

FEDERAL REGISTER

Vol. 82

Monday,

No. 5

January 9, 2017

Pages 2193–2848

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097-6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402 is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see www.ofr.gov.

The seal of the National Archives and Records Administration authenticates the **Federal Register** as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at www.fdsys.gov, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 59, 1 (January 2, 1994) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, gpocusthelp.com.

The annual subscription price for the **Federal Register** paper edition is \$749 plus postage, or \$808, plus postage, for a combined **Federal Register**, **Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is \$165, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register**, including postage, is based on the number of pages: \$11 for an issue containing less than 200 pages; \$22 for an issue containing 200 to 400 pages; and \$33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for \$3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see bookstore.gpo.gov.

There are no restrictions on the republication of material appearing in the **Federal Register**.

How To Cite This Publication: Use the volume number and the page number. Example: 82 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Rules and Regulations

Federal Register

Vol. 82, No. 5

Monday, January 9, 2017

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

Food and Nutrition Service

7 CFR Parts 210 and 220

RIN 0584-AE25

Local School Wellness Policy Implementation Under the Healthy, Hunger-Free Kids Act of 2010; Approval of Information Collection Request

AGENCY: Food and Nutrition Service, USDA.

ACTION: Final rule; notice of approval of Information Collection Request (ICR).

SUMMARY: The final rule titled Local School Wellness Policy Implementation Under the Healthy, Hunger-Free Kids Act of 2010 was published on July 29, 2016. The Office of Management and Budget (OMB) cleared the associated information collection requirements (ICR) on September 12, 2016. This document announces approval of the ICR.

DATES: Effective January 9, 2017. The ICR associated with the final rule published in the *Federal Register* on July 29, 2016, at 81 FR 50151, was approved by OMB on September 12, 2016, under OMB Control Number 0584-0592. The ICR was subsequently merged with 0584-0006.

FOR FURTHER INFORMATION CONTACT: Tina Namian, School Programs Branch, Policy and Program Development Division, Food and Nutrition Service, at (703) 305-2590.

Dated: December 23, 2016.

Richard Lucas,

Acting Administrator, Food and Nutrition Service.

RIN 2120-AJ94

Revisions to Operational Requirements for the Use of Enhanced Flight Vision Systems (EFVS) and to Pilot Compartment View Requirements for Vision Systems

Correction

In rule document 2016-28714 appearing on pages 90126-90177 in the issue of Tuesday, December 13, 2016, make the following correction:

■ On page 90174, in the third column, in the 18th through 22nd line, paragraph (iii) should read

§ 91.176(b)(3)(iii) [Corrected]

“(iii) At 100 feet above the touchdown zone elevation of the runway of intended landing and below that altitude, the flight visibility must be sufficient for one of the following visual references to be distinctly visible and

identifiable to the pilot without reliance on the EFVS—”

RIN 0910-AH19

Clarification of When Products Made or Derived From Tobacco Are Regulated as Drugs, Devices, or Combination Products; Amendments to Regulations Regarding “Intended Uses”

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing this final rule to describe the circumstances in which a product made or derived from tobacco that is intended for human consumption will be subject to regulation as a drug, device, or a combination product under the Federal Food, Drug, and Cosmetic Act (the FD&C Act). This action is intended to provide direction to regulated industry and to help avoid consumer confusion.

DATES: This rule is effective February 8, 2017.

ADDRESSES: For access to the docket to read background documents or

comments received, go to <https://www.regulations.gov> and insert the docket number found in brackets in the heading of this final rule into the "Search" box and follow the prompts, and/or go to the Division of Dockets Management, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

Executive Summary

Purpose of the Rule

The Family Smoking Prevention and Tobacco Control Act (Tobacco Control

Act) amends the FD&C Act and provides FDA with the authority to regulate tobacco products. Section 201(rr) of the FD&C Act (21 U.S.C. 321(rr)), as amended by the Tobacco Control Act, defines the term "tobacco product" as any product made or derived from tobacco that is intended for human consumption, including any component, part, or accessory of a tobacco product (except for raw materials other than tobacco used in manufacturing a component, part, or accessory of a tobacco product). Excluded from the definition of a tobacco product is any article that is a drug, device, or combination product. Any article that is a drug, device, or combination product will be regulated as such rather than as a tobacco product.

Because some ambiguity surrounds the circumstances under which a product that is made or derived from tobacco would be regulated as a drug, device, or combination product, and the circumstances under which it would be regulated as a tobacco product, FDA is taking this action to provide clarity regarding our interpretation of the drug and device definitions in the FD&C Act with respect to products made or derived from tobacco. This final rule will provide assistance for entities intending to market products made or derived from tobacco. FDA expects the rule will also assist investigators planning to use products made or derived from tobacco for an investigational use in determining the investigational use requirements that apply to their proposed studies. The final rule is also intended to increase clarity regarding the intended uses and supporting evidence that make a product made or derived from tobacco subject to regulation as a drug, device, or combination product, helping consumers distinguish products made or derived from tobacco that are intended for medical use from products marketed for other uses.

In addition, FDA is taking the opportunity to make changes to existing regulations at §§ 201.128 and 801.4 (21 CFR 201.128 and 801.4), and to conform them to how the Agency currently applies these regulations to drugs and devices generally.

Summary of the Major Provisions of the Regulatory Action

Conceptually, the final rule follows the disease prong and the structure/

function prong (with certain specified limitations) of the statutory definitions of "drug" and "device" (section 201(g) and (h) of the FD&C Act). Under the final rule, a product made or derived from tobacco and intended for human consumption is regulated as a drug, device, or combination product in two circumstances: (1) If the product is intended for use in the diagnosis of disease or other conditions, or in the cure, mitigation, treatment, or prevention of disease; or (2) if the product is intended to affect the structure or any function of the body in any way that is different from effects related to nicotine that were commonly and legally claimed in the marketing of cigarettes and smokeless tobacco products prior to March 21, 2000. The final rule also clarifies remaining circumstances where a product is subject to regulation as a tobacco product.

In addition, FDA is amending its existing intended use regulations for drugs and devices by inserting in §§ 201.128 and 801.4 a reference to the final rule to clarify the interplay between these regulations and this final rule. FDA has made further changes to conform §§ 201.128 and 801.4 to reflect how the Agency currently applies them to drugs and devices.

Costs and Benefits

The final rule clarifies the regulatory status of products made or derived from tobacco and our interpretation and application of the existing intended use regulations. This will reduce the ambiguity and may create some efficiency gains associated with submitting an application for approval or marketing authorization of a new tobacco-derived product, or with initiating research for a new tobacco-derived product. In addition, we assume that the regulation will clarify for consumers when products made or derived from tobacco are intended for medical uses rather than for other uses.

We assume that all tobacco-derived product manufacturers would incur one-time costs to learn the rule. There may also be a one-time cost incurred by a small number of manufacturers of tobacco products to review and revise product communications such as labeling and associated promotional materials. The following table reports these one-time costs.

TABLE 1—ONE-TIME COSTS

	Low	Mid-point	High
Learning costs	\$117,412	\$146,779	\$176,147
Review communications, such as labeling and promotional materials	486,024	486,024	486,024
Revisions to communications, such as labeling and promotional materials	283,003	1,092,422	1,901,841
Total	886,439	1,725,225	2,564,012

I. Background

In the **Federal Register** of September 25, 2015 (80 FR 57756), FDA issued a proposed rule entitled “Clarification of When Products Made or Derived From Tobacco Are Regulated as Drugs, Devices, or Combination Products; Amendments to Regulations Regarding ‘Intended Uses.’ ” We received over 1,900 comments on the proposed rule. Two comments requested that the comment period be extended due to the complexity of the legal issues involved. One of these comments related to the original 60-day comment period. In the **Federal Register** of November 30, 2015 (80 FR 74737), FDA reopened the comment period for an additional 30 days. The second comment appears to relate to the additional 30-day comment period announced in 80 FR 74737. With respect to the comment requesting an extension beyond the additional 30-day comment period, FDA believes this comment to be misplaced as it generally references “nine questions” that are related to a different rulemaking—the proposed version of the deeming rule.¹

A. Definition of “Tobacco Product”

The Tobacco Control Act was enacted on June 22, 2009 (Pub. L. 111–31), amending the FD&C Act and providing FDA with the authority to regulate tobacco products. Section 101(a) of the Tobacco Control Act amends section 201 of the FD&C Act by adding paragraph (rr), which defines the term “tobacco product.” In general, a “tobacco product” is defined as any product made or derived from tobacco that is intended for human consumption, including any component, part, or accessory of a tobacco product (except for raw materials other than tobacco used in manufacturing a component, part, or accessory of a tobacco product). Section 201(rr)(2) of the FD&C Act excludes from the definition of a tobacco product any article that is defined as a drug

under section 201(g)(1), a device under section 201(h), or a combination product described in section 503(g) of the FD&C Act (21 U.S.C. 353(g)). Section 201(rr)(3) of the FD&C Act explains that any article that is a drug, device, or combination product shall be subject to chapter V of the FD&C Act (the authorities for drugs and devices) rather than chapter IX (the authorities for tobacco products).²

B. Drug/Device/Combination Product Definitions

1. Medical Product Definitions

As noted in section I.A, the definition of “tobacco product” excludes anything that is a “drug,” “device,” or “combination product” under the FD&C Act. The FD&C Act defines “drug” (in relevant part) as an article intended either: (1) For use in the diagnosis, cure, mitigation, treatment, or prevention of disease (referred to as the “disease prong” of the definition) or (2) to affect the structure or any function of the body (the “structure/function prong”) (section 201(g)(1) of the FD&C Act). The FD&C Act defines a “device” (in relevant part) as an instrument, apparatus, implement, machine, contrivance, implant, in vitro reagent, or other similar or related article, including any component, part, or accessory, intended either: (1) For use in the diagnosis of disease or other conditions, or in the cure, mitigation, treatment, or prevention of disease or (2) to affect the structure or any function of the body, and which does not achieve its primary intended purposes through chemical action within or on the body of man and which is not dependent on being metabolized for the achievement of its primary intended purposes (section 201(h) of the FD&C Act).³ Combination products are products that constitute a combination of a drug, device, or biological product (section 503(g) of the FD&C Act). Under the FD&C Act, the Secretary’s determination

of the primary mode of action of a combination product determines which Center at FDA will have primary jurisdiction over the product (section 503(g) of the FD&C Act).

FDA had previously interpreted the exclusion in the tobacco product definition to mean that if a product made or derived from tobacco is determined to have a drug or device “intended use,” it will be regulated as a medical product, not as a tobacco product. As discussed in greater detail in this document, this interpretation was qualified in *Sottera, Inc. v. Food & Drug Administration*, 627 F.3d 891 (D.C. Cir. 2010), in which the D.C. Circuit applied the holding of *Food & Drug Administration v. Brown & Williamson Tobacco Corp.*, 529 U.S. 120, 156 (2000), to all tobacco products. Thus, the determination of whether a product is a medical product or a tobacco product is based on the FD&C Act and associated regulations and also takes into account relevant legal precedent (further described in section I.D).

2. How Intended Use Is Determined

In determining a product’s intended use, the Agency may look to “any . . . relevant source,” including but not limited to the product’s labeling, promotional claims, and advertising (see, e.g., *Action on Smoking and Health v. Harris*, 655 F.2d 236, 239 (D.C. Cir. 1980); *United States v. Storage Spaces Designated Nos. “8” and “49,”* 777 F.2d 1363, 1366 (9th Cir. 1985), *Hanson v. United States*, 417 F. Supp. 30, 35 (D. Minn.), *aff’d*, 540 F.2d 947 (8th Cir. 1976)).

For example, FDA may take into account any claim or statement made by or on behalf of a manufacturer that explicitly or implicitly promotes a product for a particular use (see, e.g., § 201.128 (drugs), § 801.4 (devices)).⁴

To establish a product’s intended use, FDA is not bound by the manufacturer or distributor’s subjective claims of intent, but rather can consider objective

¹ “Deeming Tobacco Products To Be Subject to the Federal Food, Drug, and Cosmetic Act, as Amended by the Family Smoking Prevention and Tobacco Control Act; Restrictions on the Sale and Distribution of Tobacco Products and Required Warning Statements for Tobacco Products; Proposed Rule” (79 FR 23142, April 25, 2014).

² Section 201(rr)(4) of the FD&C Act prohibits a tobacco product from being marketed in combination with any other article or product regulated under the FD&C Act. This rulemaking did not address section 201(rr)(4).

³ In this final rule, the cited language may be referred to as the “drug/device definitions.”

⁴ Under FDA regulations, the term “intended use” relates to the objective intent of the medical product manufacturer, packer, distributor, or seller, including both corporate entities and natural individuals (hereinafter “manufacturers” or “firms”).

evidence, which may include a variety of direct and circumstantial evidence. Thus, FDA may also take into account any circumstances surrounding the distribution of the product or the context in which it is sold (see *id.*; see also *United States v. Travia*, 180 F.Supp.2d 115, 119 (D.D.C. 2001)). In the context of medical products, generally, circumstantial evidence often ensures that FDA is able to pursue firms that attempt to evade FDA medical product regulation by avoiding making express claims about their products. As FDA has previously stated, however, the Agency would not, absent extraordinary circumstances, regard a firm as intending an unapproved new use for an approved drug, or a device that has been approved, cleared, granted marketing authorization, or is exempt from premarket notification requirements (for ease of reference, such a device is referred to as “an approved or cleared device” (or similar terms) throughout this preamble) based solely on the firm’s knowledge that such product was being prescribed or used by doctors for such use (Ref. 1).

Thus, when a product made or derived from tobacco is marketed or distributed for an intended use that falls within the drug/device definitions, it is regulated as a medical product, subject to the limitations discussed further in this document. Courts have recognized that products made or derived from tobacco marketed with “disease” claims and certain “structure/function” claims are drugs (see *United States v. 46 Cartons . . . Containing Fairfax Cigarettes*, 113 F.Supp. 336, 337, 338 (D. N.J. 1953) (cigarettes marketed for the prevention of respiratory diseases); *United States v. 354 Bulk Cartons . . . Trim Reducing-Aid Cigarettes*, 178 F.Supp. 847, 851 (D. N.J. 1959) (cigarettes marketed for weight reduction)).

C. Comments and Responses Regarding Definitions

Comments were received from tobacco product manufacturers, retailers, academia, medical professionals, advocacy groups, and consumers. To make it easier to identify comments and our responses, the word “Comment,” in parentheses, will appear before each comment, and the word “Response,” in parentheses, will appear before each response. We have numbered the comments to make it easier to distinguish between comments; the numbers are for organizational purposes only and do not reflect the order in which we received the comments or any value associated with them. We have combined similar

comments under one numbered comment. In addition to the comments specific to this rulemaking that we address in the following paragraphs, we received many general comments expressing support or opposition to the rule. These comments express broad policy views and do not address specific points related to this rulemaking. Therefore, these general comments do not require a response. Other comments outside the scope of this rulemaking also have not been addressed here. Summaries of the remaining comments, as well as FDA’s responses, are included in this document.

(Comment 1) At least one comment stated that FDA is not permitted to regulate the nicotine in cigarettes as a drug and should not be permitted to regulate electronic nicotine delivery systems (ENDS) as medical products.

(Response) FDA disagrees. Section 201(g) of the FD&C Act defines “drug” as articles intended for use in the diagnosis, cure, mitigation, treatment, or prevention of disease in man or other animals, and articles (other than food) intended to affect the structure or any function of the body of man or other animals. Section 201(h) of the FD&C Act defines “device” (in relevant part) as “an instrument, apparatus, implement, machine, contrivance, implant, in vitro reagent, or other similar or related article, including any component, part, or accessory,” that is intended “for use in the diagnosis of disease or other conditions, or in the cure, mitigation, treatment, or prevention of disease, in man or other animals, or . . . to affect the structure or any function of the body,” and which does not achieve its primary intended purposes through chemical action within or on the body of man and which is not dependent on being metabolized for the achievement of its primary intended purposes. As explained in this final rule, FDA has the authority to regulate a product made or derived from tobacco, including cigarettes and ENDS, as a medical product if it is distributed or marketed for an intended use that falls within the drug/device definitions, unless the product is intended to affect the structure or any function of the body in any way related to the effects of nicotine that were commonly and legally claimed in the marketing of cigarettes and smokeless tobacco products prior to March 21, 2000.

(Comment 2) Several comments stated that there is no need to clarify the medical product and tobacco product definitions that govern FDA regulation of these products. One of those comments also went on to state that there is a clear difference between drug

product claims and “consumer-oriented marketing statements” about smoking cessation.

(Response) FDA disagrees that there is no need for additional clarity in this area. The Agency frequently receives inquiries regarding jurisdictional distinctions for products made or derived from tobacco, and given the broad range of intended uses for products made or derived from tobacco and the increasing variety of such products on the market, FDA believes that the potential for consumer confusion is increasing. This is especially true when tobacco-derived products that may otherwise appear to be products intended for recreational use make claims related to quitting smoking and treatment of nicotine addiction.

FDA considers claims about smoking cessation to be more than simply “consumer-oriented marketing statements.” As noted in the preamble to the proposed rule, claims related to smoking cessation have long been recognized as evidence of intended use, conferring drug or device jurisdiction, and smoking cessation claims also have long been associated with the intended uses of curing or treating nicotine addiction and its symptoms. For example, smoking cessation claims have appeared on the approved labeling for nicotine replacement therapies since the mid-1990s. FDA believes it is important to clarify and reiterate that smoking cessation claims on any product can render that product subject to FDA’s medical products authorities.

(Comment 3) Comments had differing opinions on whether ENDS meet the definition of “tobacco product” as defined in the FD&C Act. Several comments stated that ENDS fall under the definition of “tobacco product” as defined in the FD&C Act if they contain nicotine derived from tobacco and are not intended to be drugs or devices. However, other comments stated that ENDS, including vaping hardware, do not fall within the definition of “tobacco product.”

(Response) FDA agrees that ENDS meet the definition of “tobacco product” if they are not drugs, devices, or combination products. The term “tobacco product” is defined in section 201(rr) of the FD&C Act (21 U.S.C. 321(rr)) to mean any product made or derived from tobacco that is intended for human consumption, including any component, part, or accessory of a tobacco product (except for raw materials other than tobacco used in manufacturing a component, part, or accessory of a tobacco product), and excluding drugs, devices, and

combination products as defined under the FD&C Act. Unless they are marketed for an intended use that falls within the drug/device definitions, ENDS products meet the definition of tobacco product. Additionally, as discussed elsewhere in the preamble, if ENDS products are intended to affect the structure or function of the body in any way related to the effects of nicotine that were commonly and legally claimed in the marketing of cigarettes and smokeless tobacco products prior to March 21, 2000, they will be regulated as tobacco products. (See section II.C.)

FDA disagrees with comments stating that vaping hardware does not fall within the definition of “tobacco product.” As the Agency explained in the final deeming regulation,⁵ the definition of tobacco product includes components and parts. Also included in the final deeming regulation is a non-exhaustive list of examples of components and parts used with ENDS products. Examples of components and parts used with ENDS products includes, but are not limited to: E-liquids; atomizers; batteries (with or without variable voltage); cartomizers (atomizer plus replaceable fluid-filled cartridge); digital display/lights to adjust settings; clearomisers, tank systems, flavors, vials that contain e-liquids, and programmable software. Thus, vaping hardware meets the definition of tobacco product.

D. History of 1996 Rulemaking and Relevant Litigation

Although the courts have recognized that tobacco-derived products can be regulated as medical products under the FD&C Act in certain circumstances, courts have also held that there are limitations on how the drug and device definitions can be applied to products made or derived from tobacco. This section provides a summary of FDA regulatory action and related litigation relevant to those limitations.

In 1996, FDA issued a regulation restricting the sale and distribution of cigarettes and smokeless tobacco to children and adolescents (the 1996 rule) (61 FR 44396, August 28, 1996). This rule included FDA’s determination that it had jurisdiction over cigarettes and smokeless tobacco under the FD&C Act. The basis for this determination was that cigarettes and smokeless tobacco were intended to affect the structure or

function of the body, within the FD&C Act definitions of the terms “drug” and “device,” because nicotine has significant pharmacological effects. In addition, FDA found that cigarettes and smokeless tobacco were combination products consisting of the drug nicotine and device components intended to deliver nicotine to the body. In the 1996 rule, FDA concluded that cigarettes and smokeless tobacco should be regulated under the device authorities of the FD&C Act. The 1996 rule was challenged in court by a group of tobacco manufacturers, retailers, and advertisers on the grounds that FDA lacked jurisdiction to regulate tobacco products “as customarily marketed;” that the regulations exceeded FDA’s authority to regulate devices; and that the advertising restrictions violated the First Amendment.

The Supreme Court struck down the 1996 rule in *Food & Drug Administration v. Brown & Williamson Tobacco Corp.*, 529 U.S. 120, 156 (2000), holding that FDA lacked jurisdiction over tobacco products “as customarily marketed.” The Court found that Congress intended to exclude tobacco products from FDA’s jurisdiction. In *Brown & Williamson*, the Court determined that tobacco products could not be made safe and effective for their intended uses, and therefore, if FDA had authority over them, FDA would have to remove them from the market, but that Congress had foreclosed such action (529 U.S. at 135–139). The Court also observed that Congress, in enacting statutes to regulate the labeling and advertising of conventional tobacco products, such as cigarettes and smokeless tobacco, had “effectively ratified FDA’s long-held position” that the Agency lacked jurisdiction to regulate tobacco products “absent claims of therapeutic benefit by the manufacturer” (529 U.S. at 144).

In 2008 and early 2009, FDA detained multiple shipments of electronic cigarettes from overseas manufacturers and denied them entry into the United States on the ground that electronic cigarettes were unapproved drug-device combination products under the FD&C Act. In April 2009, two of the importers who were affected by this action sought a preliminary injunction to enjoin FDA from regulating electronic cigarettes as drug-device combination products and from denying entry of those products into the United States.⁶ Between the filing of the lawsuit and a decision on the motion for a preliminary injunction,

Congress passed the Tobacco Control Act and the President signed it into law. The District Court subsequently granted a preliminary injunction, relying on *Brown & Williamson* and the recently enacted Tobacco Control Act (*Smoking Everywhere, Inc. v. FDA*, 680 F. Supp. 2d 62 (D.D.C. 2010)). FDA appealed the decision and the United States Court of Appeals for the District of Columbia Circuit (D.C. Circuit) affirmed in *Sottera, Inc. v. Food & Drug Administration*, 627 F.3d 891 (D.C. Cir. 2010).⁷ The D.C. Circuit determined that the decision in *Brown & Williamson* was not limited to tobacco products that were the subject of the specific federal legislation discussed in that case. The D.C. Circuit found that under the Tobacco Control Act, all products made or derived from tobacco and intended for human consumption that are “marketed for therapeutic purposes” are subject to FDA’s drug and/or device provisions, whereas “customarily marketed tobacco products” are subject to regulation as “tobacco products” (*Sottera*, 627 F.3d at 898–899; see also *Brown & Williamson*, 529 U.S. at 144–156).

The Court in *Brown & Williamson* frequently referred to “tobacco products as customarily marketed,” but never defined that phrase. The Court contrasted that phrase with “claims of therapeutic benefit” (see, e.g., 529 U.S. at 127, 158), which it also did not define, although it did indicate that tobacco products’ purported “therapeutic benefits” included all four of the structure/function intended uses on which FDA had based its 1996 rulemaking: Satisfying addiction, stimulation, sedation, and weight control (529 U.S. at 141). Neither of these terms is used in the FD&C Act. In *Sottera*, the D.C. Circuit relied on *Brown & Williamson* and repeated these phrases in describing contrasting types of products. The court in *Sottera* specifically equated “therapeutic uses” with the disease prong of the drug/device definitions in the FD&C Act and said that customarily marketed tobacco products were sold without therapeutic claims (627 F.3d at 894) and should be regulated as tobacco products under the FD&C Act, as amended by the Tobacco Control Act. As noted, the *Brown & Williamson* decision indicated that the four intended structure/function effects FDA had identified (satisfying addiction, stimulation, sedation, and

⁵ “Deeming Tobacco Products To Be Subject to the Federal Food, Drug, and Cosmetic Act, as Amended by the Family Smoking Prevention and Tobacco Control Act; Restrictions on the Sale and Distribution of Tobacco Products and Required Warning Statements for Tobacco Products; Final Rule” (81 FR 28973, May 10, 2016).

⁶ The original district court case was filed by *Smoking Everywhere, Inc.*, and the case was joined by *Sottera, Inc.*, which does business as NJOY.

⁷ On January 24, 2011, the D.C. Circuit denied the government’s petitions for rehearing and rehearing en banc (by the full court). See *Sottera v. Food & Drug Administration*, No. 10–5032 (D.C. Cir. Jan. 24 2011) (per curiam).

weight control) were purported tobacco product “therapeutic benefits” (*Brown & Williamson*, 529 U.S. at 141). But neither the *Brown & Williamson* nor the *Sottera* court defined what might constitute claims of therapeutic benefit, nor did they explain the relationship between “tobacco products as customarily marketed” and the structure/function prong of the drug/device definitions of the FD&C Act. In addition, no court has addressed whether certain structure/function claims for products made or derived from tobacco that generally were not made for “tobacco products as customarily marketed” should be treated as drug or device claims.⁸

II. Purpose of Regulatory Action

Because some ambiguity surrounds the circumstances under which a product that is made or derived from tobacco would be regulated as a drug, device, or combination product, and the circumstances under which it would be regulated as a tobacco product, we are issuing this final rule to provide clarity regarding our interpretation of the drug/device definitions in the FD&C Act with respect to products made or derived from tobacco. We believe that this final regulation will provide assistance for entities intending to market products made or derived from tobacco and for entities that plan to study these products. For example, the rule is expected to help sponsors determine which FDA Center should be consulted as they develop their products and make appropriate premarket submissions to bring new products to market. FDA expects the rule will also assist investigators planning to use products made or derived from tobacco for an investigational use in determining the investigational use requirements that apply to their proposed studies. In addition, we believe it is important to avoid consumer confusion about which products are intended for medical uses versus recreational or other uses. The rule is expected to increase clarity regarding the types of intended uses and supporting evidence that make a product made or derived from tobacco subject to regulation as a drug or device, which we expect will help consumers distinguish products made or derived

from tobacco that are intended for medical use from products marketed for other uses. Finally, the rule is intended to provide clarity for drug and device manufacturers generally regarding FDA’s interpretation and application of its existing intended use regulations.

In both the *Brown & Williamson* and *Sottera* decisions, the courts set forth (but did not define) two poles—“tobacco products as customarily marketed” and “claims of therapeutic benefit”—and found that the “customarily marketed” pole was not within FDA’s drug/device jurisdiction, but that the “claims of therapeutic benefit” pole was within FDA’s drug/device jurisdiction. As noted in section I.D, the terminology used by the courts in establishing these two poles is not the terminology used by the FD&C Act in defining drugs and devices. Instead, the FD&C Act’s drug and device definitions reference, in relevant part, diagnosis, cure, mitigation, treatment, or prevention of disease (disease prong) and effects on the structure or any function of the body (structure/function prong). In addition, while certain products and claims may fall clearly at one pole or the other, a spectrum of products and claims may fall somewhere between the two poles. In the sections that follow, we describe our interpretation of the jurisdictional lines established by the FD&C Act’s drug, device, and tobacco product definitions as informed by the decisions in *Brown & Williamson* and *Sottera*.

A. Intended Uses For Products Made or Derived From Tobacco That Bring Products Within the Disease Prong

1. Intended Uses That Bring Products Within the Disease Prong

As discussed in section I.B, articles intended for use in the diagnosis, cure, mitigation, treatment, or prevention of disease are drugs, devices, or combination products under the FD&C Act. Products made or derived from tobacco have historically been regulated as medical products when they are marketed for intended uses that fall within the disease prong. For example, FDA has approved a number of drug products made or derived from tobacco as nicotine replacement therapies with indications to reduce withdrawal symptoms, including nicotine craving, associated with quitting smoking. Accordingly, FDA has long considered claims related to smoking cessation in the context of curing or treating nicotine addiction and its symptoms to bring products within FDA’s “disease prong” jurisdiction.

FDA has also taken enforcement action against products made or derived from tobacco that were marketed with claims of therapeutic benefit but that did not have approved new drug applications (NDAs). For example, FDA seized cigarettes on the grounds that they were misbranded drugs when the manufacturer represented that the cigarettes were effective in preventing respiratory diseases, common cold, influenza, pneumonia, and various other ailments (*United States v. 46 Cartons . . . Containing Fairfax Cigarettes*, 113 F.Supp. 336, 337, 338 (D. N.J. 1953)); see also *United States v. 354 Bulk Cartons Trim Reducing-Aid Cigarettes*, 178 F.Supp. 847 (D. N.J. 1959) (similar, where manufacturer made weight-reduction claims for its cigarettes).

The “claims of therapeutic benefit” language used by the *Brown & Williamson* and *Sottera* courts has a logical relationship to the disease prong of the drug/device definition, in that “therapeutic” can be defined as “relating to the treatment of disease or disorders by remedial agents or methods” or to “providing or assisting in a cure.”⁹ With this rule, FDA is clarifying the categories of claims relevant to products made or derived from tobacco that FDA considers to be evidence of intended use that brings products within the disease prong in light of the *Sottera* and *Brown & Williamson* decisions. As discussed previously, claims related to smoking cessation have long been recognized as evidence of intended use conferring drug or device jurisdiction. Smoking cessation claims have also long been associated with intended uses of curing or treating nicotine addiction and its symptoms. For example, the approved labeling for nicotine replacement therapies includes the following statements: “Purpose: Stop smoking aid; Use: reduces withdrawal symptoms, including nicotine craving, associated with quitting smoking.”¹⁰ Against this backdrop, smoking cessation claims on any product generally create a strong suggestion of intended therapeutic benefit to the user that generally will be difficult to overcome absent clear context indicating that the product is not intended for use to cure or treat nicotine addiction or its symptoms, or for another therapeutic purpose.

Given the availability of FDA-approved drugs for smoking cessation,

⁹ See, e.g., Merriam-Webster Online Dictionary, available at <http://www.merriam-webster.com/dictionary/therapeutic>.

¹⁰ See, e.g., approved labeling for Nicoderm CQ, Nicorette, Habitrol.

⁸ In *Sottera*, there are a few instances where the court’s opinion could be read to suggest that all products made or derived from tobacco “marketed without claims of therapeutic effect” are, ipso facto, tobacco products “as customarily marketed” (627 F.3d at 895; see also *id.* at 898–899). However, because the issue of drug/device jurisdiction over structure/function intended uses that are not related to the commonly understood effects of nicotine was not before the court, this reading—even if it were correct—would be dicta.

FDA believes that consumers are particularly susceptible to confusion where products made or derived from tobacco that otherwise appear to be products intended for recreational use make claims related to quitting smoking. Therefore, FDA considers claims related to smoking cessation to require careful scrutiny. Where products making claims related to quitting smoking also attempt to disclaim that use in some way, FDA intends to view such disclaimers skeptically because of the likelihood of consumer confusion. In most cases, as discussed in more detail in response to Comment 13, FDA does not believe that disclaimers will sufficiently mitigate consumer confusion due to the product's claimed therapeutic benefit.

FDA will treat several other categories of claims for products made or derived from tobacco as evidence of intended use that brings the products within the disease prong of the drug/device definition. These categories of claims are discussed further in section IV, Description of the Final Rule). We note that sections 911(c) and 918 of the FD&C Act (21 U.S.C. 387k(c) and 387r), as amended by the Tobacco Control Act, contemplate that products intended for the treatment of tobacco dependence and for relapse prevention, among other things, may be subject to FDA's drug/device jurisdiction.

2. Distinction Between Modified Risk Claims and Claims That Are Evidence of Disease-Prong Intended Uses

With this final rule, FDA is also clarifying the relationship between FDA's regulation of a certain category of tobacco products—modified risk tobacco products (MRTPs)—and FDA's regulation of medical products that are intended to mitigate disease. MRTPs are tobacco products that are sold or distributed for use to reduce harm or the risk of tobacco-related disease associated with commercially marketed tobacco products (section 911(b)(1) of the FD&C Act). Tobacco products that are sold or distributed for use to reduce harm or the risk of tobacco-related disease associated with commercially marketed tobacco products means a tobacco product:

(1) That represents in its label, labeling, or advertising, either implicitly or explicitly, that:

- The tobacco product presents a lower risk of tobacco-related disease or is less harmful than one or more other commercially marketed tobacco products;

- the tobacco product or its smoke contains a reduced level of a substance or presents a reduced exposure to a substance; or

- the tobacco product or its smoke does not contain or is free of a substance;

(2) That uses the descriptors "light," "mild," "low," or similar descriptors in its label, labeling, or advertising; or

(3) For which the tobacco product manufacturer has taken any action directed to consumers through the media or otherwise, other than by means of the tobacco product's label, labeling, or advertising, after June 22, 2009, respecting the product that would be reasonably expected to result in consumers believing that the tobacco product or its smoke may present a lower risk of disease or is less harmful than one or more commercially marketed tobacco products, or presents a reduced exposure to, or does not contain or is free of, a substance or substances.

See section 911(b)(2) of the FD&C Act.¹¹

Because MRTPs have the potential to be marketed as less harmful than other tobacco products, including as presenting a lower risk of tobacco-related disease than another tobacco product, FDA recognizes that there might be questions about how these products relate to FDA's medical product jurisdiction over products made or derived from tobacco that are intended for use in disease mitigation and prevention. MRTPs may have the ultimate effect of lowering disease risk for users who would otherwise use another, more harmful tobacco product. However, an important distinction between MRTPs and medical products is that, while medical products approved/cleared for disease mitigation or prevention act affirmatively to combat a disease or health condition, MRTPs present *relatively* less risk of disease (*e.g.*, by presenting reduced exposure to harmful constituents relative to another tobacco product), but do not affirmatively act to mitigate, prevent, or otherwise treat disease. In addition, while medical products approved for disease mitigation are determined to be both safe and effective for their approved use, MRTPs are reviewed based, in part, on a "benefit the health of the population as a whole" standard, and like other tobacco products, still expose users to inherent (if reduced) harms.

¹¹No smokeless tobacco product shall be considered to be sold or distributed for use to reduce harm or the risk of tobacco-related disease solely because its label, labeling, or advertising uses the following phrases: "smokeless tobacco," "smokeless tobacco product," "not consumed by smoking," "does not produce smoke," "smokefree," "smoke-free," "without smoke," "no smoke," or "not smoke" (section 911(b)(2)(C) of the FD&C Act).

For purposes of illustration, claims of modified risk might include claims like "contains less nicotine than [tobacco product X]", "using [MRTP] reduces your risk of lung cancer compared to using [tobacco product X]", and "lower level of nitrosamines than other smokeless tobacco products." In contrast, a claim that a product "inhibits the progression of disease in adult patients with chronic obstructive pulmonary disease" is evidence of intended uses that would bring the product within drug/device jurisdiction.

B. Comments and Responses Regarding Modified Risk Tobacco Products

(Comment 4) At least one comment remarked that research studies and public opinion may come to reflect that a tobacco product appears to have properties similar to those of a medical drug or MRTP. The comment asserted that acceptance of these properties by the scientific and medical community or by the public should not subject the product to regulation as a medical product or MRTP in the absence of any specific claims by the manufacturer.

(Response) As explained in this final rule, with certain exceptions, products made or derived from tobacco are subject to regulation as medical products if they are distributed for an intended use that falls within the FD&C Act's drug/device definitions, and the Agency may look to any relevant source to determine intended use. To the extent this comment suggests that manufacturer claims are always necessary to establish a medical product's intended use, FDA disagrees. As discussed at various points in this final rule (for example, in response to Comment 18), FDA is not bound by the manufacturer or distributor's subjective claims of intent, but rather can consider objective evidence, which may include a variety of direct and circumstantial evidence. Nevertheless, FDA agrees with the comment that neither the opinions of the scientific and medical communities nor public opinion considered alone should dictate when a product made or derived from tobacco is regulated as a medical product or MRTP. In general, FDA would not regard a manufacturer as intending a medical use for a product made or derived from tobacco based solely on study findings or widespread belief that the product appears to have properties similar to those of a medical product. Similarly, FDA would not regard a manufacturer of a product made or derived from tobacco as selling or distributing a product for use to reduce harm or the risk of tobacco-related disease based solely on study findings

or widespread belief that the product appears to have properties similar to those of an MRTTP.

C. Intended Uses For Products Made or Derived From Tobacco That Bring Products Within the Structure/Function Prong

As discussed in section I.B, the drug/device definitions in the FD&C Act include articles “intended to affect the structure or any function of the body,” and FDA’s assertion of jurisdiction over cigarettes and smokeless tobacco in 1996 was predicated on the pharmacological effects of nicotine on the structure or function of the body. In addition, as explained previously, the Court in *Brown & Williamson* rejected that assertion of jurisdiction, finding that Congress did not intend for FDA to have jurisdiction over cigarettes “as customarily marketed.”

Based on the *Brown & Williamson* holding and the *Sottera* court’s application of that holding to all tobacco products, it is necessary to determine whether the intended use of a product made or derived from tobacco was the subject of claimed structure or function effects for tobacco products “as customarily marketed”—and therefore outside of FDA’s drug/device jurisdiction. FDA believes the appropriate inquiry is whether the intended structure/function effects relate to effects of nicotine that were commonly and legally claimed in the marketing of cigarettes and smokeless tobacco products prior to the date of the Supreme Court’s decision in *Brown & Williamson* (March 21, 2000).

For example, as discussed in the 1996 rulemaking, claims related to satisfaction, pleasure, enjoyment, and refreshment are euphemisms for the delivery of a pharmacologically active dose of nicotine and thus relate to effects on the structure or function of the body (61 FR 44396 at 45101 and 45175–45178). Nonetheless, FDA does not consider these tobacco satisfaction and enjoyment claims to bring products within its drug and device regulatory authority because these are structure/function claims related to the effects of nicotine and were commonly and legally made before March 21, 2000. Similarly, FDA does not consider claims suggesting that a tobacco product provides an alternative way of obtaining the effects of nicotine, or that a tobacco product will provide the same effects as another tobacco product—such as “satisfying smoking alternative,” “provides all the pleasure of smoking,” “get your nicotine fix,” or “provides smokers the same delight, physical and emotional feelings”—to bring a tobacco

product within its drug and device authority.

The *Brown & Williamson* and *Sottera* decisions do not reach the issue of intended uses that fall outside the disease prong of the drug/device definition and that are outside the area of “customarily marketed” tobacco product claims. FDA believes certain structure/function intended uses for products made or derived from tobacco continue to fall within our drug/device regulatory authority. FDA believes these structure/function intended uses fall into two main categories: (1) Intended uses that are unrelated to the pharmacological effects of nicotine and (2) intended uses that were not the subject of claims that were commonly and legally made for cigarettes and smokeless tobacco products (*i.e.*, the products addressed in the 1996 rule) prior to the Supreme Court’s decision in *Brown & Williamson*. Thus, to the extent manufacturers intend products made or derived from tobacco to be used to affect the structure or function of the body in any way that is not related to the effects of nicotine that were commonly and legally claimed in the marketing of cigarettes and smokeless tobacco products prior to March 21, 2000, FDA would consider these intended uses to remain within its drug/device jurisdiction under the final rule. For example, FDA’s 1996 rulemaking identified “sedation,” “stimulation,” and “weight loss” as intended structure/function effects related to nicotine in cigarettes and smokeless tobacco products (61 FR 44396 at 44667; see also *Brown & Williamson*, 529 U.S. at 127). These structure/function effects are similar to “relieve tension,” “restore mental alertness,” and “promote weight loss,” which the proposed rule gave as examples of potential intended structure/function effects (80 FR 57756 at 57760; see also Comment 7 in this document). But absent evidence that “sedation,” “stimulation,” or “weight loss” is both a structure/function effect related to nicotine and was commonly and legally claimed in marketing cigarettes or smokeless tobacco products prior to March 21, 2000, FDA will consider products made or derived from tobacco, whose intended use includes such structure/function effects, to be medical products.

Similarly, “maintain memory”—another example of a potential intended structure/function effect mentioned in the proposed rule (80 FR 57756 at 57760)—was (as FDA’s 1996 rulemaking observed) a pharmacological effect that Philip Morris researchers attributed to nicotine and that R.J. Reynolds Tobacco asserted as a “benefit” in court filings

(61 FR 44396 at 44857–44858 and 45029). But once again, absent evidence that “maintaining memory” is both a structure/function effect related to nicotine, and was commonly and legally claimed in marketing cigarettes or smokeless tobacco products prior to March 21, 2000, FDA will consider products made or derived from tobacco, intended for use to “maintain memory,” to be medical products.

Different facts but a similar analysis apply to the proposed rule’s other examples of potential intended structure/function effects, “maintain healthy lung function” and “support the immune system.” (80 FR 57760). In contrast to its findings for “stimulation,” “sedation,” and “weight loss,” (61 FR 44396 at 44667), FDA’s 1996 rulemaking did not identify “maintain healthy lung function” or “support the immune system” as intended structure/function effects of cigarettes or smokeless tobacco products. But as with those other potential intended uses, absent evidence that “maintaining healthy lung function” or “supporting the immune system” are both structure/function effects related to nicotine, and were commonly claimed in marketing cigarettes or smokeless tobacco products prior to March 21, 2000, FDA will consider products made or derived from tobacco, intended for use to achieve such structure/function effects, to be medical products.

FDA believes that it is important to recognize structure/function intended uses that were not commonly and legally claimed in the marketing of cigarettes and smokeless tobacco products prior to the decision in *Brown & Williamson*. Structure/function intended uses are a longstanding and important aspect of FDA’s medical product jurisdiction, grounded in the statutory definitions of “drug” and “device” in the FD&C Act. We recognize that products made or derived from tobacco are unique because of the regulatory regime for tobacco products under the FD&C Act, and that some products made or derived from tobacco making certain structure/function claims are now outside our drug/device jurisdiction. However, we believe it is consistent with the FD&C Act, case law, and our public health mission to determine that medical products include products made or derived from tobacco whose intended use includes effects on the structure or function of the body that are distinct from the pharmacological effects related to nicotine that were commonly and legally claimed before March 21, 2000.

FDA believes this final rule will provide clarity to manufacturers about how products made or derived from tobacco will be regulated if they are marketed or distributed for certain intended uses. This clarification will allow regulated industry to plan accordingly during the product development and postmarketing phases and will help researchers understand the applicable regulatory requirements associated with the investigational use of products made or derived from tobacco.

In addition, we believe this final rule will help to avoid consumer confusion about which products made or derived from tobacco are intended for a medical use (*i.e.*, as a drug/device) versus for a recreational use. Specifically, FDA wishes to avoid situations where products intended to be sold as tobacco products are marketed with the same claims as products sold as drugs or devices.

D. Comments and Responses Regarding Brown & Williamson and Sottera

(Comment 5) At least one comment agreed with FDA that the *Brown & Williamson* and *Sottera* rulings did not define the phrases “as customarily marketed” or “claims of therapeutic benefit,” leaving the Agency with some discretion as to what claims fall within each category when the distinction is not clear under existing precedent.

(Response) FDA agrees that the lack of definitions of the terms “customarily marketed” and “claims of therapeutic benefit” as they apply to products made or derived from tobacco in the relevant case law has created ambiguity and resulted in confusion among regulated industry, which has led FDA to promulgate this rule. Specifically, in the absence of clear judicial direction about what might constitute “claims of therapeutic benefit” and the relationship between tobacco products “as customarily marketed” and the structure/function prong of the drug/device definitions, the Agency believes it is important to clarify its statutory interpretations of the drug/device definitions with respect to products made or derived from tobacco in light of these terms used by the courts.

(Comment 6) Several comments supported FDA’s proposal to treat satisfaction, smoking alternative, and nicotine fix claims as tobacco product claims. However, these comments assert that all products derived from tobacco that lack express therapeutic claims must be regulated as tobacco products. These comments maintained that FDA’s proposed approach—which provides that some structure/function claims will

cause products derived from tobacco to be regulated as drugs, devices, or combination products—is inconsistent with the *Brown & Williamson* and *Sottera* decisions.

Specifically, the comments argued that neither decision “indicates that ‘customarily marketed’ means anything other than ‘not marketed with therapeutic claims.’” They maintained that the *Sottera* court “explicitly concluded that the ‘better reading’ of *Brown & Williamson* was that it deprives FDA of authority to regulate under the FD&C Act any tobacco products marketed ‘without claims of therapeutic effect,’ viewing such products as ‘customarily marketed.’” Accordingly, the comments contended that the courts saw only two categories of tobacco products—products marketed with or without therapeutic claims. The comments asked that FDA clarify that it lacks authority to regulate any product made or derived from tobacco as a drug or device absent express therapeutic claims.

(Response) FDA disagrees with these comments and declines to adopt their overly narrow reading of *Brown & Williamson* and *Sottera*. First, *Brown & Williamson* provides no support for the comments’ assertion that therapeutic claims must be express for a product to be subject to FDA’s drug/device jurisdiction. The plaintiffs in *Brown & Williamson* made this very argument, and the dissenting opinion noted that the FD&C Act “does not use the word ‘claimed’; it uses the word ‘intended.’” See *Brown & Williamson*, 529 U.S. 120, 170 (2000) (dissenting opinion). The majority specifically declined to resolve the question. See *Brown & Williamson*, 529 U.S. 120, 132 (2000).

In addition, as noted in section I.C of the proposed rule, as well as section I.D, neither the *Brown & Williamson* nor the *Sottera* decisions defined the term “customarily marketed.” Although the court in *Sottera* did equate the concept of “therapeutic claims” with the disease prong of the drug and device definitions, there was no such equating of the term “customarily marketed” with the structure/function prong of these definitions. In fact, the term “customarily marketed” itself suggests that the term has some meaning independent of its relationship to the structure/function prong of the drug and device definitions. If the Supreme Court had wanted any structure/function claim to exclude a product made or derived from tobacco from FDA’s drug/device jurisdiction, it could have said so. The structure of section 201(rr) of the FD&C Act, added by the Tobacco Control Act, further supports this

interpretation. Following the Supreme Court’s decision in *Brown & Williamson*, Congress enacted the Tobacco Control Act to give FDA explicit authority to regulate tobacco products. Under section 201(rr)(2), the term “tobacco product” excludes articles that are drugs under section 201(g)(1) and devices under section 201(h) of the FD&C Act. This statutory carve-out includes the structure/function prong of the drug/device definitions.

Having given FDA regulatory authority over tobacco products, if Congress thought that products made or derived from tobacco should never be regulated as drugs or devices under the structure/function prong of the drug or device definitions in the wake of *Brown & Williamson*, presumably Congress would have written section 201(rr)(2) of the FD&C Act differently. The better reading is that Congress recognized that products made or derived from tobacco as “customarily marketed” would be regulated as tobacco products under the Tobacco Control Act, but that products made or derived from tobacco meeting the drug/device definitions (including the structure/function prong, to the extent such products were not “customarily marketed”) would continue to be regulated as drugs or devices.

(Comment 7) At least one comment disagreed with some of the examples in the proposed rule of structure/function intended uses that FDA believes remain within its drug/device jurisdiction under the proposal. Specifically, the comment argued that claims about nicotine’s stimulant and weight-loss structure/function effects “remain permissible ‘tobacco product’ claims,” because FDA’s 1996 rulemaking found that stimulant and weight-loss structure/function effects were among the intended uses of cigarettes and smokeless tobacco products (citing 61 FR 44396 at 44630, 44632).

(Response) FDA disagrees with this comment. In the 1996 rulemaking, FDA found that, in addition to causing and sustaining addiction, nicotine in cigarettes and smokeless tobacco causes other psychoactive (mood-altering) effects, including tranquilization and stimulation; and that nicotine in cigarettes and smokeless tobacco controls weight (61 FR 44396 at 44630). The rulemaking further found that these were intended structure/function effects for cigarettes and smokeless tobacco products (*id.* at 44632). But the central holding of *Brown & Williamson* was that “customarily marketed” tobacco products were not subject to FDA’s medical product authority, even

assuming that such products could be considered to have the intended structure/function effects that FDA attributed to them if their manufacturers and sellers did not claim such effects (529 U.S. at 131–32). As discussed in section I.D, this current rulemaking applies *Brown & Williamson*, as relevant here, by looking to marketing claims for structure/function effects that were commonly and legally made for “customarily marketed” cigarettes and smokeless tobacco products prior to the date the *Brown & Williamson* decision was issued. To the extent the comment read the examples “relieve tension” and “restore mental alertness” as stimulant intended uses, FDA does not believe that they are structure/function intended uses relating to effects of nicotine that were commonly and legally claimed in the marketing of cigarettes and smokeless tobacco products prior to March 21, 2000. Similarly, FDA does not believe that “promotes weight loss” was a “customarily marketed” tobacco product claim within the meaning of *Brown & Williamson*. Section 1100.5 is written such that, if a particular intended structure/function effect for a product made or derived from tobacco is related to the effects of nicotine commonly and legally claimed prior to March 21, 2000, that product would not be subject to FDA’s drug/device jurisdiction. FDA expects that in some cases this would be a fact-specific, case-by-case inquiry.

Sponsors should also keep in mind that, regardless of whether a product is regulated as a tobacco product or a medical product, the claims made for the product would misbrand the product and subject manufacturers to enforcement action if the claims are false or misleading in any particular, including if the claims are unsubstantiated. Thus, if a particular claim related to the effects of nicotine was used in the marketing of a tobacco product prior to March 21, 2000, but that claim is not substantiated by appropriate evidence, the use of such a claim in current labeling or advertising would likely misbrand the product. In addition, both medical products and tobacco products would be subject to enforcement action under section 201(n) of the FD&C Act if their labeling or advertising fails to reveal facts material in the light of the representations made or material with respect to consequences which may result from the use of the article to which the labeling or advertising relates.

(Comment 8) Several comments argued that the proposed rule was an improper attempt to undermine the

court’s holding in *Sottera* with respect to the regulation of electronic cigarettes. These comments viewed the proposed rule as an attempt to regulate electronic cigarettes as drugs, and characterized it as an effort to bypass the D.C. Circuit’s ruling in *Sottera*. They also suggested that *Sottera* made a categorical determination regarding the intended use of electronic cigarettes generally, and maintained that FDA declined to appeal the D.C. Circuit’s decision and instead represented that it intended to regulate electronic cigarettes as tobacco products.

(Response) FDA disagrees with these comments. Although the *Sottera* decision determined that the holding in *Brown & Williamson* was not limited to cigarettes and smokeless tobacco, the court did not say that electronic cigarettes could never be regulated as drugs or devices. Rather, the court held that FDA can “regulate tobacco products marketed for therapeutic purposes under [the FD&C Act’s drug/device provisions],” and observed that “the FDA may establish that NJOY does in fact make therapeutic claims regarding its electronic cigarettes.” See *Sottera*, 627 F.3d at 899. The rule FDA issues here clarifies the circumstances under which a product made or derived from tobacco would be regulated as a drug, device, or combination product, and the circumstances under which it would be regulated as a tobacco product. Manufacturers are free to choose how they would like to market products made or derived from tobacco, but do so in the context of the regulatory framework set forth in the rule.

Moreover, the comments appear to misunderstand the nature of determinations of intended use with respect to FDA-regulated products. As discussed elsewhere in this document, intended use is a case-by-case, fact-specific inquiry in which the Agency may look to any relevant source of evidence, including a variety of direct and circumstantial evidence. See, e.g., Response to Comment 18 in section IV.C. Intended use is not determined on a categorical basis based on product type. Finally, in deciding not to petition for certiorari from the D.C. Circuit’s decision in *Sottera*, FDA did not state or signal that it intended to regulate electronic cigarettes as tobacco products under all circumstances. Rather, in the wake of the *Sottera* decision, FDA issued a letter to stakeholders,¹² noting that the Agency would abide by the jurisdictional lines established by *Sottera*, and was considering issuing a

guidance or rulemaking regarding therapeutic claims. This final rule is the result of FDA’s consideration of the issues raised by the *Sottera* decision and clarifies FDA’s interpretation of the statutory definitions of drug and medical device with respect to products made or derived from tobacco.

(Comment 9) Several comments asserted that claims that use euphemisms for the delivery of a pharmacologically active dose of nicotine, or state that a tobacco product provides an alternative way of obtaining the effects of nicotine or will provide the same effects as another tobacco product, do not fall within FDA’s medical product authority. Four comments took the opposite view. Three of these latter comments remarked that excluding such claims from FDA’s medical product authority would authorize manufacturers to continue using claims that were found to be fraudulent and deceptive by the U.S. District Court for the District of Columbia in *United States v. Philip Morris USA Inc.*, 449 F. Supp. 2d 1 (D.D.C. 2006). These comments asserted that claims suggesting a product made or derived from tobacco provides “satisfaction,” a “nicotine fix,” or “pleasure” are claims about the pharmacological effects of nicotine, and suggested that products bearing such claims should be regulated as medical products. Another comment suggested that FDA treat such claims as evidence of an article’s intended use as a drug.

(Response) The Agency disagrees with any suggestion that FDA is authorizing fraudulent claims. The purpose of this rule is to increase clarity regarding the types of intended uses and supporting evidence that make a product made or derived from tobacco subject to regulation as a tobacco product versus as a drug, device, or combination product. Regardless of the outcome of that jurisdictional question, the FD&C Act prohibits false and misleading claims in FDA-regulated labeling and advertising (see sections 502(a), 502(n), 502(r), 903(a)(1), and 903(a)(7) (21 U.S.C. 352(a), 352(n), 352(r), 387c(a)(1), and 387c(a)(7))). Similarly, in concluding that certain claims involving “satisfaction,” “pleasure,” “enjoyment,” and “refreshment” are claims about the pharmacological effects of nicotine that were commonly and legally made prior to March 21, 2000, FDA is not authorizing such claims. Rather, the Agency is explaining in more detail its understanding of how the D.C. Circuit’s interpretation of the Tobacco Control Act in *Sottera* affects the jurisdictional determination. As documented in the annex to the 1996 rule, products made

¹² See <http://www.fda.gov/newsevents/publichealthfocus/ucm252360.htm>.

or derived from tobacco were customarily marketed at that time for the pharmacological effects of nicotine, using phrases such as “smoking pleasure” and “satisfaction.”¹³ Such terms, as discussed in section II.C, are recognized euphemisms for the delivery of a pharmacologically active dose of nicotine to satisfy addiction—an intended structure/function effect—and were commonly and legally made claims for customarily marketed cigarettes and smokeless tobacco products prior to the date of the *Brown & Williamson* decision. Thus, FDA continues to believe that *Brown & Williamson*, as extended and applied to the Tobacco Control Act by *Sottera*, precludes the Agency from regulating products made or derived from tobacco as medical products on the basis of such claims.

E. Comments and Responses Regarding Consumer Confusion

(Comment 10) Comments expressed different opinions about the intended uses of products made or derived from tobacco, primarily e-cigarettes, and whether consumers are able to distinguish products that are intended for medical use from products marketed for other uses. Several comments asserted that e-cigarettes are not intended for use as smoking cessation aids, whereas many other comments asserted that e-cigarettes are vital smoking cessation aids. One comment averred that there is no evidence that consumers are confusing e-cigarette products with products that are marketed, labeled, and sold as medical products. Two other comments, however, cited studies that purportedly show many consumers believe e-cigarettes and smokeless tobacco products are effective smoking cessation aids.

(Response) FDA continues to believe that there is consumer confusion about the intended uses of marketed products made or derived from tobacco. Evidence that at least some consumers are confused about the intended uses of products can be found in the comments themselves. We received many comments from individuals who began using e-cigarettes because they believed that e-cigarettes would help them quit smoking. Moreover, as noted in two comments, studies have shown that many consumers are using e-cigarettes to attempt to quit smoking (Ref. 2) despite the fact that no e-cigarette has been approved for use as a smoking cessation aid. We believe that the rule will help to mitigate this confusion and

help ensure that consumers do not mistakenly use tobacco products, which are inherently dangerous, for medical uses.

(Comment 11) Several comments expressed concern that this regulation would increase consumer confusion by not allowing ENDS manufacturers to communicate truthful claims to their customers. These comments believed that the regulation would harm, rather than protect public health. Comments also expressed concern that ENDS manufacturers would not be able to state that e-cigarettes could be used for smoking cessation, and ENDS manufacturers would be forced to deceptively market their products. Several comments discussed FDA’s authority under section 911 of the FD&C Act to require premarket authorization of modified risk tobacco products. Some commenters urged FDA to implement section 911 in a manner that does not restrict truthful and non-misleading speech.

(Response) FDA disagrees with concerns that ENDS manufacturers will not be able to make claims that accurately represent their products’ intended uses. Manufacturers are free to decide how they would like to market their products, but must meet the appropriate statutory and regulatory standards governing the regulatory pathway they choose. Additionally, the proposed rule would not force e-vapor manufacturers to “deceptively” market their products or risk “being categorized as unapproved medical products and forced off the market.” FDA believes that manufacturers of products made or derived from tobacco, including e-vapor manufacturers, could make many types of claims under the rule that would subject them only to tobacco product jurisdiction; the preamble to the proposed rule provides examples of such tobacco product claims, but is not intended to be an exhaustive list. Moreover, section 911 of the FD&C Act allows manufacturers to make truthful and non-misleading modified risk claims with appropriate authorization. Manufacturers that have data to substantiate modified risk claims for a particular product can submit an MRTP application so that FDA can determine whether the product meets the statutory standard and if appropriate, can issue an order authorizing it to be marketed as an MRTP.

FDA continues to believe that smoking cessation claims require close examination. FDA has long considered claims related to smoking cessation in the context of curing or treating nicotine addiction to be evidence of intended uses that confer drug or device

jurisdiction. Manufacturers that have data to substantiate cessation claims for a particular product can submit an NDA so that FDA can determine whether the product meets the statutory standard and can approve the application, if appropriate. The rule’s treatment of smoking cessation claims as generally suggestive of a therapeutic purpose means that products marketed with such claims would generally be regulated as medical products. Treating these products as medical products will help assure that such claims are supported by data demonstrating that a product is safe and effective for this intended use. Otherwise, consumers may attempt to quit smoking with unproven products, threatening both individual consumers’ health and the public health generally.

(Comment 12) At least one comment suggested that a disclaimer stating that FDA has not approved e-cigarettes for medical use would be sufficient to mitigate any confusion over the intended use of such products. In contrast, several comments argued that disclaimers are insufficient to mitigate any confusion over whether a product made or derived from tobacco is intended for medical use. One of these comments suggested that disclaimers would foster confusion because they often contain statements that conflict with claims that are made elsewhere in the marketing materials and labeling for e-cigarettes and other products.

(Response) FDA does not believe that disclaimers will be sufficient in most cases to mitigate consumer confusion about whether a product made or derived from tobacco is intended for medical use. Studies have shown that disclaimers are frequently ineffective and can actually increase confusion for consumers (Refs. 3 and 4). Thus, where products making claims related to quitting smoking also attempt to disclaim that use in some way, FDA intends to view such disclaimers skeptically.

(Comment 13) Several comments suggested that excluding claims that are euphemisms for the delivery of a pharmacologically active dose of nicotine and those that suggest a tobacco product provides an alternative way of obtaining the effects of nicotine from regulation under the Agency’s drug/device authorities would create consumer confusion because such claims may not be distinguishable from drug or device claims related to the symptoms of nicotine addiction or could be perceived as modified risk claims.

(Response) As stated previously in this section, FDA has determined that

¹³ See 61 FR 44619 at 44648, August 28, 1996.

the types of claims described in these comments generally do not bring products made or derived from tobacco within its drug and device authority. We acknowledge that there are circumstances in which consumers might be confused by such claims. A consumer might be confused about a product's intended use, for example, if a "satisfying smoking alternative" claim is accompanied by other text or images indicating that the product can help smokers reduce withdrawal symptoms associated with quitting smoking. In that case, the product may be subject to regulation as a drug or device. But as a general matter, FDA does not expect claims that use euphemisms for the delivery of a pharmacologically active dose of nicotine or suggest that a tobacco product provides an alternative way of obtaining the effects of nicotine to cause much confusion. FDA will continue to monitor consumer perception and will take appropriate regulatory action if evidence accumulates showing that consumers are confused by such claims.

F. Changes to Existing "Intended Use" Regulations

FDA is also making changes to §§ 201.128 and 801.4. First, the final rule inserts a reference to § 1100.5 to clarify the interplay between these regulations and the final rule. Second, as discussed previously, the Agency does not, absent extraordinary circumstances, regard a firm as intending an unapproved new use for an approved or cleared medical product based solely on that firm's knowledge that the product was being prescribed or used by doctors for such use (see Ref. 1). Accordingly, FDA is taking this opportunity to amend §§ 201.128 and 801.4 to better reflect FDA's interpretation and application of these regulations. These changes do not reflect a change in FDA's approach regarding evidence of intended use for drugs and devices. These clarifying changes to the intended use regulations apply to drugs and devices generally, and not just to products made or derived from tobacco and intended for human consumption.

III. Legal Authority

Among the provisions that provide authority for this final rule are sections 201, 503(g), and 701(a) of the FD&C Act (21 U.S.C. 321, 353(g), 371(a)). Section 201 of the FD&C Act defines "drug," "device," and "tobacco product" (subsections (g)(1), (h), and (rr)(1) to (rr)(2)), and section 503(g) of the FD&C Act provides that combination products are those "that constitute a combination

of a drug, device, or biological product." Under section 701(a) of the FD&C Act, FDA has authority to issue regulations for the efficient enforcement of the FD&C Act. FDA believes this rule will assist the Agency with efficient enforcement of the FD&C Act because it provides increased clarity to stakeholders, particularly regulated entities, regarding FDA's interpretation of which regulatory framework will apply to particular products and will help consumers differentiate between products that are intended for medical use and products marketed for other uses.

FDA regulates the manufacture, sale, and distribution of drugs, devices, combination products, and tobacco products under the authority of the FD&C Act. Although the regulatory pathways for each product category differ, each product category is subject to similar types of regulatory requirements. For example, FDA's regulatory authority for drugs, devices, combination products, and tobacco products includes authority to review and authorize the marketing of new products as well as to oversee product labeling and advertising. Thus, whether a product meets the definition of a drug, device, or tobacco product under the FD&C Act and this final regulation, the manufacture, sale, and distribution of the product are subject to the applicable requirements of the FD&C Act.

(Comment 14) At least one comment stated that the proposed rule exceeds FDA's authority.

(Response) FDA disagrees. As described in the proposed rule, FDA has the authority to regulate as a medical product any product that meets the definition of drug, device, or combination product in the FD&C Act, including cigarettes and other tobacco-derived products unless their intended use was the subject of claimed structure/function effects of nicotine commonly and legally claimed in the marketing of cigarettes and smokeless tobacco products prior to March 21, 2000. FDA also has tobacco product jurisdiction over all other products made or derived from tobacco intended for human consumption. The final rule seeks to clarify how products containing nicotine derived from tobacco will be regulated.

IV. Description of the Final Rule

A. Exclusion From Tobacco Product Regulation (§ 1100.5)

As described in section II, the goal of this final rule is to provide clarity regarding the types of intended uses of products made or derived from tobacco

that may fall within the drug/device definitions and therefore cause those products to be regulated as medical products under the FD&C Act. In describing these intended uses, the final rule aims to assist regulated entities in the research and development of products made or derived from tobacco by clarifying which regulatory framework (*i.e.*, the drug/device frameworks or the tobacco framework) will apply to particular products based on their intended use. The final rule is also intended to reduce consumer confusion regarding which products are intended for medical use (*i.e.*, as a drug, device, or combination product) and which may be marketed for recreational or other purposes. The final rule reflects the legal and regulatory considerations discussed in sections I and II, including the *Brown & Williamson* and *Sottera* holdings. Finally, the final rule amends the existing intended use regulations for drugs and devices by inserting in §§ 201.128 and 801.4 a reference to § 1100.5 to clarify the interplay among these regulations and this final rule.

The codified language states the circumstances in which a product made or derived from tobacco would be excluded from the definition of "tobacco product" and be subject to regulation as a drug, device, or combination product. Under the final rule, this exclusion could apply in two circumstances: (1) If the product is intended for use in the diagnosis of disease or other conditions, or in the cure, mitigation, treatment, or prevention of disease or (2) if the product is intended to affect the structure or any function of the body in any way that is different from effects related to nicotine that were commonly and legally claimed in the marketing of cigarettes and smokeless tobacco products prior to March 21, 2000.

Conceptually, the codified language follows the disease prong and the structure/function prong (with certain limitations) of the drug and device definitions.

1. Disease Prong

Section 1100.5(a) follows the disease prong. The paragraph elaborates on the statutory language for the disease prong by describing several categories of intended uses that would cause a product made or derived from tobacco to be regulated as a medical product. The categories identified in § 1100.5(a) are not intended to constitute an exhaustive list; nor are these categories necessarily mutually exclusive. In addition, these categories are intended to capture concepts, rather than to suggest that the use (or omission) of

particular words is dispositive with respect to FDA's medical product jurisdiction. These categories are included as examples of types of intended uses that we believe are particularly relevant for products made or derived from tobacco and that fall within the disease prong.

2. Structure/Function Prong

Section 1100.5(b) follows the structure/function prong, but with some changes to reflect the court decisions in *Brown & Williamson* and *Sottera*. Specifically, the language in § 1100.5(b) beginning "in any way that is different from . . ." reflects the fact that, under *Brown & Williamson* and *Sottera*, intended structure/function effects related to nicotine will not confer drug/device jurisdiction to the extent they reflect claims that were commonly and legally made for "customarily marketed" tobacco products before the date of the *Brown & Williamson* decision. This language also references "the marketing of cigarettes and smokeless tobacco products" because these were the product categories considered by the Supreme Court in *Brown & Williamson*. March 21, 2000, is the date of the Supreme Court's ruling in *Brown & Williamson*.

FDA believes that it is important to include a date limitation in § 1100.5(b) to provide greater certainty about the universe of historic structure/function claims the Agency intends to consider when determining whether an intended use of a product made or derived from tobacco is different from effects related to nicotine that were commonly and legally claimed for "customarily marketed" cigarettes and smokeless tobacco products. This bright-line limitation also avoids creating a shifting standard that will cause confusion among consumers and regulated industry. FDA intends to look to the marketing of cigarettes and smokeless tobacco products prior to March 21, 2000, to determine the types of structure/function claims that constitute customary tobacco product marketing. Cigarettes and smokeless tobacco products provide a reasonable proxy for determining how nicotine-related structure/function claims were conveyed in tobacco product marketing generally. The codified language, however, applies to all products made or derived from tobacco, not just cigarettes and smokeless tobacco.

3. Intended Use

As noted in section I.B.2, intended use may be determined from any relevant source and is not based solely on claims made in a product's labeling

or advertising materials. For purposes of illustration, however, claims such as "treatment of tobacco dependence," "wean yourself off of nicotine," "for people who wish to quit smoking," "stop smoking aid," "prevent relapse," or "stay quit" generally will bring a product within the intended uses described in § 1100.5(a).¹⁴

Claims such as "to reduce withdrawal symptoms," "helps reduce symptoms including things like [list of withdrawal symptoms]" and "relieve withdrawal symptoms when you are prohibited with an intended use for relief of nicotine withdrawal symptoms, and would also fall within the intended uses described in § 1100.5(a). Withdrawal symptoms that are medically recognized as relevant to nicotine addiction may be determined by reference to standard classification and diagnostic tools such as the Diagnostic and Statistical Manual of Mental Disorders, Fifth Edition (DSM-5) and the tenth revision of the International Statistical Classification of Diseases and Related Health Problems (ICD-10).

Certain structure/function claims that were not commonly and legally made in the marketing of cigarettes and smokeless tobacco products before March 21, 2000, such as "promotes weight loss," would fall within the intended uses described in § 1100.5(b).

In contrast to the examples of medical product intended use claims given in the previous paragraphs, certain other claims made about products made or derived from tobacco would not on their own create an intended use that falls within the codified language.¹⁵ For example, claims such as "smoke free, spit free tobacco pleasure" or "full taste and satisfaction" may be associated with the marketing of tobacco products for refreshment, satisfaction, or enjoyment (which, as discussed in section II.C, are recognized euphemisms for the delivery of a pharmacologically active dose of nicotine to satisfy addiction—an intended structure/function effect—and were commonly and legally made claims for customarily marketed cigarettes and smokeless tobacco products prior to the date of the

¹⁴ These and other specific claims mentioned in this document are provided solely as examples. Other claims not mentioned in this document could also reflect an intended use described in the codified language. In addition, as discussed elsewhere in this document, FDA intends to consider the full context of claims for products made or derived from tobacco in making jurisdictional determinations.

¹⁵ As previously, the specific claims mentioned in this paragraph are provided solely as examples. Other claims not mentioned here could fall outside the intended uses described in § 1100.5.

Brown & Williamson decision). Claims such as "great tasting tobacco satisfaction when you can't smoke," "satisfying tobacco alternative," or "provides the look, feel, and experience of a cigarette" may be associated with the marketing of tobacco products as smoking substitutes. And claims such as "healthier alternative to smoking," "contains less nicotine than [another product]," or "reduces your risk of lung cancer compared to cigarettes" might be associated with MRTPs, as discussed in section II.A.2.

For products made or derived from tobacco that are intended for investigational use, FDA will consider whether the product is being used in a clinical investigation for an intended use that brings it within the codified language. If it is, the product would meet the definition of "investigational new drug" in § 312.3 (21 CFR 312.3), and the clinical investigation would be subject to the applicable requirements in part 312 (21 CFR part 312).¹⁶ Products made or derived from tobacco that are intended for investigational use but that do not meet the definition of "investigational new drug" in § 312.3 may be subject to regulation as investigational tobacco products.

B. Existing "Intended Use" Regulations (§§ 201.128 and 801.4)

In the proposed rule, FDA proposed certain changes to FDA's existing regulations describing the types of evidence that may be considered in determining a medical product's intended uses (see § 201.128 (drugs), § 801.4 (devices)). These changes were intended to revise the language of the regulations to better reflect how the Agency applies them. As explained in the preamble to the proposed rule, these amendments were intended to clarify FDA's existing position on intended use, not to change it (80 FR 57756 at 57761). Some comments, however, misunderstood FDA's proposal, particularly with respect to the proposed deletion of the last sentence of both regulations (§§ 201.128 and 801.4). FDA has now determined that its clarification goals can be better achieved by amending the last sentence of each regulation, rather than deleting them.

Accordingly, the last sentence of § 201.128 is amended to provide that if

¹⁶ Note that studies performed to meet statutory requirements in chapter IX of the FD&C Act relating to the impact of tobacco products on cessation behavior are not required to be designed as clinical investigations subject to the investigational new drug application requirements in part 312. Whether a study is considered a clinical investigation of an "investigational new drug" would depend on the study's design and specific objectives.

the totality of the evidence establishes that a manufacturer objectively intends that a drug introduced into interstate commerce by him is to be used for conditions, purposes, or uses other than ones for which it is approved (if any), he is required, in accordance with section 502(f) of the FD&C Act, or, as applicable, duly promulgated regulations exempting the drug from the requirements of section 502(f)(1), to provide for the drug adequate labeling that accords with such other intended uses.

Similarly, the last sentence of § 801.4 is amended to provide that if the totality of the evidence establishes that a manufacturer objectively intends that a device introduced into interstate commerce by him is to be used for conditions, purposes, or uses other than ones for which it has been approved, cleared, granted marketing authorization, or is exempt from premarket notification requirements (if any), he is required, in accordance with section 502(f) of the FD&C Act, or, as applicable, duly promulgated regulations exempting the device from the requirements of section 502(f)(1), to provide for the device adequate labeling that accords with such other intended uses.

As described in the preamble to the proposed rule, FDA's longstanding position is that, in determining a product's intended use, the Agency may look to any relevant source of evidence. This position has solid support in the case law (see, e.g., *United States v. Storage Spaces Designated Nos. 8 and 49*, 777 F.2d 1363, 1366 (9th Cir. 1985); *Action on Smoking and Health v. Harris*, 655 F.2d 236, 239 (D.C. Cir. 1980); *Nat'l Nutritional Foods Ass'n v. Matthews*, 557 F.2d 325, 334 (2d Cir. 1977); *United States v. Article of 216 Cartoned Bottles, "Sudden Change,"* 409 F.2d 734, 739 (2d Cir. 1969); *V.E. Irons, Inc. v. United States*, 244 F.2d 34, 44 (1st Cir. 1957); *Hanson v. United States*, 417 F. Supp. 30, 35 (D. Minn.), *aff'd*, 540 F.2d 947 (8th Cir. 1976)). This position is unchanged.

In the preamble to the proposed rule, FDA also stated "the Agency would not regard a firm as intending an unapproved new use for an approved or cleared medical product based solely on the firm's knowledge that such product was being prescribed or used by doctors for such use" (80 FR 57756 at 57757). Health care providers prescribe or use approved/cleared medical products for unapproved uses when they judge that the unapproved use is medically appropriate for their individual

patients.¹⁷ In these limited circumstances, FDA does not consider a firm's knowledge that a health care provider has used or prescribed its approved/cleared medical product for an unapproved use, by itself, as sufficient to establish the intended use element of a prohibited act related to the lack of premarket approval/clearance of that use or the lack of adequate directions for use.¹⁸ Instead, FDA examines all relevant evidence, which could include, among other facts, a manufacturer's knowledge that health care providers are prescribing or using its approved/cleared medical product for an unapproved use, to determine whether there is sufficient evidence to establish a new intended use.

Before FDA issued the proposed rule, some drug sponsors had expressed concern with the last sentence of § 201.128. That sentence provided, "if a manufacturer knows, or has knowledge of facts that would give him notice, that a drug introduced into interstate commerce by him is to be used for conditions, purposes, or uses other than the ones for which he offers it, he is required to provide adequate labeling for such a drug which accords with such other uses." (Section 801.4 contains comparable language.) They asserted that, literally read, this sentence would require that, whenever a manufacturer knew that its approved drug was being prescribed for an unapproved use, it would be required to alter the labeling of a drug to provide adequate directions for an off-label use. They further asserted that this addition to FDA-approved labeling would transform the

¹⁷ FDA generally does not seek to interfere with the exercise of the professional judgment of health care providers in prescribing or administering, for unapproved uses for individual patients, most legally marketed medical products. This longstanding position has been codified with respect to devices (see 21 U.S.C. 396). While FDA generally does not seek to interfere with the exercise of the professional judgment of veterinarians, certain unapproved uses of drugs in animals are not permitted and result in the drug being deemed unsafe under section 512 of the FD&C Act (see section 512(a)(4) and (5) of the FD&C Act (21 U.S.C. 360b(a)(4) and (5)) and 21 CFR part 530).

¹⁸ See 21 U.S.C. 331(d), 351(f), 352(f)(1), 355(a). That position does not apply to products that are not already legally marketed as medical products for at least one use. Similarly, nothing in this regulation or preamble is intended to impact the application of 21 U.S.C. 333(e), which, subject to limited exceptions, penalizes anyone who "knowingly distributes, or possesses with intent to distribute, human growth hormone for any use in humans other than the treatment of disease or other recognized medical conditions, where such use has been authorized by the Secretary of Health and Human Services under section 505 and pursuant to the order of a physician." Further, Congress or the Agency could promulgate other provisions regarding specific products or classes of medical products that recognize knowledge as sufficient evidence of a particular element of a prohibited act.

drug into a new drug that cannot be sold without first obtaining approval of a supplemental new drug application pursuant to 21 U.S.C. 321(p) and 355(a). From this they concluded that, under the last sentence of § 201.128, a manufacturer's mere knowledge of an unapproved use of its approved drug automatically triggers requirements for new labeling that in turn render distribution of that approved product unlawful without approval of a supplemental NDA.

In the proposed rule, the proposed deletion of the last sentence of §§ 201.128 and 801.4 was intended to clarify the following: Where a manufacturer is distributing an approved or cleared medical product, evidence that the manufacturer knows that health care providers are prescribing or using that approved or cleared medical product for an unapproved use would not, by itself, automatically trigger obligations for the manufacturer to provide labeling for the uses for which the health care providers are prescribing or using the product.

FDA's clarification of its position and proposed deletion of the last sentence of these regulations in the proposed rule did not suggest that FDA sought to otherwise narrow the scope of evidence of intended use that FDA may consider. However, some of the comments misunderstood the proposal. For example, some comments asserted—incorrectly—that FDA intended to eliminate manufacturer knowledge altogether as a source of evidence of intended use.

FDA has determined that its clarification goals can be better achieved by amending the last sentence of each regulation, rather than by deleting them. The amended language no longer suggests that a manufacturer's mere knowledge that its approved or cleared product was being prescribed or used for an unapproved use was sufficient to trigger the requirement to provide adequate labeling. In addition, this amended language provides further clarification by reminding manufacturers that, where the totality of evidence is sufficient to establish a new intended use for a medical product, relevant provisions of the FD&C Act and its implementing regulations will be triggered.

In addition, these amendments reflect FDA's longstanding position, upheld by the courts, that FDA may consider a variety of direct and circumstantial evidence to establish intended use. For example, FDA may also take into account any circumstances surrounding the distribution of the product or the context in which it is sold (see, e.g.,

United States v. Travia, 180 F. Supp. 2d 115, 119 (D.D.C. 2001)). In the context of medical products, generally, circumstantial evidence often ensures that FDA is able to hold accountable firms that attempt to evade FDA medical product regulation by avoiding making express claims about their products.

C. Comments and Responses Regarding Intended Use

(Comment 15) Some comments stated that this clarification of the Agency's interpretation and application of the intended use regulations (§§ 201.128 and 801.4) was helpful because it clarifies a point that has been confusing to industry. Another comment stated that the proposed changes to §§ 201.128 and 801.4 provide less information to manufacturers, not more clarity.

(Response) FDA agrees that clarification was warranted because of the apparent confusion over this point. With this final rule, the Agency is making additional changes to the codified language and providing more explanation to further clarify the meaning of the regulations.

(Comment 16) Some comments asserted that FDA should eliminate another reference to "knowledge" in § 201.128. Before the amendments implemented by this rule, both §§ 201.128 and 801.4 contained the following sentence: "[Intended use] may be shown by the circumstances that the article is, with the knowledge of such persons or their representatives, offered and used for a purpose for which it is neither labeled nor advertised." The comments recommended that FDA delete either the phrase "with the knowledge of such person or their representatives" or the entire sentence from the regulation. At least one comment asserted that its recommended change to delete that phrase is consistent with FDA's intent in amending the regulations.

(Response) FDA disagrees with these comments. It was not the Agency's intention to entirely remove manufacturer knowledge from the types of evidence that may be considered in determining a product's intended use. FDA's proposed and final rule not only retained this sentence containing the other reference to "knowledge" in the text of both §§ 201.128 and 801.4, but also added "for example" to emphasize that FDA may rely on *any* relevant source of evidence of intended use. Accordingly, the amended version of this sentence (in both regulations) now reads that "intended use may be shown, for example, by circumstances in which the article is, with the knowledge of such person or their representatives,

offered and used for a purpose for which it is neither labeled nor advertised."

In the context of medical products, generally, varied types of evidence, including evidence of a manufacturer's knowledge that a product is being used for an unapproved use, often enables FDA to pursue medical product manufacturers who attempt to evade FDA jurisdiction by avoiding express claims with respect to their products. In addition, as courts have recognized, evidence of a manufacturer's knowledge that a product is being used for an unapproved use can also be used to corroborate other evidence of intended use (see, e.g., *United States v. An Article of Device Toftness Radiation Detector*, 731 F.2d 1253, 1257 (7th Cir. 1984) (intended use established in part by witness testimony that device had been used to treat patients, together with other evidence regarding a training program and financial arrangements offered by the defendant).

FDA's intention in proposing to amend §§ 201.128 and 801.4 was more focused than these comments suggest. First, FDA's statement about not relying solely on manufacturer knowledge was limited to *approved and cleared products* because health care practitioners can generally use and prescribe such products for unapproved uses. That position does not apply to products that are not already legally marketed as medical products for at least one use. Second, manufacturer knowledge may be relevant to intended use, but the Agency would not bring an enforcement action based *solely* on manufacturer knowledge that an approved/cleared product was being prescribed or used by doctors for an unapproved use. If there is other evidence of intended use, FDA may consider manufacturer knowledge as well as other evidence. Third, FDA proposed deleting, and is now amending, the last sentence of the regulations to avoid the potential misinterpretation that a manufacturer's knowledge of an unapproved use of an approved/cleared medical product, without more, automatically triggers requirements for that manufacturer to provide additional labeling.

(Comment 17) At least one comment suggested that the First Amendment requires the exclusion of knowledge as a category of evidence that may be considered as evidence of intended use.

(Response) FDA disagrees. The First Amendment protects, among other things, freedom of speech, and knowledge and speech are not coextensive. A variety of direct and circumstantial evidence can establish a

person's knowledge; a person's speech can be one source—but is not the only source—of evidence of that person's knowledge. Thus, the inclusion of evidence of knowledge within the types of evidence that may be relevant to establishing intended use does not in itself implicate the First Amendment.

(Comment 18) At least one comment asserted that, under relevant statutory text, legislative history, and case law, evidence of intended use is limited to a manufacturer's promotional claims. Another comment similarly proposed that the Agency focus principally on statements in the product labeling to establish intended use (using advertising material only to a lesser extent). In contrast, still another comment urged FDA to consider manufacturer statements in a variety of contexts, including advertising; press statements; official or unofficial statements made by corporate officials; statements made in social media and other online arenas; and statements made in point-of-sale locations (both traditional retail and online).

(Response) FDA disagrees with the comments urging FDA to narrow the scope of evidence it will consider in determining intended use, and FDA agrees with the comment asserting that evidence relevant to intended use should include a manufacturer's statements in a variety of contexts. Under the former set of comments, FDA could not consider, for example, evidence of a manufacturer's marketing plans or directions to its sales force, evidence of the well-known uses and abuses of its products, and circumstantial evidence relating to the sale and distribution of the product. These comments' suggested narrow view of evidence of intended use would not only create a loophole for manufacturers and distributors to evade FDA oversight of the marketing of approved/cleared medical products for unapproved uses but would also open the door to the marketing of wholly unapproved medical products—all to the detriment of the public health.

As courts have recognized, "[s]elf-serving labels cannot be allowed to mask the vendor's true intent as indicated by the overall circumstances" (*United States v. Storage Spaces Designated Nos. 8 and 49*, 777 F.2d 1363, 1366 n.5 (9th Cir. 1985)). As one court explained, "[a] disease claim made with a wink and a nudge is still a disease claim. To hold otherwise would create an 'obviously wide loophole' that would defeat the 'high purpose of the Act to protect consumers.'" (*United States v. Cole*, 84 F. Supp. 3d 1159, 1166 (D. Or. 2015)

(citation omitted)). Examples of cases where the government has relied on circumstantial evidence to establish intended use include situations where products were labeled as herbal supplements, leather cleaner, incense, potpourri, bath salts, or 'for research purposes only,' but in fact contained a pharmacological ingredient such as the active ingredient from approved erectile dysfunction and hair-loss products, albuterol, steroids, or street-drug pharmacological agents ("synthetic marijuana" or "imitation cocaine"). Similar examples for devices include products labeled as laser pointers, massagers, exercise equipment or diving chambers, but actually intended to treat serious conditions such as cancer, HIV, and autism. The government has also considered manufacturers' directions to their sales forces in determining intended use.

Nothing in the statute requires the narrow scope the comments suggest. As four justices of the Supreme Court recognized in rejecting the arguments reflected in these comments, "The [FD&C Act] . . . does not use the word 'claimed'; it uses the word 'intended'" (*FDA v. Brown & Williamson Tobacco Corp.*, 529 U.S. 120, 170 (2000) (dissenting opinion) (the majority declined to resolve the issue, *id.* at 131–32)). The language of the regulations is consistent with the statutory framework. As one court recently explained, "[N]owhere does the regulation state that such statements or claims cannot be used to show objective intent unless they were published to the marketplace. To see the absurdity of defendants' argument, consider a hypothetical in which a medical device manufacturer sells device D, which is approved for use A but frequently prescribed by doctors for off-label use B. If the manufacturer creates a bumper sticker with the words 'I intend D to be used for B: Prescribe D for B Today,' by defendants' logic that poster is inadmissible evidence of subjective intent so long as it sits in his briefcase, but admissible evidence of objective intent once he sticks it on his car. The Court is not persuaded that there is a legally relevant distinction here; in either scenario, the defendant has manifested into the physical world 'oral or written statements' that may be weighed as evidence of objective intent" (*United States v. Vascular Solutions, Inc.*, 181 F. Supp. 3d 342, 347 (W.D. Tex. 2016)).

FDA also disagrees that the case law requires that evidence of intended use be limited to marketing representations by firms, to the exclusion of other types of evidence such as internal firm

documents and circumstances surrounding the sale of products. Courts have repeatedly held that intended use is determined by looking to all relevant evidence, including statements and circumstances surrounding the manufacture and distribution of a medical product (see, e.g., *United States v. Article of 216 Cartoned Bottles, "Sudden Change,"* 409 F.2d 734, 739 (2d Cir. 1969) ("It is well settled that the intended use of a product may be determined from its label, accompanying labeling, promotional material, advertising and any other relevant source.") (citations omitted); *V.E. Irons, Inc. v. United States*, 244 F.2d 34, 44 (1st Cir. 1957) (observing that a court is "free to look to all relevant sources in order to ascertain what is the 'intended use' of a drug"). As explained by one court: "Whether a product's intended use makes it a device depends, in part, on the manufacturer's *objective* intent in promoting and selling the product. All of the circumstances surrounding the promotion and sale of the product constitute the 'intent'. It is not enough for the manufacturer to merely say that he or she did not 'intend' to sell a particular product as a device. Rather, the actual circumstances surrounding the product's sale . . . determine the 'intended' use of the product as a device under the Act" (*United States v. 789 Cases, More or Less, of Latex Surgeons' Gloves*, 799 F. Supp. 1275, 1285 (D. Puerto Rico 1992) (emphasis in original) (internal citations omitted)).

Indeed, courts have rejected the comments' proposition that evidence of intended use is limited to a manufacturer's public claims concerning a device or drug (see *Nat'l Nutritional Foods Ass'n v. Matthews*, 557 F.2d 325, 334 (2d Cir. 1977) ("In determining whether an article is a 'drug' because of an intended therapeutic use, the FDA is not bound by the manufacturer's subjective claims of intent but can find actual therapeutic intent on the basis of objective evidence. Such intent also may be derived or inferred from labeling, promotional material, advertising, and any other relevant source.") (internal citation and quotations omitted); *United States v. Travia*, 180 F. Supp. 2d 115, 119 (D.D.C. 2001) ("Labeling is not exclusive evidence of the sellers' intent. Rather, as the very language quoted by the defendants themselves states, 'it is well established 'that the intended use of a product, within the meaning of the [FD&C Act], is determined from its label, accompanying labeling, promotional claims, advertising, and

any other relevant source' . . . even *consumer* intent could be relevant, so long as it was pertinent to demonstrating the seller's intent . . . [I]f the government's allegations are true, the sellers did not need to label or advertise their product, as the environment provided the necessary information between buyer and seller. In this context, therefore, the fact that there was no labeling may actually bolster the evidence of an intent to sell a mind-altering article without a prescription—that is, a misbranded drug.") (citations omitted); *United States v. Vascular Solutions, Inc.*, 181 F. Supp. 3d 342, 347 (W.D. Tex. 2016) ("Even were this Court at liberty to depart from the Fifth Circuit's position, however, it would still deny defendants' motion; though [21 CFR] § 801.4 indeed says that 'objective intent may, for example, be shown by labeling claims, advertising matter, or oral or written statements by such persons or their representatives,' nowhere does the regulation state that such statements or claims cannot be used to show objective intent unless they were published to the marketplace."); see also *United States v. Storage Spaces Designated Nos. 8 and 49*, 777 F.2d 1363, 1366 n.5 (9th Cir. 1985) (concluding that products innocuously labeled as "incense" and "not for drug use" were in fact drugs where the "overall circumstances" demonstrated vendor's intent that products be used as cocaine substitutes); *United States v. An Article of Device Toftness Radiation Detector*, 731 F.2d 1253, 1257 (7th Cir. 1984) (intended use established in part by witness testimony that device had been used to treat patients, together with other evidence regarding a training program and financial arrangements offered by the defendant); *United States v. Undetermined Quantities of an Article of Drug Labeled as "Exachol"*, 716 F. Supp. 787, 791 (S.D.N.Y. 1989) (explaining that "FDA is not bound by the vendor's subjective claims of intent" and that "[a]n article intended to be used as a drug will be regulated as a drug . . . even if the products labeling states that it is not a drug").

(Comment 19) At least two comments asserted that FDA should significantly contract its proposed definitions of "intended uses" because the First Amendment protects truthful speech. One comment stated that, under *Central Hudson Gas and Electric Corp. v. Public Services Commission*, 447 U.S. 557, 566 (1980), government regulation of truthful speech concerning a lawful activity violates the First Amendment unless government regulators can

establish that: (1) They have identified a substantial government interest; (2) the regulation directly advances that asserted interest; and (3) the regulation is no more extensive than is necessary to serve that interest. The comment then argued that a complete prohibition of truthful speech by manufacturers and their representatives concerning the off-label uses of a drug or device does not satisfy this test.

Similarly, another comment urged FDA to confirm that truthful and non-misleading speech cannot form the basis of a manufacturer's intended use of a medical product. That comment asserted that courts have recently held that enforcement actions based on truthful, non-misleading speech to health care professionals violates core First Amendment values, citing *United States v. Caronia*, 703 F.3d 149 (2d Cir. 2012) and *Amarin Pharma, Inc. v. FDA*, 119 F. Supp. 3d 196 (S.D.N.Y. 2015).

(Response) FDA is separately examining its rules and policies relating to firm communications regarding unapproved uses of approved/cleared medical products, with the goal of determining how best to integrate the significant and sometimes competing public health and safety interests served by FDA's regulatory approach related to unapproved uses of medical products with ongoing developments in science and technology, medicine, health care delivery, and constitutional law. To that end, FDA held a two-day public hearing on November 9 and 10, 2016, to obtain input on these issues, and created a docket for the submission of written comments (see, e.g., 81 FR 60299, Sept 1, 2016, announcing a public hearing and request for comments on Manufacturer Communications Regarding Unapproved Uses of Approved or Cleared Medical Products, available at: <http://www.fda.gov/NewsEvents/MeetingsConferences/Workshops/ucm489499.htm>). That examination is ongoing. In contrast, the purpose of amending §§ 201.128 and 801.4 in this rulemaking is to clarify the scope of these regulations in response to assertions by industry that they did not understand the meaning of the regulations in their previous form.

The broader policy questions and the related First Amendment issues are thus being considered in a separate proceeding. Nevertheless, it is important to note here that we do not agree with the assertion that the current case law allows FDA to consider speech as evidence of intended use only when it is false or misleading. Courts have held that the government's reliance on speech as evidence of intended use under the FD&C Act does not infringe

the right of free speech under the First Amendment based on Supreme Court precedent establishing that "[t]he First Amendment . . . does not prohibit the evidentiary use of speech to establish the elements of a crime or to prove motive or intent" (*Wisconsin v. Mitchell*, 508 U.S. 476, 489 (1993)). The D.C. Circuit applied that precedent in the context of the FD&C Act and held that "th[e] use of speech to infer intent, which in turn renders an otherwise permissible act unlawful, is constitutionally valid" and hence "it is constitutionally permissible for the FDA to use speech [by the manufacturer] . . . to infer intent for purposes of determining that [the manufacturer's] proposed sale . . . would constitute the forbidden sale of an unapproved drug" (*Whitaker v. Thompson*, 353 F.3d 947, 953 (D.C. Cir. 2004); see also *Flytenow, Inc. v. FAA*, 808 F.3d 882, 894 (D.C. Cir. 2015) (upholding "us[e of] speech (postings on Flytenow.com) as evidence that pilots are offering service that exceeds the limits of their certifications"). Courts applying that reasoning have found that the government's reliance on speech as evidence of intended use under the FD&C Act does not infringe the right of free speech under the First Amendment (see *United States v. Lebeau*, 654 Fed. App'x 826, 830–31 (7th Cir. 2016) (per curiam), petition for cert. filed, NO. 16–7125 (U.S. Oct. 13, 2016); *Whitaker v. Thompson*, 353 F.3d 947, 953 (D.C. Cir. 2004); *United States v. Article of Drug Designated B-Complex Cholinols Capsules*, 362 F.2d 923, 927 (3d Cir. 1966); *United States v. Cole*, 84 F. Supp. 3d 1159, 1166 (D. Or. 2015); *United States v. Regenerative Sciences, LLC*, 878 F. Supp. 2d 248, 255–56 (D.D.C. 2012), *aff'd*, 741 F.3d 1314 (D.C. Cir. 2014); *United States v. Livdahl*, 459 F. Supp. 2d 1255, 1268 (S.D. Fla. 2005); *United States v. Lane Labs-USA, Inc.*, 324 F. Supp. 2d 547, 579–80 (D.N.J. 2004); *United States v. General Nutrition, Inc.*, 638 F. Supp. 556, 562 (W.D.N.Y. 1986); see also *Spectrum Pharms., Inc. v. Burwell*, 824 F.3d 1062 (D.C. Cir. 2016) (manufacturer promotion of a generic drug for use approved for the sponsor but not for the generic may lead to enforcement action for misbranding)).

Although the district court in *Amarin Pharma, Inc. v. FDA* held that the *Caronia* decision foreclosed reliance (in the Second Circuit) on this doctrine in the context of an FDA enforcement action where the misbranding was based solely on truthful, non-misleading speech regarding the unapproved use of an approved drug, the Second Circuit

has more recently confirmed that "*Caronia* left open the government's ability to prove misbranding on a theory that promotional speech provides evidence that a drug is intended for a use that is not included on the drug's FDA-approved label" (*United States ex rel. Polansky v. Pfizer, Inc.*, 822 F.3d 613 n.2 (2d Cir. 2016)).

In addition, FDA's consideration of speech as evidence of intended use under its statutory and regulatory framework advances substantial public health interests relevant to analyses under *Central Hudson Gas & Electric Corp. v. Public Service Comm'n*, 447 U.S. 557, 563–64 (1980). The medical products FDA regulates have the potential to adversely impact public health and safety. Congress specifically developed the premarket review frameworks for medical products in response to public health tragedies¹⁹ and after determining that: (1) Exclusive reliance on postmarket remedies, such as enforcement actions for false or misleading labeling, is unacceptable as a public health strategy for medical products because it does not sufficiently prevent harm and injury to patients and (2) safety and effectiveness must be evaluated for each marketed intended use of a medical product to prevent the harm that occurs when patients are prescribed or use ineffective treatments and to ensure that the benefits of an intended use outweigh its risks. The premarket review requirements of the FD&C Act and the Public Health Service Act provide mechanisms to help ensure that protections are in place that will allow the public to obtain the benefits of these products while mitigating the risks. More specifically, FDA's statutory authorities, regulations, and implementation policies advance substantial public health interests including: Motivating the development of robust scientific data on safety and

¹⁹The Federal Food, Drug, and Cosmetic Act of 1938, which introduced the requirement that firms demonstrate a drug product to be safe before being marketed, followed the deaths of approximately 100 people from ingesting "Elixir Sulfanilamide," in which the lethal substance diethylene glycol was used as a solvent. Prior to 1938, there were no premarket requirements that mandated that the firm test its product's safety. The passage of the 1962 drug amendments was precipitated in part by the distribution of thalidomide, a sleeping pill that caused birth defects when taken by pregnant women. See W.F. Janssen article (Ref. 20). Significant problems with medical devices likewise preceded the Medical Device Amendments of 1976, including significant defects in cardiac pacemakers that led to 34 voluntary recalls involving 23,000 units, and serious side effects following implantation of intraocular lenses, including serious impairment of vision and the need to remove the eyes of some patients (*H.R. Rep. No. 94–853*, at 8 (1976)).

efficacy;²⁰ maintaining the premarket review process for safety and efficacy of each intended use in order to prevent harm, protect against fraud, misrepresentation, and bias, and prevent the diversion of healthcare resources toward ineffective treatments;²¹ ensuring required labeling is accurate and informative; protecting the integrity and reliability of promotional information regarding medical product uses; protecting human subjects receiving experimental treatments; ensuring informed consent; maintaining incentives for clinical trial participation; protecting innovation incentives, including statutory grants of exclusivity; and promoting the development of products for underserved patients.

At the same time, health care providers also prescribe and use approved/cleared medical products for unapproved uses when they judge that the unapproved use is medically appropriate for their individual patients.

²⁰ See R. Eisenberg article (Ref. 11) (“By requiring that firms conduct rigorous clinical trials before bringing their products to market and before making promotional claims for their products, the FDA plays an important structural role in promoting a valuable form of biomedical R&D that private firms are undermotivated to perform on their own.”); A. Kesselheim and M. Mello article (Ref. 12) (“There [would] be no need for companies to design these studies to meet the FDA’s standards for methodological rigor if the companies have no intention of submitting an application for approval of the new use but rather intend to use the study findings only in marketing communications. Companies [could] design studies in ways that maximize the chances of obtaining a desired result and select which studies to emphasize in promotional communications, ignoring others that do not support their promotional message.”); R. Stafford article (Ref. 13) (Encouraging unapproved uses “undermines the incentives for manufacturers to perform rigorous studies—and instead subtly encourages them to game the system by seeking approval for secondary indications for which clinical trials are less complicated and less expensive. And off-label use may discourage evidence-based practice.”).

²¹ See, e.g., S. Kesselheim and J. Avorn article (Ref. 5) (“In the pharmaceutical market, determining whether a drug is safe and effective for an intended use can involve dozens of FDA scientists poring over extensive databases of studies in animals, toxicologic evaluations, and clinical trials. In essence, the agency acts as a learned intermediary on behalf of prescribing physicians.”); C. Good and W. Gellad article (Ref. 6) (“Even in situations where an off-label indication has been studied, pharmacokinetics, drug-disease interactions, and other safety considerations are unlikely to have been studied systematically to the level required during the FDA drug approval process. Likewise, few clinicians have the time or the motivation to review evidence for those off-label indications to arrive at a balanced assessment of the risks and benefits to support the appropriate use of that drug”); T. Eguale et al. article (Ref. 7) (summarizing study across cohort of 46,000 patients, and concluding that unapproved use of prescription drugs is associated with adverse drug events, particularly where those uses lack strong scientific evidence in the form of at least one randomized controlled trial).

Scientific or medical information regarding unapproved uses of products may in some cases help health care providers make better decisions regarding patients, such as where the patient has a disease for which there is no approved/cleared treatment, where the patient is part of a population that has not been studied, or where all approved/cleared treatments have been exhausted. However, in other cases, the use of approved/cleared medical products for unapproved uses has also been associated with significant harm to patients, fraud, and waste of health care resources.²²

FDA’s current implementation approach seeks to integrate the complex mix of numerous and sometimes competing interests at play while also taking into account First Amendment issues. For example, FDA has issued guidance documents to describe some of the circumstances when it would not consider a firm’s distribution of reprints, clinical practice guidelines, or reference texts regarding unapproved uses of approved/cleared medical products to be evidence of intended use; and issued a draft guidance on unsolicited requests, confirming FDA’s longstanding position that it would not consider a firm’s providing truthful, balanced, non-misleading, and non-promotional scientific or medical information (including information about an unapproved use) that is responsive to unsolicited requests for information about FDA-regulated medical products to be evidence of intended use. FDA takes the same view of firms’ presenting truthful and non-misleading scientific information about unapproved uses at medical or scientific conferences when done in non-promotional settings and not accompanied by promotional materials.

There are several points worth noting regarding the *Central Hudson* evaluation conducted by Second Circuit panel majority in *United States v. Caronia*. First, the panel majority’s analysis was limited to addressing the constitutionality of a specific “construction of the FDCA’s

²² See J. Avorn et al. article (Ref. 8) (“Considerable research shows that marketing can drive prescribing practices, which in turn can lead to adverse patient outcomes if those decisions are not evidence-based.”); A. Kapczynski article (Ref. 9) (“To be effective, a company’s marketing must also influence the prescribing patterns of physicians. . . . [T]here is a strong and specific association between pharmaceutical marketing and physician behavior, independent of the evidence supporting the products.”); R. Cardarelli et al. article (Ref. 10) (pharmaceutical industry marketing to prescribing physician creates the potential for prescribing practices that may not benefit the patient, which contribute to escalating health care costs); T. Eguale et al. article (Ref. 7).

misbranding provisions to prohibit and criminalize off-label promotion” (see 703 F.3d 149, 161–64, 166–69 (2d Cir. 2012)). The *Caronia* majority did not conduct a *Central Hudson* evaluation of FDA’s actual approach to manufacturer communications regarding unapproved uses of approved medical products, as described in the preceding paragraph. Second, the panel majority did not consider the multiple facets of public health advanced by FDA’s statutory authorities, regulations, and implementation policies, which include motivating the development of reliable scientific evidence that enables the evaluation of the safety and effectiveness of each intended use of a medical product; maintaining the premarket review process for safety and efficacy of each intended use in order to prevent harm, protect against fraud, misrepresentation, and bias, and prevent the diversion of healthcare resources toward ineffective treatments; ensuring required labeling is accurate and informative; protecting the integrity and reliability of promotional information regarding medical product uses; protecting human subjects receiving experimental treatments; ensuring informed consent; maintaining incentives for clinical trial participation; protecting innovation incentives, including statutory grants of exclusivity; and promoting the development of products for underserved patients. The court’s limited review of the interests at stake necessarily affected the rest of its *Central Hudson* analysis. Furthermore, the results of an exceptionally large Canadian study showing an association between unapproved uses and adverse drug events²³ were released more than three years after the *Caronia* decision. Accordingly, the *Caronia* court, in conducting its *Central Hudson* evaluation, did not have the benefit of considering the significant findings of this study.

(Comment 20) Several comments asserted that FDA should take this opportunity to bring other related regulations and guidance documents into conformance with modern First Amendment case law. These comments suggested, for example, that FDA reconsider its approach to substantial evidence to support manufacturer communications to health care professionals about approved drugs, reconsider its interpretation of the term

²³ T. Eguale et al. article (Ref. 7) (as noted above, summarizing study across cohort of 46,000 patients, and concluding that unapproved use of prescription drugs is associated with adverse drug events, particularly where those uses lack strong scientific evidence in the form of at least one randomized controlled trial).

labeling, and revise its regulations to confirm that FDA will abide by restrictions on FDA authority imposed by federal courts in *United States v. Caronia*, 703 F.3d 149 (2d Cir. 2012), and similar First Amendment decisions. At least one comment asserted, citing *United States v. Caronia*, that FDA's interpretation and implementation of the FD&C Act restricts speech based on the identity of the speaker. The comment further asserted that any restrictions on truthful and non-misleading speech are subject to "heightened judicial scrutiny" and are "presumptively invalid" under *Sorrell v. IMS Health Inc.*, 564 U.S. 552, 565, 571 (2011), *Reed v. Town of Gilbert*, 135 S. Ct. 2218, 2226 (2015), and *Rosenberger v. Rector & Visitors of the Univ. of Va.*, 515 U.S. 819, 828 (1995). Another comment, quoting *Bolger v. Youngs Drug Prods.*, 463 U.S. 60, 66 (1983), asserted that FDA should recognize that commercial speech is limited to speech that "does no more than propose a commercial transaction." Another comment urged FDA to open a separate docket related to free speech issues regarding medical products.

(Response) To the extent these comments propose that FDA consider, in this rulemaking, issues that are beyond the scope of this rulemaking, FDA declines the suggestion. FDA agrees with the comment that suggests that broader First Amendment issues should be considered in the context of separate proceedings. FDA notes that there are separate proceedings that are currently ongoing (see, e.g., 81 FR 60299, Sept 1, 2016, announcing a public hearing and request for comments on Manufacturer Communications Regarding Unapproved Uses of Approved or Cleared Medical Products, available at: <http://www.fda.gov/NewsEvents/MeetingsConferencesWorkshops/ucm489499.htm>).

In addition, FDA notes its disagreement with certain characterizations of the existing case law. First, as discussed earlier, the court in *Caronia* based its analysis on a legal theory that is more proscriptive than the one FDA actually holds. Second, the cited Supreme Court cases did not overrule the *Central Hudson* test for commercial speech. The Supreme Court in *Sorrell* confirmed that, where, as here, the speech in question is commercial, the Court applies the "commercial speech inquiry" as outlined in *Central Hudson* (*Sorrell v. IMS Health Inc.*, 564 U.S. 552, 571–72 (2011); see also *1–800–411-Pain Referral Service, LLC v. Otto*, 744 F.3d 1045, 1055 (8th Cir. 2014) (observing that

Sorrell held that content- or speaker-based restrictions on commercial speech are subject to "heightened scrutiny," and using the *Central Hudson* test to determine the constitutionality of such restrictions)). The *Sorrell* Court also confirmed that "content-based restrictions on protected expression are sometimes permissible, and that principle applies to commercial speech" (*Sorrell*, 564 U.S. at 579).

In *Reed v. Town of Gilbert*, the Court applied strict scrutiny to content-based restrictions on non-commercial speech in public fora. That holding has no bearing on the commercial speech at issue here (see, e.g., *Sarver v. Chartier*, 813 F.3d 891, 903 n.5 (9th Cir. 2016) (stating that *Reed* does not apply to laws governing commercial speech); *Mass. Ass'n of Private Career Sch. v. Healey*, 159 F. Supp. 3d 173, 192–93 (D. Mass. 2016) (same); *San Francisco Apt. Ass'n v. City & Cnty. of San Francisco*, 142 F. Supp. 3d 910, 922 (N.D. Cal. 2015) (same), appeal docketed, No. 15–17381 (9th Cir. Dec. 3, 2015). The Supreme Court's 1995 decision, *Rosenberger v. Rector & Visitors of the Univ. of Va.*, 515 U.S. 819, likewise did not involve commercial speech.

Third, we disagree with the one comment that asserts, quoting *Bolger v. Youngs Drug Prods.*, 463 U.S. 60, 66 (1983), that the Supreme Court limited the application of the *Central Hudson* test to speech that literally "does no more than propose a commercial transaction." Although the Court in *Bolger* referred to speech that proposes a commercial transaction as "the core notion of commercial speech," the Court then explained that "informational pamphlets" that "cannot be characterized merely as proposals to engage in commercial transactions" were nevertheless commercial speech based on a combination of relevant circumstances, such as mentioning the seller's product in the pamphlet and the economic motivation of the seller (see *Bolger*, 463 U.S. at 66–68 (emphasis added); see also *Conn. Bar Ass'n v. United States*, 620 F.3d 81, 93–94 (2d Cir. 2010)).

(Comment 21) Several comments suggested that FDA replace the phrase "is intended for use" in the first sentence of § 1100.5 with other phrases, such as "is commonly used" or "is primarily used."

(Response) FDA declines this suggestion. The phrase "is intended for use" is necessary because it reflects the fact that FDA's regulatory authority over a product made or derived from tobacco is, in the context of regulating them as medical products, dependent upon the product's intended use.

(Comment 22) Several comments urged FDA not to consider a manufacturer's knowledge when determining a manufacturer's intent with respect to the regulation of human cells, tissues, and cellular and tissue-based products (HCT/Ps). The comments also request that the Agency use notice and comment rulemaking instead of guidance to make changes regarding manufacturer intent related to HCT/Ps.

(Response) These comments concern regulations and guidance documents relating specifically to HCT/Ps and are outside the scope of this rulemaking.

D. Comments and Responses Regarding Marketing Concerns

(Comment 23) At least one comment suggested that FDA amend § 1100.5(a) to incorporate the following points: (1) Products intended for use in the cure and treatment of smoking or any other tobacco product use are subject to regulation as medical products; (2) products intended for use for the prevention of relapse into any smoking, tobacco product, or nicotine relapse are subject to regulation as medical products; and (3) relief from nicotine withdrawal symptoms also includes relief from smoking or tobacco use withdrawal symptoms.

(Response) FDA agrees that the three uses identified in the comment appear to be intended uses that would render the products subject to regulation as medical products. Section 1100.5(a) explains that a product made or derived from tobacco is subject to regulation as a medical product if it is intended for use in the diagnosis of disease or other conditions, or in the cure, mitigation, treatment, or prevention of disease. For illustrative purposes, the section also provides several examples of intended uses that will subject a product to regulation as a medical product. We believe the list of examples, which is not intended to be exhaustive, adequately illustrates the types of intended uses that will subject a product made or derived from tobacco to regulation as a medical product. Thus, while we agree that the three identified uses appear to be intended uses that would render the products subject to regulation as medical products, we decline to amend the list to incorporate the uses identified by the comment.

(Comment 24) At least one comment objected that the rule would limit e-cigarettes to marketing claims of "smoking pleasure" and "smoking satisfaction" since that is how traditional tobacco products were "customarily marketed" prior to March

21, 2000. The comment asserted that the rule would either force e-cigarettes off the market as unapproved medical products, or require e-cigarettes to be marketed similar to how traditional tobacco products were marketed prior to March 21, 2000, which would be deceptive because e-cigarettes are not intended for *smoking* pleasure or *tobacco* satisfaction. The comment argued that FDA should treat e-cigarettes differently from products that both contain tobacco leaf and were commercially available before March 21, 2000, when considering the types of claims that will subject a product made or derived from tobacco to regulation as a medical product.

(Response) FDA disagrees. As explained elsewhere in this document, we believe that the rule gives manufacturers and retailers ample flexibility to market e-cigarettes in a manner that is distinct from how cigarettes were marketed prior to March 21, 2000. The date of March 21, 2000, is relevant only to considering claims about a product's effects related to nicotine on the structure or function of the body as evidence of a product's intended use. E-cigarette manufacturers' and retailers' claims related to customizability, number of puffs per cartridge or charge, and various other differentiating features that do not relate to nicotine structure/function effects, irrespective of whether such claims were customarily and legally made in the marketing of cigarettes and smokeless tobacco products before March 21, 2000, should generally not affect the determination of a product's intended use. A manufacturer's making a modified risk claim for a specific tobacco product renders the product an MRTP, which can be marketed only after the manufacturer substantiates any modified risk claims in an MRTP application and after FDA determines that the product meets the statutory standard. Additionally, if a manufacturer intends that its product be used for cessation, it can submit an NDA, Abbreviated New Drug Application (ANDA), Premarket Approval Application (PMA), or premarket notification submission so that FDA can determine whether the product meets the statutory standard and can approve the application or clear the submission, if appropriate.

(Comment 25) At least one comment questioned whether the marketing for tobacco products that are not MRTPs may contain useful contextual information (e.g., ingredient information).

(Response) This comment is outside the scope of this rulemaking because it

does not relate to the circumstances in which a product that is made or derived from tobacco will be regulated as a medical product or a tobacco product.

(Comment 26) Several comments stated that ENDS manufacturers need to be able to inform and explain how to properly use vaping devices to help novices to prevent them from having accidents. The comments stated that vape shops need to be able to correctly educate consumers on how to use the products they sell.

(Response) FDA agrees. FDA recognizes that manufacturers may wish to provide instructions to consumers on how to use novel tobacco products, and instructions may be helpful in some cases in preventing consumer injury, such as nicotine poisoning or injuries from exploding batteries. Manufacturers may provide instructions to the consumer in many ways, including verbal instruction. However, if the instructions provided by the manufacturer convey that the product is to be used as a cessation device, then the product will generally be regulated as a medical product. Additionally, if the instructions make a modified risk claim, then the manufacturer must submit an MRTP application so that FDA can determine whether the product meets the statutory standard and can issue an order authorizing it to be marketed as an MRTP.

(Comment 27) Several commenters noted that tobacco products are advertised in a variety of media, including traditional print or mainstream media, blogs, social media, testimonials, and links to studies or media reports on Web sites. One comment observed that manufacturers of ENDS products often use online blogs as a way to make implicit or explicit cessation claims, and in some cases such assertions run counter to disclaimers posted on the same Web site that hosts the blog. Another comment noted that manufacturers used consumer testimonials that make cessation or MRTP claims on their company Web sites. Commenters observed that conflicting claims in advertising caused confusion among consumers regarding whether ENDS products are FDA-approved smoking cessation aids.

(Response) FDA agrees. Tobacco products are advertised in a variety of media, and advertisements may include conflicting information regarding whether the product is a recreational tobacco product or an FDA-approved smoking cessation product. When conflicting claims are made to the consumer, consumers can be confused by those claims. Thus, FDA believes

that manufacturers' making smoking cessation claims for any product creates a strong suggestion of therapeutic benefit to the user that would subject the product to regulation under FDA's medical products authority. Such a suggestion generally will be difficult to overcome absent clear context indicating that the product is not intended for use to cure or treat nicotine addiction or its symptoms, or for another therapeutic purpose. As discussed in response to Comment 12, where products making claims related to quitting smoking also attempt to disclaim that use in some way, FDA intends to view such disclaimers skeptically because of the likelihood of consumer confusion. In most cases, FDA does not believe that disclaimers will sufficiently mitigate consumer confusion related to the intended therapeutic use of the product.

(Comment 28) Several comments stated that adolescent smokers are especially vulnerable to cessation and therapeutic claims in tobacco product marketing. These comments believe that adolescents misperceive the supposed benefits and underestimate the relative harms, risks, and addictive properties of e-cigarettes and other non-cigarette products.

(Response) FDA agrees that youth and young adults generally "underestimate the tenacity of nicotine addiction and overestimate their ability to stop smoking when they choose" (Ref. 14). For example, one survey found that "nearly 60 percent of adolescents believed that they could smoke for a few years and then quit" (Ref. 15). FDA also believes that unsubstantiated cessation claims that reach adolescents may confuse teens and lead teens to believe that these products are FDA-approved smoking cessation products. For example, a teenager in a recent qualitative study said, "I heard that the only reason they were made is to help people get off from cigarettes for people that want to quit. You would use an e-cigarette to help you quit supposedly. It was on the news" (Ref. 16). FDA believes it is important to avoid consumer confusion about which products are intended for medical uses versus recreational or other tobacco product uses among both adolescents and adults, and this rule will help consumers.

(Comment 29) At least one comment stated that users consider ENDS and smokeless tobacco products effective cessation interventions. The comment believed that many people use these products to try to stop smoking because they are influenced by manufacturers' and sellers' marketing messages that

make cessation and therapeutic claims about ENDS and other non-cigarette tobacco products.

(Response) FDA agrees that marketing can influence how consumers perceive tobacco products, and products advertised with cessation claims can lead consumers to believe that the product is an FDA-approved smoking cessation device. FDA also agrees that many consumers are using ENDS products for therapeutic purposes. One study concluded that, among State tobacco cessation quitline callers, the most common reported reason for using e-cigarettes was to cut down on, or quit, traditional tobacco use (Ref. 17). Another study concluded that some smokers who were interested in quitting were using ENDS for cessation purposes, possibly discouraging the use of proven smoking cessation treatments, delaying cessation, and thus prolonging exposure to harmful agents in combusted tobacco as an unintended consequence. Additionally, FDA received a large number of comments from individuals using ENDS for therapeutic purposes. One purpose of this regulation is to avoid consumer confusion about which products made or derived from tobacco are intended for a medical use versus for a recreational use.

E. Other Comments and Responses

(Comment 30) At least one comment expressed concern that since the *Sottera* decision, FDA has not taken action against products made or derived from tobacco and making claims that were “clearly therapeutic.” In order to protect consumers from “false, misleading, and confusing tobacco industry claims,” the comment asks that products made or derived from tobacco making claims without an MRTP order be regulated as drug/device products in the Center for Drug Evaluation and Research.

(Response) FDA disagrees with the comment to the extent that the comment suggests that tobacco products properly regulated as MRTPs be regulated as drugs or devices in the absence of an MRTP order. Tobacco products making modified risk claims are regulated under the tobacco product authorities in the FD&C Act, and an MRTP marketed without an MRTP order would be subject to enforcement as a tobacco product, rather than subject to regulation as a drug or medical device product. With respect to enforcement generally, FDA notes that it is issuing this rule to clarify its interpretation of the drug and device definitions with respect to products made or derived from tobacco, and that it expects this clarification to assist industry in

determining the applicable regulatory framework for particular products and help consumers differentiate between products that are intended for medical use and products intended for other uses.

(Comment 31) At least one comment observed that researchers may wish to study the effects that a product made or derived from tobacco has on health outcomes (e.g., withdrawal symptoms, hypertension, etc.) or on the structure and function of the body (e.g., blood pressure, lung function), or the effects of substituting one product made or derived from tobacco for another product. The comment asserted that the methods and measures of such studies are not evidence that the product being investigated is a drug and that FDA should not require an investigational new drug application (IND) for these studies unless they are sponsored by a manufacturer with the intention of supporting a health or medical drug claim.

(Response) The regulations in part 312 set forth the circumstances in which an IND is required for clinical investigations in which a drug is administered to human subjects. The IND requirement applies irrespective of whether the investigation is sponsored by a manufacturer or an academic institution. A study involving a product made or derived from tobacco will generally require an IND if the product, as used in the study, is subject to regulation as a drug. Whether the product, as used in the study, is subject to regulation as a drug depends on whether the product is being investigated for any of the purposes described in § 1100.5(a) or (b) of this rule. To determine if a product made or derived from tobacco is being investigated for one of these purposes, FDA generally would review the protocol for the study, including the proposed methods and measures. In the Agency’s experience, the proposed methods and measures for a study can provide insight into the purposes for which a product is being investigated. Ultimately, however, whether a product is being investigated for a therapeutic purpose, and thus whether the study requires an IND, is a fact-specific, case-by-case inquiry. Additional information about the IND requirement can be found in the FDA guidance document entitled “Investigational New Drug Applications (INDs)—Determining Whether Human Research Studies Can Be Conducted Without an IND.” We encourage researchers to review this guidance document, which is available on FDA’s Web site at <http://www.fda.gov/downloads/UCM229175.pdf>.

(Comment 32) At least one comment encouraged FDA to coordinate between centers to promote development of safer tobacco products as well as more effective medical products for the treatment of nicotine addiction. This comment also argued that FDA should not allow similar or identical products to be marketed as both tobacco products and medical products, and should consider approving categories of products, rather than individual products, for smoking cessation. This comment also expressed concern about dual use between tobacco product categories.

(Response) FDA agrees with this comment to the extent the comment considers the proposed rule to promote effective coordination between centers by clarifying which center should take the lead in review of premarket applications and postmarketing regulation of particular products. We note that FDA currently interprets the standards in various medical and tobacco product premarket review pathways to refer to individual products rather than product categories, and the question of whether a particular product could obtain marketing authorization as both a tobacco product and as a medical product is beyond the scope of this rule. By clarifying the jurisdictional lines between tobacco and medical products, FDA believes that finalization of this rule will make it less likely that manufacturers will attempt to market products made or derived from tobacco both as tobacco products and as medical products—for example, if a tobacco product manufacturer attempts to add claims to a currently marketed tobacco product that would require the product to be regulated as drug, device, or combination product.

(Comment 33) Several comments recommended that the Center for Tobacco Products (CTP) have sole regulatory jurisdiction over tobacco and nicotine-containing products and provided suggestions for how CTP should structurally reorganize itself to better regulate these products.

(Response) CTP oversees the regulation of products made or derived from tobacco that are intended for human consumption. As stated in this preamble, when a product made or derived from tobacco is marketed or distributed for an intended use that falls within the drug/device definitions, it would be regulated as a medical product unless it is intended to affect the structure or any function of the body in any way related to the effects of nicotine that were commonly and legally claimed prior to March 21, 2000. In this situation, one of FDA’s medical product

centers would have regulatory oversight over these products because CTP does not oversee the regulation of medical products. As these comments relate to potentially undertaking a structural reorganization, CTP is not considering a structural reorganization at this time.

(Comment 34) At least one comment suggested that FDA create a separate regulatory category for e-cigarettes that is based on the Agency's medical product regulations, but with less stringent quality standards.

(Response) This recommendation is not consistent with the statutory definitions in the FD&C Act. Under the FD&C Act, a product made or derived from tobacco is subject to regulation as a tobacco product unless it meets the definition of a drug or device or is a combination product, in which case it is subject to regulation as a medical product.

(Comment 35) Several comments stated that the cost and resources required to complete FDA's drug application process would be simply too great and would shut down many small manufacturers.

(Response) This regulation simply clarifies the circumstances under which a product made or derived from tobacco would be regulated as a drug, device, or combination product, and the circumstances under which it would be regulated as a tobacco product; it does not create new jurisdictional lines or impose new obligations on product manufacturers. Because the jurisdictional lines already exist, tobacco product manufacturers currently making claims that would render their product subject to regulation as a medical product or who wish to make such claims in the future are within FDA's drug and device jurisdiction, absent limited exceptions, and they must follow the applicable statutory and regulatory requirements.

(Comment 36) Many comments believed that the regulation would make e-cigarettes less available to consumers.

(Response) FDA disagrees. This regulation simply clarifies the circumstances under which a product made or derived from tobacco will be regulated as a drug, device, or combination product, and the circumstances under which it will be regulated as a tobacco product. This regulation will not add any additional burden to manufacturers who sell ENDS for recreational use. However, if a manufacturer is selling ENDS and making medical product claims, then the product would be subject to regulation as a drug, device, or combination product if those claims are not structure/function claims related to

the effects of nicotine that were commonly and legally claimed prior to March 21, 2000.

(Comment 37) At least one comment suggested that the final rule should include a discussion of how the regulation will affect public health.

(Response) The preamble to the proposed rule contained some discussion of this topic, and this preamble to the final rule further expands on various public health protections.

(Comment 38) FDA proposed that a product made or derived from tobacco that is intended for use in smoking cessation be subject to regulation as a medical product. Several comments objected that smoking is not a disease, but a behavior, and that a product that claims to help individuals quit smoking should not be regulated as a medical product absent any assertions that it will prevent disease or treat nicotine dependence. One comment asserted that promoting a product as suitable for continued nicotine use after stopping smoking traditional cigarettes is the functional equivalent of a "smoking alternative" claim, which FDA has said does not fall within the Agency's medical product authority, and, therefore, should not subject the product to regulation as a medical product.

(Response) Over the past 50 years, smoking has been causally linked to diseases of nearly all organs of the body, diminished health status, and fetal harm. Most current adult smokers want to quit smoking completely for health reasons (Ref. 18). Given these facts, we believe that statements related to quitting smoking generally create a strong suggestion that a product is intended for a therapeutic purpose. We recognize, however, that public perception can change and evidence may be developed showing that, in some situations, "smoking cessation" is understood in context as referring to ending the use of traditional cigarettes and switching to a non-combustible product made or derived from tobacco. We have revised the codified language in § 1100.5(a) in the final rule, to reflect that "smoking cessation" is one type of intended use related to "the cure or treatment of nicotine addiction." FDA intends to closely scrutinize "smoking cessation" claims to ensure that consumers are not misled about the intended use of a product made or derived from tobacco.

(Comment 39) One comment stated that this regulation should not require companies that handle raw materials to determine whether those raw materials would be used in tobacco products or

whether those materials would be used in medical products. The comment stated that the intended use of the product is completely within the discretion of the sellers and distributors of the finished products, and the Agency should not extend regulations to cover companies that handle raw materials.

(Response) This comment is beyond the scope of this rule. This regulation does not create new jurisdictional lines or impose new obligations on product manufacturers or companies that handle raw materials. Rather, this rulemaking simply clarifies the circumstances under which a product made or derived from tobacco would be regulated as a drug, device, or combination product, and the circumstances under which it would be regulated as a tobacco product. If FDA were to consider extending its authority in such a way that would place additional requirements on companies handling raw materials, the Agency would do so through a separate rulemaking.

F. Other Changes to the Codified Text

To eliminate redundancy, we deleted "or prevention or mitigation of disease" from the end of § 1100.5(a), as the opening text already includes similar language. Because of this deletion, we inserted the word "or" in front of "relief of nicotine withdrawal symptoms."

G. Effective Date

This final rule will become effective 30 days after the date of its publication in the **Federal Register**. During those 30 days, manufacturers will continue to be under an obligation to comply with all applicable provisions of the FD&C Act and applicable regulations.

V. Federalism

FDA has analyzed this final rule in accordance with the principles set forth in Executive Order 13132. FDA has determined that the final rule does not contain policies that would have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. Accordingly, the Agency concludes that the final rule does not contain policies that have federalism implications as defined in the Executive order and, consequently, a federalism summary impact statement is not required.

VI. Executive Order 13175: Tribal Consultation

We have analyzed this rule in accordance with the principles set forth

in Executive Order 13175. We have determined that the rule does not contain policies that have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. Accordingly, we conclude that the rule does not contain policies that have tribal implications as defined in the Executive order and, consequently, a tribal summary impact statement is not required.

VII. Analysis of Environmental Impact

FDA has determined under 21 CFR 25.30(h) and (k) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

VIII. Economic Analysis of Impacts

We have examined the impacts of the final rule under Executive Order 12866, Executive Order 13563, the Regulatory Flexibility Act (5 U.S.C. 601–612), and the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4). Executive Orders 12866 and 13563 direct us to assess all costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity). We have developed a comprehensive Economic Analysis of Impacts that assesses the

impacts of the final rule. We believe that this final rule is not a significant regulatory action as defined by Executive Order 12866.

The Regulatory Flexibility Act requires us to analyze regulatory options that would minimize any significant impact of a rule on small entities. Because, as described in detail in the section entitled “Final Small Entity Analysis” in the full analysis of economic impacts available in the docket for this final rule (Ref. 19) and at <http://www.fda.gov/AboutFDA/ReportsManualsForms/Reports/EconomicAnalyses/default.htm>, the clarifications in this final rule will not significantly increase costs on manufacturers of products made or derived from tobacco, we certify that the final rule will not have a significant economic impact on a substantial number of small entities.

The Unfunded Mandates Reform Act of 1995 (section 202(a)) requires us to prepare a written statement, which includes an assessment of anticipated costs and benefits, before issuing “any rule that includes any Federal mandate that may result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of \$100,000,000 or more (adjusted annually for inflation) in any one year.” The current threshold after adjustment for inflation is \$146 million, using the most current (2015) Implicit Price Deflator for the Gross Domestic Product. This final rule would not result in expenditure in any year that meets or exceeds this amount.

The final rule will reduce ambiguity in the market for products made or derived from tobacco and clarify FDA’s

interpretation and application of its existing intended use regulations. The rule clarifies the intended uses and supporting evidence that would result in these products being regulated as drugs, devices, or combination products rather than tobacco products. Products derived from tobacco that are intended to: (1) Diagnose, cure, mitigate, treat or prevent disease, including use in smoking cessation or (2) affect the structure or any function of the body in any way that is different from effects related to nicotine that were commonly and legally claimed in the marketing of cigarettes and smokeless tobacco prior to March 21, 2000, such as an intended use for improving respiratory function, will be subject to regulation as drugs, devices, or combination products. We estimate that there would be one-time costs for tobacco manufacturers to evaluate current product communications such as labeling and associated promotional materials in light of the clarifications in this final rule, and to revise them if needed. We expect that only a small number of product communications such as labeling and associated materials will undergo a one-time change as a result of this rule.

The final rule will provide greater clarity to producers regarding the regulatory requirements for products made or derived from tobacco and to consumers to distinguish products intended for medical uses from those marketed for other uses. The reduction in ambiguity will enhance consumers’ understanding of the products they purchase and may increase consumer welfare as a result.

TABLE 2—ECONOMIC DATA: COSTS AND BENEFITS STATEMENT

Category	Primary estimate	Low estimate	High estimate	Units			Notes
				Year dollars	Discount rate (%)	Period covered (years)

The full analysis of economic impacts is available in the docket for this final rule (Ref. 19) and at <http://www.fda.gov/AboutFDA/ReportsManualsForms/Reports/EconomicAnalyses/default.htm>.

IX. Paperwork Reduction Act of 1995

FDA concludes that this final rule contains no collection of information. Therefore, clearance by the Office of Management and Budget under the Paperwork Reduction Act of 1995 is not required.

List of Subjects**21 CFR Part 201**

Drugs, Labeling, Reporting and recordkeeping requirements.

21 CFR Part 801

Labeling, Medical devices, Reporting and recordkeeping requirements.

21 CFR Part 1100

Combination products, Devices, Drugs, Smoking, Tobacco.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, 21 CFR chapter 1 is amended as follows:

PART 201—LABELING

- 1. The authority citation for part 201 continues to read as follows:

Authority: 21 U.S.C. 321, 331, 351, 352, 353, 355, 358, 360, 360b, 360gg–360ss, 371, 374, 379e; 42 U.S.C. 216, 241, 262, 264.

- 2. Revise § 201.128 to read as follows:

§ 201.128 Meaning of “intended uses”.

The words *intended uses* or words of similar import in §§ 201.5, 201.115, 201.117, 201.119, 201.120, 201.122, and 1100.5 of this chapter refer to the objective intent of the persons legally responsible for the labeling of drugs. The intent is determined by such persons' expressions or may be shown by the circumstances surrounding the distribution of the article. This objective intent may, for example, be shown by labeling claims, advertising matter, or oral or written statements by such persons or their representatives. It may be shown, for example, by circumstances in which the article is, with the knowledge of such persons or their representatives, offered and used for a purpose for which it is neither labeled nor advertised. The intended uses of an article may change after it has been introduced into interstate commerce by its manufacturer. If, for example, a packer, distributor, or seller intends an article for different uses than those intended by the person from whom he received the drug, such packer, distributor, or seller is required to supply adequate labeling in accordance with the new intended uses. And if the totality of the evidence establishes that a manufacturer objectively intends that a drug introduced into interstate commerce by him is to be used for conditions, purposes, or uses other than ones for which it is approved (if any), he is required, in accordance with section 502(f) of the Federal Food, Drug, and Cosmetic Act, or, as applicable, duly

promulgated regulations exempting the drug from the requirements of section 502(f)(1), to provide for such drug adequate labeling that accords with such other intended uses.

PART 801—LABELING

- 3. The authority citation for part 801 continues to read as follows:

Authority: 21 U.S.C. 321, 331, 351, 352, 360d, 360i, 360j, 371, 374.

- 4. Revise § 801.4 to read as follows:

§ 801.4 Meaning of intended uses.

The words *intended uses* or words of similar import in §§ 801.5, 801.119, 801.122, and 1100.5 of this chapter refer to the objective intent of the persons legally responsible for the labeling of devices. The intent is determined by such persons' expressions or may be shown by the circumstances surrounding the distribution of the article. This objective intent may, for example, be shown by labeling claims, advertising matter, or oral or written statements by such persons or their representatives. It may be shown, for example, by circumstances in which the article is, with the knowledge of such persons or their representatives, offered and used for a purpose for which it is neither labeled nor advertised. The intended uses of an article may change after it has been introduced into interstate commerce by its manufacturer. If, for example, a packer, distributor, or seller intends an article for different uses than those intended by the person from whom he received the device, such packer, distributor, or seller is required to supply adequate labeling in accordance with the new intended uses. And if the totality of the evidence establishes that a manufacturer objectively intends that a device introduced into interstate commerce by him is to be used for conditions, purposes, or uses other than ones for which it has been approved, cleared, granted marketing authorization, or is exempt from premarket notification requirements (if any), he is required, in accordance with section 502(f) of the Federal Food, Drug, and Cosmetic Act, or, as applicable, duly promulgated regulations exempting the device from the requirements of section 502(f)(1), to provide for such device adequate labeling that accords with such other intended uses.

PART 1100—TOBACCO PRODUCTS SUBJECT TO FDA AUTHORITY

- 5. The authority citation for part 1100 is revised to read as follows:

Authority: 21 U.S.C. 387a(b), 387f(d); Secs. 901(b) and 906(d), Pub. L. 111–31; 21 CFR 16.1 and 1107.1; 21 CFR 1.1, 1.20, 14.55, 17.1, and 17.2. Section 1100.5 is issued under 21 U.S.C. 321, 353(g), and 371(a); 21 CFR 1.1.

- 6. Part 1100 is amended by adding § 1100.5 to read as follows:

§ 1100.5 Exclusion from tobacco regulation.

If a product made or derived from tobacco that is intended for human consumption is intended for use for any of the purposes described in paragraph (a) or (b) of this section, the product is not a tobacco product as defined in section 201(rr) of the Federal Food, Drug, and Cosmetic Act and will be subject to regulation as a drug, device, or combination product.

(a) The product is intended for use in the diagnosis of disease or other conditions, or in the cure, mitigation, treatment or prevention of disease, including use in the cure or treatment of nicotine addiction (e.g., smoking cessation), relapse prevention, or relief of nicotine withdrawal symptoms;

(b) The product is intended to affect the structure or any function of the body in any way that is different from effects related to nicotine that were commonly and legally claimed in the marketing of cigarettes and smokeless tobacco products prior to March 21, 2000.

Dated: December 29, 2016.

Leslie Kux,

Associate Commissioner for Policy.

BILLING CODE 1301-00-D

AGENCY FOR INTERNATIONAL DEVELOPMENT

22 CFR Part 241

Republic of Iraq Loan Guarantees Issued Under the Further Continuing and Security Assistance Appropriations Act of 2017—Standard Terms and Conditions

AGENCY: Agency for International Development (USAID).

ACTION: Final rule.

SUMMARY: This regulation prescribes the procedures and standard terms and conditions applicable to loan guarantees to be issued for the benefit of the Republic of Iraq pursuant to the Further Continuing and Security Assistance Appropriations Act, 2017.

DATES: Effective January 9, 2017.

FOR FURTHER INFORMATION CONTACT: D. Bruce McPherson, Office of the General Counsel, U.S. Agency for International Development, Washington, DC 20523-6601; tel. 202-712-1611, fax 202-216-3055.

SUPPLEMENTARY INFORMATION: Pursuant to the Further Continuing and Security Assistance Appropriations Act, 2017 (Pub. L. 114-254), the United States of America, acting through the U.S. Agency for International Development, may issue certain loan guarantees applicable to sums borrowed by the Republic of Iraq (the “Borrower”), not exceeding an aggregate total of U.S. \$1 billion in principal amount. Upon issuance, the loan guarantees shall ensure the Borrower’s repayment of 100% of principal and interest due under such borrowings and the full faith and credit of the United States of America shall be pledged for the full payment and performance of such guarantee obligations.

This rulemaking document is not subject to rulemaking under 5 U.S.C. 553 or to regulatory review under Executive Order 12866 because it involves a foreign affairs function of the United States. The provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*) do not apply.

List of Subjects in 22 CFR Part 241

Foreign aid, Foreign relations, Guaranteed loans, Loan programs—foreign relations.

Authority and Issuance

■ Accordingly, part 241 is added to title 22, chapter II, of the Code of Federal Regulations, as follows:

PART 241—REPUBLIC OF IRAQ LOAN GUARANTEES ISSUED UNDER THE FURTHER CONTINUING AND SECURITY ASSISTANCE APPROPRIATIONS ACT OF 2017

Sec.

- 241.1 Purpose.
- 241.2 Definitions.
- 241.3 The Guarantee.
- 241.4 Guarantee eligibility.
- 241.5 Non-impairment of the Guarantee.

Appendix A to Part 241—Application for Compensation

Authority: Security Assistance Appropriations Act, 2017 (Div. B, Pub. L. 114-254).

§ 241.1 Purpose.

The purpose of the regulations in this part is to prescribe the procedures and standard terms and conditions applicable to loan guarantees issued for the benefit of the Borrower, pursuant to the Further Continuing and Security Assistance Appropriations Act, 2017 (Pub. L. 114-254) (the “Authority”). The loan guarantees will be issued as provided herein pursuant to the Loan Guarantee Agreement, executed in January 2017, between the United States of America and the Republic of Iraq (the “Loan Guarantee Agreement”). The loan guarantee will apply to sums borrowed during a period beginning on the date that the Loan Guarantee Agreement enters into force and ending thirty days after such date, not exceeding an aggregate total of one billion United States Dollars (\$1,000,000,000) in principal amount. The loan guarantees shall ensure the Borrower’s repayment of 100% of principal and interest due under such borrowings. The full faith and credit of the United States of America is pledged for the full payment and performance of such guarantee obligations.

§ 241.2 Definitions.

Wherever used in the standard terms and conditions set out in this part:

Applicant means a Noteholder who files an Application for Compensation with USAID, either directly or through the Fiscal Agent acting on behalf of a Noteholder.

Application for Compensation means an executed application in the form of Appendix A to this part which a Noteholder, or the Fiscal Agent on behalf of a Noteholder, files with USAID pursuant to § 241.8.

Borrower means the Republic of Iraq.

Business Day means any day other than a day on which banks in New York, NY are closed or authorized to be closed or a day which is observed as a federal holiday in Washington, DC, by the United States Government.

Date of Application means the date on which an Application for Compensation is actually received by USAID pursuant to § 241.15.

Defaulted Payment means, as of any date and in respect of any Eligible Note, any Interest Amount and/or Principal Amount not paid when due, regardless of the reason the Borrower fails to pay, including without limitation withholding taxes.

Eligible Note(s) means [a] Note[s] meeting the eligibility criteria set out in § 241.4.

Fiscal Agency Agreement means the agreement among USAID, the Borrower and the Fiscal Agent pursuant to which the Fiscal Agent agrees to provide fiscal agency services in respect of the Note[s], a copy of which Fiscal Agency Agreement shall be made available to Noteholders upon request to the Fiscal Agent.

Fiscal Agent means the bank or trust company or its duly appointed successor under the Fiscal Agency Agreement which has been appointed by the Borrower with the consent of USAID to perform certain fiscal agency services for specified Eligible Note[s] pursuant to the terms of the Fiscal Agency Agreement.

Further Guaranteed Payments means the amount of any loss suffered by a Noteholder by reason of the Borrower's failure to comply on a timely basis with any obligation it may have under an Eligible Note to the Noteholders, including late fees under the Eligible Note, but not including any taxes or governmental charges or any expense arising out of taxes or any other governmental charges relating to the Eligible Note in the country of the Borrower.

Guarantee means the guarantee of USAID pursuant to the Authority.

Guarantee Payment Date means a Business Day not more than three (3) Business Days after the related Date of Application.

Interest Amount means for any Eligible Note the amount of interest accrued on the Principal Amount of such Eligible Note at the applicable Interest Rate.

Interest Rate means the interest rate borne by an Eligible Note.

Loss of Investment means, in respect of any Eligible Note, an amount in Dollars equal to the total of the:

- (1) Defaulted Payment unpaid as of the Date of Application,
- (2) Further Guaranteed Payments unpaid as of the Date of Application, and
- (3) Interest accrued and unpaid at the Interest Rate(s) specified in the Eligible Note(s) on the Defaulted Payment and Further Guaranteed Payments, in each case from the date of default with respect to such payment to and including the date on which full payment thereof is made to the Noteholder.

Note[s] means any debt securities issued by the Borrower.

Noteholder means the owner of an Eligible Note who is registered as such on the Note Register.

Note Register means the register of Eligible Notes required to be maintained by the Fiscal Agent.

Person means any legal person, including any individual, corporation, partnership, joint venture, association, joint stock company, trust, unincorporated organization, or government or any agency or political subdivision thereof.

Principal Amount means the principal amount of the Eligible Notes issued by the Borrower. For purposes of determining the principal amount of the Eligible Notes issued by the Borrower, the principal amount of each Eligible Note shall be the stated principal amount thereof.

USAID means the United States Agency for International Development or its successor.

§ 241.3 The Guarantee.

Subject to the terms and conditions set out in this part, the United States of America, acting through USAID, guarantees to Noteholders the Borrower's repayment of 100% of principal and interest due on Eligible Notes. Under this Guarantee, USAID agrees to pay to any Noteholder compensation in Dollars equal to such Noteholder's Loss of Investment under its Eligible Note; provided, however, that no such payment shall be made to any Noteholder for any such loss arising out of fraud or misrepresentation for which such Noteholder is responsible or of which it had knowledge at the time it became such Noteholder. This Guarantee shall apply to each Eligible Note registered on the Note Register required to be maintained by the Fiscal Agent.

§ 241.4 Guarantee eligibility.

(a) Eligible Notes only are guaranteed hereunder. Notes in order to achieve Eligible Note status:

- (1) Must be signed on behalf of the Borrower, manually or in facsimile, by a duly authorized representative of the Borrower;
- (2) Must contain a certificate of authentication manually executed by the Fiscal Agent whose appointment by the Borrower is consented to by USAID in the Fiscal Agency Agreement; and
- (3) Shall be approved and authenticated by USAID by either:
 - (i) The affixing by USAID on the Notes of a guarantee legend incorporating these Standard Terms and Conditions signed on behalf of USAID by either a manual signature or a facsimile signature of an authorized representative of USAID; or
 - (ii) The delivery by USAID to the Fiscal Agent of a guarantee certificate

incorporating these Standard Terms and Conditions signed on behalf of USAID by either a manual signature or a facsimile signature of an authorized representative of USAID.

(b) The authorized USAID representatives for purposes of the regulations in this part whose signature(s) shall be binding on USAID shall include the USAID Chief and Deputy Chief Financial Officer, Assistant Administrator and Deputy, Bureau for the Middle East, Mission Director and Acting Mission Director for USAID/Iraq, and such other individual(s) designated in a certificate executed by an authorized USAID Representative and delivered to the Fiscal Agent. The certificate of authentication of the Fiscal Agent issued pursuant to the Fiscal Agency Agreement shall, when manually executed by the Fiscal Agent, be conclusive evidence binding on USAID that an Eligible Note has been duly executed on behalf of the Borrower and delivered.

§ 241.5 Non-impairment of the Guarantee.

After issuance of a Guarantee, that Guarantee will be an unconditional, full faith and credit obligation of the United States of America, and will not be affected or impaired by any subsequent condition or event. This non-impairment of the guarantee provision shall not, however, be operative with respect to any loss arising out of fraud or misrepresentation for which the claiming Noteholder is responsible or of which it had knowledge at the time it became a Noteholder. Moreover, the Guarantee shall not be affected or impaired by:

- (a) Any defect in the authorization, execution, delivery or enforceability of any agreement or other document executed by a Noteholder, USAID, the Fiscal Agent or the Borrower in connection with the transactions contemplated by this Guarantee; or
- (b) The suspension or termination of the program pursuant to which USAID is authorized to guarantee the Eligible Notes.

§ 241.6 Transferability of Guarantee; Note Register.

A Noteholder may assign, transfer or pledge an Eligible Note to any Person, provided that such transfer is permitted under applicable law and regulation, including, without limitation, the Office of Foreign Assets Control (OFAC) regulations. Any such assignment, transfer or pledge shall be effective on the date that the name of the new Noteholder is entered on the Note Register required to be maintained by

the Fiscal Agent pursuant to the Fiscal Agency Agreement. USAID shall be entitled to treat the Persons in whose names the Eligible Notes are registered as the owners thereof for all purposes of this Guarantee and USAID shall not be affected by notice to the contrary.

§ 241.7 Fiscal Agent obligations.

Failure of the Fiscal Agent to perform any of its obligations pursuant to the Fiscal Agency Agreement shall not impair any Noteholder's rights under this Guarantee, but may be the subject of action for damages against the Fiscal Agent by USAID as a result of such failure or neglect. A Noteholder may appoint the Fiscal Agent to make demand for payment on its behalf under this Guarantee.

§ 241.8 Event of Default; Application for Compensation; payment.

At any time after an Event of Default, as this term is defined in an Eligible Note, any Noteholder hereunder, or the Fiscal Agent on behalf of a Noteholder hereunder, may file with USAID an Application for Compensation in the form provided in Appendix A to this part. USAID shall pay or cause to be paid to any such Applicant any compensation specified in such Application for Compensation that is due to the Applicant pursuant to the Guarantee as a Loss of Investment not later than the Guarantee Payment Date. In the event that USAID receives any other notice of an Event of Default, USAID may pay any compensation that is due to any Noteholder pursuant to a Guarantee, whether or not such Noteholder has filed with USAID an Application for Compensation in respect of such amount.

§ 241.9 No acceleration of Eligible Notes.

Eligible Notes shall not be subject to acceleration, in whole or in part, by USAID, the Noteholder or any other party. USAID shall not have the right to pay any amounts in respect of the Eligible Notes other than in accordance with the original payment terms of such Eligible Notes.

§ 241.10 Payment to USAID of excess amounts received by a Noteholder.

If a Noteholder shall, as a result of USAID paying compensation under this Guarantee, receive an excess payment, it shall refund the excess to USAID.

§ 241.11 Subrogation of USAID.

In the event of payment by USAID to a Noteholder under this Guarantee, USAID shall be subrogated to the extent of such payment to all of the rights of

such Noteholder against the Borrower under the related Note.

§ 241.12 Prosecution of claims.

After payment by USAID to an Applicant hereunder, USAID shall have exclusive power to prosecute all claims related to rights to receive payments under the Eligible Notes to which it is thereby subrogated. If a Noteholder continues to have an interest in the outstanding Eligible Notes, such a Noteholder and USAID shall consult with each other with respect to their respective interests in such Eligible Notes and the manner of and responsibility for prosecuting claims.

§ 241.13 Change in agreements.

No Noteholder will consent to any change or waiver of any provision of any document contemplated by this Guarantee without the prior written consent of USAID.

§ 241.14 Arbitration.

Any controversy or claim between USAID and any Noteholder arising out of this Guarantee shall be settled by arbitration to be held in Washington, DC in accordance with the then prevailing rules of the American Arbitration Association, and judgment on the award rendered by the arbitrators may be entered in any court of competent jurisdiction.

§ 241.15 Notice.

Any communication to USAID pursuant to this Guarantee shall be in writing in the English language, shall refer to the Republic of Iraq Loan Guarantee Number inscribed on the Eligible Note and shall be complete on the day it shall be actually received by USAID at the Office of Development Credit, Bureau for Economic Growth, Education and Environment, United States Agency for International Development, Washington, DC 20523-0030. Other addresses may be substituted for the above upon the giving of notice of such substitution to each Noteholder by first class mail at the address set forth in the Note Register.

§ 241.16 Governing law.

This Guarantee shall be governed by and construed in accordance with the laws of the United States of America governing contracts and commercial transactions of the United States Government.

29 CFR Parts 500, 505, 516, 519, 520, 525, 530, 547, 549, 553, 570, 575, 578, 580, 801, and 825

RIN 1235-AA17

Updating Regulations Issued Under the Fair Labor Standards Act, Service Contract Act, Davis-Bacon and Related Acts, Contract Work Hours and Safety Standards Act, the Family and Medical Leave Act, Employee Polygraph Protection Act, and the Migrant and Seasonal Agricultural Worker Protection Act

AGENCY: Wage and Hour Division, Department of Labor.

ACTION: Final rule; technical corrections.

SUMMARY: In this final rule, the Department of Labor (DOL or Department) revises regulations issued pursuant to the Fair Labor Standards Act of 1938 (FLSA), the Davis-Bacon and Related Acts (DBRA), the Service Contract Act (SCA), Contract Work Hours and Safety Standards Act (CWHSSA), Family and Medical Leave Act (FMLA), Employee Polygraph Protection Act (EPPA), and the Migrant and Seasonal Agricultural Worker Protection Act (MSPA) that include reference to the “Employment Standards Administration” at the DOL. The Employment Standards Administration was eliminated as part of agency reorganization in 2009 and its authorities and responsibilities were devolved into its constituent components, including the Wage and Hour Division (WHD). This action deletes reference to the Employment Standards Administration in the regulations administered by WHD. Additionally, this action updates Office of Management and Budget (OMB) control numbers associated with information collections in the appropriate regulations. WHD was assigned new control numbers by OMB and this action updates those references in the regulations to the current corresponding OMB control number. Further, this action updates cross-references that were not revised in the FMLA Final Rule published February 25, 2015.

DATES: Effective January 9, 2017.

FOR FURTHER INFORMATION CONTACT: Robert Waterman, Compliance

Specialist, Division of Regulations, Legislation, and Interpretation, Wage and Hour Division, U.S. Department of Labor, Room S-3502, 200 Constitution Avenue NW., Washington, DC 20210, telephone: (202) 693-0406 (this is not a toll-free number) or email: WHDPRACComments@dol.gov.

SUPPLEMENTARY INFORMATION: The Department is eliminating references to the Employment Standards Administration at the DOL. The Employment Standards Administration is a former branch of the DOL and was eliminated in an agency reorganization in 2009. In addition, the Department is updating references to OMB information collection control numbers. OMB has assigned different information collection control numbers to WHD information collections and the Department is updating these references in the appropriate regulations so the reader can find the information collection corresponding to a specific regulation.

The Department is also correcting cross-references to the FMLA’s definitions section in two sections of its FMLA regulations, § 825.104(b) and § 825.209(a). A recent rulemaking moved the definitions section of the FMLA regulations from § 825.800 to § 825.102 but did not update the cross-references to the definitions section in § 825.104(b) and § 825.209(a). Additionally, the Department is updating the reference in 29 CFR 3.3 to the Web site location where the public may access the WH-347 form. As part of the agency reorganization of the Web site, the location of the form has changed. Finally, the Department is replacing the term firefighter with the term employee engaged in fire protection activities in two sections of its regulations, 29 CFR 553.221 and 553.231, to conform to an amendment to the FLSA. In December 1999, Congress amended the FLSA to add a definition of employee engaged in fire protection activities. The Department published an FLSA Final Rule on April 5, 2011 (76 FR 18832) that incorporated the new definition into the regulations and made several conforming revisions in part 553, subpart C, but did not conform the language of these provisions.

Administrative Procedure Act

Section 553(b)(3) of the Administrative Procedure Act (APA) provides that an agency is not required to publish a notice of proposed rulemaking in the **Federal Register** and solicit public comments when the agency has good cause to find that doing so would be “impracticable,

unnecessary, or contrary to the public interest.” 5 U.S.C. 553(b)(3). The Department finds that good cause exists to dispense with the notice and public comment procedures for this technical correction to its regulations, as it concludes that such procedures are unnecessary. This rule merely memorializes the delegation of administrative authority within the Department; updates references to OMB control numbers and WHD’s Web site which are now out of date; corrects cross-references to another section of the Department’s regulations; and conforms the terminology in the Department’s regulations to an amendment to the definitions section of the FLSA. This rule does not impose any new regulatory obligations or information collection requirements on employers or affect the rights of workers. Therefore, the Department is issuing this technical correction as a final rule.

Section 553(d) of the APA also provides that substantive rules should take effect not less than 30 days after the date they are published in the **Federal Register** unless “otherwise provided by the agency for good cause found[.]” 5 U.S.C. 553(d)(3). Since this rule is a technical correction that does not change the substance of the Department’s regulations, the Department finds that it is unnecessary to delay the effective date of the rule. Accordingly, the Department finds that it has good cause exists to make this technical correction effective on the date of publication.

Summary of Changes to the Regulations

In 29 CFR 1.2, 1.5, 4.1a, 4.3, 4.5, 4.6, 4.10, 4.11, 4.12, 4.101, 4.191, 5.2, 5.12, 5.13, 6.2, 500.7, 500.20, 500.41, 500.56, 500.215, 505.2, 520.300, 525.22, 530.1, 530.101, 530.102, 530.403, 570.1, 575.2, 575.3, 578.2, 580.1, 801.2, 801.7, and 825.401, the Department has removed the reference to the Employment Standards Administration and replaced it with the Wage and Hour Division where appropriate. In 29 CFR 519.11, the Department has removed the reference to the Assistant Secretary for Employment Standards. The Employment Standards Administration is a former branch of the DOL and was eliminated in an agency reorganization in 2009. *See* Secretary’s Order No. 09-2009 (Nov. 6, 2009), 74 FR 58836 (Nov. 13, 2009). In 29 CFR 5.5, the Department has removed the reference to the Employment Standards Administration and made two additional technical corrections: Correcting an error made in the instructions to the Final Rule issued under the DBRA in 2000 (65 FR 69674)

that resulted in the retention of an editorial note referencing a 1993 suspension of paragraph (a)(1)(ii) that should have been removed at that time; and incorporating the undesignated language that follows paragraph (a)(1)(i) into that paragraph.

In 29 CFR 3.3, the Department has updated the referenced Web site location where the public may access the WH-347 form. As part of the agency reorganization of the Web site, the location of the form has changed.

In 29 CFR 3.4, 5.15, 505.5, 520.403, 520.405, 520.501, 520.502, 525.16, 530.3, 530.4, 547.1, 549.1, 570.6, 570.36, 570.37 and 801.30, the Department has updated the OMB control number where the public may access the relevant information collection approved by OMB under the Paperwork Reduction Act. In 29 CFR 4.6, 5.5 and 516.0, the Department has provided updated information collection requests tables showing the current OMB control numbers associated with the referenced recordkeeping requirements. OMB changed the agency information collection control numbers. The correction will allow the public to access the currently approved information collection.

In 29 CFR 553.221 and 553.231, the Department has replaced references to firefighters with references to employees engaged in fire protection activities to conform to a recent amendment to the FLSA. In December 1999, Congress amended the FLSA to add a definition of employee engaged in fire protection activities. See Public Law 106-151, Sec. 1, 113 Stat 1731 (Dec. 9, 1999). The Department published an FLSA Final Rule on April 5, 2011 (76 FR 18832) that incorporated the new definition into the regulations and made several conforming revisions in part 553, subpart C, but did not conform to the language of these provisions.

In 29 CFR 825.104 and 825.209, the Department has corrected cross-references to the definitions section of the FMLA regulations. On February 6, 2013, the Department published a final rule under the FMLA. In that rule, the Department moved the FMLA definitions section from the end of the regulations in § 825.800 to the front of the regulations in § 825.102. However, the Department did not update the cross-references to the definitions section in §§ 825.104 and 825.109. The Department is making this correction so the reader may easily locate the definitions section of the regulations currently located in § 825.102.

Executive Orders 12866 and 13563; Small Business Regulatory Enforcement Fairness Act; Regulatory Flexibility

This rule has been drafted and reviewed in accordance with Executive Order 12866, section 1(b), Principles of Regulations. The agency has determined that this rule is not a “significant regulatory action” under Executive Order 12866, section 3(f), Regulatory Planning and Review. Accordingly, there is no requirement for an assessment of potential costs and benefits under section 6(a)(3) of that order.

This action is not classified as a “rule” under Chapter 8 of the Small Business Regulatory Enforcement Fairness Act of 1996, because it is pertaining to agency organization, procedure, or practice that does not substantially affect the rights or obligations of non-agency parties. See 5 U.S.C. 804(3)(C).

Because no notice of proposed rulemaking is required for this rule under section 553(b) of the Administrative Procedure Act (APA), the requirements of the Regulatory Flexibility Act (5 U.S.C. 601) pertaining to regulatory flexibility do not apply to this rule. See 5 U.S.C. 601(2).

Paperwork Reduction Act

This final rule is not subject to section 350(h) of the Paperwork Reduction Act (44 U.S.C. 3501) since it does not contain any new collection of information requirements. The final rule does, however, update the information collection control numbers assigned by OMB to allow the reader to locate the collections where referenced in the regulations. The information collections referenced herein are not subject to OMB review as they do not amend information collection requirements.

Unfunded Mandates Reform Act

This Final Rule has been reviewed in accordance with the Unfunded Mandates Reform Act of 1995 (UMRA), 2 U.S.C. 1501 *et seq.* For the purposes of the UMRA, this rule does not impose any Federal mandate that may result in increased expenditures by State, local or Tribal governments, or increased expenditures by the private sector, of more than \$100 million in any year.

Executive Order 13132 (Federalism)

The Department has reviewed this rule in accordance with the Executive Order on Federalism (Executive Order 13132, 64 FR 43255, August 10, 1999). This rule does not have federalism implications as outlined in E.O. 13132. The rule does not have substantial direct effects on the States, on the

relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

Executive Order 13175, Indian Tribal Governments

The Department has reviewed this rule under the terms of Executive Order 13175 (65 FR 67249, November 6, 2000) and determined it did not have “tribal implications.” The rule does not have “substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.” As a result, no Tribal summary impact statement has been prepared.

Effects on Families

The Department certifies that this rule will not adversely affect the well-being of families, as discussed under section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105-277).

Executive Order 13045, Protection of Children

The Department has reviewed this rule under the terms of Executive Order 13045 (62 FR 19885, April 21, 1997, as amended by 68 FR 19931, April 18, 2003) and determined this action is not subject to E.O. 13045 because it is not economically significant as defined in E.O. 12866 and it does not impact the environmental health or safety risks of children.

Environmental Impact Assessment

The Department has reviewed this rule in accordance with the requirements of the National Environmental Policy Act of 1969 (NEPA), 42 U.S.C. 4321 *et seq.*, the regulations of the Council of Environmental Quality, 40 CFR 1500.1 *et seq.*, and the Departmental NEPA procedures, 29 CFR part 11, and determined that this rule will not have a significant impact on the quality of the human environment. There is, therefore, no corresponding environmental assessment or an environmental impact statement.

Executive Order 13211, Energy Supply

The Department has determined that this rule is not subject to Executive Order 13211 (66 FR 28355, May 18, 2001). It will not have a significant adverse effect on the supply, distribution, or use of energy.

Executive Order 12630, Constitutionally Protected Property Rights

The Department has determined that this rule is not subject to Executive Order 12630 (53 FR 8859, March 15, 1988) because it does not involve implementation of a policy “that has taking implications” or that could impose limitations on private property use.

Executive Order 12988, Civil Justice Reform Analysis

The Department drafted and reviewed this Final Rule in accordance with Executive Order 12988 (61 FR 4729, February 5, 1996) and determined that the rule will not unduly burden the Federal court system. The rule was: (1) Reviewed to eliminate drafting errors and ambiguities; (2) written to minimize litigation; and (3) written to provide a clear legal standard for affected conduct and to promote burden reduction.

List of Subjects*29 CFR Part 1*

Administrative practice and procedure, Construction industry, Government contracts, Minimum wages.

29 CFR Part 3

Penalties, Wages.

29 CFR Part 580

Administrative practice and procedure, Child labor, Penalties, Wages.

29 CFR Part 801

Administrative practice and procedure, Employment, Lie detector tests, Penalties, Reporting and recordkeeping requirements.

29 CFR Part 825

Administrative practice and procedure, Airmen, Employee benefit plans, Health insurance, Health, Labor management relations, Maternal and child health, Penalties, Reporting and recordkeeping requirements, Teachers.

Dated: December 20, 2016.

David Weil,

Wage and Hour Administrator.

■ For the reasons set forth above, the Department of Labor amends title 29, parts 1, 3, 4, 5, 6, 500, 505, 516, 519, 520, 525, 530, 547, 549, 553, 570, 575, 578, 580, 801, and 825 of the Code of Federal Regulations as follows:

PART 1—PROCEDURES FOR PRE-DETERMINATION OF WAGE RATES

■ 1. The authority citation for part 1 continues to read as follows:

Authority: 5 U.S.C. 301; R.S. 161, 64 Stat. 1267; Reorganization Plan No. 14 of 1950, 5 U.S.C. appendix; 40 U.S.C. 3141 *et seq.*; 40 U.S.C. 3145; 40 U.S.C. 3148; and the laws listed in appendix A of this part.

■ 2. In § 1.2, revise paragraph (c) to read as follows:

§ 1.2 Definitions.¹

* * * * *

(c) The term *Administrator* shall mean the Administrator of the Wage and Hour Division, U.S. Department of Labor, or authorized representative.

* * * * *

■ 3. In § 1.5, revise paragraph (b)(1) to read as follows:

§ 1.5 Procedure for requesting wage determinations.

* * * * *

(b)(1) If a general wage determination is not available, the Federal agency shall request a wage determination under the Davis-Bacon Act or any of its related prevailing wage statutes by submitting Form SF-308 to the Department of Labor at this address: U.S. Department of Labor, Wage and Hour Division,

¹ These definitions are not intended to restrict the meaning of the terms as used in the applicable statutes.

Branch of Government Construction Contract Wage Determination, Washington, DC 20210. In preparing Form SF-308, the agency shall check only those classifications that will be needed in the performance of the work. Inserting a note such as "entire schedule" or "all applicable classifications" is not sufficient. Additional classifications needed that are not on the form may be typed in the blank spaces or on a separate list and attached to the form.

* * * * *

PART 3—CONTRACTORS AND SUBCONTRACTORS ON PUBLIC BUILDING OR PUBLIC WORK FINANCED IN WHOLE OR IN PART BY LOANS OR GRANTS FROM THE UNITED STATES

■ 4. The authority citation for part 3 is revised to read as follows:

Authority: R.S. 161, sec. 2, 48 Stat. 848; Reorg. Plan No. 14 of 1950, 64 Stat. 1267; 5 U.S.C. 301; 40 U.S.C. 3145; Secretary's Order 01-2014 (Dec. 19, 2014), 79 FR 77527 (Dec. 24, 2014).

■ 5. In § 3.3, revise paragraph (b) to read as follows:

§ 3.3 Weekly statement with respect to payment of wages.

* * * * *

(b) Each contractor or subcontractor engaged in the construction, prosecution, completion, or repair of any public building or public work, or building or work financed in whole or in part by loans or grants from the United States, shall furnish each week a statement with respect to the wages paid each of its employees engaged on work covered by this part 3 and part 5 of this title during the preceding weekly payroll period. This statement shall be executed by the contractor or subcontractor or by an authorized officer or employee of the contractor or subcontractor who supervises the payment of wages, and shall be on the back of Form WH 347, "Payroll (For Contractors Optional Use)" or on any form with identical wording. Copies of WH 347 may be obtained from the Government contracting or sponsoring agency or from the Wage and Hour Division Web site at <http://www.dol.gov/whd/forms/index.htm> or its successor site.

* * * * *

■ 6. In § 3.4, revise the parenthetical at the end of section to read as follows:

§ 3.4 Submission of weekly statements and the preservation and inspection of weekly payroll records.

* * * * *

(Reporting and recordkeeping requirements in paragraph (b) have been approved by the Office of Management and Budget under control number 1235-0008).

PART 4—LABOR STANDARDS FOR FEDERAL SERVICE CONTRACTS

■ 7. The authority citation for part 4 is revised to read as follows:

Authority: 41 U.S.C. 351 *et seq.*; 41 U.S.C. 38 and 39; 5 U.S.C. 301; Pub. L. 104-188, 2105(b); Pub. L. 110-28, 121 Stat. 112; Secretary's Order 01-2014 (Dec. 19, 2014), 79 FR 77527 (Dec. 24, 2014).

■ 8. In § 4.1a, revise paragraphs (b) and (c) to read as follows:

§ 4.1a Definitions and use of terms.

* * * * *

(b) *Secretary* includes the Secretary of Labor or their authorized representative.

(c) *Wage and Hour Division* means the organizational unit of the Department of Labor to which is assigned the performance of functions of the Secretary under the Service Contract Act of 1965, as amended.

* * * * *

■ 9. In § 4.3, revise paragraph (e) to read as follows:

§ 4.3 Wage determinations.

* * * * *

(e) Wage determinations will be available for public inspection during business hours at the Wage and Hour Division, U.S. Department of Labor, Washington, DC, and copies will be made available upon request at Regional Offices of the Wage and Hour Division. In addition, most prevailing wage determinations are available online from WDOL. Archived versions of SCA wage determinations that are no longer current may be accessed in the "Archived SCA WD" database of WDOL for information purposes only. Contracting officers should not use an archived wage determination in a contract action without prior approval of the Department of Labor.

■ 10. In § 4.5, revise paragraph (a)(1) to read as follows:

§ 4.5 Contract specifications of determined minimum wages and fringe benefits.

(a) * * *

(1) Any wage determination from the Wage and Hour Division, Department of Labor, responsive to the contracting agency's submission of an e98 or obtained through WDOL under § 4.4; or

* * * * *

■ 11. In § 4.6, revise paragraphs (b)(2)(ii) and (b)(3), the first sentence in paragraph (g)(1), and the table in paragraph (r) to read as follows:

§ 4.6 Labor standards clauses for Federal service contracts exceeding \$2,500.

* * * * *

(b) * * *

(2) * * *

(ii) Such conforming procedure shall be initiated by the contractor prior to the performance of contract work by such unlisted class of employee. A written report of the proposed conforming action, including information regarding the agreement or disagreement of the authorized representative of the employees involved or, where there is no authorized representative, the employees themselves, shall be submitted by the contractor to the contracting officer no later than 30 days after such unlisted class of employees performs any contract work. The contracting officer shall review the proposed action and promptly submit a report of the action, together with the agency's recommendation and all pertinent information including the position of the contractor and the employees, to the Wage and Hour Division, U.S. Department of Labor, for review. The Wage and Hour Division will approve, modify, or disapprove the action or render a final determination in the event of disagreement within 30 days of receipt or will notify the contracting officer within 30 days of receipt that additional time is necessary.

* * * * *

(3) If, as authorized pursuant to section 4(d) of the Service Contract Act of 1965 as amended, the term of this contract is more than 1 year, the minimum monetary wages and fringe benefits required to be paid or furnished thereunder to service employees shall be subject to adjustment after 1 year and not less often than once every 2 years, pursuant to wage determinations to be issued by the Wage and Hour Division of the Department of Labor as provided in such Act.

* * * * *

(g)(1) The contractor and each subcontractor performing work subject to the Act shall make and maintain for 3 years from the completion of the work records containing the information specified in paragraphs (g)(1)(i) through (vi) of this section for each employee subject to the Act and shall make them available for inspection and transcription by authorized representatives of the Wage and Hour Division of the U.S. Department of Labor: * * *

* * * * *

(r) * * *

Paragraph	OMB Control No.
(b)(2)(i)–(iv)	1235–0007
(e)	1235–0007
(g)(1)(i)–(iv)	1235–0007
	1235–0018
(g)(1)(v)–(vi)	1235–0007
(l)(1), (2)	1235–0007
(q)(3)	1235–0007

■ 12. In § 4.10, revise paragraph (b)(1)(i) introductory text to read as follows:

§ 4.10 Substantial variance proceedings under section 4(c) of the Act.

* * * * *

(b) * * *

(1)(i) A request for a hearing under this section may be made by the contracting agency or other person affected or interested, including contractors or prospective contractors and associations of contractors, representatives of employees, and other interested Governmental agencies. Such a request shall be submitted in writing to the Administrator, Wage and Hour Division, U.S. Department of Labor, Washington, DC 20210, and shall include the following:

* * * * *

■ 13. In § 4.11, revise the second sentence of paragraph (b)(1) introductory text to read as follows:

§ 4.11 Arm’s length proceedings.

* * * * *

(b) * * *

(1) * * * Such a request shall be submitted in writing to the Administrator, Wage and Hour Division, U.S. Department of Labor, Washington, DC 20210. * * *

* * * * *

■ 14. In § 4.12, revise paragraph (c)(1) to read as follows:

§ 4.12 Substantial interest proceedings.

* * * * *

(c)(1) A request for a determination under this section may be made by any interested party, including contractors or prospective contractors, and associations of contractors, representatives of employees, and interested Government agencies. Such a request shall be submitted in writing to the Administrator, Wage and Hour Division, U.S. Department of Labor, Washington, DC 20210.

* * * * *

■ 15. In § 4.101, revise paragraph (g) to read as follows:

§ 4.101 Official rulings and interpretations in this subpart.

* * * * *

(g) It should not be assumed that the lack of discussion of a particular subject

in this subpart indicates the adoption of any particular position by the Department of Labor with respect to such matter or to constitute an interpretation, practice, or enforcement policy. If doubt arises or a question exists, inquiries with respect to matters other than safety and health standards should be directed to the Administrator of the Wage and Hour Division, U.S. Department of Labor, Washington, DC 20210, or any regional office of the Wage and Hour Division. Safety and health inquiries should be addressed to the Assistant Secretary for Occupational Safety and Health, U.S. Department of Labor, Washington, DC 20210, or to any OSHA regional office. A full description of the facts and any relevant documents should be submitted if an official ruling is desired.

■ 16. In § 4.191, revise paragraph (d) to read as follows:

§ 4.191 Complaints and compliance assistance.

* * * * *

(d) In the event that an Assistant Regional Administrator for the Wage and Hour Division, is notified of a breach or violation which also involves safety and health standards, the Regional Administrator of the Wage and Hour Division shall notify the appropriate Regional Administrator of the Occupational Safety and Health Administration who shall with respect to the safety and health violations take action commensurate with his responsibilities pertaining to safety and health standards.

* * * * *

PART 5—LABOR STANDARDS PROVISIONS APPLICABLE TO CONTRACTS COVERING FEDERALLY FINANCED AND ASSISTED CONSTRUCTION (ALSO LABOR STANDARDS PROVISIONS APPLICABLE TO NONCONSTRUCTION CONTRACTS SUBJECT TO THE CONTRACT WORK HOURS AND SAFETY STANDARDS ACT

■ 17. The authority citation for part 5 continues to read as follows:

Authority: 5 U.S.C. 301; R.S. 161, 64 Stat. 1267; Reorganization Plan No. 14 of 1950, 5 U.S.C. appendix; 40 U.S.C. 3141 *et seq.*; 40 U.S.C. 3145; 40 U.S.C. 3148; 40 U.S.C. 3701 *et seq.*; and the laws listed in 5.1(a) of this part; Secretary’s Order No. 01–2014 (Dec. 19, 2014), 79 FR 77527 (Dec. 24, 2014); 28 U.S.C. 2461 note (Federal Civil Penalties Inflation Adjustment Act of 1990); Pub. L. 114–74 at § 701, 129 Stat 584.

■ 18. In § 5.2, revise paragraph (b) to read as follows:

§ 5.2 Definitions.

* * * * *

(b) The term *Administrator* means the Administrator of the Wage and Hour Division, U.S. Department of Labor, or authorized representative.

* * * * *

■ 19. In § 5.5, lift the suspension and revise paragraphs (a)(1)(i) and (a)(1)(ii)(B) to read as follows:

§ 5.5 Contract provisions and related matters.

(a) * * *

(1) * * *

(i) All laborers and mechanics employed or working upon the site of the work (or under the United States Housing Act of 1937 or under the Housing Act of 1949 in the construction or development of the project), will be paid unconditionally and not less often than once a week, and without subsequent deduction or rebate on any account (except such payroll deductions as are permitted by regulations issued by the Secretary of Labor under the Copeland Act (29 CFR part 3)), the full amount of wages and bona fide fringe benefits (or cash equivalents thereof) due at time of payment computed at rates not less than those contained in the wage determination of the Secretary of Labor which is attached hereto and made a part hereof, regardless of any contractual relationship which may be alleged to exist between the contractor and such laborers and mechanics. Contributions made or costs reasonably anticipated for bona fide fringe benefits under section 1(b)(2) of the Davis-Bacon Act on behalf of laborers or mechanics are considered wages paid to such laborers or mechanics, subject to the provisions of paragraph (a)(1)(iv) of this section; also, regular contributions made or costs incurred for more than a weekly period (but not less often than quarterly) under plans, funds, or programs which cover the particular weekly period, are deemed to be constructively made or incurred during such weekly period. Such laborers and mechanics shall be paid the appropriate wage rate and fringe benefits on the wage determination for the classification of work actually performed, without regard to skill, except as provided in § 5.5(a)(4). Laborers or mechanics performing work in more than one classification may be compensated at the rate specified for each classification for the time actually worked therein: *Provided*, That the employer’s payroll records accurately set forth the time spent in each classification in which work is performed. The wage determination (including any additional classification and wage rates conformed under

paragraph (a)(1)(ii) of this section) and the Davis-Bacon poster (WH-1321) shall be posted at all times by the contractor and its subcontractors at the site of the work in a prominent and accessible place where it can be easily seen by the workers.

(ii) * * *

(B) If the contractor and the laborers and mechanics to be employed in the classification (if known), or their representatives, and the contracting officer agree on the classification and wage rate (including the amount designated for fringe benefits where appropriate), a report of the action taken shall be sent by the contracting officer to the Administrator of the Wage and Hour Division, U.S. Department of Labor, Washington, DC 20210. The Administrator, or an authorized representative, will approve, modify, or disapprove every additional classification action within 30 days of receipt and so advise the contracting officer or will notify the contracting officer within the 30-day period that additional time is necessary.

* * * * *

■ 20. In § 5.5, revise the table following paragraph (c) to read as follows:

* * * * *

(c) * * *

Paragraph	OMB Control No.
(a)(1)(ii)(B)	1235-0023
(a)(1)(ii)(C)	1235-0023
(a)(1)(iv)	1235-0023
(a)(3)(i)	1235-0023
(a)(3)(ii)(A)	1235-0023
(c)	1235-0023

■ 21. In § 5.12, revise paragraphs (c) and (d)(3)(i) to read as follows:

§ 5.12 Debarment proceedings.

* * * * *

(c) Any person or firm debarred under paragraph (a)(1) of this section may in writing request removal from the debarment list after six months from the date of publication by the Comptroller General of such person or firm's name on the ineligible list. Such a request should be directed to the Administrator of the Wage and Hour Division, U.S. Department of Labor, Washington, DC 20210, and shall contain a full explanation of the reasons why such person or firm should be removed from the ineligible list. In cases where the contractor or subcontractor failed to make full restitution to all underpaid employees, a request for removal will not be considered until such underpayments are made. In all other cases, the Administrator will examine

the facts and circumstances surrounding the violative practices which caused the debarment, and issue a decision as to whether or not such person or firm has demonstrated a current responsibility to comply with the labor standards provisions of the statutes listed in § 5.1, and therefore should be removed from the ineligible list. Among the factors to be considered in reaching such a decision are the severity of the violations, the contractor or subcontractor's attitude towards compliance, and the past compliance history of the firm. In no case will such removal be effected unless the Administrator determines after an investigation that such person or firm is in compliance with the labor standards provisions applicable to Federal contracts and Federally assisted construction work subject to any of the applicable statutes listed in § 5.1 and other labor statutes providing wage protection, such as the Service Contract Act, the Walsh-Healey Public Contracts Act, and the Fair Labor Standards Act. If the request for removal is denied, the person or firm may petition for review by the Administrative Review Board pursuant to 29 CFR part 7.

(d) * * *

(3)(i) A request for a determination of interest (or substantial interest, as appropriate), may be made by any interested party, including contractors or prospective contractors and associations of contractor's representatives of employees, and interested Government agencies. Such a request shall be submitted in writing to the Administrator, Wage and Hour Division, U.S. Department of Labor, Washington, DC 20210.

* * * * *

■ 22. Revise § 5.13 to read as follows:

§ 5.13 Rulings and interpretations.

All questions relating to the application and interpretation of wage determinations (including the classifications therein) issued pursuant to part 1 of this subtitle, of the rules contained in this part and in parts 1 and 3, and of the labor standards provisions of any of the statutes listed in § 5.1 shall be referred to the Administrator for appropriate ruling or interpretation. The rulings and interpretations shall be authoritative and those under the Davis-Bacon Act may be relied upon as provided for in section 10 of the Portal-to-Portal Act of 1947 (29 U.S.C. 259). Requests for such rulings and interpretations should be addressed to the Administrator, Wage and Hour Division, U.S. Department of Labor, Washington, DC 20210.

■ 23. In § 5.15, revise the parenthetical at the end of the section to read as follows:

§ 5.15 Limitations, variations, tolerances, and exemptions under the Contract Work Hours and Safety Standards Act.

* * * * *

(Reporting and recordkeeping requirements in paragraph (d)(2) have been approved by the Office of Management and Budget under control numbers 1235-0023 and 1235-0018. Reporting and recordkeeping requirements in paragraph (d)(3)(ii) have been approved by the Office of Management and Budget under control number 1235-0018).

PART 6—RULES OF PRACTICE FOR ADMINISTRATIVE PROCEEDINGS ENFORCING LABOR STANDARDS IN FEDERAL AND FEDERALLY ASSISTED CONSTRUCTION CONTRACTS AND FEDERAL SERVICE CONTRACTS

■ 24. The authority citation for part 6 continues to read as follows:

Authority: Secs. 4 and 5, 79 Stat. 1034, 1035 as amended by 86 Stat. 789, 790, 41 U.S.C. 353 and 354; 5 U.S.C. 301; Reorg. Plan No. 14 of 1950, 64 Stat. 1267, 5 U.S.C. Appendix; 46 Stat. 1494, as amended by 49 Stat. 1011, 78 Stat. 238, 40 U.S.C. 276a-276a-7; 76 Stat. 357-359, 40 U.S.C. 327-332; 48 Stat. 948, as amended by 63 Stat. 108, 72 Stat. 967, 40 U.S.C. 276c.

■ 25. In § 6.2, revise paragraph (a) to read as follows:

§ 6.2 Definitions.

(a) *Administrator* means the Administrator of the Wage and Hour Division, U.S. Department of Labor, or authorized representative.

* * * * *

PART 500—MIGRANT AND SEASONAL AGRICULTURAL WORKER PROTECTION

■ 26. The authority citation for part 500 continues to read as follows:

Authority: Pub. L. 97-470, 96 Stat. 2583 (29 U.S.C. 1801-1872); Secretary's Order No. 01-2014 (Dec. 19, 2014), 79 FR 77527 (Dec. 24, 2014); 28 U.S.C. 2461 Note (Federal Civil Penalties Inflation Adjustment Act of 1990); and Pub. L. 114-74, 129 Stat 584.

■ 27. In § 500.7, revise paragraph (c) to read as follows:

§ 500.7 Investigation authority of the Secretary.

* * * * *

(c) Any person may report a violation of the Act or these regulations to the Secretary by advising any local office of the Employment Service of the various States, or any office of the Wage and Hour Division, U.S. Department of Labor, or any other authorized

representative of the Administrator. The office or person receiving such a report shall refer it to the appropriate office of the Wage and Hour Division, for the region or area in which the reported violation is alleged to have occurred.

* * * * *

■ 28. In § 500.20, revise paragraph (a) to read as follows:

§ 500.20 Definitions.

* * * * *

(a) *Administrator* means the Administrator of the Wage and Hour Division, United States Department of Labor, and such authorized representatives as may be designated by the Administrator to perform any of the functions of the Administrator under this part.

* * * * *

■ 29. In § 500.41, revise paragraph (b) to read as follows:

§ 500.41 Farm labor contractor is responsible for actions of his farm labor contractor employee.

* * * * *

(b) Farm Labor Contractor Employee Certificate of Registration is valid only during the period in which the holder is an employee of the registered farm labor contractor named on the Farm Labor Contractor Employee Certificate. If prior to the expiration of the Employee Certificate, the holder through a change in employment, should become an employee of a different registered farm labor contractor, a replacements Employee Certificate which names the new employer may be obtained by submitting to the regional office that issued the original employee certificate or to any regional office of the Wage and Hour Division, a written statement that includes the date of the change in employment status and the name, the permanent place of residence and certificate registration number of the new employer. Any such change should be reported immediately.

■ 30. Revise § 500.56 to read as follows:

§ 500.56 Replacement of Certificate of Registration or Farm Labor Contractor Employee Certificate.

If a Certificate of Registration or a Farm Labor Contractor Employee Certificate is lost or destroyed, a duplicate certificate may be obtained by the submission to the regional office that issued it or to any regional office of the Wage and Hour Division, of a written statement explaining its loss or destruction, indicating where the original application was filed and requesting that a duplicate be issued.

■ 31. In § 500.215, revise paragraph (b) to read as follows:

§ 500.215 Change of address.

* * * * *

(b) The notification required in paragraph (a) of this section shall be in writing, by certified mail and addressed to the Administrator, Wage and Hour Division, 200 Constitution Avenue NW, Washington, DC 20210.

* * * * *

PART 505—LABOR STANDARDS ON PROJECTS OR PRODUCTIONS ASSISTED BY GRANTS FROM THE NATIONAL ENDOWMENT FOR THE ARTS AND HUMANITIES

■ 32. The authority citation for part 505 is revised to read as follows:

Authority: Sec. 5(j), Pub. L. 89–209, 79 Stat. 848 (20 U.S.C. 954(i)); sec. 7(g), Pub. L. 94–462, 90 Stat. 1971, as amended by sec. 107(4), Pub. L. 99–194, 99 Stat. 1337 (20 U.S.C. 956(g)); Secretary’s Order No. 01–2014 (Dec. 19, 2014), 79 FR 77527 (Dec. 24, 2014); Secretary’s Order 01–2012 (Jan. 18, 2012), 77 FR 3912 (Jan. 25, 2012).

■ 33. In § 505.2, revise paragraph (c) to read as follows:

§ 505.2 Definitions.

* * * * *

(c) The term *Administrator* means the Administrator of the Wage and Hour Division, U.S. Department of Labor, or authorized representative, to whom is assigned the performance of functions of the Secretary pertaining to wages under the National Foundation on the Arts and the Humanities Act of 1965, as amended.

* * * * *

■ 34. In § 505.5, revise the parenthetical at the end of the section to read as follows:

§ 505.5 Adequate assurances.

* * * * *

(The requirements in paragraph (b) were approved by the Office of Management and Budget under control number 1235–0018).

PART 516—RECORDS TO BE KEPT BY EMPLOYERS

■ 35. The authority citation for part 516 continues to read as follows:

Authority: Sec. 11, 52 Stat. 1066, as amended, 29 U.S.C. 211. Section 516.28 also issued under Pub. L. 104–188, 2105(b); Pub. L. 110–28, 121 Stat. 112. Section 516.33 also issued under 52 Stat. 1060, as amended; 29 U.S.C. 201 *et seq.* Section 516.34 also issued under Sec. 7, 103 Stat. 944, 29 U.S.C. 207(q).

■ 36. Revise § 516.0 to read as follows:

Subpart or section where information collection requirement is located	Currently assigned OMB Control No.
Subpart A	1235–0018

Subpart or section where information collection requirement is located	Currently assigned OMB Control No.
Subpart B 516.31 also discussed in	1235–0018 1235–0001

PART 519—EMPLOYMENT OF FULL-TIME STUDENTS AT SUBMINIMUM WAGES

■ 37. The authority citation for part 519 continues to read as follows:

Authority: Secs. 11 and 14, 52 Stat. 1068; sec. 11, 75 Stat. 74; secs. 501 and 602, 80 Stat. 843, 844 (29 U.S.C. 211, 214).

■ 38. In § 519.11, revise the first sentence of paragraph (a) to read as follows:

§ 519.11 Applicability of the regulations in this subpart.

(a) *Statutory provisions.* Under section 14 of the Fair Labor Standards Act of 1938, as amended, and the authority and responsibility delegated to him/her by the Secretary of Labor (36 FR 8755), the Administrator of the Wage and Hour Division is authorized and directed, to the extent necessary in order to prevent curtailment of employment opportunities for employment, to provide by regulation or order for the employment, under certificates, of full-time students in institutions of higher education. * * *

PART 520—EMPLOYMENT UNDER SPECIAL CERTIFICATE OF MESSENGERS, LEARNERS, (INCLUDING STUDENT-LEARNERS), AND APPRENTICES

■ 39. The authority citation for part 520 continues to read as follows:

Authority: Sec. 14, 52 Stat. 1062, 1064 (29 U.S.C. 214); secs. 2–12, 60 Stat. 237–244; (5 U.S.C. 1001–1011); 52 Stat. 1068, as amended, 29 U.S.C. 214.

■ 40. Amend § 520.300 by revising the definitions of “Administrator” and “Wage and Hour Division” to read as follows:

§ 520.300 Definitions.

Administrator means the Administrator of the Wage and Hour Division, United States Department of Labor, or his/her authorized representative.

* * * * *

Wage and Hour Division means the Wage and Hour Division, United States Department of Labor.

■ 41. In § 520.403, revise the parenthetical at end of section to read as follows:

§ 520.403 What information is required when applying for authority to pay less than the minimum wage?

* * * * *

(The information collection requirements contained in paragraphs (a), (b), and (c) were approved by the Office of Management and Budget under control number 1235-0001).
■ 42. In § 520.405, revise the parenthetical at the end of section to read as follows:

§ 520.405 Must I notify my employees that I am applying for a certificate to employ messengers and/or learners at subminimum wages?

* * * * *

(The information collection requirements contained herein were approved by the Office of Management and Budget under control number 1235-0001).
■ 43. In § 520.501, revise the parenthetical at end of section to read as follows:

§ 520.501 How do I obtain authority to employ student-learners at subminimum wages?

* * * * *

(The information collection requirements contained in paragraph (b) were approved by the Office of Management and Budget under control number 1235-0001).
■ 44. In § 520.502, revise parenthetical at end of section to read as follows:

§ 520.502 What information must an application to employ student-learners at subminimum wages contain?

* * * * *

(The information collection requirements in paragraphs (a), (b), (c), (d), (e), (f), (g), (h), and (i) were approved by the Office of Management and Budget under control number 1235-0001).

PART 525—EMPLOYMENT OF WORKERS WITH DISABILITIES UNDER SPECIAL CERTIFICATES

■ 45. The authority citation for part 525 continues to read as follows:

Authority: 52 Stat. 1060, as amended (29 U.S.C. 201-219); Pub. L. 99-486, 100 Stat. 1229 (29 U.S.C. 214).

■ 46. In § 525.16, revise the parenthetical at the end of section to read as follows:

§ 525.16 Records to be kept by employers.

* * * * *

(Approved by the Office of Management and Budget under control number 1235-0001).
■ 47. In § 525.22, revise paragraph (a) to read as follows:

§ 525.22 Employee's right to petition.

(a) Any employee receiving a special minimum wage at a rate specified pursuant to subsection 14(c) of FLSA or the parent or guardian of such an

employee may petition the Secretary to obtain a review of such special minimum wage rate. No particular form of petition is required, except that a petition must be signed by the individual, or the parent or guardian of the individual, and should contain the name and address of the employee and the name and address of the employee's employer. A petition may be filed in person or by mail with the Administrator of the Wage and Hour Division, U.S. Department of Labor, Room S3502, 200 Constitution Avenue NW., Washington, DC 20210. The petitioner may be represented by counsel in any stage of such proceedings. Upon receipt, the petition shall be forwarded immediately to the Chief Administrative Law Judge.

* * * * *

PART 530—EMPLOYMENT OF HOMEWORKERS IN CERTAIN INDUSTRIES

■ 48. The authority citation for part 530 continues to read as follows:

Authority: Sec. 11, 52 Stat. 1066 (29 U.S.C. 211) as amended by sec. 9, 63 Stat. 910 (29 U.S.C. 211(d)); Secretary's Order No. 01-2014 (Dec. 19, 2014), 79 FR 77527 (Dec. 24, 2014); 28 U.S.C. 2461 note (Federal Civil Penalties Inflation Adjustment Act of 1990); Pub. L. 114-74 at § 701, 129 Stat 584.

■ 49. In § 530.1, revise paragraph (b) to read as follows:

§ 530.1 Definitions.

* * * * *

(b) *Administrator* as used in this part means the Administrator of the Wage and Hour Division, U.S. Department of Labor, or an authorized representative of the Administrator.

* * * * *

■ 50. In § 530.3, revise the parenthetical at end of section to read as follows:

§ 530.3 Application forms for individual homeworker certificates.

* * * * *

(Approved by the Office of Management and Budget under control number 1235-0001).

■ 51. In § 530.4, revise parenthetical at end of section to read as follows:

§ 530.4 Terms and conditions for the issuance of individual homeworker certificates.

* * * * *

(Information collection requirements contained in paragraph (a) were approved by the Office of Management and Budget under control number 1235-0001).

■ 52. In § 530.101, revise paragraph (c) to read as follows:

§ 530.101 General.

* * * * *

(c) Certificates authorizing such employment may be issued on the following terms and conditions upon written application to the Administrator, Wage and Hour Division, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210.

■ 53. Revise § 530.102 to read as follows:

§ 530.102 Requests for employer certificates.

The initial request for certification or renewal application shall be signed by the employer and shall contain the name of the firm, its mailing address, the physical location of the firm's principal place of business and a description of the business operations and items produced. In addition, the initial or renewal application shall contain the names, addresses, and languages (if other than English) spoken by the homeworkers that are currently employed (if any) or expected to be employed. The employer shall also provide the Administrator, within thirty (30) days, a notice of each change of address of the principal place of business. The notification shall be in writing and addressed to the Administrator, Wage and Hour Division, 200 Constitution Avenue NW., Washington, DC 20210.

■ 54. In § 530.403, revise paragraph (a) to read as follows:

§ 530.403 Request for hearing.

(a) Except in the case of an emergency revocation under § 530.411 of this subpart, a request for an administrative hearing on a determination referred to in § 530.402 of this subpart shall be made in writing to the Administrator of the Wage and Hour Division, U.S. Department of Labor, Washington, DC 20210, and must be received no later than thirty (30) days after issuance of the notice referred to in § 530.402 of this subpart.

* * * * *

PART 547—REQUIREMENTS OF A "BONA FIDE THRIFT OR SAVINGS PLAN"

■ 55. The authority citation for part 547 continues to read as follows:

Authority: Sec. 7, 52 Stat. 1063, as amended; 29 U.S.C. 207.

■ 56. In § 547.1, revise parenthetical at end of section to read as follows:

§ 547.1 Essential requirements for qualifications.

* * * * *

(Approved by the Office of Management and Budget under control number 1235-0013).

PART 549—REQUIREMENTS OF A “BONA FIDE PROFIT SHARING PLAN OR TRUST”

■ 57. The authority citation for part 549 continues to read as follows:

Authority: Sec. 7, 52 Stat. 1063, as amended; 29 U.S.C. 207.

■ 58. In § 549.1, revise the parenthetical at the end of the section to read as follows:

§ 549.1 Essential requirements for qualifications.

* * * * *

(Approved by the Office of Management and Budget under control number 1235–0013).

PART 553—APPLICATION OF THE FAIR LABOR STANDARDS ACT TO EMPLOYEES OF STATE AND LOCAL GOVERNMENTS

■ 59. The authority citation for part 553 continues to read as follows:

Authority: Secs. 1–19, 52 Stat. 1060, as amended (29 U.S.C. 201–219); Pub. L. 99–150, 99 Stat. 787 (29 U.S.C. 203, 207, 211). Pub. L. 106–151, 113 Stat. 1731 (29 U.S.C. 203(y)).

■ 60. In § 553.221, revise paragraph (a) to read as follows:

§ 553.221 Compensable hours of work.

(a) The general rules on compensable hours of work are set forth in 29 CFR part 785 which is applicable to employees for whom the section 7(k) exemption is claimed. Special rules for sleep time (§ 553.222) apply to both law enforcement and employees in fire protection activities for whom the section 7(k) exemption is claimed. Also, special rules for meal time apply in the case of employees in fire protection activities (§ 553.223). Part 785 does not discuss the special provisions that apply to State and local government workers with respect to the treatment of substitution, special details for a separate and independent employer, early relief, and work performed on an occasional or sporadic and part-time basis, all of which are covered in this subpart.

* * * * *

■ 61. In § 553.231, revise paragraph (b) to read as follows:

§ 553.231 Compensatory time off.

* * * * *

(b) Section 7(k) permits public agencies to balance the hours of work over an entire work period for law enforcement and fire protection employees. For example, if an employee engaged in fire protection activities' work period is 28 consecutive days, and he or she works 80 hours in each of the

first two weeks, but only 52 hours in the third week, and does not work in the fourth week, no overtime compensation (in cash wages or compensatory time) would be required since the total hours worked do not exceed 212 for the work period. If the same employee in fire protection activities had a work period of only 14 days, overtime compensation or compensatory time off would be due for 54 hours (160 minus 106 hours) in the first 14 day work period.

PART 570—CHILD LABOR REGULATIONS, ORDERS AND STATEMENTS OF INTERPRETATION

Subpart A—General

■ 62. The authority citation for subpart A continues to read as follows:

Authority: Secs. 3, 11, 12, 52 Stat. 1060, as amended, 1066, as amended, 1067, as amended; 29 U.S.C. 203, 211, 212.

■ 63. In § 570.1, revise paragraph (g) to read as follows:

§ 570.1 Definitions.

* * * * *

(g) *Wage and Hour Division* means the Wage and Hour Division, United States Department of Labor.

* * * * *

■ 64. The authority citation for subpart B continues to read as follows:

Subpart B—Certificates of Age

Authority: 29 U.S.C. 203(l), 211, 212.

■ 65. In § 570.6, revise the parenthetical at the end of the section to read as follows:

§ 570.6 Contents and disposition of certificates of age.

* * * * *

(The information collection requirements contained in paragraph (a) were approved by the Office of Management and Budget under control number 1235–0018.)

■ 66. The authority citation for subpart C continues to read as follows:

Subpart C—Employment of Minors Between 14 and 16 Years of Age (Child Labor Reg. 3)

Authority: 29 U.S.C. 203(l), 212, 213(c).

■ 67. In § 570.36, revise the parenthetical at the end of the section to read as follows:

§ 570.36 Work experience and career exploration program.

* * * * *

(The information collection requirements contained in paragraphs (b)(3)(vi) and (4) were approved by the Office of Management and Budget under control number 1235–0018.)

■ 68. In § 570.37, revise the parenthetical at the end of section to read as follows:

§ 570.37 Work-study program.

* * * * *

(The information collection requirements contained in § 570.37 were approved by the Office of Management and Budget under control number 1235–0018.)

PART 575—WAIVER OF CHILD LABOR PROVISIONS FOR AGRICULTURAL EMPLOYMENT OF 10 AND 11 YEAR OLD MINORS IN HAND HARVESTING OF SHORT SEASON CROPS

■ 69. The authority citation for part 575 is revised to read as follows:

Authority: Secs. 11, 12, 13, 18, 52 Stat. 1067, 1069, as amended; 29 U.S.C. 211, 212, 213, 218; Secretary's Order 01–2014 (Dec. 19, 2014), 79 FR 77527 (Dec. 24, 2014).

■ 70. In § 575.2, revise the definition of “Administrator” to read as follows:

§ 575.2 Definitions.

* * * * *

Administrator means the Administrator of the Wage and Hour Division, U.S. Department of Labor, and includes an authorized representative designated by the Administrator to perform any of the functions of the Administrator under this part.

* * * * *

■ 71. In § 575.3, revise paragraph (a) to read as follows:

§ 575.3 Application for waiver.

(a) An application for a waiver shall be filed with the Administrator of the Wage and Hour Division, United States Department of Labor, Washington, DC 20210. To permit adequate time for processing, it is recommended that such applications be filed 6 weeks prior to the period the waiver is to be in effect.

* * * * *

PART 578—MINIMUM WAGE AND OVERTIME VIOLATIONS—CIVIL MONEY PENALTIES

■ 72. The authority citation for part 578 continues to read as follows:

Authority: Sec. 9, Pub. L. 101–157, 103 Stat. 938, sec. 3103, Pub. L. 101–508, 104 Stat. 1388–29 (29 U.S.C. 216(e)), Pub. L. 101–410, 104 Stat. 890 (28 U.S.C. 2461 note), as amended by Pub. L. 104–134, section 31001(s), 110 Stat. 1321–358, 1321–373, and Pub. L. 114–74, 129 Stat. 584.

■ 73. In § 578.2, revise paragraph (b) to read as follows:

§ 578.2 Definitions.

* * * * *

(b) *Administrator* means the Administrator of the Wage and Hour

Division, U.S. Department of Labor, and includes any official of the Wage and Hour Division who is authorized by the Administrator to perform any of the functions of the Administrator under this part.

* * * * *

PART 580—CIVIL MONEY PENALTIES—PROCEDURES FOR ASSESSING AND CONTESTING PENALTIES

■ 74. The authority citation for part 580 is revised to read as follows:

Authority: 29 U.S.C. 9a, 203, 209, 211, 212, 213(c), 216; Reorg. Plan No. 6 of 1950, 64 Stat. 1263, 5 U.S.C. App; secs. 25, 29, 88 Stat. 72, 76; Secretary's Order 01–2014 (Dec. 19, 2014), 79 FR 77527 (Dec. 24, 2014); 5 U.S.C. 500, 503, 551, 559; 103 Stat. 938.

■ 75. In § 580.1, revise the definition of “Administrator” to read as follows:

§ 580.1 Definitions.

* * * * *

Administrator means the Administrator of the Wage and Hour Division, U.S. Department of Labor, and includes any official of the Wage and Hour Division authorized by the Administrator to perform any of the functions of the Administrator under this part and parts 578 and 579 of this chapter.

* * * * *

PART 801—APPLICATION OF THE EMPLOYEE POLYGRAPH PROTECTION ACT OF 1988

■ 76. The authority citation for part 801 continues to read as follows:

Authority: Pub. L. 100–347, 102 Stat. 646, 29 U.S.C. 2001–2009; 28 U.S.C. 2461 note (Federal Civil Penalties Inflation Adjustment Act of 1990); Pub. L. 114–74 at § 701, 129 Stat. 584.

■ 77. In § 801.2:

- a. Remove paragraph (h);
- b. Redesignate paragraphs (i) and (j) as paragraphs (h) and (i), respectively; and
- c. Revise newly redesignated paragraph (h).

The revision reads as follows:

§ 801.2 Definitions.

* * * * *

(h) *Wage and Hour Division* means the organizational unit of the Department of Labor to which is assigned primary responsibility for enforcement and administration of the Act.

* * * * *

■ 78. In § 801.7, revise paragraph (d) to read as follows:

§ 801.7 Authority of the Secretary.

* * * * *

(d) Any person may report a violation of the Act or these regulations to the Secretary by advising any local office of the Wage and Hour Division, U.S. Department of Labor, or any authorized representative of the Administrator. The office or person receiving such a report shall refer it to the appropriate office of the Wage and Hour Division for the region or area in which the reported violation is alleged to have occurred.

* * * * *

■ 79. In § 801.30, revise the parenthetical at the end of section to read as follows:

§ 801.30 Records to be preserved for 3 years.

* * * * *

(Approved by the Office of Management and Budget under control number 1235–0005.)

PART 825—THE FAMILY AND MEDICAL LEAVE ACT OF 1993

■ 80. The authority citation for part 525 continues to read as follows:

Authority: 29 U.S.C. 2654; 28 U.S.C. 2461 Note (Federal Civil Penalties Inflation Adjustment Act of 1990); and Pub. L. 114–74 at § 701.

■ 81. In § 825.104, revise paragraph (b) to read as follows:

§ 825.104 Covered employer.

* * * * *

(b) The terms commerce and industry affecting commerce are defined in accordance with section 501(1) and (3) of the Labor Management Relations Act of 1947 (LMRA) (29 U.S.C. 142(1) and (3)), as set forth in the definitions at § 825.102 of this part. For purposes of the FMLA, employers who meet the 50-employee coverage test are deemed to be engaged in commerce or in an industry or activity affecting commerce.

* * * * *

■ 82. In § 825.209, revise paragraph (a) to read as follows:

§ 825.209 Maintenance of employee benefits.

(a) During any FMLA leave, an employer must maintain the employee's coverage under any group health plan (as defined in the Internal Revenue Code of 1986 at 26 U.S.C. 5000(b)(1) on the same conditions as coverage would have been provided if the employee had been continuously employed during the entire leave period. All employers covered by FMLA, including public agencies, are subject to the Act's requirements to maintain health coverage. The definition of group health plan is set forth in § 825.102. For purposes of FMLA, the term group health plan shall not include an

insurance program providing health coverage under which employees purchase individual policies from insurers provided that:

(1) No contributions are made by the employer;

(2) Participation in the program is completely voluntary for employees;

(3) The sole functions of the employer with respect to the program are, without endorsing the program, to permit the insurer to publicize the program to employees, to collect premiums through payroll deductions and to remit them to the insurer;

(4) The employer receives no consideration in the form of cash or otherwise in connection with the program, other than reasonable compensation, excluding any profit, for administrative services actually rendered in connection with payroll deduction; and,

(5) The premium charged with respect to such coverage does not increase in the event the employment relationship terminates.

* * * * *

■ 83. In § 825.401, revise paragraph (a) to read as follows:

§ 825.401 Filing a complaint with the Federal Government.

(a) A complaint may be filed in person, by mail or by telephone, with the Wage and Hour Division, U.S. Department of Labor. A complaint may be filed at any local office of the Wage and Hour Division; the address and telephone number of local offices may be found in telephone directories or on the Department's Web site.

[FR Doc. 2016–31293 Filed 1–6–17; 8:45 am]

BILLING CODE 4510–27–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Parts 22 and 124

[FRL–9956–53–OARM]

Consolidated Rules of Practice Governing the Administrative Assessment of Civil Penalties, Issuance of Compliance or Corrective Action Orders, and the Revocation/Termination or Suspension of Permits; Procedures for Decisionmaking

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This final rule revises the Environmental Protection Agency's (“EPA”) Consolidated Rules of Practice governing the administrative assessment

of civil penalties and various other administrative adjudicatory hearings. These revisions simplify the administrative processing of cases by removing inconsistencies, codifying electronic filing and service procedures, and streamlining the procedures in cases initiated at EPA Headquarters. This rule also corrects some punctuation typographical errors found in the Consolidated Rules of Practice. This rule similarly revises EPA's procedures governing decisionmaking in permit appeals. These amendments are procedural in nature and none of these changes are intended to substantively alter the Agency's administrative enforcement actions or review of permit appeals.

DATES: This rule is effective on March 10, 2017.

FOR FURTHER INFORMATION CONTACT:

Michael B. Wright, Office of Administrative Law Judges, U.S. Environmental Protection Agency, Ronald Reagan Building, Room M1200, 1300 Pennsylvania Ave. NW., Washington, DC 20004, phone number (202) 564-3247 or by email at wright.michaelb@epa.gov.

SUPPLEMENTARY INFORMATION:

I. Why is the EPA issuing this rule in final form without first issuing a proposal?

Today's final rule is limited to procedural requirements for administrative adjudicatory hearings and appeals from such hearings and from permit decisions. Under the Administrative Procedure Act, an agency may issue "rules of agency organization, procedure, or practice" without first proposing such rules for public comment. 5 U.S.C. 553(b). Accordingly, public comment is not required.

II. Does this action apply to me?

This action affects parties involved in EPA administrative adjudicatory proceedings for the assessment of civil penalties, issuance of various compliance orders, and termination or suspension of certain permits, under part 22 of title 40 of the CFR. *See* 40 CFR 22.1. This action also affects parties involved in appeal of EPA permits under part 124 of title 40 of the CFR.

III. Summary of Rule

A. Background: The EPA's Consolidated Rules of Practice in Part 22 and the EPA's Rules for Procedures for Decisionmaking on Permits in Part 124

Part 22 of Title 40 of the CFR establishes procedures governing administrative adjudicatory proceedings

to assess administrative civil penalties, to issue various compliance orders, and to terminate or suspend certain permits. 40 CFR 22.1. These proceedings are conducted under a variety of environmental statutes, including the Clean Air Act, the Clean Water Act, the Solid Waste Disposal Act, and the Federal Insecticide, Fungicide, and Rodenticide Act, among others. Such cases are generally heard by the Administrative Law Judges (ALJs) within the EPA's Office of Administrative Law Judges or Regional Judicial Officers. The part 22 regulations are titled the "Consolidated Rules of Practice Governing the Administrative Assessment of Civil Penalties, Issuance of Compliance or Corrective Action Orders, and the Revocation/Termination or Suspension of Permits" ("Rules of Practice").

The EPA promulgated the Rules of Practice to establish uniform procedural rules for administrative proceedings required to be held on the record after opportunity for a hearing in accordance with section 554 of the Administrative Procedure Act, 5 U.S.C. 551 *et seq.*, *see* 40 CFR part 22, subparts A–G, and administrative enforcement proceedings not governed by section 554, *id.* part 22, subpart I. Consolidated Rules of Practice, 45 FR 24360 (Apr. 9, 1980). The Rules of Practice also establish supplementary rules that recognize the unique procedural requirements of certain environmental statutes within the EPA's jurisdiction. *See* 40 CFR part 22, subpart H. Finally, the Rules of Practice establish procedures for appeals from decisions of the ALJs and Regional Judicial Officers to the Environmental Appeals Board. *See id.* part 22, subpart F.

Part 124 of Title 40 of the CFR establishes rules governing the EPA's issuance, modification, and revocation of permits under the Resource Conservation and Recovery Act, the Underground Injection Control program of the Safe Drinking Water Act, the Prevention of Significant Deterioration program of the Clean Air Act, and the National Pollutant Discharge Elimination System program of the Clean Water Act. These permit rules include procedures for appealing permit decisions by the EPA's regional offices to the Environmental Appeals Board. *See* 40 CFR 124.19.

B. Amendments to Part 22 Procedures

This action makes several minor changes to part 22 procedures. Many of these changes pertain to the electronic filing and service of documents.

Filing and service. The EPA has amended the filing and service

requirements to clarify how these requirements apply to electronic transmission of documents and to otherwise clarify filing and service requirements and make them more consistent with similar requirements in part 124.

Section 22.5(a) currently allows a Presiding Officer or the Environmental Appeals Board to "authorize" filing of documents by "facsimile or electronic filing." 40 CFR 22.5(a). The EPA is amending this section to also allow a Presiding Officer or the Environmental Appeals Board to "require" filing by "facsimile or an electronic filing system." Both the Office of the Administrative Law Judges and the Environmental Appeals Board have an operational electronic filing system. This section is also being amended to standardize the Environmental Appeals Board filing methods under part 22 with those currently in the EPA's permit regulations in part 124.

Section 22.5(b)(2) is modified to allow parties to agree with other parties to service by facsimile or other electronic means, including but not necessarily limited to email. A party's consent to such methods of service must be in writing and the party must file acknowledgement of such consent with the Clerk for the Presiding Officer or the Environmental Appeals Board, whichever is appropriate. This section is also modified to allow the Presiding Officer or the Environmental Appeals Board to authorize or require that the parties serve each other by facsimile or other electronic means, including but not necessarily limited to email. To facilitate electronic service, § 22.5(b)(4) is modified to require that a party include an email address in the first document it files in a proceeding.

The EPA emphasizes that the rules on electronic delivery of documents differ depending on whether the document is being *filed* with an EPA adjudicatory tribunal or *served* on a party to the proceeding. In the case of filing a document in an EPA administrative proceeding, the Presiding Officer or the Environmental Appeals Board has the sole authority to authorize or require electronic filing, and only these entities may authorize or require electronic filing by facsimile or an electronic filing system. As to service of documents between parties, not only may the Presiding Officer or the Environmental Appeals Board authorize or require service by either facsimile or other electronic means, including but not necessarily limited to email, but the parties may agree to such forms of electronic service.

Additionally, the EPA is revising § 22.5(b) to clarify that in cases before the Environmental Appeals Board, documents a party files with the Board need not also be served on the Board.

Section 22.6 is amended to allow the Regional Hearing Clerk, the Headquarters Hearing Clerk, or the Clerk of the Environmental Appeals Board to serve rulings, orders, decisions, or other documents by electronic means (including but not necessarily limited to facsimile and email).

Section 22.7(c) addresses when service is considered complete and includes a provision allowing an additional period of time for response to documents served using certain procedures. *Id.* § 22.7(c). The EPA has amended this section to specify that when documents are served by facsimile or other electronic means, the service will be complete upon transmission. This approach is similar to that in Rule 5(b) of the Federal Rules of Civil Procedure. Fed. R. Civ. P. 5(b).

The EPA has also modified the so-called “mailbox rule” in § 22.7(c) providing for additional days to respond to documents served using certain procedures. As modified, the revised mailbox rule in § 22.7(c) allows an additional three days to the time allowed for response to documents served by U.S. mail, the EPA’s internal mail,¹ or commercial delivery service. Three additional days are not allowed for a response when a document to be responded to is served by personal delivery or electronic means (*e.g.*, facsimile or email). This change allows additional days where needed, but recognizes that extra days for delivery are not needed where same-day delivery is utilized. Further, this change makes part 22 consistent with the Federal Rules of Civil Procedure, including changes made to the Rules effective December 1, 2016. Rule 6(d) of the Federal Rules of Civil Procedure currently grants an additional three days when service is effectuated by U.S. mail, an agreed-to delivery service, or an electronic means. However, an amendment to Rule 6(d) that was effective December 1, 2016, removes electronic service from the types of service to which the additional three-day rule applies. Order (S. Ct. Apr. 28, 2016). This change was based on the conclusion that electronic service has become sufficiently reliable method of

providing instantaneous delivery. Fed. R. Civ. P. 6(d) advisory committee’s note to 2016 amendment.

Presiding officer prior to respondent filing answer. Generally, the Presiding Officer in part 22 proceedings is an Administrative Law Judge except for proceedings under subpart I, which are not governed by section 554 of the Administrative Procedure Act. *See* 40 CFR 22.3 (definition of “Presiding Officer”) & subpart I. Regional Judicial Officers are the Presiding Officer under subpart I proceedings. *Id.* § 22.51. The Environmental Appeals Board hears appeals from interlocutory orders and initial decisions of a Presiding Officer. *Id.* § 22.29–22.30.

However, sections 22.4(a) and 22.16(c) currently specify, among other things, that the Environmental Appeals Board will act as Presiding Officer in proceedings under part 22 commenced at EPA Headquarters until the respondent files an answer. *Id.* §§ 22.4(a), 22.16(c). In such proceedings, an Administrative Law Judge replaces the Environmental Appeals Board as the Presiding Officer once an answer is filed. *Id.* § 22.16(c).

This rule amendment modifies § 22.4(a) and § 22.16(c) to authorize an Administrative Law Judge to serve as the Presiding Officer in part 22 proceedings commenced at EPA Headquarters from the time a complaint is filed. The Environmental Appeals Board will no longer be assigned as a Presiding Officer for the period between the filing of a complaint and the filing of an answer. Rather, an Administrative Law Judge will serve as the Presiding Officer both prior to and after the filing of the answer. Removing the Environmental Appeals Board from the initial stage of enforcement proceedings will enhance the efficiency of proceedings commenced at EPA Headquarters because a single entity will exercise the role of Presiding Officer. This also eliminates the possibility that the Environmental Appeals Board could be asked to review on appeal its own decision on a preliminary motion (filed before an answer is filed).

Other changes. Section 22.28 addresses motions to reopen a hearing. This rule modifies § 22.28 to clarify the effect of filing such a motion and to expand the section to apply to motions to set aside a default order. The revised language clarifies that the filing of a motion to reopen a hearing tolls not only the time by when an initial decision becomes final or by when an appeal of an initial decision to the Environmental Appeals Board must be filed but also the time by which the

Board must decide whether it is going to exercise its authority to hear the case on its own initiative. The revised language also applies similar requirements to a motion to set aside a default order.

Additionally, the EPA is making a series of changes to § 22.30 to clarify various issues relating to appeals to the Environmental Appeals Board. *See id.* § 22.30. Section 22.30 is modified to (1) explain how attachments to a notice of appeal, appellate brief, or response brief should be identified (§ 22.30(a)(1)(iii) and (2)); (2) impose word/page limitations for briefs and motions (§ 22.30(a)(3)); (3) provide more consistency between § 22.30(a)(1)(iii) and § 124.19(a)(4)(ii) pertaining to the need for parties’ briefs to contain specific citations or other appropriate references (*e.g.*, by including the document name and page number) (§ 22.30(a)(1)(iii) and (2)); (4) clarify that when the Board initiates review of an initial decision, it will identify any issues to be briefed and a schedule for briefing in its initial order of its intent to review or in a subsequent order (§ 22.30(b)); (5) clarify that the Board may request oral argument on its own initiative, how a party must request oral argument, and that the Board may establish additional oral argument procedures by order (§ 22.30(d)); (6) make explicit that the Board may act on a motion without awaiting a response (§ 22.30(e)(2)); and (7) explain the procedure for parties to request an extension of time (§ 22.30(e)(3)).

C. Amendments to Part 124 Procedures

Most of the revisions to part 124 also concern filing and service issues. Section 124.19(i) addresses filing and service requirements in permit appeal proceedings before the Environmental Appeals Board. This section has been modified to add language clarifying when service is complete. Specifically, service is complete upon mailing for U.S. mail and EPA internal mail, when placed in the custody of a reliable commercial deliver service, or upon transmission for facsimile or email. This new language is similar to that in Rule 5(b)(2) of the Federal Rules of Civil Procedure and Environmental Appeals Board decisions. Fed. R. Civ. P. 5(b)(2); *see In re Beckman Prod. Servs.*, 5 E.A.D. 10, 15 (EAB 1994) (“When the Region serves a final permit decision by mail, service occurs upon mailing.”). The EPA has revised the language in § 124.19(i)(3) to clarify that parties may agree to electronic service by facsimile, email, or other electronic means. The EPA has also revised § 124.19(i)(3) to require that parties that consent to

¹ EPA has specifically included “EPA internal mail” in this revision to the mailbox rule because the Environmental Appeals Board previously ruled that a prior version of this provision referencing “certified mail” did not cover a document served by EPA internal mail. *In re Outboard Marine Corp.*, 6 E.A.D. 194, 197 (EAB 1995).

service by electronic means file acknowledgement of that consent with the Environmental Appeals Board.

The EPA has also made several changes to part 124 on service and filing that duplicate the changes made to part 22: (1) Requiring that a party's first filing contain an email address (§ 124.19(i)(3)(i)); (2) authorizing the Environmental Appeals Board to require that parties file documents by facsimile or through use of the Board's electronic filing system (§ 124.19(i)(2)); (3) allowing the Environmental Appeals Board to authorize or require that the parties serve each other by facsimile or other electronic means, including email (§ 124.19(i)(3)(ii)); and (4) authorizing the Board to serve rulings, orders, and decisions on the parties by electronic means (including but not necessarily limited to facsimile and email). (§ 124.19(i)(3)(iii)).

Section 124.19(b)(1) and (2) are modified so that the deadlines for filing a response to a petition for review are based on the date the petition is served, rather than filed. This provides for appropriate notice of the petition for review in advance of the deadline for a response.

Similar to the changes made in the mailbox rule in § 22.7(c), discussed above, the EPA has modified § 124.20(d) to specify that three days are added to a prescribed period of time to act when service is made by U.S. mail, the EPA's internal mail, or a reliable, commercial delivery service. Three days are not added to the prescribed time to act when service is made by personal delivery or electronic transmission (e.g., facsimile or email).

The EPA has also added word/page limitations to § 124.19(f) for motions mirroring the word/page limitations added to § 22.30. Finally, the EPA has amended § 124.19(a)(4)(ii) and (b) to further clarify that parties are to provide in their briefs appropriate reference to the administrative record (e.g., by including the document name and page number) as to each issue raised.

IV. Statutory and Executive Order Reviews

A. Executive Orders 12866: Regulatory Planning and Review and 13563: Improving Regulation and Regulatory Review

This action is exempt from review by the Office of Management and Budget (OMB) because it is limited to agency organization, management, or personnel matters.

B. Paperwork Reduction Act

This action does not impose an information collection burden under the

PRA. This action will modify the EPA's procedural regulations governing administrative adjudicatory proceedings and appeals of adjudicatory proceedings and permit decisions to allow flexibility in the methods of serving and issuing documents and to promote efficiency in allocation of judicial resources. Specifically, the modifications to the Rules of Practice will codify the electronic service of documents between parties and by EPA adjudicative bodies. In addition, the modifications will facilitate the efficient issuance of rulings on motions by substituting an Administrative Law Judge for the Environmental Appeals Board to serve as the presiding officer in civil penalty cases initiated at EPA Headquarters before an answer is filed.

C. Regulatory Flexibility Act

This action is not subject to the RFA. The RFA applies only to rules subject to notice and comment rulemaking requirements under the Administrative Procedure Act (APA), 5 U.S.C. 553, or any other statute. This rule pertains to agency management or personnel, which the APA expressly exempts from notice and comment rulemaking requirements under 5 U.S.C. 553(a)(2).

D. Unfunded Mandates Reform Act

This action does not contain any unfunded mandate as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. The action imposes no enforceable duty on any state, local or tribal governments or the private sector.

E. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have tribal implications, as specified in Executive Order 13175. This action will modify the EPA's procedural regulations governing administrative adjudicatory proceedings and appeals of adjudicatory proceedings and permit decisions to allow flexibility in the methods of serving and issuing documents and to promote efficiency in allocation of judicial resources. Thus, Executive Order 13175 does not apply to this action.

G. Executive Order 13045: Protection of Children From Environmental Health and Safety Risks

The EPA interprets Executive Order 13045 as applying only to those regulatory actions that concern environmental health or safety risks that the EPA has reason to believe may disproportionately affect children, per the definition of "covered regulatory action" in section 2–202 of the Executive Order. This action is not subject to Executive Order 13045 because it does not concern an environmental health risk or safety risk.

H. Executive Order 13211: Actions That Significantly Affect Energy Supply, Distribution, or Use

This action is not subject to Executive Order 13211 because it is not a significant regulatory action under Executive Order 12866.

I. National Technology Transfer Advancement Act

This rulemaking does not involve technical standards.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

The EPA believes that this action does not have disproportionately high and adverse human health or environmental effects on minority populations, low-income populations and/or indigenous peoples, as specified in Executive Order 12898 (59 FR 7629, February 16, 1994). This action will modify the EPA's procedural regulations governing administrative adjudicatory proceedings and appeals of adjudicatory proceedings and permit decisions to allow flexibility in the methods of serving and issuing documents and to promote efficiency in allocation of judicial resources.

K. Congressional Review Act

This rule is exempt from the CRA because it is a rule relating to agency management or personnel.

List of Subjects

40 CFR Part 22

Environmental protection, Administrative practice and procedure, Air pollution control, Hazardous substances, Hazardous waste, Penalties, Pesticides and pests, Poison prevention, Water pollution control.

40 CFR Part 124

Environmental protection, Administrative practice and procedures.

Dated: December 20, 2016.

Gina McCarthy, Administrator.

For the reasons set out in the preamble, 40 CFR parts 22 and 124 are amended as follows:

PART 22—CONSOLIDATED RULES OF PRACTICE GOVERNING THE ADMINISTRATIVE ASSESSMENT OF CIVIL PENALTIES AND THE REVOCATION/TERMINATION OR SUSPENSION OF PERMITS

■ 1. The authority citation for part 22 is revised to read as follows:

Authority: 7 U.S.C. 1361; 15 U.S.C. 2615; 33 U.S.C. 1319, 1342, 1361, 1415 and 1418; 42 U.S.C. 300g–3(g), 6912, 6925, 6928, 6991e and 6992d; 42 U.S.C. 7413(d), 7524(c), 7545(d), 7547, 7601 and 7607(a), 9609, and 11045.

Subpart A—General

■ 2. In § 22.4, revise the first sentence of paragraph (a)(1) to read as follows:

§ 22.4 Powers and duties of the Environmental Appeals Board, Regional Judicial Officer and Presiding Officer; disqualification, withdrawal, and reassignment.

(a) *Environmental Appeals Board.* (1) The Environmental Appeals Board rules on appeals from the initial decisions, rulings and orders of a Presiding Officer in proceedings under these Consolidated Rules of Practice, and approves settlement of proceedings under these Consolidated Rules of Practice commenced at EPA Headquarters. * * *

■ 3. In § 22.5, revise the section heading and paragraphs (a)(1), (b) introductory text, (b)(2), and (c)(4) to read as follows:

§ 22.5 Filing, service by the parties, and form of all filed documents; business confidentiality claims.

(a) *Filing of documents.* (1) The original and one copy of each document intended to be part of the record shall be filed with the Headquarters or Regional Hearing Clerk, as appropriate, when the proceeding is before the Presiding Officer, or filed with the Clerk of the Board when the proceeding is before the Environmental Appeals Board. A document is filed when it is received by the appropriate Clerk. When a document is required to be filed with the Environmental Appeals Board, the document shall be sent to the Clerk of the Board by U.S. Mail, delivered by hand or courier (including delivery by U.S. Express Mail or by a commercial delivery service), or transmitted by the Environmental Appeal Board's

electronic filing system, according to the procedures specified in 40 CFR 124.19 (i)(2)(i), (ii), and (iii). The Presiding Officer or the Environmental Appeals Board may by order authorize or require filing by facsimile or an electronic filing system, subject to any appropriate conditions and limitations.

* * * * *

(b) *Service of documents.* Unless the proceeding is before the Environmental Appeals Board, a copy of each document filed in the proceeding shall be served on the Presiding Officer and on each party. In a proceeding before the Environmental Appeals Board, a copy of each document filed in the proceeding shall be served on each party.

* * * * *

(2) *Service of filed documents other than the complaint, rulings, orders, and decisions.* All documents filed by a party other than the complaint, rulings, orders, and decisions shall be served by the filing party on all other parties. Service may be made personally, by U.S. mail (including certified mail, return receipt requested, Overnight Express and Priority Mail), by any reliable commercial delivery service, or by facsimile or other electronic means, including but not necessarily limited to email, if service by such electronic means is consented to in writing. A party who consents to service by facsimile or email must file an acknowledgement of its consent (identifying the type of electronic means agreed to and the electronic address to be used) with the appropriate Clerk. In addition, the Presiding Officer or the Environmental Appeals Board may by order authorize or require service by facsimile, email, or other electronic means, subject to any appropriate conditions and limitations.

(c) * * *

(4) The first document filed by any person shall contain the name, mailing address, telephone number, and email address of an individual authorized to receive service relating to the proceeding on behalf of the person. Parties shall promptly file any changes in this information with the Headquarters or Regional Hearing Clerk or the Clerk of the Board, as appropriate, and serve copies on the Presiding Officer and all parties to the proceeding. If a party fails to furnish such information and any changes thereto, service to the party's last known address shall satisfy the requirements of paragraph (b)(2) of this section and § 22.6.

* * * * *

■ 4. Revise § 22.6 to read as follows:

§ 22.6 Filing and service of rulings, orders and decisions.

All rulings, orders, decisions, and other documents issued by the Regional Administrator or Presiding Officer shall be filed with the Headquarters or Regional Hearing Clerk, as appropriate, in any manner allowed for the service of such documents. All rulings, orders, decisions, and other documents issued by the Environmental Appeals Board shall be filed with the Clerk of the Board. The Clerk of the Board, the Headquarters Hearing Clerk, or the Regional Hearing Clerk, as appropriate, must serve copies of such rulings, orders, decisions and other documents on all parties. Service may be made by U.S. mail (including by certified mail or return receipt requested, Overnight Express and Priority Mail), EPA's internal mail, any reliable commercial delivery service, or electronic means (including but not necessarily limited to facsimile and email).

■ 5. In § 22.7, revise paragraph (c) to read as follows:

§ 22.7 Computation and extension of time.

* * * * *

(c) *Completion of service.* Service of the complaint is complete when the return receipt is signed. Service of all other documents is complete upon mailing, when placed in the custody of a reliable commercial delivery service, or for facsimile or other electronic means, including but not necessarily limited to email, upon transmission. Where a document is served by U.S. mail, EPA internal mail, or commercial delivery service, including overnight or same-day delivery, 3 days shall be added to the time allowed by these Consolidated Rules of Practice for the filing of a responsive document. The time allowed for the serving of a responsive document is not expanded by 3 days when the served document is served by personal delivery, facsimile, or other electronic means, including but not necessarily limited to email.

Subpart C—Prehearing Procedures

■ 6. In § 22.16, revise paragraph (c) to read as follows:

§ 22.16 Motions.

* * * * *

(c) *Decision.* The Regional Judicial Officer (or in a proceeding commenced at EPA Headquarters, an Administrative Law Judge) shall rule on all motions filed or made before an answer to the complaint is filed. Except as provided in §§ 22.29(c) and 22.51, an Administrative Law Judge shall rule on all motions filed or made after an answer is filed and

before an initial decision becomes final or has been appealed. The Environmental Appeals Board shall rule as provided in § 22.29(c) and on all motions filed or made after an appeal of the initial decision is filed, except as provided pursuant to § 22.28.

■ 7. Revise the subpart E heading to read as follows:

Subpart E—Initial Decision, Motion To Reopen a Hearing, and Motion To Set Aside a Default Order

■ 8. Revise § 22.28 to read as follows:

§ 22.28 Motion to reopen a hearing or to set aside a default order.

(a) *Motion to reopen a hearing—(1) Filing and content.* A motion to reopen a hearing to take further evidence must be filed no later than 20 days after service of the initial decision and shall state the specific grounds upon which relief is sought. Where the movant seeks to introduce new evidence, the motion shall: State briefly the nature and purpose of the evidence to be adduced; show that such evidence is not cumulative; and show good cause why such evidence was not adduced at the hearing. The motion shall be made to the Presiding Officer and filed with the Headquarters or Regional Hearing Clerk, as appropriate. A copy of the motion shall be filed with the Clerk of the Board in the manner prescribed by § 22.5(a)(1).

(2) *Disposition of motion to reopen a hearing.* Within 15 days following the service of a motion to reopen a hearing, any other party to the proceeding may file with the Headquarters or Regional Hearing Clerk, as appropriate, and serve on all other parties a response. A reopened hearing shall be governed by the applicable sections of these Consolidated Rules of Practice. The timely filing of a motion to reopen a hearing shall automatically toll the running of the time periods for an initial decision becoming final under § 22.27(c), for appeal under § 22.30, and for the Environmental Appeals Board to elect to review the initial decision on its own initiative pursuant to § 22.30(b). These time periods begin again in full when the Presiding Officer serves an order denying the motion to reopen the hearing or an amended decision. The Presiding Officer may summarily deny subsequent motions to reopen a hearing filed by the same party if the Presiding Officer determines that the motion was filed to delay the finality of the decision.

(b) *Motion to set aside default order—(1) Filing and content.* A motion to set aside a default order must be filed no later than 20 days after service of the

initial decision and shall state the specific grounds upon which relief is sought. The motion shall be made to the Presiding Officer and filed with the Headquarters or Regional Hearing Clerk, as appropriate. A copy of the motion shall be filed with the Clerk of the Board in the manner prescribed by § 22.5(a)(1).

(2) *Effect of motion to set aside default.* The timely filing of a motion to set aside a default order automatically tolls the running of the time periods for an initial decision becoming final under § 22.27(c), for appeal under § 22.30(a), and for the Environmental Appeals Board to elect to review the initial decision on its own initiative pursuant to § 22.30(b). These time periods begin again in full when the Presiding Officer serves an order denying the motion to set aside or an amended decision. The Presiding Officer may summarily deny subsequent motions to set aside a default order filed by the same party if the Presiding Officer determines that the motion was filed to delay the finality of the decision.

Subpart F—Appeals and Administrative Review

■ 9. In § 22.30, revise paragraphs (a), (b), (c), (d), and (e) to read as follows:

§ 22.30 Appeal from or review of initial decision.

(a) *Notice of appeal and appeal brief—(1) Filing an appeal—(i) Filing deadline and who may appeal.* Within 30 days after the initial decision is served, any party may file an appeal upon the Presiding Officer.

(ii) *Filing requirements.* Appellant must file a notice of appeal and an accompanying appellate brief with the Environmental Appeals Board as set forth in § 22.5(a). One copy of any document filed with the Clerk of the Board shall also be served on the Headquarters or Regional Hearing Clerk, as appropriate. Appellant also shall serve a copy of the notice of appeal upon the Presiding Officer. Appellant shall simultaneously serve one copy of the notice and brief upon all other parties and non-party participants.

(iii) *Content.* The notice of appeal shall summarize the order or ruling, or part thereof, appealed from. The appellant's brief shall contain tables of contents and authorities (with appropriate page references), a statement of the issues presented for review, a statement of the nature of the case and the facts relevant to the issues presented for review (with specific citation or other appropriate reference to the record (e.g., by including the

document name and page number)), argument on the issues presented, a short conclusion stating the precise relief sought, alternative findings of fact, and alternative conclusions regarding issues of law or discretion. If any appellant includes attachments to its notice of appeal or appellate brief, the notice of appeal or appellate brief shall contain a table that provides the title of each appended document and assigns a label identifying where it may be found in the record.

(iv) *Multiple appeals.* If a timely notice of appeal is filed by a party, any other party may file a notice of appeal and accompanying appellate brief on any issue within 20 days after the date on which the first notice of appeal was served or within the time to appeal in paragraph (a)(1)(i) of this section, whichever period ends later.

(2) *Response brief.* Within 20 days of service of notices of appeal and briefs under paragraph (a)(1) of this section, any other party or non-party participant may file with the Environmental Appeals Board an original and one copy of a response brief responding to arguments raised by the appellant, together with specific citation or other appropriate reference to the record, initial decision, and opposing brief (e.g., by including the document name and page number). Appellee shall simultaneously serve one copy of the response brief upon each party, non-party participant, and the Regional Hearing Clerk. Response briefs shall be limited to the scope of the appeal brief. If any responding party or non-party participant includes attachments to its response brief, the response brief shall contain a table that provides the title of each appended document and assigns a label identifying where it may be found in the record. Further briefs may be filed only with leave of the Environmental Appeals Board.

(3) *Length—(i) Briefs.* Unless otherwise ordered by the Environmental Appeals Board, appellate and response briefs may not exceed 14,000 words, and all other briefs may not exceed 7000 words. Filers may rely on the word-processing system used to determine the word count. As an alternative to this word limitation, filers may comply with a 30-page limit for appellate and response briefs, or a 15-page limit for replies. Headings, footnotes, and quotations count toward the word limitation. The table of contents, table of authorities, table of attachments (if any), statement requesting oral argument (if any), statement of compliance with the word limitation, and any attachments do not count toward the word or page-length limitation. The Environmental

Appeals Board may exclude any appeal, response, or other brief that does not meet word or page-length limitations. Where a party can demonstrate a compelling and documented need to exceed such limitations, such party must seek advance leave of the Environmental Appeals Board to file a longer brief. Such requests are discouraged and will be granted only in unusual circumstances.

(ii) *Motions*. Unless otherwise ordered by the Environmental Appeals Board, motions and any responses or replies may not exceed 7000 words. Filers may rely on the word-processing system used to determine the word count. As an alternative to this word limitation, filers may comply with a 15-page limit. Headings, footnotes, and quotations count toward the word or page-length limitation. The Environmental Appeals Board may exclude any motion that does not meet word limitations. Where a party can demonstrate a compelling and documented need to exceed such limitations, such party must seek advance leave of the Environmental Appeals Board. Such requests are discouraged and will be granted only in unusual circumstances.

(b) *Review initiated by the Environmental Appeals Board*. Whenever the Environmental Appeals Board determines to review an initial decision on its own initiative, it shall issue an order notifying the parties and the Presiding Officer of its intent to review that decision. The Clerk of the Board shall serve the order upon the Regional Hearing Clerk, the Presiding Officer, and the parties within 45 days after the initial decision was served upon the parties. In that order or in a later order, the Environmental Appeals Board shall identify any issues to be briefed by the parties and establish a time schedule for filing and service of briefs.

(c) *Scope of appeal or review*. The parties' rights of appeal shall be limited to those issues raised during the course of the proceeding and by the initial decision, and to issues concerning subject matter jurisdiction. If the Environmental Appeals Board determines that issues raised, but not appealed by the parties, should be argued, it shall give the parties written notice of such determination to allow preparation of adequate argument. The Environmental Appeals Board may remand the case to the Presiding Officer for further proceedings.

(d) *Argument before the Environmental Appeals Board*. The Environmental Appeals Board may, at its discretion in response to a request or on its own initiative, order oral

argument on any or all issues in a proceeding. To request oral argument, a party must include in its substantive brief a statement explaining why oral argument is necessary. The Environmental Appeals Board may, by order, establish additional procedures governing any oral argument before the Environmental Appeals Board.

(e) *Motions on appeal*—(1) *General*. All motions made during the course of an appeal shall conform to § 22.16 unless otherwise provided. In advance of filing a motion, parties must attempt to ascertain whether the other party(ies) concur(s) or object(s) to the motion and must indicate in the motion the attempt made and the response obtained.

(2) *Disposition of a motion for a procedural order*. The Environmental Appeals Board may act on a motion for a procedural order at any time without awaiting a response.

(3) *Timing on motions for extension of time*. Parties must file motions for extensions of time sufficiently in advance of the due date to allow other parties to have a reasonable opportunity to respond to the request for more time and to provide the Environmental Appeals Board with a reasonable opportunity to issue an order.

* * * * *

PART 124—PROCEDURES FOR DECISIONMAKING

■ 10. The authority citation for part 124 continues to read as follows:

Authority: Resource Conservation and Recovery Act, 42 U.S.C. 6901 *et seq.*; Safe Drinking Water Act, 42 U.S.C. 300f *et seq.*; Clean Water Act, 33 U.S.C. 1251 *et seq.*; Clean Air Act, 42 U.S.C. 7401 *et seq.*

Subpart A—General Program Requirements

- 11. In § 124.19:
 - a. Revise the first sentence of paragraph (a)(4)(ii), and paragraph (b).
 - b. Redesignate paragraph (f)(5) as paragraph (f)(6).
 - c. Add a new paragraph (f)(5).
 - d. Revise paragraphs (i) introductory text, (i)(2) introductory text, and (3).

The addition and revisions read as follows:

§ 124.19 Appeal of RCRA, UIC, NPDES and PSD Permits.

- (a) * * *
- (4) * * *

(ii) Petitioners must demonstrate, by providing specific citation or other appropriate reference to the administrative record (*e.g.*, by including the document name and page number), that each issue being raised in the petition was raised during the public

comment period (including any public hearing) to the extent required by § 124.13. * * *

(b) *Response(s) to a petition for review*. (1) In a PSD or other new source permit appeal, the Regional Administrator must file a response to the petition for review, a certified index of the administrative record, and the relevant portions of the administrative record within 21 days after the service of the petition. The response brief must respond to arguments raised by the appellant, together with specific citation or other appropriate reference to the record (*e.g.*, by including the document name and page number).

(2) In all other permit appeals under this section, the Regional Administrator must file a response to the petition, a certified index of the administrative record, and the relevant portions of the administrative record within 30 days after the service of a petition.

* * * * *

(f) * * *

(5) *Length*. Unless otherwise ordered by the Environmental Appeals Board, motions and any responses or replies may not exceed 7000 words. Filers may rely on the word-processing system used to determine the word count. In lieu of a word limitation, filers may comply with a 15-page limit. Headings, footnotes, and quotations count toward the word or page-length limitation. The Environmental Appeals Board may exclude any motion that does not meet word limitations. Where a party can demonstrate a compelling and documented need to exceed such limitations, such party must seek advance leave of the Environmental Appeals Board. Such requests are discouraged and will be granted only in unusual circumstances.

* * * * *

(i) *Filing and service requirements*. Documents filed under this section, including the petition for review, must be filed with the Clerk of the Environmental Appeals Board. A document is filed when it is received by the Clerk of the Environmental Appeals Board at the address specified for the appropriate method of delivery as provided in paragraph (i)(2) of this section. Service of a document between parties to an appeal or by the Environmental Appeals Board on a party is complete upon mailing for U.S. mail or EPA internal mail, when placed in the custody of a reliable commercial delivery service, or upon transmission for facsimile or email.

* * * * *

(2) *Method of filing*. Unless otherwise permitted under these rules, documents

must be filed either by using the Environmental Appeals Board's electronic filing system, by U.S. mail, or by hand delivery. In addition, a motion or a response to a motion may be submitted by facsimile if the submission contains no attachments. Upon filing a motion or response to a motion by facsimile, the sender must, within one business day, submit the original copy to the Clerk of the Environmental Appeals Board either electronically, by mail, or by hand-delivery. The Environmental Appeals Board may by order require filing by facsimile or the Board's electronic filing system, subject to any appropriate conditions and limitations.

* * * * *

(3) *Service*—(i) *Service information*. The first document filed by any person shall contain the name, mailing address, telephone number, and email address of an individual authorized to receive service relating to the proceeding. Parties shall promptly file any changes in this information with the Clerk of the Environmental Appeals Board, and serve copies on all parties to the proceeding. If a party fails to furnish such information and any changes thereto, service to the party's last known address shall satisfy the requirements of paragraph (i)(3) of this section.

(ii) *Service requirements for parties*. Petitioner must serve the petition for review on the Regional Administrator and the permit applicant (if the applicant is not the petitioner). Once an appeal is docketed, every document filed with the Environmental Appeals Board must be served on all other parties. Service must be by first class U.S. mail, by any reliable commercial delivery service, or, if agreed to by the parties, by facsimile or other electronic means, including but not necessarily limited to or email. A party who consents to service by facsimile or other electronic means must file an acknowledgement of its consent (identifying the type of electronic means agreed to and the electronic address to be used) with the Clerk of the Environmental Appeals Board. The Environmental Appeals Board may by order authorize or require service by facsimile, email, or other electronic means, subject to any appropriate conditions and limitations.

(iii) *Service of rulings, orders, and decisions*. The Clerk of the Environmental Appeals Board must serve copies of rulings, orders, and decisions on all parties. Service may be made by U.S. mail (including by certified mail or return receipt requested, Overnight Express and

Priority Mail), EPA's internal mail, any reliable commercial delivery service, or electronic means (including but not necessarily limited to facsimile and email).

* * * * *

■ 12. In § 124.20, revise paragraph (d) to read as follows:

§ 124.20 Computation of time.

* * * * *

(d) When a party or interested person may or must act within a prescribed period after being served and service is made by U.S. mail, EPA's internal mail, or reliable commercial delivery service, 3 days shall be added to the prescribed time. The prescribed period for acting after being served is not expanded by 3 days when service is made by personal delivery, facsimile, or email.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R01–OAR–2015–0402; FRL–9957–27–Region 1]

Approval and Promulgation of Implementation Plans; Rhode Island; Clean Air Act Infrastructure State and Federal Implementation Plans

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is removing several obsolete Federal Implementation Plans (FIPs) for the State of Rhode Island. These FIPs address Clean Air Act (CAA) infrastructure State Implementation Plan (SIP) requirements that have since been addressed by Rhode Island in its SIP. Therefore, EPA is removing from the Code of Federal Regulations (CFR) the corresponding FIPs. This action is being taken in accordance with the CAA.

DATES: This rule is effective on February 8, 2017.

ADDRESSES: EPA has established a docket for this action under Docket Identification No. EPA–R01–OAR–2015–0402. All documents in the docket are listed on the <http://www.regulations.gov> Web site, although some information, such as confidential business information or other information whose disclosure is restricted by statute is not publically available. Certain other material, such as copyrighted material, is not placed on

the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available at <http://www.regulations.gov> or at the U.S. Environmental Protection Agency, EPA New England Regional Office, Office of Ecosystem Protection, Air Quality Planning Unit, 5 Post Office Square—Suite 100, Boston, MA. EPA requests that, if at all possible, you contact the contact listed in the **FOR FURTHER INFORMATION CONTACT** section to schedule your inspection. The Regional Office's official hours of business are Monday through Friday, 8:30 a.m. to 4:30 p.m., excluding legal holidays.

FOR FURTHER INFORMATION CONTACT: Richard P. Burkhart, Air Quality Planning Unit, Air Programs Branch (Mail Code OEP05–02), U.S. Environmental Protection Agency, Region 1, 5 Post Office Square, Suite 100, Boston, Massachusetts, 02109–3912; (617) 918–1664; burkhart.richard@epa.gov.

SUPPLEMENTARY INFORMATION:

Throughout this document whenever “we,” “us,” or “our” is used, we mean EPA.

Organization of this document. The following outline is provided to aid in locating information in this preamble.

- I. Background and Purpose
- II. Public Comments
- III. Final Action
- IV. Statutory and Executive Order Reviews

I. Background and Purpose

This rulemaking addresses infrastructure SIP submissions from the State of Rhode Island for the 1997 fine particle matter (PM_{2.5}), 2006 PM_{2.5}, 2008 lead (Pb), 2008 ozone, 2010 nitrogen dioxide (NO₂), and 2010 sulfur dioxide (SO₂) National Ambient Air Quality Standards (NAAQS). The state submitted these infrastructure SIPs on the following dates: 1997 PM_{2.5}—September 10, 2008; 2006 PM_{2.5}—November 6, 2009; 2008 Pb—October 26, 2011; 2008 ozone—January 2, 2013; 2010 NO₂—January 2, 2013; and 2010 SO₂—June 27, 2014. Details of Rhode Island's submittals and EPA evaluation of those submittals can be found in our Notice of Proposed Rulemaking (NPR) (81 FR 10168; February 29, 2016).

On April 20, 2016, EPA took final action on the vast majority of the elements included in these submittals (see 81 FR 23175). In today's action, EPA is taking final action on its proposal to remove the following sections from the Code of Federal Regulations (CFR): 40 CFR 52.2073(b); 52.2075(b); and 52.2078(b). As discussed in detail in the NPR, these sections related to the public

availability of emissions data and enforcement procedures are no longer necessary and have become obsolete since EPA has approved the relevant infrastructure SIP elements. Removal of Federal Implementation language is reserved for the Administrator, and has not been delegated to the Regional Administrator, who signed the April 20, 2016 final rulemaking referenced above.

II. Public Comments

EPA did not receive any comments in response to the NPR.

III. Final Action

EPA is removing the following sections from the CFR: 40 CFR 52.2073(b); 52.2075(b); and 52.2078(b). The Federal Implementation Plan requirements in these sections are no longer necessary since EPA has since approved the relevant Clean Air Act infrastructure SIP revisions submitted by Rhode Island (see 81 FR 23175; April 20, 2016). A detailed discussion of the rationale for our action is included in the NPR (see 81 FR 10168; February 29, 2016).

IV. Statutory and Executive Order Reviews

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

This action is not a “significant regulatory action” under the terms of Executive Order (EO) 12866 (58 FR 51735, October 4, 1993) and is therefore not subject to review under EOs 12866 and 13563 (76 FR 3821, January 21, 2011).

B. Paperwork Reduction Act

This action does not impose an information collection burden under the provisions of the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.* Burden is defined at 5 CFR 1320.3(b).

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA. Entities potentially affected directly by this rule include state, local and tribal governments and none of these governments are small governments. Other types of small entities are not directly subject to the requirements of this rule.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain any unfunded mandate as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small

governments. The action imposes no enforceable duty on any state, local or tribal governments or the private sector.

E. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government, as specified in E.O. 13132.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have tribal implications as specified in E.O. 13175. These regulation revisions do not affect the relationship or distribution of power and responsibilities between the federal government and Indian tribes.

G. Executive Order 13045: Protection of Children From Environmental Health and Safety Risks

The EPA interprets E.O. 13045 (62 FR 19885, April 23, 1997) as applying only to those regulatory actions that concern health or safety risks, such that the analysis required under section 5–501 of the E.O. has the potential to influence the regulation. This action is not subject to E.O. 13045 because it does not establish an environmental standard intended to mitigate health or safety risks.

H. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use

This action is not subject to E.O. 13211 (66 FR 28355 (May 22, 2001)), because it is not a significant regulatory action under E.O. 12866.

I. National Technology Transfer and Advancement Act (NTTAA)

This rulemaking does not involve technical standards.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

The EPA believes that this action is not subject to E.O. 12898 (59 FR 7629, February 16, 1994) because it does not establish an environmental health or safety standard. This regulatory action is a procedural change and does not have any impact on human health or the environment.

K. Congressional Review Act

The Congressional Review Act, 5 U.S.C. 801 *et seq.*, as added by the Small

Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a “major rule” as defined by 5 U.S.C section 804(2). This rule will be effective *February 8, 2017*.

L. Petitions for Judicial Review

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by *March 10, 2017*. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this rule for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Lead, Nitrogen dioxide, Ozone, Particulate matter, Reporting and recordkeeping requirements, Sulfur oxides, Volatile organic compounds.

Dated: December 15, 2016.

Gina McCarthy,
Administrator.

Part 52 of chapter I, title 40 of the Code of Federal Regulations is amended as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

■ 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart OO—Rhode Island

§ 52.2073 [Removed and Reserved]

■ 2. Section 52.2073 is removed and reserved.

§ 52.2075 [Removed and Reserved]

■ 3. Section 52.2075 is removed and reserved.

§ 52.2078 [Removed and Reserved]

■ 4. Section 52.2078 is removed and reserved.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY**40 CFR Parts 52 and 81**

[EPA–R09–OAR–2016–0287; FRL–9957–64–Region 9]

Approval of Arizona Air Plan Revisions; Ajo and Morenci, Arizona; Second 10-Year Sulfur Dioxide Maintenance Plans and Technical Correction

AGENCY: Environmental Protection Agency (EPA).

ACTION: Direct final rule and technical correction.

SUMMARY: The Environmental Protection Agency (EPA) is approving the second 10-year maintenance plans for the Ajo and Morenci areas in Arizona for the 1971 National Ambient Air Quality Standards (NAAQS or “standards”) for sulfur dioxide (SO₂), and correcting an error in the description of the Ajo SO₂ maintenance area in the Code of Federal Regulations. Elsewhere in this **Federal Register**, we are proposing approval and soliciting written comment on these actions. If we receive adverse comments on this direct final rule, resulting in withdrawal of the entire rule or any part(s) of it, we will address those comments when we finalize the proposal. The EPA does not plan to institute a second comment period on this action. Any parties interested in commenting must do so at this time.

DATES: This rule is effective March 10, 2017, without further notice, unless we receive adverse comments by February 8, 2017. If the EPA receives adverse comments, we will publish a timely withdrawal in the **Federal Register** to notify the public that some or all of the provisions in this direct final rule will not take effect.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R09–OAR–2016–0287 at <http://www.regulations.gov>, or via email to Wienke Tax, Air Planning Office at tax.wienke@epa.gov. For comments submitted at *Regulations.gov*, follow the online instructions for submitting comments. Once submitted, comments

cannot be removed or edited from *Regulations.gov*. For either manner of submission, the EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.*, on the web, cloud, or other file sharing system). For additional submission methods, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section. For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit <http://www2.epa.gov/dockets/commenting-epa-dockets>.

You may inspect and copy the rulemaking docket for this notice at the following location during normal business hours: Environmental Protection Agency, Region IX, Air Division, Air Planning Office (AIR–2), 75 Hawthorne Street, San Francisco, CA 94105–3901. Copies of the State Implementation Plan materials are also available for inspection at the address listed here: Arizona Department of Environmental Quality, 1110 W. Washington Street, First Floor, Phoenix, AZ 85007, Phone: (602) 771–4335.

FOR FURTHER INFORMATION CONTACT: Wienke Tax, EPA Region IX, (415) 947–4192, tax.wienke@epa.gov.

SUPPLEMENTARY INFORMATION: Elsewhere in this **Federal Register**, we are proposing approval and soliciting written comment on this action. Throughout this document, the words “we,” “us,” or “our” mean EPA.

I. Summary of Action

We are approving the second 10-year maintenance plans for the Ajo and Morenci, Arizona SO₂ maintenance areas and correcting an error in the boundary description of the Ajo maintenance area in the Code of Federal Regulations (CFR).^{1,2}

II. Background

A. What National Ambient Air Quality Standards are considered in this rulemaking?

Sulfur dioxide (SO₂) is the pollutant that is the subject of this action. The NAAQS are health-based and welfare-based standards for certain ambient air pollutants. SO₂ is among the ambient air pollutants for which we have established a health-based standard. SO₂ causes adverse health effects by reducing lung function, increasing respiratory illness, altering the lung’s defenses and aggravating existing cardiovascular disease. Children, the elderly, and people with asthma are the most vulnerable. SO₂ has a variety of additional impacts, including acidic deposition, damage to crops and vegetation, and corrosion of natural and man-made materials.

In 1971, the EPA established both short- and long-term primary NAAQS

¹ For the definition of the Ajo maintenance area, see 40 CFR 81.303. Ajo is a town located in northwestern Pima County, in the southwestern portion of Arizona. The EPA designated the entire area of Pima County as nonattainment for SO₂ on March 3, 1978 for lack of a State recommendation. The EPA approved the State’s request that the SO₂-affected portion of Pima County be limited to the townships surrounding Ajo on April 10, 1979 (44 FR 21261). Townships T11S, R6W; T11S, R5W; T12S, R6W; T12S, R5W; and T13S, R6W comprised the nonattainment area. Townships T11S, R7W; T12S, R7W; T13S, R5W; and T13S, R7W were designated as “cannot be classified.” At the time of our redesignation, we incorrectly identified the maintenance area as all townships and ranges T11S–13S, R5W–R6W as “better than national standards.” However, T11S, R7W; T12S, R7W; T13S, R7W; and T13S, R5W were originally designated as “cannot be classified” and should have remained such. Today, we are correcting that error.

² For the definition of the Morenci maintenance area, see 40 CFR 81.303. Morenci is a town in eastern Greenlee County near the border of Arizona and New Mexico. The EPA designated the entire area of Greenlee County as nonattainment for SO₂ on March 3, 1978 for lack of a State recommendation. The EPA approved the State’s request that the SO₂-affected portion of Greenlee County be limited to the townships surrounding Morenci on April 10, 1979 (44 FR 21261). Within Greenlee County, Townships T3S, R28E; T3S, R29E; T3S, R30E; T4S, R28E; T4S, R29E; T4S, R30E; T5S, R28E; and T5S, R29E comprise the maintenance area. Township T5S, R30E is designated as “cannot be classified.”

for SO₂. The short-term (24-hour) standard of 0.14 parts per million (ppm) was not to be exceeded more than once per year. The long-term standard specifies an annual arithmetic mean not to exceed 0.030 ppm.³ See 40 CFR 50.4.

In 2010, the EPA revised the primary SO₂ NAAQS by establishing a new 1-hour standard of 75 parts per billion (ppb). The EPA revoked the existing 1971 primary standards at that time because they would not provide additional public health protection. See 75 FR 35550 (June 22, 2010). This action relates only to the revoked 1971 NAAQS. The State has requested that we take action on these maintenance plans.⁴

B. What is a State Implementation Plan?

The Clean Air Act (CAA or “Act”) requires states to attain and maintain ambient air quality equal to or better than the NAAQS. The state’s commitments for attaining and maintaining the NAAQS are outlined in the State Implementation Plan (SIP) for that state. The SIP is a planning document that, when implemented, is designed to ensure the achievement of the NAAQS. The Act requires that SIP revisions be made periodically as necessary to provide continued compliance with the standards.

SIPs include, among other things, the following: (1) An inventory of emission sources; (2) statutes and regulations adopted by the state legislature and executive agencies; (3) air quality analyses that include demonstrations that adequate controls are in place to meet the NAAQS; and (4) contingency measures to be undertaken if an area fails to attain the standard or make reasonable progress toward attainment by the required date, or a contingency plan if the area fails to maintain the NAAQS once redesignated. The state must make the SIP available for public review and comment through a public hearing and the SIP must be adopted by the state and submitted to us by the governor or her/his designee.

The EPA takes action on the SIP submittal, thus rendering the rules and regulations federally enforceable. The

³ Secondary NAAQS are promulgated to protect welfare. The secondary 1971 SO₂ NAAQS (3-hour) of 0.50 ppm is not to be exceeded more than once per year. The Ajo and Morenci areas are not classified nonattainment for the secondary standard, and this action relates only to the primary 1971 SO₂ NAAQS.

⁴ This action is consistent with the CAA’s anti-backsliding provisions. EPA’s proposed rule on revocation of the 1971 SO₂ NAAQS discussed that maintenance SIPs would continue being implemented by states until such time as they are subsumed by new planning and control requirements associated with the revised NAAQS. See 74 FR 64810, 64863 (December 8, 2009).

approved SIP serves as the state’s commitment to take actions that will reduce or eliminate air quality problems. Any subsequent revisions to the SIP must go through the formal SIP revision process specified in the Act.

C. What is the background for this action?

1. When were the nonattainment areas established?

Ajo

Ajo is located in northwestern Pima County. On March 3, 1978, at 43 FR 8968, for lack of a State recommendation, we designated Pima County as a primary SO₂ nonattainment area based on monitored violations of the primary SO₂ NAAQS in the area between 1975 and 1977. At the request of the Arizona Department of Environmental Quality (ADEQ), the nonattainment area was subsequently reduced to five townships in and around Ajo. See 44 FR 21261 (April 10, 1979). As a result, townships T11S, R6W; T11S, R5W; T12S, R6W; T12S, R5W; and T13S, R6W made up the nonattainment area. Townships T11S, R7W; T12S, R7W; T13S, R7W; and T13S, R5W were classified as “cannot be classified” areas.

Morenci

Morenci is a town in eastern Greenlee County near the border of Arizona and New Mexico. On March 3, 1978, at 43 FR 8968, for lack of a state recommendation, we designated Greenlee County as a primary SO₂ nonattainment area based on monitored violations of the primary SO₂ NAAQS in the area between 1975 and 1977. At the request of the ADEQ, the nonattainment area was subsequently reduced to the townships in and around Morenci. See 44 FR 21261 (April 10, 1979). As a result, within Greenlee County townships T3S, R28E; T3S, R29E; T3S, R30E; T4S, R28E; T4S, R29E; T4S, R30E; T5S, R28E; and T5S, R29E made up the nonattainment area. Township T5S, R30E was classified as a “cannot be classified” area.

On the date of enactment of the 1990 CAA Amendments, SO₂ areas meeting the conditions of section 107(d) of the Act were designated nonattainment for the SO₂ NAAQS by operation of law. Section 107(d) describes the processes by which nonattainment areas are designated, including the pre-existing SO₂ nonattainment areas. Thus, the Ajo and Morenci areas remained nonattainment for the primary SO₂ NAAQS following enactment of the 1990 CAA Amendments on November 15, 1990.

2. When were the Ajo and Morenci areas redesignated for SO₂?

In 2004, we redesignated the Ajo and Morenci areas under the criteria used for areas with shut-down smelters and discontinued monitoring described in a memorandum from John Seitz to Regional Office Air Division Directors titled “Redesignation of Sulfur Dioxide Nonattainment Areas in the Absence of Monitored Data,” dated October 18, 2000 (“Seitz Memo”).⁵

Ajo

Phelps Dodge Mining Company’s Ajo Incorporated (PDAI) operation was the largest point source in the Ajo SO₂ nonattainment area. On April 4, 1985, the PDAI smelter was permanently deactivated. Dismantling of the Ajo facility began in 1995. By February 1996, the facility was completely dismantled. On October 15, 1997, ADEQ confirmed that the facility was dismantled and no longer existed at the former site. On November 3, 2003, the EPA finalized approval of the maintenance plan and redesignation request for the Ajo area, effective January 2, 2004 (see 68 FR 62239). At that time, we incorrectly identified the maintenance area as townships and ranges T11S–T13S, R5W–R6W as “better than national standards.” However, T13S, R5W was originally designated as “cannot be classified” and should have remained such. Additionally, townships T13S, R5W; T11S, R7W; T12S, R7W; and T13S, R7W were dropped from the CFR, and should be listed in 40 CFR 81.303 as “cannot be classified,” as they were upon Ajo’s original designation in 1979. Today, we are correcting those errors.

Morenci

The Phelps Dodge Morenci Incorporated (PDMI) operation was the largest SO₂ point source in the Morenci nonattainment area during its operation. PDMI was located next to the Morenci copper mine, one of the largest copper producing operations in North America. PDMI was located close to the community of Morenci, in eastern Greenlee County, near the Arizona/New Mexico border.

On December 31, 1984, the PDMI smelter was permanently deactivated. Dismantling of the Morenci facility began in 1995 and was complete by December 1996. On October 29, 1997, ADEQ confirmed that the facility was dismantled and no longer existed at the former site. On April 26, 2004, the EPA finalized approval of the maintenance

⁵ See 68 FR 62239 (November 3, 2003) for Ajo and 69 FR 22447 (April 26, 2004) for Morenci.

plan and redesignation request for the Morenci area, effective June 25, 2004 (see 69 FR 22447).

3. What is the current status of the areas?

The Ajo and Morenci areas remain sparsely settled, and only minor industrial or commercial activities that produce small quantities of SO₂ emissions are located in or near the nonattainment areas.

Ajo

In Ajo, the only remaining SO₂ point sources consist of emergency generators run by Freeport-McMoRan Corporation and Minerals Research and Recovery, which have a potential to emit (PTE) of 0.374 tons per year (tpy) of SO₂.⁶ The 50 kilometer (km) buffer area required to be evaluated by the Seitz Memo includes an Arizona Public Service emergency generator, a paper mill, the Gila Bend Air Force Auxiliary Field, and a cotton gin, with a combined PTE of 7.388 tpy.⁷

Currently, no ambient SO₂ monitors operate in the Ajo area. However, we do not expect the cumulative impact of the sources in and around Ajo to cause a violation of the NAAQS because the area's emissions are so low. No significant new sources have located in the area since our redesignation of the area to attainment in 2003.

Morenci

Minor industrial or commercial activities such as Freeport-McMoRan mining operations and emergency generators for the Morenci wastewater treatment plant operate in the area. The 50 km area around the nonattainment area also contains a construction company, well fields, and several other sources that all still have active permits and together produce about 135 tpy of SO₂ emissions.⁸

Currently, no ambient SO₂ monitors operate in the Morenci area. However, we do not expect the cumulative impact of the sources in and around Morenci to cause a violation of the NAAQS. No significant new sources have located in the area, and the smelter was the cause of past violations.

⁶ Final Arizona State Implementation Plan Revision, Maintenance Plan for the Ajo Sulfur Dioxide Planning Area (1971 NAAQS) (2013 Ajo Maintenance Plan), page (p.) 23, Table 4.6.

⁷ 2013 Ajo Maintenance Plan, p. 24, Table 4.7.

⁸ Proposed Arizona State Implementation Plan Revision, Maintenance Plan for the Morenci Sulfur Dioxide Planning Area (1971 NAAQS), p. 20, active permits only.

D. What are the applicable provisions for second 10-year maintenance plans for SO₂?

1. What are the statutory provisions?

Section 175A of the CAA provides the general framework for maintenance plans. The initial 10-year maintenance plan must provide for maintenance of the NAAQS for at least 10 years after redesignation, including any additional control measures as may be necessary to ensure such maintenance. In addition, maintenance plans are to contain such contingency provisions as we deem necessary to assure the prompt correction of a violation of the NAAQS that occurs after redesignation. The contingency measures must include, at a minimum, a requirement that the state will implement all control measures contained in the nonattainment SIP prior to redesignation.

Section 175A(b) of the CAA requires states to submit a subsequent maintenance plan revision (second 10-year maintenance plan) eight years after redesignation. The Act requires only that this second 10-year maintenance plan maintain the applicable NAAQS for ten years after the expiration of the first 10-year maintenance plan. Beyond these provisions, however, section 175A of the CAA does not define the content of a second 10-year maintenance plan.

2. What general EPA guidance applies to SO₂ maintenance plans?

Our primary general guidance on maintenance plans and redesignation requests is a September 4, 1992 memo from John Calcagni, titled "Procedures for Processing Requests to Redesignate Areas to Attainment" ("Calcagni Memo"). Specific guidance on SO₂ redesignations also appears in a January 26, 1995 memo from Sally L. Shaver, titled "Attainment Determination Policy for Sulfur Dioxide Nonattainment Areas" ("Shaver Memo").

Guidance on SO₂ maintenance plan requirements for an area lacking monitored ambient data, if the area's historic violations were caused by a major point source that is no longer in operation, is found in the Seitz Memo at section II.C.2 and footnote 4. The Seitz Memo exempts eligible areas from the maintenance plan requirements of continued ambient air quality monitoring.

While the Seitz Memo primarily addresses redesignations, we find it is appropriate to apply the Seitz Memo to second 10-year maintenance plans for areas that were redesignated in accordance with the memo and continue to experience similar

conditions to those at the time of redesignation.

3. What are the requirements for maintenance plans for single-source SO₂ nonattainment areas in the absence of monitored data?

Our historic redesignation policy for SO₂ has called for eight quarters of clean ambient air quality data as a necessary prerequisite to redesignation of any area to attainment. The Seitz Memo provides guidance on SO₂ maintenance plan requirements for an area lacking monitored ambient data, if the area's historic violations were caused by a major point source that is no longer in operation. To allow for these areas to qualify for redesignation to attainment, this policy requires that the maintenance plan address otherwise applicable provisions, and include:

(1) Emissions inventories representing actual emissions when violations occurred; current emissions; and emissions projected to the 10th year after redesignation; all three inventories should include estimates of emissions in a 50 km buffer zone around the nonattainment area;

(2) dispersion modeling showing that no NAAQS violations will occur over the next 10 years and that the shut-down source was the dominant cause of the high concentrations in the past;

(3) evidence that if the shut-down source resumes operation, it would be considered a new source and be required to obtain a permit under the Prevention of Significant Deterioration (PSD) provisions of the CAA; and

(4) a commitment to resume monitoring before any major SO₂ source commences operation.

III. The EPA's Evaluation of the Arizona State Submittals

A. Did the State meet the CAA procedural requirements?

Ajo

On February 22, 2013, ADEQ submitted to the EPA the "Final Arizona State Implementation Plan Revision, Maintenance Plan for the Ajo Sulfur Dioxide Planning Area (1971 NAAQS)" ("2013 Ajo Maintenance Plan"). The State verified that it had adhered to its SIP adoption procedures in Appendix E to the 2013 Ajo Maintenance Plan, which includes the notice of public hearing, the agenda for the February 7, 2013 public hearing, the sign in sheet, the public hearing officer certification and transcript of the hearing, and the State's responsiveness summary.

On August 22, 2013, the 2013 Ajo Maintenance Plan was deemed complete by operation of law. See 40

CFR part 51, appendix V, for the EPA's completeness criteria, which must be satisfied before EPA formal review.

Morenci

On December 18, 2014, ADEQ submitted to the EPA the "Proposed Arizona State Implementation Plan Revision, Maintenance Plan for the Morenci Sulfur Dioxide Planning Area (1971 NAAQS)" ("2014 Morenci Maintenance Plan"). The State verified that it had adhered to its SIP adoption procedures in Appendix E to the 2014 Morenci Maintenance Plan, which includes the notice of public hearing, the agenda for the December 15, 2014 public hearing, the sign in sheet, the public hearing officer certification and transcript of the hearing, and the State's responsiveness summary.

On May 10, 2015, the 2014 Morenci Maintenance Plan was deemed complete by operation of law. See 40 CFR part 51, appendix V, for the EPA's completeness criteria, which must be satisfied before EPA formal review.

B. Has the State met the substantive maintenance plan requirements?

1. Were the area's violations caused by a major point source of SO₂ emissions that is no longer in operation?

As discussed above, the only major source of SO₂ emissions within the Ajo nonattainment area was the Phelps Dodge Mining Company's PDAI copper smelter, which ceased operation in 1985 and was completely dismantled by February 1996. The last recorded 24-hour or annual average exceedances of the primary NAAQS at PDAI occurred in 1984. During the monitoring network's history, annual average SO₂ levels were generally half of the current NAAQS (0.030 ppm). See 2013 Ajo Maintenance Plan, page (p.) 17. ADEQ removed the SO₂ monitor in 1985, and the smelter operating permits expired. The smelting equipment was removed over a period of years, and the smelter was completely dismantled by February 1996. No new sources of SO₂ of the magnitude of PDAI have located in the area. Thus, Ajo meets this criterion for review under the Seitz Memo.

As discussed above, the only major source of SO₂ emissions within the Morenci nonattainment area was the Phelps Dodge Mining Company's PDMI copper smelter, which was permanently deactivated by December 31, 1984 and was completely dismantled by December 1996. The last recorded 24-hour or annual average exceedances of the primary NAAQS at PDMI occurred in 1984. During the monitoring network's history, annual average SO₂

levels were generally half of the current NAAQS (0.030 ppm). See 2014 Morenci Maintenance Plan, p. 15–16. ADEQ removed the SO₂ monitors in 1985, and the smelter operating permits expired. The smelting equipment was removed over a period of years, and the smelter was completely dismantled by December 1996. No new sources of SO₂ of the magnitude of PDMI have located in the area. Thus, Morenci meets this criterion for review under the Seitz Memo.

2. Has the state met the requirements for second 10-year maintenance plans?

The 2013 Ajo Maintenance Plan and 2014 Morenci Maintenance Plan both extend the maintenance period for ten years after the expiration of the first 10-year maintenance plans, as required by Section 175A(b) of the CAA. As discussed below, the State has addressed the requirements in the Seitz Memo for emissions inventories, modeling, permitting of major new sources, and agreement to commence monitoring if a new major source locates in either the Ajo or Morenci areas. Therefore, the State has met the specific criteria in the Seitz Memo for approval of maintenance plans and redesignation requests where a single source was the historic cause of violations and the source is now shut down. We provide more details on each requirement and how the 2013 Ajo Maintenance Plan and the 2014 Morenci Maintenance Plan meet each requirement in the following sections.

Ajo

a. Emissions Inventories

In addition to reproducing the emissions inventories in the Ajo Sulfur Dioxide Nonattainment Area State Implementation Plan and Maintenance Plan (June 18, 2002) ("2002 Ajo maintenance plan"), the 2013 Ajo Maintenance Plan includes new emissions inventories for 2008, representing an updated "current" emissions inventory (the most recent National Emissions Inventory (NEI) available at the time), 2010, 2015, 2020, and 2025 for the second 10-year maintenance period.⁹ Continued

⁹The State provided the three emissions inventories specified in the Seitz Memo for the sources in, and within 50 kilometers of, the Ajo nonattainment area in the 2002 Ajo maintenance plan. For a representative year when the copper smelter was in operation (1981), direct SO₂ emissions from smelting operations were 39,596 tpy. ADEQ's 2002 submittal identified only a single existing point source within the Ajo Area, the Phelps Dodge Generator Station. Phelps Dodge has since shut down the generators and no longer uses them as emergency/back up electric supply. See

maintenance of the Ajo area for 10 years following the initial 10-year maintenance period is demonstrated in part by showing that future SO₂ emissions in the area are not expected to exceed the level of the attainment emissions inventory.

The emissions inventories in the 2013 Ajo Maintenance Plan include estimates of SO₂ from all relevant source categories, which the 2013 Plan divides among stationary, and area and mobile. Point source information was received from the Pima County Department of Environmental Quality (PDEQ) and the Maricopa County Air Quality Division's annual emissions inventory data. The Ajo maintenance area contains two point sources (*i.e.*, Freeport-McMoRan Corporation Childs Well Field Emergency Generator, and Minerals Research and Recovery, Inc.), which together emit less than 1 tpy SO₂. The 50 km buffer area contains four point sources, including a cotton gin, a paper mill, an Air Force auxiliary field, and an emergency generator. The 2013 Ajo Maintenance Plan includes a description of current facility types, emitting equipment, permitted emissions limits, operating rates, and emissions calculation methods.

Area and mobile sources in ADEQ's 2008 and subsequent year inventories were derived from the EPA's NEI and local agency records. Historical and 2008 emissions inventories demonstrate that no significant area or mobile sources existed in the Ajo area prior to or subsequent to the smelter operation, which closed in 1985.

Based on our review of the emissions inventories in the 2013 Ajo Maintenance Plan and the supporting information in Appendix C, we conclude that the inventories are complete, accurate, and consistent with applicable CAA provisions and the Seitz Memo.

b. Dispersion Modeling

Past EPA policy memoranda on SO₂ redesignations all recommend dispersion modeling to show that the NAAQS is met and will be maintained. The Seitz Memo recommends dispersion modeling of all point sources within 50 km of the nonattainment area boundary. Screening modeling can be used to conservatively show that non-smelter sources have only an insignificant contribution to average SO₂ concentrations in a nonattainment area.

2013 Ajo Maintenance Plan, p. 32 and Appendix C-1.

For the 2002 Ajo Maintenance Plan, screening dispersion modeling was performed using the SCREEN3 model run with conservative assumptions about source parameters and meteorology. At the time of the 2002 Ajo Maintenance Plan, the Ajo nonattainment area had one minor point source of SO₂ emissions (*i.e.*, Phelps-Dodge Generating Station) and one permitted minor point source in the 50 km buffer (*i.e.*, the proposed Gila Bend Regional Landfill). The model predicted that the impact from these two sources would not exceed 66% of the 1971 SO₂ NAAQS, even assuming constant worst-case conditions about high-sulfur content fuel use.

The Seitz Memo also requires a modeling analysis that shows that the point sources that were shutdown were the dominant sources contributing to high SO₂ concentrations in the airshed. Since the emissions of non-smelter sources in the area had changed relatively little since the time that emission controls were placed on the smelter, this same screening modeling was used to show that the non-smelter sources were insignificant in the past, and thus the smelter was the dominant source contributing to past high SO₂ concentrations.

ADEQ did not conduct a new modeling analysis for the 2013 Ajo Maintenance Plan. As described above, the modeling for the 2002 Ajo Maintenance Plan modeled the existing two sources at maximum projected emissions rates from 2004 to 2015 and showed the area would not exceed 66% of the NAAQS. Since that modeling analysis was conducted, the Phelps-Dodge Generating Station has shut down, the Gila Bend Regional Landfill was never constructed, and the permit for the landfill was allowed to expire.

Currently, only two sources operate within the nonattainment area (*i.e.*, Freeport-McMoRan Incorporated Childs Well Field Emergency Generator, and Minerals Research and Recovery), and they are permitted to emit less than 1% of the emissions modeled in the 2002 Ajo Maintenance Plan. Point sources within the 50 km buffer surrounding the nonattainment area emit about 25% of emissions modeled in the 2002 Ajo Maintenance Plan. 2025 projections show that these low emissions are expected to persist through the second 10-year maintenance period. *See* 2013 Ajo Maintenance Plan, pp. 33 and 34.

ADEQ proposes, and we concur, that because current emissions in the maintenance area and the 50 km buffer are a small fraction of modeled emissions from 2002, the ambient SO₂ modeling requirement for second 10-

year maintenance plans is met by the prior modeling, and the State has demonstrated that the 1971 SO₂ NAAQS is adequately protected.

c. Treatment of New Sources of SO₂ Emissions

In nonattainment areas, section 172(c)(5) of the CAA requires New Source Review (NSR) permits prior to the construction and operation of new major stationary sources and major modifications at existing major stationary sources. However, in attainment areas, section 165 of the CAA requires major sources and major modifications to obtain PSD permits. The PSD program requires stationary sources to apply the best available control technology and ensure that projects will not cause or contribute to a violation of a NAAQS or maximum allowable increase.

ADEQ and the PDEQ have PSD permitting programs (*i.e.*, Arizona Administrative Code (A.A.C.) R18–2–406 and Pima County Code 17.16.590) that were established to preserve the air quality in areas where ambient standards have been met. The State's updated PSD program was approved into the SIP on November 2, 2015 (80 FR 67319). PDEQ's PSD program is not SIP-approved, but the federal PSD permitting program at 40 CFR 52.21 was delegated to PDEQ effective April 14, 1994.

The PSD program has applied to any major source or major modification in the Ajo area since the area was redesignated to attainment for SO₂ in 2003, except for coarse particulate (PM₁₀), for which the area is designated nonattainment. Under section 172(c)(5) of the CAA, major sources and major modifications of PM₁₀ in the Ajo area remain subject to the nonattainment NSR program, while all other NSR regulated pollutants are subject to the PSD program. Thus the existing ADEQ and PDEQ PSD and NSR programs satisfy the preconstruction permit provision of the Seitz Memo as one of the prerequisites to redesignation for the Ajo SO₂ nonattainment area.

d. Commitment to Resume Monitoring

ADEQ commits to resume monitoring before any major source of SO₂ commences to operate in the Ajo maintenance area. *See* 2013 Ajo Maintenance Plan, p. 38. This addresses the monitoring provision of the Seitz Memo.

Morenci

a. Emissions Inventory

The 2014 Morenci Maintenance Plan includes historical inventories that were

submitted as part of the Morenci Sulfur Dioxide Nonattainment Area State Implementation Plan and Maintenance Plan (submitted June 21, 2002) (“2002 Morenci maintenance plan”) as well as a current-year inventory for 2011 (the most recent NEI available at the time), and projected inventories for 2015, 2020, 2025, and 2030 for the second 10-year maintenance period.¹⁰

The emissions inventories in the 2014 Morenci Maintenance Plan include estimates of SO₂ emissions from all relevant source categories, which are divided among stationary, area, and mobile source categories. Additional information on how the inventories were developed, including activity data and emissions calculations, is provided in Appendix C of the 2014 Morenci Maintenance Plan. Point source information was developed by ADEQ from permit information and the NEI. The 2011 inventory identifies two existing point sources within the Morenci maintenance area: The Freeport-McMoRan Morenci mine with 2011 actual emissions of 48.5 tpy SO₂, and the Morenci Townsite Wastewater Treatment Plant Emergency Generators with 2011 actual emissions of 0.003 tpy SO₂. In 2011, 13 point additional sources with actual emissions of 38.05 tpy SO₂ were located within 50 km of the Morenci maintenance area boundary. As of 2014, six of these sources had terminated their permits, resulting in slightly lower emissions.

Area and mobile source emissions in ADEQ's 2011 and subsequent year inventories were derived from the NEI. The year 2011 was a historically high wildfire year, and included the largest wildfire in Arizona history (*i.e.*, the Wallow fire), which burned in Greenlee County and surrounding areas.¹¹ ADEQ

¹⁰ In the 2002 Morenci Maintenance Plan, the State provided the three emissions inventories specified in the Seitz Memo for the sources in, and within 50 kilometers of, the Morenci nonattainment area. For a representative year when the copper smelter was in operation (1984), direct actual SO₂ emissions from smelting operations were 82,432 tpy. During its operation, the Morenci primary copper smelter was the only major point source in the area. The 2002 Morenci Maintenance Plan included inventories for 1984 (a year the smelter was in operation), 1999 (a year the area was attaining the SO₂ standard), and 2015 (the projected inventory for the horizon year of the maintenance period). Sources in the 50 km buffer around the Morenci area were estimated to emit 186.5 tpy in 1999, based on PTE, but had actual emissions significantly lower, at 1.2 tpy. *See* 2014 Morenci Maintenance Plan, p. 18.

¹¹ National Interagency Fire Center's Web site at https://www.nifc.gov/fireInfo/fireInfo_statistics.html, “Historical year-end statistics by state,” and https://en.wikipedia.org/wiki/List_of_Arizona_wildfires. Acres burned in 2011 in Arizona were more than 10 times higher than 2010 acres burned in Arizona due to wildfires, and about five

assumed the 2011 wildfire emissions remained constant when projecting emissions into the future.

Based on our review of the emissions inventories in the 2014 Morenci Maintenance Plan and the supporting information in Appendix C, we conclude that the inventories are complete, accurate, and consistent with applicable CAA provisions and the Seitz Memo.

b. Dispersion Modeling

The EPA policy memoranda on SO₂ redesignations recommend dispersion modeling to show that the NAAQS is met and will be maintained. The Seitz Memo recommends dispersion modeling of all point sources within 50 km of the nonattainment area boundary. For the 2002 Morenci Maintenance Plan, screening dispersion modeling was performed using the SCREEN3 model, which was run with conservative assumptions about source parameters and meteorology. The modeling results indicated that the impact of existing sources on concentrations within the nonattainment area would not exceed 25 percent of the 1971 SO₂ NAAQS.

The Seitz Memo also requires a modeling analysis that shows point sources that were shutdown were the dominant sources contributing to high SO₂ concentrations in the airshed. The screening modeling described above was used in the 2002 Morenci Maintenance Plan to show that the non-smelter sources have an insignificant contribution, and thus the smelter was the dominant source contributing to past high SO₂ concentrations.

For the 2014 Morenci Maintenance Plan, ADEQ conducted a modeling analysis similar to the analysis in the 2002 Morenci Maintenance Plan. The two largest sources in the maintenance area and within the 50 km buffer area were modeled. The two sources are Freeport-McMoRan Morenci Mine (FMMM) in the maintenance area, with a PTE of 88 tpy SO₂, and the Freeport-McMoRan Safford Mine (FMSM) in the 50 km buffer area, with a PTE of 81 tpy SO₂. Other point sources were not modeled because of their small or negligible emissions.

The EPA dispersion model AERSCREEN (version 11126) was used to conservatively estimate the impact of FMMM and FMSM on maintenance in the Morenci planning area.¹² The results

¹² times higher than acres burned in Arizona in 2012 due to wildfires.

¹² AERSCREEN has replaced SCREEN3 as the EPA's preferred screening model. See Memorandum dated April 11, 2011, from Tyler Fox to the EPA Regional Modeling Contacts, "AERSCREEN

of the AERSCREEN modeling indicated that the impact of these existing sources would have a cumulative potential impact of 42–53% of the 1971 annual and 24-hour SO₂ NAAQS respectively. See 2014 Morenci Maintenance Plan, p. 29. Projections for 2030 show that this low level of emissions is expected to persist through the second maintenance period. See 2014 Morenci Maintenance Plan, p. 32. We therefore conclude that the State has demonstrated that the 1971 SO₂ NAAQS is adequately protected.

c. Treatment of New Sources of SO₂ Emissions

In nonattainment areas, section 172(c)(5) of the CAA requires NSR permits prior to the construction and operation of new major stationary sources and major modifications at existing major stationary sources. However, in attainment areas, section 165 of the CAA requires major sources and major modifications to obtain PSD permits. The PSD program requires stationary sources to apply the best available control technology and ensure projects will not cause or contribute to a violation of a NAAQS or maximum allowable increase.

ADEQ has a PSD permitting program (*i.e.*, A.A.C. R18–2–406) that was established to preserve the air quality in areas where ambient standards have been met. The State's updated PSD program was approved into the SIP on November 2, 2015 (80 FR 67319). The PSD program has applied to any major source or major modification in the Morenci area since the area was redesignated to attainment for SO₂ in 2004. Thus the ADEQ's existing PSD program satisfies the preconstruction permit provision of the Seitz Memo as one of the prerequisites to redesignation for the Morenci SO₂ nonattainment area.

d. Commitment To Resume Monitoring

ADEQ commits to resume monitoring before any major source of SO₂ commences to operate. See 2014 Morenci Maintenance Plan, p. 16. This addresses the monitoring provision of the Seitz Memo.

3. Other CAA Requirements

a. Contingency Plan

As discussed above, section 175A of the CAA sets forth the statutory requirements for maintenance plans, and the Calcagni, Seitz and Shaver Memos cited above contain specific EPA guidance. The only maintenance plan element not covered by the Seitz Memo

Released as EPA Recommended Screening Model" in the docket for this action. SCREEN3 was used for the 2002 Morenci Maintenance Plan.

is the contingency provisions. Section 175A(d) of the CAA requires that maintenance plans contain contingency provisions deemed necessary by the Administrator to assure that the state will promptly correct any violation of the standard which occurs after the redesignation of the area as an attainment area.

Ajo

The 2013 Ajo Maintenance Plan includes the State's commitment to continue to track maintenance of the SO₂ NAAQS through updates to the emissions inventory. Additionally, ADEQ commits to reestablish an appropriate air quality monitoring network before any major source of SO₂ begins operations in the Ajo maintenance area. See 2013 Ajo Maintenance Plan, p. 38.

Since the primary cause of future violations of the 1971 SO₂ NAAQS in the area would be from modified or new point sources, ADEQ's current operating permit program places limits on SO₂ emissions from existing sources. Should a new facility be constructed in the Ajo area or an existing facility want to upgrade or increase SO₂ emissions, the facility would also be subject to PSD as required in the Calcagni Memo.

The Calcagni Memo emphasizes the importance of specific contingency measures, schedules for adoption, and action levels to trigger implementation of the contingency plan. Since there are no remaining sources of SO₂ emissions of the magnitude of the PDAI smelter, and there is no SO₂ monitoring in the Ajo area, we agree with the State that the level of specificity recommended in the Calcagni Memo is not necessary, and we conclude that the State's commitment satisfactorily addresses the CAA provisions. We find that the State's commitment to continue to track maintenance of the SO₂ NAAQS through updates to the emissions inventory and the State's PSD permitting programs are sufficient to assure that the Ajo area will not violate the NAAQS.

Morenci

The 2014 Morenci Maintenance Plan includes the State's commitment to continue to demonstrate maintenance of the SO₂ NAAQS through updates to the emissions inventory. Additionally, ADEQ commits to reestablish an appropriate air quality monitoring network before any major source of SO₂ begins operations in the Morenci maintenance area. See 2014 Morenci Maintenance Plan, p. 32.

Since the primary cause of future violations of the 1971 SO₂ NAAQS in

the area would be from modified or new point sources, ADEQ's current operating permit program places limits on SO₂ emissions from existing sources. Should a new facility be constructed in the Morenci area or an existing facility want to upgrade or increase SO₂ emissions, the facility would also be subject to PSD as required in the Calcagni Memo.

The Calcagni Memo emphasizes the importance of specific contingency measures, schedules for adoption, and action levels to trigger implementation of the contingency plan. Since there are no remaining sources of SO₂ emissions of the magnitude of the PDMI smelter, and there is no SO₂ monitoring in the Morenci area, we agree with the State that the level of specificity recommended in the Calcagni Memo is not necessary, and we conclude that the State's commitment satisfactorily addresses the CAA provisions. We find that the State's commitment to continue to track maintenance of the SO₂ NAAQS through updates to the emissions inventory and the State's PSD permitting programs are sufficient to assure that the Morenci area will not violate the NAAQS.

b. Transportation and General Conformity

Conformity is required under section 176(c) of the CAA to ensure that federal actions are consistent with ("conform to") the purpose of the SIP. Conformity to the purpose of the SIP means that federal activities will not cause new air quality violations, worsen existing violations, or delay timely attainment of the relevant NAAQS or interim reductions and milestones. Conformity applies to areas that are designated nonattainment and to maintenance areas. The requirement to determine conformity applies to transportation plans, programs and projects developed, funded, or approved under Title 23 U.S.C. and the Federal Transit Act ("Transportation conformity") as well as to other federally supported or funded projects ("general conformity").

Transportation conformity applies to projects that require Federal Highway Administration or Federal Transit Administration funding. 40 CFR part 93 describes the requirements for federal actions related to transportation plans, programs, and projects to conform to the purposes of the SIP. Because the EPA does not consider SO₂ a transportation-related criteria pollutant,¹³ only the requirements related to general conformity apply to the Ajo and Morenci areas.

Section 176(c)(4) of the CAA establishes the framework for general conformity. Besides ensuring that federal actions not covered by the transportation conformity rule will not interfere with the SIP, the general conformity regulations encourage consultation between the federal agency and the state or local air pollution control agencies before and during the environmental review process, as well as public notification of and access to federal agency conformity determinations, and allows for air quality review of individual federal actions.

Section 176(c) of the CAA required the states to revise their SIPs to establish criteria and procedures to ensure that federally supported or funded projects in nonattainment and maintenance areas "conform" to the air quality planning goals in the applicable SIP. SIP revisions intended to meet the conformity requirements in section 176(c) are referred to as "conformity SIPs." In 2005, Congress amended section 176(c), and under the amended conformity provisions, states are no longer required to submit conformity SIPs for general conformity, and the conformity SIP requirements for transportation conformity have been reduced to include only those relating to consultation, enforcement, and enforceability. CAA section 176(c)(4)(E).

The EPA believes it is reasonable to interpret the conformity SIP requirements as not applying for purposes of a redesignation request under section 107(d)(3)(E)(v) because state conformity rules are still required after redesignation and Federal conformity rules apply where state rules have not been approved. *See Wall v. EPA*, 265 F. 3d 426 (6th Cir. 2001), upholding this interpretation. Because both Ajo and Morenci have already been redesignated for this standard, we believe it is reasonable to apply the interpretation of conformity SIP requirements as not applying for the purposes of redesignation to the approval of second ten-year maintenance plans.

Criteria for making determinations and provisions for general conformity are contained in Arizona Administrative Code R18-2-1438. Arizona has an approved general conformity SIP.¹⁴

Ajo

ADEQ commits in the 2013 Ajo Maintenance Plan to review and comment, as appropriate, on any federal agency draft general conformity determination it receives consistent

with 40 CFR 93.155 for any federal plans or actions in this planning area, although none are currently planned for the area. *See* 2013 Ajo Maintenance Plan, p. 13.

Morenci

ADEQ commits in the 2014 Morenci Maintenance Plan to review and comment, as appropriate, on any federal agency draft general conformity determination it receives consistent with 40 CFR 93.155 for any federal plans or actions in this planning area, although none are currently planned for the area. *See* 2014 Morenci Maintenance Plan, p. 11.

IV. Technical Correction

A. History of the Ajo Nonattainment and Maintenance Area Boundary

On November 3, 2003, the EPA finalized approval of the maintenance plan and redesignation request for the Ajo area, effective January 2, 2004 (*see* 68 FR 62239). To codify this rulemaking, we amended 40 CFR 81.303 that lists the designations for air quality planning areas in Arizona, but we incorrectly identified the Ajo maintenance area in the Arizona SO₂ table by dropping township T13S, R5W from the maintenance area, and inadvertently deleted other townships and ranges in the "cannot be classified" description. Township T13S, R5W as well as townships T11S, R7W; T12S, R7W; and T13S, R7W should have remained "cannot be classified."

Section 110(k)(6) of the CAA provides that when the EPA's action approving any plan or plan revision (or part thereof), area designation, redesignation, classification, or reclassification was in error, the EPA may in the same manner revise such action. Under the EPA's authority under section 110(k)(6) of the Act, we are taking direct final action to amend the Arizona-SO₂ table in 40 CFR 81.303 by re-codifying and correcting the previous detailed descriptions of the Ajo maintenance area and townships identified as "cannot be classified."

The maintenance area consists of townships T11S, R6W; T11S, R5W; T12S, R6W; T12S, R5W; and T13S, R6W. In addition, townships T13S, R5W; T11S, R7W; T12S, R7W; and T13S, R7W are listed in 40 CFR 81.303 as "cannot be classified," as they were upon the Ajo area's original designation in 1979.

V. Final Action

We are approving the second 10-year SO₂ maintenance plans for the Ajo and Morenci areas in Arizona under sections 110 and 175A of the CAA and correcting

¹³ 40 CFR 93.102(b)(1).

¹⁴ 64 FR 19916, April 23, 1999.

an error made in the description of the Ajo maintenance area and in the identification of townships as “cannot be classified” in the CFR when we redesignated the area in 2003. As authorized in section 110(k)(3) of the Act, the EPA is fully approving the submitted SIPs because we believe they fulfill all relevant requirements. We do not think anyone will object to this approval, so we are finalizing it without proposing it in advance. However, in the Proposed Rules section of this **Federal Register**, we are simultaneously proposing approval of the same submitted SIPs. If we receive adverse comments by February 8, 2017, we will publish a timely withdrawal in the **Federal Register** to notify the public that some or all of the provisions of the direct final approval will not take effect and we will address the comments in a subsequent final action based on the proposal. If we do not receive timely adverse comments, the direct final approval will be effective without further notice on March 10, 2017. This will incorporate these SIPs into the federally enforceable SIP.

VI. Statutory and Executive Order Reviews

Under the Clean Air Act, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, the EPA’s role is to approve state choices, provided that they meet the criteria of the Clean Air Act. Accordingly, this action merely approves state law as meeting federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- does not have Federalism implications as specified in Executive

Order 13132 (64 FR 43255, August 10, 1999);

- is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act; and
- does not provide the EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where the EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications and will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

The Congressional Review Act, 5 U.S.C. 801 *et seq.*, as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. The EPA will submit a report containing this action and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a “major rule” as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by March 10, 2017. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. Parties with objections to this direct final rule are

encouraged to file a comment in response to the parallel notice of proposed rulemaking for this action published in the Proposed Rules section of this **Federal Register**, rather than file an immediate petition for judicial review of this direct final rule, so that the EPA can withdraw this direct final rule and address the comment in the proposed rulemaking. This action may not be challenged later in proceedings to enforce its requirements (*see* section 307(b)(2)).

List of Subjects

40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Reporting and recordkeeping requirements, Sulfur dioxide.

40 CFR Part 81

Environmental protection, Air pollution control, Intergovernmental relations, Reporting and recordkeeping requirements, Sulfur dioxide.

Dated: December 15, 2016.

Alexis Strauss,

Acting Regional Administrator, EPA Region IX.

Chapter I, title 40 of the Code of Federal Regulations is amended as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

- 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart D—Arizona

- 2. Section 52.120 in paragraph (e), table 1 is amended by:
 - a. Adding an entry for “‘Arizona State Implementation Plan Revision, Maintenance Plan for the Ajo Sulfur Dioxide Area (1971 NAAQS), (February 2013) excluding Appendix C, ‘Overview of Point Source Emissions Limits and Potential to Emit’ after the heading ‘Part D Elements and Plans (Other than for the Metropolitan Phoenix and Tucson Areas)’”; and
 - b. Adding an entry for “‘Arizona State Implementation Plan Revision, Maintenance Plan for the Morenci Sulfur Dioxide Area (1971 NAAQS), (December 2014)’ after the entry for “‘Final Miami Sulfur Dioxide Nonattainment Area State Implementation and Maintenance Plan (June 2002)(revised May 26, 2004), excluding appendix A (“SIP Support Information”), sections A.1 (“Pertinent

Sections of the Arizona Administrative Code”) and A.2 (“Information Regarding Revisions to AAC R18–2–715 and R18–2–715.01, ‘Standards of Performance for

Primary Copper Smelters: Site Specific Requirements; Compliance and Monitoring”); and appendix D (“SIP Public Hearing Documentation”).

The additions read as follows:

§ 52.120 Identification of plan.
* * * * *
(e) * * *

TABLE 1—EPA-APPROVED NON-REGULATORY AND QUASI-REGULATORY MEASURES
[Excluding certain resolutions and statutes, which are listed in tables 2 and 3, respectively]¹

Name of SIP provision	Applicable geographic or nonattainment area or title/ subject	State submittal date	EPA approval date	Explanation
The State of Arizona Air Pollution Control Implementation Plan				
Part D Elements and Plans (Other than for the Metropolitan Phoenix or Tucson Areas)				
Arizona State Implementation Plan Revision, Maintenance Plan for the Ajo Sulfur Dioxide Area (1971 NAAQS), (February 2013), excluding Appendix C, “Overview of Point Source Emissions Limits and Potential to Emit”.	Ajo Sulfur Dioxide Air Quality Planning Area.	February 22, 2013	1/9/2017, [Insert Federal Register citation].	Adopted by the Arizona Department of Environmental Quality on February 22, 2013. Fulfills requirements for second ten-year maintenance plans. The SIP includes a request to correct the maintenance area boundary.
Arizona State Implementation Plan Revision, Maintenance Plan for the Morenci Sulfur Dioxide Area (1971 NAAQS), (December 2014).	Morenci Sulfur Dioxide Air Quality Planning Area.	December 18, 2014	January 9, 2017, [Insert Federal Register citation].	Adopted by the Arizona Department of Environmental Quality on December 18, 2014. Fulfills requirements for second ten-year maintenance plans.

¹ Table 1 is divided into three parts: Clean Air Act Section 110(a)(2) State Implementation Plan Elements (excluding Part D Elements and Plans), Part D Elements and Plans (other than for the Metropolitan Phoenix or Tucson Areas), and Part D Elements and Plans for the Metropolitan Phoenix and Tucson Areas.

PART 81—DESIGNATION OF AREAS FOR AIR QUALITY PLANNING PURPOSES

■ 3. The authority citation for part 81 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*
■ 4. Section 81.303 is amended in the table for “Arizona—1971 Sulfur Dioxide NAAQS (Primary and Secondary)” by revising the entry for “Ajo” to read as follows:

§ 81.303 Arizona.

BILLING CODE 6560-50-P

FEDERAL MARITIME COMMISSION**46 CFR PART 503**

[Docket No. 16-18]

RIN 3072-AC66

Amendments to Regulations Governing Access to Commission Information and Records; Freedom of Information Act**AGENCY:** Federal Maritime Commission.**ACTION:** Final rule.

SUMMARY: The Federal Maritime Commission amends its regulations for processing requests for information and records under the Freedom of Information Act (FOIA). The regulations are being revised to incorporate changes brought by amendments to the FOIA under the FOIA Improvement Act of 2016. The Act requires agencies to review their FOIA regulations and issue regulations implementing the amendments no later than 180 days after enactment.

DATES: This rule is effective January 30, 2017.

FOR FURTHER INFORMATION CONTACT:

Mail: Rachel E. Dickon, Assistant Secretary, Federal Maritime Commission, 800 North Capitol Street NW., Washington, DC 20573-0001.
Phone: (202) 523-5725. *Email:* secretary@fmc.gov.

SUPPLEMENTARY INFORMATION: On June 30, 2016, the President signed into law the FOIA Improvement Act of 2016. The Act prescribes a range of procedural requirements that affect the Commission's FOIA regulations, and which this final rule implements, including requirements that the Commission:

- Provide publically available documents and its FOIA Annual Reports in an electronic format;
- provide FOIA requesters the right to seek dispute resolution services from the Commission's FOIA Public Liaison and/or the Office of Government Information Services during the FOIA process;
- provide a minimum of 90 days for FOIA requesters to file an administrative appeal; and
- not apply the deliberative process privilege to records created 25 years or more before the date on which the records were requested.

Regulatory Analysis and Notices*Regulatory Flexibility Act (RFA)*

The Regulatory Flexibility Act requires an agency to review regulations to assess their impact on small entities and prepare an initial regulatory flexibility analysis, unless the agency determines that a rule is not expected to have a significant impact on a substantial number of small entities. This final rule will affect only persons who file FOIA requests, and therefore, the Commission certifies that this final rule will not have a significant or negative economic impacts on a substantial number of small entities.

Paperwork Reduction Act (PRA)

The Paperwork Reduction Act of 1995 requires an agency to seek and receive approval from the Office of Management and Budget (OMB) before making most requests for information if the agency is requesting information from more than ten persons. 44 U.S.C. 3507. The agency must submit collections of information in proposed rules to OMB in conjunction with the publication of the proposed rulemaking. 5 CFR 1320.11. This final rule does not impose any collections of information, as defined by 44 U.S.C. 3502(3) and 5 CFR 1320.3(c).

National Environmental Policy Act (NEPA)

This final rule will have no physical impact upon the environment, and therefore, will not require any further review under NEPA.

Regulation Identifier Number

The Commission assigns a regulation identifier number (RIN) to each regulatory action listed in the Unified Agenda of Federal Regulatory and Deregulatory Actions (Unified Agenda). The Regulatory Information Service Center publishes the Unified Agenda in April and October of each year. The RIN contained in the heading of this document may be used to find this action in the Unified Agenda, available at <http://www.reginfo.gov/public/do/eAgendaMain>.

List of Subjects in 46 CFR Part 503

Administrative practices and procedures, Archives and records, Classified information, Confidential business information, Freedom of information, Information, Privacy, Records, Reporting and recordkeeping requirements, Sunshine Act.

For the reasons set forth in the preamble, the Federal Maritime Commission amends 46 CFR part 503 as follows:

PART 503—PUBLIC INFORMATION

■ 1. The authority citation for part 503 continues to read as follows:

Authority: 5 U.S.C. 552, 552a, 552b, 553; 31 U.S.C. 9701; E.O. 13526, 75 FR 707, 3 CFR, 2010 Comp., p. 298.

Subpart C—Records, Information and Materials Generally Available to the Public Without Resort to Freedom of Information Act Procedures

■ 2. Amend § 503.21 by revising paragraphs (a) introductory text and (c) introductory text to read as follows:

§ 503.21 Mandatory public records.

(a) The Commission, as required by the Freedom of Information Act, 5 U.S.C. 552, is responsible for determining which of its records must be made publicly available, for identifying additional records of interest to the public that are appropriate for public disclosure, for posting and indexing such records, and for reviewing and updating posted records and indices on an ongoing basis. The Commission makes the following materials available for public inspection in electronic format on its Web site at www.fmc.gov:

* * * * *

(c) The Commission maintains and makes available for public inspection in an electronic format, a current log or index providing identifying information for the public as to any matter which is issued, adopted, or promulgated, and which is required by paragraph (a) of this section to be made available or published.

* * * * *

Subpart D—Requests for Records Under the Freedom of Information Act

■ 3. Amend § 503.32 by revising paragraphs (a)(1) and (2), (a)(3)(i)(B), and (b)(3) to read as follows:

§ 503.32 Procedures for responding to requests made under the Freedom of Information Act.

- (a) * * *
- (1) Such determination shall be made by the Secretary within twenty (20) business days after receipt of such request, except as provided in paragraphs (b) and (e)(4) of this section, and the Secretary shall immediately notify the requester of:
- (i) Such determination and the reasons therefor;
- (ii) The right of such person to seek assistance from the agency's FOIA Public Liaison; and
- (iii) In the case of an adverse determination, the right of such

requester to appeal to the Chairman no less than 90 days after the date of such adverse determination, and the right of such requester to seek dispute resolution services from the agency's FOIA Public Liaison or the Office of Government Information Services.

(2) Upon granting a request, the Secretary shall promptly make records available to the requestor. Upon denial of such a request the Secretary shall promptly notify the requestor of the determination, explain the reason for denial, give an estimate of the volume of matter denied, and set forth the names and titles or positions of each person responsible for the denial of the request.

(3)(i) * * *

(B) Be filed not later than 90 days following receipt of notification of full or partial denial of records requested.

* * * * *

(b) * * *

(3) If the time limit is extended as prescribed under this section, and the request cannot be processed within the extended time limit, the Secretary shall notify the requestor, and either provide the requestor with an opportunity to limit the scope of the request so that it may be processed within the time limit, or provide the requestor an opportunity to arrange with the Secretary an alternative time frame for processing the request or a modified request. To aid the requester, the Commission will make available its FOIA Public Liaison, who shall assist in the resolution of any dispute between the requester and the Commission, and notify the requester of the right of the requester to seek dispute resolution services from the Office of Government Information Services.

* * * * *

■ 4. Amend § 503.33 by revising paragraph (a)(5) and adding paragraphs (a)(8) and (9) to read as follows:

§ 503.33 Exceptions to availability of records.

(a) * * *

(5) Inter-agency or intra-agency memoranda or letters that would not be available by law to a party other than an agency in litigation with the Commission, provided that the deliberative process privilege shall not apply to records created 25 years or more before the date on which the records were requested.

* * * * *

(8) Contained in or related to examination, operating, or condition reports prepared by, on behalf of, or for the use of an agency responsible for the regulation or supervision of financial institutions; or

(9) Geological and geophysical information and data, including maps, concerning wells.

* * * * *

■ 5. Amend § 503.34 by revising paragraph (b) to read as follows:

§ 503.34 Annual report of public information request activity.

* * * * *

(b) Each such report shall be made available to the public in electronic format.

By the Commission.

Rachel E. Dickon,

Assistant Secretary.

GENERAL SERVICES ADMINISTRATION

48 CFR Parts 516 and 552

[Change 81; GSAR Case 2015-G513; Docket No. 2016-0021; Sequence No. 1]

RIN 3090-AJ79

General Services Administration Acquisition Regulation (GSAR); Fair Opportunity Complaints on GSA Contracts

AGENCY: Office of Acquisition Policy, General Services Administration (GSA).

ACTION: Final rule.

SUMMARY: The General Services Administration (GSA) is issuing a final rule amending the General Services Administration Acquisition Regulation (GSAR) to clarify that the ordering-agency task and delivery order Ombudsman has jurisdiction and responsibility to review and resolve fair opportunity complaints on tasks and delivery orders placed against GSA multiple-award contracts.

DATES: *Effective:* January 9, 2017.

FOR FURTHER INFORMATION CONTACT: For clarification of content, contact Ms. Dana Davis, General Services Acquisition Policy Division, GSA, by telephone at 202-357-9652 or by email at dana.munson@gsa.gov. For information pertaining to status or publication schedules, contact the Regulatory Secretariat at 202-501-4755. Please cite GSAR case 2015-G513.

SUPPLEMENTARY INFORMATION:

I. Discussion of Changes

The General Services Administration (GSA) is issuing a final rule amending the General Services Administration Acquisition Regulation (GSAR) part 552, Solicitation Provisions and Contract

Clauses at 552.216-74 Task and Delivery Orders. The final rule clarifies that the jurisdiction and responsibility to review and resolve fair opportunity complaints placed against GSA multiple-award contracts lies with the ordering-agency task and delivery order Ombudsman. Also, the final rule requires the ordering agency to include contact information for their task and delivery order Ombudsman when placing task or delivery orders against GSA multiple-award contracts. Finally, so that GSA can maintain insight into fair opportunity complaints that arise on orders other agencies place against these contracts, the final rule requires the contractor to provide a copy of its complaint to the GSA Procurement Ombudsman for informational purposes, at the same time the contractor files its complaint to the ordering agency for action.

II. Public Comments Not Required

41 U.S.C. 1707, Publication of proposed regulations, applies to the publication of the General Services Administration Acquisition Regulation. Paragraph (a)(1) of the statute requires that a procurement policy, regulation, procedure, or form (including amendment or modification thereof) must be published for public comment if it has either a significant effect beyond the internal operating procedures of the agency issuing the policy, regulation, procedure, or form, or has a significant cost or administrative impact on contractors or offerors. This final rule is not required to be published for public comment because it does not have a significant impact on the public, contractors or offerors. This rule brings internal GSAR policy up-to-date with FAR policy. The change clarifies internal operating procedures by the Government by clarifying GSA's jurisdiction regarding fair opportunity complaints. The proposed rule comment period is impracticable as the FAR has already directed specific regulatory action.

III. Executive Orders 12866 and 13563

Executive Orders (E.O.s) 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives; and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This is not a significant

regulatory action and, therefore, was not subject to review under Section 6(b) of E.O. 12866, Regulatory Planning and Review, dated September 30, 1993. This rule is not a major rule under 5 U.S.C. 804.

IV. Regulatory Flexibility Act

The Regulatory Flexibility Act does not apply to this rule because this final rule does not constitute a significant GSAR revision and 41 U.S.C. 1707 does not require publication for public comment.

V. Paperwork Reduction Act

This final rule does not contain any information collection that requires additional approval of the Office of Management and Budget under the Paperwork Reduction Act (44 U.S.C. Chapter 35).

List of Subjects in 48 CFR Parts 516 and 552

Government procurement.

Dated: December 29, 2016.

Nicholas West,

Acting Senior Procurement Executive, Acting Director, Office of Acquisition Policy, Office of Governmentwide Policy.

Therefore, GSA amends 48 CFR parts 516 and 552 as set forth below:

■ 1. The authority citation for 48 CFR parts 516 and 552 continues to read as follows:

Authority: 40 U.S.C. 121(c).

PART 516—TYPES OF CONTRACTS

■ 2. Amend section 516.506 by—

- a. Revising paragraph (b);
- b. Redesignate paragraph (d) as paragraph (e); and
- c. Adding a new paragraph (d).

The revision and addition reads as follows:

516.506 Solicitation provisions and contract clauses.

* * * * *

(b) In solicitations and contracts for multiple-award contracts where GSA is the only ordering activity, or for GSA orders placed against a GSA multiple-award contract, insert clause 552.216–74, GSA Task-Order and Delivery-Order Ombudsman. This clause shall not be included in GSA-awarded contracts available for multiple agency use (*i.e.*, Governmentwide Acquisition Contracts, Multi-Agency Contracts); instead, see paragraph (d) of this section.

* * * * *

(d) Insert clause 552.216–76, Ordering Agency Task-Order and Delivery-Order Ombudsman in all GSA-awarded contracts available for multiple agency use (*i.e.*, Governmentwide Acquisition Contracts, Multi-Agency Contracts).

* * * * *

PART 552—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

■ 3. Amend section 552.216–74 by revising the date of the clause and paragraph (c) to read as follows:

552.216–74 GSA Task-Order and Delivery-Order Ombudsman.

* * * * *

GSA Task-Order and Delivery-Order Ombudsman JAN 2017)

* * * * *

(c) The GSA Task-Order and Delivery-Order Ombudsman is located at the General Services Administration (GSA), Office of Government-wide Policy (OGP), Office of Acquisition Policy (MV). Contact information for the GSA Task-Order and Delivery-Order Ombudsman can be found at: <http://www.gsa.gov/ombudsman>.

(End of Clause)

■ 4. Add section 552.216–76 to read as follows:

552.216–76 Ordering Agency Task-Order and Delivery-Order Ombudsman.

As prescribed in 516.506(d), insert the following provision:

Ordering Agency Task-Order and Delivery-Order Ombudsman (JAN 2017)

(a) *Ordering Agency Task-Order and Delivery-Order Ombudsman.* The Ordering Agency shall designate a Task-Order and Delivery-Order Ombudsman to review complaints from contractors and ensure that they are afforded a fair opportunity for consideration in the award of task or delivery orders placed against GSA Indefinite Delivery/Indefinite Quantity (ID/IQ) contracts, consistent with the procedures in the contract. The contact information for the Ordering Agency Task-Order and Delivery-Order Ombudsman shall be made available to contractors.

(b) *Submission of Complaints.* When a contractor submits a complaint to the Ordering Agency's designated Task-Order and Delivery-Order Ombudsman, the contractor shall also send a copy of the complaint to the GSA Procurement Ombudsman, for informational purposes. The GSA Procurement Ombudsman is located at the General Services Administration, Office of Governmentwide Policy (OGP), Office of Acquisition Policy (MV). Contact information for the GSA Procurement Ombudsman can be found at: <http://www.gsa.gov/ombudsman>.

(c) If the contractor is not satisfied with the resolution of its complaint by the Ordering Agency Task-Order and Delivery-Order Ombudsman, the contractor may follow the procedures outlined in FAR subpart 33.1, as applicable (*e.g.*, FAR 16.505(a)(10)).

(End of Clause)

[FR Doc. 2016–31932 Filed 1–6–17; 8:45 am]

BILLING CODE 6820–61–P

Proposed Rules

Federal Register

Vol. 82, No. 5

Monday, January 9, 2017

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF THE TREASURY

Community Development Financial Institutions Fund

12 CFR Part 1805

Announcement Type: Notice and Request for Information

SUMMARY: The Community Development Financial Institutions Fund (CDFI Fund), Department of the Treasury, requests comments from the public regarding the current policies and procedures to certify an organization as a Community Development Financial Institution (CDFI). Capitalized terms found in this notice are defined in the regulations that govern the CDFI Program, in our regulations.

DATES: Written comments must be received on or before March 10, 2017 to be assured of consideration.

ADDRESSES: Submit your comments via email to David Meyer, Certification, Compliance Monitoring and Evaluation (CCME) Manager, CDFI Fund, at cdfihelp@cdfi.treas.gov.

FOR FURTHER INFORMATION CONTACT: David Meyer, CCME Manager, CDFI Fund, 1500 Pennsylvania Avenue NW., Washington, DC 20220 or email to cdfihelp@cdfi.treas.gov. Information on CDFI Certification may be obtained on the CDFI Fund's Web site at <https://www.cdfifund.gov/programs-training/certification/Pages/default.aspx>.

SUPPLEMENTARY INFORMATION: Pursuant to the CDFI Fund's authorizing statute (the Community Development and Regulatory Improvement Act of 1994, 12 U.S.C. 4701 *et seq.*) (the Act) and the regulations that govern the CDFI Program (12 CFR part 1805), a community development financial institution (CDFI) is a legal entity that: (i) Has a primary mission of promoting community development; (ii) serves an investment area or targeted population; (iii) provides development services in conjunction with equity investments or loans, directly or through a subsidiary or affiliate; (iv) maintains, through

representation on its governing board or otherwise, accountability to residents of its investment area or targeted population; and (v) is not an agency or instrumentality of the United States, or of any State or political subdivision of a State.

In accordance with the statutory definition, the CDFI Fund has established seven tests, described below, to certify an Applicant financial entity as a CDFI. Applicants provide legal documentation, narratives and financial data to demonstrate their ability to meet the certification criteria. Applications are accepted on a rolling basis and may be submitted more than once, if declined. Certified CDFIs must complete an annual recertification process to update the financial and organization data contained in the original certification application. CDFI certification application and supplemental information can be found on the CDFI Fund Web site.

With this Request for Information (RFI), the CDFI Fund is embarking on a review of its CDFI certification tests to ensure that they continue to meet the statutory and regulatory requirements and the evolving nature of an industry that has changed significantly since the CDFI Fund's establishment in 1994. Since the first CDFIs were certified, the universe of certified CDFIs has grown from 196 in 1997 to over a 1,000 in number today, with over \$100 billion in total assets and headquarters in all fifty states and several territories. It is a goal of the CDFI Fund to foster a diversity of CDFI types, activities, and geographies, and to enable market-driven solutions to emerge in a constantly changing economic environment.

In addition, the significance of CDFI certification has increased over the years. While CDFI certification continues to make an entity eligible for various programs at the CDFI Fund (CDFI Program, Native American CDFI Assistance Program, Capital Magnet Fund, and the CDFI Bond Guarantee Program), because it is seen as indicating a strong community development mission, it also has come to serve as a qualifier for other Federal government programs and benefits. These include, among others, the Small Business Administration's Community Advantage program and Federal Home Loan Bank membership, as well as consideration for certain investments

under the Community Reinvestment Act and, pursuant to 12 CFR 1026.43(a)(3)(v)(A), an exemption from the Consumer Financial Protection Bureau's "Ability to Repay" rule. The CDFI Fund believes that it is important that certification remain a mark of confidence in an organization's commitment to a community development mission.

It also is imperative that CDFI certification criteria continue to support, rather than inhibit, the growth and reach of CDFIs, especially as it relates to their ability to take advantage of new technologies. These new technologies create the potential for mission-driven organizations like CDFIs to extend their reach and impact in order to improve access to financial products and services for underserved communities and populations wherever they are. This raises questions, however, of whether CDFI certification—particularly in terms of a CDFI's ability to define a Target Market and demonstrate accountability to that Target Market—is currently designed to enable such scope, which was neither possible nor envisioned when the criteria were first established.

Through this RFI, the CDFI Fund seeks feedback from the public on certain aspects of the certification criteria and process, as listed in Sections I and II. We also seek any additional information beyond these questions that members of the public believe would assist in updating the CDFI Fund's certification policies. The CDFI Fund intends to consider the feedback received through this RFI as it reexamines its current criteria and proposes any revisions to its CDFI certification policies. In making any changes to the existing criteria, the CDFI Fund will seek to ensure that certification continues to foster a diversity of CDFI types, activities, and geographies; allows for innovation that supports the growth and reach of CDFIs; and signifies confidence in a strong community development mission.

I. Certification Criteria

A. Legal Entity: To satisfy the legal entity test, the CDFI Fund requires evidence of an Applicant's incorporation/organization/establishment, such as IRS documentation, establishing documents filed with appropriate authorities, or

charter numbers for Insured Depository Institutions and Credit Unions at the time of certification application.

1. The statute does not indicate how long an organization must be in existence to be considered a “person (other than an individual).” Should there be a minimum period of time an organization should be in existence before applying for CDFI certification? If so, how long? If not, why not?

2. Is there additional documentation, beyond an organization’s establishing documents filed with State jurisdictions, that should be accepted to demonstrate that an organization is a legal entity?

B. *Primary Mission*: The statute states that a CDFI must have “a primary mission of promoting community development,” but specifies few criteria for meeting that test. The CDFI Fund currently allows Applicants for certification to meet this test by providing board-approved organizational documents that demonstrate that the Applicant has a primary mission of promoting community development along with a narrative statement describing how the Applicant’s mission is consistent with the CDFI Fund’s and a brief description of Financial Products offered. Insured Credit Unions that have received a Low Income Designation from the National Credit Union Administration are deemed to have met this criterion by virtue of their designation.

1. Should the currently required board-approved documentation and narrative statement be sufficient to demonstrate an Applicant’s primary mission, or should the CDFI Fund apply a more prescriptive primary mission test? For example, should the CDFI Fund provide a more explicit, possibly quantitative, definition of what it means to “promote community development” that Applicants would be required to meet? If so, what should be the definition and what test should be applied? Are there criteria that the CDFI Fund should not consider and why?

2. Should there be different standards for meeting the primary mission test for nonprofit versus for-profit organizations, particularly for-profits that are not Insured Depository Institutions? If so, what different standards should be applied?

3. What evidence can the CDFI Fund use to confirm an Applicant’s adherence to a stated community development mission? For example, how can the CDFI Fund distinguish between an organization that is fully committed to a community development mission and one that targets the same communities or populations as a CDFI and claims a

community development mission, but whose actions do not demonstrate intent to create community development and/or are predatory in nature?

4. To what extent should the CDFI Fund evaluate the Financial Products and/or Financial Services offered by an Applicant to determine its ability to meet the primary mission test? What test would the CDFI Fund apply in any such evaluation of Financial Products and/or Financial Services?

5. Currently, by statute, Depository Institution Holding Companies wishing to be certified as CDFIs must provide documentation that their parent, Subsidiaries, and Affiliate organizations collectively meet the primary mission test. Should the CDFI Fund also make this a requirement for Non-Regulated CDFIs, for example, a Non-Regulated for-profit financial institution? Why or why not?

C. *Financing Entity*: Insured Depository Institutions and Credit Unions are deemed to automatically meet this criterion. Non-Regulated CDFIs must demonstrate that they engage in direct financial activity (*e.g.*, the provision of Financial Products, Financial Services, and Development Services) as reflected on financial statements and executed notes, and must dedicate a predominance of their assets to Financial Products, Development Services, and/or similar financing.

1. The CDFI Fund does not currently define the term “predominance,” but in practice accepts a plurality of assets as meeting this criterion. Should the term “predominance” be defined more specifically, and if so, how?

2. Should entities that provide less than a plurality of financing activity ever be considered Financing Entities? If so, under what circumstances and is there a minimum level of activity that should be required?

3. Currently, the amount of assets and staff time dedicated to financing activities are used to measure the level of a CDFI’s financing activity. How else could a CDFI’s level of financing activity be measured?

4. For Non-Regulated CDFIs, is the current “predominance of assets” test appropriate, or should alternatives or additional considerations be permitted?

5. Should Non-Regulated CDFIs be permitted to include the financing or Financial Services activity of a mission-driven Subsidiary as part of the assessment of the parent CDFI’s financing activities?

6. Should Non-Regulated CDFIs be permitted to rely upon the financing or Financial Services activity of a parent CDFI as part of the assessment of the

Subsidiary’s or Affiliate’s financing activities?

7. Should an organization applying for CDFI certification be required to transact a minimum number or dollar amount of loan or equity investments to be considered a financing entity? Should the Applicant be required to have at least one or more years of loan or equity investment origination? If so, what should those rules be?

8. Should an organization that only services loans or Equity Investments or has very few transactions be considered a financing entity?

9. Should certified CDFIs be required to offer loans or Equity Investments each year, in order to maintain certification status?

10. Currently, non-arms-length transactions do not contribute to meeting the financing entity criteria. For example, transactions made with Subsidiaries and/or Affiliates are not considered to be arms-length transactions. Should some transactions with Affiliates be permissible as evidence of an organization being a financing entity? If so, which ones? How should an “arms-length transaction” be defined?

11. Should Applicants be required to disclose the expected amount and types of lending that may be made to Affiliates and Insiders in their certification applications? Should such transactions be limited as a condition of certification? Why or why not?

12. Current CDFI Program regulations use the term “similar financing activities” in its definition of the term “Financial Products.” How should the CDFI Fund determine what is included in “similar financing activities?”

D. *Serves an Investment Area or Targeted Population*: Applicants for certification must identify the Investment Area(s) and/or Targeted Population(s) they intend to serve as their Target Market.

1. *Threshold Target Market Test*: Although no threshold level of service is indicated in the statute or regulation, current CDFI Fund policy requires that an organization must serve at least one eligible Target Market and must direct at least 60 percent of all of its Financial Product activities to one or more eligible Target Market to qualify for certification. In general, both the number and dollar amount of the organization’s Financial Product activities should be at least 60 percent of all of its Financial Product activities in the most recent fiscal year. If an organization does not meet the 60 percent threshold in terms of either number or dollar amount of transactions (but not both), the organization can

provide an argument as to why the figure is less than 60 percent and the CDFI Fund reserves the right to accept or reject the explanation.

a. Is the current standard that 60 percent of a CDFI's Financial Product activities must be in qualified Target Markets the right standard? If not, what percentage of transactions should be in and/or to a qualified Target Market to demonstrate that an organization serves that Target Market and why?

b. Should there be different thresholds for different institution types (*i.e.*, Insured Depository Institutions and Credit Unions, nonprofit loan funds, and venture capital funds)?

c. The CDFI Fund currently relies on self-reported summary data submitted by Applicants to demonstrate that they meet the Target Market threshold test. Should statistical sampling of transactions be required to establish a current baseline of activity and document the Target Markets that they are serving?

d. The August 31, 2015 Interim CDFI Program Regulations added the provision of Financial Services as a means of demonstrating that an applicant serves a Target Market. However, the CDFI Fund does not currently have a method of recognizing or applying the provision of Financial Services toward the current 60 percent threshold test for certification. In addition to the level of Financial Products provided by an Applicant, how should an Applicant receive credit for the provision of Financial Services toward meeting any threshold test? How should this be measured? If an Applicant requests credit for providing Financial Services, should there be a separate minimum level of Financial Products that must be provided by the Applicant?

e. The CDFI Fund currently first considers an Applicant's financial activity during its most recent fiscal year in determining whether it meets the threshold test. Is this the appropriate time period to consider, or should a longer period of time be considered? If so, should the applicant be required to meet the threshold in each year of the test, for a time period, or should an average be considered? Should the CDFI Fund consider an Applicant's portfolio of loans outstanding?

2. Investment Areas: The statute requires that an Investment Area must meet at least one of the economic distress criteria (poverty rate greater than 20 percent; Median Family Income (MFI) at 80 percent or below specific MFI benchmarks; unemployment rate 1.5 times the national average) and has significant unmet needs for Financial

Products and Services, or is wholly located within an Empowerment Zone or Enterprise Community.

a. The CDFI Fund's current practice is to define Investment Areas that are composed of one or more units of geography that meet certain distress criteria. Units include but are not limited to counties, census tracts, and Indian Reservations. Should the CDFI Fund change this practice? If so, how?

b. Currently the CDFI Fund allows Investment Areas to be composed of a set of contiguous geographic units that may include a small portion of units that individually do not qualify as Investment Areas. Should the CDFI Fund continue this practice, or should all units within the Investment Area meet the Investment Area qualifications?

3. Targeted Populations: Targeted Populations include Low Income Targeted Populations (LITP) and Other Targeted Populations (OTP) for a specific geographic unit. LITP, for a specified geographic unit, by statute includes individuals whose family income (adjusted for family size) is 80 percent of the area MFI (for metropolitan areas). LITP in non-Metropolitan Areas is the greater of 80 percent of the area MFI; or 80 percent of the statewide non-Metropolitan Area MFI. The CDFI Fund currently includes, for a specific geographic unit(s), African-Americans, Hispanics, Native Americans, Native Alaskans, Native Hawaiians, and Other Pacific Islanders among the groups automatically considered eligible for an OTP Target Market. Applicants are permitted to seek OTP recognition for other populations by demonstrating that the group lacks access to capital.

a. Should the Targeted Populations be expanded to automatically accept more specifically defined Other Targeted Populations that are eligible for other Federal programs that support economic development in Low-Income communities? If so, which ones and why?

b. CDFIs currently are approved to serve Targeted Populations within a defined geographic unit at below and up to a national level. Should all Applicants proposing to serve Targeted Populations be approved to serve such Target Markets nationally?

4. National Target Markets: Currently, in order to be certified with a Target Market national in geographic scope, CDFIs need to show that they have conducted their financing activities broadly across the variously defined regions of the country, (*e.g.* Northeast, West, Midwest, South, Southeast, etc.)

a. Given that it is unlikely that most CDFIs that work broadly across the nation will complete transactions in every State every year, how can organizations demonstrate that they serve a national Target Market, whether for an Investment Area or for a Targeted Population? Should there be a certain minimum geographic dispersion of actual investments?

b. Some CDFIs serve multiple markets that are part of a multi-State region or are comprised of geographically unconnected markets. When should the CDFI Fund recognize these practices as constituting a national Target Market?

E. *Development Services*: A CDFI directly, through an Affiliate, or through a contract with another provider, must have a track record of providing Development Services in conjunction with its Financial Products and/or Financial Services. Development Services means activities undertaken by a CDFI, its Affiliate or contractor that promote community development and shall prepare or assist current or potential borrowers or investees to use the CDFI's Financial Products or Financial Services. For example, such activities include, but are not limited to, financial or credit counseling; homeownership counseling; and business planning and management assistance.

1. Should the CDFI Fund more explicitly define Development Services? If so, how should it be defined?

2. Should the CDFI Fund require CDFIs to provide a corresponding Development Service for each Financial Product and Financial Service?

3. Should a certified CDFI be required to offer each Development Service each year to maintain certification status?

F. *Accountability*: The CDFI Fund currently requires that a CDFI maintain accountability to its Target Market through representation on its governing board and/or advisory boards. Prior to recent changes in the regulation, a CDFI could demonstrate accountability through other mechanisms such as focus groups, community meeting, and/or customer surveys.

1. What percentage of a CDFI's board members should satisfy accountability rules? Should different percentages apply to different types of boards, *i.e.* governing vs. advisory boards?

2. Is representation on an advisory board sufficient to demonstrate accountability?

3. Should CDFIs be able to demonstrate accountability through means other than board membership? If so, how?

4. Is a business plan and a stratified, statistically significant random sample

of lending by asset class and location sufficient to document accountability? Under what circumstances?

5. Should accountability requirements differ based on a CDFI's type of Target Market, and if so, how?

6. How should the CDFI Fund assess accountability if a CDFI's Target Market includes borrowers or investees who are not members of a Targeted Population themselves (*e.g.*, small businesses, micro businesses, and affordable housing developers, charter schools), but whose "end-beneficiaries" are?

7. How should a CDFI demonstrate accountability to a national Target Market, in particular an Investment Area national in scope? Should there be a requirement to have local accountability to supplement a national governing or advisory board? In this context, how should the term "local" be defined?

8. How should an Applicant that utilizes a web-based lending platform, especially one that serves a national Target Market, demonstrate accountability?

G. Non-Governmental Entity: By statute, a CDFI shall not be an agency or instrumentality of the United States, or any State or political subdivision thereof. An entity that is created by, or that receives substantial assistance from, one or more government entities may be a CDFI provided it is not controlled by such entities and maintains independent decision-making power over its activities. In the CDFI Certification application, the Applicant must respond to a series of questions designed to surface/discover issues or circumstances that may prevent an Applicant from meeting this criteria.

1. Are the current standards for establishing that an Applicant is not owned or controlled by a governmental entity sufficient?

2. Are there additional or alternative questions and/or documentation the CDFI Fund should require to determine if an Applicant is an agency or instrumentality of a Federal, State or local government?

II. Certification Policy and Procedures

A. Should the CDFI Fund request information on the reason for applying for certification and intended use (*e.g.*, funding requirement, marketing)?

B. Are there additional sources of data collected by other federal agencies that can be used to meet any of the seven certification tests? If so, please describe.

III. General Certification Questions for Public Comment: Through This RFI, the CDFI Fund Invites Comments and Responses to the Following Questions Regarding CDFI Certification

A. "Community-based" is a term often used to describe CDFIs. How should "community-based" be defined and what does it mean for CDFIs to be "community-based"?

B. Although not defined in statute, the CDFI Fund allows Applicants that serve Native communities to self-designate themselves as Native CDFIs and apply for Financial Assistance and Technical Assistance through the Native CDFI Program. Applicants that self-designate as a Native CDFI must attest to providing 50 percent or more of their products and services to Native lands or Native populations. Should the CDFI Fund continue to allow Applicants to self-designate as Native CDFIs or should there be more defined standards that the CDFI Fund should verify? If so, what should they be?

C. Should CDFIs be allowed to be composed of multiple legal entities (Subsidiaries and/or Affiliates)? And if so, must a CDFI include all of its Subsidiaries and/or Affiliates for consideration?

D. Should CDFI certification standards have more "bright-line" tests, *i.e.* specific thresholds and benchmarks that are, where possible, quantitative in nature, or should the CDFI Fund maintain flexibility to evaluate Applicants on a case by case basis, even at the expense of certainty for applicants?

E. In addition to earlier questions regarding potentially different Primary Mission or Target Market standards based on institution type, are there other CDFI certification criteria standards that should vary based on institution type or the type of CDFI?

F. Should "start-up" entities be able to be certified? How should the term "start-up" be defined?

G. Are there additional areas of CDFI certification policy or the CDFI certification application review process that could use improvement? If so, how?

Authority: 12 U.S.C. 4701 *et seq.*; 12 CFR 1805.

Mary Ann Donovan,

Director, Community Development Financial Institutions Fund.

National Oceanic and Atmospheric Administration

15 CFR Part 922

[Docket No. 160907827-6827-01]

RIN 0648-BG02

Mallows Bay—Potomac River National Marine Sanctuary; Notice of Proposed Rulemaking and Availability of Draft Environmental Impact Statement and Management Plan

AGENCY: Office of National Marine Sanctuaries (ONMS), National Ocean Service (NOS), National Oceanic and Atmospheric Administration (NOAA), Department of Commerce (DOC).

ACTION: Proposed rule.

SUMMARY: The National Oceanic and Atmospheric Administration (NOAA) proposes to designate approximately 52 square miles of waters encompassing and surrounding Maryland's Mallows Bay as the Mallows Bay—Potomac River National Marine Sanctuary (MPNMS or sanctuary). NOAA also proposes regulations to implement the sanctuary designation and establish the sanctuary's terms of designation to protect historical, archeological, and cultural resources of national significance. A draft environmental impact statement (DEIS) and draft management plan (DMP) have also been prepared for this proposed action. The purpose of this action is to supplement and complement current Maryland state regulations and resource protection efforts to ensure long term protection of the nationally significant collection of historic shipwrecks and other maritime cultural heritage resources. NOAA is soliciting public comment on the proposed rule, draft environmental impact statement, and draft management plan. NOAA will also begin consultations under Section 106 of the National Historic Preservation Act (NHPA) and solicit public comments specifically related to the identification and assessment of the historic properties within the affected area in compliance with Section 106 review process.

DATES: NOAA will consider all comments received by March 31, 2017. Public meetings will be held on the following dates:

- (1) March 7, 2017, 6:00 p.m. to 9:00 p.m., La Plata, MD, and
- (2) March 9, 2017, 6:00 p.m. to 9:00 p.m., Arnold, MD.

ADDRESSES: You may submit comments on this document, identified by NOAA-

NOS-2016-0149, by any of the following methods:

- **Electronic Submission:** Submit all electronic public comments via the Federal e-Rulemaking Portal. Go to www.regulations.gov/#!docketDetail;D=NOAA-NOS-2016-0149, click the “Comment Now!” icon, complete the required fields, and enter or attach your comments.

- **Mail:** Paul Orlando, Regional Coordinator, Northeast and Great Lakes Region, 410 Severn Ave., Suite 207-A, Annapolis, MD 21403.

Instructions: Comments sent by any other method, to any other address or individual, or received after the end of the comment period, may not be considered by NOAA. All comments received are a part of the public record and will generally be posted for public viewing on www.regulations.gov without change. All personal identifying information (e.g., name, address, etc.), confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. NOAA will accept anonymous comments (enter “N/A” in the required fields if you wish to remain anonymous).

Copies of the proposed rule, DEIS, and DMP can be downloaded or viewed on the internet at www.regulations.gov (search for docket # NOAA-NOS-2016-0149) or at www.regulations.gov/#!docketDetail;D=NOAA-NOS-2016-0149. Copies can also be obtained by contacting the person identified under **FOR FURTHER INFORMATION CONTACT.**

The public meeting locations are:

- (1) La Plata, MD: Charles County Government Building, 200 Baltimore St., La Plata, MD 20646 (March 7, 2017)
- (2) Arnold, MD: Anne Arundel Community College, Center for Applied Learning and Technology (CALT) Building, Room 100, 101 College Pkwy., Arnold, MD 21012 (March 9, 2017)

FOR FURTHER INFORMATION CONTACT: Paul Orlando, Regional Coordinator, Northeast and Great Lakes Region at (240) 460-1978, paul.orlando@noaa.gov.

SUPPLEMENTARY INFORMATION:

I. Introduction

A. Background

The National Marine Sanctuaries Act (NMSA; 16 U.S.C. 1431 *et seq.*) authorizes the Secretary of Commerce (Secretary) to designate and protect as national marine sanctuaries areas of the marine environment that are of special national significance due to their

conservation, recreational, ecological, historical, scientific, cultural, archeological, educational, or esthetic qualities. Day-to-day management of national marine sanctuaries has been delegated by the Secretary to NOAA’s Office of National Marine Sanctuaries (ONMS). The primary objective of the NMSA is to protect the sanctuary system’s biological and cultural resources, such as coral reefs, marine animals, historical shipwrecks, historic structures, and archaeological sites.

NOAA is considering the Mallows Bay area of the tidal Potomac River for designation as a national marine sanctuary. The area is 40 miles south of Washington, DC, located off the Nanjemoy Peninsula of Charles County, Maryland. This is an area of national significance featuring unique historical, archeological, cultural, ecological, and esthetic resources and qualities, which offer opportunities for conservation, education, recreation, and research. Its maritime landscape is home to a diverse collection of historic shipwrecks that date back to the Civil War and potentially date to the American Revolutionary War, totaling nearly 200 known vessels including the remains of the largest “Ghost Fleet” of World War I, wooden steamships built for the U.S. Emergency Fleet. The fleet was constructed at more than 40 shipyards in 17 states as part of the massive national wartime preparation. The area’s archeological and cultural resources cover centuries of history from the earliest American Indian presence in the region about 12,000 years ago to the Revolutionary, Civil and two World Wars, as well as successive regimes of Potomac fishing industries.

The Maryland Department of Natural Resources (DNR), Maryland Historical Trust, Maryland Department of Tourism, and Charles County, MD, have worked together with community partners to initiate conservation and compatible public access strategies in and around Mallows Bay, consistent with numerous planning and implementation documents. In 2010, DNR purchased a portion of land adjacent to Mallows Bay and made it available to Charles County to create and manage Mallows Bay County Park, the main launch point for access to the historic shipwrecks. Pursuant to the NHPA, Maryland Historical Trust has stewardship and oversight responsibility for the shipwrecks, along with hundreds of other historic sites around the state. DNR manages the waterbody and associated ecosystem resources, including land use, resource conservation and extraction activities. The lands on either side of Mallows Bay

County Park are held by the U.S. Department of Interior’s Bureau of Land Management and a private citizen.

On September 16, 2014, pursuant to section 304 of the National Marine Sanctuaries Act and the Sanctuary Nomination Process (SNP; 79 FR 33851), a coalition of community groups submitted a nomination asking NOAA to designate Mallows Bay—Potomac River as a national marine sanctuary. The nomination cited conservation goals to protect and conserve the fragile remains of the Nation’s cultural heritage as well as the opportunities to expand public access, recreation, tourism, research, and education to the area. The nomination was endorsed by a diverse coalition of organizations and individuals at local, state, regional, and national levels including elected officials, businesses, Native American, environmental, recreation, conservation, fishing, tourism, museums, historical societies, and education groups. The nomination identified opportunities for NOAA to protect, study, interpret, and manage the area’s unique resources, including by building on existing local, county, and State of Maryland efforts to manage the area for the protection of shipwrecks. NOAA’s review of the nomination against the criteria and considerations of the SNP, including the requirement for broad-based community support indicated strong merit in proposing this area as a national marine sanctuary. Therefore, NOAA completed its review of the nomination and, on January 12, 2015, added the area to the inventory of nominations that are eligible for designation. All nominations submitted to NOAA can be found at: <http://www.nominate.noaa.gov/nominations/>.

NOAA began the sanctuary designation process for Mallows Bay—Potomac River National Marine Sanctuary on October 7, 2015 with the publication of a notice of intent (NOI; 80 FR 60634) to prepare a DEIS and the initiation of a public process, as required under the NMSA and the National Environmental Policy Act (NEPA). The DEIS evaluates alternatives related to the proposed designation of Mallows Bay—Potomac River National Marine Sanctuary, including a no action alternative. The NOI also announced NOAA’s intent to fulfill its responsibilities under the requirements of the NHPA.

B. Need for Action

The proposed designation would allow NOAA to complement current state-led efforts to conserve and manage the nationally significant maritime cultural heritage resources while

enhancing public awareness and appreciation, and facilitating to the extent compatible with the primary objective of resource protection, all public and private uses including recreation and tourism, as directed by the NMSA. The threats to these resources are related to actions or conditions that result in the damage or loss of the historic resources. Over time direct damage both intentionally and unintentional has occurred from breaking, redistribution of shipwrecks and artifacts, defacing and physical alteration, burning, and removal from the area. Additionally, indirect damage to the resources has occurred from the accumulation and entanglement of trash and marine debris around the resources and from weather-related processes such as wind, flood, and ice events.

The proposed sanctuary would concentrate on the protection, access and interpretation of the maritime cultural features of the area, including the Ghost Fleet, other vessels of historic significance, and related maritime infrastructure. The State of Maryland currently has a comprehensive set of management measures for the protection of the natural environment, including wildlife, fish, birds, water quality, and habitat. As such, NOAA's proposed sanctuary regulations would focus only on the protection of the shipwrecks and associated maritime cultural heritage resources.

NOAA's proposed management actions will be primarily non-regulatory in nature with a concise set of regulations focused on protecting the maritime cultural heritage resources. Although the Maryland Submerged Archeological Historic Property Act (Md. Code Ann., State Fin. & Proc. sections 5A-333 *et seq.*) provides a basic level of protection for maritime cultural heritage resources in Mallows Bay and adjacent areas of the Potomac River, the proposed action would allow NOAA's management under the NMSA to supplement and complement the existing authority and the current management framework in the area. The proposed national marine sanctuary would address ongoing threats to the maritime cultural heritage resources while providing opportunities for research, education, recreation, and tourism through coordinated and comprehensive management and conservation the resources in collaboration with the State of Maryland and Charles County. NOAA is also proposing to carry out education, science, and interpretative programs that describe for visitors and user communities the relationship between

the shipwreck structures and their interplay with the natural system.

C. Designation Process

National Marine Sanctuary Designation Process

The National Marine Sanctuaries Act authorizes NOAA to identify, designate, and protect areas of the marine and Great Lakes environment with special national significance due to their conservation, recreational, ecological, historical, scientific, cultural, archaeological, educational, or aesthetic qualities as national marine sanctuaries. NOAA may identify areas to consider for national marine sanctuary designation through the community-based Sanctuary Nomination Process as described in the final rule (79 FR 33851) establishing the process. The NMSA process for designating a new national marine sanctuary has four steps:

Scoping: NOAA announces its intent to designate a new national marine sanctuary and asks the public for input on potential boundaries, resources that could be protected, issues NOAA should consider and any information that should be included in the detailed resource analysis in a draft environmental impact statement.

Sanctuary Proposal: NOAA prepares draft designation documents including a DMP, DEIS that analyzes a range of alternatives, proposed regulations, and proposed boundaries.

Public Review: The public, agency partners, tribes, and other stakeholders provide input on the draft documents. The public review step also includes the formal consultations required under NEPA, the NMSA, the NHPA, and other relevant statutes. NOAA considers all input and determines appropriate changes.

Sanctuary Designation: NOAA makes a final decision and prepares final documents. Before the designation becomes effective, the Governor reviews the documents. Congress also has the opportunity to review the documents.

Public Scoping Process

On October 7, 2015, NOAA initiated the public scoping process with the publication of a NOI in the **Federal Register** (80 FR 60634) asking for public input on the proposed designation and informing the public that NOAA intended to prepare a DEIS evaluating alternatives related to the proposed designation of Mallows Bay—Potomac River National Marine Sanctuary under the NMSA. That announcement initiated a 90-day public comment period during which NOAA would solicit additional input related to the

scale and scope of the proposed sanctuary, including ideas presented in the community nomination. The NOI also announced NOAA's intent to fulfill its responsibilities under the requirements of the NHPA.

During the public comment period, NOAA solicited input on the range of issues to be considered in an environmental impact statement to designate this area as a national marine sanctuary. NOAA specifically asked for information that would assist in the development of alternatives including proposed regulations and boundaries. NOAA accepted public comments through a web-based portal and by mail from October 7, 2015 through January 15, 2016, and hosted two public scoping meetings. During the scoping comment period, NOAA received approximately 264 comments from individuals, businesses, organizations, and local, state, and federal agencies. The first scoping meeting was held on November 4, 2015 in La Plata, MD, where approximately 125 people attended and 51 oral and written comments were received. The second meeting was held on November 10, 2015 in Annapolis, MD. Approximately 100 people attended that meeting, and 23 oral and written comments were received.

The written comments received included 141 from individuals, nine from businesses, 46 from organizations, two from local agencies, two from state agencies, and four from federal agencies. Comments were also submitted by U.S. Representative Steny Hoyer and U.S. Senator Ben Cardin. All comments are available for review online at <https://www.regulations.gov/#!docketDetail;D=NOAA-NOS-2015-0111>.

The majority of comments received during the scoping period generally support the proposed sanctuary designation based on the considerable value and significance of the natural, maritime, archaeological, and cultural resources within the area including those related to Native American history and activities, the immense potential for ecological and archaeological research of the area's resources, and the economic and educational benefits of increased tourism and public access and awareness. The public comments also identified several additional potential benefits, including restoration of the Chesapeake watershed, economic revitalization of the local area, and promoting heritage and ecotourism.

Several comments opposed the nomination predominantly citing opposition to the possibility of increased government intervention, specifically regarding fossil collection and fishing activities that could

potentially be impacted by a sanctuary designation.

The comments also identified boundary alternatives for consideration during the designation process. Several comments supported the boundary proposed in the sanctuary nomination package, intended to align with the boundary of the Mallows Bay—Widewater Archaeological and Historic District submitted by the State of Maryland (National Register Listing Number 15000173, April 24, 2015). However, the majority of comments supported an expanded boundary. Several comments supported a northward expansion to Mattawoman Creek, but most of the comments supported a larger boundary extending from Chapman Park in the North to Chapel point in the South. One comment suggested an even larger northern boundary extending to Piscataway Creek. Most of the support for the expanded boundaries was based on the benefits of the additional protection that the commenters felt a larger boundary would provide to the significant natural and maritime cultural heritage resources in the area.

Several comments did not support a boundary expansion citing issues related to management, local impact, and government overreach. Some comments expressed concerns regarding how the boundaries would affect the Commonwealth of Virginia's interests and one comment noted that Virginia should be excluded from the sanctuary boundary.

Additional comments addressed regulatory frameworks, access issues, migratory bird protections, designation timeline goals, intergovernmental collaboration, infrastructure, education and outreach programing, and interpretation plans.

NOAA used these public comments to inform the preparation of the draft management plan, draft environmental impact statement, and the proposed sanctuary regulations. The proposed designation reflects the general public support for the protection of all nationally significant maritime cultural heritage resources in the area. It also incorporates the need for enhanced recreation and access to the proposed sanctuary to support tourism and the local economy.

In this proposed rule, NOAA is proposing to regulate damage to the maritime cultural heritage resources in a 52-square mile area of Maryland waters of the Potomac River as described below. The proposed boundaries were expanded beyond the initially nominated area and the National Register Historic District based

on public comments, additional research conducted related to the historical and archaeological resources of the area, and input from Maryland Department of Natural Resources, Maryland Historical Trust, and Charles County.

The environmental effects of this proposed designation and alternatives are analyzed in a DEIS published concurrently with this proposed rule summary statement. NOAA has also developed an associated draft management plan describing comprehensive proposed management framework envisioned for the area, including non-regulatory programs and activities actions and strategies to promote opportunities for research, education, and recreation in the area. NOAA is seeking public comment on the proposed rule, DEIS, and draft management plan, which are available at <http://sanctuaries.noaa.gov/mallows-bay/> or may be obtained by contacting the individual listed under the heading **FOR FURTHER INFORMATION CONTACT**.

II. Summary of the Proposed Regulations

1. Adding New Subpart S and Reserving Subpart T

NOAA is proposing to amend 15 CFR part 922 by adding a new subpart (subpart S) that contains site-specific regulations for MPNMS. This subpart would include the proposed boundary, contain definitions of common terms used in the new subpart, provide a framework for co-management of the sanctuary, identify prohibited activities and exceptions, and establish procedures for certification of existing uses, permitting otherwise prohibited activities, and emergency regulation procedures. Several conforming changes would also be made to the national regulations as described detail below.

NOAA is concurrently working on designating a separate new national marine sanctuary in Wisconsin's Lake Michigan waters as part of a separate rulemaking process, and those regulations would be published in their own new subpart (subpart T). As such, in this rulemaking, NOAA proposes to add and reserve subpart T for any future site-specific regulations that might be issued. NOAA would later harmonize the regulations for the Wisconsin Lake Michigan designation process with any final rule associated with this action.

2. Proposed Sanctuary Name

NOAA has proposed to name the sanctuary the "Mallows Bay—Potomac River National Marine Sanctuary (MPNMS)" based on the nomination

submitted by the community. The name aptly identifies the area where the proposed sanctuary is located. NOAA has also selected the acronym of "MPNMS" to avoid having a longer acronym, such as "MBPRNMS," and avoid duplication with an acronym already in use within the national marine sanctuary system, such as "MBNMS" used for Monterey Bay National Marine Sanctuary. NOAA is asking for public input on this proposed name. The public may also suggest an alternative name and state the reasons for suggesting an alternative name.

3. Proposed Sanctuary Boundary

NOAA is proposing to designate an area of approximately 52 square miles of the Potomac River as MPNMS. The northern boundary of the area would extend approximately 200 yards upstream of the Dominion Power lines near Ben Doane Road, Maryland to Possum Nose, Virginia. The southern boundary would extend from the end of Owens Drive east of Chotank Creek, Virginia to Benny Gray Point, Maryland. The boundary would encompass all tidal waters within this boundary from mean high tide in Maryland to mean low tide in Virginia, which serves as the boundary between Maryland and Virginia. Areas where the Virginia state line is otherwise delineated, the Quantico exclusion zone, and the area around the Quantico marina would be excluded from the sanctuary. The detailed legal boundary description is included in section 922.200 and the coordinates are located in 15 CFR part 922, subpart S, appendix A. A map of the area is shown in the DEIS.

The proposed MPNMS would include all of the known WWI-era U.S. Emergency Fleet Corporation vessels in Maryland waters, as well as a number of historically, archaeologically, and recreationally significant shipwrecks not currently included in the National Register Historic District that is located within the proposed area. The area incorporates marine battlescapes such as the land-sea engagements in the Civil War, among the first in that conflict, and one Revolutionary War battlescape; the site of the first military balloon launch from a purpose built "aircraft carrier" in history; the site of two major amphibious invasion operations: Butler's attack from Budd's Ferry to Quantico Creek on March 9, 1861, and the Liverpool Point to Aquia Creek crossings during the Fredericksburg Campaign; several wharves, landings, navigational aids of historic note; Confederate communications and contraband water routes during the Civil War, and the overall scene of the

Union's Potomac River blockade, 1861–1865.

The proposed boundary was developed based on the nomination submitted by the State of Maryland and expanded based on additional information and suggestions received during the public comment period. NOAA's adjustments include moving both the northern and southern boundary lines to incorporate additional maritime culture heritage resources.

4. Definitions

a. Define MPNMS Sanctuary Resources

NOAA is proposing to narrowly define "sanctuary resources" for MPNMS to include only the maritime cultural heritage resources of the sanctuary area in accordance with the purpose of the proposed designation. The definition would not include biological and ecological resources of the area already managed by the State of Maryland. Creating this new site-specific definition requires NOAA to modify the national definition of "sanctuary resource" in the national regulations at section 922.3 to add an additional sentence that defines the term for MPNMS at section 922.201(a). This is similar to the approach taken for other national marine sanctuaries that do not share the full "sanctuary resource" definition such as Thunder Bay National Marine Sanctuary.

Additionally NOAA would add a definition in the MPNMS regulations at section 922.201(a) for sanctuary resource that uses the national definition for "historical resources" and expands it to specifically provide examples of the types of resources in this sanctuary that fall within that definition. The national definition of "historical resources" at section 922.3 describes the resource within the definition of "historical resource" to include resources that possess historical, cultural, archaeological or paleontological significance, such as sites, contextual information, structures, districts, and objects significantly associated with or representative of earlier people, cultures, maritime heritage, and human activities and events. These historical resources also include "cultural resources," "submerged cultural resources," and also include "historical properties," as defined in the National Historic Preservation Act.

The new MPNMS definition of sanctuary resources would then be defined in section 922.201 to include historical resources as defined by section 922.3. This would include any sunken watercraft and any associated

rigging, gear, fittings, trappings, and equipment. It would also include personal property of the officers, crew, and passengers, and any cargo, as well as and any submerged or partially submerged prehistoric, historic cultural remains, such as docks, piers, fishing-related remains (e.g. weirs, fish-traps) or other cultural heritage materials. For MPNMS sanctuary resource would also mean any archaeological, historical, and cultural remains associated with or representative of historic or prehistoric American Indians and historic groups or peoples and their activities.

This proposed rule incorporates and adopts other common terms defined in the existing national regulations at section 922.3; some of those definitions include: "Cultural resources," which means any historical or cultural feature, including archaeological sites, historic structures, shipwrecks, and artifacts; and "National Marine Sanctuary" or "Sanctuary," which means an area of the marine environment of special national significance due to its resource or human-use values, which is designated as such to ensure its conservation and management.

5. Co-Management of the Sanctuary

In order to further enhance the strong engagement forged by the State of Maryland and Charles County in nominating this area as a proposed national marine sanctuary and in contributing to the development of the draft designation documents, NOAA proposes to manage the sanctuary collaboratively with the state and county. NOAA proposes to establish the framework for co-management of the sanctuary at section 922.202 and intends to work out the operational details of the collaboration in a Memorandum of Understanding (MOU). Details on the execution of sanctuary management such as activities, programs, and permitting programs would be included in the MOU and can be updated to adapt to changing conditions or threats to the sanctuary resources. Any significant changes to the regulations or management plan would not only be jointly coordinated but also subject to public review.

6. Prohibited and Regulated Activities

NOAA is proposing to supplement and complement existing management of this area by proposing three regulations to protect the sanctuary resources in section 922.203(a).

a. Damaging Sanctuary Resources

As a complement to existing protections under state law and NHPA regulations, NOAA is proposing to

prohibit damaging a sanctuary resource. The proposed regulation would prohibit moving, removing, recovering, altering, destroying, possessing, or otherwise injuring, or attempting to move, remove, recover, alter, destroy, possess or otherwise injure a sanctuary resource. The sanctuary prohibition on possessing a sanctuary resources would not apply to historical resources removed from the Sanctuary before the designation is complete. However, Maryland state regulations related to the limited removal of historical resources have been in effect since July 1, 1988 currently apply to these resources and will continue to do so. In the case of sanctuary resources that are covered under the Sunken Military Craft Act (SMCA; Pub. L. 108–375, Tit. XIV; 10 U.S.C. 113 note), NOAA and the U.S. Navy would cooperate on protecting those resources using the policy and procedures described in the 2015 Memorandum of Agreement (MOA). NOAA and the Maryland Historical Trust have tentatively identified one shipwreck as covered under the SMCA. A copy of the MOA is available at: <http://www.gc.noaa.gov/moa-2014-navy-signed.pdf>.

b. Damaging Sanctuary Signs

In addition to prohibiting damage to sanctuary resources, NOAA is also proposing to prohibit damage to sanctuary signs, notices, placards, monuments, stakes, posts, buoys, or boundary markers. These materials are part of the management of the sanctuary and may contribute to education and outreach programs. The materials are also federal property and therefore NOAA proposes to prohibit damage from marking, defacing or altering the materials in any way.

c. Interfering With Investigations

NOAA is proposing a regulation to prohibit interfering with sanctuary enforcement activities. This regulation will assist in NOAA's enforcement of the sanctuary regulations and strengthen sanctuary management.

d. Exemption for Emergencies and Law Enforcement

NOAA is proposing to include an exemption from the three regulations described above for activities that respond to emergencies that threaten lives, property or the environment, or are necessary for law enforcement purposes.

e. Department of Defense Activities

NOAA is also proposing that Department of Defense (DOD) activities be carried out in a manner that avoids

damage to sanctuary resources to the maximum extent practicable. In the event that DOD activities damage a sanctuary resource, NOAA and DOD would coordinate to work out a mitigation and restoration plan. Given the definition of sanctuary resources is limited to the historical resources and does not include biological or ecological resources NOAA does not anticipate that many, if any, current DOD activities would impact the resources.

7. Emergency Regulations

As part of the proposed designation, NOAA is proposing to give the sanctuary authority to issue emergency regulations. Emergency regulations are used in limited cases and under specific conditions when there is an imminent risk to sanctuary resources and a temporary prohibition would prevent the destruction or loss of those resources. Under the NMSA, NOAA only issues emergency regulations that address an imminent risk for a fixed amount of time with a maximum of 6 months that can only be extended a single time. A full rulemaking process must be undertaken, including a public comment period, to consider making an emergency regulation permanent. NOAA would add the authority to issue emergency regulations by modifying the national regulations at section 922.44 to include MPNMS in a list of sanctuaries that have site-specific regulations related to emergency regulations, and adding detailed site-specific emergency regulations to the MPNMS regulations at section 922.204.

8. General Permits, Certifications, Authorizations, and Special Use Permits

a. General Permits

NoAA is proposing to include the authority to issue permits to allow certain activities that would otherwise violate the prohibition in MPNMS. Similar to other national marine sanctuaries, NOAA is proposing to consider these permits only for education, research, or management.

To address the above additions to the ONMS general permit authority for MPNMS, NOAA would amend regulatory text in the program-wide regulations in part 922, subpart E, to add references to subpart S, as appropriate. NOAA would also add a new section 922.205 in subpart S titled "Permit procedures and review criteria" that would address site-specific permit procedures for MPNMS.

b. Certifications

Because of the possibility that preexisting activities, right of

subsistence use or access permitted by other federal, state, local, or tribal agencies might be occurring within the MPNMS area that would otherwise be prohibited by MPNMS regulations, NOAA would add language at section 922.206 describing the process by which it can certify existing activities within the expansion area. In compliance with the NMSA, MPNMS regulations at section 922.206 would state that certification is the process by which permitted activities existing prior to the designation of the sanctuary that violate sanctuary prohibitions may be allowed to continue, provided certain conditions are met. Applications for certifying permitted existing uses would have to be received by NOAA within 180 days of the effective date of the designation.

c. Authorizations

NoAA also proposes to provide MPNMS with the authority to consider allowing an otherwise prohibited activity if such activity is specifically authorized by any valid Federal, state, or local lease, permit, license, approval, or other authorization issued after sanctuary designation. Authorization authority is intended to streamline regulatory requirements by reducing the need for multiple permits and would apply to all proposed prohibitions at section 922.203. As such, NOAA proposes to amend the regulatory text at section 922.49 to add reference to subpart S.

d. Special Use Permits

NoAA has the authority under the NMSA to issue special use permits (SUPs) at national marine sanctuaries as established by Section 310 of the NMSA. SUPs can be used to authorize specific activities in a sanctuary if such authorization is necessary (1) to establish conditions of access to and use of any sanctuary resource; or (2) to promote public use and understanding of a sanctuary resource. The activities that qualify for a SUP are set forth in the **Federal Register** (78 FR 25957; May 3, 2013). Categories of SUPs may be changed or added to through public notice and comment. NOAA would not apply the SUP to activities in place at the time of the MPNMS designation.

SUP applications are reviewed to ensure that the activity is compatible with the purposes for which the sanctuary is designated and that the activities carried out under the SUP be conducted in a manner that do not destroy, cause the loss of, or injure sanctuary resources. NOAA also requires SUP permittees to purchase and maintain comprehensive general liability insurance, or post an equivalent

bond, against claims arising out of activities conducted under the permit. The NMSA allows NOAA to assess and collect fees for the conduct of any activity under a SUP. The fees collected could be used to recover the administrative costs of issuing the permit, the cost of implementing the permit, monitoring costs associated with the conduct of the activity, and the fair market value of the use of sanctuary resources.

9. Other Conforming Amendments

The general regulations in part 922, subpart A, for general information and part 922, subpart E, for regulations of general applicability would also have to be amended so that the regulations are accurate and up-to-date. The 10 sections that will need to be updated to reflect the increased number of sanctuaries or to add subpart S to the list of sanctuaries. The modified sections to conform to adding a new sanctuary are:

- Section 922.1 Applicability of regulations
- Section 922.40 Purpose
- Section 922.41 Boundaries
- Section 922.42 Allowed activities
- Section 922.43 Prohibited or otherwise regulated activities
- Section 922.44 Emergency regulations
- Section 922.47 Pre-existing authorizations or rights and certifications of pre-existing authorizations or rights
- Section 922.48 National Marine Sanctuary permits—application procedures and issuance criteria
- Section 922.49 Notification and review of applications for leases, licenses, permits, approvals, or other authorizations to conduct a prohibited activity
- Section 922.50 Appeals of administrative action

10. Terms of Designation

Section 304(a)(4) of the National Marine Sanctuaries Act (NMSA) requires that the terms of designation include the geographic area included within the sanctuary; the characteristics of the area that give it conservation, recreational, ecological, historical, research, educational, or aesthetic value; and the types of activities that will be subject to regulation by the Secretary of Commerce to protect these characteristics. Section 304(a)(4) also specifies that the terms of designation may be modified only by the same procedures by which the original designation was made. Thus, the terms of designation serve as a constitution for the Sanctuary.

NOAA is proposing to establish terms to designation that describe the geographic area, resources, and activities as described in details above. NOAA would add the terms of designation language as Appendix B to the MPNMS regulations at 15 CFR part 922, subpart S.

III. Classification

National Marine Sanctuaries Act

NOAA has determined that the designation of the Mallows Bay—Potomac River National Marine Sanctuary will not have a negative impact on the National Marine Sanctuary System and that sufficient resources exist to effectively implement sanctuary management plans and to update site characterizations. The finding for NMSA section 304(f) is published on the ONMS Web site for the Mallows Bay—Potomac River designation at <http://sanctuaries.noaa.gov/mallows-bay/>.

National Environmental Policy Act

NOAA has prepared a draft environmental impact statement to evaluate the environmental effects of the proposed rulemaking and alternatives as required by NEPA (42 U.S.C. 4321 *et seq.*) and the NMSA. Copies of the DEIS and related DMP are available at the address and Web site listed in the **ADDRESSES** section of this proposed rule. NOAA is also soliciting public comments on the DEIS and DMP. Responses to comments received on this proposed rule as well as on the DEIS and draft management plan will be published in the final environmental impact statement and preamble to the final rule.

Coastal Zone Management Act

Section 307 of the Coastal Zone Management Act (CZMA; 16 U.S.C. 1456) requires Federal agencies to consult with a state's coastal program on potential Federal regulations having an effect on state waters. Because MPNMS encompasses a portion of the Maryland State waters and is adjacent to the Commonwealth of Virginia lands and waters, NOAA intends to submit a copy of this proposed rule and supporting documents to the Maryland Coastal Zone Management Program and Virginia Coastal Zone Management Program for evaluation of Federal consistency under the CZMA. NOAA will publish the final rule and designation only after completion of the consultation requirements under the CZMA.

Executive Order 12866: Regulatory Impact

This proposed rule has been determined to be not significant for purposes of Executive Order 12866.

Executive Order 13132: Federalism Assessment

NOAA has concluded that this regulatory action does not have federalism implications sufficient to warrant preparation of a federalism assessment under Executive Order 13132 because NOAA supplements and complements state and local laws under the NMSA.

National Historic Preservation Act

The National Historic Preservation Act (NHPA; 16 U.S.C. 470 *et seq.*) is intended to preserve historical and archaeological sites in the United States of America. The act created the National Register of Historic Places, the list of National Historic Landmarks, and State Historic Preservation Offices. Section 106 of the NHPA requires Federal agencies to take into account the effects of their undertakings on historic properties, and afford the Advisory Council on Historic Preservation (ACHP) a reasonable opportunity to comment. The historic preservation review process mandated by Section 106 is outlined in regulations issued by ACHP (36 CFR part 800 *et seq.*). In fulfilling its responsibilities under the NHPA, NOAA is seeking to identify consulting parties in addition to the State Historic Preservation Officer (SHPO), and will complete the identification of historic properties and the assessment of the effects of the undertaking on such properties in scheduled consultations with those identified parties and the SHPO. By this notice NOAA seeks public input, particularly in regard to the identification of historic properties within the proposed areas of potential effect. Pursuant to 36 CFR 800.16(1)(1), historic properties includes: "any prehistoric or historic district, site, building, structure or object included in, or eligible for inclusion in, the National Register of Historic Places maintained by the Secretary of the Interior. The term includes artifacts, records, and remains that are related to and located within such properties. The term includes properties of traditional religious and cultural importance to an Indian tribe or Native Hawaiian organization and that meet the National Register criteria." If you, your organization(s), or business(es) would like to be considered a "consulting party" under Section 106 please contact

the individual listed under the heading **FOR FURTHER INFORMATION CONTACT**; include contact information for the principal representative for the consultation; and describe you or your party's interest in the proposed designation. In accordance with 36 CFR 800.3(f)(3), NOAA will consider all "consulting party" requests but has ultimate discretion in determining and inviting additional consulting parties.

Regulatory Flexibility Act

The Small Business Administration has established thresholds on the designation of businesses as "small entities". A finfish fishing businesses is considered a small business if it has annual receipts of less than \$20.5 million. Scenic and Sightseeing and Recreational industries are considered small businesses if they have annual receipts not in excess of \$7.5 million. According to these limits, each of the businesses potentially affected by the proposed rule would most likely be small businesses. However, as further discussed below, these regulations will not have a significant economic impact on the affected small entities, and the Chief Counsel for Regulations for the Department of Commerce has certified to the Chief Counsel for Advocacy of the Small Business Administration that this rule will not have significant economic impact on a substantial number of small entities. Thus, NOAA is not required to and has not prepared an initial regulatory flexibility analysis.

Methodology. The analysis here is based on limited quantitative information on how much each activity occurs within the proposed sanctuary. Consequently, the result is more qualitative than quantitative.

Scales Used for Assessing Impacts. For assessing levels of impacts within an alternative, NOAA used three levels; "negligible", "moderate" and "high" plus "no impacts". For levels of impacts within the proposed alternatives being analyzed, negligible means very low benefits, costs, or net benefits (less than 1% change). Moderate impacts would be more than 1% but less than or equal to 10%, and high impacts would be more than 10%. For market economic values (revenue, costs, and profits), negligible would mean no likely impact whereas moderate and high could mean some measurable impact on market economic values at the levels noted above. NOAA analyzed the proposed national marine sanctuary described above.

Small business user groups include commercial fishing operation, recreation-tourism related businesses, and land use and development

businesses. Other user groups not included here are research and education, people who receive passive economic use value from stabilization or improvement to the proposed sanctuary resources and the U.S. Navy, none of whom are small businesses.

NOAA assessed three types of regulations included in the proposed action; (1) moving, removing, recovering, altering, inuring, etc., (2) marking, defacing or damaging etc., and (3) interfering with obstructing, etc. (see section 922.203 for full details).

Proposed Action.

Moving, Removing, etc. Regulation.

Under the proposed rule, NOAA would not permit moving, removing, recovering, altering, injuring, destroying, possessing or attempting to move, remove, recover, alter, injure, destroy or possess a sanctuary resource (except where removed or possessed prior to sanctuary designation). Small businesses that could potentially be impacted include commercial fishing, recreational for-hire fishing operations, dive operations and other water recreation based operators.

The expected impact to all these business in the preferred alternative is “no impact”. The gear likely to be used to commercially fish or recreationally fish in the sanctuary will not be impacted by this regulation. Therefore, commercial fishing operations and for-hire operations are not expected to be impacted. Education and outreach will be used to educate user groups about the location of the sanctuary resources to prevent anchor damage. Divers will still be able to use the resource, but not able to take sanctuary resources, therefore the impact for this user group is also “no impact”.

Marking, defacing or damaging, etc. Regulation. Using the best information, there are no known businesses that rely on damaging or defacing sanctuary resources and no known businesses whose actions damage or deface sanctuary resources. Therefore, this prohibition is expected to have “no impact” on small businesses.

Interfering with, obstructing, delaying or preventing an investigation Regulation. This prohibition is also expected to have “no impact” on small businesses. There is no evidence that any small businesses in the area would be impacted by this prohibition.

All Regulations. NOAA expects the combined effects of all the regulations to have “no impact” on small businesses. However, it is possible that some small business may be able to leverage a sanctuary designation to increase awareness and interest in recreational opportunities within the sanctuary and

sanctuary community. This could potentially improve the potential for business growth within the area. In which case, recreational operators could potentially see a positive “moderate” improvement. Additionally, these regulations will have no impact on personal property rights, land use and planning.

Paperwork Reduction Act

ONMS has a valid Office of Management and Budget (OMB) control number (0648–0141) for the collection of public information related to the processing of ONMS permits across the National Marine Sanctuary System. NOAA’s proposal to create MPNMS would likely result in an increase in the number of requests for ONMS general permits, special use permits, certifications, and authorizations because this action proposes to add general permits and special use permits, certifications, appeals, and the authority to authorize other valid federal, state, or local leases, permits, licenses, approvals, or other authorizations. An increase in the number of ONMS permit requests would require a change to the reporting burden certified for OMB control number 0648–0141. An update to this control number for the processing of ONMS permits would be requested as part of the final rule for sanctuary expansion.

Nationwide, NOAA issues approximately 500 national marine sanctuary permits each year. Of this amount, MPNMS is expected to add 4 to 5 permit requests per year. The public reporting burden for national marine sanctuaries permits is estimated to average 1.5 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed and completing and reviewing the collection of information.

Send comments regarding the burden estimate for this data collection requirement, or any other aspect of this data collection, including suggestions for reducing the burden, to NOAA (see **ADDRESSES**) and by email to OIRA_submission@omb.eop.gov, or fax to (202) 395–7285.

Notwithstanding any other provision of law, no person is required to respond to, nor shall any person be subject to a penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act, unless that collection of information displays a currently valid OMB control number.

IV. Request for Comments

NOAA requests comments on this proposed rule by March 31, 2017. In addition to requesting comments on this proposed rule, NOAA is also soliciting input on the DEIS and DMP. In addition NOAA would like the public comments on the proposed name for the sanctuary.

List of Subjects in 15 CFR Part 922

Administrative practice and procedure, Coastal zone, Historic preservation, Intergovernmental relations, Marine resources, Natural resources, Penalties, Recreation and recreation areas, Reporting and recordkeeping requirements, Wildlife.

Dated: December 22, 2016.

W. Russell Callender,

Assistant Administrator for Ocean Services and Coastal Zone Management.

Accordingly, for the reasons discussed in the preamble, the National Oceanic and Atmospheric Administration proposes to amend 15 CFR part 922 as follows:

PART 922—NATIONAL MARINE SANCTUARY PROGRAM REGULATIONS

■ 1. The authority citation for 15 CFR part 922 continues to read as follows:

Authority: 16 U.S.C. 1431 *et seq.*

■ 2. Revise § 922.1 to read as follows:

§ 922.1 Applicability of regulations.

Unless noted otherwise, the regulations in subparts A, D, and E of this part apply to all National Marine Sanctuaries and related site-specific regulations set forth in this part. Subparts B and C of this part apply to the sanctuary nomination process and to the designation of future Sanctuaries.

■ 3. Amend § 922.3 by revising the definition of “Sanctuary resource” to read as follows:

§ 922.3 Definitions.

* * * * *

Sanctuary resource means any living or non-living resource of a National Marine Sanctuary that contributes to the conservation, recreational, ecological, historical, research, educational, or aesthetic value of the Sanctuary, including, but not limited to, the substratum of the area of the Sanctuary, other submerged features and the surrounding seabed, carbonate rock, corals and other bottom formations, coralline algae and other marine plants and algae, marine invertebrates, brine-seep biota, phytoplankton, zooplankton, fish, seabirds, sea turtles and other marine reptiles, marine mammals and

historical resources. For Thunder Bay National Marine Sanctuary and Underwater Preserve, Sanctuary resource means an underwater cultural resource as defined at § 922.191. For Mallows Bay—Potomac River National Marine Sanctuary, Sanctuary resource is defined at § 922.201(a).

* * * * *

■ 4. Revise § 922.40 to read as follows:

§ 922.40 Purpose.

The purpose of the regulations in this subpart and in the site-specific subparts is to implement the designations of the National Marine Sanctuaries by regulating activities affecting them, consistent with their respective terms of designation in order to protect, preserve and manage and thereby ensure the health, integrity and continued availability of the conservation, ecological, recreational, research, educational, historical and aesthetic resources and qualities of these areas. Additional purposes of the regulations implementing the designation of the Florida Keys and Hawaiian Islands Humpback Whale National Marine Sanctuaries are found at §§ 922.160 and 922.180, respectively.

■ 5. Revise § 922.41 to read as follows:

§ 922.41 Boundaries.

The boundary for each of the National Marine Sanctuaries is set forth in the site-specific regulations covered by this part.

■ 6. Revise § 922.42 to read as follows:

§ 922.42 Allowed activities.

All activities (e.g., fishing, boating, diving, research, education) may be conducted unless prohibited or otherwise regulated in the site-specific regulations covered by this part, subject to any emergency regulations promulgated under this part, subject to all prohibitions, regulations, restrictions, and conditions validly imposed by any Federal, State, or local authority of competent jurisdiction, including but not limited to, Federal, Tribal, and State fishery management authorities, and subject to the provisions of section 312 of the National Marine Sanctuaries Act (NMSA) (16 U.S.C. 1431 *et seq.*). The Assistant Administrator may only directly regulate fishing activities pursuant to the procedure set forth in section 304(a)(5) of the NMSA.

■ 7. Revise § 922.43 to read as follows:

§ 922.43 Prohibited or otherwise regulated activities.

The site-specific regulations applicable to the activities specified therein are set forth in the subparts covered by this part.

■ 8. Revise § 922.44 to read as follows:

§ 922.44 Emergency regulations.

(a) Where necessary to prevent or minimize the destruction of, loss of, or injury to a Sanctuary resource or quality, or minimize the imminent risk of such destruction, loss, or injury, any and all such activities are subject to immediate temporary regulation, including prohibition.

(b) The provisions of this section do not apply to the following national marine sanctuaries with site-specific regulations that establish procedures for issuing emergency regulations:

(1) Cordell Bank National Marine Sanctuary, § 922.112(e).

(2) Florida Keys National Marine Sanctuary, § 922.165.

(3) Hawaiian Islands Humpback Whale National Marine Sanctuary, § 922.185.

(4) Thunder Bay National Marine Sanctuary, § 922.196.

(5) Mallows Bay—Potomac River National Marine Sanctuary, § 922.204.

(6) [Reserved]

■ 9. Amend § 922.47 by revising paragraph (b) to read as follows:

§ 922.47 Pre-existing authorizations or rights and certifications of pre-existing authorizations or rights.

* * * * *

(b) The prohibitions listed in subparts F through P and R through T of this part do not apply to any activity authorized by a valid lease, permit, license, approval or other authorization in existence on the effective date of Sanctuary designation, or in the case of the Florida Keys National Marine Sanctuary the effective date of the regulations in subpart P, and issued by any Federal, State or local authority of competent jurisdiction, or by any valid right of subsistence use or access in existence on the effective date of Sanctuary designation, or in the case of the Florida Keys National Marine Sanctuary the effective date of the regulations in subpart P, provided that the holder of such authorization or right complies with certification procedures and criteria promulgated at the time of Sanctuary designation, or in the case of the Florida Keys National Marine Sanctuary the effective date of the regulations in subpart P, and with any terms and conditions on the exercise of such authorization or right imposed by the Director as a condition of certification as the Director deems necessary to achieve the purposes for which the Sanctuary was designated.

■ 10. Revise § 922.48 to read as follows:

§ 922.48 National Marine Sanctuary permits—application procedures and issuance criteria.

(a) A person may conduct an activity prohibited by subparts F through O and S and T of this part, if conducted in accordance with the scope, purpose, terms and conditions of a permit issued under this section and subparts F through O and S and T, as appropriate. For the Florida Keys National Marine Sanctuary, a person may conduct an activity prohibited by subpart P of this part if conducted in accordance with the scope, purpose, terms and conditions of a permit issued under § 922.166. For the Thunder Bay National Marine Sanctuary and Underwater Preserve, a person may conduct an activity prohibited by subpart R of this part in accordance with the scope, purpose, terms and conditions of a permit issued under § 922.195.

(b) Applications for permits to conduct activities otherwise prohibited by subparts F through O and S and T of this part, should be addressed to the Director and sent to the address specified in subparts F through O of this part, or subparts R through T of this part, as appropriate. An application must include:

(1) A detailed description of the proposed activity including a timetable for completion;

(2) The equipment, personnel and methodology to be employed;

(3) The qualifications and experience of all personnel;

(4) The potential effects of the activity, if any, on Sanctuary resources and qualities; and

(5) Copies of all other required licenses, permits, approvals or other authorizations.

(c) Upon receipt of an application, the Director may request such additional information from the applicant as he or she deems necessary to act on the application and may seek the views of any persons or entity, within or outside the Federal government, and may hold a public hearing, as deemed appropriate.

(d) The Director, at his or her discretion, may issue a permit, subject to such terms and conditions as he or she deems appropriate, to conduct a prohibited activity, in accordance with the criteria found in subparts F through O of this part, or subparts R through T of this part, as appropriate. The Director shall further impose, at a minimum, the conditions set forth in the relevant subpart.

(e) A permit granted pursuant to this section is nontransferable.

(f) The Director may amend, suspend, or revoke a permit issued pursuant to

this section for good cause. The Director may deny a permit application pursuant to this section, in whole or in part, if it is determined that the permittee or applicant has acted in violation of the terms and conditions of a permit or of the regulations set forth in this section or subparts F through O of this part, or subparts R through T of this part or for other good cause. Any such action shall be communicated in writing to the permittee or applicant by certified mail and shall set forth the reason(s) for the action taken. Procedures governing permit sanctions and denials for enforcement reasons are set forth in subpart D of 15 CFR part 904.

■ 11. Revise § 922.49 to read as follows:

§ 922.49 Notification and review of applications for leases, licenses, permits, approvals, or other authorizations to conduct a prohibited activity.

(a) A person may conduct an activity prohibited by subparts L through P of this part, or subparts R through T of this part, if such activity is specifically authorized by any valid Federal, State, or local lease, permit, license, approval, or other authorization issued after the effective date of Sanctuary designation, or in the case of the Florida Keys National Marine Sanctuary after the effective date of the regulations in subpart P, provided that:

(1) The applicant notifies the Director, in writing, of the application for such authorization (and of any application for an amendment, renewal, or extension of such authorization) within fifteen (15) days of the date of filing of the application or the effective date of Sanctuary designation, or in the case of the Florida Keys National Marine Sanctuary the effective date of the regulations in subpart P of this part, whichever is later;

(2) The applicant complies with the other provisions of this section;

(3) The Director notifies the applicant and authorizing agency that he or she does not object to issuance of the authorization (or amendment, renewal, or extension); and

(4) The applicant complies with any terms and conditions the Director deems reasonably necessary to protect Sanctuary resources and qualities.

(b) Any potential applicant for an authorization described in paragraph (a) of this section may request the Director to issue a finding as to whether the activity for which an application is intended to be made is prohibited by subparts L through P of this part, or subparts R through T of this part, as appropriate.

(c) Notification of filings of applications should be sent to the

Director, Office of National Marine Sanctuaries at the address specified in subparts L through P of this part, or subparts R through T of this part, as appropriate. A copy of the application must accompany the notification.

(d) The Director may request additional information from the applicant as he or she deems reasonably necessary to determine whether to object to issuance of an authorization described in paragraph (a) of this section, or what terms and conditions are reasonably necessary to protect Sanctuary resources and qualities. The information requested must be received by the Director within 45 days of the postmark date of the request. The Director may seek the views of any persons on the application.

(e) The Director shall notify, in writing, the agency to which application has been made of his or her pending review of the application and possible objection to issuance. Upon completion of review of the application and information received with respect thereto, the Director shall notify both the agency and applicant, in writing, whether he or she has an objection to issuance and what terms and conditions he or she deems reasonably necessary to protect Sanctuary resources and qualities, and reasons therefor.

(f) The Director may amend the terms and conditions deemed reasonably necessary to protect Sanctuary resources and qualities whenever additional information becomes available justifying such an amendment.

(g) Any time limit prescribed in or established under this section may be extended by the Director for good cause.

(h) The applicant may appeal any objection by, or terms or conditions imposed by, the Director to the Assistant Administrator or designee in accordance with the provisions of § 922.50.

■ 12. Revise § 922.50 to read as follows:

§ 922.50 Appeals of administrative action.

(a)(1) Except for permit actions taken for enforcement reasons (see subpart D of 15 CFR part 904 for applicable procedures), an applicant for, or a holder of, a National Marine Sanctuary permit; an applicant for, or a holder of, a Special Use permit issued pursuant to section 310 of the Act; a person requesting certification of an existing lease, permit, license or right of subsistence use or access under § 922.47; or, for those Sanctuaries described in subparts L through P and R through T of this part, an applicant for a lease, permit, license or other authorization issued by any Federal, State, or local authority of competent

jurisdiction (hereinafter appellant) may appeal to the Assistant Administrator:

(i) The granting, denial, conditioning, amendment, suspension or revocation by the Director of a National Marine Sanctuary or Special Use permit;

(ii) The conditioning, amendment, suspension or revocation of a certification under § 922.47; or

(iii) For those Sanctuaries described in subparts L through P and R through T of this part, the objection to issuance of or the imposition of terms and conditions on a lease, permit, license or other authorization issued by any Federal, State, or local authority of competent jurisdiction.

(2) For those National Marine Sanctuaries described in subparts F through K and S and T of this part, any interested person may also appeal the same actions described in paragraphs (a)(1)(i) and (ii) of this section. For appeals arising from actions taken with respect to these National Marine Sanctuaries, the term "appellant" includes any such interested persons.

(b) An appeal under paragraph (a) of this section must be in writing, state the action(s) by the Director appealed and the reason(s) for the appeal, and be received within 30 days of receipt of notice of the action by the Director. Appeals should be addressed to the Assistant Administrator for Ocean Services and Coastal Zone Management, NOAA 1305 East-West Highway, 13th Floor, Silver Spring, MD 20910.

(c)(1) The Assistant Administrator may request the appellant to submit such information as the Assistant Administrator deems necessary in order for him or her to decide the appeal. The information requested must be received by the Assistant Administrator within 45 days of the postmark date of the request. The Assistant Administrator may seek the views of any other persons. For the Monitor National Marine Sanctuary, if the appellant has requested a hearing, the Assistant Administrator shall grant an informal hearing. For all other National Marine Sanctuaries, the Assistant Administrator may determine whether to hold an informal hearing on the appeal. If the Assistant Administrator determines that an informal hearing should be held, the Assistant Administrator may designate an officer before whom the hearing shall be held.

(2) The hearing officer shall give notice in the **Federal Register** of the time, place and subject matter of the hearing. The appellant and the Director may appear personally or by counsel at the hearing and submit such material and present such arguments as deemed appropriate by the hearing officer.

Within 60 days after the record for the hearing closes, the hearing officer shall recommend a decision in writing to the Assistant Administrator.

(d) The Assistant Administrator shall decide the appeal using the same regulatory criteria as for the initial decision and shall base the appeal decision on the record before the Director and any information submitted regarding the appeal, and, if a hearing has been held, on the record before the hearing officer and the hearing officer's recommended decision. The Assistant Administrator shall notify the appellant of the final decision and the reason(s) therefore in writing. The Assistant Administrator's decision shall constitute final agency action for the purpose of the Administrative Procedure Act.

(e) Any time limit prescribed in or established under this section other than the 30-day limit for filing an appeal may be extended by the Assistant Administrator or hearing office for good cause.

■ 13. Add subpart S to read as follows:

Subpart S—Mallows Bay—Potomac River National Marine Sanctuary

Sec.

- 922.200 Boundary.
- 922.201 Definitions.
- 922.202 Joint management.
- 922.203 Prohibited or otherwise regulated activities.
- 922.204 Emergency regulations.
- 922.205 Permit procedures and review criteria.
- 922.206 Certification of preexisting leases, licenses, permits, approvals, other authorizations, or rights to conduct a prohibited activity.

Appendix A to Subpart S of Part 922—Mallows Bay—Potomac River Marine Sanctuary Boundary Description and Coordinates of the Lateral Boundary Closures and Excluded Areas

Appendix B to Subpart S of Part 922—Mallows Bay—Potomac River Marine Sanctuary Terms of Designation

§ 922.200 Boundary.

The Mallows Bay—Potomac River National Marine Sanctuary consists of an area of approximately 39 square nautical miles (nmi 2) (52 sq. mi) of waters of the state of Maryland in the Potomac River and the submerged lands thereunder, over, around, and under the underwater cultural resources in the Potomac River. The precise boundary coordinates are listed in appendix A to this subpart. The southern and western boundary of the sanctuary approximates the border between the Commonwealth of Virginia and the State of Maryland along the western side of the Potomac River and begins at Point 1 east of

Choptank Creek in King George County near Hooes, VA. From this point the boundary continues to the west passing through the points in numerical order until it reaches Point 237 at Bull Bluff on the southern side of the mouth of Potomac Creek. From this point the boundary continues north across the mouth of Potomac Creek to Point 238 near Marlboro Point in Stafford, VA. and once again follows the points in numerical order until it reaches Point 269 at the southern side of the mouth of Aquia Creek. From this point the boundary continues north across the mouth of Aquia Creek to Point 270 near Brent Point in Stafford, VA. The boundary then continues north passing through the points in numerical order until it reaches Point 312 north of Tank Creek near the restricted area in the Potomac River around Marine Base Quantico at the mouth of Chopawamsic Creek. From this point the boundary continues outside of and around the restricted area to the east and then north again passing through the points in numerical order until it reaches Point 343 south of Quantico Marina. From this point the boundary continues to the east, then north and west around the marina and then north again following the points in numerical order until it reaches Point 365 at Shipping Point on the southern side of the mouth of Quantico Creek in Quantico, VA. From this point the boundary moves to the NNE across the mouth of Quantico Creek to Possum Point near Dumfries, VA. From this point the boundary continues north passing through the points in numerical order until it reaches Point 390 SE of Southbridge, VA. From this point the boundary moves SE towards Point 391 in a straight line crossing the Potomac River until it intersects the shoreline of the river at Moss Point on the Maryland side at mean high water near Indian Head, MD just north of Goose Bay. From this intersection the boundary then follows the shoreline initially to the SW cutting across the mouths of creeks and streams along the eastern side of the Potomac River, then south past Sandy Point and around Mallows Bay. The boundary then continues following the shoreline south past Smith Point and Thomas Point where it turns to the SE and then east around Maryland Point. From here the boundary continues to follow the shoreline to the ENE past Riverside, MD until it intersects the line formed between Point 392 and Point 393 at Benny Gray Point on the western side of the mouth of Nanjemoy Creek on Tayloe Neck in Maryland. Finally, from this intersection the boundary crosses

the Potomac River to the SE in a straight line and continues to Point 393 east of Choptank Creek on the Virginia side of the Potomac River.

§ 922.201 Definitions.

(a) The following terms are defined for purposes of this subpart:

(1) *Sanctuary resource* means any historical resource with the Sanctuary boundaries, as defined in § 922.3. This includes, but is not limited to, any sunken watercraft and any associated rigging, gear, fittings, trappings, and equipment; the personal property of the officers, crew, and passengers, and any cargo; and any submerged or partially submerged prehistoric, historic cultural remains, such as docks, piers, fishing-related remains (e.g., weirs, fish-traps) or other cultural heritage materials. Sanctuary resource also means any archaeological, historical, and cultural remains associated with or representative of historic or prehistoric American Indians and historic groups or peoples and their activities.

(2) [Reserved]

(b) All other terms appearing in the regulations in this subpart are defined at 15 CFR 922.3, and/or in the Marine Protection, Research, and Sanctuaries Act, as amended, 33 U.S.C. 1401 *et seq.*, and 16 U.S.C. 1431 *et seq.*

§ 922.202 Joint management.

NOAA has primary responsibility for the management of the Sanctuary pursuant to the Act. However, NOAA shall co-manage the Sanctuary in collaboration with the State of Maryland and Charles County. The Director shall enter into a Memorandum of Understanding regarding this collaboration that shall address, but not be limited to, such aspects as areas of mutual concern, including Sanctuary programs, permitting, activities, development, and threats to Sanctuary resources.

§ 922.203 Prohibited or otherwise regulated activities.

(a) Except as specified in paragraphs (b) and (c) of this section, the following activities are prohibited and thus are unlawful for any person to conduct or to cause to be conducted:

(1) Moving, removing, recovering, altering, destroying, possessing, or otherwise injuring, or attempting to move, remove, recover, alter, destroy, possess or otherwise injure a Sanctuary resource. This prohibition does not apply to possessing historical resources removed from the Sanctuary area before the effective date of the Sanctuary designation.

(2) Marking, defacing, or damaging in any way, or displacing or removing or

tampering with any signs, notices, or placards, whether temporary or permanent, or with any monuments, stakes, posts, buoys, or other boundary markers related to the Sanctuary.

(3) Interfering with, obstructing, delaying or preventing an investigation, search, seizure or disposition of seized property in connection with enforcement of the Act or any regulation or any permit issued under the Act.

(b) The prohibitions in paragraphs (a)(1) through (3) of this section do not apply to any activity necessary to respond to an emergency threatening life, property or the environment; or to activities necessary for valid law enforcement purposes.

(c)(1) Department of Defense activities must be carried out in a manner that avoids to the maximum extent practicable any adverse impacts on Sanctuary resources.

(2) In the event of destruction of, loss of, or injury to a Sanctuary resource resulting from an incident, including but not limited to discharges, deposits, and groundings, caused by a Department of Defense activity, the Department of Defense, in coordination with the Director, must promptly prevent and mitigate further damage and must restore or replace the Sanctuary resource in a manner approved by the Director.

§ 922.204 Emergency regulations.

(a) Where necessary to prevent or minimize the destruction of, loss of, or injury to a Sanctuary resource, or to minimize the imminent risk of such destruction, loss, or injury, any and all activities are subject to immediate temporary regulation, including prohibition. An emergency regulation shall not take effect without the approval of the Governor of Maryland or her/his designee or designated agency.

(b) Emergency regulations remain in effect until a date fixed in the rule or six months after the effective date, whichever is earlier. The rule may be extended once for not more than six months.

§ 922.205 Permit procedures and review criteria.

(a) *Authority to issue general permits.* The Director may allow a person to conduct an activity that would otherwise be prohibited by this subpart, through issuance of a general permit, provided the applicant complies with:

(1) The provisions of subpart E of this part; and

(2) The relevant site specific regulations appearing in this subpart.

(b) *Sanctuary general permit categories.* The Director may issue a

sanctuary general permit under this subpart, subject to such terms and conditions as he or she deems appropriate, if the Director finds that the proposed activity falls within one of the following categories:

(1) *Research*—activities that constitute scientific research on or scientific monitoring of national marine sanctuary resources or qualities;

(2) *Education*—activities that enhance public awareness, understanding, or appreciation of a national marine sanctuary or national marine sanctuary resources or qualities; or

(3) *Management*—activities that assist in managing a national marine sanctuary.

(c) *Review criteria.* The Director shall not issue a permit under this subpart, unless he or she also finds that:

(1) The proposed activity will be conducted in a manner compatible with the primary objective of protection of national marine sanctuary resources and qualities, taking into account the following factors:

(i) The extent to which the conduct of the activity may diminish or enhance national marine sanctuary resources and qualities; and

(ii) Any indirect, secondary or cumulative effects of the activity.

(2) It is necessary to conduct the proposed activity within the national marine sanctuary to achieve its stated purpose.

(3) The methods and procedures proposed by the applicant are appropriate to achieve the proposed activity's stated purpose and eliminate, minimize, or mitigate adverse effects on sanctuary resources and qualities as much as possible.

(4) The duration of the proposed activity and its effects are no longer than necessary to achieve the activity's stated purpose.

(5) The expected end value of the activity to the furtherance of national marine sanctuary goals and purposes outweighs any potential adverse impacts on sanctuary resources and qualities from the conduct of the activity.

(6) The applicant is professionally qualified to conduct and complete the proposed activity.

(7) The applicant has adequate financial resources available to conduct and complete the proposed activity and terms and conditions of the permit.

(8) There are no other factors that would make the issuance of a permit for the activity inappropriate.

§ 922.206 Certification of preexisting leases, licenses, permits, approvals, other authorizations, or rights to conduct a prohibited activity.

(a) A person may conduct an activity prohibited by § 922.203(a)(1) through (3) if such activity is specifically authorized by a valid Federal, state, or local lease, permit, license, approval, or other authorization, or tribal right of subsistence use or access in existence prior to the effective date of sanctuary designation and within the sanctuary designated area and complies with § 922.49 and provided that the holder of the lease, permit, license, approval, or other authorization complies with the requirements of paragraph (e) of this section.

(b) In considering whether to make the certifications called for in this section, the Director may seek and consider the views of any other person or entity, within or outside the Federal government, and may hold a public hearing as deemed appropriate.

(c) The Director may amend, suspend, or revoke any certification made under this section whenever continued operation would otherwise be inconsistent with any terms or conditions of the certification. Any such action shall be forwarded in writing to both the holder of the certified permit, license, or other authorization and the issuing agency and shall set forth reason(s) for the action taken.

(d) Requests for findings or certifications should be addressed to the Director, Office of National Marine Sanctuaries; ATTN: Sanctuary Superintendent, Mallow's Bay—Potomac National Marine Sanctuary, 1305 East West Hwy., 11th Floor, Silver Spring, MD 20910. A copy of the lease, permit, license, approval, or other authorization must accompany the request.

(e) For an activity described in paragraph (a) of this section, the holder of the authorization or right may conduct the activity prohibited by § 922.203(a)(1) through (3) provided that:

(1) The holder of such authorization or right notifies the Director, in writing, within 180 days of the effective date of Sanctuary designation, of the existence of such authorization or right and requests certification of such authorization or right;

(2) The holder complies with the other provisions of this section; and

(3) The holder complies with any terms and conditions on the exercise of such authorization or right imposed as a condition of certification, by the Director, to achieve the purposes for which the Sanctuary was designated.

(f) The holder of an authorization or right described in paragraph (a) of this section authorizing an activity prohibited by § 922.203 may conduct the activity without being in violation of applicable provisions of § 922.203, pending final agency action on his or her certification request, provided the holder is otherwise in compliance with this section.

(g) The Director may request additional information from the certification requester as he or she deems reasonably necessary to condition appropriately the exercise of the certified authorization or right to achieve the purposes for which the Sanctuary was designated. The Director must receive the information requested within 45 days of the postmark date of the request. The Director may seek the views of any persons on the certification request.

(h) The Director may amend any certification made under this section whenever additional information becomes available that he/she determines justifies such an amendment.

(i) Upon completion of review of the authorization or right and information received with respect thereto, the Director shall communicate, in writing, any decision on a certification request or any action taken with respect to any certification made under this section, in writing, to both the holder of the certified lease, permit, license, approval, other authorization, or right, and the issuing agency, and shall set forth the reason(s) for the decision or action taken.

(j) The holder may appeal any action conditioning, amending, suspending, or revoking any certification in accordance with the procedures set forth in § 922.50.

(k) Any time limit prescribed in or established under this section may be extended by the Director for good cause.

Appendix A to Subpart S of Part 922—Mallows Bay—Potomac River Marine Sanctuary Boundary Description and Coordinates of the Lateral Boundary Closures and Excluded Areas

Coordinates listed in this appendix are unprojected (Geographic) and based on the North American Datum of 1983.

Appendix B to Subpart S of Part 922—Mallows Bay—Potomac River Marine Sanctuary Terms of Designation

Terms of Designation for the Proposed Mallows Bay—Potomac River National Marine Sanctuary

Under the authority of the National Marine Sanctuaries Act, as amended (the “Act” or “NMSA”), 16 U.S.C. 1431 *et seq.*, certain waters and submerged lands located off the Nanjemoy Peninsula of Charles County, Maryland and along the tidal Potomac River and its surrounding waters are hereby designated as a National Marine Sanctuary for the purposes of providing long-term protection and management of the historical resources and recreational, research, educational, and aesthetic qualities of the area.

Article I: Effect of Designation

The NMSA authorizes the issuance of such regulations as are necessary and reasonable to implement the designation, including managing and protecting the historical resources and recreational, research, and educational qualities of the Mallows Bay—Potomac River National Marine Sanctuary (the “Sanctuary”). Section 1 of Article IV of

this Designation Document lists those activities that may have to be regulated on the effective date of designation, or at some later date, in order to protect Sanctuary resources and qualities. Listing an activity does not necessarily mean that it will be regulated; however, if an activity is not listed it may not be regulated, except on an emergency basis, unless Section 1 of Article IV is amended by the same procedures by which the original Sanctuary designation was made.

Article II: Description of the Area

The Mallows Bay—Potomac River National Marine Sanctuary consists of an area of approximately 39 square nautical miles (nmi 2) (52 sq. mi) of waters of the state of Maryland in the Potomac River and the submerged lands thereunder, over, around, and under the underwater cultural resources in the Potomac River. The southern and western boundary of the sanctuary approximates the border between the Commonwealth of Virginia and the State of Maryland for roughly 29 miles along the western side of the Potomac River and begins east of Choptank Creek in King George County near Hooes, VA. From this point the boundary approximates the border west and then north cutting across the mouths of Choptank Creek, Potomac Creek, and Aquia Creek. The boundary then continues past Widewater, VA and around the Marine Base Quantico restricted area to the east and then continues north again cutting across the mouth of Quantico Creek. From a point just north of Quantico Creek and Possum Point near Dumfries, VA the boundary crosses the Potomac to the southeast until it intersects the Maryland shoreline at Moss Point near Indian Head, MD. From this point the eastern and northern boundary of the sanctuary, approximately 21 miles in length, follows the Maryland shoreline south past Sandy Point and Mallows Bay cutting across the mouths of streams and creeks. The boundary then continues following the shoreline south past Smith Point and Thomas Point where it turns to the east around Maryland Point. From here the boundary continues to follow the shoreline past Riverside, MD to a location at Benny Gray Point on the western side of the mouth of Nanjemoy Creek on Tayloe Neck in Maryland. From here the boundary crosses the Potomac River again to the south back to its point of origin east of Choptank Creek on the Virginia side of the river. The boundary encompasses all tidal waters within this boundary from mean high tide in Maryland to mean low tide in Virginia. Excluded from the sanctuary are areas where the Virginia state line is otherwise delineated, the Quantico exclusion zone, and the area around the Quantico marina.

Article III: Special Characteristics of the Area

Mallows Bay—Potomac River National Marine Sanctuary and its surrounding waters contain a diverse collection of nearly 200 known historic shipwreck vessels dating back to the Civil War and potentially dating back to the Revolutionary War as well as archaeological artifacts dating back 12,000 years indicating the presence of some of the

region’s earliest American Indian cultures, including the Piscataway Indian Nation and the Piscataway Conoy Tribe of Maryland. The area is most renowned for the remains of over 100 wooden steamships, known as the “Ghost Fleet,” that were built for the U.S. Emergency Fleet between 1917–1919 as part of U.S. engagement in World War I. Their construction at more than 40 shipyards in 17 states reflects the massive national wartime effort that drove the expansion and economic development of communities and related maritime service industries including the present-day Merchant Marines. The area is contiguous to the Captain John Smith Chesapeake National Historic Trail, the Star Spangled Banner National Historic Trail, the Potomac Heritage National Scenic Trail and the Lower Potomac Water Trail which offer meaningful educational and recreational opportunities centered on the region’s culture, heritage and history. Additionally, the structure provided by the vessels and related infrastructure serve as important habitat to thriving populations of recreational fisheries, bald eagles, and other aquatic species. The area’s listing on the National Historical Register of Places in 2015 codifies the historical, archaeological and recreational significance of the Ghost Fleet and related maritime heritage sites in and around Mallows Bay—Potomac River National Marine Sanctuary.

Article IV: Scope of Regulations

Section 1. Activities Subject to Regulation. The following activities are subject to regulation, including prohibition, to the extent necessary and reasonable to ensure the protection and management of the historical resources and recreational, research and educational qualities of the area:

- a. Damaging sanctuary resources.
- b. Damaging sanctuary property.
- c. Interfering with, obstructing, delaying or preventing an investigation, search, seizure or disposition of seized property in connection with enforcement of the Act or any regulation issued under the Act.

Section 2. Emergencies. Where necessary to prevent or minimize the destruction of, loss of, or injury to a Sanctuary resource; or minimize the imminent risk of such destruction, loss, or injury, any activity, including those not listed in Section 1, is subject to immediate temporary regulation. An emergency regulation shall not take effect without the approval of the Governor of Maryland or her/his designee or designated agency.

Article V: Relation to Other Regulatory Program

Section 1. Fishing Regulations, Licenses, and Permits. Fishing in the Sanctuary shall not be regulated as part of the Sanctuary management regime authorized by the Act. However, fishing in the Sanctuary may be regulated by other Federal, State, Tribal and local authorities of competent jurisdiction, and designation of the Sanctuary shall have no effect on any regulation, permit, or license issued thereunder.

Section 2. Other Regulations, Licenses, and Permits. If any valid regulation issued by any Federal, state, Tribal, or local authority of

competent jurisdiction, regardless of when issued, conflicts with a Sanctuary regulation, the regulation deemed by the Director of the Office of National Marine Sanctuaries, National Oceanic and Atmospheric Administration, or designee, in consultation with the State of Maryland, to be more protective of Sanctuary resources and qualities shall govern. Pursuant to section 304(c)(1) of the Act, 16 U.S.C. 1434(c)(1), no valid lease, permit, license, approval, or other authorization issued by any Federal, State, Tribal, or local authority of competent jurisdiction, or any right of subsistence use or access, may be terminated by the Secretary of Commerce, or designee, as a result of this designation, or as a result of any Sanctuary regulation, if such lease, permit, license, approval, or other authorization, or right of subsistence use or access was issued or in existence as of the effective date of this designation. However, the Secretary of Commerce or designee, in consultation with the State of Maryland, may regulate the exercise of such authorization or right consistent with the purposes for which the Sanctuary is designated.

Section 3. Defense Activities. Department of Defense activities must be carried out in a manner that avoids to the maximum extent practicable any adverse impacts on Sanctuary resources and qualities.

Article VI. Alteration of This Designation

The terms of designation may be modified only by the same procedures by which the original designation is made, including public meetings, consultation according to the NMSA.

Subpart T—[Added and Reserved]

■ 14. Add and reserve subpart T.

[Docket No. 160907828-6828-01]

RIN 0648-BG01

Wisconsin—Lake Michigan National Marine Sanctuary; Notice of Proposed Rulemaking and Availability of Draft Environmental Impact Statement and Management Plan

AGENCY: Office of National Marine Sanctuaries (ONMS), National Ocean Service (NOS), National Oceanic and Atmospheric Administration (NOAA), Department of Commerce (DOC).

ACTION: Proposed rule.

SUMMARY: The National Oceanic and Atmospheric Administration (NOAA) is proposing to designate an area of 1,075 square miles of Wisconsin state waters

as the Wisconsin—Lake Michigan National Marine Sanctuary (WLMNMS or sanctuary). NOAA also proposes regulations to implement the sanctuary designation and establish the sanctuary's terms of designation. A draft environmental impact statement and draft management plan have also been prepared for this proposed action. The purpose of this action is to supplement current Wisconsin state regulations and resource protection efforts in a way that will ensure long term protection of the nationally significant collection of historic shipwrecks and other maritime heritage resources in the area. NOAA is soliciting public comment on the proposed rule, draft environmental impact statement (DEIS), and draft management plan (DMP). NOAA will also begin consultations under Section 106 of the National Historic Preservation Act (NHPA) and solicit public comments specifically related to the identification and assessment of the historic properties within the affected area in compliance with Section 106 review process.

DATES: NOAA will consider all comments received by March 31, 2017. Public meetings will be held on the following dates:

- (1) March 13, 2017, 6:30 p.m. to 8:30 p.m., Algoma, WI;
- (2) March 14, 2017, 6:30 p.m. to 8:30 p.m., Manitowoc, WI;
- (3) March 15, 2017, 6:30 p.m. to 8:30 p.m., Sheboygan, WI; and
- (4) March 16, 2017, 6:30 p.m. to 8:30 p.m., Port Washington, WI.

ADDRESSES: You may submit comments on this document, identified by NOAA-NOS-2016-0150, by any of the following methods:

- **Electronic Submission:** Submit all electronic public comments via the Federal e-Rulemaking Portal. Go to www.regulations.gov/#!docketDetail;D=NOAA-NOS-2016-0150, click the "Comment Now!" icon, complete the required fields, and enter or attach your comments.
- **Mail:** Russ Green, Regional Coordinator, Northeast and Great Lakes Region, NOAA Office of National Marine Sanctuaries, University of Wisconsin—Sheboygan, One University Drive, Sheboygan, WI 53081.

Instructions: Comments sent by any other method, to any other address or individual, or received after the end of the comment period, may not be considered by NOAA. All comments received are a part of the public record and will generally be posted for public viewing on www.regulations.gov without change. All personal identifying information (e.g., name, address, etc.),

confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. NOAA will accept anonymous comments (enter "N/A" in the required fields if you wish to remain anonymous).

Copies of the proposed rule, DEIS, and DMP can be downloaded or viewed on the internet at www.regulations.gov (search for docket #NOAA-NOS-2016-0150) or at www.regulations.gov/#!docketDetail;D=NOAA-NOS-2016-0150. Copies can also be obtained by contacting the person identified under **FOR FURTHER INFORMATION CONTACT**.

The public meeting locations are:

- (1) *Algoma, WI:* Knudson Hall, 620 Lake Street, Algoma, WI 54201 (March 13, 2017)
- (2) *Manitowoc, WI:* Wisconsin Maritime Museum, 75 Maritime Dr., Manitowoc, WI 54220 (March 14, 2017)
- (3) *Sheboygan, WI:* University of Wisconsin—Sheboygan, Main Building, Wombat Room (Room 2114), 1 University Drive, Sheboygan, WI 53081 (March 15, 2017)
- (4) *Port Washington, WI:* Wilson House, 200 N. Franklin St., Port Washington, WI 53074 (March 16, 2017)

FOR FURTHER INFORMATION CONTACT: Russ Green, Regional Coordinator, Northeast and Great Lakes Region at (920) 459-4425 or russ.green@noaa.gov.

SUPPLEMENTARY INFORMATION:

I. Introduction

A. Wisconsin—Lake Michigan National Marine Sanctuary Background

The National Marine Sanctuaries Act (NMSA; 16 U.S.C. 1431 *et seq.*) authorizes the Secretary of Commerce (Secretary) to designate and protect as national marine sanctuaries areas of the marine environment that are of special national significance due to their conservation, recreational, ecological, historical, scientific, cultural, archeological, educational, or esthetic qualities. Day-to-day management of national marine sanctuaries has been delegated by the Secretary to NOAA's Office of National Marine Sanctuaries (ONMS). The primary objective of the NMSA is to protect the sanctuary system's biological and cultural resources, such as coral reefs, marine animals, historic shipwrecks, other historic structures, and archaeological sites.

The 1,075-square-mile area proposed for designation as the Wisconsin—Lake Michigan National Marine Sanctuary

encompasses the waters and bottomlands of Lake Michigan adjacent to Manitowoc, Sheboygan, and Ozaukee Counties. Principal cities in this area include Port Washington, Sheboygan, Manitowoc, Two Rivers, and Mequon. The boundary includes 80 miles of shoreline and extends 7 to 16 miles from the shoreline.

The area includes a nationally significant collection of maritime heritage resources, including 37 known shipwrecks, about 80 suspected shipwrecks, and numerous other historic maritime-related features such as historic cribs, docks, and piers. The historic shipwrecks in the proposed sanctuary are representative of the vessels that sailed and steamed this corridor, carrying grain and raw materials east as other vessels came west loaded with coal, manufactured goods, and people. Eighteen of the 37 shipwreck sites are listed on the National Register of Historic Places. Many of the shipwrecks in the proposed sanctuary retain an unusual degree of architectural integrity, with 14 vessels nearly intact. Well preserved by Lake Michigan's cold, fresh water, the shipwrecks and related maritime heritage sites in and around the proposed Wisconsin—Lake Michigan National Marine Sanctuary possess exceptional historical, archaeological and recreational value.

On December 2, 2014, pursuant to section 304 of the NMSA and the Sanctuary Nomination Process (SNP; 79 FR 33851), Wisconsin Governor Scott Walker, on behalf of the State of Wisconsin; the Cities of Two Rivers, Manitowoc, Sheboygan, and Port Washington; the Counties of Ozaukee, Sheboygan, and Manitowoc, submitted a nomination asking NOAA to consider designating this area of Wisconsin's Lake Michigan waters as a national marine sanctuary. The State of Wisconsin's selection of this geographic area for the nomination drew heavily from a 2008 report conducted by the Wisconsin History Society and funded by the Wisconsin Coastal Management Program (*Wisconsin's Historic Shipwrecks: An Overview and Analysis of Locations for a State/Federal Partnership with the National Marine Sanctuary Program, 2008*, <http://www.maritimetrails.org/assets/pages/Wisconsins%20Historic%20Shipwrecks.pdf>). The nomination also identified opportunities for NOAA to strengthen and expand on resource protection, education, and research programs by state of Wisconsin agencies and in the four communities along the Lake Michigan coast. NOAA completed its review of the nomination, and on

February 5, 2015 added the area to the inventory of nominations that are eligible for designation. All nominations submitted to NOAA can be found at: <http://www.nominate.noaa.gov/nominations/>.

NOAA began the sanctuary designation process for Wisconsin—Lake Michigan National Marine Sanctuary on October 7, 2015 with the publication of a notice of intent (NOI; 80 FR 60631) to prepare a DEIS and the initiation of a public process, as required under the NMSA and the National Environmental Policy Act (NEPA). The DEIS evaluates alternatives related to the proposed designation of the area, including a preferred alternative. The NOI also announced NOAA's intent to fulfill its responsibilities under the requirements of the NHPA.

A duplicate version of the notice for intent was published in error two days earlier on October 5, 2015 (80 FR 60132). That publication contained the exact same content as the official version made available for public inspection and published on October 7, 2015 (80 FR 60631). Any comments received in connection with the publication in error on October 5, 2015 were accepted and considered by NOAA.

B. Need for Action

Establishing a national marine sanctuary in Wisconsin waters would complement and supplement existing state-led preservation efforts, research programs, and public outreach initiatives. Threats to the nationally significant resources in the area include both human activities and natural processes. Natural processes include the damaging impacts of wind, waves, storms, and ice, as well as the impact of invasive species such as zebra and quagga mussels that today cover most of Lake Michigan's shipwrecks. Human threats to underwater cultural resources include looting and altering sanctuary shipwreck sites and damaging sites by anchoring. These processes threaten the long term sustainability of historic shipwrecks and other underwater cultural resources, and negatively impact their recreational and archaeological value. Examples of these impacts include: Anchor damage from visiting dive boats, damage due to unpermitted and poorly attached mooring lines, artifacts being looted, artifacts being moved within a shipwreck site, a remotely-operated vehicle tether entangled within a shipwreck, fishing gear entangled within a shipwreck, increased invasive mussel coverage, and the disturbance

and natural deterioration of newly uncovered shipwrecks within the boundary's large swaths of shallow, sandy lakebottom.

The sanctuary would enhance and facilitate broader lake conservation efforts as well as heritage tourism within the many communities that have embraced their centuries-long maritime relationship with Lake Michigan, the Great Lakes region, and the nation. A sanctuary designation would enhance existing comprehensive management programs. The presence of a sanctuary would provide access to NOAA's extended network of scientific expertise and technological resources, enhance ongoing research, and provide an umbrella for the coordination of these activities. It would support and build on existing educational initiatives and provide programming and technology for K–12, post-graduate, and the general public across the state. A sanctuary designation, the local commitment to the sanctuary, the existing state agency interest, and NOAA's existing network of affiliated programs has the potential to create synergies that reach far beyond the proposed sanctuary boundaries.

C. Designation Process

National Marine Sanctuary Designation Process

NOAA may identify areas to consider for national marine sanctuary designation through the community-based SNP described above. The process for designating a new national marine sanctuary is described in the NMSA and has four steps:

Scoping: NOAA announces its intent to designate a new national marine sanctuary and asks the public for input on potential boundaries, resources that could be protected, issues NOAA should consider and any information that should be included in the detailed resource analysis in a draft environmental impact statement.

Sanctuary Proposal: NOAA prepares draft designation documents including a DMP, DEIS that analyzes a range of alternatives, proposed regulations and proposed boundaries.

Public Review: The public, agency partners, tribes and other stakeholders provide input on the draft documents. The public review step also includes the formal consultations required under NEPA, the NMSA, the NHPA, and other relevant statutes. NOAA considers all input and determines appropriate changes.

Sanctuary Designation: NOAA makes a final decision and prepares final documents. Before the designation becomes effective, the Governor reviews

the documents. Congress also has the opportunity to review the documents.

Public Scoping Process

On October 7, 2015 NOAA initiated the public scoping process with the publication of the NOI in the **Federal Register** (80 FR 60631) asking for public input on the proposed designation and informing the public that NOAA intended to prepare a DEIS evaluating alternatives related to the proposed designation of Wisconsin-Lake Michigan National Marine Sanctuary under NMSA. That announcement initiated a 90-day public comment period during which NOAA solicited additional input related to the scale and scope of the proposed sanctuary, including ideas presented in the community nomination. The NOI also announced NOAA's intent to fulfill its responsibilities under the requirements of NHPA.

During the public comment period, NOAA hosted three public meetings in November 2015 and provided additional opportunity for comments through a web-based portal [<https://www.regulations.gov/#!docketDetail;D=NOAA-NOS-2015-0112>] and by traditional mail until January 15, 2016. All comments received, through any of these formats, were publicly posted on the www.regulations.gov web portal.

During this period, approximately 135 individuals provided input. Comments were overwhelmingly supportive of the goals of sanctuary designation, including the rationale for conservation of nationally-significant resources, considerations that enhance public use and recreation, considerations that enhance tourism and the local economy, and as a venue for education, science and interpretation as described in the community nomination.

The comments underscored the need for conservation and interpretation, particularly the importance of educating users about the importance of the Great Lakes and the role that shipbuilding and shipping commerce has played in the history of the region and our nation. There was strong support from local communities, governments, and organizations supporting sanctuary designation and offering opportunities to partner for education, research, outreach and other activities.

Several commenters who otherwise supported sanctuary designation expressed concern that designation should not in any way disrupt existing lake commerce. Specific concerns focused on the need for continued ability to dredge and maintain ports and

the continued ability for ships to ballast in port and in open water.

The few comments in opposition to sanctuary designation were concerned about the cost of implementation, the possibility that designation would make metal detecting illegal, and that designation would be an unneeded level of government intervention.

There were several requests that NOAA consider expanding the proposed boundaries. Several comments suggesting expansion north to include shipwrecks in Kewaunee County, and one commenter requested inclusion of Green Bay.

NOAA used the public comments submitted during the scoping process to inform the preparation of the DMP, DEIS, and the proposed sanctuary regulations. In response to many of these comments, this proposed rule proposes to provide additional protection to maritime heritage resources, particularly the nationally significant collection of historic shipwrecks. The environmental effects of these proposed designations are analyzed in a DEIS published concurrently with this proposed rule. NOAA has also developed an associated DMP describing sanctuary management activities in the area proposed for designation. NOAA is seeking public comment on the proposed rule, DEIS, and DMP, which are available at <http://sanctuaries.noaa.gov/wisconsin/> or may be obtained by contacting the individual listed under the heading **FOR FURTHER INFORMATION CONTACT**.

II. Summary of the Proposed Regulations

1. Adding New Subpart T and Reserving Subpart S

NOAA is proposing to amend 15 CFR part 922 by adding a new subpart (subpart T) that contains site-specific regulations for WLMNMS. This subpart would include the proposed boundary, contain definitions of common terms used in the new subpart, provide a framework for co-management of the sanctuary, identify prohibited activities and exceptions, and establish procedures for certification of existing uses, permitting otherwise prohibited activities, and emergency regulation procedures. Several conforming changes would also be made to the national sanctuary regulations as described below.

NOAA is concurrently working on designating a separate new national marine sanctuary in Mallows Bay—Potomac River waters as part of a separate rulemaking process, and those regulations would be published in their

own new subpart (subpart S). As such, in this rulemaking, NOAA proposes to add and reserve subpart S for any future site-specific regulations that might be issued. NOAA would harmonize the regulations for the Mallows Bay—Potomac River designation process with any final rule associated with this action.

2. Proposed Sanctuary Name

NOAA has proposed to name the sanctuary the “Wisconsin—Lake Michigan National Marine Sanctuary (WLMNMS)” based on the nomination submitted by the community. This name aptly identifies both the lake and state where the proposed sanctuary is located. NOAA is asking for the public to provide input on this proposed name. The public may also suggest an alternative name and state the reasons for suggesting an alternative name.

3. Proposed Sanctuary Boundary

NOAA is proposing to designate a 1,075-square mile area of Lake Michigan waters off Ozaukee, Sheboygan, and Manitowoc Counties as WLMNMS. The sanctuary's shoreward boundary would be defined by the Ordinary High Water Mark as defined by the state of Wisconsin, while the lakeward boundary would be drawn to include all known shipwrecks in each county, extending 16 miles offshore at its greatest extent. The harbors and marinas of Two Rivers, Manitowoc, Sheboygan, and Port Washington would not be included in the sanctuary. The detailed legal boundary description is included in section 922.210 and the coordinates are located in 15 CFR part 922, subpart T, appendix A. A map of the area is shown in the DEIS.

Within this proposed boundary are 37 known shipwrecks, including 18 on the National Register of Historic Places. The sanctuary would provide comprehensive protection of underwater cultural resources as well as develop partnerships and resources for education, interpretation, personnel, research, and administration. This would provide enhanced management of underwater cultural resources, as well as potential economic benefits to the coastal communities from Mequon to Two Rivers.

The proposed boundary reflects the boundary the State of Wisconsin submitted to NOAA in the nomination with an adjustment based on discussions with the State of Wisconsin. The State submitted an 875-square-mile boundary in the nomination. NOAA's adjustments result in a 1,075-square-mile boundary, and includes moving the southern and northern boundary lines to

the county lines and expanding the southeast corners to include the shipwreck site of the *Senator* (its location was previously unknown), and excluding ports and harbors.

4. Definitions

NOAA is proposing a site-specific definition of “sanctuary resources” for the WLMNMS to be tailored to include only the underwater cultural resources found in this area in accordance with the purpose of the proposed designation. The definition would not include biological and ecological resources of the area. Creating this new site-specific definition requires NOAA to modify the national definition of “sanctuary resource” in the national regulations at section 922.3 to add an additional sentence that defines the term for WLMNMS at section 922.211(a). This is similar to the approach taken for other national marine sanctuaries that do not share the full “sanctuary resource” definition such as Thunder Bay National Marine Sanctuary.

The new WLMNMS definition of “sanctuary resources” would be all prehistoric, historic, archaeological, and cultural sites and artifacts within the sanctuary boundary, including but not limited to, all shipwrecks and related components.

Additionally NOAA would add a definition for “shipwreck site” in the WLMNMS regulations at Section 922.211(a) that would define a subset of the “sanctuary resources.” The definition for “shipwreck site” would be more narrowly focused than the broader “sanctuary resource” definition and would be used in one of the prohibited activities regulations. “Shipwreck site” is defined as any sunken watercraft, its components, cargo, contents, and associated debris field.

This proposed rule incorporates and adopts other common terms defined in the existing national regulations at section 922.3. One of the common terms adopted (without modification) is “National Marine Sanctuary” or “Sanctuary,” which means an area of the marine environment of special national significance due to its resource or human-use values, which is designated as such to ensure its conservation and management.

5. Co-Management of the Sanctuary

In order to further enhance the engagement forged by the State of Wisconsin in nominating this area to become a national marine sanctuary, NOAA is proposing to manage the sanctuary collaboratively with the State

of Wisconsin. NOAA proposes to establish the framework for co-management of the sanctuary at section 922.212 and intends to work out the operational details of the collaboration in a Memorandum of Understanding (MOU). Details on the execution of sanctuary management such as activities, programs, and permitting programs would be included in the MOU and can be updated to adapt to changing conditions or threats to the sanctuary resources. Any significant changes to the regulations or management plan would not only be jointly coordinated but also subject to public review.

6. Prohibited and Regulated Activities

NOAA is proposing to supplement and complement existing management of this area by proposing three regulations to protect the sanctuary resources in section 922.213(a).

a. Damaging Sanctuary Resources

As a complement to existing protections under state law and NHPA regulations, NOAA is proposing to prohibit moving, removing, recovering, altering, destroying, possessing or otherwise injuring, or attempting to move, remove, recover, alter, destroy, possess or otherwise injure a sanctuary resource. This sanctuary prohibition would supplement the existing Wisconsin regulations that prohibit damaging shipwrecks. Since 1991 Wisconsin has had state regulations related to removing or damaging shipwrecks that currently apply to the proposed area and would continue to apply to these resources after sanctuary designation.

b. Anchoring or Grappling on a Shipwreck Site

NOAA is proposing to prohibit the use of grappling hooks and anchoring devices into shipwreck sites to protect fragile shipwrecks within the sanctuary from damage. To provide the public adequate notice of shipwreck sites, NOAA will prepare and make available sanctuary maps with known and suspected shipwreck sites. Shipwreck sites not listed on maps would still be sanctuary resources and the prohibition on anchoring and grappling would still apply. The proposed management plan includes activities related to surveying the sanctuary area and identifying additional shipwreck sites. As appropriate, and in consideration of resource management conflicts, NOAA would update the maps as new shipwreck sites are found by the sanctuary, the Wisconsin Historical Society, or other public or private

groups and individuals. Because NOAA seeks to promote public access, while also ensuring sound resource protection, an initial focus of the sanctuary management plan will be the installation of permanent mooring systems at sanctuary shipwreck sites. The moorings will provide a secure and convenient anchoring point for users, eliminating the need for grappling, and providing additional notice of the location of any known shipwreck site. NOAA is proposing to publish guidelines on best practices for anchoring near shipwrecks sites to avoid violating this prohibition. An example of a best practice could include instructions on using a weighted line, with a suggested maximum weight of 15 pounds, and surface float to mark a wreck for divers to descend and ascend. But the line would not use as an anchoring line; it would need to be continuously tended and removed before the dive boat leaves the area.

c. Interfering With Investigations

NOAA is proposing a regulation to prohibit interfering with sanctuary enforcement activities. This regulation will assist in NOAA’s enforcement of the sanctuary regulations and strengthen sanctuary management.

d. Exemption for Emergencies and Law Enforcement

NOAA is proposing to include an exemption from the three regulations described above for activities that respond to emergencies that threaten lives, property or the environment, or are necessary for law enforcement purposes.

7. Emergency Regulations

As part of the proposed designation, NOAA is proposing to give the sanctuary authority to issue emergency regulations. Emergency regulations are used in limited cases and under specific conditions when there is an imminent risk to sanctuary resources and a temporary prohibition would prevent the destruction or loss of those resources. Under the NMSA, NOAA only issues emergency regulations that address an imminent risk for a fixed amount of time with a maximum of 6 months that can be extended a single time. A full rulemaking process must be undertaken, including a public comment period, to consider making an emergency regulation permanent. NOAA would add the authority to issue emergency regulations by modifying the national regulations at section 922.44 to include WLMNMS in a list of sanctuaries that have site-specific regulations related to emergency

regulations, and adding detailed site-specific emergency regulations to the WLMNMS regulations at section 922.214.

8. General Permits, Certifications, Authorizations, and Special Use Permits

a. General Permits

NOAA is proposing to include the authority to issue permits to allow certain activities that would otherwise violate the prohibitions in WLMNMS regulations. Similar to other national marine sanctuaries, NOAA is proposing to consider these permits for the purposes of education, research, or management.

To address the above additions to the ONMS general permit authority for WLMNMS, NOAA would amend regulatory text in the program-wide regulations in part 922, subpart E, to add references to subpart T, as appropriate. NOAA would also add a new section 922.215 in subpart T titled "Permit procedures and review criteria" that would address site-specific permit procedures for WLMNMS.

b. Certifications

Because of the possibility that preexisting activities, right of subsistence use or access permitted by other federal, state, local, or tribal agencies might be occurring within the WLMNMS area that would otherwise be prohibited by WLMNMS regulations, NOAA would add language at section 922.216 describing the process by which it can certify existing activities within the WLMNMS area. In compliance with the NMSA, WLMNMS regulations at section 922.216 would state that certification is the process by which permitted activities existing prior to the designation of the sanctuary that violate sanctuary prohibitions may be allowed to continue, provided certain conditions are met. Applications for certifying permitted existing uses would have to be received by NOAA within 180 days of the effective date of the designation.

c. Authorizations

NOAA also proposes to provide WLMNMS with the authority to consider allowing an otherwise prohibited activity if such activity is specifically authorized by any valid Federal, state, or local lease, permit, license, approval, or other authorization issued after sanctuary designation. Authorization authority is intended to streamline regulatory requirements by reducing the need for multiple permits and would apply to all proposed prohibitions at section 922.213. As such, NOAA proposes to amend the

regulatory text at section 922.49 to add reference to subpart T.

d. Special Use Permits

NOAA has the authority under the NMSA to issue special use permits (SUPs) at national marine sanctuaries as established by Section 310 of the NMSA. SUPs can be used to authorize specific activities in a sanctuary if such authorization is necessary (1) to establish conditions of access to and use of any sanctuary resource; or (2) to promote public use and understanding of a sanctuary resource. The activities that qualify for a SUP are set forth in the **Federal Register** (78 FR 25957; May 3, 2013). Categories of SUPs may be changed or added to through public notice and comment. NOAA would not apply the SUP to activities in place at the time of the WLMNMS designation.

SUP applications are reviewed to ensure that the activity is compatible with the purposes for which the sanctuary is designated and that the activities carried out under the SUP be conducted in a manner that do not destroy, cause the loss of, or injure sanctuary resources. NOAA also requires SUP permittees to purchase and maintain comprehensive general liability insurance, or post an equivalent bond, against claims arising out of activities conducted under the permit. The NMSA allows NOAA to assess and collect fees for the conduct of any activity under a SUP. The fees collected could be used to recover the administrative costs of issuing the permit, the cost of implementing the permit, monitoring costs associated with the conduct of the activity, and the fair market value of the use of sanctuary resources.

9. Other Conforming Amendments

The general regulations in part 922, subpart A, for general information and part 922, subpart E, for regulations of general applicability would also have to be amended so that the regulations are accurate and up-to-date. The 10 sections that will need to be updated to reflect the increased number of sanctuaries or to add subpart T to the list of sanctuaries. The modified sections to conform to adding a new sanctuary are:

- Section 922.1 Applicability of regulations
- Section 922.40 Purpose
- Section 922.41 Boundaries
- Section 922.42 Allowed activities
- Section 922.43 Prohibited or otherwise regulated activities
- Section 922.44 Emergency regulations
- Section 922.47 Pre-existing authorizations or rights and

certifications of pre-existing authorizations or rights

- Section 922.48 National Marine Sanctuary permits—application procedures and issuance criteria
- Section 922.49 Notification and review of applications for leases, licenses, permits, approvals, or other authorizations to conduct a prohibited activity
- Section 922.50 Appeals of administrative action

10. Terms of Designation

Section 304(a)(4) of the National Marine Sanctuaries Act (NMSA) requires that the terms of designation include the geographic area included within the sanctuary; the characteristics of the area that give it conservation, recreational, ecological, historical, research, educational, or aesthetic value; and the types of activities that will be subject to regulation by the Secretary of Commerce to protect these characteristics. Section 304(a)(4) also specifies that the terms of designation may be modified only by the same procedures by which the original designation was made. Thus, the terms of designation serve as a constitution for the Sanctuary.

NOAA is proposing to establish terms to designation that describe the geographic area, resources, and activities as described in details above. NOAA would add the terms of designation language as appendix B to the WLMNMS regulations at 15 CFR part 922, subpart T.

III. Classification

National Marine Sanctuaries Act

NOAA has determined that the designation of the Wisconsin—Lake Michigan National Marine Sanctuary will not have a negative impact on the National Marine Sanctuary System and that sufficient resources exist to effectively implement sanctuary management plans and to update site characterizations. The finding for NMSA section 304(f) is published on the ONMS Web site for Wisconsin-Lake Michigan designation at <http://sanctuaries.noaa.gov/wisconsin/>.

National Environmental Policy Act

NOAA has prepared a draft environmental impact statement to evaluate the environmental effects of the proposed rulemaking and alternatives as required by NEPA (42 U.S.C. 4321 *et seq.*) and the NMSA. Copies of the DEIS and related DMP are available at the address and Web site listed in the **ADDRESSES** section of this proposed rule. NOAA is also soliciting public

comments on the DEIS and DMP. Responses to comments received on this proposed rule as well as on the DEIS and draft management plan will be published in the final environmental impact statement and preamble to the final rule.

Coastal Zone Management Act

Section 307 of the Coastal Zone Management Act (CZMA; 16 U.S.C. 1456) requires Federal agencies to consult with a state's coastal program on potential Federal regulations having an effect on state waters. Because WLMNMS encompasses a portion of the Wisconsin State waters, NOAA intends to submit a copy of this proposed rule and supporting documents to the State of Wisconsin Coastal Zone Management Program for evaluation of Federal consistency under the CZMA. NOAA will publish the final rule and designation only after completion of the consultation requirements under the CZMA.

Executive Order 12866: Regulatory Impact

This proposed rule has been determined to be not significant for purposes of Executive Order 12866.

Executive Order 13132: Federalism Assessment

NOAA has concluded that this regulatory action does not have federalism implications sufficient to warrant preparation of a federalism assessment under Executive Order 13132 because NOAA supplements and complements state and local laws under the NMSA.

National Historic Preservation Act

The National Historic Preservation Act (NHPA; 16 U.S.C. 470 *et seq.*) is intended to preserve historical and archaeological sites in the United States of America. The act created the National Register of Historic Places, the list of National Historic Landmarks, and State Historic Preservation Offices. Section 106 of the NHPA requires Federal agencies to take into account the effects of their undertakings on historic properties, and afford the Advisory Council on Historic Preservation (ACHP) a reasonable opportunity to comment. The historic preservation review process mandated by Section 106 is outlined in regulations issued by ACHP (36 CFR part 800 *et seq.*). In fulfilling its responsibilities under the NHPA, NOAA is seeking to identify consulting parties in addition to the State Historic Preservation Officer (SHPO), and will complete the identification of historic properties and

the assessment of the effects of the undertaking on such properties in scheduled consultations with those identified parties and the SHPO. By this notice NOAA seeks public input, particularly in regard to the identification of historic properties within the proposed areas of potential effect. Pursuant to 36 CFR 800.16(l)(1), historic properties includes: "any prehistoric or historic district, site, building, structure or object included in, or eligible for inclusion in, the National Register of Historic Places maintained by the Secretary of the Interior. The term includes artifacts, records, and remains that are related to and located within such properties. The term includes properties of traditional religious and cultural importance to an Indian tribe or Native Hawaiian organization and that meet the National Register criteria." If you, your organization(s), or business(es) would like to be considered a "consulting party" under Section 106 please contact the individual listed under the heading **FOR FURTHER INFORMATION CONTACT**; include contact information for the principal representative for the consultation; and describe you or your party's interest in the proposed designation. In accordance with 36 CFR 800.3(f)(3), NOAA will consider all "consulting party" requests but has ultimate discretion in determining and inviting additional consulting parties.

Regulatory Flexibility Act

This analysis seeks to fulfill the requirements of Executive Order 12866 and the Regulatory Flexibility Act. The Small Business Administration has established thresholds on the designation of businesses as "small entities". A finfish fishing businesses is considered a small business if it has annual receipts of less than \$20.5 million. Scenic and Sightseeing and Recreational industries are considered small businesses if they have annual receipts not in excess of \$7.5 million. According to these limits, each of the businesses potentially affected by the proposed rule would most likely be small businesses. However, as further discussed below, these regulations will not have a significant economic impact on the affected small entities, and the Chief Counsel for Regulations for the Department of Commerce has certified to the Chief Counsel for Advocacy of the Small Business Administration that this rule will not have significant economic impact on a substantial number of small entities. Thus, NOAA is not required to and has not prepared an initial regulatory flexibility analysis.

Methodology. The analysis here is based on limited quantitative information on how much each activity occurs within the proposed sanctuary. Consequently, the result is more qualitative than quantitative.

Scales Used for Assessing Impacts. For assessing levels of impacts within an alternative, NOAA used three levels; "negligible", "moderate" and "high" plus "no impacts". For levels of impacts within the proposed alternatives being analyzed, negligible means very low benefits, costs, or net benefits (less than 1% change). Moderate impacts would be more than 1% but less than or equal to 10%, and high impacts would be more than 10%. For market economic values (revenue, costs, and profits), negligible would mean no likely impact whereas moderate and high could mean some measurable impact on market economic values at the levels noted above. NOAA analyzed the proposed national marine sanctuary described above.

Small business user groups include commercial fishing operation, recreation-tourism related businesses, and land use and development businesses. Other user groups not included here are research and education, people who receive passive economic use value from stabilization or improvement to the proposed sanctuary resources, none of whom are small businesses.

Proposed Action

Prohibition on damaging a sanctuary resource. Small businesses that could potentially be impacted from the proposed prohibition on damaging a sanctuary resource include commercial fishing, recreational fishing and diving. This regulation is expected to have no to minimal impact on commercial fishermen because it is coextensive with existing state law. The sanctuary will assist the state in notifying the public, including fishermen of the locations of known and suspected shipwreck sites, which will enable them to avoid snagging and damaging their gear on shipwreck sites. Lastly divers and other recreational water users will still be able to use the resource, but will not be able to take sanctuary resources. Therefore the impact for this user group from this prohibition is "no impact".

Prohibition on anchoring or grappling into a shipwreck site. Commercial fishermen use trap nets or gill nets which are anchored down, but it is unlikely that fishermen would anchor their nets near known shipwrecks due to snagging and the potential to have their gear damaged. Thus, the expected impact to commercial fishermen is

negligible. The impact is also expected to be negligible for dive charters who would no longer be able to anchor on or grapple into a shipwreck site. NOAA is planning to add mooring buoys and provide anchoring best practices guidelines to facilitate divers to visit the shipwreck sites without damaging the fragile wrecks.

Prohibition on interfering with an investigation. There is no evidence that any small business in the area would be affected by this prohibition. Therefore, the prohibition is expected to have no impact on small businesses.

Thus, the overall expected impact to all these business in the preferred alternative is “no impact,” and the Chief Counsel for Regulations for the Department of Commerce has certified that this rule will not have a significant economic impact on a substantial number of small entities.

Paperwork Reduction Act

ONMS has a valid Office of Management and Budget (OMB) control number (0648–0141) for the collection of public information related to the processing of ONMS permits across the National Marine Sanctuary System. NOAA’s proposal to create WLMNMS would likely result in an increase in the number of requests for ONMS general permits, special use permits, certifications, and authorizations because this action proposes to add general permits and special use permits, certifications, appeals, and the authority to authorize other valid federal, state, or local leases, permits, licenses, approvals, or other authorizations. An increase in the number of ONMS permit requests would require a change to the reporting burden certified for OMB control number 0648–0141. An update to this control number for the processing of ONMS permits would be requested as part of the final rule for sanctuary expansion.

Nationwide, NOAA issues approximately 500 national marine sanctuary permits each year. Of this amount, WLMNMS is expected to add 4 to 5 permit requests per year. The public reporting burden for national marine sanctuaries permits is estimated to average 1.5 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed and completing and reviewing the collection of information.

Send comments regarding the burden estimate for this data collection requirement, or any other aspect of this data collection, including suggestions for reducing the burden, to NOAA (see ADDRESSES) and by email to *OIRA_*

submission@omb.eop.gov, or fax to (202) 395–7285. Notwithstanding any other provision of law, no person is required to respond to, nor shall any person be subject to a penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act, unless that collection of information displays a currently valid OMB control number.

IV. Request for Comments

NOAA requests comments on this proposed rule by March 31, 2017. In addition to requesting comments on this proposed rule, NOAA is also soliciting input on the DEIS and DMP. In addition NOAA would like the public comments on the proposed name for the sanctuary.

List of Subjects in 15 CFR Part 922

Administrative practice and procedure, Coastal zone, Historic preservation, Intergovernmental relations, Marine resources, Natural resources, Penalties, Recreation and recreation areas, Reporting and recordkeeping requirements, Wildlife.

Dated: December 22, 2016.

W. Russell Callender,

Assistant Administrator for Ocean Services and Coastal Zone Management.

Accordingly, for the reasons discussed in the preamble, the National Oceanic and Atmospheric Administration proposes to amend 15 CFR part 922 as follows:

PART 922—NATIONAL MARINE SANCTUARY PROGRAM REGULATIONS

■ 1. The authority citation for 15 CFR part 922 continues to read as follows:

Authority: 16 U.S.C. 1431 *et seq.*

■ 2. Revise § 922.1 to read as follows:

§ 922.1 Applicability of regulations.

Unless noted otherwise, the regulations in subparts A, D, and E of this part apply to all National Marine Sanctuaries and related site-specific regulations set forth in this part. Subparts B and C of this part apply to the sanctuary nomination process and to the designation of future Sanctuaries.

■ 3. Amend § 922.3 by revising the definition of “Sanctuary resource” to read as follows:

§ 922.3 Definitions.

* * * * *

Sanctuary resource means any living or non-living resource of a National Marine Sanctuary that contributes to the conservation, recreational, ecological, historical, research, educational, or aesthetic value of the Sanctuary,

including, but not limited to, the substratum of the area of the Sanctuary, other submerged features and the surrounding seabed, carbonate rock, corals and other bottom formations, coralline algae and other marine plants and algae, marine invertebrates, brine-seep biota, phytoplankton, zooplankton, fish, seabirds, sea turtles and other marine reptiles, marine mammals and historical resources. For Thunder Bay National Marine Sanctuary and Underwater Preserve, Sanctuary resource means an underwater cultural resource as defined at § 922.191. For Wisconsin—Lake Michigan National Marine Sanctuary, sanctuary resource is defined at § 922.211(a).

* * * * *

■ 4. Revise § 922.40 to read as follows:

§ 922.40 Purpose.

The purpose of the regulations in this subpart and in the site-specific subparts is to implement the designations of the National Marine Sanctuaries by regulating activities affecting them, consistent with their respective terms of designation in order to protect, preserve and manage and thereby ensure the health, integrity and continued availability of the conservation, ecological, recreational, research, educational, historical and aesthetic resources and qualities of these areas. Additional purposes of the regulations implementing the designation of the Florida Keys and Hawaiian Islands Humpback Whale National Marine Sanctuaries are found at §§ 922.160 and 922.180, respectively.

■ 5. Revise § 922.41 to read as follows:

§ 922.41 Boundaries.

The boundary for each of the National Marine Sanctuaries is set forth in the site-specific regulations covered by this part.

■ 6. Revise § 922.42 to read as follows:

§ 922.42 Allowed activities.

All activities (*e.g.*, fishing, boating, diving, research, education) may be conducted unless prohibited or otherwise regulated in the site-specific regulations covered by this part, subject to any emergency regulations promulgated under this part, subject to all prohibitions, regulations, restrictions, and conditions validly imposed by any Federal, State, or local authority of competent jurisdiction, including but not limited to, Federal, Tribal, and State fishery management authorities, and subject to the provisions of section 312 of the National Marine Sanctuaries Act (NMSA), (16 U.S.C. 1431 *et seq.*). The Assistant Administrator may only directly

regulate fishing activities pursuant to the procedure set forth in section 304(a)(5) of the NMSA.

■ 7. Revise § 922.43 to read as follows:

§ 922.43 Prohibited or otherwise regulated activities.

The site-specific regulations applicable to the activities specified therein are set forth in the subparts covered by this part.

■ 8. Revise § 922.44 to read as follows:

§ 922.44 Emergency regulations.

(a) Where necessary to prevent or minimize the destruction of, loss of, or injury to a Sanctuary resource or quality, or minimize the imminent risk of such destruction, loss, or injury, any and all such activities are subject to immediate temporary regulation, including prohibition.

(b) The provisions of this section do not apply to the following national marine sanctuaries with site-specific regulations that establish procedures for issuing emergency regulations:

(1) Cordell Bank National Marine Sanctuary, § 922.112(e).

(2) Florida Keys National Marine Sanctuary, § 922.165.

(3) Hawaiian Islands Humpback Whale National Marine Sanctuary, § 922.185.

(4) Thunder Bay National Marine Sanctuary, § 922.196.

(5) [Reserved]

(6) Wisconsin—Lake Michigan National Marine Sanctuary, § 922.214.

■ 9. Amend § 922.47 by revising paragraph (b) to read as follows:

§ 922.47 Pre-existing authorizations or rights and certifications of pre-existing authorizations or rights.

* * * * *

(b) The prohibitions listed in subparts F through P and R through T of this part do not apply to any activity authorized by a valid lease, permit, license, approval or other authorization in existence on the effective date of Sanctuary designation, or in the case of the Florida Keys National Marine Sanctuary the effective date of the regulations in subpart P, and issued by any Federal, State or local authority of competent jurisdiction, or by any valid right of subsistence use or access in existence on the effective date of Sanctuary designation, or in the case of the Florida Keys National Marine Sanctuary the effective date of the regulations in subpart P, provided that the holder of such authorization or right complies with certification procedures and criteria promulgated at the time of Sanctuary designation, or in the case of the Florida Keys National Marine Sanctuary the effective date of the

regulations in subpart P, and with any terms and conditions on the exercise of such authorization or right imposed by the Director as a condition of certification as the Director deems necessary to achieve the purposes for which the Sanctuary was designated.

■ 10. Revise § 922.48 to read as follows:

§ 922.48 National Marine Sanctuary permits—application procedures and issuance criteria.

(a) A person may conduct an activity prohibited by subparts F through O and S and T of this part, if conducted in accordance with the scope, purpose, terms and conditions of a permit issued under this section and subparts F through O and S and T, as appropriate. For the Florida Keys National Marine Sanctuary, a person may conduct an activity prohibited by subpart P of this part if conducted in accordance with the scope, purpose, terms and conditions of a permit issued under § 922.166. For the Thunder Bay National Marine Sanctuary and Underwater Preserve, a person may conduct an activity prohibited by subpart R of this part in accordance with the scope, purpose, terms and conditions of a permit issued under § 922.195.

(b) Applications for permits to conduct activities otherwise prohibited by subparts F through O and S and T of this part, should be addressed to the Director and sent to the address specified in subparts F through O of this part, or subparts R through T of this part, as appropriate. An application must include:

(1) A detailed description of the proposed activity including a timetable for completion;

(2) The equipment, personnel and methodology to be employed;

(3) The qualifications and experience of all personnel;

(4) The potential effects of the activity, if any, on Sanctuary resources and qualities; and

(5) Copies of all other required licenses, permits, approvals or other authorizations.

(c) Upon receipt of an application, the Director may request such additional information from the applicant as he or she deems necessary to act on the application and may seek the views of any persons or entity, within or outside the Federal government, and may hold a public hearing, as deemed appropriate.

(d) The Director, at his or her discretion, may issue a permit, subject to such terms and conditions as he or she deems appropriate, to conduct a prohibited activity, in accordance with the criteria found in subparts F through

O of this part, or subparts R through T of this part, as appropriate. The Director shall further impose, at a minimum, the conditions set forth in the relevant subpart.

(e) A permit granted pursuant to this section is nontransferable.

(f) The Director may amend, suspend, or revoke a permit issued pursuant to this section for good cause. The Director may deny a permit application pursuant to this section, in whole or in part, if it is determined that the permittee or applicant has acted in violation of the terms and conditions of a permit or of the regulations set forth in this section or subparts F through O of this part, or subparts R through T of this part or for other good cause. Any such action shall be communicated in writing to the permittee or applicant by certified mail and shall set forth the reason(s) for the action taken. Procedures governing permit sanctions and denials for enforcement reasons are set forth in subpart D of 15 CFR part 904.

■ 11. Revise § 922.49 to read as follows:

§ 922.49 Notification and review of applications for leases, licenses, permits, approvals, or other authorizations to conduct a prohibited activity.

(a) A person may conduct an activity prohibited by subparts L through P of this part, or subparts R through T of this part, if such activity is specifically authorized by any valid Federal, State, or local lease, permit, license, approval, or other authorization issued after the effective date of Sanctuary designation, or in the case of the Florida Keys National Marine Sanctuary after the effective date of the regulations in subpart P, provided that:

(1) The applicant notifies the Director, in writing, of the application for such authorization (and of any application for an amendment, renewal, or extension of such authorization) within fifteen (15) days of the date of filing of the application or the effective date of Sanctuary designation, or in the case of the Florida Keys National Marine Sanctuary the effective date of the regulations in subpart P, whichever is later;

(2) The applicant complies with the other provisions of this section;

(3) The Director notifies the applicant and authorizing agency that he or she does not object to issuance of the authorization (or amendment, renewal, or extension); and

(4) The applicant complies with any terms and conditions the Director deems reasonably necessary to protect Sanctuary resources and qualities.

(b) Any potential applicant for an authorization described in paragraph (a)

of this section may request the Director to issue a finding as to whether the activity for which an application is intended to be made is prohibited by subparts L through P of this part, or subparts R through T of this part, as appropriate.

(c) Notification of filings of applications should be sent to the Director, Office of National Marine Sanctuaries at the address specified in subparts L through P of this part, or subparts R through T of this part, as appropriate. A copy of the application must accompany the notification.

(d) The Director may request additional information from the applicant as he or she deems reasonably necessary to determine whether to object to issuance of an authorization described in paragraph (a) of this section, or what terms and conditions are reasonably necessary to protect Sanctuary resources and qualities. The information requested must be received by the Director within 45 days of the postmark date of the request. The Director may seek the views of any persons on the application.

(e) The Director shall notify, in writing, the agency to which application has been made of his or her pending review of the application and possible objection to issuance. Upon completion of review of the application and information received with respect thereto, the Director shall notify both the agency and applicant, in writing, whether he or she has an objection to issuance and what terms and conditions he or she deems reasonably necessary to protect Sanctuary resources and qualities, and reasons therefor.

(f) The Director may amend the terms and conditions deemed reasonably necessary to protect Sanctuary resources and qualities whenever additional information becomes available justifying such an amendment.

(g) Any time limit prescribed in or established under this section may be extended by the Director for good cause.

(h) The applicant may appeal any objection by, or terms or conditions imposed by, the Director to the Assistant Administrator or designee in accordance with the provisions of § 922.50.

■ 12. Revise § 922.50 to read as follows:

§ 922.50 Appeals of administrative action.

(a)(1) Except for permit actions taken for enforcement reasons (see subpart D of 15 CFR part 904 for applicable procedures), an applicant for, or a holder of, a National Marine Sanctuary permit; an applicant for, or a holder of, a Special Use permit issued pursuant to section 310 of the Act; a person

requesting certification of an existing lease, permit, license or right of subsistence use or access under § 922.47; or, for those Sanctuaries described in subparts L through P and R through T of this part, an applicant for a lease, permit, license or other authorization issued by any Federal, State, or local authority of competent jurisdiction (hereinafter appellant) may appeal to the Assistant Administrator:

(i) The granting, denial, conditioning, amendment, suspension or revocation by the Director of a National Marine Sanctuary or Special Use permit;

(ii) The conditioning, amendment, suspension or revocation of a certification under § 922.47; or

(iii) For those Sanctuaries described in subparts L through P and subpart R through T, the objection to issuance of or the imposition of terms and conditions on a lease, permit, license or other authorization issued by any Federal, State, or local authority of competent jurisdiction.

(2) For those National Marine Sanctuaries described in subparts F through K and S and T of this part, any interested person may also appeal the same actions described in paragraphs (a)(1)(i) and (ii) of this section. For appeals arising from actions taken with respect to these National Marine Sanctuaries, the term “appellant” includes any such interested persons.

(b) An appeal under paragraph (a) of this section must be in writing, state the action(s) by the Director appealed and the reason(s) for the appeal, and be received within 30 days of receipt of notice of the action by the Director. Appeals should be addressed to the Assistant Administrator for Ocean Services and Coastal Zone Management, NOAA 1305 East-West Highway, 13th Floor, Silver Spring, MD 20910.

(c)(1) The Assistant Administrator may request the appellant to submit such information as the Assistant Administrator deems necessary in order for him or her to decide the appeal. The information requested must be received by the Assistant Administrator within 45 days of the postmark date of the request. The Assistant Administrator may seek the views of any other persons. For the Monitor National Marine Sanctuary, if the appellant has requested a hearing, the Assistant Administrator shall grant an informal hearing. For all other National Marine Sanctuaries, the Assistant Administrator may determine whether to hold an informal hearing on the appeal. If the Assistant Administrator determines that an informal hearing should be held, the Assistant Administrator may designate

an officer before whom the hearing shall be held.

(2) The hearing officer shall give notice in the **Federal Register** of the time, place and subject matter of the hearing. The appellant and the Director may appear personally or by counsel at the hearing and submit such material and present such arguments as deemed appropriate by the hearing officer. Within 60 days after the record for the hearing closes, the hearing officer shall recommend a decision in writing to the Assistant Administrator.

(d) The Assistant Administrator shall decide the appeal using the same regulatory criteria as for the initial decision and shall base the appeal decision on the record before the Director and any information submitted regarding the appeal, and, if a hearing has been held, on the record before the hearing officer and the hearing officer’s recommended decision. The Assistant Administrator shall notify the appellant of the final decision and the reason(s) therefore in writing. The Assistant Administrator’s decision shall constitute final agency action for the purpose of the Administrative Procedure Act.

(e) Any time limit prescribed in or established under this section other than the 30-day limit for filing an appeal may be extended by the Assistant Administrator or hearing office for good cause.

Subpart S—[Added and Reserved]

■ 13. Add and reserve subpart S.

■ 14. Add subpart T to read as follows:

SUBPART T—WISCONSIN-LAKE MICHIGAN NATIONAL MARINE SANCTUARY

Sec.

922.210 Boundary.

922.211 Definitions.

922.212 Co-management.

922.213 Prohibited or otherwise regulated activities.

922.214 Emergency regulations.

922.215 Permit procedures and review criteria.

922.216 Certification of preexisting leases, licenses, permits, approvals, other authorizations, or rights to conduct a prohibited activity.

Appendix A to Subpart T of Part 922—Wisconsin-Lake Michigan Marine Sanctuary Boundary Description and Coordinates of the Lateral Boundary Closures and Excluded Areas

Appendix B to Subpart T of Part 922—Wisconsin-Lake Michigan Marine Sanctuary Terms of Designation

§ 922.210 Boundary.

The Wisconsin-Lake Michigan National Marine Sanctuary consists of an area of approximately 812 square nautical miles (nmi²) (1,075 sq. mi) of

Lake Michigan waters within the state of Wisconsin and the submerged lands thereunder, over, around, and under the submerged underwater cultural resources in Lake Michigan. The precise boundary coordinates are listed in appendix A to this subpart. The eastern boundary of the sanctuary begins approximately 9.5 miles east of the Wisconsin shoreline in Lake Michigan at Point 1 roughly on the border between Manitowoc and Kewaunee County. From this point the boundary continues SSW in a straight line to Point 2 and then SW to Point 3 at roughly the border between Ozaukee and Milwaukee County. From this point the boundary continues west towards Point 4 until it intersects the shoreline at the ordinary high water mark near Mequon, WI. From this intersection the boundary continues north following the shoreline cutting across the mouths of creeks and streams until it intersects the line segment formed between Point 5 and Point 6 at the end of the southern breakwater at the mouth of Sauk Creek at Port Washington. From this intersection the boundary continues across the river mouth towards Point 6 until it intersects the shoreline at the ordinary high water mark at the end of the northern breakwater. From this intersection the boundary continues north following the shoreline until it intersects the line segment formed between Point 7 and Point 8 at the end of the southern breakwater at the mouth of the Sheboygan River. From this intersection the boundary continues across the river mouth towards Point 8 until it intersects the shoreline at the ordinary high water mark at the end of the northern breakwater. From this intersection the boundary continues north along the shoreline until it intersects the line segment formed between Point 9 and Point 10 at the end of the southern breakwater at the mouth of Manitowoc Harbor. From this intersection the boundary continues across the harbor mouth towards Point until it intersects the shoreline at the ordinary high water mark at the end of the northern breakwater. From this intersection the boundary continues north following the shoreline until it intersects the line segment formed between Point 11 and Point 12 at the end of the western breakwater at the mouth of East Twin River. From this intersection the boundary continues across the river mouth towards Point 12 until it intersects the shoreline at the ordinary high water mark at the end of the eastern breakwater. From this intersection the boundary follows the shoreline NE around Rawley Point and

then NNW until it intersects the line segment formed between Point 13 and Point 14 along the shoreline at approximately the border between Manitowoc and Kewaunee County near Twin Creeks, WI. Finally, from this intersection the boundary moves east across Lake Michigan to Point 14.

§ 922.211 Definitions.

(a) The following terms are defined for purposes of this subpart:

(1) *Sanctuary resource* means all prehistoric, historic, archaeological, and cultural sites and artifacts within the sanctuary boundary, including but not limited to, all shipwrecks and related components.

(2) *Shipwreck site* means any sunken watercraft, its components, cargo, contents, and associated debris field.

(b) All other terms appearing in the regulations in this subpart are defined at 15 CFR 922.3, and/or in the Marine Protection, Research, and Sanctuaries Act, as amended, 33 U.S.C. 1401 *et seq.*, and 16 U.S.C. 1431 *et seq.*

§ 922.212 Co-management.

NOAA has primary responsibility for the management of the Sanctuary pursuant to the Act. However, as the Sanctuary is in state waters, NOAA will co-manage the Sanctuary in collaboration with the State of Wisconsin. The Director may enter into a Memorandum of Understanding regarding this collaboration that may address, but not be limited to, such aspects as areas of mutual concern, including Sanctuary resource protection, programs, permitting, activities, development, and threats to Sanctuary resources.

§ 922.213 Prohibited or otherwise regulated activities.

(a) Except as specified in paragraph (b) of this section, the following activities are prohibited and thus are unlawful for any person to conduct or to cause to be conducted:

(1) Moving, removing, recovering, altering, destroying, possessing, or otherwise injuring, or attempting to move, remove, recover, alter, destroy, possess or otherwise injure a sanctuary resource.

(2) Grappling into or anchoring on shipwreck sites.

(3) Interfering with, obstructing, delaying or preventing an investigation, search, seizure or disposition of seized property in connection with enforcement of the Act or any regulation or any permit issued under the Act.

(b) The prohibitions in paragraphs (a)(1) through (3) of this section do not apply to any activity necessary to

respond to an emergency threatening life, property or the environment; or to activities necessary for valid law enforcement purposes.

§ 922.214 Emergency regulations.

(a) Where necessary to prevent or minimize the destruction of, loss of, or injury to a Sanctuary resource, or to minimize the imminent risk of such destruction, loss, or injury, any and all activities are subject to immediate temporary regulation, including prohibition. An emergency regulation shall not take effect without the approval of the Governor of Wisconsin or her/his designee or designated agency.

(b) Emergency regulations remain in effect until a date fixed in the rule or six months after the effective date, whichever is earlier. The rule may be extended once for not more than six months.

§ 922.215 Permit procedures and review criteria.

(a) *Authority to issue general permits.* The Director may allow a person to conduct an activity that would otherwise be prohibited by this subpart, through issuance of a general permit, provided the applicant complies with:

(1) The provisions of subpart E of this part; and

(2) The relevant site specific regulations appearing in this subpart.

(b) *Sanctuary general permit categories.* The Director may issue a sanctuary general permit under this subpart, subject to such terms and conditions as he or she deems appropriate, if the Director finds that the proposed activity falls within one of the following categories:

(1) Research—activities that constitute scientific research on or scientific monitoring of national marine sanctuary resources or qualities;

(2) Education—activities that enhance public awareness, understanding, or appreciation of a national marine sanctuary or national marine sanctuary resources or qualities; or

(3) Management—activities that assist in managing a national marine sanctuary.

(c) *Review criteria.* The Director shall not issue a permit under this subpart, unless he or she also finds that:

(1) The proposed activity will be conducted in a manner compatible with the primary objective of protection of national marine sanctuary resources and qualities, taking into account the following factors:

(i) The extent to which the conduct of the activity may diminish or enhance national marine sanctuary resources and qualities; and

- (ii) Any indirect, secondary or cumulative effects of the activity.
- (2) It is necessary to conduct the proposed activity within the national marine sanctuary to achieve its stated purpose.
- (3) The methods and procedures proposed by the applicant are appropriate to achieve the proposed activity's stated purpose and eliminate, minimize, or mitigate adverse effects on sanctuary resources and qualities as much as possible.
- (4) The duration of the proposed activity and its effects are no longer than necessary to achieve the activity's stated purpose.
- (5) The expected end value of the activity to the furtherance of national marine sanctuary goals and purposes outweighs any potential adverse impacts on sanctuary resources and qualities from the conduct of the activity.
- (6) The applicant is professionally qualified to conduct and complete the proposed activity.
- (7) The applicant has adequate financial resources available to conduct and complete the proposed activity and terms and conditions of the permit.
- (8) There are no other factors that would make the issuance of a permit for the activity inappropriate.

§ 922.216 Certification of preexisting leases, licenses, permits, approvals, other authorizations, or rights to conduct a prohibited activity.

(a) A person may conduct an activity prohibited by § 922.213(a)(1) through (3) if such activity is specifically authorized by a valid Federal, state, or local lease, permit, license, approval, or other authorization, or tribal right of subsistence use or access in existence prior to the effective date of sanctuary designation and within the sanctuary designated area and complies with § 922.49 and provided that the holder of the lease, permit, license, approval, or other authorization complies with the requirements of paragraph (e) of this section.

(b) In considering whether to make the certifications called for in this section, the Director may seek and consider the views of any other person or entity, within or outside the Federal government, and may hold a public hearing as deemed appropriate.

(c) The Director may amend, suspend, or revoke any certification made under this section whenever continued operation would otherwise be inconsistent with any terms or conditions of the certification. Any such action shall be forwarded in writing to both the holder of the certified permit,

license, or other authorization and the issuing agency and shall set forth reason(s) for the action taken.

(d) Requests for findings or certifications should be addressed to the Director, Office of National Marine Sanctuaries; ATTN: Sanctuary Superintendent, Wisconsin-Lake Michigan National Marine Sanctuary, 1305 East-West Hwy, 11th Floor, Silver Spring, MD 20910. A copy of the lease, permit, license, approval, or other authorization must accompany the request.

(e) For an activity described in paragraph (a) of this section, the holder of the authorization or right may conduct the activity prohibited by § 922.213(a)(1) through (3) provided that:

- (1) The holder of such authorization or right notifies the Director, in writing, within 180 days of the effective date of Sanctuary designation, of the existence of such authorization or right and requests certification of such authorization or right;
- (2) The holder complies with the other provisions of this section; and
- (3) The holder complies with any terms and conditions on the exercise of such authorization or right imposed as a condition of certification, by the Director, to achieve the purposes for which the Sanctuary was designated.

(f) The holder of an authorization or right described in paragraph (a) of this section authorizing an activity prohibited by § 922.213 may conduct the activity without being in violation of applicable provisions of § 922.213, pending final agency action on his or her certification request, provided the holder is otherwise in compliance with this section.

(g) The Director may request additional information from the certification requester as he or she deems reasonably necessary to condition appropriately the exercise of the certified authorization or right to achieve the purposes for which the Sanctuary was designated. The Director must receive the information requested within 45 days of the postmark date of the request. The Director may seek the views of any persons on the certification request.

(h) The Director may amend any certification made under this section whenever additional information becomes available that he/she determines justifies such an amendment.

(i) Upon completion of review of the authorization or right and information received with respect thereto, the Director shall communicate, in writing, any decision on a certification request

or any action taken with respect to any certification made under this section, in writing, to both the holder of the certified lease, permit, license, approval, other authorization, or right, and the issuing agency, and shall set forth the reason(s) for the decision or action taken.

(j) The holder may appeal any action conditioning, amending, suspending, or revoking any certification in accordance with the procedures set forth in § 922.50.

(k) Any time limit prescribed in or established under this section may be extended by the Director for good cause.

Appendix A to Subpart T of Part 922—Wisconsin-Lake Michigan Marine Sanctuary Boundary Description and Coordinates of the Lateral Boundary Closures and Excluded Areas

Coordinates listed in this appendix are unprojected (Geographic) and based on the North American Datum of 1983.

TABLE A1—COORDINATES FOR SANCTUARY

Point ID	Latitude	Longitude
1	44.32749	-87.34795
2	43.45716	-87.48817
3	43.19198	-87.62813
4*	43.19203	-87.89245
5*	43.38447	-87.86079
6*	43.38523	-87.85963
7*	43.74858	-87.69479
8*	43.74946	-87.69265
9*	44.09135	-87.64377
10*	44.09262	-87.64373
11*	44.14226	-87.56161
12*	44.14267	-87.56069
13*	44.32751	-87.54400
14	44.32749	-87.34795

Note: The coordinates in the table above marked with an asterisk (*) are not a part of the sanctuary boundary. These coordinates are landward reference points used to draw a line segment that intersects with the shoreline.

Appendix B to Subpart T of Part 922—Wisconsin-Lake Michigan Marine Sanctuary Terms of Designation

Terms of Designation for the Proposed Wisconsin-Lake Michigan National Marine Sanctuary Under the authority of the National Marine Sanctuaries Act, as amended (the "Act" or "NMSA"), 16 U.S.C. 1431 *et seq.*, 1,075 square miles of Lake Michigan off the coast of Wisconsin's coastal counties of Ozaukee, Sheboygan and Manitowoc are hereby designated as a National Marine Sanctuary for the purposes of providing long-term protection and management of the historical resources and recreational, research, educational, and aesthetic qualities of the area.

Article I: Effect of Designation

The NMSA authorizes the issuance of such regulations as are necessary and reasonable to implement the designation, including managing and protecting the historical resources and recreational, research, and educational qualities of the Wisconsin-Lake Michigan National Marine Sanctuary (the "Sanctuary"). Section 1 of Article IV of this Designation Document lists those activities that may have to be regulated on the effective date of designation, or at some later date, in order to protect Sanctuary resources and qualities. Listing an activity does not necessarily mean that it will be regulated; however, if an activity is not listed it may not be regulated, except on an emergency basis, unless Section 1 of Article IV is amended by the same procedures by which the original Sanctuary designation was made.

Article II: Description of the Area

The Wisconsin-Lake Michigan National Marine Sanctuary consists of an area of approximately 812 square nautical miles (nmi²) (1,075 sq. mi) of Lake Michigan waters within the state of Wisconsin and the submerged lands thereunder, over, around, and under the submerged underwater cultural resources in Lake Michigan. The eastern boundary of the sanctuary begins approximately 9.5 miles east of the Wisconsin shoreline in Lake Michigan roughly on the border between Manitowoc and Kewaunee County. From this point the boundary continues in Lake Michigan roughly to the SSW until it intersects the border between Ozaukee and Milwaukee County at a point approximately 13 miles east of the shoreline. The southern boundary continues west approximating the border between these same two counties until it intersects the shoreline near Mequon, WI. The western boundary continues north following the shoreline for approximately 90 miles cutting across the mouths of rivers and streams; specifically those of Sauk Creek at Port Washington, the Sheboygan River at Sheboygan, Manitowoc Harbor as Manitowoc, and East Twin River at Two Rivers as well as any other smaller streams and creeks. The western boundary ends at roughly the border between Manitowoc and Kewaunee County along the shoreline near Twin Creeks, WI. The northern boundary continues from the shoreline east approximating the border between these same two counties back to its point of origin 9.5 miles offshore.

Article III: Special Characteristics of the Area

The historic shipwrecks in the Wisconsin-Lake Michigan National Marine Sanctuary are representative of vessels that sailed and steamed the Lake Michigan corridor, carrying grain and raw materials east as other vessels came west loaded with coal, manufactured good, and immigrants. Eighteen of the 37 shipwrecks are listed on the National Register of Historic Places. Many of the shipwrecks in the proposed sanctuary retain an unusual degree of architectural integrity, with 14 vessels virtually intact. Well preserved by Lake Michigan's cold, fresh water, the shipwrecks and related

underwater cultural sites in and around the Wisconsin-Lake Michigan National Marine Sanctuary possess exceptional historical, archaeological and recreational value.

Article IV: Scope of Regulations

Section 1. Activities Subject to Regulation. The following activities are subject to regulation, including prohibition, to the extent necessary and reasonable to ensure the protection and management of the historical resources and recreational, research and educational qualities of the area:

- a. Damaging sanctuary resources.
- b. Using grappling hooks and anchors at shipwreck sites.
- c. Interfering with, obstructing, delaying or preventing an investigation, search, seizure or disposition of seized property in connection with enforcement of the Act or any regulation issued under the Act.
- d. Reporting shipwreck discoveries and locations to the sanctuary.

Section 2. Emergencies. Where necessary to prevent or minimize the destruction of, loss of, or injury to a Sanctuary resource or quality; or minimize the imminent risk of such destruction, loss, or injury, any activity, including those not listed in Section 1, is subject to immediate temporary regulation. An emergency regulation shall not take effect without the approval of the Governor of Wisconsin or her/his designee or designated agency.

Article V: Relation to Other Regulatory Programs

Section 1. Fishing Regulations, Licenses, and Permits. Fishing in the Sanctuary shall not be regulated as part of the Sanctuary management regime authorized by the Act. However, fishing in the Sanctuary may be regulated by other Federal, State, Tribal and local authorities of competent jurisdiction, and designation of the Sanctuary shall have no effect on any regulation, permit, or license issued thereunder.

Section 2. Other Regulations, Licenses, and Permits. If any valid regulation issued by any Federal, state, Tribal, or local authority of competent jurisdiction, regardless of when issued, conflicts with a Sanctuary regulation, the regulation deemed by the Director of the Office of National Marine Sanctuaries, National Oceanic and Atmospheric Administration, or designee, in consultation with the State of Wisconsin, to be more protective of Sanctuary resources and qualities shall govern. Pursuant to section 304(c)(1) of the Act, 16 U.S.C. 1434(c)(1), no valid lease, permit, license, approval, or other authorization issued by any Federal, State, Tribal, or local authority of competent jurisdiction, or any right of subsistence use or access, may be terminated by the Secretary of Commerce, or designee, as a result of this designation, or as a result of any Sanctuary regulation, if such lease, permit, license, approval, or other authorization, or right of subsistence use or access was issued or in existence as of the effective date of this designation. However, the Secretary of Commerce or designee, in consultation with the State of Wisconsin, may regulate the exercise of such authorization or right consistent with the purposes for which the Sanctuary is designated.

Article VI. Alteration of This Designation

The terms of designation may be modified only by the same procedures by which the original designation is made, including public meetings, consultation according to the NMSA.

[FR Doc. 2016-31741 Filed 1-6-17; 8:45 am]

BILLING CODE 03510-NK-P

DEPARTMENT OF JUSTICE**Drug Enforcement Administration****21 CFR Part 1308**

[Docket No. DEA-446]

Schedules of Controlled Substances: Temporary Placement of Six Synthetic Cannabinoids (5F-ADB, 5F-AMB, 5F-APINACA, ADB-FUBINACA, MDMB-CHMICA and MDMB-FUBINACA) Into Schedule I

AGENCY: Drug Enforcement Administration, Department of Justice.

ACTION: Notice of intent.

SUMMARY: The Administrator of the Drug Enforcement Administration is issuing this notice of intent to temporarily schedule six synthetic cannabinoids: Methyl 2-(1-(5-fluoropentyl)-1H-indazole-3-carboxamido)-3,3-dimethylbutanoate [5F-ADB]; 5F-MDMB-PINACA; methyl 2-(1-(5-fluoropentyl)-1H-indazole-3-carboxamido)-3-methylbutanoate [5F-AMB]; N-(adamantan-1-yl)-1-(5-fluoropentyl)-1H-indazole-3-carboxamide [5F-APINACA, 5F-AKB48]; N-(1-amino-3,3-dimethyl-1-oxobutan-2-yl)-1-(4-fluorobenzyl)-1H-indazole-3-carboxamide [ADB-FUBINACA]; methyl 2-(1-(cyclohexylmethyl)-1H-indole-3-carboxamido)-3,3-dimethylbutanoate [MDMB-CHMICA, MMB-CHMINACA] and methyl 2-(1-(4-fluorobenzyl)-1H-indazole-3-carboxamido)-3,3-dimethylbutanoate [MDMB-FUBINACA], into schedule I pursuant to the temporary scheduling provisions of the Controlled Substances Act (CSA). This action is based on a finding by the Administrator that the placement of these synthetic cannabinoids into schedule I of the Controlled Substances Act is necessary to avoid an imminent hazard to the public safety. Any final order will impose the administrative, civil, and criminal sanctions and regulatory controls applicable to schedule I substances under the Controlled Substances Act on the manufacture, distribution, possession, importation, exportation of, and research and conduct with, instructional activities of these synthetic cannabinoids.

DATES: January 9, 2017.

FOR FURTHER INFORMATION CONTACT:

Michael J. Lewis, Office of Diversion Control, Drug Enforcement Administration; Mailing Address: 8701 Morrisette Drive, Springfield, Virginia 22152; Telephone: (202) 598-6812.

SUPPLEMENTARY INFORMATION: Any final order will be published in the **Federal Register** and may not be effective prior to February 8, 2017.

Legal Authority

The Drug Enforcement Administration (DEA) implements and enforces titles II and III of the Comprehensive Drug Abuse Prevention and Control Act of 1970, as amended. 21 U.S.C. 801-971. Titles II and III are referred to as the "Controlled Substances Act" and the "Controlled Substances Import and Export Act," respectively, and are collectively referred to as the "Controlled Substances Act" or the "CSA" for the purpose of this action. The DEA publishes the implementing regulations for these statutes in title 21 of the Code of Federal Regulations (CFR), chapter II. The CSA and its implementing regulations are designed to prevent, detect, and eliminate the diversion of controlled substances and listed chemicals into the illicit market while providing for the legitimate medical, scientific, research, and industrial needs of the United States. Controlled substances have the potential for abuse and dependence and are controlled to protect the public health and safety.

Under the CSA, every controlled substance is classified into one of five schedules based upon its potential for abuse, its currently accepted medical use in treatment in the United States, and the degree of dependence the drug or other substance may cause. 21 U.S.C. 812. The initial schedules of controlled substances established by Congress are found at 21 U.S.C. 812(c), and the current list of all scheduled substances is published at 21 CFR part 1308.

Section 201 of the CSA, 21 U.S.C. 811, provides the Attorney General with the authority to temporarily place a substance into schedule I of the CSA for two years without regard to the requirements of 21 U.S.C. 811(b) if she finds that such action is necessary to avoid an imminent hazard to the public safety. 21 U.S.C. 811(h)(1). In addition, if proceedings to control a substance are initiated under 21 U.S.C. 811(a)(1), the Attorney General may extend the temporary scheduling for up to one year. 21 U.S.C. 811(h)(2).

Where the necessary findings are made, a substance may be temporarily

scheduled if it is not listed in any other schedule under section 202 of the CSA, 21 U.S.C. 812, or if there is no exemption or approval in effect for the substance under section 505 of the Federal Food, Drug, and Cosmetic Act (FDCA), 21 U.S.C. 355. 21 U.S.C. 811(h)(1); 21 CFR part 1308. The Attorney General has delegated scheduling authority under 21 U.S.C. 811 to the Administrator of the DEA. 28 CFR 0.100.

Background

Section 201(h)(4) of the CSA 21 U.S.C. 811(h)(4), requires the Administrator to notify the Secretary of the Department of Health and Human Services (HHS) of any intention to temporarily place a substance into schedule I of the CSA.¹ The Acting Administrator transmitted notice of his intent to place 5F-ADB, 5F-AMB, 5F-APINACA, ADB-FUBINACA, MDMB-CHMICA and MDMB-FUBINACA in schedule I on a temporary basis to the Assistant Secretary by letter dated April 22, 2016. The Assistant Secretary responded to this notice by letter dated May 2, 2016, and advised that based on a review by the Food and Drug Administration (FDA), there were no investigational new drug applications or approved new drug applications for 5F-ADB, 5F-AMB, 5F-APINACA, ADB-FUBINACA, MDMB-CHMICA or MDMB-FUBINACA. The Assistant Secretary also stated that the HHS had no objection to the temporary placement of 5F-ADB, 5F-AMB, 5F-APINACA, ADB-FUBINACA, MDMB-CHMICA or MDMB-FUBINACA into schedule I of the CSA. 5F-ADB, 5F-AMB, 5F-APINACA, ADB-FUBINACA, MDMB-CHMICA or MDMB-FUBINACA are not currently listed in any schedule under the CSA.

To find that placing a substance temporarily into schedule I of the CSA is necessary to avoid an imminent hazard to the public safety, the Administrator is required to consider three of the eight factors set forth in 21 U.S.C. 811(c): The substance's history and current pattern of abuse; the scope, duration and significance of abuse; and what, if any, risk there is to the public health. 21 U.S.C. 811(h)(3).

Consideration of these factors includes

¹ As discussed in a memorandum of understanding entered into by the Food and Drug Administration (FDA) and the National Institute on Drug Abuse (NIDA), the FDA acts as the lead agency within the Department of Health and Human Service (HHS) in carrying out the Secretary's scheduling responsibilities under the CSA, with the concurrence of NIDA. 50 FR 9518, Mar. 8, 1985. The Secretary of the HHS has delegated to the Assistant Secretary for Health of the HHS the authority to make domestic drug scheduling recommendations. 58 FR 35460, July 1, 1993.

actual abuse, diversion from legitimate channels, and clandestine importation, manufacture, or distribution. 21 U.S.C. 811(h)(3).

A substance meeting the statutory requirements for temporary scheduling may only be placed in schedule I. 21 U.S.C. 811(h)(1). Substances in schedule I are those that have a high potential for abuse, no currently accepted medical use in treatment in the United States, and a lack of accepted safety for use under medical supervision. 21 U.S.C. 812(b)(1).

5F-ADB, 5F-AMB, 5F-APINACA, ADB-FUBINACA, MDMB-CHMICA and MDMB-FUBINACA

Available data and information for 5F-ADB, 5F-AMB, 5F-APINACA, ADB-FUBINACA, MDMB-CHMICA and MDMB-FUBINACA indicate that these synthetic cannabinoids (SCs) have a high potential for abuse, no currently accepted medical use in treatment in the United States, and a lack of accepted safety for use under medical supervision.

Synthetic Cannabinoids

SCs are substances synthesized in laboratories that mimic the biological effects of delta-9-tetrahydrocannabinol (THC), the main psychoactive ingredient in marijuana. It is believed that SCs were first introduced on the designer drug market in several European countries as "herbal incense" before the initial encounter in the United States by U.S. Customs and Border Protection (CBP) in November 2008. From 2009 to the present, misuse and abuse of SCs has increased in the United States with law enforcement encounters describing SCs applied onto plant material and in designer drug products intended for human consumption. It has been demonstrated that the substances and the associated designer drug products are abused for their psychoactive properties. With many generations of SCs having been encountered since 2009, 5F-ADB, 5F-AMB, 5F-APINACA, ADB-FUBINACA, MDMB-CHMICA and MDMB-FUBINACA are some of the latest, and the abuse of these substances is negatively impacting communities.

As observed by the DEA and CBP, SCs originate from foreign sources, such as China. Bulk powder substances are smuggled via common carrier into the United States and find their way to clandestine designer drug product manufacturing operations located in residential neighborhoods, garages, warehouses, and other similar destinations throughout the country. According to online discussion boards and law enforcement encounters,

applying by spraying or mixing the SCs with plant material provides a vehicle for the most common route of administration—smoking (using a pipe, a water pipe, or rolling the drug-laced plant material in cigarette papers).

5F-ADB, 5F-AMB, 5F-APINACA, ADB-FUBINACA, MDMB-CHMICA, and MDMB-FUBINACA have no accepted medical use in the United States. Use of these specific SCs has been reported to result in adverse effects in humans including deaths (see 3-Factor document in “Supporting and Related Material” section). Use of other SCs has resulted in signs of addiction and withdrawal, and based on the similar pharmacological profile of these six substances, it is believed that there will be similar observed adverse effects.

5F-ADB, 5F-AMB, 5F-APINACA, ADB-FUBINACA, MDMB-CHMICA and MDMB-FUBINACA are SCs that have pharmacological effects similar to the schedule I hallucinogen delta- Δ -tetrahydrocannabinol (THC) and temporarily and permanently controlled schedule I synthetic cannabinoid substances. In addition, the misuse of 5F-ADB, 5F-AMB, 5F-APINACA, ADB-FUBINACA, MDMB-CHMICA and/or MDMB-FUBINACA have been associated with either overdoses requiring emergency medical intervention or death (see factor 6). With no approved medical use and limited safety or toxicological information, 5F-ADB, 5F-AMB, 5F-APINACA, ADB-FUBINACA, MDMB-CHMICA and MDMB-FUBINACA have emerged on the designer drug market, and the abuse of these substances for their psychoactive properties is concerning. The DEA’s analysis is available in its entirety under “Supporting and Related Material” of the public docket for this action at www.regulations.gov under docket number DEA-443.

Factor 4. History and Current Pattern of Abuse

Synthetic cannabinoids have been developed over the last 30 years as tools for investigating the endocannabinoid system (*e.g.*, determining CB1 and CB2 receptor activity). The first encounter of SCs within the United States occurred in November 2008 by CBP. Since then the popularity of SCs and their associated products has increased steadily as evidenced by law enforcement seizures, public health information, and media reports. 5F-ADB, 5F-AMB, 5F-APINACA, ADB-FUBINACA, MDMB-CHMICA and MDMB-FUBINACA are SCs that have been recently encountered (see “Supporting and Related Material,” Factor 5). Multiple overdoses involving

emergency medical intervention or deaths have been associated with 5F-ADB, 5F-AMB, 5F-APINACA, ADB-FUBINACA, MDMB-CHMICA and MDMB-FUBINACA.

Research and clinical reports have demonstrated that SCs are applied onto plant material so that the material may be smoked as users attempt to obtain a euphoric and/or psychoactive “high,” believed to be similar to marijuana. Data gathered from published studies, supplemented by discussions on Internet discussion Web sites, demonstrate that these products are being abused mainly by smoking for their psychoactive properties. The adulterated products are marketed as “legal” alternatives to marijuana. In recent overdoses, 5F-ADB, 5F-AMB, 5F-APINACA, ADB-FUBINACA, MDMB-CHMICA and MDMB-FUBINACA have been shown to be applied onto plant material, similar to the SCs that have been previously available.

Law enforcement personnel have encountered various application methods including buckets or cement mixers in which plant material and one or more SCs (including 5F-ADB, 5F-AMB, 5F-APINACA, ADB-FUBINACA, MDMB-CHMICA and/or MDMB-FUBINACA) are mixed together, as well as large areas where the plant material is spread out so that a dissolved SC mixture can be applied directly. Once mixed, the SC plant material is then allowed to dry before manufacturers package the product for distribution, ignoring any control mechanisms to prevent contamination or to ensure a consistent, uniform concentration of the substance in each package. Adverse health consequences may also occur from directly ingesting the substance(s) during the manufacturing process. 5F-ADB, 5F-AMB, 5F-APINACA, ADB-FUBINACA, MDMB-CHMICA and MDMB-FUBINACA, similar to other SCs, have been encountered in form of dried leaves or herbal blends.

The designer drug products laced with SCs, including 5F-ADB, 5F-AMB, 5F-APINACA, ADB-FUBINACA, MDMB-CHMICA and MDMB-FUBINACA, are often sold under the guise of “herbal incense” or “potpourri,” use various product names, and are routinely labeled “not for human consumption.” Additionally, these products are marketed as a “legal high” or “legal alternative to marijuana” and are readily available over the Internet, in head shops, or sold in convenience stores. There is an incorrect assumption that these products are safe, that they are a synthetic form of marijuana, and that labeling these products as “not for

human consumption” is a legal defense to criminal prosecution.

A major concern, as reiterated by public health officials and medical professionals, is the targeting and direct marketing of SCs and SC-containing products to adolescents and youth. This is supported by law enforcement encounters and reports from emergency departments; however, all age groups have been reported by media as abusing these substances and related products. Individuals, including minors, are purchasing SCs from Internet Web sites, gas stations, convenience stores, and head shops.

Factor 5. Scope, Duration and Significance of Abuse

SCs, including 5F-ADB, 5F-AMB, 5F-APINACA, ADB-FUBINACA, MDMB-CHMICA and MDMB-FUBINACA, continue to be encountered on the illicit market regardless of scheduling actions that attempt to safeguard the public from the adverse effects and safety issues associated with these substances. Numerous substances are encountered each month, differing only by small modifications intended to avoid prosecution while maintaining the pharmacological effects. Law enforcement and health care professionals continue to report abuse of these substances and their associated products.

As described by the National Institute on Drug Abuse (NIDA), many substances being encountered in the illicit market, specifically SCs, have been available for years but have reentered the marketplace due to a renewed popularity.

The threat of serious injury to the individual following the ingestion of 5F-ADB, 5F-AMB, 5F-APINACA, ADB-FUBINACA, MDMB-CHMICA and MDMB-FUBINACA and other SCs persists. Numerous calls have been received by poison centers regarding the abuse of products potentially laced with SCs that have resulted in visits to emergency departments. Law enforcement continues to encounter novel SCs on the illicit market, including 5F-ADB, 5F-AMB, 5F-APINACA, ADB-FUBINACA, MDMB-CHMICA and MDMB-FUBINACA (see factor 5 in “Supporting and Related Material”).

The following information details information obtained through NFLIS² (queried on November 7, 2016),

² The National Forensic Laboratory Information System (NFLIS) is a national drug forensic laboratory reporting system that systematically collects results from drug chemistry analyses conducted by state and local forensic laboratories in the United States.

including dates of first encounter, exhibits/reports, and locations.

5F-ADB: NFLIS—2,311 reports, first encountered in September 2014, locations include: Arizona, Arkansas, California, Florida, Georgia, Idaho, Indiana, Iowa, Kansas, Kentucky, Louisiana, Missouri, New Jersey, North Dakota, Ohio, Oklahoma, Pennsylvania, South Carolina, Texas, Virginia, and Wisconsin.

5F-AMB: NFLIS—3,349 reports, first encountered in January 2014, locations include: Arizona, Arkansas, California, Colorado, Florida, Georgia, Hawaii, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maryland, Massachusetts, Minnesota, Mississippi, Missouri, Nebraska, New Hampshire, New Jersey, New Mexico, New York, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, South Carolina, Tennessee, Texas, Utah, Virginia, Wisconsin, and Wyoming.

5F-APINACA: NFLIS—1,936 reports, first encountered in August 2012, locations include: Alabama, Arizona, Arkansas, California, Colorado, Connecticut, Florida, Georgia, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maryland, Minnesota, Mississippi, Missouri, Nebraska, New Hampshire, New Jersey, North Dakota, Ohio, Oklahoma, Pennsylvania, Puerto Rico, South Carolina, Tennessee, Texas, Utah, Virginia, West Virginia, Wisconsin, and Wyoming.

ADB-FUBINACA: NFLIS—942 reports, first encountered in March 2014, locations include: Arkansas, California, Colorado, Florida, Georgia, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maryland, Mississippi, Missouri, New Jersey, New Mexico, New York, North Dakota, Ohio, Pennsylvania, Texas, Utah, Virginia, and Wyoming.

MDMB-CHMICA: NFLIS—227 reports, first encountered in March 2015, locations include: Arkansas, Georgia, Indiana, Kentucky, Louisiana, Nevada, Ohio, Oklahoma, South Carolina, and Texas.

MDMB-FUBINACA: NFLIS—507 reports, first encountered in July 2015, locations include: Arkansas, California, Colorado, Connecticut, Georgia, Idaho, Indiana, Kansas, Kentucky, Louisiana, Missouri, Nevada, New Jersey, New Mexico, North Dakota, Ohio, Oklahoma, Pennsylvania, Texas, Virginia, Wisconsin, and West Virginia.

Factor 6. What, if Any, Risk There Is to the Public Health

5F-ADB, 5F-AMB, 5F-APINACA, ADB-FUBINACA, MDMB-CHMICA and MDMB-FUBINACA have all been

identified in overdose and/or cases involving death attributed to their abuse. Adverse health effects reported from these incidents involving 5F-ADB, 5F-AMB, 5F-APINACA, ADB-FUBINACA, MDMB-CHMICA and/or MDMB-FUBINACA have included: nausea, persistent vomiting, agitation, altered mental status, seizures, convulsions, loss of consciousness and/or cardio toxicity. Large clusters of overdoses requiring medical care have been reported involving 5F-AMB, MDMB-FUBINACA, MDMB-CHMICA and 5F-ADB. Reported deaths involving these SCs have included 5F-ADB (8); 5F-AMB (6); 5F-APINACA (1); ADB-FUBINACA (2); MDMB-CHMICA (4), European Monitoring Centre for Drugs and Drug Addiction has reported an additional 12 deaths involving MDMB-CHMICA; and MDMB-FUBINACA (1) (see factor 6 in “Supporting and Related Material”).

Finding of Necessity of Schedule I Placement To Avoid Imminent Hazard to Public Safety

In accordance with 21 U.S.C. 811(h)(3), based on the available data and information summarized above, the continued uncontrolled manufacture, distribution, importation, exportation, conduct of research and chemical analysis, possession, and abuse of 5F-ADB, 5F-AMB, 5F-APINACA, ADB-FUBINACA, MDMB-CHMICA and MDMB-FUBINACA pose an imminent hazard to the public safety. The DEA is not aware of any currently accepted medical uses for these substances in the United States. A substance meeting the statutory requirements for temporary scheduling, 21 U.S.C. 811(h)(1), may only be placed in schedule I. Substances in schedule I are those that have a high potential for abuse, no currently accepted medical use in treatment in the United States, and a lack of accepted safety for use under medical supervision. Available data and information for 5F-ADB, 5F-AMB, 5F-APINACA, ADB-FUBINACA, MDMB-CHMICA and MDMB-FUBINACA indicate that these SCs have a high potential for abuse, no currently accepted medical use in treatment in the United States, and a lack of accepted safety for use under medical supervision. As required by section 201(h)(4) of the CSA, 21 U.S.C.

811(h)(4), the Administrator, through a letter dated April 22, 2016, notified the Assistant Secretary of the DEA’s intention to temporarily place these six substances in schedule I.

Conclusion

This notice of intent initiates a temporary scheduling action and provides the 30-day notice pursuant to section 201(h) of the CSA, 21 U.S.C. 811(h). In accordance with the provisions of section 201(h) of the CSA, 21 U.S.C. 811(h), the Administrator considered available data and information, herein sets forth the grounds for his determination that it is necessary to temporarily schedule methyl 2-(1-(5-fluoropentyl)-1H-indazole-3-carboxamido)-3,3-dimethylbutanoate [5F-ADB; 5F-MDMB-PINACA]; methyl 2-(1-(5-fluoropentyl)-1H-indazole-3-carboxamido)-3-methylbutanoate [5F-AMB]; N-(adamantan-1-yl)-1-(5-fluoropentyl)-1H-indazole-3-carboxamide [5F-APINACA, 5F-AKB48]; N-(1-amino-3,3-dimethyl-1-oxobutan-2-yl)-1-(4-fluorobenzyl)-1H-indazole-3-carboxamide [ADB-FUBINACA]; methyl 2-(1-(cyclohexylmethyl)-1H-indole-3-carboxamido)-3,3-dimethylbutanoate [MDMB-CHMICA, MMB-CHMINACA] and methyl 2-(1-(4-fluorobenzyl)-1H-indazole-3-carboxamido)-3,3-dimethylbutanoate [MDMB-FUBINACA] in schedule I of the CSA, and finds that the placement of these substances into schedule I of the CSA on a temporary basis is necessary to avoid an imminent hazard to the public safety.

Because the Administrator hereby finds that it is necessary to temporarily place these SCs into schedule I to avoid an imminent hazard to the public safety, any subsequent final order temporarily scheduling these substances will be effective on the date of publication in the **Federal Register**, and will be in effect for a period of two years, with a possible extension of one additional year, pending completion of the regular (permanent) scheduling process. 21 U.S.C. 811(h)(1) and (2). It is the intention of the Administrator to issue such a final order as soon as possible after the expiration of 30 days from the date of publication of this notice. 5F-ADB, 5F-AMB, 5F-APINACA, ADB-FUBINACA, MDMB-CHMICA and MDMB-FUBINACA will then be subject to the regulatory controls and administrative, civil, and criminal sanctions applicable to the manufacture, distribution, importation, exportation, research, conduct of instructional activities, and chemical analysis and possession of a schedule I controlled substance.

The CSA sets forth specific criteria for scheduling a drug or other substance. Regular scheduling actions in accordance with 21 U.S.C. 811(a) are subject to formal rulemaking procedures

done “on the record after opportunity for a hearing” conducted pursuant to the provisions of 5 U.S.C. 556 and 557. 21 U.S.C. 811. The regular scheduling process of formal rulemaking affords interested parties with appropriate process and the government with any additional relevant information needed to make a determination. Final decisions that conclude the regular scheduling process of formal rulemaking are subject to judicial review. 21 U.S.C. 877. Temporary scheduling orders are not subject to judicial review. 21 U.S.C. 811(h)(6).

Regulatory Matters

Section 201(h) of the CSA, 21 U.S.C. 811(h), provides for an expedited temporary scheduling action where such action is necessary to avoid an imminent hazard to the public safety. As provided in this subsection, the Attorney General may, by order, schedule a substance in schedule I on a temporary basis. Such an order may not be issued before the expiration of 30 days from (1) the publication of a notice in the **Federal Register** of the intention to issue such order and the grounds upon which such order is to be issued, and (2) the date that notice of the proposed temporary scheduling order is transmitted to the Assistant Secretary. 21 U.S.C. 811(h)(1).

Inasmuch as section 201(h) of the CSA directs that temporary scheduling actions be issued by order and sets forth the procedures by which such orders are to be issued, the DEA believes that the notice and comment requirements of

section 553 of the Administrative Procedure Act (APA), 5 U.S.C. 553, do not apply to this notice of intent. In the alternative, even assuming that this notice of intent might be subject to section 553 of the APA, the Administrator finds that there is good cause to forgo the notice and comment requirements of section 553, as any further delays in the process for issuance of temporary scheduling orders would be impracticable and contrary to the public interest in view of the manifest urgency to avoid an imminent hazard to the public safety.

Although the DEA believes this notice of intent to issue a temporary scheduling order is not subject to the notice and comment requirements of section 553 of the APA, the DEA notes that in accordance with 21 U.S.C. 811(h)(4), the Administrator will take into consideration any comments submitted by the Assistant Secretary with regard to the proposed temporary scheduling order.

Further, the DEA believes that this temporary scheduling action is not a “rule” as defined by 5 U.S.C. 601(2), and, accordingly, is not subject to the requirements of the Regulatory Flexibility Act (RFA). The requirements for the preparation of an initial regulatory flexibility analysis in 5 U.S.C. 603(a) are not applicable where, as here, the DEA is not required by section 553 of the APA or any other law to publish a general notice of proposed rulemaking.

Additionally, this action is not a significant regulatory action as defined

by Executive Order 12866 (Regulatory Planning and Review), section 3(f), and, accordingly, this action has not been reviewed by the Office of Management and Budget.

This action will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 13132 (Federalism) it is determined that this action does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

List of Subjects in 21 CFR Part 1308

Administrative practice and procedure, Drug traffic control, Reporting and recordkeeping requirements.

For the reasons set out above, the DEA proposes to amend 21 CFR part 1308 as follows:

PART 1308—SCHEDULES OF CONTROLLED SUBSTANCES

■ 1. The authority citation for part 1308 continues to read as follows:

Authority: 21 U.S.C. 811, 812, 871(b), unless otherwise noted.

■ 2. In § 1308.11, add paragraph (h)(23) through (28) to read as follows:

§ 1308.11 Schedule I

* * * * *
(h) * * *

(23) methyl 2-(1-(5-fluoropentyl)-1 <i>H</i> -indazole-3-carboxamido)-3,3-dimethylbutanoate, its optical, positional, and geometric isomers, salts and salts of isomers (Other names: 5F-ADB; 5F-MDMB-PINACA)	(7034)
(24) methyl 2-(1-(5-fluoropentyl)-1 <i>H</i> -indazole-3-carboxamido)-3-methylbutanoate, its optical, positional, and geometric isomers, salts and salts of isomers (Other names: 5F-AMB)	(7033)
(25) <i>N</i> -(adamantan-1-yl)-1-(5-fluoropentyl)-1 <i>H</i> -indazole-3-carboxamide, its optical, positional, and geometric isomers, salts and salts of isomers (Other names: 5F-APINACA, 5F-AKB48)	(7049)
(26) <i>N</i> -(1-amino-3,3-dimethyl-1-oxobutan-2-yl)-1-(4-fluorobenzyl)-1 <i>H</i> -indazole-3-carboxamide, its optical, positional, and geometric isomers, salts and salts of isomers (Other names: ADB-FUBINACA)	(7010)
(27) methyl 2-(1-(cyclohexylmethyl)-1 <i>H</i> -indole-3-carboxamido)-3,3-dimethylbutanoate, its optical, positional, and geometric isomers, salts and salts of isomers (Other names: MDMB-CHMICA, MMB-CHMINACA)	(7042)
(28) methyl 2-(1-(4-fluorobenzyl)-1 <i>H</i> -indazole-3-carboxamido)-3,3-dimethylbutanoate, its optical, positional, and geometric isomers, salts and salts of isomers (Other names: MDMB-FUBINACA)	(7020)

* * * * *
Dated: December 13, 2016.
Chuck Rosenberg,
Acting Administrator.

Mine Safety and Health Administration
30 CFR Parts 57, 70, 72, and 75
[Docket No. MSHA-2014-0031]
RIN 1219-AB86
Exposure of Underground Miners to Diesel Exhaust
AGENCY: Mine Safety and Health Administration, Labor.

ACTION: Request for information; reopening of the comment period.
SUMMARY: In response to requests from the public, the Mine Safety and Health Administration (MSHA) is reopening the proposed rulemaking record for public comment on the Agency’s request for information on Exposure of Underground Miners to Diesel Exhaust.
DATES: The comment period for the request for information, published on June 8, 2016 (81 FR 36826), and closed

on November 30, 2016, (81 FR 58424) is reopened. Comments must be received on or before midnight Eastern Standard Time on January 9, 2018.

ADDRESSES: Submit comments and informational materials for the rulemaking record, identified by RIN 1219-AB86 or Docket No. MSHA-2014-0031, by one of the following methods:

- *Federal E-Rulemaking Portal:* <http://www.regulations.gov>. Follow the on-line instructions for submitting comments.

- *E-Mail:* zzMSHA-comments@dol.gov.

- *Mail:* MSHA, Office of Standards, Regulations, and Variances, 201 12th Street South, Suite 4E401, Arlington, Virginia 22202-5452.

- *Hand Delivery or Courier:* 201 12th Street South, Suite 4E401, Arlington, Virginia, between 9:00 a.m. and 5:00 p.m. Monday through Friday, except Federal holidays. Sign in at the receptionist's desk on the 4th floor East, Suite 4E401.

- *Fax:* 202-693-9441.

Instructions: All submissions must include "RIN 1219-AB86" or "Docket No. MSHA-2014-0031." Do not include personal information that you do not want publicly disclosed; MSHA will post all comments without change to <http://www.regulations.gov> and <http://arlweb.msha.gov/currentcomments.asp>, including any personal information provided.

Docket: For access to the docket to read comments received, go to <http://www.regulations.gov> or <http://arlweb.msha.gov/currentcomments.asp>. To read background documents, go to <http://www.regulations.gov>. Review the docket in person at MSHA, Office of Standards, Regulations, and Variances, 201 12th Street South, Arlington, Virginia, between 9:00 a.m. and 5:00 p.m. Monday through Friday, except Federal Holidays. Sign in at the receptionist's desk in Suite 4E401.

E-Mail Notification: To subscribe to receive an email notification when MSHA publishes rules in the **Federal Register**, go to <http://www.msha.gov>.

FOR FURTHER INFORMATION CONTACT: Sheila A. McConnell, Director, Office of Standards, Regulations, and Variances, MSHA, at mcconnell.sheila.a@dol.gov (email), 202-693-9440 (voice); or 202-693-9441 (facsimile). These are not toll-free numbers.

SUPPLEMENTARY INFORMATION: On June 8, 2016 (81 FR 36826), MSHA published a request for information (RFI) on Exposure of Underground Miners to Diesel Exhaust. The RFI sought input from the public that will help MSHA evaluate the Agency's existing standards

and policy guidance on controlling miners' exposures to diesel exhaust to evaluate the effectiveness of the protection now in place to preserve miners' health.

On June 27, 2016, (81 FR 41486), MSHA published a notice in the **Federal Register** announcing four public meetings on the RFI. Public meetings were held on July 19, 21, and 26 and August 4, 2016. The comment period was scheduled to close on September 6, 2016; however, in response to requests from the public, MSHA extended the comment period until November 30, 2016 (81 FR 58424).

During the comment period, MSHA received requests for MSHA and the National Institute for Occupational Safety and Health (NIOSH) to convene a Diesel Exhaust Health Effects Partnership (Partnership) with the mining industry, diesel engine manufacturers, academia and representatives of organized labor to gather information regarding the complex questions contained in the RFI. In response to these requests, MSHA and NIOSH agreed to form a Partnership that includes all relevant stakeholders from the mining community to come together to understand the health effects from underground miners' exposure to diesel exhaust. The Partnership will also provide stakeholders an opportunity to consider best practices and new technologies including engineering controls that enhance control of diesel exhaust exposures to improve protections for miners.

The first meeting of the Diesel Exhaust Health Effects Partnership was held on December 8, 2016, in Washington, Pennsylvania.

During the comment period and at the Partnership meeting, MSHA received requests from stakeholders to reopen the rulemaking record for comment on the RFI and allow the comment period to remain open during the Partnership proceedings. In response to these requests, MSHA is reopening the record for comment and extending the comment period to January 9, 2018. The reopening of the record for comment will allow all interested parties an additional opportunity to re-evaluate all issues related to miners' exposure to diesel exhaust and to determine if improvements can be made.

Joseph A. Main,

Assistant Secretary of Labor for Mine Safety and Health.

[Docket No. MSHA-2014-0019]

RIN 1219-AB78

Proximity Detection Systems for Mobile Machines in Underground Mines

AGENCY: Mine Safety and Health Administration, Labor.

ACTION: Proposed rule; reopening the comment period.

SUMMARY: The Mine Safety and Health Administration (MSHA) is reopening the rulemaking record and requesting additional comments on the Agency's proposed rule on Proximity Detection Systems for Mobile Machines in Underground Mines which was published in the **Federal Register** on September 2, 2015. The proposed rule would require underground coal mine operators to equip coal hauling machines and scoops with proximity detection systems. Miners working near these machines face pinning, crushing, and striking hazards that result in accidents involving life-threatening injuries and death.

DATES: The comment period for the proposed rule published September 2, 2015 (80 FR 53070) is reopened. Comments must be received by midnight Daylight Saving Time on February 8, 2017.

ADDRESSES: Submit comments and informational materials, identified by RIN 1219-AB78 or Docket No. MSHA-2014-0019 by one of the following methods:

- *Federal E-Rulemaking Portal:* <http://www.regulations.gov>. Follow the on-line instructions for submitting comments.

- *E-Mail:* zzMSHA-comments@dol.gov.

- *Mail:* MSHA, Office of Standards, Regulations, and Variances, 201 12th Street South, Suite 4E401, Arlington, Virginia 22202-5452.

- *Hand Delivery or Courier:* 201 12th Street South, Suite 4E401, Arlington, Virginia, between 9:00 a.m. and 5:00 p.m. Monday through Friday, except Federal holidays. Sign in at the receptionist's desk on the 4th Floor East, Suite 4E401.

- *Fax:* 202-693-9441.

Instructions: All submissions must include RIN 1219-AB78 or Docket No. MSHA-2014-0019. Do not include personal information that you do not want publicly disclosed; MSHA will

post all comments without change, including any personal information provided.

Docket: For access to the docket to read comments received, go to <http://www.regulations.gov> or <http://www.msha.gov/currentcomments.asp>. To read background documents, go to <http://www.regulations.gov>. Review the docket in person at MSHA, Office of Standards, Regulations, and Variances, 201 12th Street South, Arlington, Virginia, between 9:00 a.m. and 5:00 p.m., Monday through Friday, except Federal holidays. Sign in at the receptionist's desk on the 4th Floor East, Suite 4E401.

Email notification: To subscribe to receive email notification when the Agency publishes rulemaking documents in the **Federal Register**, go to <http://www.msha.gov/subscriptions>.

FOR FURTHER INFORMATION CONTACT: Sheila McConnell, Director, Office of Standards, Regulations, and Variances, MSHA, at mcconnell.sheila.a@dol.gov (email), 202-693-9440 (voice), or 202-693-9441 (facsimile).

SUPPLEMENTARY INFORMATION:

I. Introduction

On September 2, 2015, MSHA published a proposed rule, Proximity Detection Systems for Mobile Machines in Underground mines (80 FR 53070). MSHA is reopening the rulemaking record and requesting comments on issues that were raised by commenters during the comment period and on issues that developed after the record closed.

MSHA also observed the operation of proximity detection systems on both continuous mining machines and mobile machines (shuttle cars, ram cars and scoops) on working sections in the United States and South Africa after the record closed. There are 106 mobile machines operating on working sections equipped with proximity detection systems in the United States. MSHA visited six mines that operated 79 of these machines. These mines varied by physical, geological, and environmental conditions. MSHA is also including in the rulemaking record MSHA's field-trip report on the use of proximity detection in South Africa's underground coal mines and materials presented at the National Institute for Occupational Safety and Health (NIOSH) Proximity Detection Partnership Meeting held on June 22, 2016.

II. Request for Comments

1. Requirements for Proximity Detection Systems

Proposed § 75.1733(b)(1) would require that a proximity detection system cause a machine to stop before contacting a miner except for a miner who is in the on-board operator's compartment. MSHA requested comments on the types of machine movement the proximity detection system should stop. Commenters did not support the total de-energization of all functions of the equipment. One commenter noted that a "stop all machine movement" requirement cannot be applied universally to all mobile equipment covered by this proposed rule. The commenter noted that mine operators need the flexibility to configure proximity detection systems and machine responses based on the individual applications needed underground. In support of this comment, the commenter stated that machines that interact with other equipment, machines that require a ground-standing operator to be in contact with the machine, and machines that lack specific capabilities for motion control may need allowances outside of prescriptive requirements. As an example, the commenter stated that shuttle cars and ram cars do not require a miner to stand on the ground nearby to perform required tasks; however, scoops require a miner to touch or be near the machine to do certain work.

One commenter also noted that proximity detection systems present significant problems for performing trouble-shooting and maintenance activities. The commenter provided an example of a mechanic trying to identify a leaking hydraulic hose; the mechanic must remove the miner-wearable component for the machine to be started because the mechanic has to be inside a red zone to diagnose the source of the leak.

The National Institute for Occupational Safety and Health (NIOSH) also commented that requiring all machine movement to stop would potentially limit the development and application of advanced technology for selective shutdown features. NIOSH stated that currently available systems are not capable of providing the level of protection required in the industry while maintaining the operator's freedom to efficiently perform the job. NIOSH further stated that to be acceptable to the miners and to avoid false alarms, a proximity detection system must provide the necessary protection while still allowing normal operation of the machine.

MSHA observed mobile machines with proximity detection systems operating during coal production on working sections. These proximity detection systems functioned as designed to prevent pinning, crushing, and striking accidents. Four of the six mines that MSHA visited in the United States, after the record closed, had proximity detection systems on mobile machines and continuous mining machines on the working section except for full-face mining machines. The mobile machines included shuttle cars, ram cars, and scoops. These mine operators provided all miners on these working sections with miner-wearable components.

MSHA solicits additional comments on whether currently available proximity detection systems are capable of preventing coal hauling machines and scoops from pinning, crushing, and striking miners while maintaining the machine operator's freedom to efficiently perform the job.

Under proposed § 75.1733(b)(1), MSHA would consider stopping a coal hauling machine or scoop to consist of causing it to cease tramping or articulating any part of a machine that could cause the machine to contact a miner. Tramping means to move the machine in a forward or reverse direction. Articulating includes an act of moving or pivoting at a joint, such as when a mobile machine may pivot towards a rib such that the movement could result in pinning, striking, or crushing a miner. Under the proposal, the machine would remain stopped while any miner is within a programmed stop zone. Unexpected tramping and articulation in the direction of a miner may be hazardous. However, MSHA is considering whether it is necessary to stop the movement of all parts of the machine, such as auxiliary movements, as long as the tramping and articulating machine motion that can pin, crush, or strike a miner is stopped. In MSHA's experience, striking, pinning, or crushing hazards are not caused by auxiliary functions such as operation of a pump motor or diesel engine, ram extension, winch movement, vertical bucket movement, or battery lift.

MSHA is also aware of proximity detection system features that only allow authorized miners to perform maintenance. For example, an authorized miner may swipe an identification card over a card reader mounted on the machine or have a separate miner-wearable component that is programmed to allow a miner to perform maintenance. The proximity detection system records each time

maintenance is performed. Miners authorized to perform maintenance on machines equipped with proximity detection systems would continue to observe standard safety procedures, such as removing stored energy and blocking the machine to prevent motion, while maintaining and repairing the machine.

MSHA is considering a revision to proposed § 75.1733(b)(1) that would require a proximity detection system to stop a machine from tramming or articulating before contacting a miner except for a miner who (i) is in the on-board operator's compartment, or (ii) performing maintenance with the proximity detection system in maintenance mode.

MSHA observed a miner and a scoop operator perform maintenance by changing the battery on a scoop equipped with a proximity detection system. The miner stayed near the scoop, directed the scoop operator's movement of the machine, and maintained a safe position outside of the proximity detection system's warning zone. MSHA also observed a ram car equipped with a proximity detection system that was installed and programmed to modify its warning and shutdown zone dimensions to allow miners to safely approach the machine to perform maintenance and repairs without causing it to shut down. The warning and shutdown zones extended around the entire machine perimeter during normal operation; however, activating the parking brake reduced these zones to encompass only the pinch point areas around the articulation joint.

MSHA solicits comments on the types of machine movement a proximity detection system should allow for miners to perform necessary maintenance without exposing them to pinning, crushing, or striking hazards. MSHA also solicits comments on miners' and mine operators' experiences with proximity detection systems that allow a miner to conduct maintenance on a machine without activating the stop movement function.

Several commenters also noted that sudden stopping of equipment presents hazards for on-board machine operators. A commenter noted that sudden stops and equipment shut downs, like any other unexpected operations, could put the operator of the machine at risk of injury or death based on the size and speed of the machine, and other related factors. One commenter stated concerns that the requirement to stop the machine before contacting a miner could create a hazard for machine operators, especially diesel-powered

machine operators since their ground speed is typically faster than electric-powered machines. However, another commenter stated that MSHA should not require that machines slow down before stopping because some machines, such as battery-powered direct current traction drives, do not have this capability; in some cases, it is more important to stop the machine as fast as possible to prevent contact with miners.

NIOSH commented that field tests of proximity detection systems on continuous mining machines and input from stakeholders found that detection range, environmental effects/limitations, detection accuracy, and system repeatability are considered critical parameters. MSHA observed mobile machines operating in mines in the United States with properly functioning proximity detection systems of various manufacturers with appropriate zone dimensions. These mobile machines worked in a range of seam heights, in dry and wet conditions, on varying grades, with and without wire mesh, with various mine ventilation controls. In MSHA's experience, mine operators work with machine manufacturers and proximity detection system manufacturers to determine the appropriate warning and shutdown zones for the specific mining conditions and practices that the machine encounters. MSHA is aware that proximity detection system manufacturers provide site-specific testing during commissioning of proximity detection systems. MSHA also observed proximity detection system testing used to confirm appropriate zone dimensions for the equipment and the mining conditions at the time of commissioning. MSHA solicits additional comments on appropriate warning and stopping zones for each type of machine movement and various mining conditions including any differences in cost for differing conditions or machines.

Current NIOSH research is identifying critical parameters that impact the performance of proximity detection systems on mobile machines, such as stopping distances and deceleration rates. MSHA is aware that NIOSH research on proximity detection systems for underground mobile equipment is scheduled to conclude in September, 2018. Several commenters expressed concern that the Agency will require proximity detection systems to be installed on coal haulage machines and scoops before the findings from NIOSH research on proximity detection systems on underground mobile machines are released. MSHA is also aware that some mine operators have installed and are

operating proximity detection systems on mobile machines. MSHA observed variations in the installation, maintenance and performance of these systems. MSHA anticipates that a final rule would provide minimum standards for installation, performance, maintenance, and recordkeeping to assure that miners are adequately protected. MSHA observed several dynamic tests of mobile machines equipped with proximity detection systems in which the machine decelerated to a full stop without injury to the on-board operator. MSHA also observed warning and shutdown zone incursions on mobile machines equipped with proximity detection systems that are being used on working sections during normal mine production operations. These proximity detection systems appropriately slowed and/or stopped these mobile machines without injuring the on-board machine operator. MSHA is not aware of any on-board operator injuries resulting from a proximity detection system decelerating and/or stopping a mobile machine.

MSHA will continue to work with original equipment manufacturers, proximity detection system manufacturers, NIOSH, States, and mine operators to consider the benefits and timing of requiring proximity detection systems on mobile machines in underground coal mines.

MSHA solicited and received several comments on how the use of proximity detection systems and the overlap of proximity detection system protection zones on multiple types of machines operating on the same working section might affect miners' work positions. One commenter stated that testing, which was conducted in a controlled environment, demonstrated that it was impossible to provide full coverage on the rear section of the coal hauler without creating a shutdown zone in the locations where the continuous mining machine operator was required to stand. A modification to the system allowed the shutdown zone to shrink as the coal hauler backed into the loading position. Due to the shape of the zone, however, the modification removed protective coverage of the rear corners of the coal hauler.

MSHA observed continuous mining machines and mobile machines equipped with proximity detection systems successfully interact during production on working sections where all of the miners had miner-wearable components. MSHA solicits additional information regarding how coal hauling machines using proximity detection systems work with continuous mining machines equipped with proximity

detection systems while allowing continuous mining machine operators to remain in a safe location. MSHA is interested in additional information describing the installation and programming of proximity detection systems and examples of related work practices established to assure that the continuous mining machine operator remains outside of the coal hauling machine warning and shutdown zones.

Another commenter observed, during tests of proximity detection systems on continuous mining machines and battery haulers, instances in which miners (primarily continuous mining machine operators) could not properly perform necessary tasks without getting closer to the continuous mining machine than the proximity detection system allowed. The commenter noted that without the capability to temporarily bypass proximity detection, these personnel would either be forced to operate equipment without a clear line of sight or they would need to stand in conditions that pose different hazards, such as roof or rib hazards, or in locations that are not permitted under other regulations. The commenter recommended that the proximity detection system regulation for mobile equipment allow for personnel to temporarily bypass proximity detection when such conditions are encountered.

MSHA may consider such a feature and seeks comment on the availability, use, and appropriateness of a temporary bypass feature. MSHA solicits information regarding how this feature could work with existing proximity detection systems and specific benefits or hazards that could result.

One commenter noted that coal haulers and scoops would encounter sensors (miner-wearable components) much more frequently during operation than would continuous mining machines. Thus, there is an increased potential for nuisance tripping caused by inadvertent exposure into the detection zones of coal haulers, scoops, and other equipment. The commenter further noted the operation of equipment during the mining process requires multiple machines to operate, often in close proximity and can result in cross zone interference and nuisance tripping. As an example, the commenter noted a mine had to install additional equipment to help alleviate the cross zone interference issue. MSHA is aware that proximity detection system manufacturers must consider the interaction of machines with on-board operators to prevent unnecessary shut downs. MSHA observed a loading machine on which proximity detection equipment was installed to provide a

silent zone for the on-board loading machine operator. This silent zone allowed the shuttle car to approach the loading machine without the loading machine operator causing the shuttle car to stop. MSHA is also aware that proximity detection system manufacturers have addressed this situation through programming miner-wearable components with specific permissions.

In addition, MSHA received a comment from a machine manufacturer stating that its field testing experience with coal customers within the United States demonstrates measurable section production tonnage drops, within five to ten percent of normal production levels, when proximity detection is active on haulage equipment.

MSHA is aware of mine operators that installed proximity detection systems on all mobile machines on the working section and experienced production decreases. Two of these mine operators reported that production later returned to pre-installation levels. MSHA observed that miners with experience working with mobile machines equipped with proximity detection systems are aware of the warning and shutdown zone locations and position themselves to minimize machine shutdowns. MSHA did observe a proximity detection system provide both a warning and then shut down the machine while the miner-wearable component was physically located outside the established warning and shutdown zones. This mine operator reported working with the proximity detection system manufacturer to resolve this type of occurrence. MSHA is aware of proximity detection system manufacturers that have mitigated nuisance alarms and other issues through engineering solutions. MSHA is also aware that proximity detection system manufacturers continue to improve their technology and develop solutions to minimize unwarranted warnings and shutdowns.

MSHA solicits definitive data, including cost and time estimates, on delays in production caused by proximity detection system alarms due to cross zone interference and nuisance tripping as well as data on the length of time to return to pre-installation production levels. MSHA also seeks information on how to reduce or eliminate production delays when working with mobile machines equipped with proximity detection systems.

MSHA solicits comments on how miners can place themselves in a safe work position to avoid causing nuisance alarms when one or more machines

with proximity detection systems are on the working section. MSHA also solicits comments on miners' and mine operators' experiences when more than one miner may be in close proximity to one or more machines with proximity detection systems.

MSHA solicited and received several comments on proposed training for miners who operate or work near machines equipped with proximity detection systems. NIOSH commented that gaining an in-depth view of miners' perspectives and how their job tasks and environment could be or are affected and then incorporating that information into training may help to prevent accidents and injuries that have been labeled as human error in the workplace. NIOSH further commented that studies of continuous mining machine operators have found that unintended consequences, such as a disruption in situational awareness, risks, hazards, and decision-making capabilities, can be avoided if human factors considerations are integrated into each stage of the technology design and implementation process. In addition, NIOSH stated that each piece of equipment needs to have a uniquely prescribed proximity system and the methods and amounts of training for each system should be designed specifically for each system and common platforms established where possible.

One commenter stated that it has been evaluating and testing proximity detection system technologies since 2011. The commenter further stated that inadequate situational awareness is one of the primary factors in incidents attributed to human error and that the primary purpose of any proximity detection system/collision avoidance technology is to enhance situational awareness.

Another commenter stated that proximity detection system technology has the potential to dangerously change how miners interact with mobile equipment in underground mines. The commenter further stated that it has witnessed multiple instances where miners have taken higher risks because of a false sense of security and that implementation of proximity detection systems on all mobile machines will lead miners to unsafely rely on the devices and act contrary to their intuition and training. In addition, the commenter stated that the first priority [of the final rule] should be a safe working position for a miner or machine operator, and second a noncontact rule.

MSHA has observed miners relocate themselves to safer locations because of proximity detection system visible and

audible warnings. These warnings increased the miner's situational awareness regarding their location with respect to hazardous areas around the mobile machines.

MSHA is interested in receiving additional information on miners' and mine operators' experiences with the effect that proximity detection systems have on miners' and machine operators' situational awareness and any examples where reliance on proximity detection technology may cause the miner to develop work practices that introduce additional hazards.

MSHA observed representatives of mine operators and proximity detection system manufacturers provide instruction and task training to miners on the working section where proximity detection systems have been installed on mobile machines. Miners have demonstrated their knowledge of the installation, maintenance, and use of proximity detection systems to MSHA personnel. For example, MSHA observed one mine operator instruct miners to move into a crosscut adjacent to a coal haulage travelway. This increased their distance from the coal haulage travelway, averted unwanted proximity zone incursions, and ultimately placed the workers in a safer location. MSHA also observed a South African mine operator utilize data reports from the proximity detection systems to reinforce safe work practices specified in company policy. These data reports logged the instances when miner-wearable components entered the established warning and shutdown zones.

MSHA is also interested in miners', mine operators' and proximity detection system manufacturers' experiences with training that could be done to increase miners' and machine operators' situational awareness around machines with proximity detection systems.

2. *Electromagnetic Interference*

Electrical systems used in the mine, including proximity detection systems, can adversely affect the function of other electrical systems through the generation of electromagnetic interference. Several commenters noted that electromagnetic interference generated from a variety of external sources can adversely affect the performance of proximity detection systems. Several commenters stated that electromagnetic interference prevents proximity detection systems from functioning as designed. Another commenter stated that, because of electromagnetic interference, the proximity detection system failed to locate the miner-wearable component

with any level of accuracy or consistency. The commenter further stated that, as a result, it was nearly impossible for the coal hauler to work in close proximity to the continuous miner or operator.

In addition, on April 6, 2016, MSHA was made aware of concerns from mine operators regarding electromagnetic interferences with proximity detection systems from respirable coal mine dust sampling devices. On April 15 and May 2, 2016, MSHA notified underground coal mine operators who have a proximity detection system installed on any equipment that they should identify sources of any electromagnetic interference that adversely affect the performance of the proximity detection system. The above-referenced notices are included in the rulemaking record.

Proposed § 75.1733(b)(5) would require a mine operator to install a proximity detection system to prevent interference that adversely affects performance of any electrical system. MSHA clarifies that proposed § 75.1733(b)(5) would require mine operators to prevent electromagnetic interference from affecting the operation of the proximity detection system or any other electrical system. MSHA intends that the system would be installed, maintained and operated in such a way that no electrical systems would be adversely affected due to interference. This would require periodic post-installation evaluation of all new potential sources of electromagnetic interference.

To clarify this intent, MSHA is considering a revision to proposed § 75.1733(b)(5) that would require proximity detection systems to be both installed and operated in a manner that prevents interferences that adversely affect the performance of any electrical system, including the proximity detection system. The operation of other electrical systems and equipment must not interfere with the performance of the proximity detection system, and the proximity detection system must not interfere with the performance of other electrical systems.

MSHA has found that one type of common interference can be identified when electrical devices are placed within several inches of the miner-wearable component of the proximity detection system. Electromagnetic interference between these two systems can be mitigated by maintaining a minimum distance between a miner-wearable component and electrical devices. MSHA's technical staff estimated that each mine would require an average of 20 hours for a mining engineer to identify sources of

electromagnetic interference and the minimum distance needed to mitigate the interference. Mining engineers will test the compatibility between electrical devices and proximity detection system components. Tests will be based on equipment use and mining conditions. MSHA anticipates that mining engineers will conduct physical tests for compatibility, review equipment user manuals, and consult with the original equipment manufacturers and the proximity detection system manufacturer.

Based on MSHA's mine visits, the Agency estimated that mine operators are likely, on average, to introduce new electrical equipment twice per year. This would require a mining engineer two hours to identify and mitigate adverse interference from the new electrical equipment.

Holding all other variables of the preliminary regulatory economic analysis constant, MSHA estimated that, on average, it would cost each mine operator \$3,500 over ten years to comply with proposed § 75.1733(b)(5). MSHA seeks comments on the cost drivers for compatibility testing and the Agency's cost estimate for proposed § 75.1733(b)(5).

MSHA is aware of best practices that mine operators and proximity detection system manufacturers have established to minimize the effects of electromagnetic interference. MSHA is aware that proximity detection system manufacturers have stated that minimum separation distances need to be maintained between miner-wearable components and other electrical equipment. During mine visits, miners have demonstrated the ability to maintain sufficient separation between miner-wearable components and other equipment to ensure proper proximity detection system function. MSHA is also aware of mine operators that have added inline filters on variable frequency drive shuttle cars to reduce electromagnetic emission interference. MSHA is aware of an electrical equipment manufacturer that added material designed to provide electromagnetic shielding to its gas detection equipment which reportedly reduced interference with proximity detection systems.

MSHA solicits comments on the methods and practices mine operators have used or could use to identify sources of electromagnetic interference. MSHA is also interested in receiving information on the actions an operator has taken or could take to prevent such interference and how electromagnetic interference can be mitigated in instances where a miner needs to wear

multiple miner-wearable components because different proximity detection system models are operating on a working section. Please also describe procedures that were successful and those that were not successful in identifying interferences, as well as solutions to prevent adverse interference.

MSHA has observed that wire mesh and metallic equipment can affect the proximity detection systems' warning and stopping zones. MSHA has also received reports of some pyrite deposits within coal seams affecting the use of the proximity detection system, but has not observed this effect first-hand. MSHA solicits information and data from mine operators and proximity detection system manufacturers on best practices to minimize the effects of these non-electrical interferences.

Since the record closed, MSHA became aware of a proximity detection system design feature on a miner-wearable component that determines if the magnetic field sensing coils have been affected by electromagnetic interference and can no longer detect the magnetic field generated by the machine-mounted components. This feature provides a distinct audible and visible alarm on the miner-wearable component to alert miners when it is not functioning properly due to electromagnetic interference. MSHA is considering requiring this design feature for all miner-wearable components.

MSHA solicits comments on the cost and availability of, and experience with, any proximity detection system feature or other technology that automatically alerts the miner or machine operator when the miner-wearable component or proximity detection system is not functioning properly due to electromagnetic interference.

3. Proximity Detection System Checks

Proposed § 75.1733(c)(1) would require that a mine operator designate a person to perform a check of machine-mounted components of the proximity detection system to verify that components are intact and the system is functioning properly, and to take action to correct defects. MSHA clarifies that under proposed paragraph (c)(1), the check would include verification that the warning and shutdown zones are set for the established proximity detection field distances and to meet the performance requirements under proposed § 75.1733(b)(1) and (b)(2). Under proposed § 75.1733(c)(1), the

person designated to perform the check would verify that the machine-mounted components are intact and correctly mounted and the system is operating properly to identify a miner-wearable component and stop the machine. The check assures that the warning and shutdown zones around the perimeter of the machine are set according to a mine operator's specifications. In MSHA's experience, proximity detection system manufacturers have determined the type of checks that should be conducted to assure that their system is functioning properly. Mine operators are expected to follow the check procedures suggested by the manufacturers. MSHA has observed that a check of the warning and shutdown zones can be made by a miner walking around the machine with a miner-wearable component to confirm proper zone range. MSHA has also observed checking the machine shutdown function of the proximity detection system. This check involves placing a miner wearable component inside the shutdown zone and then attempting to initiate machine movements such as tramping. If the proximity detection system prevents machine movement, the system is functioning properly.

The check would also include an examination of the machine-mounted components to assure that the field generators, antennas, cabling, and other components are undamaged and correctly mounted. The check would also assure that appropriate audible and visual warning signals are working as required. MSHA solicits comments on how the warning and shutdown zones can be checked, or tested, without putting machine operators at risk.

With the clarification in this notice, MSHA estimates that the average time required for a check, which includes a verification that the warning and shutdown zones are set to meet the performance requirements under proposed § 75.1733(b)(1) and (b)(2), would increase from 20 seconds to 6 minutes. MSHA's revised estimate of 6 minutes reflects the time needed to: (1) Verify that the machine-mounted components are intact and correctly mounted and the system is operating properly to identify a miner-wearable component and stop the machine, and (2) test and validate that the warning and stopping zones meet performance requirements. MSHA substituted the 6 minutes into the calculations of the proposed rule, held all other variables

constant, and calculated that the average 10-year cost per mine increase would be \$182,000. Many other assumptions and data values will be updated in a final regulatory analysis. MSHA seeks comments on the Agency's revisions to its proposed time estimate to comply with § 75.1733(c)(1).

4. South Africa Field-Trip Report and NIOSH Partnership Meeting

The rulemaking record includes MSHA's Field-Trip Report on Proximity Detection Use in South Africa. On April 2 through April 13, 2016, MSHA and NIOSH representatives visited South Africa to investigate the progress of proximity detection system technology in South Africa. The group visited two proximity detection system manufacturing facilities and observed proximity detection system performance in three underground coal mines. In addition, the group met with a proximity detection system technology developer with experience in proximity detection system development in South Africa and other countries. Among other topics, they discussed the developer's experiences with proximity detection system interference in South Africa.

MSHA and NIOSH also met with representatives of South Africa's Department of Mineral Resources on the implementation of proximity detection systems on electric-powered, trackless mobile machinery in South Africa's surface and underground mines. MSHA's report and presentation materials from the South Africa trip are included in the rulemaking record and available for comment.

MSHA has also included in the rulemaking record materials from the NIOSH Proximity Detection Partnership Meeting. On June 22, 2016, NIOSH held a partnership meeting that included representatives from MSHA, industry, labor, and proximity detection system manufacturers. Materials presented during the partnership meeting are included in the rulemaking record and available for comment.

III. Compliance Cost Revision

MSHA initially estimated that the proposed rule would cost mine operators, over ten years, approximately \$536,000 per mine. MSHA has revised estimates for two provisions to reflect the Agency's clarification on the proposed requirements. Table 1 summarizes the changes to estimated cost for these two provisions.

TABLE 1—AVERAGE 10-YEAR TOTAL COST PER MINE

	Average 10-year per mine cost
Total 10-Year Cost as Proposed on 09/02/2015	\$536,000
Changes:	
Proximity Detection System Checks	182,000
Electromagnetic Interference Evaluation	3,500
Total Change	185,500
Total Revised Cost	\$721,500
Percent increase in average cost per mine	35%

The rulemaking record and comment period for the proposed rule is reopened until February 8, 2017. MSHA solicits comments on all aspects of the proposed rule. The Agency requests that comments be specific as possible and include any technological and economic feasibility data.

Joseph A. Main,

Assistant Secretary of Labor for Mine Safety and Health.

[FR Doc. 2017-00105 Filed 1-6-17; 8:45 am]

BILLING CODE 4520-43-P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 100

[Docket Number USCG-2016-0940]

RIN 1625-AA08

Special Local Regulation; Manatee River; Bradenton, FL

AGENCY: Coast Guard, DHS.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Coast Guard proposes to establish a special local regulation for certain waters of the Manatee River during the Bradenton Area River Regatta. This action is necessary to protect the safety of race participants, participant vessels, spectators, and the general public on these navigable waters of the United States during the event. The special local regulation would restrict vessel traffic in the waters of the Manatee River in the vicinity of Bradenton, Florida. It would establish the following three areas: Two spectator areas, where all vessels must be anchored or operate at No Wake Speed; and an enforcement area where designated representatives may control vessel traffic as determined by the prevailing conditions.

DATES: Comments and related material must be received by the Coast Guard on or before February 8, 2017.

ADDRESSES: You may submit comments identified by docket number USCG-2016-0940 using the Federal eRulemaking Portal at <http://www.regulations.gov>. See the “Public Participation and Request for Comments” portion of the **SUPPLEMENTARY INFORMATION** section for further instructions on submitting comments.

FOR FURTHER INFORMATION CONTACT: If you have questions about this proposed rulemaking, call or email Boatswain’s Mate First Class Tyrone J. Stafford, Sector St. Petersburg Prevention Department, Coast Guard; telephone 813-228-2191, email Tyrone.J.Stafford@uscg.mil.

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
 DHS Department of Homeland Security
 FR Federal Register
 NPRM Notice of proposed rulemaking
 Pub. L. Public Law
 § Section
 U.S.C. United States Code

II. Background, Purpose, and Legal Basis

The Coast Guard proposes to establish a special local regulation on the waters of the Manatee River, Bradenton, Florida during the Bradenton Area River Regatta. This event is a high speed boat race with approximately 12 Formula 2 Class boats, traveling at speeds in excess of 100 miles per hour. There will also be approximately 14, 1000 cc Hydrocross jet skis participating in scheduled races during this event. Additionally, there will be a jet ski and water ski exhibition located within the regulated area. It is anticipated that 250 spectator vessels will be present along the race course. The race is scheduled to take place annually from approximately 9 a.m. to 9 p.m. during the first Saturday of February.

This proposed rulemaking is necessary to provide for the safety of race participants, participant vessels, spectators, and the general public on these navigable waters of the United States during the Bradenton Area River Regatta. The Coast Guard proposes this rulemaking under authority in 33 U.S.C. 1233.

III. Discussion of Proposed Rule

This proposed rulemaking would encompass certain waters of the Manatee River in Bradenton, Florida. The special local regulation would be enforced from 9 a.m. to 9 p.m. normally occurring during the first Saturday of February. The special local regulation would establish the following three areas: (1) Two spectator areas, where all vessels must be anchored or operate at No Wake Speed; and (2) an enforcement area that encompasses all race courses and demonstrations, where designated representatives may control vessel traffic as determined by the prevailing conditions.

Persons and vessels may request authorization to enter, transit through, anchor in, or remain within the regulated area by contacting the Captain of the Port St. Petersburg by telephone at 727-824-7506, or a designated representative via VHF radio on channel 16. If authorization to enter, transit through, anchor in, or remain within the regulated area is granted by the Captain of the Port St. Petersburg or a designated representative, all persons and vessels receiving such authorization must comply with the instructions of the Captain of the Port St. Petersburg or a designated representative. The Coast Guard will provide notice of the special local regulation by Local Notice to Mariners, Broadcast Notice to Mariners, and/or on-scene designated representatives.

IV. Regulatory Analyses

We developed this proposed rule after considering numerous statutes and Executive Orders related to rulemaking.

Below we summarize our analyses based on a number of these statutes and Executive Orders, and we discuss First Amendment rights of protesters.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This NPRM has not been designated a “significant regulatory action,” under Executive Order 12866. Accordingly, the NPRM has not been reviewed by the Office of Management and Budget.

The economic impact of this rule is not significant for the following reasons: (1) The special local regulation will be enforced for only twelve hours; (2) although persons and vessels are prohibited to enter, transit through, anchor in, or remain within the regulated area without authorization from the Captain of the Port St. Petersburg or a designated representative, they may operate in the surrounding area during the enforcement period; (3) persons and vessels may still enter, transit through, anchor in, or remain within the regulated area or anchor in the sponsor’s designated spectator area, during the enforcement period if authorized by the Captain of the Port St. Petersburg or a designated representative; and (4) the Coast Guard will provide advance notification of the special local regulations to the local maritime community by Local Notice to Mariners and/or Broadcast Notice to Mariners.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term “small entities” comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this proposed rule would not have a significant economic impact on a substantial number of small entities.

This rule may affect the following entities, some of which may be small entities: The owners or operators of vessels intending to enter, transit through, anchor in, or remain within

that portion of the Manatee River, Bradenton, Florida, encompassed within the special local regulation from 9 a.m. until 9 p.m. annually on the first Saturday of February. For the reasons stated in section IV.A above, this rule will not have a significant economic impact on a substantial number of small entities.

If you think that your business, organization, or governmental jurisdiction qualifies as a small entity and that this rule would have a significant economic impact on it, please submit a comment (see **ADDRESSES**) explaining why you think it qualifies and how and to what degree this rule would economically affect it.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this proposed rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section. The Coast Guard will not retaliate against small entities that question or complain about this proposed rule or any policy or action of the Coast Guard.

C. Collection of Information

This proposed rule would not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this proposed rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this proposed rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it would not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. If you believe this proposed rule has

implications for federalism or Indian tribes, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section above.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of \$100,000,000 (adjusted for inflation) or more in any one year. Though this proposed rule would not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this proposed rule under Department of Homeland Security Management Directive 023–01 and Commandant Instruction M16475.ID, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have made a preliminary determination that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves a special local regulation issued in conjunction with a regatta or marine parade. This rule is categorically excluded from further review under paragraph (34)(h) of Figure 2–1 of Commandant Instruction M16475.ID. We seek any comments or information that may lead to the discovery of a significant environmental impact from this proposed rule.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places, or vessels.

V. Public Participation and Request for Comments

We view public participation as essential to effective rulemaking, and will consider all comments and material received during the comment period. Your comments can help shape the outcome of this rulemaking. If you submit a comment, please include the docket number for this rulemaking, indicate the specific section of this document to which each comment

applies, and provide a reason for each suggestion or recommendation.

We encourage you to submit comments through the Federal eRulemaking Portal at <http://www.regulations.gov>. If your material cannot be submitted using <http://www.regulations.gov>, contact the person in the **FOR FURTHER INFORMATION**

CONTACT section of this document for alternate instructions.

We accept anonymous comments. All comments received will be posted without change to <http://www.regulations.gov> and will include any personal information you have provided. For more about privacy and the docket, you may review a Privacy Act notice regarding the Federal Docket Management System in the March 24, 2005, issue of the **Federal Register** (70 FR 15086).

Documents mentioned in this NPRM as being available in the docket, and all public comments, will be in our online docket at <http://www.regulations.gov> and can be viewed by following that Web site's instructions. Additionally, if you go to the online docket and sign up for email alerts, you will be notified when comments are posted or a final rule is published.

List of Subjects in 33 CFR Part 100

Marine safety, Navigation (water), Reporting and recordkeeping requirements, Waterways.

For the reasons discussed in the preamble, the Coast Guard proposes to amend 33 CFR part 100 as follows:

PART 100—SAFETY OF LIFE ON NAVIGABLE WATERS

■ 1. The authority citation for part 100 continues to read as follows:

Authority: 33 U.S.C. 1233.

■ 2. Add § 100.723 to read as follows:

§ 100.723 Special Local Regulation; Bradenton Area River Regatta, Manatee River; Bradenton, FL.

(a) *Regulated Areas.* The following regulated areas are established as special local regulations. All coordinates are North American Datum 1983.

(1) *Spectator Area #1.* An area marked by the event sponsor encompassed within the following points: 27°30.43' N., 82°34.55' W., thence to position 27°30.43' N., 82°34.43' W., thence to position 27°30.23' N., 82°34.43' W., thence to position 27°30.13' N., 82°34.30' W., thence to position 27°30.09' N., 82°34.30' W., thence to position 27°30.09' N., 82°34.55' W., thence back to the original position 27°30.43' N., 82°34.55' W.

(2) *Spectator Area #2.* An area marked by the event sponsor east of the CSX Railroad train trestle eastbound of a line connected by the following points: 27°30.73' N., 82°34.13' W., thence to position 27°29.99' N., 82°34.07' W.

(3) *Enforcement Area.* The designated race and demonstration areas that are composed of all waters of the Manatee River encompassed within the following points: 27°30.58' N., 82°34.62' W., thence to position 27°30.58' N., 82°34.13' W., thence to position 27°29.99' N., 82°34.06' W., thence to position 27°29.99' N., 82°34.62' W., thence back to the original position 27°30.58' N., 82°34.62' W.

(b) *Definition.* The term “designated representative” means Coast Guard Patrol Commanders, including Coast Guard coxswains, petty officers, and other officers operating Coast Guard vessels, and Federal, state, and local officers designated by or assisting the Captain of the Port St. Petersburg in the enforcement of the regulated areas.

(c) Regulations.

(1) All persons and vessels are prohibited from entering, transiting through, anchoring in, or remaining within the enforcement area unless authorized by the Captain of the Port St. Petersburg or a designated representative.

(2) Designated representatives may control vessel traffic throughout the enforcement area as determined by the prevailing conditions.

(3) All vessels are to be anchored and/or operate at a No Wake Speed in the spectator area. Persons and vessels may request authorization to enter, transit through, anchor in, or remain within the regulated areas by contacting the Captain of the Port St. Petersburg by telephone at 727-824-7506, or a designated representative via VHF radio on channel 16.

(d) *Enforcement period:* This section will be enforced from 9:00 a.m. to 9:00 p.m. annually on the first Saturday during the month of February.

Dated: December 27, 2016.

H.L. Najarian,

Captain, U.S. Coast Guard, Captain of the Port Saint Petersburg.

[FR Doc. 2017-00109 Filed 1-6-17; 8:45 am]

BILLING CODE 9110-04-P

POSTAL SERVICE

39 CFR Part 111

Electronic Induction (eInduction®) Option

AGENCY: Postal Service™.

ACTION: Proposed rule.

SUMMARY: The Postal Service proposes to revise *Mailing Standards of the United States Postal Service*, Domestic Mail Manual (DMM®) to add an option to streamline the processing of drop shipments and expedited plant load mailings.

DATES: Submit comments on or before February 8, 2017.

ADDRESSES: Mail or deliver written comments to the manager, Product Classification, U.S. Postal Service, 475 L'Enfant Plaza SW., Room 4446, Washington, DC 20260-5015. If sending comments by email, include the name and address of the commenter and send to ProductClassification@usps.gov, with a subject line of “eInduction Option.” Faxed comments are not accepted.

You may inspect and photocopy all written comments, by appointment only, at USPS® Headquarters Library, 475 L'Enfant Plaza SW., 11th Floor North, Washington, DC 20260. These records are available for review on Monday through Friday, 9 a.m.–4 p.m., by calling 202-268-2906.

FOR FURTHER INFORMATION CONTACT:

Direct questions or comments to Heather Dyer by email at heather.l.dyer@usps.gov or phone (202) 482-7217, or Jacqueline Erwin by email at jacqueline.r.erwin@usps.gov or phone (202) 268-2158.

SUPPLEMENTARY INFORMATION: The Electronic Induction (eInduction) option is a process that streamlines the preparation and induction (how and where the mail physically enters the Postal Service mailstream) of drop shipments and expedited plant load mailings. eInduction links scans of Intelligent Mail container barcodes (IMcb) to the electronic documentation (eDoc) information, allowing the Postal Service to verify that postage was paid prior to accepting a mailer shipped container. eInduction eliminates the need for paper PS Forms 8125, 8125-CD, and 8017, and manual reconciliation at the entry facility. Correct postage payment is verified both at the entry facility and during post-induction processing in *PostalOne!*.

Mailers who would like to use the eInduction option must meet eligibility requirements and request authorization by contacting the Facility Access Shipping Tracking, (FAST)® Helpdesk. Business Mailer Support will provide final authorization. Additional information, including information regarding verification and associated assessments, is provided in Publication 6850, *Publication for Streamlined Mail Acceptance for Letters and Flats*,

available at <https://postalpro.usps.com/node/581>.

List of Subjects in 39 CFR Part 111

Administrative practice and procedure, Postal Service.

Although exempt from the notice and comment requirements of the Administrative Procedure Act (5 U.S.C. 553(b), (c)) regarding proposed rulemaking by 39 U.S.C. 410(a), the Postal Service invites public comments on the following proposed revisions to *Mailing Standards of the United States Postal Service*, Domestic Mail Manual (DMM), incorporated by reference in the Code of Federal Regulations. See 39 CFR 111.1.

Accordingly, 39 CFR part 111 is proposed to be amended as follows:

PART 111—[AMENDED]

■ 1. The authority citation for 39 CFR part 111 continues to read as follows:

Authority: 5 U.S.C. 552(a); 13 U.S.C. 301–307; 18 U.S.C. 1692–1737; 39 U.S.C. 101, 401, 403, 404, 414, 416, 3001–3011, 3201–3219, 3403–3406, 3621, 3622, 3626, 3632, 3633, and 5001.

■ 2. Revise the following sections of *Mailing Standards of the United States Postal Service*, Domestic Mail Manual (DMM), as follows:

Mailing Standards of the United States Postal Service, Domestic Mail Manual (DMM)

* * * * *

700 Special Standards

* * * * *

705 Advanced Preparation and Special Postage Payment Systems

* * * * *

[Add new section 20.0, to read as follows:]

20.0 eInduction Option

20.1 Description

Electronic Induction (eInduction) is an electronic alternative to using the following paper PS Forms 8125, 8125C, 8125CD, and 8017 for all containers entered at the dock of a processing facility or claiming a Destination Delivery Unit (DDU) discount. eInduction uses Intelligent Mail container barcode (IMcb) scans to determine container payment and delivery status, and verifies payment and entry location by matching IMcb scan data to electronic documentation (eDoc) information. Containers are eligible for eInduction at certain designated facilities. Additional information, including information regarding verification and associated

assessments, is provided in Publication 6850, *Publication for Streamlined Mail Acceptance for Letters and Flats*, at <https://postalpro.usps.com/node/581>.

20.2 Approval

Mailers must be authorized by the USPS to participate in the eInduction program.

20.3 General Eligibility Standards

First-Class Mail, Periodicals, Standard Mail letters and flats, and Bound Printed Matter presorted or carrier route barcoded flats and packages are eligible for eInduction. All containers entered under eInduction must:

a. Be labeled with a USPS placard and a unique Intelligent Mail container barcode. All required pallets and similar containers (such as all-purpose containers, hampers, and gaylords) and all containers prepared under 8.0 must display container placards that include accurately encoded Intelligent Mail container barcodes (IMcb) as described in 708.6.6. Mailing documentation must indicate each container participating in eInduction. b. Be part of a mailing using an approved electronic method to transmit a postage statement and mailing documentation to the *PostalOne!* system.

c. Not include containers included on paper PS Forms 8125/8017.

d. Be included on a scheduled FAST appointment when entered at a USPS processing facility.

20.4 Additional Standards

20.4.1 Special Support for Continuous Mailers

Mailers who cannot generate a finalized postage statement two hours before container entry may request approval for an eInduction Continuous Mailer ID, (MID). Once approved, mailers using an authorized MID in the IMcb may enter any container with the approved MID in the IMcb prior to the receipt of electronic documentation. Mailers are required to submit an eDoc and generate a finalized postage statement for all eInduction MID containers within one calendar day of the unload scan. Mailers may request authorization for an MID through the Business Customer Gateway. The USPS must approve the mailer request before the mailer may participate in the MID process.

* * * * *

We will publish an appropriate amendment to 39 CFR part 111 to reflect

these changes, if our proposal is adopted.

Stanley F. Mires,

Attorney, Federal Compliance.

[FR Doc. 2016–32056 Filed 1–6–17; 8:45 am]

RIN 2090–AA39

Nondiscrimination in Programs or Activities Receiving Federal Assistance From the Environmental Protection Agency

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule; withdrawal.

SUMMARY: The Environmental Protection Agency (EPA) is withdrawing a proposed rule for which the EPA no longer intends to issue a final rule. This document identifies the proposed rule and explains the EPA’s decision to withdraw the proposal. The withdrawal of this proposed rule does not preclude the EPA from initiating the same or similar rulemaking at a future date. It does, however, close out the entry for this proposed rule in the EPA Semi-Annual Regulatory Agenda, published as part of the Unified Agenda of Federal Regulatory and Deregulatory Actions (Unified Agenda). Should the EPA decide at some future date to initiate the same or similar rulemaking, it will add an appropriate new entry to the EPA Semi-Annual Regulatory Agenda to reflect the initiation of the action.

DATES: The EPA is withdrawing the proposed rule as of January 9, 2017.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA–HQ–OA–2013–0031. All documents in the docket are listed on the <http://www.regulations.gov> Web site. Although listed in the index, some information is not publicly available, e.g., CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available electronically through <http://www.regulations.gov>.

FOR FURTHER INFORMATION CONTACT: Kurt Temple, Environmental Protection Agency, Office of Civil Rights, (Mail

Code 1201A), 1200 Pennsylvania Ave. NW., Washington, DC 20460, telephone number: (202) 564-7272 or (202) 564-7299; email address: temple.kurt@epa.gov.

SUPPLEMENTARY INFORMATION:

I. Does this action apply to me?

This action is directed to the public in general, and may be of particular interest to those persons who follow proposed rules related to the EPA's regulations about Nondiscrimination in Programs or Activities Receiving Federal Assistance from the EPA. Since others may also be interested, the EPA has not attempted to describe all the specific entities potentially interested.

II. Why is the EPA issuing this withdrawal document?

This document announces to the public that the EPA is withdrawing a certain proposed rule for which the EPA no longer intends to issue a final rule.

For the reasons described in this document, the EPA has decided not to finalize this rulemaking at this time. By withdrawing the proposed rule, the EPA is eliminating the pending nature of the regulatory action. Should the EPA determine to pursue anything in these areas in the future, it will issue a new proposed rule and invite public comment through notice in the **Federal Register**.

III. Background

1. *What was proposed?* On December 14, 2015, the EPA published a proposed rule in the **Federal Register** (80 FR 77284), to amend its nondiscrimination regulation regarding compliance information requirements for recipients of EPA financial assistance and Agency Compliance Procedures, as well as a technical correction to the reference to the Paperwork Reduction Act.

2. *Why is it being withdrawn?* The agency proposed amending its regulation to bring it into conformance with more than 20 other federal agencies. In other words, this proposed regulatory amendment concerned the EPA's internal processes, including the investigation of complaints and compliance reviews, and not obligations imposed on external stakeholders.

Nonetheless, the EPA received several adverse comments about this proposed amendment; especially regarding the proposal to remove numeric deadlines from the administrative complaint processing regulations. The EPA has considered all comments received. Although the EPA continues to believe that the proposed amendments, including the elimination of the numeric deadlines, are needed in order

to better position the EPA to strategically manage and individually tailor resolution approaches to its administrative investigation of complaints and compliance reviews, the EPA has decided to withdraw the proposed amendments.

Instead of continuing to pursue this rulemaking, the EPA will implement and evaluate the ability of its internal procedural guidance documents and accountability measures that were finalized in December 2016 (including the Case Resolution Manual and the EPA's OCR External Compliance Program Strategic Plan) to achieve prompt effective, and efficient docket management. Based on its evaluation, the EPA may decide at some future date to initiate a new rulemaking to amend its non-discrimination regulation. The EPA is withdrawing the proposed amendments, as opposed to leaving them inactive, to promote transparency and certainty with regard to the status of its non-discrimination regulation.

3. *Where can I get more information about this action?* The EPA has established a docket for this action under Docket ID No. EPA-HQ-OA-2013-0031. See the **ADDRESSES** section above for more detail information about this docket.

Air Quality Plans; Tennessee; Infrastructure Requirements for the 2012 PM_{2.5} National Ambient Air Quality Standard

AGENCY: Environmental Protection Agency.

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve the State Implementation Plan (SIP) submission, submitted by the State of Tennessee, through the Tennessee Department of Environment and Conservation (TDEC), on December 16, 2015, for inclusion into the Tennessee SIP. This proposal pertains to the infrastructure requirements of the Clean Air Act (CAA or Act) for the 2012 Annual Fine Particulate Matter (PM_{2.5}) national ambient air quality standard (NAAQS). The CAA requires that each state adopt and submit a SIP for the implementation, maintenance and enforcement of each NAAQS promulgated by EPA, which is commonly referred to as an "infrastructure SIP submission." TDEC certified that the Tennessee SIP contains provisions that ensure the 2012 Annual PM_{2.5} NAAQS is implemented, enforced, and maintained in Tennessee. EPA is proposing to determine that portions of Tennessee's infrastructure SIP submission, provided to EPA on December 16, 2015, satisfy certain required infrastructure elements for the 2012 Annual PM_{2.5} NAAQS.

DATES: Written comments must be received on or before February 8, 2017.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA-R04-OAR-2014-0430 at <http://www.regulations.gov>. Follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from *Regulations.gov*. The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment

contents located outside of the primary submission (*i.e.*, on the web, cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit <http://www2.epa.gov/dockets/commenting-epa-dockets>.

Ms. Bell can be reached via electronic mail at bell.tiereny@epa.gov or via telephone at (404) 562–9088.

SUPPLEMENTARY INFORMATION:

I. Background and Overview

On December 14, 2012 (78 FR 3086, January 15, 2013), EPA promulgated a revised primary annual PM_{2.5} NAAQS. The standard was strengthened from 15.0 micrograms per cubic meter (µg/m³) to 12.0 µg/m³. Pursuant to section 110(a)(1) of the CAA, states are required to submit SIPs meeting the applicable requirements of section 110(a)(2) within three years after promulgation of a new or revised NAAQS or within such shorter period as EPA may prescribe. Section 110(a)(2) requires states to address basic SIP elements such as requirements for monitoring, basic program requirements and legal authority that are designed to assure attainment and maintenance of the NAAQS. States were required to submit such SIPs for the 2012 Annual PM_{2.5} NAAQS to EPA no later than December 14, 2015.¹

This rulemaking is proposing to approve portions of Tennessee's December 16, 2015 PM_{2.5} infrastructure SIP submission for the applicable requirements of the 2012 Annual PM_{2.5} NAAQS, with the exception of the interstate transport requirements of section 110(a)(2)(D)(i)(I) and (II) (prongs 1, 2, and 4), for which EPA is not proposing any action in this rulemaking regarding these requirements. For the aspects of Tennessee's submittal proposed for approval in this

¹ In these infrastructure SIP submissions States generally certify evidence of compliance with sections 110(a)(1) and (2) of the CAA through a combination of state regulations and statutes, some of which have been incorporated into the federally-approved SIP. In addition, certain federally-approved, non-SIP regulations may also be appropriate for demonstrating compliance with sections 110(a)(1) and (2). Throughout this rulemaking, the cited regulation has either been approved, or submitted for approval into Tennessee's federally-approved SIP.

rulemaking, EPA notes that the Agency is not approving any specific rule, but rather proposing that Tennessee's already approved SIP meets certain CAA requirements.

II. What elements are required under sections 110(a)(1) and (2)?

Section 110(a) of the CAA requires states to submit SIPs to provide for the implementation, maintenance, and enforcement of a new or revised NAAQS within three years following the promulgation of such NAAQS, or within such shorter period as EPA may prescribe. Section 110(a) imposes the obligation upon states to make a SIP submission to EPA for a new or revised NAAQS, but the contents of that submission may vary depending upon the facts and circumstances. In particular, the data and analytical tools available at the time the state develops and submits the SIP for a new or revised NAAQS affects the content of the submission. The contents of such SIP submissions may also vary depending upon what provisions the state's existing SIP already contains.

More specifically, section 110(a)(1) provides the procedural and timing requirements for SIPs. Section 110(a)(2) lists specific elements that states must meet for "infrastructure" SIP requirements related to a newly established or revised NAAQS. As mentioned above, these requirements include basic SIP elements such as requirements for monitoring, basic program requirements and legal authority that are designed to assure attainment and maintenance of the NAAQS. The requirements are summarized below and in EPA's September 13, 2013, memorandum entitled "Guidance on Infrastructure State Implementation Plan (SIP) Elements under Clean Air Act Sections 110(a)(1) and 110(a)(2)."²

- 110(a)(2)(A): Emission Limits and Other Control Measures
- 110(a)(2)(B): Ambient Air Quality Monitoring/Data System

² Two elements identified in section 110(a)(2) are not governed by the three-year submission deadline of section 110(a)(1) because SIPs incorporating necessary local nonattainment area controls are not due within three years after promulgation of a new or revised NAAQS, but rather are due at the time the nonattainment area plan requirements are due pursuant to section 172. These requirements are: (1) Submissions required by section 110(a)(2)(C) to the extent that subsection refers to a permit program as required in part D, title I of the CAA; and (2) submissions required by section 110(a)(2)(I) which pertain to the nonattainment planning requirements of part D, title I of the CAA. This proposed rulemaking does not address infrastructure elements related to section 110(a)(2)(I) or the nonattainment planning requirements of 110(a)(2)(C).

- 110(a)(2)(C): Programs for Enforcement of Control Measures and for Construction or Modification of Stationary Sources
- 110(a)(2)(D)(i)(I) and (II): Interstate Pollution Transport
- 110(a)(2)(D)(ii): Interstate Pollution Abatement and International Air Pollution
- 110(a)(2)(E): Adequate Resources and Authority, Conflict of Interest, and Oversight of Local Governments and Regional Agencies
- 110(a)(2)(F): Stationary Source Monitoring and Reporting
- 110(a)(2)(G): Emergency Powers
- 110(a)(2)(H): SIP Revisions
- 110(a)(2)(I): Plan Revisions for Nonattainment Areas³
- 110(a)(2)(J): Consultation with Government Officials, Public Notification, and Prevention of Significant Deterioration (PSD) and Visibility Protection
- 110(a)(2)(K): Air Quality Modeling and Submission of Modeling Data
- 110(a)(2)(L): Permitting fees
- 110(a)(2)(M): Consultation and Participation by Affected Local Entities

III. What is EPA's approach to the review of infrastructure SIP submissions?

EPA is acting upon the SIP submission from Tennessee that addresses the infrastructure requirements of CAA sections 110(a)(1) and 110(a)(2) for the 2012 Annual PM_{2.5} NAAQS. The requirement for states to make a SIP submission of this type arises out of CAA section 110(a)(1). Pursuant to section 110(a)(1), states must make SIP submissions "within 3 years (or such shorter period as the Administrator may prescribe) after the promulgation of a national primary ambient air quality standard (or any revision thereof)," and these SIP submissions are to provide for the "implementation, maintenance, and enforcement" of such NAAQS. The statute directly imposes on states the duty to make these SIP submissions, and the requirement to make the submissions is not conditioned upon EPA's taking any action other than promulgating a new or revised NAAQS. Section 110(a)(2) includes a list of specific elements that "[e]ach such plan" submission must address.

EPA has historically referred to these SIP submissions made for the purpose of satisfying the requirements of CAA sections 110(a)(1) and 110(a)(2) as "infrastructure SIP" submissions.

³ As mentioned above, this element is not relevant to this proposed rulemaking.

Although the term “infrastructure SIP” does not appear in the CAA, EPA uses the term to distinguish this particular type of SIP submission from submissions that are intended to satisfy other SIP requirements under the CAA, such as “nonattainment SIP” or “attainment plan SIP” submissions to address the nonattainment planning requirements of part D of title I of the CAA, “regional haze SIP” submissions required by EPA rule to address the visibility protection requirements of CAA section 169A, and nonattainment new source review (NNSR) permit program submissions to address the permit requirements of CAA, title I, part D.

Section 110(a)(1) addresses the timing and general requirements for infrastructure SIP submissions, and section 110(a)(2) provides more details concerning the required contents of these submissions. The list of required elements provided in section 110(a)(2) contains a wide variety of disparate provisions, some of which pertain to required legal authority, some of which pertain to required substantive program provisions, and some of which pertain to requirements for both authority and substantive program provisions.⁴ EPA therefore believes that while the timing requirement in section 110(a)(1) is unambiguous, some of the other statutory provisions are ambiguous. In particular, EPA believes that the list of required elements for infrastructure SIP submissions provided in section 110(a)(2) contains ambiguities concerning what is required for inclusion in an infrastructure SIP submission.

The following examples of ambiguities illustrate the need for EPA to interpret some section 110(a)(1) and section 110(a)(2) requirements with respect to infrastructure SIP submissions for a given new or revised NAAQS. One example of ambiguity is that section 110(a)(2) requires that “each” SIP submission must meet the list of requirements therein, while EPA has long noted that this literal reading of the statute is internally inconsistent and would create a conflict with the nonattainment provisions in part D of title I of the Act, which specifically address nonattainment SIP

⁴ For example: Section 110(a)(2)(E)(i) provides that states must provide assurances that they have adequate legal authority under state and local law to carry out the SIP; section 110(a)(2)(C) provides that states must have a SIP-approved program to address certain sources as required by part C of title I of the CAA; and section 110(a)(2)(G) provides that states must have legal authority to address emergencies as well as contingency plans that are triggered in the event of such emergencies.

requirements.⁵ Section 110(a)(2)(I) pertains to nonattainment SIP requirements and part D addresses when attainment plan SIP submissions to address nonattainment area requirements are due. For example, section 172(b) requires EPA to establish a schedule for submission of such plans for certain pollutants when the Administrator promulgates the designation of an area as nonattainment, and section 107(d)(1)(B) allows up to two years, or in some cases three years, for such designations to be promulgated.⁶ This ambiguity illustrates that rather than apply all the stated requirements of section 110(a)(2) in a strict literal sense, EPA must determine which provisions of section 110(a)(2) are applicable for a particular infrastructure SIP submission.

Another example of ambiguity within sections 110(a)(1) and 110(a)(2) with respect to infrastructure SIPs pertains to whether states must meet all of the infrastructure SIP requirements in a single SIP submission, and whether EPA must act upon such SIP submission in a single action. Although section 110(a)(1) directs states to submit “a plan” to meet these requirements, EPA interprets the CAA to allow states to make multiple SIP submissions separately addressing infrastructure SIP elements for the same NAAQS. If states elect to make such multiple SIP submissions to meet the infrastructure SIP requirements, EPA can elect to act on such submissions either individually or in a larger combined action.⁷ Similarly, EPA interprets the CAA to

⁵ See, e.g., “Rule To Reduce Interstate Transport of Fine Particulate Matter and Ozone (Clean Air Interstate Rule); Revisions to Acid Rain Program; Revisions to the NO_x SIP Call; Final Rule,” 70 FR 25162, at 25163–65 (May 12, 2005) (explaining relationship between timing requirement of section 110(a)(2)(D) versus section 110(a)(2)(I)).

⁶ EPA notes that this ambiguity within section 110(a)(2) is heightened by the fact that various subparts of part D set specific dates for submission of certain types of SIP submissions in designated nonattainment areas for various pollutants. Note, e.g., that section 182(a)(1) provides specific dates for submission of emissions inventories for the ozone NAAQS. Some of these specific dates are necessarily later than three years after promulgation of the new or revised NAAQS.

⁷ See, e.g., “Approval and Promulgation of Implementation Plans; New Mexico; Revisions to the New Source Review (NSR) State Implementation Plan (SIP); Prevention of Significant Deterioration (PSD) and Nonattainment New Source Review (NNSR) Permitting,” 78 FR 4339 (January 22, 2013) (EPA’s final action approving the structural PSD elements of the New Mexico SIP submitted by the State separately to meet the requirements of EPA’s 2008 PM_{2.5} NSR rule), and “Approval and Promulgation of Air Quality Implementation Plans; New Mexico; Infrastructure and Interstate Transport Requirements for the 2006 PM_{2.5} NAAQS,” (78 FR 4337) (January 22, 2013) (EPA’s final action on the infrastructure SIP for the 2006 PM_{2.5} NAAQS).

allow it to take action on the individual parts of one larger, comprehensive infrastructure SIP submission for a given NAAQS without concurrent action on the entire submission. For example, EPA has sometimes elected to act at different times on various elements and sub-elements of the same infrastructure SIP submission.⁸

Ambiguities within sections 110(a)(1) and 110(a)(2) may also arise with respect to infrastructure SIP submission requirements for different NAAQS. Thus, EPA notes that not every element of section 110(a)(2) would be relevant, or as relevant, or relevant in the same way, for each new or revised NAAQS. The states’ attendant infrastructure SIP submissions for each NAAQS therefore could be different. For example, the monitoring requirements that a state might need to meet in its infrastructure SIP submission for purposes of section 110(a)(2)(B) could be very different for different pollutants because the content and scope of a state’s infrastructure SIP submission to meet this element might be very different for an entirely new NAAQS than for a minor revision to an existing NAAQS.⁹

EPA notes that interpretation of section 110(a)(2) is also necessary when EPA reviews other types of SIP submissions required under the CAA. Therefore, as with infrastructure SIP submissions, EPA also has to identify and interpret the relevant elements of section 110(a)(2) that logically apply to these other types of SIP submissions. For example, section 172(c)(7) requires that attainment plan SIP submissions required by part D have to meet the “applicable requirements” of section 110(a)(2). Thus, for example, attainment plan SIP submissions must meet the requirements of section 110(a)(2)(A) regarding enforceable emission limits and control measures and section 110(a)(2)(E)(i) regarding air agency resources and authority. By contrast, it is clear that attainment plan SIP submissions required by part D would not need to meet the portion of section 110(a)(2)(C) that pertains to the PSD

⁸ On December 14, 2007, the State of Tennessee, through the Tennessee Department of Environment and Conservation, made a SIP revision to EPA demonstrating that the State meets the requirements of sections 110(a)(1) and (2). EPA proposed action for infrastructure SIP elements (C) and (J) on January 23, 2012 (77 FR 3213) and took final action on March 14, 2012 (77 FR 14976). On April 16, 2012 (77 FR 22533) and July 23, 2012 (77 FR 42997), EPA took separate proposed and final actions on all other section 110(a)(2) infrastructure SIP elements of Tennessee’s December 14, 2007, submittal.

⁹ For example, implementation of the 1997 PM_{2.5} NAAQS required the deployment of a system of new monitors to measure ambient levels of that new indicator species for the new NAAQS.

program required in part C of title I of the CAA, because PSD does not apply to a pollutant for which an area is designated nonattainment and thus subject to part D planning requirements. As this example illustrates, each type of SIP submission may implicate some elements of section 110(a)(2) but not others.

Given the potential for ambiguity in some of the statutory language of section 110(a)(1) and section 110(a)(2), EPA believes that it is appropriate to interpret the ambiguous portions of section 110(a)(1) and section 110(a)(2) in the context of acting on a particular SIP submission. In other words, EPA assumes that Congress could not have intended that each and every SIP submission, regardless of the NAAQS in question or the history of SIP development for the relevant pollutant, would meet each of the requirements, or meet each of them in the same way. Therefore, EPA has adopted an approach under which it reviews infrastructure SIP submissions against the list of elements in section 110(a)(2), but only to the extent each element applies for that particular NAAQS.

Historically, EPA has elected to use guidance documents to make recommendations to states for infrastructure SIPs, in some cases conveying needed interpretations on newly arising issues and in some cases conveying interpretations that have already been developed and applied to individual SIP submissions for particular elements.¹⁰ EPA most recently issued guidance for infrastructure SIPs on September 13, 2013 (2013 Guidance).¹¹ EPA developed this document to provide states with up-to-date guidance for infrastructure SIPs for any new or revised NAAQS. Within this guidance, EPA describes the duty of states to make infrastructure SIP submissions to meet basic structural SIP requirements within three years of promulgation of a new or revised NAAQS. EPA also made recommendations about many specific subsections of section 110(a)(2) that are relevant in the context of infrastructure

SIP submissions.¹² The guidance also discusses the substantively important issues that are germane to certain subsections of section 110(a)(2). Significantly, EPA interprets sections 110(a)(1) and 110(a)(2) such that infrastructure SIP submissions need to address certain issues and need not address others. Accordingly, EPA reviews each infrastructure SIP submission for compliance with the applicable statutory provisions of section 110(a)(2), as appropriate.

As an example, section 110(a)(2)(E)(ii) is a required element of section 110(a)(2) for infrastructure SIP submissions. Under this element, a state must meet the substantive requirements of section 128, which pertain to state boards that approve permits or enforcement orders and heads of executive agencies with similar powers. Thus, EPA reviews infrastructure SIP submissions to ensure that the state's implementation plan appropriately addresses the requirements of section 110(a)(2)(E)(ii) and section 128. The 2013 Guidance explains EPA's interpretation that there may be a variety of ways by which states can appropriately address these substantive statutory requirements, depending on the structure of an individual state's permitting or enforcement program (*e.g.*, whether permits and enforcement orders are approved by a multi-member board or by a head of an executive agency). However they are addressed by the state, the substantive requirements of section 128 are necessarily included in EPA's evaluation of infrastructure SIP submissions because section 110(a)(2)(E)(ii) explicitly requires that the state satisfy the provisions of section 128.

As another example, EPA's review of infrastructure SIP submissions with respect to the PSD program requirements in sections 110(a)(2)(C), (D)(i)(II), and (J) focuses upon the

structural PSD program requirements contained in part C and EPA's PSD regulations. Structural PSD program requirements include provisions necessary for the PSD program to address all regulated sources and new source review (NSR) pollutants, including greenhouse gases (GHG). By contrast, structural PSD program requirements do not include provisions that are not required under EPA's regulations at 40 CFR 51.166 but are merely available as an option for the state, such as the option to provide grandfathering of complete permit applications with respect to the 2012 PM_{2.5} NAAQS. Accordingly, the latter optional provisions are types of provisions EPA considers irrelevant in the context of an infrastructure SIP action.

For other section 110(a)(2) elements, however, EPA's review of a state's infrastructure SIP submission focuses on assuring that the state's SIP meets basic structural requirements. For example, section 110(a)(2)(C) includes, *inter alia*, the requirement that states have a program to regulate minor new sources. Thus, EPA evaluates whether the state has an EPA-approved minor NSR program and whether the program addresses the pollutants relevant to that NAAQS. In the context of acting on an infrastructure SIP submission, however, EPA does not think it is necessary to conduct a review of each and every provision of a state's existing minor source program (*i.e.*, already in the existing SIP) for compliance with the requirements of the CAA and EPA's regulations that pertain to such programs.

With respect to certain other issues, EPA does not believe that an action on a state's infrastructure SIP submission is necessarily the appropriate type of action in which to address possible deficiencies in a state's existing SIP. These issues include: (i) Existing provisions related to excess emissions from sources during periods of startup, shutdown, or malfunction that may be contrary to the CAA and EPA's policies addressing such excess emissions ("SSM"); (ii) existing provisions related to "director's variance" or "director's discretion" that may be contrary to the CAA because they purport to allow revisions to SIP-approved emissions limits while limiting public process or not requiring further approval by EPA; and (iii) existing provisions for PSD programs that may be inconsistent with current requirements of EPA's "Final NSR Improvement Rule," 67 FR 80186 (December 31, 2002), as amended by 72 FR 32526 (June 13, 2007) ("NSR Reform"). Thus, EPA believes it may

¹² EPA's September 13, 2013, guidance did not make recommendations with respect to infrastructure SIP submissions to address section 110(a)(2)(D)(i)(I). EPA issued the guidance shortly after the U.S. Supreme Court agreed to review the D.C. Circuit decision in *EME Homer City*, 696 F.3d (D.C. Cir. 2012) which had interpreted the requirements of section 110(a)(2)(D)(i)(I). In light of the uncertainty created by ongoing litigation, EPA elected not to provide additional guidance on the requirements of section 110(a)(2)(D)(i)(I) at that time. As the guidance is neither binding nor required by statute, whether EPA elects to provide guidance on a particular section has no impact on a state's CAA obligations. On March 17, 2016, EPA released a memorandum titled, "Information on the Interstate Transport 'Good Neighbor' Provision for the 2012 Fine Particulate Matter National Ambient Air Quality Standards under Clean Air Act Section 110(a)(2)(D)(i)(I)" to provide guidance to states for interstate transport requirements specific to the PM_{2.5} NAAQS.

¹⁰ EPA notes, however, that nothing in the CAA requires EPA to provide guidance or to promulgate regulations for infrastructure SIP submissions. The CAA directly applies to states and requires the submission of infrastructure SIP submissions, regardless of whether or not EPA provides guidance or regulations pertaining to such submissions. EPA elects to issue such guidance in order to assist states, as appropriate.

¹¹ "Guidance on Infrastructure State Implementation Plan (SIP) Elements under Clean Air Act sections 110(a)(1) and 110(a)(2)," Memorandum from Stephen D. Page, September 13, 2013.

approve an infrastructure SIP submission without scrutinizing the totality of the existing SIP for such potentially deficient provisions and may approve the submission even if it is aware of such existing provisions.¹³ It is important to note that EPA's approval of a state's infrastructure SIP submission should not be construed as explicit or implicit re-approval of any existing potentially deficient provisions that relate to the three specific issues just described.

EPA's approach to review of infrastructure SIP submissions is to identify the CAA requirements that are logically applicable to that submission. EPA believes that this approach to the review of a particular infrastructure SIP submission is appropriate, because it would not be reasonable to read the general requirements of section 110(a)(1) and the list of elements in 110(a)(2) as requiring review of each and every provision of a state's existing SIP against all requirements in the CAA and EPA regulations merely for purposes of assuring that the state in question has the basic structural elements for a functioning SIP for a new or revised NAAQS. Because SIPs have grown by accretion over the decades as statutory and regulatory requirements under the CAA have evolved, they may include some outmoded provisions and historical artifacts. These provisions, while not fully up to date, nevertheless may not pose a significant problem for the purposes of "implementation, maintenance, and enforcement" of a new or revised NAAQS when EPA evaluates adequacy of the infrastructure SIP submission. EPA believes that a better approach is for states and EPA to focus attention on those elements of section 110(a)(2) of the CAA most likely to warrant a specific SIP revision due to the promulgation of a new or revised NAAQS or other factors.

For example, EPA's 2013 Guidance gives simpler recommendations with respect to carbon monoxide than other NAAQS pollutants to meet the visibility requirements of section 110(a)(2)(D)(i)(II), because carbon monoxide does not affect visibility. As a result, an infrastructure SIP submission for any future new or revised NAAQS for carbon monoxide need only state this fact in order to

address the visibility prong of section 110(a)(2)(D)(i)(II).

Finally, EPA believes that its approach with respect to infrastructure SIP requirements is based on a reasonable reading of sections 110(a)(1) and 110(a)(2) because the CAA provides other avenues and mechanisms to address specific substantive deficiencies in existing SIPs. These other statutory tools allow EPA to take appropriately tailored action, depending upon the nature and severity of the alleged SIP deficiency. Section 110(k)(5) authorizes EPA to issue a "SIP call" whenever the Agency determines that a state's SIP is substantially inadequate to attain or maintain the NAAQS, to mitigate interstate transport, or to otherwise comply with the CAA.¹⁴ Section 110(k)(6) authorizes EPA to correct errors in past actions, such as past approvals of SIP submissions.¹⁵ Significantly, EPA's determination that an action on a state's infrastructure SIP submission is not the appropriate time and place to address all potential existing SIP deficiencies does not preclude EPA's subsequent reliance on provisions in section 110(a)(2) as part of the basis for action to correct those deficiencies at a later time. For example, although it may not be appropriate to require a state to eliminate all existing inappropriate director's discretion provisions in the course of acting on an infrastructure SIP submission, EPA believes that section 110(a)(2)(A) may be among the statutory bases that EPA relies upon in the course of addressing such deficiency in a subsequent action.¹⁶

¹⁴ For example, EPA issued a SIP call to Utah to address specific existing SIP deficiencies related to the treatment of excess emissions during SSM events. See "Finding of Substantial Inadequacy of Implementation Plan; Call for Utah State Implementation Plan Revisions," 74 FR 21639 (April 18, 2011).

¹⁵ EPA has used this authority to correct errors in past actions on SIP submissions related to PSD programs. See "Limitation of Approval of Prevention of Significant Deterioration Provisions Concerning Greenhouse Gas Emitting-Sources in State Implementation Plans; Final Rule," 75 FR 82536 (December 30, 2010). EPA has previously used its authority under CAA section 110(k)(6) to remove numerous other SIP provisions that the Agency determined it had approved in error. See, e.g., 61 FR 38664 (July 25, 1996) and 62 FR 34641 (June 27, 1997) (corrections to American Samoa, Arizona, California, Hawaii, and Nevada SIPs); 69 FR 67062 (November 16, 2004) (corrections to California SIP); and 74 FR 57051 (November 3, 2009) (corrections to Arizona and Nevada SIPs).

¹⁶ See, e.g., EPA's disapproval of a SIP submission from Colorado on the grounds that it would have included a director's discretion provision inconsistent with CAA requirements, including section 110(a)(2)(A). See, e.g., 75 FR 42342 at 42344 (July 21, 2010) (proposed disapproval of director's discretion provisions); 76 FR 4540 (Jan. 26, 2011) (final disapproval of such provisions).

IV. What is EPA's analysis of how Tennessee addressed the elements of the sections 110(a)(1) and (2) "infrastructure" provisions?

The Tennessee infrastructure submission addresses the provisions of sections 110(a)(1) and (2) as described below.

1. 110(a)(2)(A) *Emission Limits and Other Control Measures*: Section 110(a)(2)(A) requires that each implementation plan include enforceable emission limitations and other control measures, means, or techniques (including economic incentives such as fees, marketable permits, and auctions of emissions rights), as well as schedules and timetables for compliance, as may be necessary or appropriate to meet the applicable requirements. Several regulations within Tennessee's SIP are relevant to air quality control regulations. The regulations described below include enforceable emission limitations and other control measures. SIP-approved Tennessee Air Pollution Control Regulations (TAPCR) 1200-03-03, *Ambient Air Quality Standards*, 1200-03-04, *Open Burning*, 1200-03-06, *Non-process Emission Standards*, 1200-03-07, *Process Emission Standards*, 1200-03-09, *Construction and Operating Permits*, 1200-03-14, *Control of Sulfur Dioxide Emission*, 1200-03-19, *Emission Standards and Monitoring Requirements for Additional Control Areas*, 1200-03-21, *General Alternate Emission Standards*, 1200-03-24, *Good Engineering Practice Stack Height Regulations*, and 1200-03-27, *NO_x emissions from designated source categories* collectively establish enforceable emissions limitations and other control measures, means or techniques, for activities that contribute to PM_{2.5} concentrations in the ambient air, and provide authority for TDEC to establish such limits and measures as well as schedules for compliance to meet the applicable requirements of the CAA. Additionally, State statutes established in the Tennessee Air Quality Act and adopted in the Tennessee Code Annotated (TCA) section 68-201-105(a), *Powers and duties of board—Notification of vacancy—Termination due to vacancy*, provide the Tennessee Air Pollution Control Board and TDEC's Division of Air Pollution Control the authority to take actions in support of this infrastructure element such as issue permits, promulgate regulations, and issue orders to implement the Tennessee Air Quality Act and the CAA, as relevant. EPA has made the preliminary determination that the provisions contained in these State

¹³ By contrast, EPA notes that if a state were to include a new provision in an infrastructure SIP submission that contained a legal deficiency, such as a new exemption for excess emissions during SSM events, then EPA would need to evaluate that provision for compliance against the rubric of applicable CAA requirements in the context of the action on the infrastructure SIP.

regulations and State statute satisfy Section 110(a)(2)(A) for the 2012 Annual PM_{2.5} NAAQS in the State.

In this action, EPA is not proposing to approve or disapprove any existing state provisions with regard to excess emissions during start up, shut down, and malfunction (SSM) operations at a facility. EPA believes that a number of states have SSM provisions which are contrary to the CAA and existing EPA guidance, "State Implementation Plans: Policy Regarding Excess Emissions During Malfunctions, Startup, and Shutdown" (September 20, 1999), and the Agency is addressing such state regulations in a separate action.¹⁷

Additionally, in this action, EPA is not proposing to approve or disapprove any existing state rules with regard to director's discretion or variance provisions. EPA believes that a number of states have such provisions which are contrary to the CAA and existing EPA guidance (52 FR 45109 (November 24, 1987)), and the Agency plans to take action in the future to address such state regulations. In the meantime, EPA encourages any state having a director's discretion or variance provision which is contrary to the CAA and EPA guidance to take steps to correct the deficiency as soon as possible.

2. 110(a)(2)(B) *Ambient Air Quality Monitoring/Data System*: Section 110(a)(2)(B) requires SIPs to provide for establishment and operation of appropriate devices, methods, systems, and procedures necessary to (i) monitor, compile, and analyze data on ambient air quality, and (ii) upon request, make such data available to the Administrator. TCA 68–201–105(b)(4) gives TDEC the authority to provide technical, scientific and other services as may be required to implement the provisions of the Tennessee Air Quality Act. Annually, states develop and submit to EPA for approval statewide ambient monitoring network plans consistent with the requirements of 40 CFR parts 50, 53, and 58. The annual network plan involves an evaluation of any proposed changes to the monitoring network, includes the annual ambient monitoring network design plan, and includes a certified evaluation of the agency's ambient monitors and auxiliary support equipment.¹⁸ On June 30, 2015,

¹⁷ On June 12, 2015, EPA published a final action entitled, "State Implementation Plans: Response to Petition for Rulemaking; Restatement and Update of EPA's SSM Policy Applicable to SIPs; Findings of Substantial Inadequacy; and SIP Calls to Amend Provisions Applying to Excess Emissions During Periods of Startup, Shutdown, and Malfunction." See 80 FR 33840.

¹⁸ The annual network plans are approved by EPA in accordance with 40 CFR part 58, and, on

Tennessee submitted its most recent plan to EPA, which was approved by EPA on October 26, 2015. Tennessee's monitoring network plan can be accessed at www.regulations.gov using Docket ID No. EPA–R04–OAR–2014–0430. EPA has made the preliminary determination that Tennessee's SIP and practices are adequate for the ambient air quality monitoring and data system related to the 2012 Annual PM_{2.5} NAAQS.

3. 110(a)(2)(C) *Programs for Enforcement of Control Measures and for Construction or Modification of Stationary Sources*: This element consists of three sub-elements: Enforcement, state-wide regulation of new and modified minor sources and minor modifications of major sources, and preconstruction permitting of major sources and major modifications in areas designated attainment or unclassifiable for the subject NAAQS as required by CAA title I part C (*i.e.*, the major source PSD program). TDEC's 2012 Annual PM_{2.5} NAAQS infrastructure SIP submission cites a number of SIP provisions to address these requirements. EPA's rationale for its proposed action regarding each sub-element is described below.

Enforcement: The following SIP-approved regulation provides TDEC with authority for enforcement of PM_{2.5} emission limits and control measures. TAPCR 1200–03–13–.01, *Violation Statement*, states that, "Failure to comply with any of the provisions of these regulations shall constitute a violation thereof and shall subject the person or persons responsible therefore to any and all the penalties provided by law." Also note, under TCA 68–201–116, *Orders and assessments of damages and civil penalty—Appeal*, the State's Technical Secretary is authorized to issue orders requiring correction of violations of any part of the Tennessee Air Quality Act, or of any regulation promulgated under this State statute. Violators are subject to civil penalties of up to 25,000 dollars per day for each day of violation and for any damages to the State resulting from the violations.

Preconstruction PSD Permitting for Major Sources: EPA interprets the PSD sub-element to require that a state's infrastructure SIP submission for a particular NAAQS demonstrate that the state has a complete PSD permitting program in place covering the structural PSD requirements for all regulated NSR pollutants. A state's PSD permitting

occasion, proposed changes to the monitoring network are evaluated outside of the network plan approval process in accordance with 40 CFR part 58.

program is complete for this sub-element (and prong 3 of D(i) and J related to PSD) if EPA has already approved or is simultaneously approving the state's implementation plan with respect to all structural PSD requirements that are due under the EPA regulations or the CAA on or before the date of the EPA's proposed action on the infrastructure SIP submission. For the, 2012 Annual PM_{2.5} NAAQS, Tennessee's authority to regulate construction of new and modified stationary sources to assist in the protection of air quality in attainment or unclassifiable areas is established in TAPCR 1200–03–09–.01(4), *Prevention of Significant Deterioration of Air Quality*. Tennessee's infrastructure SIP submission demonstrates that new major sources and major modifications in areas of the State designated attainment or unclassifiable for the specified NAAQS are subject to a federally-approved PSD permitting program meeting all the current structural requirements of part C of title I of the CAA to satisfy the infrastructure SIP PSD elements.¹⁹

Regulation of minor sources and modifications: Section 110(a)(2)(C) also requires the SIP to include provisions that govern the minor source program that regulates emissions of the 2012 Annual PM_{2.5} NAAQS. TAPCR 1200–03–09–.01, *Construction Permits*, and TAPCR 1200–03–09–.03, *General Provisions*, collectively govern the preconstruction permitting of modifications and construction of minor stationary sources, and minor modifications of major stationary sources.

EPA has made the preliminary determination that Tennessee's SIP is adequate for program enforcement of control measures, regulation of minor sources and modifications, and preconstruction permitting of major sources and major modifications related to the 2012 Annual PM_{2.5} NAAQS.

4. 110(a)(2)(D)(i)(I) and (II) *Interstate Pollution Transport*: Section 110(a)(2)(D)(i) has two components: 110(a)(2)(D)(i)(I) and 110(a)(2)(D)(i)(II). Each of these components has two subparts resulting in four distinct components, commonly referred to as "prongs," that must be addressed in infrastructure SIP submissions. The first two prongs, which are codified in section 110(a)(2)(D)(i)(I), are provisions that prohibit any source or other type of

¹⁹ More information concerning how the Tennessee infrastructure SIP submission currently meets applicable requirements for the PSD elements (110(a)(2)(C); (D)(i)(I), prong 3; and (J)) can be found in the technical support document in the docket for today's rulemaking.

emissions activity in one state from contributing significantly to nonattainment of the NAAQS in another state (“prong 1”), and interfering with maintenance of the NAAQS in another state (“prong 2”). The third and fourth prongs, which are codified in section 110(a)(2)(D)(i)(II), are provisions that prohibit emissions activity in one state from interfering with measures required to prevent significant deterioration of air quality in another state (“prong 3”), or to protect visibility in another state (“prong 4”).

110(a)(2)(D)(i)(I)—prongs 1 and 2: EPA is not proposing any action in this rulemaking related to the interstate transport provisions pertaining to the contribution to nonattainment or interference with maintenance in other states of section 110(a)(2)(D)(i)(I) (prongs 1 and 2). EPA will consider these requirements in relation to Tennessee’s 2012 Annual PM_{2.5} NAAQS infrastructure submission in a separate rulemaking.

110(a)(2)(D)(i)(II)—prong 3: With regard to section 110(a)(2)(D)(i)(II), the PSD element, referred to as prong 3, may be met by a state’s confirmation in an infrastructure SIP submission that new major sources and major modifications in the state are subject to a PSD program meeting all the current structural requirements of part C of title I of the CAA, or (if the state contains a nonattainment area that has the potential to impact PSD in another state), a NNSR program. As discussed in more detail above under section 110(a)(2)(C), Tennessee’s SIP contains provisions for the State’s PSD program that reflects the required structural PSD requirements to satisfy prong 3 of section 110(a)(2)(D)(i)(II). Tennessee addresses prong 3 through TAPCR 1200–03–09–.01(4), *Prevention of Significant Deterioration of Air Quality*, and TAPCR 1200–03–09–.01(5), *Growth Policy*, for the PSD and NNSR programs, respectively. EPA has made the preliminary determination that Tennessee’s SIP is adequate for PSD permitting of major sources and major modifications for interstate transport related to the 2012 Annual PM_{2.5} NAAQS for section 110(a)(2)(D)(i)(II) (prong 3).

110(a)(2)(D)(i)(II)—prong 4: EPA is not proposing any action in this rulemaking related to the interstate transport provisions pertaining to visibility in other states of section 110(a)(2)(D)(i)(II) (prong 4) and will consider these requirements in relation to Tennessee’s 2012 Annual PM_{2.5} NAAQS infrastructure submission in a separate rulemaking.

5. 110(a)(2)(D)(ii): *Interstate Pollution Abatement and International Air Pollution:* Section 110(a)(2)(D)(ii) requires SIPs to include provisions ensuring compliance with sections 115 and 126 of the Act, relating to interstate and international pollution abatement. Regulation 1200–03–09 03, *General Provisions*, requires the permitting authority to notify air agencies whose areas may be affected by emissions from a source. Additionally, Tennessee does not have any pending obligation under sections 115 and 126 of the CAA relating to international or interstate pollution abatement. EPA has made the preliminary determination that Tennessee’s SIP and practices are adequate for ensuring compliance with the applicable requirements relating to interstate and international pollution abatement for the 2012 Annual PM_{2.5} NAAQS.

6. 110(a)(2)(E) *Adequate Resources and Authority, Conflict of Interest, and Oversight of Local Governments and Regional Agencies:* Section 110(a)(2)(E) requires that each implementation plan provide: (i) Necessary assurances that the state will have adequate personnel, funding, and authority under state law to carry out its implementation plan, (ii) that the state comply with the requirements respecting state boards pursuant to section 128 of the Act, and (iii) necessary assurances that, where the state has relied on a local or regional government, agency, or instrumentality for the implementation of any plan provision, the state has responsibility for ensuring adequate implementation of such plan provisions. EPA is proposing to approve Tennessee’s infrastructure SIP submission as meeting the requirements of sub-elements 110(a)(2)(E)(i), (ii), and (iii). EPA’s rationale for today’s proposal respecting each section of 110(a)(2)(E) is described in turn below.

In support of EPA’s proposal to approve sub-elements 110(a)(2)(E)(i) and (iii), TCA 68–201–105, *Powers and duties of board—Notification of vacancy—Termination due to vacancy*, gives the Tennessee Air Pollution Control Board the power and duty to promulgate rules and regulations to implement the Tennessee Air Quality Act. The Board may define ambient air quality standards, set emission standards, set forth general policies or plans, establish a system of permits, and identify a schedule of fees for review of plans and specifications, issuance or renewal of permits or inspection of air contaminant sources.

TAPCR 1200–03–26, *Administrative Fees Schedule*, establishes construction fees, annual emission fees, and permit

review fees sufficient to supplement existing State and Federal funding and to cover reasonable costs associated with the administration of Tennessee’s air pollution control program. These costs include costs associated with the review of permit applications and reports, issuance of permits, source inspections and emission unit observations, review and evaluation of stack and/or ambient monitoring results, modeling, and costs associated with enforcement actions.

TCA 68–201–115, *Local pollution control programs—Exemption from state supervision—Applicability of part to air contaminant sources burning wood waste—Open burning of wood waste*, states that “Any municipality or county in this state may enact, by ordinance or resolution respectively, air pollution control regulations not less stringent than the standards adopted for the state pursuant to this part, or any such municipality or county may also adopt or repeal an ordinance or resolution which incorporates by reference any or all of the regulations of the board, or any federal regulations including any changes in such regulations, when such regulations are properly identified as to date and source.” Before such ordinances or resolutions become effective, the municipality or county must receive a certificate of exemption from the Board to enact local regulations in the State. In granting any certificate of exemption, the State of Tennessee reserves the right to enforce any applicable resolution, ordinance, or regulation of the local program.

TCA 68–201–115 also directs TDEC to “frequently determine whether or not any exempted municipality or county meets the terms of the exemption granted and continues to comply with this section.” If TDEC determines that the local program does not meet the terms of the exemption or does not otherwise comply with the law, the Board may suspend the exemption in whole or in part until the local program complies with the State standards.

As evidence of the adequacy of TDEC’s resources with respect to sub-elements (i) and (iii), EPA submitted a letter to Tennessee on June 30, 2015, outlining section 105 grant commitments and the current status of these commitments for fiscal year 2015. The letter EPA submitted to Tennessee can be accessed at www.regulations.gov using Docket ID No. EPA–R04–OAR–2014–0430. Annually, states update these grant commitments based on current SIP requirements, air quality planning, and applicable requirements related to the NAAQS. Tennessee

satisfactorily met all commitments agreed to in the Air Planning Agreement for fiscal year 2015, therefore Tennessee's grants were finalized and closed out. EPA has made the preliminary determination that Tennessee has adequate resources and authority for implementation of the 2012 Annual PM_{2.5} NAAQS.

Section 110(a)(2)(E)(ii) requires that the state comply with section 128 of the CAA. Section 128 requires that the SIP provide: (a)(1) the majority of members of the state board or body which approves permits or enforcement orders represent the public interest and do not derive any significant portion of their income from persons subject to permitting or enforcement orders under the CAA; and (a)(2) any potential conflicts of interest by such board or body, or the head of an executive agency with similar powers be adequately disclosed. Section 110(a)(2)(E)(ii) obligations for the 2012 Annual PM_{2.5} NAAQS and the requirements of CAA section 128 are met in Regulation 0400–30–17, *Conflict of Interest*. Under this regulation, the Tennessee board with authority over air permits and enforcement orders is required to determine annually and after receiving a new member that at least a majority of its members represent to public interest and do not derive any significant portion of income from persons subject to such permits and enforcement orders. Further, the board cannot act to hear contested cases until it has determined it can do so consistent with CAA section 128. The regulation also requires TDEC's Technical Secretary and board members to declare any conflict-of-interest in writing prior to the issuance of any permit, variance or enforcement order that requires action on their part.

EPA has made the preliminary determination that the State has adequately addressed the requirements of section 128, and accordingly has met the requirements of section 110(a)(2)(E)(ii) with respect to infrastructure SIP requirements. Therefore, EPA is proposing to approve Tennessee's infrastructure SIP submission as meeting the requirements of sub-elements 110(a)(2)(E)(i), (ii) and (iii).

7. 110(a)(2)(F) *Stationary Source Monitoring and Reporting*: Section 110(a)(2)(F) requires SIPs to meet applicable requirements addressing: (i) The installation, maintenance, and replacement of equipment, and the implementation of other necessary steps, by owners or operators of stationary sources to monitor emissions from such sources, (ii) periodic reports

on the nature and amounts of emissions and emissions related data from such sources, and (iii) correlation of such reports by the state agency with any emission limitations or standards established pursuant to this section, which reports shall be available at reasonable times for public inspection. TDEC's infrastructure SIP submission identifies requirements for compliance testing by emissions sampling and analysis, and for emissions and operation monitoring to ensure the quality of data in the State, and also the collection of source emission data throughout the State and the assurance of the quality of such data. These data are used to compare against current emission limits and to meet requirements of EPA's Air Emissions Reporting Rule (AERR). Specifically, TAPCR 1200–03–10, *Required Sampling, Recording, and Reporting*, gives the State's Technical Secretary the authority to monitor emissions at stationary sources, and to require these sources to conduct emissions monitoring and to submit periodic emissions reports. This rule requires owners or operators of stationary sources to compute emissions, submit periodic reports of such emissions and maintain records as specified by various regulations and permits, and to evaluate reports and records for consistency with the applicable emission limitation or standard on a continuing basis over time. The monitoring data collected and records of operations serve as the basis for a source to certify compliance, and can be used by Tennessee as direct evidence of an enforceable violation of the underlying emission limitation or standard.

Additionally, Tennessee is required to submit emissions data to EPA for purposes of the National Emissions Inventory (NEI). The NEI is EPA's central repository for air emissions data. EPA published the AERR on December 5, 2008, which modified the requirements for collecting and reporting air emissions data (73 FR 76539). The AERR shortened the time states had to report emissions data from 17 to 12 months, giving states one calendar year to submit emissions data. All states are required to submit a comprehensive emissions inventory every three years and report emissions for certain larger sources annually through EPA's online Emissions Inventory System. States report emissions data for the six criteria pollutants and the precursors that form them—nitrogen oxides, sulfur dioxides, ammonia, lead, carbon monoxide, particulate matter, and volatile organic

compounds. Many states also voluntarily report emissions of hazardous air pollutants. Tennessee made its latest update to the 2011 NEI on April 9, 2014. EPA compiles the emissions data, supplementing it where necessary, and releases it to the general public through the Web site <http://www.epa.gov/ttn/chieff/einformation.html>. EPA has made the preliminary determination that Tennessee's SIP and practices are adequate for the stationary source monitoring systems related to the 2012 Annual PM_{2.5} NAAQS.

Regarding credible evidence, TAPCR 1200–3–10–04, *Sampling, Recording, and Reporting Required for Major Stationary Sources*, states that: “the Technical Secretary is authorized to require by permit condition any periodic or enhanced monitoring, recording and reporting that he deems necessary for the verification of the source's compliance with the applicable requirements as defined in paragraph 1200–03–09–02(11).” EPA is unaware of any provision preventing the use of credible evidence in the Tennessee SIP. EPA has made the preliminary determination that Tennessee's SIP and practices are adequate for the stationary source monitoring systems related to the Annual PM_{2.5} NAAQS. Accordingly, EPA is proposing to approve Tennessee's infrastructure SIP submission with respect to section 110(a)(2)(F).

8. 110(a)(2)(G) *Emergency Powers*: Section 110(a)(2)(G) of the Act requires that states demonstrate authority comparable with section 303 of the CAA and adequate contingency plans to implement such authority. Tennessee's emergency powers are outlined in TAPCR 1200–03–15, *Emergency Episode Plan*, which establishes the criteria for declaring an air pollution episode (air pollution alert, air pollution warning, or air pollution emergency), specific emissions reductions for each episode level, and emergency episode plan requirements for major sources located in or significantly impacting a nonattainment area. Additional emergency powers are codified in TCA 68–201–109, *Emergency Stop Orders for Air Contaminant Sources*. Under TCA 68–201–109, if the Commissioner of TDEC finds that emissions from the operation of one or more sources are causing imminent danger to human health and safety, the Commissioner may, with the approval of the Governor, order the source(s) responsible to reduce or discontinue immediately its (their) air emissions. Additionally, this State law requires a hearing to be held before

the Commissioner within 24 hours of any such order.

Regarding the public welfare and environment, TCA 68–201–106, *Matters to be considered in exercising powers*, states that “In exercising powers to prevent, abate and control air pollution, the board or department shall give due consideration to all pertinent facts, including, but not necessarily limited to: (1) The character and degree of injury to, or interference with, the protection of the health, general welfare and physical property of the people. . . .” Also, TCA 68–201–116, *Orders and assessments of damages and civil penalty Appeal*, provides in subsection (a) that if the Tennessee technical secretary discovers that any State air quality regulation has been violated, the Tennessee technical secretary may issue an order to correct the violation, and this order shall be complied with within the time limit specified in the order. EPA has made the preliminary determination that Tennessee’s SIP and practices are adequate for emergency powers related to the 2012 Annual PM_{2.5} NAAQS. Accordingly, EPA is proposing to approve Tennessee’s infrastructure SIP submission with respect to section 110(a)(2)(G).

9. 110(a)(2)(H) *SIP Revisions*: Section 110(a)(2)(H), in summary, requires each SIP to provide for revisions of such plan (i) as may be necessary to take account of revisions of such national primary or secondary ambient air quality standard or the availability of improved or more expeditious methods of attaining such standard, and (ii) whenever the Administrator finds that the plan is substantially inadequate to attain the NAAQS or to otherwise comply with any additional applicable requirements. As previously discussed, TDEC is responsible for adopting air quality rules and revising SIPs as needed to attain or maintain the NAAQS in Tennessee.

Section 68–201–105(a) of the Tennessee Air Quality Act authorizes the Tennessee Air Pollution Control Board to promulgate rules and regulations to implement this State statute, including setting and implementing ambient air quality standards, emission standards, general policies or plans, a permits system, and a schedule of fees for review of plans and specifications, issuance or renewal of permits, and inspection of sources. EPA has made the preliminary determination that Tennessee’s SIP and practices adequately demonstrate a commitment to provide future SIP revisions related to the 2012 Annual PM_{2.5} NAAQS when necessary.

Accordingly, EPA is proposing to approve Tennessee’s infrastructure SIP submission with respect to section 110(a)(2)(H).

10. 110(a)(2)(J) *Consultation with Government Officials, Public Notification, and PSD and Visibility Protection*: EPA is proposing to approve Tennessee’s infrastructure SIP submission for the 2012 Annual PM_{2.5} NAAQS with respect to the general requirement in section 110(a)(2)(J) to include a program in the SIP that complies with the applicable consultation requirements of section 121, the public notification requirements of section 127, PSD and visibility protection. EPA’s rationale for each sub-element is described below.

Consultation with government officials (121 consultation): Section 110(a)(2)(J) of the CAA requires states to provide a process for consultation with local governments, designated organizations and Federal Land Managers (FLMs) carrying out NAAQS implementation requirements pursuant to section 121 relative to consultation. The following State rule, as well as the State’s Regional Haze Implementation Plan (which allows for consultation between appropriate state, local, and tribal air pollution control agencies as well as the corresponding FLMs), provide for consultation with government officials whose jurisdictions might be affected by SIP development activities: TAPCR 1200–03–34, *Conformity*, provides for interagency consultation on transportation and general conformity issues. Tennessee adopted state-wide consultation procedures for the implementation of transportation conformity which includes the development of mobile inventories for SIP development. These consultation procedures were developed in coordination with the transportation partners in the State and are consistent with the approaches used for development of mobile inventories for SIPs. Required partners covered by Tennessee’s consultation procedures include Federal, state and local transportation and air quality agency officials. EPA has made the preliminary determination that Tennessee’s SIP and practices adequately demonstrate consultation with government officials related to the 2012 Annual PM_{2.5} NAAQS when necessary. Accordingly, EPA is proposing to approve Tennessee’s infrastructure SIP submission with respect to section 110(a)(2)(J) consultation with government officials.

Public notification: These requirements are met through the State’s existing Air Quality Index and Air

Quality Forecasting programs, which provide a method to alert the public if any NAAQS is exceeded in an area. Additionally, the State’s annual monitoring plan update is sent out each year for public review and comment. EPA has made the preliminary determination that Tennessee’s SIP and practices adequately demonstrate the State’s ability to provide public notification related to the 2012 Annual PM_{2.5} NAAQS when necessary. Accordingly, EPA is proposing to approve Tennessee’s infrastructure SIP submission with respect to section 110(a)(2)(J) public notification.

PSD: With regard to the PSD element of section 110(a)(2)(J), this requirement is met by a state’s confirmation in an infrastructure SIP submission that it has a PSD program meeting all the current structural requirements of part C of title I of the CAA. As discussed in more detail above under section 110(a)(2)(C), Tennessee’s SIP contains a PSD program that includes the required structural PSD requirements to satisfy the requirement of the PSD element of section 110(a)(2)(J). EPA has made the preliminary determination that Tennessee’s SIP and practices are adequate for PSD permitting of major sources and major modifications related to the 2012 Annual PM_{2.5} NAAQS for the PSD element of section 110(a)(2)(J). Accordingly, EPA is proposing to approve Tennessee’s infrastructure SIP submission with respect to the PSD element of section 110(a)(2)(J).

Visibility protection: EPA’s 2013 Guidance notes that it does not treat the visibility protection aspects of section 110(a)(2)(J) as applicable for purposes of the infrastructure SIP approval process. EPA recognizes that states are subject to visibility protection and regional haze program requirements under part C of the Act (which includes sections 169A and 169B). However, there are no newly applicable visibility protection obligations after the promulgation of a new or revised NAAQS. Thus, EPA has determined that states do not need to address the visibility component of 110(a)(2)(J) in infrastructure SIP submittals. As such, EPA has made the preliminary determination that it does not need to address the visibility protection element of section 110(a)(2)(J) in Tennessee’s infrastructure SIP submission related to the 2012 Annual PM_{2.5} NAAQS.

11. 110(a)(2)(K) *Air Quality Modeling and Submission of Modeling Data*: Section 110(a)(2)(K) of the CAA requires that SIPs provide for performing air quality modeling so that effects on air quality of emissions from NAAQS pollutants can be predicted and

submission of such data to the EPA can be made. TAPCR 1200–03–09–.01(4), *Prevention of Significant Air Quality Deterioration*, specifies when modeling and when monitoring (pre- or post-construction) must be performed and that the resulting data be made available for review to EPA. Tennessee also states that it has personnel with training and experience to conduct dispersion modeling consistent with models approved by EPA protocols. Also note that TCA 68–201–105(b)(7) grants TDEC the power and duty to collect and disseminate information relative to air pollution. Additionally, Tennessee participates in a regional effort to coordinate the development of emissions inventories and conduct regional modeling for several NAAQS, including the 2012 Annual PM_{2.5} NAAQS, for the Southeastern states. Taken as a whole, Tennessee’s air quality regulations and practices demonstrate that TDEC has the authority to provide relevant data for the purpose of predicting the effect on ambient air quality of the Annual PM_{2.5} NAAQS. EPA has made the preliminary determination that Tennessee’s SIP and practices adequately demonstrate the State’s ability to provide for air quality modeling, along with analysis of the associated data, related to the 2012 Annual PM_{2.5} NAAQS. Accordingly, EPA is proposing to approve Tennessee’s infrastructure SIP submission with respect to section 110(a)(2)(K).

12. 110(a)(2)(L) *Permitting fees*: Section 110(a)(2)(L) requires the owner or operator of each major stationary source to pay to the permitting authority, as a condition of any permit required under the CAA, a fee sufficient to cover: (i) The reasonable costs of reviewing and acting upon any application for such a permit, and (ii) if the owner or operator receives a permit for such source, the reasonable costs of implementing and enforcing the terms and conditions of any such permit (not including any court costs or other costs associated with any enforcement action), until such fee requirement is superseded with respect to such sources by the Administrator’s approval of a fee program under title V.

In Tennessee, funding for review of PSD and NNSR permits comes from permit-specific fees that are charged to new applicants and from annual emission fees charged to existing title V emission sources that are applying for major modifications under PSD or NNSR. The cost of reviewing, approving, implementing, and enforcing PSD and major NNSR permits are covered under the following State

regulations: (1) TAPCR 1200–03–26–.02(5) requires each new major stationary source to pay a construction permit application filing/processing fee and (2) TAPCR 1200–03–26–.02(9), *Annual Emission Fees for Major Sources*,²⁰ mandates that existing major stationary sources pay annual title V emission fees, which are used to cover the permitting costs for any new construction or modifications at these facilities as well as implementation and enforcement of PSD and NNSR permits after they have been issued. EPA has made the preliminary determination that Tennessee adequately provides for permitting fees related to the 2012 Annual PM_{2.5} NAAQS when necessary. Accordingly, EPA is proposing to approve Tennessee’s infrastructure SIP submission with respect to section 110(a)(2)(L).

13. 110(a)(2)(M) *Consultation/participation by affected local entities*: Section 110(a)(2)(M) of the Act requires states to provide for consultation and participation in SIP development by local political subdivisions affected by the SIP. TCA 68–201–105, *Powers and duties of board Notification of vacancy Termination due to vacancy*, authorizes and requires the Tennessee Air Pollution Control Board to promulgate rules and regulations related to consultation under the provisions of the State’s Uniform Administrative Procedures Act. TCA 4–5–202, *When hearings required*, requires agencies to precede all rulemaking with a notice and public hearing, except for exemptions. TCA 4–5–203, *Notice of hearing*, states that whenever an agency is required by law to hold a public hearing as part of its rulemaking process, the agency shall: “(1) Transmit written notice of the hearings to the secretary of state for publication in the notice section of the administrative register Web site . . . and (2) Take such other steps as it deems necessary to convey effective notice to persons who are likely to have an interest in the proposed rulemaking.” TCA 68–201–105(b)(7) authorizes and requires TDEC to “encourage voluntary cooperation of affected persons or groups in preserving and restoring a reasonable degree of air purity; advise, consult and cooperate with other agencies, persons or groups in matters pertaining to air pollution; and encourage authorized air pollution agencies of political subdivisions to handle air pollution problems within their respective jurisdictions to the greatest extent possible and to provide

technical assistance to political subdivisions. . .”. TAPCR 1200–03–34, *Conformity*, requires interagency consultation on transportation and general conformity issues. Additionally, TDEC has, in practice, consulted with local entities for the development of its transportation conformity SIP and has worked with the FLMs as a requirement of EPA’s regional haze rule. EPA has made the preliminary determination that Tennessee’s SIP and practices adequately demonstrate consultation with affected local entities related to the 2012 Annual PM_{2.5} NAAQS. Accordingly, EPA is proposing to approve Tennessee’s infrastructure SIP submission with respect to section 110(a)(2)(M).

V. Proposed Action

With the exception of interstate transport provisions pertaining to the contribution to nonattainment or interference with maintenance in other states and visibility protection requirements of section 110(a)(2)(D)(i)(I) and (II) (prongs 1, 2, and 4), EPA is proposing to approve Tennessee’s infrastructure submission submitted on December 16, 2015, for the 2012 Annual PM_{2.5} NAAQS for the above described infrastructure SIP requirements. EPA is proposing to approve Tennessee’s infrastructure SIP submission for the 2012 Annual PM_{2.5} NAAQS because the submission is consistent with section 110 of the CAA.

VI. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable federal regulations. *See* 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA’s role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this proposed action merely approves state law as meeting federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this proposed action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- is certified as not having a significant economic impact on a substantial number of small entities

²⁰ Title V program regulations are federally-approved but not incorporated into the federally-approved SIP.

under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);

- does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and
- does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), nor will it impose substantial direct costs on tribal governments or preempt tribal law.

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Nitrogen dioxide, Ozone, Particulate matter, Reporting and recordkeeping requirements, Volatile organic compounds.

Authority: 42 U.S.C. 7401 *et seq.*

Dated: December 20, 2016.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R09–OAR–2016–0702; FRL–9957–95–Region 9]

Approval of Arizona Air Plan Revisions, Arizona Department of Environmental Quality and Pinal County Air Quality Control District

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve revisions to the Arizona State Implementation Plan (SIP). These revisions include a state statute and certain state rules that govern air pollution sources under the Arizona Department of Environmental Quality (ADEQ) and the Pinal County Air Quality Control District (PDAQCD). These revisions concern emissions of particulate matter (PM) from construction sites, agricultural activity and other fugitive dust sources. We are proposing to approve local rules to regulate these emission sources under the Clean Air Act (CAA or the Act). We are taking comments on this proposal and plan to follow with a final action.

DATES: Any comments must arrive by February 8, 2017.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R09–OAR–2016–0702 at <http://www.regulations.gov>, or via email to Steckel.Andrew@epa.gov. For comments submitted at [Regulations.gov](http://www.regulations.gov), follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from [Regulations.gov](http://www.regulations.gov). For either manner of submission, the EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the

official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.*, on the web, cloud, or other file sharing system). For additional submission methods, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section. For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit <http://www2.epa.gov/dockets/commenting-epa-dockets>.

FOR FURTHER INFORMATION CONTACT: Christine Vineyard, EPA Region IX, (415) 947–4125, vineyard.christine@epa.gov.

SUPPLEMENTARY INFORMATION:

Throughout this document, “we,” “us” and “our” refer to the EPA.

Table of Contents

- I. The State’s Submittal
 - A. What statute and rules did the State submit?
 - B. Are there other versions of the statute and rules?
 - C. What is the purpose of the submitted rules and statute revisions?
- II. The EPA’s Evaluation and Action
 - A. How is the EPA evaluating the rules and statute?
 - B. Do the rules and statute meet the evaluation criteria?
 - C. EPA Recommendations To Further Improve the Rules
 - D. Public Comment and Proposed Action
- III. Incorporation by Reference
- IV. Statutory and Executive Order Reviews

I. The State’s Submittal

A. What statute and rules did the State submit?

Table 1 lists the statute and rules addressed by this proposal with the dates that they were adopted by the state or local air agency and submitted by the ADEQ.

TABLE 1—SUBMITTED STATUTE AND RULES

Local agency	Rule No.	Rule title	Adopted	Submitted
PCAQCD	Chapter 4—Article 1	Fugitive Dust	10/28/15	12/21/15
PCAQCD	Chapter 4—Article 3	Construction Sites—Fugitive Dust	10/28/15	12/21/15
Arizona Revised Statutes (ARS)	Statute No.	Statute title	Effective date	Submitted
ARS	§ 49–424	Duties of Department	4/18/14	12/21/15
Arizona Administrative Code (AAC) Rule No.	AAC No.	AAC title	Amended/ effective date	Submitted
AAC	R18–2–210	Attainment, Nonattainment, and Unclassifiable Area Designations.	07/01/14	12/21/15
AAC	R18–2–610	Definitions for R18–2–610.01, R18–2–610.02, and R18–2–610.03.	07/02/15	12/21/15
AAC	R18–2–610.03	Agricultural PM General Permit for Crop Operations; Pinal County PM Nonattainment Area.	07/02/15	12/21/15
AAC	R18–2–612	Definitions for R18–2–612.01	07/02/15	12/21/15
AAC	R18–2–612.01	Agricultural PM General Permit for Irrigation Districts; PM Nonattainment Areas Designated After June 1, 2009.	07/02/15	12/21/15
AAC	Appendix 2	Test Methods and Protocols	07/02/15	12/21/15

On March 21, 2016, the EPA determined that the submitted revisions from ADEQ and PCAQCD listed in Table 1 met the completeness criteria in 40 CFR part 51 Appendix V, which must be met before formal EPA review.

B. Are there other versions of the statute and rules?

There are no previous versions of PCAQCD Chapter 4, Articles 1 and 3 in the SIP. Table 2 lists versions of the

statute and rules EPA has previously approved into the SIP.

TABLE 2—SIP-APPROVED RULES

ARS	Title	Existing SIP-approved rule superseded by this action	Previous approval
§ 49–424	Duties of Department	49–424 (2011) Duties of Department	77 FR 66398 11/05/12
AAC	Title	Existing SIP superseded by this action	Previous Approval
R18–2–210	Attainment, Nonattainment, and Unclassifiable Area Designations.	Attainment, Nonattainment, and Unclassifiable Area Designations.	79 FR 56656 09/23/14
Appendix 2	Test Methods and Protocols	Test Methods and Protocols	79 FR 56655 09/23/15

In addition, we note that SIP-approved rule R18–2–610, “Definitions for R18–2–611,” has the same AAC number as new rule R18–2–610, “Definitions for R18–2–610.01 R18–2–610.02, and R18–2–610.03,” but is not superseded by the new rule. See 66 FR 51869 (October 11, 2001). Both versions of R18–2–610 will be in the SIP, but can be differentiated by their different titles and dates.

C. What is the purpose of the submitted rule and statute revisions?

Particulate matter, including PM equal to or less than 2.5 microns in diameter (PM_{2.5}) and PM equal to or less than 10 microns in diameter (PM₁₀), contributes to effects that are harmful to human health and the environment, including premature mortality,

aggravation of respiratory and cardiovascular disease, decreased lung function, visibility impairment, and damage to vegetation and ecosystems. Section 110(a) of the CAA requires states to submit regulations that control PM emissions.

PCAQCD Chapter 4, Article 1—Fugitive Dust

- New rule applies to open areas/ vacant lots, unpaved roads, unpaved lots and paved public roadways.
- Establishes a 20 percent opacity limit.
- Requires no trespassing signs, physical barriers or other effective control measures upon evidence of trespass.

- Limits silt content on unpaved lots and roads to eight percent and six percent respectively.

PCAQCD Chapter 4, Article 3—Construction Sites—Fugitive Dust

- New rule designed to regulate PM₁₀ emissions attributed to construction activities under both stagnation and windy conditions.

- Limits opacity to 20 percent.

ARS § 49–424—Duties of Department

- Revised rule extends the requirement to develop and disseminate air quality dust forecasts to the Maricopa County PM₁₀ maintenance area and any other PM₁₀ nonattainment or maintenance areas designated on or after December 31, 2011.

AAC R18-2-210—Attainment, Nonattainment, and Unclassifiable Area Designations

- Revised rule reflects updated 40 CFR 81.303 as amended July 1, 2014.

AAC R18-2-610—Definitions for R18-2-610.01, R18-2-610.02, and R18-2-610.03

- New rule provides definitions for commercial farms general permit rule and applies to general permit rules in other specified nonattainment areas.

AAC R18-2-610.03—Agricultural PM General Permit for Crop Operations; Pinal County PM Attainment Area

- New menu-based rule requires a general permit for commercial farms in the Pinal County PM Nonattainment Area.
- Requires implementation of at least one (best management practice) BMP in the following five categories: Tillage, ground operations and harvest, noncropland, commercial farm roads, and cropland. Beginning in calendar year 2017, and no more than once every subsequent three years, requires facility response to an ADEQ survey on BMP implementation.

AAC R18-2-612—Definitions for R18-2-612.01

- New rule provides definitions for R18-2-612.01.

AAC R18-2-612.01—Agricultural PM General Permit for Irrigation Districts; PM Nonattainment Areas Designated After June 1, 2009

- New menu-based rule requires a general permit for irrigation districts in nonattainment areas designated after June 1, 2009.
- Requires implementation of at least one BMP in the following three categories: unpaved operation and maintenance roads, canals, and unpaved utility access roads.
- Beginning in calendar year 2017, and no more than once every subsequent three years, requires irrigation district response to an ADEQ survey on BMP implementation.

AAC Appendix 2—Test Methods and Protocol

- Revised rule adds section L: 40 CFR 51.128 Appendix A (1)(B) and section M: Silt Content Test Method.

The EPA's technical support documents (TSDs) have more information about these rules.

II. The EPA's Evaluation and Action

A. How is the EPA evaluating the statute and rules?

SIP rules must be enforceable (see CAA section 110(a)(2)), must not interfere with applicable requirements concerning attainment and reasonable further progress or other CAA requirements (see CAA section 110(l)), and are limited in how they can modify certain SIP control requirements in nonattainment areas (see CAA section 193).

In addition, generally, SIP rules must implement Reasonably Available Control Measures (RACM), including Reasonably Available Control Technology (RACT), in moderate PM_{2.5}/PM₁₀ nonattainment areas (see CAA sections 172(c)(1) and 189(a)(1)(C)). The PCAQCD regulates a PM₁₀ nonattainment area classified as moderate for the 1987 24-hour PM₁₀ National Ambient Air Quality Standard (NAAQS) (40 CFR 81.303).¹ A RACM evaluation is generally performed in context of a broader plan, so we are not proposing to determine whether ADEQ has demonstrated RACM for the Pinal area as part of this notice.

Guidance and policy documents that we use to evaluate enforceability, revision/relaxation and rule stringency requirements for the applicable criteria pollutants include the following:

1. "State Implementation Plans; General Preamble for the Implementation of Title I of the Clean Air Act Amendments of 1990," 57 FR 13498 (April 16, 1992); 57 FR 18070 (April 28, 1992).
2. "Issues Relating to VOC Regulation Cutpoints, Deficiencies, and Deviations," EPA, May 25, 1988 (the Bluebook, revised January 11, 1990).
3. "Guidance Document for Correcting Common VOC & Other Rule Deficiencies," EPA Region 9, August 21, 2001 (the Little Bluebook).
4. "PM-10 Guideline Document," EPA 452/R-93-008, April 1993.
5. "Fugitive Dust Background Document and Technical Information Document for Best Available Control Measures," EPA 450/2-92-004, September 1992.

B. Do the rules and statute meet the evaluation criteria?

We believe these rules and statute are consistent with CAA requirements and relevant guidance and fulfill the evaluation criteria. The statute and rules are clear and contain adequate testing,

¹The 1997 PM₁₀ 24-hour National Ambient Air Quality Standard (primary and secondary) is 150 micrograms per cubic meter. See <https://www.epa.gov/criteria-air-pollutants/naaqs-table>.

recordkeeping and reporting requirements to be sufficiently enforceable. The statute and rules strengthen effective requirements (e.g., by strengthening/adding general permit rules and BMPs for agricultural operations) and are consistent with CAA section 193. The statute and rules generally impose RACT-level requirements (e.g., the revisions limit silt content on unpaved lots and roads to eight percent and six percent respectively) for the affected categories.

The TSDs have more information on our evaluation.

C. EPA recommendations To Further Improve the Rules

The TSDs describe additional rule revisions that we recommend for the next time the state and local agency modifies the rules.

D. Public Comment and Proposed Action

As authorized in section 110(k)(3) of the Act, the EPA proposes to fully approve the submitted rules and statute because we believe they fulfill all relevant requirements. We will accept comments from the public on this proposal until February 8, 2017. Unless we receive convincing new information during the comment period, we intend to publish a final approval action that will incorporate these rules and statute into the federally-enforceable SIP.

III. Incorporation by Reference

In this rule, the EPA is proposing to include in a final EPA rule regulatory text that includes incorporation by reference. In accordance with requirements of 1 CFR 51.5, the EPA is proposing to incorporate by reference the PCAQCD/ADEQ rules/statute as described in Table 1 of this notice. The EPA has made, and will continue to make, these documents available electronically through www.regulations.gov and in hard copy at the appropriate EPA office (see the **ADDRESSES** section of this preamble for more information).

IV. Statutory and Executive Order Reviews

Under the Clean Air Act, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the Clean Air Act. Accordingly, this proposed action merely proposes to approve state law as meeting federal requirements and does

not impose additional requirements beyond those imposed by state law. For that reason, this proposed action:

- Is not a “significant regulatory action” subject to review by the Office of Management and Budget under Executive Order 12866 (58 FR 51735, October 4, 1993);
- does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act; and
- does not provide the EPA with the discretionary authority to address disproportionate human health or environmental effects with practical, appropriate, and legally permissible methods under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where the EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications and will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations,

[EPA–R09–OAR–2016–0287; FRL–9957–63–Region 9]

Approval of Arizona Air Plan Revisions; Ajo and Morenci, Arizona; Second 10-Year Sulfur Dioxide Maintenance Plans and Technical Correction

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve the second ten-year maintenance plans for the Ajo and Morenci areas in Arizona for the 1971 National Ambient Air Quality Standards (NAAQS) for sulfur dioxide (SO₂), and to correct an error in the description of the Ajo, Arizona SO₂ maintenance area in the *Code of Federal Regulations*.

DATES: Any comments on this proposal must arrive by February 8, 2017.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R09–OAR–2016–0287 at <http://www.regulations.gov>, or via email to Wienke Tax, at tax.wienke@epa.gov. For comments submitted at *Regulations.gov*, follow the online instructions for submitting comments. Once submitted, comments cannot be removed or edited from *Regulations.gov*. For either manner of submission, the EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not

consider comments or comment contents located outside of the primary submission (*i.e.*, on the web, cloud, or other file sharing system). For additional submission methods, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section. For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit <http://www2.epa.gov/dockets/commenting-epa-dockets>.

FOR FURTHER INFORMATION CONTACT: Wienke Tax, EPA Region IX, (415) 947–4192, tax.wienke@epa.gov.

SUPPLEMENTARY INFORMATION:

Throughout this document, “we,” “us” and “our” refer to the EPA. This proposal addresses the second ten-year maintenance plans submitted by the Arizona Department of Environmental Quality to address the 1971 SO₂ NAAQS in the Ajo and Morenci maintenance areas, AZ. In the Rules and Regulations section of this **Federal Register**, we are approving these second ten-year maintenance plans in a direct final action without prior proposal because we believe these SIP revisions are not controversial. If we receive adverse comments, however, we will publish a timely withdrawal of the direct final rule and address the comments in subsequent action based on this proposed rule. If we receive adverse comment on a distinct provision of this rulemaking, *i.e.*, our action regarding only one maintenance plan, we will publish a timely withdrawal in the **Federal Register** indicating which provisions we are withdrawing. The provisions that are not withdrawn, *i.e.*, our approval of the other maintenance plan that is not the subject of an adverse comment, will become effective on the date set out above, notwithstanding adverse comment on the other maintenance plan.

We do not plan to open a second comment period, so anyone interested in commenting should do so at this time. If we do not receive adverse comments, no further activity is planned. For further information, please see the direct final action.

Dated: December 15, 2016.

Alexis Strauss,

Acting Regional Administrator, Region IX.

Monday, January 9, 2017

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Rural Utilities Service

Rural Broadband Access Loans and Loan Guarantees Program

AGENCY: Rural Utilities Service, USDA.

ACTION: Notice of Solicitation of Applications (NOSA).

SUMMARY: The Rural Utilities Service (RUS), an agency of the United States Department of Agriculture (USDA), announces that it is accepting applications for fiscal year (FY) 2017 for the Rural Broadband Access Loan and Loan Guarantee program (the Broadband Program). There will be two application windows for FY 2017.

In addition to announcing the application windows, RUS announces the minimum and maximum amounts for broadband loans for FY 2017.

DATES: Unless otherwise extended by a notice of funds availability, applications for the first application window under this NOSA must be submitted from March 1, 2017, through March 31, 2017, and for the second application window from September 1, 2017, through September 30, 2017. Applications can only be submitted through the Agency's online application system during the periods specified above; however, applicants may begin working on their applications in the online system as outlined below.

FOR FURTHER INFORMATION CONTACT: For further information contact Shawn Arner, Deputy Assistant Administrator, Loan Originations and Approval Division, Rural Utilities Service, Room 2844, STOP 1597, 1400 Independence Avenue SW., Washington, DC 20250-1597, Telephone: (202) 720-0800, or email: Shawn.Arner@wdc.usda.gov.

SUPPLEMENTARY INFORMATION:

General Information

The Rural Broadband Access Loan and Loan Guarantee Program (the

“Broadband Program”) is authorized by the Rural Electrification Act (7 U.S.C. 901 *et seq.*), as amended by the Agricultural Act of 2014 (Pub. L. 113-79) also referred to as the 2014 Farm Bill.

During FY 2017, loans will be made available for the construction, improvement, and acquisition of facilities and equipment to provide service at the broadband lending speed for eligible rural areas. Applications are subject to the requirements of 7 CFR 1738.

Application Assistance

Since the implementation of the requirements of the 2014 Farm Bill, RUS has held two application windows. After reviewing the applications for eligibility, RUS has determined that there is considerable misunderstanding of the revised requirements for the Broadband Program. Under the two previous windows, once an application was submitted, RUS could not contact an applicant for additional information and the application had to be evaluated on the information that was submitted. If incorrect or inadequate information was submitted or a regulatory requirement was not met, an applicant did not have the ability to adjust its application and RUS was forced to reject it as incomplete or inadequate. In order to break with the pattern of wide scale applications that do not meet the regulation's requirements, RUS will place additional emphasis on providing assistance to applicants with submitting complete applications. As a result, RUS will open pre-application periods, in which National Office staff as well as the General Field Representative assigned to the project will be able to review the draft application, provide detailed comments, and identify when an application is not meeting eligibility requirements for funding. The online application system will allow RUS staff to assist an applicant with completing every part of an application as it is being developed.

The first pre-application window will open on January 9, 2017, and application assistance will be available until the application is formally submitted for consideration by the applicant, but no later than midnight, Eastern Time, on March 24, 2017. Once the application is formally submitted, RUS will be unable to provide

additional assistance with completing the application and will begin reviewing the application for conformance with the broadband regulation with respect to eligibility and technical and financial feasibility. In addition, once an application is formally submitted through the online system, the applicant can no longer submit supporting information. For assistance with an application, please contact Shawn Arner, Deputy Assistant Administrator, Loan Originations and Approval Division, Rural Utilities Service, Room 2844, STOP 1597, 1400 Independence Avenue SW., Washington, DC 20250-1597, Telephone: (202) 720-0800, or email: Shawn.Arner@wdc.usda.gov. If an application is ultimately found to be incomplete or inadequate for funding after it is formally submitted, a detailed explanation will be provided to the applicant at least thirty days prior to the opening of the second window of FY 2017 for formally submitting applications.

The second pre-application window will open on July 1, 2017, and application assistance will be available until the application is formally submitted for consideration by the applicant, but not later than midnight, Eastern Time, on September 22, 2017. As with the first pre-application window, once an application is formally submitted, RUS will be unable to provide additional assistance with completing the application and will begin reviewing the application for conformance with the broadband regulation with respect to eligibility and technical and financial feasibility. In addition, once an application is formally submitted through the online system, the applicant can no longer submit supporting information. Please contact Shawn Arner at the above contact information if you would like assistance with your application. If an application is ultimately found to be incomplete or inadequate, a detailed explanation will be provided to the applicant.

To further assist in the preparation of applications, an application guide is available online at: <http://www.rd.usda.gov/programs-services/farm-bill-broadband-loans-loan-guarantees>. Application guides may also be requested from the RUS contact listed in the **FOR FURTHER INFORMATION CONTACT** section of this notice.

Application requirements: All requirements for submission of an application under the Broadband Program are subject to 7 CFR 1738.

Application Materials/Submission: Applications must be submitted through the Agency's online application system located at <http://www.rd.usda.gov/programs-services/rd-apply>. All materials required for completing an application are included in the online system.

Items of Special Emphasis: The following items have been overlooked or inadequately addressed in a number of applications received in the last two application cycles. They are highlighted below to help ensure that future applications do not have the same deficiencies.

- *Calculation of Additional Cash Requirement 7 CFR 1738.208:* Certain applications may need to satisfy an additional cash requirement even though they have addressed the equity requirement covered in 7 CFR 1738.207 (an element of a complete application in accordance with 7 CFR 1738.202(c)). If an applicant is either a start-up operation or has not demonstrated positive cash flow from operations for the two years prior to the submission date of the application, then the applicant must submit adjusted financial projections in which projected revenues are decreased by 50 percent for each year of the five-year forecast period, unless revenues are based on documented binding commitments which would preclude such a drop. If the adjusted financial projections show an inadequate cash balance at the end of any year during the five-year forecast period, the amount of cash necessary to eliminate that cash insufficiency is the Additional Cash Requirement for the application.

- *Equity requirement 7 CFR 1738.207:* If an applicant has equity at the time of application equal to less than 10 percent of the requested loan amount, then the applicant must submit either an investor commitment or a commitment to issue a general obligation bond, along with a legal opinion demonstrating that the applicant has the authority to issue such a bond in an amount sufficient to meet the equity requirement (this second option is available to State, Tribal and local government applicants only). If an applicant submits more than one application, then the equity requirement will be calculated based on the sum of the requested loan amounts, as if all applications will be successful.

- *Market survey (7 CFR 1738.209):* If a market survey is required, the survey must have been completed within 6

months of the application submission date.

- *Methodology and Assumptions included with Financial Information (7 CFR 1738.211):* The narrative explaining the methodology and assumptions used to develop the financial projections for the five-year forecast period (7 CFR 1738.211(b)(2)) and the adjusted financial projections, if applicable (7 CFR 1738.208(a)(2)), must adequately address every category in the pro-forma financial statements. This narrative should include a discussion of any historical trends or anomalies and their impact on the forecast(s). The applicant should not only include any calculations or percentage changes in the assumptions but also discuss the reasons for choosing any multipliers or percentage increases/decreases for the forecast.

- *Audited Financial Statements vs. Unaudited Financial Statements plus Tax Returns (7 CFR 1738.211(a)(1)–(3)):* Audited financial statements submitted in compliance with 7 CFR 1738.211(a)(1)–(3) must be audited and certified by an independent certified public accountant (CPA) and include an opinion, balance sheet, income statement, statement of changes in financial position, and notes to the financial statements. Compilations or reviews are considered unaudited financial statements, even if a CPA was involved in their preparation or presentation. If an applicant submits unaudited statements, tax returns for the relevant years are also required. Start-up entities must provide, at a minimum, an opening balance sheet dated within 30 days of the final submission of all application material.

Minimum and Maximum Loan Amounts

Loans under this authority will not be made for less than \$100,000. The maximum loan amount that will be considered for FY 2017 is \$10,000,000.

Required Definitions for Broadband Program Regulation

The regulation for the Broadband Program requires that certain definitions affecting eligibility be revised and published from time to time by the agency in the **Federal Register**. For the purposes of this NOSA, the agency is revising the definition of Broadband Service, such that for applications submitted under these two windows, existing Broadband Service shall mean the minimum rate-of-data transmission of ten megabits downstream and one megabit upstream for both mobile and fixed service. With respect to the Broadband Lending Speed, the rate at

which applicants must propose to offer new broadband service is a minimum bandwidth of ten megabits downstream and one megabit upstream for mobile service and twenty-five megabits downstream and three megabits upstream for fixed service to the customer.

Priority for Approving Loan Applications

Applications for FY 2017 will be accepted from March 1, 2017, through March 30, 2017, for the first application window and from September 1, 2017, through September 30, 2017, for the second application window. Although review of applications will start when they are submitted for each window, all applications submitted for the first application period will be evaluated and ranked together based on the percentage of unserved households in the proposed funded service area. Likewise, all applications submitted for the second window will be evaluated and ranked together based on the percentage of unserved households in the proposed funded service area. Subject to available funding, eligible applications that propose to serve the highest percentage of unserved households will receive funding offers before other eligible applications that have been submitted. The amount available for each window will be published on the Agency Web page once the annual appropriation process has been completed.

Applications will not be accepted after September 30, 2017, until a new funding window has been opened with the publication of an additional NOSA in the **Federal Register**.

Paperwork Reduction Act

In accordance with the Paperwork Reduction Act of 1995, the information collection requirements associated with Broadband loans, as covered in this NOSA, have been approved by the Office of Management and Budget (OMB) under OMB Control Number 0572–0130.

USDA Non-Discrimination Statement

In accordance with Federal civil rights law and U.S. Department of Agriculture (USDA) civil rights regulations and policies, the USDA, its Agencies, offices, and employees, and institutions participating in or administering USDA programs are prohibited from discriminating based on race, color, national origin, religion, sex, gender identity (including gender expression), sexual orientation, disability, age, marital status, family/parental status, income derived from a public assistance program, political

beliefs, or reprisal or retaliation for prior civil rights activity, in any program or activity conducted or funded by USDA (not all bases apply to all programs). Remedies and complaint filing deadlines vary by program or incident.

Persons with disabilities who require alternative means of communication for program information (e.g., Braille, large print, audiotape, American Sign Language, etc.) should contact the responsible Agency or USDA's TARGET Center at (202) 720-2600 (voice and TTY) or contact USDA through the Federal Relay Service at (800) 877-8339. Additionally, program information may be made available in languages other than English.

To file a program discrimination complaint, complete the USDA Program Discrimination Complaint Form, AD-3027, found online at http://www.ascr.usda.gov/complaint_filing_cust.html and at any USDA office or write a letter addressed to USDA and provide in the letter all of the information requested in the form. To request a copy of the complaint form, call (866) 632-9992. Submit your completed form or letter to USDA by:

- (1) *Mail*: U.S. Department of Agriculture, Office of the Assistant Secretary for Civil Rights, 1400 Independence Avenue SW., Washington, DC 20250-9410;
 - (2) *Fax*: (202) 690-7442; or
 - (3) *Email*: program.intake@usda.gov.
- USDA is an equal opportunity provider, employer, and lender.

Dated: November 21, 2016.

Brandon McBride,

Administrator, Rural Utilities Service.

BILLING CODE P

DEPARTMENT OF COMMERCE

Foreign-Trade Zones Board

[B-1-2017]

Foreign-Trade Zone (FTZ) 221—Mesa, Arizona; Notification of Proposed Production Activity; Apple Inc. (Data Server Cabinets); Mesa, Arizona

The City of Mesa Office of Economic Development, grantee of FTZ 221, submitted a notification of proposed production activity to the FTZ Board on behalf of Apple Inc. (Apple), located in Mesa, Arizona. The notification conforming to the requirements of the regulations of the FTZ Board (15 CFR 400.22) was received on December 27, 2016.

Apple already has authority to produce certain components for

consumer electronics within Subzone 221A. The current request would add finished products and foreign status materials/components to the scope of authority. Pursuant to 15 CFR 400.14(b), additional FTZ authority would be limited to the specific foreign-status materials/components and specific finished products described in the submitted notification (as described below) and subsequently authorized by the FTZ Board.

Production under FTZ procedures could exempt Apple from customs duty payments on the foreign-status materials/components used in export production. On its domestic sales, Apple would be able to choose the duty rate during customs entry procedures that applies to finished server assembly cabinets (duty-free) for the foreign-status materials/components noted below and in the existing scope of authority. Customs duties also could possibly be deferred or reduced on foreign-status production equipment.

The materials/components sourced from abroad include: Tape; plastic boxes; polyethylene bags; plastic bags; plastic packing; plastic washers; rubber washers; rubber spacers; steel screw hooks; steel screws; steel nuts; steel standoff; steel spring washers; steel washers, not spring/lock type; steel rivets; steel cotter pins; steel springs; steel springs, of wire; steel baffles; copper washers; copper boss; copper nuts; nickel fasteners; aluminum screws; aluminum hooks; metal hinges; metal brackets; fans; fan blades, fan unit housings; servers; input/output units; storage units; smart cables; card readers; server housing/enclosures; printed circuit board assemblies; electric motors; transformers; static converters; inductors; magnets; lithium batteries; lithium polymer batteries; routers and network switches; microphones; CDs, software; solid state drives; semiconductor media; monitors; capacitors; fuses; circuit breakers; power strips; relays; switches; electrical connectors; optical fiber cable connectors; terminals; power strips with rack mounts; diodes; transistors; thyristors; LEDs; electronic integrated circuits; infrared LED strips; data server cables; copper and power cables; cables; optical fiber cables; metal furniture; and, server rack rails (duty rate ranges from duty-free to 8.6%).

Public comment is invited from interested parties. Submissions shall be addressed to the Board's Executive Secretary at the address below. The closing period for their receipt is February 21, 2017.

A copy of the notification will be available for public inspection at the

Office of the Executive Secretary, Foreign-Trade Zones Board, Room 21013, U.S. Department of Commerce, 1401 Constitution Avenue NW., Washington, DC 20230-0002, and in the "Reading Room" section of the Board's Web site, which is accessible via www.trade.gov/ftz.

For further information, contact Elizabeth Whiteman at Elizabeth.Whiteman@trade.gov or (202) 482-0473.

Dated: January 3, 2017.

Andrew McGilvray,

Executive Secretary.

Foreign-Trade Zones Board

[B-62-2016]

Foreign-Trade Zone (FTZ) 20—Newport News, Virginia; Authorization of Production Activity; Canon Virginia, Inc.; Subzone 20D (Toner Cartridges); Newport News, Virginia

On September 2, 2016, Canon Virginia, Inc., submitted a notification of proposed production activity to the Foreign-Trade Zones (FTZ) Board for its facility within Subzone 20D, in Newport News, Virginia.

The notification was processed in accordance with the regulations of the FTZ Board (15 CFR part 400), including notice in the **Federal Register** inviting public comment (81 FR 64870, September 21, 2016). The FTZ Board has determined that no further review of the activity is warranted at this time. The production activity described in the notification is authorized, subject to the FTZ Act and the Board's regulations, including Section 400.14.

Dated: January 3, 2017.

Andrew McGilvray,

Executive Secretary.

DEPARTMENT OF COMMERCE

Foreign-Trade Zones Board

[B-02-2017]

Foreign-Trade Zone (FTZ) 44—Morris County, New Jersey; Notification of Proposed Production Activity; AGFA Corporation (Aluminum Digital Printing Plates); Branchburg, New Jersey

AGFA Corporation (AGFA) submitted a notification of proposed production

activity to the FTZ Board for its facility in Branchburg, New Jersey, within FTZ 44. The notification conforming to the requirements of the regulations of the FTZ Board (15 CFR 400.22) was received on December 19, 2016.

A separate application for subzone designation at the AGFA facility has been submitted and is being processed under Section 400.31 of the FTZ Board's regulations (S-152-2016). The facility is used for the production of aluminum digital printing plates used in the commercial printing industry. Pursuant to 15 CFR 400.14(b), FTZ activity would be limited to the specific foreign-status component and specific finished product described in the submitted notification (as described below) and subsequently authorized by the FTZ Board.

Production under FTZ procedures could exempt AGFA from customs duty payments on the foreign-status components used in export production. On its domestic sales, AGFA would be able to choose the duty rate during customs entry procedures that applies to aluminum digital printing plates (duty free) for foreign-status aluminum coils (duty rate 3%). Customs duties also could possibly be deferred or reduced on foreign-status production equipment.

Public comment is invited from interested parties. Submissions shall be addressed to the FTZ Board's Executive Secretary at the address below. The closing period for their receipt is February 21, 2017.

A copy of the notification will be available for public inspection at the Office of the Executive Secretary, Foreign-Trade Zones Board, Room 21013, U.S. Department of Commerce, 1401 Constitution Avenue NW., Washington, DC 20230-0002, and in the "Reading Room" section of the FTZ Board's Web site, which is accessible via www.trade.gov/ftz.

Pursuant to Section 766.24 of the Export Administration Regulations, 15 CFR parts 730-774 (2016) ("EAR" or the "Regulations"),¹ I hereby grant the

¹ The Regulations, currently codified at 15 CFR parts 730-774 (2016), originally issued pursuant to the Export Administration Act of 1979. Since

request of the Office of Export Enforcement ("OEE") to renew the July 7, 2016 Temporary Denial Order (the "TDO"). The July 7, 2016 Order denied the export privileges of Mahan Airways, Pejman Mahmood Kosarayanifard, Mahmoud Amini, Kerman Aviation, Sirjanco Trading LLC, Ali Eslamian, Mahan Air General Trading LLC, Skyco (UK) Ltd., Equipco (UK) Ltd., Mehdi Bahrami, Al Naser Airlines, Ali Abdullah Alhay, Bahar Safwa General Trading, Sky Blue Bird Group, and Issam Shammout.² I find that renewal of the TDO is necessary in the public interest to prevent an imminent violation of the EAR.

I. Procedural History

On March 17, 2008, Darryl W. Jackson, the then-Assistant Secretary of Commerce for Export Enforcement ("Assistant Secretary"), signed a TDO denying Mahan Airways' export privileges for a period of 180 days on the grounds that its issuance was necessary in the public interest to prevent an imminent violation of the Regulations. The TDO also named as denied persons Blue Airways, of Yerevan, Armenia ("Blue Airways of Armenia"), as well as the "Balli Group Respondents," namely, Balli Group PLC, Balli Aviation, Balli Holdings, Vahid Alaghband, Hassan Alaghband, Blue Sky One Ltd., Blue Sky Two Ltd., Blue Sky Three Ltd., Blue Sky Four Ltd., Blue Sky Five Ltd., and Blue Sky Six Ltd., all of the United Kingdom. The TDO was issued *ex parte* pursuant to Section 766.24(a), and went into effect on March 21, 2008, the date it was published in the **Federal Register**.

The TDO subsequently has been renewed in accordance with Section 766.24(d), including most recently on July 7, 2016.³ As of March 9, 2010, the

August 21, 2001, the Act has been in lapse and the President, through Executive Order 13222 of August 17, 2001 (3 CFR, 2001 Comp. 783 (2002)), which has been extended by successive Presidential Notices, the most recent being that of August 4, 2016 (81 FR 52,58748,223 (Aug. 8, 2016)), has continued the Regulations in effect under the International Emergency Economic Powers Act (50 U.S.C. 1701, *et seq.* (2006 & Supp. IV 2010)).

² See note 3, *infra*.

³ The July 7, 2016 Order was published in the **Federal Register** on July 13, 2016 (81 Fed Reg. 45276). The TDO previously had been renewed on September 17, 2008, March 16, 2009, September 11, 2009, March 9, 2010, September 3, 2010, February 25, 2011, August 24, 2011, February 15, 2012, August 9, 2012, February 4, 2013, July 31, 2013, January 24, 2014, July 22, 2014, January 16, 2015, July 13, 2015, and January 7, 2016. The August 24, 2011 renewal followed the modification of the TDO on July 1, 2011, which added Zarand Aviation as a respondent. The July 13, 2015 renewal followed the modification of the TDO on May 21, 2015, which added Al Naser Airlines, Ali Abdullah Alhay, and Bahar Safwa General Trading as

Balli Group Respondents and Blue Airways were no longer subject to the TDO. As part of the February 25, 2011 TDO renewal, Gatewick LLC (a/k/a Gatewick Freight and Cargo Services, a/k/a Gatewick Aviation Services), Mahmoud Amini, and Pejman Mahmood Kosarayanifard (“Kosarian Fard”) were added as related persons in accordance with Section 766.23 of the Regulations.⁴ On July 1, 2011, the TDO was modified by adding Zarand Aviation as a respondent in order to prevent an imminent violation.⁵ As part of the August 24, 2011 renewal, Kerman Aviation, Sirjanco Trading LLC, and Ali Eslamian were added to the TDO as related persons. Mahan Air General Trading LLC, Skyco (UK) Ltd., and Equipco (UK) Ltd. were added as related persons on April 9, 2012. Mehdi Bahrami was added to the TDO as a related person as part of the February 4, 2013 renewal order.

On May 21, 2015, the TDO was modified to add Al Naser Airlines, Ali Abdullah Alhay, and Bahar Safwa General Trading as respondents. Sky Blue Bird Group and its chief executive officer Issam Shammout were added to the TDO as related persons as part of the July 13, 2015 renewal order.⁶

On December 13, 2016, BIS, through its Office of Export Enforcement (“OEE”), submitted a written request for renewal of the TDO. The written request was made more than 20 days before the scheduled expiration of the current TDO, which issued on July 7, 2016. Notice of the renewal request also was provided to Mahan Airways, Al Naser Airlines, Ali Abdullah Alhay, and Bahar Safwa General Trading in accordance with Sections 766.5 and 766.24(d) of the Regulations. No opposition to the renewal of the TDO has been received. Furthermore, no appeal of the related

respondents. Each renewal or modification order was published in the **Federal Register**.

⁴ On August 13, 2014, BIS and Gatewick LLC resolved administrative charges against Gatewick, including a charge for acting contrary to the terms of a BIS denial order (15 CFR 764.2(k)). In addition to the payment of a civil penalty, the settlement includes a seven-year denial order. The first two years of the denial period are active, with the remaining five years suspended on condition that Gatewick LLC pays the civil penalty in full and timely fashion and commits no further violation of the Regulations during the seven-year denial period. The Gatewick LLC Final Order was published in the **Federal Register** on August 20, 2014. See 79 FR 49283 (Aug. 20, 2014).

⁵ As of July 22, 2014, Zarand Aviation was no longer subject to the TDO.

⁶ The U.S. Department of the Treasury’s Office of Foreign Assets Control (“OFAC”) designated Sky Blue Bird and Issam Shammout as Specially Designated Global Terrorists (“SDGTs”) on May 21, 2015, pursuant to Executive Order 13324, for “providing support to Iran’s Mahan Air.” See 80 FR 30762 (May 29, 2015).

person determinations made as part of the September 3, 2010, February 25, 2011, August 24, 2011, April 9, 2012, February 4, 2013, and July 13, 2015 renewal or modification orders has been made by Kosarian Fard, Mahmoud Amini, Kerman Aviation, Sirjanco Trading LLC, Ali Eslamian, Mahan Air General Trading LLC, Skyco (UK) Ltd., Equipco (UK) Ltd., Mehdi Bahrami, Sky Blue Bird Group, or Issam Shammout.⁷

II. Renewal of the TDO

A. Legal Standard

Pursuant to Section 766.24, BIS may issue or renew an order temporarily denying a respondent’s export privileges upon a showing that the order is necessary in the public interest to prevent an “imminent violation” of the Regulations. 15 CFR 766.24(b)(1) and 766.24(d). “A violation may be ‘imminent’ either in time or degree of likelihood.” 15 CFR 766.24(b)(3). BIS may show “either that a violation is about to occur, or that the general circumstances of the matter under investigation or case under criminal or administrative charges demonstrate a likelihood of future violations.” *Id.* As to the likelihood of future violations, BIS may show that the violation under investigation or charge “is significant, deliberate, covert and/or likely to occur again, rather than technical or negligent [.]” *Id.* A “lack of information establishing the precise time a violation may occur does not preclude a finding that a violation is imminent, so long as there is sufficient reason to believe the likelihood of a violation.” *Id.*

B. The TDO and BIS’s Request for Renewal

OEE’s request for renewal is based upon the facts underlying the issuance of the initial TDO and the TDO renewals in this matter and the evidence developed over the course of this investigation indicating a blatant disregard of U.S. export controls and the TDO. The initial TDO was issued as a result of evidence that showed that Mahan Airways and other parties engaged in conduct prohibited by the EAR by knowingly re-exporting to Iran three U.S.-origin aircraft, specifically Boeing 747s (“Aircraft 1–3”), items subject to the EAR and classified under Export Control Classification Number (“ECCN”) 9A991.b, without the required U.S. Government authorization. Further evidence submitted by BIS indicated

⁷ A party named or added as a related person may not oppose the issuance or renewal of the underlying temporary denial order, but may file an appeal of the related person determination in accordance with Section 766.23(c).

that Mahan Airways was involved in the attempted re-export of three additional U.S.-origin Boeing 747s (“Aircraft 4–6”) to Iran.

As discussed in the September 17, 2008 renewal order, evidence presented by BIS indicated that Aircraft 1–3 continued to be flown on Mahan Airways’ routes after issuance of the TDO, in violation of the Regulations and the TDO itself.⁸ It also showed that Aircraft 1–3 had been flown in further violation of the Regulations and the TDO on the routes of Iran Air, an Iranian Government airline. Moreover, as discussed in the March 16, 2009, September 11, 2009 and March 9, 2010 Renewal Orders, Mahan Airways registered Aircraft 1–3 in Iran, obtained Iranian tail numbers for them (EP–MNA, EP–MNB, and EP–MNE, respectively), and continued to operate at least two of them in violation of the Regulations and the TDO,⁹ while also committing an additional knowing and willful violation when it negotiated for and acquired an additional U.S.-origin aircraft. The additional acquired aircraft was an MD–82 aircraft, which subsequently was painted in Mahan Airways’ livery and flown on multiple Mahan Airways’ routes under tail number TC–TUA.

The March 9, 2010 Renewal Order also noted that a court in the United Kingdom (“U.K.”) had found Mahan Airways in contempt of court on February 1, 2010, for failing to comply with that court’s December 21, 2009 and January 12, 2010 orders compelling Mahan Airways to remove the Boeing 747s from Iran and ground them in the Netherlands. Mahan Airways and the Balli Group Respondents had been litigating before the U.K. court concerning ownership and control of Aircraft 1–3. In a letter to the U.K. court dated January 12, 2010, Mahan Airways’ Chairman indicated, *inter alia*, that Mahan Airways opposes U.S. Government actions against Iran, that it continued to operate the aircraft on its routes in and out of Tehran (and had 158,000 “forward bookings” for these aircraft), and that it wished to continue to do so and would pay damages if required by that court, rather than ground the aircraft.

The September 3, 2010 renewal order discussed the fact that Mahan Airways’ violations of the TDO extended beyond operating U.S.-origin aircraft and

⁸ Engaging in conduct prohibited by a denial order violates the Regulations. 15 CFR 764.2(a) and (k).

⁹ The third Boeing 747 appeared to have undergone significant service maintenance and may not have been operational at the time of the March 9, 2010 renewal order.

attempting to acquire additional U.S.-origin aircraft. In February 2009, while subject to the TDO, Mahan Airways participated in the export of computer motherboards, items subject to the Regulations and designated as EAR99, from the United States to Iran, via the United Arab Emirates (“UAE”), in violation of both the TDO and the Regulations, by transporting and/or forwarding the computer motherboards from the UAE to Iran. Mahan Airways’ violations were facilitated by Gatewick LLC, which not only participated in the transaction, but also has stated to BIS that it acted as Mahan Airways’ sole booking agent for cargo and freight forwarding services in the UAE.

Moreover, in a January 24, 2011 filing in the U.K. court, Mahan Airways asserted that Aircraft 1–3 were not being used, but stated in pertinent part that the aircraft were being maintained in Iran especially “in an airworthy condition” and that, depending on the outcome of its U.K. court appeal, the aircraft “could immediately go back into service . . . on international routes into and out of Iran.” Mahan Airways’ January 24, 2011 submission to U.K. Court of Appeal, at p. 25, ¶¶ 108, 110. This clearly stated intent, both on its own and in conjunction with Mahan Airways’ prior misconduct and statements, demonstrated the need to renew the TDO in order to prevent imminent future violations. Two of these three 747s subsequently were removed from Iran and are no longer in Mahan Airways’ possession. The third of these 747s, with Manufacturer’s Serial Number (“MSN”) 23480 and Iranian tail number EP–MNE, remained in Iran under Mahan’s control. Pursuant to Executive Order 13324, it was designated a Specially Designated Global Terrorist (“SDGT”) by the U.S. Department of the Treasury’s Office of Foreign Assets Control (“OFAC”) on September 19, 2012.¹⁰ Furthermore, as discussed in the February 4, 2013 Order, open source information indicated that this 747, painted in the livery and logo of Mahan Airways, had been flown between Iran and Syria, and was suspected of ferrying weapons and/or other equipment to the Syrian Government from Iran’s Islamic Revolutionary Guard Corps. Open source information showed that this aircraft had flown from Iran to Syria as recently as June 30, 2013, and continues to show that it remains in active operation in Mahan Airways’ fleet.

¹⁰ See <http://www.treasury.gov/resource-center/sanctions/OFAC-Enforcement/pages/20120919.aspx>.

In addition, as first detailed in the July 1, 2011 and August 24, 2011 orders, and discussed in subsequent renewal orders in this matter, Mahan Airways also continued to evade U.S. export control laws by operating two Airbus A310 aircraft, bearing Mahan Airways’ livery and logo, on flights into and out of Iran.¹¹ At the time of the July 1, 2011 and August 24, 2011 Orders, these Airbus A310s were registered in France, with tail numbers F–OJHH and F–OJHI, respectively.¹²

The August 2012 renewal order also found that Mahan Airways had acquired another Airbus A310 aircraft subject to the Regulations, with MSN 499 and Iranian tail number EP–VIP, in violation of the TDO and the Regulations.¹³ On September 19, 2012, all three Airbus A310 aircraft (tail numbers F–OJHH, F–OJHI, and EP–VIP) were designated as SDGTs.¹⁴

The February 4, 2013 Order laid out further evidence of continued and additional efforts by Mahan Airways and other persons acting in concert with Mahan, including Kral Aviation and another Turkish company, to procure U.S.-origin engines—two GE CF6–50C2 engines, with MSNs 517621 and 517738, respectively—and other aircraft parts in violation of the TDO and the Regulations.¹⁵ The February 4, 2013

¹¹ The Airbus A310s are powered with U.S.-origin engines. The engines are subject to the EAR and classified under Export Control Classification (“ECCN”) 9A991.d. The Airbus A310s contain controlled U.S.-origin items valued at more than 10 percent of the total value of the aircraft and as a result are subject to the EAR. They are classified under ECCN 9A991.b. The export or reexport of these aircraft to Iran requires U.S. Government authorization pursuant to Sections 742.8 and 746.7 of the Regulations.

¹² OEE subsequently presented evidence that after the August 24, 2011 renewal, Mahan Airways worked along with Kerman Aviation and others to de-register the two Airbus A310 aircraft in France and to register both aircraft in Iran (with, respectively, Iranian tail numbers EP–MHH and EP–MHI). It was determined subsequent to the February 15, 2012 renewal order that the registration switch for these A310s was cancelled and that Mahan Airways then continued to fly the aircraft under the original French tail numbers (F–OJHH and F–OJHI, respectively). Both aircraft apparently remain in Mahan Airways’ possession.

¹³ See note 12, *supra*.

¹⁴ See <http://www.treasury.gov/resource-center/sanctions/OFAC-Enforcement/pages/20120919.aspx>. Mahan Airways was previously designated by OFAC as a SDGT on October 18, 2011. 77 FR 64,427 (October 18, 2011).

¹⁵ Kral Aviation was referenced in the February 4, 2013 Order as “Turkish Company No. 1.” Kral Aviation purchased a GE CF6–50C2 aircraft engine (MSN 517621) from the United States in July 2012, on behalf of Mahan Airways. OEE was able to prevent this engine from reaching Mahan by issuing a redelivery order to the freight forwarder in accordance with Section 758.8 of the Regulations. OEE also issued Kral Aviation a redelivery order for the second CF6–50C2 engine (MSN 517738) on July 30, 2012. The owner of the second engine

renewal order also added Mehdi Bahrami as a related person in accordance with Section 766.23 of the Regulations. Bahrami, a Mahan Vice-President and the head of Mahan’s Istanbul Office, also was involved in Mahan’s acquisition of the original three Boeing 747s (Aircraft 1–3) that resulted in the original TDO, and has had a business relationship with Mahan dating back to 1997.

The July 31, 2013 Order detailed additional evidence obtained by OEE showing efforts by Mahan Airways to obtain another GE CF6–50C2 aircraft engine (MSN 528350) from the United States via Turkey. Multiple Mahan employees, including Mehdi Bahrami, were involved in or aware of matters related to the engine’s arrival in Turkey from the United States, plans to visually inspect the engine, and prepare it for shipment from Turkey.

Mahan sought to obtain this U.S.-origin engine through Pioneer Logistics Havacilik Turizm Yonetim Danismanlik (“Pioneer Logistics”), an aircraft parts supplier located in Turkey, and its director/operator, Gulnihal Yegane, a Turkish national who previously had conducted Mahan related business with Mehdi Bahrami and Ali Eslamian. Moreover, as referenced in the July 31, 2013 Order, a sworn affidavit by Kosol Surinanda, also known as Kosol Surinandha, Managing Director of Mahan’s General Sales Agent in Thailand, stated that the shares of Pioneer Logistics for which he was the listed owner were “actually the property of and owned by Mahan.” He further stated that he held “legal title to the shares until otherwise required by Mahan” but would “exercise the rights granted to [him] exactly and only as instructed by Mahan and [his] vote and/or decisions [would] only and exclusively reflect the wills and demands of Mahan[.]”¹⁶

The January 24, 2014 Order outlined OEE’s continued investigation of Mahan Airways’ activities and detailed an attempt by Mahan, which OEE

subsequently cancelled the item’s sale to Kral Aviation. In September 2012, OEE was alerted by a U.S. exporter that another Turkish company (“Turkish Company No. 2”) was attempting to purchase aircraft spare parts intended for re-export by Turkish Company No. 2 to Mahan Airways. See February 4, 2013 Order.

On December 31, 2013, Kral Aviation was added to BIS’s Entity List, Supplement No. 4 to Part 744 of the Regulations. See 78 FR75458 (Dec. 12, 2013). Companies and individuals are added to the Entity List for engaging in activities contrary to the national security or foreign policy interests of the United States. See 15 CFR 744.11.

¹⁶ Pioneer Logistics, Gulnihal Yegane, and Kosol Surinanda also were added to the Entity List on December 12, 2013. See 78 FR 75458 (Dec. 12, 2013).

thwarted, to obtain, via an Indonesian aircraft parts supplier, two U.S.-origin Honeywell ALF-502R-5 aircraft engines (MSNs LF5660 and LF5325), items subject to the Regulations, from a U.S. company located in Texas. An invoice of the Indonesian aircraft parts supplier dated March 27, 2013, listed Mahan Airways as the purchaser of the engines and included a Mahan ship-to address. OEE also obtained a Mahan air waybill dated March 12, 2013, listing numerous U.S.-origin aircraft parts subject to the Regulations—including, among other items, a vertical navigation gyroscope, a transmitter, and a power control unit—being transported by Mahan from Turkey to Iran in violation of the TDO.

The July 22, 2014 Order discussed open source evidence from the March-June 2014 time period regarding two BAE regional jets, items subject to the Regulations, that were painted in the livery and logo of Mahan Airways and operating under Iranian tail numbers EP-MOK and EP-MOI, respectively.¹⁷ In addition, aviation industry resources indicated that these aircraft were obtained by Mahan Airways in late November 2013 and June 2014, from Ukrainian Mediterranean Airline, a Ukrainian airline that was added to BIS's Entity List (Supplement No. 4 to Part 744 of the Regulations) on August 15, 2011, for acting contrary to the national security and foreign policy interests of the United States.¹⁸ OEE's on-going investigation indicates that both BAE regional jets remain active in Mahan's fleet, with open source information showing EP-MOI being used on flights into and out of Iran as recently as January 12, 2015. The continued operation of these aircraft by Mahan Airways violates the TDO.

The January 16, 2015 Order detailed evidence of additional attempts by

Mahan Airways to acquire items subject to the Regulations in further violation of the TDO. Specifically, in March 2014, OEE became aware of an inertial reference unit bearing serial number 1231 ("the IRU") that had been sent to the United States for repair. The IRU is subject to the Regulations, classified under ECCN 7A103, and controlled for missile technology reasons. Upon closer inspection, it was determined that IRU came from or had been installed on an Airbus A340 aircraft bearing MSN 056. Further investigation revealed that as of approximately February 2014, this aircraft was registered under Iranian tail number EP-MMB and had been painted in the livery and logo of Mahan Airways.

The January 16, 2015 Order also described related efforts by the Departments of Justice and Treasury to further thwart Mahan's illicit procurement efforts. Specifically, on August 14, 2014, the United States Attorney's Office for the District of Maryland filed a civil forfeiture complaint for the IRU pursuant to 22 U.S.C. 401(b) that resulted in the court issuing an Order of Forfeiture on December 2, 2014. EP-MMB remains listed as active in Mahan Airways' fleet.

Additionally, on August 29, 2014, OFAC blocked the property and interests in property of Asian Aviation Logistics of Thailand, a Mahan Airways affiliate or front company, pursuant to Executive Order 13224. In doing so, OFAC described Mahan Airways' use of Asian Aviation Logistics to evade sanctions by making payments on behalf of Mahan for the purchase of engines and other equipment.¹⁹

The May 21, 2015 modification order detailed the acquisition of two aircraft, specifically an Airbus A340 bearing MSN 164 and an Airbus A321 bearing MSN 550, that were purchased by Al Naser Airlines in late 2014/early 2015 and are currently located in Iran under the possession, control, and/or ownership of Mahan Airways.²⁰ The

sales agreements for these two aircraft were signed by Ali Abdullah Alhay for Al Naser Airlines.²¹ Payment information reveals that multiple electronic funds transfers ("EFT") were made by Ali Abdullah Alhay and Bahar Safwa General Trading in order to acquire MSNs 164 and 550.

The May 21, 2015 modification order also laid out evidence showing the respondents' attempts to obtain other controlled aircraft, including aircraft physically located in the United States in similarly-patterned transactions during the same recent time period. Transactional documents involving two Airbus A320s bearing MSNs 82 and 99, respectively, again showed Ali Abdullah Alhay signing sales agreements for Al Naser Airlines.²² A review of the payment information for these aircraft similarly revealed EFTs from Ali Abdullah Alhay and Bahar Safwa General Trading that follow the pattern described for MSNs 164 and 550, *supra*. MSNs 82 and 99 were detained by OEE Special Agents prior to their planned export from the United States.

The July 13, 2015 Order outlined evidence showing that Al Naser Airlines' attempts to acquire aircraft on behalf of Mahan Airways extended beyond MSNs 164 and 550 to include a total of nine aircraft.²³ Four of the aircraft, all of which are subject to the Regulations and were obtained by

9A991.b. The export or re-export of these aircraft to Iran requires U.S. Government authorization pursuant to Sections 742.8 and 746.7 of the Regulations.

²¹ Ali Abdullah Alhay is a 25% owner of Al Naser Airlines.

²² Both aircraft were physically located in the United States and therefore are subject to the Regulations pursuant to Section 734.3(a)(1). Moreover, these Airbus A320s are powered by U.S.-origin engines that are subject to the Regulations and classified under Export Control Classification Number ECCN 9A991.d. The Airbus A320s contain controlled U.S.-origin items valued at more than 10 percent of the total value of the aircraft and as a result are subject to the EAR regardless of their location. The aircraft are classified under ECCN 9A991.b. The export or re-export of these aircraft to Iran requires U.S. Government authorization pursuant to Sections 742.8 and 746.7 of the Regulations.

²³ This evidence included a press release dated May 9, 2015, that appeared on Mahan Airways' Web site and stated that Mahan "added 9 modern aircraft to its air fleet [.]" and that the newly acquired aircraft included eight Airbus A340s and one Airbus A321. See <http://www.mahan.aero/en/mahan-air/press-room/44>. The press release was subsequently removed from Mahan Airways' Web site. Publicly available aviation databases similarly showed that Mahan had obtained nine additional aircraft from Al Naser Airlines in May 2015, including MSNs 164 and 550. As also discussed in the July 13, 2015 renewal order, Sky Blue Bird Group, via Issam Shammout, was actively involved in Al Naser Airlines' acquisition of MSNs 164 and 550, and the attempted acquisition of MSNs 82 and 99 (which were detained by OEE).

¹⁷ The BAE regional jets are powered with U.S.-origin engines. The engines are subject to the EAR and classified under ECCN 9A991.d. These aircraft contain controlled U.S.-origin items valued at more than 10 percent of the total value of the aircraft and as a result are subject to the EAR. They are classified under ECCN 9A991.b. The export or re-export of these aircraft to Iran requires U.S. Government authorization pursuant to Sections 742.8 and 746.7 of the Regulations.

¹⁸ See 76 FR 50407 (Aug. 15, 2011). The July 22, 2014 TDO renewal order also referenced two Airbus A320 aircraft painted in the livery and logo of Mahan Airways and operating under Iranian tail numbers EP-MMK and EP-MML, respectively. OEE's investigation also showed that Mahan obtained these aircraft in November 2013, from Khors Air Company, another Ukrainian airline that, like Ukrainian Mediterranean Airlines, was added to BIS's Entity List on August 15, 2011. Open source evidence indicates the two Airbus A320 aircraft may be transferred by Mahan Airways to another Iranian airline in October 2014, and issued Iranian tail numbers EP-APE and EP-APF, respectively.

¹⁹ See <http://www.treasury.gov/resource-center/sanctions/OFAC-Enforcement/Pages/20140829.aspx>. See 79 FR 55073 (Sep. 15, 2014). OFAC also blocked the property and property interests of Pioneer Logistics of Turkey on August 29, 2014. *Id.* Mahan Airways' use of Pioneer Logistics in an effort to evade the TDO and the Regulations was discussed in a prior renewal order, as summarized, *supra*, at 13-14. BIS added both Asian Aviation Logistics and Pioneer Logistics to the Entity List on December 12, 2013. See 78 FR 75458 (Dec. 12, 2013).

²⁰ Both of these aircraft are powered by U.S.-origin engines that are subject to the Regulations and classified under ECCN 9A991.d. Both aircraft contain controlled U.S.-origin items valued at more than 10 percent of the total value of the aircraft and as a result are subject to the EAR regardless of their location. The aircraft are classified under ECCN

Mahan from Al Naser Airlines, had been issued the following Iranian tail numbers: EP–MMD (MSN 164), EP–MMG (MSN 383), EP–MMH (MSN 391) and EP–MMR (MSN 416), respectively.²⁴ Publicly available flight tracking information provided evidence that at the time of the July 13, 2015 renewal, both EP–MMH and EP–MMR were being actively flown on routes into and out of Iran in violation of the TDO and Regulations.²⁵

The January 7, 2016 Order discussed evidence that Mahan Airways had begun actively flying EP–MMD, another of the aircraft Mahan had obtained from Al Naser Airlines (as discussed in the July 13, 2015 renewal order), on international routes into and out of Iran, including from/to Bangkok, Thailand. Additionally, the January 7, 2016 Order described publicly available aviation database and flight tracking information indicating that Mahan Airways was continuing its efforts to acquire Iranian tail numbers and press into active service under Mahan's livery and logo at least two more of the Airbus A340 aircraft it had obtained from or through Al Naser Airlines: EP–MME (MSN 371) and EP–MMF (MSN 376), respectively. Since January 2016, EP–MME has logged flights to and from Tehran, Iran involving various destinations, including Guangzhou, China and Dubai, United Arab Emirates in further violation of the TDO and the Regulations.

The July 7, 2016 Order described Mahan Airways' acquisition of a BAE Avro RJ–85 aircraft (MSN E2392) in violation of the TDO and its subsequent registration under Iranian tail number EP–MOR.²⁶ This information was

²⁴ The Airbus A340s are powered by U.S.-origin engines that are subject to the Regulations and classified under ECCN 9A991.d. The Airbus A340s contain controlled U.S.-origin items valued at more than 10 percent of the total value of the aircraft and as a result are subject to the EAR regardless of their location. The aircraft are classified under ECCN 9A991.b. The export or re-export of these aircraft to Iran requires U.S. Government authorization pursuant to Sections 742.8 and 746.7 of the Regulations.

²⁵ There is some publicly available information indicating that the aircraft Mahan Airways is flying under Iranian tail number EP–MMR is now MSN 615, rather than MSN 416. Both aircraft are Airbus A340 aircraft that Mahan acquired from Al Naser Airlines in violation of the TDO and the Regulations. Moreover, both aircraft were designated as SDGTs by OFAC on May 21, 2015, pursuant to Executive Order 13324. See 80 FR 30762 (May 29, 2015).

²⁶ The BAE Avro RJ–85 is powered by U.S.-origin engines that are subject to the Regulations and classified under ECCN 9A991.d. The BAE Avro RJ–85 contains controlled U.S.-origin items valued at more than 10 percent of the total value of the aircraft and as a result is subject to the EAR regardless of its location. The aircraft is classified under ECCN 9A991.b, and its export or re-export to

corroborated by publicly available information on the Web site of Iran's civil aviation authority. The July 7, 2016 Order also outlined Mahan's continued operation of EP–MMF in violation of the TDO on routes from Tehran Iran to Beijing, China and Shanghai, China, respectively.

The December 13, 2016 renewal request discusses OEE's on-going concerns that Mahan Airways has continued to utilize aircraft, engines, and other aircraft parts that it previously acquired in violation of the TDO. This conduct includes, but is not limited to, operating aircraft originally obtained from or through Al Naser Airlines on international flights into and out of Iran. Publicly available flight tracking information shows that since December 20, 2016, EP–MMD (MSN 164), EP–MMF (MSN 376), and EP–MMH (MSN 391) has each been flown on routes into or out of Tehran, Iran, including from/to Beijing, China, Kuala Lumpur, Malaysia, and Istanbul, Turkey.²⁷ These flights into or out of Iran by Mahan Airways constitute additional violations of the TDO and the Regulations.²⁸

Mahan's acquisition of these aircraft from or through Al Naser Airlines and their subsequent registration in Iran were detailed in the July 13, 2015 and January 7, 2016 renewal orders, respectively. Both Mahan Airways and Al Naser Airways remain subject to an on-going investigation by OEE.

C. Findings

Under the applicable standard set forth in Section 766.24 of the Regulations and my review of the entire record, I find that the evidence presented by BIS convincingly demonstrates that the denied persons have acted in violation of the Regulations and the TDO; that such

Iran requires U.S. Government authorization pursuant to Sections 742.8 and 746.7 of the Regulations.

²⁷ Publicly available flight tracking information shows that on December 22, 2016, EP–MMD (MSN 164) flew from Dubai, UAE to Tehran, Iran. Additionally, between December 20, 2016, and December 22, 2016, EP–MMF (MSN 376) flew on routes from Tehran, Iran to Beijing, China and Istanbul, Turkey, respectively. Similar flight tracking information shows that between December 26, 2016 and December 28, 2016, EP–MMH (MSN 391) flew on routes from Tehran, Iran to Kuala Lumpur, Malaysia.

²⁸ OEE's December 13, 2016 request also raised its concerns about an Airbus A340 previously registered in the United States. The aircraft was recently exported from the United States to Indonesia contrary to filings made with the U.S. Federal Aviation Administration indicating, first that the aircraft was being flown to Almaty, Kazakhstan, and then indicating that the aircraft should be de-registered in the U.S. because it was being exported to and going to be registered in Ukraine, neither of which has occurred.

violations have been significant, deliberate and covert; and that given the foregoing and the nature of the matters under investigation, there is a likelihood of future violations. Therefore, renewal of the TDO is necessary to prevent imminent violation of the Regulations and to give notice to companies and individuals in the United States and abroad that they should continue to cease dealing with Mahan Airways, Al Naser Airlines, and the other denied persons under the TDO in connection with export and reexport transactions involving items subject to the Regulations.

IV. Order

IT IS THEREFORE ORDERED:
FIRST, that MAHAN AIRWAYS, Mahan Tower, No. 21, Azadegan St., M.A. Jenah Exp. Way, Tehran, Iran; PEJMAN MAHMOOD KOSARAYANIFARD A/K/A KOSARIAN FARD, P.O. Box 52404, Dubai, United Arab Emirates; MAHMOUD AMINI, G#22 Dubai Airport Free Zone, P.O. Box 393754, Dubai, United Arab Emirates, and P.O. Box 52404, Dubai, United Arab Emirates, and Mohamed Abdulla Alqaz Building, Al Maktoum Street, Al Rigga, Dubai, United Arab Emirates; KERMAN AVIATION A/K/A GIE KERMAN AVIATION, 42 Avenue Montaigne 75008, Paris, France; SIRJANCO TRADING LLC, P.O. Box 8709, Dubai, United Arab Emirates; ALI ESLAMIAN, 33 Cavendish Square, 4th Floor, London W1G0PW, United Kingdom, and 2 Bentinck Close, Prince Albert Road St. Johns Wood, London NW87RY, United Kingdom; MAHAN AIR GENERAL TRADING LLC, 19th Floor Al Moosa Tower One, Sheik Zayed Road, Dubai 40594, United Arab Emirates; SKYCO (UK) LTD., 33 Cavendish Square, 4th Floor, London, W1G 0PV, United Kingdom; EQUIPCO (UK) LTD., 2 Bentinck Close, Prince Albert Road, London, NW8 7RY, United Kingdom; and MEHDI BAHRAMI, Mahan Airways- Istanbul Office, Cumhuriye Cad. Sibil Apt No: 101 D:6, 34374 Emadad, Sisli Istanbul, Turkey; AL NASER AIRLINES A/K/A AL-NASER AIRLINES A/K/A ALNASER AIRLINES AND AIR FREIGHT LTD., Home 46, Al-Karrada, Babil Region, District 929, St 21, Beside Al Jadiry Private Hospital, Baghdad, Iraq, and Al Amirat Street, Section 309, St. 3/H.20, Al Mansour, Baghdad, Iraq, and P.O. Box 28360, Dubai, United Arab Emirates, and P.O. Box 911399, Amman 11191, Jordan; ALI ABDULLAH ALHAY A/K/A ALI ALHAY A/K/A ALI ABDULLAH AHMED ALHAY, Home 46, Al-Karrada, Babil Region, District 929, St 21, Beside

Al Jadiry Private Hospital, Baghdad, Iraq, and Anak Street, Qatif, Saudi Arabia 61177; BAHAR SAFWA GENERAL TRADING, P.O. Box 113212, Citadel Tower, Floor-5, Office #504, Business Bay, Dubai, United Arab Emirates, and P.O. Box 8709, Citadel Tower, Business Bay, Dubai, United Arab Emirates; SKY BLUE BIRD GROUP A/K/A SKY BLUE BIRD AVIATION A/K/A SKY BLUE BIRD LTD A/K/A SKY BLUE BIRD FZC, P.O. Box 16111, Ras Al Khaimah Trade Zone, United Arab Emirates; and ISSAM SHAMMOUT A/K/A MUHAMMAD ISAM MUHAMMAD ANWAR NUR SHAMMOUT A/K/A ISSAM ANWAR, Philips Building, 4th Floor, Al Fardous Street, Damascus, Syria, and Al Kolaa, Beirut, Lebanon 151515, and 17-18 Margaret Street, 4th Floor, London, W1W 8RP, United Kingdom, and Cumhuriyet Mah. Kavakli San St. Fulya, Cad. Hazar Sok. No.14/A Silivri, Istanbul, Turkey, and when acting for or on their behalf, any successors or assigns, agents, or employees (each a "Denied Person" and collectively the "Denied Persons") may not, directly or indirectly, participate in any way in any transaction involving any commodity, software or technology (hereinafter collectively referred to as "item") exported or to be exported from the United States that is subject to the Export Administration Regulations ("EAR"), or in any other activity subject to the EAR including, but not limited to:

A. Applying for, obtaining, or using any license, License Exception, or export control document;

B. Carrying on negotiations concerning, or ordering, buying, receiving, using, selling, delivering, storing, disposing of, forwarding, transporting, financing, or otherwise servicing in any way, any transaction involving any item exported or to be exported from the United States that is subject to the EAR, or in any other activity subject to the EAR; or

C. Benefitting in any way from any transaction involving any item exported or to be exported from the United States that is subject to the EAR, or in any other activity subject to the EAR.

SECOND, that no person may, directly or indirectly, do any of the following:

A. Export or reexport to or on behalf of a Denied Person any item subject to the EAR;

B. Take any action that facilitates the acquisition or attempted acquisition by a Denied Person of the ownership, possession, or control of any item subject to the EAR that has been or will be exported from the United States, including financing or other support activities related to a transaction

whereby a Denied Person acquires or attempts to acquire such ownership, possession or control;

C. Take any action to acquire from or to facilitate the acquisition or attempted acquisition from a Denied Person of any item subject to the EAR that has been exported from the United States;

D. Obtain from a Denied Person in the United States any item subject to the EAR with knowledge or reason to know that the item will be, or is intended to be, exported from the United States; or

E. Engage in any transaction to service any item subject to the EAR that has been or will be exported from the United States and which is owned, possessed or controlled by a Denied Person, or service any item, of whatever origin, that is owned, possessed or controlled by a Denied Person if such service involves the use of any item subject to the EAR that has been or will be exported from the United States. For purposes of this paragraph, servicing means installation, maintenance, repair, modification or testing.

THIRD, that, after notice and opportunity for comment as provided in section 766.23 of the EAR, any other person, firm, corporation, or business organization related to a Denied Person by affiliation, ownership, control, or position of responsibility in the conduct of trade or related services may also be made subject to the provisions of this Order.

FOURTH, that this Order does not prohibit any export, reexport, or other transaction subject to the EAR where the only items involved that are subject to the EAR are the foreign-produced direct product of U.S.-origin technology.

In accordance with the provisions of Sections 766.24(e) of the EAR, Mahan Airways, Al Naser Airlines, Ali Abdullah Alhay, and/or Bahar Safwa General Trading may, at any time, appeal this Order by filing a full written statement in support of the appeal with the Office of the Administrative Law Judge, U.S. Coast Guard ALJ Docketing Center, 40 South Gay Street, Baltimore, Maryland 21202-4022. In accordance with the provisions of Sections 766.23(c)(2) and 766.24(e)(3) of the EAR, Pejman Mahmood Kosarayanifard, Mahmoud Amini, Kerman Aviation, Sirjanco Trading LLC, Ali Eslamian, Mahan Air General Trading LLC, Skyco (UK) Ltd., Equipco (UK) Ltd., Mehdi Bahrami, Sky Blue Bird Group, and/or Issam Shammout may, at any time, appeal their inclusion as a related person by filing a full written statement in support of the appeal with the Office of the Administrative Law Judge, U.S. Coast Guard ALJ Docketing Center, 40

South Gay Street, Baltimore, Maryland 21202-4022.

In accordance with the provisions of Section 766.24(d) of the EAR, BIS may seek renewal of this Order by filing a written request not later than 20 days before the expiration date. A renewal request may be opposed by Mahan Airways, Al Naser Airlines, Ali Abdullah Alhay, and/or Bahar Safwa General Trading as provided in Section 766.24(d), by filing a written submission with the Assistant Secretary of Commerce for Export Enforcement, which must be received not later than seven days before the expiration date of the Order.

A copy of this Order shall be provided to Mahan Airways, Al Naser Airlines, Ali Abdullah Alhay, and Bahar Safwa General Trading and each related person, and shall be published in the **Federal Register**. This Order is effective immediately and shall remain in effect for 180 days.

Dated: December 30, 2016.

Richard R. Majauskas,

Acting Assistant Secretary of Commerce for Export Enforcement.

Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules, From the People's Republic of China: Preliminary Results of the Countervailing Duty Administrative Review and Preliminary Intent To Rescind, in Part; 2014

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (the Department) preliminarily determines that countervailable subsidies are being provided to producers and exporters of crystalline silicon photovoltaic cells, whether or not assembled into modules (solar cells), from the People's Republic of China (PRC). The period of review (POR) is January 1, 2014, through December 31, 2014. Interested parties are invited to comment on these preliminary results.

DATES: Effective January 9, 2017.

FOR FURTHER INFORMATION CONTACT: Gene Calvert, AD/CVD Operations, Office VII, Enforcement and Compliance, International Trade Administration, U.S. Department of

Commerce, 1401 Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482-3586.

SUPPLEMENTARY INFORMATION:

Background

On December 7, 2012, the Department issued a countervailing duty (CVD) order on solar cells from the PRC.¹ Several interested parties requested that the Department conduct an administrative review of the countervailing duty order, and February 9, 2016, the Department published in the **Federal Register** a notice of initiation of an administrative review of the CVD Order for 45 producers/exporters for the POR.²

Scope of the Order

The merchandise subject to the CVD Order is crystalline silicon photovoltaic cells, and modules, laminates, and panels, consisting of crystalline silicon photovoltaic cells, whether or not partially or fully assembled into other products, including, but not limited to, modules, laminates, panels, and building integrated materials. A full description of the scope of the order is contained in the Department memorandum, "Decision Memorandum for the Preliminary Results of the Countervailing Duty Administrative Review of Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules, from the People's Republic of China; 2014," dated concurrently with this notice (Preliminary Decision Memorandum) and hereby adopted by this notice.

Methodology

The Department is conducting this administrative review in accordance with section 751(a)(1)(A) of the Tariff Act of 1930, as amended (the Act). For each of the subsidy programs found countervailable, we preliminarily find that there is a subsidy, (*i.e.*, a financial contribution from an authority that gives rise to a benefit to the recipient) and that the subsidy is specific.³ In making this preliminary determination, the Department relied, in part, on facts otherwise available, with the application of adverse inferences.⁴ For

further information, see "Use of Facts Otherwise Available and Application of Adverse Inferences" in the accompanying Preliminary Decision Memorandum. A list of topics discussed in the Preliminary Decision Memorandum is provided at Appendix I to this notice.

The Preliminary Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at <http://access.trade.gov>, and is available to all parties in the Central Records Unit, room B8024 of the main Department of Commerce building. In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly at <http://enforcement.trade.gov/frn/>. The signed Preliminary Decision Memorandum and the electronic version of the Preliminary Decision Memorandum are identical in content.

Intent To Partially Rescind the Administrative Review

Pursuant to 19 CFR 351.213(d)(1), the Department will rescind an administrative review, in whole or in part, if the parties that requested a review withdraw the request within 90 days of the date of publication of the notice of initiation. Jinko Solar Co., Ltd., JinkoSolar (U.S.) Inc., Jinko Solar Import and Export Co., Ltd., JinkoSolar International Limited, Zhejiang Jinko Solar Co., Ltd. (collectively, the Jinko Solar Companies); Yingli Green Energy Holding Company Limited (Yingli); ERA Solar Co. Limited (ERA Solar); Zhejiang Sunflower Light Energy Science & Technology Limited Liability Company (Zhejiang Sunflower); and JA Solar Technology Yangzhou Co., Ltd., Shanghai JA Solar Technology Co., Ltd., and JingAo Solar Co., Ltd. (collectively, the JA Solar Companies) timely withdrew their requests for review.⁵ No

⁵ See Letter to the Secretary from the Jinko Solar Companies, "Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled into Modules, from the People's Republic of China: Jinko's Withdrawal of Request for Administrative Review," (March 14, 2016); Letter to the Secretary from Yingli, "Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled into Modules, from the People's Republic of China: Yingli's Withdrawal of Request for Administrative Review," (March 18, 2016); Letter to the Secretary from ERA Solar, "Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled into Modules From The People's Republic of China; ERA Solar Co., Limited's Withdrawal of Request for Review," (May 9, 2016); Letter to the Secretary from Zhejiang Sunflower, "Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled into Modules From The People's Republic of China; Zhejiang Sunflower Light Energy

other party requested a review of any of these companies. Therefore, in accordance with 19 CFR 351.213(d)(1), the Department intends to rescind this review of the countervailing duty order on solar cells from the PRC with respect to these companies. A final decision regarding whether to rescind the review of these companies will be issued with the final results of review.

Preliminary Results of Review

As a result of this review, we preliminarily determine the countervailable subsidy rates to be:

Company	Subsidy rate (percent)
Canadian Solar Manufacturing (Changshu) and its Cross-Owned Affiliates ⁶ ...	20.98
Changzhou Trina Solar Energy Co., Ltd. and its Cross-Owned Affiliates ⁷ ...	12.48
Non-Selected Companies Under Review	16.69

Preliminary Rate for the Non-Selected Companies Under Review

For the companies for which a review was requested that were not selected as mandatory company respondents, and for which we did not receive a timely request for withdrawal of review, and which we are not finding to be cross-owned with the mandatory company respondents, we are preliminarily basing the subsidy rate on the weighted-average of the subsidy rates calculated for Canadian Solar and Trina Solar. These rates were above *de minimis* and not based entirely on facts available. For a list of these non-selected companies, please see the Appendix to the Preliminary Decision Memorandum.

Disclosure and Public Comment

The Department will disclose to parties to this proceeding the calculations performed in reaching the preliminary results within five days of

Science & Technology Limited Liability Company's Withdrawal of Request for Review," (May 9, 2016); and Letter to the Secretary from the JA Solar Companies, "Administrative Review of the Countervailing Duty Order on Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled into Modules from the People's Republic of China: Withdrawal of Request for Review," (May 9, 2016).

⁶ Cross-owned affiliates are: Canadian Solar Manufacturing (Luoyang) Inc.; CSI Cells Co., Ltd.; CSI Solar Power (China) Inc.; CSI Solartronics (Changshu) Co., Ltd.; CSI Solar Technologies Inc.; and CSI Solar Manufacture Inc. See Preliminary Decision Memorandum.

⁷ Cross-owned affiliates are: Trina Solar (Changzhou) Science & Technology Co., Ltd.; Yancheng Trina Solar Energy Technology Co., Ltd.; Changzhou Trina Solar Yabang Energy Co., Ltd.; Hubei Trina Solar Energy Co., Ltd.; Turpan Trina Solar Energy Co., Ltd.; and Changzhou Trina PV Ribbon Materials Co., Ltd. See Preliminary Decision Memorandum.

¹ See *Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules, From the People's Republic of China: Countervailing Duty Order*, 77 FR 73017 (December 7, 2012) (CVD Order).

² See *Initiation of Antidumping and Countervailing Duty Administrative Reviews*, 81 FR 6832 (February 9, 2016) (Initiation Notice).

³ See sections 771(5)(B) and (D) of the Act regarding financial contribution; section 771(5)(E) of the Act regarding benefit; and section 771(5A) of the Act regarding specificity.

⁴ See section 776(a) of the Act.

the date of publication of these preliminary results.⁸ Interested parties may submit written comments (case briefs) at a date to be determined by the Department and rebuttal comments (rebuttal briefs) within five days after the time limit for filing case briefs.⁹ Rebuttal briefs must be limited to issues raised in the case briefs.¹⁰ Parties who submit case or rebuttal briefs are requested to submit with the argument: (1) A statement of the issue; (2) a brief summary of the argument; and (3) a table of authorities.¹¹

Interested parties who wish to request a hearing must do so within 30 days of publication of these preliminary results by submitting a written request to the Assistant Secretary for Enforcement and Compliance, U.S. Department of Commerce, using Enforcement and Compliance's ACCESS system.¹² Hearing requests should contain the party's name, address, and telephone number, the number of participants, and a list of the issues to be discussed. If a request for a hearing is made, we will inform parties of the scheduled date for the hearing, which will be held at the U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230, at a time and location to be determined.¹³ Parties should confirm by telephone the date, time, and location of the hearing. Issues addressed at the hearing will be limited to those raised in the briefs.¹⁴ All briefs and hearing requests must be filed electronically and received successfully in their entirety through ACCESS by 5:00 p.m. Eastern Time by their respective deadlines.

Unless the deadline is extended pursuant to section 751(a)(3)(A) of the Act, the Department intends to issue the final results of this administrative review, including the results of our analysis of the issues raised by the parties in their comments, within 120 days after publication of these preliminary results.

Assessment Rates and Cash Deposit Requirement

In accordance with 19 CFR 351.221(b)(4)(i), we assigned a subsidy rate for each producer/exporter subject to this administrative review. Upon issuance of the final results, the Department shall determine, and U.S.

Customs and Border Protection (CBP) shall assess, countervailing duties on all appropriate entries covered by this review. We intend to issue instructions to CBP 15 days after publication of the final results of review.

Pursuant to section 751(a)(2)(C) of the Act, the Department also intends to instruct CBP to collect cash deposits of estimated countervailing duties, in the amounts shown above for each of the respective companies shown above, on shipments of subject merchandise entered, or withdrawn from warehouse, for consumption on or after the date of publication of the final results of this review. For all non-reviewed firms, we will instruct CBP to continue to collect cash deposits at the most-recent company-specific or all-others rate applicable to the company, as appropriate. These cash deposit requirements, when imposed, shall remain in effect until further notice.

These preliminary results of review are issued and published in accordance with sections 751(a)(1) and 777(i)(1) of the Act and 19 CFR 351.213 and 351.221(b)(4).

Dated: December 29, 2016.

Paul Piquado,

Assistant Secretary for Enforcement and Compliance.

Multilayered Wood Flooring From the People's Republic of China: Preliminary Results of Countervailing Duty Administrative Review, Rescission of Review, in Part, and Intent To Rescind the Review in Part; 2014

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Department) preliminarily determines that countervailable subsidies are being provided to producers and exporters of multilayered wood flooring (wood flooring) from the People's Republic of China (PRC). The period of review (POR) is January 1, 2014, through December 31, 2014.

DATES: Effective January 9, 2017.

FOR FURTHER INFORMATION CONTACT: Dennis McClure or Sergio Balbontin, AD/CVD Operations, Office VIII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW., Washington, DC 20230; telephone: 202-482-5973 or 202-482-6478, respectively.

Scope of the Order

The product covered by the Order is wood flooring from the PRC. For a complete description of the scope of this administrative review, see the Preliminary Decision Memorandum.¹

¹ See Memorandum to Paul Piquado, Assistant Secretary for Enforcement and Compliance, from Christian Marsh, Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations, "Decision Memorandum for the Preliminary Determination in the Countervailing Duty Administrative Review of Multilayered Wood Flooring from the People's Republic of China: 2014," (Preliminary Decision Memorandum) dated concurrently with, and hereby adopted by, this notice.

⁸ See 19 CFR 351.224(b).

⁹ See 19 CFR 351.309(c)(1)(ii) and 351.309(d)(1). Interested parties will be notified through ACCESS regarding the deadline for submitting case briefs.

¹⁰ See 19 CFR 351.309(d)(2).

¹¹ See 19 CFR 351.309(c)(2) and (d)(2).

¹² See 19 CFR 351.310(c).

¹³ See 19 CFR 351.310.

¹⁴ See 19 CFR 351.310(c).

The Preliminary Decision Memorandum is a public document and is on file electronically *via* Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at <https://access.trade.gov> and in the Central Records Unit, Room B8024 of the main Department building. In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly on the Internet at <http://enforcement.trade.gov/frn/index.html>. The signed Preliminary Decision Memorandum and the electronic version of the Preliminary Decision Memorandum are identical in content.

A list of topics discussed in the Preliminary Decision Memorandum is included as Appendix I to this notice.

Rescission of Administrative Review, in Part

Pursuant to 19 CFR 351.213(d)(1), the Secretary will rescind an administrative review, in whole or in part, if the parties that requested a review withdraw the request within 90 days of the date of publication of the notice of initiation of the requested review. This review was initiated on February 9, 2016. One PRC producer/exporter of wood flooring, Jiangsu Keri Wood Co., Ltd. (Jiangsu Keri), withdrew its request for review on February 22, 2016, which was within the 90-day deadline. Therefore, in accordance with 19 CFR 351.213(d)(1), and consistent with our practice, we are rescinding this review with respect to Jiangsu Keri.

Intent To Rescind Administrative Review, in Part

We received timely filed no-shipment certifications from six companies.² Because there is no evidence on the record to indicate that Changbai Mountain, Shenyang Senwang, and Jiangsu Yuhui had entries of subject merchandise during the POR, pursuant to 19 CFR 351.213(d)(3), we intend to rescind the review with respect to these companies. A final decision regarding whether to rescind the review of these

² See Letter from Changbai Mountain Development and Protection Zone Hongtu Wood Industrial Co., Ltd. (Changbai Mountain), Shenyang Senwang Wooden Industry Co., Ltd. (Shenyang Senwang), Henan Xingwangjia Technology Co., Ltd. (Henan Xingwangjia), Dalian Xinjinghua Wood Co., Ltd. (Dalian Xinjinghua), Xuzhou Antop International Trade Co., Ltd. (Xuzhou Antop), and Jiangsu Yuhui International Trade Co., Ltd., (Jiangsu Yuhui) "Multilayered Wood Flooring from the People's Republic of China: Submission of No Shipment Certifications," dated February 18, 2016.

companies will be made in the final results of this review.

With respect to Dalian Xinjinghua, Henan Xingwangjia, and Xuzhou Antop, we preliminarily determine that there is sufficient evidence on the record of this review to conclude that these companies had reviewable transactions during the POR.³ Therefore, we are continuing to include Dalian Xinjinghua, Henan Xingwangjia, and Xuzhou Antop in this administrative review for purposes of the preliminary results.

Methodology

The Department is conducting this countervailing duty (CVD) review in accordance with section 751(a)(1)(A) of the Tariff Act of 1930, as amended (Act). For each of the subsidy programs found countervailable, we preliminarily determine that there is a subsidy, *i.e.*, a financial contribution by an "authority" that confers a benefit to the recipient, and that the subsidy is specific.⁴ For a full description of the methodology underlying our preliminary conclusions, see the Preliminary Decision Memorandum.

In making these preliminary results, the Department relied, in part, on facts otherwise available.⁵ For further information, see "Provision of Electricity for Less Than Adequate Remuneration (LTAR)" in the Preliminary Decision Memorandum.

Rate for Non-Selected Companies Under Review

There are 104 companies for which a review was requested and not rescinded, but were not selected as mandatory respondents. For these companies, we calculated the non-selected rate by averaging the rates of mandatory respondents Dalian Penghong Floor Products Co., Ltd. and Fine Furniture (Shanghai) Limited, based on their publicly ranged sales data for the POR, instead of weight-averaging based on their proprietary sales data for the POR, which would risk disclosure of proprietary information. For further information on the calculation of the non-selected rate, refer to the section in the Preliminary Decision Memorandum entitled, "Preliminary Ad Valorem Rate for Non-Selected Companies Under Review."

³ See Preliminary Decision Memorandum.
⁴ See sections 771(5)(B) and (D) of the Act regarding financial contribution; section 771(5)(E) of the Act regarding benefit; and section 771(5A) of the Act regarding specificity.
⁵ See section 776(a) of the Act.

Preliminary Results of the Review

In accordance with 19 CFR 351.221(b)(4)(i), we calculated a countervailable subsidy rate for each of the mandatory respondents, Dalian Penghong Floor Products Co., Ltd. (Penghong) and Fine Furniture (Shanghai) Limited (Fine Furniture), and their cross-owned affiliates where applicable.

We preliminarily find the countervailable subsidy rates for the mandatory respondents under review to be as follows:

Producer/exporter	Subsidy rate (percent)
Dalian Penghong Floor Products Co., Ltd	1.45
Dalian Shumaiké Floor Manufacturing Co. Ltd.	
Fine Furniture (Shanghai) Limited	1.91

Review-Specific Average Rate Applicable to the Following Non-Selected Companies:

Disclosure and Public Comment

We will disclose to parties in this proceeding the calculations performed in reaching the preliminary results within five days of publication of these preliminary results.⁶ Interested parties may submit written comments (case

⁶ See 19 CFR 351.224(b).

briefs) on the preliminary results no later than 30 days from the date of publication of this **Federal Register** notice, and rebuttal comments (rebuttal briefs) within five days after the time limit for filing case briefs.⁷ Pursuant to 19 CFR 351.309(d)(2), rebuttal briefs must be limited to issues raised in the case briefs. Parties who submit arguments are requested to submit with the argument: (1) A statement of the issue; (2) a brief summary of the argument; and (3) a table of authorities.

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing must submit a written request to the Assistant Secretary for Enforcement and Compliance within 30 days of the date of publication of this notice. Requests should contain: (1) The party's name, address and telephone number; (2) the number of participants; and (3) a list of issues parties intend to discuss. Issues raised in the hearing will be limited to those raised in the respective case and rebuttal briefs. If a request for a hearing is made, the Department intends to hold the hearing at the U.S. Department of Commerce, 1401 Constitution Avenue NW., Washington, DC 20230, at a date and time to be determined.⁸ Parties should confirm by telephone the date, time, and location of the hearing two days before the scheduled date.

Parties are reminded that briefs and hearing requests are to be filed electronically using ACCESS and that electronically filed documents must be received successfully in their entirety by 5 p.m. Eastern Time on the due date.

Unless the deadline is extended pursuant to section 751(a)(3)(A) of the Act, we intend to issue the final results of this administrative review, including the results of our analysis of the issues raised by the parties in their comments, within 120 days after publication of these preliminary results.

Assessment Rates

Consistent with section 751(a)(1) of the Act, upon issuance of the final results, the Department shall determine, and U.S. Customs and Border Protection (CBP) shall assess, countervailing duties on all appropriate entries covered by this review. We intend to issue instructions to CBP 15 days after publication of the final results of this review.

Cash Deposit Requirements

In accordance with section 751(a)(1) of the Act, the Department intends to instruct CBP to collect cash deposits of

⁷ See 19 CFR 351.309(c)(1)(ii) and 351.309(d)(1).

⁸ See 19 CFR 351.310.

estimated countervailing duties in the amounts shown for each of the respective companies listed above. For all non-reviewed firms, we will instruct CBP to continue to collect cash deposits at the most recent company specific or all-others rate applicable to the company. These cash deposit requirements, when imposed, shall remain in effect until further notice.

This administrative review and notice are in accordance with sections 751(a)(1) and 777(i) of the Act and 19 CFR 351.213.

Dated: December 30, 2016.

Paul Piquado,

Assistant Secretary for Enforcement and Compliance.

DEPARTMENT OF COMMERCE

International Trade Administration

[A-423-808, A-791-805, A-583-830, C-791-806]

Stainless Steel Plate in Coils From Belgium, South Africa, and Taiwan: Continuation of Antidumping Duty Orders and Countervailing Duty Order

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: As a result of the determinations by the Department of Commerce (Department) and the International Trade Commission (ITC) that revocation of the antidumping duty (AD) orders on stainless steel plate in

coils (SSPC) from Belgium, South Africa, and Taiwan, and the countervailing duty (CVD) order on SSPC from South Africa, would likely lead to a continuation or recurrence of dumping and countervailable subsidies and material injury to an industry in the United States, the Department is publishing a notice of continuation of the AD orders and the CVD order.

DATES: Effective January 9, 2017.

FOR FURTHER INFORMATION CONTACT: Victoria Cho or Yasmin Bordas, AD/CVD Operations, Office VI, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482-2312 or (202) 482-3813, respectively.

SUPPLEMENTARY INFORMATION:

Background

On July 1, 2016, the Department published the notice of initiation of the third sunset reviews of the AD orders on SSPC from Belgium, South Africa, and Taiwan, and the CVD order on SSPC from South Africa, pursuant to section 751(c) of the Tariff Act of 1930, as amended (the Act).¹ As a result of the reviews, the Department determined that revocation of the AD orders would likely lead to a continuation or recurrence of dumping, and that revocation of the CVD order would likely lead to continuation or recurrence of countervailable subsidies.² The Department, therefore, notified the ITC of the magnitude of the dumping margins and net countervailable subsidy rates likely to prevail should the AD orders and the CVD order be revoked. On January 3, 2016, the ITC published notice of its determination, pursuant to sections 751(c) and 752(a) of the Act, that revocation of the AD orders on SSPC from Belgium, South Africa, and Taiwan, and the CVD order on SSPC from South Africa, would likely lead to a continuation or recurrence of material injury to an industry in the United States within a reasonably foreseeable time.³

¹ See *Initiation of Five-Year ("Sunset") Reviews*, 81 FR 43185 (July 1, 2016).

² See *Stainless Steel Plate in Coils from Belgium, South Africa, and Taiwan: Final Results of the Expedited Sunset Reviews of the Antidumping Duty Orders*, 81 FR 78774 (November 9, 2016) (*AD Final Results*); see also *Stainless Steel Plate in Coils from South Africa: Final Results of Expedited Sunset Review of the Countervailing Duty Order*, 81 FR 78115 (November 7, 2016) (*CVD Final Results*).

³ See *Stainless Steel Plate in Coils from Belgium, South Africa, and Taiwan: Investigation Nos. 701-TA-379 and 701-TA-782, 792, and 793 (Third Review)*, USITC Publication 4658 (December 2016); see also *Stainless Steel Plate in Coils from Belgium,*

Scope of the Orders

The product covered by these orders is certain stainless steel plate in coils. Stainless steel is alloy steel containing, by weight, 1.2 percent or less of carbon and 10.5 percent or more of chromium, with or without other elements. The subject plate products are flat-rolled products, 254 mm or over in width and 4.75 mm or more in thickness, in coils, and annealed or otherwise heat treated and pickled or otherwise descaled. The subject plate may also be further processed (e.g., cold-rolled, polished, etc.) provided that it maintains the specified dimensions of plate following such processing. Excluded from the scope of these orders are the following: (1) Plate not in coils, (2) plate that is not annealed or otherwise heat treated and pickled or otherwise descaled, (3) sheet and strip, and (4) flat bars. The merchandise subject to these orders is currently classifiable in the Harmonized Tariff Schedule of the United States (HTSUS) at subheadings: 7219.11.00.30, 7219.11.00.60, 7219.12.00.02, 7219.12.00.05, 7219.12.00.06, 7219.12.00.20, 7219.12.00.21, 7219.12.00.25, 7219.12.00.26, 7219.12.00.50, 7219.12.00.51, 7219.12.00.55, 7219.12.00.56, 7219.12.00.65, 7219.12.00.66, 7219.12.00.70, 7219.12.00.71, 7219.12.00.80, 7219.12.00.81, 7219.31.00.10, 7219.90.00.10, 7219.90.00.20, 7219.90.00.25, 7219.90.00.60, 7219.90.00.80, 7220.11.00.00, 7220.20.10.10, 7220.20.1 0.15, 7220.20.1 0.60, 7220.20.1 0.80, 7220.20.60.05, 7220.20.60.1 0, 7220.20.60.15, 7220.20.60.60, 7220.20.60.80, 7220.90.00.1 0, 7220.90.00.15, and 7220.90.00.60.

Although the HTSUS subheadings are provided for convenience and customs purposes, the written description of the merchandise subject to these orders is dispositive.

Continuation of the Orders

As a result of the determinations by the Department and the ITC that revocation of the AD orders and the CVD order would likely lead to a continuation or recurrence of dumping and countervailable subsidies and material injury to an industry in the United States, pursuant to section 751(d)(2) of the Act and 19 CFR 351.218(a), the Department hereby orders the continuation of the AD orders on SSPC from Belgium, South Africa, and Taiwan, and the CVD order on SSPC from South Africa.

South Africa, and Taiwan; Determination, 81 FR 140 (January 3, 2017).

U.S. Customs and Border Protection will continue to collect AD and CVD cash deposits at the rates in effect at the time of entry for all imports of subject merchandise. The effective date of the continuation of the orders will be the date of publication in the **Federal Register** of this notice of continuation. Pursuant to section 751(c)(2) of the Act, the Department intends to initiate the next five-year sunset reviews of the orders not later than 30 days prior to the fifth anniversary of the effective date of continuation.

These five-year sunset reviews and this notice are in accordance with section 751(c) of the Act and published pursuant to section 777(i)(1) of the Act and 19 CFR 351.218(f)(4).

Dated: January 3, 2017

Paul Piquado,

Assistant Secretary for Enforcement and Compliance.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648-XF136

Pacific Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; public meeting.

SUMMARY: The Pacific Fishery Management Council's (Pacific Council) Highly Migratory Species Advisory Subpanel (HMSAS) will hold a webinar, which is open to the public.

DATES: The HMSAS webinar will be on Tuesday, January 31, 2017, from 1:30 to 3:30 p.m. Pacific Time, or when business for the day is complete.

ADDRESSES: To attend the HMSAS webinar visit this link: <http://www.gotomeeting.com/online/webinar/join-webinar>. Enter the Webinar ID: 957-023-963. Please enter your name and email address (required). After logging into the webinar, dial this TOLL number +1 (562) 247-8422 (not a toll-free number), enter the attendee phone audio access code 370-921-429, then enter your audio phone PIN (shown after joining the webinar). Participants are encouraged to use their telephone, as this is the best practice to avoid technical issues and excessive feedback. If you do not select "Use Telephone" after joining the webinar you will be

connected to audio using your computer's microphone and speakers (VoIP). You may send an email to Mr. Kris Kleinschmidt (kris.kleinschmidt@noaa.gov) or contact him at (503) 820-2280, extension 425 for technical assistance. A listening station will also be provided at the Pacific Council office.

Council address: Pacific Council, 7700 NE Ambassador Place, Suite 101, Portland, OR 97220-1384.

FOR FURTHER INFORMATION CONTACT: Kit Dahl, Pacific Council; telephone: (503) 820-2422.

SUPPLEMENTARY INFORMATION: The HMSAS will be briefed on proposed changes to the Fishery Management Plan for U.S. West Coast Fisheries for Highly Migratory Species (HMS FMP). Changes are proposed in Chapters 1, 4, 6, and 8. These changes are not intended to change the management framework described in the FMP or any related policies; rather, edits to update descriptive information and improve the readability of the document.

Although nonemergency issues not contained in the meeting agenda may be discussed, those issues may not be the subject of formal action during the meeting. Action will be restricted to those issues specifically listed in this document and any issues arising after publication of this document that require emergency action under section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the intent to take final action to address the emergency.

Technical Information and System Requirements

PC-based attendees: Windows® 7, Vista, or XP operating system required. Mac®-based attendees: Mac OS® X 10.5 or newer required. Mobile attendees: iPhone®, iPad®, Android™ phone or Android tablet required (use GoToMeeting Webinar Apps).

Special Accommodations

The meeting is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Mr. Kris Kleinschmidt at (503) 820-2280 at least 10 days prior to the meeting date.

Dated: January 4, 2017.

Tracey L. Thompson,

Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

BILLING CODE 3510-22-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Proposed Information Collection; Comment Request; Foreign Fishing Vessel Permits, Vessel, and Gear Identification, and Reporting Requirements

AGENCY: National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice.

SUMMARY: The Department of Commerce, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995.

DATES: Written comments must be submitted on or before March 10, 2017.

ADDRESSES: Direct all written comments to Jennifer Jessup, Departmental Paperwork Clearance Officer, Department of Commerce, Room 6616, 14th and Constitution Avenue NW., Washington, DC 20230 (or via the Internet at Jjessup@doc.gov).

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection instrument and instructions should be directed to Christopher Rogers, Office for International Affairs and Seafood Inspection (F/IS5), 1315 East-West Highway, Silver Spring, Maryland 20910, 301-427-8350 or christopher.rogers@noaa.gov.

SUPPLEMENTARY INFORMATION:

I. Abstract

This request is for extension of a currently approved information collection. The National Marine Fisheries Service (NMFS) issues permits, under the Magnuson-Stevens Fishery Conservation and Management Act (16 U.S.C. 1801 *et seq.*; MSA), to foreign fishing vessels fishing or operating in United States' (U.S.) waters. MSA and associated regulations at 50 CFR part 600 require that vessels apply for fishing permits, that vessels and certain gear be marked for identification purposes, that observers be embarked on selected vessels, and that permit holders report their fishing effort and catch or, when processing fish under joint ventures, the amount and locations of fish received from U.S. vessels. These requirements apply to all foreign vessels fishing, transshipping, or processing fish in U.S. waters.

Information is collected from persons who operate a foreign fishing vessel in U.S. waters to participate in a directed fishery or joint venture operation, transship fish harvested by a U.S. vessel to a location outside the U.S., or process fish in internal waters. Each person operating a foreign fishing vessel under MSA authority may be required to submit information for a permit, mark their vessels and gear, or submit information about their fishing activities. To facilitate observer coverage, foreign fishing vessel operators must provide a quarterly schedule of fishing effort and upon request must also provide observers with copies of any required records. For foreign fishing vessels that process fish in internal waters, the information collected varies somewhat from other foreign fishing vessels that participate in a directed fishery or a joint venture operation. In particular, these vessels may not be required to provide a permit application or mark their vessels. The information submitted in applications is used to determine whether permits should be used to authorize directed foreign fishing, participation in joint ventures with U.S. vessels, or transshipments of fish or fish products within U.S. waters. The display of identifying numbers on vessels and gear aid in fishery law enforcement and allows other fishermen to report suspicious activity. Reporting of fishing activities allows monitoring of fish received by foreign vessels.

II. Method of Collection

Foreign fishing activity reports are made by radio when fishing begins or ceases, to report on transfers of fish, and to file weekly reports on the catch or receipt of fish. Weekly reports may be submitted by fax or email. Recordkeeping requirements for foreign vessels include a communications log, a transfer log, a daily fishing log, a consolidated fishing or joint venture log, and a daily joint venture log. These records must be maintained for three years. Paper forms are used for foreign fishing vessel permit applications. No information is submitted to NMFS for the vessel and gear marking requirements.

III. Data

OMB Control Number: 0648-0075.
Form Number: None.

Type of Review: Regular (extension of a currently approved collection).

Affected Public: Business or other for-profit organizations.

Estimated Number of Respondents: 8.

Estimated Time per Response: For permit applications: One and one half

hours for an application for a directed fishery; two hours for a joint venture application, and 45 minutes for a transshipment permit; for fishing activity reporting: 6 minutes for a joint venture report; 30 minutes per day for joint venture record-keeping; and 7.5 minutes per day for record-keeping by transport vessels; for weekly reports, 30 minutes per response; for foreign vessel and gear identification marking: 15 minutes per marking.

Estimated Total Annual Burden Hours: 82.

Estimated Total Annual Cost to Public: \$3,337 in recordkeeping/reporting costs.

IV. Request for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden (including hours and cost) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

Dated: January 4, 2017.

Sarah Brabson,

NOAA PRA Clearance Officer.

BILLING CODE 3510-22-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Proposed Information Collection; Comment Request; Management and Oversight of the National Estuarine Research Reserve System

AGENCY: National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice.

SUMMARY: The Department of Commerce, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to

take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995.

DATES: Written comments must be submitted on or before March 10, 2017.

ADDRESSES: Direct all written comments to Jennifer Jessup, Departmental Paperwork Clearance Officer, Department of Commerce, Room 6616, 14th and Constitution Avenue NW., Washington, DC 20230 (or via the Internet at Jjessup@doc.gov).

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection instrument and instructions should be directed to Erica Seiden, 240-533-0781, Erica.Seiden@noaa.gov.

SUPPLEMENTARY INFORMATION:

I. Abstract

This request is for extension of a current information collection.

The Coastal Zone Management Act of 1972 (CZMA; 16 U.S.C. 1461 *et seq.*) provides for the designation of estuarine research reserves representative of various regions and estuarine types in the United States to provide opportunities for long-term research, education and interpretation. During the site selection and designation process, information is collected from states in order to prepare a management plan and environmental impact statement. Designated reserves apply annually for operations funds by submitting a work plan; subsequently progress reports are required every six months for the duration of the award. Each reserve compiles an ecological characterization or site profile to describe the biological and physical environment of the reserve, research to date and research gaps. Reserves revise their management plans every five years. This information is required to ensure that reserves are adhering to regulations and that the reserves are in keeping with the purpose for which they were designated.

II. Method of Collection

Respondents have a choice of either electronic or paper submissions. Methods of submittal include email of electronic forms, and mail and facsimile transmission of paper forms.

III. Data

OMB Control Number: 0648-0121.

Form Number: None.

Type of Review: Regular submission (extension of a current information collection).

Affected Public: Non-profit institutions; state, local, or tribal government.

Estimated Number of Respondents: 75.

Estimated Time per Response: Management plan, 1,800 hours; site profile, 1,800 hours; award application, 8 hours; award reports, 5 hours; designations, 2,000 hours; NEPA documentation, 40 hours.

Estimated Total Annual Burden Hours: 8,216.

Estimated Total Annual Cost to Public: \$1,000 in recordkeeping/reporting costs.

IV. Request for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden (including hours and cost) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

Dated: January 4, 2017.

BILLING CODE 3510-08-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648-XF089

Fisheries of the South Atlantic; Southeast Data, Assessment, and Review (SEDAR); Data Scoping Webinar for South Atlantic Red Grouper; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of SEDAR 53 Assessment webinar.

SUMMARY: The SEDAR 53 assessment of the South Atlantic stock of red grouper will consist of a series webinars. See **SUPPLEMENTARY INFORMATION.**

DATES: A SEDAR 53 Assessment webinar will be held Wednesday, February 1, 2017, from 9 a.m. to 12 p.m.

ADDRESSES: The meeting will be held via webinar. The webinar is open to members of the public. Those interested in participating should contact Julia Byrd at SEDAR (see **FOR FURTHER INFORMATION CONTACT**) to request an invitation providing webinar access information. Please request webinar invitations at least 24 hours in advance of each webinar.

SEDAR address: South Atlantic Fishery Management Council, 4055 Faber Place Drive, Suite 201, N. Charleston, SC 29405; www.sedarweb.org.

FOR FURTHER INFORMATION CONTACT: Julia Byrd, SEDAR Coordinator, 4055 Faber Place Drive, Suite 201, North Charleston, SC 29405; phone (843) 571-4366; email: julia.byrd@safmc.net.

SUPPLEMENTARY INFORMATION: The Gulf of Mexico, South Atlantic, and Caribbean Fishery Management Councils, in conjunction with NOAA Fisheries and the Atlantic and Gulf States Marine Fisheries Commissions, have implemented the Southeast Data, Assessment and Review (SEDAR) process, a multi-step method for determining the status of fish stocks in the Southeast Region. The product of the SEDAR webinar series will be a report which compiles and evaluates potential datasets and recommends which datasets are appropriate for assessment analyses, and describes the fisheries, evaluates the status of the stock, estimates biological benchmarks, projects future population conditions, and recommends research and monitoring needs. Participants for SEDAR Workshops are appointed by the Gulf of Mexico, South Atlantic, and Caribbean Fishery Management Councils and NOAA Fisheries Southeast Regional Office, Highly Migratory Species Management Division, and Southeast Fisheries Science Center. Participants include: data collectors and database managers; stock assessment scientists, biologists, and researchers; constituency representatives including fishermen, environmentalists, and non-governmental organizations (NGOs); international experts; and staff of Councils, Commissions, and state and federal agencies.

The items of discussion in the Assessment webinar are as follows:

1. Participants will continue discussions to develop population models to evaluate stock status, estimate population benchmarks, and project future conditions, as specified in the Terms of Reference.

2. Participants will recommend the most appropriate methods and configurations for determining stock status and estimating population parameters.

3. Participants will prepare a workshop report and determine whether the assessment(s) are adequate for submission for review.

Although non-emergency issues not contained in this agenda may come before this group for discussion, those issues may not be the subject of formal action during this meeting. Action will be restricted to those issues specifically identified in this notice and any issues arising after publication of this notice that require emergency action under section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the intent to take final action to address the emergency.

Special Accommodations

This meeting is accessible to people with disabilities. Requests for auxiliary aids should be directed to the SAFMC office (see **ADDRESSES**) at least 10 business days prior to the meeting.

Note: The times and sequence specified in this agenda are subject to change.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: January 4, 2017.

Tracey L. Thompson,

Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

BILLING CODE 3510-22-P

DEPARTMENT OF COMMERCE

National Telecommunications and Information Administration

Proposed Information Collection; Comment Request; Computer and Internet Use Supplement to the Census Bureau's Current Population Survey

AGENCY: National Telecommunications and Information Administration (NTIA).

ACTION: Notice.

SUMMARY: The Department of Commerce, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995.

DATES: Submit comments on or before March 10, 2017.

ADDRESSES: Direct all written comments to Jennifer Jessup, Departmental

Paperwork Clearance Officer, (202) 482-0336, Department of Commerce, Room 6612, 1401 Constitution Avenue NW., Washington, DC 20230 (or via email at Jjessup@doc.gov).

FOR FURTHER INFORMATION CONTACT:

NTIA has made a copy of the proposed information collection instrument available at https://ntia.doc.gov/files/ntia/publications/november_2017_cps_supplement_draft_for_public_comment.pdf. Additionally, requests for further information or copies of the proposed information collection instrument and instructions should be directed to Rafi Goldberg, Telecommunications Policy Analyst, Office of Policy Analysis and Development, NTIA, at (202) 482-4375 or RGoldberg@ntia.doc.gov.

SUPPLEMENTARY INFORMATION:

I. Abstract

NTIA proposes to add 58 questions to the U.S. Census Bureau's November 2017 Current Population Survey (CPS) to gather reliable data on broadband (also known as high-speed Internet) use by U.S. households through the Computer and Internet Use Supplement ("the Supplement"). The planned Supplement will be the fourteenth since NTIA began sponsoring such surveys in November 1994. Since that time, NTIA has continually revised the Supplement to reflect developments in Internet technology, applications, and connected devices.

As the digital economy's accelerating growth reinforces the Internet's importance to the nation's economic prosperity, policymakers, businesses, non-profits, communities, and other stakeholders increasingly rely on data about whether and how Americans use broadband in their routine activities. Recognizing that digitally-connected Americans provide the modern workforce, creative innovation, and growing customer base to help sustain our nation's global competitiveness, the Supplement will yield data that can inform investment decisions and resource allocations to advance full participation in the digital economy.

NTIA is working with Congress, the Federal Communications Commission (FCC), other federal agencies, state and local governments, as well as with industry and non-profits to develop and promote policies that foster broadband deployment and adoption. These policies help to ensure that the nation's businesses and consumers can obtain competitively priced high-speed Internet access and that everyone is able to gain the skills necessary to use the technology. Collecting current,

systematic, and comprehensive information on broadband use and non-use by U.S. households is critical to enabling policymakers to gauge progress made to date, and also to identify specific areas and demographic groups in which broadband adoption is a concern with a specificity that permits carefully targeted and cost-effective responses.

The U.S. Census Bureau is widely regarded as a premier data collector based on centuries of experience and rigorous scientific methods. Collection of NTIA's requested broadband usage data will occur in conjunction with the U.S. Census Bureau's scheduled November 2017 CPS, thereby significantly reducing the potential burdens on the U.S. Census Bureau and on surveyed households.

The U.S. government has an increasingly pressing need for comprehensive broadband data. The U.S. Government Accountability Office (GAO), NTIA, and the FCC have issued reports noting the importance of useful broadband adoption data for policymakers. Moreover, Congress passed legislation—the Broadband Data Improvement Act in 2008 and the American Recovery and Reinvestment Act in 2009—wholly or in part to address this deficiency. Modifying the November 2017 CPS to include NTIA's requested broadband questions will enable the Commerce Department and NTIA to respond to congressional concerns and directives.

II. Method of Collection

The Supplement will be administered through personal visits and live telephone interviews using computer-assisted telephone interviewing and computer-assisted personal interviewing.

III. Data

OMB Control Number: 0660-0021.
Form Number(s): None.
Type of Review: Regular submission (Revision of a currently approved collection).
Affected Public: Individuals and households.
Estimated Number of Respondents: 54,000 households.
Estimated Time per Response: 10 minutes.
Estimated Total Annual Burden Hours: 9,000.
Estimated Total Annual Cost to Public: \$0.

IV. Requests for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance

of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden (including hours and cost) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden on respondents of providing the requested information, including through the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will be a matter of public record.

Sheleen Dumas,

PRA Departmental Lead, Office of the Chief Information Officer.

BILLING CODE 6355-01-P

DEPARTMENT OF DEFENSE**Department of the Army**

[Docket ID: USA-2017-HQ-0001]

Proposed Collection; Comment Request**AGENCY:** Department of the Army, DoD.**ACTION:** Notice.

SUMMARY: In compliance with the *Paperwork Reduction Act of 1995*, the Office of the Director Army Safety announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by March 10, 2017.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.
- *Mail:* Department of Defense, Office of the Deputy Chief Management Officer, Directorate for Oversight and Compliance, Regulatory and Advisory Committee Division, 4800 Mark Center Drive, Mailbox #24, Alexandria, VA 22350-1700.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the Internet at <http://www.regulations.gov> as they are received without change, including any personal identifiers or contact information.

Any associated form(s) for this collection may be located within this same electronic docket and downloaded for review/testing. Follow the instructions at <http://www.regulations.gov> for submitting comments. Please submit comments on any given form identified by docket number, form number, and title.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to the Department of the Army, Army Safety Office, Chief of Staff, DACS-SF, 9351 Hall Rd, Fort Belvoir, VA 22060, ATTN: Mr. Timothy Mikulski at (703) 697-1321.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Radiation Sources on Army Land; OMB Control Number 0702-0109.

Needs and Uses: The information collection requirement is necessary to regulate the use, storage, or possession of radiation sources by non-Army agencies (including their civilian contractors) on an Army installation. The non-Army applicant will apply by letter, email or facsimile with supporting documentation to the garrison commander through the appropriate tenant commander or garrison director.

The Army radiation permit application will specify the effective date and duration for the Army radiation permit and describe the purposes for which the Army radiation permit is being sought. The application will include identification of the trained operating personnel who will be responsible for implementation of the activities authorized by the permit and a summary of their professional qualifications; the point-of-contact name and phone number for the application; the applicant's radiation safety Standing Operating Procedures (SOPs); storage provisions when the radiation source is not in use; and procedures for notifying the installation of reportable incidents/accidents.

Affected Public: Business or Other For-Profit; Not-For-Profit Institutions; State, Local, or Tribal Government.

Annual Burden Hours: 470.

Number of Respondents: 235.

Responses per Respondent: 1.

Annual Responses: 235.

Average Burden per Response: 2 hours.

Frequency: On occasion.

Dated: January 4, 2017.

Aaron Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

BILLING CODE 5001-06-P

DEPARTMENT OF EDUCATION

[Docket No. ED-2016-ICCD-0121]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; Formula Grant EASIE (Electronic Application System for Indian Education)

AGENCY: Office of Elementary and Secondary Education (OESE), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 3501 *et seq.*), ED is proposing a revision of an existing information collection.

DATES: Interested persons are invited to submit comments on or before February 8, 2017.

ADDRESSES: To access and review all the documents related to the information collection listed in this notice, please use <http://www.regulations.gov> by searching the Docket ID number ED-2016-ICCD-0121. Comments submitted in response to this notice should be submitted electronically through the Federal eRulemaking Portal at <http://www.regulations.gov> by selecting the Docket ID number or via postal mail, commercial delivery, or hand delivery. *Please note that comments submitted by fax or email and those submitted after the comment period will not be accepted.* Written requests for information or comments submitted by postal mail or delivery should be addressed to the Director of the Information Collection Clearance Division, U.S. Department of Education, 400 Maryland Avenue SW., LBJ, Room 226-62, Washington, DC 20202-4537.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Kimberly Smith, 202-453-6469.

SUPPLEMENTARY INFORMATION: The Department of Education (ED), in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand the Department's information collection requirements and provide the requested data in the desired format. ED is soliciting comments on the proposed

information collection request (ICR) that is described below. The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: Formula Grant EASIE (Electronic Application System for Indian Education).

OMB Control Number: 1810-0021.

Type of Review: A revision of an existing information collection.

Respondents/Affected Public: State, Local, and Tribal Governments.

Total Estimated Number of Annual Responses: 11,300.

Total Estimated Number of Annual Burden Hours: 9,590.

Abstract: The Indian Education Formula Grant (CFDA 84.060A) requires the annual submission of the application from the local educational agency and/or tribe. The amount of each applicant's award is determined by formula, based upon the reported number of American Indian/Alaska Native students identified in the application, the state per pupil expenditure, and the total appropriation available. Applicants provide the data required for funding electronically, and the Office of Indian Education (OIE) is able to apply electronic tools to facilitate the review and analysis leading to grant awards. The system has been named Formula Grant Electronic Application System for Indian Education (EASIE), and is located in the ED Facts System (ESS) Web site.

Dated: January 4, 2017.

Tomakie Washington,

Acting Director, Information Collection Clearance Division, Office of the Chief Privacy Officer, Office of Management.

BILLING CODE 4000-01-P

DEPARTMENT OF EDUCATION

Applications for New Awards; College Assistance Migrant Program

AGENCY: Office of Elementary and Secondary Education, Department of Education.

ACTION: Notice.

Overview Information:
College Assistance Migrant Program (CAMP).

Notice inviting applications for new awards for fiscal year (FY) 2017.

Catalog of Federal Domestic Assistance (CFDA) Number: 84.149A.

Dates:
Applications Available: January 9, 2017.

Deadline for Transmittal of Applications: March 10, 2017.

Deadline for Intergovernmental Review: May 9, 2017.

Full Text of Announcement

I. Funding Opportunity Description

Purpose of Program: The purpose of CAMP is to provide academic and financial support to help migrant and seasonal farmworkers and members of their immediate family complete their first year of college and continue in postsecondary education.

Priorities: This competition includes one competitive preference priority and two invitational priorities. In accordance with 34 CFR 75.105(b)(2)(iv), the competitive preference priority is from section 418A(e) of the Higher Education Act of 1965, as amended (HEA) (20 U.S.C. 1070d-2(e)).

Competitive Preference Priority: For FY 2017 and any subsequent year in which we make awards from the list of unfunded applications from this competition, this priority is a competitive preference priority. Under 34 CFR 75.105(c)(2)(i), we award up to 15 additional points to an application, depending on how well the applicant meets the competitive preference priority.

This priority is:
Prior Experience of Service Delivery (Up to 15 points).

For applicants with an expiring CAMP project, the Secretary will consider the applicant's prior experience in implementing its expiring CAMP project, based on information contained in documents previously provided to the Department, such as annual performance reports, project evaluation reports, site visit reports, and the previously approved CAMP application.

Under this competition, we also are particularly interested in applications that address the following invitational priorities.

Invitational Priorities: For FY 2017 and any subsequent year in which we make awards from the list of unfunded applications from this competition,

these priorities are invitational priorities. Under 34 CFR 75.105(c)(1) we do not give an application that meets these invitational priorities a competitive or absolute preference over other applications.

These priorities are:

Invitational Priority 1—Science, Technology, Engineering, and Mathematics Education (STEM).

Projects that are designed to address one or more of the following priority areas:

(a) Providing students with increased access to rigorous and engaging coursework in STEM.

(b) Increasing the number and proportion of students prepared for postsecondary or graduate study and careers in STEM, with a specific focus on an increase in the number and proportion of students so prepared who are from groups traditionally underrepresented in STEM careers, including minorities, individuals with disabilities, and women.

Note: Applicants could, for example, propose providing students with increased access to coursework in STEM through such activities as mentoring, counseling, and tutoring in ways that motivate participants to pursue postsecondary education in the areas of STEM. Similarly, applicants could propose increasing the number and proportion of students prepared for postsecondary or graduate study and careers in STEM through activities such as referrals to STEM-oriented work-based learning experiences, exposure to academic programs and careers in STEM-related fields, and providing support services. These could include services to improve participants' academic skills and knowledge so that they may pursue studies and careers in STEM-related fields.

Invitational Priority 2—Faith-Based and Community Organizations.

Applications that propose to engage faith-based and community organizations in the delivery of services under this program.

Program Authority: 20 U.S.C. 1070d-2.

Applicable Regulations: (a) The Education Department General Administrative Regulations (EDGAR) in 34 CFR parts 75, 77, 79, 81, 82, 84, 86, 97, 98, and 99. (b) The Office of Management and Budget (OMB) Guidelines to Agencies on Governmentwide Debarment and Suspension (Nonprocurement) in 2 CFR part 180, as adopted and amended as regulations of the Department in 2 CFR part 3485. (c) The Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards in 2 CFR part 200, as adopted and amended as regulations of the Department in 2 CFR part 3474. (d) The regulations for this program in 34

CFR part 206. (e) The definitions of “migratory agricultural worker” in 34 CFR 200.81(f), “migratory child” in 34 CFR 200.81(g), and “migratory fisher” in 34 CFR 200.81(h). (f) The regulations in 20 CFR 669.110 and 669.320.

Note: The regulations in 34 CFR part 86 apply to institutions of higher education (IHEs) only.

II. Award Information

Type of Award: Discretionary grants.
Estimated Available Funds:

\$4,537,279.

Contingent upon the availability of funds and the quality of applications, we may make additional awards in subsequent years from the list of unfunded applications from this competition.

Estimated Range of Awards:

\$180,000–\$425,000.

Estimated Average Size of Awards:

\$412,479.

Maximum Award: We will reject any application that proposes a CAMP award exceeding \$425,000 for any of the five single budget periods of 12 months as reflected in the applicant’s ED 524 Budget Form, Section A, submitted as a part of the project application.

Minimum Award: We will reject any application that proposes a CAMP award that is less than \$180,000 for any of the five single budget periods of 12 months as reflected in the applicant’s ED 524 Budget Form, Section A, submitted as a part of the project application. Regardless of any other information in the application, the Department will interpret an ED 524 form that, in Part A, provides a blank budget summary for any of the five project years as the applicant’s intent to seek “\$0” for that year, and thus to not operate a project that year. Similarly, the Department will interpret any blank spaces on the ED 524 budget form as \$0.

Estimated Number of Awards: 11.

Note: The Department is not bound by any estimates in this notice.

Project Period: Applicants must propose a project of 60 months (five years) in duration, and we will reject any application that does not do so as reflected on the applicant’s ED 524 form, Section A, submitted as a part of the application. However, if an applicant receives an initial grant award, annual continuation funding is contingent upon availability of funds and the grantee having met minimum performance standards.

III. Eligibility Information

1. *Eligible Applicants:* IHEs or private non-profit organizations (including faith-based organizations) that plan their

projects in cooperation with an IHE and propose to operate the project with the facilities of the IHE.

2. *Cost Sharing or Matching:* This program does not require cost sharing or matching. However, consistent with 34 CFR 75.700, which requires an applicant to comply with its approved application, an applicant that proposes non-Federal matching funds and is awarded a grant must provide those funds for each year that the funds are proposed.

3. *Other:* Projects funded under this competition must budget for a two-day Office of Migrant Education annual meeting for CAMP directors in the Washington, DC area during each year of the project period.

IV. Application and Submission Information

1. *Address to Request Application Package:* Emily Bank, U.S. Department of Education, Office of Migrant Education, 400 Maryland Avenue SW., Room 3E338, Washington, DC 20202–6135. Telephone: (202) 453–6389 or by email: emily.bank@ed.gov.

To obtain a copy via the Internet, use the following address: www.ed.gov/programs/camp/applicant.html.

If you use a telecommunications device for the deaf (TDD) or a text telephone (TTY), call the Federal Relay Service (FRS), toll free, at 1–800–877–8339.

Individuals with disabilities can obtain a copy of the application package in an accessible format (e.g., braille, large print, audiotape, or compact disc) by contacting the program contact person listed in this section.

2.a. *Content and Form of Application Submission:* Requirements concerning the content and form of an application, together with the forms you must submit, are in the application package for this competition.

Page Limit: The application narrative (Part IV of the application) is where you, the applicant, address the selection criteria that reviewers use to evaluate your application. Panel readers will award points only for an applicant’s response to a given selection criterion that is contained within the section of the application designated to address that particular selection criterion. Readers will not review, or award points for, a response to the selection criterion that is located in any other section of the application or the appendices. We will reject any application narrative that exceeds 25 pages or does not adhere to the following standards:

- A “page” is 8.5” x 11”, on one side only, with 1” margins at the top, bottom, and both sides.

- Double space (no more than three lines per vertical inch) all text in the application narrative, including titles, headings, footnotes, quotations, references, and captions. However, you may single space all text in charts, tables, figures, and graphs. Charts, tables, figures, and graphs presented in the application narrative count toward the page limit.

- Use a font that is either 12 point or larger or no smaller than 10 pitch (characters per inch) throughout the entire application package.

- Use one of the following fonts: Times New Roman, Courier, Courier New, or Arial. An application submitted in any other font (including Times Roman or Arial Narrow) will not be accepted. The 25-page limit for the application narrative does not apply to the cover sheet; the budget section, including the narrative budget justification; the assurances and certifications; or the one-page abstract. However, the page limit does apply to all of the application narrative.

Appendices must be limited to 20 pages and must include the following: Resumes, if applicable, and job descriptions of key personnel. Job descriptions must include duties and minimum qualifications. Items in the appendices will only be used by the program office; the items will not be read by reviewers.

b. *Submission of Proprietary Information:* Given the types of projects that may be proposed in applications for the CAMP, your application may include business information that you consider proprietary. In 34 CFR 5.11 we define “business information” and describe the process we use in determining whether any of that information is proprietary and, thus, protected from disclosure under Exemption 4 of the Freedom of Information Act (5 U.S.C. 552, as amended).

Because we plan to make successful applications available to the public you may wish to request confidentiality of business information.

Consistent with Executive Order 12600, please designate in your application any information that you believe is exempt from disclosure under Exemption 4. In the appropriate Appendix section of your application, under “Other Attachments Form,” please list the page number or numbers on which we can find this information. For additional information please see 34 CFR 5.11(c).

3. *Submission Dates and Times:*

Applications Available: January 9, 2017.

Deadline for Transmittal of Applications: March 10, 2017.

Applications for grants under this competition must be submitted electronically using the *Grants.gov* Apply site (*Grants.gov*). For information (including dates and times) about how to submit your application electronically, or in paper format by mail or hand delivery if you qualify for an exception to the electronic submission requirement, please refer to *Other Submission Requirements* in section IV of this notice.

We will not consider an application that does not comply with the deadline requirements.

Individuals with disabilities who need an accommodation or auxiliary aid in connection with the application process should contact the person listed under **FOR FURTHER INFORMATION CONTACT** in section VII of this notice. If the Department provides an accommodation or auxiliary aid to an individual with a disability in connection with the application process, the individual's application remains subject to all other requirements and limitations in this notice.

Deadline for Intergovernmental Review: May 9, 2017.

4. *Intergovernmental Review:* This competition is subject to Executive Order 12372 and the regulations in 34 CFR part 79. Information about Intergovernmental Review of Federal Programs under Executive Order 12372 is in the application package for this competition.

5. *Funding Restrictions:* We reference regulations outlining funding restrictions in the *Applicable Regulations* section of this notice.

6. *Data Universal Numbering System Number, Taxpayer Identification Number, and System for Award Management:* To do business with the Department of Education, you must—

- a. Have a Data Universal Numbering System (DUNS) number and a Taxpayer Identification Number (TIN);
- b. Register both your DUNS number and TIN with the System for Award Management (SAM), the Government's primary registrant database;
- c. Provide your DUNS number and TIN on your application; and
- d. Maintain an active SAM registration with current information while your application is under review by the Department and, if you are awarded a grant, during the project period.

You can obtain a DUNS number from Dun and Bradstreet at the following Web site: <http://fedgov.dnb.com/>

webform. A DUNS number can be created within one to two business days.

If you are a corporate entity, agency, institution, or organization, you can obtain a TIN from the Internal Revenue Service. If you are an individual, you can obtain a TIN from the Internal Revenue Service or the Social Security Administration. If you need a new TIN, please allow two to five weeks for your TIN to become active.

The SAM registration process can take approximately seven business days, but may take upwards of several weeks, depending on the completeness and accuracy of the data you enter into the SAM database. Thus, if you think you might want to apply for Federal financial assistance under a program administered by the Department, please allow sufficient time to obtain and register your DUNS number and TIN. We strongly recommend that you register early.

Note: Once your SAM registration is active, it may be 24 to 48 hours before you can access the information in, and submit an application through, *Grants.gov*.

If you are currently registered with SAM, you may not need to make any changes. However, please make certain that the TIN associated with your DUNS number is correct. Also note that you will need to update your registration annually. This may take three or more business days.

Information about SAM is available at www.SAM.gov. To further assist you with obtaining and registering your DUNS number and TIN in SAM or updating your existing SAM account, we have prepared a *SAM.gov* Tip Sheet, which you can find at: <http://www2.ed.gov/fund/grant/apply/sam-faqs.html>.

In addition, if you are submitting your application via *Grants.gov*, you must (1) be designated by your organization as an Authorized Organization Representative (AOR); and (2) register yourself with *Grants.gov* as an AOR. Details on these steps are outlined at the following *Grants.gov* Web page: www.grants.gov/web/grants/register.html.

7. *Other Submission Requirements:* Applications for grants under this competition must be submitted electronically unless you qualify for an exception to this requirement in accordance with the instructions in this section.

a. *Electronic Submission of Applications.*

Applications for grants under CAMP, CFDA number 84.149A, must be submitted electronically using the Governmentwide *Grants.gov* Apply site at www.Grants.gov. Through this site,

you will be able to download a copy of the application package, complete it offline, and then upload and submit your application. You may not email an electronic copy of a grant application to us.

We will reject your application if you submit it in paper format unless, as described elsewhere in this section, you qualify for one of the exceptions to the electronic submission requirement *and* submit, no later than two weeks before the application deadline date, a written statement to the Department that you qualify for one of these exceptions. Further information regarding calculation of the date that is two weeks before the application deadline date is provided later in this section under *Exception to Electronic Submission Requirement*.

You may access the electronic grant application for CAMP at www.Grants.gov. You must search for the downloadable application package for this competition by the CFDA number. Do not include the CFDA number's alpha suffix in your search (e.g., search for 84.149, not 84.149A).

Please note the following:

- When you enter the *Grants.gov* site, you will find information about submitting an application electronically through the site, as well as the hours of operation.

- Applications received by *Grants.gov* are date and time stamped. Your application must be fully uploaded and submitted and must be date and time stamped by the *Grants.gov* system no later than 4:30:00 p.m., Washington, DC time, on the application deadline date. Except as otherwise noted in this section, we will not accept your application if it is received—that is, date and time stamped by the *Grants.gov* system—after 4:30:00 p.m., Washington, DC time, on the application deadline date. We do not consider an application that does not comply with the deadline requirements. When we retrieve your application from *Grants.gov*, we will notify you if we are rejecting your application because it was date and time stamped by the *Grants.gov* system after 4:30:00 p.m., Washington, DC time, on the application deadline date.

- The amount of time it can take to upload an application will vary depending on a variety of factors, including the size of the application and the speed of your Internet connection. Therefore, we strongly recommend that you do not wait until the application deadline date to begin the submission process through *Grants.gov*.

- You should review and follow the Education Submission Procedures for

submitting an application through *Grants.gov* that are included in the application package for this competition to ensure that you submit your application in a timely manner to the *Grants.gov* system. You can also find the Education Submission Procedures pertaining to *Grants.gov* under News and Events on the Department's G5 system home page at www.G5.gov. In addition, for specific guidance and procedures for submitting an application through *Grants.gov*, please refer to the *Grants.gov* Web site at: www.grants.gov/web/grants/applicants/apply-for-grants.html.

- You will not receive additional point value because you submit your application in electronic format, nor will we penalize you if you qualify for an exception to the electronic submission requirement, as described elsewhere in this section, and submit your application in paper format.

- You must submit all documents electronically, including all information you typically provide on the following forms: the Application for Federal Assistance (SF 424), the Department of Education Supplemental Information for SF 424, Budget Information—Non-Construction Programs (ED 524), and all necessary assurances and certifications.

- You must upload any narrative sections and all other attachments to your application as files in read-only Portable Document Format (PDF). Do not upload an interactive or fillable PDF file. If you upload a file type other than a read-only, PDF (e.g., Word, Excel, WordPerfect, etc.) or submit a password-protected file, we will not review that material. Please note that this could result in your application not being considered for funding because the material in question—for example, the application narrative—is critical to a meaningful review of your proposal. For that reason it is important to allow yourself adequate time to upload all material as PDF files. The Department will not convert material from other formats to PDF.

- Your electronic application must comply with any page-limit requirements described in this notice.

- After you electronically submit your application, you will receive from *Grants.gov* an automatic notification of receipt that contains a *Grants.gov* tracking number. This notification indicates receipt by *Grants.gov* only, not receipt by the Department. *Grants.gov* will also notify you automatically by email if your application met all the *Grants.gov* validation requirements or if there were any errors (such as submission of your application by someone other than a registered

Authorized Organization Representative, or inclusion of an attachment with a file name that contains special characters).

- Once your application is successfully validated by *Grants.gov*, the Department will retrieve your application from *Grants.gov* and send you an email with a unique PR/Award number for your application.

These emails do not mean that your application is without any disqualifying errors. While your application may have been successfully validated by *Grants.gov*, it must also meet the Department's application requirements as specified in this notice and in the application instructions. Disqualifying errors could include, for instance, failure to upload attachments in a read-only PDF; failure to submit a required part of the application; or failure to meet applicant eligibility requirements. It is your responsibility to ensure that your submitted application has met all of the Department's requirements.

- We may request that you provide us original signatures on forms at a later date.

Application Deadline Date Extension in Case of Technical Issues with the Grants.gov System: If you are experiencing problems submitting your application through *Grants.gov*, please contact the *Grants.gov* Support Desk, toll free, at 1-800-518-4726. You must obtain a *Grants.gov* Support Desk Case Number and must keep a record of it.

If you are prevented from electronically submitting your application on the application deadline date because of technical problems with the *Grants.gov* system, we will grant you an extension until 4:30:00 p.m., Washington, DC time, the following business day to enable you to transmit your application electronically or by hand delivery. You also may mail your application by following the mailing instructions described elsewhere in this notice.

If you submit an application after 4:30:00 p.m., Washington, DC time, on the application deadline date, please contact the person listed under **FOR FURTHER INFORMATION CONTACT** in section VII of this notice and provide an explanation of the technical problem you experienced with *Grants.gov*, along with the *Grants.gov* Support Desk Case Number. We will accept your application if we can confirm that a technical problem occurred with the *Grants.gov* system and that the problem affected your ability to submit your application by 4:30:00 p.m., Washington, DC time, on the application deadline date. We will

contact you after we determine whether your application will be accepted.

Note: The extensions to which we refer in this section apply only to the unavailability of, or technical problems with, the *Grants.gov* system. We will not grant you an extension if you failed to fully register to submit your application to *Grants.gov* before the application deadline date and time or if the technical problem you experienced is unrelated to the *Grants.gov* system.

Exception to Electronic Submission Requirement: You qualify for an exception to the electronic submission requirement, and may submit your application in paper format, if you are unable to submit an application through the *Grants.gov* system because—

- You do not have access to the Internet; or

- You do not have the capacity to upload large documents to the *Grants.gov* system;

and

- No later than two weeks before the application deadline date (14 calendar days or, if the fourteenth calendar day before the application deadline date falls on a Federal holiday, the next business day following the Federal holiday), you mail or fax a written statement to the Department, explaining which of the two grounds for an exception prevents you from using the Internet to submit your application.

If you mail your written statement to the Department, it must be postmarked no later than two weeks before the application deadline date. If you fax your written statement to the Department, we must receive the faxed statement no later than two weeks before the application deadline date.

Address and mail or fax your statement to: Emily Bank, U.S. Department of Education, 400 Maryland Avenue SW., Room 3E338, Washington, DC 20202-6135. FAX: (202) 205-0089.

Your paper application must be submitted in accordance with the mail or hand delivery instructions described in this notice.

b. *Submission of Paper Applications by Mail.*

If you qualify for an exception to the electronic submission requirement, you may mail (through the U.S. Postal Service or a commercial carrier) your application to the Department. You must mail the original and two copies of your application, on or before the application deadline date, to the Department at the following address: U.S. Department of Education, Application Control Center, Attention: CFDA Number 84.149A, LBJ Basement Level 1, 400 Maryland Avenue SW., Washington, DC 20202-4260.

You must show proof of mailing consisting of one of the following:

(1) A legibly dated U.S. Postal Service postmark.

(2) A legible mail receipt with the date of mailing stamped by the U.S. Postal Service.

(3) A dated shipping label, invoice, or receipt from a commercial carrier.

(4) Any other proof of mailing acceptable to the Secretary of the U.S. Department of Education.

If you mail your application through the U.S. Postal Service, we do not accept either of the following as proof of mailing:

(1) A private metered postmark.

(2) A mail receipt that is not dated by the U.S. Postal Service.

Note: The U.S. Postal Service does not uniformly provide a dated postmark. Before relying on this method, you should check with your local post office.

We will not consider applications postmarked after the application deadline date.

c. Submission of Paper Applications by Hand Delivery.

If you qualify for an exception to the electronic submission requirement, you (or a courier service) may deliver your paper application to the Department by hand. You must deliver the original and two copies of your application by hand, on or before the application deadline date, to the Department at the following address: U.S. Department of Education, Application Control Center, Attention: CFDA Number 84.149A, 550 12th Street SW., Room 7039, Potomac Center Plaza, Washington, DC 20202-4260.

The Application Control Center accepts hand deliveries daily between 8:00 a.m. and 4:30:00 p.m., Washington, DC time, except Saturdays, Sundays, and Federal holidays.

Note for Mail or Hand Delivery of Paper Applications: If you mail or hand deliver your application to the Department—

(1) You must indicate on the envelope and—if not provided by the Department—in Item 11 of the SF 424 the CFDA number, including suffix letter, if any, of the competition under which you are submitting your application; and

(2) The Application Control Center will mail to you a notification of receipt of your grant application. If you do not receive this notification within 15 business days from the application deadline date, you should call the U.S. Department of Education Application Control Center at (202) 245-6288.

V. Application Review Information

1. **Selection Criteria:** The selection criteria for this competition are from 34

CFR 75.210 and are listed in the application package.

2. **Review and Selection Process:** The Secretary will consider the need to provide an equitable geographic distribution of grants in selecting applications for awards, in accordance with section 418A of the HEA (20 U.S.C. 1070d-2(g)). In addition, we remind potential applicants that in reviewing applications in any discretionary grant competition, the Secretary may consider, under 34 CFR 75.217(d)(3), the past performance of the applicant in carrying out a previous award, such as the applicant's use of funds, achievement of project objectives, and compliance with grant conditions. The Secretary may also consider whether the applicant failed to submit a timely performance report or submitted a report of unacceptable quality.

In addition, in making a competitive grant award, the Secretary requires various assurances, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department of Education (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

3. **Risk Assessment and Special Conditions:** Consistent with 2 CFR 200.205, before awarding grants under this competition the Department conducts a review of the risks posed by applicants. Under 2 CFR 3474.10, the Secretary may impose special conditions and, in appropriate circumstances, high-risk conditions on a grant if the applicant or grantee is not financially stable; has a history of unsatisfactory performance; has a financial or other management system that does not meet the standards in 2 CFR part 200, subpart D; has not fulfilled the conditions of a prior grant; or is otherwise not responsible.

4. **Integrity and Performance System:** If you are selected under this competition to receive an award that over the course of the project period may exceed the simplified acquisition threshold (currently \$150,000), under 2 CFR 200.205(a)(2) we must make a judgment about your integrity, business ethics, and record of performance under Federal awards—that is, the risk posed by you as an applicant—before we make an award. In doing so, we must consider any information about you that is in the integrity and performance system (currently referred to as the Federal Awardee Performance and Integrity Information System (FAPIIS)), accessible through SAM. You may review and comment on any information about yourself that a

Federal agency previously entered and that is currently in FAPIIS.

Please note that, if the total value of your currently active grants, cooperative agreements, and procurement contracts from the Federal Government exceeds \$10,000,000, the reporting requirements in 2 CFR part 200, Appendix XII, require you to report certain integrity information to FAPIIS semiannually. Please review the requirements in 2 CFR part 200, Appendix XII, if this grant plus all the other Federal funds you receive exceed \$10,000,000.

VI. Award Administration Information

1. **Award Notices:** If your application is successful, we notify your U.S. Representative and U.S. Senators and send you a Grant Award Notification (GAN); or we may send you an email containing a link to access an electronic version of your GAN. We may notify you informally, also.

If your application is not evaluated or not selected for funding, we notify you.

2. **Administrative and National Policy Requirements:** We identify administrative and national policy requirements in the application package and reference these and other requirements in the *Applicable Regulations* section of this notice.

We reference the regulations outlining the terms and conditions of an award in the *Applicable Regulations* section of this notice and include these and other specific conditions in the GAN. The GAN also incorporates your approved application as part of your binding commitments under the grant.

3. **Reporting:** (a) If you apply for a grant under this competition, you must ensure that you have in place the necessary processes and systems to comply with the reporting requirements in 2 CFR part 170 should you receive funding under the competition. This does not apply if you have an exception under 2 CFR 170.110(b).

(b) At the end of your project period, you must submit a final performance report, including financial information, as directed by the Secretary. If you receive a multiyear award, you must submit an annual performance report that provides the most current performance and financial expenditure information as directed by the Secretary under 34 CFR 75.118. The Secretary may also require more frequent performance reports under 34 CFR 75.720(c). For specific requirements on reporting, please go to www.ed.gov/fund/grant/apply/appforms/appforms.html.

(c) Under 34 CFR 75.250(b), the Secretary may provide a grantee with additional funding for data collection

analysis and reporting. In this case the Secretary establishes a data collection period.

4. *Performance Measures:* Under the Government Performance and Results Act of 1993 (GPRA), the Department developed the following performance measures to evaluate the overall effectiveness of CAMP: (1) The percentage of CAMP participants completing the first academic year of their postsecondary program, and (2) the percentage of CAMP participants who, after completing the first academic year of college, continue their postsecondary education.

Applicants must propose annual targets for these measures in their applications. The national target for GPRA measure 1 for FY 2017 is that 86 percent of CAMP participants will complete the first academic year of their postsecondary program. The national target for GPRA measure 2 for FY 2017 is that 85 percent of CAMP participants continue their postsecondary education after completing the first academic year of college. The national targets for subsequent years may be adjusted based on additional baseline data. The panel readers will score related selection criteria on the basis of how well an applicant addresses these GPRA measures. Therefore, applicants will want to consider how to demonstrate a sound capacity to provide reliable data on the GPRA measures, including the project's annual performance targets for addressing the GPRA performance measures, as is required by the Office of Management and Budget approved annual performance report that is included in the application package. All grantees will be required to submit, as part of their annual performance report, information with respect to these GPRA performance measures.

5. *Continuation Awards:* In making a continuation award under 34 CFR 75.253, the Secretary considers, among other things: Whether a grantee has made substantial progress in achieving the goals and objectives of the project; whether the grantee has expended funds in a manner that is consistent with its approved application and budget; and, if the Secretary has established performance measurement requirements, the performance targets in the grantee's approved application.

In making a continuation award, the Secretary also considers whether the grantee is operating in compliance with the assurances in its approved application, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance

from the Department (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

VII. Agency Contact

FOR FURTHER INFORMATION CONTACT:

Emily Bank, U.S. Department of Education, 400 Maryland Avenue SW., Room 3E338, Washington, DC 20202-6135. Telephone: (202) 453-6389 or by email: emily.bank@ed.gov.

If you use a TDD or TTY, call the FRS, toll free, at 1-800-877-8339.

VIII. Other Information

Accessible Format: Individuals with disabilities can obtain this document and a copy of the application package in an accessible format (e.g., braille, large print, audiotope, or compact disc) on request to the program contact person listed under **FOR FURTHER INFORMATION CONTACT** in section VII of this notice.

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register**. Free Internet access to the official edition of the **Federal Register** and the Code of Federal Regulations is available via the Federal Digital System at: www.gpo.gov/fdsys. At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or PDF. To use PDF you must have Adobe Acrobat Reader, which is available free at the site.

You may also access documents of the Department published in the **Federal Register** by using the article search feature at: www.federalregister.gov. Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

Dated: January 4, 2017.

Ann Whalen,

Delegated the authority to perform the functions and duties of Assistant Secretary for Elementary and Secondary Education.

[FR Doc. 2017-00168 Filed 1-6-17; 8:45 am]

BILLING CODE 4000-01-P

DEPARTMENT OF EDUCATION

List of Correspondence From January 1, 2015 Through March 31, 2015 and April 1, 2015 Through June 30, 2015

AGENCY: Office of Special Education and Rehabilitative Services, Department of Education.

ACTION: Notice.

SUMMARY: The Secretary is publishing the following list of correspondence from the U.S. Department of Education (Department) received by individuals during the first and second quarters of

2015. The correspondence describes the Department's interpretations of the Individuals with Disabilities Education Act (IDEA) or the regulations that implement the IDEA. This list and the letters or other documents described in this list, with personally identifiable information redacted, as appropriate, can be found at: www2.ed.gov/policy/speced/guid/idea/index.html.

FOR FURTHER INFORMATION CONTACT:

Jessica Spataro or Mary Louise Dirrigl. Telephone: (202) 245-7605.

If you use a telecommunications device for the deaf (TDD) or a text telephone (TTY), you can call the Federal Relay Service (FRS), toll free, at 1-800-877-8339.

Individuals with disabilities can obtain a copy of this list and the letters or other documents described in this list in an accessible format (e.g., braille, large print, audiotope, or compact disc) by contacting Jessica Spataro or Mary Louise Dirrigl at (202) 245-7605.

SUPPLEMENTARY INFORMATION: The following list identifies correspondence from the Department issued from January 1, 2015 through March 31, 2015 and April 1, 2015 through June 30, 2015. Under section 607(f) of the IDEA, the Secretary is required to publish this list quarterly in the **Federal Register**. The list includes those letters that contain interpretations of the requirements of the IDEA and its implementing regulations, as well as letters and other documents that the Department believes will assist the public in understanding the requirements of the law. The list identifies the date and topic of each letter and provides summary information, as appropriate. To protect the privacy interests of the individual or individuals involved, personally identifiable information has been redacted, as appropriate.

Part B—Assistance for Education of all Children With Disabilities

Section 612—State Eligibility

Topic Addressed: State Educational Agency General Supervisory Authority

- Dear Colleague Letter dated April 15, 2015, providing guidance on best practices for the appropriate use of IDEA's dispute resolution procedures and the importance of avoiding conflicting decisions when a public agency files a due process complaint on the same issues that are the subject of a parent's pending State complaint.
- Letter dated May 19, 2015, to Mississippi Department of Education, Special Assistant Attorney General Heather S. Deaton, regarding the State's

duty to implement corrective actions to address the findings in a State complaint decision, and the types of corrective actions that can be ordered when a parent subsequently files a due process complaint involving some of the same issues.

Section 615—Procedural Safeguards

Topic Addressed: Impartial Due Process Hearings

- Letter dated January 7, 2015, to Minnesota attorney Margaret O'Sullivan Kane, regarding two issues related to due process hearings in Minnesota.

Topic Addressed: Independent Educational Evaluations

- Letter dated February 23, 2015, to individual Debbie Baus, regarding a parent's right to request an independent educational evaluation at public expense in an area that was not previously assessed by the public agency, and the public agency's responsibilities after the parent makes the request.

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register**. Free Internet access to the official edition of the **Federal Register** and the Code of Federal Regulations is available via the Federal Digital System at: www.gpo.gov/fdsys. At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Portable Document Format (PDF). To use PDF you must have Adobe Acrobat Reader, which is available free at the site.

You may also access documents of the Department published in the **Federal Register** by using the article search feature at: www.federalregister.gov. Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

Dated: January 4, 2017.

Sue Swenson,

Deputy Assistant Secretary for Special Education and Rehabilitative Services, delegated the authority to perform the functions and duties of the Assistant Secretary for Special Education and Rehabilitative Services.

[FR Doc. 2017-00172 Filed 1-6-17; 8:45 am]

BILLING CODE 4000-01-P

DEPARTMENT OF EDUCATION

[Docket No. ED-2017-ICCD-0001]

Agency Information Collection Activities; Comment Request; High School Equivalency Program (HEP) Annual Performance Report

AGENCY: Office of Elementary and Secondary Education (OESE), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 3501 *et seq.*), ED is proposing a revision of an existing information collection.

DATES: Interested persons are invited to submit comments on or before March 10, 2017.

ADDRESSES: To access and review all the documents related to the information collection listed in this notice, please use <http://www.regulations.gov> by searching the Docket ID number ED-2017-ICCD-0001. Comments submitted in response to this notice should be submitted electronically through the Federal eRulemaking Portal at <http://www.regulations.gov> by selecting the Docket ID number or via postal mail, commercial delivery, or hand delivery. *Please note that comments submitted by fax or email and those submitted after the comment period will not be accepted.* Written requests for information or comments submitted by postal mail or delivery should be addressed to the Director of the Information Collection Clearance Division, U.S. Department of Education, 400 Maryland Avenue SW., LBJ, Room 226-62, Washington, DC 20202-4537.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Tara Ramsey, 202-260-2063.

SUPPLEMENTARY INFORMATION: The Department of Education (ED), in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand the Department's information collection requirements and provide the requested data in the desired format. ED is soliciting comments on the proposed information collection request (ICR) that is described below. The Department of Education is especially interested in

public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: High School Equivalency Program (HEP) Annual Performance Report.

OMB Control Number: 1810-0684.

Type of Review: A revision of an existing information collection.

Respondents/Affected Public: State, Local, and Tribal Governments.

Total Estimated Number of Annual Responses: 44.

Total Estimated Number of Annual Burden Hours: 1,408.

Abstract: The Office of Migrant Education is collecting information for the High School Equivalency Program Annual Performance Report in compliance with Higher Education Act of 1965, as amended, Title IV, Sec. 418A; 20 U.S.C. 1070d-2 (special programs for students whose families are engaged in migrant and seasonal farm work), the Government Performance Results Act (GPRA) of 1993, Section 4 (1115), and the Education Department General Administrative Regulations (EDGAR), 34 CFR 75.253. EDGAR states that recipients of multi-year discretionary grants must submit an Annual Performance Report demonstrating that substantial progress has been made towards meeting the approved objectives of the project. In addition, discretionary grantees are required to report on their progress toward meeting the performance measures established for the Department of Education grant program. The Office of Migrant Education requests an extension without change of a currently approved collection to continue the use of a customized Annual Performance Report that goes beyond the Department of Education generic form number 524B Annual Performance Report to facilitate the collection of more standardized and comprehensive data to inform GPRA, to improve the overall quality of data collected, and to increase the quality of data that can be used to inform policy decisions.

The proposed changes to the 2017 HEP APR are changes to the HEP

Instructions Form and Performance Report Data Form and OME made minor editorial language and formatting changes. OME aligned the directions to the performance report data form, and required grantees to disaggregate HSE attainers and HSE withdrawals into New and Returning participants.

Dated: January 4, 2017.

Tomakie Washington,

Acting Director, Information Collection Clearance Division, Office of the Chief Privacy Officer, Office of Management.

[FR Doc. 2017-00146 Filed 1-6-17; 8:45 am]

BILLING CODE 4000-01-P

DEPARTMENT OF EDUCATION

Comprehensive Centers Program; CFDA Number: 84.283B

AGENCY: Office of Elementary and Secondary Education, Department of Education.

ACTION: Notice.

SUMMARY: The Secretary proposes to waive the requirements in 34 CFR 75.250(a) and 75.261(c)(2) of the Education Department General Administrative Regulations (EDGAR). Respectively, these provisions generally prohibit project periods exceeding five years and project period extensions involving the obligation of additional Federal funds. The proposed waivers would enable the 22 grantees under the Comprehensive Centers program that received awards in the fiscal year (FY) 2012 grant competition to continue to receive Federal funding for up to 24 months beyond the five-year limitation contained in 34 CFR 75.250(a).

DATES: We must receive your comments on or before February 8, 2017.

ADDRESSES: Address all comments about these proposed waivers to Britt Jung, Office of Elementary and Secondary Education, U.S. Department of Education, 400 Maryland Ave. SW., Room 3E206, Washington, DC 20202-6400.

FOR FURTHER INFORMATION CONTACT: Britt Jung. Telephone: (202) 205-4513 or by email: Britt.Jung@ed.gov.

If you use a telecommunications device for the deaf (TDD) or a text telephone (TTY), call the Federal Relay Service (FRS), toll-free, at 1-800-877-8339.

SUPPLEMENTARY INFORMATION:

Invitation to Comment: We invite you to submit comments regarding this notice of proposed waivers.

During and after the comment period, you may inspect all public comments about this notice of proposed waivers by

accessing *Regulations.gov*. You may also inspect the comments in person in Room 3E206, 400 Maryland Avenue SW., Washington, DC, between the hours of 8:30 a.m. and 4:00 p.m., Washington, DC time, Monday through Friday of each week, except Federal holidays. Please contact the person listed under **FOR FURTHER INFORMATION CONTACT**.

Assistance to Individuals With Disabilities in Reviewing the Rulemaking Record: On request, we will provide an appropriate accommodation or auxiliary aid to an individual with a disability who needs assistance to review the comments or other documents in the public rulemaking record for these proposed waivers. If you want to schedule an appointment for this type of accommodation or auxiliary aid, please contact the person listed under **FOR FURTHER INFORMATION CONTACT**.

Background: Under the Comprehensive Centers program the Department of Education (Department) supports grants to operate regional technical assistance centers and national content centers as authorized by sections 203 through 207 of the Educational Technical Assistance Act of 2002 (ETAA) (20 U.S.C. 9602-9606).

The purpose of these centers is to provide technical assistance to States as States work to help local educational agencies (LEAs) and schools to close achievement gaps in core content areas and raise student achievement in schools. We are especially interested in helping LEAs that are implementing comprehensive support and improvement activities and targeted support and improvement activities under section 1111(d) of the Elementary and Secondary Act of 1965 (ESEA), as amended by the Every Student Succeeds Act (ESSA).

Eligible applicants for Comprehensive Center grants are research organizations, institutions, agencies, institutions of higher education, partnerships among these types of entities, or individuals with the demonstrated ability or capacity to carry out the activities described in the notice inviting applications published in the **Federal Register** on June 6, 2012 (2012 NIA) (77 FR 33564) and corrected on August 15, 2012 (77 FR 48974). In FY 2012, the Department made five-year awards to 22 Comprehensive Centers. The project period for these Comprehensive Centers is currently scheduled to end on September 30, 2017.

We are proposing to waive the requirements in 34 CFR 75.250(a), which prohibit project periods exceeding five years, and the

requirements in 34 CFR 75.261(c)(2), which limit the extension of a project period if the extension involves the obligation of additional Federal funds. This would allow the 22 current Comprehensive Center grantees to continue to receive Federal funding annually for project periods through FY 2017 and possibly through FY 2018.

We are proposing these waivers because we do not believe it would be in the public interest to hold a new competition under the Comprehensive Centers program until after the finalization of the Department's new regulations and guidance on the ESEA, as amended by the ESSA. One of the primary purposes of the Comprehensive Centers program is to provide technical assistance to States regarding the administration and implementation of programs under the ESEA. Delaying the next competition until after the Department has finished implementing the ESEA, as amended by the ESSA, would allow applicants to familiarize themselves with the new statutory requirements under the ESSA and submit proposals that will best serve States.

We have also concluded that it would be contrary to the public interest to have a lapse in the work of the Comprehensive Centers while the Department implements the components of the ESSA described above.

We intend to fund the extended project period for either one or two years by using the FY 2017 and, if necessary, FY 2018 funds that Congress appropriates under the current statutory authority.

Under this proposed waiver and extension of the project period—

(1) Current grantees will be authorized to receive continuation awards annually for up to two years.

(2) We would not announce a new competition or make new awards under the Comprehensive Centers program in FY 2017.

(3) During the extension period, any activities carried out must be consistent with, or be a logical extension of the scope, goals, and objectives of the grantee's approved application from the 2012 Comprehensive Centers competition.

(4) Each grantee who receives a continuation award must also continue to comply with the requirements established in the program regulations and the 2012 NIA.

The proposed waivers of 34 CFR 75.250(a) and 75.261(c)(2) would not affect the applicability of the requirements in 34 CFR 75.253 (continuation of a multi-year project

after the first budget period) to any current Comprehensive Centers grantee that receives a continuation award as a result of the waivers.

In addition, these proposed waivers would not exempt current Comprehensive Centers grantees from the account-closing provisions in 31 U.S.C. 1552(a), nor would they extend the availability of funds previously awarded to current Comprehensive Centers grantees. Under 31 U.S.C. 1552(a) appropriated funds may be used for payment of valid obligations for only five years after the expiration of their period of availability for Federal obligation. After that time, the U.S. Department of Education will cancel and return the unexpended balance of those funds to the U.S. Treasury Department and these funds will be unavailable for restoration for any purpose. The waivers proposed in this notice would not change this requirement.

Implementing these waivers, therefore, would ensure that the important services provided by the current Comprehensive Centers grantees can be continued uninterrupted, as the Department releases final regulations and guidance to support States in their transition to the ESSA. During this extension period the activities of the current Comprehensive Centers grantees would be modified through work plans, as necessary, to support States as they begin to implement the ESSA.

We will announce the final waivers, if any, in a notice in the **Federal Register**. We will determine the final waivers after considering responses to this notice and other information available to the Department.

Proposed Waivers—Comprehensive Centers Program

For the 22 Comprehensive Centers grantees that received awards in the FY 2012 competition, the Secretary proposes to waive the requirements in 34 CFR 75.250(a) and 75.261(c)(2) that prohibit project periods exceeding five years and extensions of project periods that involve the obligation of additional Federal funds.

Regulatory Flexibility Act Certification

The Secretary certifies that these proposed waivers would not have a significant economic impact on a substantial number of small entities.

The small entities that would be affected by these proposed waivers are:

- (a) The FY 2012 grantees currently receiving Federal funds; and
- (b) Entities that otherwise would have been eligible to apply for an award in FY 2017 under the Comprehensive

Centers program if the Department had held that competition.

The Secretary certifies that the proposed waivers would not have a significant economic impact on these entities because the proposed waivers and the activities required to support the additional years of funding would not impose excessive regulatory burdens or require unnecessary Federal supervision. The proposed waivers would impose minimal requirements to ensure the proper expenditure of program funds, including requirements that are standard for continuation awards.

Paperwork Reduction Act of 1995

This notice of proposed waivers does not contain any information collection requirements.

Intergovernmental Review

This program is subject to Executive Order 12372 and the regulations in 34 CFR part 79. One of the objectives of the Executive Order is to foster an intergovernmental partnership and a strengthened federalism. The Executive Order relies on processes developed by State and local governments for coordination and review of proposed Federal financial assistance.

This document provides early notification of our specific plans and actions for this program.

Accessible Format: Individuals with disabilities can obtain this document in an accessible format (e.g., braille, large print, audiotope, or compact disc) by contacting the program contact person listed in this notice.

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register**. Free Internet access to the official edition of the **Federal Register** and the Code of Federal Regulations is available via the Federal Digital System at: www.gpo.gov/fdsys. At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Portable Document Format (PDF). To use PDF you must have Adobe Acrobat Reader, which is available free at the site.

You may also access documents of the Department published in the **Federal Register** by using the article search feature at: www.federalregister.gov. Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

Ann Whalen,

Senior Advisor to the Secretary Delegated the Duties of Assistant Secretary for Elementary and Secondary Education.

[FR Doc. 2017-00174 Filed 1-6-17; 8:45 am]

BILLING CODE 4000-01-P

DEPARTMENT OF EDUCATION

Applications for New Awards; High School Equivalency Program

AGENCY: Office of Elementary and Secondary Education, Department of Education.

ACTION: Notice.

Overview Information:

High School Equivalency Program (HEP) Notice inviting applications for new awards for fiscal year (FY) 2017

Catalog of Federal Domestic Assistance (CFDA) Number: 84.141A.

Dates:

Applications Available: January 9, 2017.

Deadline for Transmittal of Applications: March 10, 2017.

Deadline for Intergovernmental Review: May 9, 2017.

Full Text of Announcement

I. Funding Opportunity Description

Purpose of Program: The purposes of HEP are to help migrant and seasonal farmworkers and members of their immediate family: (1) Obtain a general education diploma that meets the guidelines for high school equivalency (HSE) established by the State in which the HEP project is conducted; and (2) gain employment or be placed in an institution of higher education (IHE) or other postsecondary education or training.

Priorities: This competition includes one competitive preference priority and two invitational priorities. In accordance with 34 CFR 75.105(b)(2)(iv), the competitive preference priority is from section 418A(e) of the Higher Education Act of 1965, as amended (HEA) (20 U.S.C. 1070d-2(e)).

Competitive Preference Priority: For FY 2017 and any subsequent year in which we make awards from the list of unfunded applications from this competition, this priority is a competitive preference priority. Under 34 CFR 75.105(c)(2)(i), we award up to an additional 15 points to an application, depending on how well the application meets this priority.

This priority is:

Prior Experience of Service Delivery (Up to 15 Points)

For applicants with an expiring HEP project, the Secretary will consider the applicant's prior experience in implementing its expiring HEP project, based on information contained in documents previously provided to the Department, such as annual performance reports, project evaluation reports, site visit reports, and the previously approved HEP application.

Under this competition, we also are particularly interested in applications that address the following invitational priorities.

Invitational Priorities: For FY 2017 and any subsequent year in which we make awards from the list of unfunded applications from this competition, these priorities are invitational priorities. Under 34 CFR 75.105(c)(1) we do not give an application that meets these invitational priorities a competitive or absolute preference over other applications.

These priorities are:

Invitational Priority 1—Science, Technology, Engineering, and Mathematics Education (STEM)

Projects that are designed to address one or more of the following priority areas:

(a) Providing students with increased access to rigorous and engaging coursework in STEM.

(b) Increasing the opportunities for high-quality preparation of, or professional development for, teachers or other educators of STEM subjects.

Note: Applicants could, for example, consider activities to better prepare program participants to transition into postsecondary education, such as preparing students to pass the sections of college entrance examinations in STEM-related subjects or providing mentoring, counseling, and tutoring services designed to motivate participants to pursue postsecondary education in STEM-related fields. Similarly, for the professional development priority area, applicants could propose activities to increase the opportunities for high-quality professional development for HSE instructors of STEM-related subjects that include, for example, training in intensive science teaching techniques presented by a professionally credentialed expert in science education.

Invitational Priority 2—Faith-Based and Community Organizations

Applications that propose to engage faith-based and community organizations in the delivery of services under this program.

Program Authority: 20 U.S.C. 1070d–2.

Applicable Regulations: (a) The Education Department General

Administrative Regulations (EDGAR) in 34 CFR parts 75, 77, 79, 81, 82, 84, 86, 97, 98, and 99. (b) The Office of Management and Budget Guidelines to Agencies on Governmentwide Debarment and Suspension (Nonprocurement) in 2 CFR part 180, as adopted and amended as regulations of the Department in 2 CFR part 3485. (c) The Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards in 2 CFR part 200, as adopted and amended as regulations of the Department in 2 CFR part 3474. (d) The regulations for this program in 34 CFR part 206. (e) The definitions of “migratory agricultural worker” in 34 CFR 200.81(f), “migratory child” in 34 CFR 200.81(g), and “migratory fisher” in 34 CFR 200.81(h). (f) The regulations in 20 CFR 669.110 and 669.320.

Note: The regulations in 34 CFR part 86 apply to institutions of higher education (IHEs) only.

II. Award Information

Type of Award: Discretionary grants.

Estimated Available Funds: \$1,393,360.

Contingent upon the availability of funds and the quality of applications, we may make additional awards in subsequent years from the list of unfunded applications from this competition.

Estimated Range of Awards: \$180,000–\$475,000.

Estimated Average Size of Awards: \$464,453.

Maximum Award: We will reject any application that proposes a HEP award exceeding \$475,000 for any of the five single budget periods of 12 months as reflected in the applicant's ED 524 Budget Form, Section A, submitted as a part of the application.

Minimum Award: We will reject any application that proposes a HEP award that is less than \$180,000 for any of the five single budget periods of 12 months as reflected in the applicant's ED 524 Budget Form, Section A, submitted as a part of the application. Regardless of any other information in the application, the Department will interpret an ED 524 Budget Form that, in Section A, provides a blank budget summary for any of the five project years as the applicant's intent to seek “\$0” for that year, and thus to not operate a project that year. Similarly, the Department will interpret any blank spaces on the ED 524 budget form as \$0.

Estimated Number of Awards: 3.

Note: The Department is not bound by any estimates in this notice.

Project Period: Applicants must propose a project of 60 months (five years) in duration, and we will reject any application that does not do so as reflected on the applicant's ED 524 Budget Form, Section A, submitted as a part of the application. However, if an applicant receives an initial grant award, annual continuation funding is contingent upon availability of funds and the grantee having met minimum performance standards.

III. Eligibility Information

1. **Eligible Applicants:** IHEs or private non-profit organizations (including faith-based organizations) that plan their projects in cooperation with an IHE and propose to operate some aspects of the project with the facilities of the IHE.

2. **Cost Sharing or Matching:** This program does not require cost sharing or matching. However, consistent with 34 CFR 75.700, which requires an applicant to comply with its approved application, an applicant that proposes non-Federal matching funds and is awarded a grant must provide those funds for each year that the funds are proposed.

3. **Other:** Projects funded under this competition must budget for a two-day Office of Migrant Education annual meeting for HEP Directors in the Washington, DC area during each year of the project period.

IV. Application and Submission Information

1. **Address to Request Application Package:** Emily Bank, U.S. Department of Education, Office of Migrant Education, 400 Maryland Avenue SW., Room 3E338, Washington, DC 20202–6135. Telephone: (202) 453–6389 or by email: emily.bank@ed.gov.

To obtain a copy via the Internet, use the following address: www.ed.gov/programs/hep/applicant.html.

If you use a telecommunications device for the deaf (TDD) or a text telephone (TTY), call the Federal Relay Service (FRS), toll free, at 1–800–877–8339.

Individuals with disabilities can obtain a copy of the application package in an accessible format (e.g., braille, large print, audiotope, or compact disc) by contacting the program contact person listed in this section.

2. a. **Content and Form of Application Submission:** Requirements concerning the content and form of an application, together with the forms you must submit, are in the application package for this competition.

Page Limit: The application narrative (Part IV of the application) is where you, the applicant, address the selection

criteria that reviewers use to evaluate your application. Panel readers will award points only for an applicant's response to a given selection criterion that is contained within the section of the application designated to address that particular selection criterion. Readers will not review, or award points for, a response to the selection criterion that is located in any other section of the application or the appendices. We will reject any application narrative that exceeds 25 pages or does not adhere to the following standards:

- A "page" is 8.5" x 11", on one side only, with 1" margins at the top, bottom, and both sides.

- Double space (no more than three lines per vertical inch) all text in the application narrative, including titles, headings, footnotes, quotations, references, and captions. However, you may single space all text in charts, tables, figures, and graphs. Charts, tables, figures, and graphs presented in the application narrative count toward the page limit.

- Use a font that is either 12 point or larger or no smaller than 10 pitch (characters per inch) throughout the entire application package.

- Use one of the following fonts: Times New Roman, Courier, Courier New, or Arial. An application submitted in any other font (including Times Roman or Arial Narrow) will not be accepted.

The 25-page limit for the application narrative does not apply to the cover sheet; the budget section, including the narrative budget justification; the assurances and certifications; or the one-page abstract. However, the page limit does apply to all of the application narrative.

Appendices must be limited to 20 pages and must include resumes, if applicable, and job descriptions of key personnel. Job descriptions must include duties and minimum qualifications. Items in the appendices will only be used by the program office; the items will not be read by reviewers.

b. *Submission of Proprietary Information:* Given the types of projects that may be proposed in applications for the HEP, your application may include business information that you consider proprietary. In 34 CFR 5.11 we define "business information" and describe the process we use in determining whether any of that information is proprietary and, thus, protected from disclosure under Exemption 4 of the Freedom of Information Act (5 U.S.C. 552, as amended). Because we plan to make successful applications available to the public you may wish to request confidentiality of business information.

Consistent with Executive Order 12600, please designate in your application any information that you believe is exempt from disclosure under Exemption 4. In the appropriate Appendix section of your application, under "Other Attachments Form," please list the page number or numbers on which we can find this information. For additional information please see 34 CFR 5.11(c).

3. *Submission Dates and Times:*
Applications Available: January 9, 2017.

Deadline for Transmittal of Applications: March 10, 2017.

Applications for grants under this competition must be submitted electronically using the *Grants.gov* Apply site (*Grants.gov*). For information (including dates and times) about how to submit your application electronically, or in paper format by mail or hand delivery if you qualify for an exception to the electronic submission requirement, please refer to *Other Submission Requirements* in section IV of this notice.

We will not consider an application that does not comply with the deadline requirements.

Individuals with disabilities who need an accommodation or auxiliary aid in connection with the application process should contact the person listed under **FOR FURTHER INFORMATION CONTACT** in section VII of this notice. If the Department provides an accommodation or auxiliary aid to an individual with a disability in connection with the application process, the individual's application remains subject to all other requirements and limitations in this notice.

Deadline for Intergovernmental Review: May 9, 2017.

4. *Intergovernmental Review:* This competition is subject to Executive Order 12372 and the regulations in 34 CFR part 79. Information about Intergovernmental Review of Federal Programs under Executive Order 12372 is in the application package for this competition.

5. *Funding Restrictions:* We reference regulations outlining funding restrictions in the *Applicable Regulations* section of this notice.

6. *Data Universal Numbering System Number, Taxpayer Identification Number, and System for Award Management:* To do business with the Department of Education, you must—

- a. Have a Data Universal Numbering System (DUNS) number and a Taxpayer Identification Number (TIN);

- b. Register both your DUNS number and TIN with the System for Award

Management (SAM), the Government's primary registrant database;

- c. Provide your DUNS number and TIN on your application; and

- d. Maintain an active SAM registration with current information while your application is under review by the Department and, if you are awarded a grant, during the project period.

You can obtain a DUNS number from Dun and Bradstreet at the following Web site: <http://fedgov.dnb.com/webform>. A DUNS number can be created within one to two business days.

If you are a corporate entity, agency, institution, or organization, you can obtain a TIN from the Internal Revenue Service. If you are an individual, you can obtain a TIN from the Internal Revenue Service or the Social Security Administration. If you need a new TIN, please allow two to five weeks for your TIN to become active.

The SAM registration process can take approximately seven business days, but may take upwards of several weeks, depending on the completeness and accuracy of the data you enter into the SAM database. Thus, if you think you might want to apply for Federal financial assistance under a program administered by the Department, please allow sufficient time to obtain and register your DUNS number and TIN. We strongly recommend that you register early.

Note: Once your SAM registration is active, it may be 24 to 48 hours before you can access the information in, and submit an application through, *Grants.gov*.

If you are currently registered with SAM, you may not need to make any changes. However, please make certain that the TIN associated with your DUNS number is correct. Also note that you will need to update your registration annually. This may take three or more business days.

Information about SAM is available at www.SAM.gov. To further assist you with obtaining and registering your DUNS number and TIN in SAM or updating your existing SAM account, we have prepared a SAM.gov Tip Sheet, which you can find at: <http://www2.ed.gov/fund/grant/apply/sam-faqs.html>.

In addition, if you are submitting your application via *Grants.gov*, you must (1) be designated by your organization as an Authorized Organization Representative (AOR); and (2) register yourself with *Grants.gov* as an AOR. Details on these steps are outlined at the following *Grants.gov* Web page: www.grants.gov/web/grants/register.html.

7. *Other Submission Requirements:*
Applications for grants under this

competition must be submitted electronically unless you qualify for an exception to this requirement in accordance with the instructions in this section.

a. *Electronic Submission of Applications.*

Applications for grants under HEP, CFDA number 84.141A, must be submitted electronically using the Governmentwide *Grants.gov* Apply site at www.Grants.gov. Through this site, you will be able to download a copy of the application package, complete it offline, and then upload and submit your application. You may not email an electronic copy of a grant application to us.

We will reject your application if you submit it in paper format unless, as described elsewhere in this section, you qualify for one of the exceptions to the electronic submission requirement and submit, no later than two weeks before the application deadline date, a written statement to the Department that you qualify for one of these exceptions. Further information regarding calculation of the date that is two weeks before the application deadline date is provided later in this section under *Exception to Electronic Submission Requirement*.

You may access the electronic grant application for HEP at www.Grants.gov. You must search for the downloadable application package for this competition by the CFDA number. Do not include the CFDA number's alpha suffix in your search (e.g., search for 84.141, not 84.141A).

Please note the following:

- When you enter the *Grants.gov* site, you will find information about submitting an application electronically through the site, as well as the hours of operation.

- Applications received by *Grants.gov* are date and time stamped. Your application must be fully uploaded and submitted and must be date and time stamped by the *Grants.gov* system no later than 4:30:00 p.m., Washington, DC time, on the application deadline date. Except as otherwise noted in this section, we will not accept your application if it is received—that is, date and time stamped by the *Grants.gov* system—after 4:30:00 p.m., Washington, DC time, on the application deadline date. We do not consider an application that does not comply with the deadline requirements. When we retrieve your application from *Grants.gov*, we will notify you if we are rejecting your application because it was date and time stamped by the *Grants.gov* system after

4:30:00 p.m., Washington, DC time, on the application deadline date.

- The amount of time it can take to upload an application will vary depending on a variety of factors, including the size of the application and the speed of your Internet connection. Therefore, we strongly recommend that you do not wait until the application deadline date to begin the submission process through *Grants.gov*.

- You should review and follow the Education Submission Procedures for submitting an application through *Grants.gov* that are included in the application package for this competition to ensure that you submit your application in a timely manner to the *Grants.gov* system. You can also find the Education Submission Procedures pertaining to *Grants.gov* under News and Events on the Department's G5 system home page at www.G5.gov. In addition, for specific guidance and procedures for submitting an application through *Grants.gov*, please refer to the *Grants.gov* Web site at: www.grants.gov/web/grants/applicants/apply-for-grants.html.

- You will not receive additional point value because you submit your application in electronic format, nor will we penalize you if you qualify for an exception to the electronic submission requirement, as described elsewhere in this section, and submit your application in paper format.

- You must submit all documents electronically, including all information you typically provide on the following forms: The Application for Federal Assistance (SF 424), the Department of Education Supplemental Information for SF 424, Budget Information—Non-Construction Programs (ED 524), and all necessary assurances and certifications.

- You must upload any narrative sections and all other attachments to your application as files in a read-only Portable Document Format (PDF). Do not upload an interactive or fillable PDF file. If you upload a file type other than a read-only PDF (e.g., Word, Excel, WordPerfect, etc.) or submit a password-protected file, we will not review that material. Please note that this could result in your application not being considered for funding because the material in question—for example, the project narrative—is critical to a meaningful review of your proposal. For that reason it is important to allow yourself adequate time to upload all material as PDF files. The Department will not convert material from other formats to PDF.

- Your electronic application must comply with any page-limit requirements described in this notice.

- After you electronically submit your application, you will receive from *Grants.gov* an automatic notification of receipt that contains a *Grants.gov* tracking number. This notification indicates receipt by *Grants.gov* only, not receipt by the Department. *Grants.gov* will also notify you automatically by email if your application met all the *Grants.gov* validation requirements or if there were any errors (such as submission of your application by someone other than a registered Authorized Organization Representative, or inclusion of an attachment with a file name that contains special characters).

Once your application is successfully validated by *Grants.gov*, the Department will retrieve your application from *Grants.gov* and send you an email with a unique PR/Award number for your application.

These emails do not mean that your application is without any disqualifying errors. While your application may have been successfully validated by *Grants.gov*, it must also meet the Department's application requirements as specified in this notice and in the application instructions. Disqualifying errors could include, for instance, failure to upload attachments in a read-only PDF; failure to submit a required part of the application; or failure to meet applicant eligibility requirements. It is your responsibility to ensure that your submitted application has met all of the Department's requirements.

- We may request that you provide us original signatures on forms at a later date.

Application Deadline Date Extension in Case of Technical Issues with the Grants.gov System: If you are experiencing problems submitting your application through *Grants.gov*, please contact the *Grants.gov* Support Desk, toll free, at 1-800-518-4726. You must obtain a *Grants.gov* Support Desk Case Number and must keep a record of it.

If you are prevented from electronically submitting your application on the application deadline date because of technical problems with the *Grants.gov* system, we will grant you an extension until 4:30:00 p.m., Washington, DC time, the following business day to enable you to transmit your application electronically or by hand delivery. You also may mail your application by following the mailing instructions described elsewhere in this notice.

If you submit an application after 4:30:00 p.m., Washington, DC time, on the application deadline date, please contact the person listed under **FOR FURTHER INFORMATION CONTACT** in

section VII of this notice and provide an explanation of the technical problem you experienced with *Grants.gov*, along with the *Grants.gov* Support Desk Case Number. We will accept your application if we can confirm that a technical problem occurred with the *Grants.gov* system and that the problem affected your ability to submit your application by 4:30:00 p.m., Washington, DC time, on the application deadline date. We will contact you after we determine whether your application will be accepted.

Note: The extensions to which we refer in this section apply only to the unavailability of, or technical problems with, the *Grants.gov* system. We will not grant you an extension if you failed to fully register to submit your application to *Grants.gov* before the application deadline date and time or if the technical problem you experienced is unrelated to the *Grants.gov* system.

Exception to Electronic Submission Requirement: You qualify for an exception to the electronic submission requirement, and may submit your application in paper format, if you are unable to submit an application through the *Grants.gov* system because—

- You do not have access to the Internet; or
- You do not have the capacity to upload large documents to the *Grants.gov* system;

and

- No later than two weeks before the application deadline date (14 calendar days or, if the fourteenth calendar day before the application deadline date falls on a Federal holiday, the next business day following the Federal holiday), you mail or fax a written statement to the Department, explaining which of the two grounds for an exception prevents you from using the Internet to submit your application.

If you mail your written statement to the Department, it must be postmarked no later than two weeks before the application deadline date. If you fax your written statement to the Department, we must receive the faxed statement no later than two weeks before the application deadline date.

Address and mail or fax your statement to: Emily Bank, U.S. Department of Education, 400 Maryland Avenue SW., Room 3E338, Washington, DC 20202-6135. FAX: (202) 205-0089.

Your paper application must be submitted in accordance with the mail or hand delivery instructions described in this notice.

b. Submission of Paper Applications by Mail.

If you qualify for an exception to the electronic submission requirement, you

may mail (through the U.S. Postal Service or a commercial carrier) your application to the Department. You must mail the original and two copies of your application, on or before the application deadline date, to the Department at the following address: U.S. Department of Education, Application Control Center, Attention: CFDA Number 84.141A, LBJ Basement Level 1, 400 Maryland Avenue SW., Washington, DC 20202-4260.

You must show proof of mailing consisting of one of the following:

- (1) A legibly dated U.S. Postal Service postmark.
- (2) A legible mail receipt with the date of mailing stamped by the U.S. Postal Service.
- (3) A dated shipping label, invoice, or receipt from a commercial carrier.
- (4) Any other proof of mailing acceptable to the Secretary of the U.S. Department of Education.

If you mail your application through the U.S. Postal Service, we do not accept either of the following as proof of mailing:

- (1) A private metered postmark.
- (2) A mail receipt that is not dated by the U.S. Postal Service.

Note: The U.S. Postal Service does not uniformly provide a dated postmark. Before relying on this method, you should check with your local post office.

We will not consider applications postmarked after the application deadline date.

c. Submission of Paper Applications by Hand Delivery.

If you qualify for an exception to the electronic submission requirement, you (or a courier service) may deliver your paper application to the Department by hand. You must deliver the original and two copies of your application by hand, on or before the application deadline date, to the Department at the following address:

U.S. Department of Education, Application Control Center, Attention: CFDA Number 84.141A, 550 12th Street SW., Room 7039, Potomac Center Plaza, Washington, DC 20202-4260.

The Application Control Center accepts hand deliveries daily between 8:00 a.m. and 4:30:00 p.m., Washington, DC time, except Saturdays, Sundays, and Federal holidays.

Note for Mail or Hand Delivery of Paper Applications: If you mail or hand deliver your application to the Department—

- (1) You must indicate on the envelope and—if not provided by the Department—in Item 11 of the SF 424 the CFDA number, including suffix letter, if any, of the competition under

which you are submitting your application; and

(2) The Application Control Center will mail to you a notification of receipt of your grant application. If you do not receive this notification within 15 business days from the application deadline date, you should call the U.S. Department of Education Application Control Center at (202) 245-6288.

V. Application Review Information

1. Selection Criteria: The selection criteria for this competition are from 34 CFR 75.210 and are listed in the application package.

2. Review and Selection Process: The Secretary will consider the need to provide an equitable geographic distribution of grants in selecting applications for awards, in accordance with section 418A of the HEA (20 U.S.C. 1070d-2(g)). In addition, we remind potential applicants that in reviewing applications in any discretionary grant competition, the Secretary may consider, under 34 CFR 75.217(d)(3), the past performance of the applicant in carrying out a previous award, such as the applicant's use of funds, achievement of project objectives, and compliance with grant conditions. The Secretary may also consider whether the applicant failed to submit a timely performance report or submitted a report of unacceptable quality.

In addition, in making a competitive grant award, the Secretary requires various assurances, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department of Education (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

3. Risk Assessment and Special Conditions: Consistent with 2 CFR 200.205, before awarding grants under this competition the Department conducts a review of the risks posed by applicants. Under 2 CFR 3474.10, the Secretary may impose special conditions and, in appropriate circumstances, high-risk conditions on a grant if the applicant or grantee is not financially stable; has a history of unsatisfactory performance; has a financial or other management system that does not meet the standards in 2 CFR part 200, subpart D; has not fulfilled the conditions of a prior grant; or is otherwise not responsible.

4. Integrity and Performance System:

If you are selected under this competition to receive an award that over the course of the project period may exceed the simplified acquisition threshold (currently \$150,000), under 2 CFR 200.205(a)(2) we must make a

judgment about your integrity, business ethics, and record of performance under Federal awards—that is, the risk posed by you as an applicant—before we make an award. In doing so, we must consider any information about you that is in the integrity and performance system (currently referred to as the Federal Awardee Performance and Integrity Information System (FAPIIS)), accessible through SAM. You may review and comment on any information about yourself that a Federal agency previously entered and that is currently in FAPIIS.

Please note that, if the total value of your currently active grants, cooperative agreements, and procurement contracts from the Federal Government exceeds \$10,000,000, the reporting requirements in 2 CFR part 200, Appendix XII, require you to report certain integrity information to FAPIIS semiannually. Please review the requirements in 2 CFR part 200, Appendix XII, if this grant plus all the other Federal funds you receive exceed \$10,000,000.

VI. Award Administration Information

1. *Award Notices:* If your application is successful, we notify your U.S. Representative and U.S. Senators and send you a Grant Award Notification (GAN); or we may send you an email containing a link to access an electronic version of your GAN. We may notify you informally, also.

If your application is not evaluated or not selected for funding, we notify you.

2. *Administrative and National Policy Requirements:* We identify administrative and national policy requirements in the application package and reference these and other requirements in the *Applicable Regulations* section of this notice.

We reference the regulations outlining the terms and conditions of an award in the *Applicable Regulations* section of this notice and include these and other specific conditions in the GAN. The GAN also incorporates your approved application as part of your binding commitments under the grant.

3. *Reporting:* (a) If you apply for a grant under this competition, you must ensure that you have in place the necessary processes and systems to comply with the reporting requirements in 2 CFR part 170 should you receive funding under the competition. This does not apply if you have an exception under 2 CFR 170.110(b).

(b) At the end of your project period, you must submit a final performance report, including financial information, as directed by the Secretary. If you receive a multiyear award, you must submit an annual performance report

that provides the most current performance and financial expenditure information as directed by the Secretary under 34 CFR 75.118. The Secretary may also require more frequent performance reports under 34 CFR 75.720(c). For specific requirements on reporting, please go to www.ed.gov/fund/grant/apply/appforms/appforms.html.

(c) Under 34 CFR 75.250(b), the Secretary may provide a grantee with additional funding for data collection analysis and reporting. In this case the Secretary establishes a data collection period.

4. *Performance Measures:* Under the Government Performance and Results Act of 1993 (GPRA), the Department developed the following performance measures to evaluate the overall effectiveness of HEP: (1) The percentage of HEP program participants exiting the program having received an HSE diploma (GPRA 1), and (2) the percentage of HSE diploma recipients who enter postsecondary education or training programs, upgraded employment, or the military (GPRA 2).

Applicants must propose annual targets for these measures in their applications. The national target for GPRA measure 1 for FY 2017 is that 69 percent of HEP program participants exit the program having received an HSE credential. The national target for GPRA measure 2 for FY 2017 is that 80 percent of HEP HSE diploma recipients will enter postsecondary education or training programs, upgraded employment, or the military. The national targets for subsequent years may be adjusted based on additional baseline data. The panel readers will score related selection criteria on the basis of how well an applicant addresses these GPRA measures. Therefore, applicants will want to consider how to demonstrate a sound capacity to provide reliable data on the GPRA measures, including the project's annual performance targets for addressing the GPRA performance measures, as is required by the Office of Management and Budget approved annual performance report that is included in the application package. All grantees will be required to submit, as part of their annual performance report, information with respect to these GPRA performance measures.

5. *Continuation Awards:* In making a continuation award under 34 CFR 75.253, the Secretary considers, among other things: Whether a grantee has made substantial progress in achieving the goals and objectives of the project; whether the grantee has expended funds in a manner that is consistent with its

approved application and budget; and, if the Secretary has established performance measurement requirements, the performance targets in the grantee's approved application.

In making a continuation award, the Secretary also considers whether the grantee is operating in compliance with the assurances in its approved application, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

VII. Agency Contact

For Further Information Contact: Emily Bank, U.S. Department of Education, 400 Maryland Avenue SW., Room 3E338, Washington, DC 20202–6135. Telephone: (202) 453–6389 or by email: emily.bank@ed.gov.

If you use a TDD or TYY, call the FRS, toll free, at 1–800–877–8339.

VIII. Other Information

Accessible Format: Individuals with disabilities can obtain this document and a copy of the application package in an accessible format (e.g., braille, large print, audiotape, or compact disc) on request to the program contact person listed under *For Further Information Contact* in section VII of this notice.

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register**. Free Internet access to the official edition of the **Federal Register** and the Code of Federal Regulations is available via the Federal Digital System at: www.gpo.gov/fdsys. At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or PDF. To use PDF you must have Adobe Acrobat Reader, which is available free at the site.

You may also access documents of the Department published in the **Federal Register** by using the article search feature at: www.federalregister.gov. Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

Dated: January 4, 2017.

Ann Whalen,

Delegated the authority to perform the functions and duties of Assistant Secretary for Elementary and Secondary Education.

[FR Doc. 2017–00170 Filed 1–6–17; 8:45 am]

BILLING CODE 4000–01–P

DEPARTMENT OF ENERGY**Federal Energy Regulatory Commission****Combined Notice of Filings #1**

Take notice that the Commission received the following electric corporate filings:

Docket Numbers: EC16-178-000.

Applicants: Wisconsin River Power Company, Wisconsin Public Service Corporation, Wisconsin Power and Light Company.

Description: Supplement to September 9, 2016 Application of Wisconsin River Power Company, et al. for Approval of Transaction Under Section 203(a)(1) of the Federal Power Act.

Filed Date: 10/11/16.

Accession Number: 20161011-5348.

Comments Due: 5 p.m. ET 1/10/17.

Take notice that the Commission received the following electric rate filings:

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. EL17-31-000]

Northern Illinois Municipal Power Agency v. PJM Interconnection, L.L.C.; Notice of Complaint

Take notice that on December 21, 2016, pursuant to sections 206, 306, and 309 of the Federal Power Act, 16 U.S.C. 824e, 825e, and 825h, and Rules 206 and 212 of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure, 18 CFR 385.206 and 385.212, Northern Illinois Municipal Power Agency (Complainant) filed a formal complaint against PJM Interconnection, L.L.C. (Respondent) alleging that Respondent is assessing duplicative congestion charges for pseudo-tied resources located in the adjoining balancing area of the Midcontinent Independent System Operator, Inc., all as more fully explained in the complaint.

Complainant certify that copies of the complaint were served on the contacts for Respondent, as listed on the Commission's list of Corporate Officials.

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. The Respondent's answer and all interventions, or protests must be filed on or before the comment date. The Respondent's answer, motions to

intervene, and protests must be served on the Complainant.

The Commission encourages electronic submission of protests and interventions in lieu of paper using the "eFiling" link at <http://www.ferc.gov>. Persons unable to file electronically should submit an original and 5 copies of the protest or intervention to the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426.

This filing is accessible on-line at <http://www.ferc.gov>, using the "eLibrary" link and is available for review in the Commission's Public Reference Room in Washington, DC. There is an "eSubscription" link on the Web site that enables subscribers to receive email notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please email FERCOnlineSupport@ferc.gov, or call (866) 208-3676 (toll free). For TTY, call (202) 502-8659.

Comment Date: 5:00 p.m. Eastern Time on January 10, 2017.

Dated: December 28, 2016.

Federal Energy Regulatory Commission

[Docket No. RM98-1-000]

Records Governing Off-the-Record Communications; Public Notice

This constitutes notice, in accordance with 18 CFR 385.2201(b), of the receipt of prohibited and exempt off-the-record communications.

Order No. 607 (64 FR 51222, September 22, 1999) requires Commission decisional employees, who make or receive a prohibited or exempt off-the-record communication relevant to the merits of a contested proceeding, to deliver to the Secretary of the Commission, a copy of the

communication, if written, or a summary of the substance of any oral communication.

Prohibited communications are included in a public, non-decisional file associated with, but not a part of, the decisional record of the proceeding. Unless the Commission determines that the prohibited communication and any responses thereto should become a part of the decisional record, the prohibited off-the-record communication will not be considered by the Commission in reaching its decision. Parties to a proceeding may seek the opportunity to respond to any facts or contentions made in a prohibited off-the-record communication, and may request that the Commission place the prohibited communication and responses thereto in the decisional record. The Commission will grant such a request only when it determines that fairness so requires. Any person identified below as having made a prohibited off-the-record communication shall serve the document on all parties listed on the official service list for the applicable proceeding in accordance with Rule 2010, 18 CFR 385.2010.

Exempt off-the-record communications are included in the decisional record of the proceeding, unless the communication was with a cooperating agency as described by 40 CFR 1501.6, made under 18 CFR 385.2201(e)(1)(v).

The following is a list of off-the-record communications recently received by the Secretary of the Commission. The communications listed are grouped by docket numbers in ascending order. These filings are available for electronic review at the Commission in the Public Reference Room or may be viewed on the Commission's Web site at <http://www.ferc.gov> using the eLibrary link. Enter the docket number, excluding the last three digits, in the docket number field to access the document. BILLING CODE 6717-01-P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP15-138-000]

Transcontinental Gas Pipe Line Company, LLC; Notice of Availability of the Final Environmental Impact Statement for the Proposed Atlantic Sunrise Project

The staff of the Federal Energy Regulatory Commission (FERC or Commission) has prepared a final environmental impact statement (EIS) for the Atlantic Sunrise Project, proposed by Transcontinental Gas Pipe Line Company, LLC (Transco) in the above-referenced docket. Transco requests authorization to expand its existing pipeline system from the Marcellus Shale production area in northern Pennsylvania to deliver an incremental 1.7 million dekatherms per day of year-round firm transportation capacity to its existing southeastern market areas.

The final EIS assesses the potential environmental effects of the construction and operation of the project in accordance with the requirements of the National Environmental Policy Act (NEPA). The FERC staff concludes that approval of the project would result in some adverse environmental impacts; however, most of these impacts would be reduced to less-than-significant levels with the implementation of Transco's proposed mitigation and the additional measures recommended in the final EIS.

The U.S. Army Corps of Engineers and the U.S. Department of Agriculture's Natural Resources Conservation Service participated as cooperating agencies in the preparation of the final EIS. Cooperating agencies

have jurisdiction by law or special expertise with respect to resources potentially affected by the proposal and participate in the NEPA analysis. Although the U.S. Army Corps of Engineers and the Natural Resources Conservation Service provided input to the conclusions and recommendations presented in the final EIS, the agencies will present their own conclusions and recommendations in their respective records of decision or determinations for the project.

The final EIS addresses the potential environmental effects of the construction and operation of about 199.4 miles of pipeline composed of the following facilities:

- 185.9 miles of new 30- and 42-inch-diameter natural gas pipeline in Pennsylvania;
- 11.0 miles of new 36- and 42-inch-diameter pipeline looping in Pennsylvania;
- 2.5 miles of 30-inch-diameter replacements in Virginia; and
- associated equipment and facilities.

The project's proposed aboveground facilities include two new compressor stations in Pennsylvania; additional compression and related modifications to three existing compressor stations in Pennsylvania and Maryland; two new meter stations and three new regulator stations in Pennsylvania; and minor modifications at existing aboveground facilities at various locations in Pennsylvania, Virginia, Maryland, North Carolina, and South Carolina to allow for bi-directional flow and the installation of supplemental odorization, odor detection, and/or odor masking/deodorization equipment.

The FERC staff mailed copies of the final EIS to federal, state, and local government representatives and agencies; elected officials; environmental and public interest groups; Native American tribes; potentially affected landowners and other interested individuals and groups; newspapers and libraries in the project area; and parties to this proceeding. Paper copy versions of this EIS were mailed to those specifically requesting

them; all others received a CD version. In addition, the final EIS is available for public viewing on the FERC's Web site (www.ferc.gov) using the eLibrary link. A limited number of copies are available for distribution and public inspection at: Federal Energy Regulatory Commission, Public Reference Room, 888 First Street NE., Room 2A, Washington, DC 20426, (202) 502-8371.

In accordance with the Council on Environmental Quality's (CEQ) regulations implementing NEPA, no agency decision on a proposed action may be made until 30 days after the U.S. Environmental Protection Agency publishes a notice of availability of the final EIS in the **Federal Register**. However, the CEQ regulations provide an exception to this rule when an agency decision is subject to a formal internal appeal process that allows other agencies or the public to make their views known. In such cases, the agency decision may be made at the same time the notice of the final EIS is published, allowing both periods to run concurrently. The Commission decision for this proposed action is subject to a 30-day rehearing period.

Additional information about the project is available from the Commission's Office of External Affairs, at (866) 208-FERC, or on the FERC Web site (www.ferc.gov) using the eLibrary link. Click on the eLibrary link, click on "General Search," and enter the docket number excluding the last three digits in the Docket Number field (*i.e.*, CP15-138). Be sure you have selected an appropriate date range. For assistance, please contact FERC Online Support at FercOnlineSupport@ferc.gov or toll free at (866) 208-3676; for TTY, contact (202) 502-8659. The eLibrary link also provides access to the texts of formal documents issued by the Commission, such as orders, notices, and rulemakings.

In addition, the Commission offers a free service called eSubscription that allows you to keep track of all formal issuances and submittals in specific dockets. This can reduce the amount of time you spend researching proceedings

by automatically providing you with notification of these filings, document summaries, and direct links to the documents. Go to www.ferc.gov/docs-filing/esubscription.asp.

Dated: December 30, 2016.

BILLING CODE 6717-01-P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. PF16-10-000]

WBI Energy Transmission, Inc.; Supplemental Notice of Intent To Prepare an Environmental Assessment for the Planned Valley Expansion Project and Request for Comments on Environmental Issues

On November 23, 2016, the Commission issued a "Notice of Intent to Prepare an Environmental Assessment for the Planned Valley Expansion Project and Request for Comments on Environmental Issues" (NOI) and an Errata Notice for the NOI on November 28, 2016. It has come to our attention that the environmental mailing list was not provided copies of the NOI or the Errata Notice; therefore, we are issuing this Supplemental NOI to extend the scoping period and provide

additional time for interested parties to file comments on environmental issues.

The staff of the Federal Energy Regulatory Commission (FERC or Commission) will prepare an environmental assessment (EA) that will discuss the environmental impacts of the Valley Expansion Project involving construction and operation of facilities by WBI Energy Transmission, Inc. (WBI Energy) in Clay County, Minnesota and Cass, Burleigh, Stutsman, and Barnes Counties, North Dakota. The Commission will use this EA in its decision-making process to determine whether the project is in the public convenience and necessity.

You can make a difference by providing us with your specific comments or concerns about the project. Your comments should focus on the potential environmental effects, reasonable alternatives, and measures to avoid or lessen environmental impacts. Your input will help the Commission staff determine what issues they need to evaluate in the EA. The NOI identified December 23, 2016 as the close of the scoping period. Please note that the scoping period is now extended and will close on January 27, 2017.

If you sent comments on this project to the Commission before the opening of this docket on October 17, 2016, you will need to file those comments in Docket No. PF16-10-000 to ensure they are considered as part of this proceeding.

This notice is being sent to the Commission's current environmental mailing list for this project. State and local government representatives should notify their constituents of this planned project and encourage them to comment on their areas of concern.

If you are a landowner receiving this notice, a pipeline company representative may contact you about the acquisition of an easement to construct, operate, and maintain the planned facilities. The company would seek to negotiate a mutually acceptable agreement. However, if the Commission approves the project, that approval conveys with it the right of eminent domain. Therefore, if easement negotiations fail to produce an agreement, the pipeline company could initiate condemnation proceedings where compensation would be determined in accordance with state law.

A fact sheet prepared by the FERC entitled "An Interstate Natural Gas Facility On My Land? What Do I Need To Know?" is available for viewing on the FERC Web site (www.ferc.gov). This fact sheet addresses a number of typically asked questions, including the

use of eminent domain and how to participate in the Commission's proceedings.

Public Participation

For your convenience, there are three methods you can use to submit your comments to the Commission. The Commission encourages electronic filing of comments and has expert staff available to assist you at (202) 502-8258 or efiling@ferc.gov. Please carefully follow these instructions so that your comments are properly recorded.

(1) You can file your comments electronically using the *eComment* feature on the Commission's Web site (www.ferc.gov) under the link to *Documents and Filings*. This is an easy method for submitting brief, text-only comments on a project;

(2) You can file your comments electronically by using the *eFiling* feature on the Commission's Web site (www.ferc.gov) under the link to *Documents and Filings*. With eFiling, you can provide comments in a variety of formats by attaching them as a file with your submission. New eFiling users must first create an account by clicking on "eRegister." If you are filing a comment on a particular project, please select "Comment on a Filing" as the filing type; or

(3) You can file a paper copy of your comments by mailing them to the following address. Be sure to reference the project docket number (PF16-10-000) with your submission: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE., Room 1A, Washington, DC 20426.

Summary of the Planned Project

WBI Energy plans to construct 38 miles of new 16-inch-diameter pipeline between Mapleton, North Dakota and Felton, Minnesota. WBI Energy also plans to construct a new 2,600-horsepower electric-driven compressor station in Cass County, North Dakota, farm taps, valve settings, and ancillary facilities. Additionally, WBI Energy plans to replace two existing town border station delivery points and construct one regulator station in Burleigh, Stutsman, and Barnes Counties, North Dakota in order to increase in the maximum allowable operating pressure of a portion of its Line Section 24. According to WBI Energy, the project would provide an additional 40 million cubic feet per day of firm transportation on its system.

The general location of the project facilities is shown in appendix 1.¹

¹ The appendices referenced in this notice will not appear in the **Federal Register**. Copies of the

Land Requirements for Construction

Construction of the project would affect a total of about 530 acres of land, including the pipeline construction right-of-way, additional temporary workspace, staging areas, temporary and permanent access roads, and aboveground facilities. The total acreage required for operation of the project is approximately 235 acres, including the new permanent pipeline easement, permanent access roads, and permanent aboveground facilities' footprint.

The EA Process

The National Environmental Policy Act (NEPA) requires the Commission to take into account the environmental impacts that could result from an action whenever it considers the issuance of a Certificate of Public Convenience and Necessity. NEPA also requires us² to discover and address concerns the public may have about proposals. This process is referred to as scoping. The main goal of the scoping process is to focus the analysis in the EA on the important environmental issues. By this notice, the Commission requests public comments on the scope of the issues to address in the EA. We will consider all filed comments during the preparation of the EA.

In the EA, we will discuss impacts that could occur as a result of the construction and operation of the planned project under these general headings:

- Geology and soils;
- water resources, fisheries, and wetlands;
- vegetation and wildlife;
- endangered and threatened species;
- cultural resources;
- socioeconomic;
- land use;
- air quality and noise;
- public safety; and
- cumulative impacts.

We will also evaluate possible alternatives to the planned project or portions of the project, and make recommendations on how to lessen or avoid impacts on the various resource areas.

Although no formal application has been filed, we have already initiated our NEPA review under the Commission's pre-filing process. The purpose of the

appendices were sent to all those receiving this notice in the mail and are available at www.ferc.gov using the link called "eLibrary" or from the Commission's Public Reference Room, 888 First Street NE., Washington, DC 20426, or call (202) 502-8371. For instructions on connecting to eLibrary, refer to the last page of this notice.

² "We," "us," and "our" refer to the environmental staff of the Commission's Office of Energy Projects.

pre-filing process is to encourage early involvement of interested stakeholders and to identify and resolve issues before the FERC receives an application. As part of our pre-filing review, we have begun to contact some federal and state agencies to discuss their involvement in the scoping process and the preparation of the EA.

The EA will present our independent analysis of the issues. The EA will be available in the public record through eLibrary. Depending on the comments received during the scoping process, we may also publish and distribute the EA to the public for an allotted comment period. We will consider all comments on the EA before we make our recommendations to the Commission. To ensure we have the opportunity to consider and address your comments, please carefully follow the instructions in the Public Participation section, beginning on page 2.

With this notice, we are asking agencies with jurisdiction by law and/or special expertise with respect to the environmental issues related to this project to formally cooperate with us in the preparation of the EA.³ Agencies that would like to request cooperating agency status should follow the instructions for filing comments provided under the Public Participation section of this notice.

Consultations Under Section 106 of the National Historic Preservation Act

In accordance with the Advisory Council on Historic Preservation's implementing regulations for section 106 of the National Historic Preservation Act, we are using this notice to initiate consultation with the applicable State Historic Preservation Offices (SHPO), and to solicit their views and those of other government agencies, interested Indian tribes, and the public on the project's potential effects on historic properties.⁴ We will define the project-specific Area of Potential Effects (APE) in consultation with the SHPOs as the project develops. On natural gas facility projects, the APE at a minimum encompasses all areas subject to ground disturbance (examples include construction right-of-way, contractor/pipe storage yards, compressor stations, and access roads).

³ The Council on Environmental Quality regulations addressing cooperating agency responsibilities are at Title 40, Code of Federal Regulations, Part 1501.6.

⁴ The Advisory Council on Historic Preservation regulations are at Title 36, Code of Federal Regulations, Part 800. Those regulations define historic properties as any prehistoric or historic district, site, building, structure, or object included in or eligible for inclusion in the National Register of Historic Places.

Our EA for this project will document our findings on the impacts on historic properties and summarize the status of consultations under section 106.

Currently Identified Environmental Issues

We have already identified several issues that we think deserve attention based on a preliminary review of the planned facilities and the environmental information provided by WBI Energy. This preliminary list of issues may change based on your comments and our analysis, but currently includes:

- Drain tiles;
- deep topsoil and poor quality subsoils (salinity/sodium or lime);
- prime farm land;
- federally listed species, including the whooping crane, gray wolf, Dakota skipper, northern long-eared bat, western prairie fringed orchid, and the powershiek skipperling;
- cultural resources; and
- crossing methods of the Rush River, Red River of the North, and the Buffalo River.

Environmental Mailing List

The environmental mailing list includes federal, state, and local government representatives and agencies; elected officials; Native American Tribes; other interested parties; and local libraries and newspapers. This list also includes all affected landowners (as defined in the Commission's regulations) who are potential right-of-way grantors, whose property may be used temporarily for project purposes, or who own homes within certain distances of aboveground facilities, and anyone who submits comments on the project. We will update the environmental mailing list as the analysis proceeds to ensure that we send the information related to this environmental review to all individuals, organizations, and government entities interested in and/or potentially affected by the planned project.

If we publish and distribute the EA, copies will be sent to the environmental mailing list for public review and comment. If you would prefer to receive a paper copy of the document instead of the CD version or would like to remove your name from the mailing list, please return the attached Information Request (appendix 2).

Becoming an Intervenor

Once WBI Energy files its application with the Commission, you may want to become an "intervenor" which is an official party to the Commission's proceeding. Intervenors play a more

formal role in the process and are able to file briefs, appear at hearings, and be heard by the courts if they choose to appeal the Commission's final ruling. An intervenor formally participates in the proceeding by filing a request to intervene. Motions to intervene are more fully described at <http://www.ferc.gov/resources/guides/how-to/intervene.asp>. Instructions for becoming an intervenor are in the "Document-less Intervention Guide" under the "e-filing" link on the Commission's Web site. Please note that the Commission will not accept requests for intervenor status at this time. You must wait until the Commission receives a formal application for the project.

Additional Information

Additional information about the project is available from the Commission's Office of External Affairs, at (866) 208-FERC, or on the FERC Web site (www.ferc.gov) using the eLibrary link. Click on the eLibrary link, click on "General Search" and enter the docket number, excluding the last three digits in the Docket Number field (*i.e.*, PF16-10). Be sure you have selected an appropriate date range. For assistance, please contact FERC Online Support at FercOnlineSupport@ferc.gov or toll free at (866) 208-3676, or for TTY, contact (202) 502-8659. The eLibrary link also provides access to the texts of formal documents issued by the Commission, such as orders, notices, and rulemakings.

In addition, the Commission offers a free service called eSubscription, which allows you to keep track of all formal issuances and submittals in specific dockets. This can reduce the amount of time you spend researching proceedings by automatically providing you with notification of these filings, document summaries, and direct links to the documents. Go to www.ferc.gov/docs-filing/esubscription.asp.

Finally, public meetings or site visits will be posted on the Commission's calendar located at www.ferc.gov/EventCalendar/EventsList.aspx along with other related information.

Dated: December 28, 2016.

Kimberly D. Bose,
Secretary.

[FR Doc. 2017-00071 Filed 1-6-17; 8:45 am]

BILLING CODE 6717-01-P

DEPARTMENT OF ENERGY**Federal Energy Regulatory Commission****Notice of Availability of the Draft Environmental Impact Statement for the Proposed Atlantic Coast Pipeline, Supply Header Project, and Capacity Lease Proposal**

	Docket Nos.
Atlantic Coast Pipeline, LLC.	CP15-554-000, CP15-554-001
Dominion Transmission, Inc.	CP15-555-000
Piedmont Natural Gas Company, Inc.	CP15-556-000

The staff of the Federal Energy Regulatory Commission (FERC or Commission) has prepared a draft environmental impact statement (EIS) for the Atlantic Coast Pipeline (ACP) and Supply Header Project (SHP) as proposed by Atlantic Coast Pipeline, LLC (Atlantic) and Dominion Transmission, Inc. (DTI), respectively, in the above-referenced dockets. Atlantic and DTI request authorization to construct and operate a total of 641.3 miles of natural gas transmission pipeline and associated facilities, and three new natural gas-fired compressor stations, and to modify four existing compressor stations. The projects would provide about 1.44 billion cubic feet per day of natural gas to electric generation, distribution, and end use markets in Virginia and North Carolina. In addition, Atlantic and Piedmont Natural Gas Co., Inc. (Piedmont) request authorization to allow Atlantic to lease capacity on Piedmont's existing pipeline distribution system in North Carolina for use by Atlantic (Capacity Lease Proposal). No construction or facility modifications are proposed with the Capacity Lease Proposal.

The draft EIS assesses the potential environmental effects of the construction and operation of the projects in accordance with the requirements of the National Environmental Policy Act (NEPA). The FERC staff concludes that approval of the projects would have some adverse and significant environmental impacts; however, the majority of impacts would be reduced to less-than-significant levels with the implementation of the Atlantic's and DTI's proposed mitigation and the additional measures recommended in the draft EIS.

The U.S. Department of Agriculture—Forest Service (FS); U.S. Army Corps of Engineers; U.S. Environmental Protection Agency; U.S. Fish and

Wildlife Service—Great Dismal Swamp National Wildlife Refuge; West Virginia Department of Environmental Protection; and West Virginia Division of Natural Resources participated as cooperating agencies in the preparation of the draft EIS. Cooperating agencies have jurisdiction by law or special expertise with respect to resources potentially affected by the proposals and participate in the NEPA analysis. Further, the FS may use the EIS when it considers amendments to Land and Resource Management Plans (LRMPs) for the proposed crossings of the Monongahela National Forest (MNF) and George Washington National Forest (GWNF). Although the cooperating agencies provide input to the conclusions and recommendations presented in the draft EIS, each agency will present its own conclusions and recommendations in its respective record of decision or determination for the projects.

The draft EIS addresses the potential environmental effects of the construction and operation of the following proposed project facilities:

The ACP includes:

- 519.1 miles of new 42- and 36-inch-diameter natural gas pipeline in West Virginia, Virginia, and North Carolina;
- 84.6 miles of 20- and 16-inch-diameter natural gas pipeline in Virginia and North Carolina;
- three new compressor station in Lewis County, West Virginia; Buckingham County, Virginia; and Northampton County, North Carolina; and
- nine meter stations, along with pig launchers/receivers and mainline valves.

The SHP includes:

- 37.5 miles of new 36-inch-diameter natural gas pipeline in Pennsylvania and West Virginia;
- modifications at four existing compressor stations in Westmoreland and Green Counties Pennsylvania and Marshall and Wetzel Counties West Virginia;
- abandonment of existing compressor units and associated facilities in Wetzel County, West Virginia; and
- one meter station, along with pig launchers/receivers and mainline valves.

Actions of the Forest Service

The FS's purpose and need for the proposed action is to respond to a special use application submitted by Atlantic on November 12, 2015, to allow the construction and operation of the ACP on national forest system (NFS) lands managed by the MNF and the

GWNF. If the FS decides to authorize the pipeline crossing of NFS lands and issue a special use permit, the FS has determined that amendments to each national forest LRMP would be needed.

Project-specific plan amendments would be needed to deviate from the precise wording of forest plan standards for the construction and operation of the ACP. These amendments are considered "project-specific" amendments because they would not change FS requirements for other projects or authorize any other actions. Additionally, if the proposed route is authorized and a special use permit issued, the GWNF LRMP would need to be amended to change the current management prescriptions in the pipeline's operational corridor to Management Prescription Area (Rx) 5C-Designated Utility Corridors. The MNF does not have LRMP direction that would require a similar plan amendment to reallocate management prescriptions. Therefore, this amendment is considered a "plan-level" amendment and would change future management direction for the lands reallocated to the new management prescription. The FS has also identified other potential amendments that may be required, pending survey information and analyses that are not currently available.

Pursuant to Title 40 of the Code of Federal Regulations, Part 1506.3(c) (40 CFR 1506.3(c)), the FS may adopt and use the EIS developed by FERC to consider authorization for the construction and operation of the ACP crossing NFS lands. Further, the FS may use this EIS when it considers amendments to the LRMPs that would be required for the proposed crossings of the MNF and GWNF. The FS will prepare separate Records of Decision for the authorization decision and for the plan amendments decisions, after issuance of the FERC final EIS.

The following amendments have been proposed by the FS as part of the proposed action in the FERC draft EIS:

Monongahela National Forest

The type of amendment applicable to the MNF would be a project-specific amendment. This amendment would not change FS requirements for other projects or authorize any other actions.

Potential Amendment 1: The MNF LRMP may need to be amended to allow construction of the ACP to temporarily exceed standards identified under management direction for soils and water, specifically forest-wide standards SW06 and SW07, provided that design criteria, mitigation measures, project requirements, and/or monitoring activities agreed upon by the FS are

implemented as needed to achieve adequate slope and soil stability.

Other potential amendments may be needed pending the outcome of ongoing analyses and development of project design and mitigation.

George Washington National Forest

The first type of LRMP amendment applicable to the GWNF would be a plan-level amendment that would change land allocations. This would change future management direction for the lands reallocated to the new Rx and is required by LRMP Standards FW-243 and FW-244.

Proposed Amendment 1: The LRMP would be amended to reallocate 102.3 acres to the Rx 5C-Designated Utility Corridors from these Rxs: 7E1-Dispersed Recreation Areas (7 acres), and 13-Mosaics of Habitat (95 acres). Rx 11-Riparian Corridors would remain embedded within the new Rx 5C area.

Rx 5C-Designated Utility Corridors contains special uses which serve a public benefit by providing a reliable supply of electricity, natural gas, or water essential to local, regional, and national economies. The new Rx 5C land allocation would be 53.5 feet wide, the width of the final operational right-of-way of the ACP. The area would not cross into the Rx 4A-Appalachian National Scenic Area but would stop and start at the existing Rx 4A boundary. The Rx4A would continue to be managed for the Appalachian National Scenic Trail.

The second type of amendment applicable to the GWNF would be a project-specific amendment that would apply only to the construction and operation of the ACP. The following standards would require a temporary waiver to allow the project to proceed. These amendments would not change LRMP requirements for other projects or authorize any other actions.

Proposed Amendment 2: The LRMP would be amended to allow construction of the ACP to exceed restrictions on soil conditions and riparian corridor conditions as described in LRMP Standards FW-5, FW-15, FW-16, FW-17, and 11-019, provided that mitigation measures or project requirements agreed upon by the FS are implemented as needed.

Proposed Amendment 3: The LRMP would be amended to allow the ACP to cross the Appalachian National Scenic Trail in Augusta County, Virginia (reference LRMP Standard 4A-025).

Potential Amendment 4: The LRMP may need to be amended to allow the removal of old growth trees within the construction corridor of ACP (reference LRMP Standard FW-85).

Potential Amendment 5: The LRMP may need to be amended to allow major reconstruction of a NFS road within the Rx 2C3 area to provide access for pipeline construction. This is contingent on the final location of access roads (reference LRMP Standard 2C3-015).

Potential Amendment 6: The LRMP may need to be amended to allow the ACP to not immediately meet Scenic Integrity Objectives; however, mitigation measures, including vegetation management and restoration actions, are expected to improve visual quality over an extended timeframe (reference LRMP Standard FW-182).

The FS is requesting public comments on the authorization of the ACP on NFS lands and the draft proposed and potential amendments of the LRMPs that would allow the ACP to cross the MNF and GWNF. All comments must be submitted to the FERC as directed in this notice. The FS decision to authorize the ACP will be subject to FS predecisional administrative review procedures established in 36 CFR 218. The MNF Potential Amendment 1, GWNF Proposed Amendments 2 and 3, and Potential Amendments 4, 5, and 6 were developed in accordance with 36 CFR 219 (2012 version) regulations but will be subject to the administrative review procedures under 36 CFR 218 regulations Subparts A and B, per 36 CFR 219.59(b). GWNF Proposed Amendment 1 was developed in accordance to 36 CFR 219 (2012) regulations and will be subject to the administrative review procedures under 36 CFR 219 Subpart B. Refer to the applicable administrative review regulations for eligibility requirements.

All comments must be submitted to the FERC, the lead federal agency, within the timeframe stated in this Notice of Availability. Refer to Docket No. CP15-554-000 (ACP) in all correspondence to ensure that your comments are correctly filed in the record. You may submit your comments to the FERC using one of the four methods listed below.

Distribution and Comments on the Draft Environmental Impact Statement

The FERC staff mailed copies of the draft EIS to federal, state, and local government representatives and agencies; elected officials; environmental and public interest groups; Native American tribes; potentially affected landowners and other interested individuals and groups; newspapers and libraries in the project areas; and parties to this proceeding. Paper copy versions of this draft EIS were mailed to those specifically

requesting them; all others received a CD version. In addition, the draft EIS is available for public viewing on the FERC's Web site (www.ferc.gov) using the eLibrary link. A limited number of copies of the draft EIS are available for distribution and public inspection at:

Federal Energy Regulatory Commission, Public Reference Room, 888 First Street NE., Room 2A, Washington, DC 20426, (202) 502-8371.

Any person wishing to comment on the draft EIS may do so. To ensure consideration of your comments on the proposals in the final EIS, it is important that the Commission receive your comments by April 6, 2017.

For your convenience, there are four methods you can use to submit your comments to the Commission. In all instances, please reference the appropriate docket numbers (CP15-554-000 and CP15-554-001 for ACP; CP15-555-000 for SHP; or CP15-556-000 for Capacity Lease) with your submission. The Commission encourages electronic filing of comments and has expert staff available to assist you at (202) 502-8258 or efiling@ferc.gov. Please carefully follow these instructions so that your comments are properly recorded.

(1) You can file your comments electronically using the eComment feature on the Commission's Web site (www.ferc.gov) under the link to Documents and Filings. This is an easy method for submitting brief, text-only comments on a project.

(2) You can file your comments electronically by using the eFiling feature on the Commission's Web site (www.ferc.gov) under the link to Documents and Filings. With eFiling, you can provide comments in a variety of formats by attaching them as a file with your submission. New eFiling users must first create an account by clicking on "eRegister." If you are filing a comment on a particular project, please select "Comment on a Filing" as the filing type.

(3) You can file a paper copy of your comments by mailing them to the following address:

Nathaniel J. Davis, Sr., Deputy Secretary, Federal Energy Regulatory Commission, 888 First Street NE., Room 1A, Washington, DC 20426.

(4) In lieu of sending written or electronic comments, the Commission invites you to attend one of the public comment sessions its staff will conduct in the project area to receive comments on the draft EIS. We encourage interested groups and individuals to attend and present oral comments on

the draft EIS. The sessions are scheduled as follows:

Date and time	Location
Monday, February 13, 2017, 5:00–9:00 p.m.	Doubletree Hotel, 1965 Cedar Creek Road, Fayetteville, NC 28312.
Tuesday, February 14, 2017, 5:00–9:00 p.m.	Forest Hills Middle School, 1210 Forest Hills Road, Wilson, NC 27893.
Wednesday, February 15, 2017, 5:00–9:00 p.m.	Hilton Garden Inn Roanoke Rapids, 111 Carolina Crossroads Parkway, Roanoke Rapids, NC 27870.
Thursday, February 16, 2017, 5:30–9:30 p.m.	Hilton Garden Inn Conference Center, 100 East Constance Road, Suffolk, VA 23434.
Tuesday, February 21, 2017, 5:00–9:00 p.m.	Moton Museum, 900 Griffin Boulevard, Farmville, VA 23901.
Wednesday, February 22, 2017, 5:00–9:00 p.m.	Nelson County High School, 6919 Thomas Nelson Highway, Route 29, Lovingston, VA 22949.
Thursday, February 23, 2017, 5:00–9:00 p.m.	Holiday Inn Hotel and Conference, 152 Fairway Lane, Staunton, VA 24401.
Tuesday, February 28, 2017, 5:00–9:00 p.m.	Highland Center, 61 Highland Center Drive, Monterey, VA 24465.
Wednesday, March 1, 2017, 5:00–9:00 p.m.	Gandy Dance Theater, 359 Beverly Pike, Elkins, WV 26241.
Thursday, March 2, 2017, 5:00–9:00 p.m.	Marlinton Community Wellness Center, 320 9th Street, Marlinton, WV 24954.

There will not be a formal presentation by Commission staff at any of the ten public comment sessions, although a format outline handout will be made available. All sessions will begin at 5:00 p.m., with the exception of the session on Thursday, February 16, 2017, which will begin at 5:30 p.m. If you wish to provide verbal comments, the Commission staff will hand out numbers in the order of your arrival. Number distribution will be discontinued at 8:00 p.m. in order to ensure all comments are received by the session closing time. Comments will be taken until 9:00 p.m. (or 9:30 p.m. at the February 16 session). However, if no additional numbers have been handed out *and* all individuals who wish to provide comments have had an opportunity to do so, staff may conclude the session at 8:00 p.m., or after the last comment is taken.

The primary goal of the public sessions is to allow individuals to provide verbal comments on the draft EIS. Individual verbal comments will be taken on a one-on-one basis with a Court Reporter (with FERC staff or representative present), called up in the order of the numbers received. Because we anticipate considerable interest from concerned citizens, this format is designed to receive the maximum amount of verbal comments, in a convenient way during the timeframe allotted. If many people are interested in providing verbal comments in the one-on-one setting at any particular session, a time limit of 3 minutes may be implemented for each commenter.

Your verbal comments will be recorded by the Court Reporter. Transcripts of all comments from the sessions will be placed into the dockets for the projects, which are accessible for public viewing on the FERC's Web site (at www.ferc.gov) through our eLibrary system.

Commission staff will be available at each venue of the public sessions to answer questions about our

environmental review process. It is important to note that written comments mailed to the Commission and those submitted electronically are reviewed by staff with the same scrutiny and consideration as the verbal comments given at the public sessions.

Any person seeking to become a party to the proceeding must file a motion to intervene pursuant to Rule 214 of the Commission's Rules of Practice and Procedures (18 CFR part 385.214).¹ Only intervenors have the right to seek rehearing of the Commission's decision. The Commission grants affected landowners and others with environmental concerns intervenor status upon showing good cause by stating that they have a clear and direct interest in this proceeding which no other party can adequately represent. Simply filing environmental comments will not give you intervenor status, but you do not need intervenor status to have your comments considered.

Questions?

Additional information about the projects is available from the Commission's Office of External Affairs, at (866) 208-FERC, or on the FERC Web site (www.ferc.gov) using the eLibrary link. Click on the eLibrary link, click on "General Search," and enter the docket number excluding the last three digits in the Docket Number field (*i.e.*, CP15-554, CP15-555, or CP15-556). Be sure you have selected an appropriate date range. For assistance, please contact FERC Online Support at FERCOnlineSupport@ferc.gov or toll free at (866) 208-3676; for TTY, contact (202) 502-8659. The eLibrary link also provides access to the texts of formal documents issued by the Commission, such as orders, notices, and rulemakings.

In addition, the Commission offers a free service called eSubscription that

¹ See the previous discussion on the methods for filing comments.

allows you to keep track of all formal issuances and submittals in specific dockets. This can reduce the amount of time you spend researching proceedings by automatically providing you with notification of these filings, document summaries, and direct links to the documents. Go to www.ferc.gov/docs-filing/esubscription.asp to subscribe.

Dated: December 30, 2016.

Kimberly D. Bose,
Secretary.

[FR Doc. 2017-00068 Filed 1-6-17; 8:45 am]

BILLING CODE 6717-01-P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. ER17-737-000]

Viridity Energy Solutions Inc.; Supplemental Notice That Initial Market-Based Rate Filing Includes Request For Blanket Section 204 Authorization

This is a supplemental notice in the above-referenced proceeding of Viridity Energy Solutions Inc.'s application for market-based rate authority, with an accompanying rate tariff, noting that such application includes a request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability.

Any person desiring to intervene or to protest should file with the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant.

Notice is hereby given that the deadline for filing protests with regard to the applicant's request for blanket authorization, under 18 CFR part 34, of

future issuances of securities and assumptions of liability, is January 23, 2017.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at <http://www.ferc.gov>. To facilitate electronic service, persons with Internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically should submit an original and 5 copies of the intervention or protest to the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426.

The filings in the above-referenced proceeding are accessible in the Commission's eLibrary system by clicking on the appropriate link in the above list. They are also available for electronic review in the Commission's Public Reference Room in Washington, DC. There is an eSubscription link on the Web site that enables subscribers to receive email notification when a document is added to a subscribed docket(s). DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. EL17-29-000]

American Municipal Power, Inc. v. Midcontinent Independent System Operator, Inc.; Notice of Complaint

Take notice that on December 19, 2016, pursuant to Rule 206 of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure, 18 CFR 385.206 and sections 206 and 309 of the Federal Power Act, (FPA) ¹ American Municipal Power, Inc. (AMP or Complainant) filed a formal complaint against Midcontinent Independent System Operator, Inc. (MISO or Respondent)

alleging that MISO violated its Open Access Transmission, Energy and Operating Reserve Markets Tariff by improperly charging AMP for certain congestion and scheduling fees associated with the transmission of energy from its facility, as more fully explained in the complaint.

The Complainant certifies that a copies of the complaint were served on the contacts for MISO as listed on the Commission's list of Corporate Officials.

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. The Respondent's answer and all interventions, or protests must be filed on or before the comment date. The Respondent's answer, motions to intervene, and protests must be served on the Complainants.

The Commission encourages electronic submission of protests and interventions in lieu of paper using the "eFiling" link at <http://www.ferc.gov>. Persons unable to file electronically should submit an original and 5 copies of the protest or intervention to the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426.

This filing is accessible on-line at <http://www.ferc.gov>, using the "eLibrary" link and is available for electronic review in the Commission's Public Reference Room in Washington, DC. There is an "eSubscription" link on the Web site that enables subscribers to receive email notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please email FERCOnlineSupport@ferc.gov, or call (866) 208-3676 (toll free). For TTY, call (202) 502-8659.

Comment Date: 5:00 p.m. Eastern Time on January 18, 2017.

Dated: December 28, 2016.

Great River Energy; Notice of Filing

Take notice that on December 29, 2016, Great River Energy submitted an updated revenue requirement for Reactive Power Service provided under Schedule 2 of the Midwest ISO Tariff.

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. Such notices, motions, or protests must be filed on or before the comment date. On or before the comment date, it is not necessary to serve motions to intervene or protests on persons other than the Applicant.

The Commission encourages electronic submission of protests and interventions in lieu of paper using the "eFiling" link at <http://www.ferc.gov>. Persons unable to file electronically should submit an original and 5 copies of the protest or intervention to the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426.

BILLING CODE 6717-01-P

DEPARTMENT OF ENERGY**Federal Energy Regulatory Commission**

[Docket No. CP16-478-000]

Gulf South Pipeline Company, LP; Notice of Schedule for Environmental Review of the St. Charles Parish Expansion Project

On July 11, 2016, Gulf South Pipeline Company, LP (Gulf South) filed an application in Docket No. CP16-478-000 requesting a Certificate of Public Convenience and Necessity pursuant to section 7(c) of the Natural Gas Act to construct and operate certain natural gas pipeline facilities. The proposed project is known as the St. Charles Parish Expansion (Project), and involves the construction and operation of natural gas pipeline and compression facilities by Gulf South in St. Charles and St. John the Baptist Parishes, Louisiana.

On July 18, 2016, the Federal Energy Regulatory Commission (Commission or FERC) issued its Notice of Application for the Project. Among other things, that notice alerted agencies issuing federal

authorizations of the requirement to complete all necessary reviews and to reach a final decision on a request for a federal authorization within 90 days of the date of issuance of the Commission staff's Environmental Assessment (EA) for the Project. This instant notice identifies the FERC staff's planned schedule for the completion of the EA for the Project.

Schedule for Environmental Review

Issuance of EA—March 3, 2017
90-day Federal Authorization Decision
Deadline—June 1, 2017

If a schedule change becomes necessary, additional notice will be provided so that the relevant agencies are kept informed of the Project's progress.

Project Description

The Project purpose is to provide 133,333 dekatherms per day to serve Entergy Louisiana, LLC's proposed natural gas-fired power plant facility located near Montz, Louisiana. Gulf South proposes to construct a new 5,000 horsepower compressor station near Montz, Louisiana (Montz Compressor Station), about 900 feet of new 16-inch-diameter pipeline, and auxiliary facilities.

The proposed Montz Compressor Station would be on the border of St. Charles and St. John the Baptist Parishes. Gulf South plans to begin construction of the Project in the fall of 2017 and place the facilities in-service by September 1, 2018.

Background

On August 24, 2016, the Commission issued a *Notice of Intent to Prepare an Environmental Assessment for the Proposed St. Charles Parish Expansion Project and Request for Comments on Environmental Issues* (NOI). The NOI was sent to affected landowners; federal, state, and local government agencies; elected officials; environmental and public interest groups; Native American tribes; other interested parties; and local libraries and newspapers. In response to the NOI, the Commission received comments from the U.S. Environmental Protection Agency and the Choctaw Nation of Oklahoma. The primary issues raised by the commentors are air quality, impacts on wetlands, tribal coordination, the availability of cultural surveys, and environmental justice impacts.

Additional Information

In order to receive notification of the issuance of the EA and to keep track of all formal issuances and submittals in specific dockets, the Commission offers

a free service called eSubscription. This can reduce the amount of time you spend researching proceedings by automatically providing you with notification of these filings, document summaries, and direct links to the documents. Go to www.ferc.gov/docs-filing/esubscription.asp.

Additional information about the Project is available from the Commission's Office of External Affairs at (866) 208-FERC or on the FERC Web site (www.ferc.gov). Using the "eLibrary" link, select "General Search" from the eLibrary menu, enter the selected date range and "Docket Number" excluding the last three digits (*i.e.*, CP16-478), and follow the instructions. For assistance with access to eLibrary, the helpline can be reached at (866) 208-3676, TTY (202) 502-8659, or at FERCOnlineSupport@ferc.gov. The eLibrary link on the FERC Web site also provides access to the texts of formal documents issued by the Commission, such as orders, notices, and rule makings.

Dated: December 30, 2016.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. EL17-30-000]

Nogales Transmission, L.L.C., Nogales Frontier Operations, L.L.C.; Notice of Petition for Declaratory Order

Take notice that on December 21, 2016, pursuant to Rule 207(a)(2) of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure,¹ Nogales Transmission, L.L.C. (Nogales Transmission) and Nogales Frontier Operations, L.L.C. (Nogales Operations) filed a petition for declaratory order: (1)

¹ 18 CFR 385.207(a)(2) (2016).

Finding that Nogales Transmission is a passive entity and therefore not a "public utility" under the Federal Power Act, or an "electric utility company" under the Public Utility Holding Company Act of 2005; (2) granting Nogales Operations negotiated rate authority; (3) approving Nogales Operations' capacity allocation methodology; and (4) granting certain waivers of Commission regulations, all as more fully explained in the petition.

Any person desiring to intervene or to protest in this proceeding must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214) on or before 5:00 p.m. Eastern time on the specified comment date. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. Such notices, motions, or protests must be filed on or before the comment date. Anyone filing a motion to intervene or protest must serve a copy of that document on the Petitioner.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at <http://www.ferc.gov>. To facilitate electronic service, persons with Internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. BILLING CODE 6717-01-P

ENVIRONMENTAL PROTECTION AGENCY

[EPA-HQ-OAR-2014-0471; FRL-9958-00-OAR]

RIN 2060-AS26

Granting Petitions To Add n-Propyl Bromide to the List of Hazardous Air Pollutants

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice; request for public comment.

SUMMARY: The Environmental Protection Agency (EPA) is publishing a draft notice of the rationale for granting petitions to add n-propyl bromide (nPB), also known as 1-bromopropane (1-BP), (Chemical Abstract Service No. 106-94-5) to the list of hazardous air pollutants (HAP) contained in section 112(b)(1) of the Clean Air Act (CAA). The Halogenated Solvents Industry Alliance (HSIA) and New York State Department of Environmental Conservation (NYSDEC) submitted petitions requesting that nPB be added to the list of HAP. In response to the EPA requests for additional data, HSIA subsequently supplemented its petition. Petitions to add a substance to the list of HAP are permitted under the CAA section 112(b)(3).

Based on the EPA's evaluation of the petitioners' showing concerning potential hazards, emissions, and atmospheric dispersion modeling that provided estimates of ambient concentrations of nPB, the EPA has determined that there is adequate evidence to support a determination that emissions and ambient concentrations of nPB may reasonably be anticipated to cause adverse health effects.

DATES: Comments must be received on or before March 10, 2017.

ADDRESSES: *Comments.* Submit your comments, identified by Docket ID No. EPA-HQ-OAR-2014-0471, at <http://www.regulations.gov>. Follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from *Regulations.gov*. The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.*, on the Web, cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit <http://www2.epa.gov/dockets/commenting-epa-dockets>.

FOR FURTHER INFORMATION CONTACT: For questions about this proposed action, contact Ms. Elineth Torres, Sector Policies and Programs Division, Policies and Strategies Group (D205-02), Office of Air Quality Planning and Standards, Environmental Protection Agency, Research Triangle Park, North Carolina 27711; telephone number: (919) 541-4347; email address: torres.elineth@epa.gov.

SUPPLEMENTARY INFORMATION:

Docket: The EPA has established a docket for this action under Docket ID No. EPA-HQ-OAR-2014-0471. All documents in the docket are listed in the <http://www.regulations.gov> index. Although listed in the index, some information is not publicly available, *e.g.*, CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, will be publicly available only in hard copy form. Publicly available docket materials are available either electronically at: <http://www.regulations.gov>, or in hard copy at the EPA Docket Center, EPA WJC West Building, Room 3334, 1301 Constitution Ave. NW., Washington, DC. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566-1744, and the telephone number for the EPA Docket Center is (202) 566-1742.

Instructions: All submissions must include agency name and docket number or Regulatory Information Number (RIN) for this rulemaking. Direct your comments to Docket ID No. EPA-HQ-OAR-2014-0471. The EPA's policy is that all comments received will be included in the public docket and may be made available online at: <http://www.regulations.gov>, including any personal information provided, unless the comment includes information claimed to be CBI, or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI, or otherwise protected through <http://www.regulations.gov> or email. The <http://www.regulations.gov> Web site is an "anonymous access" system, which means the EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an email comment directly to the EPA without going through <http://www.regulations.gov>, your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, the EPA recommends that you include your name and other contact information in the body of your comment, and with any disk or CD-ROM you submit. If the EPA cannot read your comment due to technical difficulties, and cannot contact you for clarification, the EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses. For additional information about the EPA's public docket, visit the EPA Docket Center homepage at <http://www.epa.gov/dockets>.

Organization of This Document. The information presented in this document is organized as follows:

- I. General Information
 - A. What should I consider as I prepare my comments for the EPA?
 - B. Where can I get a copy of this document?
- II. Background Information
 - A. What is the list of HAP?
 - B. CAA Authority: Petitions To Modify the List of HAP
 - C. Criteria for Listing
- III. Summary of Petitions
 - A. Background
 - B. Public Comments Received on EPA's Notice of Complete Petition
- IV. EPA's Technical Review of the Petitions
 - A. Chemical Characteristics, Uses, Sources, and Emissions of nPB
 - B. nPB Health Effects
 - C. Potential Human Exposure and Cancer Risk
- V. EPA's Decision To Grant the Petitions
- VI. Statutory and Executive Order Review
 - A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

I. General Information

A. What should I consider as I prepare my comments for the EPA?

Submitting CBI. Do not submit information that you consider to be CBI electronically through <http://www.regulations.gov> or email. Send or deliver information identified as CBI to only the following address: OAQPS Document Control Officer (Room C404-02), Environmental Protection Agency, Research Triangle Park, North Carolina 27711; Attn: Docket ID No. EPA-HQ-OAR-2014-0471.

Clearly mark the part or all of the information that you claim to be CBI. For CBI information in a disk or CD-ROM that you mail to the EPA, mark the outside of the disk or CD-ROM as CBI and then identify electronically within the disk or CD-ROM the specific information that is claimed as CBI. In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket. If you submit a CD-ROM or disk that does not contain CBI, mark the outside of the disk or CD-ROM clearly that it does not contain CBI. Information marked as CBI

will not be disclosed except in accordance with procedures set forth in 40 Code of Federal Regulations part 2.

If you have any questions about CBI or the procedures for claiming CBI, please consult the person identified in the **FOR FURTHER INFORMATION CONTACT** section of this document.

B. Where can I get a copy of this document?

In addition to being available in the docket, the electronic copy of this document will be available on the World Wide Web. Following signature, a copy of this document will be posted on at the following address: <https://www.epa.gov/haps/initial-list-hazardous-air-pollutants-modifications>.

II. Background Information

A. What is the list of HAP?

The list of HAP, which can be found in CAA section 112(b)(1), is a list of a wide variety of organic and inorganic substances that Congress identified as hazardous air pollutants in the 1990 CAA Amendments. These HAP have been associated with a wide variety of adverse health effects, including cancer, neurological effects, reproductive effects, and developmental effects. The health effects associated with various HAP differ depending upon the toxicity of the individual HAP and the particular circumstances of exposure, such as the amount of chemical present, the length of time a person is exposed, and the stage of life at which the person is exposed. The CAA directs the EPA to first identify and list source categories that emit HAP and then to set emission standards for those listed source categories. Standards promulgated under CAA section 112(d) are commonly referred to as National Emission Standards for Hazardous Air Pollutants (NESHAP).

B. CAA Authority: Petitions To Modify the List of HAP

CAA section 112(b)(3)(A) specifies that any person may petition the Administrator to modify the list of HAP contained in CAA section 112(b)(1) by adding or deleting a substance. CAA section 112(b)(3)(B) sets out the substantive criteria for granting a petition. It calls for the Administrator to add a substance to the CAA section 112(b)(1) list “upon a showing by the petitioner or on the Administrator’s own determination that the substance is an air pollutant and that emissions, ambient concentrations, bioaccumulation or deposition of the substance are known to cause or may reasonably be anticipated to cause

adverse effects to human health or adverse environmental effects.” The Administrator is required under CAA section 112(b)(3)(A) to either grant or deny a petition within 18 months of the receipt of a complete petition by publishing a written explanation of the reasons for the Administrator’s decision. The Administrator may not deny a petition solely on the basis of inadequate resources or time for review.

CAA section 112(b)(2) gives the Administrator authority to add to the CAA section 112(b)(1) list “pollutants which present, or may present through inhalation or other routes of exposure, a threat of adverse human health effects (including, but not limited to, substances, which are known to be, or may reasonably be anticipated to be, carcinogenic, mutagenic, teratogenic, neurotoxic, which cause reproductive dysfunction or which are acutely or chronically toxic) or adverse environmental effects whether through ambient concentrations, bioaccumulation, deposition or otherwise.” CAA section 302(k) defines an air pollutant as “any air pollution agent or combination of such agents, including any physical, chemical, biological, radioactive . . . substance or matter which is emitted into or otherwise enters the ambient air.” CAA section 112(a)(7) specifically defines the term “adverse environmental effect” as “any significant and widespread adverse effect, which may reasonably be anticipated, to wildlife, aquatic life, or other natural resources, including adverse impacts on populations of endangered or threatened species or significant degradation of environmental quality over broad areas.”

The EPA reviews petitions to add substances to the HAP list in two phases: (1) A completeness determination and (2) a substantive technical review. During the completeness determination, we conduct a broad review of the petition to determine whether the necessary subject areas have been addressed and whether reasonable information and analyses are present for each of the subject areas. Once we determine the petition complete, we publish a notice of receipt of a complete petition in the **Federal Register** and request public comment and/or additional data.

During the technical review, we conduct an evaluation of both the petition and the information received from the public in response to the **Federal Register** notice of complete petition to determine whether the data, analyses, interpretations, and conclusions in the petition are adequate.

Based on this review, we decide whether the petition satisfies the requirements of CAA section 112(b)(3)(B) and adequately supports a decision to grant the petition. Upon conclusion of this review, we publish a draft notice in the **Federal Register** with the written explanation of the Administrator’s decision to grant the petition. After considering the comments received on the draft document, we publish a final notice in the **Federal Register**. A final notice granting a petition to add a pollutant to the HAP list in CAA section 112(b)(1) brings sources emitting that HAP into consideration in the EPA’s program to promulgate NESHAP.

Finally, under CAA section 112(e)(4), the Administrator’s action to add a pollutant to the CAA section 112(b)(1) HAP list is not a final agency action subject to judicial review, except that any such action may be reviewed when the Administrator promulgates applicable CAA section 112(d) standards for the pollutant. Thus, any final decision to grant petitions to add nPB to the HAP list would not be subject to review until the Administrator promulgates applicable CAA section 112(d) standards addressing emissions of nPB.

C. Criteria for Listing

As previously explained, CAA section 112(b)(3)(A) allows any person to petition the EPA to modify the CAA section 112(b)(1) list of HAP by adding or deleting a substance. A petitioner must make “a showing . . . that there is adequate data on the health or environmental effects of the pollutant or other evidence adequate to support the petition.” CAA section 112(b)(3)(A). Thus, this section places the burden on a petitioner to demonstrate that the data sufficiently support an affirmative determination that the substantive criteria contained in CAA section 112(b)(3)(B) have been met. In other words, a petitioner bears the burden of showing that emissions, ambient concentrations, bioaccumulation or deposition of a substance are known to cause or may reasonably be anticipated to result in adverse human health or environmental effects. “The statutory language unambiguously places on a [] listing petitioner the burden to make a ‘showing’ that ‘there is adequate data’ about a substance to determine exposure to it ‘may . . . reasonably be anticipated to cause’ adverse effects.” *Am. Forest & Paper Ass’n v. EPA*, 294 F.3d 113, 119 (D.C. Cir. 2002) (emphasis in original). The statute does not further define what constitutes adequate data and we believe that by employing the term

“adequate,” the statute acknowledges the limitations of data on human health and environment and gives the Administrator discretion to determine what constitutes sufficient or adequate information for purposes of a listing petition. We also note that CAA section 112(b)(4) allows the Administrator to “acquire” information “when she determines that information on the health or environmental effects of a substance is not sufficient to make a determination,” under CAA section 112(b)(3). Moreover, Congress could have provided, but did not provide, specific criteria to guide the Administrator’s exercise of her discretion in deciding whether the data presented are sufficient under CAA section 112(b)(3)(A).¹ Thus, we interpret the statutory silence in CAA section 112(b)(3)(A) as allowing the Administrator to apply her expertise when reviewing data/information provided by the petitioner to make the demonstration required by CAA section 112(b)(3)(B), as well as to consider limitations and difficulties inherent in information on public health, welfare, and/or the environment.

As previously noted, CAA section 112(b)(3)(B) calls for the Administrator to add to the CAA section 112(b)(1) list of HAP a substance that is shown to be “an air pollutant and that emissions, ambient concentrations, bioaccumulation or deposition of the substance are known to cause or may reasonably be anticipated to cause adverse effects to human health or adverse environmental effects.” CAA section 112(b)(2) provides additional guidance on how the Administrator’s decision is to be formed by identifying carcinogenicity, mutagenicity, teratogenicity, neurotoxicity, reproductive dysfunction, and acute or chronic toxicity as types of adverse health effects. Further, the language used in CAA section 112(b)(3)(B) does not call for either complete substantiation or require absolute certainty that a substance will cause adverse effects to human health or the environment. In fact, it calls for listing a substance that “may reasonably be anticipated to cause” certain impacts. The EPA interprets this language as recognizing the limitations and

difficulties associated with information on public health and environment. Typically, questions as to whether a substance presents adverse health and welfare effects and the types of effects border on the frontiers of scientific knowledge and are given to uncertainty because there is either insufficient or inconsistent data. For example, there might be limited scientific knowledge of exposure effects on human health and the environment. Some substances have no known safe level. There might also be limited emissions data on a substance that is considered for addition to the list given that it would be largely unregulated.

Moreover, the CAA is a protective or preventive statute. One of its stated purposes is “to protect and enhance the quality of the Nation’s air resources so as to promote the public health and welfare.” CAA section 101(b)(1). Relevant legislative history also provides support for this stated purpose. (The CAA is “to assure that regulatory action can effectively prevent harm before it occurs; to emphasize the predominant value of protection of public health.” H.R. Rep. No. 95–294, 95th Cong., 1st Sess. 49 (1977)). Such statutes do not call for certainty of harm, but rather accord a decision maker flexibility in taking regulatory action that is protective of public health and the environment. They allow a decision maker to exercise discretion when forming her judgement, which would likely involve balancing of factors that are uniquely within her expertise and policy choices, and predictions on the frontiers of scientific knowledge. (“[A]n agency [has] latitude to exercise its discretion in accordance with the remedial purposes of the controlling statute where relevant facts cannot be ascertained or are on the frontiers of scientific inquiry.” *Nat’l Lime Ass’n v. EPA*, 627 F.2d 416, 454 (D.C. Cir. 1980)).

Further, requiring data/information that provides absolute certainty of the adverse health effects of a substance would likely result in making listing decisions similar to the risk- and health-based approach employed prior to the 1990 CAA Amendments. See S. Rep. No. 101–228 at 3, 128 (1989); see also H.R. Rep. No. 101–490, pt. 1, at 322 (1990). Up until then, the EPA was required to list HAP for regulation based on a conclusion that they could “cause or contribute to, an increase in mortality, an increase in serious irreversible, or incapacitating reversible illness.” Section 112(a)(1), CAA, Pub. L. 91–604, 84 Stat. 1676, 1685 (1970).² In

doing so, the EPA would consider emissions levels at which health effects have previously been observed and factor in an ample margin of safety to protect public health. This approach proved unsatisfactory in achieving the goal of improved public health and in the 1990 CAA Amendments, Congress dispensed with this provision, listed 189 HAP in CAA section 112(b)(1) for regulation, and provided for modifications of the HAP list either by petition or on the Administrator’s determination in CAA sections 112(b)(3)(A) and (B). Thus, we interpret CAA section 112(b)(3)(B) as invoking the Administrator’s expertise in considering information/data that addresses the potential or likelihood of harm rather than concrete proof of actual harm. We also believe that CAA section 112(b)(3)(B) would allow the Administrator to act in the face of uncertainty as to the proven health effects of a substance, draw inferences from the data before her, as well as err on the side of caution in determining whether the data are sufficient to support listing a substance. This determination would likely take into account the risks associated with not taking an action as compared to taking action and granting the petition to add a substance to the CAA section 112(b)(1) HAP list.

We note that the Administrator’s discretion is neither unbounded nor limitless, but rather constrained by the EPA’s duty to protect human health and welfare. See *Massachusetts v. EPA*, 127 S. Ct. 1438, 1462. (The goal of the CAA is “to protect and enhance the quality of the Nation’s air resources so as to promote the public health and welfare and the productive capacity of its population.” CAA section 101(b)(1)). Therefore, we believe that CAA section 112(b)(3) would allow the Administrator to make a comparative assessment of adverse health or environment effects of a substance, projections, or predictions of future possibilities of harm, consideration of uncertainties, and extrapolation of limited and even imperfect scientific data. We also believe that it would allow the Administrator to balance the likelihood of adverse health effects against limited scientific data and to err on the side of caution in making her decision in light of uncertainties in scientific data. Any projections, assessments, and estimations, however, must be

¹ This is in contrast to various provisions in the CAA that specify listing criteria for pollutants (See for example, CAA section 108(a)(2), which states that within 12 months of the listing of a pollutant under CAA section 108(a), the Administrator must issue “air quality criteria” that “accurately reflect the latest scientific knowledge useful in indicating the kind and extent of all identifiable effects on public health or welfare which may be expected from the presence of such pollutant in the ambient air, in varying quantities.”).

² Additionally, until 1990, a HAP was defined as an “air pollutant . . . which in the judgment of the

Administrator cause, or contribute to, air pollution which may reasonably be anticipated to result in an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness.” Section 112(a)(1), CAA, Public Law 91–604, 84 Stat. 1676, 1685 (1970).

reasonable and not based on conjecture. She must also make any necessary policy choices and considerations. Therefore, we do not read CAA section 112(b)(3)(B) as requiring a bright-line test on how a CAA section 112(b)(1) listing decision should be made. The Administrator will neither require nor base her determination solely on a single parameter or measure, *i.e.*, in arriving at her decision, no one set of data will outweigh the other. Rather, the Administrator's decision to list a HAP would be made on a case-by-case basis and involve a thorough and comprehensive review of factual issues, scientific evidence, and data provided in support of a petition to add a substance to the CAA section 112(b)(1) HAP list.

In summary, we read CAA section 112(b)(3)(B) as allowing the Administrator to exercise her expertise to decide, based on all relevant considerations, whether the data presented in a petition are adequate to support a decision to add a substance to the CAA section 112(b)(1) list of HAP. In other words, to determine whether a petitioner has shown that emissions of a substance cause or may reasonably be anticipated to cause adverse effects to human health or the environment. The Administrator would also likely assess potential or probable public health and environmental risks rather than proof of actual harm and consider necessary policy issues. The burden, however, remains on a petitioner to provide data sufficient to support an affirmative determination that emissions of a substance may cause or may reasonably be anticipated to cause adverse human health or environmental effects. Thus, a petitioner must provide a detailed assessment of the available data concerning the substance's potential adverse human health and environmental effects and, where appropriate, characterize the potential for human and environmental exposures resulting from emissions of the substance. We expect that such data would most likely demonstrate that emissions, ambient concentrations, bioaccumulation, or deposition of the substance may reasonably be anticipated to cause adverse effects to human health or the environment. We believe this is a reasonable and proper manner of giving effect to the Administrator's duty to address public health and environmental effects under CAA section 112(b)(3).

III. Summary of Petitions

A. Background

HSIA and NYSDEC submitted petitions to add nPB, also known as 1-BP, to the CAA section 112(b)(1) list of HAP on October 28, 2010, and November 24, 2011, respectively. On November 28, 2012, in response to the EPA's requests for additional data, HSIA supplemented its petition. The petitions to add nPB to the list of HAP presented the following information:

- Background data on nPB, including chemical properties, physical properties, production data, and use data;
- Toxicological evidence describing the human health effects of nPB;
- Estimation of an inhalation unit risk;
- nPB emissions estimates and atmospheric dispersion modeling estimating potential ambient concentrations of nPB adjacent to facilities that emit it; and
- Characterization of potential risks to human health due to potential exposure to ambient air concentrations of nPB.

We discuss in detail the information presented in the petitions in section IV of this document, titled EPA's Technical Review of the Petitions.

Following the receipt of the petitions, the EPA conducted a review to determine whether the petitions were complete according to the agency criteria. After reviewing these petitions and supplemental information, the EPA determined that the petitions addressed all of the necessary subject areas for the agency to assess whether emissions, ambient concentrations, bioaccumulation, or deposition of nPB are known to cause or may reasonably be anticipated to cause adverse human health effects or adverse environmental effects. The EPA determined the petitions to add nPB to the list of HAP to be complete and published a notice of receipt of a complete petition in the **Federal Register** on February 6, 2015, and invited the public to comment on the technical merits of these petitions and to submit any information relevant to the technical review of the petitions.

B. Public Comments Received on EPA's Notice of Complete Petition

We received 17 submissions in response to the request for comments and additional information. The submissions are in the docket. Almost all the submissions agreed with the EPA's completeness determination of the petitions to add nPB to the CAA section 112(b)(1) HAP list. The majority of commenters referenced the National

Toxicology Program (NTP) Report on Carcinogens (RoC), 13th Edition, 2014 (NTP, 2014) in which the NTP classified nPB, identified as 1-BP, as being reasonably anticipated to be a human carcinogen.

Both petitioners, HSIA and NYSDEC, provided comments and additional information on occupational hazards and toxicity of nPB to support their petitions. Albemarle Corporation and Enviro Tech International (ETI), a manufacturer and a supplier of nPB respectively, disagreed with the EPA's completeness determination and provided their own evaluation of the emissions estimates, nPB carcinogenicity, as well as the exposure and cancer risk assessment included in the HSIA petition. Both Albemarle and ETI did not support the granting of petitions to add nPB to the HAP list based on their risk assessment. Submissions from various states, the city of Philadelphia, and groups representing state air pollution control agencies supported the EPA's completeness determination, presented state-specific information regarding the uses of nPB in dry cleaning and as a solvent in adhesives and degreaser operations, provided information on nPB state-specific studies and regulations, and supported the granting of the petitions to add nPB to the HAP list.

Submissions from national environmental organizations and other members of the public provided the EPA with additional references to studies on nPB's carcinogenic potential and neurotoxicity as well as information relevant to the NTP's peer-reviewed report on the carcinogenicity of nPB, and to the occupational exposure limits for nPB. These commenters also referenced the EPA's addition of nPB to the list of toxic chemicals subject to reporting requirements under section 313 of the Emergency Planning and Community Right-to-Know Act (EPCRA) and section 6607 of the Pollution Prevention Act (PPA). We considered all comments in our technical review.

IV. EPA's Technical Review of the Petitions

In this section, we present the EPA's evaluation of the evidence provided by the petitioners and information submitted by commenters beyond what was provided in the petitions relevant to our technical review. The purpose of this evaluation is to determine whether the data, analyses, interpretations, and conclusions in the petitions are adequate and whether they support a determination under CAA section 112(b)(3) that the substance is an air

pollutant and that emissions, ambient concentrations, bioaccumulation, or deposition of the substance are known to cause or may reasonably be anticipated to cause adverse effects to human health or adverse environmental effects.

The EPA's technical review focuses on the evidence provided by petitioners and commenters regarding emissions, ambient concentrations, and health effects of nPB. We are seeking comments on the EPA's technical review of the HSIA and NYSDEC petitions, on whether the criteria for listing have been met, and the agency's rationale for the decision to grant these petitions.

A. Chemical Characteristics, Uses, Sources, and Emissions of nPB

nPB, also known as 1-BP or 1-propyl bromide (CAS # 106-94-5), is a brominated organic colorless liquid that is insoluble in water, but soluble in ethanol and ether. Both petitioners and public commenters provided background information regarding nPB's chemical properties, physical properties, production, and usage. nPB is used as an intermediate chemical in the manufacture of pharmaceuticals and agricultural products, as well as a carrier solvent in aerosols and adhesives. The petitioners presented information on specific applications of nPB, including its use in aerosol solvents, adhesives, dry cleaning, and for open vapor degreasing applications in electronic, metal, and precision cleaning operations. Many commenters raised concerns with the use of nPB as a replacement of perchloroethylene (PERC), a HAP, in the dry cleaning industry and as replacement for HAP chlorinated solvents, like trichloroethylene (TCE), in solvent cleaning operations. Commenters pointed out that nPB's vapor pressure (146 millimeters of mercury (mm Hg) at 20 °C) is higher than the vapor pressure for PERC (14 mm Hg at 20 °C) and TCE (58 mm Hg at 20 °C) and that indoor and outdoor air emissions associated with nPB use are likely to be higher than those caused by similar use of other solvents with lower vapor pressure.

The petitioners expressed the difficulty in obtaining data on production, uses, and emissions of nPB due to the lack of publically available data. HSIA estimated the global production of nPB in 2007 was 20,000–30,000 metric tons and projected the use of nPB as a solvent in the U.S. to be growing at a rate of 15–20 percent per year (5,000 metric tons or 5,511 short tons). ETI commented on the HSIA's estimates and presented its own data on

the use of nPB in the U.S. in the precision cleaning industry sector, dry cleaning industry, and the adhesive, coatings, and inks sectors. Per ETI, in 2014 the U.S. used a total of 4,080 short tons of nPB within these three sectors.

The EPA agrees with the petitioners that since nPB has not been a regulated pollutant under CAA section 112 and reporting data under the Toxics Release Inventory (TRI) Program will not be available until July 2017,³ it is difficult to ascertain public data on usage, sources, and emissions. Nevertheless, in evaluating the information included in the petitions regarding uses and sources of nPB, the EPA compared the information with previous assessments of nPB performed by the EPA for the Significant New Alternatives Policy (SNAP) program and TRI. Based on this review, the EPA finds that the petitioner's showing of information regarding nPB uses and sources is reasonable.

To assess nPB air emissions, HSIA estimated nPB emissions for five facilities: A narrow tube manufacturing/degreasing operation, two dry cleaners, and two furniture manufacturing/spray adhesive facilities. HSIA's emission estimates are based on the internal concentration of nPB as measured by industrial hygiene studies or based on permit files and assuming that nPB is emitted in quantities similar to what would be expected for volatile organic compounds, TCE, or PERC. HSIA acknowledged in their petition that since the emission estimates have been made without access to the facilities, specific nPB use data provided by the facilities, or stack testing data, actual nPB emissions for these facilities could be different from the emission estimates. In their comments, Albemarle presented their own nPB emissions estimates for the same facilities included in the HSIA petition. The EPA believes the emissions estimates provided by HSIA and Albemarle represent a reasonable range of potential nPB emissions, with HSIA providing more conservative (higher) emissions estimates. The EPA finds that HSIA has presented adequate evidence to support the determination that nPB is an air pollutant as defined by CAA section 302(k).

B. nPB Health Effects

To support their request for listing nPB as a HAP, the petitioners provided citations for peer-reviewed published

papers and reports describing health effects of nPB. The summary from HSIA's original petition focused on reproductive effects, carcinogenicity, and neurotoxicity. When the EPA requested additional information, HSIA supplemented the information with additional scientific literature on these primary health outcomes. The NYSDEC's petition addressed these same health effects. The petitioners submitted summaries of 2-year bioassays in rats and mice, along with recommendations of the NTP Technical Reports Review Subcommittee, as evidence of carcinogenic activity (NTP, 2011). Claims of neurotoxicity are supported by the laboratory animal studies, as well as occupational studies and case reports of altered peripheral nerve function in workers exposed to concentrations of nPB as low as 1–3 parts per million (ppm). Developmental and reproductive effects, which were described by the EPA SNAP rule (72 FR 30142, May 30, 2007), were referenced by the petitioners. The petitioners claimed that the data are sufficient to conclude that nPB can and does produce adverse human health outcomes. Public comments mostly concurred with this description of health effects. In particular, Dr. Adam Finkel (a subject-matter expert on chemical toxicology) provided comments expanding upon the submitted evidence to lend more support and explanations of nPB toxicity. Regarding these health effects, Albemarle provided comments and summaries of additional studies to refute conclusions of carcinogenicity and to discount methods used in one human occupational study.

1. Cancer Effects

The petitions included a draft report of the NTP Technical Reports Review Subcommittee, followed by the final NTP report summarizing the carcinogenicity bioassays in rats and mice (NTP, 2011).⁴ This NTP report concluded "clear evidence of carcinogenicity" of nPB based on increased incidences of alveolar/bronchiolar neoplasms in female mice and intestinal adenomas in female rats and "some evidence of carcinogenicity" based on skin neoplasms and intestinal adenomas in male rats. There were also increased incidences of non-neoplastic lesions in both rats and mice. More recently the NTP has synthesized information from the existing animal and mechanistic studies, public comments, and peer review and

³ The final rule adding 1-BP to the list of toxic chemicals subject to reporting under section 313 of the EPCRA and section 6607 of the PPA, 80 FR 72906, November 23, 2015, became effective on November 30, 2015. The reporting year began on January 1, 2016, with reports due on July 1, 2017.

⁴ References used in the evaluation of nPB health effects are available in the docket of this action.

concluded that nPB is “reasonably anticipated to be a human carcinogen” in the NTP’s 13th RoC (NTP, 2014). The EPA has reviewed that assessment to assure its consistency with the EPA Guidelines for Carcinogen Risk Assessment and agreed with the conclusions and classification by the NTP (U.S. EPA Office of Environmental Information, 2014); the details of the EPA’s review of these data were presented in the proposed (80 FR 20189, April 15, 2015) and final (80 FR 72906, November 23, 2015) documents to add nPB to the TRI list.

Comments submitted by Albemarle regarding these HAP listing petitions are the same as those submitted on the EPA’s proposed TRI action (80 FR 20189, April 15, 2015). Detailed responses by the EPA to these comments are described therein. Albemarle disputed the use of the alveolar/bronchiolar adenomas in the cancer assessment, suggesting a lack of human relevance of these mouse tumors. While this topic has been debated in the scientific literature and was the topic of a technical workshop convened by the EPA (U.S. EPA, 2014),⁵ there is no cross-chemical consensus on the human relevance of mouse lung tumors; each chemical will need to be judged separately regarding relevance. Furthermore, the NTP conclusions, supported by the EPA, do not rely solely on the lung tumor data, but rather on the totality of the available information. The commenter also claimed that the EPA has not considered potential uncertainties in the mutagenicity, genotoxicity, and carcinogenicity data for nPB. The NTP review, however, assessed available mutagenicity data in its review. This took into account reports of mutations in bacterial and mammalian cells and limited data on DNA damage in nPB-exposed workers. Furthermore, it is noted that metabolic pathways are similar in humans and experimental animals, and several metabolites of nPB have been identified as mutagens and are known to cause DNA damage. Results from some of these in vitro assays are mixed, and confounding factors may include the volatility of nPB or active metabolites. Finally, the commenter provided a summary of an unpublished study they commissioned showing negative results in the Ames assay; however, the EPA is

⁵ U.S. EPA. Summary Report: State-of-the-Science Workshop on Chemically-Induced Mouse Lung Tumors: Applications to Human Health Assessments. U.S. Environmental Protection Agency, Washington, DC, EPA/600/R-14/002, 2014. Available at <https://cfpub.epa.gov/ncea/risk/recordisplay.cfm?deid=291094&CFID=67867665&CFTOKEN=37343828>.

not persuaded, and these results do not change the conclusion regarding the mutagenicity of nPB and its metabolites. Another commenter (Dr. Adam Finkel) provided counter-arguments to each of Albemarle’s points and strongly encouraged the EPA to grant the petitions and to add nPB to the CAA 112(b)(1) list of hazardous pollutants. Considering the available information, including that presented in the petitions and in public comments, the EPA continues to agree with NTP’s conclusion that nPB is “reasonably anticipated to be a human carcinogen.”

2. Non-Cancer Effects

a. Developmental/Reproductive Toxicity

In a previous SNAP ruling (72 FR 30142, May 30, 2007), the EPA reviewed a two-generation study (WIL Research, 2001) and concluded that reproductive toxicity, specifically changes in sperm motility and estrus cycles, was the most sensitive effect of nPB. The petition repeated this information, added references to literature studies that replicated these changes, and suggested that a metabolite may be responsible for the spermatotoxicity (Liu et al., 2009; Banu et al., 2007; Garner et al., 2007; Yamada et al., 2003). These effects are reported at inhalation exposures ≥ 200 ppm in rats and ≥ 50 ppm in mice. The petition also summarized the deliberations of the NTP Center for the Evaluation of Risks of Human Reproduction (NTP-CERHR), an expert panel that evaluated the available scientific literature on the potential for nPB to adversely affect human reproduction or development (NTP-CERHR, 2003). That monograph summarized nPB effects, including alterations in sperm count and motility, estrus cyclicity, follicular count, and reproductive organ weights. The impact of these changes is evident in the two-generation study that reported decreased fertility, increased post-implantation loss, and decreased number of litters, and live litter size. Decreased fetal weight and skeletal abnormalities, as well as depressed postnatal weight gain have also been reported in the literature. Using a weight-of-evidence approach, the panel concluded that there is clear evidence of adverse developmental/reproductive toxicity in laboratory animals and serious concern for adverse effects in humans at levels of occupational exposures.

The EPA has previously reviewed the reproductive and developmental data and agreed with the NTP panel’s conclusions. In its SNAP ruling (72 FR 30142, May 30, 2007), the descriptions

and evaluations of these data were provided in considerable detail. At that time the data on sperm counts and estrus cyclicity were used for derivations of acceptable exposure levels. In a recent draft report (81 FR 12099, March 8, 2016), the EPA again described nPB-induced reproductive and developmental toxicity, supplemented with studies made available after the 2003 NTP report (NTP-CERHR, 2003). These studies confirm and extend the findings of spermatotoxicity, alterations in estrous cycles, and decreased reproductive organ weights. In this recent report, the EPA considered decreased live litter size (WIL Research, 2001) to be among the most sensitive endpoints for dose-response modeling. Public comments received on the **Federal Register** notice of complete petition (80 FR 6676, February 6, 2015) supported and reiterated concern for this health outcome and noted that nPB is listed as a developmental/reproductive toxicant under Proposition 65 in California.

Given the available information in the petitions, and as described by the EPA in other agency actions on nPB,⁶ the EPA concludes that there is clear evidence that nPB produces adverse developmental and reproductive effects.⁷

b. Neurotoxicity

The petitions presented data from published studies in humans and laboratory animals that demonstrate that both the peripheral and central nervous systems are sensitive targets of nPB exposure. The petitions described case reports of severe neurotoxicity requiring hospitalization and potentially irreversible effects (Perrone et al., 2008; Majersik et al., 2007; Sclar, 1999). There are also epidemiological studies that describe concentration-related neurological impacts at relatively low levels; these findings were initially reported in small worker populations while later studies expanded testing to larger groups from several Chinese production facilities (Li et al., 2010; Ichihara et al., 2004; Ichihara et al., 2002). Measurements used in these occupational studies included tuning fork vibration sensitivity and neurophysiological measures of

⁶ See 72 FR 30142, May 30, 2007; 80 FR 20189, April 15, 2015; 80 FR 72906, November 23, 2015; and 81 FR 12098, March 8, 2016.

⁷ In January, 2016, the Agency for Toxic Substances and Disease Registry published a Draft Toxicological Profile for nPB that includes an analysis of the available data on the toxicity of nPB that provides further support for the evidence presented in this notice on the adverse health effects of nPB. The document can be found at <https://www.atsdr.cdc.gov/ToxProfiles/tp209.pdf>.

conduction velocity and latency in motor and sensory nerves. Li et al. (2010) allocated exposure levels (measured by passive sampling) into tertiles with medians of 1.28 to 22.58 ppm for female workers and conducted the analyses using time-weighted averages and cumulative exposures. Vibration sensitivity, the most sensitive endpoint, significantly decreased in all exposure groups, and tibial motor distal latency and sural nerve conduction velocity were altered in the middle and/or high exposure groups. Hematological and hormonal changes were also reported in some or all groups.

The petitions also referenced a number of animal studies showing hind limb weakness, altered neurophysiological measures, and ataxic gait from nPB exposure, which are qualitatively similar to the reported human neurological outcomes. Behavioral measures of neuromuscular function are sensitive measures of nPB neurotoxicity (Banu et al., 2007; Honma et al., 2003; Ichihara et al., 2000). Significant changes were documented at exposures as low as 50 ppm for 21 days (Honma et al., 2003) and changes may be slow or not reversible (Banu et al., 2007). Motor nerve conduction velocity and latency measured in the rat tail nerve were altered at higher concentrations with progressive changes from 4 to 12 weeks of exposure (Yu et al., 2001; Ichihara et al., 2000). Studies of very high exposures report severely altered gait, weakness or loss of hind limb control, convulsions, and death (Banu et al., 2007; Yu et al., 2001; Ichihara et al., 2000; Ohnishi et al., 1999), as well as peripheral nerve degeneration, myelin sheath abnormalities, and spinal cord axonal swelling (Wang et al., 2002; Yu et al., 2001; Ichihara et al., 2000). The petitions included studies of potential mechanisms including neurotransmitter dysregulation (Suda et al., 2008; Wang et al., 2002) and disinhibition in paired-pulse stimulation of hippocampal slices (Fueta et al., 2007).

Some of these neurotoxic effects were described in the EPA's SNAP ruling (72 FR 30142, May 30, 2007), and the conclusions of that review are in agreement with the claims of the petitioners. Since then, the EPA has reviewed the larger literature on the neurotoxicity of nPB and has described the physiological, behavioral, and biochemical measures that characterize and develop exposure-response data for neurological effects (81 FR 12098, March 8, 2016). The EPA has concluded that the concordance of outcomes across humans and laboratory rodents provides striking evidence of neurotoxic effects.

One commenter (Albemarle) expressed concerns regarding the validity and conduct of the tuning fork test of peripheral neuropathy (Li et al., 2010) for risk assessment purposes. The EPA is not persuaded by these objections given that electrophysiological measures of peripheral nerve function were also altered in that and other studies, and, furthermore, considerations regarding hazard do not rely solely on that endpoint. The conclusion of nPB neurotoxicity is supported by the EPA's review of numerous human reports and the preponderance of studies in laboratory animals.

3. Inhalation Unit Risk

HSIA and Albemarle each submitted separate quantitative estimates of cancer unit risk. In addition, the 2010 HSIA petition recommended a non-cancer reference value based on a larger composite uncertainty factor than was used in the SNAP rule's acceptable exposure level. When using quantitative reference values for determining risk from chronic cancer and non-cancer effects, for CAA section 112 actions, the EPA uses only final values that have undergone a rigorous development and review process,⁸ *i.e.*, the EPA Integrated Risk Information System (IRIS), the Agency for Toxic Substances and Disease Registry (ATSDR)⁹ and the California Office of Environmental Health Hazards Assessment. At this time, there are no final dose-response values for chronic cancer and non-cancer effects for nPB from these sources. Notwithstanding, the EPA acknowledges that the petitioners have shown that adequate information exists to develop such values and that this provides additional support for the potential cancer and non-cancer hazards from exposure to nPB.

C. Potential Human Exposure and Cancer Risk

The petition submitted by HSIA, including supplemental information and analyses submitted through February 2016, contains an exposure assessment and estimates of lifetime potential cancer risks for populations downwind of the five facilities discussed in section IV.A of this document. The petitioner's assessment used the latest version of the EPA's

⁸ <https://www.epa.gov/fera/dose-response-assessment-assessing-health-risks-associated-exposure-hazardous-air-pollutants>.

⁹ In January 2016 ATSDR published a draft toxicological profile for nPB. The document can be found at the effects of nPB. The document can be found at <https://www.atsdr.cdc.gov/ToxProfiles/tp209.pdf>.

Human Exposure Model (HEM)¹⁰ to model estimated facility emissions and account for the effects on plume dispersion from building downwash and whether the facility was located in an urban or rural area. Census block centroids from the 2010 Census are used as model receptors in HEM and are surrogates for locations of human exposure. The petitioner supplemented these default receptor locations with the locations of actual residences near the facilities. The petitioner applied its derived cancer unit risk estimate to the modeled ambient concentrations to estimate potential lifetime individual cancer risks and population risks. The petitioner's estimates of potential risk range from 5-in-1 million to 40-in-1 million, with about 9,000 people estimated to have cancer risk greater than 1-in-1 million.

A commenter (Albemarle) noted issues with several aspects of the estimation of ambient concentration and potential cancer risks originally submitted by the petitioner, including the use of an outdated model, which used old census and meteorological data, failure to consider the urban heat island effect, incorrect source release parameters, and failure to diurnally vary source emissions. Most of the concerns raised by this commenter have been addressed by the petitioner's use of the latest model version in its most recently submitted assessment, which used current census data, recent meteorological data from a larger library of meteorological stations, and specified urban or rural dispersion for each facility. Although the petitioner did not make any revisions to source release parameters nor temporalize source emissions, the EPA concludes that the petitioner's assessment is to be viewed less as a refined assessment of these specific facilities, but rather as an indication that it is reasonable that nPB emissions and ambient concentrations have the potential to cause elevated risks. It is important to note that the commenter's own assessment of the facilities modeled by the petitioner indicate cancer risk estimates as high as 10-in-1 million.

Moreover, as explained earlier in section II.C of this document, CAA section 112(b)(3)(B) does not specifically require an exposure assessment as a criterion for listing a substance. Rather it requires the EPA to consider whether "emissions, ambient concentrations, bioaccumulation or deposition of the substance are known to cause or may reasonably be

¹⁰ <https://www.epa.gov/fera/risk-assessment-and-modeling-human-exposure-model-hem>.

anticipated to cause adverse effects to human health or adverse environmental effects.” In contrast, EPCRA section 313(d)(2)(A) mandates that the EPA consider whether “a chemical is known to cause or can reasonably be anticipated to cause significant adverse acute human health effects at concentration levels that are reasonably likely to exist beyond facility site boundaries.” The contrast demonstrates that when Congress intends to specifically require a risk assessment, it does so. It decided not to do so in CAA section 112(b)(3). The CAA is silent on the issue of noncancer hazards and quantitative cancer risk evaluation and does not explicitly prohibit the EPA from considering it when making a determination under CAA section 112(b)(3)(B). As previously explained in section II.C, the EPA also believes that in meeting its obligation under CAA section 112(b)(3)(B), the Administrator has discretion in forming her decision to either grant or deny a petition to add a substance to the CAA section 112(b)(1) HAP list. We believe this discretion would allow her, where appropriate, to consider risk evaluation of a substance in order to make the requisite determination as to whether a substance is “known to cause or may reasonably be anticipated to cause adverse effects to human health or adverse environmental effects,” under CAA section 112(b)(3)(B).

Thus, the EPA concludes that the petitioners have met the CAA section 112(b)(3)(A) requisite showing of adequate data by estimating nPB emissions and ambient concentrations that are likely to result beyond a facility’s fence line and providing adequate evidence of adverse health effects of nPB. Because the EPA is granting the petition for reasons stated above, the agency does not find it necessary to make determinations regarding other elements of the petition, such as a petitioner’s noncancer hazards and quantitative cancer risk evaluation, or whether nPB presents adverse environmental effects.

V. EPA’s Decision To Grant the Petitions

Based on the EPA’s evaluation of the petitions submitted by HSIA and NYSDEC, we conclude that the petitioners have provided sufficient information demonstrating the adverse health effects of nPB. The documented adverse health effects of nPB, which are based on established sound scientific principles, include carcinogenicity, reproductive toxicity, and neurotoxicity. The EPA also concludes that the petitioner’s assessment regarding

estimates of potential ambient concentrations of nPB that are likely to result at a facility’s fence line and process emissions related information and chemical usage information representative of normal operating conditions are reasonable. The EPA concludes that there is adequate evidence to support a determination that nPB is an air pollutant and that emissions and ambient concentrations of nPB may reasonably be anticipated to cause adverse effects to human health. As mentioned above, we are seeking comments on all aspects of this notice, including EPA’s technical review of the HSIA and NYSDEC petitions, whether the criteria for listing have been met, and the agency’s rationale for the decision to grant these petitions.

VI. Statutory and Executive Order Review

Additional information about this Executive Order can be found at <http://www.epa.gov/laws-regulations/laws-and-executive-orders>.

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

This action is a significant regulatory action that was submitted to the Office of Management and Budget (OMB) for review because it raises novel legal or policy issues. Any changes made in response to OMB recommendations have been documented in the docket.

Accordingly, the EPA is issuing this draft notice announcing the decision to grant petitions to add nPB to the CAA section 112(b)(1) HAP list.

Dated: December 28, 2016.

Gina McCarthy,
Administrator.

BILLING CODE 6560-50-P

FEDERAL ELECTION COMMISSION

Sunshine Act Meetings

AGENCY: Federal Election Commission.

DATE AND TIME: Thursday, January 12, 2017 at 10:00 a.m.

PLACE: 999 E Street NW., Washington, DC (Ninth Floor).

STATUS: This meeting will be open to the public.

ITEMS TO BE DISCUSSED:

Draft Advisory Opinion 2016-21: Great America PAC

Draft Advisory Opinion 2016-23:

Socialist Workers Party
Revised Proposal To Launch

Rulemaking To Ensure That U.S.

Political Spending is Free From Foreign Influence
January–July 2017 Meeting Dates
Management and Administrative Matters

Individuals who plan to attend and require special assistance, such as sign language interpretation or other reasonable accommodations, should contact Dayna C. Brown, Acting Secretary and Clerk, at (202) 694-1040, at least 72 hours prior to the meeting date.

PERSON TO CONTACT FOR INFORMATION:
Judith Ingram, Press Officer, Telephone: (202) 694-1220.

Dayna C. Brown,
Acting Secretary and Clerk of the Commission.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Agency for Toxic Substances and Disease Registry

[60Day-17-171Y]

Proposed Data Collection Submitted for Public Comment and Recommendations

AGENCY: Agency for Toxic Substances and Disease Registry (ATSDR), Department of Health and Human Services (HHS)

ACTION: Notice with comment period; withdrawal.

SUMMARY: The Agency for Toxic Substances and Disease Registry (ATSDR) in the Department of Health and Human Services (HHS) announces the withdrawal of the notice published under the same title on December 30, 2016 for public comment.

DATES: Effective January 9, 2017.

FOR FURTHER INFORMATION CONTACT: Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE., MS-D74, Atlanta, Georgia 30329; phone: 404-639-7570; Email: omb@cdc.gov.

SUPPLEMENTARY INFORMATION: On December 30, 2016 ATSDR published a notice in the **Federal Register** titled “Proposed Data Collection Submitted for Public Comment and Recommendations” (Vol. 81, No. 251 FR Doc. 2016-31738, Pages 96454-96456). ATSDR prematurely and inadvertently published this notice. The notice is being withdrawn immediately for public comment.

A new and corrected notice published on January 3, 2017 under the same title

(Vol. 82, No. 1 FR Doc. 2016–31772, Pages 124–126, Docket No. ATSDR–2016–0007) for public comment.

Leroy A. Richardson,

Chief, Information Collection Review Office, Office of Scientific Integrity, Office of the Associate Director for Science, Office of the Director, Centers for Disease Control and Prevention.

Centers for Medicare & Medicaid Services

[CMS–6059–N6]

Medicare, Medicaid, and Children's Health Insurance Programs: Announcement of the Extension of Temporary Moratoria on Enrollment of Part B Non-Emergency Ground Ambulance Suppliers and Home Health Agencies in Designated Geographic Locations

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Extension of temporary moratoria.

SUMMARY: This document announces the extension of statewide temporary moratoria on the enrollment of new Medicare Part B non-emergency ground ambulance providers and suppliers and Medicare home health agencies, subunits, and branch locations in Florida, Illinois, Michigan, Texas, Pennsylvania, and New Jersey, as applicable, to prevent and combat fraud, waste, and abuse. This extension also applies to the enrollment of new non-emergency ground ambulance suppliers and home health agencies, subunits, and branch locations in Medicaid and the Children's Health Insurance Program in those states.

DATES: Effective January 29, 2017.

FOR FURTHER INFORMATION CONTACT: Steve Manning, (410) 786–1691.

News media representatives must contact CMS' Public Affairs Office at (202) 690–6145 or email them at press@cms.hhs.gov.

SUPPLEMENTARY INFORMATION:

I. Background

A. CMS' Implementation of Temporary Enrollment Moratoria

Under the Patient Protection and Affordable Care Act (Pub. L. 111–148), as amended by the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152) (collectively known as

the Affordable Care Act), the Congress provided the Secretary with new tools and resources to combat fraud, waste, and abuse in Medicare, Medicaid, and the Children's Health Insurance Program (CHIP). Section 6401(a) of the Affordable Care Act added a new section 1866(j)(7) to the Social Security Act (the Act) to provide the Secretary with authority to impose a temporary moratorium on the enrollment of new Medicare, Medicaid or CHIP providers and suppliers, including categories of providers and suppliers, if the Secretary determines a moratorium is necessary to prevent or combat fraud, waste, or abuse under these programs. Section 6401(b) of the Affordable Care Act added specific moratorium language applicable to Medicaid at section 1902(kk)(4) of the Act, requiring States to comply with any moratorium imposed by the Secretary unless the State determines that the imposition of such moratorium would adversely impact Medicaid beneficiaries' access to care. Section 6401(c) of the Affordable Care Act amended section 2107(e)(1) of the Act to provide that all of the Medicaid provisions in sections 1902(a)(77) and 1902(kk) are also applicable to CHIP.

In the February 2, 2011 **Federal Register** (76 FR 5862), CMS published a final rule with comment period titled, "Medicare, Medicaid, and Children's Health Insurance Programs; Additional Screening Requirements, Application Fees, Temporary Enrollment Moratoria, Payment Suspensions and Compliance Plans for Providers and Suppliers," which implemented section 1866(j)(7) of the Act by establishing new regulations at 42 CFR 424.570. Under § 424.570(a)(2)(i) and (iv), CMS, or CMS in consultation with the Department of Health and Human Services' Office of Inspector General (HHS–OIG) or the Department of Justice (DOJ), or both, may impose a temporary moratorium on newly enrolling Medicare providers and suppliers if CMS determines that there is a significant potential for fraud, waste, or abuse with respect to a particular provider or supplier type, or particular geographic locations, or both. At § 424.570(a)(1)(ii), CMS stated that it would announce any temporary moratorium in a **Federal Register** document that includes the rationale for the imposition of such moratorium. This document fulfills that requirement.

In accordance with section 1866(j)(7)(B) of the Act, there is no judicial review under sections 1869 and 1878 of the Act, or otherwise, of the decision to impose a temporary enrollment moratorium. A provider or supplier may use the existing appeal procedures at 42 CFR part 498 to

administratively appeal a denial of billing privileges based on the imposition of a temporary moratorium; however the scope of any such appeal is limited solely to assessing whether the temporary moratorium applies to the provider or supplier appealing the denial. Under § 424.570(c), CMS denies the enrollment application of a provider or supplier if the provider or supplier is subject to a moratorium. If the provider or supplier was required to pay an application fee, the application fee will be refunded if the application was denied as a result of the imposition of a temporary moratorium (see § 424.514(d)(2)(v)(C)).

Based on this authority and our regulations at § 424.570, we initially imposed moratoria to prevent enrollment of new home health agencies, subunits, and branch locations¹ (hereafter referred to as HHAs) in Miami-Dade County, Florida and Cook County, Illinois, as well as surrounding counties, and Medicare Part B ground ambulance suppliers in Harris County, Texas and surrounding counties, in a notice issued on July 31, 2013 (78 FR 46339).² We exercised this authority again in a notice published on February 4, 2014 (79 FR 6475) when we extended the existing moratoria for an additional 6 months and expanded them to include enrollment of HHAs in Broward County, Florida; Dallas County, Texas; Harris County, Texas; and Wayne County, Michigan and surrounding counties, and enrollment of ground ambulance suppliers in Philadelphia, Pennsylvania and surrounding counties. Then, we further extended these moratoria in documents issued on August 1, 2014 (79 FR 44702), February 2, 2015 (80 FR 5551), July 28, 2015 (80 FR 44967), and February 2, 2016 (81 FR 5444). On August 3, 2016 (81 FR 51120), we extended the current moratoria for an additional 6 months and expanded them to statewide for the

¹ As noted in the preamble to the final rule with comment period implementing the moratorium authority (February 2, 2011, CMS–6028–FC (76 FR 5870), home health agency subunits and branch locations are subject to the moratoria to the same extent as any other newly enrolling home health agency.

² CMS has identified an error in the provider and beneficiary saturation data described in our July 31, 2013 **Federal Register** notice (78 FR 46339). We have subsequently revised the methodology by which we determine provider and beneficiary saturation. Following these revisions to the methodology, we simulated application of our current 2016 methodology to the 2013 data, and determined that the 2013 decision to impose the moratorium would not have been impacted had the revised methodology been applied. Provider saturation remains one of the criteria used to determine whether to implement a moratorium. CMS has made market saturation data publicly available at <https://data.cms.gov/market-saturation>.

enrollment of new HHAs in Florida, Illinois, Michigan, and Texas, and Part B non-emergency ambulance suppliers in New Jersey, Pennsylvania, and Texas. Our August 3, 2016 publication also announced the lifting of temporary moratoria for all Part B emergency ambulance suppliers.³

B. Determination of the Need for Moratoria

In imposing these enrollment moratoria, CMS considered both qualitative and quantitative factors suggesting a high risk of fraud, waste, or abuse. CMS relied on law enforcement's longstanding experience with ongoing and emerging fraud trends and activities through civil, criminal, and administrative investigations and prosecutions. CMS' determination of a high risk of fraud, waste, or abuse in these provider and supplier types within these geographic locations was then confirmed by CMS' data analysis, which relied on factors the agency identified as strong indicators of risk. (For a more detailed explanation of this determination process and of these authorities, see the July 31, 2013 notice (78 FR 46339) or February 4, 2014 moratoria document (79 FR 6475)).

Because fraud schemes are highly migratory and transitory in nature, many of CMS' program integrity authorities and anti-fraud activities are designed to allow the agency to adapt to emerging fraud in different locations. The laws and regulations governing CMS' moratoria authority give us flexibility to use any and all relevant criteria for future moratoria, and CMS may rely on additional or different criteria as the basis for future moratoria.

1. Application to Medicaid and the Children's Health Insurance Program (CHIP)

The February 2, 2011, final rule also implemented section 1902(kk)(4) of the Act, establishing new Medicaid regulations at § 455.470. Under § 455.470(a)(1) through (3), the Secretary may impose a temporary moratorium, in accordance with § 424.570, on the enrollment of new providers or provider types after consulting with any affected State Medicaid agencies. The State

Medicaid agency must impose a temporary moratorium on the enrollment of new providers or provider types identified by the Secretary as posing an increased risk to the Medicaid program unless the State determines that the imposition of such moratorium would adversely affect Medicaid beneficiaries' access to medical assistance and so notifies the Secretary. The final rule also implemented section 2107(e)(1)(D) of the Act by providing, at § 457.990 of the regulations, that all of the provisions that apply to Medicaid under sections 1902(a)(77) and 1902(kk) of the Act, as well as the implementing regulations, also apply to CHIP.

Section 1866(j)(7) of the Act authorizes imposition of a temporary enrollment moratorium for Medicare, Medicaid, and/or CHIP, "if the Secretary determines such moratorium is necessary to prevent or combat fraud, waste, or abuse under either such program." While there may be exceptions, CMS believes that generally, a category of providers or suppliers that poses a risk to the Medicare program also poses a similar risk to Medicaid and CHIP. Many of the new anti-fraud provisions in the Affordable Care Act reflect this concept of "reciprocal risk" in which a provider that poses a risk to one program poses a risk to the other programs. For example, section 6501 of the Affordable Care Act titled, "Termination of Provider Participation under Medicaid if Terminated Under Medicare or Other State Plan," which amends section 1902(a)(39) of the Act, requires State Medicaid agencies to terminate the participation of an individual or entity if such individual or entity is terminated under Medicare or any other State Medicaid plan. Additional provisions in title VI, Subtitles E and F of the Affordable Care Act also support the determination that categories of providers and suppliers pose the same risk to Medicaid as to Medicare. Section 6401(a) of the Affordable Care Act required us to establish levels of screening for categories of providers and suppliers based on the risk of fraud, waste, and abuse determined by the Secretary. Section 6401(b) of the Affordable Care Act required State Medicaid agencies to screen providers and suppliers based on the same levels established for the Medicare program. This reciprocal concept is also reflected in the Medicare moratoria regulations at § 424.570(a)(2)(ii) and (iii), which permit CMS to impose a Medicare moratorium based solely on a State imposing a Medicaid moratorium. Accordingly, CMS has determined that

there is a reasonable basis for concluding that a category of providers or suppliers that poses a risk to Medicare also poses a similar risk to Medicaid and CHIP, and that a moratorium in all of these programs is necessary to effectively combat this risk.

2. Consultation With Law Enforcement

In consultation with the HHS Office of Inspector General (OIG) and the Department of Justice (DOJ), CMS previously identified two provider and supplier types in nine geographic locations that warrant a temporary enrollment moratorium. For a more detailed discussion of this consultation process, see the July 31, 2013 notice (78 FR 46339) or February 4, 2014 moratoria document (79 FR 6475).

3. Data Analysis

In addition to consulting with law enforcement, CMS also analyzed its own data to identify specific provider and supplier types within geographic locations with significant potential for fraud, waste or abuse, therefore warranting the imposition of enrollment moratoria.

4. Beneficiary Access to Care

Beneficiary access to care in Medicare, Medicaid, and CHIP is of critical importance to CMS and its State partners, and CMS carefully evaluated access for the target moratorium locations with every imposition and extension of the moratoria. Prior to imposing and extending these moratoria, CMS reviewed Medicare data for these areas and found no concerns with beneficiary access to HHAs or ground ambulance suppliers. CMS also consulted with the appropriate State Medicaid Agencies and with the appropriate State Departments of Emergency Medical Services to determine if the moratoria would create access to care concerns for Medicaid and CHIP beneficiaries. All of CMS' State partners were supportive of CMS' analysis and proposals, and together with CMS, determined that *continuation* of these moratoria would not create access to care issues for Medicaid or CHIP beneficiaries.

5. When a Temporary Moratorium Does Not Apply

Under § 424.570(a)(1)(iii), a temporary moratorium does not apply to any of the following: (1) Changes in practice location (2) changes in provider or supplier information, such as phone number or address; or (3) changes in ownership (except changes in ownership of HHAs that require initial enrollment under § 424.550). Also, in

³ CMS also concurrently announced a demonstration under the authority provided in section 402(a)(1)(J) of the Social Security Amendments of 1967 (42 U.S.C. 1395b-1(a)(1)(J)) that allows for access to care-based exceptions to the moratoria in certain limited circumstances after a heightened review of that provider has been conducted. This exception process also applies to Medicaid and CHIP providers in each state. This announcement may be found in the **Federal Register** document issued on August 3, 2016 (81 FR 51116).

accordance with § 424.570(a)(1)(iv), a temporary moratorium does not apply to any enrollment application that a Medicare contractor has already approved, but has not yet entered into the Provider Enrollment, Chain, and Ownership System (PECOS) at the time the moratorium is imposed.

6. Lifting a Temporary Moratorium

In accordance with § 424.570(b), a temporary enrollment moratorium imposed by CMS will remain in effect for 6 months. If CMS deems it necessary, the moratorium may be extended in 6-month increments. CMS will evaluate whether to extend or lift the moratorium before the end of the initial 6-month period and, if applicable, any subsequent moratorium periods. If one or more of the moratoria announced in this document are extended, CMS will publish a document regarding such extensions in the **Federal Register**.

As provided in § 424.570(d), CMS may lift a moratorium at any time if the President declares an area a disaster under the Robert T. Stafford Disaster Relief and Emergency Assistance Act, if circumstances warranting the imposition of a moratorium have abated, if the Secretary has declared a public health emergency, or if, in the judgment of the Secretary, the moratorium is no longer needed.

Once a moratorium is lifted, the provider or supplier types that were unable to enroll because of the moratorium will be designated to CMS' high screening level under §§ 424.518(c)(3)(iii) and 455.450(e)(2) for 6 months from the date the moratorium was lifted.

II. Extension of Home Health and Ambulance Moratoria—Geographic Locations

CMS currently has in place moratoria on newly enrolling HHAs in Florida, Illinois, Michigan, and Texas and Part B non-emergency ambulance suppliers in New Jersey, Pennsylvania, and Texas.

As provided in § 424.570(b), CMS may deem it necessary to extend previously-imposed moratoria in 6-month increments. Under this authority, CMS is extending the temporary moratoria on the Medicare enrollment of HHAs and Part B non-emergency ground ambulance providers and suppliers in the geographic locations discussed herein. Under the regulations at § 455.470 and § 457.990, these moratoria also apply to the enrollment of HHAs and non-emergency ground ambulance providers and suppliers in Medicaid and CHIP in those locations. Under § 424.570(b), CMS is required to

publish a document in the **Federal Register** announcing any extension of a moratorium, and this extension of moratoria document fulfills that requirement.

CMS consulted with the HHS–OIG regarding the extension of the moratoria on new HHAs and Part B non-emergency ground ambulance providers and suppliers in all of the moratoria states, and HHS–OIG agrees that a significant potential for fraud, waste, and abuse continues to exist regarding those provider and supplier types in these geographic areas. The circumstances warranting the imposition of the moratoria have not yet abated, and CMS has determined that the moratoria are still needed as we monitor the indicators and continue with administrative actions to combat fraud and abuse, such as payment suspensions and revocations of provider/supplier numbers. (For more information regarding the monitored indicators, see the February 4, 2014 moratoria document (79 FR 6475)).

Based upon CMS' consultation with the relevant State Medicaid agencies, CMS has concluded that extending these moratoria will not create an access to care issue for Medicaid or CHIP beneficiaries in the affected states at this time. CMS also reviewed Medicare data for these states and found there are no current problems with access to HHAs or ground ambulance providers or suppliers. Nevertheless, the agency will continue to monitor these locations to make sure that no access to care issues arise in the future.

Based upon our consultation with law enforcement and consideration of the factors and activities described previously, CMS has determined that the temporary enrollment moratoria should be extended for an additional 6 months.

III. Summary of the Moratoria Locations

CMS is executing its authority under sections 1866(j)(7), 1902(kk)(4), and 2107(e)(1)(D) of the Act to extend and implement temporary enrollment moratoria on HHAs for all counties in Florida, Illinois, Michigan, and Texas, as well as Part B non-emergency ground ambulance providers and suppliers for all counties in New Jersey, Pennsylvania, and Texas.

IV. Clarification of Right to Judicial Review

Section 1866(j)(7)(B) of the Act states that there shall be no judicial review under section 1869, section 1878, or otherwise, of a temporary moratorium imposed on the enrollment of new

providers of services and suppliers if the Secretary determines that the moratorium is necessary to prevent or combat fraud, waste, or abuse. Accordingly, our regulations at 42 CFR 498.5(l)(4) state that for appeals of denials based on a temporary moratorium, the scope of review will be limited to whether the temporary moratorium applies to the provider or supplier appealing the denial. The agency's basis for imposing a temporary moratorium is not subject to review. Our regulations do not limit the right to seek judicial review of a final agency decision that the temporary moratorium applies to a particular provider or supplier. In the preamble to the February 2, 2011 (76 FR 5918) final rule with comment period establishing this regulation, we explained that "a provider or supplier may administratively appeal an adverse determination based on the imposition of a temporary moratorium up to and including the Department Appeal Board (DAB) level of review." We are clarifying that providers and suppliers that have received unfavorable decisions in accordance with the limited scope of review described in § 498.5(l)(4) may seek judicial review of those decisions after they exhaust their administrative appeals. However, we reiterate that section 1866(j)(7)(B) of the Act precludes judicial review of the agency's basis for imposing a temporary moratorium.

V. Collection of Information Requirements

This document does not impose information collection requirements, that is, reporting, recordkeeping or third-party disclosure requirements. Consequently, there is no need for review by the Office of Management and Budget under the authority of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

VI. Regulatory Impact Statement

CMS has examined the impact of this document as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (January 18, 2011), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104–4), Executive Order 13132 on Federalism (August 4, 1999) and the Congressional Review Act (5 U.S.C. 804(2)).

Executive Orders 12866 and 13563 direct agencies to assess all costs and

benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health, and safety effects, distributive impacts, and equity). A regulatory impact analysis (RIA) must be prepared for major regulatory actions with economically significant effects (\$100 million or more in any 1 year). This document will prevent the enrollment of new home health providers and Part B non-emergency ground ambulance suppliers in Medicare, Medicaid, and CHIP in certain states. Though savings may accrue by denying enrollments, the monetary amount cannot be quantified. Since the imposition of the initial moratoria on July 31, 2013, 1,147 HHAs and 19 ambulance companies in all geographic areas affected by the moratoria had their applications denied. We have found the number of applications that are denied after 60 days declines dramatically, as most providers and suppliers will not submit applications during the moratoria period. Therefore, this document does not reach the economic threshold, and thus is not considered a major action.

The RFA requires agencies to analyze options for regulatory relief of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Most hospitals and most other providers and suppliers are small entities, either by nonprofit status or by having revenues of less than \$7.5 million to \$38.5 million in any one year. Individuals and states are not included in the definition of a small entity. CMS is not preparing an analysis for the RFA because it has determined, and the Secretary certifies, that this document will not have a significant economic impact on a substantial number of small entities.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis if an action may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, CMS defines a small rural hospital as a hospital that is located outside of a metropolitan statistical area (MSA) for Medicare payment purposes and has fewer than 100 beds. CMS is not preparing an analysis for section 1102(b) of the Act because it has determined, and the Secretary certifies, that this document will not have a significant impact on the operations of a substantial number of small rural hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 also requires that agencies assess anticipated costs and benefits before issuing any regulatory action whose mandates require spending in any 1 year of \$100 million in 1995 dollars, updated annually for inflation. In 2016, that threshold is approximately \$146 million. This document will have no consequential effect on state, local, or tribal governments or on the private sector.

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed regulatory action (and subsequent final action) that imposes substantial direct requirement costs on state and local governments, preempts state law, or otherwise has Federalism implications. Because this document does not impose any costs on state or local governments, the requirements of Executive Order 13132 are not applicable.

In accordance with the provisions of Executive Order 12866, this document was reviewed by the Office of Management and Budget.

Dated: December 28, 2016.

Andrew M. Slavitt,

Acting Administrator, Centers for Medicare & Medicaid Services.

BILLING CODE 4120-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

Request for Information

AGENCY: Administration for Children and Families (ACF), Department of Health and Human Services (HHS).

ACTION: Request for information (RFI).

SUMMARY: This Request for Information (RFI) seeks recommendations for future work with and on behalf of American Indian and Alaska Native (AI/AN) leadership, tribes, tribal organizations, and populations in accord with ACF's vision of "children, youth, families, individuals, and communities who are resilient, safe, healthy, and economically secure."

DATES: Submit responses by March 10, 2017.

ADDRESSES: Written comments may be submitted through any of the methods specified below. However, electronic submission is preferred. Please do not submit duplicate comments.

■ **Electronic submission** through <https://www.regulations.gov> portal. Follow the instructions for submitting electronic comments. Attachments, if any, should be in Microsoft Word or Microsoft Excel. You can find this RFI by typing ACF-2016-0002 in the Search window. Then click on the "Comment Now!" button on the Search Results page. This will open up a Comment form where you can enter your comment on the form, attach files (up to 10MB each), as well as your personal information, when applicable. Be sure to complete all required fields. Please note that information entered on the web form may be viewable publicly. Once you reach the "Your Preview" screen, the information that will be viewable publicly is displayed directly on the form under the section titled: "This information will appear on *Regulations.gov*." To complete your comment, you must first agree to the disclaimer and check the box. This will enable the "Submit Comment" button. Upon completion, you will receive a Comment Tracking Number for your comment. To learn more about comment submission, visit the Submit a Comment section of the "How to Use *Regulations.gov*" pages.

■ **Electronic submission** through email to ANAComments@acf.hhs.gov.

All comments received before the close of the comment period will be available for public inspection, including any information that is included in a comment. All electronically submitted comments posted through the <https://www.regulations.gov> portal received before the end of the comment period will be available at <http://www.regulations.gov>.

FOR FURTHER INFORMATION CONTACT: Camille Loya, Director, Division of Policy, Administration for Native Americans, Camille.Loya@acf.hhs.gov, 202-401-5964.

SUPPLEMENTARY INFORMATION:

I. Background information

Executive Order 13175, dated November 6, 2000, established policymaking criteria applicable to federal agencies, to the extent permitted by law, when formulating and implementing policies that have tribal implications, including special requirements for legislative proposals and consultation. Subsequently, President Obama issued a Presidential Memorandum on Tribal Consultation, dated November 5, 2009, affirming that "meaningful dialogue between Federal officials and tribal officials has greatly improved Federal policy toward Indian

tribes.” Finally, ACF recently issued the *ACF Principles for Working with Federally Recognized Indian Tribes*, effective October 20, 2016, that affirmed ACF’s commitment to receive input from elected tribal representatives as well as “to otherwise ensure human services coordination around issues affecting AI/AN populations.”

Consistent with the above affirmative statements of the value of feedback from AI/AN partners and stakeholders, ACF is requesting information from AI/AN tribes, tribal organizations, and stakeholders (including grantees). The purpose is to identify issues and challenges facing AI/AN populations as well as to inform ACF of tribes’ and tribal organizations’ recommendations, promising practices, and innovations to address the needs of AI/AN children, youth, families, and communities. This information may, in turn, be used by ACF in the development of future rulemaking and technical assistance, formation of legislative proposals and research agendas, and strategic planning in consultation with tribes.

II. Request for Information

As President Obama stated in his Presidential Proclamation—National Native American Heritage Month (2016):

Let us continue to build on the advancements we have made, because enduring progress will depend on our dedication to honoring our trust and treaty responsibilities. With sustained effort and unwavering optimism, we can ensure a vibrant and resilient Indian Country filled with possibility and prosperity.

In this RFI, we seek feedback and recommendations related to how ACF partners with tribes and how to make progress in the future. The following questions are not exhaustive, and we encourage commenters to provide any additional information they believe relevant to ACF’s work with and on behalf of American Indians and Alaska Natives. You may provide general comments, respond to all questions posed in section II of this RFI, or respond to one or more questions. If you respond to any of the questions in section II, please identify the number that corresponds to the question(s) you are responding to. Include our agency name and the docket number on all submissions. Please do not include confidential information, or otherwise sensitive or protected information with your responses.

(1) Are there challenges to AI/AN tribes and tribal organizations posed by non-federal match or cost sharing requirements in any applicable ACF programs? Please be specific as to the program or programs you are referring to

as well as provide as much detail as possible in describing challenges or difficulties posed and any specific recommendations you wish to provide.

(2) Are there challenges to AI/AN tribes and tribal organizations posed by administrative cost caps required under some ACF grant programs? Please be specific as to the program or programs you are referring to as well as provide as much detail as possible in describing challenges or difficulties posed and any specific recommendations you wish to provide.

(3) Are there instances for which you believe waiver authority, additional waiver authority allowed under block grants, would benefit tribes under any ACF programs? Please be specific as to the program or programs you are referring to as well as provide as much detail as possible in describing challenges or difficulties posed and any specific recommendations you wish to provide.

(4) For ACF programs that currently have waiver authority for tribes, do you recommend ACF streamline the processes under which AI/AN tribes and tribal organizations apply for or request waivers of statutory or regulatory requirements across ACF grant programs? Please be specific as to the program or programs you are referring to as well as provide as much detail as possible in describing where you believe additional streamlining is needed, along with any specific recommendations you wish to provide.

(5) Are there regulatory or administrative barriers that present challenges to AI/AN tribes and tribal organizations in the implementation of ACF grant programs? Please be specific about what those regulatory or administrative barriers are as well as recommendations for addressing them.

(6) Can you identify practices, policies, and procedures in ACF or elsewhere that are particularly effective in meeting the needs of AI/AN tribes, tribal organizations, families, and communities? Please be specific as to the program or programs you are referring to as well as provide as much detail as possible in describing effective and responsive practices, policies, and procedures.

(7) Related to data, what would you recommend ACF either collect (if it does not already) or analyze that would be most useful to inform our work with AI/AN tribes and tribal organizations? Please be specific and provide as much detail as possible.

(8) Do you have recommendations for how ACF could better share data related to AI/AN grantee program performance, outcomes, and sustainability? Please be

specific, including recommended use of technological or other means of data sharing.

(9) Are there elements of the application process that could potentially discourage AI/AN tribes or organizations from applying for ACF grants? If so, please specify what those elements are and explain why those elements could potentially discourage prospective AI/AN applicants and any recommendations for addressing such barriers.

III. Response to Comments

Because of the large number of public comments we normally receive, we are not able to acknowledge or respond to them individually. However, comments will be accepted on this RFI through <https://www.Regulations.gov> where you will be able to track your own comments and view other comments we receive.

Dated: January 3, 2017.

Mark H. Greenberg

Acting Assistant Secretary for Children and Families.

Dated: January 3, 2017.

Stacey Ecoffey,

Acting Deputy Assistant Secretary for Native American Affairs and Acting Commissioner Administration for Native Americans.

BILLING CODE 4184-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA-2015-D-2537]

Submission of Quality Metrics Data; Revised Draft Guidance for Industry; Extension of Comment Period

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability; extension of comment period.

SUMMARY: The Food and Drug Administration (FDA) is extending the comment period for the notice of revised draft guidance availability that appeared in the **Federal Register** of November 25, 2016. The Agency is taking this action in response to requests for an extension to allow interested persons additional time to submit comments.

DATES: FDA is extending the comment period on the notice of revised draft guidance availability published on November 25, 2016 (81 FR 85226). Submit either electronic or written comments by March 27, 2017.

ADDRESSES: You may submit comments by any of the following methods:

Electronic Submissions

Submit electronic comments in the following way:

- **Federal eRulemaking Portal:** <https://www.regulations.gov>. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to <https://www.regulations.gov> will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on <https://www.regulations.gov>.

- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see "Written/Paper Submissions" and "Instructions").

Written Submissions

Submit written submissions in the following ways:

- **Mail/Hand delivery/Courier (for written/paper submissions):** Division of Dockets Management (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

- For written/paper comments submitted to the Division of Dockets Management, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in "Instructions."

Instructions: All submissions received must include the Docket No. FDA-2015-D-2537 for "Submission of Quality Metrics Data; Revised Draft Guidance for Industry." Received comments will be placed in the docket and, except for those submitted as "Confidential Submissions," publicly viewable at <https://www.regulations.gov> or at the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

- **Confidential Submissions—**To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two

copies total. One copy will include the information you claim to be confidential with a heading or cover note that states "THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION." The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on <https://www.regulations.gov>. Submit both copies to the Division of Dockets Management. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as "confidential." Any information marked as "confidential" will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: <http://www.fda.gov/regulatoryinformation/dockets/default.htm>.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to <https://www.regulations.gov> and insert the docket number(s), found in brackets in the heading of this document, into the "Search" box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: Tara Goen Bizjak, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 51, Rm. 2109, Silver Spring, MD 20993-0002, 301-796-3257 or Stephen Ripley, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 7301, Silver Spring, MD 20993-0002, 240-402-7911.

SUPPLEMENTARY INFORMATION: In the **Federal Register** of November 25, 2016, FDA published a notice of revised draft guidance availability with a 60-day comment period. Comments on the notice of revised draft guidance availability will inform FDA's development and proposed implementation of a voluntary phase of the quality metrics program.

FDA is extending the comment period for an additional 60 days, until March 27, 2017. The Agency believes that a 60-day extension of the comment period for

the notice of revised draft guidance availability will provide adequate time for interested persons to submit comments without significantly delaying Agency decision making on these important issues.

Dated: January 3, 2017.

Leslie Kux,

Associate Commissioner for Policy.

BILLING CODE 4164-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA-2016-N-0001]

Circulatory System Devices Panel of the Medical Devices Advisory Committee; Notice of Meeting

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) announces a forthcoming public advisory committee meeting of the Circulatory System Devices Panel of the Medical Devices Advisory Committee. The general function of the committee is to provide advice and recommendations to the Agency on FDA's regulatory issues. The meeting will be open to the public.

DATES: The meeting will be held on February 23, 2017, from 8 a.m. to 6 p.m.

ADDRESSES: Hilton Washington, DC/North, Salons A, B, C and D, 620 Perry Pkwy., Gaithersburg, MD 20877. The hotel's phone number is 301-977-8900. Answers to commonly asked questions including information regarding special accommodations due to a disability, visitor parking, and transportation may be accessed at: <http://www.fda.gov/AdvisoryCommittees/AboutAdvisoryCommittees/ucm408555.htm>.

FOR FURTHER INFORMATION CONTACT: Evella Washington, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. G640, Silver Spring, MD 20993-0002, Evella.Washington@fda.hhs.gov, 301-796-6683, or FDA Advisory Committee Information Line, 1-800-741-8138 (301-443-0572 in the Washington, DC area). A notice in the **Federal Register** about last minute modifications that impact a previously announced advisory committee meeting cannot always be published quickly enough to provide timely notice. Therefore, you should always check the Agency's Web site at <http://www.fda.gov/AdvisoryCommittees/>

default.htm and scroll down to the appropriate advisory committee meeting link, or call the advisory committee information line to learn about possible modifications before coming to the meeting.

SUPPLEMENTARY INFORMATION:

Agenda: On February 23, 2017, the committee will discuss and make recommendations on clinical information related to the *de novo* request for the Sentinel[®] Cerebral Protection System, a first of a kind embolic protection device to be used with transcatheter aortic valve replacement (TAVR) procedures.

FDA intends to make background material available to the public no later than 2 business days before the meeting. If FDA is unable to post the background material on its Web site prior to the meeting, the background material will be made publicly available at the location of the advisory committee meeting, and the background material will be posted on FDA's Web site after the meeting. Background material is available at <http://www.fda.gov/AdvisoryCommittees/Calendar/default.htm>. Scroll down to the appropriate advisory committee meeting link.

Procedure: Interested persons may present data, information, or views, orally or in writing, on issues pending before the committee. Written submissions may be made to the contact person on or before February 9, 2017. Oral presentations from the public will be scheduled between approximately 1 p.m. and 2 p.m. Those individuals interested in making formal oral presentations should notify the contact person and submit a brief statement of the general nature of the evidence or arguments they wish to present, the names and addresses of proposed participants, and an indication of the approximate time requested to make their presentation on or before February 1, 2017. Time allotted for each presentation may be limited. If the number of registrants requesting to speak is greater than can be reasonably accommodated during the scheduled open public hearing session, FDA may conduct a lottery to determine the speakers for the scheduled open public hearing session. The contact person will notify interested persons regarding their request to speak by February 2, 2017.

Persons attending FDA's advisory committee meetings are advised that the Agency is not responsible for providing access to electrical outlets.

FDA welcomes the attendance of the public at its advisory committee meetings and will make every effort to

accommodate persons with disabilities. If you require accommodations due to a disability, please contact AnnMarie Williams at AnnMarie.Williams@fda.hhs.gov or 301-796-5966 at least 7 days in advance of the meeting.

FDA is committed to the orderly conduct of its advisory committee meetings. Please visit our Web site at <http://www.fda.gov/AdvisoryCommittees/AboutAdvisoryCommittees/ucm111462.htm> for procedures on public conduct during advisory committee meetings.

Notice of this meeting is given under the Federal Advisory Committee Act (5 U.S.C. app. 2).

Dated: January 4, 2017.

Janice M. Soreth,

Associate Commissioner, Special Medical Programs.

BILLING CODE 4164-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA-2016-N-4586]

Authorization of Emergency Use of an In Vitro Diagnostic Device for Detection of Zika Virus; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing the issuance of an Emergency Use Authorization (EUA) (the Authorization) for an in vitro diagnostic device for detection of the Zika virus in response to the Zika virus outbreak in the Americas. FDA issued this Authorization under the Federal Food, Drug, and Cosmetic Act (the FD&C Act), as requested by ELITechGroup Inc. Molecular Diagnostics. The Authorization contains, among other things, conditions on the emergency use of the authorized in vitro diagnostic device. The Authorization follows the February 26, 2016, determination by the Secretary of Health and Human Services (HHS) that there is a significant potential for a public health emergency that has a significant potential to affect national security or the health and security of U.S. citizens living abroad and that involves Zika virus. On the basis of such determination, the Secretary of HHS declared on February 26, 2016, that circumstances exist justifying the authorization of emergency use of in vitro diagnostic tests for detection of Zika virus and/or

diagnosis of Zika virus infection, subject to the terms of any authorization issued under the FD&C Act. The Authorization, which includes an explanation of the reasons for issuance, is reprinted in this document.

DATES: The Authorization is effective as of December 9, 2016.

ADDRESSES: Submit written requests for single copies of the EUA to the Office of Counterterrorism and Emerging Threats, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 1, Rm. 4338, Silver Spring, MD 20993-0002. Send one self-addressed adhesive label to assist that office in processing your request or include a fax number to which the Authorization may be sent. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the Authorization.

FOR FURTHER INFORMATION CONTACT:

Carmen Maher, Office of Counterterrorism and Emerging Threats, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 1, Rm. 4347, Silver Spring, MD 20993-0002, 301-796-8510 (this is not a toll free number).

SUPPLEMENTARY INFORMATION:

I. Background

Section 564 of the FD&C Act (21 U.S.C. 360bbb-3) as amended by the Project BioShield Act of 2004 (Pub. L. 108-276) and the Pandemic and All-Hazards Preparedness Reauthorization Act of 2013 (Pub. L. 113-5) allows FDA to strengthen the public health protections against biological, chemical, nuclear, and radiological agents. Among other things, section 564 of the FD&C Act allows FDA to authorize the use of an unapproved medical product or an unapproved use of an approved medical product in certain situations. With this EUA authority, FDA can help assure that medical countermeasures may be used in emergencies to diagnose, treat, or prevent serious or life-threatening diseases or conditions caused by biological, chemical, nuclear, or radiological agents when there are no adequate, approved, and available alternatives.

Section 564(b)(1) of the FD&C Act provides that, before an EUA may be issued, the Secretary of HHS must declare that circumstances exist justifying the authorization based on one of the following grounds: (1) A determination by the Secretary of Homeland Security that there is a domestic emergency, or a significant potential for a domestic emergency, involving a heightened risk of attack with a biological, chemical, radiological, or nuclear agent or agents; (2) a

determination by the Secretary of Defense that there is a military emergency, or a significant potential for a military emergency, involving a heightened risk to U.S. military forces of attack with a biological, chemical, radiological, or nuclear agent or agents; (3) a determination by the Secretary of HHS that there is a public health emergency, or a significant potential for a public health emergency, that affects, or has a significant potential to affect, national security or the health and security of U.S. citizens living abroad, and that involves a biological, chemical, radiological, or nuclear agent or agents, or a disease or condition that may be attributable to such agent or agents; or (4) the identification of a material threat by the Secretary of Homeland Security under section 319F–2 of the Public Health Service (PHS) Act (42 U.S.C. 247d–6b) sufficient to affect national security or the health and security of U.S. citizens living abroad.

Once the Secretary of HHS has declared that circumstances exist justifying an authorization under section 564 of the FD&C Act, FDA may authorize the emergency use of a drug, device, or biological product if the Agency concludes that the statutory criteria are satisfied. Under section 564(h)(1) of the FD&C Act, FDA is required to publish in the **Federal Register** a notice of each authorization, and each termination or revocation of an authorization, and an explanation of the reasons for the action. Section 564 of the FD&C Act permits FDA to authorize the introduction into interstate commerce of a drug, device, or biological product intended for use when the Secretary of HHS has declared that circumstances exist justifying the authorization of emergency use. Products appropriate for emergency use may include products and uses that are not approved, cleared, or licensed under sections 505, 510(k), or 515 of the FD&C Act (21 U.S.C. 355, 360(k), and 360e) or section 351 of the PHS Act (42 U.S.C. 262). FDA may issue an EUA only if, after consultation with

the HHS Assistant Secretary for Preparedness and Response, the Director of the National Institutes of Health, and the Director of the Centers for Disease Control and Prevention (to the extent feasible and appropriate given the applicable circumstances), FDA¹ concludes: (1) That an agent referred to in a declaration of emergency or threat can cause a serious or life-threatening disease or condition; (2) that, based on the totality of scientific evidence available to FDA, including data from adequate and well-controlled clinical trials, if available, it is reasonable to believe that: (A) The product may be effective in diagnosing, treating, or preventing (i) such disease or condition; or (ii) a serious or life-threatening disease or condition caused by a product authorized under section 564, approved or cleared under the FD&C Act, or licensed under section 351 of the PHS Act, for diagnosing, treating, or preventing such a disease or condition caused by such an agent; and (B) the known and potential benefits of the product, when used to diagnose, prevent, or treat such disease or condition, outweigh the known and potential risks of the product, taking into consideration the material threat posed by the agent or agents identified in a declaration under section 564(b)(1)(D) of the FD&C Act, if applicable; (3) that there is no adequate, approved, and available alternative to the product for diagnosing, preventing, or treating such disease or condition; and (4) that such other criteria as may be prescribed by regulation are satisfied.

No other criteria for issuance have been prescribed by regulation under section 564(c)(4) of the FD&C Act. Because the statute is self-executing, regulations or guidance are not required for FDA to implement the EUA authority.

¹ The Secretary of HHS has delegated the authority to issue an EUA under section 564 of the FD&C Act to the Commissioner of Food and Drugs.

II. EUA Request for an In Vitro Diagnostic Device for Detection of the Zika Virus

On February 26, 2016, the Secretary of HHS determined that there is a significant potential for a public health emergency that has a significant potential to affect national security or the health and security of U.S. citizens living abroad and that involves Zika virus. On February 26, 2016, under section 564(b)(1) of the FD&C Act, and on the basis of such determination, the Secretary of HHS declared that circumstances exist justifying the authorization of emergency use of in vitro diagnostic tests for detection of Zika virus and/or diagnosis of Zika virus infection, subject to the terms of any authorization issued under section 564 of the FD&C Act. Notice of the determination and declaration of the Secretary was published in the **Federal Register** on March 2, 2016 (81 FR 10878). On November 28, 2016, ELITechGroup Inc. Molecular Diagnostics requested, and on December 9, 2016, FDA issued, an EUA for the Zika ELITe MGB® Kit U.S., subject to the terms of the Authorization.

III. Electronic Access

An electronic version of this document and the full text of the Authorization are available on the Internet at <https://www.regulations.gov/>.

IV. The Authorization

Having concluded that the criteria for issuance of the Authorization under section 564(c) of the FD&C Act are met, FDA has authorized the emergency use of an in vitro diagnostic device for detection of Zika virus subject to the terms of the Authorization. The Authorization in its entirety (not including the authorized versions of the fact sheets and other written materials) follows and provides an explanation of the reasons for its issuance, as required by section 564(h)(1) of the FD&C Act:

BILLING CODE 4164-01-P

DEPARTMENT OF HEALTH & HUMAN SERVICES

Food and Drug Administration
Silver Spring, MD 20993

December 9, 2016

Terry Trimmingham
Senior Regulatory Affairs Specialist
ELITechGroup Inc. Molecular Diagnostics
21720 23rd Drive SE, Suite 150
Bothell, WA 98021

Dear Mr. Trimmingham:

This letter is in response to your request that the Food and Drug Administration (FDA) issue an Emergency Use Authorization (EUA) for emergency use of ELITechGroup Inc. Molecular Diagnostics' ("ELI MDx") Zika ELITE MGB[®] Kit U.S. for the qualitative detection of RNA from Zika virus in human serum and EDTA plasma from individuals meeting Centers for Disease Control and Prevention (CDC) Zika virus clinical criteria (e.g., clinical signs and symptoms associated with Zika virus infection) and/or CDC Zika virus epidemiological criteria (e.g., history of residence in or travel to a geographic region with active Zika transmission at the time of travel, or other epidemiological criteria for which Zika virus testing may be indicated), by laboratories in the United States (U.S.) that are certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. § 263a, to perform high complexity tests, or by similarly qualified non-U.S. laboratories, pursuant to section 564 of the Federal Food, Drug, and Cosmetic Act (the Act) (21 U.S.C. § 360bbb-3).¹ Test results are for the identification of Zika virus RNA. Zika virus RNA is generally detectable in these specimens during the acute phase of infection and, according to the updated CDC Guidance for U.S. Laboratories Testing for Zika Virus Infection,² up to 14 days in serum, following onset of symptoms, if present. Positive results are indicative of current infection.

On February 26, 2016, pursuant to section 564(b)(1)(C) of the Act (21 U.S.C. § 360bbb-3(b)(1)(C)), the Secretary of Health and Human Services (HHS) determined that there is a significant potential for a public health emergency that has a significant potential to affect national security or the health and security of U.S. citizens living abroad and that involves Zika virus.³ Pursuant to section 564(b)(1) of the Act (21 U.S.C. § 360bbb-3(b)(1)), and on the basis of such determination, the Secretary of HHS then declared that circumstances exist justifying the authorization of the emergency use of *in vitro* diagnostic tests for detection of Zika virus and/or diagnosis of Zika virus infection, subject to the terms of any authorization issued under 21 U.S.C. § 360bbb-3(a).⁴

¹ For ease of reference, this letter will refer to "laboratories in the United States (U.S.) that are certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. § 263a, to perform high complexity tests, or by similarly qualified non-U.S. laboratories" as "authorized laboratories."

² Available at <http://www.cdc.gov/zika/laboratories/lab-guidance.html> (last updated on November 16, 2016).

³ As amended by the Pandemic and All Hazards Preparedness Reauthorization Act, Pub. L. No. 113-5, under section 564(b)(1)(C) of the Act, the Secretary may make a determination of a public health emergency, or of significant potential for a public health emergency.

⁴ HHS. *Determination and Declaration Regarding Emergency Use of in Vitro Diagnostic Tests for Detection of Zika Virus and/or Diagnosis of Zika Virus Infection*. 81 Fed. Reg. 10878 (March 2, 2016).

Page 2 – Mr. Terry Trimmingham, ELITechGroup Inc. Molecular Diagnostics, USA

Having concluded that the criteria for issuance of this authorization under section 564(c) of the Act (21 U.S.C. § 360bbb-3(c)) are met, I am authorizing the emergency use of the Zika ELITE MGB[®] Kit U.S. (as described in the Scope of Authorization section of this letter (Section II)) in individuals meeting CDC Zika virus clinical criteria (e.g., clinical signs and symptoms associated with Zika virus infection) and/or CDC Zika virus epidemiological criteria (e.g., history of residence in or travel to a geographic region with active Zika transmission at the time of travel, or other epidemiological criteria for which Zika virus testing may be indicated) (as described in the Scope of Authorization section of this letter (Section II)) for the detection of Zika virus infection by authorized laboratories, subject to the terms of this authorization.

I. Criteria for Issuance of Authorization

I have concluded that the emergency use of the Zika ELITE MGB[®] Kit U.S. for the detection of Zika virus and diagnosis of Zika virus infection in the specified population meets the criteria for issuance of an authorization under section 564(c) of the Act, because I have concluded that:

1. The Zika virus can cause Zika virus infection, a serious or life-threatening disease or condition to humans infected with the virus;
2. Based on the totality of scientific evidence available to FDA, it is reasonable to believe that the Zika ELITE MGB[®] Kit U.S., when used with the specified instrument(s) and in accordance with the Scope of Authorization, may be effective in detecting Zika virus and diagnosing Zika virus infection, and that the known and potential benefits of the Zika ELITE MGB[®] Kit U.S. for detecting Zika virus and diagnosing Zika virus infection outweigh the known and potential risks of such product; and
3. There is no adequate, approved, and available alternative to the emergency use of the Zika ELITE MGB[®] Kit U.S. for detecting Zika virus and diagnosing Zika virus infection.⁵

II. Scope of Authorization

I have concluded, pursuant to section 564(d)(1) of the Act, that the scope of this authorization is limited to the use of the authorized Zika ELITE MGB[®] Kit U.S. by authorized laboratories for the detection of RNA from Zika virus and diagnosis of Zika virus infection in individuals meeting CDC Zika virus clinical criteria (e.g., clinical signs and symptoms associated with Zika virus infection) and/or CDC Zika virus epidemiological criteria (e.g., history of residence in or travel to a geographic region with active Zika transmission at the time of travel, or other epidemiological criteria for which Zika virus testing may be indicated).

The Authorized Zika ELITE MGB[®] Kit U.S.

The Zika ELITE MGB[®] Kit U.S. is a real-time reverse transcription polymerase chain reaction (rRT-PCR) assay for the qualitative detection of RNA from Zika virus in human serum, EDTA

⁵ No other criteria of issuance have been prescribed by regulation under section 564(c)(4) of the Act.

Page 3 – Mr. Terry Trimmingham, ELITechGroup Inc. Molecular Diagnostics, USA

plasma and other authorized specimen types. The Zika ELITE MGB[®] Kit U.S. uses a primer set and single uniquely labeled probe to amplify and detect the NS3 protein encoding gene of Zika virus.

The Zika ELITE MGB[®] Kit U.S. is performed using the ELITE InGenius[™] instrument or other authorized instruments. The ELITE InGenius[™] instrument automates the nucleic acid extraction, amplification and detection. The RNA is extracted and purified from the patient specimen before it is reverse transcribed into cDNA which is then amplified using the primer set and detected using the specific probe.

The Zika ELITE MGB[®] Kit U.S. includes the following materials or other authorized materials: 20x Zika PreMix, PCR MasterMix, RT EnzymeMix, PCR Grade Water, Negative Control, MS2 RNA Internal Control, Zika – Positive Control. The Zika ELITE MGB[®] Kit U.S. also requires the use of additional materials and ancillary reagents that are not included with the test but are commonly used in clinical laboratories and are described in the authorized Zika ELITE MGB[®] Kit U.S. Instructions for Use.

The Zika ELITE MGB[®] Kit U.S. requires the following control materials, or other authorized control materials; all controls listed below must generate expected results in order for a test to be considered valid, as outlined in the Zika ELITE MGB[®] Kit U.S. Instructions for Use:

- Zika - Positive Control: Synthetic Zika RNA stabilized in a guanidinium buffer, requires extraction – run in place of a sample daily. Monitors for failures of rRT-PCR reagents and reaction conditions.
- Negative Control: DNase and RNase-free water – run in place of a sample on every batch run. Monitors for reagent and system contamination.
- MS2 RNA Internal Control: MS2 RNA stabilized in a guanidinium buffer, requires extraction – added automatically to each sample and control during the extraction step. The MS2 RNA is co-extracted and co-amplified with the target nucleic acid, and monitors for integrity of the kit reagents, equipment function and the presence of amplification inhibitors in the samples.

The above described Zika ELITE MGB[®] Kit U.S., when labeled consistently with the labeling authorized by FDA entitled “Zika ELITE MGB[®] Kit U.S.” (available at <http://www.fda.gov/MedicalDevices/Safety/EmergencySituations/ucm161496.htm>), which may be revised by EGI MDx in consultation with the Division of Microbiology Devices (DMD)/Office of In Vitro Diagnostics and Radiological Health (OIR)/Center for Devices and Radiological Health (CDRH), is authorized to be distributed to and used by authorized laboratories under this EUA, despite the fact that it does not meet certain requirements otherwise required by federal law.

The above described Zika ELITE MGB[®] Kit U.S. is authorized to be accompanied by the following information pertaining to the emergency use, which is authorized to be made available to healthcare providers and patients, including pregnant women:

- Fact Sheet for Healthcare Providers: Interpreting Zika ELITE MGB[®] Kit U.S. Test Results
- Fact Sheet for Patients: Understanding Results from the Zika ELITE MGB[®] Kit U.S.

Page 4 – Mr. Terry Trimmingham, ELITechGroup Inc. Molecular Diagnostics, USA

As described in Section IV below, EGI MDx and its authorized distributors are also authorized to make available additional information relating to the emergency use of the authorized Zika ELITE MGB[®] Kit U.S. that is consistent with, and does not exceed, the terms of this letter of authorization.

I have concluded, pursuant to section 564(d)(2) of the Act, that it is reasonable to believe that the known and potential benefits of the authorized Zika ELITE MGB[®] Kit U.S. in the specified population, when used for detection of Zika virus and to diagnose Zika virus infection and used consistently with the Scope of Authorization of this letter (Section II), outweigh the known and potential risks of such a product.

I have concluded, pursuant to section 564(d)(3) of the Act, based on the totality of scientific evidence available to FDA, that it is reasonable to believe that the authorized Zika ELITE MGB[®] Kit U.S. may be effective in the detection of Zika virus and diagnosis of Zika virus infection, when used consistently with the Scope of Authorization of this letter (Section II), pursuant to section 564(c)(2)(A) of the Act.

FDA has reviewed the scientific information available to FDA, including the information supporting the conclusions described in Section I above, and concludes that the authorized Zika ELITE MGB[®] Kit U.S., when used for detection of Zika virus and to diagnose Zika virus infection in the specified population (as described in the Scope of Authorization of this letter (Section II)), meets the criteria set forth in section 564(c) of the Act concerning safety and potential effectiveness.

The emergency use of the authorized Zika ELITE MGB[®] Kit U.S. under this EUA must be consistent with, and may not exceed, the terms of this letter, including the Scope of Authorization (Section II) and the Conditions of Authorization (Section IV). Subject to the terms of this EUA and under the circumstances set forth in the Secretary of HHS's determination described above and the Secretary of HHS's corresponding declaration under section 564(b)(1), the Zika ELITE MGB[®] Kit U.S. described above is authorized to detect Zika virus and diagnose Zika virus infection in individuals meeting CDC Zika virus clinical criteria (e.g., clinical signs and symptoms associated with Zika virus infection) and/or CDC Zika virus epidemiological criteria (e.g., history of residence in or travel to a geographic region with active Zika virus transmissions at the time of travel, or other epidemiological criteria for which Zika virus testing may be indicated).

This EUA will cease to be effective when the HHS declaration that circumstances exist to justify the EUA is terminated under section 564(b)(2) of the Act or when the EUA is revoked under section 564(g) of the Act.

III. Waiver of Certain Requirements

I am waiving the following requirements for the Zika ELITE MGB[®] Kit U.S. during the duration of this EUA:

Page 5 – Mr. Terry Trimmingham, ELITechGroup Inc. Molecular Diagnostics, USA

- Current good manufacturing practice requirements, including the quality system requirements under 21 CFR Part 820 with respect to the design, manufacture, packaging, labeling, storage, and distribution of the Zika ELITe MGB[®] Kit U.S.
- Labeling requirements for cleared, approved, or investigational devices, including labeling requirements under 21 CFR 809.10 and 21 CFR 809.30, except for the intended use statement (21 CFR 809.10(a)(2), (b)(2)), adequate directions for use (21 U.S.C. 352(f)), (21 CFR 809.10(b)(5), (7), and (8)), any appropriate limitations on the use of the device including information required under 21 CFR 809.10(a)(4), and any available information regarding performance of the device, including requirements under 21 CFR 809.10(b)(12).

IV. Conditions of Authorization

Pursuant to section 564 of the Act, I am establishing the following conditions on this authorization:

ELITechGroup Inc. Molecular Diagnostics and Its Authorized Distributor(s)

- A. EGI MDx and its authorized distributor(s) will distribute the authorized Zika ELITe MGB[®] Kit U.S. with the authorized labeling only to authorized laboratories. Changes to the authorized labeling may be made by EGI MDx in consultation with, and require concurrence of, DMD/OIR/CDRH.
- B. EGI MDx and its authorized distributor(s) will provide to authorized laboratories the authorized Zika ELITe MGB[®] Kit U.S. Fact Sheet for Healthcare Providers and the authorized Zika ELITe MGB[®] Kit U.S. Fact Sheet for Patients.
- C. EGI MDx and its authorized distributor(s) will make available on their websites the authorized Zika ELITe MGB[®] Kit U.S. Fact Sheet for Healthcare Providers and the authorized Zika ELITe MGB[®] Kit U.S. Fact Sheet for Patients.
- D. EGI MDx and its authorized distributor(s) will inform authorized laboratories and relevant public health authority(ies) of this EUA, including the terms and conditions herein.
- E. EGI MDx and its authorized distributor(s) will ensure that the authorized laboratories using the authorized Zika ELITe MGB[®] Kit U.S. have a process in place for reporting test results to healthcare providers and relevant public health authorities, as appropriate.⁶
- F. Through a process of inventory control, EGI MDx and its authorized distributor(s) will maintain records of device usage.

⁶ For questions related to reporting Zika test results to relevant public health authorities, it is recommended that EGI MDx, other authorized distributor(s), and authorized laboratories consult with the applicable country, state or territory health department(s). According to CDC, Zika virus disease is a nationally notifiable condition (see <http://www.cdc.gov/zika/>).

Page 6 – Mr. Terry Trimmingham, ELITechGroup Inc. Molecular Diagnostics, USA

- G. EGI MDx and its authorized distributor(s) will collect information on the performance of the test. EGI MDx will report to FDA any suspected occurrence of false positive and false negative results and significant deviations from the established performance characteristics of the test of which EGI MDx becomes aware.
- H. EGI MDx and its authorized distributor(s) are authorized to make available additional information relating to the emergency use of the authorized Zika ELITe MGB[®] Kit U.S. that is consistent with, and does not exceed, the terms of this letter of authorization.

ELITechGroup Inc. Molecular Diagnostics

- I. EGI MDx will notify FDA of any authorized distributor(s) of the Zika ELITe MGB[®] Kit U.S., including the name, address, and phone number of any authorized distributor(s).
- J. EGI MDx will provide its authorized distributor(s) with a copy of this EUA, and communicate to its authorized distributor(s) any subsequent amendments that might be made to this EUA and its authorized accompanying materials (e.g., Fact Sheets, Instructions for Use).
- K. EGI MDx may request changes to the authorized Zika ELITe MGB[®] Kit U.S. Fact Sheet for Healthcare Providers and the authorized Zika ELITe MGB[®] Kit U.S. Fact Sheet for Patients. Such requests will be made by EGI MDx in consultation with, and require concurrence of, DMD/OIR/CDRH.
- L. EGI MDx may request the addition of other instruments for use with the authorized Zika ELITe MGB[®] Kit U.S. Such requests will be made by EGI MDx in consultation with, and require concurrence of, DMD/OIR/CDRH.
- M. EGI MDx may request the addition of other extraction methods for use with the authorized Zika ELITe MGB[®] Kit U.S. Such requests will be made by EGI MDx in consultation with, and require concurrence of, DMD/OIR/CDRH.
- N. EGI MDx may request the addition of other specimen types for use with the authorized Zika ELITe MGB[®] Kit U.S. Such requests will be made by EGI MDx in consultation with, and require concurrence of, DMD/OIR/CDRH.
- O. EGI MDx may request the addition and/or substitution of other control materials for use with the authorized Zika ELITe MGB[®] Kit U.S. Such requests will be made by EGI MDx in consultation with, and require concurrence of, DMD/OIR/CDRH.
- P. EGI MDx may request the addition and/or substitution of other ancillary reagents and materials for use with the authorized Zika ELITe MGB[®] Kit U.S. Such requests will be made by EGI MDx in consultation with, and require concurrence of, DMD/OIR/CDRH.
- Q. EGI MDx will assess traceability⁷ of the Zika ELITe MGB[®] Kit U.S. with FDA-

⁷ Traceability refers to tracing analytical sensitivity/reactivity back to a FDA recommended reference material.

Page 7 – Mr. Terry Trimmingham, ELITechGroup Inc. Molecular Diagnostics, USA

recommended reference material(s). After submission to FDA and DMD/OIR/CDRH's review of and concurrence with the data, EGI MDx will update its labeling to reflect the additional testing.

R. EGI MDx will track adverse events and report to FDA under 21 CFR Part 803.

Authorized Laboratories

- S. Authorized laboratories will include with reports of the results of the Zika ELITE MGB[®] Kit U.S. the authorized Fact Sheet for Healthcare Providers and the authorized Fact Sheet for Patients. Under exigent circumstances, other appropriate methods for disseminating these Fact Sheets may be used, which may include mass media.
- T. Authorized laboratories will perform the Zika ELITE MGB[®] Kit U.S. on the ELITE InGenius[™] instrument, or other authorized instruments.
- U. Authorized laboratories will perform the Zika ELITE MGB[®] Kit U.S. on human serum, EDTA plasma, or other authorized specimen types.
- V. Authorized laboratories will have a process in place for reporting test results to healthcare providers and relevant public health authorities, as appropriate.⁸
- W. Authorized laboratories will collect information on the performance of the test and report to EGI MDx any suspected occurrence of false positive or false negative results of which they become aware.
- X. All laboratory personnel using the test should be appropriately trained in RT-PCR techniques and use appropriate laboratory and personal protective equipment when handling this kit, and use the test in accordance with the authorized labeling.

ELITechGroup Inc. Molecular Diagnostics, Its Authorized Distributor(s) and Authorized Laboratories

- Y. EGI MDx, its authorized distributor(s), and authorized laboratories, will ensure that any records associated with this EUA are maintained until notified by FDA. Such records will be made available to FDA for inspection upon request.

Conditions Related to Advertising and Promotion

- Z. All advertising and promotional descriptive printed matter relating to the use of the authorized Zika ELITE MGB[®] Kit U.S. shall be consistent with the Fact Sheets and authorized labeling, as well as the terms set forth in this EUA and the applicable requirements set forth in the Act and FDA regulations.

⁸ For questions related to reporting Zika test results to relevant public health authorities, it is recommended that EGI MDx, other authorized distributor(s), and authorized laboratories consult with the applicable country, state or territory health department(s). According to CDC, Zika virus disease is a nationally notifiable condition. <http://www.cdc.gov/zika/>.

Page 8 – Mr. Terry Trimmingham, ELITechGroup Inc. Molecular Diagnostics, USA

AA. All advertising and promotional descriptive printed matter relating to the use of the authorized Zika ELITE MGB® Kit U.S. shall clearly and conspicuously state that:

- This test has not been FDA cleared or approved;
- This test has been authorized by FDA under an EUA for use by authorized laboratories;
- This test has been authorized only for the detection of RNA from Zika virus and diagnosis of Zika virus infection, not for any other viruses or pathogens; and
- This test is only authorized for the duration of the declaration that circumstances exist justifying the authorization of the emergency use of *in vitro* diagnostic tests for detection of Zika virus and/or diagnosis of Zika virus infection under section 564(b)(1) of the Act, 21 U.S.C. § 360bbb-3(b)(1), unless the authorization is terminated or revoked sooner.

No advertising or promotional descriptive printed matter relating to the use of the authorized Zika ELITE MGB® Kit U.S. may represent or suggest that this test is safe or effective for the diagnosis of Zika virus infection.

The emergency use of the authorized Zika ELITE MGB® Kit U.S. as described in this letter of authorization must comply with the conditions and all other terms of this authorization.

V. Duration of Authorization

This EUA will be effective until the declaration that circumstances exist justifying the authorization of the emergency use of *in vitro* diagnostic tests for detection of Zika virus and/or diagnosis of Zika virus infection is terminated under section 564(b)(2) of the Act or the EUA is revoked under section 564(g) of the Act.

Sincerely,

Robert M. Califf, M.D.
Commissioner of Food and Drugs

BILLING CODE 4164-01-C

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket Nos. FDA-2016-E-1196 and FDA-2016-E-1197]

Determination of Regulatory Review Period for Purposes of Patent Extension; ADYNOVATE

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) has determined the regulatory review period for ADYNOVATE and is publishing this

notice of that determination as required by law. FDA has made the determination because of the submission of an application to the Director of the U.S. Patent and Trademark Office (USPTO), Department of Commerce, for the extension of a patent which claims that human biological product.

DATES: Anyone with knowledge that any of the dates as published (see the **SUPPLEMENTARY INFORMATION** section) are incorrect may submit either electronic or written comments and ask for a redetermination by March 10, 2017. Furthermore, any interested person may petition FDA for a determination regarding whether the applicant for

extension acted with due diligence during the regulatory review period by July 10, 2017. See “Petitions” in the **SUPPLEMENTARY INFORMATION** section for more information.

ADDRESSES: You may submit comments as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal:* <https://www.regulations.gov>. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to <https://www.regulations.gov> will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else’s Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on <https://www.regulations.gov>.

- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see “Written/Paper Submissions” and “Instructions”).

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand delivery/Courier (for written/paper submissions):* Division of Dockets Management (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

- For written/paper comments submitted to the Division of Dockets Management, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in “Instructions.”

Instructions: All submissions received must include the Docket Nos. FDA-2016-E-1196 and FDA-2016-E-1197 for “Determination of Regulatory Review Period for Purposes of Patent Extension; ADYNOVATE.” Received comments will be placed in the docket and, except for those submitted as “Confidential Submissions,” publicly viewable at <https://www.regulations.gov> or at the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

- **Confidential Submissions**—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states “THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.” The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on <https://www.regulations.gov>. Submit both copies to the Division of Dockets Management. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as “confidential.” Any information marked as “confidential” will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA’s posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: <http://www.fda.gov/regulatoryinformation/dockets/default.htm>.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to <https://www.regulations.gov> and insert the docket number, found in brackets in the heading of this document, into the “Search” box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: Beverly Friedman, Office of Regulatory Policy, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 51, Rm. 6250, Silver Spring, MD 20993, 301-796-3600.

SUPPLEMENTARY INFORMATION:

I. Background

The Drug Price Competition and Patent Term Restoration Act of 1984 (Pub. L. 98-417) and the Generic Animal Drug and Patent Term Restoration Act (Pub. L. 100-670) generally provide that a patent may be extended for a period of up to 5 years so long as the patented item (human drug product, animal drug product, medical device, food additive, or color additive) was subject to regulatory

review by FDA before the item was marketed. Under these Acts, a product’s regulatory review period forms the basis for determining the amount of extension an applicant may receive.

A regulatory review period consists of two periods of time: A testing phase and an approval phase. For human biological products, the testing phase begins when the exemption to permit the clinical investigations of the biological product becomes effective and runs until the approval phase begins. The approval phase starts with the initial submission of an application to market the human biological product and continues until FDA grants permission to market the biological product. Although only a portion of a regulatory review period may count toward the actual amount of extension that the Director of USPTO may award (for example, half the testing phase must be subtracted as well as any time that may have occurred before the patent was issued), FDA’s determination of the length of a regulatory review period for a human biological product will include all of the testing phase and approval phase as specified in 35 U.S.C. 156(g)(1)(B).

FDA has approved for marketing the human biologic product ADYNOVATE (antihemophilic factor (recombinant), PEGylated). ADYNOVATE is indicated in adolescent and adult patients (12 years and older) with Hemophilia A (congenital Factor VIII deficiency) for: On-demand treatment and control of bleeding episodes, and routine prophylaxis to reduce the frequency of bleeding episodes. Subsequent to this approval, the USPTO received patent term restoration applications for ADYNOVATE (U.S. Patent Nos. 7,199,223 and 8,247,536) from Nektar Therapeutics, and the USPTO requested FDA’s assistance in determining the patents’ eligibility for patent term restoration. In a letter dated July 12, 2016, FDA advised the USPTO that this human biological product had undergone a regulatory review period and that the approval of ADYNOVATE represented the first permitted commercial marketing or use of the product. Thereafter, the USPTO requested that FDA determine the product’s regulatory review period.

II. Determination of Regulatory Review Period

FDA has determined that the applicable regulatory review period for ADYNOVATE is 1,061 days. Of this time, 707 days occurred during the testing phase of the regulatory review period, while 354 days occurred during the approval phase. These periods of

time were derived from the following dates:

1. *The date an exemption under section 505(i) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 355(i)) became effective:* December 19, 2012. FDA has verified the applicant's claim that the date the investigational new drug application became effective was on December 19, 2012.

2. *The date the application was initially submitted with respect to the human biological product under section 351 of the Public Health Service Act (42 U.S.C. 262):* November 25, 2014. FDA has verified the applicant's claim that the biologics license application (BLA) for ADYNOVATE (BLA 125566) was initially submitted on November 25, 2014.

3. *The date the application was approved:* November 13, 2015. FDA has verified the applicant's claim that BLA 125566 was approved on November 13, 2015.

This determination of the regulatory review period establishes the maximum potential length of a patent extension. However, the USPTO applies several statutory limitations in its calculations of the actual period for patent extension. In its application for patent extension, this applicant seeks 708 days of patent term extension.

III. Petitions

Anyone with knowledge that any of the dates as published are incorrect may submit either electronic or written comments and ask for a redetermination (see **DATES**). Furthermore, any interested person may petition FDA for a determination regarding whether the applicant for extension acted with due diligence during the regulatory review period. To meet its burden, the petition must be timely (see **DATES**) and contain sufficient facts to merit an FDA investigation. (See H. Rept. 857, part 1, 98th Cong., 2d sess., pp. 41–42, 1984.) Petitions should be in the format specified in 21 CFR 10.30.

Submit petitions electronically to <https://www.regulations.gov> at Docket No. FDA–2013–S–0610. Submit written petitions (two copies are required) to the Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

Dated: January 3, 2017.

Leslie Kux,

Associate Commissioner for Policy.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2016–E–1198]

Determination of Regulatory Review Period for Purposes of Patent Extension; EMLICITI

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) has determined the regulatory review period for EMLICITI and is publishing this notice of that determination as required by law. FDA has made the determination because of the submission of an application to the Director of the U.S. Patent and Trademark Office (USPTO), Department of Commerce, for the extension of a patent which claims that human biological product.

DATES: Anyone with knowledge that any of the dates as published (see the **SUPPLEMENTARY INFORMATION** section) are incorrect may submit either electronic or written comments and ask for a redetermination by March 10, 2017. Furthermore, any interested person may petition FDA for a determination regarding whether the applicant for extension acted with due diligence during the regulatory review period by July 10, 2017. See “Petitions” in the **SUPPLEMENTARY INFORMATION** section for more information.

ADDRESSES: You may submit comments as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal:* <https://www.regulations.gov>. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to <https://www.regulations.gov> will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on <https://www.regulations.gov>.

- If you want to submit a comment with confidential information that you

do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see “Written/Paper Submissions” and “Instructions”).

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand delivery/Courier (for written/paper submissions):* Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

- For written/paper comments submitted to the Division of Dockets Management, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in “Instructions.”

Instructions: All submissions received must include the Docket No. FDA–2016–E–1198 for “Determination of Regulatory Review Period for Purposes of Patent Extension; EMLICITI.” Received comments will be placed in the docket and, except for those submitted as “Confidential Submissions,” publicly viewable at <https://www.regulations.gov> or at the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

- **Confidential Submissions—**To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states “THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.” The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on <https://www.regulations.gov>. Submit both copies to the Division of Dockets Management. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as “confidential.” Any information marked as “confidential” will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access

the information at: <http://www.fda.gov/regulatoryinformation/dockets/default.htm>.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to <https://www.regulations.gov> and insert the docket number, found in brackets in the heading of this document, into the "Search" box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: Beverly Friedman, Office of Regulatory Policy, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 51, Rm. 6250, Silver Spring, MD 20993, 301-796-3600.

SUPPLEMENTARY INFORMATION:

I. Background

The Drug Price Competition and Patent Term Restoration Act of 1984 (Pub. L. 98-417) and the Generic Animal Drug and Patent Term Restoration Act (Pub. L. 100-670) generally provide that a patent may be extended for a period of up to 5 years so long as the patented item (human drug product, animal drug product, medical device, food additive, or color additive) was subject to regulatory review by FDA before the item was marketed. Under these acts, a product's regulatory review period forms the basis for determining the amount of extension an applicant may receive.

A regulatory review period consists of two periods of time: A testing phase and an approval phase. For human biological products, the testing phase begins when the exemption to permit the clinical investigations of the biological becomes effective and runs until the approval phase begins. The approval phase starts with the initial submission of an application to market the human biological product and continues until FDA grants permission to market the biological product. Although only a portion of a regulatory review period may count toward the actual amount of extension that the Director of USPTO may award (for example, half the testing phase must be subtracted as well as any time that may have occurred before the patent was issued), FDA's determination of the length of a regulatory review period for a human biological product will include all of the testing phase and approval phase as specified in 35 U.S.C. 156(g)(1)(B).

FDA has approved for marketing the human biologic product EMPLICITI (elotuzumab). EMPLICITI is indicated in

combination with lenalidomide and dexamethasone for the treatment of patients with multiple myeloma who have received one to three prior therapies. Subsequent to this approval, the USPTO received a patent term restoration application for EMPLICITI (U.S. Patent No. 7,709,610) from AbbVie Biotherapeutics, Inc., and the USPTO requested FDA's assistance in determining this patent's eligibility for patent term restoration. In a letter dated July 12, 2016, FDA advised the USPTO that this human biological product had undergone a regulatory review period and that the approval of EMPLICITI represented the first permitted commercial marketing or use of the product. Thereafter, the USPTO requested that FDA determine the product's regulatory review period.

II. Determination of Regulatory Review Period

FDA has determined that the applicable regulatory review period for EMPLICITI is 3,400 days. Of this time, 3,245 days occurred during the testing phase of the regulatory review period, while 155 days occurred during the approval phase. These periods of time were derived from the following dates:

1. *The date an exemption under section 505(i) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 355(i)) became effective:* August 11, 2006. FDA has verified the applicant's claim that the date the investigational new drug application became effective was on August 11, 2006.

2. *The date the application was initially submitted with respect to the human biological product under section 351 of the Public Health Service Act (42 U.S.C. 262):* June 29, 2015. FDA has verified the applicant's claim that the biologics license application (BLA) for EMPLICITI (BLA 761035) was initially submitted on June 29, 2015.

3. *The date the application was approved:* November 30, 2015. FDA has verified the applicant's claim that BLA 761035 was approved on November 30, 2015.

This determination of the regulatory review period establishes the maximum potential length of a patent extension. However, the USPTO applies several statutory limitations in its calculations of the actual period for patent extension. In its application for patent extension, this applicant seeks 1,095 days of patent term extension.

III. Petitions

Anyone with knowledge that any of the dates as published are incorrect may submit either electronic or written comments and ask for a redetermination

(see **DATES**). Furthermore, any interested person may petition FDA for a determination regarding whether the applicant for extension acted with due diligence during the regulatory review period. To meet its burden, the petition must be timely (see **DATES**) and contain sufficient facts to merit an FDA investigation. (See H. Rept. 857, part 1, 98th Cong., 2d sess., pp. 41-42, 1984.) Petitions should be in the format specified in 21 CFR 10.30.

Submit petitions electronically to <https://www.regulations.gov> at Docket No. FDA-2013-S-0610. Submit written petitions (two copies are required) to the Division of Dockets Management (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

Dated: December 30, 2016.

Leslie Kux,

Associate Commissioner for Policy.

BILLING CODE 4164-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA-2016-N-4508]

Generic Drug User Fee Amendments II Program Fee: List of Abbreviated New Drug Application Sponsors and Application Numbers; Request for Information and Comments

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice; request for information and comments.

SUMMARY: The Food and Drug Administration (FDA) is seeking information and public comment, in anticipation of the passage of Generic Drug User Fee Amendments reauthorization (GDUFA II), relevant to FDA's planned approach for administering generic drug program fees under that legislation for fiscal year (FY) 2018. This includes requests for comment and information regarding FDA's initial inventory of approved abbreviated new drug application sponsors and application numbers. The information gathered from public comments will assist FDA in accurately assessing FY 2018 GDUFA program fees in a timely manner.

DATES: Submit written or electronic comments and information by March 10, 2017.

ADDRESSES: You may submit comments as follows:

Electronic Submissions

Submit electronic comments in the following way:

- **Federal eRulemaking Portal:** <http://www.regulations.gov>. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to <http://www.regulations.gov> will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on <http://www.regulations.gov>.

- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see "Written/Paper Submissions" and "Instructions").

Written/Paper Submissions

Submit written/paper submissions as follows:

- **Mail/Hand delivery/Courier (for written/paper submissions):** Division of Dockets Management (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

- For written/paper comments submitted to the Division of Dockets Management, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in "Instructions."

Instructions: All submissions received must include the Docket No. FDA-2016-N-4508 for "Generic Drug User Fee Amendments II Program Fee: List of Abbreviated New Drug Application Sponsors and Application Numbers; Request for Information and Comment." Received comments will be placed in the docket and, except for those submitted as "Confidential Submissions," publicly viewable at <http://www.regulations.gov> or at the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

- **Confidential Submissions—**To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper

submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states "THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION." The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on <http://www.regulations.gov>. Submit both copies to the Division of Dockets Management. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as "confidential." Any information marked as "confidential" will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: <http://www.fda.gov/regulatoryinformation/dockets/default.htm>.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to <http://www.regulations.gov> and insert the docket number, found in brackets in the heading of this document, into the "Search" box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: Kristan Callahan, Center for Drug Evaluation and Research, Food and Drug Administration, 10001 New Hampshire Ave., Silver Spring, MD 20993, 301-796-7900, CDERCollections@fda.hhs.gov.

SUPPLEMENTARY INFORMATION:

I. Background

In anticipation of the enactment and implementation of GDUFA II, FDA has begun taking steps to ensure efficient administration of GDUFA for FY 2018. It is projected that the GDUFA II legislation will include an annual program fee for which holders of approved abbreviated new drug applications (ANDAs) will be responsible.

Under GDUFA II, it is anticipated that affiliated companies will be grouped together and counted as a single entity for purposes of assessing the program fee. The proposed legislation defines the

term "affiliate" in the same way it was defined in GDUFA. An "affiliate" is defined as a business entity that has a relationship with a second business entity if, directly or indirectly, one business entity controls, or has the power to control, the other business entity; or a third party controls, or has the power to control, both of the business entities. As set forth in the proposed legislation, the program fee will be allocated among three tiers of application holders:

- Large (companies with 20 or more approved ANDAs);
- Medium (companies with between 6 and 19 approved ANDAs); and,
- Small (companies with 5 or fewer approved ANDAs).

To assess program fees in an accurate and timely manner if these provisions are enacted, FDA seeks to identify how many approved ANDAs belong to each application holder, and which application holders are affiliates for purposes of assessing GDUFA II program fees. In furtherance of this effort, FDA requests comments and information regarding FDA's initial inventory of approved ANDA sponsors and application numbers. The current spreadsheet containing this initial inventory and instructions on how to use it are available at <http://www.fda.gov/ForIndustry/UserFees/GenericDrugUserFees/default.htm>.

II. Request for Information and Comment

FDA is seeking information and public comment, in anticipation of the passage of GDUFA II, relevant to FDA's planned approach for administering generic drug program fees under that legislation for FY 2018. The information gathered from public comments will assist FDA in accurately assessing FY 2018 GDUFA Program Fees in a timely manner. Interested persons are invited to comment, in general, on any aspect of FDA's planned approach for administering these generic drug program fees under GDUFA II. FDA is particularly interested in comments and information addressing the accuracy and completeness of the information in the previously mentioned spreadsheet containing FDA's initial inventory of approved ANDA sponsors and application numbers. In addition, FDA is interested in any information that could be relevant to determining whether two or more companies that are currently listed separately in that spreadsheet should be considered to be affiliated for purposes of assessing the anticipated program fee. As a general matter, FDA does not consider affiliates

to be confidential commercial information.

After receiving feedback and comments on the spreadsheet, FDA anticipates publishing a **Federal Register** notice and making available a revised spreadsheet that will incorporate information received in the comments on this notice. FDA plans to seek comment on the revised spreadsheet before compiling the final information regarding affiliated entities that will be used as the basis for determining and assessing FY 2018 program fees in the event that GDUFA II is enacted.

Dated: January 3, 2017.

Leslie Kux,

Associate Commissioner for Policy.

BILLING CODE 4164-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Resources and Services Administration

Agency Information Collection Activities: Submission to OMB for Review and Approval; Public Comment Request; Advanced Education Nursing Traineeship (AENT) Program Specific Data Collection Forms

AGENCY: Health Resources and Services Administration (HRSA), Department of Health and Human Services.

ACTION: Notice.

SUMMARY: In compliance with the requirement for opportunity for public comment on proposed data collection projects of the Paperwork Reduction Act of 1995, HRSA has submitted an Information Collection Request (ICR) to the Office of Management and Budget (OMB) for review and approval. Comments submitted during the first public review of this ICR will be provided to OMB. OMB will accept further comments from the public during the review and approval period.

DATES: Comments on this ICR should be received no later than February 8, 2017.

ADDRESSES: Submit your comments, including the ICR Title, to the desk officer for HRSA, either by email to *OIRA_submission@omb.eop.gov* or by fax to 202-395-5806.

FOR FURTHER INFORMATION CONTACT: To request a copy of the clearance requests submitted to OMB for review, email the HRSA Information Collection Clearance Officer at *paperwork@hrsa.gov* or call (301) 443-1984.

SUPPLEMENTARY INFORMATION:

Information Collection Request Title: Advanced Education Nursing Traineeship (AENT) Program Specific Data Collection Forms for Use with the New Advanced Nursing Education Workforce (ANEW) Program.

OMB No. 0915-0375—Revision

Abstract: The Advanced Nursing Education Workforce (ANEW) Program is a new program that incorporates elements of HRSA’s Advanced Education Nursing Traineeship (AENT) and Advanced Nursing Education (ANE) programs. The current OMB approved Program Specific Data Collection Forms for the former AENT Program will be simplified and used for the ANEW program. HRSA provides advanced education nursing grants to educational institutions to increase the numbers of advanced education nurses through the ANEW Program. The ANEW Program is authorized by Title VIII, Section 811 of the Public Health Service Act (42 U.S.C. 296j). This renewal with revision request includes the Project Abstract, Program Narrative, Attachments, and Tables. The proposed ANEW Tables are very similar to the previous AENT Tables and include information on program participants such as the projected number of enrollees/trainees receiving traineeship support; projected number of graduates receiving traineeship support for the previous fiscal year; the types of programs they are enrolling into and/or from which enrollees/trainees are graduating, and the distribution of primary care nurse practitioners (NP), primary care clinical nurse specialists (CNS); and nurse-midwives who plan to practice in rural and underserved settings. To reduce the reporting burden for applicants, HRSA simplified the Tables to focus on the types of providers and practice settings that are included in the statute in order to determine whether applicants qualify for the preference or special consideration in making awards for this program.

Need and Proposed Use of the Information: HRSA will use this information in determining the eligibility for the statutory funding preference and special consideration, and to succinctly capture data for the number of projected students for subsequent years in the project period.

Likely Respondents: Likely respondents are potential applicants for the ANEW program. Eligible applicants for the ANEW program include entities that provide registered nurses with primary care NP, primary CNS, and nurse-midwife education. Such programs may include accredited schools of nursing, nursing centers, academic health centers, state or local governments, and other public or private nonprofit entities authorized by the Secretary of HHS to confer degrees to registered nurses for primary care NP, primary care CNS, or nurse-midwife education. Federally recognized Indian Tribal Government and Native American Organizations as well as faith-based or community-based organizations may apply if they are otherwise eligible.

Eligible state government entities include the 50 states, the District of Columbia, Guam, the Commonwealth of Puerto Rico, the Northern Mariana Islands, American Samoa, the U.S. Virgin Islands, the Federated States of Micronesia, the Republic of the Marshall Islands, and the Republic of Palau.

Burden Statement: Burden in this context means the time expended by persons to generate, maintain, retain, disclose, or provide the information requested. This includes the time needed to review instructions; to develop, acquire, install, and utilize technology and systems for the purpose of collecting, validating and verifying information, processing and maintaining information, and disclosing and providing information; to train personnel and be able to respond to a collection of information; to search data sources; to complete and review the collection of information; and to transmit or otherwise disclose the information. The total annual burden hours estimated for this ICR are summarized in the table below.

Total estimated annualized burden hours:

Form name	Number of respondents	Number of responses per respondent	Total responses	Average burden per response (in hours)	Total burden hours
ANEW Application including the ANEW Program Specific Tables and Attachments	236	1	236	7	1,652

Form name	Number of respondents	Number of responses per respondent	Total responses	Average burden per response (in hours)	Total burden hours
Total	236	1	236	7	1,652

Agenda: To review and evaluate grant applications.

Place: Pier 2620 Hotel, 2620 Jones Street, San Francisco, CA 94133.

Contact Person: Laurent Taupenot, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 4183, MSC 7850, Bethesda, MD 20892, 301-435-1203, taupenol@csr.nih.gov.

Name of Committee: Vascular and Hematology Integrated Review Group; Molecular and Cellular Hematology Study Section.

Date: February 6-7, 2017.

Time: 8:00 a.m. to 5:00 p.m.

Agenda: To review and evaluate grant applications.

Place: Marines' Memorial Club & Hotel, 609 Sutter Street, San Francisco, CA 94102.

Contact Person: Luis Espinoza, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 6183, MSC 7804, Bethesda, MD 20892, 301-495-1213, espinozala@mail.nih.gov.

Name of Committee: Risk, Prevention and Health Behavior Integrated Review Group; Behavioral Medicine, Interventions and Outcomes Study Section.

Date: February 6-7, 2017.

Time: 8:00 a.m. to 6:00 p.m.

Agenda: To review and evaluate grant applications.

Place: The Westgate Hotel, 1055 Second Avenue, San Diego, CA 92101.

Contact Person: Lee S. Mann, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 3224, MSC 7808, Bethesda, MD 20892, 301-435-0677, mannel@csr.nih.gov.

Name of Committee: Cell Biology Integrated Review Group; Cellular Signaling and Regulatory Systems Study Section.

Date: February 6-7, 2017.

Time: 8:00 a.m. to 6:00 p.m.

Agenda: To review and evaluate grant applications.

Place: Residence Inn Bethesda, 7335 Wisconsin Avenue, Bethesda, MD 20814.

Contact Person: Elena Smirnova, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 5187, MSC 7840, Bethesda, MD 20892, 301-357-9112, smirnov@csr.nih.gov.

Name of Committee: Surgical Sciences, Biomedical Imaging and Bioengineering Integrated Review Group; Bioengineering, Technology and Surgical Sciences Study Section.

Date: February 6-7, 2017.

Time: 8:00 a.m. to 5:00 p.m.

Agenda: To review and evaluate grant applications.

Place: Bethesda North Marriott Hotel & Conference Center, 5701 Marinelli Road, Bethesda, MD 20852.

Contact Person: Khalid Masood, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 5120, MSC 7854, Bethesda, MD 20892, 301-435-2392, masoodk@csr.nih.gov.

Name of Committee: Cell Biology Integrated Review Group; Development—2 Study Section.

Date: February 6-7, 2017.

Time: 8:00 a.m. to 12:30 p.m.

Agenda: To review and evaluate grant applications.

Place: Embassy Suites DC Convention Center, 900 10th Street NW., Washington, DC 20001.

Contact Person: Rass M. Shaiyiq, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institute of Health, 6701 Rockledge Drive, Room 2182, MSC 7818, Bethesda, MD 20892, (301) 435-2359, shaiyiq@csr.nih.gov.

Name of Committee: Molecular, Cellular and Developmental Neuroscience Integrated

Review Group; Molecular Neuropharmacology and Signaling Study Section.

Date: February 6-7, 2017.

Time: 8:00 a.m. to 2:00 p.m.

Agenda: To review and evaluate grant applications.

Place: Lorient Hotel & Spa, 1600 King Street, Alexandria, VA 22314.

Contact Person: Deborah L. Lewis, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 4183, MSC 7850, Bethesda, MD 20892, 301-408-9129, lewisdeb@csr.nih.gov.

BILLING CODE 4140-01-P

DEPARTMENT OF HOMELAND SECURITY

U.S. Customs and Border Protection

Modification and Clarification of the National Customs Automation Program Tests Regarding Post-Summary Corrections and Periodic Monthly Statements; Republication With Correction and Further Clarification

AGENCY: U.S. Customs and Border Protection, Department of Homeland Security.

ACTION: General notice; republication with correction and further clarification.

SUMMARY: On December 12, 2016, U.S. Customs and Border Protection (CBP) published in the **Federal Register** a document announcing CBP's plans to modify and clarify the National Customs Automation Program (NCAP) test regarding Post-Summary Correction (PSC) claims to entry summaries that are filed in the Automated Commercial Environment (ACE), as well as the Periodic Monthly Statement (PMS) test. The notice liberalized and eliminated some requirements needed for the filing of PSCs; however, it also placed burdens on the importer in the form of a restriction and a prohibition.

Subsequently, CBP decided to remove the restriction imposed on all PSC filings to make payments within three business days of submitting the PSC, with the exception of entry type 03 filings, and to remove the prohibition of filing additional PSCs until additional

duties, fees and taxes are deposited. This document republishes and supersedes the document published on December 12 with these corrections and clarifications. Except to the extent expressly announced or modified by this document, all aspects, rules, terms and conditions announced in notices previous to this notice and the December 12 publication regarding the tests remain in effect.

DATES: The changes made by this notice are effective January 14, 2017.

ADDRESSES: Comments concerning these test programs may be submitted via email to Monica Crockett at ESARinfoinbox@dhs.gov with a subject line identifier reading, "Post-Summary Corrections and Periodic Monthly Statements."

FOR FURTHER INFORMATION CONTACT: For policy-related questions, contact Randy Mitchell, Director, Commercial Operations, Trade Policy and Programs, Office of Trade, at Randy.Mitchell@cbp.dhs.gov. For technical questions related to ABI transmissions, contact your assigned client representative. Interested parties without an assigned client representative should direct their questions to the Client Representative Branch at (703) 650-3500.

SUPPLEMENTARY INFORMATION: On December 12, 2016, U.S. Customs and Border Protection (CBP) published a notice in the **Federal Register** (81 FR 89482) announcing plans to modify and clarify, effective on January 14, 2017, the National Customs Automation Program (NCAP) test regarding Post-Summary Correction (PCS) claims, and the Periodic Monthly Statement (PMS) test. The notice announced seven changes to the PSC test. Subsequently, CBP decided not to implement two of the changes. One of the changes relates to the requirement of submitting additional duties, fees and taxes within three business days of filing a PSC. This notice alleviates the requirement imposed on all PSC filings and limits the restriction of submitting payment to PSC filings declaring an increase of liability for antidumping/countervailing duties and associated fees and taxes. This notice also removes the prohibition of filing additional PSCs until the duties, fees and taxes are deposited. With this notice, CBP modifies section 3 ("Deposit of Duties, Fees and Taxes With PSC Showing Increase in Liability") and removes section 5 ("Elimination of CBP's Policy of Rejecting a PSC When There is No Deposit of Antidumping and/or Countervailing Duties at Time of

Submission of PSC") of the published notice on December 12.

This document also provides the correct CBP point of contact for making a deposit, and clarifies the method and location of payment of additional deposits of duties, fees and taxes. In addition, this notice clarifies how CBP will determine the time of payment of duties, fees and taxes.

For ease of reference, the December 12 document is republished below with the aforementioned changes.

I. Background

Post-Summary Correction (PSC) and Periodic Monthly Statement (PMS) Test Programs

The National Customs Automation Program (NCAP) was established by Subtitle B of Title VI—Customs Modernization in the North American Free Trade Agreement (NAFTA) Implementation Act (Customs Modernization Act) (Pub. L. 103-182, 107 Stat. 2057, 2170, December 8, 1993) (19 U.S.C. 1411). Through NCAP, the thrust of customs modernization was on trade compliance and the development of the Automated Commercial Environment (ACE), the planned successor to the Automated Commercial System (ACS) as the CBP-authorized electronic data interchange (EDI) system. ACE is an automated and electronic system for commercial trade processing which is intended to streamline business processes, facilitate growth in trade, ensure cargo security, and foster participation in global commerce, while ensuring compliance with U.S. laws and regulations and reducing costs for CBP and all of its communities of interest. The ability to meet these objectives depends on successfully modernizing CBP's business functions and the information technology that supports those functions. CBP's modernization efforts are accomplished through phased releases of ACE component functionality designed to replace specific legacy ACS functions and add new functionality. Section 101.9(b) of title 19 of the Code of Federal Regulations (19 CFR 101.9(b)) provides for the testing of NCAP components. *See* T.D. 95-21, 60 FR 14211 (March 16, 1995). A list of ACE tests is provided in Section III below.

1. PSC Test Program

On June 24, 2011, CBP published a notice in the **Federal Register** (76 FR 37136) that announced a plan to conduct an NCAP test concerning new ACE capabilities which allow importers to file a PSC for certain entry summaries

using the Automated Broker Interface (ABI). Importers and brokers are also allowed to use ABI to file a PSC to those pre-liquidation ACE entry summaries that were accepted by CBP, fully paid, and under CBP control. On November 19, 2013, CBP published a notice in the **Federal Register** modifying and clarifying the terms and conditions of the PSC test. *See* 78 FR 69434.

2. PMS Test Program

On February 4, 2004, CBP published a notice in the **Federal Register** (69 FR 5362) that announced a plan to conduct an NCAP test concerning PMS which allows importers to deposit estimated duties, fees and taxes on a monthly basis. CBP modified and clarified the PMS test in seven subsequent **Federal Register** notices published on: September 8, 2004 (69 FR 54302); February 1, 2005 (70 FR 5199); August 8, 2005 (70 FR 45736); September 22, 2005 (70 FR 55623); January 20, 2006 (71 FR 3315); June 2, 2006 (71 FR 32114); and October 17, 2008 (73 FR 61891).

II. Test Modifications and Clarifications

This document announces numerous modifications and clarifications to the PSC and PMS tests. Each modification and clarification is discussed separately below. This document supersedes the December 12 notice and, except to the extent expressly announced or modified by this document, all aspects, rules, terms, requirements, obligations and conditions announced in notices previous to this notice and the December 12 publication regarding the PSC and PMS tests remain in effect.

A. Modifications and Clarifications of the PSC Test

1. Expansion of Entry Types

This document announces that CBP is expanding the type of entries that may be corrected by filing a PSC, in addition to the current entry types 01 (Consumption—Free and Dutiable) and 03 (Consumption—Antidumping/Countervailing Duty). The additional entry types are as follows:

- 02—Consumption—Quota/Visa.
- 06—Consumption—Foreign Trade Zone (FTZ).
- 07—Consumption—Antidumping/Countervailing Duty and Quota/Visa Combination.
- 21—Warehouse.
- 22—Re-Warehouse.
- 23—Temporary Importation Bond (TIB).
- 31—Warehouse Withdrawal—Consumption.
- 32—Warehouse Withdrawal—Quota.

- 34—Warehouse Withdrawal—Antidumping/Countervailing Duty.
- 38—Warehouse Withdrawal—Antidumping/Countervailing Duty & Quota/Visa Combination.
- 51—Defense Contract Administration Service Region (DCASR).
- 52—Government—Dutiable.

2. Merchandise Subject to Quota

When filing a PSC for an entry of merchandise subject to quota, the date and time of submission will be considered the date and time of presentation of the merchandise to CBP. If a PSC is filed on an entry with merchandise subject to quota, and the quota is full or nearly full at threshold, the PSC filer must do two things. The filer must follow the Entry Summary Business Rules and Process Document on www.CBP.gov and also, within 24 hours of making the correction, contact Headquarters Quota Branch, either by phone: (202) 863-6560 (public phone number), or email: HQQuota@cbp.dhs.gov, regardless of whether the correction concerns merchandise subject to quota.

3. Deposit of Duties, Fees and Taxes With PSC Showing Increase in Liability

This document announces that when a PSC is filed declaring an increase in the importer's liability for antidumping or countervailing duties and associated fees and taxes, the importer must mail or deliver a check to the CBP port of entry with those additional antidumping or countervailing duties and associated fees and taxes within three business days of submitting the PSC. Furthermore, CBP will no longer reject a PSC declaring an increase in liability for antidumping or countervailing duties and associated fees and taxes when the additional duties, fees and taxes are not deposited at the time of submitting the PSC. This is a change in CBP policy.

If a check is mailed, CBP will consider the additional deposit made based on the date of postmark indicating the check was mailed. When a PSC is filed that results in an increase in the importer's liability for regular duties, fees and taxes and the importer wishes to deposit them, the importer must mail or deliver a check to the port of entry.

4. Change of Entry Type When Antidumping and/or Countervailing Duties Are Involved

Previously, a filer under the PSC test could not change a type 03 entry to a type 01 entry. *See* 76 FR 37136. This document announces that a PSC may declare that a previously filed entry

which stated that merchandise covered by that entry was subject to antidumping and/or countervailing duties is not, in fact, subject to such duties. For instance, a PSC may declare that a previously filed 03 entry type is corrected to indicate it is a 01 entry type.

5. No Filing of PSC To Make a Post-Importation Claim under 19 U.S.C. 1520(d)

On June 24, 2011, CBP announced in the **Federal Register** (76 FR 37136) that one of the data elements that may not be modified via a PSC is the NAFTA indicator. This notice clarifies that such prohibition applies not only to a post-importation NAFTA claim under 19 U.S.C. 1520(d), but also to a claim made under other free trade agreements covered by 19 U.S.C. 1520(d).

6. PSC Submission Within the Time Limitations Authorized by This Test

On November 19, 2013, CBP published a notice in the **Federal Register** (78 FR 69434) that stated that a PSC cannot be filed when any merchandise covered by the original entry has been conditionally released and its right to admission has not been determined. This restriction was overly broad and prevented importers from filing a PSC because all goods are conditionally released and their admissibility is not legally determined until liquidation. This notice announces that this restriction does not prevent the filing of a PSC within the time periods allowed as long as all other requirements and limitations are met. The time limits authorized by this test are set forth in notices published in the **Federal Register** on June 24, 2011 (76 FR 37136) and November 19, 2013 (78 FR 69434). This clarification is in line with current practice.

B. Modification to the PMS Test

This notice announces that CBP will consider a PMS as paid, in the event the importer uses the Automated Clearing House (ACH) debit process, when CBP receives confirmation from the Treasury Department that funds are available and transferred to CBP from the financial institution designated by the importer for payment of the ACH debit authorization. Prior to this modification, CBP considered a PMS as paid when CBP transmitted the debit authorization to the designated financial institution. *See* 69 FR 5362 (February 4, 2004). This change will result in a delay of approximately two working days in the time that CBP uses to consider a PMS as paid. It is important to note that this modification applies only to importers

who participate in the test program. For all other importers, the current regulation, 19 CFR 24.25(c)(4), still applies which means CBP will consider a statement as paid upon acceptance of the ACH debit authorization.

III. Development of ACE Prototypes

A chronological listing of **Federal Register** publications detailing ACE test developments is set forth below.

- ACE Portal Accounts and Subsequent Revision Notices: 67 FR 21800 (May 1, 2002); 69 FR 5360 and 69 FR 5362 (February 4, 2004); 69 FR 54302 (September 8, 2004); 70 FR 5199 (February 1, 2005).
- ACE System of Records Notice: 71 FR 3109 (January 19, 2006).
- Terms/Conditions for Access to the ACE Portal and Subsequent Revisions: 72 FR 27632 (May 16, 2007); 73 FR 38464 (July 7, 2008).
- ACE Non-Portal Accounts and Related Notice: 70 FR 61466 (October 24, 2005); 71 FR 15756 (March 29, 2006).
- ACE Entry Summary, Accounts and Revenue (ESAR I) Capabilities: 72 FR 59105 (October 18, 2007).
- ACE Entry Summary, Accounts and Revenue (ESAR II) Capabilities: 73 FR 50337 (August 26, 2008); 74 FR 9826 (March 6, 2009).
- ACE Entry Summary, Accounts and Revenue (ESAR III) Capabilities: 74 FR 69129 (December 30, 2009).
- ACE Entry Summary, Accounts and Revenue (ESAR IV) Capabilities: 76 FR 37136 (June 24, 2011).
- Post-Entry Amendment (PEA) Processing Test: 76 FR 37136 (June 24, 2011).
- ACE Announcement of a New Start Date for the National Customs Automation Program Test of Automated Manifest Capabilities for Ocean and Rail Carriers: 76 FR 42721 (July 19, 2011).
- ACE Simplified Entry: 76 FR 69755 (November 9, 2011).
- National Customs Automation Program (NCAP) Tests Concerning Automated Commercial Environment (ACE) Document Image System (DIS): 77 FR 20835 (April 6, 2012).
- National Customs Automation Program (NCAP) Tests Concerning Automated Commercial Environment (ACE) Simplified Entry: Modification of Participant Selection Criteria and Application Process: 77 FR 48527 (August 14, 2012).
- Modification of National Customs Automation Program (NCAP) Test Regarding Reconciliation for Filing Certain Post-Importation Preferential Tariff Treatment Claims under Certain FTAs: 78 FR 27984 (May 13, 2013).
- Modification of Two National Customs Automation Program (NCAP)

Tests Concerning Automated Commercial Environment (ACE) Document Image System (DIS) and Simplified Entry (SE): 78 FR 44142 (July 23, 2013).

- Modification of Two National Customs Automation Program (NCAP) Tests Concerning Automated Commercial Environment (ACE) Document Image System (DIS) and Simplified Entry (SE); Correction: 78 FR 53466 (August 29, 2013).

- Modification of National Customs Automation Program Test Concerning Automated Commercial Environment (ACE) Cargo Release (formerly known as Simplified Entry): 78 FR 66039 (November 4, 2013).

- Post-Summary Corrections to Entry Summaries Filed in ACE Pursuant to the ESAR IV Test: Modifications and Clarifications: 78 FR 69434 (November 19, 2013).

- National Customs Automation Program (NCAP) Test Concerning the Submission of Certain Data Required by the Environmental Protection Agency and the Food Safety and Inspection Service Using the Partner Government Agency Message Set Through the Automated Commercial Environment (ACE): 78 FR 75931 (December 13, 2013).

- Modification of National Customs Automation Program (NCAP) Test Concerning Automated Commercial Environment (ACE) Cargo Release for Ocean and Rail Carriers: 79 FR 6210 (February 3, 2014).

- Modification of National Customs Automation Program (NCAP) Test Concerning Automated Commercial Environment (ACE) Cargo Release to Allow Importers and Brokers to Certify From ACE Entry Summary: 79 FR 24744 (May 1, 2014).

- Modification of National Customs Automation Program (NCAP) Test Concerning Automated Commercial Environment (ACE) Cargo Release for Truck Carriers: 79 FR 25142 (May 2, 2014).

- Modification of National Customs Automation Program (NCAP) Test Concerning Automated Commercial Environment (ACE) Document Image System: 79 FR 36083 (June 25, 2014).

- Announcement of eBond Test: 79 FR 70881 (November 28, 2014).

- eBond Test Modifications and Clarifications: Continuous Bond Executed Prior to or Outside the eBond Test May Be Converted to an eBond by the Surety and Principal, Termination of an eBond by Filing Identification Number, and Email Address Correction: 80 FR 899 (January 7, 2015).

- Modification of National Customs Automation Program (NCAP) Test

Concerning Automated Commercial Environment (ACE) Document Image System Relating to Animal and Plant Health Inspection Service (APHIS) Document Submissions: 80 FR 5126 (January 30, 2015).

- Modification of National Customs Automation Program (NCAP) Test Concerning the use of Partner Government Agency Message Set through the Automated Commercial Environment (ACE) for the Submission of Certain Data Required by the Environmental Protection Agency (EPA): 80 FR 6098 (February 4, 2015).

- Announcement of Modification of ACE Cargo Release Test to Permit the Combined Filing of Cargo Release and Importer Security Filing (ISF) Data: 80 FR 7487 (February 10, 2015).

- Modification of NCAP Test Concerning ACE Cargo Release for Type 03 Entries and Advanced Capabilities for Truck Carriers: 80 FR 16414 (March 27, 2015).

- Automated Commercial Environment (ACE) Export Manifest for Air Cargo Test: 80 FR 39790 (July 10, 2015).

- National Customs Automation Program (NCAP) Concerning Remote Location Filing Entry Procedures in the Automated Commercial Environment (ACE) and the Use of the Document Image System for the Submission of Invoices and the Use of eBonds for the Transmission of Single Transaction Bonds: 80 FR 40079 (July 13, 2015).

- Modification of National Customs Automation Program (NCAP) Test Concerning the Automated Commercial Environment (ACE) Partner Government Agency (PGA) Message Set Regarding Types of Transportation Modes and Certain Data Required by the National Highway Traffic Safety Administration (NHTSA): 80 FR 47938 (August 10, 2015).

- Automated Commercial Environment (ACE) Export Manifest for Vessel Cargo Test: 80 FR 50644 (August 20, 2015).

- Modification of National Customs Automation Program (NCAP) Test Concerning the Submission of Certain Data Required by the Food and Drug Administration (FDA) Using the Partner Government Agency Message Set through the Automated Commercial Environment (ACE): 80 FR 52051 (August 27, 2015).

- Automated Commercial Environment (ACE) Export Manifest for Rail Cargo Test: 80 FR 54305 (September 9, 2015).

- Modification of the National Customs Automation Program (NCAP) Test Concerning the Automated Commercial Environment (ACE)

Document Image System (DIS) Regarding Future Updates and New Method of Submission of Accepted Documents: 80 FR 62082 (October 15, 2015).

- Modification of the National Customs Automation Program (NCAP) Test Concerning the Automated Commercial Environment (ACE) Cargo Release for Entry Type 52 and Certain Other Modes of Transportation: 80 FR 63576 (October 20, 2015).

- Modification of the National Customs Automation Program (NCAP) Test Concerning the Automated Commercial Environment (ACE) Entry Summary, Accounts and Revenue (ESAR) Test of Automated Entry Summary Types 51 and 52 and Certain Modes of Transportation: 80 FR 63815 (October 21, 2015).

- Modification of the National Customs Automation Program Test Concerning the Automated Commercial Environment Portal Account to Establish the Exporter Portal Account: 80 FR 63817 (October 21, 2015).

- Modification of National Customs Automation Program Test Concerning the Automated Commercial Environment Partner Government Agency Message Set Regarding the Toxic Substances Control Act Certification Required by the Environmental Protection Agency: 81 FR 7133 (February 10, 2016).

- Notice Announcing the Automated Commercial Environment (ACE) as the Sole CBP-Authorized Electronic Data Interchange (EDI) System for Processing Certain Electronic Entry and Entry Summary Filings: 81 FR 10264 (February 29, 2016).

- Modification of the National Customs Automation Program (NCAP); Test Concerning the Partner Government Agency Message Set for Certain Data Required by the Environmental Protection Agency (EPA): 81 FR 13399 (March 14, 2016).

- Cessation of National Customs Automation Program (NCAP) Test Concerning the Submission of Certain Data Required by the Food and Drug Administration (FDA) Using the Partner Government Agency (PGA) Message Set Through the Automated Commercial Environment (ACE): 81 FR 18634 (March 31, 2016).

- Automated Commercial Environment (ACE); Announcement of National Customs Automation Program Test of the In-Transit Manifest Pilot Program: 81 FR 24837 (April 27, 2016).

- Announcement of National Customs Automation Program (NCAP) Test Concerning the Submission through the Automated Commercial Environment (ACE) of Certain Import

Data and Documents Required by the U.S. Fish and Wildlife Service: 81 FR 27149 (May 5, 2016).

- Notice Announcing the Automated Commercial Environment (ACE) as the Sole CBP-Authorized Electronic Data Interchange (EDI) System for Processing Certain Electronic Entry and Entry Summary Filings Accompanied by Food and Drug Administration (FDA) Data: 81 FR 30320 (May 16, 2016).

- Notice Announcing the Automated Commercial Environment (ACE) as the Sole CBP-Authorized Electronic Data Interchange (EDI) System for Processing Electronic Entry and Entry Summary Filings: 81 FR 32339 (May 23, 2016).

- Notice Announcing the Automated Commercial Environment (ACE) Protest Module as the Sole CBP-Authorized Method for Filing Electronic Protests: 81 FR 49685 (July 28, 2016).

- Modification of the National Customs Automation Program (NCAP) Test Concerning the Automated Commercial Environment (ACE) Portal Accounts to Establish the Protest Filer Account and Clarification that the Terms and Conditions for Account Access Apply to all ACE Portal Accounts: 81 FR 52453 (August 8, 2016).

- National Customs Automation Program (NCAP) Test Concerning Electronic Filing of Protests in the Automated Commercial Environment (ACE): 81 FR 53497 (August 12, 2016).

- Modification of the National Customs Automation Program (NCAP) Test Regarding Reconciliation and Transition of the Test From the Automated Commercial System to the Automated Commercial Environment (ACE): 81 FR 89486 (December 12, 2016).

- Modification and Clarification of the National Customs Automation Program (NCAP) Test Regarding Post-Summary Corrections and Periodic Monthly Statements: 81 FR 89482 (December 12, 2016).

- Effective Date for the Automated Commercial Environment (ACE) Being the Sole CBP-Authorized Electronic Data Interchange (EDI) System for Processing Electronic Drawback and Duty Deferral Entry and Entry Summary Filings: 81 FR 89486 (December 12, 2016).

Dated: January 4, 2017.

Brenda B. Smith,

Executive Assistant Commissioner, Office of Trade.

BILLING CODE 9111-14-P

DEPARTMENT OF HOMELAND SECURITY

Transportation Security Administration

[Docket No. TSA-2003-14610]

Revision of Agency Information Collection Activity Under OMB Review: Security Threat Assessment for Individuals Applying for a Hazardous Materials Endorsement for a Commercial Driver's License

AGENCY: Transportation Security Administration, DHS.

ACTION: 30-day Notice.

SUMMARY: This notice announces that the Transportation Security Administration (TSA) has forwarded the Information Collection Request (ICR), Office of Management and Budget (OMB) control number 1652-0027, abstracted below to OMB for review and approval of a revision of the currently approved collection under the Paperwork Reduction Act (PRA). The ICR describes the nature of the information collection and its expected burden. TSA published a **Federal Register** notice soliciting comments for a 60-day period on August 16, 2016, 81 FR 54585. The collection involves applicant submission of biometric and biographic information for TSA's security threat assessment required before obtaining the hazardous materials endorsement (HME) on a commercial driver's license (CDL) issued by the States and the District of Columbia.

DATES: Send your comments by February 8, 2017. A comment to OMB is most effective if OMB receives it within 30 days of publication.

ADDRESSES: Interested persons are invited to submit written comments on the proposed information collection to the Office of Information and Regulatory Affairs, OMB. Comments should be addressed to Desk Officer, Department of Homeland Security/TSA, and sent via electronic mail to oir_submission@omb.eop.gov or faxed to (202) 395-6974.

FOR FURTHER INFORMATION CONTACT: Christina A. Walsh, TSA PRA Officer, Office of Information Technology (OIT), TSA-11, Transportation Security Administration, 601 South 12th Street, Arlington, VA 20598-6011; telephone (571) 227-2062; email TSAPRA@tsa.dhs.gov.

SUPPLEMENTARY INFORMATION:

Comments Invited

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), an agency may not conduct or sponsor, and a person is not required to

respond to, a collection of information unless it displays a valid OMB control number. The ICR documentation is available at <http://www.reginfo.gov>. Therefore, in preparation for OMB review and approval of the following information collection, TSA is soliciting comments to—

(1) Evaluate whether the proposed information requirement is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agency's estimate of the burden;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including using appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Information Collection Requirement

Title: Security Threat Assessment for Individuals Applying for a Hazardous Materials Endorsement for a Commercial Driver's License

Type of Request: Revision of a currently approved collection.

OMB Control Number: 1652-0027.

Form(s): TSA Form 2214; HME Threat Assessment Program (HTAP).

Affected Public: Drivers seeking a hazardous material endorsement (HME) on their commercial driver's license (CDL).

Abstract: This collection supports the implementation of sec. 1012 of the USA PATRIOT Act (Pub. L. 107-56, 115 Stat. 272, 396, Oct. 26, 2001) (49 U.S.C. 5103a), which mandates that no State or the District of Columbia may issue an HME on a CDL unless TSA has first determined the driver is not a threat to transportation security. TSA's regulations at 49 CFR part 1572 describe the procedures, standards, and eligibility criteria for security threat assessments on individuals seeking to obtain, renew, or transfer a HME on a CDL. In order to conduct the security threat assessment, States (or a TSA designated agent in States that elect to have TSA perform the collection of information) must collect information in addition to that already collected for the purpose of HME applications, which will occur once approximately every five years. The driver is required to submit an application that includes personal biographic information (for instance, height, weight, eye and hair color, date of birth); information concerning legal status, mental health defects history, and criminal history;

and biometrics such as fingerprints. In addition, 49 CFR part 1572 requires States to maintain a copy of the driver application for a period of one year.

TSA is revising the collection of information to allow for recurrent criminal history vetting. Applicants' fingerprints and associated information will be provided to the Federal Bureau of Investigation (FBI) for the purpose of comparing their fingerprints to other fingerprints in the FBI's Next Generation Identification (NGI) system or its successor systems, including civil, criminal, and latent fingerprint repositories. The FBI may retain applicants' fingerprints and associated information in NGI after the completion of their application and, while retained, their fingerprints may continue to be compared against other fingerprints submitted to or retained by NGI. TSA will also transmit applicants' biometrics for enrollment into the Department of Homeland Security Automated Biometrics Identification System (IDENT).

In addition, TSA is revising the collection of information to expand enrollment options and the potential use of biographic and biometric (*e.g.*, fingerprints, iris scans, and/or photo) information. This revision would allow for facilitation of the security threat assessment and future use of the information collected for additional comparability determinations, such as allowing the HME applicant to participate in a program such as the TSA Pre✓® Application Program, TSA's expedited screening program for air travelers, or obtain a Transportation Worker Identification Credential (TWIC) without requiring an additional background check.

TSA is currently revising its fee for the HME Threat Assessment Program as well as the fee for comparable security threat assessments in light of changes to the FBI's fingerprint processing fee and TSA's costs related to conducting the security threat assessment (STA). The FBI's fee and STA fee are two out of three segments of the HME Threat Assessment Program's overall fee. The HME fee contains segments for enrollment, the STA, and FBI fees, most recently \$38.00 for vendor enrollments (amount varies by State for State enrollments), \$34.00 for the STA of each applicant and \$14.50 for the FBI processing each enrollment, respectively.

On February 1, 2015, the FBI reduced its fingerprint-based criminal history record check fee by \$1.75 based on recommendations from a required user fee study (75 FR 18751). Effective October 1, 2016, the FBI again reduced

its fingerprint-based criminal history record check fee, this time by \$2.75 based on recommendations from a required user fee study (81 FR 45535). Section 1572.501(b)(3) states that if the FBI amends its fee for criminal history records checks, TSA will collect the amended FBI fee. By contrast, TSA will increase the STA segment of the standard HME fee in the amount of \$3.00. TSA has identified, in accordance with the methodologies described in the 2013 final fee rule, threat assessment service costs related to the STA segment of the standard HME fee that exceed the expected STA segment revenue. The majority of these costs relate to technology infrastructure and operating costs. In addition to increased technology costs, the number of HME applicants has been in decline, leaving fewer applicants from which costs may be recovered. These two factors necessitate an increase in cost recovery in the ongoing operation of the HME program. The enrollment segment of the HME Threat Assessment Program's overall fee will remain at \$38.00 for enrollments conducted by TSA's vendor. As a result of the FBI's fee decreases (\$4.50 over the FBI's past two fee changes) and the increase in the STA segment of the standard HME fee (\$3.00), the overall HME standard enrollment fee (\$86.50) for applicants enrolled by TSA's vendor will be reduced by \$1.50 to the new fee of \$85.00 (\$10.00 + \$37.00 + \$38.00), effective upon publication of TSA's Notice of Fee Adjustment. For applicants who enroll through a State in States that choose not to use TSA's enrollment vendor, the revised fees for the FBI and STA segments of the overall fee for State enrollments will be the same as for enrollments conducted by TSA's vendor (\$10.00 and \$37.00, respectively); however, because each State that conducts its own enrollments charges its own fee (over which TSA has no control) TSA cannot provide a revised overall enrollment fee for State enrollments.

TSA will also decrease the amount of the STA segment of the reduced HME fee by \$1.00, from \$29.00 to \$28.00, which applies to both vendor and state enrollment methods. TSA is decreasing this segment of the reduced HME fee because TSA has identified, in accordance with the methodologies described in the 2013 final fee rule, threat assessment service revenue related to the STA segment of the reduced fee that exceeds the expected STA segment costs. Thus, the HME reduced enrollment fee (\$67.00) will be reduced to the new fee of \$66.00 for

vendor enrollments, effective upon publication of TSA's Notice of Fee Adjustment. Again, because each state that conducts its own enrollments charges its own fee for its enrollment segment, it is not possible to give a revised overall reduced HME fee for state enrollments.

Number of Respondents: 268,295.

Estimated Annual Burden Hours: An estimated 524,746 hours annually.

Dated: January 3, 2017.

Christina A. Walsh,

TSA Paperwork Reduction Act Officer, Office of Information Technology.

[FR Doc. 2017-00155 Filed 1-6-17; 8:45 am]

BILLING CODE 9110-05-P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR-5915-N-14]

60-Day Notice of Proposed Information Collection: Supportive Services Demonstration Resident Assessment Form

AGENCY: Office of Policy Development and Research, HUD.

ACTION: Notice.

SUMMARY: HUD is seeking approval from the Office of Management and Budget (OMB) for the information collection described below. In accordance with the Paperwork Reduction Act, HUD is requesting comments from all interested parties on the proposed collection of information. The purpose of this notice is to allow for 60 days of public comment.

DATES: *Comments Due Date:* March 10, 2017.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and/or OMB Control Number and should be sent to: Anna P. Guido, Reports Management Officer, QDAM, Department of Housing and Urban Development, 451 7th Street SW., Room 4176, Washington, DC 20410-5000; telephone 202-402-5534 (this is not a toll-free number) or email at Anna.P.Guido@hud.gov for a copy of the proposed forms or other available information. Persons with hearing or speech impairments may access this number through TTY by calling the toll-free Federal Relay Service at (800) 877-8339.

FOR FURTHER INFORMATION CONTACT:

Anna P. Guido, Reports Management Officer, QDAM, Department of Housing and Urban Development, 451 7th Street SW., Washington, DC 20410; email

Anna P. Guido at Anna.P.Guido@hud.gov or telephone 202-402-5535 (this is not a toll-free number). Persons with hearing or speech impairments may access this number through TTY by calling the toll-free Federal Relay Service at (800) 877-8339. Copies of available documents submitted to OMB may be obtained from Ms. Guido.

SUPPLEMENTARY INFORMATION: This notice informs the public that HUD is seeking approval from OMB for the information collection described in Section A.

A. Overview of Information Collection

Title of Information Collection: Supportive Services Demonstration Resident Assessment Form.

OMB Approval Number: Pending.

Type of Request: New.

Form Number: No forms.

Description of the Need for the Information and Proposed Use: HUD assists a large vulnerable senior population in its Section 202 and other elderly-designated properties. By virtue of their advanced ages, low-incomes and other demographic characteristics, residents in these communities have complex social, health and functional situations. The quality affordable housing provided by HUD provides a fundamental base for these individuals to age safely in their community. With housing as a key social determinant of health, HUD wishes to leverage its properties as a platform for the coordination and delivery of services to better address the interdependent health and supportive service needs of its older residents. The Fiscal Year (FY) 2014 Consolidated Appropriations Act gave HUD the authority to develop a demonstration to test a model of housing and supportive services for low-income elderly residents in HUD-assisted housing. In FY 2015, HUD announced the availability of a funding opportunity under the Supportive Services Demonstration that will provide grants to property owners to participate in the demonstration. The purpose of this demonstration is to test a model of housing and supportive services with the potential to delay nursing home care for low-income elderly residents in HUD-assisted housing. HUD aims to better manage residents' health, decrease emergency room and hospital utilization, and maintain residents' independence in

their homes for a longer period of time, thus delaying or preventing transfers to a higher level of care.

Conducting this research will require the Implementation Team (The Lewin Group and our partners from Leading Age and the National Center for Healthy Aging, under HUD contract HHSP23337002T) to collect self-reported information from demonstration participants. The Implementation Team will leverage existing validated tools combined together in one comprehensive Resident Needs Assessment. The Resident Needs Assessment requests information on demographics, health status and ability to complete Activities of Daily Living (ADLs), and Instrumental Activities of Daily Living (IADLs), as well as other social and medical service information.

The Resident Needs Assessment will occur face-to-face in a private setting administered by trained enhanced service coordinators or wellness nurses. The assessment interview is expected to last an average of 90 minutes.

Respondents: This information collection will affect approximately 4,000 individuals residing in units of 40 funded demonstration sites (approximately 100 residents per property; 40 properties in total). Respondents are expected to be low-income seniors who currently reside in HUD-assisted multi-family properties. All respondents will be presented with an IRB approved informed consent form prior to participation in the demonstration. In their consent, individuals agree to the collection of data about their health and wellness. Upon consent, respondents will be requested to complete a Resident Needs Assessment within 45 days of enrollment in the demonstration.

Information will be collected in a secure web-based platform that meets all required federal regulations to track general health and service use information. Information will be attributed to individuals by name. Names and information collected in a project-specific web-based platform will link to HUD's administrative data, which HUD can be linked to Medicare and possibly Medicaid data for program evaluation purposes. All collected information will be self-reported and will inform the development of individualized healthy aging plans and property-wide health education/

promotion activities and programs, including selection of specific evidence-based interventions to be implemented within demonstration sites. Additionally, results will support the evaluation of the demonstration in meeting HUD's goals and desired outcomes for the national demonstration.

The table below estimates the total burden to the public for the proposed information collection, assuming an hourly cost per response, based on the income levels of respondents. Hourly costs were estimated using FY 2016 income limits from the Office of Policy Development and Research through HUD's Web site located at <https://www.huduser.gov/portal/datasets/il/il16/index.html>.

HUD tiers the income levels for funded recipients at three levels: Extremely low, very low, and low. For purposes of burden estimate, we selected the "low income" tier to identify a median income level.

Further delineation of the burden estimates requires income adjustments based on the number of individuals residing with the respondent. Using HUD data to conduct data analysis, we estimate that:

- 66% of potential respondents will live alone (2650 respondents)
- 17% will reside with a spouse (690 respondents)
- 8% will reside with three people (330 respondents)
- 8% will reside with four people (330 respondents)

For HUD, the baseline for median income is based on a four-person household. For FY 2016 this was adjusted at \$65,800. Adjustments for number of residents are legislated by Congress.

- A single household is adjusted at 70% of income of baseline (\$46,060)
- Living with spouse is adjusted at 80% of income of baseline (\$52,640)
- Living in a three-person household is adjusted at 90% of income of baseline (\$59,220)

These income adjustments, based on both probability of residence status as well as adjustments based on the income baseline, are used to estimate burden of information collection in the table below.

Information collection	Number of respondents	Frequency of response	Responses per annum	Burden hour per response	Annual burden hours	Hourly cost per response	Cost
HUD Residents living alone (single household)	2,650	3	1	1.5	3,975	\$33.21	\$132,009.75

Information collection	Number of respondents	Frequency of response	Responses per annum	Burden hour per response	Annual burden hours	Hourly cost per response	Cost
HUD Residents living with spouse (2-person household)	690	3	1	1.5	1,035	37.97	39,298.95
HUD Residents in 3-person household	330	3	1	1.5	495	42.71	21,141.45
HUD Residents in 4-person household	330	3	1	1.5	495	47.45	23,487.75
Total	4,000	6,000	215,937.90

B. Solicitation of Public Comment

This notice is soliciting comments from members of the public and affected parties concerning the collection of information described in Section A on the following:

(1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) The accuracy of the agency's estimate of the burden of the proposed collection of information;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) Ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

HUD encourages interested parties to submit comment in response to these questions.

Authority: Section 3507 of the Paperwork Reduction Act of 1995, 44 U.S.C. Chapter 35.

Dated: December 23, 2016.

Matthew Ammon,

General Deputy, Assistant Secretary for Policy Development and Research.

BILLING CODE 4210-67-P

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[Docket No. FWS-R7-ES-2014-0060; FF07Camm00 FXES11130700000]

Endangered and Threatened Wildlife and Plants; Notice of Availability of Polar Bear Conservation Management Plan

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of document availability.

SUMMARY: We, the U.S. Fish and Wildlife Service, announce the

availability of our Polar Bear Conservation Management Plan (Polar Bear Plan). The polar bear is listed as threatened under the Endangered Species Act of 1973, as amended (ESA), and is also considered “depleted” under the Marine Mammal Protection Act of 1972, as amended (MMPA). The Polar Bear Plan identifies objective, measurable ESA recovery criteria, site-specific recovery actions, as well as time and cost estimates. It also serves as an MMPA conservation plan.

ADDRESSES: An electronic copy of the Polar Bear Plan is available for viewing at <https://ecos.fws.gov/ecp0/profile/speciesProfile?spcode=A0IJ> or at www.regulations.gov at Docket No. FWS-R7-ES-2014-0060. Copies of the Polar Bear Plan are also available by request from the U.S. Fish and Wildlife Service, Marine Mammals Management Office, 1011 East Tudor Road, MS-341, Anchorage, AK 99503; telephone (907) 786-3800; facsimile (907) 786-3816. If you use a telecommunications device for the deaf (TDD), call the Federal Information Relay Service (FIRS) at 800-877-8339.

FOR FURTHER INFORMATION CONTACT: Hilary Cooley, Polar Bear Lead, Marine Mammals Management, by telephone at 907-786-3800; by U.S. mail at Marine Mammals Management, U.S. Fish and Wildlife Service, 1011 East Tudor Road, Anchorage, AK 99503; or by email at Hilary_Cooley@fws.gov. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Relay Service at 800-877-8339.

SUPPLEMENTARY INFORMATION: We announce the availability of our Polar Bear Conservation Management Plan (Polar Bear Plan). The polar bear (*Ursus maritimus*) is listed throughout its range as threatened under the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*, ESA). Because of its threatened status under the ESA, the species is also considered “depleted” under the Marine Mammal Protection Act of 1972, as amended (16 U.S.C. 1361 *et seq.*, MMPA). As required under the ESA section 4(f), the Polar Bear Plan identifies “objective, measurable”

recovery criteria and site-specific recovery actions with estimations of the time and costs to carry out those actions. The Polar Bear Plan also serves as a conservation plan under section 115(b) of the MMPA with a goal of conserving and restoring polar bears to their optimum sustainable population level, and will contribute to our international polar bear conservation efforts under the 1973 Agreement on the Conservation of Polar Bears (T.I.A.S. No. 8409).

Background

We listed the polar bear as threatened under the ESA on May 15, 2008 (73 FR 28212). For a description of the taxonomy, distribution, status, breeding biology, and habitat, and a summary of factors affecting the species, please see Appendix A of the Polar Bear Plan. Recovery of endangered or threatened animals and plants is a primary goal of our endangered species program and the ESA. To help guide the recovery effort, we prepare recovery plans for most listed species native to the United States. Further, the ESA requires that we develop recovery plans for listed species, unless such a plan would not promote the conservation of a particular species, and that we provide public notice and an opportunity for public review and comment during recovery plan development. Recovery plans describe actions considered necessary for the conservation and survival of the species, establish criteria for delisting listed species, and estimate time and cost for implementing needed recovery measures.

MMPA Conservation Plans have the purpose of conserving and restoring a species or stock to its optimum sustainable population. The MMPA further provides that Conservation Plans shall be modeled on ESA recovery plans. Therefore, the Polar Bear Plan provides recommended management actions for the survival and recovery of the species and to conserve and restore the species to its optimum sustainable population.

To invite public review and comment on the draft Polar Bear Plan, we published a notice of availability initiating a 45-day public comment period for the draft Polar Bear Plan on July 6, 2015 (80 FR 38458); we extended that comment period an additional 30 days on August 14, 2015 (80 FR 48908). The final Polar Bear Plan and the associated documents reflect the comments and recommendations the U.S. Fish and Wildlife Service received on that draft.

Polar bears evolved to utilize the Arctic sea ice niche. They are distributed throughout most ice-covered seas of the United States, Canada, the Russian Federation, Norway, and Greenland/Denmark (collectively the Range States), in the Northern Hemisphere and are managed in 19 subpopulations around the Arctic (see Figure 1 of the Polar Bear Plan). The current global polar bear population is estimated to be 22,000 to 31,000.

Ongoing and projected loss of the polar bear's crucial sea ice habitat threatens the species throughout all of its range. The projected loss of sea ice will diminish productivity, abundance, and availability of ice seals, the polar bear's primary prey base, and increase energetic requirements of polar bears for movement and obtaining food. It will also affect access to traditional denning areas. In turn, these factors will cause declines in the condition of polar bears from nutritional stress and reduced productivity. The eventual effect of this loss of sea ice is that the polar bear population will decline. The rate and magnitude of decline will vary geographically, based on differences in the rate, timing, and magnitude of impacts. However, within the foreseeable future, the worldwide population will be affected, and the species is likely to become in danger of extinction throughout all of its range (73 FR 28292–28293, May 15, 2008). Global climate change resulting from greenhouse gas emissions is the root cause of the loss of Arctic sea ice.

The Plan

The Polar Bear Plan addresses both the MMPA and the ESA, as they relate to polar bear conservation and recovery; it also reflects the input and values of stakeholders closely connected with polar bears and their habitat, including the State of Alaska, the North Slope Borough, Alaska Native peoples, the Polar Bear Range States, conservation groups, and the oil and gas industry, as well as the general public. All of these sources informed the Polar Bear Plan's fundamental goals, which focus on conservation of polar bears while

recognizing values associated with subsistence take, human safety, and economic activity. The goals will be used to guide management, research, monitoring, and communication into the future. Although the fundamental goals target three geographic scales (rangewide, intermediate (ecoregion), and subpopulation (stock)), specific actions under the Polar Bear Plan pertain primarily to the polar bear subpopulations present in Alaska. The Polar Bear Plan also contains specific recovery criteria, expressed in fundamental, demographic, and threats-based terms, to determine when the polar bear should be considered for delisting under the ESA and fundamental and demographic criteria to guide conservation efforts associated with the MMPA.

Conservation and recovery actions are specified in the Polar Bear Plan. The single most important action for the recovery of polar bears is global reduction of atmospheric greenhouse gases, which, if achieved, should result in reduced global climate change, including Arctic warming and sea ice loss. Along with communicating that fact, the Polar Bear Plan identifies a suite of high-profile actions designed to ensure that polar bears remain in sufficient number and diversity so that they are in a position to recover once climate change is addressed. Those actions include the following:

- Limit global atmospheric levels of greenhouse gases to levels appropriate for supporting polar bear recovery and conservation, primarily by reducing greenhouse gas emissions;
- Support international conservation efforts through the Range States relationships;
- Manage human–bear conflicts;
- Collaboratively manage subsistence harvest;
- Protect denning habitat;
- Minimize risks of contamination from spills;
- Conduct strategic monitoring and research.

The full cost of implementing the Polar Bear Plan over the next 5 years is approximately \$66,720,000.

Authority: We developed our Polar Bear Plan under the authority of ESA section 4(f), 16 U.S.C. 1533(f), as well as section 115(b) of the MMPA, 16 U.S.C. 1383b(b). We publish this notice under ESA section 4(f) (16 U.S.C. 1531 *et seq.*).

Dated: December 20, 2016.

Gregory Siekaniec,
Regional Director, Alaska Region, U.S. Fish and Wildlife Service.

BILLING CODE 4333–15–P

INTERNATIONAL TRADE COMMISSION

[USITC SE–17–001]

Sunshine Act Meeting

AGENCY HOLDING THE MEETING: United States International Trade Commission.

TIME AND DATE: January 18, 2017 at 9:30 a.m.

PLACE: Room 101, 500 E Street SW., Washington, DC 20436, Telephone: (202) 205–2000.

STATUS: Open to the public.

MATTERS TO BE CONSIDERED:

1. Agendas for future meetings: None
2. Minutes
3. Ratification List
4. Vote in Inv. No. 731–TA–718 (Fourth Review)(Glycine from China). The Commission is currently scheduled to complete and file its determinations and views of the Commission by January 31, 2017.
5. Vote in Inv. Nos. 731–TA–825 and 826 (Third Review)(Polyester Staple Fiber from Korea and Taiwan). The Commission is currently scheduled to complete and file its determinations and views of the Commission by January 31, 2017.
6. Outstanding action jackets: None.

In accordance with Commission policy, subject matter listed above, not disposed of at the scheduled meeting, may be carried over to the agenda of the following meeting.

By order of the Commission.

Issued: January 4, 2017.

William R. Bishop,

Supervisory Hearings and Information Officer.

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

[Investigation Nos. 701–TA–565 and 731–TA–1341 (Preliminary)]

Hardwood Plywood From China

Determinations

On the basis of the record¹ developed in the subject investigations, the United States International Trade Commission (“Commission”) determines, pursuant to the Tariff Act of 1930 (“the Act”), that there is a reasonable indication that an industry in the United States is materially injured by reason of imports of hardwood plywood from China,

¹ The record is defined in sec. 207.2(f) of the Commission's Rules of Practice and Procedure (19 CFR 207.2(f)).

provided for in subheadings 4412.10, 4412.31, 4412.32, 4412.39, 4412.94, and 4412.99 of the Harmonized Tariff Schedule of the United States, that are alleged to be sold in the United States at less than fair value (“LTFV”) and to be subsidized by the government of China.

Commencement of Final Phase Investigations

Pursuant to section 207.18 of the Commission’s rules, the Commission also gives notice of the commencement of the final phase of its investigations. The Commission will issue a final phase notice of scheduling, which will be published in the **Federal Register** as provided in section 207.21 of the Commission’s rules, upon notice from the Department of Commerce (“Commerce”) of affirmative preliminary determinations in the investigations under sections 703(b) or 733(b) of the Act, or, if the preliminary determinations are negative, upon notice of affirmative final determinations in those investigations under sections 705(a) or 735(a) of the Act. Parties that filed entries of appearance in the preliminary phase of the investigations need not enter a separate appearance for the final phase of the investigations. Industrial users, and, if the merchandise under investigation is sold at the retail level, representative consumer organizations have the right to appear as parties in Commission antidumping and countervailing duty investigations. The Secretary will prepare a public service list containing the names and addresses of all persons, or their representatives, who are parties to the investigations.

Background

On November 18, 2016, the Coalition for Fair Trade of Hardwood Plywood and its individual members² filed a petition with the Commission and Commerce, alleging that an industry in the United States is materially injured or threatened with material injury by reason of LTFV and subsidized imports of hardwood plywood from China. Accordingly, effective November 18, 2016, the Commission, pursuant to sections 703(a) and 733(a) of the Act (19 U.S.C. 1671b(a) and 1673b(a)), instituted countervailing duty investigation No. 701–TA–565 and antidumping duty

investigation No. 731–TA–1341 (Preliminary).

Notice of the institution of the Commission’s investigations and of a public conference to be held in connection therewith was given by posting copies of the notice in the Office of the Secretary, U.S. International Trade Commission, Washington, DC, and by publishing the notice in the **Federal Register** of November 28, 2016 (81 FR 85639). The conference was held in Washington, DC, on December 9, 2016, and all persons who requested the opportunity were permitted to appear in person or by counsel.

The Commission made these determinations pursuant to sections 703(a) and 733(a) of the Act (19 U.S.C. 1671b(a) and 1673b(a)). It completed and filed its determinations in these investigations on January 3, 2017. The views of the Commission are contained in USITC Publication 4661 (January 2017), entitled *Hardwood Plywood from China: Investigation Nos. 701–TA–565 and 731–TA–1341 (Preliminary)*.

By order of the Commission.

Issued: January 3, 2017.

Lisa R. Barton,

Secretary to the Commission.

[FR Doc. 2017–00126 Filed 1–6–17; 8:45 am]

BILLING CODE 7020–02–P

DEPARTMENT OF JUSTICE

Bureau of Alcohol, Tobacco, Firearms and Explosives

[OMB Number 1140–0018]

Agency Information Collection Activities; Proposed eCollection Comments Requested; Application for Federal Firearms License (ATF F 7(5310.12)/7 CR (5310.16))

AGENCY: Bureau of Alcohol, Tobacco, Firearms and Explosives, Department of Justice.

ACTION: 30-Day notice.

SUMMARY: The Department of Justice (DOJ), Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF), will submit the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The proposed information collection was previously published in the **Federal Register** 81 FR 57616, on August 23, 2016, allowing for a 60-day comment period. This information collection OMB 1140–0018 (Application for Federal Firearms License)—ATF Form 7 (5310.12) is being revised and combined

with OMB 1140–0038 (Application for Federal Firearms License (Collector of Curios and Relics))—ATF Form 7 CR (5310.16); thereby eliminating the need for a separate application form for Type 03, Collector of Curios and Relics FFL (1140–0038). The proposed information collection is also being published to obtain comments from the public and affected agencies.

DATES: Comments are encouraged and will be accepted for an additional 30 days until February 8, 2017.

FOR FURTHER INFORMATION CONTACT: If you have additional comments, particularly with respect to the estimated public burden or associated response time, have suggestions, need a copy of the proposed information collection instrument with instructions, or desire any other additional information, please contact Tracey Robertson, Chief, Federal Firearms Licensing Center, either by mail at 244 Needy Road, Martinsburg, WV 25405, or by email at tracey.robertson@atf.gov. Written comments and/or suggestions can also be directed to the Office of Management and Budget, Office of Information and Regulatory Affairs, Attention: Department of Justice Desk Officer, Washington, DC 20503 or sent to OIRA_submissions@omb.eop.gov.

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency’s estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Evaluate whether and if so how the quality, utility, and clarity of the information to be collected can be enhanced; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Overview of this information collection:

² Columbia Forest Products, Greensboro, North Carolina; Commonwealth Plywood Inc., Whitehall, New York; Murphy Plywood Co., Eugene, Oregon; Roseburg Forest Products Co., Roseburg, Oregon; States Industries, Inc., Eugene, Oregon; and Timber Products Company, Springfield, Oregon.

1. *Type of Information Collection:* Revision of a currently approved collection.

2. *The Title of the Form/Collection:* Application for Federal Firearms License.

3. *The agency form number, if any, and the applicable component of the Department sponsoring the collection:*

Form number: ATF F 7(5310.12)/7 CR (5310.16).

Component: Bureau of Alcohol, Tobacco, Firearms and Explosives, U.S. Department of Justice.

4. *Affected public who will be asked or required to respond, as well as a brief abstract:*

Primary: Business or other for-profit.

Other: Individuals or households.

Abstract: The law of 18 U.S.C. Section 923(a)(1), requires a person wishing to transport, ship, or receive firearms in interstate or foreign commerce to pay a fee, to file an application and to obtain a license before engaging in business. ATF F 5310.12/7 CR 5310.16 will be for the purpose of ensuring this collection of information is necessary to insure that the person who wishes to be licensed as required by Section 923 meets the requirements of the section for the license. Additionally, this form will be used by the public when applying for a Federal firearms license to collect curios and relics to facilitate a personal collection in interstate and foreign commerce. The information requested on the form establishes eligibility for all license types.

5. *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* An estimated 15,000 respondents will utilize the form, and it will take each respondent 60 minutes to complete the form.

6. *An estimate of the total public burden (in hours) associated with the collection:* The estimated annual public burden associated with this collection is 15,000 hours.

If additional information is required contact: Melody Braswell, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE., 3E.405A, Washington, DC 20530.

Dated: January 4, 2017.

Melody Braswell,

Department Clearance Officer for PRA, U.S. Department of Justice.

BILLING CODE 4410-14-P

NATIONAL ARCHIVES AND RECORDS ADMINISTRATION

[NARA-2017-020]

Records Management; General Records Schedule (GRS); GRS Transmittal 27

AGENCY: National Archives and Records Administration (NARA).

ACTION: Notice of new General Records Schedule (GRS) Transmittal 27.

SUMMARY: NARA is issuing a new set of General Records Schedules (GRS) via GRS Transmittal 27. The GRS provides mandatory disposition instructions for administrative records common to several or all Federal agencies. Transmittal 27 announces changes we have made to the GRS since we published Transmittal 26 in August and September 2016. We are concurrently disseminating Transmittal 27 (the memo and the accompanying records schedules and documents) directly to each agency's records management official and have also posted it on NARA's Web site.

DATES: This transmittal is effective the date it publishes in the **Federal Register**.

ADDRESSES: You can find this transmittal on NARA's Web site at <http://www.archives.gov/records-mgmt/grs/>. You can download the complete current GRS, in PDF format, from NARA's Web site at <http://www.archives.gov/records-mgmt/grs.html>.

FOR FURTHER INFORMATION CONTACT: For more information about this notice or to obtain paper copies of the GRS, contact Kimberly Keravuori, External Policy Program Manager, at regulation_comments@nara.gov, or by telephone at 301.837.3151.

You may contact NARA's GRS Team with general questions about the GRS at GRS_Team@nara.gov. Writing and maintaining the GRS is the GRS Team's responsibility. This team is part of Records Management Services in the National Records Management Program, Office of the Chief Records Officer at NARA.

Your agency's records officer may contact the NARA appraiser or records analyst with whom your agency normally works for support in carrying out this transmittal and the revised portions of the GRS. You may access a list of the appraisal and scheduling work group and regional contacts on our Web site at <http://www.archives.gov/records-mgmt/appraisal/index.html>.

SUPPLEMENTARY INFORMATION: GRS Transmittal 27 announces changes to

the General Records Schedules (GRS) made since NARA published GRS Transmittal 26 in September 2016. The GRS provide mandatory disposition instructions for records common to several or all Federal agencies. We are more than half-way through a 5-year plan to completely rewrite the GRS. With Transmittal 27, 61% of old items are now superseded.

Transmittal 27 introduces a significant change in the way we publish transmittals and indeed the entire GRS. Transmittal 26 included all current schedules: new schedules (with new-to-old crosswalks and Frequently Asked Questions [FAQs]), old schedules annotated for supersession by new schedules, and an old-to-new crosswalk for the entire old GRS. Transmittal 27 includes only schedules newly issued or updated since the last transmittal (with new-to-old crosswalks and FAQs for each).

Users may find the entire set of GRS at <http://www.archives.gov/records-mgmt/grs.html>, both individually and in a single document containing just schedules (no crosswalks or FAQs). FAQs about the whole GRS and the GRS Update Project no longer appear in new Transmittals. You can still access them at <http://www.archives.gov/records-mgmt/grs.html>.

What changes does this transmittal make to the GRS?

GRS Transmittal 27 publishes five new schedules:

GRS 2.6 Employee Training Records (DAA-GRS-2016-0014)

GRS 5.3 Continuity and Emergency Planning Records (DAA-GRS-2016-0004)

GRS 5.4 Facility, Equipment, Vehicle, Property, and Supply Records (DAA-GRS-2016-0011)

GRS 5.5 Mail, Printing, and Telecommunication Service Management Records (DAA-GRS-2016-0012)

GRS 6.4 Public Affairs Records (DAA-GRS-2016-0005)

It also publishes new or updated items in four schedules:

GRS 1.1 Financial Management and Reporting Records (see question 3)

GRS 2.5 Employee Separation Records (see question 4)

GRS 3.1 General Technology Management Records (see question 5)

GRS 4.2 Information Access and Protection Records (see question 6)

This transmittal also updates the general FAQs on Deviations, clarifying the definition of a deviation to the GRS, and how GRS deviations differ from GRS notifications.

How has GRS 1.1 changed? How might these changes affect my agency?

We added one new item (001) to cover financial management and reporting administrative records.

How has GRS 2.5 changed?

We added two news items (050 and 051) for records created by phased retirement programs.

How has GRS 3.1 changed?

We added one new item (001) to cover technology management administrative records.

How has GRS 4.2 changed?

We added two new items. Item 001 covers administrative records on FOIA, Privacy Act, and classified documents. Item 180 covers virtual public access library records. Also, we slightly altered titles of items 060, 061, 120, and 121 from what appeared in Transmittal 26 to

match the titles under which they were approved in ERA. The new titles alter neither meaning nor coverage of the items.

What GRS items does GRS Transmittal 27 rescind?

Many old GRS items are superseded by new GRS items. A few old items, however, have outlived their usefulness and cannot be crosswalked to new items. The table below lists old items newly rescinded by GRS Transmittal 27.

GRS	Item	Title	Reason
10	11a	Recordkeeping copies of maintenance manuals for unique or customized aircraft.	Only a very few agencies create these records. They relate to agencies' missions and should therefore be scheduled on an agency-specific schedule.
12	3b	Copies of incoming and original copies of outgoing messages, including Standard Form (SF) 14, Telegraphic Message maintained by communications offices or centers, and EXCLUDING the copies maintained by originating program office.	Telegram service in the United States ceased January 27, 2006. The last telegram in the world was sent in India on July 14, 2013. The very short two-month retention of these records means that none should now exist. SF 14 has been discontinued.
14	3	Press Service files	These records appear to no longer exist.
18	29a	National Defense Executive Reserve (NDER) case files on reservists.	According to FEMA, the National Defense Executive Reserve program has been dormant for the past 5 years and no agency has open programs. For this reason, FEMA suggested that we rescind these items.
18	29b	National Defense Executive Reserve case files on individuals whose applications were rejected or withdrawn.	
27	6	CIO subject and office records	CIOs are considered high-level officials under Capstone email guidance. It is therefore not appropriate to schedule these records as universally temporary.
27	7	CIO schedules of daily activities.	

Rescinded items are shown in context of their schedules in the old-to-new crosswalk.

How do I cite new GRS items?

When you send records to an FRC for storage, you should cite the records' legal authority—the "DAA" number—in the "Disposition Authority" column of the table. For informational purposes, please include schedule and item number. For example, "DAA-GRS-2013-0001-0004 (GRS 4.3, item 020)."

Do I have to take any action to implement these GRS changes?

NARA regulations (36 CFR 1226.12(a)) require agencies to disseminate GRS changes within six months of receipt.

Per 36 CFR 1227.12(a)(1), you must follow GRS dispositions that state they must be followed without exception.

Per 36 CFR 1227.12(a)(3), if you have an existing schedule that differs from a new GRS item that does *not* require being followed without exception, and you wish to continue using your agency-specific authority rather than the GRS authority, you must notify NARA within 120 days of the date of this transmittal.

If you do not have an already existing agency-specific authority but wish to apply a retention period that differs from that specified in the GRS, you must submit a records schedule to NARA for approval via the Electronic Records Archives.

How do I get copies of the new GRS?

You can download the complete current GRS, in PDF format, from NARA's Web site at <http://www.archives.gov/records-mgmt/grs.html>.

Whom do I contact for further information?

Writing and maintaining the GRS is the responsibility of the GRS Team. You may contact the team with general questions about the GRS at GRS_Team@nara.gov. This team is part of Records Management Services in the National Records Management Program of the Office of the Chief Records Officer at NARA.

Your agency's records officer may contact the NARA appraiser or records analyst with whom your agency normally works for support in carrying

out this transmittal. A list of the appraisal and scheduling work group and regional contacts is on the NARA Web site at <http://www.archives.gov/records-mgmt/appraisal/index.html>.

Dated: January 3, 2017.

David S. Ferriero,
Archivist of the United States.

NATIONAL ARCHIVES AND RECORDS ADMINISTRATION

Office of Government Information Services

[NARA-2017-014]

Freedom of Information Act (FOIA) Advisory Committee; Meeting

AGENCY: National Archives and Records Administration (NARA).

ACTION: Notice of Federal Advisory Committee Meeting.

SUMMARY: In accordance with the Federal Advisory Committee Act (5 U.S.C. App) and the second United

States Open Government National Action Plan (NAP) released on December 5, 2013, NARA announces an upcoming Freedom of Information Act (FOIA) Advisory Committee meeting.

DATES: The meeting will be on January 26, 2017, from 10:00 a.m. to 1:00 p.m. EDT. You must register for the meeting by 5:00 p.m. EDT on January 23, 2017.

Location: National Archives and Records Administration (NARA); 700 Pennsylvania Avenue NW.; William G. McGowan Theater, Washington, DC 20408.

FOR FURTHER INFORMATION CONTACT: Kate Russ, Designated Federal Officer for this committee, by mail at National Archives and Records Administration; Office of Government Information Services; 8601 Adelphi Road—OGIS; College Park, MD 20740-6001, by telephone at 202-741-5770, or by email at foia-advisory-committee@nara.gov.

SUPPLEMENTARY INFORMATION: *Agenda and meeting materials:* You may find all meeting materials at <https://ogis.archives.gov/foia-advisory-committee/2016-2018-term/Meetings.htm>. This will be the third meeting of the second committee term. The purpose of this meeting will be to review the work of the committee's three subcommittees. <https://ogis.archives.gov/foia-advisory-committee/2016-2018-term/Subcommittees.htm>.

Procedures: The meeting is open to the public. Due to access procedures, you must register in advance if you wish to attend the meeting. You will also go through security screening when you enter the building. Registration for the meeting will go live via Eventbrite on January 3, 2017, at 10:00 a.m. EDT. To register for the meeting, please do so at this Eventbrite link: <https://www.eventbrite.com/e/freedom-of-information-act-foia-advisory-committee-meeting-january-26-2017-registration-30222704924>.

This program will be live-streamed on the US National Archives' YouTube channel, <https://www.youtube.com/user/usnationalarchives/playlists>. The webcast will include a captioning option. To request additional accommodations (e.g., a transcript), email foia-advisory-committee@nara.gov or call 202-741-5770. Members of the media who wish to register, those who are unable to register online, and those who require special accommodations, should contact Kate Russ at the phone number, mailing address, or email address listed above.

Dated: December 23, 2016.

Patrice Little Murray,
Committee Management Officer.

NUCLEAR REGULATORY COMMISSION

[NRC-2017-0001]

Sunshine Act Meeting

DATE: January 9, 16, 23, 30, February 6, 13, 2017.

PLACE: Commissioners' Conference Room, 11555 Rockville Pike, Rockville, Maryland.

STATUS: Public and Closed.

Week of January 9, 2017

Friday, January 13, 2017

9:00 a.m. Briefing on Operator Licensing Program (Public Meeting), (Contact: Nancy Salgado: 301-415-1324).

This meeting will be webcast live at the Web address—<http://www.nrc.gov/>.

Week of January 16, 2017—Tentative

There are no meetings scheduled for the week of January 16, 2017.

Week of January 23, 2017—Tentative

Monday, January 23, 2017

10:00 a.m. Discussion of Management and Personnel Issues (Closed Ex. 2 & 6).

Week of January 30, 2017—Tentative

There are no meetings scheduled for the week of January 30, 2017.

Week of February 6, 2017—Tentative

There are no meetings scheduled for the week of February 6, 2017.

February 13, 2017—Tentative

Thursday, February 16, 2017

9:00 a.m. Briefing on Lessons Learned from the Fukushima Dai-ichi Accident (Public Meeting), (Contact: Andrew Proffitt: 301-415-1418).

This meeting will be webcast live at the Web address—<http://www.nrc.gov/>.

Friday, February 17, 2017

9:30 a.m. Briefing on Project Aim (Public Meeting) (Contact: Tammy Bloomer: 301-415-1785).

This meeting will be webcast live at the Web address—<http://www.nrc.gov/>.

NUCLEAR REGULATORY COMMISSION

[Docket No. 40-9092; NRC-2013-0164]

Reno Creek *In Situ* Uranium Recovery Project in Campbell County, Wyoming

AGENCY: Nuclear Regulatory Commission.

ACTION: Final supplemental environmental impact statement; issuance.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is issuing the Final Supplemental Environmental Impact Statement (SEIS) (NUREG-1910, Supplement 6) for the Reno Creek *In Situ* Uranium Recovery (ISR) Project. By letter dated October 3, 2012, AUC LLC submitted an application to the NRC for a new source materials license for the proposed Reno Creek ISR Project proposed to be located in Campbell County, Wyoming. The SEIS is

NUCLEAR REGULATORY COMMISSION

[NRC–2016–0276]

Category 3 Source Security and Accountability**AGENCY:** Nuclear Regulatory Commission.**ACTION:** Source protection; public meetings and request for comment.

SUMMARY: On October 18, 2016, the U.S. Nuclear Regulatory Commission (NRC) issued a Staff Requirements Memorandum (SRM) for COMJMB–16–0001 and directed NRC staff to take specific actions to evaluate whether it is necessary to revise NRC regulations or processes governing source protection and accountability. Specifically, the Commission asked the staff to conduct an evaluation of, among other things, the pros and cons of different methods of requiring transferors of Category 3 quantities of radioactive material to verify the validity of a transferee's license prior to transfer, the pros and cons of including Category 3 sources in the National Source Tracking System (NSTS), and the risks posed by aggregation of Category 3 sources into Category 2 quantities. As part of this evaluation, the NRC is seeking input from licensees, Agreement States, and the public to inform the staff's assessment of potential revisions to regulations or processes requiring Category 3 source protection and accountability.

DATES: Submit comments by March 10, 2017. Comments received after this date will be considered if it is practical to do so, but the NRC is able to ensure consideration only for comments received on or before this date.

ADDRESSES: You may submit comments by any of the following methods:

- *Federal Rulemaking Web site:* Go to <http://www.regulations.gov> and search for Docket ID NRC–2016–0276. Address questions about NRC dockets to Carol Gallagher; telephone: 301–415–3463; email: Carol.Gallagher@nrc.gov. For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.

- *Mail comments to:* Cindy Bladey, Office of Administration, Mail Stop: OWFN–12–H08, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001.

For additional direction on obtaining information and submitting comments, see “Obtaining Information and Submitting Comments” in the

SUPPLEMENTARY INFORMATION section of this document.

FOR FURTHER INFORMATION CONTACT: Irene Wu, Office of Nuclear Material Safety and Safeguards, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–1951; email: Irene.Wu@nrc.gov.

SUPPLEMENTARY INFORMATION:**I. Obtaining Information and Submitting Comments***A. Obtaining Information*

Please refer to Docket ID NRC–2016–0276 when contacting the NRC about the availability of information for this action. You may obtain publicly-available information related to this action by any of the following methods:

- *Federal Rulemaking Web site:* Go to <http://www.regulations.gov> and search for Docket ID NRC–2016–0276.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly-available documents online in the ADAMS Public Documents collection at <http://www.nrc.gov/reading-rm/adams.html>. To begin the search, select “ADAMS Public Documents” and then select “Begin Web-based ADAMS Search.” For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to pdr.resource@nrc.gov. The ADAMS accession number for each document referenced (if it is available in ADAMS) is provided the first time that it is mentioned in this document.

- *NRC's PDR:* You may examine and purchase copies of public documents at the NRC's PDR, Room O1–F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852.

B. Submitting Comments

Please include Docket ID NRC–2016–0276 in your comment submission.

The NRC cautions you not to include identifying or contact information that you do not want to be publicly disclosed in your comment submission. The NRC will post all comment submissions at <http://www.regulations.gov> as well as enter the comment submissions into ADAMS. The NRC does not routinely edit comment submissions to remove identifying or contact information.

If you are requesting or aggregating comments from other persons for submission to the NRC, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their comment submission. Your request should state that the NRC

does not routinely edit comment submissions to remove such information before making the comment submissions available to the public or entering the comment into ADAMS.

II. Background

In 2007, the Government Accountability Office (GAO) conducted an investigation (GAO–07–1038T) on NRC's licensing program and was able to obtain a radioactive materials license using a fictitious company and place orders that would have resulted, if actually obtained, in receipt of an aggregated Category 3 quantity of radioactive material. After the 2007 investigation, the NRC and the Agreement States made a number of important changes to strengthen the licensing and regulatory processes to prevent malevolent individuals from obtaining a radioactive material license. The NRC staff submitted an Action Plan (SECY–07–0147) (ADAMS Accession No. ML072360206) to the Commission to respond to recommendations for addressing security issues in the National Materials Program. The Commission approved the staff's Action Plan, which included a consideration of expanding the NSTS to include Category 3 sources plus a subset of “high-end” Category 4 sources (SRM–SECY–07–0147) (ADAMS Accession No. ML072620088). The proposed rule on Expansion of NSTS to include additional nationally tracked sources was published in the **Federal Register** in April 2008 (73 FR 19749).

In January 2009, licensees began reporting Category 1 and 2 source information to the NSTS. The NRC staff submitted a request to the Commission to defer further expansion of the NSTS to allow staff to monitor operation of the NSTS for one year and to apply insights gained for the decision on system expansion (SECY–09–0011) (ADAMS Accession No. ML083540566). This request for deferral was not approved, so in June 2009, the staff requested approval of the final rule amending parts 20 and 32 title 10 of the *Code of Federal Regulations* (10 CFR) to expand reporting to the NSTS to include Category 3 sources (SECY–09–0086) (ADAMS Accession No. ML091390202). In June 2009, the Commission did not reach a decision on the proposed rulemaking (2–2 split vote), and the final rule was not approved (SRM–SECY–09–0086) (ADAMS Accession No. ML091811125). Some of the Commission votes indicated that further expansion of the NSTS should be based upon a vulnerability assessment, built off an interagency risk study for sources, and that the original recommendation

lacked a risk-informed foundation for proposed regulatory action.

In 2014, the GAO initiated an audit of the materials licensing program to determine whether the licensing vulnerabilities identified in their 2007 investigation had been addressed by the regulatory framework and other improvements implemented by the NRC and the Agreement States. In 2015, as part of the audit, GAO conducted an investigation that attempted to obtain radioactive materials licenses from one NRC regional office and two separate Agreement States. The investigation sought approval of licenses authorizing the procurement of one Category 3 source using a fictitious company. The 2015 investigation went beyond the 2007 investigation in its sophistication and planning, such that GAO rented storefront/warehouse space to demonstrate their legitimacy during pre-licensing visits. Despite this level of effort, the GAO was unsuccessful in two of three attempts; however, the GAO was able to acquire a license for a Category 3 well logging source in one attempt. GAO successfully placed an order for one Category 3 source using the license, then altered it and used it to place an order for a second Category 3 source. The investigation demonstrated that GAO could have acquired an aggregated Category 2 quantity of material, although at no point in the investigation were radioactive materials actually shipped to the fictitious company. Once notified of the investigation by GAO in October 2015, the NRC and Agreement States took a number of actions, one of which included forming two NRC-Agreement State working groups to evaluate vulnerabilities identified as a result of the 2015 GAO investigation. Specifically, one working group considered enhancements to the pre-licensing guidance while the second working group evaluated the need for enhancements to existing requirements or guidance for license verification and source tracking beyond Category 1 and Category 2 thresholds.

On July 15, 2016, the GAO published its final report of the material licensing audit and investigation, GAO-16-330, entitled "Nuclear Security: NRC Has Enhanced the Controls of Dangerous Radioactive Materials, but Vulnerabilities Remain." The report made three recommendations:

1. Take steps needed to include Category 3 sources in the NSTS and add Agreement State Category 3 licenses to the Web-based Licensing System as quickly as reasonably possible.
2. At least until such time that Category 3 licenses can be verified using

the License Verification System, require that transferors of Category 3 quantities of radioactive materials confirm the validity of a would-be purchaser's radioactive materials license with the appropriate regulatory authority before transferring any Category 3 quantities of licensed materials.

3. As part of the ongoing efforts of NRC working groups meeting to develop enhancements to the pre-licensing requirements for Category 3 licenses, consider requiring that an on-site security review be conducted for all unknown applicants of Category 3 licenses to verify that each applicant is prepared to implement the required security measures before taking possession of licensed radioactive materials.

Given the NRC's operating experience with higher-risk sources and in response to the findings by GAO, the Commission directed the staff to take specific actions to evaluate whether it is necessary to revise NRC regulations or processes governing source protection and accountability. Specifically, on October 18, 2016, the Commission issued its SRM for COMJMB-16-0001, "Proposed Staff Re-Evaluation of Category 3 Source Accountability" (ADAMS Accession No. ML16292A812). The SRM required the staff to conduct the following tasks:

1. An evaluation of the pros and cons of different methods of requiring transferors of Category 3 sources to verify the validity of a transferee's license prior to transfer;
2. An evaluation of the pros and cons of including Category 3 sources in NSTS;
3. An assessment, based on these evaluations, of these and any additional options that the staff identifies for addressing the source accountability recommendations made by the GAO;
4. A vulnerability assessment which identifies changes in the threat environment between 2009 and today that argue in favor of or against expansion of the NSTS to include Category 3 sources;

5. A regulatory impact analysis of the accrued benefit and costs of the change, to include impacts to the NRC, Agreement States, non-Agreement States, and regulated entities;

6. A discussion of potential regulatory actions that would not require changes to our regulations that arose from or were considered by the staff working groups, to include changes to guidance, training, and other program improvements such as more closely monitoring the implementation of the staff recommendations using the Integrated Materials Performance Evaluation Program process; and

7. Any other factors arising from the staff's currently ongoing assessment that the staff concludes would bear on the Commission's deliberation on the proposed change.

The SRM also directed the staff to assess the risks posed by the aggregation of Category 3 sources into Category 2 quantities and to collaborate with its Agreement State partners, non-Agreement States, regulated entities, public interest groups, industry groups, and the reactor community.

Additionally, the SRM directed the staff to consider the results of the assessment of the security requirements in 10 CFR part 37, "Physical Protection of Category 1 and 2 Quantities of Radioactive Material," as required by the Energy and Water Development and Related Agencies Appropriations Bills for Fiscal Year 2015, as a means to inform the staff's evaluation. This assessment, referred to as the "program review" of 10 CFR part 37, encompassed an evaluation of nine review areas related to implementation of the security requirements in the rule. These areas included the results of inspections conducted of NRC licensees in the first two years of rule implementation, as well as an evaluation of events reported under the provisions of the rule. The program review also included consideration of the definition of aggregation as it applies to well logging sources and an evaluation of enhanced tracking and accounting of radioactive sources. A report detailing the program review was provided to Congress on December 14, 2016 (ADAMS Accession No. ML16348A230).

In the interest of fully informing the public of the staff's evaluation of Category 3 source security and accountability, the staff is issuing this notice to request specific feedback from stakeholders. The information received from this request will help to fully assess the regulatory impact for any recommendations related to Category 3 source security and accountability and will be documented in a paper that will be provided to the Commission in August 2017.

III. Specific Considerations

The NRC has developed specific questions that are separated into sections based on the topics and applicability to relevant stakeholders. These include: general questions related to license verification, general questions related to the NSTS, specific questions for licensees related to license verification, specific questions for licensees related to the NSTS, specific questions for Agreement States related to license verification, specific

questions for Agreement States related to the NSTS, and other questions.

The NRC is requesting comments on license verification involving transfers of Category 3 quantities of radioactive material and the inclusion of Category 3 sources in the NSTS. Please note that Table 1 of Appendix A to 10 CFR part 37 provides the thresholds for Category 1 and Category 2 quantities of radioactive material and Appendix E of 10 CFR part 20 provides the thresholds for Category 1 and 2 sources included in NSTS. The list of radionuclides subject to physical security requirements in 10 CFR part 37 is different than the list of radionuclides included in NSTS. NRC regulations do not include a definition for Category 3 but the NRC has historically considered the Category 3 threshold to be greater than 1/10th of the Category 2 threshold but less than the Category 2 threshold.

Please be cautious in providing comments that contain specific examples and do not provide any specific official-use-only, safeguards, and/or classified information related to a specific facility.

General Questions Related to License Verification

1. Should the current methods for verification of licenses prior to transferring Category 3 quantities of radioactive material listed in 10 CFR 30.41(d)(1)–(5), 10 CFR 40.51(d)(1)–(5), and 10 CFR 70.42(d)(1)–(5) be changed such that only the methods prescribed in 10 CFR 37.71 are allowed?

2. Would there be an increase in safety and/or security if the regulations were changed to only allow license verification through the NRC's License Verification System (LVS) or the transferee's license issuing authority for transfers of Category 3 quantities of radioactive material? If so, how much of an increase would there be?

3. If the NRC changed the regulations to limit license verification only through the LVS or the transferee's license issuing authority for transfers of Category 3 quantities of radioactive material, should licensees transferring Category 3 quantities to manufacturers and distributors be excepted from the limitation?

4. Is there anything else we should consider when evaluating different methods of license verification prior to transferring Category 3 quantities of radioactive material?

General Questions Related to the NSTS

1. Should Category 3 sources be included in the NSTS? Please provide a rationale for your answer.

2. If Category 3 sources are included in the NSTS, should the NRC consider imposing the same reporting requirements currently required for Category 1 and 2 sources (10 CFR 20.2207(f))?

3. Should the NRC consider alternatives to the current NSTS reporting requirements for Category 1 and 2 sources to increase the immediacy of information availability, such as requiring the source transfers to be reported prior to, or on the same day as, the source shipment date?

4. Would there be an increase in safety and/or security if the regulations were changed to include Category 3 sources in the NSTS? If so, how much of an increase would there be?

5. Is there anything else we should consider as part of our evaluation of including Category 3 sources in the NSTS?

Specific Questions for Licensees Related to License Verification

1. It currently takes approximately one month to get credentialed to access the LVS. If you currently do not have online access to LVS, and NRC establishes new requirements for license verification involving Category 3 quantities of radioactive material, would you be inclined to sign up for online access, or would you use alternative methods for license verification such as emailing the NRC Form 748 "Manual License Verification Report" to the LVS Help Desk or calling the license-issuing regulatory authority directly?

2. Approximately how many transfers involving Category 3 quantities of radioactive material do you do monthly? What percentage involves transfers directly to/from a manufacturer?

3. Should license verification be required when transferring to an established manufacturer?

4. Do you have online access to LVS? If so, have you experienced any issues with the LVS? Do you have any recommendations on how to improve LVS?

Specific Questions for Licensees Related to the NSTS

1. It currently takes approximately one month to get credentialed to access the NSTS. If you currently do not have online access to the NSTS and NRC establishes new requirements for the tracking of Category 3 sources in the NSTS, would you be inclined to sign up for online access or would you use alternative methods for NSTS reporting such as emailing or faxing the NRC Form 748 "National Source Tracking Transaction Report" to the NSTS Help Desk?

2. Do you have online access to the NSTS? If so, have you experienced any issues with the NSTS? Do you have any recommendations on how to improve the NSTS?

Specific Questions for Agreement States Related to License Verification

1. Approximately how many licenses do you authorize for Category 1, 2, and 3 quantities of radioactive material?

2. If license verification through the LVS or the transferee's license issuing authority is required for transfers involving Category 3 quantities of radioactive material, would you encourage the use of LVS among your licensees, or plan for the additional burden imposed by the manual license verification process?

3. If license verification through the LVS or the transferee's license issuing authority is required for transfers involving Category 3 quantities of radioactive material, would you consider adopting the Web-Based Licensing System (WBL) to ensure that the most up-to-date licenses are available for license verification using the LVS or voluntarily provide your Category 3 licenses (similar to what some Agreement States do now for Category 1 and 2 licenses) to be included in WBL, or would you do neither and prefer licensees to use the manual license verification process?

4. What would the impact in time and resources be on your program to handle the additional regulatory oversight needed for Category 3 licensees if license verification through the LVS or the transferee's license issuing authority was required for transfers involving Category 3 quantities of radioactive material?

Specific Question for Agreement States Related to the NSTS

1. The NRC currently administers the annual inventory reconciliation process on behalf of the Agreement States. This process involves providing hard copy inventories to every licensee that possesses nationally tracked sources at the end of the year, processing corrections to inventories, and processing confirmations of completion of the reconciliation into the NSTS. The process involves a significant amount of staff time and resources from November to February. If the Agreement States were to adopt administration of the annual inventory reconciliation process and if Category 3 sources were included in the NSTS, what would the additional regulatory burden be on the Agreement States to perform the annual inventory reconciliation for Category 1, 2, and 3 sources?

Other Questions

1. Should physical security requirements for Category 1 and 2 quantities of radioactive material be expanded to include Category 3 quantities?

2. Some Category 3 sources are covered under a general license (10 CFR 31.5). Should the NRC consider establishing maximum quantities in general licensed devices, thereby reserving authorization to possess Category 1, 2, and 3 quantities of radioactive material to specific licensees?

IV. Public Comments Process

The NRC is committed to keeping the public informed and values public involvement in its assessment effort. Responses to this solicitation will be considered by NRC in preparing a report to the Committees on Appropriations of the House of Representatives and the Senate, pursuant to Public Law 113–235, Section 403 and will inform staff consideration of the regulatory impacts for any recommendations related to Category 3 source security and accountability, which will be documented in a paper to be provided to the Commission in August 2017. The NRC, however, does not intend to provide specific responses to comments or other information submitted in response to this request.

V. Public Meetings

The NRC plans to hold three public meetings and two webinars during the public comment period for this action. The first public meeting is scheduled for January 31, 2017, at NRC Headquarters. The two other public meetings will be held outside of the Washington DC area. The webinars are scheduled for February 21, 2017 and March 2, 2017. The public meetings and webinars will provide forums for the NRC staff to discuss the issues and questions with members of the public. The information received will be used by NRC to develop a report to the Commission. The NRC does not intend to provide any responses to comments submitted during the public meetings and webinars. Each public meeting and webinar will be noticed on the NRC's public meeting Web site at least 10 calendar days before the meeting. Members of the public should monitor the NRC's public meeting Web site for additional information about the public meetings at <http://www.nrc.gov/public-involve/public-meetings/index.cfm>. The NRC will post the notices for the public meetings and webinars and may post additional material related to this action

to the Federal Rulemaking Web site at www.regulations.gov under Docket ID NRC–2016–0276. The Federal Rulemaking Web site allows you to receive alerts when changes or additions occur in a docket folder. To subscribe: (1) Navigate to the docket folder (NRC–2016–0276); (2) click the “Sign up for Email Alerts” link; and (3) enter your email address and select how frequently you would like to receive emails (daily, weekly, or monthly).

Dated at Rockville, Maryland, this 30th day of December 2016.

For the Nuclear Regulatory Commission.

Pamela J. Henderson,

Deputy Director, Division of Material Safety, State, Tribal and Rulemaking Programs, Office of Nuclear Material Safety and Safeguards.

[FR Doc. 2017–00169 Filed 1–6–17; 8:45 am]

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[NRC–2012–0235]

Tribal Policy Statement

AGENCY: Nuclear Regulatory Commission.

ACTION: Policy statement; issuance.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is issuing this Statement of Policy to set forth principles to be followed by the NRC staff to promote effective government-to-government interactions with American Indian and Alaska Native Tribes, and to encourage and facilitate Tribal involvement in the areas over which the Commission has jurisdiction. It provides agencywide guidelines that achieve consistency, but also encourage custom-tailored approaches to consultation and coordination that reflect the circumstances of each situation and the preference of each Tribal government. It is the NRC's expectation that all program and regional office consultation and coordination practices will be consistent with or adhere to the NRC Tribal Policy Statement.

DATES: This policy statement is effective on January 9, 2017.

ADDRESSES: Please refer to Docket ID NRC–2012–0235 when contacting the NRC about the availability of information regarding this document. You may obtain publicly-available information related to this document using any of the following methods:

- *Federal Rulemaking Web site:* Go to <http://www.regulations.gov> and search for Docket ID NRC–2012–0235. Address questions about NRC dockets to Carol

Gallagher; telephone: 301–415–3463; email: Carol.Gallagher@nrc.gov. For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.

- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly-available documents online in the ADAMS Public Documents collection at <http://www.nrc.gov/reading-rm/adams.html>. To begin the search, select “ADAMS Public Documents” and then select “Begin Web-based ADAMS Search.” For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to pdr.resource@nrc.gov. The ADAMS accession number for each document referenced in this document (if that document is available in ADAMS) is provided the first time that a document is referenced. The Tribal Policy Statement, in its entirety, is in the attachment to this document.

- *NRC's PDR:* You may examine and purchase copies of public documents at the NRC's PDR, Room O1–F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852.

FOR FURTHER INFORMATION CONTACT:

Kevin O'Sullivan, Office of Nuclear Material Safety and Safeguards, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–8112, email: Tribal_Outreach.Resource@nrc.gov.

SUPPLEMENTARY INFORMATION:

- I. Background
- II. Discussion
- III. Opportunity for Public Participation
- IV. Procedural Requirements

I. Background

The purpose of the NRC Tribal Policy Statement is to establish policy principles to be followed by the NRC to promote effective government-to-government interactions with Indian Tribes, and to encourage and facilitate Tribal involvement in the areas over which the Commission has jurisdiction. The NRC licenses and regulates the Nation's civilian use of radioactive materials to protect public health and safety, common defense and security, and the environment under the Atomic Energy Act of 1954, as amended (AEA) (42 U.S.C. 2011). Other statutory provisions such as the National Historic Preservation Act (NHPA) (54 U.S.C. 300101) can require Tribal consultation as part of the NRC's evaluation of agency activities during licensing actions, rulemaking, or policy development. The NRC complies with statutory provisions and NRC regulatory

provisions that require Tribal consultation and interacts with Tribal governments accordingly.

A. NRC Previous Interactions with Indian Tribes

Historically, the NRC has had limited, but significant, interactions with Indian Tribes. The Commission has upheld statutory obligations to consult with Tribes under Federal law and acted in a manner consistent with the spirit of certain Presidential initiatives pertaining to Tribal consultation and coordination. However, the NRC has not previously formalized an agencywide policy statement.

Many Federally recognized Tribes have an interest in public health and safety and environmental protection associated with NRC regulatory activities that include uranium recovery, commercial nuclear power, and nuclear waste transportation, disposal, and storage activities. The NRC has exercised its Trust Responsibility in the context of its authorizing statutes, including the AEA. The NRC Tribal Policy Statement formally reflects the NRC's recognition of the Federal Trust Responsibility and the NRC's commitment to a government-to-government relationship, which is distinct from interactions with members of the public, with Federally recognized Tribes. The NRC will make efforts to consult in good faith with Indian Tribes on agency actions that have substantial direct effects on one or more Indian Tribes as well as those regulatory actions for which Tribal consultation is required under Federal Statute. Under the NRC's policy, the NRC or Tribal governments can request consultation on regulatory activities that have Tribal implications. The NRC's policy is to consult on a government-to-government basis with Tribal governments as soon as practicable on NRC regulatory actions with Tribal implications.

On November 6, 2000, President Clinton issued Executive Order (EO) 13175, "Consultation and Coordination with Indian Tribal Governments" (65 FR 67249). Executive Order 13175 states, "Policies that have Tribal implications" refers to regulations, legislative comments or proposed legislation, and other policy statements or actions that have substantial direct effects on one or more Indian Tribes, on the relationship between the Federal government and Indian Tribes, or on the distribution of power and responsibilities between the Federal government and Indian Tribes." Executive Order 13175, established the following principles to guide agencies when forming and implementing

policies with potential Tribal implications:

- The United States has a unique legal relationship with Indian Tribal governments as set forth in the Constitution of the United States, treaties, statutes, EOs, and court decisions. The Federal government recognizes Indian Tribes as domestic dependent nations under its protection and has enacted statutes and promulgated regulations that establish and define a trust relationship with Indian Tribes.
- The Federal government has recognized the right of Indian Tribes to self-government with inherent sovereign powers over their members and territory. The United States continues to work with Indian Tribes on a government-to-government basis to address issues concerning Tribal self-government, Tribal trust resources, and Indian Tribal treaty and other rights.
- The United States recognizes the right of Indian Tribes to self-government and supports Tribal sovereignty and self-determination.

As an independent regulatory agency, the NRC is exempt from the requirements of certain EOs, including EO 13175. However, on January 26, 2001, the Commission sent correspondence to the Office of Management and Budget stating that ". . . in exercising its regulatory authority this agency [NRC] acts in a manner consistent with the fundamental precepts expressed in the Order [EO 13175]" (ADAMS Accession No. ML010260297). To that end, the Commission has developed agency practices for Tribal consultation consistent with the principles articulated in EO 13175.

The NRC's past practice for government-to-government interaction with Federally recognized Tribes has reflected the spirit of the relevant EOs, without establishing a formal policy. The NRC has interacted with Tribal governments on a case-by-case basis, allowing the NRC and the Tribes to initiate communication and consultation. The NRC staff has also maintained working relationships with Tribal governments and Tribal organizations that have an interest in NRC regulated activities.

B. Development of the Draft Tribal Policy Statement

In SECY-96-187, "Policy Issues Raised in Meeting with Prairie Island Dakota Indian Representatives" (ADAMS Accession No. ML16293A128), the NRC staff provided to the Commission an analysis of Tribal issues. The paper centered on issues raised by

representatives from the Prairie Island Dakota Indian Community including: (1) Entering into a Memorandum of Understanding with the NRC; 2) allowing Tribal representatives to observe inspections at the Prairie Island Nuclear Generating Plant; and 3) developing a formal policy on cooperation with Federally recognized Tribes. In the Staff Requirements Memorandum (SRM) dated November 13, 1996, the Commission approved the staff's recommendation not to develop a formal policy on cooperation with Federally recognized Tribal governments at that time, but to continue addressing Native American issues on a case-by-case basis and operating with Tribal governments on a government-to-government basis (ADAMS Accession No. ML16293A154).

On January 8, 2009, the Commission issued SRM-M081211, from the December 11, 2008, "Briefing on Uranium Recovery," directing the NRC staff to develop and implement an internal protocol for interaction with Native American Tribal Governments that would allow for custom tailored approaches to address both the NRC and Tribal interests on a case-by-case basis (ADAMS Accession No. ML090080206). The Commission also directed the NRC staff to assess what policies other Federal agencies have for interactions with Native American Tribal Governments and to report those findings, which could determine the efficacy of an NRC Tribal Policy Statement, to the Commission. The NRC staff responded to this Commission direction in SECY-09-0180, "U.S. Nuclear Regulatory Commission Interaction with Native American Tribes" (ADAMS Accession No. ML092920384). The staff communicated the determination that the NRC's case-by-case approach to interaction was effective and met the needs of the Commission and the Tribes. The staff concluded that Tribal interactions would not benefit from a formal Tribal policy at that time. The NRC staff also developed NUREG-2173, "NRC Tribal Protocol Manual: Guidance for NRC Employees," as an internal protocol for interacting with Tribal governments (ADAMS Accession No. ML092990559).

On May 22, 2012, the Commission issued the SRM for COMWDM-12-0001, "Tribal Consultation Policy Statement and Protocol" (ADAMS Accession No. ML121430233), directing the NRC staff to provide a proposed Policy Statement and protocol on consultation with Tribal governments. The Commission also directed the NRC staff to do the following when developing the proposed policy

statement: (1) Use the existing “Tribal Protocol Manual: Guidance for NRC Employees,” and the NRC staff’s ongoing efforts outlined in SECY-09-0180 as a starting point and the basis for developing the proposed policy statement and protocol; (2) seek input from the Tribes and the public on how to improve the existing manual; (3) clearly articulate in the policy statement and protocol that the NRC’s actions must be in accordance with its governing statutes and regulations; (4) respect and reflect in the policy statement and protocol sensitivity to the distinction made in executive orders and statutes between Indian Tribes who are Federally recognized and those who are not; (5) indicate in the policy statement and protocol that the NRC will conduct outreach to State-recognized Tribes on a case-by-case basis; (6) explore additional opportunities within our current regulatory processes for information sharing and outreach to State-recognized Tribes; and (7) make the protocol prominently publicly available on the NRC’s public Web site. The Commission also specified that the proposed policy statement should serve as a high-level foundation for the protocol and should echo the language and spirit of the relevant Presidential Memoranda and EOs.

The NRC staff formed an agency working group to develop a proposed NRC Tribal Policy Statement and to revise the NRC Tribal Protocol Manual. On October 12, 2012 (77 FR 62269), the NRC requested public comment on the NRC Tribal Protocol Manual and requested suggestions for the development of a proposed NRC Tribal Policy Statement to establish policy principles to be followed by the NRC to promote effective government-to-government interactions with Indian Tribes, and to encourage and facilitate involvement by Indian Tribes in the areas over which the Commission has jurisdiction. The public comment period was open for 180 days, and the NRC received a total of six comment letters from two Tribal governments, two mining associations, one inter-Tribal organization, and a Tribal college.

Informed by internal working group representatives, external outreach, and review of similar policies at other Federal agencies, the NRC developed the proposed NRC Tribal Policy Statement. The NRC engaged with Tribal governments and other interested parties by: (1) Collaborating with the National Congress of American Indians to conduct mass mailings to Federally recognized Tribes; and (2) participating in Tribal meetings hosted by Tribal

organizations and other Federal agencies (these meetings included attendees from Federally recognized and State-recognized Tribes). Additionally, the NRC staff reviewed Tribal policy statements of executive departments, their related agencies, and other independent agencies and provided their findings to the Commission.

The proposed NRC Tribal Policy Statement was consistent with the language of EO 13175 and was intended to cover a broad range of Tribal consultations, outreach, and interactions conducted by NRC staff. The proposed NRC Tribal Policy Statement applied to Federally recognized Indian Tribes as defined by the Federally Recognized Indian Tribe List Act of 1994 (25 U.S.C. 479a). It also encouraged participation by State-recognized Tribes in the NRC’s regulatory process. On December 1, 2014, the NRC published the proposed NRC Tribal Policy Statement in the **Federal Register** for public comment (79 FR 71136). (See Section III, “Opportunity for Public Participation,” of this document for additional information.)

C. Development of the Final NRC Tribal Policy Statement

After the December 2014 publication of the proposed NRC Tribal Policy Statement in the **Federal Register**, the NRC staff engaged in internal and external collaboration and outreach to inform the final NRC Tribal Policy Statement. The NRC staff also sought comments on the final NRC Tribal Policy Statement through participation in external conferences and presentations, periodic telephone calls, teleconferences, and webinars. The NRC staff continued to participate in standing Tribal meetings hosted by Federal partners and Tribal organizations and initiated additional outreach to Tribal leadership through various regional or affiliated Tribal leadership councils. A list of all outreach efforts can be found in NRC Tribal Liaison Annual Report Fiscal Year 2015 (ADAMS Accession No. ML15247A011).

The final NRC Tribal Policy Statement reflects responses to both internal and external comments. The final NRC Tribal Policy Statement applies to all NRC staff and activities within the NRC’s regulatory jurisdiction. The NRC Tribal Policy Statement is written at a high level to cover a wide variety of interactions, consultation, and outreach to Indian Tribes, including Federally recognized American Indian and Alaska Native Tribes.

II. Discussion

Within the context of this discussion, the following definitions will apply unless otherwise indicated:

Consultation means efforts to conduct meaningful and timely discussions between the NRC and Tribal governments on the NRC’s regulatory actions that have substantial direct effects on one or more Indian Tribes and those regulatory actions for which Tribal consultation is required under Federal statute. The NRC’s Tribal consultation allows Indian Tribes the opportunity to provide input on regulatory actions with Tribal implications and those where Tribal consultation is required, and is different from the outreach and public comment periods. The consultation process may include, but is not limited to, providing for mutually-agreed protocols, timely communication, coordination, cooperation, and collaboration. The consultation process provides opportunities for appropriate Tribal officials or representatives to meet with NRC management or staff to achieve a mutual understanding between the NRC and the Tribes of their respective interests and perspectives.

Indian Tribe means any American Indian or Alaska Native Tribe, Band, Nation, Pueblo, or other organized group or community that the Secretary of the Interior acknowledges to exist as an Indian Tribe pursuant to the Federally Recognized Indian Tribe List Act of 1994 (25 U.S.C. 479a).

Interaction means reciprocal actions involving the NRC and Indian Tribes, and may include, but is not limited to, outreach, consultation, coordination, training, and information exchanges. Interactions may be oral or written and can take place remotely (through electronic media) or in face-to-face meetings.

Outreach means NRC staff efforts to inform Indian Tribes about the agency’s actions and plans. Outreach includes sharing information and encouraging Tribal governments to communicate their concerns and interests to NRC staff.

Regulatory Actions with Tribal Implications refers to regulations, legislative comments or proposed legislation, and other policy statements or actions that have substantial direct effect on one or more Indian Tribes, on the relationship between the Federal Government and Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes.

Tribal Official means an elected, appointed, or designated official or

employee of an Indian Tribe or authorized intertribal organization.

Trust Responsibility means a fiduciary duty, on the part of the United States, to protect Tribal treaty rights, lands, assets, and resources, as well as a duty to carry out the mandates of Federal law with respect to Indian Tribes. The NRC exercises its Trust Responsibility in the context of its authorizing statutes, which include the AEA, the Energy Reorganization Act of 1974, the Nuclear Waste Policy Act of 1982, the Low-Level Radioactive Waste Policy Act of 1985, and the Uranium Mill Tailings Radiation Control Act of 1978, as amended. As an independent regulatory agency that does not hold in trust Tribal lands or assets, or provide services to Federally recognized Tribes, the NRC fulfills its Trust Responsibility through implementation of the principles of the Tribal Policy Statement, by providing

protections under its implementing regulations, and through recognition of additional obligations consistent with other applicable treaties and statutory authorities.

III. Opportunity for Public Comment

On December 1, 2014 (79 FR 71136), the NRC published a **Federal Register** notice requesting public comments on the proposed NRC Tribal Policy Statement. The original 120-day comment period was extended to 180 days (ending on May 31, 2015) through an additional **Federal Register** notice that was published on February 5, 2015 (80 FR 6553).

A. Overview of Public Comments

The NRC received nine comment submissions, including comments from two representatives from Federally recognized Tribes, two representatives from inter-Tribal organizations, a

Federal agency, an electric utility company, and three individuals who did not provide an organizational affiliation.

Comments and responses related to the proposed NRC Tribal Policy Statement are listed in this section, and comments are quoted directly from comment submissions. The NRC Tribal Protocol Manual was published concurrently with the proposed Policy Statement in the **Federal Register** for public comment; comments and related responses will be published separately, with the exception of overlapping comments that cover both the NRC Tribal Policy Statement and the NRC Tribal Protocol Manual.

The following table lists the commenter’s name and affiliation, ADAMS accession number for the comment submission, and the document related to each comment.

Commenter Name	Affiliation	Comment Submission ADAMS Accession No.	Document
Charlene Dwin Vaughn	Advisory Council on Historic Preservation (ACHP).	ML15154A842	Proposed Tribal Policy Statement
R. Budd Haemer	Indiana Michigan Power	ML15155A564	Proposed Tribal Policy Statement and Tribal Protocol Manual
Richard Arnold	National Transportation Stakeholders Forum Tribal Caucus.	ML15175A161	Proposed Tribal Policy Statement
Bill Thompson	National Tribal Air Association	ML15124A013	Proposed Tribal Policy Statement and Tribal Protocol Manual
Philip R. Mahowald	Prairie Island Indian Community ..	ML15159A181	Proposed Tribal Policy Statement and Tribal Protocol Manual
Heather Westra	Prairie Island Indian Community ..	ML15065A219	Proposed Tribal Policy Statement
Cassandra Bloedel	Private Citizen	ML15159A179	Proposed Tribal Policy Statement
Doreen Dupont	Private Citizen	ML15159A180	Proposed Tribal Policy Statement
Savannah Halleaux	Private Citizen	ML14345A750	Proposed Tribal Policy Statement

B. Public Comment Analysis

The NRC has reviewed every comment submission and has identified 42 unique comments requiring NRC consideration and response. Comments and the NRC responses are presented in this section. The comments generally fell within the following categories: NRC’s Trust Responsibility as a Federal agency; suggested changes to the language of the NRC Tribal Policy Statement; NRC’s Tribal outreach and consultation; and NRC’s government-to-government relationship with Tribes. Commenters provided additional comments that did not fall within those categories as well as comments that were out of scope of the NRC Tribal Policy Statement; these comments have been included at the end of this section, along with NRC responses.

1. NRC’s Trust Responsibility as a Federal Agency

Multiple commenters provided input related to the NRC’s Trust

Responsibility to Federally recognized Tribes as a Federal agency.

Comment 1.1. “Politics should not come into play in the Trust Relationship. The Trust Relationship requires more in terms of interactions access, and voice.”

Response 1.1. The NRC agrees with this comment. The NRC upholds its Trust Relationship with Federally recognized Tribes without consideration of politics. In achieving its mission, the NRC adheres to the principles of good regulation—independence, openness, efficiency, clarity, and reliability. The NRC seeks to use the highest possible standards of ethical performance and professionalism with regard to regulatory activities. Tribal governments and others are encouraged to participate in the regulatory process to provide relevant facts and opinions pertaining to an action. The NRC considers many, and possibly conflicting public interests, when making decisions that are based on objective, unbiased assessments of all information, and

must be documented with reasons explicitly stated.

No change has been made to the NRC Tribal Policy Statement as a result of the comment.

Comment 1.2. “It is inconsistent to say that the Trust Responsibility is met simply by meeting standards for the general public. Need to recognize the uniqueness of Tribes and the Trust Relationship. Trust relationship requires more than simply meeting what is required.”

Response 1.2. The NRC agrees with this comment. Under the Federal Trust Doctrine, the United States—and the individual agencies of the Federal government—owe a fiduciary duty to Indian Tribes. The nature of that duty depends on the underlying substantive laws (*i.e.*, treaties, statutes, agreements) creating the duty. The NRC exercises its Trust Responsibility under its authorizing statutes including the AEA, the Energy Reorganization Act of 1974, the Nuclear Waste Policy Act of 1982, the Low-Level Radioactive Waste Policy

Act of 1985, and the Uranium Mill Tailings Radiation Control Act of 1978, as amended. As an independent regulatory agency that does not hold in trust Tribal lands or assets or provide services to Federally recognized Tribes, the NRC fulfills its Trust Responsibility through implementation of the principles of the Tribal Policy Statement, by providing protections under its implementing regulations, and through recognition of additional obligations consistent with other applicable treaties and statutory authorities. The NRC Tribal Policy Statement formally reflects the NRC's recognition of the Federal Trust Responsibility and the NRC's commitment to a government-to-government relationship with Federally recognized Tribes that is distinct from interactions with members of the public. The NRC will consult in good faith with Indian Tribes on agency actions that have substantial direct effects on one or more Indian Tribes as well as those agency actions for which Tribal consultation is required under Federal Statute.

The NRC Tribal Policy Statement has been revised to reflect the comment, in part.

Comment 1.3. "NRC has not historically met its Trust Responsibilities. Tribal Advance Notification Rule and the requirement for tribes to 'opt-in' is inconsistent with the Tribal Policy Statement. States do not have to opt-in, while Tribes have to. Tribes should be given the opportunity to 'opt-out.'"

Response 1.3. The NRC disagrees with the comment that the NRC has not historically met its Trust Responsibility. Under the Federal Trust Doctrine, the United States—and the individual agencies of the Federal Government—owe a fiduciary duty to Indian Tribes. The nature of that duty depends on the underlying substantive laws (*i.e.*, treaties, statutes, agreements) creating the duty. The NRC exercises its Trust Responsibility under its authorizing statutes including the AEA, the Energy Reorganization Act of 1974, the Nuclear Waste Policy Act of 1982, the Low-Level Radioactive Waste Policy Act of 1985, and the Uranium Mill Tailings Radiation Control Act of 1978, as amended. As an independent regulatory agency that does not hold in trust Tribal lands or assets or provide services to Federally recognized Tribes, the NRC fulfills its Trust Responsibility through implementation of the principles of the Tribal Policy Statement, by providing protections under its implementing regulations, and through recognition of additional obligations consistent with

other applicable treaties and statutory authorities. The NRC Tribal Policy Statement formally reflects the NRC's recognition of the Federal Trust Responsibility and the NRC's commitment to a government-to-government relationship with Federally recognized Tribes that is distinct from interactions with members of the public. In addition to affording Tribal members protections under its implementing regulations, the NRC will consult in good faith with Indian Tribes on agency actions that have substantial direct effects on one or more Indian Tribes as well as those agency actions for which Tribal consultation is required under Federal statute.

While the comment related to the Tribal Advance Notification Rule is out of scope of the NRC Tribal Policy Statement, the NRC believes the Tribal Advance Notification Rule is consistent with the NRC Tribal Policy Statement because it requires Tribal governments to opt-in to participate in the advanced notification program. The Advance Notification to Native American Tribes of Transportation of Certain Types of Nuclear Waste (Tribal Advance Notification Rule) amends NRC rules to require licensees to provide advance notification to participating Federally recognized Tribal governments regarding shipments of irradiated reactor fuel and certain types of nuclear waste for any shipment that passes within or across their reservations (77 FR 34194). After reviewing public comments received during the development of the Tribal Advance Notification Rule, the NRC staff concluded that Tribes should have the option of whether to opt into the program because the program requires training, certain equipment, and has civil and criminal penalties for non-compliance.

The NRC Tribal Policy Statement has been revised to reflect the comment, in part.

Comment 1.4. "The ACHP [Advisory Council on Historic Preservation] recommends expanding the discussion on trust responsibility [related to policy principle 2 on Trust Responsibility] and including an acknowledgement of trust responsibility. For more information about trust responsibility, please reference the Bureau of Indian Affairs [BIA] definition of trust responsibility (<http://www.bia.gov/FAQs/>)."

Response 1.4. The NRC agrees with this comment. In comparison with the BIA, the NRC is an independent regulatory agency and does not hold in trust Tribal lands or assets or provide services to Federally recognized Tribes. Under the Federal Trust Doctrine, the

United States—and the individual agencies of the Federal Government—owe a fiduciary duty to Indian Tribes. The nature of that duty depends on the underlying substantive laws (*i.e.*, treaties, statutes, agreements) creating the duty. The NRC exercises its Trust Responsibility in the context of its authorizing statutes including the AEA, the Energy Reorganization Act of 1974, the Nuclear Waste Policy Act of 1982, the Low-Level Radioactive Waste Policy Act of 1985, and the Uranium Mill Tailings Radiation Control Act of 1978, as amended. As an independent regulatory agency that does not hold in trust Tribal lands or assets or provide services to Federally recognized Tribes, the NRC fulfills its Trust Responsibility through implementation of the principles of the Tribal Policy Statement, by providing protections under its implementing regulations, and through recognition of additional obligations consistent with other applicable treaties and statutory authorities. The NRC Tribal Policy Statement formally recognizes the unique relationship between the Federal Government and Indian Tribes and describes NRC's continuing commitment to a government-to-government relationship with Tribal governments that is distinct from the interactions that the agency has with members of the public. The discussion section of Policy Principle 1 has been revised to provide further clarification and acknowledgment of the NRC's Trust Responsibility.

The NRC Tribal Policy Statement has been revised to reflect the comment.

Comment 1.5. "To Indian tribes, upholding a Trust relationship with Indian tribes means more to Indian tribes than just ensuring the tribal members receive the same protections that are available to other persons (*i.e.*, the general public). In our view, the NRC is required to do more, not less."

"The 'trust responsibility' that the federal government owes to Indian tribes imposes both substantive and procedural duties on the federal government."

Response 1.5. The NRC agrees with the comment. Under the Federal Trust Doctrine, the United States—and the individual agencies of the Federal Government—owe a fiduciary duty to Indian Tribes. The nature of that duty depends on the underlying substantive laws (*i.e.*, treaties, statutes, agreements) creating the duty. The NRC exercises its Trust Responsibility under its authorizing statutes including the AEA, the Energy Reorganization Act of 1974, the Nuclear Waste Policy Act of 1982, the Low-Level Radioactive Waste Policy

Act of 1985, and the Uranium Mill Tailings Radiation Control Act of 1978, as amended. As an independent regulatory agency that does not hold in trust Tribal lands or assets or provide services to Federally recognized Tribes, the NRC fulfills its Trust Responsibility through implementation of the principles of the Tribal Policy Statement, by providing protections under its implementing regulations, and through recognition of additional obligations consistent with other applicable treaties and statutory authorities. The NRC Tribal Policy Statement formally reflects the NRC's recognition of the Federal Trust Responsibility and the NRC's commitment to a government-to-government relationship with Federally recognized Tribes that is distinct from interactions with members of the public.

Other procedural components for carrying out interactions with Tribal governments are articulated in the Tribal Protocol Manual and specific agency regulations and guidance documents.

The NRC Tribal Policy Statement has been revised to reflect the comment.

Comment 1.6. "PIIC [Prairie Island Indian Community] believes that the trust responsibility must mean more than solely complying with existing statutes and regulations. Compliance of this type is no different than what is owed to the general public. In order for the trust responsibility to have any vitality, Federal agencies must exercise a higher responsibility when taking action that may affect a tribe. This is especially true when the issues concern lands held in trust by the United States for a tribe and the tribal cultural and historic resources and a tribe's ancestral homeland."

Response 1.6. The NRC agrees with this comment. Under the Federal Trust Doctrine, the United States—and the individual agencies of the Federal Government—owe a fiduciary duty to Indian Tribes. The nature of that duty depends on the underlying substantive laws (*i.e.*, treaties, statutes, agreements) creating the duty. The NRC exercises its Trust Responsibility under its authorizing statutes including the AEA, the Energy Reorganization Act of 1974, the Nuclear Waste Policy Act of 1982, the Low-Level Radioactive Waste Policy Act of 1985, and the Uranium Mill Tailings Radiation Control Act of 1978, as amended. As an independent regulatory agency that does not hold in trust Tribal lands or assets or provide services to Federally recognized Tribes, the NRC fulfills its Trust Responsibility through implementation of the principles of the Tribal Policy

Statement, by providing protections under its implementing regulations, and through recognition of additional obligations consistent with other applicable treaties and statutory authorities. The NRC Tribal Policy Statement formally reflects the NRC's recognition of the NRC's commitment to a government-to-government relationship with Federally recognized Tribes with respect to agency actions that have a substantial direct effect on one or more Indian Tribes that is distinct from interactions with members of the public. The NRC also upholds the statutory obligation to consult with Federally recognized Tribes under Section 106 of the NHPA, which is intended to protect historic properties that may be affected by a Federal undertaking. The NHPA requirement to engage in Tribal consultation applies regardless of the location of the historic property and can include Tribal ancestral lands that are not part of the Tribe's current reservation or trust lands.

The NRC Tribal Policy Statement has been revised to reflect the comment.

2. Suggested changes to the language of the NRC Tribal Policy Statement

Multiple commenters proposed changes to the language of the NRC Tribal Policy Statement or to the discussion section that defines terms utilized throughout the NRC Tribal Policy Statement.

Comment 2.1. "While the 6 principles [of the NRC Tribal Policy Statement] originally proposed serve as foundation of which to build upon, the [U.S. Department of Energy] DOE National Transportation Stakeholders Forum Tribal Caucus believes the proposed principles should be expanded to include an additional Principle Policy Statement #7. Specifically, it is recommended that the existing policy statement include:

PRINCIPLE POLICY STATEMENT #7

7. NRC is committed to collaborating with tribes in regulatory activities that may have the potential of affecting tribal interests."

Response 2.1. The NRC disagrees with this comment. The NRC Tribal Policy Statement is consistent with EO 13175, which states "Policies that have tribal implications refers to regulations, legislative comments or proposed legislation, and other policy statements or actions that have substantial direct effects on one or more Indian Tribes, on the relationship between the Federal Government and Indian Tribes, or on the distribution of power and responsibilities between the Federal

Government and Indian Tribes." The suggested language could be interpreted to require the NRC to seek consultation and collaboration on all of NRC's activities because they have the potential to impact Tribal members even if the activity has no greater potential effect on Tribal members than the general public. For example, health and safety regulations relating to well-logging or medical use of byproduct material could fall under this definition. Therefore, the NRC limited the obligation for the NRC to specifically seek Tribal consultation to activities defined in EO 13175 and those for which Tribal consultation is required under Federal statute. However, Tribes can always request consultation with the NRC regarding "regulatory activities that may have the potential of affecting Tribal interests." The NRC would evaluate such requests on a case-by-case basis.

No change has been made to the NRC Tribal Policy Statement as a result of the comment.

Comment 2.2. [The commenter suggested including the underlined text in the discussion of policy principle 1.] "The NRC shall respect Indian Tribal self-government and sovereignty, will honor Tribal *treaty and other* rights, and meet responsibilities that arise from the unique relationship between the Federal government and Indian Tribal governments. *Further, the NRC shall encourage states to recognize the Federal government's trust relationship with Tribes and incorporate this recognition in their own practices."*

Response 2.2. The NRC disagrees with this comment. Our understanding of the phrase "Tribal rights" would also cover "tribal treaty and other rights," so the change is unnecessary.

Section 274b. of the AEA authorizes the NRC to enter into agreements with States so that the NRC relinquishes, and the State assumes, regulatory authority over the radioactive material and activities specified in the agreement. The NRC approves the agreement if the NRC finds the State program adequate to protect public health and safety and compatible with the NRC's regulatory program. The NRC periodically reviews the State's program, but the NRC does not mandate to the State how they should interact with Tribal governments when implementing these regulatory requirements and the States apply their own laws to implement their radiation control program for the specified AEA radioactive materials covered in the Agreement.

No change has been made to the NRC Tribal Policy Statement as a result of the comment.

Comment 2.3. [The commenter suggested including the underlined text in the discussion of policy principle 2, “The NRC Recognizes and Is Committed to a Government-to-Government Relationship With Indian Tribes.”] “The NRC recognizes the right of each Indian Tribe to self-governance and supports Tribal sovereignty and self-determination. The NRC recognizes Tribal governments as dependent domestic sovereign nations, independent from State governments, with separate and distinct authorities with inherent sovereign powers over their members and territory.”

Response 2.3. The NRC agrees with this comment. The second sentence of the discussion related to Policy Principle 2 now reads, “The NRC recognizes Tribal governments as dependent domestic sovereign nations, independent from State governments, with separate and distinct authorities with inherent sovereign powers over their members and territory, consistent with applicable statutes and authorities.”

The NRC Tribal Policy Statement has been revised to reflect the comment.

Comment 2.4. [The Commenter suggested including the underlined text in the discussion of policy principle 4, “The NRC Will Engage in Timely Consultation.”] “The NRC will provide timely notice to, and consult with, Tribal governments on NRC’s regulatory and non-regulatory actions that have substantial direct effects on one or more Indian Tribes. Tribal officials may request that the NRC engage in government-to-government consultation with them on matters that have not been identified by the NRC to have substantial direct effects on one or more Indian Tribes. The NRC will make efforts to honor such requests, taking into consideration the nature of the activity at issue, past consultation efforts, available resources, timing issues, and other relevant factors. The NRC will establish early communication and begin consultation at the earliest permissible stage, as appropriate. The NRC will consult in good faith throughout the agency decisionmaking process and develop and maintain regular and meaningful effective communication, coordination, and cooperation with Indian Tribes. The NRC representatives for consultations with Tribal officials or representatives will be of an appropriate rank of NRC representatives and level of interaction commensurate with the circumstances and who shall have decision-making power. The appropriate level of interaction will be determined by past and current practices, continuing

dialogue between NRC and Tribal governments, and program office consultation procedures.”

Response 2.4. The NRC agrees in part and disagrees in part with this comment. The term “regulatory action” is used to reflect the scope of the NRC’s mission as a regulatory agency, and no change has been made to the existing text. “Effective communication” already reflects that communication should be ongoing during the consultation process. The text has been revised to reflect that “The NRC representatives for consultations with Tribal officials or representatives will be of an appropriate rank and the level of interaction will be commensurate with the circumstances. The appropriate level of interaction will be determined by a discussion between the NRC and Tribal governments, and program office consultation procedures and guidance. Participating Tribal and NRC representatives will serve as respective decisionmakers, based on the established agenda and to the extent possible.”

The NRC Tribal Policy Statement has been revised to reflect the comment.

Comment 2.5. [The commenter suggested including the underlined text in the discussion of Policy Principle 5, “The NRC Will Coordinate with Other Federal Agencies.”] “The NRC Will Coordinate With Other Federal Agencies and States. When the Commission’s action involves other Federal agencies and States, the NRC will perform its Tribal consultation jointly with other Federal agencies and States, as appropriate.”

Response 2.5. The NRC agrees in part and disagrees in part with this comment. The NRC coordinates with other Federal agencies and with States, as appropriate, during consultations. For example, when following the regulatory procedures related to the NHPA and National Environmental Policy Act (NEPA) the NRC coordinates with the State by communicating with the State Historic Preservation Officer, who is included as a consulting party under the NHPA, or the State agency regarding State listed species of concern for environmental impact determinations on specific resource areas. The NRC disagrees that Policy Principle 5 should be revised to include States since the Principle is limited to Federal coordination.

No change has been made to the NRC Tribal Policy Statement as a result of the comment.

Comment 2.6. “The ACHP recommends defining *interactions* and using *interactions* consistently throughout the document. In certain cases, *interactions* could be confused

with more formal government to government consultations.”

Response 2.6. The NRC agrees with this comment. The definition of interaction has been included in the discussion section of the policy statement to identify activities covered by the term “interaction.”

The discussion section related to the NRC Tribal Policy Statement has been revised as a result of the comment.

Comment 2.7. “The ACHP recommends defining *substantial direct effects* in order to provide clarity to the NRC’s practices addressing Executive Order 13175.”

Response 2.7. The NRC disagrees with this comment. The use of “substantial direct effects” is consistent with the language used in EO 13175, which also does not define the term. Since the Tribal Policy Statement covers a vast range of regulatory activities, the NRC has not defined “substantial direct effects” in the NRC Tribal Policy Statement. The NRC will consider including criteria in future guidance documents to determine whether an activity has a “substantial direct effect” on one or more Indian Tribes.

No change has been made to the NRC Tribal Policy Statement as a result of the comment.

Comment 2.8. “The ACHP recommends specifying *outreach* should be done in addition to formal government to government consultation with Native Americans tribes and/or Native Hawaiian Organizations. Also, the NRC should include a definition for *outreach*. Outreach and consultation should be discussed as two separate activities conducted by the NRC.”

Response 2.8. The NRC agrees in part and disagrees in part with this comment. The NRC agrees that outreach is distinct from government-to-government consultation. The NRC Tribal Policy Statement reflects the distinction between outreach and consultation by putting forth two separate and distinct policy principles related to outreach and consultation. In an effort to provide clarification regarding the distinction between outreach and consultation, Policy Principle 3 has been revised.

The NRC agrees that a definition of *outreach* should be included in the Discussion Section in an effort to provide further clarification. The purpose of NRC’s Tribal outreach can be broad, ranging from participation in standing Tribal meetings hosted by Federal partners and Tribal organizations, to conducting informational meetings related to a licensing project or rulemaking, to an informational webinar. The NRC Tribal

liaison team continues to seek new opportunities to engage Tribal representatives.

The NRC disagrees that the NRC Tribal Policy Statement's discussion of outreach should include Native Hawaiian Organizations. The Tribal Policy Statement pertains to consultation with Tribal Governments recognized by the Federally Recognized Indian Tribe List Act of 1994, 25 U.S.C. 479a. (See response to Comment 4.1 for additional information regarding the Native Hawaiian Organizations.)

The NRC Tribal Policy Statement has been revised as a result of the comment.

Comment 2.9. "The ACHP recommends stating [in the discussion of policy principle 4, "The NRC Will Engage in Timely Consultation"] that it is the federal agency's responsibility to engage in consultation. It is not the tribe's responsibility to request engagement in consultation."

Response 2.9. The NRC agrees in part and disagrees in part with this comment. The NRC agrees that it is its responsibility to initiate consultation when Tribal consultation is required under Federal statute. The discussion of Policy Principle 4 has been revised to clarify that the NRC also engages in consultation when required under Federal statute. However, the NRC disagrees with the suggestion to state specifically in Policy Principle 4 that "it is the federal agency's responsibility to engage in consultation" or that "it is not the tribe's responsibility to request engagement in consultation." As stated in Policy Principle 4 the NRC will provide timely notice and consult in good faith with Tribal Governments on NRC regulatory actions that have substantial direct effects on one or more Indian Tribes as well as those regulatory actions for which Tribal consultation is required under Federal statute. In some circumstances, Federally recognized Tribes may request to engage in consultation on matters that have not been identified by the NRC as having substantial direct effects on one or more Indian Tribes or for which Tribal consultation is not required under Federal statute. The NRC can make a good faith effort to invite Tribes to consult, but cannot mandate their participation in the process.

The NRC Tribal Policy Statement has been revised to address this comment, in part.

Comment 2.10. "The Policy and Manual generally reflect the differences between outreach and consultation. However, there are several specific spots, discussed below, where the language is unclear or the terms are used interchangeably. Confusion as to

whether the NRC is engaged in outreach or consultation or the scope of consultation can result in confusion and delay. The Tribes may even get the impression that the NRC is only pretending to consult; see, for example, the eighth bullet on page 6 of the letter from the Seneca Nation of Indians, dated April 1, 2013, in this docket.

"Principles 3 and 4 of the Policy are potentially confusing as they use the terms 'consult' and 'outreach' interchangeably. In addition, these Principles state that they apply to 'regulatory actions' without clarifying whether what is meant are policy setting, rulemaking, issuing guidance, or a licensing action. As reflected in Section 1.D and associated note 25 of the Manual, as a regulatory agency, the NRC fulfills the fiduciary obligation to Tribes by ensuring uniform treatment action in providing protection under its implementing regulations. On the other hand, where the NRC is engaged in setting policy, issuing rules, or providing guidance that directly impact Tribes, consultation on subjects within the scope of the impact may be appropriate where the impact is significant. To minimize confusing ambiguity, the following clarifications are suggested:

A. The Policy

(1) In Principle 3, replace 'consult' with 'inform' in the first sentence and replace 'NRC regulatory actions that have substantial direct impacts on one or more Indian Tribe' with 'NRC regulatory actions, including licensing actions, in which one or more Indian Tribes have an interest.' This clarification ensures that outreach to Indian Tribes will include any regulatory action of interest to a Tribe."

Response 2.10. The NRC disagrees in part and agrees in part with this comment. The NRC recognizes that consultation and outreach are distinct terms that should not be used interchangeably. The NRC disagrees with the proposed changes to Policy Principle 3, but agrees that Policy Principle 3 should be revised to provide greater clarity. "Consult" has been removed from the first sentence, but "regulatory actions that have substantial direct impacts on one or more Indian Tribe" remains. The NRC Tribal Policy Statement reflects the distinction between outreach and consultation by setting forth two separate and distinct policy principles related to outreach and consultation. In an effort to provide clarification regarding the distinction between outreach and consultation, Policy Principle 3 has been revised. The purpose of NRC's Tribal outreach can be

broad, ranging from participation in standing Tribal meetings hosted by Federal partners and Tribal organizations to conducting informational meetings related to a licensing project or rulemaking to an informational webinar. The NRC Tribal liaison team continues to seek new opportunities to engage Tribal representatives.

The NRC Tribal Policy Statement has been revised as a result of the comment.

Comment 2.11. "In Principle 4, replace 'on NRC's regulatory actions' with 'prior to the NRC issuing policies, rules, or guidance' in the first sentence. This clarification reflects that consultation on NRC licensing actions would generally not be consistent with the NRC's statutory authority. This clarification also harmonizes the Policy with the Presidential directive for agencies to consult on policies with tribal implications, E.O. [Executive Order] 13175, § I(a), Nov. 6, 2000."

Response 2.11. The NRC agrees in part and disagrees in part with this comment. The focus of E.O. 13175 is specifically related to consultation on "policies that have Tribal implications" (i.e., "regulations, legislative comments on proposed legislation, and other policy statements or actions that have substantial direct effects on one or more Indian Tribes"). The revised text proposed by the commenter would harmonize the Policy Statement with the E.O. by replacing the term "NRC's regulatory actions" with a specific set of activities that are consistent with the activities covered in the E.O. However, the NRC Tribal Policy Statement covers a broader set of activities than those covered in the E.O. Not all NRC Tribal consultation is related to "policies, rules, or guidance" as noted in the comment. The NRC licensing actions may also trigger Tribal consultation under other Federal statutes. Therefore, the discussion of Policy Principle 4 has been revised to clarify the broader set of activities covered by the Policy Statement.

The NRC Tribal Policy Statement has been revised to address the comment, in part.

Comment 2.12. "Consistent with the practices of other agencies, the Policy designates an official to facilitate meaningful and timely consultations with Indian Tribes. See generally, E.O. [Executive Order] 13175, § 5(a), Nov. 6, 2000. The designated official is to work with other NRC personnel to ensure Tribal implications have been considered. The conclusions from these intra-agency considerations should be documented in the papers provided to the Commission (SECY papers), much

the way the conclusions of the Chief Financial Officer or legal office are reflected now. Such documentation would serve to provide timely feedback to the Commission, to be mindful with the resource implications associated with formal Tribal consultations, and to show respect for the solemnity of conducting Tribal consultations on a Government-to-Government basis. Also, the second sentence of the first paragraph under 'Designated Official and Tribal Liaisons' is an ambiguous, run-on sentence that does not clarify that where the NRC is engaged in setting policy, issuing rules, or providing guidance that directly impact Tribes, consultation on subjects within the scope of the impact may be appropriate where the impact is significant as reflected in Comment 2, above. It is suggested that sentence be split into four sentences that read:

The designated Official shall ensure that agency program personnel have considered the Tribal implications related to their responsibilities within the NRC's scope of jurisdiction. Where programs, policies, rulemaking or guidance are proposed to the Commission, the conclusions from review of these considerations shall be briefly discussed; specifically whether or not there potentially are direct effects on one or more Indian Tribes. The designated official shall facilitate meaningful and timely consultation concerning the development, administration, and enforcement of NRC's policy, rulemaking, or guidance actions that have a substantial direct effect on one or more Indian Tribes, including obtaining Commission approval to initiate formal consultation with one or more Indian Tribes on subjects within the scope of such substantial direct effects. Prior Commission approval to initiate consultation is not required where consultation is required by a Federal statute."

Response 2.12. The NRC agrees in part and disagrees in part with this comment. The NRC agrees that the "designated official" should be involved in regulatory actions that have Tribal implications, but disagrees with the commenter's suggested edits and related implications. Some of the commenter's proposed language would introduce procedures that are not appropriate for a high-level policy statement. The NRC would consider developing specific procedures in a future guidance document. Regulatory actions involving Tribal consultation, would be reviewed by the Office of the Executive Director for Operations, including the designated official, before being sent to the Commission. The NRC Tribal Policy Statement identifies the Deputy Executive Director for Materials, Waste, Research, State, Tribal, Compliance, Administration, and Human Capital

Programs as the "designated official" for purposes of the NRC Tribal Policy Statement, and not pursuant to E.O. 13175, as noted by the commenter. The NRC agrees that the second sentence of the section titled, "Designated Officials and Tribal Liaisons," referenced by the commenter should be restructured and has divided it into two sentences.

The NRC Tribal Policy Statement has been revised to reflect part of the comment.

3. Outreach and Consultation

Multiple commenters provided input related to the use of the terms "outreach" and "consultation" in the policy principles of the NRC Tribal Policy Statement.

Comment 3.1. "The NTAA [National Tribal Air Association] supports Principle No. 3 which provides:

The NRC Will Conduct Outreach to Indian Tribes.

The NRC will consult and coordinate with Indian Tribes, as appropriate, related to its regulatory actions with Tribal implications and will seek additional opportunities for general outreach. The NRC will participate in national and regional Tribal conferences and summits hosted by Federal agencies and Tribal organizations, and will seek Tribal representation in NRC meetings and advisory committees concerning NRC regulatory actions that have substantial direct effects on one or more Indian Tribes.

While the NTAA supports Principle No. 3, it does not find that current NRC outreach to Indian Tribes is being done or happening in a timely manner. For example, apart from some local efforts, the NTAA is unaware of any venue where Tribes are being brought together to discuss radiation issues and air quality impacts from the nuclear program. The NTAA finds that NRC must be more diligent in conducting outreach on all issues as they are brought to the attention of the NRC by Tribes, the NTAA, or other Tribal organizations."

Response 3.1. The NRC agrees in part and disagrees in part with this comment. The NRC agrees with the commenter's support of the NRC Tribal Policy Principle 3. The NRC disagrees that the NRC has not conducted outreach to Indian Tribes in a timely manner. While the NRC has not hosted particular meetings to bring Tribes together to discuss radiation issues and air quality impacts from the nuclear program, the NRC has participated in national and regional Tribal conferences and summits hosted by Federal agencies and Tribal organizations. Additionally, the NRC has provided instructor-led

training sessions at multiple Tribal Colleges and Universities to inform Tribes regarding NRC's mission, basic health physics, radiation safety, and environmental review. The NRC will continue to provide training, as needed, to Tribes who are affected by regulated activities and will seek outreach opportunities.

No change has been made to the NRC Tribal Policy Statement as a result of the comment.

Comment 3.2. "Principle No. 4: Development of a Consultation Plan. The NTAA recommends that Principle No. 4 require the NRC to also develop a comprehensive Tribal consultation plan for NRC regulatory and non-regulatory actions having potentially substantial direct effects on one or more Indian Tribes. Although Tribes consider consultation to be very important, Tribes have limited resources and time to expend on it. The NRC must be sensitive to this fact and make every effort to provide Tribes with any additional resources and assistance that they might require to engage in effective consultation. Some recommendations to help the NRC to conduct effective consultation with Tribes include:

1. Develop guidance on how the NRC intends to assure that consultation meetings result in meaningful dialogue rather than simply pro forma consultation;
2. Assign a Tribal liaison to the specific NRC action who has extensively worked with Tribes on similar issues; and

3. Provide adequate time to Tribes to review and provide comments concerning proposed NRC actions well beyond the 30- to 60-day periods provided to the public to make its comments."

Response 3.2. The NRC disagrees in part and agrees in part with this comment. The NRC staff has developed an implementation plan that will be revised to reflect the final NRC Tribal Policy Statement. The NRC disagrees that Policy Principle 4 should state specifically that the NRC has to develop a comprehensive Tribal consultation plan for NRC regulatory and non-regulatory actions having potentially substantial direct effects on one or more Indian Tribes. The NRC agrees that the NRC should consider development of consultation plans for actions that have substantial direct effects on one or more Indian Tribes as well as those regulatory actions for which Tribal consultation is required under Federal statute, in an effort to promote more effective consultations. The NRC Tribal liaison staff will continue to work in conjunction with program office staff

during licensing and other regulatory actions, and may be assigned to specific sites or actions, as resources and staffing permit. The NRC strives to establish an effective consultation process and will consider time allowed for Tribal engagement, including Tribal review and comment of relevant documents, on a case by case basis, as appropriate, during the regulatory process.

No change has been made to the NRC Tribal Policy Statement as a result of the comment.

Comment 3.3. “Further, the NRC must engage in government-to-government consultation with individual Tribes and not groups of Tribes which might occur as part of an outreach session at a conference or other similar gathering. Such a consultation approach is necessary for a number of reasons. First, it provides for more candid conversations between the individual Tribe and NRC than would occur otherwise during a group meeting. Second, each Tribe’s circumstances are unique and must be treated as such by the NRC. A group meeting of Tribes would only give short shrift to these circumstances. Third, most cultural resources information is protected from release under statutory exemptions to the Freedom of Information Act. Discussion of such information by an individual Tribe as part a group meeting of Tribes risks its release to the general public and potentially endangers Tribal cultural sites and practices. Finally, the subject matter may be so unique that government-to-government consultation between the individual Tribe and NRC provides the best opportunity for a resolution to the situation versus a group meeting of Tribes where any number of Tribal issues could be discussed in a finite period of time.”

Response 3.3. The NRC agrees with this comment. The NRC does not consider outreach during a conference to be consultation. The NRC will make an effort to engage Tribes on a government-to-government basis, and will consider whether it is more appropriate to consult individually or simultaneously with multiple Tribes, on a case-by-case basis, taking into consideration site-specific facts, resource limitations, and preference of consulting Tribes.

No change has been made to the NRC Tribal Policy Statement as a result of the comment.

Comment 3.4. “The NRC will consult and coordinate with Indian Tribes, as appropriate, related to its regulatory actions with Tribal implications and will seek additional opportunities for general outreach. The NRC will participate in national and regional

Tribal conferences and summits hosted by Federal agencies and Tribal organizations, and will seek Tribal representation in NRC meetings and advisory committees concerning NRC regulatory actions that have substantial direct effects on one or more Indian Tribes.

“Attending major tribal conferences and meetings is an excellent way of interacting with Indian tribes. As well, NRC staff should endeavor to attend meetings of other federal agencies that attract tribal representatives.

“ . . . [I]t is important to recognize that while there might not be delineated reservation or Trust lands in a given area that does not necessarily mean that there are no tribes interested in or impacted by NRC regulatory actions. Many tribes were forcibly removed from their ancestral lands or ceded vast tracts of land to the federal government through treaties and have retained or reserved rights (fishing, hunting, gathering) for these lands or these lands contain archaeological, cultural or historical resources, including important sacred sites.”

Response 3.4. The NRC agrees with this comment. The NRC agrees that attending conferences and meetings is an effective way of engaging Tribes and that the NRC staff should attend meetings held by other Federal agencies that attract Tribal representatives. The NRC staff participates in Tribal meetings hosted by other Federal agencies, including conferences hosted by the U.S. Environmental Protection Agency, the U.S. Department of Energy, and the U.S. Department of Transportation, along with meetings hosted by inter-Tribal organizations, including the National Congress of American Indians. The NRC also agrees that Tribes may have an interest in areas that do not have current reservation or trust lands. The current location and geographic proximity to NRC regulated sites is not the sole consideration of the NRC when engaging in outreach with Tribes. The NRC also considers whether there are Tribes that have historic and cultural ties to the land in question.

No change has been made to the NRC Tribal Policy Statement as a result of the comment.

Comment 3.5. [The Commenter provided input specific to policy principle 4, “The NRC Will Engage in Timely Consultation.”] “Early and frequent consultation must be the cornerstone of the government-to-government relationship. Publishing a notice in the **Federal Register** is not consultation. It should be noted that sometime the consultative process can take time.”

Response 3.5. The NRC agrees with this comment. The definition of “consultation” and Policy Principle 4 have been revised to provide further clarification. The revisions clarify that consultation is a process and may include, but is not limited to, providing for mutually-agreed protocols, timely communication, coordination, cooperation, and collaboration and provides opportunities for appropriate Tribal officials or representatives to meet with NRC management or staff to achieve a mutual understanding between the NRC and the Tribes of their respective interests and perspectives.

No change has been made to the NRC Tribal Policy Statement as a result of the comment.

4. NRC’s Government-to-Government Relationship With Tribes

Comment 4.1. “The ACHP recommends including Alaska Natives and Native Hawaiians in the NRC Tribal Policy Statement and the Tribal Protocol Manual. The NRC is responsible for licensing materials in Alaska and Hawaii. Additionally, the NRC should avoid homogenizing Native American tribes and reference Native American communities [in the Tribal Protocol Manual], not the Native American community.”

Response 4.1. The NRC disagrees in part and agrees in part with this comment. The NRC disagrees that the NRC Tribal Policy Statement should include Native Hawaiian Organizations. The NRC Tribal Policy Statement and Tribal Protocol Manual pertain to consultation with Tribal governments recognized by the Federally Recognized Indian Tribe List Act of 1994, 25 U.S.C. 479a. The definition of Indian Tribe includes Alaska Native Tribes. The United States has recognized and implemented a special political and Trust Responsibility with the Native Hawaiian community through programs and services that are, in many respects, analogous to, but separate from the programs and services enacted for Federally recognized Indian Tribes. However, Native Hawaiian Organizations are not governmental entities. As a result, Native Hawaiian Organizations are not covered by the NRC Tribal Policy Statement. The NRC does comply with statutory obligations to consult with Native Hawaiian Organizations. For example, the NRC consults with Native Hawaiian Organizations, as appropriate, under Section 106 of the NHPA.

The NRC agrees with the comment, “the NRC should avoid homogenizing Native American Tribes” and recognizes distinctions between Federally

recognized Tribes, as noted in the Tribal Protocol Manual. The Tribal Protocol Manual has been revised to reflect the suggested change from “community” to “communities.”

No change has been made to the NRC Tribal Policy Statement as a result of the comment.

Comment 4.2. “Taken together, both the Tribal Protocol Manual and the NRC Tribal Policy Statement (and their respective **Federal Register** notices) provide important historical information, such as various treaties, Congressional Acts affecting Indian tribes and rights, and a discussion of the Federal Trust Responsibility. This information provides the proper historical context critical to understanding the unique relationship federally recognized Indian Tribes have with the Federal Government. This point is underscored in the Tribal Protocol Manual, which notes that Indian tribes are not the public or special interest groups, but are, in fact, governments. This point is important in understanding why tribes desire to have a government-to-government relationship with the NRC and do not wish to be considered ‘stakeholders’.”

Response 4.2. The NRC agrees with this comment. The NRC Tribal Policy Statement and Tribal Protocol Manual underscore the NRC’s commitment to a government-to-government relationship with Indian Tribes. The NRC Tribal Policy Statement formalizes the NRC’s commitment to engaging Indian Tribes on a government-to-government basis, providing opportunities for participation in the NRC’s regulatory process beyond those available to members of the general public or interested stakeholders, consistent with the principles articulated in E.O. 13175.

No changes were made to the NRC Tribal Policy Statement or Tribal Protocol Manual as a result of the comment.

Comment 4.3. [The commenter provided input on policy principle 2, “The NRC Recognizes and Is Committed to a Government-to-Government Relationship with Indian Tribes.”]

“It should be noted that there are differences among tribes and that there is no ‘one size, fits all’ approach when it comes to interacting with and understanding Indian tribes. Each tribe is unique and should be treated as such. There should not be a ‘standard process’ as recommended by some commenters.”

Response 4.3. The NRC agrees with this comment. The NRC recognizes distinctions between Federally recognized Tribes, as noted in the Tribal Protocol Manual. The NRC Tribal Policy Statement does not prescribe a

“standard process” for interacting with Tribes. Instead, it identifies policy principles that guide the NRC’s interactions with Indian Tribes.

No changes were made to the NRC Tribal Policy Statement as a result of the comment.

5. Additional Comments

Comment 5.1. “The Nuclear Regulatory Commission should look to the policies and practices of the Environmental Protection Agency [EPA] in developing its relationship with tribal governments. In particular, the EPA identified certain tribal governments to be granted with the same treatment as states, allowing the tribes to have primacy in civil jurisdiction with regards to enforcement of EPA regulations on tribal lands. The NRC should consider implementing a similar policy with some or all tribal governments.”

Response 5.1. The NRC disagrees with this comment. Unlike States, the AEA does not authorize Tribal governments to assume regulatory authority over AEA radioactive material. However, the NRC has treated Federally recognized Tribes in a similar manner to States in some instances. For example, Tribal governments can participate in a program to receive advance notification of shipments of certain types of radioactive material and spent nuclear fuel under the Tribal Advance Notification Rule.

No change has been made to the NRC Tribal Policy Statement as a result of the comment.

Comment 5.2. “NRC needs to be committed to the Tribal Policy Statement. If not, policies can be easily side-stepped. NRC needs to implement these policies.”

Response 5.2. The NRC agrees with this comment. The Commission approved a Tribal Policy Statement Implementation Plan in March 2015 (ADAMS Accession No. ML15078A039), which aligns the agency’s Tribal activities with policy principles in the NRC Tribal Policy Statement. The NRC staff will utilize the plan to implement the NRC Tribal Policy Statement, and will update it, as appropriate.

No change has been made to the NRC Tribal Policy Statement as a result of this comment.

Comment 5.3. “The NRC should encourage tribal participation on working groups.”

Response 5.3. The NRC agrees with this comment. The NRC will consider inviting Tribes to participate on working groups related to regulatory actions that have substantial direct effects on one or more Indian Tribes, as appropriate.

No change has been made to the NRC Tribal Policy Statement as a result of the comment.

Comment 5.4. “As subject-matter experts, the NRC will invite tribal representatives to participate on working groups developed for those activities that have the potential of impacting tribal interests, including but not limited to: Integrated Performance Evaluation Program [(IMPEP)] Reviews, Rule-making and other related activities impacting our tribal governments.”

Response 5.4. The NRC disagrees in part and agrees in part with this comment. The NRC disagrees with the threshold for Tribal working group participation set by the commenter’s language, “for those activities that have the potential of impacting Tribal interests.” The NRC agrees that it may invite Tribal representatives to participate on working groups on matters that have substantial direct effects on one or more Indian Tribes, as appropriate. This is consistent with Policy Principle 3 on the NRC outreach to Indian Tribes, which states “The NRC will encourage Tribal governments to communicate their preferences to NRC staff during outreach activities and will seek to provide information about opportunities for Tribal participation in NRC meetings and advisory committees concerning NRC regulatory actions that have substantial direct effects on one or more Indian Tribes, as appropriate.” Because the NRC does not have statutory authority to enter into agreements with Tribes like it does with States, Tribal government employees cannot participate in IMPEP Reviews as a review team member in the same manner as an Agreement State government employee. However, IMPEP reports are publically available and meetings are open to the public.

No change has been made to the NRC Tribal Policy Statement as a result of the comment.

Comment 5.5. “Further, the NRC will present a yearly report to tribal organizations describing all agency undertakings involving or relating to Indian Tribes.”

Response 5.5. The NRC disagrees with this comment. The NRC has no current plans to present an annual report describing “all agency undertakings involving or relating to Indian Tribes.” As part of the NRC Tribal Policy implementation Plan, the NRC staff prepares an annual report of the agency’s implementation of the NRC Tribal Policy Statement, including some of the agency’s Tribal-related interactions. While the report is intended for internal use, it will be available on the NRC’s public Web site.

It will also be available in hardcopy, upon request.

No change has been made to the NRC Tribal Policy Statement as a result of the comment.

Comment 5.6. “Yes, extend the comment period.”

Response 5.6. The NRC agrees with this comment. The comment period was extended for the NRC Tribal Policy Statement from 120 days to 180 days. The NRC considers comments received after the end of the comment period if it is practical to do so, but the NRC is able to assure consideration only for comments received on or before the comment period closes.

No changes were made to the NRC Tribal Policy Statement as a result of the comment.

Comment 5.7. “We believe that the key to effectively implementing the Tribal Policy Statement is via actions that will protect Indian people, lands, and resources. Toward that end, an evaluation of existing staff guidance is a strong start. This evaluation should not be limited to the Tribal Protocol Manual, but all NRC staff guidance.”

Response 5.7. The NRC agrees with this comment. The NRC staff has reviewed numerous agency and office-level guidance documents to determine if changes were necessary before the Commission approves the final NRC Tribal Policy Statement, ensuring that the guidance documents are consistent with policy principles in the NRC Tribal Policy Statement. The NRC will revise guidance, as needed, to reflect the policy principles of the final NRC Tribal Policy Statement.

No change has been made to the NRC Tribal Policy Statement as a result of the comment.

Comment 5.8. “We suggest that the NRC work with a number of tribes, representing a cross-section of NRC regulatory activities, as well as the Bureau of Indian Affairs (BIA) to gain a better understanding of Indian land tenure and the potential consequences of contamination to Indian lands.

“We understand that the NRC may possibly be developing a guidance document pertaining to the National Historic Preservation Act (NHPA) Section 106 consultation. We applaud this effort. We recommend that the NRC work with tribes, the Advisory Council on Historic Preservation (ACHP), industry (limited participation), and possibly other federal agencies to develop this guidance document.

“Finalizing and fully implementing the Tribal Protocol Manual will also help NRC staff to be informed on tribal issues. Training, awareness, and

continuity of staff are also key elements of an effective tribal program.”

Response 5.8. The first part of this comment related to Indian land tenure is out of scope of the NRC Tribal Policy Statement. The NRC Tribal Policy Statement is an agencywide, high-level document that encompasses a broad range of NRC Tribal interactions, consultation, and outreach. NRC disagrees in part and agrees in part with the remainder of the comment. The NRC is in the process of finalizing NHPA Section 106 guidance for uranium recovery licensing. The NRC sought input from NRC Staff, ACHP, Tribal governments, industry representatives, and members of the public. The NRC published the draft Interim Staff Guidance, FSME-ISG-02, “Guidance for Conducting the Section 106 Process of the National Historic Preservation Act for Uranium Recovery Licensing Actions,” for public review and comment on June 18, 2014 (79 FR 34792). On September 3, 2014, the NRC extended the comment period (79 FR 52374). The NRC staff is in the process of developing the final program specific guidance. The NRC staff has reviewed staff guidance documents and concluded that no guidance documents directly contradict the NRC Tribal Policy Statement. The NRC staff review identified documents that will need to be revised to be consistent with the final NRC Tribal Policy Statement. Guidance will be updated as scheduled, and will incorporate the final NRC Tribal Policy Statement, as appropriate. The NRC staff has also developed and implemented a Tribal cultural sensitivity training that is available agencywide.

No change has been made to the NRC Tribal Policy Statement as a result of the comment.

6. Out of Scope Comments

Comment 6.1. “We have reviewed the comment letters submitted in 2013 by other entities on the Tribal Protocol Manual (most notably those representing the uranium mining industry) and found the comments to be self-serving, ill-informed and insensitive [to] tribal history, culture and tradition. These commenters complained that the Section 106 process was ‘too cumbersome, time consuming, and costly for the uranium recovery industry’ and that the pace of the consultation should be accelerated and standardized. Moreover, the commenters suggested that the NRC should not be making an exhaustive effort to identify all potentially impacted Indian tribes. In other words, hurry up and get it done!”

The NRC has an obligation under the NHPA to ensure that its actions do not have adverse impacts. The NRC also has an obligation to federally recognized Indian tribes.

With regard to tribes delaying the process or lacking incentive to work with the NRC, it should be noted that it can be a burden (financially and technically) to effectively participate in NRC proceedings.”

Response 6.1. This comment is out of scope of the NRC Tribal Policy Statement because the comment centers on specific statutory requirements to consult with Tribes under NHPA. The NRC Tribal Policy Statement is an agencywide, high-level document that encompasses a broad range of NRC Tribal interactions, consultation, and outreach. It does not prescribe procedural requirements for fulfilling NHPA consultation requirements. The NRC upholds all statutory obligations to consult with Federally recognized Tribes, including consultation responsibilities under the NHPA and NEPA.

No change has been made to the NRC Tribal Policy Statement as a result of the comment.

Comment 6.2. “The NEPA process (for either [an] EA [environmental assessment] or EIS [environmental impact statement]) does not ensure that environmental issues and concerns identified by the impacted tribes will be addressed adequately, as EA’s or EIS’s are disclosure tools that do not and cannot offer remedies or mitigation. It is through the NRC’s Atomic Safety and Licensing Board (ASLB) adjudicatory process that identified issues can be addressed (if the Board admits the affected tribe as an intervenor because the tribe has articulated a deficiency with an application before the NRC). Achieving intervenor status is a difficult and costly undertaking, given the high legal and regulatory standards to be met. Nevertheless, this is a huge barrier that many tribes cannot overcome and this should be recognized a severe limitation to effective participation by any tribes impacted by NRC licensing actions.”

Response 6.2. This comment is out of scope of the NRC Tribal Policy Statement. The NRC Tribal Policy Statement is an agency-wide, high-level document that encompasses a broad range of NRC Tribal interactions, consultation, and outreach. It does not prescribe procedural requirements for fulfilling NEPA Tribal consultations. The process for achieving intervenor status before an NRC Atomic Safety and Licensing Board (or other NRC adjudicator) is outside the scope of the NRC Tribal Policy Statement. Under the

NRC Tribal Policy Statement, the NRC will provide timely notice and consult in good faith with Tribal governments on NRC's regulatory actions that have substantial direct effects on one or more Indian Tribes. In addition, Tribes will have the opportunity to raise environmental, historic, and cultural issues during the NEPA environmental review and NHPA process. This process provides an additional opportunity to address the Tribe's concerns with a proposed licensing action. Good faith efforts to consult with Indian Tribes under the NRC Tribal Policy Statement or during the NEPA and NHPA review process may also have the potential to resolve issues outside the hearing process.

No change has been made to the NRC Tribal Policy Statement as a result of the comment.

Comment 6.3. "In 2013, the NRC finalized its advance notification rule (10 CFR 71.97) that allows Indian tribes to receive advance notification of shipments of irradiated reactor fuel through reservation land (not Trust lands). To participate, interested tribes must 'opt in' and complete safeguards training. Although the NRC was very flexible with some of the prerequisites, the fact that no tribe is currently participating in this pre-notification program should cause the NRC to pause and ask why. It could be that it is just too cumbersome for the tribes to participate, due to a lack of resources (staff, financial, etc.) or competing priorities for resources."

Response 6.3. This comment is out of scope of the NRC Tribal Policy Statement. The NRC Tribal Policy Statement is an agencywide, high-level document that encompasses a broad range of NRC Tribal interactions, consultation, and outreach. The Tribal Advance Notification Rule amended NRC regulations to require licensees to provide advance notification to participating Federally recognized Tribal governments regarding shipments of irradiated reactor fuel and certain types of nuclear waste for any shipment that passes within or across their reservations (77 FR 34194). After reviewing public comments received during the development of the Tribal Advance Notification Rule, the NRC staff concluded that Tribes should have the option of whether to opt into the program because the program requires training, certain equipment, and has civil and criminal penalties for non-compliance. As of July of 2016, one Indian Tribe completed the process of enrolling in the Tribal Advance Notification Program. A list of participating Tribes is maintained on

the NRC Web site at <http://www.nrc.gov/about-nrc/state-tribal/tribal-advance-notification.html#tribes>.

No change has been made to the NRC Tribal Policy Statement as a result of the comment.

Comment 6.4. "Principle No. 4: An Example of Lack of Implementation. In 2012, the NRC proposed an Advance Notification Rule, by which Indian Tribes would receive advance notification of shipments of irradiated reactor fuel and other nuclear wastes transported across their reservations. ("Tribal Advance Notification" at <http://www.nrc.gov/about-nrc/state-tribal/tribal-advance-notification.html#def> (last visited on April 12, 2015).)

"Yet, the NRC claims that 'there are no tribes that have the prerequisite required to receive advance notifications.' ("Tribal Advance Notification" at <http://www.nrc.gov/about-nrc/state-tribal/tribal-advance-notification.html#def> (last visited on April 12, 2015).)

"Nuclear waste is being transported through a number of reservations weekly by unmarked trucks (e.g., missing placards) and Indian Tribes of these reservations have not been made privy to the transportation schedules for the waste. Knowing the schedule would enable Tribes to protect their reservation environments by having emergency response teams in place in case of any accidental waste releases. Regardless of whether Tribes meet the aforementioned prerequisite, the NRC should still be actively consulting with Tribes on shipments across their reservations and other NRC actions having potentially substantial air quality and other direct effects on one or more Tribes.

"The NTAA has also seen several inconsistencies in the reporting of the number of regulated facilities in Indian Country. The NTAA finds that, an update of NRC's maps or inventories of regulated facilities, would help the NRC to more effectively contact and identify Tribes about NRC regulatory and non-regulatory actions having substantial air quality and other direct effects on one or more Tribes."

Response 6.4. This comment is out of scope of the NRC Tribal Policy Statement in part. The NRC Tribal Policy Statement is an agencywide, high-level document that encompasses a broad range of NRC Tribal interactions, consultation, and outreach. The Tribal Advance Notification Rule amended NRC regulations to require licensees to provide advance notification to participating Federally recognized Tribal governments regarding shipments of irradiated reactor fuel and certain types of nuclear waste for any shipment

that passes within or across their reservations (77 FR 34194). After reviewing public comments received during the development of the Tribal Advance Notification Rule, the NRC staff concluded that Tribes should have the option of whether to opt into the program because the program requires training, certain equipment, and has civil and criminal penalties for non-compliance. As of July of 2016, one Indian Tribe completed the process of enrolling in the Tribal Advance Notification Program. A list of participating Tribes is maintained on the NRC Web site at: <http://www.nrc.gov/about-nrc/state-tribal/tribal-advance-notification.html#tribes>. The NRC continues to update maps of Tribal reservation and trust lands within a 50-mile radius of NRC-regulated nuclear power plants. The NRC staff is developing tools that they may utilize to identify Tribal lands near other NRC-regulated facilities.

No change has been made to the NRC Tribal Policy Statement as a result of the comment.

Comment 6.5. "Hire natives to be liaisons with our own people. Create trust, transparency and rapport. These people have been deceived and betrayed since the white man stepped foot on this land. It's very important to really reach the native people and it's high time they got many seats at the round table. Thank you for your work and hope it can improve to genuinely include First Nation's peoples."

Response 6.5. This comment is out of scope of the NRC Tribal Policy Statement. The NRC Tribal Policy Statement is an agencywide, high-level document that encompasses a broad range of NRC Tribal interactions, consultation, and outreach. However, the NRC does seek to foster a diverse workplace. The Office of the Chief Human Capital Officer participates in extensive recruitment, including the American Indian Science and Engineering Society's annual conference. Additionally, the NRC's Office of Small Business and Civil Rights promotes diversity by sponsoring Equal Employment Opportunity Advisory Committees, including the Native American Advisory Committee (NAAC). The NAAC recommends initiatives and approaches to attract qualified Native Americans and Alaskan Natives to the NRC and to support and retain the Native American and Alaskan Native employees of the NRC. The Committee has also forged a working relationship with the American Indian Science and Engineering Society through a memorandum of understanding. For clarification, the

listed activities do not cover the “First Nations [of Canada]” referenced by the commenter.

No change has been made to the NRC Tribal Policy Statement as a result of the comment.

Comment 6.6. “Lastly, the NRC will ensure there are mechanisms in place to prevent an unfunded mandate upon any tribe, including but not limited to requirements of acquiring GSA safe or other supplies or materials as stipulated in the in the advance notification rule.”

Response 6.6. This comment is out of scope of the NRC Tribal Policy Statement. The NRC Tribal Policy Statement is an agencywide, high-level document that encompasses a broad range of NRC Tribal interactions, consultation, and outreach. The Tribal Advance Notification Rule amended NRC regulations to require licensees to provide advance notification to participating Federally recognized Tribal governments regarding shipments of irradiated reactor fuel and certain types of nuclear waste for any shipment that passes within or across their reservations (June 11, 2012; 77 FR 34194). After reviewing public comments received during the development of the Tribal Advance Notification Rule, the NRC staff concluded that Tribes should have the option of whether to opt into the program because the program requires training, certain equipment, and has civil and criminal penalties for non-compliance. The NRC is committed to ensuring that Tribal Nations are informed of the requirements for receiving Safeguards Information and sensitive information. It is the responsibility of all Tribal governments that volunteer to participate in the Tribal Advance Notification program to ensure that the information is secure and used in a manner that will provide for the protection of the public health and the environment.

No change has been made to the NRC Tribal Policy Statement as a result of the comment.

Comment 6.7. “It is important to note, even though NRC has expanded educational tools for Radiation Workshops as open communication protocol, there is a need for Native speakers to provide the information. Non-English speakers attend the workshops and do not comprehend the contents. More workshops related to DOE Radiation site locations throughout Indian Country is strongly urged that NRC has oversight. Many of these sites are under DOE-LM [DOE Office of Legacy Management] and not necessarily under DOE-EM [DOE Office of Environmental Management] as it

seems there is a communication barrier, and updated cleanups by site is missing, especially with transport of radioactive sludge from holding/evaporation ponds.

“Many transport routes go through Native communities, and are not part of the DOE-EM START [Stakeholder Tool for Assessing Radioactive Transportation] programming. It may be missing out of other regulatory components as 108(c) under DOE for transport. Consideration for links for the public with RECA [Radiation Exposure Compensation Act] benefits and DownWinder Web sites under NRC is important as many suffer the health devastation of cancer due to radiation.”

Response 6.7. This comment is out of scope of the NRC Tribal Policy Statement. The NRC Tribal Policy Statement is an agencywide, high-level document that encompasses a broad range of NRC Tribal interactions, consultation, and outreach. Previously the NRC staff received similar feedback on the inclusion of non-English speakers in the NRC’s Tribal Training Program. The NRC will consider the inclusion of Native speakers when arranging future training sessions for Tribes. DOE-EM START programming is not administered by the NRC, and therefore is not covered by the NRC Tribal Policy Statement. The RECA benefits are administered by the Department of Justice’s program for claims relating to atmospheric nuclear testing and claims relating to uranium industry employment. The NRC does not oversee the program, make related determinations, or administer payment of claims. The Downwinder Web sites are maintained by the U.S. Department of Health and Human Services and do not fall under the NRC’s jurisdiction.

No change has been made to the NRC Tribal Policy Statement as a result of the comment.

Comment 6.8. [The commenter quoted policy principle 5, “The NRC Will Coordinate with Other Federal Agencies,” stating “When the Commission’s action involves other Federal agencies, the NRC will perform its Tribal consultation jointly with other Federal agencies, as appropriate.”] “This will be especially important if/ when shipments of spent nuclear fuel to a federal repository or an interim storage facility commence. Shipments of spent nuclear fuel will involve the NRC, the US Department of Energy (DOE) and the US Department of Transportation (DOT). Equally important is the engagement of federal agencies involved in the uranium mining regulation (*i.e.*, the Bureau of Indian Affairs or the Bureau of Land Management).”

Response 6.8. This comment is out of scope of the NRC Tribal Policy Statement. The NRC Tribal Policy Statement is an agencywide, high-level document that encompasses a broad range of NRC Tribal interactions, consultation, and outreach. The NRC currently coordinates with other Federal agencies, as appropriate, on issues within its regulatory jurisdiction, including the shipment of spent nuclear fuel and licensing and regulation of uranium recovery facilities. Currently, there is neither a Federal repository for spent nuclear fuel nor an interim storage facility but the NRC will follow the Tribal Policy Statement and appropriate regulations when processing any applications for these facilities. The NRC does have regulations that govern the transport of spent nuclear fuel and implements them in coordination with relevant Federal agencies, including the DOE and the DOT. The NRC does not have regulatory authority over uranium mining facilities. However, the NRC does have regulatory authority over uranium recovery and uranium milling facilities and coordinates with other Federal agencies, as appropriate, including the Bureau of Land Management and EPA, during the consultation process.

No change has been made to the NRC Tribal Policy Statement as a result of the comment.

V. Procedural Requirements

Congressional Review Act Statement

This final NRC Tribal Policy Statement is a rule as defined in the Congressional Review Act (5 U.S.C. 801–808). However, the Office of Management and Budget has not found it to be a major rule as defined in the Congressional Review Act.

Paperwork Reduction Act Statement

This Policy Statement does not contain new or amended information collection requirements and, therefore, is not subject to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

Dated at Rockville, Maryland, this 3rd day of January, 2017.

For the Nuclear Regulatory Commission.

Annette L. Vietti-Cook,
Secretary of the Commission.

Tribal Policy Statement

The purpose of this Tribal Policy Statement is to set forth principles to be followed by the U.S. Nuclear Regulatory Commission (NRC) to promote effective government-to-government interactions with Federally recognized American Indian and Alaska Native Tribes, and to

encourage and facilitate Tribal involvement in the areas that the NRC has jurisdiction. It seeks to provide agencywide principles to achieve consistency but also encourage custom-tailored approaches to consultation and coordination that reflect the circumstances of each situation and the preference of each Tribal government. It is the NRC's expectation that all program and regional office consultation and coordination practices will be consistent with or adhere to the NRC Tribal Policy Statement. This NRC Tribal Policy Statement is based on the United States Constitution, treaties, statutes, Executive Orders, judicial decisions, and the unique relationship between Indian Tribes and the Federal government.¹

The following principles will guide the NRC's interaction with Indian Tribes:

1. The NRC Recognizes the Federal Trust Relationship With and Will Uphold Its Trust Responsibility to Indian Tribes

The NRC shares the Federal government's unique Trust Relationship with, and Trust Responsibility to, Indian Tribes. Under the Federal Trust Doctrine, the United States—and the individual agencies of the Federal government—owe a fiduciary duty to Indian Tribes. The nature of that duty depends on the underlying substantive laws (*i.e.*, treaties, statutes, agreements) creating the duty. The NRC exercises its Trust Responsibility in the context of its authorizing statutes including the Atomic Energy Act, the Energy Reorganization Act of 1974, the Nuclear Waste Policy Act of 1982, the Low-Level Radioactive Waste Policy Act of 1985, and the Uranium Mill Tailings Radiation Control Act of 1978, as amended. As an independent regulatory agency that does not hold in trust Tribal lands or assets or provide services to Federally recognized Tribes, the NRC fulfills its Trust Responsibility through implementation of the principles of the Tribal Policy Statement, by providing protections under its implementing regulations, and through recognition of additional obligations consistent with

¹ This Tribal Policy Statement is not intended to, and does not, grant, expand, create, or diminish any rights, benefits, or trust responsibilities, substantive or procedural, enforceable at law or in equity in any cause of action by any party against the United States, the Commission, or any person. This Tribal Policy Statement does not alter, amend, repeal, interpret, or modify Tribal sovereignty, any treaty rights of any Indian Tribes, or preempt, modify, or limit the exercise of such rights. Nothing herein shall be interpreted as amending or changing the Commission's regulations.

other applicable treaties and statutory authorities.

2. The NRC Recognizes and Is Committed to a Government-to-Government Relationship With Indian Tribes

The NRC recognizes the right of each Indian Tribe to self-governance and supports Tribal sovereignty and self-determination. The NRC recognizes Tribal governments as dependent domestic sovereign nations, independent from State governments, with separate and distinct authorities with inherent sovereign powers over their members and territory, consistent with applicable statutes and authorities.

3. The NRC Will Conduct Outreach to Indian Tribes

The NRC will conduct outreach to keep Indian Tribes informed about the agency's actions and plans, as appropriate, related to its regulatory actions that have substantial direct effects on one or more Indian Tribes. The NRC will participate in national and regional Tribal conferences and summits hosted by Federal agencies, Tribal governments, and Tribal organizations, as appropriate. The NRC will encourage Tribal governments to communicate their preferences to NRC staff during outreach activities and will seek to provide information about opportunities for Tribal participation in NRC meetings and advisory committees concerning NRC regulatory actions that have substantial direct effects on one or more Indian Tribes, as appropriate.

4. The NRC Will Engage in Timely Consultation

The NRC will provide timely notice and consult in good faith with Tribal governments on NRC's regulatory actions that have substantial direct effects on one or more Indian Tribes as well as those regulatory actions for which Tribal consultation is required under Federal statute.

Tribal officials may also request that the NRC engage in consultation with them on matters that have not been identified by the NRC to have substantial direct effects on one or more Indian Tribes as well as those regulatory actions for which Tribal consultation is not required under Federal statute. The NRC will make efforts to grant such requests, taking into consideration the nature of the activity at issue, past consultation efforts, available resources, timing issues, and other relevant factors.

The NRC will establish early communications and begin consultation as soon as practicable. The NRC will consult in good faith throughout the

agency decisionmaking process and develop and maintain effective communication, coordination, and cooperation with Indian Tribes. The NRC representatives for consultations with Tribal officials or representatives will be of an appropriate rank and the level of interaction will be commensurate with the circumstances. The appropriate level of interaction will be determined by a discussion between the NRC and Tribal governments, and program office consultation procedures and guidance. Participating Tribal and NRC representatives will serve as respective decisionmakers, based on the established agenda and to the extent possible.

5. The NRC Will Coordinate With Other Federal Agencies

When the Commission's action involves other Federal agencies, the NRC will perform its Tribal consultation jointly with other Federal agencies, as appropriate and to the extent possible.

6. The NRC Will Encourage Participation by State-Recognized Tribes

The NRC recognizes the distinction between Indian Tribes who are Federally recognized and those who are not. The NRC will reach out to States to identify the appropriate State-recognized Tribes to invite to participate in its regulatory process, including opportunities related to rulemaking, licensing and decommissioning.

Designated Official and Tribal Liaisons

The Deputy Executive Director for Materials, Waste, Research, State, Tribal, Compliance, Administration, and Human Capital Programs serves as the NRC's designated official for Tribal consultations. The designated official will ensure that the agency program personnel have considered the Tribal implications related to their responsibilities within the NRC's jurisdiction. The designated official will also make efforts to facilitate meaningful and timely consultation and coordination regarding NRC's regulatory actions that have substantial direct effects on one or more Indian Tribes as well as those regulatory actions for which Tribal consultation is required under Federal statute.

The designated official will be supported by staff who have functional responsibility to serve as intergovernmental liaisons to Indian Tribes. These NRC Tribal liaisons will facilitate government-to-government consultation by serving as the agency's primary points of contact for Indian Tribes, coordinating with the appropriate office or personnel

regarding programmatic inquiries, and will facilitate the appropriate level of communication and exchange of information between Tribal officials and the NRC staff. The Tribal liaisons will also educate the NRC staff about Tribal issues including cultural sensitivity and the Federal Trust Responsibility. The designated official will have the authority to delegate tasks to the NRC Tribal liaisons as he/she deems fit.

[FR Doc. 2017-00091 Filed 1-6-17; 8:45 am]

BILLING CODE 7590-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-79719; File No. SR-NYSEArca-2016-143]

Self-Regulatory Organizations; NYSE Arca, Inc.; Order Approving Proposed Rule Change, as Modified by Amendment No. 1 Thereto, Introducing NYSE OptX

January 3, 2017.

I. Introduction

On November 3, 2016, NYSE Arca, Inc. (the “Exchange”) filed with the Securities and Exchange Commission (“Commission”) pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (“Act”) ¹ and Rule 19b-4 thereunder, ² a proposed rule change to introduce NYSE OptX, an order entry platform that will allow for the submission of Qualified Contingent Cross orders (“QCC Orders”) by OTP Holders and OTP Firms. On November 15, 2016, the Exchange filed Amendment No. 1 to the proposal. ³ The proposed rule change, as modified by Amendment No. 1, was published for comment in the **Federal Register** on November 22, 2016. ⁴ The Commission received no comment letters on the proposed rule change. This order approves the proposed rule change, as modified by Amendment No. 1.

II. Description of the Proposed Rule Change

The Exchange proposes to introduce NYSE OptX, an order entry platform that will allow OTP Holders ⁵ and OTP

Firms ⁶ (collectively, “OTPs”) to submit QCC Orders to the Exchange. According to the Exchange, OTPs currently send QCC Orders to the Exchange through the use of third-party front end order management systems or by calling Floor Brokers and relaying their orders by telephone. ⁷

According to the Exchange, NYSE OptX is an order entry platform that will utilize a combination of Instant Messaging (“IM”) and browser-based technology to allow OTPs to submit QCC Orders for execution on the Exchange’s trading system. ⁸ To execute a QCC Order through NYSE OptX, an OTP will send the order in plain text to NYSE OptX, ⁹ which will then translate the message into a pre-populated order ticket with details of the order and return the order ticket to the OTP in a browser-based URL. The OTP will then confirm the order ticket and submit the order to the Exchange for execution, or send the order to a Floor Broker for execution. After an order is executed on the Exchange, NYSE OptX will remit details of the execution back to the OTP.

According to the Exchange, NYSE OptX is designed as an alternative to front end order management systems and the use of telephones for the sending of QCC Orders to the Exchange. ¹⁰ The Exchange notes that NYSE OptX will not provide OTPs with the capability to send any other type of orders or the capability to send QCC Orders for execution to other options markets. ¹¹ Further, OTPs will continue

OTP, or has been named as a Nominee. An OTP Holder must be a registered broker or dealer pursuant to Section 15 of the Act, or a nominee or an associated person of a registered broker or dealer that has been approved by the Exchange to conduct business on the Exchange’s Trading Facilities. *See* Exchange Rule 1.1(q).

⁶ The term “OTP Firm” refers to a sole proprietorship, partnership, corporation, limited liability company, or other organization in good standing that holds an OTP or upon which an individual OTP Holder has conferred trading privileges on the Exchange’s Trading Facilities pursuant to and in compliance with Exchange Rules. An OTP Firm must be a registered broker or dealer pursuant to Section 15 of the Act. *See* Exchange Rule 1.1(r).

⁷ *See* Notice, *supra* note 4, at 83891.

⁸ *See id.* The Exchange represents that NYSE OptX will not require any changes to the Exchange’s communication or surveillance rules. *Id.* at 83891, n.9.

⁹ The Exchange states that OTPs will be required to provide all the essential information regarding the QCC Order when sending it to NYSE OptX, including the price of the option and the stock, the size and side of the order, and delta. The Exchange further represents that QCC Orders sent to the Exchange for execution will comply with the order format and EOC entry requirements established by the Exchange. *See* Notice, *supra* note 4, at 83891, n.11. *See also* Exchange Rule 6.67—Order Format and System Entry Requirements.

¹⁰ *See* Notice, *supra* note 4, at 83891.

¹¹ *See id.*

to be able to submit QCC Orders through the use of a third-party front end order management system, or by telephone, as they currently do. ¹² The Exchange notes that use of OptX to send QCC Orders to the Exchange is optional and voluntary. ¹³

The Exchange stated that it will announce the effective date of NYSE OptX in a Trader Update to be published no later than 90 days following approval of this proposal, and that such effective date will be no later than 270 days following publication of the Trader Update. ¹⁴

III. Discussion and Commission Findings

After careful review, the Commission finds that the proposed rule change is consistent with the requirements of Section 6 of the Act ¹⁵ and the rules and regulations thereunder applicable to a national securities exchange. ¹⁶ In particular, the Commission finds that the proposed rule change is consistent with Section 6(b)(5) of the Act, ¹⁷ which requires, among other things, that the rules of a national securities exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest and that the rules not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

In particular, the Commission notes that, according to the Exchange, NYSE OptX will provide OTPs an alternative to third-party front end order management systems and the use of telephones to send QCC Orders to the Exchange. ¹⁸ Such an alternative may help protect the interests of investors by

¹² *See id.*

¹³ *See id.*

¹⁴ *See id.*

¹⁵ 15 U.S.C. 78f.

¹⁶ In approving this proposed rule change, the Commission has considered the proposed rule’s impact on efficiency, competition, and capital formation. *See* 15 U.S.C. 78c(f).

¹⁷ 15 U.S.C. 78f(b)(5).

¹⁸ *See* Notice, *supra* note 4, at 83891. As stated above, the Exchange represented that OTPs will be required to provide all the essential information regarding the QCC Order when sending the order to NYSE OptX and QCC Orders sent to the Exchange for execution will comply with the order format and EOC entry requirements established by the Exchange. *Id.* at 83891, n.11.

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ In Amendment No. 1, the Exchange clarified that QCC Orders sent through NYSE OptX to the Exchange for execution will comply with the order format and EOC entry requirements established by the Exchange, which are set forth in Exchange Rule 6.67.

⁴ *See* Securities Exchange Act Release No. 79327 (November 16, 2016), 81 FR 83890 (“Notice”).

⁵ The term “OTP Holder” refers to a natural person, in good standing, who has been issued an

offering OTPs an additional way to send QCC Orders to the Exchange for execution. The Commission notes that the use of OptX will be entirely voluntary and OTPs will still be able to submit QCC Orders as they do today, either through the use of third-party front end order management systems or by telephone. For these reasons, the Commission finds that the proposed rule change, as modified by Amendment No. 1, is consistent with Section 6(b)(5) of the Act and the rules and regulations thereunder applicable to a national securities exchange.

IV. Conclusion

IT IS THEREFORE ORDERED, pursuant to Section 19(b)(2) of the Act,¹⁹ that the proposed rule change (SR-NYSEArca-2016-143), as modified by Amendment No. 1, be, and hereby is, approved.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.²⁰

Eduardo A. Aleman,
Assistant Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-79724; File No. SR-Phlx-2016-105]

Self-Regulatory Organizations; NASDAQ PHLX LLC; Notice of Filing of Proposed Rule Change To Amend Rules 501, 507, 508, 510, and 511

January 3, 2017.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (“Act”)¹ and Rule 19b-4 thereunder,² notice is hereby given that on December 21, 2016, NASDAQ PHLX LLC (“Phlx” or the “Exchange”) filed with the Securities and Exchange Commission (“SEC” or “Commission”) the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Rule 501 (Specialist Appointment), Rule 507 (Application for Approval as an

SQT, RSQT, or RSQTO and Assignment in Options), Rule 508 (Transfer Application), Rule 510 (SQT and RSQT Performance Evaluation), and Rule 511 (Specialist Allocation and Performance Evaluation).³ The proposed amendments are described further below.

The text of the proposed rule change is available on the Exchange’s Web site at <http://nasdaqphlx.cchwallstreet.com/>, at the principal office of the Exchange, and at the Commission’s Public Reference Room.

II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization’s Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend: (1) Rule 501 to delete a reference to a back-up specialist; (2) Rule 507 to: Update the reference to “Board” to permit the Board to appoint a panel; update the composition of the review committee; and update the reference to Rule 510; (3) Rule 508 to delete the reference to “lease” and the cross-reference to Rule 511; (4) Rule 510 to re-entitle the rule “Good Standing for Specialist, SQT, and RSQT,”⁴ and add relevant good standing language, and appeal rights; and (5) Rule 511 to delete the rule.

Rules 501, 507, 508, 510, and 511 are part of the 500 series of rules in the Rules of the Exchange (the “Series 500 Rules”), which are entitled “Allocation, SQT, RSQT, and Evaluation Rules (Rule 500–599).”⁵ Many Series 500 Rules

were established more than three decades ago with the advent of options trading on the Exchange,⁶ at which time Exchange options trading was strictly on-floor open outcry through specialists. Exchange options trading has, since that time, developed into a robust hybrid system that is currently largely electronic and off-floor⁷ but continues to have an on-floor specialist⁸ and an open outcry trading floor. The Exchange is now updating and modernizing the Series 500 Rules as discussed below.⁹

Updating Rule 501

The Exchange proposes in Rule 501 to delete the reference to a back-up specialist.

Currently, Rule 501 states that initial application(s) to become a specialist unit shall include information regarding the specialist, back-up specialist unit and a substitute specialist unit. With the development of liquidity-enhancing electronic market makers on the Exchange such as RSQTs, which make markets in the same options issues as specialists, and the diminution of the

continues to have a hybrid options floor, but no longer has an equities floor or a commodities floor.

⁶ For example, Rules 501, 505, and 506, were adopted on a pilot basis in 1982. See Securities Exchange Act Release No. 18975 (August 17, 1982), 47 FR 37019 (August 24, 1982) (approval order regarding pilot in respect of Rules 501–506 and authorizing the Phlx Allocation, Evaluation and Securities Committee, which no longer exists). See also Securities Exchange Act Release No. 18975 (August 17, 1982), 47 FR 37019 (August 24, 1982) (SR-Phlx-81-1) (approval order regarding Rules 100, 201, 203 and 214 in combination with Rules 500 through 505). Rules 500, 501, 505, 506, 508, 511, 515, 520, 522, 523, 525, and 526 (of which Rules 500, 515, 516, 520, 522, 523, 525, and 526 no longer exist) were permanently approved in 1991. See Securities Exchange Act Release No. 29369 (June 26, 1991), 56 FR 30604 (July 3, 1991) (SR-Phlx-87-42) (order granting permanent approval). Rule 507 was adopted in 2004. See Securities Exchange Act Release No. 50100 (July 27, 2004), 69 FR 46612 (August 3, 2004) (SR-Phlx-2003-59) (order granting approval). Rule 510 was adopted in 2007. See Securities Exchange Act Release No. 55080 (January 10, 2007), 72 FR 2324 (January 18, 2007) (SR-Phlx-2006-51) (order granting approval). The Exchange has filed a separate proposal regarding two of the rules in the Series 500 Rules, namely Rules 505 and 506. See Securities Exchange Act Release No. 77121 (February 11, 2016), 81 FR 8308 (February 18, 2016) (SR-Phlx-2016-22) (notice of filing and immediate effectiveness to delete Rule 505 and update Rule 506).

⁷ Electronic traders include Registered Options Traders or “ROT’s,” that are Streaming Quote Traders or “SQT’s,” Remote Streaming Quote Traders or “RSQT’s,” as well as off-floor specialists (Remote Specialists) (collectively “market makers”). See Rules 1014(b)(ii)(A), 1014(b)(ii)(B), and 1020.

⁸ Unlike specialists, Remote Specialists do not have a physical presence on the floor of the Exchange. Rule 1020.

⁹ While the vast majority of options-related rules are found in Rule 1000 and higher (with option index rules found in Rule 1000A and higher), some of the older options-related rules are, as discussed, in the Series 500 Rules.

¹⁹ 15 U.S.C. 78s(b)(2).

²⁰ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ References to rules are to Phlx rules unless otherwise noted. The terms SQT, RSQT, RSQTO, and Specialist are discussed below.

⁴ “Specialist” is an Exchange member who is registered as an options specialist pursuant to Rule 1020(a). “Remote Specialist” is a specialist that does not have a physical presence on the floor of the Exchange. Streaming quote trader (“SQT”) and remote streaming quote trader (“RSQT”) are electronic traders on the Exchange pursuant to Rule 1014(b)(ii)(A) and Rule 1014(b)(ii)(B), respectively.

⁵ These Series 500 Rules apply to Exchange members that trade options. The Exchange

role that the specialist plays in managing the order book on the Exchange, both a back-up specialist and substitute specialist are no longer needed.¹⁰ Therefore, obsolete language in Rule 501 in respect of back-up specialists, which includes Commentary .01 to Rule 501, is proposed to be deleted from Rule 501. All of the other initial application requirements of Rule 501, which include the following information, remain unchanged: The identity of the individual who will act as head specialist and as assistant specialist(s) in the unit; the identity of the unit's staff positions and who will occupy those positions; the identity of a substitute specialist unit not associated with the specialist unit, which shall serve as a substitute specialist unit in the event that the specialist unit is unable to perform the duties of a specialist; the unit's clearing arrangements; and the unit's capital structure, including any lines of credit.¹¹

Updating Rule 507

The Exchange proposes in Rule 507 to update the reference to "Board," update the composition of the review committee, and update the reference to Rule 510.

First, Rule 507(a) currently states that the Board has the ability to perform functions such as deferring or limiting approval of SQTs or RSQTs. The Exchange proposes to replace the role of the Board with Exchange staff. The Exchange may therefore defer, for a period to be determined in the Exchange's discretion, approval of qualifying applications for SQT or RSQT status pending any action required to address the issue of concern to the Exchange. The Exchange's Membership department¹² may not defer a determination of the approval of the application of any SQT or RSQT applicant or place any limitation(s) on access to the Exchange's electronic quoting and trading system on any SQT or RSQT applicant unless the basis for such limitation(s) or deferral have been

objectively determined by the Exchange, subject to Securities and Exchange Commission approval or effectiveness pursuant to a rule change filing under Section 19(b) of the Securities Exchange Act of 1934, as amended. The Exchange shall provide written notification to any SQT or RSQT applicant whose application is the subject of such limitation(s) or deferral, describing the objective basis for such limitation(s) or deferral. The Exchange believes that this change will help with the administration and application of Rule 507. Also, there is an appeal to the Board from any action of Exchange staff within Rule 507(e).

Second, Rule 507(e) currently states that an appeal to the Board from a decision of the Exchange regarding an SQT, RSQT, or RSQTO¹³ application may be requested by a member or member organization; and that such appeal shall be heard by a special committee of the Board composed of three (3) Directors, at least one of whom will be Independent. In light of and commensurate with the first proposed Rule 507 change regarding the Board, the Exchange proposes to state that any appeal from a decision pursuant to Rule 507 may be heard by the Board or a panel appointed by the Board ("Board Panel") composed of three (3) members not materially involved in the Exchange decision appealed from;¹⁴ and that, as

¹³ "RSQTO" is a Remote Streaming Quote Trader Organization with up to five affiliated RSQTs. Rule 507(a).

¹⁴ The language stating that one of the Board members shall be an Independent is proposed to be deleted. The Exchange believes that this is proper as the "Independent" label is now a distinction with little, if any, effect. Whereas the vast majority of Phlx Board members were not Independent when Rule 507 was put into place and the Exchange was a membership corporation, and application of the Independent label may have made sense under those circumstances, the composition of the Phlx Board has radically changed since Phlx became a subsidiary of a public company, Nasdaq, Inc., in 2008. The By-Laws of the Exchange now provide that the Exchange may have Public Directors, Non-Industry Directors, and Industry Directors; and that Industry Directors may include no more than two officers of the Exchange, selected at the sole discretion of the Board, which may serve in the role of Staff Director (not Independent). Phlx By-Laws Article I. See also Securities Exchange Act Release No. 77165 (February 17, 2016), 81 FR 9041 (February 23, 2016) (SR-BSECC-2015-002; SR-SCCP-2015-02; SR-BX-2015-085; SR-NASDAQ-2015-160; SR-Phlx-2015-113) (order granting approval). Now, all but one of the twelve members on the Phlx Board are Independent (the only exception being one Staff Board member who is an officer of the Exchange). Thus, in light of the composition of the Phlx Board, which has one Staff Board member, only one of the three Directors on the special committee discussed in current Rule 507 could even possibly be not Independent; and, by Phlx By-Laws no more than two Directors could ever be not Independent. The Exchange believes that, distinct from the Independent criteria, the ability of the Board to appoint a panel as proposed

now, there shall be no appeal to the Board from a decision of the Board Panel. If a Board Panel is appointed by the Board, three persons shall be selected to serve on the Board Panel and in making such selections the Board shall choose individuals whose background, experience and training qualify them to consider and make determinations regarding the subject matter to be presented to the Board Panel. The Exchange notes that references to "special committee" will now refer to "Board" or "Board Panel" with this proposal. The Board Panel shall consist of two members of the Exchange, or general partners or officers of member organizations and one other person that would qualify as a public member as defined in Article I of the By-Laws, whom the Board considers to be qualified.

Third, Rule 507(b) currently states that, when making a decision concerning an application for assignment in an option, the Exchange shall consider the applicant's prior performance as a specialist, SQT, or RSQT based on evaluations conducted pursuant to Exchange Rule 510.¹⁵ The Exchange is, as discussed below, proposing to update Rule 510 so that in lieu of the current formulaic language in the rule, there is new language that accentuates the good standing of members. In light of this, the Exchange proposes to update the 507(b) reference to state that the Exchange can consider the applicant's prior performance as a specialist, SQT or RSQT based on "good standing pursuant to Rule 510." The Exchange is not proposing any other change to Rule 507. The Exchange notes that the other aspects of Rule 507, such as, for example, RSQTO eligibility

will serve to enhance the ability to quickly assemble a panel in case of potential appeal, if one occurs. The Exchange notes that a special committee per Rule 507 has not been instituted since, let alone before, Phlx became a subsidiary of Nasdaq, Inc. The Exchange also notes that the compositional requirements for the Boards that oversee the three options markets under the umbrella of Nasdaq, Inc. (Phlx, The NASDAQ Options Market LLC ("NOM"), and NASDAQ BX, Inc. ("BX Options")) are similar. While there is no requirement in this proposal for an Independent panel member to be appointed to the Board Panel, the Exchange notes that the public member has some independent aspect. See Phlx By-Laws at Article I (hh), "The term 'public member' means a member of any committee appointed by the Board of Directors who has no material business relationship with a broker or dealer, the Exchange, or its affiliates."

¹⁵ Other factors for consideration include: (A) The financial and technical resources available to the applicant; and (B) the applicant's experience and expertise in market making or options trading. Rule 507(b).

¹⁰ The function of a back-up specialist unit not associated with the specialist unit, as in current Rule 501(b), is for one specialist unit on the floor to provide staffing when needed to another specialist unit on the floor. Because multiple specialist units are no longer present on the floor, the back-up function is no longer feasible. Moreover, as discussed below, the specialist unit must clearly indicate its staffing to the Exchange, and the substitute specialist requirement continues unchanged.

¹¹ Rule 501(a) and (b).

¹² Applications for SQTs and RSQTs would be reviewed by the Membership department. Today, the Exchange's Membership Department review applications for membership to Phlx for both equities and options members.

criteria,¹⁶ SQT and RSQT eligibility criteria,¹⁷ and technological ability for RSQTOs, SQTs, or RSQTs,¹⁸ remain in place.¹⁹

Updating Rule 508

The Exchange proposes in Rule 508 to delete the reference to “lease” and to Rule 511.

First, Rule 508 currently refers to “lease.” Leasing is no longer practiced on the Exchange, and for this reason the Exchange is proposing to delete this obsolete term from Rule 508. This is similar to a recent proposal wherein the Exchange noted that leasing is an obsolete term that should be deleted.²⁰

Second, Rule 508 currently refers to Rule 511, regarding specialists. The Exchange proposes to delete the Rule 508 reference to Rule 511. This is because, as discussed below, Rule 511 is proposed to be deleted as the language of Rule 510 is proposed to be modified to include specialists.²¹

¹⁶ These RSQTO criteria include: (A) Significant market-making and/or specialist experience in a broad array of securities; (B) Superior resources, including capital, technology and personnel; (C) Demonstrated history of stability, superior electronic capacity, and superior operational capacity; (D) Proven ability to interact with order flow in all types of markets; (E) Existence of order flow commitments; (F) Willingness to accept allocations as an RSQT in options overlying 400 or more securities; and (G) Willingness and ability to make competitive markets on the Exchange and otherwise to promote the Exchange in a manner that is likely to enhance the ability of the Exchange to compete successfully for order flow in the options it trades. Rule 507(a)(i).

¹⁷ These SQT and RSQT criteria include: (A) Significant market-making and/or specialist experience in a broad array of securities; (B) Superior resources, including capital, technology and personnel; (C) Demonstrated history of stability, superior electronic capacity, and superior operational capacity; (D) Proven ability to interact with order flow in all types of markets; (E) Willingness and ability to make competitive markets on the Exchange and otherwise to promote the Exchange in a manner that is likely to enhance the ability of the Exchange to compete successfully for order flow in the options it trades; (F) A current affiliation with an Exchange-approved RSQTO (RSQT applicants only). Rule 507(a)(ii).

¹⁸ No application for initial assignment in an option shall be approved without verification that (A) the RSQTO, SQT or RSQT applicant has sufficient technological ability to support his/her continuous quoting requirements as set forth in Rule 1014(b)(ii), and (B) the RSQTO, SQT or RSQT applicant has successfully completed, or is scheduled to complete, testing of its quoting system with the Exchange. Rule 507(b)(ii).

¹⁹ Specialist (and Remote Specialist) eligibility and qualification requirements are discussed in Rules 501, 506, 1014, and 1020.

²⁰ See Securities Exchange Act Release No. 77121 (February 11, 2016), 81 FR 8308 (February 18, 2016) (SR-Phlx-2016-22) (notice of filing and immediate effectiveness to delete Rule 505 and update Rule 506).

²¹ Rule 508 will continue to indicate, without reference to Rule 511, that failure to provide the Exchange prior notice of a transfer in accordance with Rule 508, or failure to obtain Exchange approval of a transfer, permits the Exchange to

Updating Rule 510

The Exchange proposes to entitle Rule 510 “Good Standing for Specialist, SQT, and RSQT” and to add relevant good standing language.

First, Rule 510 currently applies only to SQTs and RSQTs. The Exchange proposes to change the language of Rule 510 to indicate that this rule will also be applicable to specialists. Thus, the Exchange proposes to entitle Rule 510 as “Good Standing for Specialist, SQT, and RSQT.” The good standing requirement, which is discussed below, is a continuous requirement rather than a periodic evaluation requirement as in current Rules 510 and 511.²² The requirements to remain in good standing are discussed in the new language in Rule 510(a). These obligations will be continuous and not periodic. The Exchange will provide written notice to a specialist (including Remote Specialist), SQT, or RSQT of a contemplated action regarding good standing pursuant to Rule 510, as noted below. A specialist (including Remote Specialist), SQT, or RSQT may request and the Exchange may hold an informal meeting to discuss the alleged failure to remain in good standing and to explore possible appropriate remedies. Written notice of the date and time of the meeting will be given to the specialist (including Remote Specialist), SQT, or RSQT and no verbatim record will be kept. If the Exchange believes there are no mitigating circumstances that would demonstrate substantial improvement of or reasonable justification for the failure to meet the good standing requirements of this Rule 510, the Exchange may take appropriate action pursuant to subsection (b) of this Rule 510. This process is described in further detail below. Exchange staff will evaluate good standing which entails continuous compliance with, among other things, Exchange options rules and procedures as well as market making requirements (market making requirements are found in Rule 1014).

Second, Rule 510 currently is written in terms of doing performance evaluations for SQTs and RSQTs. Currently, Rule 507 has a very detailed

recover the allocated securities and reallocate them pursuant to Rule 506.

²² Proposed Rule 510, which applies to specialists (including Remote Specialists), SQTs, and RSQTs, discusses that good standing on the Exchange means continuous compliance with, among other things, Exchange options rules and procedures as well as market making requirements (market making requirements are found in Rule 1014). In light of the proposed continuous and extensive good standing requirements per Rule 510 as well as other rule requirements, the old evaluations applicable to SQTs, RSQTs, and specialists are not needed.

process for applying for and approving SQTs and RSQTs, and for assigning options to SQTs and RSQTs. In addition, today Rule 501 defines the application and approval process for specialists.²³ To more closely align the Exchange with another options exchange, namely BX Options, the Exchange is adopting language similar to BX Options Rule at Chapter VII, Section 4 (the “BX Options rule”).²⁴ Similar to Phlx, BX Options has market makers (“BX Options Market Makers”, which are also known as lead market makers (“LMMs”)). All BX Options Market Makers are designated as specialists on BX for all purposes under the Act or rules thereunder.²⁵ The Exchange is adopting the BX Options rule and proposing, in lieu of the current formulaic language in Rule 510, to insert new language indicating how a member of the Exchange can remain in good standing on the Exchange. The Exchange believes that this new proposal will obligate market participants that conduct market making activities with continuous requirements to remain in good standing as compared to periodic requirements. The continuous requirements will serve to accentuate the good standing of members who have remained in compliance. The Exchange believes that it is important for market structure for these participants to have continuous

²³ Rules 506, 508, and 513 discuss other aspects of the process.

²⁴ See Securities Exchange Act Release No. 67256 (June 26, 2012), 77 FR 39277 (July 2, 2012) (order approving establishment of BX Options and marketplace rules) (SR-BX-2012-030).

²⁵ See BX Options Chapter VII, Section 2.

For obligations of BX Options Market Makers, see BX Options Chapter VII, Section 5, entitled “Obligations of Market Makers.” This section indicates that BX Options Markets Maker obligations include, but are not limited to: Maintain a course of dealings reasonably calculated to contribute to the maintenance of a fair and orderly market in transactions where acting in a market making capacity; not make bids or offers or enter into transactions that are inconsistent with such course of dealings; maintain a two-sided market, during trading hours, in those options in which the Market Maker is registered to trade, in a manner that enhances the depth, liquidity and competitiveness of the market; compete with other Market Makers in all options in which the Market Maker is registered to trade; update quotations in response to changed market conditions in all options in which the Market Maker is registered to trade; and maintain active markets in all options in which the Market Maker is registered.

The BX Options Market Maker obligations are similar in nature to those of Phlx specialists, which can be found in Phlx Rule 1014, entitled “Obligations and Restrictions Applicable to Specialists and Registered Options Traders,” and include: Maintain a fair and orderly market; not enter into transactions or make bids or offers that are inconsistent with such a course of dealings; quote a two-sided market; and maintain a two-sided market.

requirements to remain in good standing rather than only periodic evaluations.

The proposed new language is similar, in all material respects,²⁶ to BX Options rule at Chapter VII, Section 4. Specifically, the Exchange proposes to adopt new language in Rule 510(a) to state that to remain in good standing as a specialist (including Remote Specialist), SQT, or RSQT, the specialist, SQT, or RSQT must:

(i) Continue to meet the requirements established in SEC Rule 15c3–1(a)(6)(i),²⁷ and the requirements set forth in the Series 500 Rules in the Rules of the Exchange;

(ii) continue to satisfy the specialist, SQT or RSQT qualification and market making requirements specified by the Exchange, as amended from time to time;

(iii) comply with the Rules of the Exchange and the Options Rules²⁸ as well as the rules of The Options Clearing Corporation (“OCC”) and the rules of the Federal Reserve Board [sic “FRB”]; and

(iv) pay on a timely basis such member, transaction and other fees as the Exchange shall prescribe.²⁹

These proposed requirements to remain in good standing on the Exchange are not periodic, as are the evaluation and performance concepts in current Rules 510 and 511, but rather are continuous in nature.

Third, the Exchange notes that with the proposed new good standing requirements, specialist and other market maker (e.g., RSQT) obligations, such as market making, will continue to apply.³⁰ For specialists (and RSQTs functioning as Remote Specialists) the Rule 1014 market making obligations are applicable throughout the trading day. Thus, a specialist (or Remote Specialist) shall continue to be responsible to quote two-sided markets in the lesser of 99% of the series or 100% of the series minus one call-put pair in each option in which such specialist is assigned. To satisfy this requirement with respect to quoting a series, the specialist must quote such

series 90% of the trading day (as a percentage of the total number of minutes in such trading day) or such higher percentage as the Exchange may announce in advance. These obligations will apply collectively to all appointed issues of the specialist, rather than on an issue-by-issue basis. Compliance with this obligation will be determined on a monthly basis. However, determining compliance with the continuous quoting requirement on a monthly basis does not relieve the specialist (including the Remote Specialist) of the obligation to provide continuous two-sided quotes on a daily basis, nor will it prohibit the Exchange from taking disciplinary action against the specialist (including the Remote Specialist) for failing to meet the continuous quoting obligation each trading day.³¹

Fourth, the proposed new language in Rule 510(b) states that the good standing of a specialist (including Remote Specialist), SQT, or RSQT may be suspended, terminated or otherwise withdrawn, as provided in the Exchange’s rules, if any of these conditions for approval cease to be maintained or the specialist, SQT, or RSQT violates any of its agreements with the Exchange or any of the provisions of the Rules of the Exchange or of the Options Rules. The Exchange is proposing to add an Informal Meeting process and appeal rights, which do not exist in Rule 510 for specialists at this time.

The Informal Meeting process proposed in Rule 510 is based on the Informal Meeting process in current Rules 510 (for SQTs and RSQTs) and 511 (for specialists), which is in respect of performance evaluations. The Informal Meeting process proposed in Rule 510 is, however, in respect of good standing. Specifically, the Exchange proposes to amend Rule 510 to adopt the following language in Rule 510(b)(i): The Exchange will provide written notice to a specialist (including Remote Specialist), SQT, or RSQT of a contemplated action regarding good standing pursuant to this Rule 510. A

specialist (including Remote Specialist), SQT, or RSQT may request and the Exchange may hold an informal meeting to discuss the alleged failure to remain in good standing and to explore possible appropriate remedies. Written notice of the date and time of the meeting will be given to the specialist (including Remote Specialist), SQT, or RSQT and no verbatim record will be kept. If the Exchange believes there are no mitigating circumstances that would demonstrate substantial improvement of or reasonable justification for the failure to meet the good standing requirements of this Rule 510, the Exchange may take appropriate action pursuant to subsection (b) of this Rule 510. Nothing in this Informal Meeting process limits the Exchange from enforcing the rules of the Exchange, which may include a disciplinary action pursuant to such rules. The Regulatory staff may, for example, initiate a disciplinary action pursuant to Rule 960.3 against a member for failure to meet continuous quoting obligations in Rule 1014.³² The proposed appeal rights in Rule 510(c) are taken from current Rule 511, but expanded to cover specialists (including Remote Specialists), SQTs, and RSQTs.³³ Specifically, the Exchange proposes to amend Rule 510 to adopt the following language in Rule 510(c): An appeal by a specialist (including Remote Specialist), SQT, or RSQT to the Board of Directors from a decision of the Exchange may be requested by a member or member organization interested therein by filing with the Secretary of the Exchange written notice of appeal within ten (10) days after the decision has been rendered. Any appeal from a decision pursuant to Rule 510 may be heard by the Board or a Board Panel composed of three (3) members not materially involved in the Exchange decision appealed from.³⁴ If a Board

³² Specifically, the Exchange may pursue disciplinary process against a member that commits an egregious market making violation evidenced by a pattern of repeated failure to make a two-sided market in assigned options.

³³ The SQT and RSQT appeal rights to the Board currently in Rule 510 are limited to apply only in respect of performance evaluations. The Exchange believes that the appeal rights afforded SQTs and RSQTs in proposed Rule 510, which will be to the Board or a Board Panel, are appropriate in that they are expanded to cover any decision of the Exchange regarding Rule 510; and, an informal meeting process is also afforded prior to appeal. The Board or a Board Panel would serve as a secondary appeal to a group of individuals that were not involved in the primary decision making. The Exchange is seeking to afford its members due process when seeking an appeal.

³⁴ Rule 511(f) now states, in relevant part, that any appeal from a decision pursuant to Rule 511 regarding evaluation or review shall be heard by a special committee of the Board of Directors

²⁶ As with virtually all rules text copied from another exchange, changes are made to the proposed rule text to better fit the structure of the existing rules of the Exchange.

²⁷ SEC Rule 15c–3, 240 CFR 15c3–1, is the net capital requirement for brokers or dealers.

²⁸ As discussed, while the vast majority of options-related rules are found in Rule 1000 and higher (with option index rules in Rule 1000A and higher), some of the older options-related rules are found in rules below 1000, such as, for example, the Series 500 Rules.

²⁹ Member assessments are generally reflected in the Phlx Pricing Schedule.

³⁰ Other obligations include, for example: Order exposure, order handling, and best execution.

³¹ See Rule 1014(b)(ii)(D)(2).

For the market making obligations of SQTs and RSQTs (including Directed SQT or DRSQTs [sic], and Directed RSQTs or DRSQTs), which remain unchanged, see Rule 1014(b)(ii)(D)(1). This rule states that, like for specialists, compliance for SQTs and RSQTs will be determined on a monthly basis. However, determining compliance with the continuous quoting requirement on a monthly basis does not relieve an SQT, RSQT, DSQT, or DRSQT of the obligation to provide continuous two-sided quotes on a daily basis, nor will it prohibit the Exchange from taking disciplinary action against an SQT, RSQT, DSQT, or DRSQT for failing to meet the continuous quoting obligation each trading day. Rule 1014(b)(ii)(D)(1).

Panel is appointed by the Board, three persons shall be selected to serve on the Board Panel and in making such selections the Board shall, to the extent practicable, choose individuals whose background, experience and training qualify them to consider and make determinations regarding the subject matter to be presented to the Board Panel. The Board Panel shall consist of two members of the Exchange, or general partners or officers of member organizations and one other person who would qualify as a public member as defined in Article I of the By-Laws, whom the Board considers to be qualified. The person requesting review shall be permitted to submit a written statement to and/or appear before the Board or Board Panel. The Secretary of the Exchange shall certify the record of the proceeding, if any, and the written decision, and shall submit these documents to the Board or Board Panel. The Board's or Board Panel's review of the action shall be based solely on the record, the written decision and any statement submitted by the person requesting the review. The Board or Board Panel shall prepare and deliver to such person a written decision and reasons therefore. If the Board or Board Panel affirms the action, the action shall become effective ten (10) days from the date of the Board Panel's decision. There shall be no appeal to the Board from any decision of the Board Panel.³⁵

The memorialization of appeal rights in proposed Rule 510(c) is done to ensure that if the good standing of a specialist, SQT, or RSQT is suspended, terminated or otherwise withdrawn then they have a clear way to initiate and prosecute an appeal regarding such decision. The proposed due process methodology is similar to other rules of the Exchange. By proposing new language in Rule 510(a) and (b) regarding specialists, SQTs, and RSQTs regarding good standing, which is similar to that of BX Options, the continuous good standing rules of the Exchange and BX Options will be more aligned and easier to apply. Proposed Rule 510 describes an Informal Meeting process and appeal rights applicable to specialists (including Remote Specialists), SQTs, and RSQTs. The Exchange is replacing the current

composed of three (3) Directors, of whom at least one (1) shall be an Independent. The Exchange believes that, as discussed, the old independence requirement is no longer needed when Rule 510 is restructured. Commensurate with other proposed changes discussed herein, Rule 510 appeals can be heard by the Board or a Board Panel.

³⁵ The appeal process in proposed Rule 507(e) is amended to reflect an appeal to the Board or a Board Panel.

periodic evaluation or performance requirements in Rule 510 (e.g., monthly for SQTs and RSQTs), as also in Rule 511 (e.g., annually for specialists) as discussed, with the proposed Rule 510 *continuous* requirements for specialists (including Remote Specialists), SQTs, and RSQTs to meet Exchange, Commission, OCC and FRB rules and requirements to remain in good standing. Compliance with good standing requirements is monitored across the Exchange.³⁶

Deleting Rule 511

The Exchange has concluded that, with the placement of the good standing concepts into proposed Rule 510 in such a way that they include specialist (and Remote Specialist), Rule 511 is no longer needed. In Rule 510, as discussed, in lieu of the current language, the Exchange is proposing to adopt new language indicating how a member of the Exchange can remain in good standing.

The proposed new language in Rule 510 is, in all material respects, similar to the BX Options rule at Chapter VII, Section 4. Because of this proposed new language in Rule 510, which addresses specialists (as also Remote Specialists, RSQTs, and SQTs), the Exchange proposes to delete Rule 511 in its entirety. The Exchange believes that, within the effort to update and consolidate the Series 500 Rules as discussed, it is reasonable and proper to delete Rule 511. This rule was established decades ago for the purpose of dealing with the extensive on-floor open outcry specialist system, with multiple competing specialist units. Since the implementation of Rule 511, the open outcry options floor has evolved into a robust and competitive principally electronic system, and the

³⁶ Thus, in Rule 510 the Exchange is proposing an Informal Meeting process and appeal rights applicable to specialists (including Remote Specialists), SQTs, and RSQTs. And, the Exchange is replacing the current *periodic* evaluation or performance requirements in Rule 510 (e.g., monthly for SQTs and RSQTs), as also in Rule 511 (e.g., annually for specialists) as discussed, with the proposed Rule 510 *continuous* requirements for specialists (including Remote Specialists), SQTs, and RSQTs to meet Exchange, Commission, OCC and FRB rules and requirements to remain in good standing. Compliance with good standing requirements is monitored across the Exchange. Thus, for example, units that monitor the application, allocation, and fees requirements and processes include membership, listing, and finance groups. And the surveillance group will continue to use its current processes to monitor compliance with Exchange rules and where appropriate will pursue disciplinary action against members for rule violations(s) (e.g., failure to make two-sided market(s) per Phlx Rule 1014). Moreover, while proposed Rule 510 is being changed the market making and other obligations for specialists, SQTs, and RSQTs continue as discussed.

remaining hybrid options floor does not have numerous competing specialists as was the case when Rule 511 was instituted.

The Exchange believes that under the circumstances, and because specialists are proposed to be covered in Rule 510 in terms of good standing, and continue to be covered in the Series 500 Rules and other rules of the Exchange,³⁷ deletion of Rule 511 is proper.

As discussed, the Exchange is deleting the performance evaluation structure of Rule 511 and is proposing to relocate the concept within Rule 510 with the proposed good standing requirement and appeal rights applicable to specialists, SQTs, and RSQTs. The Exchange believes that the proposed good standing approach, which is applicable to specialists, SQTs, and RSQTs, enhances the current rule because unlike the periodic nature of the performance evaluation structure the proposed good standing approach would have continuous requirements that must be maintained in order to remain in good standing on the Exchange (e.g., compliance with the equity and options rules of the Exchange, OCC, and FRB).

As discussed, options trading on the Exchange has developed into a robust hybrid system that is currently largely electronic and off-floor. The Exchange continues to have an open outcry trading floor, however, rather than a proliferation of competitive specialists on the options floor as was the case when Rule 511 was instituted: There is currently one specialist unit on the options floor and therefore Rule 511 is not needed. In the past, when so many specialists conducted business on the options floor, Rule 511 served a purpose. Today, Rule 511, with its specialist evaluation process and allocation process constructed for multiple competitive specialists on the floor, is no longer needed with one specialist unit on the floor.³⁸ As such, in light of the current realities of the options floor Rule 511 is obsolete, particularly in light of numerous rules

³⁷ See, e.g., Rule 501 (Specialist Appointment); Rule 506 (Allocation Application, Allocation, Reallocation, and Transfer); Rule 508 (Transfer Application); and Rule 513 (Voluntary Resignation of Options Privileges). See also, e.g., Rule 1022 (Securities Accounts and Orders of Specialists and Registered Options Traders); and Rule 1020 (Registration and Functions of Options Specialists), which discusses on-floor options specialists and electronic Remote Specialists.

³⁸ The Exchange believes that even if additional floor specialists begin to conduct business on the options floor, Rule 511 was designed for a very different competitive floor environment and is not needed, particularly in light of proposed Rule 510 and the numerous other Exchange rules applicable to options specialists.

in the Phlx rulebook that apply to specialists.

The many rules that continue to apply to specialists discuss topics such as application, approval, allocation, re-allocation, market making, and obligations of specialists. For example, Rule 501 as proposed discusses the specialist allocation process and specialist approval process. To be an approved specialist unit and retain the privilege of such status, for example, a specialist unit must maintain the approved clearing arrangements and capital structure stated on their application and changes regarding certain requirements must be submitted and approved by the Exchange. In addition, each unit must consist of at least one head specialist and one assistant specialist that must be associated with the specialist unit; the Exchange, in its discretion, may require a unit to obtain additional staff depending upon the number of assigned options classes and associated order flow. Rule 506 discusses allocation application, reallocation of a previously allocated options, and transfer of allocated options.³⁹ Rule 506 also discusses that, in addition to a minimum allocation period of one year, the Exchange may establish an “alternate specialist period” period of less than one year to act as a specialist in an options class. Rule 508 as proposed discusses the Exchange approval process if there is agreement between or among specialist units to transfer one or more options classes already allocated to a specified specialist unit. Rule 513, which is not proposed to be amended with this filing, discusses the process if an option specialist unit voluntarily resigns from allocation in a particular option and there is a future allocation regarding such option.⁴⁰ In addition, Rule 1014 discusses the obligations and restrictions applicable to specialists and registered options traders during each trading day; these obligations and restrictions include, as discussed above, very specific market making requirements. Finally, Rule 1022 discusses securities accounts and orders of specialists and registered options traders and proper identification of

accounts, reporting of options, and orders of underlyings.⁴¹

The Exchange believes that the changes to the noted rules in the Series 500 Rules will make remaining Rules 501, 507, 508, and 510 easier to apply, clearer and better.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,⁴² in general, and furthers the objectives of Section 6(b)(5) of the Act,⁴³ in particular, in that it is designed to promote just and equitable principles of trade, to remove impediments to, and perfect the mechanism of a free and open market and, in general, to protect investors and the public interest by proposing to make changes to five rules in the Series 500 Rules as discussed. The proposed rule change is designed to promote just and equitable principles of trade by updating and modernizing the Series 500 Rules and making them clearer and easier to use while continuing to protect investors and the public interest.

In particular, the Exchange is proposing to change Rule 501 to delete reference to a back-up specialist. With the development of liquidity-enhancing electronic market makers on the Exchange such as RSQTs, which make markets in the same options issues as specialists, and the diminution of the role that the specialist plays in managing the order book on the Exchange, both a back-up specialist and substitute specialist are no longer needed. The Exchange believes that this proposal amendment is consistent with the Act because the advent of streaming quote traders on the Exchange served to perfect the mechanism of a free and open market because of the liquidity that such participants brought to Phlx. These participants are obligated to continuously quote in the market and have filled a role which was previously reliant on a back-up specialist and a substitute specialist.

Obsolete language in Rule 501 in respect of back-up specialists, which includes Commentary .01 to Rule 501, is proposed to be deleted from Rule 501. Similarly, the Exchange is proposing to change Rule 508 to delete the cross reference to Rule 511 and references to “lease.” As discussed, with the change in Rule 510 to the good standing

standard that applies to specialists as well as SQTs and RSQTs, Rule 511 is proposed to be deleted and therefore the reference is no longer needed. Moreover, leasing is no longer permitted on the Exchange, and for this reason the Exchange is proposing to delete this obsolete term from Rule 508. The Exchange believes it is consistent with the Act to delete obsolete references which serve to confuse members within the Rulebook.

The Exchange is proposing to amend Rule 507(a) to permit the Exchange, instead of the Board to defer approval of qualifying applications for SQT or RSQT status pending any action required to address the issue of concern to the Exchange. The applicant would have a right of appeal to the Board or a Board Panel of any action of Exchange staff pursuant to Rule 507(e). The Exchange believes that the application process should be handled by staff initially with appellate rights to the Board or a Board Panel. Currently Rule 507 states that the Board has the ability to perform functions such as deferring or limiting approval of SQTs or RSQTs. The Exchange believes that this amendment is consistent with the Act because it will change [sic] will promote just and equitable principles of trade by serving the administration and application of Rule 507 and permitting a right of appeal as provided in Rule 507(e).

With respect to Rule 507(e), the Exchange proposes to expand the appeal to either the Board or a Board Panel. Currently, Rule 507(e) states that an appeal shall be heard by a special committee of the Directors composed of three Directors, of whom at least one (1) shall be an Independent. The Exchange proposes to state that the appeal may be heard by a panel appointed by the Board composed of three (3) members not materially involved in the Exchange decision appealed from. If a panel is appointed by the Board, three persons shall be selected to serve on the panel and in making such selections the Board shall, to the extent practicable, choose individuals whose background, experience and training qualify them to consider and make determinations regarding the subject matter to be presented to the panel. The panel shall consist of two members of the Exchange, or general partners or officers of member organizations and one other person who would qualify as a public member as defined in Article I of the By-Laws, whom the Board considers to be qualified. The Exchange believes that this amendment is consistent with the Act because the Board or a Board Panel

³⁹ See Securities Exchange Act Release No. 77121 (February 11, 2016), 81 FR 8308 (February 18, 2016) (SR-Phlx-2016-22) (notice of filing and immediate effectiveness to delete Rule 505 and update Rule 506).

⁴⁰ One rule in the Series 500 Rules does not specifically deal with specialists. This is Rule 507, which was discussed above. This rule deals with the application and approval process for SQTs, RSQTs, or RSQTOs, and the assignment of options.

⁴¹ The Exchange has previously discussed that the allocation and evaluation process in Rule 511 proposed to be deleted made sense when the rule was established with multiple competitive specialists on the floor, but is no longer needed in light of the current composition of the floor.

⁴² 15 U.S.C. 78f(b).

⁴³ 15 U.S.C. 78f(b)(5).

would allow a path of impartial appeal for the applicant.

Also, currently Rule 507(b) states that when making a decision concerning an application for assignment in an option the Exchange shall consider the applicant's prior performance as a specialist, SQT or RSQT based on evaluations conducted pursuant to Exchange Rule 510. The Exchange proposes to update Rule 510 so that in lieu of the current formulaic language in the rule, there is new language that accentuates the good standing of members. In light of this, the Exchange proposes to update the 507(b) reference to state that the Exchange can consider the applicant's prior performance as a specialist, SQT or RSQT based on "good standing pursuant to Rule 510." The Exchange believes that this amendment is consistent with the Act because it will consider a more holistic approach in evaluating members that engage in market making activities. The Exchange believes that this approach is broader and will take new factors into account which would serve to promote just and equitable principles of trade in evaluating market participants that engage in market making activities by considering their obligations and past performance.

The Exchange is proposing to update Rule 510 to give it a new title, "Good Standing for Specialist, SQT, and RSQT," to add relevant good standing language, and appeal rights. The Exchange proposes to amend the language of Rule 510 to indicate that, with the deletion of Rule 511, Rule 510 will also be applicable to specialists. The Exchange proposes to change the language of Rule 510 to more closely align the Exchange with BX Options by adopting language from the BX Options rule at Chapter VII, Section 4. BX Options Market Makers are held to good standing standards per the BX Options rule. Specialists on Phlx are another type of market maker. The Exchange believes that these amendments are consistent with the Act because these changes serve to add clarity and transparency to the rule text.

The Exchange is adopting language from BX Options at Chapter VII, Section 4. Specifically, the Exchange proposes new language in Rule 510(a) to state that to remain in good standing on the Exchange as a specialist (including Remote Specialist), SQT, or RSQT, the specialist, SQT, or RSQT must meet specific requirements set forth in the rule.⁴⁴ As discussed, the proposed new

good standing language in Rule 510 will be, in all material respects, similar to BX Options rules at Chapter VII, Section 4. This makes particular sense because all BX Options Market Makers are designated as specialists on BX for all purposes under the Act or rules thereunder and, like Phlx specialists, have market making obligations.⁴⁵ The Exchange believes that the good standing rule text is consistent with the Act because as described above the Exchange believes that this approach is broader and will take new factors into account which would serve to promote just and equitable principles of trade in evaluating market participants that engage in market making activities by considering their obligations and past performance.

The Exchange is proposing to add an Informal Meeting process and appeal rights, which do not exist in Rule 510 for specialists; as discussed, the appeal rights now in Rule 510 are regarding SQTs and RSQTs only in respect of performance evaluations. These proposed appeal rights for a specialist (including Remote Specialist), SQT, or RSQT, which are set forth in Rule 510(c) for, are adopted from Rule 511. The memorialization in Rule 510 of Informal Meeting process and appeal rights is done to affirm that if the good standing of a specialist, SQT, or RSQT is suspended, terminated or otherwise withdrawn then they have a clear way to meet with the Exchange to discuss the issue and initiate and prosecute an appeal regarding such decision. The Exchange's proposal to expand the role of the Board to permit an appeal to be heard by a Board Panel appointed by the Board composed of three (3) members not materially involved in the Exchange decision appealed from is consistent with the Act because the Board or a Board Panel would allow a path of impartial appeal for the applicant.⁴⁶

forth in the Series 500 Rules in the Rules of the Exchange; (ii) continue to satisfy the specialist, SQT or RSQT qualification requirements specified by the Exchange, as amended from time to time; (iii) comply with the Rules of the Exchange and the Options Rules as well as the rules of the Options Clearing Corporation and the rules of the Federal Reserve Board; and (iv) pay on a timely basis such member, transaction and other fees as the Exchange shall prescribe. Proposed Rule 510(a).

⁴⁵ See, e.g., *supra* note 24 [sic] and accompanying discussion.

⁴⁶ If a Board Panel is appointed by the Board, three persons shall be selected to serve on the Board Panel and in making such selections the Board shall, to the extent practicable, choose individuals whose background, experience and training qualify them to consider and make determinations regarding the subject matter to be presented to the Board Panel. The Board panel shall consist of two members of the Exchange, or general partners or officers of member organizations and one other person that would qualify as a public member as

The Exchange has concluded that, with the placement of the good standing concepts into proposed Rule 510 in such a way that they include a specialist (and Remote Specialist), Rule 511 is no longer needed and is therefore proposed to be deleted in its entirety (with transfer of specialist appeal rights from Rule 511 to Rule 510).

The Exchange is proposing to delete Rule 511. This rule was established decades ago for the purpose of dealing with the extensive on-floor open outcry specialist system, with multiple competing specialist units. Since the implementation of Rule 511, the open outcry options floor has evolved into a robust and competitive system that is principally electronic, and the remaining hybrid options floor does not have numerous competing specialists as was the case when Rule 511 was instituted. The Exchange believes that because of the extensive changes on the option floor (from having numerous competitive specialist units on the old options floor to having a specialist unit on the current options floor), and because specialists are proposed to be covered in Rule 510 in terms of good standing and continue to be covered in the Series 500 Rules and other rules of the Exchange, it is consistent with the Act and promotes just and equitable principles of trade to delete Rule 511.

Furthermore, numerous rules in the Phlx Rulebook continue to apply to specialists (as well as to other registered options traders). For example, Rule 501 as proposed discusses the specialist allocation process and specialist approval process. Rule 506 discusses allocation application, reallocation of previously allocated options, and transfer of allocated options. Rule 508 as proposed discusses the Exchange approval process if there is agreement between or among specialist units to transfer one or more options classes already allocated to a specified specialist unit. Rule 513, which is not proposed to be amended with this filing, discusses the process if an option specialist unit voluntarily resigns from allocation in a particular option and there is a future allocation regarding that option. Rule 1014 discusses the obligations and restrictions, including specific market making requirements, that are applicable to specialists each trading day. Finally, Rule 1022 discusses proper identification of accounts, reporting of options, and orders of underlyings in respect of securities accounts and orders of specialists and ROTs.

defined in Article I of the By-Laws, whom the Board considers to be qualified.

⁴⁴ The specific good standing requirements are: (i) Continue to meet the requirements established in SEC Rule 15c3-1(a)(6)(i), and the requirements set

The Exchange believes that the changes to the noted rules in the Series 500 Rules will make remaining Rules 501, 507, 508, and 510 easier to apply, clearer and more transparent. Such proposed changes are in consistent with the Act, the public interest, and continue to serve to protect investors.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act, as amended. While the Exchange does not believe that the proposed change is a burden on competition, or is competitive in nature, the Exchange believes that clearer, updated, modernized, and better-conforming rules that do not refer to obsolete concepts are always beneficial to market participants, are in the public interest, and serve to protect investors.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the Exchange consents, the Commission shall: (a) By order approve or disapprove such proposed rule change, or (b) institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-Phlx-2016-105 on the subject line.

Paper Comments

- Send paper comments in triplicate to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-Phlx-2016-105. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-Phlx-2016-105, and should be submitted on or before January 30, 2017.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.⁴⁷

Eduardo A. Aleman,

Assistant Secretary.

⁴⁷ 17 CFR 200.30-3(a)(12).

Federal Register on November 3, 2016.⁸ The Commission has received 30 comment letters on the proposed rule change.⁹

Section 19(b)(2) of the Act¹⁰ provides that, after initiating disapproval proceedings, the Commission shall issue an order approving or disapproving the proposed rule change not later than 180 days after the date of publication of notice of filing of the proposed rule change. The Commission may extend the period for issuing an order approving or disapproving the proposed rule change by not more than 60 days if the Commission determines that a longer period is appropriate and publishes the reasons for such determination. The proposed rule change was published for notice and comment in the **Federal Register** on July 14, 2016. January 10, 2017 is 180 days from that date, and March 11, 2017 is 240 days from that date.

The Commission finds it appropriate to designate a longer period within which to issue an order approving or disapproving the proposed rule change so that it has sufficient time to consider this proposed rule change. Accordingly, the Commission, pursuant to Section 19(b)(2) of the Act,¹¹ designates March 11, 2017 as the date by which the Commission should either approve or disapprove the proposed rule change (File No. SR-BatsBZX-2016-30), as modified by Amendment No. 1.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-79720; File No. SR-NYSEMKT-2016-102]

Self-Regulatory Organizations; NYSE MKT LLC; Order Approving Proposed Rule Change, as Modified by Amendment No. 1 Thereto, Introducing NYSE OptX

January 3, 2017.

I. Introduction

On November 3, 2016, NYSE MKT LLC, on behalf of NYSE Amex Options (the “Exchange”) filed with the Securities and Exchange Commission (“Commission”) pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (“Act”) ¹ and Rule 19b-4 thereunder, ² a proposed rule change to introduce NYSE OptX, an order entry platform that will allow for the submission of Qualified Contingent Cross (“QCC”) Orders and orders executed in the Exchange’s Customer Best Execution (“CUBE”) Auction by ATP Holders. On November 15, 2016, the Exchange filed Amendment No. 1 to the proposal. ³ The proposed rule change, as modified by Amendment No. 1, was published for comment in the *Federal Register* on November 22, 2016. ⁴ The Commission received no comment letters on the proposed rule change. This order approves the proposed rule change, as modified by Amendment No. 1.

II. Description of the Proposed Rule Change

The Exchange proposes to introduce NYSE OptX, an order entry platform that will allow ATP Holders to submit QCC Orders and CUBE Orders (collectively, “paired orders”) to the Exchange. ⁵ According to the Exchange, ATP Holders currently send paired orders to the Exchange through the use of third-party front end order management systems or by calling Floor

Brokers and relaying their orders by telephone. ⁶

According to the Exchange, NYSE OptX is an order entry platform that will utilize a combination of Instant Messaging (“IM”) and browser-based technology to allow ATP Holders to submit paired orders for execution on the Exchange’s trading system. ⁷ To execute a paired order through NYSE OptX, an ATP Holder will send the order in plain text to NYSE OptX, ⁸ which will then translate the message into a pre-populated order ticket with details of the order and return the order ticket to the ATP Holder in a browser-based URL. The ATP Holder will then confirm the order ticket and submit the order to the Exchange for execution, or send the order to a Floor Broker for execution. After an order is executed on the Exchange, NYSE OptX will remit details of the execution back to the ATP Holder.

According to the Exchange, NYSE OptX is designed as an alternative to front end order management systems and the use of telephones for the sending of paired orders to the Exchange. ⁹ The Exchange notes that NYSE OptX will not provide ATP Holders with the capability to send any other type of orders or the capability to send paired orders for execution to other options markets. ¹⁰ Further, ATP Holders will continue to be able to submit paired orders through the use of a third-party front end order management system, or by telephone, as they currently do. ¹¹ The Exchange notes that use of OptX to send paired orders is optional and voluntary. ¹²

The Exchange stated that it will announce the effective date of NYSE OptX in a Trader Update to be published no later than 90 days following approval of this proposal, and that such effective date will be no later

⁶ See Notice, *supra* note 4, at 83889.

⁷ See *id.* The Exchange represents that NYSE OptX will not require any changes to the Exchange’s communication or surveillance rules. *Id.* at 83889, n.8.

⁸ The Exchange states that ATP Holders will be required to provide all the essential information regarding the paired order when sending the order to NYSE OptX, including the price of the option and the stock, the size and side of the order, and delta. The Exchange further represents that QCC Orders sent to the Exchange for execution will comply with the order format and EOC entry requirements established by the Exchange. See Notice, *supra* note 4, at 83889, n.10. See also Exchange Rule 955NY—Order Format and System Entry Requirements.

⁹ See Notice, *supra* note 4, at 83889.

¹⁰ See *id.*

¹¹ See *id.*

¹² See *id.*

than 270 days following publication of the Trader Update. ¹³

III. Discussion and Commission Findings

After careful review, the Commission finds that the proposed rule change is consistent with the requirements of Section 6 of the Act ¹⁴ and the rules and regulations thereunder applicable to a national securities exchange. ¹⁵ In particular, the Commission finds that the proposed rule change is consistent with Section 6(b)(5) of the Act, ¹⁶ which requires, among other things, that the rules of a national securities exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest and that the rules not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

In particular, the Commission notes that, according to the Exchange, NYSE OptX will provide ATP Holders an alternative to third-party front end order management systems and the use of telephones to send paired orders to the Exchange. ¹⁷ Such an alternative may help protect the interests of investors by offering ATP Holders an additional way to send paired orders to the Exchange for execution. The Commission notes that the use of OptX will be entirely voluntary and ATP Holders will still be able to submit paired orders as they do today, either through the use of third-party front end order management systems or by telephone. For these reasons, the Commission finds that the proposed rule change, as modified by Amendment No. 1, is consistent with Section 6(b)(5) of the Act and the rules

¹³ See *id.*

¹⁴ 15 U.S.C. 78f.

¹⁵ In approving this proposed rule change, the Commission has considered the proposed rule’s impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

¹⁶ 15 U.S.C. 78f(b)(5).

¹⁷ See Notice, *supra* note 4, at 83889. As stated above, the Exchange represented that ATP Holders will be required to provide all the essential information regarding the paired order when sending the order to NYSE OptX and QCC Orders sent to the Exchange for execution will comply with the order format and EOC entry requirements established by the Exchange. *Id.* at 83889, n.10.

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ In Amendment No. 1, the Exchange clarified that QCC Orders sent through NYSE OptX to the Exchange for execution will comply with the order format and EOC entry requirements established by the Exchange, which are set forth in Exchange Rule 955NY.

⁴ See Securities Exchange Act Release No. 79328 (November 16, 2016), 81 FR 83888 (“Notice”).

⁵ The term “ATP Holder” refers to a natural person, sole proprietorship, partnership, corporation, limited liability company, or other organization, in good standing, that has been issued an ATP. An ATP Holder must be a registered broker or dealer pursuant to Section 15 of the Act. See Exchange Rule 900.2NY.(5).

and regulations thereunder applicable to a national securities exchange.

IV. Conclusion

IT IS THEREFORE ORDERED, pursuant to Section 19(b)(2) of the Act,¹⁸ that the proposed rule change (SR-NYSEMKT-2016-102), as modified by Amendment No. 1, be, and hereby is, approved.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹⁹

Eduardo A. Aleman,
Assistant Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-79718; File No. SR-BatsEDGX-2016-41]

Self-Regulatory Organizations; Bats EDGX Exchange, Inc.; Notice of Filing of Amendment No. 1 and Order Granting Accelerated Approval of a Proposed Rule Change, as Modified by Amendment No. 1, Related to the Exchange's Equity Options Platform To Adopt a Price Improvement Auction, the Bats Auction Mechanism

January 3, 2017.

I. Introduction

On September 16, 2016, Bats EDGX Exchange, Inc. (the "Exchange" or "EDGX") filed with the Securities and Exchange Commission ("Commission"), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")¹ and Rule 19b-4 thereunder,² a proposed rule change for the Exchange's equity options platform ("EDGX Options") to adopt a price improvement auction, the Bats Auction Mechanism. The proposed rule change was published for comment in the **Federal Register** on October 5, 2016.³ The Commission received no comments regarding the proposal. On November 17, 2016, the Commission extended the time period within which to approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether to disapprove the proposed rule change.⁴ On December 15, 2016, EDGX filed

Amendment No. 1 to the proposal.⁵ The Commission is publishing this notice to solicit comment on Amendment No. 1 from interested persons and is approving the proposed rule change, as modified by Amendment No. 1, on an accelerated basis, with certain provisions subject to a pilot period scheduled to expire on January 18, 2017.

II. Description of the Proposal, as Amended

EDGX proposes to establish a price-improvement auction, the Bats Auction Mechanism ("BAM," "BAM Auction," or "Auction") on the Exchange's equity options platform, in which an Exchange Member (an "Initiating Member") may electronically submit for execution a two-sided paired order, where one side is an order it represents as agent on behalf of a Priority Customer,⁶ broker-dealer, or any other person or entity ("Agency Order") and the other side is principal interest or any other order it represents as agent (an "Initiating Order") provided that the Member first

⁵ In Amendment No. 1, EDGX provided additional details to its proposal and made certain changes to original aspects of the proposal. Specifically, the proposal as revised would: (i) Restrict an Auction from commencing with a stop price equal to a same side resting order unless the resting order is not a Priority Customer order, the Exchange's "Customer Overlay" is in effect, and the incoming Agency Order is a Priority Customer order; (ii) prohibit an Initiating Order from being a solicited order for the account of an Options Market Maker assigned in the affected series on the Exchange; (iii) describe a survey conducted by the Exchange regarding the ability of participants to respond to an Auction lasting no less than one hundred milliseconds and no more than one second; (iv) provide additional explanation and justification of certain aspects of the proposal, including additional examples describing Auction processing and order allocation in various scenarios and details regarding the handling of overlapping Auctions for 50 contracts or more; and (v) make other minor structural, technical, and clarifying amendments to the proposal and the proposed rule text that EDGX believes does not result in any material differences over its original proposal. Amendment No. 1 amends and replaces the original filing in its entirety. To promote transparency of its proposed amendment, when EDGX filed Amendment No. 1 with the Commission, it also submitted a comment letter to the file with a brief description of Amendment No. 1, which the Commission posted on its Web site and placed in the public comment file for SR-BatsEDGX-2016-41. The Exchange also posted a copy of its Amendment No. 1 on its Web site when it filed the amendment with the Commission.

⁶ A "Priority Customer" means any person or entity that is not: (A) A broker or dealer in securities; or (B) a Professional. The term "Priority Customer Order" means an order for the account of a Priority Customer. See EDGX Rule 16.1(a)(45). A "Professional" is any person or entity that: (A) Is not a broker or dealer in securities; and (B) places more than 390 orders in listed options per day on average during a calendar month for its own beneficial account(s). All Professional orders shall be appropriately marked by Options Members. See EDGX Rule 16.1(a)(46).

exposes the Agency Order in the BAM Auction pursuant to the proposed Rule.

A. Auction Eligibility Requirements

All options traded on the Exchange are eligible for BAM.⁷ To initiate a BAM Auction, an Initiating Member first must "stop" the Agency Order such that: (A) If the Agency Order is for less than 50 option contracts and the difference between the National Best Bid and Offer ("NBBO") is \$0.01, the Initiating Member must stop the entire Agency Order at one minimum price improvement increment better than the NBBO; or (B) for any other Agency Order, the Initiating Member must stop the entire Agency Order at the better of the NBBO or the Agency Order's limit price. In addition, if the EDGX BBO on the same side of the market as the Agency Order represents a Priority Customer order on the book, the stop price must be at least \$0.01 better than the booked order's limit price. If the EDGX BBO on the same side of the market as the Agency Order represents a quote or order that is not a Priority Customer order on the book, the stop price must be at least \$0.01 better than the booked order's limit price unless the Agency Order is a Priority Customer order and the Customer Overlay set forth in Rule 21.8(d)(1) is in effect.⁸ In addition, Auctions in the same series of Agency Orders for less than 50 contracts may not queue or overlap in any manner; however, Auctions of Agency Orders for 50 contracts or more will be allowed to occur at the same time as other Auctions (of any size Agency Order) in the same series.⁹ Finally, an

⁷ See proposed EDGX Rule 21.19(a).

⁸ According to the Exchange, this condition is consistent with the operation of the Exchange generally, where Priority Customer orders receive a priority advantage over all other orders. See Amendment No. 1, *supra* note 5. See also EDGX Rule 21.8(d)(1), which specifies that when the Customer Overlay is in effect, Priority Customer Orders shall have priority over orders on behalf of all other types of participants ("non-Customers") at the same price. The Exchange noted that the Customer Overlay is currently in effect with respect to all options traded on the Exchange. See Amendment No. 1, *supra* note 5.

⁹ In its proposal, the Exchange notes that although it is possible for one or more Auctions for 50 contracts or more to overlap, each Auction will be started in a sequence and will have a distinct conclusion at which time the Auction will be allocated. Therefore, when the first Auction concludes, unrelated orders that then exist will be considered for participation in that Auction. If there is remaining unrelated order interest after the first Auction has been allocated, then such unrelated order interest will be considered for allocation when the subsequent Auction is processed. If there are multiple Auctions underway that are each terminated early pursuant to proposed EDGX Rule 21.19(b)(2)(B) or (C), the Auctions will be processed sequentially based on the order in which they commenced. See Notice, *supra* note 3, at 69178-79 and Amendment No. 1, *supra* note 5. See also

¹⁸ 15 U.S.C. 78s(b)(2).

¹⁹ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ See Securities Exchange Act Release No. 78988 (September 29, 2016), 81 FR 69172.

⁴ See Securities Exchange Act Release No. 79339, 81 FR 84625 (November 23, 2016).

Agency Order may not be a solicited order for the account of any Options Market Maker assigned in the affected series.¹⁰ Agency Orders that do not comply with the aforementioned auction eligibility requirements will be rejected. In addition, Agency Orders submitted at or before the opening of trading or when the NBBO is crossed are not eligible to initiate an Auction and will be rejected.

B. Auction Process

To initiate the Auction, the Initiating Member must mark the Agency Order for Auction processing, and specify either: (A) A single price at which it seeks to execute the Agency Order (a "single-price submission"); (B) that it is willing to automatically match as principal or as agent on behalf of an Initiating Order the price and size of all BAM Auction Notification responses ("BAM responses") and other trading interest ("auto-match") as follows: (i) Stopping the entire order at a single stop price and auto-matching BAM responses and other trading interest at all prices that improve the stop price to a specified price; or (ii) stopping the entire order at a single stop price and auto-matching all BAM responses and other trading interest at all prices that improve the stop price. Once the Initiating Member has submitted an Agency Order for exposure in the Auction, such Agency Order may not be modified or cancelled.

Under no circumstances will the Initiating Member receive an allocation percentage, at the final price point, of more than 50% of the initial Agency Order in the event there is one competing quote, order, or BAM response or 40% of the initial Agency Order in the event there are multiple competing quotes, orders, or BAM responses.¹¹ However, when starting an Auction, the Initiating Member may submit the Agency Order with a designation of "last priority" to other BAM participants ("Last Priority"), which will result in the Initiating Member forfeiting priority and trade allocation privileges. If Last Priority is

proposed EDGX Rule 21.19(b)(3) and proposed Interpretation and Policy .04 to EDGX Rule 21.19. In addition, each BAM response must specifically identify the Auction for which it is targeted and will only be considered in the specified Auction. See Notice, *supra* note 3, at 69179 and Amendment No. 1, *supra* note 5. See also proposed EDGX Rule 21.19(b)(1)(E).

¹⁰ See proposed EDGX Rule 21.19(a)(6). The Exchange stated that this prohibition is based on a prohibition contained in other options exchanges' auction mechanisms. See Amendment No. 1, *supra* note 5. See also Chapter VI, Section 9(i)(F) of the NASDAQ BX, Inc. ("BX") Rules.

¹¹ See proposed EDGX Rule 21.19(b)(1)(A).

specified, the Initiating Order would trade only if there were not enough interest available to fully execute the Agency Order at prices which are equal to or improve upon the stop price.¹² Last Priority information would not be available to other market participants and may not be modified after the order is submitted to the Auction.

When the Exchange receives an Agency Order for Auction processing, an auction notification message detailing the side, size, price, and options series of the Agency Order would be sent over the Exchange's Multicast PITCH Feed and Auction Feed. BAM Auctions would be for a specified duration of no less than one hundred milliseconds and no more than one second, as determined by the Exchange and announced on the Exchange's Web site.¹³ Any person or entity other than the Initiating Member may submit a response to the Auction, provided such response is properly marked specifying price, size, side of the market, and information identifying the Auction to which the response is targeted. BAM responses would not be visible to Auction participants, and would not be disseminated to OPRA. The minimum price increment for BAM responses and for an Initiating Member's submission would be \$0.01,

¹² Last Priority will not be permitted if both the Initiating Order and Agency Order are Priority Customer Orders. See proposed EDGX Rule 21.19(b)(1)(B)(ii). In addition, Last Priority is only compatible with single-price submissions and cannot be designated on an Agency Order specified as auto-match. See proposed EDGX Rule 21.19(b)(1)(B)(iii).

¹³ The Exchange states that, in September 2016, it conducted a survey of active EDGX market maker firms and other active liquidity providers inquiring as to the timeframe within which these market participants can respond to an auction with a duration time ranging from less than fifty (50) milliseconds to more than one (1) second. Of the ten (10) active EDGX market maker firms that were surveyed, eight (8) responded to the survey. In addition, the Exchange included six (6) additional liquidity providers that are not active EDGX market makers but are active participants on EDGX Options. Of the survey respondents, 93% indicated that their firm could respond to auctions with a duration time of at least 50 milliseconds, and 100% indicated that their firm could respond to auctions with a duration time of at least 100 milliseconds. Based on the results of the survey, the Exchange believes that allowing for an auction period of no less than one hundred (100) milliseconds and no more than one (1) second would provide a meaningful opportunity for Members to respond to the BAM Auction while at the same time facilitating the prompt execution of orders. The Exchange believes that 100 milliseconds will continue to provide all market participants with sufficient time to respond, compete, and provide price improvement for orders and will provide investors and other market participants with more timely executions, thereby reducing their market risk. See Amendment No. 1, *supra* note 5.

regardless if the class trades in another increment.¹⁴

A BAM response with a size greater than the size of the Agency Order will be capped at the size of the Agency Order (*i.e.*, the excess size will be ignored when processing the Auction). BAM responses may be modified or cancelled during the Auction. BAM responses on the same side of the market as the Agency Order or with a Time in Force of IOC or FOK are considered invalid and will be immediately cancelled.¹⁵ Finally, multiple BAM responses from the same User may be submitted during the Auction. However, multiple orders at a particular price point submitted by a User in response to an Auction or resting on the EDGX Options Book will be aggregated together and will be capped at the size of the Agency Order (*i.e.*, the excess size will be ignored when processing the Auction).¹⁶ BAM responses cannot cross the price of the Initial NBBO but will be executed, if possible, at the most aggressive permissible price within such Initial NBBO.

C. Conclusion of an Auction and Order Allocation

The BAM Auction would conclude at the earlier of: (i) The end of the Auction period; (ii) upon receipt by the Exchange of a Priority Customer order on the same side of the market and at the stop price of the Agency Order that is to be posted to the EDGX Options Book; (iii) upon receipt by the Exchange of an unrelated order or quote that is not a Priority Customer order that is on the same side of the market as the Agency Order that would cause the Agency Order's stop price to be outside of the EDGX BBO; (iv) at the close of trading; or (v) any time there is a trading halt on the Exchange in the affected series.¹⁷

If the BAM Auction concludes earlier than the end of the prescribed Auction period for any of the reasons described

¹⁴ See proposed EDGX Rule 21.19(b)(1)(G). See also Amendment No. 1, *supra* note 5.

¹⁵ See proposed EDGX Rule 21.19(b)(1)(K). See also Amendment No. 1, *supra* note 5.

¹⁶ See proposed EDGX Rule 21.19(b)(1)(I).

¹⁷ See proposed EDGX Rule 21.19(b)(2). In Amendment No. 1, the Exchange stated that the proposed difference between scenario (ii), where an unrelated, same-side Priority Customer order will cause early termination of an Auction when it arrives on the Exchange at the stop price, and scenario (iii), where an unrelated, same-side order or quote from a non-Priority Customer will cause early termination of an Auction only when it would be better than the stop price, is consistent with the Exchange's belief that a Priority Customer order received and placed on the Exchange's order book should have certainty that it will be the first order executed at that price in response to contra-side liquidity. See Amendment No. 1, *supra* note 5.

above other than a trading halt, the Auction will be processed pursuant to the order allocation process set forth in proposed EDGX Rule 21.19(b)(4).¹⁸ In the event of a trading halt on the Exchange in the affected series, the Auction will be cancelled without execution.¹⁹

Any unexecuted BAM responses will be cancelled.²⁰ An unrelated market or marketable limit order (against the EDGX BBO) on the opposite side of the market from the Agency Order received during the Auction will not cause the Auction to end early and will execute against interest outside of the Auction.²¹ If contracts remain from such unrelated order at the time the auction ends, they will be considered for participation in the order allocation process. All unrelated orders submitted to the Exchange with contracts remaining at the time the Auction ends, including orders marked as Post Only Orders pursuant to EDGX Rule 21.1(d)(8),²² will be considered for participation in the order allocation process. If an Auction is initiated for an Agency Order designated as an “Intermarket Sweep Order” or “ISO” Order,²³ responses and executions will be permitted at a price inferior to the Initial NBBO.²⁴

At the conclusion of the Auction, the Agency Order will be allocated at the best price(s), pursuant to the priority set forth in proposed EDGX Rule 21.19(b)(4).²⁵ First, Priority Customer orders would have time priority at each price level. Next, the Initiating Member

would receive an allocation after Priority Customer orders.²⁶

If the Initiating Member selected the *single-price submission option*, BAM executions will occur first at prices that improve the stop price, and then at the stop price with up to 40% of the remaining contracts after Priority Customer interest is satisfied being allocated to the Initiating Member at the stop price. However, if only one other quote, order, or BAM response matches the stop price, the Initiating Member may be allocated up to 50% of the contracts executed at such price.

If the Initiating Member selected the *auto-match option*, the Initiating Member would be allocated a number of contracts equal to the aggregate size of all other quotes, orders, and BAM responses at each price point until a price point is reached where the balance of the order can be fully executed, except that the Initiating Member would be entitled to receive up to 40% (if there are multiple competing quotes, orders, or BAM responses) or 50% (if there is only one competing quote, order, or BAM response) of the initial Agency Order at the final price point (including situations where the stop price is the final price), after Priority Customer interest has been satisfied but before remaining interest receives an allocation.

After Public Customers and the Initiating Participant receive their allocations, and for classes designated by the Exchange as eligible for “Priority Order” status, Users with resting quotes and orders that were at a price that is equal to the Initial NBBO on the opposite side of the market from the Agency Order (“Priority Orders”) would have priority up to their size in the Initial NBBO at each price level at or better than such Initial NBBO. Priority Orders and BAM responses submitted by Users with Priority Order Status will be allocated pursuant to the algorithm set forth in EDGX Rule 21.8(c).²⁷

Finally, after Priority Customers, the Initiating Member, and Users with Priority Orders, if applicable, have received allocations, all other interest will be allocated pursuant to Rule 21.8(c).²⁸ Any remaining contracts will be allocated to the Initiating Member.

D. Crossing Agency Orders

The Exchange also proposes, in lieu of the BAM Auction procedures set forth in proposed paragraphs (a)–(b) to EDGX Rule 21.19, to allow an Initiating Member to enter an Agency Order for the account of a Priority Customer paired with an order for the account of another Priority Customer, and such paired orders will be automatically executed without an Auction. In its proposal, the Exchange notes that it would be a violation of EDGX Rule 22.12 for an Options Member to circumvent EDGX Rule 22.12 by providing an opportunity for (i) a Priority Customer affiliated with the Options Member, or (ii) a Priority Customer with whom the Options Member has an arrangement that allows the Options Member to realize similar economic benefits from the transaction as the Options Member would achieve by executing agency orders as principal, to regularly execute against agency orders handled by the firm immediately upon their entry as BAM Priority Customer-to-Priority Customer immediate crosses.²⁹

E. Pilot Program Information to the Commission

Subject to a pilot program expiring January 18, 2017,³⁰ there will be no minimum size requirement for orders to be eligible for the Auction. During this pilot period, the Exchange represents that it periodically will submit certain data, as requested by the Commission staff, to provide supporting evidence that, among other things, there is meaningful competition in BAM Auctions for all size orders and that there is an active and liquid market functioning on the Exchange outside of the Auction mechanism.³¹ The Exchange further noted that it would seek to request confidential treatment for any raw data that it submits to the Commission.³²

The Exchange represented that it will provide the following additional information on a monthly basis:

- (i) The number of contracts (of orders of 50 contracts or greater) entered into BAM Auctions;
- (ii) The number of contracts (of orders of fewer than 50 contracts) entered into BAM Auctions;

²⁹ See Notice, *supra* note 3, at 69176. See also Amendment No. 1, *supra* note 5 and proposed Interpretation and Policy .03 to EDGX Rule 21.19.

³⁰ See proposed Interpretation and Policy .05 to EDGX Rule 21.19.

³¹ See Notice, *supra* note 3, at 69176. See also Amendment No. 1, *supra* note 5.

³² See Notice, *supra* note 3, at 69176; Amendment No. 1, *supra* note 5. See also proposed Interpretation and Policy .05 to EDGX Rule 21.19.

¹⁸ See proposed EDGX Rule 21.19(b)(2)(A)–(D).

¹⁹ See proposed EDGX Rule 21.19(b)(2)(E).

²⁰ See proposed EDGX Rule 21.19(b)(5).

²¹ See proposed EDGX Rule 21.19(b)(3).

²² The Exchange noted that Post Only Orders would participate in an Auction in the same manner as any other unrelated order even if the Post Only Order would be considered to be removing liquidity from the Auction. See Amendment No. 1, *supra* note 5.

²³ “Intermarket Sweep Orders” or “ISO” Orders are limit orders that are designated as ISOs in the manner prescribed by EDGX and are executed within the System at one or multiple price levels without regard to Protected Quotations of other Eligible Exchanges as defined in EDGX Rule 27.1. ISOs are not eligible for routing pursuant to EDGX Rule 21.9. In Amendment No. 1, the Exchange described in greater detail how a BAM ISO would be handled if any better priced interest arrived on the Exchange’s order book after the BAM ISO was sent but before the corresponding Auction commenced. See Amendment No. 1, *supra* note 5 (stating that in this circumstance, any better priced interest in the order book at the time of such BAM Auction would be executed pursuant to the proposed Auction functionality).

²⁴ See proposed EDGX Rule 21.19(b)(6).

²⁵ See Notice, *supra* note 3, at 69176–78 and Amendment No. 1, *supra* note 5, for examples illustrating trade allocations under various auction scenarios.

²⁶ The Initiating Participant shall receive additional allocation only if contracts remain after any allocation pursuant to proposed EDGX Rule 21.19(b)(4).

²⁷ See proposed EDGX Rule 21.19(b)(4)(B)(iii). Priority Order status is only valid for the duration of the particular Auction.

²⁸ See proposed EDGX Rule 21.19(b)(4)(B)(iv).

(iii) The number of orders of 50 contracts or greater entered into BAM Auctions; and

(iv) The number of orders of fewer than 50 contracts entered into BAM Auctions.

III. Discussion and Commission Findings

After careful review, the Commission finds that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to a national securities exchange and, in particular, with Section 6(b) of the Act.³³ In particular, the Commission finds that the proposed rule change is consistent with Section 6(b)(5) of the Act,³⁴ which requires, among other things, that the rules of a national securities exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect customers, issuers, brokers and dealers. The Commission believes that the Exchange's proposal to establish the BAM may increase competition among those options exchanges that offer similar price improvement mechanisms. The Commission further believes that allowing EDGX Members to enter orders into the BAM will provide additional opportunities for such orders to receive price improvement over the NBBO and, in some instances, will result in such orders receiving price improvement over the NBBO.

In particular, the Commission notes that, in order to initiate an Auction, the Initiating Member must stop the entire Agency Order as principal or with a solicited order at a price in an increment of \$0.01 such that if the Agency Order is for less than 50 option contracts and the difference between the NBB and NBO is \$0.01, the Initiating Member must stop the entire Agency Order at one minimum price improvement increment better than the NBBO, which increment shall be determined by the Exchange but may not be smaller than \$0.01. The Commission believes that guaranteed price improvement for Agency Orders of

fewer than 50 contracts when the difference between the NBB and NBO is \$0.01 will benefit such Agency Orders. The Commission notes further that, for any other Agency Order, the Initiating Member must stop the entire Agency Order at the better of the NBBO or the Agency Order's limit price (if the order is a limit order). Accordingly, the proposed rule change will provide customers with an opportunity for price improvement over the NBBO in those instances.

If the EDGX BBO on the same side of the market as the Agency Order represents a Priority Customer order on the book, the stop price must be at least \$0.01 better than the booked order's limit price. If the EDGX BBO on the same side of the market as the Agency Order represents a quote or order that is not a Priority Customer order on the book, the stop price must be at least \$0.01 better than the booked order's limit price unless the Agency Order is a Priority Customer order and the Customer Overlay set forth in Exchange Rule 21.8(d)(1) is in effect. The Commission notes that the Exchange has represented that this condition is consistent with the operation of the Exchange generally, where the Customer Overlay is currently in effect with respect to all options traded on the Exchange, and Priority Customer Orders have first priority over other orders at the same price.

With respect to Agency Orders for less than 50 contracts, only one BAM Auction may be ongoing at any given time in a series and Auctions in the same series may not queue or overlap in any manner. However, BAM Auctions for Agency Orders of 50 contracts or more will be allowed to occur at the same time as other Auctions in the same series. The Commission notes that the BAM rules regarding the processing of overlapping BAM Auctions for Agency Orders of 50 contracts or more have been made transparent in the proposed rule change and are reasonable, given that the electronic nature of BAM makes the sequence of auction start times readily discernable.³⁵ In particular, the Commission notes that a BAM response will only be considered for its specified Auction. Each BAM response must specifically identify the BAM Auction for which it is targeted, and if not fully executed, the BAM response will be cancelled back at the conclusion of the auction.

All BAM Auctions will last for a period of no less than 100 milliseconds and no more than one second, as

determined by the Exchange and announced on the Exchange's Web site. As the Exchange discussed in its proposal, the Exchange conducted a survey of active EDGX market maker firms and other active liquidity providers inquiring as to the timeframe within which these market participants respond to an auction with a duration time ranging from less than fifty (50) milliseconds to more than one (1) second. According to the Exchange, a majority of the market maker firms and active liquidity providers on EDGX Options that responded to the survey indicated that they were capable of responding to auctions with a duration time of at least 50 milliseconds.³⁶ Based on the Exchange's statements, the Commission believes that the proposed duration of the BAM Auction could facilitate the prompt execution of orders in the BAM, while providing market participants with an opportunity to compete for exposed bids and offers. The Commission notes that other exchanges' price improvement auctions provide for auction response periods within the range of the response duration proposed by EDGX.³⁷

The Commission believes that the Exchange's proposed matching algorithm is sufficiently clear regarding how orders are to be allocated in the BAM Auction and is designed in a manner that should facilitate a competitive auction process. The Commission further believes that permitting Priority Orders to have enhanced priority may encourage EDGX Users to quote aggressively with additional size outside of the BAM Auction and, therefore, may enhance competition and liquidity on the EDGX market.

Under the proposal, the BAM Auction would be available for orders of fewer

³⁶ Of the ten (10) active EDGX market maker firms that were surveyed, eight (8) of these market makers responded to the survey. In addition, because EDGX is a relatively new options exchange and is still encouraging market makers to register and participate on the Exchange as such, and to increase the sample size, the Exchange included six (6) additional liquidity providers that are not active EDGX market makers but are active participants on EDGX Options. Thirteen (13) of the fourteen (14) respondents, or 93% indicated that their firm could respond to auctions with a duration time of at least 50 milliseconds, though one of these firms indicated a preference of auctions with a duration of 100 milliseconds. The remaining firm indicated that it could respond to auctions with a duration of at least 100 milliseconds. This survey was conducted in September of 2016.

³⁷ See Chapter VI, Section 9(ii)(A)(3) of the BX Rules (auction period between 100 milliseconds and 1 second), International Securities Exchange, LLC ("ISE") Rule 723(c)(5) (auction period of 500 milliseconds), CBOE Rule 6.74A(b)(1)(C) (auction period of 1 second), and BOX Options Exchange LLC ("BOX") Rule 7150(f)(1) (auction period of 100 milliseconds).

³³ 15 U.S.C. 78f(b). In approving this proposed rule change, the Commission has considered the proposed rule's impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

³⁴ 15 U.S.C. 78f(b)(5).

³⁵ See proposed Interpretation and Policy .04 to EDGX Rule 21.19.

than 50 contracts. There would be no minimum size requirement for orders entered into the BAM Auction for a pilot period expiring on January 18, 2017. The Exchange has represented its commitment to submit certain data on BAM Auctions at the request of Commission staff. The Commission expects such data to be used, by both the Exchange and the Commission staff, to assess the performance of the BAM Auction, including, among other things, to study whether there is meaningful competition for all size orders with the BAM, the degree of price improvement for all orders executed through the BAM, and whether there is an active and liquid market functioning on the Exchange outside of the BAM. The data provided will enable the Commission, as well as the Exchange itself, to evaluate the BAM Auction to determine its performance and possible impact on EDGX and options market structure in general and the degree to which it is beneficial to customers and to the options market as a whole.

IV. Section 11(a) of the Act

Section 11(a)(1) of the Act³⁸ prohibits a member of a national securities exchange from effecting transactions on that exchange for its own account, the account of an associated person, or an account over which it or its associated person exercises investment discretion (collectively, “covered accounts”) unless an exception applies. Rule 11a2-2(T) under the Act,³⁹ known as the “effect versus execute” rule, provides exchange members with an exemption from the Section 11(a)(1) prohibition. Rule 11a2-2(T) permits an exchange member, subject to certain conditions, to effect transactions for covered accounts by arranging for an unaffiliated member to execute transactions on the exchange. To comply with Rule 11a2-2(T)’s conditions, a member: (i) must transmit the order from off the exchange floor; (ii) may not participate in the execution of the transaction once it has been transmitted to the member performing the execution;⁴⁰ (iii) may not be affiliated with the executing member; and (iv) with respect to an account over which the member or an associated person has investment discretion, neither the member nor its associated person may retain any compensation in connection with effecting the transaction except as provided in the Rule. For the reasons set

forth below, the Commission believes that Exchange members entering orders into the BAM Auction would satisfy the requirements of Rule 11a2-2(T).

The Rule’s first condition is that orders for covered accounts be transmitted from off the exchange floor. In the context of automated trading systems, the Commission has found that the off-floor transmission requirement is met if a covered account order is transmitted from a remote location directly to an exchange’s floor by electronic means.⁴¹ EDGX represents that the EDGX trading system and the proposed BAM Auction receive all orders electronically through remote terminals or computer-to-computer interfaces.⁴² The Exchange also represents that orders for covered accounts from Members will be transmitted from a remote location directly to the proposed BAM mechanism by electronic means. Because no Exchange members may submit orders into the BAM Auction from on the floor of the Exchange, the Commission believes that the BAM Auction satisfies the off-floor transmission requirement.

Second, the Rule requires that the member and any associated person not participate in the execution of its order after the order has been transmitted. The Exchange represents that at no time following the submission of an order is a Member able to acquire control or influence over the result or timing of the order’s execution.⁴³ According to the Exchange, the execution of an order sent

to the BAM mechanism is determined by what other orders are present and the priority of those orders.⁴⁴ Accordingly, the Commission believes that a member does not participate in the execution of an order submitted to the BAM mechanism.

Third, Rule 11a2-2(T) requires that the order be executed by an exchange member who is unaffiliated with the member initiating the order. The Commission has stated that this requirement is satisfied when automated exchange facilities, such as the BAM mechanism, are used, as long as the design of these systems ensures that members do not possess any special or unique trading advantages in handling their orders after transmitting them to the exchange.⁴⁵ EDGX represents that the BAM Auction is designed so that no Member has any special or unique trading advantage in the handling of its orders after transmitting its orders to the mechanism.⁴⁶ Based on the Exchange’s representation, the Commission believes that the BAM mechanism satisfies this requirement.

Fourth, in the case of a transaction effected for an account with respect to which the initiating member or an associated person thereof exercises investment discretion, neither the initiating member nor any associated person thereof may retain any compensation in connection with effecting the transaction, unless the person authorized to transact business for the account has expressly provided otherwise by written contract referring to Section 11(a) of the Act and Rule 11a2-2(T) thereunder.⁴⁷ EDGX

³⁸ See, e.g., Securities Exchange Act Release Nos. 61419 (January 26, 2010), 75 FR 5157 (February 1, 2010) (SR-BATS-2009-031) (approving BATS options trading); 59154 (December 23, 2008), 73 FR 80468 (December 31, 2008) (SR-BSE-2008-48) (approving equity securities listing and trading on BSE); 57478 (March 12, 2008), 73 FR 14521 (March 18, 2008) (SR-NASDAQ-2007-004 and SR-NASDAQ-2007-080) (approving NOM options trading); 53128 (January 13, 2006), 71 FR 3550 (January 23, 2006) (File No. 10-131) (approving The Nasdaq Stock Market LLC); 44983 (October 25, 2001), 66 FR 55225 (November 1, 2001) (SR-PCX-00-25) (approving Archipelago Exchange); 29237 (May 24, 1991), 56 FR 24853 (May 31, 1991) (SR-NYSE-90-52 and SR-NYSE-90-53) (approving NYSE’s Off-Hours Trading Facility); and 15533 (January 29, 1979), 44 FR 6084 (January 31, 1979) (“1979 Release”).

³⁹ See Notice, *supra* note 3, at 69179-80. See also Amendment No. 1, *supra* note 5.

⁴⁰ See Notice, *supra* note 3, at 69180. See also Amendment No. 1, *supra* note 5 (also representing, among other things, that: 1) no Member, including the Initiating Member, will see a BAM response submitted into BAM and therefore will not be able to influence or guide the execution of their Agency Orders, 2) the Last Priority feature will not permit a Member to have any control over an order, and the election to Last Priority an order is available prior to the submission of the order, will not be broadcast and further, the Last Priority option may not be modified by the Initiating Member during the auction).

⁴¹ See Notice, *supra* note 3, at 69180. See also Amendment No. 1, *supra* note 5. The Exchange notes that a Member may not cancel or modify an order after it has been submitted into BAM.

⁴² In considering the operation of automated execution systems operated by an exchange, the Commission noted that, while there is not an independent executing exchange member, the execution of an order is automatic once it has been transmitted into the system. Because the design of these systems ensures that members do not possess any special or unique trading advantages in handling their orders after transmitting them to the exchange, the Commission has stated that executions obtained through these systems satisfy the independent execution requirement of Rule 11a2-2(T). See 1979 Release, *supra* note 41.

⁴³ See Notice, *supra* note 3, at 69180. See also Amendment No. 1, *supra* note 5.

⁴⁴ In addition, Rule 11a2-2(T)(d) requires a member or associated person authorized by written contract to retain compensation, in connection with effecting transactions for covered accounts over which such member or associated persons thereof exercises investment discretion, to furnish at least annually to the person authorized to transact business for the account a statement setting forth the total amount of compensation retained by the member or any associated person thereof in connection with effecting transactions for the

³⁸ 15 U.S.C. 78k(a)(1).

³⁹ 17 CFR 240.11a2-2(T).

⁴⁰ This prohibition also applies to associated persons. The member may, however, participate in clearing and settling the transaction.

represents that Members relying on Rule 11a2-2(T) for transactions effected through the BAM Auction must comply with this condition of the Rule and that the Exchange will enforce this requirement pursuant to its obligations under Section 6(b)(1) of the Act to enforce compliance with federal securities laws.⁴⁸

V. Accelerated Approval of Proposal, as Modified by Amendment No. 1

The Commission finds good cause, pursuant to Section 19(b)(2) of the Exchange Act, to approve the proposal, as modified by Amendment No. 1, prior to the 30th day after publication of Amendment No. 1 in the **Federal Register**. In Amendment No. 1, EDGX revised the original proposal to make the changes discussed in detail above. Notably, in Amendment No. 1, EDGX revises its proposal to restrict an Auction from commencing with a stop price equal to a same side resting order except in limited circumstances, as described above, and prohibit an Initiating Order from being a solicited order for the account of an Options Market Maker assigned in the affected series on the Exchange. EDGX also made changes to clarify and add detail to its proposal and the proposed rule text. The Commission believes that Amendment No. 1 does not raise any novel regulatory issues and instead better aligns EDGX's proposed Auction functionality with existing functionality on the Exchange and with that of similar auction mechanisms operated by other options exchanges, and provides additional clarity in the rule text, which is consistent with EDGX's original proposal and supports EDGX's analysis of how its proposal is consistent with the Act, thus facilitating the Commission's ability to make the findings set forth above to approve the proposal. Accordingly, the Commission finds that good cause exists to approve the proposal, as modified by Amendment No. 1, on an accelerated basis.

VI. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether Amendment No. 1 is

account during the period covered by the statement. See 17 CFR 240.11a2-2(T)(d). See also Securities Exchange Act Release No. 14563 (March 14, 1978), 43 FR 11542 (March 17, 1978) (stating "[t]he contractual and disclosure requirements are designed to assure that accounts electing to permit transaction-related compensation do so only after deciding that such arrangements are suitable to their interests").

⁴⁸ See Notice, *supra* note 3, at 69180. See also Amendment No. 1, *supra* note 5.

consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-BatsEDGX-2016-41 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-BatsEDGX-2016-41. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>).

Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549-1090, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-BatsEDGX-2016-41 and should be submitted on or before January 30, 2017.

VII. Conclusion

It is therefore ordered, pursuant to Section 19(b)(2) of the Act,⁴⁹ that the proposed rule change (SR-BatsEDGX-2016-41), as modified by Amendment No. 1, be and hereby is approved on an accelerated basis, except that there shall be no minimum size requirement for orders to be eligible for the Auction for

⁴⁹ 15 U.S.C. 78s(b)(2).

a pilot period expiring on January 18, 2017.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.⁵⁰

Eduardo A. Aleman,
Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-79721; File No. SR-ISE-2016-32]

Self-Regulatory Organizations; International Securities Exchange, LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend Rules To Extend a Pilot Program

January 3, 2017.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on December 23, 2016, the International Securities Exchange, LLC ("ISE" or "Exchange") filed with the Securities and Exchange Commission ("SEC" or "Commission") the proposed rule change as described in Items I and II, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend its rules to extend a pilot program to quote and to trade certain options classes in penny increments.

The text of the proposed rule change is available on the Exchange's Web site at www.ise.com, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

Under the Penny Pilot Program, the minimum price variation for all participating options classes, except for the Nasdaq-100 Index Tracking Stock ("QQQQ"), the SPDR S&P 500 Exchange Traded Fund ("SPY") and the iShares Russell 2000 Index Fund ("IWM"), is \$0.01 for all quotations in options series that are quoted at less than \$3 per contract and \$0.05 for all quotations in options series that are quoted at \$3 per contract or greater. QQQQ, SPY and IWM are quoted in \$0.01 increments for all options series. The Penny Pilot Program is currently scheduled to expire on December 31, 2016.³ The Exchange proposes to extend the Penny Pilot Program through June 30, 2017, and to provide a revised date for adding replacement issues to the Penny Pilot Program. The Exchange proposes that any Penny Pilot Program issues that have been delisted may be replaced on the second trading day following January 1, 2017. The replacement issues will be selected based on trading activity for the most recent six month period excluding the month immediately preceding the replacement (*i.e.*, beginning June 1, 2016, and ending November 30, 2016). This filing does not propose any substantive changes to the Penny Pilot Program: All classes currently participating will remain the same and all minimum increments will remain unchanged. The Exchange believes the benefits to public customers and other market participants who will be able to express their true prices to buy and sell options have been demonstrated to outweigh any increase in quote traffic.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder that are applicable to a national securities exchange, and, in particular, with the requirements of Section 6(b) of the Act.⁴ Specifically, the proposed rule change is consistent with Section 6(b)(5) of the

Act,⁵ because it is designed to promote just and equitable principles of trade, remove impediments to and perfect the mechanisms of a free and open market and a national market system and, in general, to protect investors and the public interest. In particular, the proposed rule change, which extends the Penny Pilot Program for an additional six months, will enable public customers and other market participants to express their true prices to buy and sell options to the benefit of all market participants.

B. Self-Regulatory Organization's Statement on Burden on Competition

In accordance with Section 6(b)(8) of the Act,⁶ the Exchange does not believe that the proposed rule change will impose any burden on intermarket or intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act. Specifically, the Exchange believes that, by extending the expiration of the Penny Pilot Program, the proposed rule change will allow for further analysis of the Penny Pilot Program and a determination of how the Penny Pilot Program should be structured in the future. In doing so, the proposed rule change will also serve to promote regulatory clarity and consistency, thereby reducing burdens on the marketplace and facilitating investor protection.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has filed the proposed rule change pursuant to Section 19(b)(3)(A)(iii) of the Act⁷ and Rule 19b-4(f)(6) thereunder.⁸ Because the proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative prior to 30 days from the date on which it was filed, or such shorter time as the Commission may designate, if consistent with the protection of investors and the public interest, the proposed rule change has become effective pursuant to Section 19(b)(3)(A)

of the Act and Rule 19b-4(f)(6)(iii) thereunder.

A proposed rule change filed under Rule 19b-4(f)(6)⁹ normally does not become operative prior to 30 days after the date of the filing.¹⁰ However, pursuant to Rule 19b-4(f)(6)(iii),¹¹ the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has asked the Commission to waive the 30-day operative delay so that the proposal may become operative immediately upon filing. The Commission believes that waiving the 30-day operative delay is consistent with the protection of investors and the public interest because doing so will allow the Pilot Program to continue without interruption in a manner that is consistent with the Commission's prior approval of the extension and expansion of the Pilot Program and will allow the Exchange and the Commission additional time to analyze the impact of the Pilot Program. Accordingly, the Commission designates the proposed rule change as operative upon filing with the Commission.¹²

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B)¹³ of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

⁹ 17 CFR 240.19b-4(f)(6).

¹⁰ 17 CFR 240.19b-4(f)(6). In addition, Rule 19b-4(f)(6)(iii) requires the Exchange to give the Commission written notice of the Exchange's intent to file the proposed rule change along with a brief description and the text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this pre-filing requirement.

¹¹ 17 CFR 240.19b-4(f)(6)(iii).

¹² For purposes only of waiving the operative delay for this proposal, the Commission has considered the proposed rule's impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

¹³ 15 U.S.C. 78s(b)(2)(B).

³ See Exchange Act Release No. 78203 (June 30, 2016), 81 FR 44404 (July 7, 2016) (SR-ISE-2016-15).

⁴ 15 U.S.C. 78f(b).

⁵ 15 U.S.C. 78f(b)(5).

⁶ 15 U.S.C. 78f(b)(8).

⁷ 15 U.S.C. 78s(b)(3)(A)(iii).

⁸ 17 CFR 240.19b-4(f)(6).

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File No. SR-ISE-2016-32 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-ISE-2016-32. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room. Copies of such filing also will be available for inspection and copying at the principal office of the ISE. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-ISE-2016-32 and should be submitted by January 30, 2017.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹⁴

Eduardo A. Aleman,
Assistant Secretary.

BILLING CODE 8011-01-P

SOCIAL SECURITY ADMINISTRATION

[Docket No. SSA-2016-0063]

Rate for Assessment on Direct Payment of Fees to Representatives in 2017

AGENCY: Social Security Administration (SSA).

ACTION: Notice.

SUMMARY: We are announcing that the assessment percentage rate under sections 206(d) and 1631(d)(2)(C) of the Social Security Act (Act), 42 U.S.C. 406(d) and 1383(d)(2)(C), is 6.3 percent for 2017.

FOR FURTHER INFORMATION CONTACT:

Jeffrey C. Blair, Associate General Counsel for Program Law, Office of the General Counsel, Social Security Administration, 6401 Security Boulevard, Baltimore, MD 21235-6401. Phone: (410) 965-3157, email Jeff.Blair@ssa.gov.

SUPPLEMENTARY INFORMATION: A claimant may appoint a qualified individual as a representative to act on his or her behalf in matters before the Social Security Administration (SSA). If the claimant is entitled to past-due benefits and was represented either by an attorney or by a non-attorney representative who has met certain prerequisites, the Act provides that we may withhold up to 25 percent of the past-due benefits and use that money to pay the representative's approved fee directly to the representative.

When we pay the representative's fee directly to the representative, we must collect from that fee payment an assessment to recover the costs we incur in determining and paying representatives' fees. The Act provides that the assessment we collect will be the lesser of two amounts: A specified dollar limit; or the amount determined by multiplying the fee we are paying by the assessment percentage rate. (Sections 206(d), 206(e), and 1631(d)(2) of the Act, 42 U.S.C. 406(d), 406(e), and 1383(d)(2).)

The Act initially set the dollar limit at \$75 in 2004 and provides that the limit will be adjusted annually based on changes in the cost-of-living. (Sections 206(d)(2)(A) and 1631(d)(2)(C)(ii)(I) of the Act, 42 U.S.C. 406(d)(2)(A) and 1383(d)(2)(C)(ii)(I).) The maximum dollar limit for the assessment currently is \$91, as we announced in the **Federal Register** on October 27, 2016 (81 FR 74854).

The Act requires us each year to set the assessment percentage rate at the lesser of 6.3 percent or the percentage rate necessary to achieve full recovery of the costs we incur to determine and pay representatives' fees. (Sections 206(d)(2)(B)(ii) and 1631(d)(2)(C)(ii)(II) of the Act, 42 U.S.C. 406(d)(2)(B)(ii) and 1383(d)(2)(C)(ii)(II).)

Based on the best available data, we have determined that the current rate of 6.3 percent will continue for 2017. We

will continue to review our costs for these services on a yearly basis.

Michelle King,

Acting Deputy Commissioner for Budget, Finance, Quality, and Management.

BILLING CODE 4191-02-P

DEPARTMENT OF TRANSPORTATION**Federal Aviation Administration****Tenth RTCA SC-229 406 MHz ELT Plenary Joint with WG-98**

AGENCY: Federal Aviation Administration (FAA), U.S. Department of Transportation (DOT).

ACTION: Tenth RTCA SC-229 406 MHz ELT Plenary Joint with WG-98.

SUMMARY: The FAA is issuing this notice to advise the public of a meeting of Tenth RTCA SC-229 406 MHz ELT Plenary Joint with WG-98.

DATES: The meeting will be held March 14-17, 2017 09:00 a.m.-05:00 p.m.

ADDRESSES: The meeting will be held at: RTCA Headquarters, 1150 18th Street NW., Suite 910, Washington, DC 20036.

FOR FURTHER INFORMATION CONTACT:

Rebecca Morrison at rmorrison@rtca.org or 202-330-0654, or The RTCA Secretariat, 1150 18th Street NW., Suite 910, Washington, DC 20036, or by telephone at (202) 833-9339, fax at (202) 833-9434, or Web site at <http://www.rtca.org>.

SUPPLEMENTARY INFORMATION: Pursuant to section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92-463, 5 U.S.C., App.), notice is hereby given for a meeting of the Tenth RTCA SC-229 406 MHz ELT Plenary Joint with WG-98. The agenda will include the following:

Tuesday, March 13, 2017—9:00 a.m.—5:00 p.m.

1. Welcome/Introductions/
Administrative Remarks
2. Agenda overview and approval
3. Fort Lauderdale meeting review and approval
4. Review Action Items from Fort Lauderdale meeting
5. "Phasing in" RTCA/DO-204B, EUROCAE/ED-62B—Timeline and ToR
6. EASA presentation
 - EASA approval process
 - EU rules on aircraft tracking and location of aircraft in distress
7. Briefing of: ICAO GADSS-AG, COSPAS-SARSAT, activities
8. Other Industry coordination and presentations

¹⁴ 17 CFR 200.30-3(a)(12).

9. Working group of the whole meeting (rest of the day)

Wednesday, March 14, 2017—9:00 a.m.—5:00 p.m.

Working group of the whole meeting

Thursday, March 15, 2017—9:00 a.m.—5:00 p.m.

Working group of the whole meeting

Friday, March 17, 2017—9:00 a.m.—4:00 p.m.

1. Plenary meeting in the morning
2. WGs' reports
2. Action item review
3. Future meeting plans and dates
4. Industry coordination and presentations (if any)
5. Other business
6. Adjourn

Attendance is open to the interested public for plenary discussion, but limited to space availability. Registration for this meeting is required. Working group of the whole items are closed to the public. With the approval of the chairman, members of the public may present oral statements at the plenary meeting. Persons wishing to present statements or obtain information should contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section. Members of the public may present a written statement to the committee at any time. Issued in Washington, DC on January 4, 2017.

Mohannad Dawoud,
Management & Program Analyst, Partnership Contracts Branch, ANG-A17 NextGen, Procurement Services Division, Federal Aviation Administration.

BILLING CODE 4910-13-P

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

[FHWA Docket No. FHWA-2016-0033]

Motorcyclist Advisory Council to the Federal Highway Administration

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice of Establishment of the Motorcyclist Advisory Council to the Federal Highway Administration; Request for Nominations.

SUMMARY: The FHWA announces the establishment of the Motorcyclist Advisory Council (MAC) for a 2-year period. The MAC will coordinate with and advise the FHWA Administrator on infrastructure issues of concern to motorcyclists, including: (1) Barrier design; (2) road design, construction, and maintenance practices; and (3) the architecture and implementation of intelligent transportation system technologies. The FHWA seeks member nominations for the MAC.

DATES: The deadline for nominations for MAC membership is February 23, 2017.

ADDRESSES: All nomination materials should be emailed to MAC-FHWA@dot.gov or mailed attention to Mr. Michael Griffith, Federal Highway Administration, Office of Safety, Room E71-312, 1200 New Jersey Ave. SE., Washington, DC 20590. Any person needing accessibility accommodations should contact Michael Griffith at (202) 366-9469.

FOR FURTHER INFORMATION CONTACT: Mr. Michael Griffith, Office of Safety, (202) 366-9469 or MAC-FHWA@dot.gov; 1200 New Jersey Ave. SE., Washington, DC 20590; or Ms. Seetha Srinivasan, Office of the Chief Counsel—Legislation, Regulation, and General Law Division, 1200 New Jersey Avenue SE., Washington, DC 20590, (202) 366-4099 or Seetha.Srinivasan@dot.gov.

SUPPLEMENTARY INFORMATION: Section 1426 of the Fixing America's Surface Transportation Act (Pub. L. 114-94) requires the establishment of a Motorcyclist Advisory Council (MAC). The Secretary, acting through the Administrator of the FHWA, is required

to appoint a MAC to coordinate with and advise the Administrator on infrastructure issues of concern to motorcyclists, including:

- (1) Barrier design;
- (2) Road design, construction, and maintenance practices; and
- (3) The architecture and implementation of intelligent transportation system technologies.

Pursuant to Section 9(a)(2) of the Federal Advisory Committee Act (FACA), and in accordance with 41 CFR 102–3.65, and following consultation with the Committee Management Secretariat, General Services Administration, notice is hereby given that the MAC will be established for up to a 2-year period.

The MAC shall comprise not more than 10 members appointed by the Secretary of Transportation for terms of up to 2 years. Members serve at the pleasure of the Secretary. The Secretary may extend appointments and may appoint replacements for members who have resigned outside of a stated term, as necessary. Members may continue to serve until their replacements have been appointed.

The MAC seeks to have a fairly balanced membership with expertise in highway engineering, safety analysis, and motorcycling. Specifically, the following are the categories of members that shall be included in the MAC:

- (1) Experts from State/local government in highway engineering issues, including:
 - (A) Barrier design;
 - (B) Road design, construction, maintenance; and/or
 - (C) Intelligent Transportation Systems;
- (2) State/local traffic and safety engineers, design engineers, or other transportation department officials who are motorcyclists;
- (3) A representative from a national motorcyclist association;
- (4) A roadway safety data expert on crash testing/analysis; and
- (5) A member of a national safety organization that represents the traffic safety systems industry.

This document gives notice of this process to potential participants and affords them the opportunity to request representation on the MAC. The procedure for requesting such representation is set out below. The FHWA is aware that there are many more potential organizations and participants than there are membership slots on the MAC. Organizations and participants should be prepared to support their participation on the MAC.

It is important to recognize that interested parties who are not selected

to membership on the MAC can make valuable contributions to the work of the MAC in any of several ways. Interested persons shall be permitted to attend, appear before, or file statements with any advisory committee, subject to such reasonable rules or regulations as the Administrator may prescribe.

Any member of the public is welcome to attend the MAC meetings, and, as provided in FACA, speak to the MAC. Time will be set aside during each meeting for this purpose, consistent with the MAC's need for sufficient time to complete its deliberations.

The MAC meetings will be held approximately twice per Federal fiscal year, once in-person and once by web conference. Notice of each meeting shall be published in the **Federal Register** at least 15 calendar days prior to the date of the meeting. The meeting agenda and all relevant meeting information will be posted in advance of each meeting on the Web site (<http://safety.fhwa.dot.gov/motorcycles>).

Every effort will be made to select MAC members who are objective and support the functions to be performed by the MAC. A balance is needed and weight is given to a variety of factors including, but not limited to, geographical distribution, gender, minority status, organization, and expertise. Some MAC members may be appointed as Special Government Employees and will be subject to certain ethical restrictions, and such members will be required to submit certain information in connection with the appointment process. With the exception of travel and per diem for official travel, members will serve without compensation.

A potential member may self-nominate or be nominated by an interested organization. Each nomination for membership should submit a letter of application that includes the following:

- (1) The name, title, and relevant contact information (including phone and email address) of the nominee;
- (2) a brief statement detailing interest for involvement in the MAC;
- (3) A brief professional summary or résumé, including years of experience; relevant professional experience; geographic representation; and examples of previous leadership role in related committees, organizations, or advisory panels;
- (4) A detailed description of the nominee's experience and expertise of the subject matter categories described above;
- (5) Evidence that the nominee is authorized to represent parties related to

the interest the person proposes to represent;

(6) An affirmative statement that the nominee meets all MAC eligibility requirements; and

(7) Optional support materials to emphasize interest and experience. This may include letters of recommendations, up to 3 references, publications and/or research.

Please do not send company, trade association, or organization brochures or any similar information. Should more information be needed, DOT staff will contact the nominee, obtain information from the nominee's past affiliations, or obtain information from publicly available sources, such as the Internet.

Nominations may be emailed to MAC-FHWA@dot.gov or mailed to the attention of Michael Griffith, Federal Highway Administration, Office of Safety, Room E71–312, 1200 New Jersey Ave. SE., Washington, DC 20590. Nominations must be received by February 23, 2017. Nominees selected for appointment to the MAC will be notified by return email and by a letter of appointment.

A selection team comprising representatives from DOT offices will review the nomination packages. The Federal Highway Administrator will submit a list of recommended candidates to the Secretary of Transportation for review and selection of MAC members. The selection team will make recommendations regarding membership to the Secretary of Transportation through the Federal Highway Administrator based on criteria including: (1) Professional or academic expertise, experience, and knowledge relevant to the MAC activities described above; (2) the member categories described above; and (3) availability and willingness to serve.

Nominations are open to all individuals without regard to race, color, religion, sex, national origin, age, mental or physical handicap, marital status, or sexual orientation. To ensure that recommendations to the Secretary take into account the needs of the diverse groups served by DOT, membership shall include, to the extent practicable, individuals with demonstrated ability to represent minorities, women, and persons with disabilities.

Issued on: December 21, 2016.

Gregory G. Nadeau,
Administrator, Federal Highway Administration.

Qualification of Drivers; Exemption Applications; Vision

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), DOT.

ACTION: Notice of final disposition.

SUMMARY: FMCSA announces its decision to renew exemptions for 38 individuals from the vision requirement in the Federal Motor Carrier Safety Regulations (FMCSRs) for interstate commercial motor vehicle (CMV) drivers. The exemptions enable these individuals to continue to operate CMVs in interstate commerce without meeting the vision requirement in one eye.

DATES: Each group of renewed exemptions was effective on the dates stated in the discussions below and will expire on the dates stated in the discussions below.

FOR FURTHER INFORMATION CONTACT: Ms. Christine A. Hydock, Chief, Medical Programs Division, 202-366-4001, fmcsamedical@dot.gov, FMCSA, Department of Transportation, 1200 New Jersey Avenue SE., Room W64-224, Washington, DC 20590-0001. Office hours are from 8:30 a.m. to 5 p.m., e.t., Monday through Friday, except Federal holidays. If you have questions regarding viewing or submitting material to the docket, contact Docket Services, telephone (202) 366-9826.

SUPPLEMENTARY INFORMATION:**I. Electronic Access**

You may see all the comments online through the Federal Document Management System (FDMS) at: <http://www.regulations.gov>.

Docket: For access to the docket to read background documents or comments, go to <http://www.regulations.gov> and/or Room W12-140 on the ground level of the West Building, 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., e.t., Monday through Friday, except Federal holidays.

Privacy Act: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to <http://www.regulations.gov>, as described in the system of records notice (DOT/ALL-14 FDMS), which can be reviewed at <http://www.dot.gov/privacy>.

II. Background

On November 15, 2016, FMCSA published a notice announcing its decision to renew exemptions for 38 individuals from the vision requirement in 49 CFR 391.41(b)(10) to operate a CMV in interstate commerce and requested comments from the public (81 FR 80161). The public comment period ended on December 15, 2016, and no comments were received.

As stated in the previous notice, FMCSA has evaluated the eligibility of these applicants and determined that renewing these exemptions would achieve a level of safety equivalent to or greater than the level that would be achieved by complying with the current regulation 49 CFR 391.41(b)(10).

The physical qualification standard for drivers regarding vision found in 49 CFR 391.41(b)(10) states that a person is physically qualified to driver a CMV if that person:

Has distant visual acuity of at least 20/40 (Snellen) in each eye without corrective lenses or visual acuity separately corrected to 20/40 (Snellen) or better with corrective lenses, distant binocular acuity of a least 20/40 (Snellen) in both eyes with or without corrective lenses, field of vision of at least 70° in the horizontal meridian in each eye, and the ability to recognize the colors of traffic signals and devices showing red, green, and amber.

III. Discussion of Comments

FMCSA received no comments in this preceding.

VI. Conclusion

As of November 9, 2016, and in accordance with 49 U.S.C. 31136(e) and 31315, the following 36 individuals have satisfied the conditions for obtaining a renewed exemption from the vision requirements (63 FR 196; 63 FR 30285; 65 FR 20245; 65 FR 33406; 65 FR 57230; 65 FR 57234; 65 FR 66293; 66 FR 53826; 66 FR 66966; 67 FR 46016; 67 FR 57266; 67 FR 57267; 67 FR 67234; 68 FR 69434; 69 FR 51346; 69 FR 52741; 69 FR 53493; 69 FR 62741; 69 FR 62742; 70 FR 74102; 71 FR 50970; 71 FR 53489; 71 FR 62147; 71 FR 62148; 73 FR 35196; 73 FR 36955; 73 FR 46973; 73 FR 48270; 73 FR 48275; 73 FR 51336; 73 FR 51689; 73 FR

54888; 73 FR 61925; 73 FR 63047; 73 FR 74565; 75 FR 25919; 75 FR 36779; 75 FR 39725; 75 FR 39729; 75 FR 44051; 75 FR 47883; 75 FR 50799; 75 FR 52061; 75 FR 52062; 75 FR 52063; 75 FR 54958; 75 FR 59327; 75 FR 61833; 75 FR 63257; 75 FR 64396; 75 FR 66423; 75 FR 70078; 77 FR 7657; 77 FR 22059; 77 FR 27852; 77 FR 38384; 77 FR 39379; 77 FR 40946; 77 FR 46153; 77 FR 48590; 77 FR 52381; 77 FR 52388; 77 FR 52389; 77 FR 60010; 77 FR 64582; 77 FR 64583; 77 FR 64841; 77 FR 68199; 77 FR 68200; 79 FR 27681; 79 FR 35212; 79 FR 35218; 79 FR 38649; 79 FR 38659; 79 FR 45868; 79 FR 46153; 79 FR 46300; 79 FR 47175; 79 FR 51643; 79 FR 53514; 79 FR 56097; 79 FR 56099; 79 FR 56104; 79 FR 56117; 79 FR 58856; 79 FR 59348; 79 FR 59357; 79 FR 64001; 79 FR 68199; 79 FR 70928; 79 FR 72754:

Charles S. Amyx, Jr. (LA)
John W. Arnold (KY)
Kelvin Frandin Bombu (KY)
Derric D. Burrell (AL)
Kenneth C. Caldwell (NY)
John P. Catalano (NJ)
Lee A. Clason (NE)
Edward Cunningham (MI)
Eric P. Demers (NH)
Louis A. DiPasqua, Jr. (NY)
Roderick L. Duvall (PA)
Tyron O. Frieze (MN)
James O. Hancock (IN)
John H. Holmberg (WI)
Stetson W. King (FL)
Donald L. McCraw, Jr. (VA)
Elijah Mitchell (TX)
Charles J. Morman (FL)
Benny R. Morris (WV)
Timothy L. Morton (NC)
Dennis E. Palmer, Jr. (CT)
Jesus Penuelas (AZ)
Larry A. Prieve (ND)
John C. Rodriguez (PA)
Sabahudin Sabic (IA)
Antonio Sanchez (NJ)
Garry R. Setters (KY)
Jimmy E. Settle (MO)

Richard T. Traigle (LA)
Wilbert Walden (NC)
Donald Wallace (IL)
Carl V. Wheeler (NC)
Earl L. White, Jr. (NH)
Hubert Whittenburg (MO)

The drivers were included in one of the following dockets: Docket Nos. FMCSA-1998-3637; FMCSA-2000-7006; FMCSA-2000-7165; FMCSA-2000-8203; FMCSA-2001-10578; FMCSA-2002-12294; FMCSA-2004-18885; FMCSA-2008-0106; FMCSA-2008-0231; FMCSA-2008-0266; FMCSA-2010-0082; FMCSA-2010-0161; FMCSA-2010-0187; FMCSA-2010-0201; FMCSA-2011-0324; FMCSA-2012-0105; FMCSA-2012-

0215; FMCSA–2014–0005; FMCSA–2014–0006; FMCSA–2014–0007; FMCSA–2014–0010; FMCSA–2014–0011; FMCSA–2014–0296. Their exemptions are effective as of November 9, 2016 and will expire on November 9, 2018.

As of November 22, 2016 and in accordance with 49 U.S.C. 31136(e) and 31315, the following 2 individuals have satisfied the conditions for obtaining a renewed exemption from the vision requirements (79 FR 63211; 80 FR 2471):

Dewey P. Huffman (OR)
Michael J. Monroe (IA)

The drivers were included in Docket No. FMCSA–2014–0297. Their exemptions are effective as of November 22, 2016, and will expire on November 22, 2018.

In accordance with 49 U.S.C. 31315, each exemption will be valid for two years from the effective date unless revoked earlier by FMCSA. The exemption will be revoked if the following occurs: (1) The person fails to comply with the terms and conditions of the exemption; (2) the exemption has resulted in a lower level of safety than was maintained prior to being granted; or (3) continuation of the exemption would not be consistent with the goals and objectives of 49 U.S.C. 31136 and 31315.

Issued on: December 29, 2016.

DEPARTMENT OF TRANSPORTATION

Federal Motor Carrier Safety Administration

[Docket No. FMCSA–2011–0389; FMCSA–2012–0294; FMCSA–2013–0109; FMCSA–2013–0442]

Qualification of Drivers; Exemption Applications; Epilepsy and Seizure Disorders

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), DOT.

ACTION: Notice of renewal of exemptions; request for comments.

SUMMARY: FMCSA announces its decision to renew exemptions of 11 individuals from the requirement in the Federal Motor Carrier Safety Regulations (FMCSRs) that interstate commercial motor vehicle (CMV) drivers have “no established medical history or clinical diagnosis of epilepsy or any other condition which is likely

to cause loss of consciousness or any loss of ability to control a CMV.” The exemptions enable these individuals who have had one or more seizures and are taking anti-seizure medication to continue to operate CMVs in interstate commerce.

DATES: Each group of renewed exemptions were effective on the dates stated in the discussions below and will expire on the dates stated in the discussions below. Comments must be received on or before February 8, 2017. **FOR FURTHER INFORMATION CONTACT:** Ms. Christine A. Hydock, Chief, Medical Programs Division, 202–366–4001, fmcamedical@dot.gov, FMCSA, Department of Transportation, 1200 New Jersey Avenue SE., Room W64–224, Washington, DC 20590–0001. Office hours are from 8:30 a.m. to 5 p.m., e.t., Monday through Friday, except Federal holidays. If you have questions regarding viewing or submitting material to the docket, contact Docket Services, telephone (202) 366–9826.

ADDRESSES: You may submit comments bearing the Federal Docket Management System (FDMS) Docket No. FMCSA–2011–0389; FMCSA–2012–0294; FMCSA–2013–0109; FMCSA–2013–0442 using any of the following methods:

- *Federal eRulemaking Portal:* Go to <http://www.regulations.gov>. Follow the online instructions for submitting comments.

- *Mail:* Docket Management Facility; U.S. Department of Transportation, 1200 New Jersey Avenue SE., West Building Ground Floor, Room W12–140, Washington, DC 20590–0001.

- *Hand Delivery:* West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal Holidays.

- *Fax:* 1–202–493–2251.

Instructions: Each submission must include the Agency name and the docket number(s) for this notice. Note that all comments received will be posted without change to <http://www.regulations.gov>, including any personal information provided. Please see the Privacy Act heading below for further information.

Docket: For access to the docket to read background documents or comments, go to <http://www.regulations.gov> at any time or Room W12–140 on the ground level of the West Building, 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The

FDMS is available 24 hours each day, 365 days each year. If you want acknowledgment that we received your comments, please include a self-addressed, stamped envelope or postcard or print the acknowledgement page that appears after submitting comments online.

Privacy Act: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to <http://www.regulations.gov>, as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at <http://www.dot.gov/privacy>.

I. Background

Under 49 U.S.C. 31136(e) and 31315, FMCSA may grant an exemption for two years if it finds “such exemption would likely achieve a level of safety that is equivalent to or greater than the level that would be achieved absent such exemption.” The statute also allows the Agency to renew exemptions at the end of the two-year period.

The physical qualification standard for drivers regarding epilepsy found in 49 CFR 391.41(b)(8) states that a person is physically qualified to drive a CMV if that person:

Has no established medical history or clinical diagnosis of epilepsy or any other condition which is likely to cause the loss of consciousness or any loss of ability to control a CMV.

In addition to the regulations, FMCSA has published advisory criteria to assist Medical Examiners in determining whether drivers with certain medical conditions are qualified to operate a CMV in interstate commerce. [49 CFR part 391, APPENDIX A TO PART 391—MEDICAL ADVISORY CRITERIA, section H. Epilepsy: § 391.41(b)(8), paragraphs 3, 4, and 5.]

The 11 individuals listed in this notice have requested renewal of their exemptions from the Epilepsy and Seizure Disorders prohibition in 49 CFR 391.41(b)(8), in accordance with FMCSA procedures. Accordingly, FMCSA has evaluated these applications for renewal on their merits and decided to extend each exemption for a renewable two-year period.

II. Request for Comments

Interested parties or organizations possessing information that would otherwise show that any, or all, of these drivers are not currently achieving the statutory level of safety should immediately notify FMCSA. The Agency will evaluate any adverse

evidence submitted and, if safety is being compromised or if continuation of the exemption would not be consistent with the goals and objectives of 49 U.S.C. 31136(e) and 31315, FMCSA will take immediate steps to revoke the exemption of a driver.

III. Basis for Renewing Exemptions

Under 49 U.S.C. 31315(b)(1), an exemption may be granted for no longer than two years from its approval date and may be renewed upon application. In accordance with 49 U.S.C. 31136(e) and 31315, each of the 11 applicants has satisfied the conditions for obtaining an exemption from the Epilepsy and Seizure Disorder requirements and were published in the **Federal Register** (79 FR 70917; 79 FR 73690; 79 FR 23054). In addition, for Commercial Driver's License (CDL) holders, the Commercial Driver's License information System (CDLIS) and the Motor Carrier Management Information System (MCMIS) are searched for crash and violation data. For non-CDL holders, the Agency reviews the driving records from the State Driver's Licensing Agency (SDLA). These factors provide an adequate basis for predicting each driver's ability to continue to safely operate a CMV in interstate commerce.

The 11 drivers in this notice remain in good standing with the Agency, have maintained their medical monitoring and have not exhibited any medical issues that would compromise their ability to safely operate a CMV during the previous two-year exemption period. FMCSA has concluded that renewing the exemptions for each of these applicants is likely to achieve a level of safety equal to that existing without the exemption. Therefore, FMCSA has decided to renew each exemption for a two-year period. In accordance with 49 U.S.C. 31136(e) and 31315, each driver has received a renewed exemption.

As of April 8, 2016, the following four individuals have satisfied the renewal conditions for obtaining an exemption from the Epilepsy and Seizure Disorders prohibition in 49 CFR 391.41(b)(8), from driving CMVs in interstate commerce (79 FR 70917; 79 FR 23054): Jeffrey Ballweg (WI); Michael Ranalli (PA); Lonnie Reicker (IL); and Jay Whitehead (NY). These drivers were included in FMCSA-2011-0389; and FMCSA-2012-0294; FMCSA-2013-0109. The exemptions were effective on April 8, 2016, and will expire on April 8, 2018.

As of April 23, 2016, the following seven individuals have satisfied the renewal conditions for obtaining an exemption from the Epilepsy and Seizure Disorders prohibition in 49 CFR

391.41(b)(8), from driving CMVs in interstate commerce (79 FR 73690):

Charles Blood (NY)
Raymond Lobo (NJ)
Randy Pinto (PA)
Brent Robinson (NC)
Douglas Teigland (MN)
Joseph Thomas (MD)
James Spece (PA)

These drivers were included in FMCSA-2013-0442. The exemptions were effective on April 23, 2016, and will expire on April 23, 2018.

The exemptions are extended subject to the following conditions: (1) Each driver must remain seizure-free and maintain a stable treatment during the two-year exemption period; (2) each driver must submit annual reports from their treating physicians attesting to the stability of treatment and that the driver has remained seizure-free; (3) each driver must undergo an annual medical examination by a certified Medical Examiner, as defined by 49 CFR 390.5; and (4) each driver must provide a copy of the annual medical certification to the employer for retention in the driver's qualification file, or keep a copy of his/her driver's qualification file if he/she is self-employed. The driver must also have a copy of the exemption when driving, for presentation to a duly authorized Federal, State, or local enforcement official. The exemption will be rescinded if: (1) The person fails to comply with the terms and conditions of the exemption; (2) the exemption has resulted in a lower level of safety than was maintained before it was granted; or (3) continuation of the exemption would not be consistent with the goals and objectives of 49 U.S.C. 31136(e) and 31315.

IV. Preemption

During the period the exemption is in effect, no State shall enforce any law or regulation that conflicts with this exemption with respect to a person operating under the exemption.

V. Conclusion

Based upon its evaluation of the 11 exemption applications, FMCSA renews the exemptions of the aforementioned drivers from the Epilepsy and Seizure Disorders requirement in 49 CFR 391.41(b)(8). In accordance with 49 U.S.C. 31136(e) and 31315, each exemption will be valid for two years unless revoked earlier by FMCSA.

Issued on: December 29, 2016.

Federal Motor Carrier Safety Administration

[Docket No. FMCSA-2013-0107]

Qualification of Drivers; Exemption Applications; Epilepsy and Seizure Disorders

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), DOT.

ACTION: Notice of renewal of exemptions; request for comments.

SUMMARY: FMCSA announces its decision to renew exemptions of four individuals from the requirement in the Federal Motor Carrier Safety Regulations (FMCSRs) that interstate commercial motor vehicle (CMV) drivers have "no established medical history or clinical diagnosis of epilepsy or any other condition which is likely to cause loss of consciousness or any loss of ability to control a CMV." The exemptions enable these individuals who have had one or more seizures and are taking anti-seizure medication to continue to operate CMVs in interstate commerce.

DATES: The exemptions were effective on November 6, 2015. The exemptions will expire on November 6, 2017. Comments must be received on or before February 8, 2017.

I. Background

Under 49 U.S.C. 31136(e) and 31315, FMCSA may grant an exemption for two years if it finds “such exemption would likely achieve a level of safety that is equivalent to or greater than the level that would be achieved absent such exemption.” The statute also allows the Agency to renew exemptions at the end of the two-year period.

The physical qualification standard for drivers regarding epilepsy found in 49 CFR 391.41(b)(8) states that a person is physically qualified to drive a CMV if that person:

Has no established medical history or clinical diagnosis of epilepsy or any other condition which is likely to cause the loss of consciousness or any loss of ability to control a CMV.

In addition to the regulations, FMCSA has published advisory criteria to assist Medical Examiners in determining whether drivers with certain medical conditions are qualified to operate a CMV in interstate commerce. [49 CFR part 391, APPENDIX A TO PART 391—

MEDICAL ADVISORY CRITERIA, section H. Epilepsy: § 391.41(b)(8), paragraphs 3, 4, and 5.]

The four individuals listed in this notice have requested renewal of their exemptions from the Epilepsy and Seizure Disorders prohibition in 49 CFR 391.41(b)(8), in accordance with FMCSA procedures. Accordingly, FMCSA has evaluated these applications for renewal on their merits and decided to extend each exemption for a renewable two-year period.

II. Request for Comments

Interested parties or organizations possessing information that would otherwise show that any, or all, of these drivers are not currently achieving the statutory level of safety should immediately notify FMCSA. The Agency will evaluate any adverse evidence submitted and, if safety is being compromised or if continuation of the exemption would not be consistent with the goals and objectives of 49 U.S.C. 31136(e) and 31315, FMCSA will take immediate steps to revoke the exemption of a driver.

III. Basis for Renewing Exemptions

Under 49 U.S.C. 31315(b)(1), an exemption may be granted for no longer than two years from its approval date and may be renewed upon application. In accordance with 49 U.S.C. 31136(e) and 31315, each of the four applicants has satisfied the conditions for obtaining an exemption from the Epilepsy and Seizure Disorder requirements and were published in the **Federal Register** (78 FR 67449). In addition, for Commercial Driver's License (CDL) holders, the Commercial Driver's License information System (CDLIS) and the Motor Carrier Management Information System (MCMIS) are searched for crash and violation data. For non-CDL holders, the Agency reviews the driving records from the State Driver's Licensing Agency (SDLA). These factors provide an adequate basis for predicting each driver's ability to continue to safely operate a CMV in interstate commerce.

The four drivers in this notice remain in good standing with the Agency, have maintained their medical monitoring and have not exhibited any medical issues that would compromise their ability to safely operate a CMV during the previous two-year exemption period. FMCSA has concluded that renewing the exemptions for each of these applicants is likely to achieve a level of safety equal to that existing without the exemption. Therefore, FMCSA has decided to renew each exemption for a two-year period. In

accordance with 49 U.S.C. 31136(e) and 31315, each driver has received a renewed exemption.

As of November 6, 2015, the following four drivers has satisfied the renewal conditions for obtaining an exemption from the Epilepsy and Seizure Disorders prohibition in 49 CFR 391.41(b)(8), from driving CMVs in interstate commerce (78 FR 67449): Christopher Bird (OH); Edward Nissenbaum (PA); Stephen Stawinsky (PA); and George Webb (MA). The drivers were included in FMCSA-2013-0107. The exemptions were effective on November 6, 2015, and will expire on November 6, 2017.

IV. Conditions and Requirements

The exemptions are extended subject to the following conditions: (1) Each driver must remain seizure-free and maintain a stable treatment during the two-year exemption period; (2) each driver must submit annual reports from their treating physicians attesting to the stability of treatment and that the driver has remained seizure-free; (3) each driver must undergo an annual medical examination by a certified Medical Examiner, as defined by 49 CFR 390.5; and (4) each driver must provide a copy of the annual medical certification to the employer for retention in the driver's qualification file, or keep a copy of his/her driver's qualification file if he/she is self-employed. The driver must also have a copy of the exemption when driving, for presentation to a duly authorized Federal, State, or local enforcement official. The exemption will be rescinded if: (1) The person fails to comply with the terms and conditions of the exemption; (2) the exemption has resulted in a lower level of safety than was maintained before it was granted; or (3) continuation of the exemption would not be consistent with the goals and objectives of 49 U.S.C. 31136(e) and 31315.

V. Preemption

During the period the exemption is in effect, no State shall enforce any law or regulation that conflicts with this exemption with respect to a person operating under the exemption.

VI. Conclusion

Based upon its evaluation of the four exemption applications, FMCSA renews the exemptions of the aforementioned drivers from the Epilepsy and Seizure Disorders requirement in 49 CFR 391.41(b)(8). In accordance with 49 U.S.C. 31136(e) and 31315, each exemption will be valid for two years unless revoked earlier by FMCSA.

Issued on: December 29, 2016.

BILLING CODE 4910-EX-P

DEPARTMENT OF TRANSPORTATION

Federal Transit Administration

Transfer of Federally Assisted Land or Facility

AGENCY: Federal Transit Administration, DOT.

ACTION: Notice of intent to transfer Federally assisted land or facility.

SUMMARY: Section 5334(h) of the Federal Transit Laws, as codified, 49 U.S.C. 5301, *et seq.*, permits the Administrator of the Federal Transit Administration (FTA) to authorize a recipient of FTA funds to transfer land or a facility to a public body for any public purpose with no further obligation to the Federal Government if, among other things, no Federal agency is interested in acquiring the asset for Federal use. Accordingly, FTA is issuing this Notice to advise Federal Agencies that the Champaign Transit System intends to transfer a 14,850 square foot, one-story concrete block transit garage building to the Champaign County Sheriff's Department to store the sheriff's department vehicles and equipment. Champaign County currently owns the building.

DATES: *Effective Date:* Any Federal agency interested in acquiring the Facility must notify the FTA Region V Office of its interest by February 8, 2017.

ADDRESSES: Interested parties should notify the Regional Office by writing to Marisol R. Simón, Regional Administrator, Federal Transit Administration, 200 West Adams, Suite 320, Chicago, IL 60606.

FOR FURTHER INFORMATION CONTACT: Kathryn Loster, Regional Counsel, at 312-353-3869.

SUPPLEMENTARY INFORMATION:

Background

49 U.S.C. Section 5334(h) provides guidance on the transfer of assets no longer needed. Specifically, if a recipient of FTA assistance decides an asset acquired at least in part with federal assistance is no longer needed for the purpose for which it was acquired, the Secretary of Transportation may authorize the recipient to transfer the asset to a local governmental authority to be used for a

public purpose with no further obligation to the Government. 49 U.S.C. Section 5334(h)(1).

Determinations

The Secretary may authorize a transfer for a public purpose other than public transportation only if the Secretary decides:

(A) The asset will remain in public use for at least 5 years after the date the asset is transferred;

(B) There is no purpose eligible for assistance under this chapter for which the asset should be used;

(C) The overall benefit of allowing the transfer is greater than the interest of the Government in liquidation and return of the financial interest of the Government in the asset, after considering fair market value and other factors; and

(D) Through an appropriate screening or survey process, that there is no interest in acquiring the asset for Government use if the asset is a facility or land.

Federal Interest in Acquiring Land or Facility

This document implements the requirements of 49 U.S.C. Section 5334(h)(1)(D). Accordingly, FTA hereby provides notice of the availability of the Facility further described below. Any Federal agency interested in acquiring the affected facility should promptly notify the FTA.

If no Federal agency is interested in acquiring the existing Facility, FTA will make certain that the other requirements specified in 49 U.S.C. Section 5334(h)(1)(A) through (C) are met before permitting the asset to be transferred.

The facility is located at 308 Miami Street, Urbana, Ohio and consists of approximately a 14,850 square foot, one-story, concrete block, 12-bay transit garage building. The building was built in 1994 being approximately and has poured concrete footers and concrete slab floor. Other site improvements consist of a concrete apron on approximately 3,262 SF which has approximately 8 lined diagonal spaces of parking and 145 lineal feet of guard rail along the rear of the building.

If no Federal agency is interested in acquiring the existing Facility, FTA will make certain that the other requirements specified in 49 U.S.C. Section 5334(h)(1)(A) through (C) are met before permitting the asset to be transferred.

Marisol Simón,

Regional Administrator, FTA Region V.

Alcohol and Tobacco Tax and Trade Bureau

[Docket No. TTB-2015-0012; Notice No. 169]

Importation of Distilled Spirits, Wine, Beer, Malt Beverages, Tobacco Products, Processed Tobacco, and Cigarette Papers and Tubes; Cancellation of Pilot Program Testing Electronic Collection of Import Data

AGENCY: Alcohol and Tobacco Tax and Trade Bureau, Treasury.

ACTION: Notice of cancellation of pilot program.

SUMMARY: The Alcohol and Tobacco Tax and Trade Bureau (TTB) is cancelling a pilot program in which importers, U.S. Customs and Border Protection (CBP), and TTB tested, as part of the International Trade Data System (ITDS) project, the electronic collection of import-related data required by TTB and the transfer of that data to TTB. TTB has amended its regulations to permanently provide importers with the option to file import-related data electronically along with the filing of the entry or entry summary with CBP, making the pilot program no longer necessary.

DATES: The cancellation of the pilot program is effective December 31, 2016.

FOR FURTHER INFORMATION CONTACT: John Kyranos, Regulations and Rulings Division, Alcohol and Tobacco Tax and Trade Bureau, 1310 G Street NW., Box 12, Washington, DC 20005; telephone (202) 453-1039, extension 001; or email itds@ttb.gov.

For technical questions related to the Automated Commercial Environment (ACE) or Automated Broker Interface (ABI) transmissions, contact Steven Zaccaro at steven.j.zaccaro@cbp.dhs.gov.

SUPPLEMENTARY INFORMATION: In Notice No. 156, a **Federal Register** notice published on August 7, 2015 (80 FR 47558), the Alcohol and Tobacco Tax and Trade Bureau (TTB) announced a pilot program to test the collection and transfer of certain import data through the Automated Commercial Environment (ACE), which is maintained by U.S. Customs and Border Protection (CBP). This pilot was part of TTB's effort to implement the International Trade Data System (ITDS). The pilot program was open to importers of distilled spirits, wine, beer and malt beverages, tobacco products, processed tobacco, and cigarette papers and tubes, and to U.S. government and industrial alcohol users (referred to in

this document, collectively, as “importers”).

Notice No. 156 also announced the availability of, and requested comment on, a draft of the ACE Filing Instructions for TTB-Regulated Commodities (Filing Instructions), which contains instructions for proper electronic filing of import data for TTB-regulated commodities. TTB requested comment on the draft Filing Instructions for 60 days ending October 6, 2015. TTB received no written comments by that date. However, TTB’s experience administering the pilot program led us to make several changes to the Filing Instructions.

In Industry Circular 2015–01, issued on October 21, 2015, TTB described how importers participating in the pilot program would submit specific information through ACE, either as an approved alternative to procedures prescribed in the TTB regulations or as a means to fulfill or demonstrate compliance with regulatory requirements. At the time, most TTB regulations that required the submission of information to CBP at importation required importers to submit paper documents or paper copies of those documents to CBP. Industry Circular 2015–01 also provided specific information about how to apply to participate in the pilot program.

In T.D. TTB–145, a final rule published in the **Federal Register** on December 22, 2016 (81 FR 94186), and effective December 31, 2016, TTB amended its regulations to clarify and streamline import procedures, and support the implementation of ITDS and the filing of import information electronically. The amendments include providing the option for importers to file import-related data electronically when filing entry or entry summary data electronically with CBP. As a result, as of December 31, 2016, the TTB regulations provide all TTB-regulated importers with the same option to file import-related information through ACE that participants in the pilot program had.

For this reason, this document announces the cancellation of the pilot program and Industry Circular 2015–01, effective December 31, 2016. On that date, importers who have been participating in the pilot program must follow TTB’s regulations with regard to submitting data through ACE for importation of TTB-regulated commodities. Importers who have not been participating in the pilot program also must follow TTB’s amended regulations to submit required information on paper or electronically.

In addition to the changes TTB made to the Filing Instructions due to the experience gained through the pilot program, TTB has also updated the Filing Instructions to reflect the regulatory changes made in T.D. TTB–145. The latest version of the Filing Instructions can be found on <https://www.cbp.gov> by searching for its title.

TTB notes that transmissions to ACE must be through a CBP-approved electronic data interchange system. For more information on submission of import-related information and forms through ACE, please see CBP’s home page on use of ACE at <https://www.cbp.gov/trade/automated>.

For more general information on TTB’s implementation of ITDS, see <https://www.ttb.gov/importers/learn-more-itds.shtml>.

BILLING CODE 4810–31–P

DEPARTMENT OF THE TREASURY

Community Development Financial Institutions Fund

Notice and Request for Public Comment

Announcement Type: Notice and Request for Public Comment.

SUMMARY: The U.S. Department of the Treasury, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, 44 U.S.C. 3506(c)(2)(A). Currently, the Community Development Financial Institutions Fund (CDFI Fund), U.S. Department of the Treasury, is soliciting comments concerning the New Markets Tax Credit Program (NMTC Program) Allocation Application.

DATES: Written comments must be received on or before March 10, 2017 to be assured of consideration.

ADDRESSES: Submit your comments via email to Robert Ibanez, NMTC Program Manager, CDFI Fund, at nmtc@cdfi.treas.gov.

FOR FURTHER INFORMATION CONTACT:

Robert Ibanez, NMTC Program Manager, CDFI Fund, U.S. Department of the

Treasury, 1500 Pennsylvania Avenue NW., Washington, DC 20220. The NMTC Allocation Application may be obtained from the CDFI Fund’s Web site at <http://www.cdfifund.gov/nmtc>. Other information regarding the CDFI Fund and its programs may be obtained through the CDFI Fund’s Web site at <http://www.cdfifund.gov>.

SUPPLEMENTARY INFORMATION:

Title: NMTC Program Allocation Application.

OMB Number: 1559–0016.

Abstract: Title I, subtitle C, section 121 of the Community Renewal Tax Relief Act of 2000 (the Act) amended the Internal Revenue Code (IRC) by adding IRC § 45D and created the NMTC Program. The Department of the Treasury, through the CDFI Fund, Internal Revenue Service, and Office of Tax Policy, administers the NMTC Program. In order to claim the NMTC, tax payers make Qualified Equity Investments (QEIs) in Community Development Entities (CDEs) and substantially all of the QEI proceeds must, in turn, be used by the CDE to provide investments in businesses and real estate developments in low-income communities and other purposes authorized under the statute.

The tax credit provided to the investor totals 39 percent of the amount of the investment and is claimed over a seven-year period. In each of the first three years, the investor receives a credit equal to five percent of the total amount paid for the stock or capital interest at the time of purchase. For the final four years, the value of the credit is six percent annually. Investors may not redeem their investments in CDEs prior to the conclusion of the seven-year period without forfeiting any credit amounts they have received.

The CDFI Fund is responsible for certifying organizations as CDEs, and administering the competitive allocation of tax credit authority to CDEs, which it does through annual allocation rounds. As part of the award selection process, CDEs are required to prepare and submit an Allocation Application, which consists of five key sections: Business Strategy; Community Outcomes; Organization Capacity; Capitalization Strategy; and Previous Allocations and Awards. This request for public comment seeks to gather information on the NMTC Allocation Application.

Type of Review: Regular Review.

Affected Public: CDEs applying for allocations of New Markets Tax Credits.

Estimated Number of Respondents: 310.

Estimated Annual Time per Respondent: 263.

Estimated Total Annual Burden Hours: 81,530.

Requests for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for Office of Management and Budget approval. All comments will become a matter of public record and may be published on the Fund Web site at <http://www.cdfifund.gov>. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services required to provide information.

Authority: 26 U.S.C. 45D; 26 CFR 1. 45D-1.

Mary Ann Donovan,

Director, Community Development Financial Institutions Fund.

BILLING CODE 4810-70-P

DEPARTMENT OF THE TREASURY

Office of the Comptroller of the Currency

FEDERAL RESERVE SYSTEM

FEDERAL DEPOSIT INSURANCE CORPORATION

Agency Information Collection Activities: Submission for OMB Review; Joint Comment Request

AGENCY: Office of the Comptroller of the Currency (OCC), Treasury; Board of Governors of the Federal Reserve System (Board); and Federal Deposit Insurance Corporation (FDIC).

ACTION: Joint notice and request for comment.

SUMMARY: In accordance with the requirements of the Paperwork Reduction Act (PRA) of 1995, the OCC, the Board, and the FDIC (the "agencies") may not conduct or sponsor, and the respondent is not required to respond to, an information collection unless it displays a currently valid Office of Management and Budget (OMB) control number. On August 15,

2016, the agencies, under the auspices of the Federal Financial Institutions Examination Council (FFIEC), requested public comment for 60 days on a proposal for a new Consolidated Reports of Condition and Income for Eligible Small Institutions (FFIEC 051). The proposed FFIEC 051 is a streamlined version of the existing Consolidated Reports of Condition and Income for a Bank with Domestic Offices Only (FFIEC 041), which was created by (1) removing certain existing schedules and data items and replacing them with a limited number of data items in a new supplemental schedule, (2) eliminating certain other existing data items, and (3) reducing the reporting frequency of certain data items. The FFIEC 051 generally would be available to institutions with domestic offices only and assets of less than \$1 billion, which currently file the FFIEC 041. Of the nearly 6,000 insured depository institutions, approximately 5,200 would be eligible to file the proposed FFIEC 051. When compared to the existing FFIEC 041, the proposed FFIEC 051 shows a reduction in the number of pages from 85 to 61. This decrease is the result of the removal of approximately 950 or about 40 percent of the nearly 2,400 data items in the FFIEC 041. Of the data items remaining from the FFIEC 041, the agencies have reduced the reporting frequency for approximately 100 data items in the proposed FFIEC 051. In addition, the FFIEC and the agencies requested public comment on proposed revisions to the FFIEC 041 and the Consolidated Reports of Condition and Income for a Bank with Domestic and Foreign Offices (FFIEC 031), which are currently approved collections of information. The Consolidated Reports of Condition and Income are commonly referred to as the Call Report.

The comment period for the August 2016 notice ended on October 14, 2016. As described in the **SUPPLEMENTARY INFORMATION** section, after considering the comments received on the proposals, the FFIEC and the agencies will proceed with the implementation of the proposed FFIEC 051, along with the proposed reporting revisions to the FFIEC 041 and FFIEC 031, with some modifications to the proposals for all three versions of the Call Report. With OMB approval, the proposed FFIEC 051 and the proposed reporting changes to the existing FFIEC 031 and FFIEC 041 would become effective as of March 31, 2017.

The agencies also are giving notice that they have sent the collection to OMB for review.

DATES: Comments must be submitted on or before February 8, 2017.

ADDRESSES: Interested parties are invited to submit written comments to any or all of the agencies. All comments, which should refer to the OMB control number(s), will be shared among the agencies.

OCC: Because paper mail in the Washington, DC, area and at the OCC is subject to delay, commenters are encouraged to submit comments by email, if possible, to prainfo@occ.treas.gov. Comments may be sent to: Legislative and Regulatory Activities Division, Office of the Comptroller of the Currency, Attention: "1557-0081, FFIEC 031, 041, and 051," 400 7th Street SW., Suite 3E-218, Mail Stop 9W-11, Washington, DC 20219. In addition, comments may be sent by fax to (571) 465-4326. You may personally inspect and photocopy comments at the OCC, 400 7th Street SW., Washington, DC 20219. For security reasons, the OCC requires that visitors make an appointment to inspect comments. You may do so by calling (202) 649-6700 or, for persons who are deaf or hard of hearing, TTY, (202) 649-5597. Upon arrival, visitors will be required to present valid government-issued photo identification and submit to security screening in order to inspect and photocopy comments.

All comments received, including attachments and other supporting materials, are part of the public record and subject to public disclosure. Do not include any information in your comment or supporting materials that you consider confidential or inappropriate for public disclosure.

Board: You may submit comments, which should refer to "FFIEC 031, FFIEC 041, and FFIEC 051," by any of the following methods:

- **Agency Web site:** <http://www.federalreserve.gov>. Follow the instructions for submitting comments at: <http://www.federalreserve.gov/generalinfo/foia/ProposedRegs.cfm>.

- **Federal eRulemaking Portal:** <http://www.regulations.gov>. Follow the instructions for submitting comments.

- **Email:** regs.comments@federalreserve.gov. Include the reporting form numbers in the subject line of the message.

- **Fax:** (202) 452-3819 or (202) 452-3102.

- **Mail:** Robert DeV. Frierson, Secretary, Board of Governors of the Federal Reserve System, 20th Street and Constitution Avenue NW., Washington, DC 20551.

All public comments are available from the Board's Web site at

www.federalreserve.gov/generalinfo/foia/ProposedRegs.cfm as submitted, unless modified for technical reasons. Accordingly, your comments will not be edited to remove any identifying or contact information. Public comments may also be viewed electronically or in paper in Room MP-500 of the Board's Martin Building (20th and C Streets NW.) between 9:00 a.m. and 5:00 p.m. on weekdays.

FDIC: You may submit comments, which should refer to "FFIEC 031, FFIEC 041, and FFIEC 051," by any of the following methods:

- **Agency Web site:** <https://www.fdic.gov/regulations/laws/federal/>. Follow the instructions for submitting comments on the FDIC's Web site.

- **Federal eRulemaking Portal:** <https://www.regulations.gov>. Follow the instructions for submitting comments.

- **Email:** comments@FDIC.gov. Include "FFIEC 031, FFIEC 041, and FFIEC 051" in the subject line of the message.

- **Mail:** Manuel E. Cabeza, Counsel, Attn: Comments, Room MB-3007, Federal Deposit Insurance Corporation, 550 17th Street NW., Washington, DC 20429.

- **Hand Delivery:** Comments may be hand delivered to the guard station at the rear of the 550 17th Street Building (located on F Street) on business days between 7:00 a.m. and 5:00 p.m.

Public Inspection: All comments received will be posted without change to <https://www.fdic.gov/regulations/laws/federal/> including any personal information provided. Paper copies of public comments may be requested from the FDIC Public Information Center by telephone at (877) 275-3342 or (703) 562-2200.

Additionally, commenters may send a copy of their comments to the OMB desk officer for the agencies by mail to the Office of Information and Regulatory Affairs, U.S. Office of Management and Budget, New Executive Office Building, Room 10235, 725 17th Street NW., Washington, DC 20503; by fax to (202) 395-6974; or by email to oira_submission@omb.eop.gov.

FOR FURTHER INFORMATION CONTACT: For further information about the proposed revisions to the Call Report described in this notice, please contact any of the agency staff whose names follow. In addition, copies of the FFIEC 031 and FFIEC 041 Call Report forms and the proposed FFIEC 051 report form can be obtained at the FFIEC's Web site (https://www.ffiec.gov/ffiec_report_forms.htm).

OCC: Kevin Korzeniewski, Counsel, (202) 649-5490 or, for persons who are

deaf or hard of hearing, TTY, (202) 649-5597, Legislative and Regulatory Activities Division, Office of the Comptroller of the Currency, 400 7th Street SW., Washington, DC 20219.

Board: Nuha Elmaghrabi, Federal Reserve Board Clearance Officer, (202) 452-3884, Office of the Chief Data Officer, Board of Governors of the Federal Reserve System, 20th and C Streets NW., Washington, DC 20551. Telecommunications Device for the Deaf (TDD) users may call (202) 263-4869.

FDIC: Manuel E. Cabeza, Counsel, (202) 898-3767, Legal Division, Federal Deposit Insurance Corporation, 550 17th Street NW., Room MB-3007, Washington, DC 20429.

SUPPLEMENTARY INFORMATION: The agencies are proposing to create a new Call Report for eligible small institutions, the foundation for which is a currently approved collection of information for each agency. In addition, the agencies are proposing revisions to data items reported on the FFIEC 041 and FFIEC 031 Call Reports.

Report Title: Consolidated Reports of Condition and Income (Call Report).

Form Numbers: FFIEC 051 (proposed for eligible small institutions), FFIEC 041 (for banks and savings associations with domestic offices only), and FFIEC 031 (for banks and savings associations with domestic and foreign offices).

Frequency of Response: Quarterly.

Affected Public: Business or other for-profit.

Type of Review: Revision and extension of currently approved collections.

OCC

OMB Control No.: 1557-0081.

Estimated Number of Respondents: 1,383 national banks and federal savings associations.

Estimated Average Burden per Response: 50.03 burden hours per quarter to file.

Estimated Total Annual Burden: 276,766 burden hours to file.

Board

OMB Control No.: 7100-0036.

Estimated Number of Respondents: 825 state member banks.

Estimated Average Burden per Response: 54.00 burden hours per quarter to file.

Estimated Total Annual Burden: 178,200 burden hours to file.

FDIC

OMB Control No.: 3064-0052.

Estimated Number of Respondents: 3,824 insured state nonmember banks and state savings associations.

Estimated Average Burden per Response: 48.08 burden hours per quarter to file.

Estimated Total Annual Burden: 735,432 burden hours to file.

The estimated average burden hours collectively reflect the estimates for the FFIEC 031, the FFIEC 041, and the proposed FFIEC 051 reports. When the estimates are calculated by type of report across the agencies, the estimated average burden hours per quarter are 128.05 (FFIEC 031), 74.88 (FFIEC 041) and 44.94 (FFIEC 051). Furthermore, the estimated burden per response for the quarterly filings of the Call Report is an average that varies by agency because of differences in the composition of the institutions under each agency's supervision (e.g., size distribution of institutions, types of activities in which they are engaged, and existence of foreign offices).

The agencies received ten comments on the burden estimates. One commenter recommended including time to review instructions for the applicable form, even if data items in that form are not applicable to the institution. The agencies also received comments from institutions with estimates of the time it takes their institutions to prepare the current FFIEC 041 Call Report. The majority of these estimates ranged from 40-80 hours per quarter, with one response of 268 hours per quarter. Three commenters stated that preparing the Call Report costs approximately \$1,000 annually for software. In response to the comments on methodology, the agencies have revised their calculation for their burden estimates. In addition to the estimated time for gathering and maintaining data in the required form and completing those Call Report data items for which an institution has a reportable (nonzero) amount, which have been included in the agencies' burden estimates, the revised methodology incorporates time for reviewing instructions for all items, even if the institution determines it does not have a reportable amount. The agencies have also added estimated burden hours for verifying the accuracy of amounts reported in the Call Report. As stated earlier, the agencies are also separating the estimated burden by type of report, to highlight the estimated burden reduction between the FFIEC 041 and FFIEC 051 reports. While the agencies' burden estimates are on the lower end of the ranges provided by commenters, these estimates are based on average times to complete each data item factoring in the varying levels of automation versus manual interventions

that exist across institutions for every data item.

One commenter estimated that the incremental burden associated with the one-time conversion from the FFIEC 041 to the FFIEC 051 would be approximately 160 hours, primarily for training, and approximately \$350 for software. Due to the various factors that could affect the time and cost of switching to the FFIEC 051, including training needs, the type of existing systems and automation at an institution, and any cost from software vendors to enable an institution to file the new form, the agencies have not provided an estimate of this conversion burden. The agencies reiterate that adopting the FFIEC 051 form is optional, and each institution should weigh the estimated time savings from using that form with the one-time burden to switch to the FFIEC 051 from the FFIEC 041.

General Description of Reports

Institutions submit Call Report data to the agencies each quarter for the agencies' use in monitoring the condition, performance, and risk profile of individual institutions and the industry as a whole. Call Report data serve a regulatory or public policy purpose by assisting the agencies in fulfilling their missions of ensuring the safety and soundness of financial institutions and the financial system and protecting consumer financial rights. The data also serve public policy purposes associated with agency-specific missions affecting national and state-chartered institutions, *e.g.*, monetary policy, financial stability, and deposit insurance. Call Reports are the source of the most current statistical data available for identifying areas of focus for on-site and off-site examinations. The agencies use Call Report data in evaluating institutions' corporate applications, including, in particular, interstate merger and acquisition applications for which, as required by law, the agencies must determine whether the resulting institution would control more than 10 percent of the total amount of deposits of insured depository institutions in the United States. Call Report data also are used to calculate institutions' deposit insurance and Financing Corporation assessments and national banks' and federal savings associations' semiannual assessment fees.

These information collections are mandatory: 12 U.S.C. 161 (for national banks), 12 U.S.C. 324 (for state member banks), 12 U.S.C. 1817 (for insured state nonmember commercial and savings banks), and 12 U.S.C. 1464 (for federal

and state savings associations). At present, except for selected data items and text, these information collections are not given confidential treatment.

Current Actions

I. Introduction

On August 15, 2016, the agencies requested comment for 60 days on a proposal for a new Consolidated Reports of Condition and Income for Eligible Small Institutions (FFIEC 051) along with various proposed revisions to the existing Call Report requirements (FFIEC 031 and FFIEC 041).¹ The FFIEC 051 was created by removing items or reducing the frequency of items reported in the FFIEC 041, as detailed in Appendix B. The FFIEC 051 and the revisions to the FFIEC 031 and FFIEC 041 are the result of a formal initiative launched by the FFIEC in December 2014 to identify potential opportunities to reduce burden associated with Call Report requirements for community institutions. The most significant actions under this initiative are community institution outreach efforts, internal surveys of users of Call Report data at FFIEC member entities, and the proposal for a streamlined Call Report for small institutions. Additional information about the initiative can be found in the August 2016 notice, along with two other notices related to actions taken under that initiative.²

The comment period for the August 2016 notice ended on October 14, 2016. General comments on the notice are summarized in Section II. In Section III, the agencies provide more details on the comments received on the FFIEC 051 and any changes the agencies are making in response to those comments. In Section IV, the agencies address comments on the proposed changes to the FFIEC 031 and FFIEC 041 Call Reports. In Section V, the agencies provide information about additional specific suggestions received from commenters to improve all versions of the Call Report and any changes the agencies are making in response to those comments. With OMB approval, the effective date for the initial implementation of the FFIEC 051 and the revisions to the existing FFIEC 041 and FFIEC 031 would be March 31, 2017.

II. General Comments on the Proposal

The agencies collectively received comments on the proposal from approximately 1,100 entities, including individuals, banking organizations,

bankers' associations, and a government entity.³ General comments on the proposed FFIEC 051 and existing FFIEC 031 and FFIEC 041 Call Reports are included in this section. The agencies provide information regarding comments on specific aspects of the proposed FFIEC 051 and the proposed revisions to the existing Call Reports in more detail in Sections III and IV, respectively. Additional specific suggestions provided by commenters on the existing Call Reports and the proposed FFIEC 051 are included in Section V.

A. General Comments on the Proposed FFIEC 051

Commenters expressed mixed opinions on the proposed FFIEC 051. Approximately 25 commenters representing banking organizations, bankers' associations, and a government entity supported the effort put forth by the agencies. One bankers' association stated that the initial proposal was "a positive step in an ongoing, iterative process" that shows a "modest but material burden relief to institutions eligible to file the [FFIEC 051] report." One institution stated that the proposed FFIEC 051 would assist small banks by reducing preparation time and minimizing confusion by removing schedules related to activities in which the bank does not engage. Another commenter stated that this proposal was a good start by removing items that have no relationship with the reporting institution. Another commenter agreed with the proposal to shorten the length of the Call Report and the instructions, which would reduce the time spent reviewing updates to determine items that may or may not be applicable to the bank. One commenter stated the reduction and the removal of non-relevant data items for noncomplex institutions saves both time and money. The government entity stated it uses certain data items in the Call Report in preparing national economic reports, and encouraged the agencies to continue collecting those items.

On the other hand, the majority of commenters from banking organizations and bankers' associations responded that there was no perceived impact by adopting the FFIEC 051. Many of the banking organizations stated that the data items proposed to be removed were not reported currently by their institutions; therefore, the changes would not impact their burden in preparing the Call Report. Three of the bankers' associations stated that the

¹ See 81 FR 54190 (August 15, 2016).

² See 80 FR 56539 (September 18, 2015) and 81 FR 45357 (July 13, 2016).

³ The agencies received approximately 100 unique letters and 1,000 form letters.

agencies removed items largely not reported, and related to activities not engaged in, by community banks. Another institution responded that by making the change to the FFIEC 051, it would add burden at the conversion date with little time savings in future filings. One commenter stated that the inclusion of the supplemental schedule (Schedule SU) could actually increase burden, as banks must use the same processes or new processes to verify the data (or inapplicability) of the new supplemental items.

The agencies recognize that not all community institutions eligible to file the FFIEC 051 will see an immediate and large reduction in burden by switching to that form. Some of the items that were removed from the FFIEC 041 to create the FFIEC 051 only needed to be reported by institutions with assets of \$1 billion or more. Other items not included in the FFIEC 051 applied to institutions of all sizes, but may not have applied to every community institution, due to the nature of each institution's activities. Approximately 100 data items would be collected at a reduced frequency in the FFIEC 051. For example, in creating the FFIEC 051, the agencies have removed from the FFIEC 041 the data items on Schedule RC-L, Derivatives and Off-Balance Sheet Items, in which the more than 700 eligible institutions that have derivative contracts have been required to report the gross positive and negative fair values of these contracts. The agencies also have reduced from quarterly to semiannually the reporting frequency in the FFIEC 051 of Schedule RC-C, Part II, Loans to Small Businesses and Small Farms, which is applicable to the approximately 5,200 institutions eligible to file the FFIEC 051,⁴ and Schedule RC-A, Cash and Balances Due from Depository Institutions, which applies to the more than 1,400 eligible institutions that have \$300 million or more in total assets. Additionally, as noted earlier, the agencies are shortening the instructions associated with the FFIEC 051, so that community bankers will not need to review as many nonapplicable instructions, or the associated changes to those instructions that may occur in the future. Taken together, the agencies believe these changes are a positive step toward providing meaningful Call Report burden relief to community institutions.

A majority of the commenters that did not favor the proposed FFIEC 051 suggested the agencies adopt a "short-form" Call Report to be filed in the first

and third quarters. The short-form Call Report recommended by commenters would consist only of an institution's balance sheet, income statement, and statement of changes in equity capital. The institution would file a full Call Report including all supporting schedules in the second and fourth quarters.

The agencies recognize that the information requested in the Call Report is often more granular than information presented in standard financial statements, including the notes to the financial statements, and can require refining or subdividing the information contained in accounts reported in an institution's general ledger system or core processing systems. This process may be burdensome, particularly when account balances have not materially changed from the prior quarter. However, one element that sets banking apart from other industries is the regulatory framework, particularly the provision of Federal deposit insurance and the important role of financial intermediation, which requires safety and soundness supervision and examination. A key component of bank supervision is reviewing granular financial data about an institution's activities to identify changes in those activities and in the institution's condition, performance, and risk profile from quarter to quarter that suggest areas for further investigation by the institution's supervisory agency. For example, granular data on loan categories, past due and nonaccrual loans, and loan charge-offs and recoveries⁵ feed into an analysis of credit risk, while data on loan, security, time deposit, and other borrowed money maturities and repricing dates⁶ feed into analyses of interest rate risk and liquidity risk. Much of this analysis occurs off-site, so an institution may not be aware of the extent of this process unless it identifies anomalies or other "red flags" at the institution. Even then, some anomalies and other "red flags" may be discussed immediately with the institution, while other concerns are flagged for investigation at the next on-site examination. The earlier that anomalies, upon immediate follow-up, are found to evidence deficiencies in risk management or deterioration in an institution's condition, the less difficult it will be for the institution to implement appropriate corrective action. In this context, with full-scope on-site examinations occurring no less

than once during each 18-month period for institutions that have total assets of less than \$1 billion and meet certain other criteria, quarterly data are necessary for many of the data items in the Call Report in order for an institution's supervisory agency to have a sufficient number of data points to both identify and distinguish between one-time anomalies and developing trends at the institution. Moreover, the agencies note that extending the examination cycle to 18 months for certain qualifying institutions is discretionary, and the analysis of trends in a particular institution's Call Report data is a significant factor in deciding whether to exercise that discretion with respect to that institution.

In addition to supporting the identification of higher-risk situations, enabling timely corrective action for such cases, and justifying the extended examination cycle, the quarterly reporting of the more granular Call Report items also aids in the identification of low-risk areas prior to on-site examinations, allowing the agencies to improve the allocation of their supervisory resources and increase the efficiency of supervisory assessments, which reduces the scope of examinations in these areas, thereby reducing regulatory burden. While the quarterly monitoring process enabled by the more granular Call Report items historically has focused on raising "red flags," similar emphasis has also been placed on the identification of low-risk situations. A six-month reporting cycle for the more granular Call Report items would hamper the agencies' ability to form timely risk assessments and so could stymie efforts to improve the focus of on-site examinations for low-risk institutions. In this manner, an effort to reduce regulatory burden by lengthening the reporting cycle for the more granular Call Report items could limit the agencies' opportunities to reduce burden for on-site examinations.

In addition to safety and soundness data, other data items are required quarterly due to various statutes or regulations. Leverage ratios based on average quarterly assets and risk-based capital ratios are necessary under the prompt corrective action framework established under 12 U.S.C. 1831o.⁷ Data on off-balance sheet assets and liabilities are required every quarter for which an institution submits a balance sheet to the agencies pursuant to 12 U.S.C. 1831n.⁸ Granular data on deposit liabilities and data affecting risk assessments for deposit insurance are

⁵ Reported on Schedules RI-B; RC-C, Part I; and RC-N.

⁶ Reported on Schedules RC-B; RC-C, Part I; RC-E; and RC-M.

⁷ Reported on Schedules RC-K and RC-R.

⁸ Reported on Schedule RC-L.

⁴ See Section III for further discussion of this change in reporting frequency.

required four times per year under 12 U.S.C. 1817.⁹

Further, the public availability of most quarterly Call Report information from institutions that are not publicly held is desired by their depositors (particularly those whose deposits are not fully insured), other creditors, investors, and other institutions. An institution's depositors and other creditors may use quarterly Call Report information to perform their own assessments of the condition of the institution. Existing and potential investors may evaluate Call Report data to assess an institution's condition and future prospects; the absence of quarterly information could impair the institution's ability to raise capital or could limit the liquidity of the institution's shares for existing stockholders. Other institutions that engage in transactions with the reporting institution may utilize Call Report information to assess the condition of their counterparties to these transactions. In addition, some institutions use peer analysis to benchmark against local competitors using data obtained from their Call Reports directly, or by using third-party vendors who often leverage information from the agencies' repository of Call Report data. For example, as part of their financial control structures, some institutions analyze their allowance for loan and lease losses (ALLL) by comparing their delinquency ratios and their ratios of ALLL to loans and leases to peer group ranges and averages.

While the agencies understand the commenters' desire for a "short-form" Call Report, for the reasons stated above, the agencies did not adopt this suggestion. In addition to the basic financial statements, the most streamlined quarterly report possible must also include quarterly data required by statute or regulation, along with quarterly data necessary for adequate supervision by the agencies. However, as part of the continuing burden reduction efforts, the agencies will continue to review the quarterly data collected in the proposed FFIEC 051 and existing FFIEC 031 and FFIEC 041 reports that go beyond the statutory or regulatory requirements or essential supervisory needs. For example, as described in Section III, the agencies are revising Schedule RC-C, Part II, in the FFIEC 051 to reduce its reporting frequency from quarterly to semiannual for all institutions that file the FFIEC 051.

B. General Comments on the Call Report Initiatives

The agencies are still engaged in the statutorily mandated review of the existing Call Report data items (Full Review).¹⁰ The agencies are conducting the Full Review as a series of nine surveys of internal users of Call Report data within the FFIEC member entities. Proposed changes resulting from the first three surveys were included in the August 2016 proposal, and a summary of the member entities' uses of the data items retained in the Call Report schedules covered in these three surveys is included as Appendix A. The agencies are analyzing the results of four additional surveys, and still need to collect and review data from the final two surveys to determine any future proposed revisions to the FFIEC 031, FFIEC 041, and FFIEC 051. Burden-reducing reporting changes to these three versions of the Call Report from the remaining six surveys will be proposed in future **Federal Register** notices with an anticipated implementation date of March 31, 2018. The agencies described this staged approach to proposing changes to the FFIEC 031, FFIEC 041, and FFIEC 051 resulting from the Full Review in their August 2016 proposal, but asked whether it would be less burdensome to delay all the changes to the Call Report until the completion of the Full Review.

The agencies received comments about the burden reduction initiative and the Full Review. On the timing of future revisions, one commenter stated that it would not matter, while another commenter wanted the changes implemented as soon as possible. Three commenters recommended adopting all of the changes at once. These commenters stated it is more burdensome to deal with more frequent changes to the Call Report, even if those changes would reduce burden. Six commenters sought a better understanding for the agencies' use of the Call Report data items submitted by institutions. Two bankers' associations requested a published report of how the data are used either by individual line item or by schedule.

The agencies are cognizant of the burden caused by frequent changes to the Call Report, but also must consider the ongoing burden imposed until the completion of the review by collecting data items the agencies have agreed are no longer necessary. In an attempt to balance those concerns, the agencies

plan to propose changes related to the user surveys in two future notices. The agencies already included the results from the first three user surveys in the August 2016 notice. The next notice would include changes from a second set of user surveys and is expected to be issued in early 2017. The last notice would include any changes from a third and final set of user surveys and is expected to be issued in late 2017. The proposed effective date for changes in both future notices would be March 31, 2018.

As described earlier in this section and in response to specific comments in Sections III and V, a significant amount of the data collected in the Call Report is used for safety and soundness purposes, especially for quarterly off-site monitoring and reviews between on-site examinations. Additional data items are required by statute or regulation. A lesser number of data items are used for consumer financial protection purposes or for specific agency missions, such as deposit insurance and monetary policy. To provide additional detail on the uses of Call Report schedules and data elements, the agencies are including, in Appendix A, a summary of the FFIEC member entities' uses of specific schedules and data items from the first three user surveys conducted in the Full Review. The agencies plan to publish similar summaries when proposing additional changes based on the results of the second two sets of Full Review surveys in future notices.

Finally, while it may not directly reduce burden at this time, as described in the August 2016 notice, the agencies will apply a set of guiding principles in evaluating potential future additions and revisions to the Call Report. Those principles are: (1) The data items serve a long-term regulatory or public policy purpose by assisting the FFIEC member entities in fulfilling their missions of ensuring the safety and soundness of financial institutions and the financial system and the protection of consumer financial rights, as well as agency-specific missions affecting national and state-chartered institutions; (2) the data items to be collected maximize practical utility and minimize, to the extent practicable and appropriate, burden on financial institutions; and (3) equivalent data items are not readily available through other means. The agencies intend to apply these principles with rigor for items proposed to be added to the Call Reports, with the goal of minimizing future burden increases.

¹⁰ Section 604 of the Financial Services Regulatory Relief Act of 2006 (12 U.S.C. 1817(a)(11)) mandates that this review occur every five years.

⁹ Reported on Schedules RC-E and RC-O.

III. Specific Comments on the Proposed FFIEC 051

A. Eligibility

The agencies proposed to make the FFIEC 051 available as an option to eligible small institutions. For purposes of the FFIEC 051 Call Report, the agencies proposed to define “eligible small institutions” as institutions with total assets less than \$1 billion and domestic offices only. Total assets for eligibility would be measured as of June 30 each year to determine the institution’s eligibility to file the FFIEC 051 beginning in March of the following year. In addition, for an institution otherwise eligible to file the FFIEC 051, the institution’s primary federal regulatory agency, jointly with the state chartering authority, if applicable, may require the institution to file the FFIEC 041 instead based on supervisory needs. In making this determination, the appropriate agency will consider criteria including, but not limited to, whether the eligible institution is significantly engaged in complex, specialized, or other higher risk activities.¹¹ The agencies anticipate making such determinations only in a limited number of cases.

The agencies received numerous comments on eligibility for the FFIEC 051. Eight commenters supported expanding the threshold. One commenter suggested using the FDIC’s definition of a “community bank” (from the FDIC’s Community Banking Study), which is based on deposit and lending activity and certain other criteria rather than solely asset size, while another commenter suggested expanding the FFIEC 051 to all institutions that do not engage in complex activities. Another commenter suggested tying the asset threshold to the definition of “small bank” under the Community Reinvestment Act (currently, \$1.216 billion and indexed for inflation). Two commenters recommended using a \$10 billion asset threshold, with one of those commenters suggesting that the asset threshold be automatically adjusted for inflation in the future.

At this time, the agencies are retaining their proposed \$1 billion asset-size threshold to be eligible for the FFIEC 051. This threshold is consistent with one of the eligibility criteria established by Congress for community institutions

¹¹ This proposed reservation of authority is consistent with the reservation of authority applicable to a holding company with consolidated total assets of less than \$1 billion that would otherwise file the Board’s FR Y-9SP, Parent Company Only Financial Statements for Small Holding Companies (OMB No. 7100-0128). See page GEN-1 of the instructions for the FR Y-9SP.

to be eligible for an 18-month examination cycle rather than the standard 12-month cycle.¹² The agencies are considering other size thresholds and other eligibility criteria, such as whether relevant criteria could be developed for determining that an institution should be considered a “community” institution for Call Report purposes; however, an asset-size threshold tied to an existing statutory basis was chosen to keep the initial eligibility criteria simple and transparent, and avoid delaying the proposed March 31, 2017, initial implementation date for those eligible institutions interested in beginning to file the FFIEC 051 as of that date while the agencies evaluate additional potential eligibility criteria. The agencies plan to review additional data in determining whether to propose any changes to the initial eligibility threshold in the future. The agencies are also making one revision to the eligibility criteria to disallow advanced approaches institutions¹³ from being eligible to use the FFIEC 051.¹⁴ Even though such an institution may be under the \$1 billion asset-size threshold, it is part of a consolidated banking organization with assets greater than \$250 billion and as such the agencies do not believe such an institution shares the same risks as eligible small institutions.

The agencies also asked whether filing the FFIEC 051 by eligible institutions should be mandatory or optional. Six commenters supported allowing the FFIEC 051 to be optional. The agencies agree with the commenters and will continue to offer it as an option to eligible small institutions that would otherwise need to file the FFIEC 041. If an institution is eligible for and chooses to adopt the FFIEC 051, the agencies expect the institution will continue filing that version of the report going forward as long as it remains eligible.¹⁵

¹² See 12 U.S.C. 1820(d), as amended by Section 83001 of the Fixing America’s Surface Transportation Act, Public Law 114-94, 129 Stat. 1312 (2015). The \$1 billion asset-size threshold for the proposed FFIEC 051 also is consistent with the incremental approach taken by Congress when increasing the threshold for the Board’s Small Bank Holding Company and Savings and Loan Holding Company Policy Statement; see Public Law 113-250 (December 18, 2014).

¹³ See 12 CFR 3.100(b) (OCC); 12 CFR 217.100(b) (Board); 12 CFR 324.100(b) (FDIC).

¹⁴ As a consequence, the data items in Schedule RC-R that are applicable only to advanced-approaches institutions would be removed from the FFIEC 051.

¹⁵ An institution whose assets remain below \$1 billion as of June 30 of any year may choose to file the FFIEC 041 instead of the FFIEC 051 beginning with the first quarter of the following calendar year. An institution’s primary federal supervisory agency

If an institution’s assets increase to \$1 billion or more as of June 30 of any calendar year, the institution must return to filing the FFIEC 041 beginning with the first quarter of the following calendar year.

The agencies received three comments on the proposed reservation of authority for filing the FFIEC 051. Two commenters opposed this reservation of authority, stating that the language was too broad and would allow too much discretion to examiners to arbitrarily make institutions change their version of the Call Report. One of these commenters suggested a process where any determination by an examiner that an institution must revert to the FFIEC 041 should be automatically appealable to the agency’s Ombudsman. The other commenter recommended more clearly defining and limiting the scenarios in which the agencies would consider making an institution revert to filing the FFIEC 041. The agencies acknowledge the criteria to use the reservation of authority listed in the notice could be interpreted more broadly than the agencies intended. The agencies would consider using the reservation of authority if an institution has a large amount of activity in one or more complex activities that would be reported on one of the schedules or items proposed to be eliminated in the FFIEC 051. These schedules include Schedules RC-D (trading activity), RC-L (off-balance sheet derivatives), RC-P (mortgage banking), RC-Q (fair value measurements), RC-S (servicing, securitization, and asset sale activities), and RC-V (variable interest entities). The agencies do not intend to use this reservation of authority widely, or to apply it to institutions that engage only in activities that are fully reported on the FFIEC 051. Furthermore, the exercise of the reservation of authority would require a decision by a member of the appropriate agency’s senior management and would not be at the discretion of examination staff.

B. Implementation Date

The agencies proposed implementing the FFIEC 051 beginning March 31, 2017, for all eligible small institutions. Nine commenters indicated the lead time was sufficient because most of the changes between the FFIEC 041 and FFIEC 051 did not affect their institutions. Three commenters suggested delaying the implementation date. One commenter suggested setting

_____ may approve an institution’s request to change to the FFIEC 041 in a later quarter of a calendar year on a case-by-case basis.

the date at least six months from the start of the quarter in which the final changes are published. Another commenter stated a minimum of one quarter is needed after the final FFIEC 051 is approved. One institution suggested a June 30, 2017, implementation date.

The agencies believe that it is important to offer this new report form as an option as early as feasibly possible, to reduce burden for those eligible institutions that are able to switch to the FFIEC 051 beginning with the March 31, 2017, report date. The conversion to the FFIEC 051 is optional, and initial eligibility would be determined by an institution's asset size as of June 30, 2016. For an institution that qualifies to use the FFIEC 051 and desires to use that form, but is unable to do so for the March 31, 2017, report date, the institution may begin reporting on the FFIEC 051 as of the June 30, 2017, report date or in a subsequent quarter of 2017. Alternatively, the institution could wait until March 31, 2018, to begin reporting on the FFIEC 051, assuming it continues to meet the eligibility criteria.

C. Comments on Schedule RC-R, Regulatory Capital

The agencies received approximately 30 comment letters that highlighted the burden required to prepare Schedule RC-R, Regulatory Capital. The agencies received similar comments during their banker outreach efforts, as well as in comment letters submitted under a review of agency regulations required by the Economic Growth and Regulatory Paperwork Reduction Act (EGRPRA).¹⁶

An institution must calculate its capital ratios quarterly pursuant to the prompt corrective action provisions of statute and the agencies' regulations. The agencies revised Schedule RC-R in March 2015 to include the data items that would be necessary for an institution to calculate its regulatory capital ratios under the agencies' revised capital rules. The greater detail of those rules requires a degree of categorization, recordkeeping, and reporting that is greater than under the previously applicable capital rules. While many of the data fields on Schedule RC-R may not be applicable to community institutions not engaged in complex activities, some community institutions do engage in activities that would need to be reported in those fields to perform the correct calculation under the capital rules. The agencies are developing responses to the concerns

about the burden of the regulatory capital rules raised during the EGRPRA comment process and the associated reporting requirements on Schedule RC-R. If the agencies propose modifications to the regulatory capital rules, the agencies would also propose modifications to the associated reporting requirements on Schedule RC-R.

D. Comments on Schedule RC-C, Loans and Lease Financing Receivables

Twelve commenters emphasized Schedule RC-C as a significant contributor to the reporting burden for smaller institutions. Five banking organizations specifically highlighted Schedule RC-C, Part II, Loans to Small Businesses and Small Farms, as particularly burdensome and suggested eliminating the schedule or reducing the frequency of the data collected. During the agencies' banker outreach efforts, community institutions similarly highlighted the burden of Schedule RC-C, and particularly Part II of the schedule.

In developing the proposed FFIEC 051, the agencies removed 38 items from Schedule RC-C, Part I, that are currently reported in the FFIEC 041 and were identified as having lesser utility for institutions eligible to file the new report.

The remaining loan and lease data in Schedule RC-C, Part I, are critical inputs to assessing the safety and soundness of individual institutions through analysis of the institutions' credit risk, interest rate risk, and liquidity risk, including the identification and analysis of lending concentrations. The granularity of the loan categories is also essential for peer group analysis and industry analysis. Loan and lease information is also an important component of agency statistical models that assess the risk profile of an institution. In addition, many community institutions use the Call Report loan categories when they measure the estimated credit losses that have been incurred on groups of loans with similar risk characteristics in their calculations of the ALLL each quarter under U.S. generally accepted accounting principles (GAAP).

Finally, loan and lease information assists the agencies in fulfilling their specific missions. The Board, as part of its monetary policy mission, relies on the loan data in Schedule RC-C, Part I, to provide information on credit availability and lending conditions not available elsewhere. Loan and lease detail at all sizes of institutions is necessary for monitoring the overall health of the economy. Reducing loan

detail or data frequency for smaller institutions would limit the ability to monitor credit availability and lending conditions widely, including in response to any changes in monetary policy. At times, loan availability and lending conditions may be different at smaller institutions than at larger institutions. Furthermore, Schedule RC-C, Part I, data are used to benchmark weekly loan data collected by the Board from a sample of both small and large institutions; the weekly data are used to estimate weekly loan aggregates for the banking sector as a whole to provide more timely input for the purposes of monitoring the macroeconomy.

The FDIC's deposit insurance assessment system for "established small banks" relies on information reported by individual institutions for the Schedule RC-C, Part I, standardized loan categories in the determination of the loan mix index in the financial ratios method, which is used to determine assessment rates for such institutions.¹⁷

The data collected in Schedule RC-C, Part II, is based on a statutory requirement to collect data on small business and small farm loans on an annual basis and began in 1993.¹⁸ In 2010, the FFIEC changed the reporting frequency for Schedule RC-C, Part II, from annual to quarterly. At that time, the agencies approved the more frequent collection of these data to improve the Board's ability to monitor credit conditions facing small businesses and small farms and contribute to its ability to develop policies intended to address any problems that arise in credit markets. The U.S. Department of the Treasury also identified a particular need for these data as they worked to develop policies to ensure that more small businesses and small farms would have access to credit. The Board also found the more frequent data valuable for monitoring the macroeconomy and credit availability in particular for the purposes of monetary policymaking. However, after extensive analysis by the Board, the agencies agreed in the August 2016 proposal to reduce the frequency of Schedule RC-C, Part II, to semiannually in June and December for institutions with assets of less than \$50 million.

The agencies received five comments stating that Schedule RC-C, Part II, was particularly burdensome for their institutions due to the level of manual

¹⁷ See 81 FR 32186–32188 and 32208 (May 20, 2016).

¹⁸ See Section 122 of the Federal Deposit Insurance Corporation Improvement Act of 1991, Public Law 102–242.

¹⁶ Public Law 104–208 (1996), codified at 12 U.S.C. 3311.

intervention required to report the data. This schedule requests the number and amount currently outstanding of existing loans in each of these categories, but categorized by the loans' original amounts. One banker noted that their bank had to manually stratify loan data into the three loan size categories for each type of loan according to the loans' original amounts, and then manually adjust for lines of credit and participations purchased and sold to accurately report the amount currently outstanding. One bank questioned how valuable the small business and small farm loan data are for setting monetary policy, particularly since the Board had been setting monetary policy for many years before the FFIEC began requiring quarterly data in 2010 and also because the Call Report data collected in Schedule RC-C, Part II, does not capture significant nonbank funding sources for small businesses such as credit cards and vendor financing. The agencies received similar comments about burden from banker outreach efforts conducted by the FFIEC member entities and through the EGRPRA process. After additional review, the Board has determined that semiannual reporting by all institutions filing the FFIEC 051 would be of sufficient frequency to meet their data needs. Therefore, the agencies will collect this loan information from all institutions filing the FFIEC 051 in the June and December quarterly reports only.

E. Coordination With Other Reports

Two commenters from multibank holding companies stated that the FFIEC 051 does not provide any relief for their institutions, because many of the items removed from the FFIEC 041 must still be reported on the holding company's FR Y-9C¹⁹ report and therefore must still be collected at the bank level. One of these commenters noted that unless all banks in a multibank holding company can use the FFIEC 051, likely none of them will, as it may be more difficult to consolidate the information from different Call Report forms when completing the FR Y-9C. The Board notes that for most holding companies with total assets less than \$1 billion, the holding company can file the FR Y-9SP, which does not require data being removed from the FFIEC 051. For holding companies with total assets of \$1 billion or more, the FR Y-9C does require a significant amount of information that is being removed from the FFIEC 051. The Board believes this information is necessary on the FR Y-

9C, even if the activity is spread among multiple subsidiary institutions, some of which may have assets less than \$1 billion, for the effective supervision of the consolidated holding company. In those cases, the holding company and its subsidiary institutions can best determine whether there is any burden saved at the institution level by filing the FFIEC 051 rather than the FFIEC 041.

Four commenters stated that the agencies should reduce duplication between the Call Report and other regulatory reports collected by the agencies. Commenters noted perceived duplication of one or more data items with the following reports: FR 2900,²⁰ FR 2644,²¹ the FDIC's annual Summary of Deposits survey,²² and loan data provided to the institution's Federal Home Loan Bank for access to advances. The agencies do not believe data collected in these collections are duplicative of Call Report data. The FR 2900 collects select data on cash and deposit liabilities for reserve requirement purposes, from most institutions on a weekly basis, which may not coincide with the reporting date for the Call Report. The FR 2644 collects data on loans, securities, and borrowings from a small sample of banks on a weekly basis, which may not coincide with the reporting date for the Call Report. The FDIC's Summary of Deposits survey collects data on deposits stratified by branch location from institutions with branch offices annually as of each June 30. Deposit data categorized by branch location is not available elsewhere. The Federal Home Loan Banks are not government agencies, and any data they may collect in connection with various lending programs are not readily available for use by FFIEC member entities.

IV. Proposed Call Report Revisions to the FFIEC 041 and the FFIEC 031

The agencies proposed revisions to some of the schedules in the FFIEC 041 and FFIEC 031 Call Reports in response to the findings of the first three user surveys at FFIEC member entities conducted under the Full Review. Specifically, the following schedules in the FFIEC 041 and FFIEC 031 versions of the Call Report would have data items removed or subject to new or higher reporting thresholds as a result of these surveys (see Appendices C and D

for a complete listing of the affected data items based on the September 30, 2016, FFIEC 031 and FFIEC 041 Call Reports, respectively):

- Schedule RI—Income Statement
- Schedule RI-B—Charge-offs and Recoveries on Loans and Leases and Changes in Allowance for Loan and Lease Losses
- Schedule RC-C—Loans and Lease Financing Receivables
- Schedule RC-E—Deposit Liabilities
- Schedule RC-M—Memoranda
- Schedule RC-N—Past Due and Nonaccrual Loans, Leases, and Other Assets

The agencies did not receive any comments on the specific changes to the FFIEC 041 and FFIEC 031 in the proposal, and plan to implement those changes as proposed.

V. Additional Suggested Revisions

Twelve commenters recommended additional specific changes for the agencies to consider on various schedules of the Call Report. Many of these commenters did not direct their comments at a specific version of the Call Report, so the agencies considered these comments to improve both the existing FFIEC 031 and FFIEC 041 Call Reports and proposed FFIEC 051.

One commenter suggested the agencies revise Schedule RI-C (Disaggregated Data on the Allowance for Loan and Lease Losses) to align with the loan categories reported on Schedule RC-C, Part I. The agencies did not adopt this suggestion. Aligning the categories would require collecting additional granular data on Schedule RI-C, adding approximately 20 categories and 60 total items. The agencies proposed collecting disaggregated ALLL data for key Schedule RC-C, Part I, loan categories when they proposed to add Schedule RI-C to the Call Report in 2011. However, commenters on that proposal questioned the reporting of ALLL data for these key Call Report loan categories. They recommended reducing the number of loan categories and using broader portfolio segments that would better align with their loan loss allowance methodologies, which the agencies did in the final implementation of Schedule RI-C in 2013. The agencies do not believe that changing the schedule to require additional granularity of data is necessary for the supervision of the institutions to which this schedule is currently applicable. In this regard, the agencies do not collect Schedule RI-C from institutions with assets less than \$1 billion and it would not be included in the FFIEC 051.

¹⁹ Consolidated Financial Statements for Holding Companies (FR Y-9C; OMB No. 7100-0128).

²⁰ Report of Transaction Accounts, Other Deposits and Vault Cash (FR 2900; OMB No. 7100-0087).

²¹ Weekly Report of Selected Assets and Liabilities of Domestically Chartered Commercial Banks and U.S. Branches and Agencies of Foreign Banks (FR 2644; OMB No. 7100-0075).

²² Summary of Deposits, OMB No. 3064-0061.

Three commenters suggested revisions to Schedule RI-E (Explanations). One commenter suggested adjusting the criteria to separately disclose individual components of other noninterest income and other noninterest expense. The agencies' current criteria require separate disclosure if a component within one of those income statement categories is greater than \$100,000 and 3 percent of the total balance of that category.²³ The commenter suggested adjusting the criteria to the greater of \$100,000 and 5 to 7 percent of the total balance. Another commenter suggested reporting Schedule RI-E detail on other noninterest income and other noninterest expense annually on the December 31 Call Report, as the commenter stated the data are primarily useful on an annual rather than quarterly basis. Another commenter suggested providing definitions for each of the components of other noninterest income and other noninterest expense for which preprinted captions are provided in Schedule RI-E. The agencies plan to review the threshold for separately disclosing individual components and the frequency of the data collection as part of the ongoing Full Review. The agencies do not plan to provide specific definitions for the components of other noninterest income and other noninterest expense represented by preprinted captions. The agencies added preprinted captions for these components to assist all institutions, including community institutions, as they were the most frequently disclosed components. Not having preprinted captions for such components would necessitate each institution manually entering its own captions for those components of other noninterest income and other noninterest expense exceeding the reporting threshold. However, the agencies do not want to impose a regulatory definition for these individual components, which could require institutions to adjust their internal definitions to line up with the agencies' definitions. The agencies use this information primarily for the supervision of individual institutions rather than for peer group comparison, so imposing uniform definitions across

²³ Prior to 2001, the agencies required separate disclosure of components greater than 10 percent of all other noninterest income or other noninterest expense. In 2001, the agencies revised the threshold to 1 percent of total interest income plus total noninterest income. In 2008, the agencies changed the threshold to 3 percent of other noninterest income or other noninterest expense with a \$25,000 floor. The floor was raised to \$100,000 effective September 30, 2016, while retaining the percentage threshold.

institutions is not necessary for supervisory review. Detailed lists of components of other noninterest income and other noninterest expense can be found in the instructions for Schedule RI, items 5.1 and 7.d, respectively. The agencies plan to clarify the instructions for these two Schedule RI data items to better indicate the linkage between the components of other noninterest income and other noninterest expense listed in these instructions and the preprinted captions provided in Schedule RI-E.

One commenter suggested the agencies review the intangible asset breakout on Schedule RC, item 10, and Schedule RC-M, item 2, and suggested combining goodwill and other intangible assets on Schedule RC. The agencies need additional time to consider this request, and will consider it within the next set of proposed Call Report revisions.

Six commenters stated that Schedule RC-E (Deposit Liabilities) and RC-O (Other Data for Deposit Insurance and FICO Assessments) were particularly burdensome and suggested simplifying or consolidating the deposit data on these schedules. Some commenters specifically noted the breakout of deposit information by source, use, and balance as time-consuming, especially for Memorandum items 1 through 4 on Schedule RC-E. Two commenters noted that the FDIC's deposit insurance assessments currently are calculated based on average total assets and average tangible equity, so the deposit data is not necessary for the vast majority of banks.²⁴ Three commenters also questioned why the agencies maintain a stratification of certain deposits in Schedule RC-E into those with balances less than \$100,000, \$100,000 through \$250,000, and more than \$250,000 even though the deposit insurance limit is currently \$250,000, and stated this stratification was particularly burdensome as it required a significant amount of manual intervention. Two commenters stated that separating out Individual Retirement Accounts (IRA) data from general deposits on Schedule RC-O was particularly burdensome, with one commenter noting their bank had to further identify and separate out Coverdell Education Savings Accounts (formerly called Education IRAs) from the bank's other IRA account balances to add back to the non-retirement accounts.

Schedule RC-E categorizes deposits based on source (brokered or non-

brokered) and type of account (time deposit, demand deposit, savings deposit), and by deposit size within certain of those categories. The reporting of deposit data for some of these categories is required by statute.²⁵ Reporting of time deposits with balances less than \$100,000 in Schedule RC-E, including certain Memorandum items to adjust that amount, is tied to the Board's measurement of the money supply.²⁶ Schedule RC-O, Memorandum item 1, categorizes deposits based on purpose (for retirement or not for retirement) and subdivided by deposit size, as the deposit insurance limit applies separately to retirement and non-retirement accounts. These deposit data also are necessary for the FDIC to calculate the reserve ratio each quarter, which is the ratio of the net worth of the Deposit Insurance Fund (DIF) to the aggregate estimated insured deposits.²⁷ The agencies previously approved revisions to Schedule RC-E (and Schedules RI and RC-K) to replace most segmentations of deposits less than \$250,000 that are not needed to calculate the money supply with segmentations based on deposits of more than \$250,000 for consistency with the deposit insurance limits currently in effect. These revisions will be implemented beginning March 31, 2017.²⁸ The agencies are not making any revisions to the classification of Coverdell accounts, as the reporting of deposits by purpose is tied to the FDIC's provision of deposit insurance.

One commenter stated that the data on Schedules RC-F (Other Assets) and RC-G (Other Liabilities) did not change significantly for community banks from quarter to quarter and should be reported annually instead. The agencies did propose reducing the frequency by which institutions must report the significant components of all other assets and all other liabilities on these two schedules to semiannual in the FFIEC 051 in the August 2016 notice. The agencies will be considering both the data items and frequency of reporting for these two schedules for all versions of the Call Report in the Full Review, and will consider the commenter's suggestions in that process.

One commenter stated that Schedule RC-K (Quarterly Averages) was particularly burdensome, as the bank's general ledger provides point-in-time

²⁵ For example, 12 U.S.C. 1817(a)(5) and (9).

²⁶ See definition of M2, https://www.federalreserve.gov/faqs/money_12845.htm.

²⁷ See 12 U.S.C. 1813(y)(3).

²⁸ See 81 FR 45357 (July 13, 2016).

²⁴ Deposit data affects the assessments at certain institutions, such as bankers' banks and custodial banks.

amounts and manual intervention is needed to calculate quarterly averages. The agencies note that average total assets is necessary for various purposes, including prompt corrective action and deposit insurance assessments.²⁹ The agencies will be considering both the data items and frequency of reporting for this schedule in the Full Review, and will consider the commenter's suggestions in that process.

Three commenters stated that Schedule RC-L (Derivatives and Off-Balance Sheet Items) was particularly difficult to complete, as some items defined in that schedule do not align with definitions for similar items in Schedule RC-R, particularly for over-the-counter (OTC) derivatives. The commenters also noted certain items included in Schedule RC-L, such as "commitments to make a commitment," are difficult to define and track. One commenter suggested lining up the loan commitment categories on Schedule RC-L with the loan categories on Schedule RC-C, Part I. The agencies are investigating alternatives to the current definitions in Schedule RC-L, and whether they can be more closely aligned with definitions used in the agencies' regulatory capital rules, which is the basis for Schedule RC-R, for inclusion in a future notice. The agencies do not plan to align the loan categories between Schedules RC-L and RC-C, Part I. The loan categories on Schedule RC-C, Part I, are much more granular than in Schedule RC-L. Reducing the granularity of categories on Schedule RC-C, Part I, would impair the agencies' ability to use that data for safety and soundness monitoring, while increasing the granularity on Schedule RC-L would impose additional burden to collect items the agencies do not believe are necessary.

One commenter recommended reducing the frequency of certain data items in Schedule RC-M (Memoranda) to annual. Specifically, items 7 through 9, 11, and 12 do not change from quarter to quarter at the commenter's bank. Item 7 collects data on assets under management in proprietary mutual funds and annuities. Item 8 collects information on an institution's internet Web site addresses and trade names. Item 9 asks about internet Web site transactional capability. Items 11 and 12 collect information on certain bank powers. The agencies proposed in the August 2016 notice to reduce the frequency for items 7, 9, 11, and 12 from quarterly to annual. The agencies will continue collecting item 8 on a quarterly basis to provide more accurate, timely,

and complete information to the FDIC, depositors, and the general public on the insured status of entities identifying themselves as FDIC-insured depository institutions than would occur through annual reporting.

One commenter requested that the agencies add control totals to Schedule RC-N for past due and nonaccrual loans, leases, and other assets to allow easier validation of the accuracy of the reported data to the institution's own records. The agencies also noted during their on-site banker outreach efforts that some institutions appended their own control totals on this form. The agencies agree with the suggestion, and plan to revise Schedule RC-N on the FFIEC 031, 041, and 051. For the same reason, the agencies will also revise Schedule RC-C, Part I, and Schedule RC-N to add control totals for troubled debt restructurings in Memorandum item 1 of each schedule. While these changes would add additional data items to these two schedules, the data items would be simple mathematical totals of existing data items and would not require the institution to obtain any additional data.

Five commenters requested that the agencies improve the clarity and usefulness of the Call Report instructions and highlight any changes made to the instructions each quarter. One commenter also recommended improving internal consistency within the Call Report. The agencies agree that the current Call Report instructions could be made more useful, and will start by incorporating hyperlinks to cited documents in the instructions for the FFIEC 051.³⁰ In addition, the agencies will post "redlined" documents on the FFIEC Web site³¹ that clearly indicate any changes to the instructions made since the previous quarter in both versions of the Call Report instructions. The agencies note that the description in the Call Report forms and instructions for "loans and leases, net of unearned income" and "loans and leases held for investment" are intended to have the same reported amounts. Accordingly, the agencies will replace the former description with the latter description in affected data item captions and related instructions for clarity and internal consistency. The agencies will continue to consider additional changes to improve the clarity and usefulness of the Call Report

instructions and the internal consistency of the report.

VI. Request for Comment

Public comment is requested on all aspects of this joint notice. Comment is invited on:

(a) Whether the proposed revisions to the collections of information that are the subject of this notice are necessary for the proper performance of the agencies' functions, including whether the information has practical utility;

(b) The accuracy of the agencies' estimates of the burden of the information collections as they are proposed to be revised, including the validity of the methodology and assumptions used;

(c) Ways to enhance the quality, utility, and clarity of the information to be collected;

(d) Ways to minimize the burden of information collections on respondents, including through the use of automated collection techniques or other forms of information technology; and

(e) Estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Comments submitted in response to this joint notice will be shared among the agencies. All comments will become a matter of public record.

Appendix A

Summary of the FFIEC Member Entities' Uses of the Data Items in the Call Report Schedules in Full Review Surveys 1 Through 3

Schedule RC (Balance Sheet)

Schedule RC collects high-level information on various balance sheet categories, including assets, liabilities, and equity accounts every quarter. These categories are aligned with the categories typically reported on a basic balance sheet prepared under U.S. generally accepted accounting principles (GAAP).

Schedule RI (Income Statement)

Schedule RI collects information on various income and expense categories every quarter. In general, these categories are aligned with the categories typically reported on a basic income statement and in the notes to the financial statements prepared under U.S. GAAP.

The Memorandum items collect an assortment of information on items related to the income statement. Some items provide additional detail for certain categories of income or expense, while other items are not directly tied to earnings measures. Memorandum items on tax-exempt income and nondeductible interest expense are used to convert components of reported earnings to a tax-equivalent basis to improve the comparability of income statement information across institutions for purposes

³⁰ The agencies have already begun to add such hyperlinks to the existing set of instructions for the FFIEC 031 and FFIEC 041.

³¹ https://www.ffiec.gov/ffiec_report_forms.htm.

²⁹ See 12 U.S.C. 1831o and 12 CFR 327.5.

of analyzing institutions' earnings. An institution's Subchapter S status for federal income tax purposes assists examiners and other users in understanding the amounts, if any, reported for applicable income taxes. It also serves as a flag for adjusting after-tax earnings when measuring return on assets to improve the comparability of this ratio across institutions with differing tax statuses. The count of full-time equivalent employees is used to calculate efficiency ratios and average personnel expenses per employee to identify institutions with higher expense levels for further review. The existence of other-than-temporary impairment losses on debt securities recognized in earnings provides an indication of heightened credit risk in an institution's investment securities, which may warrant supervisory follow-up, and assists in the scoping of the review of the securities portfolio during on-site examinations. Data on the composition of trading revenue is used in evaluating the variability and volatility of this revenue source for institutions with significant trading activity in off-site reviews and for pre-examination planning and as part of industry analysis of trading activity.

Schedule RC-C, Part I (Loans and Lease Financing Receivables)

Schedule RC-C, Part I, requests information on loan and lease financing activities, segmented into detailed loan categories. The memoranda items request additional information, including scheduled maturities and repricing dates for certain loan types and fair value estimates.

Schedule RC-C details loan volumes, segmentations, and structures, all of which facilitate the assessment of an institution's inherent risk, performance risk, and structure risk in its primary earning assets and its primary source of credit risk. Schedule RC-C is often reviewed in conjunction with Schedules RI, RI-B, and RC-N. This granular data enables examiners to analyze and assess the institution's loan portfolio diversification, credit quality, concentration exposure, and overall risk profile. These schedules are critical to the credit quality analysis performed by examiners to identify early warning signs of deterioration in the financial condition of institutions. Asset quality ratios from the Uniform Bank Performance Report (UBPR) that are calculated using data from Schedule RC-C and related loan schedules are also helpful to examiners in determining how an institution is performing relative to its peers and relative to its own risk profile based on its loan portfolio composition. In addition, these ratios are useful to examiners in assessing the institution's credit risk management practices relative to its peers. Elevated charge-offs or increases in nonaccrual loans in relation to loan balances provide information to users of the data on potential weak underwriting in prior periods, deterioration of asset quality, or the indication that the institution is recovering from a period of stress. If there are concerns about the allowance for loan and lease losses (ALLL) methodology or the appropriateness of the ALLL level, then there is a focus on the provision expense relative to the charge-offs as well as to the growth and

quality of certain portfolios, depending on the institution's risk characteristics. All of these inputs are essential in the review of the balance sheet, the liquidity of the institution, and the asset-liability management of the institution.

The data on Schedule RC-C are needed for on-site and off-site examination purposes and also are used in the systemic analysis of the banking system. Because the loan portfolio is the primary source of credit risk in institutions, the breakdown of the portfolio by loan type is essential in the review of asset quality. An understanding of an institution's lending activity is needed to ensure the safety and soundness of the financial institution by indicating whether the institution is increasing concentrations or incorporating a change to its lending strategy. The loan segmentation information is essential for planning and staffing examinations by considering each institution's lending activities. The information also allows the examination teams to determine if the lending volume constitutes a concentration of credit, which could require additional monitoring, measuring, and risk mitigation strategies by bank management. In addition, the loan detail is important for loan scoping and trend analysis of the entire portfolio, which are essential in determining an institution's risk profile. On a broader perspective, the loan segmentation allows regulatory staff to identify concentration risks across institutions.

Along with related data in Schedule RC-N, information about troubled debt restructurings in compliance with their modified terms can assist the assessment of management's ability to work out different categories of problem loans.

Maturity and repricing information on loans and leases, together with the maturity and repricing information collected in other schedules for other types of assets and liabilities, are needed to evaluate the liquidity and interest rate risk of the institution and to aid in evaluating the strategies institutions take to mitigate these risks. Liquidity and interest rate risk indicators that are calculated by agency models from an institution's Call Report data and exceed specified parameters or change significantly between examinations are red flags that call for timely examiner off-site review. The institution's risk profile in these areas is considered during pre-examination planning to determine the appropriate scoping and staffing for examinations.

In addition, Schedule RC-C and related loan schedules assisted the Consumer Financial Protection Bureau's (CFPB) efforts to develop required estimates for various Title XIV mortgage reform rulemakings under the Dodd-Frank Wall Street Reform and Consumer Protection Act (Pub. L. 111-203) (Dodd-Frank Act). Going forward, data items in these schedules are critical for continuous monitoring of the mortgage market. The CFPB uses these items to understand the intricacies of the mortgage market that are essential to assessing institutional participation in regulated consumer financial services markets and to assess regulatory impact associated with recent and proposed

policies, as required by that agency's statutory mandate.

Finally, loan and lease information assists the agencies in fulfilling their specific missions. The Board, as part of its monetary policy mission, relies on institution-specific Call Report data to provide information on credit availability and lending conditions not available elsewhere. Loan and lease detail at all sizes of institutions is necessary for monitoring economic conditions.

Reducing loan detail or data frequency for smaller institutions would limit the ability to monitor credit availability and lending conditions widely, including changes in credit and lending related to changes in monetary policy. At times, loan availability and lending conditions may be different at smaller institutions than at larger institutions. Furthermore, Schedule RC-C, Part I, data are used to benchmark weekly loan data collected by the Board from a sample of both small and large institutions; the weekly data are used to estimate weekly loan aggregates for the banking sector as a whole to provide a more timely input for purposes of monitoring the macroeconomy.

The FDIC's deposit insurance assessment system for "established small banks" relies on information reported by individual institutions for the Schedule RC-C, Part I, standardized loan categories in the determination of the loan mix index in the financial ratios method, as recently amended, which is used to determine assessment rates for such institutions.

Schedule RC-C, Part II (Loans to Small Businesses and Small Farms)

Schedule RC-C, Part II, requests data on loans to small businesses and small farms, including stratification by original loan amount.

Call Report small business and small farm lending data are an invaluable resource for understanding credit conditions facing these sectors of the economy. Quarterly collection of these data improves the Board's ability to monitor credit conditions facing small businesses and small farms and significantly contributes to its ability to develop policies intended to address any problems that arise in credit markets. The institution-level Call Report data provide information that cannot be obtained from other indicators of small business and small farm credit conditions. For example, during a period of credit contraction, the Call Report data can be used to identify which types of institutions are reducing the volume of their loans to small businesses and small farms. This is important information for the Board, as having detailed data on the characteristics of affected institutions is crucial to building a sufficiently informative picture of the strength of economic activity. Moreover, there is evidence that small business lending by small institutions does not correlate with lending by larger institutions.

Monetary policymaking benefits importantly from timely information on small business credit conditions and flows. To determine how best to adjust the federal funds rate over time, the Board must continuously assess the prospects for real economic activity and inflation in coming

quarters. Credit conditions have an important bearing on the evolution of those prospects over time, and so the Board pays close attention to data from Call Reports and other sources. In trying to understand the implications of aggregate credit data for the macroeconomic outlook, it is helpful to be able to distinguish between conditions facing small firms and those affecting other businesses, for several reasons. First, small businesses comprise a substantial portion of the nonfinancial business sector, and so their hiring and investment decisions have an important influence on overall real activity. Second, because small businesses tend to depend more heavily on depository institutions for external financing, they likely experience material swings in their ability to obtain credit relative to larger firms. Third, the relative opacity of small businesses and their consequent need to provide collateral for loans is thought to create a "credit" channel for monetary policy to influence real activity. Specifically, changes in monetary policy may alter the value of assets used as collateral for loans, thereby affecting the ability of small businesses to obtain credit, abstracting from the effects of any changes in loan rates. Finally, the credit conditions facing small businesses and small farms differ substantially from those facing large businesses, making it necessary to collect indicators that are specific to these borrowers. Large businesses may access credit from a number of different sources, including the corporate bond market and the commercial paper market. In contrast, small businesses and small farms rely more heavily on credit provided through depository institutions. The dependence of small businesses and small farms on lending by depository institutions—particularly from smaller institutions—highlights the importance of Call Report data.

Schedule RC-N (Past Due and Nonaccrual Loans, Leases, and Other Assets)

Schedule RC-N requests data on past due and nonaccrual assets by detailed categories for loans and leases and, on a combined basis, for debt securities and other assets.

Data collected on Schedule RC-N is essential to the oversight function of the FFIEC member entities. The loan portfolio is the largest asset type and the primary source of credit risk at most financial institutions. Past due and nonaccrual loan information provides significant insights into the overall credit quality of a financial institution's loan portfolio and potential areas of credit quality concerns on which to focus for monitoring and assessing the credit risk management and overall safety and soundness of an institution. A high level of past due or nonaccrual loans often precedes adverse changes in an institution's earnings, liquidity, and capital adequacy. This information can also have an impact on consumer protection law compliance and agency rulemaking.

Information collected on Schedule RC-N is integral to both on-site and off-site review processes at the FFIEC member entities. Trends in past due and nonaccrual loans alert examiners to possible weaknesses in bank management's loan underwriting and

credit administration practices. This information is a significant factor in assessing the portfolio's collectability and in estimating the appropriate level for an institution's ALLL, as well as the adequacy of its capital levels. The ability to compare results and trends across financial institutions is important to distinguish systemic issues from institution-specific concerns. Past due and nonaccrual loan information can serve as an indicator of areas of increasing credit risk within the loan portfolio. The segmentation of past due and nonaccrual information by loan category is necessary to pinpoint where the credit risk in an institution's loan portfolio exists. Comparing the past due level in different loan portfolios to other risk characteristics in that portfolio such as concentration, charge-offs, or growth can help to determine the overall level of risk to the safety and soundness of an institution. This data can also provide more insight on credit risks or weak underwriting practices associated with a specific loan category, which helps direct the scope of an exam.

Memorandum items in Schedule RC-N also provide important information about credit risk management, including the past due or nonaccrual status of troubled debt restructurings, which can assist the assessment of management's ability to work out different categories of problem loans. Data regarding delinquent derivative contracts provides important information for assessing a financial institution's asset quality, capital level, earnings, market risk, and operational risk.

Past due and nonaccrual information is also utilized in the assessment of compliance with consumer protection laws and regulations. Items reported on Schedule RC-N are used to inform rule writing and policy efforts, including the CFPB's Title XIV mortgage reform rulemakings under the Dodd-Frank Act. Past due information can identify potential areas of disparate treatment in relation to the Fair Housing Act (Pub. L. 90-284). Additionally, past due levels can highlight areas of potential unfair practices under the principles in section 1031 of the Dodd-Frank Act, which are similar to those under section 5 of the Federal Trade Commission Act (15 U.S.C. 45).

Schedule RI-B, Parts I and II (Charge-offs and Recoveries on Loans and Leases and Changes in Allowance for Loan and Lease Losses)

Schedule RI-B, Part I, collects information on charge-offs and recoveries on loans and leases, while Part II collects information on changes in the ALLL during the year-to-date reporting period in a manner consistent with the disclosure of the activity in the allowance required under U.S. GAAP.

The data items on Schedule RI-B provide information critical to the missions of the FFIEC member entities. Charge-off amounts, in conjunction with any associated recoveries, for the various loan categories are needed to assess the safety and soundness of the financial institution by indicating the credit quality of the loan portfolio and the potential credit risk of the institution. The data items are also used to assess the strength of the institution's credit administration

practices, along with the institution's loan underwriting practices. The data items also support the agencies' rule writing and policy efforts.

Schedule RI-B data play an integral role in reviewing the asset quality of an institution. The net charge-offs help in the assessment of the level of credit risk in the loan portfolio, both in aggregate and by loan type. Above average or increasing net charge-offs may be a signal of weak underwriting in prior periods, which in turn may be an indicator of future risks to earnings and capital. In addition, the separate reporting of gross charge-offs and recoveries allows users of the data to evaluate whether high recovery rates are masking underlying loss levels and trends, which may have future earnings implications, and the charge-off and recovery data also aid in the planning of on-site examinations and in the scoping of the loan review to be conducted during these examinations.

Schedule RI-B is also important in assessing the strength of an institution's underwriting and credit administration practices. The data items allow for the agencies to highlight loan categories with a large or sudden change in charge-off rates, which is often a key indicator of weaknesses in these areas, while information on recoveries provides support in evaluating an institution's ability to collect on prior charge-offs.

The segmentation of the charge-off and recovery data by loan category in Schedule RI-B is essential for many reasons. Consistent segmentation by loan category allows for comparability between institutions, as well as within an institution from quarter to quarter, allowing for the evaluation of changes and trends in charge-offs and recoveries that may or may not be institution-specific. This evaluation facilitates on-site examination planning. It also allows for better off-site monitoring of the existing types of lending and shifts in types of lending. The granularity and consistency of data items helps in the determination of whether weaknesses are confined to a particular portfolio segment and are unique to the institution or whether they are representative of a more widespread systemic weakness in a particular loan category. The detail by loan category is critical as losses in certain portfolios vary based on several factors and aggregating the data items would impair the ability to analyze data by loan category. The Memorandum items request further detail on charge-offs and recoveries or additional loan categories, which assists in the assessment of credit risk in these areas.

Schedule RI-B data items are used in rule writing and policy efforts. In particular, the items are used to assess institutional participation in regulated consumer financial services markets and to assess regulatory impact associated with recent and proposed policies, as required by the CFPB's mandate. Also, the information reported in Schedule RI-B, Part I, was integral in various Title XIV mortgage reform rulemakings under the Dodd-Frank Act and continues to be critical for the continuous monitoring of the mortgage markets.

Schedule RC-E, Parts I and II (Deposit Liabilities)

Schedule RC-E, Part I, requests data on deposits, segmented between transaction and nontransaction accounts. The Memoranda section of the schedule requests additional detail on retirement account deposits, brokered deposits, deposit size, and time deposit maturity and repricing dates. Schedule RC-E, Part II, requests data on foreign deposits and is included only in the FFIEC 031.

Schedule RC-E, Part I, provides detail necessary for supervisory purposes, including for identifying material deposit elements and providing detail needed to analyze cost of funds. Deposit detail as to the type, nature, and maturity of deposits, including deposits from non-core sources, is critical to the agencies' asset-liability management, interest rate risk, and liquidity analyses. A number of agency analysis tools routinely use quarterly deposit data for trend analysis and timely identification of deposit shifts, including changes in an institution's use of brokered and listing service deposits. Schedule RC-E, Part I, data are also used to estimate the contribution to the U.S. monetary aggregates for over 1,000 depository institutions that do not file these data directly to the Board.

The Schedule RC-E, Part I, Memorandum items provide information needed for off-site monitoring and pre-examination planning, particularly for analyses related to brokered deposits and time deposits, the results of which may signal the existence of higher-risk funding strategies. The resolution process for failed institutions requires sufficient deposit detail to estimate the least costly alternative to liquidation. Brokered deposit data are used as inputs in the calculation of deposit insurance assessment rates and to assure compliance with safety and soundness regulations tied to limits on those types of deposits.

Maturity and repricing information on time deposits, together with the maturity and repricing information collected in other schedules for other types of assets and liabilities, are needed to evaluate the liquidity and interest rate risk of the institution and to aid in evaluating the strategies institutions take to mitigate these risks. Liquidity and interest rate risk indicators that are calculated by agency models from an institution's Call Report data and exceed specified parameters or change significantly between examinations are red flags that call for timely examiner off-site review. The institution's risk profile in these areas is considered during pre-examination planning to determine the appropriate scoping and staffing for examinations.

Schedule RC-E, Part II, data on foreign deposits provides the extent of and exposure to such balances, and is used in similar analyses for institutions with foreign operations.

Schedule RC-O (Other Data for Deposit Insurance and FICO Assessments)

Schedule RC-O requests data for deposit insurance purposes and serves three primary purposes for the FDIC: Calculating the FDIC's DIF reserve ratio, calculating the assessment base of FDIC-insured institutions, and calculating the risk-based assessment rate of FDIC-insured institutions.

Schedule RC-O data are collected in the Call Report to provide unique information used in the calculation of the FDIC's reserve ratio to satisfy the statutory requirements related to maintaining the DIF. Information related to deposit liabilities on Schedule RC-O is needed to estimate insured deposits. Schedule RC-O is the only place on the Call Report where information is available to estimate insured and uninsured deposits for individual institutions and equivalent data items are not readily available from other sources.

Schedule RC-O data that are not available elsewhere enable the FDIC to calculate the quarterly deposit insurance assessment base for each FDIC-insured institution. Pursuant to the Dodd-Frank Act, the assessment base is defined as average consolidated total assets minus average tangible equity, both of which are reported in Schedule RC-O. Custodial banks and banker's banks also receive an additional adjustment to the assessment base using Schedule RC-O data. The FDIC must be able to calculate the assessment base in order to meet the statutory requirements for collecting quarterly insurance assessments from all FDIC-insured institutions.

Most of the data reported on Schedule RC-O is used to determine the risk-based insurance assessment for individual institutions in accordance with FDIC regulations implementing the statutory requirement for risk-based assessments first enacted in 1991. With the adoption of the risk-based scorecards for large and highly complex institutions, additional reporting is required on Schedule RC-O in data items applicable only to these institutions. In addition, some Schedule RC-O data items are used for determining the assessment rate of all FDIC-insured institutions.

Supervisory uses of Schedule RC-O data include incorporating the data on the maturity structure of external borrowings in agency interest rate risk models to determine the impact of interest rate movements on income and economic value of equity. Interest rate risk indicators that exceed specified parameters or change significantly

between examinations are triggers for timely off-site review. The indicated level of interest rate risk is considered during pre-examination planning to determine the appropriate scoping and staffing for examinations. Data on reciprocal brokered deposits supplements on- and off-site analyses of liquidity ratios, including the net non-core funding dependence and net short-term non-core funding dependence, both of which include brokered deposits in their calculation, because reciprocal brokered deposits may have characteristics that differ from other brokered deposits.

Appendix B

Proposed FFIEC 051 for March 31, 2017: Changes Made to the FFIEC 041 (Based on the FFIEC 041 for September 30, 2016)

Schedules Replaced by Schedule SU—Supplemental Information

- Schedule RC-D—Trading Assets and Liabilities
- Schedule RC-P—1-4 Family Residential Mortgage Banking Activities
- Schedule RC-Q—Assets and Liabilities Measured at Fair Value on a Recurring Basis
- Schedule RC-S—Servicing, Securitization, and Asset Sale Activities
- Schedule RC-V—Variable Interest Entities

Schedules with a Change in Frequency of Collection

1. Schedule RC-C, Part II—Loans to Small Businesses and Small Farms—For all institutions that file the FFIEC 051, the frequency of collection will move from quarterly to semiannual (June and December).
2. Schedule RC-A—Cash and Balances Due from Depository Institutions—Institutions with less than \$300 million in total assets are already exempt from completing this schedule. For all other FFIEC 051 filers, the frequency of collection will move from quarterly to semiannual (June and December).

Data Items Removed

Note: In the following list of "Data Items Removed" from the proposed FFIEC 051, existing FFIEC 041 data items that institutions with less than \$1 billion in total assets are currently exempt from reporting are marked with an asterisk ("*"). In addition, the list excludes two Call Report data items that have been approved for removal by OMB effective March 31, 2017, in accordance with the agencies' July 13, 2016, **Federal Register** notice (81 FR 45357): Schedule RI, Memorandum items 14.a and 14.b.

Schedule	Item	Item name	MDRM No.
RI	1.a.(4)	Loans to foreign governments and official institutions	RIAD4056.
RI	1.e	Interest income from trading assets	RIAD4069.
RI	2.c	Interest on trading liabilities and other borrowed money	RIAD4185.
RI	2.d	Interest on subordinated notes and debentures	RIAD4200.
		Note: Items 2.c and 2.d of Schedule RI will be combined into one data item for "Other interest expense."	
RI	5.c	Trading revenue	RIADA220.
RI	5.e	Venture capital revenue	RIADB491.

Schedule	Item	Item name	MDRM No.
RI	M2*	Income from the sale and servicing of mutual funds and annuities (included in Schedule RI, item 8).	RIAD8431.
RI	M8.a	Interest rate exposures	RIAD8757.
RI	M8.b	Foreign exchange exposures	RIAD8758.
RI	M8.c	Equity security and index exposures	RIAD8759.
RI	M8.d	Commodity and other exposures	RIAD8760.
RI	M8.e	Credit exposures	RIADF186.
RI	M8.f*	Impact on trading revenue of changes in the creditworthiness of the bank's derivatives counterparties on the bank's derivative assets (included in Memorandum items 8.a through 8.e).	RIADK090.
RI	M8.g*	Impact on trading revenue of changes in the creditworthiness of the bank on the bank's derivative liabilities (included in Memorandum items 8.a through 8.e)..	RIADK094.
RI	M9.a	Net gains (losses) on credit derivatives held for trading	RIADC889.
RI	M9.b	Net gains (losses) on credit derivatives held for purposes other than trading.	RIADC890.
RI	M10	Credit losses on derivatives	RIADA251.
RI	M13.a.(1)	Estimated net gains (losses) on loans attributable to changes in instrument-specific credit risk.	RIADF552.
RI	M13.b.(1)	Estimated net gains (losses) on liabilities attributable to changes in instrument-specific credit risk.	RIADF554.
RI	M15.a*	Consumer overdraft-related service charges levied on those transaction account and non-transaction savings account deposit products intended primarily for individuals for personal, household, or family use.	RIADH032.
RI	M15.b*	Consumer account periodic maintenance charges levied on those transaction account and non-transaction savings account deposit products intended primarily for individuals for personal, household, or family use.	RIADH033.
RI	M15.c*	Consumer customer automated teller machine (ATM) fees levied on those transaction account and non-transaction savings account deposit products intended primarily for individuals for personal, household, or family use.	RIADH034.
RI	M15.d*	All other service charges on deposit accounts	RIADH035.
RI-B, Part I	2	Loans to depository institutions and acceptances of other banks (Columns A and B).	RIAD4481, RIAD4482.

Occupational Exposure to Beryllium; Final Rule

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

29 CFR Parts 1910, 1915, and 1926

[Docket No. OSHA-H005C-2006-0870]

RIN 1218-AB76

Occupational Exposure to Beryllium

AGENCY: Occupational Safety and Health Administration (OSHA), Department of Labor.

ACTION: Final rule.

SUMMARY: The Occupational Safety and Health Administration (OSHA) is amending its existing standards for occupational exposure to beryllium and beryllium compounds. OSHA has determined that employees exposed to beryllium at the previous permissible exposure limits face a significant risk of material impairment to their health. The evidence in the record for this rulemaking indicates that workers exposed to beryllium are at increased risk of developing chronic beryllium disease and lung cancer. This final rule establishes new permissible exposure limits of 0.2 micrograms of beryllium per cubic meter of air (0.2 $\mu\text{g}/\text{m}^3$) as an 8-hour time-weighted average and 2.0 $\mu\text{g}/\text{m}^3$ as a short-term exposure limit determined over a sampling period of 15 minutes. It also includes other provisions to protect employees, such as requirements for exposure assessment, methods for controlling exposure, respiratory protection, personal protective clothing and equipment, housekeeping, medical surveillance, hazard communication, and recordkeeping.

OSHA is issuing three separate standards—for general industry, for shipyards, and for construction—in order to tailor requirements to the circumstances found in these sectors.

DATES: *Effective date:* The final rule becomes effective on March 10, 2017.

Compliance dates: Compliance dates for specific provisions are set in § 1910.1024(o) for general industry, § 1915.1024(o) for shipyards, and § 1926.1124(o) for construction. There are a number of collections of information contained in this final rule (see Section IX, OMB Review under the Paperwork Reduction Act of 1995). Notwithstanding the general date of applicability that applies to all other requirements contained in the final rule, affected parties do not have to comply with the collections of information until the Department of Labor publishes a separate document in the **Federal**

Register announcing the Office of Management and Budget has approved them under the Paperwork Reduction Act.

ADDRESSES: In accordance with 28 U.S.C. 2112(a), the Agency designates Ann Rosenthal, Associate Solicitor of Labor for Occupational Safety and Health, Office of the Solicitor of Labor, Room S-4004, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210, to receive petitions for review of the final rule.

FOR FURTHER INFORMATION CONTACT: For general information and press inquiries, contact Frank Meilinger, Director, Office of Communications, Room N-3647, OSHA, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210; telephone (202) 693-1999; email meilinger.francis2@dol.gov.

For technical inquiries, contact William Perry or Maureen Ruskin, Directorate of Standards and Guidance, Room N-3718, OSHA, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210; telephone (202) 693-1950.

Citation Method

In the docket for the beryllium rulemaking, found at <http://www.regulations.gov>, every submission was assigned a document identification (ID) number that consists of the docket number (OSHA-H005C-2006-0870) followed by an additional four-digit number. For example, the document ID number for OSHA's Preliminary Economic Analysis and Initial Regulatory Flexibility Analysis is OSHA-H005C-2006-0870-0426. Some document ID numbers include one or more attachments, such as the National Institute for Occupational Safety and Health (NIOSH) prehearing submission (see Document ID OSHA-H005C-2006-0870-1671).

When citing exhibits in the docket, OSHA includes the term "Document ID" followed by the last four digits of the document ID number, the attachment number or other attachment identifier, if applicable, page numbers (designated "p." or "Tr." for pages from a hearing transcript). In a citation that contains two or more document ID numbers, the document ID numbers are separated by semi-colons. In some sections, such as Section V, Health Effects, author names and year of study publication are included before the document ID number in a citation, for example: (Deubner *et al.*, 2011, Document ID 0527). Where multiple exhibits are listed with author names and year of study publication, document ID numbers after the first are in parentheses, for example: (Elder *et al.*, 2005, Document ID 1537; Carter *et al.*, 2006 (1556); Refsnes *et al.*, 2006 (1428)).

I. Executive Summary

This final rule establishes new permissible exposure limits (PELs) for beryllium of 0.2 micrograms of beryllium per cubic meter of air (0.2 $\mu\text{g}/\text{m}^3$) as an 8-hour time-weighted average (TWA) and 2.0 $\mu\text{g}/\text{m}^3$ as a short-term exposure limit (STEL) determined over a sampling period of 15 minutes. In addition to the PELs, the rule includes provisions to protect employees such as requirements for exposure assessment, methods for controlling exposure, respiratory protection, personal protective clothing and equipment, housekeeping, medical surveillance, hazard communication, and recordkeeping. OSHA is issuing three separate standards—for general

industry, for shipyards, and for construction—in order to tailor requirements to the circumstances found in these sectors. There are, however, numerous common elements in the three standards.

The final rule is based on the requirements of the Occupational Safety and Health Act (OSH Act) and court interpretations of the Act. For health standards issued under section 6(b)(5) of the OSH Act, OSHA is required to promulgate a standard that reduces significant risk to the extent that it is technologically and economically feasible to do so. *See* Section II, Pertinent Legal Authority, for a full discussion of OSH Act legal requirements.

OSHA has conducted an extensive review of the literature on adverse health effects associated with exposure to beryllium. OSHA has also developed estimates of the risk of beryllium-related diseases, assuming exposure over a working lifetime, at the preceding PELs as well as at the revised PELs and action level. Comments received on OSHA's preliminary analysis, and the Agency's final findings, are discussed in Section V, Health Effects, Section VI, Risk Assessment, and Section VII, Significance of Risk. OSHA finds that employees exposed to beryllium at the preceding PELs are at an increased risk of developing chronic beryllium disease (CBD) and lung cancer. As discussed in Section VII, OSHA concludes that exposure to beryllium constitutes a significant risk of material impairment to health and that the final rule will substantially lower that risk. The Agency considers the level of risk remaining at the new TWA PEL to still be significant. However, OSHA did not adopt a lower TWA PEL because the Agency could not demonstrate technological feasibility of a lower TWA PEL. The Agency has adopted the STEL and ancillary provisions of the rule to further reduce the remaining significant risk.

OSHA's examination of the technological and economic feasibility of the rule is presented in the Final Economic Analysis and Regulatory Flexibility Analysis (FEA), and is summarized in Section VIII of this preamble. OSHA concludes that the final PELs are technologically feasible for all affected industries and application groups. Thus, OSHA concludes that engineering and work practice controls will be sufficient to reduce and maintain beryllium exposures to the new PELs or below in most operations most of the time in the affected industries. For those few operations within an industry or

application group where compliance with the PELs cannot be achieved even when employers implement all feasible engineering and work practice controls, use of respirators will be required.

OSHA developed quantitative estimates of the compliance costs of the rule for each of the affected industry sectors. The estimated compliance costs were compared with industry revenues and profits to provide a screening analysis of the economic feasibility of complying with the rule and an evaluation of the economic impacts. Industries with unusually high costs as a percentage of revenues or profits were further analyzed for possible economic feasibility issues. After performing these analyses, OSHA finds that compliance with the requirements of the rule is economically feasible in every affected industry sector.

The final rule includes several major changes from the proposed rule as a result of OSHA's analysis of comments and evidence received during the comment periods and public hearings. The major changes are summarized below and are fully discussed in Section XVI, Summary and Explanation of the Standards. OSHA also presented a number of regulatory alternatives in the Notice of Proposed Rulemaking (80 FR 47566, 47729–47748 (8/7/2015)). Where the Agency received substantive comments on a regulatory alternative, those comments are also discussed in Section XVI. A full discussion of all regulatory alternatives can be found in Chapter VIII of the Final Economic Analysis (FEA).

Scope. OSHA proposed to cover occupational exposures to beryllium in general industry, with an exemption for articles and an exemption for materials containing less than 0.1% beryllium by weight. OSHA has made a final determination to cover exposures to beryllium in general industry, shipyards, and construction under the final rule, and to issue separate standards for each sector. The final rule also provides an exemption for materials containing less than 0.1% beryllium by weight only where the employer has objective data demonstrating that employee exposure to beryllium will remain below the action level of 0.1 $\mu\text{g}/\text{m}^3$ as an 8-hour TWA under any foreseeable conditions.

Exposure Assessment. The proposed rule would have required periodic exposure monitoring annually where employee exposures are at or above the action level but at or below the TWA PEL; no periodic monitoring would have been required where employee exposures exceeded the TWA PEL. The final rule specifies that exposure

monitoring must be repeated within six months where employee exposures are at or above the action level but at or below the TWA PEL, and within three months where employee exposures are above the TWA PEL or STEL. The final rule also includes provisions allowing the employer to discontinue exposure monitoring where employee exposures fall below the action level and STEL. In addition, the final rule includes a new provision that allows employers to assess employee exposures using any combination of air monitoring data and objective data sufficient to accurately characterize airborne exposure to beryllium (*i.e.*, the “performance option”).

Beryllium Work Areas. The proposed rule would have required the employer to establish and maintain a beryllium work area wherever employees are, or can reasonably be expected to be, exposed to airborne beryllium, regardless of the level of exposure. As discussed in the Summary and Explanation section of this preamble, OSHA has narrowed the definition of beryllium work area in the final rule from the proposal. The final rule now limits the requirement to work areas containing a process or operation that can release beryllium where employees are, or can reasonably be expected to be, exposed to airborne beryllium at any level. The final rule expands the exposure requirement to include work areas containing a process or operation where there is potential dermal contact with beryllium based on comments from public health experts that relying solely on airborne exposure omits the potential contribution of dermal exposure to total exposure. See the Summary and Explanation section of this preamble for a full discussion of the relevant comments and reasons for changes from the proposed standard. Beryllium work areas are not required under the standards for shipyards and construction.

Respiratory Protection. OSHA has added a provision in the final rule requiring the employer to provide a powered air-purifying respirator (PAPR) instead of a negative pressure respirator where respiratory protection is required by the rule and the employee requests a PAPR, provided that the PAPR provides adequate protection.

Personal Protective Clothing and Equipment. The proposed rule would have required use of protective clothing and equipment where employee exposure exceeds, or can reasonably be expected to exceed the TWA PEL or STEL; where employees' clothing or skin may become visibly contaminated with beryllium; and where employees'

skin can reasonably be expected to be exposed to soluble beryllium compounds. The final rule requires use of protective clothing and equipment where employee exposure exceeds, or can reasonably be expected to exceed the TWA PEL or STEL; or where there is a reasonable expectation of dermal contact with beryllium.

Medical Surveillance. The exposure trigger for medical examinations has been revised from the proposal. The proposed rule would have required that medical examinations be offered to each employee who has worked in a regulated area (*i.e.*, an area where an employee's exposure exceeds, or can reasonably be expected to exceed, the TWA PEL or STEL) for more than 30 days in the last 12 months. The final rule requires that medical examinations be offered to each employee who is or is reasonably expected to be exposed at or above the action level for more than 30 days per year. A trigger to offer periodic medical surveillance when recommended by the most recent written medical opinion was also added the final rule. Under the final rule, the licensed physician recommends continued periodic medical surveillance for employees who are confirmed positive for sensitization or diagnosed with CBD. The proposed rule also would have required that medical examinations be offered annually; the final rule requires that medical examinations be offered at least every two years.

The final medical surveillance provisions have been revised to provide enhanced privacy for employees. The rule requires the employer to obtain a written medical opinion from a licensed physician for medical examinations provided under the rule but limits the information provided to the employer to the date of the examination, a statement that the examination has met the requirements of the standard, any recommended limitations on the employee's use of respirators, protective clothing, and equipment, and a statement that the results of the exam have been explained to the employee. The proposed rule would have required that such opinions contain additional information, without requiring employee authorization, such as the physician's opinion as to whether the employee has any detected medical condition that would place the employee at increased risk of CBD from further exposure, and any recommended limitations upon the employee's exposure to beryllium. In the final rule, the written opinion provided to the employer will only include recommended limitations on the

employee's exposure to beryllium, referral to a CBD diagnostic center, a recommendation for continued periodic medical surveillance, or a recommendation for medical removal if the employee provides written authorization. The final rule requires a separate written medical report provided to the employee to include this additional information, as well as detailed information related to the employee's health.

The proposed rule would have required that the licensed physician provide the employer with a written medical opinion within 30 days of the examination. The final rule requires that the licensed physician provide the employee with a written medical report and the employer with a written medical opinion within 45 days of the examination, including any follow-up beryllium lymphocyte proliferation test (BeLPTs).

The final rule also adds requirements for the employer to provide the CBD diagnostic center with the same information provided to the physician or other licensed health care professional who administers the medical examination, and for the CBD diagnostic center to provide the employee with a written medical report and the employer with a written medical opinion. Under the final standard, employees referred to a CBD diagnostic center can choose to have future evaluations performed there. A requirement that laboratories performing BeLPTs be certified was also added to the final rule.

The proposed rule would have required that employers provide low dose computed tomography (LDCT) scans to employees who met certain exposure criteria. The final rule requires LDCT scans when recommended by the physician or other licensed healthcare professional administering the medical exam, after considering the employee's history of exposure to beryllium along with other risk factors.

Dates. OSHA proposed an effective date 60 days after publication of the rule; a date for compliance with all provisions except change rooms and engineering controls of 90 days after the effective date; a date for compliance with change room requirements, which was one year after the effective date; and a date for compliance with engineering control requirements of two years after the effective date.

OSHA has revised the proposed compliance dates. The final rule is effective 60 days after publication. All obligations for compliance commence one year after the effective date, with two exceptions: The obligation for

change rooms and showers commences two years after the effective date; and the obligation for engineering controls commences three years after the effective date.¹

Under the OSH Act's legal standard directing OSHA to set health standards based on findings of significant risk of material impairment and technological and economic feasibility, OSHA does not use cost-benefit analysis to determine the PEL or other aspects of the rule. It does, however, determine and analyze costs and benefits for its own informational purposes and to meet certain Executive Order requirements, as discussed in Section VIII, Summary of the Final Economic Analysis and Final Regulatory Flexibility Analysis and in the FEA. Table I-1—which is derived from material presented in Section VIII of this preamble—provides a summary of OSHA's best estimate of the costs and benefits of the rule using a discount rate of 3 percent. As shown, the rule is estimated to prevent 90 fatalities and 46 new cases of CBD annually once the full effects are realized, and the estimated cost of the rule is \$73.9 million annually. Also as shown in Table I-1, the discounted monetized benefits of the rule are estimated to be \$560.9 million annually, and the rule is estimated to generate net benefits of approximately \$487 million annually; however, there is a great deal of uncertainty in those benefits due to assumptions made about dental workers' exposures and reductions; see Section VIII of this preamble. As that section shows, benefits significantly exceed costs regardless of how dental workers' exposures are treated.

TABLE I-1—ANNUALIZED BENEFITS, COSTS AND NET BENEFITS OF OSHA'S FINAL BERYLLIUM STANDARD

[3 Percent discount rate, 2015 dollars]

Annualized Costs:	
Control Costs	\$12,269,190
Rule Familiarization	180,158
Exposure Assessment	13,748,676
Regulated Areas	884,106

¹ Note that the main analysis of costs and benefits presented in this FEA does not take into account the lag in effective dates but, instead, assumes that the rule takes effect in Year 1. To account for the lag in effective dates, OSHA has provided in the sensitivity analysis in Chapter VII of the FEA an estimate of its separate effects on costs and benefits relative to the main analysis. This analysis, which appears in Table VII-16 of the FEA, indicates that if employers delayed implementation of all provisions until legally required, and no benefits occurred until all provisions went into effect, this would decrease the estimated costs by 3.9 percent; the estimated benefits by 8.5 percent, and the estimated net benefits of the standard by 9.2 percent (to \$442 million).

II. Pertinent Legal Authority

The purpose of the Occupational Safety and Health Act (29 U.S.C. 651 *et seq.*) (“the Act” or “the OSH Act”), is “to assure so far as possible every working man and woman in the Nation safe and healthful working conditions and to preserve our human resources” (29 U.S.C. 651(b)). To achieve this goal Congress authorized the Secretary of Labor (“the Secretary”) “to set mandatory occupational safety and health standards applicable to businesses affecting interstate commerce” (29 U.S.C. 651(b)(3); *see* 29 U.S.C. 654(a) (requiring employers to comply with OSHA standards), 655(a) (authorizing summary adoption of existing consensus and federal standards within two years of the Act’s enactment), and 655(b) (authorizing promulgation, modification or revocation of standards pursuant to notice and comment)). The primary statutory provision relied upon by the Agency in promulgating health standards is section 6(b)(5) of the Act; other sections of the OSH Act, however, authorize the Occupational Safety and Health Administration (“OSHA”) to require labeling and other appropriate forms of warning, exposure assessment, medical examinations, and recordkeeping in its standards (29 U.S.C. 655(b)(5), 655(b)(7), 657(c)).

The Act provides that in promulgating standards dealing with toxic materials or harmful physical agents, such as beryllium, the Secretary “shall set the

standard which most adequately assures, to the extent feasible, on the basis of the best available evidence, that no employee will suffer material impairment of health or functional capacity even if such employee has regular exposure to the hazard dealt with by such standard for the period of his working life” (29 U.S.C. 655(b)(5)). Thus, “[w]hen Congress passed the Occupational Safety and Health Act in 1970, it chose to place pre-eminent value on assuring employees a safe and healthful working environment, limited only by the feasibility of achieving such an environment” (*American Textile Mfrs. Institute, Inc. v. Donovan*, 452 US 490, 541 (1981) (“*Cotton Dust*”).

OSHA proposed this new standard for beryllium and beryllium compounds and conducted its rulemaking pursuant to section 6(b)(5) of the Act ((29 U.S.C. 655(b)(5)). The preceding beryllium standard, however, was adopted under the Secretary’s authority in section 6(a) of the OSH Act (29 U.S.C. 655(a)), to adopt national consensus and established Federal standards within two years of the Act’s enactment (*see* 29 CFR 1910.1000 Table Z-1). Any rule that “differs substantially from an existing national consensus standard” must “better effectuate the purposes of this Act than the national consensus standard” (29 U.S.C. 655(b)(8)). Several additional legal requirements arise from the statutory language in sections 3(8) and 6(b)(5) of the Act (29 U.S.C. 652(8), 655(b)(5)). The remainder of this section discusses these requirements, which OSHA must consider and meet before it may promulgate this occupational health standard regulating exposure to beryllium and beryllium compounds.

Material Impairment of Health

Subject to the limitations discussed below, when setting standards regulating exposure to toxic materials or harmful physical agents, the Secretary is required to set health standards that ensure that “no employee will suffer material impairment of health or functional capacity. . . .” (29 U.S.C. 655(b)(5)). “OSHA is not required to state with scientific certainty or precision the exact point at which each type of [harm] becomes a material impairment” (*AFL-CIO v. OSHA*, 965 F.2d 962, 975 (11th Cir. 1992)). Courts have also noted that OSHA should consider all forms and degrees of material impairment—not just death or serious physical harm (*AFL-CIO*, 965 F.2d at 975). Thus the Agency has taken the position that “subclinical” health effects, which may be precursors to more serious disease, can be material impairments of health that OSHA

should address when feasible (43 FR 52952, 52954 (11/14/78) (Lead Preamble)).

Significant Risk

Section 3(8) of the Act requires that workplace safety and health standards be “reasonably necessary or appropriate to provide safe or healthful employment” (29 U.S.C. 652(8)). The Supreme Court, in its decision on OSHA’s benzene standard, interpreted section 3(8) to mean that before promulgating any standard, the Secretary must evaluate whether “significant risk[.]” exists under current conditions and to then determine whether that risk can be “eliminated or lessened” through regulation (*Indus. Union Dep’t, AFL-CIO v. Am. Petroleum Inst.*, 448 U.S. 607, 642 (1980) (plurality opinion) (“*Benzene*”). The Court’s holding is consistent with evidence in the legislative record, with regard to section 6(b)(5) of the Act (29 U.S.C. 655(b)(5)), that Congress intended the Agency to regulate unacceptably severe occupational hazards, and not “to establish a utopia free from any hazards” or to address risks comparable to those that exist in virtually any occupation or workplace (116 Cong. Rec. 37614 (1970), Leg. Hist. 480–82). It is also consistent with Section 6(g) of the OSH Act, which states that, in determining regulatory priorities, “the Secretary shall give due regard to the urgency of the need for mandatory safety and health standards for particular industries, trades, crafts, occupations, businesses, workplaces or work environments” (29 U.S.C. 655(g)).

The Supreme Court in *Benzene* clarified that “[i]t is the Agency’s responsibility to determine, in the first instance, what it considers to be a ‘significant risk’” (*Benzene*, 448 U.S. at 655), and that it was not the Court’s responsibility to “express any opinion on the . . . difficult question of what factual determinations would warrant a conclusion that significant risks are present which make promulgation of a new standard reasonably necessary or appropriate” (*Benzene*, 448 U.S. at 659). The Court stated, however, that the section 6(f) (29 U.S.C. 655(b)(f)) substantial evidence standard applicable to OSHA’s significant risk determination does not require the Agency “to support its finding that a significant risk exists with anything approaching scientific certainty” (*Benzene*, 448 U.S. at 656). Rather, OSHA may rely on “a body of reputable scientific thought” to which “conservative assumptions in interpreting the data . . .” may be applied, “risking error on the side of

overprotection” (*Benzene*, 448 U.S. at 656; see also *United Steelworkers of Am., AFL-CIO-CLC v. Marshall*, 647 F.2d 1189, 1248 (D.C. Cir. 1980) (“*Lead I*”) (noting the *Benzene* court’s application of this principle to carcinogens and applying it to the lead standard, which was not based on carcinogenic effects)). OSHA may thus act with a “pronounced bias towards worker safety” in making its risk determinations (*Bldg & Constr. Trades Dep’t v. Brock*, 838 F.2d 1258, 1266 (D.C. Cir. 1988) (“*Asbestos II*”).

The Supreme Court further recognized that what constitutes “significant risk” is “not a mathematical straitjacket” (*Benzene*, 448 U.S. at 655) and will be “based largely on policy considerations” (*Benzene*, 448 U.S. at 655 n. 62). The Court gave the following example:

If . . . the odds are one in a billion that a person will die from cancer by taking a drink of chlorinated water, the risk clearly could not be considered significant. On the other hand, if the odds are one in a thousand that regular inhalation of gasoline vapors that are 2% benzene will be fatal, a reasonable person might well consider the risk significant . . . (*Benzene*, 448 U.S. at 655).

Following *Benzene*, OSHA has, in many of its health standards, considered the one-in-a-thousand metric when determining whether a significant risk exists. Moreover, as “a prerequisite to more stringent regulation” in all subsequent health standards, OSHA has, consistent with the *Benzene* plurality decision, based each standard on a finding of significant risk at the “then prevailing standard” of exposure to the relevant hazardous substance (*Asbestos II*, 838 F.2d at 1263). The Agency’s final risk assessment is derived from existing scientific and enforcement data and its final conclusions are made only after considering all evidence in the rulemaking record. Courts reviewing the validity of these standards have uniformly held the Secretary to the significant risk standard first articulated by the *Benzene* plurality and have generally upheld the Secretary’s significant risk determinations as supported by substantial evidence and “a reasoned explanation for his policy assumptions and conclusions” (*Asbestos II*, 838 F.2d at 1266).

Once OSHA makes its significant risk finding, the “more stringent regulation” (*Asbestos II*, 838 F.2d at 1263) it promulgates must be “reasonably necessary or appropriate” to reduce or eliminate that risk, within the meaning of section 3(8) of the Act (29 U.S.C. 652(8)) and *Benzene* (448 U.S. at 642) (see *Asbestos II*, 838 F.2d at 1269). The courts have interpreted section 6(b)(5) of

the OSH Act as requiring OSHA to set the standard that eliminates or reduces risk to the lowest feasible level; as discussed below, the limits of technological and economic feasibility usually determine where the new standard is set (see *UAW v. Pendergrass*, 878 F.2d 389, 390 (D.C. Cir. 1989)). In choosing among regulatory alternatives, however, “[t]he determination that [one standard] is appropriate, as opposed to a marginally [more or less protective] standard, is a technical decision entrusted to the expertise of the agency . . .” (*Nat’l Mining Ass’n v. Mine Safety and Health Admin.*, 116 F.3d 520, 528 (D.C. Cir. 1997)) (analyzing a Mine Safety and Health Administration standard under the *Benzene* significant risk standard). In making its choice, OSHA may incorporate a margin of safety even if it theoretically regulates below the lower limit of significant risk (*Nat’l Mining Ass’n*, 116 F.3d at 528 (citing *American Petroleum Inst. v. Costle*, 665 F.2d 1176, 1186 (D.C. Cir. 1982))).

Working Life Assumption

The OSH Act requires OSHA to set the standard that most adequately protects employees against harmful workplace exposures for the period of their “working life” (29 U.S.C. 655(b)(5)). OSHA’s longstanding policy is to define “working life” as constituting 45 years; thus, it assumes 45 years of exposure when evaluating the risk of material impairment to health caused by a toxic or hazardous substance. This policy is not based on empirical data that most employees are exposed to a particular hazard for 45 years. Instead, OSHA has adopted the practice to be consistent with the statutory directive that “no employee” suffer material impairment of health “even if” such employee is exposed to the hazard for the period of his or her working life (see 74 FR 44796 (8/31/09)). OSHA’s policy was given judicial approval in a challenge to an OSHA standard that lowered the permissible exposure limit (PEL) for asbestos (*Asbestos II*, 838 F.2d at 1264–1265). In that case, the petitioners claimed that the median duration of employment in the affected industry sectors was only five years. Therefore, according to petitioners, OSHA erred in assuming a 45-year working life in calculating the risk of health effects caused by asbestos exposure. The D.C. Circuit disagreed, stating “[e]ven if it is only the rare worker who stays with asbestos-related tasks for 45 years, that worker would face a 64/1000 excess risk of contracting cancer; Congress clearly authorized OSHA to protect such a worker”

(*Asbestos II*, 838 F.2d at 1264–1265). OSHA might calculate the health risks of exposure, and the related benefits of lowering the exposure limit, based on an assumption of a shorter working life, such as 25 years, but such estimates are for informational purposes only.

Best Available Evidence

Section 6(b)(5) of the Act requires OSHA to set standards “on the basis of the best available evidence” and to consider the “latest available scientific data in the field” (29 U.S.C. 655(b)(5)). As noted above, the Supreme Court, in its *Benzene* decision, explained that OSHA must look to “a body of reputable scientific thought” in making its material harm and significant risk determinations, while noting that a reviewing court must “give OSHA some leeway where its findings must be made on the frontiers of scientific knowledge” (*Benzene*, 448 U.S. at 656).

The courts of appeals have afforded OSHA similar latitude to issue health standards in the face of scientific uncertainty. The Second Circuit, in upholding the vinyl chloride standard, stated: “[T]he ultimate facts here in dispute are ‘on the frontiers of scientific knowledge’, and, though the factual finger points, it does not conclude. Under the command of OSHA, it remains the duty of the Secretary to act to protect the workingman, and to act even in circumstances where existing methodology or research is deficient” (*Society of the Plastics Industry, Inc. v. OSHA*, 509 F.2d 1301, 1308 (2d Cir. 1975) (quoting *Indus. Union Dep’t, AFL-CIO v. Hodgson*, 499 F.2d 467, 474 (D.C. Cir. 1974) (“*Asbestos I*”))). The D.C. Circuit, in upholding the cotton dust standard, stated: “OSHA’s mandate necessarily requires it to act even if information is incomplete when the best available evidence indicates a serious threat to the health of workers” (*Am. Fed’n of Labor & Cong. of Indus. Orgs. v. Marshall*, 617 F.2d 636, 651 (D.C. Cir. 1979), *aff’d in part and vacated in part on other grounds*, *American Textile Mfrs. Inst., Inc. v. Donovan*, 452 U.S. 490 (1981)). When there is disputed scientific evidence in the record, OSHA must review the evidence on both sides and “reasonably resolve” the dispute (*Pub. Citizen Health Research Grp. v. Tyson*, 796 F.2d 1479, 1500 (D.C. Cir. 1986)). The Court in *Public Citizen* further noted that, where “OSHA has the expertise we lack and it has exercised that expertise by carefully reviewing the scientific data,” a dispute within the scientific community is not occasion for the reviewing court to take sides about which view is correct (*Pub. Citizen Health Research Grp.*, 796 F.2d

at 1500) or for OSHA or the courts to “be paralyzed by debate surrounding diverse medical opinions” (*Pub. Citizen Health Research Grp.*, 796 F.2d at 1497 (quoting H.R. Rep. No. 91–1291, 91st Cong., 2d Sess. 18 (1970), reprinted in Legislative History of the Occupational Safety and Health Act of 1970 at 848 (1971))). Provided the Agency gave adequate notice in the proposal’s preamble discussion of potential regulatory alternatives that the Secretary would be considering one or more stated options for regulation, OSHA is not required to prefer the option in the text of the proposal over a given regulatory alternative that was addressed in the rulemaking if substantial evidence in the record supports inclusion of the alternative in the final standard. See *Owner-Operator Independent Drivers Ass’n, Inc. v. Federal Motor Carrier Safety Admin.*, 494 F.3d 188, 209 (D.C. Cir. 2007) (notice by agency concerning modification of sleeper-berth requirements for truck drivers was sufficient because proposal listed several options and asked a question regarding the details of the one option that ultimately appeared in final rule); *Kooritzky v. Reich*, 17 F.3d 1509, 1513 (D.C. Cir. 1994) (noting that a final rule need not match a proposed rule, as long as “the agency has alerted interested parties to the possibility of the agency’s adopting a rule different than the one proposed” and holding that agency failed to comply with notice and comment requirements when “preamble in July offered no clues of what was to come in October”).

Feasibility

The OSH Act requires that, in setting a standard, OSHA must eliminate the risk of material health impairment “to the extent feasible” (29 U.S.C. 655(b)(5)). The statutory mandate to consider the feasibility of the standard encompasses both technological and economic feasibility; these analyses have been done primarily on an industry-by-industry basis (*Lead I*, 647 F.2d at 1264, 1301). The Agency has also used application groups, defined by common tasks, as the structure for its feasibility analyses (*Pub. Citizen Health Research Grp. v. OSHA*, 557 F.3d 165, 177–179 (3d Cir. 2009)). The Supreme Court has broadly defined feasible as “capable of being done” (*Cotton Dust*, 452 U.S. at 509–510).

Although OSHA must set the most protective PEL that the Agency finds to be technologically and economically feasible, it retains discretion to set a uniform PEL even when the evidence demonstrates that certain industries or

operations could reasonably be expected to meet a lower PEL. OSHA health standards generally set a single PEL for all affected employers; OSHA exercised this discretion most recently in its final rules on occupational exposure to Chromium (VI) (71 FR 10100, 10337–10338 (2/28/2006) and Respirable Crystalline Silica (81 FR 16285, 16576–16575 (3/25/2016)); see also 62 FR 1494, 1575 (1/10/97) (methylene chloride)). In its decision upholding the chromium (VI) standard, including the uniform PEL, the Court of Appeals for the Third Circuit addressed this issue as one of deference, stating “OSHA’s decision to select a uniform exposure limit is a legislative policy decision that we will uphold as long as it was reasonably drawn from the record” (*Chromium (VI)*, 557 F.3d at 183 (3d Cir. 2009)); see also *Am. Iron & Steel Inst. v. OSHA*, 577 F.2d 825, 833 (3d Cir. 1978)). OSHA’s reasons for choosing one chromium (VI) PEL, rather than imposing different PELs on different application groups or industries, included: Multiple PELs would create enforcement and compliance problems because many workplaces, and even workers, were affected by multiple categories of chromium (VI) exposure; discerning individual PELs for different groups of establishments would impose a huge evidentiary burden on the Agency and unnecessarily delay implementation of the standard; and a uniform PEL would, by eliminating confusion and simplifying compliance, enhance worker protection (*Chromium (VI)*, 557 F.3d at 173, 183–184). The Court held that OSHA’s rationale for choosing a uniform PEL, despite evidence that some application groups or industries could meet a lower PEL, was reasonably drawn from the record and that the Agency’s decision was within its discretion and supported by past practice (*Chromium (VI)*, 557 F.3d at 183–184).

Technological Feasibility

A standard is technologically feasible if the protective measures it requires already exist, can be brought into existence with available technology, or can be created with technology that can reasonably be expected to be developed (*Lead I*, 647 F.2d at 1272; *Amer. Iron & Steel Inst. v. OSHA*, 939 F.2d 975, 980 (D.C. Cir. 1991) (“*Lead II*”). OSHA’s standards may be “technology forcing,” *i.e.*, where the Agency gives an industry a reasonable amount of time to develop new technologies, OSHA is not bound by the “technological status quo” (*Lead I*, 647 F.2d at 1264). While the test for technological feasibility is normally articulated in terms of the ability of

employers to decrease exposures to the PEL, provisions such as exposure measurement requirements must also be technologically feasible (*see Forging Indus. Ass’n v. Sec’y of Labor*, 773 F.2d 1436, 1453 (4th Cir. 1985)).

In its *Lead* decisions, the D.C. Circuit described OSHA’s obligation to demonstrate the technological feasibility of reducing occupational exposure to a hazardous substance.

[W]ithin the limits of the best available evidence . . . OSHA must prove a reasonable possibility that the typical firm will be able to develop and install engineering and work practice controls that can meet the PEL in most of its operations . . . The effect of such proof is to establish a presumption that industry can meet the PEL without relying on respirators . . . Insufficient proof of technological feasibility for a few isolated operations within an industry, or even OSHA’s concession that respirators will be necessary in a few such operations, will not undermine this general presumption in favor of feasibility. Rather, in such operations firms will remain responsible for installing engineering and work practice controls to the extent feasible, and for using them to reduce . . . exposure as far as these controls can do so (*Lead I*, 647 F.2d at 1272).

Additionally, the D.C. Circuit explained that “[f]easibility of compliance turns on whether exposure levels at or below [the PEL] can be met in most operations most of the time . . .” (*Lead II*, 939 F.2d at 990).

Courts have given OSHA significant deference in reviewing its technological feasibility findings. “So long as we require OSHA to show that any required means of compliance, even if it carries no guarantee of meeting the PEL, will substantially lower . . . exposure, we can uphold OSHA’s determination that every firm must exploit all possible means to meet the standard” (*Lead I*, 647 F.2d at 1273). Even in the face of significant uncertainty about technological feasibility in a given industry, OSHA has been granted broad discretion in making its findings (*Lead I*, 647 F.2d at 1285). “OSHA cannot let workers suffer while it awaits . . . scientific certainty. It can and must make reasonable [technological feasibility] predictions on the basis of ‘credible sources of information,’ whether data from existing plants or expert testimony” (*Lead I*, 647 F.2d at 1266 (quoting *Am. Fed’n of Labor & Cong. of Indus. Orgs.*, 617 F.2d at 658)). For example, in *Lead I*, the D.C. Circuit allowed OSHA to use, as best available evidence, information about new and expensive industrial smelting processes that had not yet been adopted in the U.S. and would require the rebuilding of plants (*Lead I*, 647 F.2d at 1283–1284). Even under circumstances where

OSHA's feasibility findings were less certain and the Agency was relying on its "legitimate policy of technology forcing," the D.C. Circuit approved of OSHA's feasibility findings when the Agency granted lengthy phase-in periods to allow particular industries time to comply (*Lead I*, 647 F.2d at 1279–1281, 1285).

OSHA is permitted to adopt a standard that some employers will not be able to meet some of the time, with employers limited to challenging feasibility at the enforcement stage (*Lead I*, 647 F.2d at 1273 & n. 125; *Asbestos II*, 838 F.2d at 1268). Even when the Agency recognized that it might have to balance its general feasibility findings with flexible enforcement of the standard in individual cases, the courts of appeals have generally upheld OSHA's technological feasibility findings (*Lead II*, 939 F.2d at 980; see *Lead I*, 647 F.2d at 1266–1273; *Asbestos II*, 838 F.2d at 1268). Flexible enforcement policies have been approved where there is variability in measurement of the regulated hazardous substance or where exposures can fluctuate uncontrollably (*Asbestos II*, 838 F.2d at 1267–1268; *Lead II*, 939 F.2d at 991). A common means of dealing with the measurement variability inherent in sampling and analysis is for the Agency to add the standard sampling error to its exposure measurements before determining whether to issue a citation (e.g., 51 FR 22612, 22654 (06/20/86) (*Asbestos Preamble*)).

Economic Feasibility

In addition to technological feasibility, OSHA is required to demonstrate that its standards are economically feasible. A reviewing court will examine the cost of compliance with an OSHA standard "in relation to the financial health and profitability of the industry and the likely effect of such costs on unit consumer prices . . ." (*Lead I*, 647 F.2d at 1265 (omitting citation)). As articulated by the D.C. Circuit in *Lead I*, "OSHA must construct a reasonable estimate of compliance costs and demonstrate a reasonable likelihood that these costs will not threaten the existence or competitive structure of an industry, even if it does portend disaster for some marginal firms" (*Lead I*, 647 F.2d at 1272). A reasonable estimate entails assessing "the likely range of costs and the likely effects of those costs on the industry" (*Lead I*, 647 F.2d at 1266). As with OSHA's consideration of scientific data and control technology, however, the estimates need not be precise (*Cotton Dust*, 452 U.S. at 528–

29 & n. 54) as long as they are adequately explained. Thus, as the D.C. Circuit further explained:

Standards may be economically feasible even though, from the standpoint of employers, they are financially burdensome and affect profit margins adversely. Nor does the concept of economic feasibility necessarily guarantee the continued existence of individual employers. It would appear to be consistent with the purposes of the Act to envisage the economic demise of an employer who has lagged behind the rest of the industry in protecting the health and safety of employees and is consequently financially unable to comply with new standards as quickly as other employers. As the effect becomes more widespread within an industry, the problem of economic feasibility becomes more pressing (*Asbestos I*, 499 F.2d. at 478).

OSHA standards therefore satisfy the economic feasibility criterion even if they impose significant costs on regulated industries so long as they do not cause massive economic dislocations within a particular industry or imperil the very existence of the industry (*Lead II*, 939 F.2d at 980; *Lead I*, 647 F.2d at 1272; *Asbestos I*, 499 F.2d. at 478). As with its other legal findings, OSHA "is not required to prove economic feasibility with certainty, but is required to use the best available evidence and to support its conclusions with substantial evidence" (*Lead II*, 939 F.2d at 980–981) (citing *Lead I*, 647 F.2d at 1267)).

Because section 6(b)(5) of the Act explicitly imposes the "to the extent feasible" limitation on the setting of health standards, OSHA is not permitted to use cost-benefit analysis to make its standards-setting decisions (29 U.S.C. 655(b)(5)).

Congress itself defined the basic relationship between costs and benefits, by placing the "benefit" of worker health above all other considerations save those making attainment of this "benefit" unachievable. Any standard based on a balancing of costs and benefits by the Secretary that strikes a different balance than that struck by Congress would be inconsistent with the command set forth in § 6(b)(5) (*Cotton Dust*, 452 U.S. at 509).

Thus, while OSHA estimates the costs and benefits of its proposed and final rules, these calculations do not form the basis for the Agency's regulatory decisions; rather, they are performed to ensure compliance with requirements such as those in Executive Orders 12866 and 13563.

Structure of OSHA Health Standards

OSHA's health standards traditionally incorporate a comprehensive approach to reducing occupational disease. OSHA substance-specific health standards

generally include the "hierarchy of controls," which, as a matter of OSHA's preferred policy, mandates that employers install and implement all feasible engineering and work practice controls before respirators may be used. The Agency's adherence to the hierarchy of controls has been upheld by the courts (*ASARCO, Inc. v. OSHA*, 746 F.2d 483, 496–498 (9th Cir. 1984); *Am. Iron & Steel Inst. v. OSHA*, 182 F.3d 1261, 1271 (11th Cir. 1999)). In fact, courts view the legal standard for proving technological feasibility as incorporating the hierarchy: "OSHA must prove a reasonable possibility that the typical firm will be able to develop and install engineering and work practice controls that can meet the PEL in most of its operations. . . . The effect of such proof is to establish a presumption that industry can meet the PEL without relying on respirators" (*Lead I*, 647 F.2d at 1272).

The reasons supporting OSHA's continued reliance on the hierarchy of controls, as well as its reasons for limiting the use of respirators, are numerous and grounded in good industrial hygiene principles (see discussion in Section XVI. Summary and Explanation of the Standards, Methods of Compliance). The hierarchy of controls focuses on removing harmful airborne materials at their source "to prevent atmospheric contamination" to which the employee would be exposed, rather than relying on the proper functioning of a respirator as the primary means of protecting the employee (see 29 CFR 1910.134, 1910.1000(e), 1926.55(b)).

In health standards such as this one, the hierarchy of controls is augmented by ancillary provisions. These provisions work with the hierarchy of controls and personal protective equipment requirements to provide comprehensive protection to employees in affected workplaces. Such provisions typically include exposure assessment, medical surveillance, hazard communication, and recordkeeping.

The OSH Act compels OSHA to require all feasible measures for reducing significant health risks (29 U.S.C. 655(b)(5); *Pub. Citizen Health Research Grp.*, 796 F.2d at 1505 ("if in fact a STEL [short-term exposure limit] would further reduce a significant health risk and is feasible to implement, then the OSH Act compels the agency to adopt it (barring alternative avenues to the same result)"). When there is significant risk below the PEL, the D.C. Circuit indicated that OSHA should use its regulatory authority to impose additional requirements on employers when those requirements will result in

a greater than de minimis incremental benefit to workers' health (*Asbestos II*, 838 F.2d at 1274). The Supreme Court alluded to a similar issue in *Benzene*, pointing out that "in setting a permissible exposure level in reliance on less-than-perfect methods, OSHA would have the benefit of a backstop in the form of monitoring and medical testing" (*Benzene*, 448 U.S. at 657). OSHA concludes that the ancillary provisions in this final standard provide significant benefits to worker health by providing additional layers and types of protection to employees exposed to beryllium and beryllium compounds.

III. Events Leading to the Final Standards

The first occupational exposure limit for beryllium was set in 1949 by the Atomic Energy Commission (AEC), which required that beryllium exposure in the workplaces under its jurisdiction be limited to 2 $\mu\text{g}/\text{m}^3$ as an 8-hour time-weighted average (TWA), and 25 $\mu\text{g}/\text{m}^3$ as a peak exposure never to be exceeded (Document ID 1323). These exposure limits were adopted by all AEC installations handling beryllium, and were binding on all AEC contractors involved in the handling of beryllium.

In 1956, the American Industrial Hygiene Association (AIHA) published a Hygienic Guide which supported the AEC exposure limits. In 1959, the American Conference of Governmental Industrial Hygienists (ACGIH[®]) also adopted a Threshold Limit Value (TLV[®]) of 2 $\mu\text{g}/\text{m}^3$ as an 8-hour TWA (Borak, 2006). In 1970, ANSI issued a national consensus standard for beryllium and beryllium compounds (ANSI Z37.29–1970). The standard set a permissible exposure limit (PEL) for beryllium and beryllium compounds at 2 $\mu\text{g}/\text{m}^3$ as an 8-hour TWA; 5 $\mu\text{g}/\text{m}^3$ as an acceptable ceiling concentration; and 25 $\mu\text{g}/\text{m}^3$ as an acceptable maximum peak above the acceptable ceiling concentration for a maximum duration of 30 minutes in an 8-hour shift (Document ID 1303).

In 1971, OSHA adopted, under Section 6(a) of the Occupational Safety and Health Act of 1970, and made applicable to general industry, the ANSI standard (Document ID 1303). Section 6(a) provided that in the first two years after the effective date of the Act, OSHA was to promulgate "start-up" standards, on an expedited basis and without public hearing or comment, based on national consensus or established Federal standards that improved employee safety or health. Pursuant to that authority, in 1971, OSHA promulgated approximately 425 PELs for air contaminants, including

beryllium, derived principally from Federal standards applicable to government contractors under the Walsh-Healey Public Contracts Act, 41 U.S.C. 35, and the Contract Work Hours and Safety Standards Act (commonly known as the Construction Safety Act), 40 U.S.C. 333. The Walsh-Healey Act and Construction Safety Act standards, in turn, had been adopted primarily from ACGIH[®]'s TLV[®]s as well as several from United States of America Standards Institute (USASI) [later the American National Standards Institute (ANSI)].

The National Institute for Occupational Safety and Health (NIOSH) issued a document entitled *Criteria for a Recommended Standard: Occupational Exposure to Beryllium* (Criteria Document) in June 1972 with Recommended Exposure Limits (RELs) of 2 $\mu\text{g}/\text{m}^3$ as an 8-hour TWA and 25 $\mu\text{g}/\text{m}^3$ as an acceptable maximum peak above the acceptable ceiling concentration for a maximum duration of 30 minutes in an 8-hour shift. OSHA reviewed the findings and recommendations contained in the Criteria Document along with the AEC control requirements for beryllium exposure. OSHA also considered existing data from animal and epidemiological studies, and studies of industrial processes of beryllium extraction, refinement, fabrication, and machining. In 1975, OSHA asked NIOSH to update the evaluation of the existing data pertaining to the carcinogenic potential of beryllium. In response to OSHA's request, the Director of NIOSH stated that, based on animal data and through all possible routes of exposure including inhalation, "beryllium in all likelihood represents a carcinogenic risk to man."

In October 1975, OSHA proposed a new beryllium standard for all industries based on information from studies finding that beryllium caused cancer in animals (40 FR 48814 (10/17/75)). Adoption of this proposal would have lowered the 8-hour TWA exposure limit from 2 $\mu\text{g}/\text{m}^3$ to 1 $\mu\text{g}/\text{m}^3$. In addition, the proposal included ancillary provisions for such topics as exposure monitoring, hygiene facilities, medical surveillance, and training related to the health hazards from beryllium exposure. The rulemaking was never completed.

In 1977, NIOSH recommended an exposure limit of 0.5 $\mu\text{g}/\text{m}^3$ and identified beryllium as a potential occupational carcinogen. In December 1998, ACGIH published a Notice of Intended Change for its beryllium exposure limit. The notice proposed a lower TLV of 0.2 $\mu\text{g}/\text{m}^3$ over an 8-hour

TWA based on evidence of CBD and sensitization in exposed workers. Then in 2009, ACGIH adopted a revised TLV for beryllium that lowered the TWA to 0.05 $\mu\text{g}/\text{m}^3$ (inhalable) (see Document ID 1755, Tr. 136).

In 1999, the Department of Energy (DOE) issued a Chronic Beryllium Disease Prevention Program (CBDPP) Final Rule for employees exposed to beryllium in its facilities (Document ID 1323). The DOE rule set an action level of 0.2 $\mu\text{g}/\text{m}^3$, and adopted OSHA's PEL of 2 $\mu\text{g}/\text{m}^3$ or any more stringent PEL. OSHA might adopt in the future (10 CFR 850.22; 64 FR 68873 and 68906, Dec. 8, 1999).

Also in 1999, OSHA was petitioned by the Paper, Allied-Industrial, Chemical and Energy Workers International Union (PACE) (Document ID 0069) and by Dr. Lee Newman and Ms. Margaret Mroz, from the National Jewish Health (NJH) (Document ID 0069), to promulgate an Emergency Temporary Standard (ETS) for beryllium in the workplace. In 2001, OSHA was petitioned for an ETS by Public Citizen Health Research Group and again by PACE (Document ID 0069). In order to promulgate an ETS, the Secretary of Labor must prove (1) that employees are exposed to grave danger from exposure to a hazard, and (2) that such an emergency standard is necessary to protect employees from such danger (29 U.S.C. 655(c) [6(c)]). The burden of proof is on the Department and because of the difficulty of meeting this burden, the Department usually proceeds when appropriate with ordinary notice and comment [section 6(b)] rulemaking rather than a 6(c) ETS. Thus, instead of granting the ETS requests, OSHA instructed staff to further collect and analyze research regarding the harmful effects of beryllium in preparation for possible section 6(b) rulemaking.

On November 26, 2002, OSHA published a Request for Information (RFI) for "Occupational Exposure to Beryllium" (Document ID 1242). The RFI contained questions on employee exposure, health effects, risk assessment, exposure assessment and monitoring methods, control measures and technological feasibility, training, medical surveillance, and impact on small business entities. In the RFI, OSHA expressed concerns about health effects such as chronic beryllium disease (CBD), lung cancer, and beryllium sensitization. OSHA pointed to studies indicating that even short-term exposures below OSHA's PEL of 2 $\mu\text{g}/\text{m}^3$ could lead to CBD. The RFI also cited studies describing the relationship between beryllium sensitization and CBD (67 FR at 70708). In addition,

OSHA stated that beryllium had been identified as a carcinogen by organizations such as NIOSH, the International Agency for Research on Cancer (IARC), and the Environmental Protection Agency (EPA); and cancer had been evidenced in animal studies (67 FR at 70709).

On November 15, 2007, OSHA convened a Small Business Advocacy Review Panel for a draft proposed standard for occupational exposure to beryllium. OSHA convened this panel under Section 609(b) of the Regulatory Flexibility Act (RFA), as amended by the Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA) (5 U.S.C. 601 *et seq.*).

The Panel included representatives from OSHA, the Solicitor's Office of the Department of Labor, the Office of Advocacy within the Small Business Administration, and the Office of Information and Regulatory Affairs of the Office of Management and Budget. Small Entity Representatives (SERs) made oral and written comments on the draft rule and submitted them to the panel.

The SBREFA Panel issued a report on January 15, 2008 which included the SERs' comments. SERs expressed concerns about the impact of the ancillary requirements such as exposure monitoring and medical surveillance. Their comments addressed potential costs associated with compliance with the draft standard, and possible impacts of the standard on market conditions, among other issues. In addition, many SERs sought clarification of some of the ancillary requirements such as the meaning of "routine" contact or "contaminated surfaces."

OSHA then developed a draft preliminary beryllium health effects evaluation (Document ID 1271) and a draft preliminary beryllium risk assessment (Document ID 1272), and in 2010, OSHA hired a contractor to oversee an independent scientific peer review of these documents. The contractor identified experts familiar with beryllium health effects research and ensured that these experts had no conflict of interest or apparent bias in performing the review. The contractor selected five experts with expertise in such areas as pulmonary and occupational medicine, CBD, beryllium sensitization, the Beryllium Lymphocyte Proliferation Test (BeLPT), beryllium toxicity and carcinogenicity, and medical surveillance. Other areas of expertise included animal modeling, occupational epidemiology, biostatistics, risk and exposure assessment, exposure-response modeling, beryllium exposure

assessment, industrial hygiene, and occupational/environmental health engineering.

Regarding the preliminary health effects evaluation, the peer reviewers concluded that the health effect studies were described accurately and in sufficient detail, and OSHA's conclusions based on the studies were reasonable (Document ID 1210). The reviewers agreed that the OSHA document covered the significant health endpoints related to occupational beryllium exposure. Peer reviewers considered the preliminary conclusions regarding beryllium sensitization and CBD to be reasonable and well presented in the draft health evaluation section. All reviewers agreed that the scientific evidence supports sensitization as a necessary condition in the development of CBD. In response to reviewers' comments, OSHA made revisions to more clearly describe certain sections of the health effects evaluation. In addition, OSHA expanded its discussion regarding the BeLPT.

Regarding the preliminary risk assessment, the peer reviewers were highly supportive of the Agency's approach and major conclusions (Document ID 1210). The peer reviewers stated that the key studies were appropriate and their selection clearly explained in the document. They regarded the preliminary analysis of these studies to be reasonable and scientifically sound. The reviewers supported OSHA's conclusion that substantial risk of sensitization and CBD were observed in facilities where the highest exposure generating processes had median full-shift exposures around $0.2 \mu\text{g}/\text{m}^3$ or higher, and that the greatest reduction in risk was achieved when exposures for all processes were lowered to $0.1 \mu\text{g}/\text{m}^3$ or below.

In February 2012, the Agency received for consideration a draft recommended standard for beryllium (Materion and USW, 2012, Document ID 0754). This draft standard was the product of a joint effort between two stakeholders: Materion Corporation, a leading producer of beryllium and beryllium products in the United States, and the United Steelworkers, an international labor union representing workers who manufacture beryllium alloys and beryllium-containing products in a number of industries. They sought to craft an OSHA-like model beryllium standard that would have support from both labor and industry. OSHA has considered this proposal along with other information submitted during the development of the Notice of Proposed Rulemaking

(NPRM) for beryllium. As described in greater detail in the Introduction to the Summary and Explanation of the final rule, there was substantial agreement between the submitted joint standard and the OSHA proposed standard.

On August 7, 2015, OSHA published its NPRM in the **Federal Register** (80 FR 47565 (8/7/15)). In the NPRM, the Agency made a preliminary determination that employees exposed to beryllium and beryllium compounds at the preceding PEL face a significant risk to their health and that promulgating the proposed standard would substantially reduce that risk. The NPRM (Section XVIII) also responded to the SBREFA Panel recommendations, which OSHA carefully considered, and clarified the requirements about which SERs expressed confusion. OSHA also discussed the regulatory alternatives recommended by the SBREFA Panel in NPRM, Section XVIII, and in the PEA (Document ID 0426).

The NPRM invited interested stakeholders to submit comments on a variety of issues and indicated that OSHA would schedule a public hearing upon request. Commenters submitted information and suggestions on a variety of topics. In addition, in response to a request from the Non-Ferrous Founders' Society, OSHA scheduled an informal public hearing on the proposed rule. The Agency invited interested persons to participate by providing oral testimony and documentary evidence at the hearing. OSHA also welcomed presentation of data and documentary evidence that would provide the Agency with the best available evidence to use in determining whether to develop a final rule.

The public hearing was held in Washington, DC on March 21 and 22, 2016. Administrative Law Judge William Colwell presided over the hearing. The Agency heard testimony from several organizations, such as public health groups, the Non-Ferrous Founders' Society, other industry representatives, and labor unions. Following the hearing, participants who had filed notices of intent to appear were allowed 30 days—until April 21, 2016—to submit additional evidence and data, and an additional 15 days—until May 6, 2016—to submit final briefs, arguments, and summations (Document ID 1756, Tr. 326).

In 2016, in an action parallel to OSHA's rulemaking, DOE proposed to update its action level to $0.05 \mu\text{g}/\text{m}^3$ (81 FR 36704–36759, June 7, 2016). The DOE action level triggers workplace precautions and control measures such as periodic monitoring, exposure

reduction or minimization, regulated areas, hygiene facilities and practices, respiratory protection, protective clothing and equipment, and warning signs (Document ID 1323; 10 CFR 850.23(b)). Unlike OSHA's PEL, however, DOE's selection of an action level is not required to meet statutory requirements of technological and economic feasibility.

In all, the OSHA rulemaking record contains over 1,900 documents, including all the studies OSHA relied on in its preliminary health effects and risk assessment analyses, the hearing transcript and submitted testimonies, the joint Materion-USW draft proposed standard, and the pre- and post-hearing comments and briefs. The final rule on occupational exposure to beryllium and beryllium compounds is thus based on consideration of the entire record of this rulemaking proceeding, including materials discussed or relied upon in the proposal, the record of the hearing, and all written comments and exhibits

timely received. Based on this comprehensive record, OSHA concludes that employees exposed to beryllium and beryllium compounds are at significant risk of material impairment of health, including chronic beryllium disease and lung cancer. The Agency concludes that the PEL of 0.2 µg/m³ reduces the significant risks of material impairments of health posed to workers by occupational exposure to beryllium and beryllium compounds to the maximum extent that is technologically and economically feasible. OSHA's substantive determinations with regard to the comments, testimony, and other information in the record, the legal standards governing the decision-making process, and the Agency's analysis of the data resulting in its assessments of risks, benefits, technological and economic feasibility, and compliance costs are discussed elsewhere in this preamble. More technical or complex issues are

discussed in greater detail in the background documents referenced in this preamble.

IV. Chemical Properties and Industrial Uses

Chemical and Physical Properties

Beryllium (Be; CAS Number 7440-41-7) is a silver-grey to greyish-white, strong, lightweight, and brittle metal. It is a Group IIA element with an atomic weight of 9.01, atomic number of 4, melting point of 1,287 °C, boiling point of 2,970 °C, and a density of 1.85 at 20 °C (Document ID 0389, p. 1). It occurs naturally in rocks, soil, coal, and volcanic dust (Document ID 1567, p. 1). Beryllium is insoluble in water and soluble in acids and alkalis. It has two common oxidation states, Be(0) and Be(+2). There are several beryllium compounds with unique CAS numbers and chemical and physical properties. Table IV-1 describes the most common beryllium compounds.

TABLE IV-1—PROPERTIES OF BERYLLIUM AND BERYLLIUM COMPOUNDS

Chemical name	CAS No.	Synonyms and trade names	Molecular weight	Melting point (°C)	Description	Density (g/cm ³)	Solubility
Beryllium metal	7440-41-7	Beryllium; beryllium-9, beryllium element; beryllium metallic.	9.0122	1287	Grey, close-packed, hexagonal, brittle metal.	1.85 (20 °C)	Soluble in most dilute acids and alkali; decomposes in hot water; insoluble in mercury and cold water.
Beryllium chloride.	7787-47-5	Beryllium dichloride	79.92	399.2	Colorless to slightly yellow; orthorhombic, deliquescent crystal.	1.899 (25 °C).	Soluble in water, ethanol, diethyl ether and pyridine; slightly soluble in benzene, carbon disulfide and chloroform; insoluble in acetone, ammonia, and toluene.
Beryllium fluoride.	7787-49-7 (12323-05-6)	Beryllium difluoride	47.01	555	Colorless or white, amorphous, hygroscopic solid.	1.986	Soluble in water, sulfuric acid, mixture of ethanol and diethyl ether; slightly soluble in ethanol; insoluble in hydrofluoric acid.
Beryllium hydroxide.	13327-32-7 (1304-49-0)	Beryllium dihydroxide	43.3	138 (decomposes to beryllium oxide).	White, amorphous, amphoteric powder.	1.92	Soluble in hot concentrated acids and alkali; slightly soluble in dilute alkali; insoluble in water.
Beryllium sulfate	13510-49-1	Sulfuric acid, beryllium salt (1:1).	105.07	550-600 °C (decomposes to beryllium oxide).	Colorless crystal	2.443	Forms soluble tetrahydrate in hot water; insoluble in cold water.
Beryllium sulfate tetrahydrate.	7787-56-6	Sulfuric acid; beryllium salt (1:1), tetrahydrate.	177.14	100 °C	Colorless, tetragonal crystal.	1.713	Soluble in water; slightly soluble in concentrated sulfuric acid; insoluble in ethanol.
Beryllium Oxide	1304-56-9	Beryllia; beryllium monoxide thermalox TM.	25.01	2508-2547 °C	Colorless to white, hexagonal crystal or amorphous, amphoteric powder.	3.01 (20 °C)	Soluble in concentrated acids and alkali; insoluble in water.
Beryllium carbonate.	1319-43-3	Carbonic acid, beryllium salt, mixture with beryllium hydroxide.	112.05	No data	White powder	No data	Soluble in acids and alkali; insoluble in cold water; decomposes in hot water.
Beryllium nitrate trihydrate.	7787-55-5	Nitric acid, beryllium salt, trihydrate.	187.97	60	White to faintly yellowish, deliquescent mass.	1.56	Very soluble in water and ethanol.
Beryllium phosphate.	13598-15-7	Phosphoric acid, beryllium salt (1:1).	104.99	No data	Not reported	Not reported	Slightly soluble in water.

ATSDR, 2002.

The physical and chemical properties of beryllium were realized early in the 20th century, and it has since gained commercial importance in a wide range of industries. Beryllium is lightweight, hard, spark resistant, non-magnetic, and has a high melting point. It lends strength, electrical and thermal conductivity, and fatigue resistance to alloys (Document ID 0389, p. 1). Beryllium also has a high affinity for oxygen in air and water, which can cause a thin surface film of beryllium oxide to form on the bare metal, making it extremely resistant to corrosion. These properties make beryllium alloys highly suitable for defense, nuclear, and aerospace applications (Document ID 1342, pp. 45, 48).

There are approximately 45 mineralized forms of beryllium. In the United States, the predominant mineral form mined commercially and refined into pure beryllium and beryllium alloys is bertrandite. Bertrandite, while containing less than 1% beryllium compared to 4% in beryl, is easily and efficiently processed into beryllium hydroxide (Document ID 1342, p. 48). Imported beryl is also converted into beryllium hydroxide as the United States has very little beryl that can be economically mined (Document ID 0616, p. 28).

Industrial Uses

Materion Corporation (Materion), formerly called Brush Wellman, is the only producer of primary beryllium in the United States. Beryllium is used in a variety of industries, including aerospace, defense, telecommunications, automotive, electronic, and medical specialty industries. Pure beryllium metal is used in a range of products such as X-ray transmission windows, nuclear reactor neutron reflectors, nuclear weapons, precision instruments, rocket propellants, mirrors, and computers (Document ID 0389, p. 1). Beryllium oxide is used in components such as ceramics, electrical insulators, microwave oven components, military vehicle armor, laser structural components, and automotive ignition systems (Document ID 1567, p. 147). Beryllium oxide ceramics are used to produce sensitive electronic items such as lasers and satellite heat sinks.

Beryllium alloys, typically beryllium/copper or beryllium/aluminum, are manufactured as high beryllium content or low beryllium content alloys. High content alloys contain greater than 30% beryllium. Low content alloys are typically less than 3% beryllium. Beryllium alloys are used in automotive electronics (e.g., electrical connectors

and relays and audio components), computer components, home appliance parts, dental appliances (e.g., crowns), bicycle frames, golf clubs, and other articles (Document ID 0389, p. 2; 1278, p. 182; 1280, pp. 1–2; 1281, pp. 816, 818). Electrical components and conductors are stamped and formed from beryllium alloys. Beryllium-copper alloys are used to make switches in automobiles (Document ID 1280, p. 2; 1281, p. 818) and connectors, relays, and switches in computers, radar, satellite, and telecommunications equipment (Document ID 1278, p. 183). Beryllium-aluminum alloys are used in the construction of aircraft, high resolution medical and industrial X-ray equipment, and mirrors to measure weather patterns (Document ID 1278, p. 183). High content and low content beryllium alloys are precision machined for military and aerospace applications. Some welding consumables are also manufactured using beryllium.

Beryllium is also found as a trace metal in materials such as aluminum ore, abrasive blasting grit, and coal fly ash. Abrasive blasting grits such as coal slag and copper slag contain varying concentrations of beryllium, usually less than 0.1% by weight. The burning of bituminous and sub-bituminous coal for power generation causes the naturally occurring beryllium in coal to accumulate in the coal fly ash byproduct. Scrap and waste metal for smelting and refining may also contain beryllium. A detailed discussion of the industries and job tasks using beryllium is included in the Preliminary Economic Analysis (Document ID 0385, 0426).

Occupational exposure to beryllium can occur from inhalation of dusts, fume, and mist. Beryllium dusts are created during operations where beryllium is cut, machined, crushed, ground, or otherwise mechanically sheared. Mists can also form during operations that use machining fluids. Beryllium fume can form while welding with or on beryllium components, and from hot processes such as those found in metal foundries.

Occupational exposure to beryllium can also occur from skin, eye, and mucous membrane contact with beryllium particulate or solutions.

V. Health Effects

Overview of Findings and Supportive Comments

As discussed in detail throughout this section (section V, Final Health Effects) and in Section VI, Final Quantitative Risk Assessment and Significance of Risk, OSHA finds, based upon the best available evidence in the record, that

exposure to soluble and poorly soluble forms of beryllium are associated with several adverse health outcomes including sensitization, chronic beryllium disease, acute beryllium disease and lung cancer.

The findings and conclusions in this section are consistent with those of the National Academies of Sciences (NAS), the World Health Organization's International Agency for Research on Cancer (IARC), the U.S. Department of Health and Human Services' (HHS) National Toxicology Program (NTP), the National Institute for Occupational Safety and Health (NIOSH), the Agency for Toxic Substance and Disease Registry (ATSDR), the European Commission on Health, Safety and Hygiene at Work, and many other organizations and individuals, as evidenced in the rulemaking record and further discussed below. Other scientific organizations and governments have recognized the strong body of scientific evidence pointing to the health risks of exposure to beryllium and have deemed it necessary to take action to reduce those risks. In 1999, the Department of Energy (DOE) updated its airborne beryllium concentration action level to 0.2 µg/m³ (Document ID 1323). In 2009, the American Conference of Governmental Industrial Hygienists (ACGIH), a professional society that has been recommending workplace exposure limits for six decades, revised its Threshold Limit Value (TLV) for beryllium and beryllium-containing compounds to 0.05 µg/m³ (Document ID 1304).

In finalizing this Health Effects preamble section for the final rule, OSHA updated the preliminary Health Effects section published in the NPRM based on the stakeholder response received by the Agency during the public comment period and public hearing. OSHA also corrected several non-substantive errors that were published in the NPRM as well as those identified by NIOSH and Materion including several minor organizational changes made to sections V.D.3 and V.E.2.b (Document ID 1671, pp. 10–11; 1662, pp. 3–5). A section titled "Dermal Effects" was added to V.F.5 based on comments received by the American Thoracic Society (ATS), National Jewish Health, and the National Supplemental Screening Program (Document ID 1688, p. 2; 1664, p. 5; 1677, p. 3). Additionally, the Agency responded to relevant stakeholder comments contained in specific sections.

In developing its review of the preliminary health effects from beryllium exposure and assessment of risk for the NPRM, OSHA prepared a

pair of draft documents, entitled “Occupation Exposure to Beryllium: Preliminary Health Effects Evaluation” (OSHA, 2010, Document ID 1271) and “Preliminary Beryllium Risk Assessment” (OSHA, 2010, Document ID 1272), that underwent independent scientific peer review in accordance with the Office of Management and Budget’s (OMB) Information Quality Bulletin for Peer Review. Eastern Research Group, Inc. (ERG), under contract with OSHA, selected five highly qualified experts with collective expertise in occupational epidemiology, occupational medicine, toxicology, immunology, industrial hygiene, and risk assessment methodology.² The peer reviewers responded to 27 questions that covered the accuracy, completeness, and understandability of key studies and adverse health endpoints as well as questions regarding the adequacy, clarity and reasonableness of the risk analysis (ERG, 2010; Document ID 1270).

Overall, the peer reviewers found that the OSHA draft health effects evaluation described the studies in sufficient detail, appropriately addressed their strengths and limitations, and drew scientifically sound conclusions. The peer reviewers were also supportive of the Agency’s preliminary risk assessment approach and the major conclusions. OSHA provided detailed responses to reviewer comments in its publication of the NPRM (80 FR 47646–47652, 8/7/2015). Revisions to the draft health effects evaluation and preliminary risk assessment in response to the peer review comments were reflected in sections V and VI of the same publication (80 FR 47581–47646, 8/7/2015). OSHA received public comment and testimony on the Health Effects and Preliminary Risk Assessment sections published in the NPRM, which are discussed in this preamble.

The Agency received a wide variety of stakeholder comments and testimony for this rulemaking on issues related to the health effects and risk of beryllium exposure. Statements supportive of OSHA’s Health Effects section include comments from NIOSH, the National Safety Council, the American Thoracic Society (ATS), Representative Robert C. “Bobby” Scott, Ranking Member of Committee on Education and the

Workforce, the U.S. House of Representatives, national labor organizations (American Federation of Labor—Congress of Industrial Organizations (AFL–CIO), North American Building Trades Unions (NABTU), United Steelworkers (USW), Public Citizen, ORCHSE, experts from National Jewish Health (Lisa Maier, MD and Margaret Mroz, MSPH), the American Association for Justice, and the National Council for Occupational Safety and Health.

For example, NIOSH commented in its prepared written hearing testimony:

OSHA has appropriately identified and documented all critical health effects associated with occupational exposure to beryllium and has appropriately focused its greatest attention on beryllium sensitization (BeS), chronic beryllium disease (CBD) and lung cancer . . .

NIOSH went on to say that sensitization was more than a test result with little meaning. It relates to a condition in which the immune system is able to recognize and adversely react to beryllium in a way that increases the risk of developing CBD. NIOSH agrees with OSHA that sensitization is a functional change that is necessary in order to proceed along the pathogenesis to serious lung disease.

The National Safety Council, a congressionally chartered nonprofit safety organization, also stated that “beryllium represents a serious health threat resulting from acute or chronic exposures.” (Document ID 1612, p. 5). Representative Robert C. “Bobby” Scott, Ranking Member of Committee on Education and the Workforce, the U.S. House of Representatives, submitted a statement recognizing that the evidence strongly supports the conclusion that sensitization can occur from exposure to soluble and poorly soluble forms of beryllium (Document ID 1672, p. 3).

OSHA also received supporting statements from ATS and ORCHSE on the inclusion of beryllium sensitization, CBD, skin disease, and lung cancer as major adverse health effects associated with beryllium exposure (Document ID 1688, p. 7; 1691, p. 14). ATS specifically stated:

. . . the ATS supports the inclusion of beryllium sensitization, CBD, and skin disease as the major adverse health effects associated with exposure to beryllium at or below 0.1 µg/m³ and acute beryllium disease at higher exposures based on the currently available epidemiologic and experimental studies. (Document ID 1688, p. 2)

In addition, OSHA received supporting comments from labor organizations representing workers exposed to beryllium. The AFL–CIO, NABTU, and USW submitted comments supporting

the inclusion of beryllium sensitization, CBD and lung cancer as health effects from beryllium exposure (Document ID 1689, pp. 1, 3; 1679, p. 6; 1681, p. 19). AFL–CIO commented that “[t]he proposal is based on extensive scientific and medical evidence . . .” and “[b]eryllium exposure causes immunological sensitivity, CBD and lung cancer. These health effects are debilitating, progressive and irreversible. Workers are exposed to beryllium through respiratory, dermal and gastrointestinal routes.” (Document ID 1689, pp. 1, 3). Comments submitted by USW state that “OSHA has correctly identified, and comprehensively documented the material impairments of health resulting from beryllium exposure.” (Document ID 1681, p. 19).

Dr. Lisa Maier and Ms. Margaret Mroz of National Jewish Health testified about the health effects of beryllium in support of the beryllium standard:

We know that chronic beryllium disease often will not manifest clinically until irreversible lung scarring has occurred, often years after exposure, with a latency of 20 to 30 years as discussed yesterday. Much too late to make changes in the work place. We need to look for early markers of health effects, cast the net widely to identify cases of sensitization and disease, and use screening results in concert with exposure sampling to identify areas of increased risk that can be modified in the work place. (Document ID 1756, Tr. 102; 1806).

American Association for Justice noted that:

Unlike many toxins, there is no threshold below which no worker will become sensitized to beryllium. Worker sensitization to beryllium is a precursor to CBD, but not cancer. The symptoms of chronic beryllium disease (CBD) are part of a continuum of disease that is progressive in nature. Early recognition of and treatment for CBD may lead to a lessening of symptoms and may prevent the disease from progressing further. Symptoms of CBD may occur at exposure levels well below the proposed permissible exposure limit of .2 µg/m³ and even below the action level of .1 µg/m³. OSHA has clear authority to regulate health effects across the entire continuum of disease to protect workers. We applaud OSHA for proposing to do so. (Document ID 1683, pp. 1–2).

National Committee for Occupational Safety and Health support OSHA findings of health effects due to beryllium exposure (1690, p. 1). Comments from Public Citizen also support OSHA findings: “Beryllium is toxic at extremely low levels and exposure can result in BeS, an immune response that eventually can lead to an autoimmune granulomatous lung disease known as CBD. BeS is a necessary prerequisite to the development of CBD, with OSHA’s

² The five selected peer reviewers were John Balmes, MD, University of California-San Francisco; Patrick Breyse, Ph.D., Johns Hopkins University, Bloomberg School of Public Health; Terry Gordon, Ph.D., New York University School of Medicine; Milton Rossman, MD, University of Pennsylvania School of Medicine; Kyle Steenland, Ph.D., Emory University, Rollins School of Public Health.

NPRM citing studies showing that 31–49 percent of all sensitized workers were diagnosed with CBD after clinical evaluations. Beryllium also is a recognized carcinogen that can cause lung cancer.” (Document ID 1670, p.2).

In addition to the comments above and those noted throughout this Health Effects section, Materion submitted their correspondence to the National Academies (NAS) regarding the company’s assessment of the NAS beryllium studies and their correspondence to NIOSH regarding the Cummings 2009 study (Document 1662, Attachments) to OSHA. For the NAS study, Materion included a series of comments regarding studies included in the NAS report. OSHA has reviewed these comments and found that the comments submitted to the NAS critiquing their review of the health effects of beryllium were considered and incorporated where appropriate. For the NIOSH study Materion included comments regarding 2 cases of acute beryllium disease evaluated in a study published by Cummings *et al.*, 2009. NIOSH also dealt with the comments from Materion as they found appropriate. However, none of the changes recommended by Materion to the NAS or NIOSH altered the overall findings or conclusions from either study. OSHA has taken the Materion comments into account in the review of these documents. OSHA found them not to be sufficient to discount either the findings of the NAS or NIOSH.

Introduction

Beryllium-associated health effects, including acute beryllium disease (ABD), beryllium sensitization (also referred to in this preamble as “sensitization”), chronic beryllium disease (CBD), and lung cancer, can lead to a number of highly debilitating and

life-altering conditions including pneumonitis, loss of lung capacity (reduction in pulmonary function) leading to pulmonary dysfunction), loss of physical capacity associated with reduced lung capacity, systemic effects related to pulmonary dysfunction, and decreased life expectancy (NIOSH, 1972, Document ID 1324, 1325, 1326, 1327, 1328; NIOSH, 2011 (0544)).

This Health Effects section presents information on beryllium and its compounds, the fate of beryllium in the body, research that relates to its toxic mechanisms of action, and the scientific literature on the adverse health effects associated with beryllium exposure, including ABD, sensitization, CBD, and lung cancer. OSHA considers CBD to be a progressive illness with a continuous spectrum of symptoms ranging from no symptomatology at its earliest stage following sensitization to mild symptoms such as a slight almost imperceptible shortness of breath, to loss of pulmonary function, debilitating lung disease, and, in many cases, death. This section also discusses the nature of these illnesses, the scientific evidence that they are causally associated with occupational exposure to beryllium, and the probable mechanisms of action with a more thorough review of the supporting studies.

A. Beryllium and Beryllium Compounds—Particle Characterization
1. Particle Physical/Chemical Properties

Beryllium has two oxidative states: Be(0) and Be(2+) (Agency for Toxic Substance and Disease Registry (ATSDR) 2002, Document ID 1371). It is likely that the Be(2+) state is the most biologically reactive and able to form a bond with peptides leading to it becoming antigenic (Snyder *et al.*, 2003) as discussed in more detail in the Beryllium Sensitization section below.

Beryllium has a high charge-to-radius ratio, forming various types of ionic bonds. In addition, beryllium has a strong tendency for covalent bond formation (*e.g.*, it can form organometallic compounds such as Be(CH₃)₂ and many other complexes) (ATSDR, 2002, Document ID 1371; Greene *et al.*, 1998 (1519)). However, it appears that few, if any, toxicity studies exist for the organometallic compounds. Additional physical/chemical properties, such as solubility, for beryllium compounds that may be important in their biological response are summarized in Table 1 below. Solubility (as discussed in biological fluids in Section V.A.2.A below) is an important factor in evaluating the biological response to beryllium. For comparative purposes, water solubility is used in Table 1. The International Chemical Safety Cards lists water solubility as a way to standardize solubility values among particles and fibers. The information contained within Table 1 was obtained from the International Chemical Safety Cards (ICSC) for beryllium metal (ICSC 0226, Document ID 0438), beryllium oxide (ICSC 1325, Document ID 0444), beryllium sulfate (ICSC 1351, Document ID 0443), beryllium nitrate (ICSC 1352, Document ID 0442), beryllium carbonate (ICSC 1353, Document ID 0441), beryllium chloride (ICSC 1354, Document ID 0440), beryllium fluoride (ICSC 1355, Document ID 0439) and from the hazardous substance data bank (HSDB) for beryllium hydroxide (CASRN: 13327–32–7), and beryllium phosphate (CASRN: 13598–15–7, Document ID 0533). Additional information on chemical and physical properties as well as industrial uses for beryllium can be found in this preamble at Section IV, Chemical Properties and Industrial Uses.

TABLE 1—BERYLLIUM CHARACTERISTICS AND PROPERTIES

Compound name	Chemical formula	Molecular mass	Acute physical hazards	Solubility in water at 20 °C
Beryllium Metal	Be	9.0	Combustible; Finely dispersed particles—Explosive.	None.
Beryllium Oxide	BeO	25.0	Not combustible or explosive	Very sparingly soluble.
Beryllium Carbonate	Be ₂ CO ₃ (OH)/Be ₂ CO ₃ H ₂	181.07	Not combustible or explosive	None.
Beryllium Sulfate	BeSO ₄	105.1	Not combustible or explosive	Slightly soluble.
Beryllium Nitrate	BeN ₂ O ₆ /Be(NO ₃) ₂	133.0	Enhances combustion of other substances	Very soluble (1.66 × 10 ⁶ mg/L).
Beryllium Hydroxide	Be(OH) ₂	43.0	Not reported	Slightly soluble 0.8 × 10 ^{minus;4} mol/L (3.44 mg/L).
Beryllium Chloride	BeCl ₂	79.9	Not combustible or explosive	Soluble.
Beryllium Fluoride	BeF ₂	47.0	Not combustible or explosive	Very soluble.
Beryllium Phosphate	Be ₃ (PO ₄) ₂	271.0	Not reported	Soluble.

Beryllium shows a high affinity for oxygen in air and water, resulting in a thin surface film of beryllium oxide on the bare metal. If the surface film is disturbed, it may become airborne and cause respiratory tract exposure or dermal exposure (also referred to as dermal contact). The physical properties of solubility, particle surface area, and particle size of some beryllium compounds are examined in more detail below. These properties have been evaluated in many toxicological studies. In particular, the properties related to the calcination (firing temperatures) and differences in crystal size and solubility are important aspects in their toxicological profile.

2. Factors Affecting Potency and Effect of Beryllium Exposure

The effect and potency of beryllium and its compounds, as for any toxicant, immunogen, or immunotoxicant, may be dependent upon the physical state in which they are presented to a host. For occupational airborne materials and surface contaminants, it is especially critical to understand those physical parameters in order to determine the extent of exposure to the respiratory tract and skin since these are generally the initial target organs for either route of exposure.

For example, solubility has an important part in determining the toxicity and bioavailability of airborne materials as well. Respiratory tract retention and skin penetration are directly influenced by the solubility and reactivity of airborne material. Large particles may have less of an effect in the lung than smaller particles due to reduced potential to stay airborne, to be inhaled, or be deposited along the respiratory tract. In addition, once inhalation occurs particle size is critical in determining where the particle will deposit along the respiratory tract.

These factors may be responsible, at least in part, for the process by which beryllium sensitization progresses to CBD in exposed workers. Other factors influencing beryllium-induced toxicity include the surface area of beryllium particles and their persistence in the lung. With respect to dermal contact or exposure, the physical characteristics of the particle are also important since they can influence skin absorption and bioavailability. This section addresses certain physical characteristics (*i.e.*, solubility, particle size, particle surface area) that influence the toxicity of beryllium materials in occupational settings.

a. Solubility

Solubility has been shown to be an important determinant of the toxicity of airborne materials, influencing the deposition and persistence of inhaled particles in the respiratory tract, their bioavailability, and the likelihood of presentation to the immune system. A number of chemical agents, including metals that contact and penetrate the skin, are able to induce an immune response, such as sensitization (Boeniger, 2003, Document ID 1560; Mandervelt *et al.*, 1997 (1451)). Similar to inhaled agents, the ability of materials to penetrate the skin is also influenced by solubility because dermal absorption may occur at a greater rate for soluble materials than poorly soluble materials (Kimber *et al.*, 2011, Document ID 0534). In post-hearing comments, NIOSH explained:

In biological systems, solubility is used to describe the rate at which a material will undergo chemical clearance and dissolve in a fluid (airway lining, inside phagolysosomes) relative to the rate of mechanical clearance. For example, in the lung a “poorly soluble” material is one that dissolves at a rate slower than the rate of mechanical removal via the mucociliary escalator. Examples of poorly soluble forms of beryllium are beryllium silicates, beryllium oxide, and beryllium metal and alloys (Deubner *et al.* 2011; Huang *et al.* 2011; Duling *et al.* 2012; Stefaniak *et al.* 2006, 2011a, 2012). A highly soluble material is one that dissolves at a rate faster than mechanical clearance. Examples of highly soluble forms of beryllium are beryllium fluoride, beryllium sulfate, and beryllium chloride. (Document ID 1660–A2, p. 9).

This section reviews the relevant information regarding solubility, its importance in a biological matrix and its relevance to sensitization and beryllium lung disease. The weight of evidence presented below suggests that both soluble and poorly soluble forms of beryllium can induce a sensitization response and result in progression of lung disease.

Beryllium salts, including the chloride (BeCl_2), fluoride (BeF_2), nitrate ($\text{Be}(\text{NO}_3)_2$), phosphate ($\text{Be}_3(\text{PO}_4)_2$), and sulfate (tetrahydrate) ($\text{BeSO}_4 \cdot 4\text{H}_2\text{O}$) salts, are all water soluble. However, soluble beryllium salts can be converted to less soluble forms in the lung (Reeves and Vorwald, 1967, Document ID 1309). According to an EPA report, aqueous solutions of the soluble beryllium salts are acidic as a result of the formation of $\text{Be}(\text{OH})_2$, 2^+ , the tetrahydrate, which will react to form poorly soluble hydroxides or hydrated complexes within the general physiological range of pH values (between 5 and 8) (EPA, 1998, Document ID 1322). This may be

an important factor in the development of CBD since lower-soluble forms of beryllium have been shown to persist in the lung for longer periods of time and persistence in the lung may be needed in order for this disease to occur (NAS, 2008, Document ID 1355).

Beryllium oxide (BeO), hydroxide ($\text{Be}(\text{OH})_2$), carbonate ($\text{Be}_2\text{CO}_3(\text{OH})_2$), and sulfate (anhydrous) (BeSO_4) are either insoluble, slightly soluble, or considered to be sparingly or poorly soluble (almost insoluble or having an extremely slow rate of dissolution and most often referred to as poorly soluble in more recent literature). The solubility of beryllium oxide, which is prepared from beryllium hydroxide by calcining (heating to a high temperature without fusing in order to drive off volatile chemicals) at temperatures between 500 and 1,750 °C, has an inverse relationship with calcination temperature. Although the solubility of the low-fired crystals can be as much as 10 times that of the high-fired crystals, low-fired beryllium oxide is still only sparingly soluble (Delic, 1992, Document 1547). In a study that measured the dissolution kinetics (rate to dissolve) of beryllium compounds calcined at different temperatures, Hoover *et al.*, compared beryllium metal to beryllium oxide particles and found them to have similar solubilities. This was attributed to a fine layer of beryllium oxide that coats the metal particles (Hoover *et al.*, 1989, Document ID 1510). A study conducted by Deubner *et al.* (2011) determined ore materials to be more soluble than beryllium oxide at pH 7.2 but similar in solubility at pH 4.5. Beryllium hydroxide was more soluble than beryllium oxide at both pHs (Deubner *et al.*, 2011, Document ID 0527).

Investigators have also attempted to determine how biological fluids can dissolve beryllium materials. In two studies, poorly soluble beryllium, taken up by activated phagocytes, was shown to be ionized by myeloperoxidases (Leonard and Lauwerys, 1987, Document ID 1293; Lansdown, 1995 (1469)). The positive charge resulting from ionization enabled the beryllium to bind to receptors on the surface of cells such as lymphocytes or antigen-presenting cells which could make it more biologically active (NAS, 2008, Document ID 1355). In a study utilizing phagolysosomal-simulating fluid (PSF) with a pH of 4.5, both beryllium metal and beryllium oxide dissolved at a greater rate than that previously reported in water or SUF (simulant fluid) (Stefaniak *et al.*, 2006, Document ID 1398), and the rate of dissolution of the multi-constituent (mixed) particles

was greater than that of the single-constituent beryllium oxide powder. The authors speculated that copper in the particles rapidly dissolves, exposing the small inclusions of beryllium oxide, which have higher specific surface areas (SSA) and therefore dissolve at a higher rate. A follow-up study by the same investigational team (Duling *et al.*, 2012, Document ID 0539) confirmed dissolution of beryllium oxide by PSF and determined the release rate was biphasic (initial rapid diffusion followed by a latter slower surface reaction-driven release). During the latter phase, dissolution half-times were 1,400 to 2,000 days. The authors speculated this indicated bertrandite was persistent in the lung (Duling *et al.*, 2012, Document ID 0539).

In a recent study investigating the dissolution and release of beryllium ions for 17 beryllium-containing materials (ore, hydroxide, metal, oxide, alloys, and processing intermediates) using artificial human airway epithelial lining fluid, Stefaniak *et al.* (2011) found release of beryllium ions within 7 days (beryl ore smelter dust). The authors calculated dissolution half-times ranging from 30 days (reduction furnace material) to 74,000 days (hydroxide). Stefaniak *et al.* (2011) speculated that despite the rapid mechanical clearance, billions of beryllium ions could be released in the respiratory tract via dissolution in airway lining fluid (ALF). Under this scenario, beryllium-containing particles depositing in the respiratory tract dissolving in ALF could provide beryllium ions for absorption in the lung and interact with immune cells in the respiratory tract (Stefaniak *et al.*, 2011, Document ID 0537).

Huang *et al.* (2011) investigated the effect of simulated lung fluid (SLF) on dissolution and nanoparticle generation and beryllium-containing materials. Bertrandite-containing ore, beryl-containing ore, frit (a processing intermediate), beryllium hydroxide (a processing intermediate) and silica (used as a control), were equilibrated in SLF at two pH values (4.5 and 7.2) to reflect inter- and intra-cellular environments in the lung tissue. Concentrations of beryllium, aluminum, and silica ions increased linearly during the first 20 days in SLF, and rose more slowly thereafter, reaching equilibrium over time. The study also found nanoparticle formation (in the size range of 10–100 nm) for all materials (Huang *et al.*, 2011, Document ID 0531).

In an *in vitro* skin model, Sutton *et al.* (2003) demonstrated the dissolution of beryllium compounds (poorly soluble beryllium hydroxide, soluble beryllium

phosphate) in a simulated sweat fluid (Document ID 1393). This model showed beryllium can be dissolved in biological fluids and be available for cellular uptake in the skin. Duling *et al.* (2012) confirmed dissolution and release of ions from bertrandite ore in an artificial sweat model (pH 5.3 and pH 6.5) (Document ID 0539).

In summary, studies have shown that soluble forms of beryllium readily dissolve into ionic components making them biologically available for dermal penetration and activation of immune cells (Stefaniak *et al.*, 2011; Document ID 0537). Soluble forms can also be converted to less soluble forms in the lung (Reeves and Vorwald, 1967, Document ID 1309) making persistence in the lung a possibility and increasing the potential for development of CBD (see section V.D.2). Studies by Stefaniak *et al.* (2003, 2006, 2011, 2012) (Document ID 1347; 1398; 0537; 0469), Huang *et al.* (2011), Duling *et al.* (2012), and Deubner *et al.* (2011) have demonstrated poorly soluble forms can be readily dissolved in biological fluids such as sweat, lung fluid, and cellular fluids. The dissolution of beryllium ions into biological fluids increases the likelihood of beryllium presentation to immune cells, thus increasing the potential for sensitization through dermal contact or lung exposure (Document ID 0531; 0539; 0527) (see section V.D.1).

OSHA received comments from the Non-Ferrous Founders' Society (NFFS) contending that the scientific evidence does not support insoluble beryllium as a causative agent for sensitization and CBD (Document ID 1678, p. 6). The NFFS contends that insoluble beryllium is not carcinogenic or a sensitizer to humans, and argues that based on this information, OSHA should consider a bifurcated standard with separate PELs for soluble and poorly soluble beryllium and beryllium compounds and insoluble beryllium metal (Document ID 1678, p. 7). As evidence supporting its conclusion, the NFFS cited a 2010 statement written by Dr. Christian Strupp commissioned by the beryllium industry (Document ID 1785, 1814), which reviewed selected studies to evaluate the toxic potential of beryllium metal and alloys (Document ID 1678, pp. 7). The Strupp and Furnes statement (2010) cited by the NFFS is the background material and basis of the Strupp (2011a and 2011b) studies in the docket (Document ID 1794; 1795). In response to Strupp 2011 (a and b), Aleks Stefaniak of NIOSH published a letter to the editor refuting some of the evidence presented by Strupp (2011a and b, Document ID 1794; 1795). The first

study by Strupp (2011a) evaluated selected animal studies and concluded that beryllium metal was not a sensitizer. Stefaniak (2011) evaluated the validity of the Strupp (2011a) study of beryllium toxicity and noted numerous deficiencies, including deficiencies in the study design, improper administration of beryllium test compounds, and lack of proper controls (Document ID 1793). In addition, Strupp (2011a) omitted numerous key animal and epidemiological studies demonstrating the potential of poorly soluble beryllium and beryllium metal as a sensitizing agent. One such study, Tinkle *et al.* (2003), demonstrated that topical application of poorly soluble beryllium induced skin sensitization in mice (Document ID 1483). Comments from NIOSH and National Jewish Medical Center state that poorly soluble beryllium materials are capable of dissolving in sweat (Document ID 1755; 1756). After evaluating the scientific evidence from epidemiological and animal studies, OSHA finds, based on the best available evidence, that soluble and poorly soluble forms of beryllium and beryllium compounds are causative agents of sensitization and CBD.

b. Particle Size

The toxicity of beryllium as exemplified by beryllium oxide is dependent, in part, on the particle size, with smaller particles (less than 10 μm in diameter) able to penetrate beyond the larynx (Stefaniak *et al.*, 2008, Document ID 1397). Most inhalation studies and occupational exposures involve quite small (less than 1–2 μm in diameter) beryllium oxide particles that can penetrate to the pulmonary regions of the lung (Stefaniak *et al.*, 2008, Document ID 1397). In inhalation studies with beryllium ores, particle sizes are generally much larger, with deposition occurring in several areas throughout the respiratory tract for particles less than 10 μm in diameter.

The temperature at which beryllium oxide is calcined influences its particle size, surface area, solubility, and ultimately its toxicity (Delic, 1992, Document ID 1547). Low-fired (500 $^{\circ}\text{C}$) beryllium oxide is predominantly made up of poorly crystallized small particles, while higher firing temperatures (1000–1750 $^{\circ}\text{C}$) result in larger particle sizes (Delic, 1992, Document ID 1547).

In order to determine the extent to which particle size plays a role in the toxicity of beryllium in occupational settings, several key studies are reviewed and detailed below. The findings on particle size have been related, where possible, to work process

and biologically relevant toxicity endpoints of either sensitization or CBD.

Numerous studies have been conducted evaluating the particle size generated during basic industrial and machining operations. In a study by Cohen *et al.* (1983), a multi-cyclone sampler was utilized to measure the size mass distribution of the beryllium aerosol at a beryllium-copper alloy casting operation (Document ID 0540). Briefly, Cohen *et al.* (1983) found variable particle size generation based on the operations being sampled with particle size ranging from 3 to 16 μm . Hoover *et al.* (1990) also found variable particle sizes being generated across different operations (Document ID 1314). In general, Hoover *et al.* (1990) found that milling operations generated smaller particle sizes than sawing operations. Hoover *et al.* (1990) also found that beryllium metal generated higher concentrations than metal alloys. Martyny *et al.* (2000) characterized generation of particle size during precision beryllium machining processes (Document ID 1053). The study found that more than 50 percent of the beryllium machining particles collected in the breathing zone of machinists were less than 10 μm in aerodynamic diameter with 30 percent of those smaller particles being less than 0.6 μm . A study by Thorat *et al.* (2003) found similar results with ore mixing, crushing, powder production and machining ranging from 5.0 to 9.5 μm (Document ID 1389). Kent *et al.* (2001) measured airborne beryllium using size-selective samplers in five furnace areas at a beryllium processing facility (Document ID 1361). A statistically significant linear trend was reported between the alveolar-deposited particle mass concentration and prevalence of CBD and sensitization in the furnace production areas. The study authors suggested that the concentration of alveolar-deposited particles (*e.g.*, <3.5 μm) may be a better predictor of sensitization and CBD than the total mass concentration of airborne beryllium.

A recent study by Virji *et al.* (2011) evaluated particle size distribution, chemistry, and solubility in areas with historically elevated risk of sensitization and CBD at a beryllium metal powder, beryllium oxide, and alloy production facility (Document ID 0465). The investigators observed that historically, exposure-response relationships have been inconsistent when using mass concentration to identify process-related risk, possibly due to incomplete particle characterization. Two separate exposure surveys were conducted in March 1999 and June–August 1999 using multi-stage

personal impactor samplers (to determine particle size distribution) and personal 37 mm closed face cassette (CFC) samplers, both located in workers' breathing zones. One hundred and ninety eight time-weighted-average (TWA) personal impactor samples were analyzed for representative jobs and processes. A total of 4,026 CFC samples were collected over the collection period and analyzed for mass concentration, particle size, chemical content and solubility and compared to process areas with high risk of sensitization and CBD. The investigators found that total beryllium concentration varied greatly between workers and among process areas. Analysis of chemical form and solubility also revealed wide variability among process areas, but high risk process areas had exposures to both soluble and poorly soluble forms of beryllium. Analysis of particle size revealed most process areas had particles ranging from 5 to 14 μm mass median aerodynamic diameter (MMAD). Rank order correlating jobs to particle size showed high overall consistency (Spearman $r = 0.84$) but moderate correlation (Pearson $r = 0.43$). The investigators concluded that by considering more relevant aspects of exposure such as particle size distribution, chemical form, and solubility could potentially improve exposure assessments (Virji *et al.*, 2011, Document ID 0465).

To summarize, particle size influences deposition of beryllium particles in the lung, thereby influencing toxicity. Studies by Stefaniak *et al.* (2008) demonstrated that the majority of particles generated by beryllium processing operations were in the respirable range (less than 1–2 μm) (Document ID 1397). However, studies by Virji *et al.* (2011) (Document ID 0465), Cohen *et al.* (1983) (Document ID 0540) and Hoover *et al.* (1990) (Document ID 1314) showed that some operations could generate particle sizes ranging from 3 to 16 μm .

c. Particle Surface Area

Particle surface area has been postulated as an important metric for beryllium exposure. Several studies have demonstrated a relationship between the inflammatory and tumorigenic potential of ultrafine particles and their increased surface area (Driscoll, 1996, Document ID 1539; Miller, 1995 (0523); Oberdorster *et al.*, 1996 (1434)). While the exact mechanism explaining how particle surface area influences its biological activity is not known, a greater particle surface area has been shown to increase inflammation, cytokine production, pro-

and anti-oxidant defenses and apoptosis, which has been shown to increase the tumorigenic potential of poorly-soluble particles (Elder *et al.*, 2005, Document ID 1537; Carter *et al.*, 2006 (1556); Refsnes *et al.*, 2006 (1428)).

Finch *et al.* (1988) found that beryllium oxide calcined at 500°C had 3.3 times greater specific surface area (SSA) than beryllium oxide calcined at 1000 °C, although there was no difference in size or structure of the particles as a function of calcining temperature (Document ID 1317). The beryllium-metal aerosol (airborne beryllium particles), although similar to the beryllium oxide aerosols in aerodynamic size, had an SSA about 30 percent that of the beryllium oxide calcined at 1000 °C. As discussed above, a later study by Delic (1992) found calcining temperatures had an effect on SSA as well as particle size (Document ID 1547).

Several studies have investigated the lung toxicity of beryllium oxide calcined at different temperatures and generally have found that those calcined at lower temperatures have greater toxicity and effect than materials calcined at higher temperatures. This may be because beryllium oxide fired at the lower temperature has a loosely formed crystalline structure with greater specific surface area than the fused crystal structure of beryllium oxide fired at the higher temperature. For example, beryllium oxide calcined at 500 °C has been found to have stronger pathogenic effects than material calcined at 1,000 °C, as shown in several of the beagle dog, rat, mouse and guinea pig studies discussed in the section on CBD pathogenesis that follows (Finch *et al.*, 1988, Document ID 1495; Polák *et al.*, 1968 (1431); Haley *et al.*, 1989 (1366); Haley *et al.*, 1992 (1365); Hall *et al.*, 1950 (1494)). Finch *et al.* have also observed higher toxicity of beryllium oxide calcined at 500 °C, an observation they attribute to the greater surface area of beryllium particles calcined at the lower temperature (Finch *et al.*, 1988, Document ID 1495). These authors found that the *in vitro* cytotoxicity to Chinese hamster ovary (CHO) cells and cultured lung epithelial cells of 500 °C beryllium oxide was greater than that of 1,000 °C beryllium oxide, which in turn was greater than that of beryllium metal. However, when toxicity was expressed in terms of particle surface area, the cytotoxicity of all three forms was similar. Similar results were observed in a study comparing the cytotoxicity of beryllium metal particles of various sizes to cultured rat alveolar macrophages, although specific surface

area did not entirely predict cytotoxicity (Finch *et al.*, 1991, Document ID 1535).

Stefaniak *et al.* (2003) investigated the particle structure and surface area of beryllium metal, beryllium oxide, and copper-beryllium alloy particles (Document ID 1347). Each of these samples was separated by aerodynamic size, and their chemical compositions and structures were determined with x-ray diffraction and transmission electron microscopy, respectively. In summary, beryllium-metal powder varied remarkably from beryllium oxide powder and alloy particles. The metal powder consisted of compact particles, in which SSA decreases with increasing surface diameter. In contrast, the alloys and oxides consisted of small primary particles in clusters, in which the SSA remains fairly constant with particle size. SSA for the metal powders varied based on production and manufacturing process with variations among samples as high as a factor of 37. Stefaniak *et al.* (2003) found lesser variation in SSA for the alloys or oxides (Document ID 1347). This is consistent with data from other studies summarized above showing that process may affect particle size and surface area. Particle size and/or surface area may explain differences

in the rate of beryllium sensitization and CBD observed in some epidemiological studies. However, these properties have not been consistently characterized in most studies.

B. Kinetics and Metabolism of Beryllium

Beryllium enters the body by inhalation, absorption through the skin, or ingestion. For occupational exposure, the airways and the skin are the primary routes of uptake.

1. Exposure Via the Respiratory System

The respiratory tract, especially the lung, is the primary target of inhalation exposure in workers. Disposition (deposition and clearance) of the particle or droplet along the respiratory tract influences the biological response to the toxicant (Schlesinger *et al.*, 1997, Document ID 1290). Inhaled beryllium particles are deposited along the respiratory tract in a size dependent manner as described by the International Commission for radiological Protection (ICRP) model (Figure 1). In general, particles larger than 10 μm tend to deposit in the upper respiratory tract or nasal region and do not appreciably penetrate lower in the

tracheobronchial or pulmonary regions (Figure 1). Particles less than 10 μm increasingly penetrate and deposit in the tracheobronchial and pulmonary regions with peak deposition in the pulmonary region occurring below 5 μm in particle diameter. The CBD pathology of concern is found in the pulmonary region. For particles below 1 μm in particle diameter, regional deposition changes dramatically. Ultrafine particles (generally considered to be 100 nm or lower) have a higher rate of deposition along the entire respiratory system (ICRP model, 1994). However, due to the hygroscopic nature of soluble particles, deposition patterns may be slightly different with an enhanced preference for the tracheobronchial or bronchial region of the lung. Nonetheless, soluble particles are still capable of depositing in the pulmonary region (Schlesinger *et al.*, 1997, Document ID 1290).

Particles depositing in the lung and along the entire respiratory tract may encounter immunologic cells or may move into the vascular system where they are free to leave the lung and can contribute to systemic beryllium concentrations.

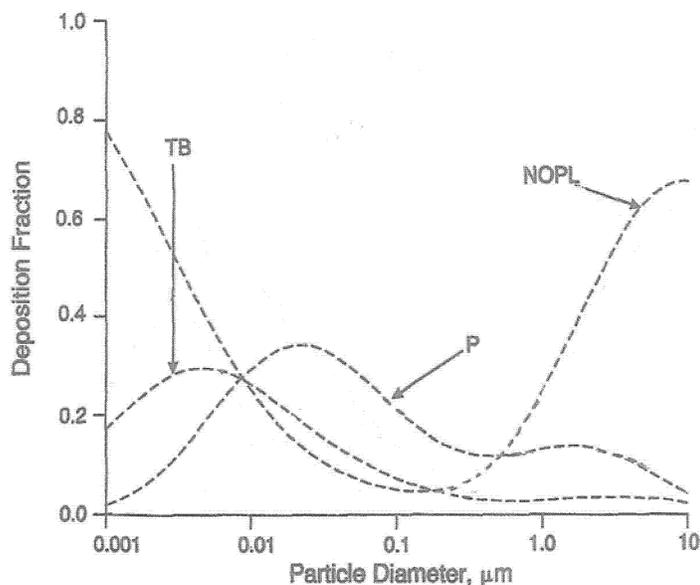

Figure 1, ICRP model: Regional Deposition Model in Humans (Adapted from Yeh *et al.*, 1996, Document ID 0386))

NOPL - naso-oral-pharyngeal region

TB - tracheobronchial region

P - pulmonary region

Beryllium is removed from the respiratory tract by various clearance mechanisms. Soluble beryllium is

removed from the respiratory tract via absorption or chemical clearance (Schlesinger, 1997, Document ID 1290).

Sparingly soluble or poorly soluble beryllium is removed via mechanical mechanisms and may remain in the

lungs for many years after exposure, as has been observed in workers (Schepers, 1962, Document ID 1414). Clearance mechanisms for sparingly soluble or poorly soluble beryllium particles include: In the nasal passage, sneezing, mucociliary transport to the throat, or dissolution; in the tracheobronchial region, mucociliary transport, coughing, phagocytosis, or dissolution; in the pulmonary or alveolar region, phagocytosis, movement through the interstitium (translocation), or dissolution (Schlesinger, 1997, Document ID 1290). Mechanical clearance mechanisms may occur slowly in humans, which is consistent with some animal and human studies. For example, subjects in the Beryllium Case Registry (BCR), which identifies and tracks cases of acute and chronic beryllium diseases, had elevated concentrations of beryllium in lung tissue (e.g., 3.1 µg/g of dried lung tissue and 8.5 µg/g in a mediastinal node) more than 20 years after termination of short-term (generally between 2 and 5 years) occupational exposure to beryllium (Sprince *et al.*, 1976, Document ID 1405).

Due to physiological differences, clearance rates can vary between humans and animal species (Schlesinger, 1997, Document ID 1290; Miller, 2000 (1831)). However, clearance rates are also dependent upon the solubility, dose, and size of the inhaled beryllium compound. As reviewed in a WHO Report (2001) (Document ID 1282), more soluble beryllium compounds generally tend to be cleared from the respiratory system and absorbed into the bloodstream more rapidly than less soluble compounds (Van Cleave and Kaylor, 1955, Document ID 1287; Hart *et al.*, 1980 (1493); Finch *et al.*, 1990 (1318)). Animal inhalation or intratracheal instillation studies administering soluble beryllium salts demonstrated significant absorption of approximately 20 percent of the initial lung burden with rapid dissolution of soluble compounds from the lung (Delic, 1992, Document ID 1547). Absorption of poorly soluble compounds such as beryllium oxide administered via inhalation or intratracheal instillation was slower and less significant (Delic, 1992, Document ID 1547). Additional animal studies have demonstrated that clearance of poorly soluble beryllium compounds was biphasic: A more rapid initial mucociliary transport phase of particles from the tracheobronchial tree to the gastrointestinal tract, followed by a slower phase via translocation to tracheobronchial lymph nodes, alveolar

macrophages uptake, and beryllium particles dissolution (Camner *et al.*, 1977, Document ID 1558; Sanders *et al.*, 1978 (1485); Delic, 1992 (1547); WHO, 2001 (1282)). Confirmatory studies in rats have shown the half-time for the rapid phase to be between 1 and 60 days, while the slow phase ranged from 0.6 to 2.3 years. Studies have also shown that this process was influenced by the solubility of the beryllium compounds: Weeks/months for soluble compounds, months/years for poorly soluble compounds (Reeves and Vorwald, 1967; Reeves *et al.*, 1967; Rhoads and Sanders, 1985). Studies in guinea pigs and rats indicate that 40–50 percent of the inhaled soluble beryllium salts are retained in the respiratory tract. Similar data could not be found for the poorly soluble beryllium compounds or metal administered by this exposure route. (WHO, 2001, Document ID 1282; ATSDR, 2002 (1371).)

Evidence from animal studies suggests that greater amounts of beryllium deposited in the lung may result in slower clearance times. Acute inhalation studies performed in rats and mice using a single dose of inhaled aerosolized beryllium metal showed that exposure to beryllium metal can slow particle clearance and induce lung damage in rats and mice (Finch *et al.*, 1998, Document ID 1317; Haley *et al.*, 1990 (1314)). In another study, Finch *et al.* (1994) exposed male F344/N rats to beryllium metal at concentrations resulting in beryllium lung burdens of 1.8, 10, and 100 µg. These exposure levels resulted in an estimated clearance half-life ranging from 250 to 380 days for the three concentrations. For mice (Finch *et al.*, 1998, Document ID 1317), lung clearance half-lives were 91–150 days (for 1.7- and 2.6-µg lung burden groups) or 360–400 days (for 12- and 34-µg lung burden groups). While the lower exposure groups were quite different for rats and mice, the highest groups were similar in clearance half-lives for both species.

Beryllium absorbed from the respiratory system was shown to distribute primarily to the tracheobronchial lymph nodes via the lymph system, bloodstream, and skeleton (Stokinger *et al.*, 1953, Document ID 1277; Clary *et al.*, 1975 (1320); Sanders *et al.*, 1975 (1486); Finch *et al.*, 1990 (1318)). Studies in rats demonstrated accumulation of beryllium chloride in the skeletal system following intraperitoneal injection (Crowley *et al.*, 1949, Document ID 1551; Scott *et al.*, 1950 (1413)) and accumulation of beryllium phosphate and beryllium sulfate in both non-parenchymal and parenchymal

cells of the liver after intravenous administration in rats (Skilleter and Price, 1978, Document ID 1408). Studies have also demonstrated intracellular accumulation of beryllium oxide in bone marrow throughout the skeletal system after intravenous administration to rabbits (Fodor, 1977, Document ID 1532; WHO, 2001 (1282)). Trace amounts of beryllium have also been shown to be distributed throughout the body (WHO, 2001, Document ID 1282).

Systemic distribution of the more soluble compounds was shown to be greater than that of the poorly soluble compounds (Stokinger *et al.*, 1953, Document ID 1277). Distribution has also been shown to be dose dependent in research using intravenous administration of beryllium in rats; small doses were preferentially taken up in the skeleton, while higher doses were initially distributed preferentially to the liver.

Beryllium was later mobilized from the liver and transferred to the skeleton (IARC, 1993, Document ID 1342). A half-life of 450 days has been estimated for beryllium in the human skeleton (ICRP, 1960, Document ID 0248). This indicates the skeleton may serve as a repository for beryllium that may later be reabsorbed by the circulatory system, making beryllium available to the immunological system (WHO, 2001, Document ID 1282). In a recent review of the information, the American Conference of Governmental Industrial Hygienists (ACGIH, 2010) was not able to confirm the association between occupational inhalation and urinary excretion (Document ID 1662, p. 4). However, IARC (2012) noted that an accidental exposure of 25 people to beryllium dust reported in a study by Zorn *et al.* (1986) resulted in a mean serum concentration of 3.5 µg/L one day after the exposure, which decreased to 2.4 µg/L by day six. The IARC report concluded that beryllium from beryllium metal was biologically available for systemic distribution from the lung (IARC, 2012, Document ID 0650).

Based on these studies, OSHA finds that the respiratory tract is a primary pathway for beryllium exposure. While particle size and surface area may contribute to the toxicity of beryllium, there is not sufficient evidence for OSHA to regulate based on size and surface area. However, the Agency finds that both soluble and poorly soluble forms of beryllium and beryllium compounds can contribute to exposure via the respiratory system and therefore can be causative agents of sensitization and CBD.

2. Dermal Exposure

Beryllium compounds have been shown to cause skin irritation and sensitization in humans and certain animal models (Van Ordstrand *et al.*, 1945, Document ID 1383; de Nardi *et al.*, 1953 (1545); Nishimura, 1966 (1435); Epstein, 1991 (0526); Belman, 1969 (1562); Tinkle *et al.*, 2003 (1483); Delic, 1992 (1547)). The Agency for Toxic Substances and Disease Registry (ATSDR) estimated that less than 0.1 percent of beryllium compounds are absorbed through the skin (ATSDR, 2002, Document ID 1371). However, even minute contact and absorption across the skin may directly elicit an immunological response resulting in sensitization (Deubner *et al.*, 2001, Document ID 1543; Toledo *et al.*, 2011 (0522)). Studies by Tinkle *et al.* (2003) showed that penetration of beryllium oxide particles was possible *ex vivo* for human intact skin at particle sizes of less than or equal to 1 μm in diameter, as confirmed by scanning electron microscopy (Document ID 1483). Using confocal microscopy, Tinkle *et al.* demonstrated that surrogate fluorescent particles up to 1 μm in size could penetrate the mouse epidermis and dermis layers in a model designed to mimic the flexing and stretching of human skin in motion. Other poorly soluble particles, such as titanium dioxide, have been shown to penetrate normal human skin (Tan *et al.*, 1996, Document ID 1391) suggesting the flexing and stretching motion as a plausible mechanism for dermal penetration of beryllium as well. As earlier summarized, poorly soluble forms of beryllium can be solubilized in biological fluids (*e.g.*, sweat) making them available for absorption through intact skin (Sutton *et al.*, 2003, Document ID 1393; Stefaniak *et al.*, 2011 (0537) and 2014 (0517); Duling *et al.*, 2012 (0539)).

Although its precise role remains to be elucidated, there is evidence that dermal exposure can contribute to beryllium sensitization. As early as the 1940s it was recognized that dermatitis experienced by workers in primary beryllium production facilities was linked to exposures to the soluble beryllium salts. Except in cases of wound contamination, dermatitis was rare in workers whose exposures were restricted to exposure to poorly soluble beryllium-containing particles (Van Ordstrand *et al.*, 1945, Document ID 1383). Further investigation by McCord in 1951 (Document ID 1448) indicated that direct skin contact with soluble beryllium compounds, but not beryllium hydroxide or beryllium metal,

caused dermal lesions (reddened, elevated, or fluid-filled lesions on exposed body surfaces) in susceptible persons. Curtis, in 1951, demonstrated skin sensitization to beryllium with patch testing using soluble and poorly soluble forms of beryllium in beryllium-naïve subjects. These subjects later developed granulomatous skin lesions with the classical delayed-type contact dermatitis following repeat challenge (Curtis, 1951, Document ID 1273). These lesions appeared after a latent period of 1–2 weeks, suggesting a delayed allergic reaction. The dermal reaction occurred more rapidly and in response to smaller amounts of beryllium in those individuals previously sensitized (Van Ordstrand *et al.*, 1945, Document ID 1383). Contamination of cuts and scrapes with beryllium can result in the beryllium becoming embedded within the skin causing an ulcerating granuloma to develop in the skin (Epstein, 1991, Document ID 0526). Soluble and poorly soluble beryllium-compounds that penetrate the skin as a result of abrasions or cuts have been shown to result in chronic ulcerations and skin granulomas (Van Ordstrand *et al.*, 1945, Document ID 1383; Lederer and Savage, 1954 (1467)). Beryllium absorption through bruises and cuts has been demonstrated as well (Rossman *et al.*, 1991, Document ID 1332).

In a study by Ivannikov *et al.* (1982) (as cited in Deubner *et al.*, 2001, Document ID 0023), beryllium chloride was applied directly to three different types of wounded skin: abrasions (superficial skin trauma), cuts (skin and superficial muscle trauma), and penetration wounds (deep muscle trauma). According to Deubner *et al.* (2001) the percentage of the applied dose systemically absorbed during a 24-hour exposure was significant, ranging from 7.8 percent to 11.4 percent for abrasions, from 18.3 percent to 22.9 percent for cuts, and from 34 percent to 38.8 percent for penetration wounds (Deubner *et al.*, 2001, Document ID 0023).

A study by Deubner *et al.* (2001) concluded that exposure across damaged skin can contribute as much systemic loading of beryllium as inhalation (Deubner *et al.*, 2001, Document ID 1543). Deubner *et al.* (2001) estimated dermal loading (amount of particles penetrating into the skin) in workers as compared to inhalation exposure. Deubner's calculations assumed a dermal loading rate for beryllium on skin of 0.43 $\mu\text{g}/\text{cm}^2$, based on the studies of loading on skin after workers cleaned up (Sanderson *et al.*, 1999, Document ID 0474), multiplied by a factor of 10 to

approximate the workplace concentrations and the very low absorption rate of beryllium into skin of 0.001 percent (taken from EPA estimates). As cited by Deubner *et al.* (2001), the EPA noted that these calculations did not take into account absorption of soluble beryllium salts that might occur across nasal mucus membranes, which may result from contact between contaminated skin and the nose (Deubner *et al.*, 2001, Document ID 1543).

A study conducted by Day *et al.* (2007) evaluated the effectiveness of a dermal protection program implemented in a beryllium alloy facility in 2002 (Document ID 1548). The investigators evaluated levels of beryllium in air, on workplace surfaces, on cotton gloves worn over nitrile gloves, and on the necks and faces of workers over a six day period. The investigators found a strong correlation between air concentrations determined from sampling data and work surface contamination at this facility. The investigators also found measurable levels of beryllium on the skin of workers as a result of work processes even from workplace areas promoted as "visually clean" by the company housekeeping policy. Importantly, the investigators found that the beryllium contamination could be transferred from body region to body region (*e.g.*, hand to face, neck to face) demonstrating the importance of dermal protection measures since sensitization can occur via dermal exposure as well as respiratory exposure. The investigators demonstrated multiple pathways of exposure which could lead to sensitization, increasing risk for developing CBD (Day *et al.*, 2007, Document ID 1548).

The same group of investigators extended their work on investigating multiple exposure pathways contributing to sensitization and CBD (Armstrong *et al.*, 2014, Document ID 0502). The investigators evaluated four different beryllium manufacturing and processing facilities to assess the contribution of various exposure pathways on worker exposure. Airborne, work surface and cotton glove beryllium concentrations were evaluated. The investigators found strong correlations between air and surface concentrations; glove and surface concentrations; and air and glove concentrations at this facility. This work supports findings from Day *et al.* (2007) (Document ID 1548) demonstrating the importance of airborne beryllium concentrations to surface contamination and dermal exposure even at exposures below the

preceding OSHA PEL (Armstrong *et al.*, 2014, Document ID 0502).

OSHA received comments regarding the potential for dermal penetration of poorly soluble particles. Materion contended there is no supporting evidence to suggest that insoluble or poorly soluble particles penetrate skin and stated:

. . . we were aware that, a hypothesis has been put forth which suggests that being sensitized to beryllium either through a skin wound or via penetration of small beryllium particles through intact skin could result in sensitization to beryllium which upon receiving a subsequent inhalation dose of airborne beryllium could result in CBD. However, there are no studies that skin absorption of insoluble beryllium results in a systemic effect. The study by Curtis, the only human study looking for evidence of a beryllium sensitization reaction occurring through intact human skin, found no sensitization reaction using insoluble forms of beryllium. (Document ID 1661, p. 12).

OSHA disagrees with the assertion that no studies are available indicating skin absorption of poorly soluble (insoluble) beryllium. In addition to the study cited by Materion (Curtis, 1951, Document ID 1273), OSHA reviewed numerous studies on the effects of beryllium solubility and dermal penetration (see section V. B. 2) including the Tinkle *et al.* (2003) (Document ID 1483) study which demonstrated the potential for poorly soluble beryllium particles to penetrate skin using an ex vivo human skin model. While OSHA believes that these studies demonstrate poorly soluble beryllium can in fact penetrate intact skin, penetration through intact skin is not the only means for a person to become sensitized through skin contact with poorly soluble beryllium. During the informal hearing proceedings, NIOSH was asked about the role of poorly soluble beryllium in sensitizing workers to beryllium. Aleks Stefaniak, Ph.D., NIOSH, stated that "intact skin naturally has a barrier that prevents moisture from seeping out of the body and things from getting into the body. Very few people actually have fully intact skin, especially in an industrial environment. So the skin barrier is often compromised, which would make penetration of particles much easier." (Document ID 1755, Tr. 36).

As summarized above, poorly soluble beryllium particles have been shown to solubilize in biological fluids (*e.g.*, sweat) releasing beryllium ions and making them available for absorption through intact skin (Sutton *et al.*, 2003, Document ID 1393; Stefaniak *et al.* 2014 (0517); Duling *et al.*, 2012 (0539)). Epidemiological studies evaluating the

effectiveness of PPE in facilities working with beryllium (with special emphasis on skin protection) have demonstrated a reduced rate of beryllium sensitization after implementation of this type of control (Day *et al.*, 2007, Document ID 1548; Armstrong *et al.*, 2014 (0502)). Dr. Stefaniak confirmed these findings:

[T]he particles can actually dissolve when they're in contact with liquids on the skin, like sweat. So we've actually done a series of studies, using a simulant of sweat, but it had characteristics that very closely matched human sweat. We see in those studies that, in fact, beryllium particles, beryllium oxide, beryllium metal, beryllium alloys, all these sort of what we call insoluble forms actually do in fact dissolve very readily in analog of human sweat. And once beryllium is in an ionic form on the skin, it's actually very easy for it to cross the skin barrier. And that's been shown many, many times in studies that beryllium ions can cross the skin and induce sensitization. (Document ID 1755, Tr. 36–37).

Based on information from various studies demonstrating that poorly soluble particles have the potential to penetrate skin, that skin as a barrier is rarely intact (especially in industrial settings), and that beryllium particles can readily dissolve in sweat and other biological fluids, OSHA finds that dermal exposure to poorly soluble beryllium can cause sensitization (Rossman, *et al.*, 1991, Document ID 1332; Deubner *et al.*, 2001 (1542); Tinkle *et al.*, 2003 (1483); Sutton *et al.*, 2003 (1393); Stefaniak *et al.*, 2011 (0537) and 2014 (0517); Duling *et al.*, 2012 (0539); Document ID 1755, Tr. 36–37).

3. Oral and Gastrointestinal Exposure

According to the WHO Report (2001), gastrointestinal absorption of beryllium can occur by both the inhalation and oral routes of exposure (Document ID 1282). In the case of inhalation, a portion of the inhaled material is transported to the gastrointestinal tract by the mucociliary escalator or by the swallowing of the poorly soluble material deposited in the upper respiratory tract (Schlesinger, 1997, Document ID 1290). Animal studies have shown oral administration of beryllium compounds to result in very limited absorption and storage (as reviewed by U.S. EPA, 1998, Document ID 0661). Oral studies utilizing radio-labeled beryllium chloride in rats, mice, dogs, and monkeys, found the majority of the beryllium was unabsorbed by the gastrointestinal tract and was eliminated in the feces. In most studies, less than 1 percent of the administered radioactivity was absorbed into the bloodstream and subsequently excreted

in the urine (Crowley *et al.*, 1949, Document ID 1551; Furchner *et al.*, 1973 (1523); LeFevre and Joel, 1986 (1464)). Research using soluble beryllium sulfate has shown that as the compound passes into the intestine, which has a higher pH than the stomach (approximate pH of 6 to 8 for the intestine, pH of 1 or 2 for the stomach), the beryllium is precipitated as the poorly soluble phosphate and is not absorbed (Reeves, 1965, Document ID 1430; WHO, 2001 (1282)).
