To monetize the benefits of this rule, AMS used research that has measured consumers' willingness to pay for outdoor access between \$0.21 and \$0.49 per dozen eggs. Based on this, AMS estimates that the annualized benefits would range between \$4.1 million to \$49.5 million annually. The range in benefits accounts for several producer response scenarios, which correspond to those described above for the cost estimates.

In the Regulatory Flexibility Analysis, we report that large poultry operations would have significantly higher compliance costs than small operations on average. Larger organic layer operations, in particular, will have demand greater land areas for outdoor access.

AMS estimates that business revenues for small organic layer operations are \$736 million, or about \$1.03 million per firm. For small egg producers, business revenues would need to be less than \$867,000 to \$967,000 per firm for the rule to cost more than 3% of revenue. The estimated business revenue is calculated from the projected organic egg production from small producers using AMS Market News data on the U.S. organic layer population, estimated lay rate of 308 eggs/hen/year and the wholesale price for organic eggs \$2.83/dozen (AMS Market News).

A summary of the estimated costs and benefits associated with this rule is provided in Table A.

TABLE A—SUMMARY OF BENEFITS, COSTS, AND DISTRIBUTIONAL EFFECTS OF FINAL RULE

Assumed conditions	Affected population	Costs, millions ^a	Benefits, millions	Transfers, millions
All producers remain in organic market; Organic layer and broiler populations continue historical growth rates after rule.	Organic layer and organic broiler production at full implementation of rule, <i>i.e.</i> , 2022 for layers; 2020 for broilers.	\$28.7–\$31.0	\$16.3–\$49.5	N/A
50% of organic layer production in year 6 (2022), moves to the cage-free market. Organic layer and broiler populations continue historical growth rates after rule.	Organic layer and organic broiler production at full implementation of rule, <i>i.e.</i> , 2022 for layers; 2020 for broilers.	\$11.7–\$12.0	\$4.5–\$13.8	\$79.5–\$86.3

TABLE A—SUMMARY OF BENEFITS, COSTS, AND DISTRIBUTIONAL EFFECTS OF FINAL RULE—Continued

Assumed conditions	Affected population	Costs, millions ^a	Benefits, millions	Transfers, millions
50% of current organic layer production moves to the cage-free market in year 6 (2022). There are no new entrants after publication of this rule that cannot comply.	Current organic layer production; organic broiler production at full implementation of rule in 2020.	\$8.2	\$4.1–\$12.4	\$45.6–\$49.5

Other impacts: Estimated paperwork burden: \$3.9 million.

^a All values in the costs, benefits and transfers columns of this table are annualized and discounted at 3% and 7% rates.

XIII. Retrospective Analysis

Within 3–5 years of full implementation, the Administrator shall conduct and make publicly available a retrospective analysis of the impacts of this rulemaking. This analysis will include a retrospective evaluation of the benefits, costs and transfers of the rule, along with a comparison of these impacts to the prospective estimates contained in this final regulatory impact analysis. The retrospective analysis should include consideration of factors such as: The impacts on exit and entry of affected entities; market shares of affected entities, as well as market competition and concentration; the impacts on the number of producers participating in the organic program; impacts on organic egg production volume, impacts on secondary (e.g., feed/grain) markets; impacts on supply and price of eggs; and impacts on consumer understanding. An opportunity for public comment on this analysis will be provided.

XIV. Executive Order 12988

Executive Order 12988 instructs each executive agency to adhere to certain requirements in the development of new and revised regulations in order to avoid unduly burdening the court system. This final rule cannot be applied retroactively.

States and local jurisdictions are preempted under the OFPA from creating programs of accreditation for private persons or State officials who want to become certifying agents of organic farms or handling operations. A governing State official would have to apply to USDA to be accredited as a certifying agent, as described in section 6514(b) of the OFPA. States are also preempted under sections 6503 and 6507 of the OFPA from creating certification programs to certify organic farms or handling operations unless the State programs have been submitted to, and approved by, the Secretary as meeting the requirements of the OFPA.

Pursuant to section 6507(b)(2) of the OFPA, a State organic certification program may contain additional

requirements for the production and handling of organically produced agricultural products that are produced in the State and for the certification of organic farm and handling operations located within the State under certain circumstances. Such additional requirements must: (a) Further the purposes of the OFPA, (b) not be inconsistent with the OFPA, (c) not be discriminatory toward agricultural commodities organically produced in other States, and (d) not be effective until approved by the Secretary.

Pursuant to section 6519(f) of the OFPA, this final rule would not alter the authority of the Secretary under the Federal Meat Inspection Act (21 U.S.C. 601–624), the Poultry Products Inspection Act (21 U.S.C. 451–471), or the Egg Products Inspection Act (21 U.S.C. 1031–1056), concerning meat, poultry, and egg products, nor any of the authorities of the Secretary of Health and Human Services under the Federal Food, Drug and Cosmetic Act (21 U.S.C. 301–399), nor the authority of the Administrator of the EPA under the Federal Insecticide, Fungicide and Rodenticide Act (7 U.S.C. 136–136(y)).

Section 6520 of the OFPA provides for the Secretary to establish an expedited administrative appeals procedure under which persons may appeal an action of the Secretary, the applicable governing State official, or a certifying agent under this title that adversely affects such person or is inconsistent with the organic certification program established under this title. The OFPA also provides that the U.S. District Court for the district in which a person is located has jurisdiction to review the Secretary's decision.

XV. Executive Order 13175

This final rule has been reviewed in accordance with the requirements of Executive Order 13175, "Consultation and Coordination with Indian Tribal Governments." Executive Order 13175 requires Federal agencies to consult and coordinate with tribes on a government-to-government basis on policies that

have tribal implications, including regulations, legislative comments or proposed legislation, and other policy statements or actions that have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

AMS assessed the impact of this rule on Indian tribes and determined that this rule does not, to our knowledge, have tribal implications that require tribal consultation under E.O. 13175. If a Tribe requests consultation, AMS will work with the Office of Tribal Relations to ensure meaningful consultation is provided where changes, additions and modifications identified herein are not expressly mandated by Congress.

XVI. Paperwork Reduction Act

A. Summary

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520) (PRA), AMS is requesting OMB approval for a new information collection totaling 131,683 hours for the reporting and recordkeeping requirements contained in this final rule. OMB previously approved information collection requirements associated with the NOP and assigned OMB control number 0581–0191. AMS intends to merge this new information collection, upon OMB approval, into the approved 0581–0191 collection. Below, AMS has described and estimated the annual burden, *i.e.*, the amount of time and cost of labor, for entities to prepare and maintain information to participate in this voluntary labeling program. The OFPA, as amended, provides authority for this action.

Title: National Organic Program: Organic Livestock and Poultry Practices.
OMB Control Number: 0581–0293.

Expiration Date of Approval: 3 years from OMB date of approval.

Type of Request: New collection.

Abstract: Information collection and recordkeeping is necessary to implement reporting and recordkeeping necessitated by amendments to

§§ 205.238, 205.239, 205.241, 205.242 and 205.290 for additional animal welfare standards for organic livestock production under the USDA organic regulations. OFPA authorizes the further development of livestock production standards (7 U.S.C. 6513(c)). This action is necessary to address multiple recommendations provided to USDA by the NOSB to add specificity about animal welfare practices with the purpose of ensuring consumers that conditions and practices for livestock products labeled as organic encourage and accommodate natural behaviors and utilize preventive health care slaughter practices.

All certified organic operations must develop and maintain an organic system plan for certification (§ 205.201). The OSP must include a description of practices and procedures to be performed and maintained, including the frequency with which they will be performed; under this final rule, organic livestock operations are subject to additional reporting requirements. The amendments to §§ 205.238, 205.239, 205.241, 205.242, and 205.290 require livestock operations to provide specific documentation as part of an organic system plan to include conditions on livestock living conditions to permit natural behavior, including minimum space requirements, outdoor access, and utilization of preventive health care practices (e.g. physical alterations, euthanasia).

The PRA also requires AMS to measure the recordkeeping burden. Under the USDA organic regulations each producer is required to maintain and make available upon request, for 5 years, such records as are necessary to verify compliance (§ 205.103). Certifying agents are required to maintain records for 5 to 10 years, depending on the type of record (§ 205.510(b)), and make these records available for inspection upon request (§ 205.501(a)(9)). The new information that livestock operations must provide for certification will assist certifying agents and inspectors in the efficient and comprehensive evaluation of these operations and will impose an additional recordkeeping burden for livestock operations. Certifying agents currently involved in livestock certification are required to observe the same recordkeeping requirements to maintain accreditation, therefore AMS expects that this final rule does not significantly increase the recordkeeping burden on certifying agents.

Reporting and recordkeeping are essential to the integrity of the organic certification system. A clear paper trail is a critical tool for verifying that practices meet the mandate of OFPA

and the USDA organic regulations. The information collected supports the AMS mission, program objectives, and management needs by enabling us to assess the efficiency and effectiveness of the NOP. The information also affects decisions because it is the basis for evaluating compliance with OFPA and USDA organic regulations, administering the NOP, establishing the cost of the program, and facilitating management decisions and planning. It also supports administrative and regulatory actions to address noncompliance with OFPA and USDA organic regulations.

This information collection is only used by the certifying agent and authorized representatives of USDA, including AMS and NOP staff. Certifying agents, including any affiliated organic inspectors, and USDA are the primary users of the information.

Respondents

AMS identified three types of entities (respondents) that will need to submit and maintain information in order to participate in organic livestock certification. For each type of respondent, we describe the general paperwork submission and recordkeeping activities and estimate: (i) the number of respondents; (ii) the hours they spend, annually, completing the paperwork requirements of this labeling program; and, (iii) the costs of those activities.

1. *Certifying agents.* Certifying agents are State, private, or foreign entities accredited by USDA to certify domestic and foreign livestock producers and handlers as organic in accordance with OFPA and USDA organic regulations. Certifying agents determine if a producer or handler meets organic requirements, using detailed information from the operation about its specific practices and on-site inspection reports from organic inspectors. Currently, there are 79 certifying agents accredited under NOP; many of which certify operations based in the U.S. and abroad. AMS assumes all currently accredited certifying agents evaluate livestock operations for compliance with the USDA organic regulations and will therefore be subject to the amendments at §§ 205.238, 205.239, 205.241, 205.242, and 205.290.

Each entity seeking to continue USDA accreditation for livestock will need to submit information documenting its business practices including certification, enforcement and recordkeeping procedures and personnel qualifications (§ 205.504). AMS will review that information during its next scheduled on-site

assessment to determine whether to continue accreditation for the scope of livestock. Certifying agents will need to annually update the above information and provide results of personnel performance evaluations and the internal review of its certification activities (§ 205.510).

AMS projects that the additional components of organic system plans for livestock may entail longer review times than those for other types of production systems. AMS estimates the annual collection cost per certifying agent will be \$3,053.27. This estimate is based on an estimated 91.8 labor hours per year at \$33.26 per hour for a total salary component of \$3,053.27 per year. This value is assumed to be an underestimate as the certifying agent bears a portion of the burden of the inspector and certifying agents employ varying numbers of inspectors. The source of the hourly rate is the May 2015 National Occupational Employment and Wage Estimates, United States, published annually by the Bureau of Labor Statistics. The rate is the mean hourly wage for compliance officers (occupation code 13–1041). This classification was selected as an occupation with similar duties and responsibilities to that of a certifying agent.²⁵

2. *Organic inspectors.* Inspectors conduct on-site inspections of certified operations and operations applying for certification and report the findings to the certifying agent. Inspectors may be the agents themselves, employees of the agents, or individual contractors. The USDA organic regulations call for certified operations to be inspected annually; a certifying agent may call for additional inspections on an as needed basis (§ 205.403(a)). Any individual who applies to conduct inspections of livestock operations will need to submit information documenting their qualifications to the certifying agent (§ 205.504(a)(3)). Inspectors will need to provide an inspection report to the certifying agent for each operation inspected (§ 205.403(e)). AMS projects that on average, inspectors will spend 3 hours longer than their current timeframe (10 hours) to complete an inspection report for livestock operations. This estimate is due to the additional components of the organic system plan that will need to be

²⁵ Compliance officers examine, evaluate, and investigate eligibility for or conformity with laws and regulations governing contract compliance of licenses and permits, and perform other compliance and enforcement inspection and analysis activities not classified elsewhere. Bureau of Labor Statistics, Occupational Employment and Wages, May 2015, 13–1041 Compliance Officers.

inspected. Inspectors do not have recordkeeping obligations; certifying agents maintain records of inspection reports.

According to the International Organic Inspectors Association (IOIA), there are approximately 250 inspectors currently inspecting crop, livestock, handling, and/or wild crop operations that are certified or have applied for certification. AMS assumes that approximately half (125) of these inspectors inspect livestock operations.

AMS estimates the annual collection cost per inspector to be \$6,760. This estimate is based on an estimated 321 additional labor hours per year at \$21.06 per hour for a total salary component of \$6,760 per year. The source of the hourly rate is the May 2015 National Occupational Employment and Wage Estimates, United States, published annually by the Bureau of Labor Statistics. The rate is the mean hourly wage for agricultural inspectors (occupation code 45–2011).²⁶

3. *Producers and handlers.* Domestic and foreign livestock producers and handlers will submit the following information to certifying agents: An application for certification, detailed descriptions of specific practices, annual updates to continue certification, and changes in their practices. Handlers include those who produce or transport livestock and may include bulk distributors, food and feed manufacturers, processors, or packers. Some handlers may be part of a retail operation that processes organic products in a location other than the premises of the retail outlet.

In order to obtain and maintain certification, livestock producers and handlers will need to develop and maintain an organic system plan. This is a requirement for all organic operations and the USDA organic regulations describe what information must be included in an organic system plan (§ 205.201). This final rule describes the additional information (§§ 205.238, 205.239, 205.241, 205.242, and 205.290) that will need to be included in a livestock operation's organic system plan in order to assess compliance. Certified operations are required to keep records about their organic production and/or handling for five years (§ 205.103(b)(3)).

AMS used the Organic Integrity Database to estimate the number of

livestock operations that would be affected by this action.²⁷ According to that source, AMS estimates that 4,844 currently certified foreign and domestic livestock operations will be subject to the amendments at §§ 205.238, 205.239, 205.240, 205.241, 205.242, and 205.290. To estimate the number of livestock operations that will apply for and become certified on an annual basis, AMS assumed that this would be proportional to the estimated annual increase in certified operations (350). Therefore, AMS estimates that there will be 69 new certified organic livestock operations annually.

AMS estimates the annual collection and recordkeeping costs per organic livestock producer to be \$559.45. This estimate is based on an estimated 16.65 labor hours per year at \$33.60 per hour for a total salary component of \$559.45 per year. AMS estimates that as producers adapt to the requirements introduced by the amendments at §§ 205.238, 205.239, 205.241, 205.242, and 205.290, the number of labor hours per year for currently certified operators will decrease. The source of the hourly rate is the May 2015 National Occupational Employment and Wage Estimates, United States, published annually by the Bureau of Labor Statistics. The rate is the mean hourly wage for farmers, ranchers and other agricultural managers (occupation code 11–9013).²⁸ Administrative costs for reporting and recordkeeping will vary among certified operators. Factors affecting costs include the type and size of operation, and the type of systems maintained.

Reporting Burden

Estimate of Burden: Public reporting burden for the collection of information is estimated to be 20.3 hours per year.

Respondents: Certifying agents, inspectors, and certified livestock operations.

Estimated Number of Respondents: 5,117.

Estimated Number of Responses: 42,522.

Estimated Total Annual Burden on Respondents: 104,124 hours.

Total Cost: \$2,992,895.

Recordkeeping Burden

²⁷ NOP 2016 List of certified USDA organic operations. Available at the USDA National Organic Program Organic Integrity Database, <http://apps.ams.usda.gov/nop/>.

²⁸ Farmers, Ranchers, and Other Agricultural Managers plan, direct, or coordinate the management or operation of farms, ranches, greenhouses, aquacultural operations, nurseries, timber tracts, or other agricultural establishments. Excludes "First-Line Supervisors of Farming, Fishing, and Forestry Workers" (45–1011).

Estimate of Burden: Public recordkeeping burden is estimated to be an annual total of 5.18 hours per respondent.

Respondents: Livestock operations (including exempt operations).

Estimated Number of Respondents: 5,396.

Estimated Total Annual Burden on Respondents: 27,954 hours.

Total Cost: \$939,240.

Grand Total of Reporting, Training & Recordkeeping Costs: \$3,932,134

Comments: For the proposed rule, AMS invited comments from all interested parties concerning the information collection and recordkeeping required as a result of the proposed amendments to 7 CFR part 205. Comments were invited on: (1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) the accuracy of the agency's estimate of the burden of the proposed collection of information including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

B. Discussion of Comments Received

AMS received a total of 6,675 written comments on the proposed rule, which addressed the proposed requirements for organic livestock production practices. AMS received 12 comments that addressed the information collection and recordkeeping burden estimates; two of these comments were duplicative. AMS did not make changes based on comments for several reasons. AMS received eight comments specifically objecting to the recordkeeping requirements, relative to the population of respondents. AMS expects that this is because this rule refers to specific, narrow documentation requirements that are already within the scope of the general recordkeeping requirements for organic producers and the components of an organic system plan. Specifically, such records fully disclose all activities in sufficient detail to be readily understood and audited and be sufficient to demonstrate compliance with the USDA organic regulations (7 CFR 205.103); and that an organic system plan must contain a description of practices and procedures to be performed, and monitoring

²⁶ Agricultural Inspectors inspect agricultural commodities, processing equipment, and facilities, and fish and logging operations, to ensure compliance with regulations and laws governing health, quality, and safety. Bureau of Labor Statistics, Occupational Employment and Wages, May 2015, 45–2011 Agricultural Inspectors.

practices to ensure the plan implemented (7 CFR 205.201). AMS believes, and some comments support this conclusion, that many organic producers already maintain the records that are specified in this rule as part of their organic system plans. In addition, AMS understands that numerous organic livestock producers also participate in third-party animal welfare certification programs and would likely maintain records concerning animal health/condition to participate in those programs. The comments to the questions posed in the proposed rule concerning reporting and recordkeeping requirements and AMS's responses are described below.

1. Whether the Proposed Collection of Information Is Necessary for the Proper Performance of the Functions of the Agency, Including Whether the Information Will Have Practical Utility

(Comment) While stating their support for more specific standards regarding the care of poultry and livestock in organic operations, four out of the ten comments expressed concerns about the specific records that would be required to document how animal illness and injury would be prevented and treated. In particular, these comments stated that body condition scoring and monitoring the causes and treatments of lameness as well as having a parasite management strategy and a written plan for the use of euthanasia was too prescriptive. One comment indicated that providing written justification for the use of teeth trimming and tail docking in pigs on a per litter basis would be burdensome while another comment was concerned about needing to document every instance of indoor confinement of poultry.

One comment indicated that quantifiable measures in the 2012 pasture rule had not necessarily increased consistency in interpretation or implementation by certifying agents or producers. This comment also noted that the prescriptive requirements and quantifiable measures in this new regulation would burden producers and certifying agents. The comment contends that this recordkeeping burden would lessen time for producers to perfect solutions on their operation and increase certifying agent and inspector focus on paper trail rather than assessing the livestock system as a whole.

(Response) Recordkeeping is a core principle of the organic program and an important tool for producers to demonstrate, and certifying agents to verify, compliance with the regulations.

We believe that the requirements which specify specific documentation are minimal and are essential for verifying the rule is being implemented successfully.

2. The Accuracy of the Agency's Estimate of the Burden of the Proposed Collection of Information Including the Validity of the Methodology and Assumptions Used

(Comment) Two of the ten comments questioned the validity of the \$3000.94 estimate of their annual costs, stating that it underestimated the direct labor hours that will be necessary to implement the new requirements. These comments spoke to the need for new forms, extensive training for personnel and certified operations, and processing additional compliance-related correspondence after the rule takes effect.

One comment estimated that each livestock file would require an additional 1-hour review which would amount to about 900 direct labor hours annually for this entity; this estimate is higher than the proposed rule estimate of 91.8 hours as an average for all certifying agents. Consequently, the comment stated that the additional annual labor costs would be \$27,000 at \$30 per hour. Alternatively, this comment expects most of their livestock operation inspections to require only one additional hour to inspect rather than the AMS estimate of three hours of additional inspection time per operation in the proposed rule. Whether the inspection takes one or three hours to verify these new requirements, the comments acknowledged that it is the client operations that will ultimately absorb the increased costs of inspections, and they will need time to prepare.

One comment from a certifying agent included a survey of its certified operations to determine if the records described in the proposed rule are necessary to enforce compliance with the standards. Overall, their clients (74.5 percent) reported that additional records are not needed with the largest group (40.1 percent) responding that they already keep more records than would be needed to enforce compliance. While a smaller proportion (25 percent) of their clients said that the records are needed to enforce compliance, the largest portion of that group of responders (21.8 percent) feel more records will be needed. The certifying agent also asked their clients to estimate how much additional time would be spent maintaining records with 89.3 percent stating somewhere between 1–40 hours annually. A much smaller

portion expected to spend more than 40 hours per year maintaining records. In conclusion, the certifying agent acknowledged the difficulties with accurately estimating the labor hours that will be needed to establish and maintain the records, and affirmed that some requirements will be met through the current records already kept.

(Response) The estimates of total recordkeeping and reporting burden are average per-operation estimates based on the number of operations and animals across the whole industry. A certifying agent with a large number of livestock and poultry operation clients will have larger annual respective costs.

Describing the illness and injury prevention and treatment strategies in writing with useful monitoring and recordkeeping systems unique to the needs, species, and breeds of each operation in an organic system plan will require an initial investment of labor that may need to be absorbed. In actuality, these prevention strategies and monitoring systems should already be in place at least informally.

Based on one certifying agent's query, 75 percent of their client operations are already keeping the necessary records. The majority of the operations that reported the need for more recordkeeping reported that they see them as necessary, and one hour per week (greater than 40 hours annually) was the most direct labor hours reported by a small percentage of the certified operations queried. The query did not ask certified operations whether or not they perceived the necessary records as a burden. These recordkeeping systems should become routine over time and help operations become more efficient, thus reducing their management burden. The regulation provides marketplace assurance through verification.

3. Ways To Enhance the Quality, Utility, and Clarity of the Information To Be Collected

(Comment) One certifying agent affirmed that assessing the condition of the animals as well as the dietary rations provided is needed. This comment noted that a broad, integrated approach that observed the overall wellness of the animals was more appropriate. Indicators of poor health could be flagged without requiring the systemized use of body condition scoring.

A Land Grant College that works with smaller scale farmers through their extension services expressed general concern that some small farmers may no longer choose to be certified organic due to the costs and burdens of

recordkeeping. The organization perceived a duplication in reporting requirements being imposed on organic livestock operations. The comment also noted that the recordkeeping required to document food safety, labor, and environmental compliance has been increasing exponentially in recent decades as well, and is exacerbating the recordkeeping burden of farmers of all scales.

(Response) We agree that a broad integrated approach which observes the overall wellness of the animals, flags indicators of poor health, and scores body condition is important. Using a consistent recordkeeping system within an operation is more important than all operations using the same system, although it may be more efficient for inspectors if all certifying agents voluntarily select the same system.

AMS is not seeking to collect and compare data from one operation to another, or from one certifying agent to another. Body condition scoring is considered a low-cost, hands-on, internally consistent method to assess and monitor the condition of individual animals, herds, or flocks. Using a body scoring system is more accurate and efficient than relying on memory about animals' respective conditions, and helps producers identify the need for treatment or intervention. In addition, certifying agents should make every effort to be sure their recordkeeping requirements are not duplicative and coordinate with the requirements of other standards, where possible, that are outside of the direct scope of AMS.

4. Ways To Minimize the Burden of the Collection of Information on Those Who Are To Respond, Including the Use of Appropriate Automated, Electronic, Mechanical, or Other Technological Collection Techniques or Other Forms of Information Technology

(Comment) Three commenters requested that AMS provide monitoring form templates, training, and other resources in producer-friendly language and format, especially for body condition scoring. One certifying agent requested that we provide the tables that show the original rule language side-by-side with the final rule changes as a separate document for use in outreach materials and training.

A Land Grant College offered that they were likely to prepare new tools and templates to assist organic farmers with monitoring and recording lameness in individual animals. This comment also noted that new records would be needed to document when animals are restricted from outdoor access due to

temperature fluctuations within the ranges specified in the rule.

(Response) AMS is considering developing tools to assist producers and certifying agents, especially for body condition scoring. These optional resources will be available on the NOP Web-site. AMS also plans to offer four regional trainings for producers and certifying agents—most likely in Pennsylvania, Iowa, California, and Texas. Other agricultural extension services and agents, the Natural Resources Conservation Service, and other Federal, state, and nonprofit organizations have tools and resources for monitoring animal health and living conditions that can be adapted.

XVII. Civil Rights Impact Analysis

AMS has reviewed this final rule in accordance with the Department Regulation 4300–4, Civil Rights Impact Analysis (CRIA), to address any major civil rights impacts the rule might have on minorities, women, and persons with disabilities. After a careful review of the rule's intent and provisions, AMS determined that this rule would only impact the organic practices of organic producers and that this rule has no potential for affecting producers in protected groups differently than the general population of producers. This rulemaking was initiated to clarify a regulatory requirement and enable consistent implementation and enforcement.

Protected individuals have the same opportunity to participate in the NOP as non-protected individuals. The USDA organic regulations prohibit discrimination by certifying agents. Specifically, § 205.501(d) of the current regulations for accreditation of certifying agents provides that “No private or governmental entity accredited as a certifying agent under this subpart shall exclude from participation in or deny the benefits of the NOP to any person due to discrimination because of race, color, national origin, gender, religion, age, disability, political beliefs, sexual orientation, or marital or family status.” Section 205.501(a)(2) requires “certifying agents to demonstrate the ability to fully comply with the requirements for accreditation set forth in this subpart” including the prohibition on discrimination. The granting of accreditation to certifying agents under § 205.506 requires the review of information submitted by the certifying agent and an on-site review of the certifying agent's client operation. Further, if certification is denied, § 205.405(d) requires that the certifying agent notify the applicant of their right

to file an appeal to the AMS Administrator in accordance with § 205.681.

These regulations provide protections against discrimination, thereby permitting all producers, regardless of race, color, national origin, gender, religion, age, disability, political beliefs, sexual orientation, or marital or family status, who voluntarily choose to adhere to the rule and qualify, to be certified as meeting NOP requirements by an accredited certifying agent. This action in no way changes any of these protections against discrimination.

List of Subjects in 7 CFR Part 205

Administrative practice and procedure, Agriculture, Animals, Archives and records, Imports, Labeling, Organically produced products, Plants, Reporting and recordkeeping requirements, Seals and insignia, Soil conservation.

For the reasons set forth in the preamble, 7 CFR part 205 is amended as follows:

PART 205—NATIONAL ORGANIC PROGRAM

■ 1. The authority citation for part 205 continues to read as follows:

Authority: 7 U.S.C. 6501–6522.

■ 2. Section 205.2 is amended by adding definitions for “Beak trimming”, “Caponization”, “Cattle wattle”, “De-beaking”, “De-snooding”, “Dubbing”, “Indoors or indoor space”, “Mulesing”, “Non-ambulatory”, “Outdoors or outdoor space”, “Perch”, “Pullets”, “Religious slaughter”, “Soil”, “Stocking density”, “Toe clipping”, and “Vegetation” in alphabetical order to read as follows:

§ 205.2 Terms defined.

* * * * *

Beak trimming. The removal of not more than one-quarter to one-third of the upper beak or the removal of one-quarter to one-third of both the upper and lower beaks of a bird in order to control injurious pecking and cannibalism.

* * * * *

Caponization. Castration of chickens, turkeys, pheasants, and other avian species.

Cattle wattle. The surgical separation of two layers of the skin from the connective tissue for along a 2 to 4 inch path on the dewlap, neck, or shoulders used for ownership identification.

* * * * *

De-beaking. The removal of more than one-third of the upper beak or removal

of more than one-third of both the upper and lower beaks of a bird.

De-snooding. The removal of the turkey snood (a fleshy protuberance on the forehead of male turkeys).

* * * * *

Dubbing. The removal of poultry combs and wattles.

* * * * *

Indoors or indoor space. The space inside of an enclosed building or housing structure available to livestock. Indoor space for avian species includes, but is not limited to:

(1) *Mobile housing.* A mobile structure for avian species with solid or perforated flooring that is moved regularly during the grazing season.

(2) *Aviary housing.* A fixed structure for avian species that has multiple tiers or levels.

(3) *Slatted/mesh floor housing.* A fixed structure for avian species that has both: (1) A slatted floor where perches, feed, and water are provided over a pit or belt for manure collection; and

(ii) Litter covering the remaining solid floor.

(4) *Floor litter housing.* A fixed structure for avian species that has absorbent litter covering the entire floor.

* * * * *

Mulesing. The removal of skin from the buttocks of sheep, approximately 2 to 4 inches wide and running away from the anus to the hock to prevent fly strike.

* * * * *

Non-ambulatory. As defined in 9 CFR 309.2(b).

* * * * *

Outdoors or outdoor space. Any area outside an enclosed building or enclosed housing structure, including roofed areas that are not enclosed. Outdoor space for avian species includes, but is not limited to:

(1) *Pasture pens.* Floorless pens, with full or partial roofing, that are moved regularly and provide direct access to soil and vegetation.

(2) *[Reserved]*

* * * * *

Perch. A rod or branch type structure above the floor of the house that accommodates roosting, allowing birds to utilize vertical space in the house

* * * * *

Pullets. Female chickens being raised for egg production that have not yet started to lay eggs.

* * * * *

Ritual slaughter. Slaughtering in accordance with the ritual requirements of the Jewish faith or any other religious faith that prescribes a method of slaughter whereby the animal suffers

loss of consciousness by anemia of the brain caused by the simultaneous and instantaneous severance of the carotid arteries with a sharp instrument and handling in connection with such slaughtering.

* * * * *

Soil. The outermost layer of the earth comprised of minerals, water, air, organic matter, fungi, and bacteria in which plants may grow roots.

* * * * *

Stocking density. The weight of animals on a given area or unit of land.

* * * * *

Toe clipping. The removal of the nail and distal joint of the back two toes of a bird.

* * * * *

Vegetation. Living plant matter that is anchored in the soil by roots and provides ground cover.

* * * * *

■ 3. Section 205.238 is revised to read as follows:

§ 205.238 Livestock care and production practices standard.

(a) The producer must establish and maintain preventive health care practices, including:

(1) Selection of species and types of livestock with regard to suitability for site-specific conditions and resistance to prevalent diseases and parasites.

(2) Provision of a feed ration sufficient to meet nutritional requirements, including vitamins, minerals, proteins and/or amino acids, fatty acids, energy sources, and fiber (ruminants), resulting in appropriate body condition.

(3) Establishment of appropriate housing, pasture conditions, and sanitation practices to minimize the occurrence and spread of diseases and parasites.

(4) Provision of conditions which allow for exercise, freedom of movement, and reduction of stress appropriate to the species.

(5) Physical alterations may be performed to benefit the welfare of the animals, for identification purposes, or for safety purposes. Physical alterations must be performed on livestock at a reasonably young age, with minimal stress and pain and by a competent person.

(i) The following practice may not be routinely used and must be used only with documentation that alternative methods to prevent harm failed: Needle teeth clipping (no more than top one-third of the tooth) in pigs and tail docking in pigs.

(ii) The following practices are prohibited: De-beaking, de-snooding, caponization, dubbing, toe clipping of

chickens, toe clipping of turkeys unless with infra-red at hatchery, beak trimming after 10 days of age, tail docking of cattle, wattling of cattle, face branding of cattle, tail docking of sheep shorter than the distal end of the caudal fold, and mulesing of sheep.

(6) Administration of vaccines and other veterinary biologics.

(7) All surgical procedures necessary to treat an illness shall be undertaken in a manner that employs best management practices in order to minimize pain, stress, and suffering, with the use of appropriate and allowed anesthetics, analgesics, and sedatives.

(8) Monitoring of lameness and keeping records of the percent of the herd or flock suffering from lameness and the causes. Certified operations may monitor lameness in a manner prescribed by the NOP.

(b) Producers may administer medications that are allowed under 205.603 to alleviate pain or suffering, and when preventive practices and veterinary biologics are inadequate to prevent sickness. Parasiticides allowed under § 205.603 may be used on:

(1) Breeder stock, when used prior to the last third of gestation but not during lactation for progeny that are to be sold, labeled, or represented as organically produced; and

(2) Dairy stock, when used a minimum of 90 days prior to the production of milk or milk products that are to be sold, labeled, or represented as organic.

(c) An organic livestock operation must not:

(1) Sell, label, or represent as organic any animal or product derived from any animal treated with antibiotics, any substance that contains a synthetic substance not allowed under § 205.603, or any substance that contains a nonsynthetic substance prohibited in § 205.604. Milk from animals undergoing treatment with synthetic substances allowed under § 205.603 cannot be sold as organic but may be fed to calves on the same operation. Milk from animals undergoing treatment with prohibited substances cannot be sold as organic or fed to organic livestock.

(2) Administer synthetic medications unless:

(i) In the presence of illness or to alleviate pain and suffering, and

(ii) That such medications are allowed under § 205.603.

(3) Administer hormones for growth promotion, production, or reproduction, except as provided in § 205.603.

(4) Administer synthetic parasiticides on a routine basis.

(5) Administer synthetic parasiticides to slaughter stock.

(6) Administer animal drugs in violation of the Federal Food, Drug, and Cosmetic Act; or

(7) Withhold medical treatment from a sick animal in an effort to preserve its organic status. All appropriate medications must be used to restore an animal to health when methods acceptable to organic production fail. Livestock treated with a prohibited substance must be clearly identified and neither the animal nor its products shall be sold, labeled, or represented as organically produced.

(8) Withhold individual treatment designed to minimize pain and suffering for injured, diseased, or sick animals, which may include forms of euthanasia as recommended by the American Veterinary Medical Association.

(9) Neglect to identify and record treatment of sick and injured animals in animal health records.

(10) Practice forced molting or withdrawal of feed to induce molting.

(d) Organic livestock operations must have comprehensive plans to minimize internal parasite problems in livestock. The plan will include preventive measures such as pasture management, fecal monitoring, and emergency measures in the event of a parasite outbreak. Parasite control plans shall be approved by the certifying agent.

(e) *Euthanasia*. (1) Organic livestock operations must have written plans for prompt, humane euthanasia for sick or injured livestock.

(2) The following methods of euthanasia are not permitted: suffocation; manual blow to the head by blunt instrument or manual blunt force trauma; and the use of equipment that crushes the neck, including killing pliers or Burdizzo clamps.

(3) Following a euthanasia procedure, livestock must be carefully examined to ensure that they are dead.

■ 4. Section 205.239 is revised to read as follows:

§ 205.239 Mammalian livestock living conditions.

(a) The producer of an organic livestock operation must establish and maintain year-round livestock living conditions which accommodate the wellbeing and natural behavior of animals, including:

(1) Year-round access for all animals to the outdoors, shade, shelter, exercise areas, fresh air, clean water for drinking, and direct sunlight, suitable to the species, its stage of life, the climate, and the environment: Except, that, animals may be temporarily denied access to the outdoors in accordance with paragraphs (b) and (c) of this section. Yards, feeding pads, and feedlots may be used to

provide ruminants with access to the outdoors during the non-grazing season and supplemental feeding during the grazing season. Yards, feeding pads, and feedlots shall be large enough to allow all ruminant livestock occupying the yard, feeding pad, or feedlot to feed without competition for food. Continuous total confinement of any animal indoors is prohibited. Continuous total confinement of ruminants in yards, feeding pads, and feedlots is prohibited.

(2) For all ruminants, management on pasture and daily grazing throughout the grazing season(s) to meet the requirements of § 205.237, except as provided for in paragraphs (b), (c), and (d) of this section.

(3) Appropriate clean, dry bedding. When roughages are used as bedding, they shall have been organically produced in accordance with this part by an operation certified under this part, except as provided in § 205.236(a)(2)(i), and, if applicable, organically handled by operations certified to the NOP.

(4) Shelter designed to allow for:

(i) Over a 24-hour period, sufficient space and freedom to lie down, turn around, stand up, fully stretch their limbs, and express normal patterns of behavior;

(ii) Temperature level, ventilation, and air circulation suitable to the species;

(iii) Reduction of potential for livestock injury; and

(iv) If indoor housing is provided, areas for bedding and resting that are sufficiently large, solidly built, and comfortable so that animals are kept clean, dry, and free of lesions.

(5) The use of yards, feeding pads, feedlots and laneways that shall be well-drained, kept in good condition (including frequent removal of wastes), and managed to prevent runoff of wastes and contaminated waters to adjoining or nearby surface water and across property boundaries.

(6) Housing, pens, runs, equipment, and utensils shall be properly cleaned and disinfected as needed to prevent cross-infection and build-up of disease-carrying organisms.

(7) Dairy young stock may be housed in individual pens until completion of the weaning process but no later than 6 months of age, provided that they have enough room to turn around, lie down, stretch out when lying down, get up, rest, and groom themselves; individual animal pens shall be designed and located so that each animal can see, smell, and hear other calves.

(8) Swine must be housed in a group, except:

(i) Sows may be housed individually at farrowing and during the suckling period;

(ii) Boars; and

(iii) Swine with documented instance of aggression or recovery from an illness.

(9) Piglets shall not be kept on flat decks or in piglet cages.

(10) For swine, rooting materials must be provided, except during the farrowing and suckling period.

(11) In confined housing with stalls for mammalian livestock, enough stalls must be present to provide for the natural behaviors of the animals. A cage must not be called a stall. For group-housed swine, the number of individual feeding stalls may be less than the number of animals, as long as all animals are fed routinely over a 24-hour period. For group-housed cattle, bedded packs, compost packs, tie-stalls, free-stalls, and stanchion barns are all acceptable housing as part of an overall organic system plan.

(12) Outdoor space must be provided year-round. When the outdoor space includes soil, maximal vegetative cover must be maintained as appropriate for the season, climate, geography, species of livestock, and stage of production.

(b) The producer of an organic livestock operation may provide temporary confinement or shelter for an animal because of:

(1) Inclement weather;

(2) The animal's stage of life, however, lactation is not a stage of life that would exempt ruminants from any of the mandates set forth in this part;

(3) Conditions under which the health, safety, or well-being of the animal could be jeopardized;

(4) Risk to soil or water quality;

(5) Preventive healthcare procedures or for the treatment of illness or injury (neither the various life stages nor lactation is an illness or injury);

(6) Sorting or shipping animals and livestock sales, provided that the animals shall be maintained under continuous organic management, including organic feed, throughout the extent of their allowed confinement;

(7) Breeding: Except, that, animals shall not be confined any longer than necessary to perform the natural or artificial insemination. Animals may not be confined to observe estrus; and

(8) 4-H, National FFA Organization, and other youth projects, for no more than one week prior to a fair or other demonstration, through the event, and up to 24 hours after the animals have arrived home at the conclusion of the event. These animals must have been maintained under continuous organic management, including organic feed,

during the extent of their allowed confinement for the event. Notwithstanding the requirements in paragraph (b)(6) of this section, facilities where 4–H, National FFA Organization, and other youth events are held are not required to be certified organic for the participating animals to be sold as organic, provided all other organic management practices are followed.

(c) The producer of an organic livestock operation may, in addition to the times permitted under paragraph (b) of this section, temporarily deny a ruminant animal pasture or outdoor access under the following conditions:

(1) One week at the end of a lactation for dry off (for denial of access to pasture only), three weeks prior to parturition (birthing), parturition, and up to one week after parturition;

(2) In the case of newborn dairy cattle for up to six months, after which they must be on pasture during the grazing season and may no longer be individually housed: Except, That, an animal shall not be confined or tethered in a way that prevents the animal from lying down, standing up, fully extending its limbs, and moving about freely;

(3) In the case of fiber bearing animals, for short periods for shearing; and

(4) In the case of dairy animals, for short periods daily for milking. Milking must be scheduled in a manner to ensure sufficient grazing time to provide each animal with an average of at least 30 percent DMI from grazing throughout the grazing season. Milking frequencies or duration practices cannot be used to deny dairy animals pasture.

(d) Ruminant slaughter stock, typically grain finished, shall be maintained on pasture for each day that the finishing period corresponds with the grazing season for the geographical location. Yards, feeding pads, or feedlots may be used to provide finish feeding rations. During the finishing period, ruminant slaughter stock shall be exempt from the minimum 30 percent DMI requirement from grazing. Yards, feeding pads, or feedlots used to provide finish feeding rations shall be large enough to allow all ruminant slaughter stock occupying the yard, feeding pad, or feed lot to feed without crowding and without competition for food. The finishing period shall not exceed one-fifth (1/5) of the animal's total life or 120 days, whichever is shorter.

(e) The producer of an organic livestock operation must manage manure in a manner that does not contribute to contamination of crops, soil, or water by plant nutrients, heavy

metals, or pathogenic organisms and optimizes recycling of nutrients and must manage pastures and other outdoor access areas in a manner that does not put soil or water quality at risk.

■ 5. Section 205.241 is added to read as follows:

§ 205.241 Avian living conditions.

(a) The producer of an organic poultry operation must establish and maintain year-round poultry living conditions that accommodate the health and natural behavior of poultry, including: Year-round access to outdoors; shade; shelter; exercise areas; fresh air; direct sunlight; clean water for drinking; materials for dust bathing; and adequate outdoor space to escape aggressive behaviors suitable to the species, its stage of life, the climate, and environment. Poultry may be temporarily denied access to the outdoors in accordance with paragraph (d) of this section.

(b) Indoor space requirements—

(1) Poultry housing must be sufficiently spacious to allow all birds to move freely, stretch their wings, stand normally, and engage in natural behaviors.

(2) Producers must monitor ammonia levels at least monthly and implement practices to maintain ammonia levels below 10 ppm. When ammonia levels exceed 10 ppm, producers must implement additional practices and additional monitoring to reduce ammonia levels below 10 ppm. Ammonia levels must not exceed 25 ppm.

(3) For layers and fully feathered birds, artificial light may be used to prolong the day length, to provide up to 16 hours of continuous light. Artificial light intensity must be lowered gradually to encourage hens to move to perches or settle for the night. Natural light must be sufficient indoors on sunny days so that an inspector can read and write when all lights are turned off.

(4) Exit areas—poultry houses must have sufficient exit areas that are appropriately distributed to ensure that all birds have ready access to the outdoors.

(5) Perches—for layers (*Gallus gallus*), six inches of perch space must be provided per bird. Perch space may include the alighting rail in front of the nest boxes. All layers must be able to perch at the same time except for aviary housing, in which 55 percent of layers must be able to perch at the same time.

(6) All birds must have access to areas in the house that allow for scratching and dust bathing. Litter must be provided and maintained in a dry condition.

(7) Houses with slatted/mesh floors must have 30 percent minimum of solid floor area available with sufficient litter available for dust baths so that birds may freely dust bathe without crowding.

(8) For layers (*Gallus gallus*), indoor stocking density must not exceed (live bird weight):

(i) Mobile housing: 4.5 pounds per square foot.

(ii) Aviary housing: 4.5 pounds per square foot.

(iii) Slatted/mesh floor housing: 3.75 pounds per square foot.

(iv) Floor litter housing: 3.0 pounds per square foot.

(v) Other housing: 2.25 pounds per square foot.

(9) For pullets (*Gallus gallus*), indoor stocking density must not exceed 3.0 pounds of bird per square foot.

(10) For broilers (*Gallus gallus*), indoor stocking density must not exceed 5.0 pounds of bird per square foot.

(11) Indoor space includes flat areas available to birds, excluding nest boxes.

(12) Indoor space may include enclosed porches and lean-to type structures (e.g. screened in, roofed) as long as the birds always have access to the space, including during temporary confinement events. If birds do not have continuous access to the porch during temporary confinement events, this space must not be considered indoors.

(c) Outdoor space requirements—

(1) Access to outdoor space and door spacing must be designed to promote and encourage outside access for all birds on a daily basis. Producers must provide access to the outdoors at an early age to encourage (i.e., train) birds to go outdoors. Birds may be temporarily denied access to the outdoors in accordance with § 205.241(d).

(2) At least 50 percent of outdoor space must be soil. Outdoor space with soil must include maximal vegetative cover appropriate for the season, climate, geography, species of livestock, and stage of production. Vegetative cover must be maintained in a manner that does not provide harborage for rodents and other pests.

(3) Shade may be provided by structures, trees, or other objects in the outdoor area.

(4) For layers (*Gallus gallus*), outdoor space must be provided at a rate of no less than one square foot for every 2.25 pounds of bird in the flock.

(5) For pullets (*Gallus gallus*), outdoor space must be provided at a rate of no less than one square foot for every 3.0 pounds of bird in the flock.

(6) For broilers (*Gallus gallus*), outdoor space must be provided at a rate of no less than one square foot for every 5.0 pounds of bird in the flock.

(7) Outdoor space may include porches and lean-to type structures that are not enclosed (e.g. with roof, but with screens removed) and allow birds to freely access other outdoor space.

(d) The producer of an organic poultry operation may temporarily confine birds. Confinement must be recorded. Operations may temporarily confine birds when one of the following circumstances exists:

(1) Inclement weather, including when air temperatures are under 40 degrees F or above 90 degrees F.

(2) The animal's stage of life, including:

(i) The first 4 weeks of life for broilers (*Gallus gallus*);

(ii) The first 16 weeks of life for pullets (*Gallus gallus*); and

(iii) Until fully feathered for bird species other than *Gallus gallus*.

(3) Conditions under which the health, safety, or well-being of the animal could be jeopardized.

(4) Risk to soil or water quality, including to establish vegetation by reseeding the outdoor space.

(5) Preventive healthcare procedures or for the treatment of illness or injury (neither various life stages nor egg laying is an illness or injury).

(6) Sorting or shipping birds and poultry sales, provided that the birds are maintained under continuous organic management, throughout the extent of their allowed confinement.

(7) For nest box training, provided that birds shall not be confined any longer than required to establish the proper behavior. Confinement must not exceed five weeks.

(8) For 4–H, National FFA Organization, and other youth projects, provided that temporary confinement for no more than one week prior to a fair or other demonstration, through the event, and up to 24 hours after the birds have arrived home at the conclusion of the event. During temporary confinement, birds must be under continuous organic management, including organic feed, for the duration of confinement. Notwithstanding the requirements in paragraph (d)(6) of this section, facilities where 4–H, National FFA Organization, and other youth events are held are not required to be certified organic for the participating birds to be sold as organic, provided all other organic management practices are followed.

(e) The producer of an organic poultry operation must manage manure in a manner that does not contribute to contamination of crops, soil, or water by

plant nutrients, heavy metals, or pathogenic organisms. The producer must also optimize recycling of nutrients and must manage outdoor access in a manner that does not put soil or water quality at risk.

■ 6. Section 205.242 is added to read as follows:

§ 205.242 Transport and slaughter.

(a) *Transportation.* (1) Certified organic livestock must be clearly identified as organic, and this identity must be traceable for the duration of transport.

(2) All livestock must be fit for transport to buyers, auction or slaughter facilities.

(i) Calves must have a dry navel cord and be able to stand and walk without human assistance.

(ii) Non-ambulatory animals must not be transported for sale or slaughter. Such animals may be medically treated or euthanized.

(3) Adequate and season-appropriate ventilation is required for all livestock trailers, shipping containers, and any other mode of transportation used to protect animals against cold and heat stresses.

(4) Bedding must be provided on trailer floors and in holding pens as needed to keep livestock clean, dry, and comfortable during transport and prior to slaughter. Bedding is not required in poultry crates. When roughages are used for bedding, they must be certified organic.

(5) Arrangements for water and organic feed must be made if transport time, including all time on the mode of transportation, exceeds 12 hours.

(i) The producer or handler of an organic livestock operation, who is responsible for overseeing the transport of organic livestock, must provide records to certifying agents during inspections or upon request that demonstrate that transport times for organic livestock are not detrimental to the welfare of the animals and meet the requirements of paragraph (a)(5) of this section.

(6) Organic producers and handlers, who are responsible for overseeing the transport of organic livestock, must have emergency plans in place that adequately address possible animal welfare problems that might occur during transport.

(b) *Mammalian slaughter.* (1) Producers and handlers who slaughter organic livestock must be in compliance, as determined by FSIS, with the Federal Meat Inspection Act

(21 U.S.C. 603(b) and 21 U.S.C. 610(b)), the regulations at 9 CFR part 313 regarding humane handling and slaughter of livestock, and the regulations of 9 CFR part 309 regarding ante-mortem inspection.

(2) Producers and handlers who slaughter organic exotic animals must be in compliance with the Agricultural Marketing Act of 1946 (7 U.S.C. 1621, *et seq.*), the regulations at 9 CFR parts 313 and 352 regarding the humane handling and slaughter of exotic animals, and the regulations of 9 CFR part 309 regarding ante-mortem inspection.

(3) Producers and handlers who slaughter organic livestock or exotic animals must provide all noncompliance records related to humane handling and slaughter issued by the controlling national, federal, or state authority and all records of subsequent corrective actions to certifying agents during inspections or upon request.

(c) *Avian slaughter.* (1) Producers and handlers who slaughter organic poultry must be in compliance, as determined by FSIS, with the Poultry Products Inspection Act requirements (21 U.S.C. 453(g)(5)); the regulations at paragraph (v) of the definition of “*Adulterated*” in 9 CFR 381.1(b), and 9 CFR 381.90, and 381.65(b)); and FSIS Directives 6100.3 and 6910.1.

(2) Producers and handlers who slaughter organic poultry must provide all noncompliance records related to the use of good manufacturing practices in connection with slaughter issued by the controlling national, federal, or state authority and all records of subsequent corrective actions to the certifying agent at inspection or upon request.

(3) Producers and handlers who slaughter organic poultry, but are exempt from or not covered by the requirements of the Poultry Products Inspection Act, must ensure that:

(i) No lame birds may be shackled, hung, or carried by their legs;

(ii) All birds shackled on a chain or automated system must be stunned prior to exsanguination, with the exception of ritual slaughter; and

(iii) All birds must be irreversibly insensible prior to being placed in the scalding tank.

Federal Housing Administration: Strengthening the Home Equity Conversion
Mortgage Program; Final Rule

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

24 CFR Parts 30 and 206

[Docket No. FR-5353-F-03]

RIN 2502-A179

Federal Housing Administration: Strengthening the Home Equity Conversion Mortgage Program

AGENCY: Office of the Assistant Secretary for Housing—Federal Housing Commissioner, HUD.

ACTION: Final rule.

SUMMARY: This final rule codifies several significant changes to FHA's Home Equity Conversion Mortgage program that were previously issued under the authority granted to HUD in the Housing and Economic Recovery Act of 2008 and the Reverse Mortgage Stabilization Act of 2013, and makes additional regulatory changes. The HECM program is FHA's reverse mortgage program that enables seniors who have equity in their homes to withdraw a portion of the accumulated equity. The intent of the Home Equity Conversion Mortgage program is to ease the financial burden on elderly homeowners facing increased health, housing, and subsistence costs at a time of reduced income. FHA's mission is to serve underserved markets, which must be balanced with HUD's inherent, as well as, statutory obligation under the National Housing Act to protect the FHA insurance funds. This rulemaking strengthens the FHA Home Equity Conversion Mortgage program and codifies changes that reduce risk to the Mutual Mortgage Insurance Fund and increase the sustainability of this important program for seniors. This final rule follows publication of a May 19, 2016, proposed rule and takes into consideration the public comments received on the proposed rule.

DATES: *Effective Date:* September 19, 2017.

FOR FURTHER INFORMATION CONTACT:

Karin Hill, Senior Policy Advisor, Office of Single Family Housing, Department of Housing and Urban Development, 451 7th Street SW., Room 9282, Washington, DC 20410-8000; telephone number 202-402-3084 (this is not a toll-free number). Persons with hearing or speech challenges may access this number through TTY by calling the toll-free Federal Relay Service at 800-877-8339.

SUPPLEMENTARY INFORMATION

I. Executive Summary

A. Purpose of Regulatory Action

Since the 2008 housing and economic recession, the HECM portfolio has experienced major borrower demographic and behavioral changes that have caused additional risk to the Mutual Mortgage Insurance Fund (MMIF). Some of the changes include shifting from a predominantly adjustable interest rate mortgage with borrowers receiving payments over time using the line of credit, modified term, or modified tenure payment options to a fixed interest rate mortgage with borrowers drawing large amounts of HECM proceeds at the time of closing; younger borrowers with higher amounts of property indebtedness; and increasing property charge defaults. While program changes made prior to and during 2013, such as consolidating the HECM Standard and HECM Saver products, did improve the stability of the HECM program, the HECM portfolio has continued to experience volatility. The economic value of the HECM portfolio has fluctuated from a negative \$1.2 billion reported in FHA's Fiscal Year (FY) 2014 submission to Congress, to a positive \$6.8 billion in FY 2015, to a negative \$7.7 billion in FY 2016. Even under an improved housing market, the positive impacts of program changes on the HECM portfolio overall will be gradual and initially difficult to model for purposes of the actuarial study, as they will be evidenced only in future cohorts of activity. As a result, it is critical to remain vigilant in monitoring program performance and policy to ensure the soundness of the MMIF.

Recognizing the need to stabilize the HECM program and ensure it remains a sustainable program, Congress passed and the President signed into law, the Reverse Mortgage Stabilization Act of 2013 (RMSA) (Pub. L. 113-29). The RMSA gave FHA the tools to make, through mortgagee letter,¹ changes to the HECM program that are necessary to improve the fiscal safety and soundness of the program. Under this authority, FHA implemented a number of changes to the HECM program, including the Financial Assessment and Property Charge Funding Requirements; deferring the due and payable status for Eligible Non-Borrowing Spouses; limiting disbursements during the first 12 months of the HECM; and eliminating future draws on fixed interest rate HECMs.

¹ Mortgagee letters issued under the authority granted to HUD in RMSA will be identified throughout this rule as RMSA mortgagee letters.

On May 19, 2016 (81 FR 31770), HUD published a proposed rule to codify these policies, with amendments as discussed in the preamble to the proposed rule. In addition, FHA proposed to implement a number of new policies. Also, so that all regulatory requirements are codified in the HECM regulations, HUD also proposed to codify HECM program changes made by mortgagee letter² under the Housing and Economic Recovery Act of 2008 (HERA) (Pub. L. 110-289), which implemented the HECM for Purchase program and established new origination fee limits, and amends the initial and monthly mortgage insurance premium (MIP) limits to correspond with statutory changes. This final rule follows publication of the May 19, 2016, proposed rule and takes into consideration the public comments received on the proposed rule.

B. Summary of Major Provisions of This Final Rule

In this rule, FHA codifies existing policy which has been implemented by mortgagee letters under various statutory authorities; implements statutory changes; issues new origination and servicing policies; and clarifies existing regulatory language. The main policy provisions are discussed below. All policies which have been implemented by mortgagee letters will remain in effect until the effective date of this final rule.

Implementing Statutory Changes and Codifying Existing Policies Implemented Under Statutory Authority

Financial Assessment and Property Charge Funding Requirements. RMSA Mortgagee Letter 2014-21 required mortgagees to perform a Financial Assessment of the prospective borrower prior to loan approval, which considers the prospective borrower's credit history, cash flow and residual income, extenuating circumstances, and compensating factors. Based on the results of the Financial Assessment, the mortgagee may require a Life Expectancy Set Aside (LESA) for the payment of certain property charges. For fixed interest rate HECMs, if a LESA is required, it may only be a Fully-Funded LESA. For adjustable interest rate HECMs, if a LESA is required, the mortgagee may require either a Partially- or Fully-Funded LESA. Proceeds from a Partially-Funded LESA will be disbursed to the borrower semi-annually to be used to assist in the payment of

² Mortgagee letters issued under the authority granted to HUD in HERA will be identified throughout this rule as HERA mortgagee letters.

property charges; for Fully-Funded LESAs, mortgagees disburse funds directly to the tax authority or insurance company for the payment of certain property charges when they are due. If the mortgagee does not require a Fully-Funded LESA, a borrower with an adjustable or fixed interest rate HECM, may elect to have a Fully-Funded LESA.

Deferring the Due and Payable Status for Eligible Non-Borrowing Spouses. RMSA Mortgagee Letter 2014–07, as amended by RMSA Mortgagee Letter 2015–02, established a Deferral Period, during which the due and payable status of a HECM is deferred after the death of the last surviving borrower for an Eligible Non-Borrowing Spouse, provided eligibility and all other FHA requirements are, and continue to be, satisfied. In addition, the new policy required the principal limit to be based on the age of the youngest borrower or Eligible Non-Borrowing Spouse, instead of only the youngest borrower. The new policy also provided for a 30-day period for the Eligible Non-Borrowing Spouse to cure a default and to reinstate a Deferral Period.

Limiting Disbursements During the First 12 Months of the HECM. Through RMSA Mortgagee Letter 2014–21, FHA limited initial disbursements for HECMs. For fixed and adjustable interest rate HECMs, the funds advanced to the borrower at closing and during the First 12-Month Disbursement Period could not exceed the greater of 60 percent of the principal limit; or Mandatory Obligations plus an additional 10 percent of the principal limit.

While FHA does not intend to change the current limits of 60 percent and 10 percent at this time, this rule provides flexibility for this limit to be changed in the future to respond to market changes or other factors. Specifically, this rule revises the regulations such that the 60 percent cap will never be modified to be less than 50 percent, and the additional percentage will never be modified to be less than 10 percent absent future rulemaking.

Eliminating Future Draws on Fixed Interest Rate HECMs. Ginnie Mae issued an All Participants Memorandum, APM 14–04, announcing that fixed interest rate HECM loans with future draws would be ineligible for securitization on or after June 1, 2014. As a result of APM 14–04, in RMSA Mortgagee Letter 2014–11, FHA limited the insurability of fixed interest rate mortgages under the HECM program to mortgages with the Single Lump Sum payment option, which does not allow for future draws after closing.

HECM for Purchase Program. HECM for Purchase program requirements were

originally located in HERA Mortgagee Letter 2009–11. This rule codifies the HECM for Purchase program requirements, with an important change to the existing prohibition on interested party contributions. The rule permits the seller to pay fees required to be paid by the seller under state or local law and fees that are customarily paid by a seller in the locality of the subject property and to purchase the Home Warranty policy. The rule also allows the Commissioner to define the types and parameters of other allowable interested party contributions through **Federal Register** notice for comment.

Allowable Loan Origination Fees and Charges. FHA implemented the loan origination fee limits imposed by HERA through HERA Mortgagee Letter 2008–34. In this rule, FHA clarifies that such loan origination fee limits include expenses incurred in originating, processing and closing the HECM.

Amount of MIP. This rule amends the allowable initial and monthly MIP charges to reflect that HECMs are now obligations of the MMIF instead of the General Insurance Fund and to reflect statutory amendments to the National Housing Act providing FHA with a wider range of acceptable MIP charges. FHA is not changing actual MIP charges, which may be set outside of the rulemaking process by mortgagee letter or other similar administrative issuance.

Seasoning Requirements. HUD implemented seasoning requirements for existing non-HECM liens through Mortgagee Letter 2014–21. Under the mortgagee letter, borrowers could only pay off existing non-HECM liens using HECM proceeds if the liens had been in place longer than 12 months or resulted in less than \$500 cash to the borrower. This rule adopts these seasoning requirements for existing non-HECM liens but amends them to: (1) Impose the 12-month requirement beginning at the date of the HECM closing rather than the HECM loan application; and (2) allow the pay-off, at closing, of Home Equity Lines of Credit (HELOCs) that do not meet seasoning requirements from borrower funds, the HECM funds, or a combination of HECM funds and borrower funds, as long as the draw from HECM funds does not exceed the draw limits during the first 12 months of the HECM.

New Origination and Servicing Policies

Disclosure of Available HECM Program Options. This rule requires that mortgagees inform potential HECM borrowers of all of the HECM products, features, and options that FHA insures, in a manner acceptable to the Commissioner, irrespective of the

particular HECM products offered by the mortgagee.

Interest Rate Lock-In. This rule amends the definition of “expected average mortgage interest rate,” to provide that the mortgagee, with the agreement of the borrower, may lock in the expected average mortgage interest rate prior to the date of loan closing or establish the expected average mortgage interest rate on the date of loan closing.

Appraisal Requirements. This rule requires the mortgagee to have the property appraised no later than 30 days after receipt of the request by an applicable party in connection with a pending property sale; the property must be appraised within 30 days of a foreclosure sale. The rule also allows the Commissioner to approve the use of other appraisers when the mortgagee is required to appraise the property.

Limiting Reimbursement of Property Charge Advances. This rule limits insurance claim reimbursement to a mortgagee to two-thirds of the total payments for: (a) Taxes, ground rents, and water rates; (b) special assessments, which are noted on the application for insurance or which become liens after the insurance of the mortgage; and (c) hazard insurance premiums on the mortgaged property not in excess of a reasonable rate.

Acquisition and Sale of Property. This rule replaces the requirement that the property be sold for at least 95 percent of the appraised value with a more flexible provision which allows the Commissioner to lower this amount as necessary to adapt to market conditions and other factors. This rule also requires that the closing costs from the sale be no more than the greater of 11 percent of the sales price, or a fixed dollar amount as determined by the Commissioner through **Federal Register** notice.

Cash for Keys. This rule provides an incentive for parties with legal authority to dispose of a property that serves as the security for a HECM to complete a deed in lieu of foreclosure more quickly. The rule also applies the Cash for Keys incentive when a bona fide tenant vacates the property prior to an eviction being initiated by the mortgagee in the case of a foreclosure. This rule grants the Commissioner the flexibility to increase the minimum amount of time a mortgagee shall grant the borrower or bona fide tenant to vacate the property and the authority to establish the amount of the financial incentive.

Pay-Off of Debt Not Secured by the Property. This rule allows HECM proceeds to be used to pay off debt that is not secured by the property, as defined by the Commissioner through

Federal Register notice, as a mandatory obligation.

Property Charge Payments. This rule allows the Commissioner, through **Federal Register** notice, to establish an incentive for the borrower voluntarily electing a Life Expectancy Set Aside. Additionally, the final rule authorizes the Commissioner, through **Federal Register** notice, to expand the borrower's options for electing to have the mortgagee make property charge payments.

C. Costs and Benefits of This Rule³

This rule codifies the following program changes that have reduced risks to both FHA and to borrowers: Implementation of limits on fixed-rate full draw loans (full draw loans expose FHA to high risk of insurance loss, and such loans are often not sustainable solutions for borrowers since they do not provide the borrower with future access to HECM proceeds); a Financial Assessment to enable mortgagees to determine if the HECM enables borrowers to comply with the mortgage requirements and that the HECM is a sustainable solution for borrowers; protection to Eligible Non-Borrowing Spouses from foreclosure after the death of the last borrower; removal of incentives for borrowers to obtain higher principal limits by using only the age of the older spouse through quitclaiming the younger spouse from the title; and a Life Expectancy Set Aside which will reduce the incidence of borrower defaults due to non-

compliance with the mortgage obligation for the borrower to make timely payment of property taxes, and hazard and flood insurance payments. The new changes to the HECM program are expected to reduce foreclosures arising from these defaults, which will benefit FHA, borrowers, and communities where properties are located; give FHA more flexibility to accept short sales on properties where market conditions warrant; and provide homeowners with the ability to purchase a more suitable home without incurring the costs of two loan closings. Together, these changes may initially reduce HECM origination volume, although the potential demand for HECM is expected to remain high.

The social benefits that may be realized by this rule also include reducing resolution costs and borrower distress in cases where loans are no longer sustainable; improved sustainability of the MMIF, which would enhance the choice and wellbeing of future borrowers; and increased protections for borrowers, including those afforded non-borrowing spouses and those from improving the ultimate sustainability of HECM loans related to financial assessment changes.

The policies discussed in this rule may reduce FHA HECM insurance endorsements by \$1.9 billion per year, thereby reducing choices for potential HECM borrowers to access home equity and imposing an equivalent cost on them; reduce foreclosures due to tax and

insurance default by up to 6,000 cases (totaling about \$1.5 billion in loan amount) per year, along with reduction in ancillary costs of foreclosures to neighborhoods and local governments; and reduce loan origination costs for 2,000 "HECM for Purchase" borrowers, saving them \$12 million per year representing transfers from mortgagees to borrowers.

Other costs from the rule would include reduced borrowers' choice and the well-being of those borrowers who may not meet the eligibility requirements, or who no longer have access to as much upfront cash. The table below and the bullet points that follow display the benefits, costs, and transfers of this rule.

Absent the changes in the HECM program made by mortgagee letters issued by HUD under the authority of RMSA, the ongoing operation of the HECM program would have required a credit subsidy appropriation under the Federal Credit Reform Act of approximately \$684 million. The fact that this appropriation was not required represents a transfer from potential HECM borrowers to taxpayers. This transfer was effected by the regulatory mortgagee letters, and not this final rule which merely codifies these existing policies in the Code of Federal Regulations. This transfer amount is reported in this analysis to inform the public, but had no bearing on whether these provisions would be included in the final rule.

Benefits	Costs	Transfers
4,400 fewer foreclosures per year from tax and insurance default. • \$1.1 billion aggregate unpaid principal balance. • Reduction in ancillary costs of foreclosures to neighborhoods, borrowers, and local governments. Reduced loan origination costs for 2,000 "HECM for Purchase" borrowers per year. • Total benefit of \$12 million per year. • Frees resources for other purposes.	Reduce FHA HECM insurance endorsements by \$1.9 billion per year, thereby reducing choices for potential HECM borrowers to access home equity. No additional costs	Mortgagee letters issued under authority granted by the Reverse Mortgage Stabilization Act and codified by this rule reduced credit subsidy appropriations required under the Federal Credit Reform Act for the HECM program from \$684 million to \$0. This is a transfer from potential HECM borrowers to taxpayers. No additional transfers.

Other benefits include the following:

- Improving the financial condition of the FHA MMIF due to:

- Fewer foreclosures and lower loss rates;
- Financial incentives of a Cash for Keys program for short sales and REO properties;

- Persistently lower insured loan balances over time, due to limits on initial disbursement; and
- More flexibility for FHA to accept short sales on properties where market conditions warrant.
- Improving overall HECM program viability and in turn improving suitability and attractiveness for potential borrowers

- Reduces risks to both FHA and to borrowers associated with fixed-rate full draw loans (full draw loans expose FHA to high risk of insurance loss, and such loans are often not suitable for borrowers);

- Helps borrowers and their housing counselors determine if a HECM is a sustainable option for them through the use of a Financial Assessment;

³ Any changes made in this section from what was presented in the proposed rule only indicate

policy changes that were made based on public comments or reconsideration of the issues.

- Provides protection to Eligible Non-Borrowing Spouses from foreclosure, and removes incentives for borrowers to obtain higher principal limits than they would otherwise be eligible for by using only the age of the older spouse; and
- Reduces the incidence of borrower defaults due to non-compliance with the mortgage obligation.

II. Background

A. Program Description

The HECM program, authorized by section 255 of the National Housing Act (NHA) (12 U.S.C. 1715z–20), is FHA's reverse mortgage insurance program. The regulations for this program are codified in 24 CFR part 206. The HECM program enables FHA-approved mortgagees to extend insured mortgage financing to eligible borrowers, 62 years of age or older, who want to convert the equity in their homes into liquid assets. The withdrawal of equity may take a variety of forms, as authorized by the NHA and selected by the borrower. The home, which serves as security for the mortgage, must be, and continue to be, the borrower's principal residence during the life of the borrower. For adjustable interest rate HECMs, equity payments to the borrower may be in the form of monthly disbursements for life or a fixed term of years, disbursements from a line of credit advance or a combination of monthly disbursements and a line of credit. For fixed interest rate HECMs, equity payments to the borrower must be in the form of a single lump sum disbursement at closing.

The maximum amount of equity in the home that is available to a borrower under a HECM loan is the "principal limit" that is calculated for that loan. The borrower retains ownership of the property and may sell the home at any time keeping any residual sale proceeds in excess of the outstanding loan balance. Until the mortgage is repaid, and regardless of whether or not additional disbursements under the mortgage are permissible, interest on the mortgage, mortgage insurance premiums, and servicing charges, where applicable, continue to accrue.

B. HUD's May 19, 2016, Proposed Rule

On May 19, 2016, HUD published its proposed rule to implement the HERA and RMSA mortgagee letters described above in addition to other regulatory changes. HUD proposed to strengthen the HECM program by consolidating the requirements of these HERA and RMSA mortgagee letters into the regulations and introducing new requirements that would reduce risk to the Mutual Mortgage Insurance Fund and increase

the sustainability of the HECM program for seniors. Interested readers should refer to the preamble of the May 19, 2016, proposed rule for details regarding the proposed regulatory changes to the HECM program.

C. Solicitation of Comment on Required Assignment

On August 11, 2016, at 81 FR 53095, HUD published in the **Federal Register** a supplemental notice of proposed rulemaking to solicit comment in response to a proposal raised by one of the public commenters on the proposed rule. The document opened the public comment period solely to address this proposal regarding the mortgagee's option to file a claim when the loan balance reaches 98 percent of the maximum claim amount.

The current regulations at § 206.107(a) provide the mortgagee an option, before the mortgage is submitted for insurance endorsement, to select either: (1) The assignment option, which allows the mortgagee to assign the HECM to the Secretary if the mortgage balance is equal to or greater than 98 percent of the maximum claim amount; or (2) the shared premium option, which allows the mortgagee to retain a portion of the monthly MIP but does not allow the mortgagee to assign the mortgage unless the mortgagee fails to make payments and the Secretary demands assignment. Under the assignment option, the mortgagee may only assign the mortgage to the Secretary if the following requirements are satisfied: (1) The mortgagee is current in making the required payments to the mortgagor; (2) the mortgagee is current in making the required MIP payments to the Secretary; (3) the mortgage is not due and payable; and (4) the mortgage is a first lien of record and title to the property securing the mortgage is good and marketable.

The public commenter suggested that, under the assignment option, HUD should instead require that the mortgagee assign the HECM loan to FHA if the outstanding loan balance is equal to or greater than 98 percent of the maximum claim amount. The commenter stated that, in some cases, a mortgagee may decline to file a claim in this scenario if the property value has risen rapidly and the loan has an above-market rate. The commenter concluded that lenders in this way have a "put option" and "can choose to keep the best loans and make claims for the worst ones".

HUD is deferring its final determination as to whether to adopt the commenter's proposal at this time, and after HUD fully reviews and takes into consideration the comments

received, HUD will issue, or choose not to issue, its final determination of this proposal through a subsequent final rule.

III. Overview of Final Rule—Key Changes Made at Final Rule Stage

In the May 19, 2016, proposed rule, HUD explicitly solicited public comment on numerous proposed policy changes, including specific questions on the maximum closing costs allowed on the sale of a property, including utilities as property charges, property inspections, non-borrowing spouse communication, and the benefits and costs of the rule. HUD received 241 public comments, including 83 unique comments, on the proposed rule. HUD appreciates all the questions raised, and suggestions and recommendations made by the public commenters. After review and consideration of the public comments and upon further consideration of issues by HUD, the following highlights key clarifications and changes made by HUD at the final rule stage.

The final rule:

- Amends the provision limiting the number of mortgages by allowing borrowers to provide legal documentation evidencing the release of the borrower's financial obligation to satisfy the existing HECM rather than requiring the borrower to demonstrate a final divorce decree. (See § 206.34.)

- Amends the seasoning requirements for existing non-HECM liens to: (1) Impose the 12-month requirement beginning at the date of the HECM closing rather than the HECM loan application; and (2) allow the pay-off at closing of Home Equity Lines of Credit (HELOCs) that do not meet the seasoning requirements from borrower funds, the HECM funds, or a combination of HECM funds and borrower funds, as long as the draw from HECM funds does not exceed the draw limits during the first 12 months of the HECM. (See § 206.36.)

- Includes required pay-off of debt not secured by the property, as defined by the Commissioner through **Federal Register** notice, as a mandatory obligation. (See § 206.25(b) and § 206.25(c).)

- Clarifies that the mortgagees are required to request borrowers to designate, at the borrower's discretion, an alternative individual for the purpose of communicating with the mortgagee if the mortgagee has not been able to reach the borrower directly. (See § 206.40(c).)

- Retains the current policy requirement that the mortgagor must provide the mortgagee with a physical copy of the housing counseling

certificate, and removes the requirement that the HECM counselor upload the certificate to an electronic database. (See § 206.41(c).)

- Clarifies that the mortgagee shall provide any disclosures required by law when asking the borrower about any costs or other obligations that the borrower has incurred to obtain the mortgage. (See § 206.43(a).)

- Allows fees customarily paid by the seller in the subject property locality to be included as an interested party contribution. (See § 206.44(c).)

- Clarifies the requirement for maintaining flood insurance coverage. (See § 206.45(c).)

- Grants the FHA Commissioner the authority, where a HECM is due and payable, to increase the maximum closing costs allowable for selling the property above 11% of the sales price by establishing a fixed dollar amount as determined through **Federal Register** notice. (See § 206.125(a)(2)(ii).)

- Allows the FHA Commissioner to approve the use of qualified appraisers acceptable to and identified by the Commissioner when the mortgagee is required to appraise the property. (See § 206.125(b).)

- Authorizes the FHA Commissioner to expand availability of the Cash for Keys incentive, in an amount to be determined by the Commissioner, on REO properties with bona fide tenants. (See § 206.125(g)(4).)

- For the Cash for Keys incentive, authorizes the Commissioner to increase the minimum amount of time a mortgagee shall grant the borrower or bona fide tenant to vacate the property. (See § 206.125(f)(1)(ii) and § 206.125(g)(4).)

- Amends the limitation on reimbursements for advances made by the mortgagee for property charges to cover two-thirds of the overall advances made by the mortgagee rather than the full value of the first two years of such advances. (See § 206.129(d)(3).)

- Removes the ability for the borrower to elect that the mortgagee pay ground rents through the borrower's voluntary election to have the mortgagee pay property charges. (See § 206.205(b)(2) & § 206.205(d).)

- Authorizes the Commissioner to establish an incentive for voluntarily electing a Life Expectancy Set Aside through **Federal Register** notice. (See § 206.205(b)(2)(ii).)

- Authorizes the Commissioner to expand the borrower's options for property charge payment by the mortgagee through **Federal Register** notice. (See § 206.205(d).)

Deferred Final Determination

Additionally, in order to fully consider the comments received on these issues, HUD will defer making its final determination of the policies listed below from the proposed rule and afterwards, HUD will issue its final determination on these issues in a final rule.

- The change to the cap on interest rate adjustments for annually adjustable interest rate products and the imposition of a five percent cap on interest rate adjustments for monthly adjustable interest rate products;

- The establishment of extenuating circumstances exceptions for exceeding the Initial Disbursement Limit or Borrower's Advance during the First 12-Month Disbursement Period;

- Post-closing property inspections;
- The requirement to undergo counseling before signing a HECM for Purchase contract and/or making an earnest money deposit; and

- The definition of property charges to include utilities.

IV. Public Comments and HUD's Response to Public Comments

A. The Public Comments Generally

HUD received 241 public comments, including duplicate mass mailings, resulting in 83 unique public submissions covering a wide range of issues. Comments came from a wide variety of entities, including lenders, servicers, interest groups, real estate agents, and academics. In general, the public commenters expressed support for codifying policy implemented via Mortgage Letter under statutory authority, updating CFR part 206 and a number of the proposed regulatory changes. Many commenters also raised questions or offered suggestion for changes at the final rule stage. This section of the preamble discusses the significant issues raised by the commenters and provides HUD's responses to the comments received. All public comments can be viewed at <https://www.regulations.gov/docket?D=HUD-2016-0052>.

B. Specific Public Comments

1. Definitions

Comment: The definition of "borrower" should be consistent with the definition used in the Mortgagee Optional Election Assignment guidance (Mortgagee Letter 2015-15) to mean the "original borrower under a note and mortgage." The commenter encouraged the use of consistent definitions throughout HECM program guidance.

HUD Response: With the recent changes to the HECM program,

particularly the protections and benefits for non-borrowing spouses, it was necessary for HUD to revise the definitions of "borrower" and "mortgagor" in order to resolve title issues involving quit claiming practices of non-borrowing spouses or other non-borrowing owners. The definition of "borrower," as provided in 206.3, "means a mortgagor who is an original borrower under the HECM Loan Agreement and Note. The term does not include successors or assigns of a borrower."

Comment: HUD should clarify that the new proposed definition of "mortgagee" does not conflict with the rule change regarding sales to other FHA-approved entities, as proposed in § 206.101(d)(2). The commenter stated that "mortgagee" is defined as the original lender under a mortgage and its successors and assigns, as approved by the Commissioner, but that HUD also proposed to include a non-FHA-approved entity as a possible successor or assign, in some limited cases.

HUD Response: These requirements are not new additions to the HECM program. They were previously listed in the regulations at 24 CFR part 203 and incorporated into the HECM program by reference. This rule simply moves the regulations into part 206 in order to reduce the number of cross-references. HUD intends to retain these regulatory requirements.

2. State Statutes of Limitations

Comment: HUD should state that when a HECM loan is assigned to HUD, any state statute of limitations on collecting or foreclosing upon the loan does not apply to HUD. The commenter also suggested that HUD state that any such state law is preempted by HUD HECM regulations and program guidelines.

HUD Response: HUD appreciates the recommendation and will take it under consideration for future rulemaking and policy guidance. However, FHA reminds mortgagees that the model loan document provided must be adapted by the lenders to local and state requirements that preserve first lien status.

3. Program Complex/Disclosures

Comment: The HECM program is incredibly complex and could be improved by the use of plain language educational materials and software.

HUD Response: HUD agrees that the program is complex. The HECM program is unique and was designed to reduce the effects of economic hardships that senior homeowners may experience. Over the years, changing

borrower and industry practices have required HUD to respond with appropriate policymaking to manage risk to the MMIF and support sustainability of the program. HUD supports consumer education and awareness through its HECM counseling requirement. HUD understands the need to provide plain language educational materials and appreciates suggested content. However, prospective borrowers must understand the terms and conditions of the mortgage as defined in the legal documents.

Comment: The program changes are overly restrictive and protective of senior borrowers. The commenter stated that seniors are not necessarily uneducated and have had many years of experience. The commenter also stated that the current disclosure and guideline requirements are sufficient.

HUD Response: HUD's mission is to serve underserved markets, which must be balanced with HUD's inherent, as well as, statutory obligation under the NHA to protect the MMIF. Knowing that many seniors are educated and resourceful, HUD must take every precaution to ensure seniors who need a reverse mortgage are equipped with the information necessary to make an informed decision of whether the HECM is a sustainable solution that enhances their financial position.

Comment: The changes in this rule are less about protecting seniors and more about controlling the marketplace, lenders, and seniors, and that the same policies do not apply to forward mortgages.

HUD Response: Despite the varying opinions concerning the recent changes to the HECM program, HUD's mission is to serve underserved markets, which must be balanced with HUD's inherent, as well as statutory, obligation under the NHA to protect the MMIF. Governance of the marketplace is beyond HUD's purview and the reverse mortgage industry must examine its practices to determine what is acceptable and beneficial for the survival of this program. The requirements of the HECM program are unique and it is important to note that the program has a very different risk profile than Forward Mortgages. Where feasible, HUD strives to adopt forward mortgage requirements that can be applied to the HECM Program.

Comment: HUD should expand the disclosure requirement to allow for new and improved methods with which to inform potential HECM borrowers. One commenter proposed that HUD host a technology roundtable to discuss and evaluate a new consumer-friendly marketing campaign. Another

commenter stated that HUD should elaborate on the disclosure requirement and further define the extent to which lenders must disclose all products, features, and options that HUD will insure. Commenters stated that the description of these products should include overall access to equity, costs, and the amount of funds available during the first 12 months.

HUD Response: Mortgagees are required to explain in clear, consistent language all requirements and features of the HECM program. Mortgagees have the flexibility to identify and use methods that will ensure borrowers are properly informed of all features and products that are available.

Comment: HUD should discourage product-steering by lenders.

HUD Response: HUD believes its requirement that mortgagees must disclose all products, whether they are offered by the mortgagee or not, will discourage product-steering.

Comment: HUD should promulgate suitability rules to ensure that lenders only recommend reverse mortgage loans that are suitable for borrowers' needs.

HUD Response: Housing counseling and the Financial Assessment are prudent practices for evaluating whether the HECM is a sustainable solution. Both practices promote the participation of homeowners who are well-informed and financially well-positioned for a HECM loan.

Comment: Disclosing too many options may be confusing to borrowers.

HUD Response: HUD disagrees and believes that the full disclosure of all products is necessary to insure borrowers are aware of all options and to avoid potential steering.

4. Interest Rate Lock-In

Comment: HUD should eliminate the credit line growth feature of adjustable-rate HECM loans. The commenter stated that the growth is determined by interest rate, lender margin, and mortgage insurance premiums, and borrowers have access to increasing amounts of funds even if home prices fall, which leads to greater risk for the MMIF.

HUD Response: The HECM program was designed to allow the line growth feature to insure borrowers had access to equity. Other program features balance risk such as principal limit factors, MIP, controls over large cash draws upfront, and no future draws on fixed rate product.

Comment: HUD should clarify that rate locks are optional.

HUD Response: The rate lock is optional. HUD notes that the proposed rule, in its definition "expected average

mortgage interest rate," indicates that mortgagees, with the agreement of the borrower, may lock in the expected average mortgage interest rate and the mortgagee's margin prior to the date of loan closing or on the date of loan closing. HUD retains this option in this final rule.

Comment: HUD should maintain the current policy regarding the timing of when the mortgagee may lock in the rate that determines the principal limit, which is the application date.

HUD Response: HUD appreciates the feedback but believes the borrower should have the flexibility of setting the expected average mortgage interest rate and mortgagee's margin, if applicable, any time prior to closing or at closing.

Comment: HUD should continue to permit the "float down" option whereby the principal limit may be recalculated at closing if the expected interest rate has declined and is lower than at application date.

HUD Response: HUD will continue to permit the "float down" option, per ML 2006–22.

Comment: HUD should allow the borrower to keep the rate lock they have chosen or the expected rate based on the index in effect at closing, whichever is most beneficial to the borrower.

HUD Response: HUD will continue to permit the "float down" option, per ML 2006–22.

Comment: HUD should elaborate on the interest rate lock-in timeframes and further clarify the terms used.

HUD Response: The guidance found in ML 2006–22 provides useful background for interest rate lock-in timeframes.

5. Shared Premium/Shared Appreciation

Comment: Shared appreciation should not be utilized in the HECM market. One commenter stated that the terms of a shared appreciation reverse mortgage are heavily weighted towards benefiting the mortgagee and not the borrower. Another commenter stated that there should be a prohibition against shared appreciation schemes, due to the harm done to the borrower.

HUD Response: The National Housing Act provides for a shared appreciation option, and HUD will retain the shared appreciation option in the regulations to allow for future potential product design.

Comment: The shared appreciation option has not been utilized, but may be useful in the future. One commenter stated that shared appreciation could be an example of a product that seems unnecessary but eventually becomes popular due to changing market

conditions. The commenter stated that “low balance” HECM options or the HECM Saver product could be other examples of such products. Commenters stated that these items could allow for important product design and innovation in the future. Some commenters suggested that this could give an opportunity for further review and study on how such features may be used to design new products and features. Some commenters also stated that the product could be used in the future to reduce risk to the MMIF. One commenter stated that these options have the potential for creating competitive loan products in the marketplace.

HUD Response: HUD will retain the shared appreciation option in the regulations for future potential product design.

Comment: More information is needed on the shared premium and shared appreciation options. The commenter also stated that the 2009 PLF tables do not include the shared premium basis points as in previous versions, and that there is little explanation of how the shared premium and shared appreciation options are administered or audited by HUD, or whether these loans are eligible for securitization.

HUD Response: We do not currently administer these options.

6. Deferral of Due & Payable Status

Comment: Eligible Non-Borrowing Spouses should continue to enjoy the benefits of any monthly distributions or the availability of any line of credit funds once the last borrower dies. The commenter stated that the eligible NBS should still have access to these benefits since the amount available to the borrower is determined by the age of the NBS.

HUD Response: The NBS is not a borrower and as such is not a party to the Loan Agreement. The Loan Agreement is a contract solely between the borrower and the mortgagee, not the NBS. Upon the last surviving borrower's death, the terms of the Loan Agreement provide that no further funds can be made available to a person who is not a party to the Agreement.

Comment: Ninety days is insufficient for a grieving spouse to take practical measures to secure her or his right to the property. One commenter stated that the probate process alone can take longer than ninety days for reasons outside of the surviving spouse's control. Commenters suggested that the time frame should be extended to 180 days. Another commenter suggested 120 days would be sufficient. One commenter

also suggested that HUD may require that a probate action be opened within a reasonable time after the borrower's death.

HUD Response: HUD appreciates the recommendation. HUD would like to remind the public that a NBS does not have to obtain legal title in order to be eligible for a deferral period. A NBS must establish a legal right to remain in the property, which may be accomplished through means other than obtaining legal title to the property. While HUD understands and appreciates that concerns raised about the time required to obtain legal title, as it is not the requirement and the NBS has other means in which to establish a legal right to remain, HUD will not adopt this recommendation at this time.

Comment: Thirty days after a deferral period ceases is not a sufficient time frame to cure a default. The commenter stated that most spouses will need more time to obtain documentation or evidence from a taxing authority to provide timely payment and to successfully navigate the servicer's protocols.

HUD Response: Non-borrowing spouses are provided the same timeframes and opportunity during a deferral period to cure a default as a borrower is provided during his or her lifetime and HUD believes this timeframe to be sufficient. Additionally, borrowers and non-borrowing spouses can cure a default up until the foreclosure sale occurs.

Comment: HUD should expand the definition of events that are able to trigger the deferral period under § 206.55. The commenter recommended that the definition should be expanded to cover all events that are outside the control of the borrower, such as significant health or life events. Another commenter stated that due and payable status should also be deferred when a borrower is no longer residing in the home serving as collateral property but there is an Eligible NBS present and occupying the home.

HUD Response: HUD understands the issue raised by the commenter but is unable to adopt this suggestion to expand events that would be eligible for a deferral period. The other events that would give rise to a due and payable status result from a borrower failing to comply with his or her obligations of the mortgage. As such, HUD cannot provide for a deferral where there is a breach of a contractual duty.

Additionally, by providing a deferral period for a NBS where the borrowing spouse has died, the requirements of this provision in the NHA are satisfied.

7. Initial Disbursement Limit/Borrower's Advance

Comment: HUD should allow any funds disbursed as a monthly tenure payment to the borrower to exceed the Initial Disbursement Limit (IDL) during the first 12 months. One commenter stated that applying the Initial Disbursement Limit to monthly tenure payments causes confusion by requiring the payments to be reduced so that they remain less than the IDL during the first 12 months, and then recast at the end of the first year to recapture the amount reduced during that time period.

HUD Response: HUD appreciates the recommendation and will take it under consideration for future rulemaking or policy guidance.

Comment: HUD should clarify what constitutes fees and charges for real estate purchase contracts, warranties, inspections, surveys, and engineer certifications.

HUD Response: HUD appreciates the recommendation and will take it under consideration for future policy guidance.

Comment: HUD should only require the borrower to report whether the amount drawn during the First 12-Month Disbursement Period will exceed the 60 percent limit. Commenters stated that reporting the exact percentage would be confusing and unnecessary.

HUD Response: HUD has amended the language in this final rule to remove the word “exact” from § 206.25(a) to avoid any confusion. HUD will continue to require the borrower to indicate what percentage, up to 10% of the principal limit, she or he chooses to receive during the first year. The additional amount that the borrower plans to use during the First 12-Month Disbursement Period is needed for the initial MIP calculations.

Comment: HUD should not further amend the limits on the initial disbursements during the first 12 months.

HUD Response: HUD appreciates the concern raised. However, the flexibility in the regulation will enable HUD to react to market conditions, for the viability of the HECM program, and to protect the fiscal soundness of the MMIF. The flexibility in place at § 206.25(a) allows the Commissioner to raise or lower the maximum initial draw but cannot go lower than 50% and the additional percentage cannot be less than 10%.

Comment: HUD should be careful not to set limits at a point in which it eliminates access to the program for many potential borrowers. The commenter referenced examples of

seniors who were convinced to withdraw the maximum amount at closing and immediately invest in financial products.

HUD Response: The flexibility in place at § 206.25(a) only allows the Commissioner to raise or lower the maximum initial draw but cannot go lower than 50% and the additional percentage cannot be less than 10%. This limitation was specifically designed to reduce initial draws and is presently set at the amount of Mandatory Obligations or 60% plus an additional 10% of the Principal Limit. In addition, the MIP Structure also provides a lower upfront rate of 0.50% for draws of 60% or less and 2.50% for draws in excess of 60%. Mortgagee Letter 2014–10 provides specific guidance regarding the borrower's right to determine the amount of the initial disbursement and requires mortgagees to inform them of these rights.

8. Allowable Charges and Fees

Comment: HUD should clarify in the preamble to the final rule that the origination fee limit does not include and does not apply to third party closing costs or fees. Another commenter stated that including more fees without increasing the allowable origination fee is reducing funds for a company to operate even though the costs of operating a business and the cost of living is increasing.

HUD Response: HUD is not seeking to include additional borrower charges in the loan origination fee. The amendments to § 206.31 in this final rule clarify the loan origination fee includes expenses incurred in originating, processing, and closing the HECM. Third party closing costs or fees such as an appraisal fee, MIP, transfer fees, etc., are the responsibility of the borrower. The practice of the lender using the loan origination fee to cover the full amount or a portion of those fees and charges to reduce the borrower's out-of-pocket expenses may continue.

Comment: HUD should clarify the ability of mortgagees to charge other fees, which should also be included as allowable Mandatory Obligations. Commenters stated the following should fall under this category: Tax history verifications, credit report fees, 4506T tax verifications, and other verifications such as verification of employment, income, bank statements, and assets. Another commenter requested that HUD allow mortgagees to incur and pass along to HECM borrowers a document delivery or technology fee that allows for the delivery of loan documents and disclosures as well as any required

document review fee such as those mandated by state law. Another commenter requested additional clarification on the allowance of closing charges and fees.

HUD Response: Section 206.25 was amended by the proposed rule to include credit report fees as mandatory obligations. The final rule retains this language. HUD issued ML 2016–10 to permit a Third Party Property Tax Verification Fee to verify the borrower's property tax payment history and the annual amount of property taxes due for a specific property. HUD will use its administrative authority to clarify its policy concerning the handling of reasonable and customary fees and charges that are required to do business as an FHA-approved lender.

Comment: HUD should consider adding regulations to limit broker compensation, particularly as to adjustable rate line of credit reverse mortgages where the Truth in Lending Act regulations do not apply. The commenter provided an example of a mortgage broker receiving a yield spread premium of 15 percent of the loan amount in exchange for acceptance of a higher-than-market interest rate, without the borrower's understanding of the situation.

HUD Response: HUD does not have regulatory authority to issue these requirements. Loan originator compensation is regulated by the CFPB under the Truth in Lending Act and its implementing Regulation Z (12 CFR part 1026). The provisions apply to closed-end consumer credit transactions secured by a dwelling, including reverse mortgages that are not home equity lines of credit under 12 CFR 1026.40. See 12 CFR 1026.36.

Comment: HUD should consider addressing the allowance of Appraisal Management Company fees and document preparation fees as part of the allowable loan origination fees and charges.

HUD Response: HUD appreciates the recommendation and will take it under consideration for future policy guidance.

Comment: A second HECM should be allowed in the case of a divorce. Commenters stated that the divorced co-borrower must show a divorce decree and/or a copy of the deed indicating the former spouse is responsible for the prior marital home.

HUD Response: HUD is adopting in this final rule the proposed rule change that allows for a new HECM when the existing HECM is satisfied prior to or at the closing of the new HECM, or the borrower provides legal documentation, acceptable to the Commissioner,

evidencing release of financial obligation to satisfy the existing HECM, which may include a divorce.

Comment: A second HECM should be allowed when the individual is no longer on title to the property with the existing HECM and a new primary residence has been established. The commenter stated that the proposed rule solved for married individuals only and not other situations such as domestic partners or relatives.

HUD Response: HUD is adopting in this final rule the proposed rule change that allows for a new HECM when the existing HECM is satisfied prior to or at the closing of the new HECM, or the borrower provides legal documentation, acceptable to the Commissioner, evidencing release of financial obligation to satisfy the existing HECM. This requirement is applicable to all borrowers and not just married individuals.

10. Title of Property Which Is Security for the HECM

Comment: HUD should allow the NBS to go on title without having to refinance or qualify for another loan. The commenter stated that there are many examples of spouses not qualifying under the new regulations and as a result, they have to stay off title, which causes other legal issues not pertaining to the mortgage on the property.

HUD Response: The new definitions for "mortgagor" and "borrower" in § 206.3 of this final rule address the commenter's concern.

Comment: Allowing non-borrowing spouses to remain on the title could open the door to claims by other non-borrowing owners. Commenters expressed concerns over whether other co-owners could demand the sale of the property or demand to receive their share of the home title. One commenter asked if HUD could limit the ability to remain on title to eligible NBSs only or perhaps only to owners who also reside in the home. Another commenter suggested that HUD should limit the ability of a non-borrower to remain on title to spouses, or alternatively, grant a life estate right to the borrower so that the borrower could keep the home.

HUD Response: While HUD understands the potential issues that could arise from shared legal ownership of a property, HUD has determined it is not in a place to dictate to a homeowner or homeowners how to best structure legal ownership to a property. Further, even should HUD be inclined to limit those individuals on title at origination, there is nothing that would prevent the borrower from subsequently adding additional individuals to title. These

individuals whether added before or after origination would have certain legal rights as would any other legal owner of a property. Ultimately, how a homeowner or homeowners elect to hold title is within their control.

Comment: HUD should clarify when a certification must be signed by all non-borrowing spouses and non-borrowing owners to consent to the borrower obtaining a HECM. The commenter recommended that the certification be required at the time of closing or funding.

HUD Response: HUD will take these comments under consideration when implementing related policy through guidance.

Comment: HUD should clarify that HECM servicers may encourage borrowers on currently outstanding HECMs to add NBSs and heirs to the title when preparing for end-of-life arrangements.

HUD Response: HUD has determined it is not appropriate to dictate to a homeowner or homeowners how to best structure legal ownership to a property.

12. Seasoning Requirements for Existing Non-HECM Liens

Comment: An unintended consequence of the rule is that it disallows a HECM even when the non-HECM lien would not result in exceeding the 60 percent of the initial disbursement limit. Some commenters suggested that the policy should be changed so that liens seasoned for less than one year can be paid off at closing if the PLU is 60 percent or less.

HUD Response: HUD has considered this proposal and is incorporating a change to the final rule for HELOCs. The final rule allows borrowers to pay off unseasoned HELOCs using their own funds, HECM funds, or a combination of HECM funds and non-HECM funds. The final rule allows the use of HECM funds to pay off unseasoned HELOCs if the IDL or Borrower's Advance remains at or under the percentage set by the Commissioner in § 206.25(a).

Comment: The seasoning requirement should be eliminated altogether. The commenter stated that many seniors take out a home equity line of credit without realizing a reverse mortgage would be a better option. The commenter explained that if an emergency makes it difficult for this senior to make monthly payments on the HELOC, it would put the borrower in an even worse financial situation if the borrower could not apply for a HECM for twelve months. Another commenter stated that this requirement only hurts the seniors who have to wait up to twelve months to get their HECM

loan. One commenter asked what is wrong with allowing debts to be paid off at closing. Some commenters stated that it is not reasonable to expect a homeowner to possibly know that an ordinary consumer transaction such as opening a home equity line of credit will close the door to a HECM. One commenter suggested two alternatives: (1) Reduce the seasoning requirement to draws made in the last 60 to 90 days; or (2) make the effective date the date of closing rather than the date of application.

HUD Response: This final rule retains an amended seasoning requirement that imposes the 12-month requirement beginning at the date of the HECM closing rather than the HECM loan application, and at closing, allows the pay-off of HELOCs that do not meet seasoning requirements from borrower funds, HECM funds, or a combination of a borrower's own funds and HECM funds if the IDL or Borrower's Advance remains under the percentage set by the Commissioner in § 206.25(a).

Comment: The seasoning requirement should be rewritten to exclude construction and rehab loans, as long as the borrower can show that all loan proceeds were paid to contractors. One commenter stated that in many cases, these loans are required to bring the property into compliance for a HECM.

HUD Response: Existing policy does not consider funds paid to third parties for construction and rehab to be "cash to the borrower". As long as documentation is provided to show that loan proceeds in excess of \$500 were paid to a contractor, the seasoning requirement in § 206.36 is considered satisfied.

Comment: HUD should clarify the current interpretation by wholesale lenders concerning such loan proceeds passing through the bank account of the borrower.

HUD Response: If documentation is provided to show that the loan proceeds in excess of \$500 were paid to a third party, funds that were received by the borrower and paid through the borrower's bank account satisfies the seasoning requirement in § 206.36.

Comment: Rather than allowing the Commissioner to impose additional seasoning requirements through notice and comment, the seasoning requirements under Mortgage Letter 2014-21 should remain the same and be incorporated into the regulations.

HUD Response: As stated in the proposed rule and retained in the final rule in § 206.36, the seasoning requirements that may be established by the Commissioner will not prohibit the payoff of non-HECM liens if the liens

have been in place for longer than 12 months or have resulted in cash to the borrower in an amount of \$500 or less.

Comment: HUD should allow for greater flexibility for paying off existing mortgages by imposing a 1.75 percent upfront MIP cap rather than a 2.5 percent cap or by increasing the percentage allowable from 42 percent to 52 percent with a 60 percent cap on distributions.

HUD Response: HUD will take these comments under consideration when implementing future policy guidance.

11. Financial Assessment

Comment: The introduction of non-property related expenses is outside the scope of the financial assessment. One commenter stated that a senior will pay the property taxes when given a choice between paying the property taxes or paying off a credit card.

HUD Response: It is critical to evaluate the willingness (credit history) and financial capacity of the borrower in order to determine whether the HECM loan is a sustainable solution for the borrower in order to reduce defaults and manage risk to the MMIF.

Comment: Proof of on-time property taxes and insurance payments should not be required. The commenter stated that those who have a history of less-than-stellar credit, even if they pass the Financial Assessment, should be considered for a LESA.

HUD Response: Current regulations in § 206.205 require that if the borrower does not meet the Financial Assessment requirements that a Fully- or Partially-Funded LESA is required. And all HECM borrowers have the option to voluntarily request a LESA for payment of taxes and insurance or voluntarily request the mortgagee to pay taxes and insurance out of the HECM proceeds if a LESA is not required.

Comment: Willingness is the primary cause of tax and insurance defaults.

HUD Response: HUD rejects this comment and recognizes the majority of its borrowers demonstrate a willingness to pay their property charges in a timely manner. HUD's guidance, as provided in the revised HECM Financial Assessment and Property Charge Guide attached to Mortgage Letter 2016-10, includes instructions for reviewing and evaluating the applicant's credit history, including tax and insurance payment history, and extenuating circumstances of prospective borrowers to determine whether the HECM loan is a sustainable solution and whether a LESA must be required.

Comment: Borrowers with a certain minimum credit score should be exempt from the income assessment.

HUD Response: HUD is receptive to adding FICO Scores to the Financial Assessment process; however, at this time, sufficient performance data is not available to support the implementation of FICO score criteria for HECMs. HUD is now collecting FICO information on HECM borrowers and will, over time, evaluate how that may be incorporated in the Financial Assessment process.

Comment: Additional compensating factors should be taken into consideration at the discretion of the direct endorsement underwriter, just as in traditional mortgages.

HUD Response: HUD does not allow additional compensating factors to be taken into consideration of the direct endorsement underwriter on forward mortgages and does not intend to adopt this recommendation for the HECM program.

Comment: HUD should audit recent financial assessments to determine how much documentation is unnecessary. One commenter stated that many guideline requirements are beyond risk management and ambiguous, and suggested that HUD could establish quarterly meetings with industry underwriters and sales leaders for a path toward closing good loans with limited documentation.

HUD Response: HUD continues to closely monitor performance of the HECM portfolio and will update guidance on the Financial Assessment as needed.

Comment: HUD should wait to implement further changes to the financial assessment, since the impact of the changes that took effect in April 2015 are not yet fully understood.

HUD Response: The proposed rule does not include any changes to the Financial Assessment requirements. HUD continues to closely monitor the performance of the HECM portfolio and will update guidance on the Financial Assessment as needed.

Comment: HUD should allow seniors to pay off revolving debt at closing from proceeds in order to qualify under the financial assessment rules, particularly since this can be done with forward mortgages.

HUD Response: In this final rule, HUD has included use of HECM proceeds to be used to pay-off unsecured debt, as defined by the Commissioner through **Federal Register** notice, as a mandatory obligation.

Comment: The financial assessment guidelines are overly restricting access to the HECM program. One commenter stated that a LESA eliminates some concern regarding residual income, since a person with a full LESA is covered with regards to tax and

insurance. Another commenter stated that the Financial Assessment guidelines apply HUD practices designed for younger, employment-aged consumers and should be more closely correlated to the actual situation of aging homeowners over time. The commenter suggested that the rule should recognize the evolving nature of the Financial Assessment protocol and require further review to expand the population of low-risk senior homeowners who are eligible to participate in the HECM program. Another commenter stated that even borrowers with excellent credit are forced to go through many underwriting conditions that would not be required for an FHA forward mortgage. Another commenter stated that the process of obtaining a HECM has become unnecessarily documentation-intensive and rigid with respect to the specific documentation format.

HUD Response: As stated in § 206.37(b)(1), the financial capacity of the borrower must be evaluated to determine whether the HECM is a sustainable solution for the borrower. HUD has always required full documentation for borrowers on all its mortgage programs, except for streamlined refinances. Providing specific documentation requirements ensures consistency and these requirements may vary from forward mortgages because of the different profile of the programs and the borrowers. However, a significant amount of the required financial assessment documentation reflects standard documentation criteria for real estate secured loans. The need to require additional cash flow and projected financial documentation on HECMs reflects the unique structure of this type of mortgage and borrower. HUD appreciates the recommendation and will take it under consideration for future policy guidance.

Comment: The requirement to use the prior year's tax bill amount multiplied by 1.04 or an amount set by the Commissioner through notice is unnecessary as the LESA formula already has a 1.2 times multiplier to the annual taxes and insurance.

HUD Response: When the mortgagee requires the payment of taxes and flood and hazard insurance at closing, or the borrower requests that their property charges are paid at closing, and a new tax bill has not been issued or is unavailable, the 1.04 multiplier is used to calculate the projected amount of taxes and insurance to be disbursed during the first 12 months. The 1.2 multiplier is used for the LESA and takes into account expected increases in

property taxes and hazard and flood insurance over the life expectancy of the youngest mortgagor.

Comment: HUD should clarify that Financial Assessment underwriting should not include utility payments in the expenses of HECM borrowers.

HUD Response: Utility payments, using the residual income formula in the Financial Assessment Guide, is a requirement and HUD does not intend to change this policy at this time.

13. Disclosure, Verification, & Certifications

Comment: HUD should clarify, in guidance if not in the regulations, that borrowers will not be required to grant the agent specified power of attorney with the ability to access HECM funds. Some commenters stated that some borrowers will not know someone trustworthy enough for that purpose. Another commenter suggested that HUD should restrict this person's role to that of a "trusted contact" person. One commenter stated that HUD should clarify that the designation of an additional contact is optional on the part of HECM borrowers.

HUD Response: It was not HUD's intent to have all borrowers designate an agent with the authority to make financial decisions or withdraw funds. It is HUD's intent that HECM borrowers be requested to designate a point of contact that mortgagees would be required to use in the event a problem arises or in the event of the borrower's death or incapacitation. Accordingly, HUD has revised § 206.40(c) to clarify that the contact person is not acting as an agent and that the mortgagee will be required to request the designation, but that the borrower is not required to designate such a contact person.

Comment: HUD should require borrowers to provide a trusted contact at the time of loan origination, who would be notified in the event HUD could not establish contact with the borrower. The commenter stated that a failure to respond by the borrower would result in a notification sent to the trusted contact.

HUD Response: HUD has revised § 206.40(c) to clarify that the contact person will not be an "agent" and that the mortgagee will only request that the borrower designate such a contact person that mortgagees would be required to use if they cannot reach the borrower directly in the event a problem arises or in the event of the borrower's death or incapacitation.

Comment: The servicer should verify the agent's information annually when the borrower's certification of residency is obtained, to ensure that the information is up-to-date.

HUD Response: In § 206.211(a), the proposed rule includes the borrower designation of alternate individual as part of the annual certification.

Comment: The requirement to collect an alternative point of contact for notifications from the mortgagee should be required at the time of loan origination and updated annually.

HUD Response: HUD has revised § 206.40(c) to clarify the mortgagee shall request but not require the borrower to designate an alternative individual at origination. In section 206.211(a), the proposed rule includes the borrower designation of alternate individual as part of the annual certification.

Comment: HUD should make certain revisions to the Eligible Non-Borrowing Spouse Certification. The commenter stated that the certification should affirm that the NBS does not have, and is not aware of, any claims against the mortgagee. The commenter also stated that the certification should affirm that the NBS agrees to execute documentation reasonably requested in order to toll the running of any applicable statute of limitation after the borrower passes away but the NBS remains in the property during a deferral period. The commenter finally stated that similar changes should be made to the certifications issued under FHA Info, prior to the issuance of Mortgagee Letter 2016–05 for HECMs subject to the Mortgagee Letter and the MOE Assignment election.

HUD Response: HUD will take these comments under consideration when implementing related policy through guidance. Additionally, FHA reminds mortgagees that the model loan document provided must be adapted by the lenders to local and state requirements that preserve first lien status.

Comment: HUD should allow mortgagees to amend the HECM loan documents to revise the recitals in the security instrument to make clear that the non-borrowing spouse is not a borrower. The commenter also stated that the repair rider and other riders should be indicated as secured items in the initial recitals of the HECM mortgages.

HUD Response: HUD will take these comments under consideration when implementing related policy through guidance. Additionally, FHA reminds mortgagees that the model loan document provided must be adapted by the lenders to local and state requirements that preserve first lien status.

Comment: HUD should add a seventh Qualifying Attribute that the non-borrowing spouse must agree to execute

certain documentation in order to toll the running of any applicable statute of limitation during a deferral period.

HUD Response: HUD will take these comments under consideration when implementing related policy through future rulemaking or policy guidance. Additionally, FHA reminds mortgagees that the model loan document provided must be adapted by the lenders to local and state requirements that preserve first lien status.

Comment: HUD should consider defining the due and payable date as the later of when the Eligible NBS no longer meets all of the Qualifying Attributes or when the borrower dies, in those cases where there is an Eligible NBS present. The commenter stated that this language could be used by mortgagees in states that do not allow the tolling of a statute of limitations.

HUD Response: HUD will take these comments under consideration for future rulemaking. Additionally, HUD reminds mortgagees that the model loan document provided must be adapted to local and state requirements that preserve first lien status.

14. Monetary Investment for HECM for Purchase

Comment: Like most other loan products, there should only be a restriction to payment of those items that are reasonable and customary. Many commenters stated that seller contribution rules for the HECM for Purchase program should be the same as those in the FHA forward market. Some commenters stated that further restrictions result in the senior borrowers having more of a cost burden than similar borrowers using FHA's forward mortgage program as well as conventional and VA mortgage borrowers. One commenter stated that HECM buyers are currently unnecessarily burdened with paying for transfer tax, owner's title insurance, and some escrow fees, whereas forward mortgage buyers have these expenses paid by a third party. Another commenter stated that these restrictions cause seniors to pay more than what they would if they chose a forward mortgage, especially with new construction. One commenter stated that not allowing for customary transaction charges normally paid by the seller can create confusing market irregularities when a HECM is used to purchase a new home. The commenter also stated that some HECM rules are in direct conflict with state law.

HUD Response: In addition to allowing seller payment of fees required by State or Local tax laws and a Home Warranty Policy, the final rule has been

revised to allow fees customarily paid by a seller in the subject property locality to be a permissible interested party contribution. The final rule also retains the proposed rule language to grant flexibility to the Commissioner to consider additional permissible interested party contributions through notice for comment, and will take these comments under consideration in possibly issuing such a future notice.

Comment: The amount of closing costs that other parties can pay should be expanded to further support the use of the HECM for Purchase program. Some commenters stated that it does not make sense to prevent other parties from helping to cover other borrower costs, when these practices are perfectly acceptable for all other types of mortgage transactions. Some commenters stated that HUD should allow lenders credit for buyer closing costs up to 3 percent. Other commenters suggested that the rule be changed to allow the seller to pay 3 to 6 percent of closing costs, similar to the forward side. Another commenter stated that the lender should be able to pay closing costs without limitation, other than the counseling fee. Commenters stated that the practice of prohibiting sellers from paying customary fees or closing costs is unfair to reverse mortgage borrowers. Another commenter stated that if HUD allows the same closing costs to be paid by the seller as are allowed in a traditional FHA loan, HECM for Purchase loans will skyrocket in popularity and greatly benefit the senior real estate market. One commenter stated that even a 2 percent allowable concession would put the consumer into a better cost structure. Another commenter recommended that HUD exclude lender closing cost credits, adjustments, and discounts from the definition of "interested party" contributions.

HUD Response: In addition to allowing seller payment of fees required by State or Local tax laws and Home Warranty Policy, the final rule has been revised to allow fees customarily paid by a seller in the subject property locality to be a permissible interested party contribution. The final rule also retains the proposed rule language to grant flexibility to the Commissioner to consider additional permissible interested party contributions through notice for comment, and will take these comments under consideration in possibly issuing such a future notice.

Comment: HUD should specify what it means by "typical" and "required by state law."

HUD Response: HUD appreciates the recommendation and will take it under

consideration for future policy guidance.

Comment: HUD should allow the seller to pay for the buyer's closing costs and thereby increase the popularity of HECM for Purchase loans. The commenter stated that many borrowers would use a HECM for Purchase loan that they do not intend to live in for the long-term, which would be a great loan for the MMIF.

HUD Response: In addition to the allowing seller payment of fees required by State or Local tax laws and Home Warranty Policy, the final rule was revised to allow fees and charges customarily paid by a seller in the subject property locality to be included as a permissible interested party contribution. HUD will continue to explore responsible lending practices and protections for the benefit for this protected class.

Comment: Continuing the ban on closing costs is a good idea for new construction but not for resales.

HUD Response: HUD appreciates the recommendation and will take it under consideration for future policy guidance.

Comment: HUD should find a way to relieve all closing costs if the borrower agrees to dedicate at least part of the funds toward life and/or annuity products which have prematurity distribution clauses.

HUD Response: Section 255(o) of the National Housing Act prohibits prospective borrowers from being required to purchase additional products, such as annuities as a requirement or condition of HECM eligibility. Currently, closing costs associated with a HECM are limited to certain items such as, but not limited to, MIP, mortgagee's title insurance, hazard and/or flood insurance, loan origination fees, the discharge of all liens against the property which serves as collateral for the HECM, and other reasonable and customary amounts, but not more than the amount actually paid by the mortgagee.

Comment: HUD should clarify that lender-paid broker fees that are disclosed as a "credit" on the HUD-1 for RESPA purposes are not lender credits for purposes of the HECM for Purchase program. The commenter stated HUD should clarify that although lender-paid mortgage broker fees are reflected as a "credit" on line 802 of the HUD-1, such fees paid by lenders to mortgage brokers are not a credit for purposes of the HECM for Purchase program.

HUD Response: HUD appreciates the recommendation and will take it under

consideration for future policy guidance.

15. Eligible Properties

Comment: HUD should require the Certificate of Occupancy as a closing condition rather than for purposes of an application. Another commenter stated that HUD should remove the requirement for a certificate of occupancy to be issued prior to application. The commenter stated that the rule as proposed would restrict consumer access to the HECM for Purchase program. One commenter stated that the builder may not be able to afford to complete the home, and then have the buyer apply for the HECM and wait another 3–6 weeks to close.

HUD Response: The timing for taking the initial loan application will be addressed in future policy guidance rather than this final rule.

Comment: Requiring the certificate of occupancy to be completed on new construction before the HECM can be originated is very burdensome for seniors. Some commenters suggested that the HECM regulations should follow standard FHA rules for forward mortgages wherein the case number and application may ensue upon 90 percent of property completion with the Certificate of Occupancy obtained prior to closing. The commenter, and others, stated that this would enable seniors to compete for new construction homes in 55-and-over communities and energy efficient properties. Another commenter suggested that HUD should allow for an order of a case number and appraisal any time after the home is 50 percent complete. Another commenter stated that newly-built senior housing that is more accommodative to aging independently is a major national demographic trend.

HUD Response: HUD appreciates the comments concerning the timing for collecting habitability documentation and will take it under consideration for future policy guidance.

Comment: As an alternative, HUD should allow for a "temporary" or "conditional" Certificate of Occupancy to be accepted at application. The commenter suggested that the conditional or temporary issues to be addressed would be sod, landscaping, or perhaps an unfinished driveway.

HUD Response: HUD appreciates the recommendation and will take it under consideration for future policy guidance.

Comment: HUD should clarify that the leasehold period is based on the life of the borrower rather than the life of the mortgagor.

HUD Response: The NHA requires that the leasehold period must be under a lease for not less than 99 years that is renewable, or under a lease that has a term that ends no earlier than the minimum number of years, as specified by the Secretary, beyond the actuarial life expectancy of the mortgagor or comortgagor, whichever is the later date. The leasehold period cannot be based on the life of the borrower as the NHA requires that it be based on the life of the mortgagor.

Comment: The proposal to add a new flood insurance mandate "to the extent required by the Commissioner" is vague and unnecessary. One commenter stated that the proposed rule does not contain any description of the criteria the Commissioner would use to make the determination as to whether flood insurance was required. The commenter also stated that federal law and the flood insurance program were already designed to protect mortgagees and the federal government from the risk of property loss due to floods. Another commenter stated that HUD should make it clear that flood insurance is not required unless required under the National Flood Act because the property is in a flood zone.

HUD Response: These requirements are not new additions to the HECM program. They were previously listed in the regulations at 24 CFR part 203 and incorporated into the HECM program by reference. This rule simply moves the regulations into part 206 in order to reduce the number of cross-references. HUD intends to retain these regulatory requirements.

Comment: Section 206.45(c)(1)(ii) should be deleted or paragraph (1) should be edited by adding a paragraph break after the first comma of § 206.45(c)(1)(ii). The commenter stated that, without a paragraph break, it is unclear whether the phrase "if flood insurance under the National Flood Insurance Program (NFIP) is available" applies only to paragraph (ii) or paragraph (i) as well.

HUD Response: The final rule has been revised to clarify the flood insurance requirements.

Comment: HUD should remove its inclusion of collateral "subsequently erected" as it relates to hazard insurance requirements because risk can be effectively mitigated through insurance requirements for the collateral used to secure the loan at the time of origination. One commenter stated that the ability for the servicers to monitor collateral that has been subsequently erected by the borrower is impractical and would require periodic inspections of the property at an added

cost to the borrower. Another commenter requested that the requirement be to protect the collateralized value at the time of origination.

HUD Response: These requirements are not new additions to the HECM program. They were previously listed in the regulations at 24 CFR part 203 and incorporated into the HECM program by reference. This rule simply moves the regulations into part 206 in order to reduce the number of cross-references. HUD intends to retain these regulatory requirements.

16. Repair Work

Comment: HUD should clarify that repair administration fees need not be listed on the HUD Settlement Statement at closing.

HUD Response: The HUD-1 Settlement Statement is under the purview of the CFPB and is a statement of actual charges and adjustments paid by the borrower and the seller, if applicable, to be given to the parties in connection with the settlement.

Comment: HUD should permit the mortgagees to establish a set-aside range between 150 and 200 percent of the estimated cost of repairs. The commenter stated that when an appraiser makes repair estimates, it would be more beneficial to have up to 200 percent of the estimated cost set aside, whereas if a qualified contractor makes the repair estimates, 150 percent should suffice.

HUD Response: HUD currently requires the repair set aside to be established in an amount equal to 150% of the estimated cost of repairs when such required repairs do not exceed 15% of the MCA. The 150% limit provides a sufficient range of flexibility; however, borrowers are also permitted to add additional funds to the Repair Set Aside, but the funds cannot be drawn until the repairs are completed.

17. "Spot Approval" Exception for Condominiums

Comment: The "spot approval" exception should be reinstated for expired approvals. One commenter stated that in some cases, the "spot approval" exception is the only way in which some elderly homeowners can stay in their condominium unit when the property management does not get the entire project FHA approved. One commenter stated that without access to FHA, seniors who live in a non-certified condominium project are cut off from a major potential source of needed cash to pay bills and support their retirement years. The commenter asked whether there is still an opportunity to

reconsider maintaining the spot approval exception and whether there are alternatives to the spot approval. Another commenter suggested that if the spot approval process is not reinstated, the approval process for condominiums needs to be completely revamped because in some markets, it is impossible to get a condominium FHA approved. One commenter stated that many condominium developments do not fully understand FHA approval and that homeowners are afraid to speak up to say that a HECM would improve their financial circumstances so that they would be able to continue to stay in the development. Another commenter asked whether spot approvals could be allowed for HECMs only, as the previous spot approval process was poorly handled and abused frequently. The commenter stated that condominiums provide an attractive, low-maintenance option for seniors. Another commenter requested that HUD re-visit, update, and remedy the spot approval process for single-family FHA-insured loans, including HECMs.

HUD Response: HECMs are subject to existing HUD Condominium eligibility and approval processes as published in ML 2016-15, ML 2016-13, ML 2015-27, and ML 2012-18. This final rule updates the existing HECM regulations regarding spot loans to comply with condominium guidelines that were implemented under HERA via the mortgagee letters referenced above. HUD appreciates the recommendation and will take it under consideration for future rulemaking and policy guidance.

18. Eligible HECM for Purchase Sales

Comment: Ninety days after acquisition is too long to require the seller to wait in order to re-sell the property. One commenter stated that 75 days is plenty of time to fix up a house, get an offer, and close, and that a seller could sell to conventional and VA loan customers earlier.

HUD Response: This requirement does not represent a change in the regulations. This rule simply restates the requirements of part 203 that were previously incorporated into part 206 through cross-references.

19. MIP

Comment: The MIP is too high. One commenter stated that the elevated upfront MIP will often alienate a senior due to cost and suggested, alternatively, that the upfront MIP could be added to the balance similar to the FHA forward mortgage process. Another commenter suggested that the refund of MIP be permitted on a sliding scale or prorated

basis during the first few years of the loan.

HUD Response: It has been HUD's longstanding practice to allow borrowers to finance the initial MIP charge. In response to the sliding scale or proration suggestion, once a mortgage is insured, HUD's longstanding policy has been to require termination of the mortgage without refunding initial MIP. This practice will continue. The limited circumstances for warranting a refund of initial MIP are outlined in paragraph 7-13 of HUD Handbook 4235.1.

Comment: HUD should change the upfront MIP structure for all HECMs. Several comments proposed a tiered MIP structure tied to the percent of Principal Limit disbursed during the first 12 months of the HECM. One commenter suggested a .01 percent upfront MIP for initial draws up to 25 percent, a half-percent upfront MIP for initial draws between 26 and 50 percent, two and half percent upfront MIP for initial draws between 51 and 75 percent, and a three and a half percent upfront MIP for initial draws between 76 and 100 percent. Another commenter suggested that any initial draw under 50 percent would be charged a half-percent upfront MIP; an initial draw between 50 and 60 percent would be charged a one percent upfront MIP; an initial draw between 60 and 70 percent would be charged one and a half percent upfront MIP; etc.

HUD Response: HUD will take these comments under consideration when implementing related policy through guidance.

Comment: The initial MIP should be refundable for a HECM terminated in the first twelve months due to the death of the borrower(s).

HUD Response: Once a mortgage is insured, HUD's longstanding policy has been to require termination of the mortgage without refunding initial MIP.

Comment: HUD should review the legislative history and authority regarding HUD's ability to increase the MIP and re-consider proposing this change at another time.

HUD Response: This final rule updates the existing HECM regulations to include statutory MIP requirements that were implemented under Public Law 111-229 on August 11, 2010, that amended subparagraph (B) of section 203(c)(2) of the National Housing Act (12 U.S.C. 1709(c)(2)(B)).

Comment: The consumer should only be credited with 100 percent of the initial MIP if they are too short to close; otherwise, a fixed amount or percentage should be credited. The commenter stated that lenders that normally credit 100 percent have the servicing rights so

they will recoup this credit on the back end, but some other loan officers cannot offer the same deal and are disadvantaged.

HUD Response: HUD requires the payment of initial MIP as a condition of endorsement. HUD is responsible for oversight and management of the HECM portfolio, not competitive pricing. HUD encourages and supports a borrower's decision to look for the best financing option that will meet their individual short- and long-term needs.

Comment: HUD should refrain from changing the time period of 10 days to remit payment of initial MIP to the Commissioner. The commenter stated that there are occasional cases in which the commenter is unaware of an error with the MIP payment, and 5 days would not be sufficient time to resolve the issue and remit payment before incurring a late charge.

HUD Response: FHA is not changing the 15-day requirement to remit initial MIP to the Secretary. However, the final rule retains the requirement to assess a late charge when MIP is remitted more than 5 days after the payment date as described in § 206.111(a).

20. Insurance of Mortgage

Comment: HUD should use the principal limit on the deed instead of 150 percent of the maximum claim amount. The commenter explained that using a deeded amount of 150 percent of the maximum claim amount causes reverse mortgage borrowers in certain states to pay approximately 260 percent of the tax they should owe. The commenter stated that these states charge an intangible tax or deed/mortgage tax on the deeded amount of the loan.

HUD Response: HUD appreciates the recommendation and will take it under consideration for future policy guidance.

21. Commissioner Authorized to Make Payments

Comment: If the regulations permit the Commissioner to require or not require a subordinate mortgage through notice, HUD should clarify how this change will affect the claims process.

HUD Response: The proposed rule provides flexibility for the Commissioner to consider future policy changes. HUD appreciates the recommendation and will take it under consideration for future policy guidance.

22. Acquisition and Sale of Property

Comment: Acquiring appraisals in the currently strong real estate market typically takes 45–60 days, so the

proposed 30-day time frame is not realistic. One commenter asked what happens when the appraisal is not performed within 30 days of application if the delay is a result of borrower action or inaction. Another commenter stated that the longer appraisal turnaround time can be attributed to the market, weather, review of title prior to appraisal, borrower illness, borrower-created delays, or the rural location of a property.

HUD Response: HUD's longstanding policy has been to use 30 days as the appraisal timeframe. However, should there be any issues due to market conditions making appraisers unavailable, the mortgagee as always may request an extension, which HUD, in its discretion, may grant.

Comment: HUD should revise the proposed language to state that a servicing mortgagee must have a valid appraisal in place at the time of the foreclosure sale date based on HUD's current definition of a valid appraisal.

HUD Response: HUD will issue guidance subsequent to the publication of the final rule in which it will clarify the use of a valid appraisal for establishing the bid amount at a foreclosure sale.

Comment: HUD should provide additional clarity regarding the effective date for the correction involving the appraisal date following the borrower's death instead of the foreclosure sale. The commenter stated that HUD and participating lenders may have disbursed excessive funds as a result of multiple appraisal orders and subsequent curtailments due to the previous drafting error. Some commenters suggested that this drafting error correction should be retroactive in order to protect servicing mortgagees for missing the timeline.

HUD Response: This final rule does not and cannot amend insurance contracts for HECM loans.

Comment: HUD should differentiate the type of "value" requested in reference to the term, "appraised value." The commenter highly recommended, in the case of a foreclosure sale, for the appraisal to include an estimate of the property's market value and liquidation value.

HUD Response: HUD intends to retain its longstanding practice of requiring the "as is" appraised value.

Comment: HUD should clarify that appraisals for pending property sales should be ordered from a HUD-rostered appraiser within 30 days according to the uniform standards, while in cases of foreclosure, appraisals should be received within 30 days prior to the expected foreclosure sale.

HUD Response: Section 206.125(b) of the final rule was revised to provide the Commissioner with the flexibility to have the property appraised by an appraiser on the FHA Roster or other qualified individual. HUD will publish guidance subsequent to the publication of the final rule in which it can clarify the use of a valid appraisal for establishing the bid amount at a foreclosure sale.

Comment: Picky appraisal conditions are infuriating appraisers to the point that they are refusing to accept the orders.

HUD Response: HUD appreciates the comment and will take it under consideration for future policy guidance.

Comment: HUD should tighten appraiser eligibility standards. The commenter suggested that HUD consider a requirement for FHA appraisers to demonstrate verifiable education on FHA appraisal requirements, as authorized by the Housing and Economic Recovery Act of 2008.

HUD Response: Regulations of appraiser requirements are outside the scope of this proposed rule, but HUD appreciates the comment and will take it under consideration.

Comment: There is currently a significant undersupply of appraisers. One commenter suggested that the requirements to become an appraiser should be revised. Another commenter stated that the undersupply is causing borrowers to pay above-market rates and that the wait times are beginning to increase beyond one month in certain areas. The commenter suggested that some funds should be placed into attracting talent into the appraiser pool.

HUD Response: Regulations of appraiser requirements are outside the scope of this proposed rule, but HUD appreciates the comment and will take it under consideration.

Comment: For the Cash for Keys program, the amount should be consistent with Mortgagee Letter 2016–03, up to a maximum of \$3,000.

HUD Response: HUD will take these comments under consideration when implementing related policy through guidance.

Comment: HUD should allow for the Cash for Keys option in lieu of evictions and not merely deed-in-lieu transactions.

HUD Response: HUD has adopted this change in the final rule and will make Cash for Keys available after foreclosure to bona fide tenants only. A bona fide tenant means a tenant of the property who is not a mortgagor, borrower, a spouse or child of a mortgagor or

borrower, or any other member of a mortgagor's or borrower's family. The incentive to have the borrower or person with legal right to dispose of the property provide a deed-in-lieu would be negated if they were aware that they could force the mortgagee to foreclose, allowing them to remain in the property longer and still be paid a Cash for Keys incentive.

Comment: Cash for Keys should not only be available during the first six months following the due date. The commenter stated that there may be circumstances in which a property cannot be transferred within this time frame, but a deed-in-lieu of foreclosure would still be an attractive option for both parties.

HUD Response: Deeds in lieu are offered as a means to save the time it takes to foreclose, particularly in states with long foreclosure timeframes and to limit the expenses HUD reimburses in eventual claims. As indicated in the preamble to the proposed rule, 9 months allows a borrower or other party with the legal right to dispose of the property 6 full months to sell the property and then 3 additional months for the mortgagee to obtain a title search and get the deed signed, provided that title is clear. Allowing a deed in lieu to occur after that time does not represent the time or cost savings intended by a deed in lieu.

Comment: Nine months is not sufficient time to allow the borrower to attempt to sell the property under the time frame for a deed-in-lieu of foreclosure following the time at which the HECM becomes due and payable. The commenters stated that deed-in-lieu of foreclosure transactions should be allowed up until the foreclosure sale date. The commenters also stated that probate proceedings can make it difficult for the heirs to sell the property within nine months.

HUD Response: Deeds in lieu are offered as a means to save the time it takes to foreclose, particularly in states with long foreclosure timeframes and to limit the expenses HUD reimburses in eventual claims. As indicated in the preamble to the proposed rule, 9 months allows a borrower or other party with the legal right to dispose of the property 6 full months to sell the property and then 3 additional months for the mortgagee to obtain a title search and get the deed signed, provided that title is clear. Allowing a deed in lieu to occur at any time up until the foreclosure sale date does not represent the time or cost savings intended by a deed in lieu.

Comment: Sixty days is not sufficient for notice to be provided to HUD regarding the mortgage becoming due

and payable. One commenter stated that death cannot always be discovered within this timeframe, which results in servicers facing significant curtailment risk due to their inability to provide such timely notice. The commenter suggested as an alternative to require mortgagees to report notice of the passing of the last surviving borrower within ten days of receiving notification of the borrower's death following reasonable diligence in monitoring the loan portfolio. Another commenter recommended notification within 60 days of the servicer discovering and confirming the title was conveyed and that no HECM borrower remains on title. One commenter recommended that the required timeline should begin when the servicer knew or reasonably should have known of the death.

HUD Response: The timeframes in the proposed rule for the due date did not change, with the exception of adding the end of a deferral period. However, the final rule codifies in § 206.125 the guidance issued in ML 2015–10, and HUD believes these are acceptable timeframes.

Comment: The proposal to base the foreclosure on the due date conflicts with ML 2015–10 and should remain as is.

HUD Response: HUD believes the initiation of foreclosure is more appropriately aligned with the due date, i.e., the date of notice to HUD that the borrower has died or conveyed title to the property or the date HUD grants due and payable permission. Basing the foreclosure initiation date on when notice is made to the borrower poses increased risk to the MMIF because it allows mortgagees to delay the process unnecessarily by simply withholding the required notice and thereby increasing eventual claim expenses.

23. Payment of Claim

Comment: As in Mortgagee Letter 2016–03, HUD should require servicers to exercise reasonable diligence in prosecuting the foreclosure proceedings to completion and in acquiring title to and possession of the property pending varying state procedures. The commenter stated that the process associated with the foreclosure of a property with HECM financing can be lengthy and that the two-year reimbursement period would put both the MMIF and servicer at risk.

HUD Response: HUD has taken public comments into consideration and has replaced the two-year reimbursement period in § 206.129(d)(3) with a limit of two-thirds of total advances for the allowable expenses outlined in this section.

Comment: HUD should remove the proposed two-year limitation on insurance claim reimbursements for property charge advances. One commenter stated that if this limitation were applied to existing HECMs, the number of HECM foreclosures would increase as servicers called the loans due and payable as the two-year limit was reached. The commenter also stated that this result would conflict with HUD guidance allowing the deferral of due and payable status for low-balance arrearages and “At Risk” borrowers. Another commenter stated that the process can be delayed by factors outside of a servicer's control, such as a tax and insurance default and a repayment plan, new tax and insurance disbursements, and default/foreclosure timelines.

HUD Response: HUD has taken public comments into consideration and has replaced the two-year reimbursement period in § 206.129(d)(3) with a limit of two-thirds of total advances for the allowable expenses outlined in this section.

Comment: Regarding the regulations addressing the amount of payment when the borrower sells the property, HUD should include provisions for loans assigned prior to the effective date of the rule that are or are not in due and payable status. The commenter stated that for such loans that are due and payable, the claim amount should be based on the outstanding loan balance as of the due date and should include the allowance for items to capture the costs of title, foreclosure costs, and costs associated with the acquisition of the property.

HUD Response: The language in the final rule has been revised to clearly define what is reimbursable where the borrower sells the property, pre and post due and payable, based on the effective date of the final rule.

Question 1: Should the HECM program provide for the pro rata curtailment of debenture interest and reduction of expenses incurred as a result of the mortgagee's delay in filing the mortgage insurance claim, and if so, how should such a policy be structured to ensure feasible implementation?

Comment: Debenture interest should be curtailed on a pro rata basis, but curtailing expenses could create an incorrect incentive on the part of servicers to refrain from expending such amounts, which would perhaps impact recoveries and place the MMIF at risk.

HUD Response: The regulations do not remove the requirement for mortgagees to protect the lien interest or to preserve and protect the property.

HUD is exploring options to ensure mortgagees meet required timeframes. There is great risk to the FHA MMIF when mortgagees fail to timely prosecute foreclosures or take other required actions.

Comment: Debenture interest should be paid from the date of notification to HUD. The commenter stated that servicers must demonstrate reasonable diligence in monitoring for death but should not be penalized for issues related to reporting bureaus.

HUD Response: HUD believes without this time frame; mortgagees will have little incentive to move the HECM to termination in a timely manner. In addition, HUD believes mortgagees have resources to identify the borrower's death, but because there may be an expense related to such resources, the mortgagees prefer not to subscribe to them. HUD contends that 60 days is sufficient time to identify a borrower's death through available resources, and move the HECM toward its logical conclusion.

Comment: The debenture interest rate should continue to be based on the endorsement date rather than the date on which the default on the mortgage occurred.

HUD Response: HUD did not propose changing the date upon which the debenture interest rate is based. It only proposed to restate the requirements of part 203 that are applicable to the HECM program instead of cross-referencing to part 203, which includes the debenture interest calculations.

24. First Lien Status

Comment: As a result of this rule change, lenders and servicers in super lien states will do a more thorough job of monitoring HOA payments to ensure that the liens do not occur in the first place. The commenter stated that this rule change would allow homeowner associations to receive the funds they are owed sooner.

HUD Response: HUD appreciates the comment.

Comment: The proposed rule change on the lien priority for homeowners' associations and condominiums disregards the laws of 21 states and the District of Columbia. Commenters noted that allowing homeowners' association and condominium "super liens" to take precedence over HECM liens would probably render such properties unloanable. Some commenters stated that the proposed changes would effectively eliminate a condominium or house purchase in those states by anyone planning to finance with a HECM for Purchase. One commenter stated that condominiums provide a maintenance-

free lifestyle that is especially popular with the HECM customer base. Another commenter estimated that there would be about a sixteen percent loss of volume as a result of this rule change. One commenter stated that this change may cause further restrictions to financing options for senior homeowners living in low maintenance condominiums. Commenters stated that the rule change exposes community association homeowners and residents, including senior citizens, to risk of higher housing costs and unjust financial burdens. One commenter stated that these state association lien priority laws intend to prevent the unjust enrichment of lenders at the expense of community association homeowners that occurred during the Great Recession. Another commenter stated that the proposed rule may disqualify more than 4 million senior citizens living in condominiums. One commenter stated that removing the HECM option for homeowners and potential homeowners in these markets would have dire consequences on the senior population, the economic stability in those markets, and a negative impact on the MMIF due to the reduction of HECM loans. Another commenter stated that the difficulty surrounding assignment of loans in such markets could result in an inadvertent curtailment or cessation of HECM mortgage origination and servicing. One commenter stated that seniors move into condominiums without considering a HECM, and then find out later that this is not an option.

HUD Response: HUD has removed the language referring to homeowners' association liens and condo association liens for the final rule. However, HUD reminds mortgagees that in order for a HECM to be eligible for loan assignment, the mortgage must be a valid, legally enforceable first lien and title to the property securing the mortgage must be good and marketable. In the event that HUD discovers later that good and marketable title is lacking due to a lien, HUD may require repurchase.

Comment: HUD should prohibit HOA liens of record at the time of assignment, and not afterwards. The commenter stated that servicing mortgagees have no way to determine whether HOA dues are past due, and a lien from past due HOA dues may only be reflected on a title report ordered as part of or prior to an assignment.

HUD Response: HUD has removed the language referring to homeowners' association liens and condo association liens in this final rule. However, HUD reminds mortgagees that in order for a

HECM to be eligible for loan assignment, the mortgage must be a valid, legally enforceable first lien and title to the property securing the mortgage must be good and marketable. In the event that HUD discovers later that good and marketable title is lacking due to a lien, HUD may require repurchase.

Comment: The non-payment of HOA/COA fees is already a condition of default for HECMs. The commenter encouraged HUD to share data regarding the extent of HOA defaults to help advocates better understand the scope of this issue.

HUD Response: HUD has removed the language referring to homeowners' association liens and condo association liens in this final rule. However, HUD reminds mortgagees that in order for a HECM to be eligible for loan assignment, the mortgage must be a valid, legally enforceable first lien and title to the property securing the mortgage must be good and marketable. In the event that HUD discovers later that good and marketable title is lacking due to a lien, HUD may require repurchase.

Comment: Instead of threatening seniors' ability to take advantage of the HECM program in certain states, HUD should focus on ensuring compliance from the lending community with program rules and guidelines concerning foreclosure, property preservation, and title conveyance. The commenter stated that the proposed rule threatens pro-homeowner, pro-consumer state statutes by excluding senior citizens from the HECM program in these states.

HUD Response: HUD has removed the language referring to homeowners' association liens and condo association liens in this final rule. However, HUD reminds mortgagees that in order for a HECM to be eligible for loan assignment, the mortgage must be a valid, legally enforceable first lien and title to the property securing the mortgage must be good and marketable. In the event that HUD discovers later that good and marketable title is lacking due to a lien, HUD may require repurchase.

Comment: HUD's proposal will likely have a disproportionate, negative impact on female HECM borrowers residing in condominiums in association lien priority jurisdictions.

HUD Response: HUD has removed the language referring to homeowners' association liens and condo association liens in this final rule. However, HUD reminds mortgagees that in order for a HECM to be eligible for loan assignment, the mortgage must be a

valid, legally enforceable first lien and title to the property securing the mortgage must be good and marketable. In the event that HUD discovers later that good and marketable title is lacking due to a lien, HUD may require repurchase.

Comment: HUD does not justify this rule change by indicating any losses HUD may have suffered insuring reverse mortgages due to state law association lien priority.

HUD Response: HUD has removed the language referring to homeowners' association liens and condo association liens in this final rule. However, HUD reminds mortgagees that in order for a HECM to be eligible for loan assignment, the mortgage must be a valid, legally enforceable first lien and title to the property securing the mortgage must be good and marketable. In the event that HUD discovers later that good and marketable title is lacking due to a lien, HUD may require repurchase.

Comment: HUD should include in the LESA any association assessments in states that recognize association lien priority. One commenter suggested requiring a set-aside for 6 months' worth of fees for borrowers in those markets that have super lien laws. Another commenter stated that HUD should explore whether HOA dues should be included as part of the required set-aside, as well as what the impact would be on low-income households.

HUD Response: HUD has removed the language referring to homeowners' association liens and condo association liens in this final rule. However, HUD reminds mortgagees that in order for a HECM to be eligible for loan assignment, the mortgage must be a valid, legally enforceable first lien and title to the property securing the mortgage must be good and marketable. In the event that HUD discovers later that good and marketable title is lacking due to a lien, HUD may require repurchase.

Comment: The different treatment of utility charges and condominium or HOA fees results in irrational discrimination against owners in such associations. The commenter stated that if a nonpayment of utilities would result in a lien, then HUD will reimburse the lender for advancing the payment as a property charge. However, the commenter stated, if the utilities are centrally metered and paid for by a condominium association or HOA and reimbursed through assessments, then HUD would not have to reimburse the lender for advancing payments.

HUD Response: HUD has removed the language referring to homeowners'

association liens and condo association liens in this final rule. However, HUD reminds mortgagees that in order for a HECM to be eligible for loan assignment, the mortgage must be a valid, legally enforceable first lien and title to the property securing the mortgage must be good and marketable. In the event that HUD discovers later that good and marketable title is lacking due to a lien, HUD may require repurchase.

Comment: HUD should clarify its position and procedures under circumstances where state laws limit a mortgage's first lien status.

HUD Response: HUD has removed the language referring to homeowners' association liens and condo association liens in this final rule. However, HUD reminds mortgagees that in order for a HECM to be eligible for loan assignment, the mortgage must be a valid, legally enforceable first lien and title to the property securing the mortgage must be good and marketable. In the event that HUD discovers later that good and marketable title is lacking due to a lien, HUD may require repurchase.

Comment: HOA dues should be considered property charges and treated like taxes and insurances with regard to default and repayment plans in the super lien states in which delinquent HOA dues may become a superior lien to the HECM. Commenters stated that the consumer should be allowed to repay any advances made on these liens, just like any other property charge. One commenter stated that this would protect HUD's lien position and the MMIF, and provide loss mitigation options to HECM borrowers.

HUD Response: HUD has removed the language referring to homeowners' association liens and condo association liens in this final rule. However, HUD reminds mortgagees that in order for a HECM to be eligible for loan assignment, the mortgage must be a valid, legally enforceable first lien and title to the property securing the mortgage must be good and marketable. In the event that HUD discovers later that good and marketable title is lacking due to a lien, HUD may require repurchase.

Comment: HUD should expressly prohibit the extinguishment of HECM mortgage lien interests by HOA super liens. Commenters stated that HUD has successfully relied on the Constitution's Supremacy Clause to bar HOA foreclosure sales from extinguishing first liens deeds of trust in Nevada when they are insured through HUD.

HUD Response: HUD has removed the language referring to homeowners'

association liens and condo association liens in this final rule. However, HUD reminds mortgagees that in order for a HECM to be eligible for loan assignment, the mortgage must be a valid, legally enforceable first lien and title to the property securing the mortgage must be good and marketable. In the event that HUD discovers later that good and marketable title is lacking due to a lien, HUD may require repurchase.

Comment: HUD should clarify that this requirement would not apply to existing HECM loans where HUD has issued a commitment to insure.

HUD Response: HUD has removed the language referring to homeowners' association liens and condo association liens in this final rule. However, HUD reminds mortgagees that in order for a HECM to be eligible for loan assignment, the mortgage must be a valid, legally enforceable first lien and title to the property securing the mortgage must be good and marketable. In the event that HUD discovers later that good and marketable title is lacking due to a lien, HUD may require repurchase.

25. Effect of Noncompliance With Regulations

Comment: The proposed new section 206.137 would violate the basic precept in the National Housing Act that mortgage insurance on an FHA loan is incontestable in the hands of the holder. The commenter stated that this provision would cause a problem with loans being pooled or sold in the secondary market, as almost all HECM loans are.

HUD Response: Section 206.137 does not represent a change in the regulations. This rule incorporates this provision from 24 CFR part 203 into part 206, whereas it had previously been incorporated by cross-reference.

26. Final Payment

Comment: HUD needs to process all past due HECM supplemental claims and streamline the process for paying such claims in the future within a time period less than that proposed in new section § 206.144.

HUD Response: Section 206.144 does not represent a change in the regulations. This rule incorporates this provision from 24 CFR part 203 into part 206, whereas it had previously been incorporated by cross-reference.

27. Providing Information

Comment: HUD should expand its requirement to provide the borrower with a single statement at the end of each month to include additional

documentation that will help to modernize the HECM program. The commenter suggested that the borrower be provided with visual charts and diagrams depicting the loan status, analysis tools for borrowers to explore changing the disbursement plan, online banking methods to review account statement data, and account statement formats that comply with the Plain Writing Act. Another commenter stated that specific contact information for HECM experts with the mortgagee or servicer should be included on the monthly statement.

HUD Response: HUD does not intend to prescribe a burdensome process for providing monthly statements. However, HUD does not restrict mortgagees from offering any additional information through the monthly statement. Additionally, servicers' monthly statements already include a phone number for borrowers to contact a HECM representative.

Comment: Mortgagees should be required to provide borrowers with a dedicated phone number they can call and speak to employees on a team specifically trained to address inquiries concerning HECM mortgages.

HUD Response: The final rule, as did the proposed rule, states that the borrower may speak to the employee or employees specifically designated by the mortgagee or its servicer to address inquiries concerning mortgages insured under this part. Since the part in question is 24 CFR part 206, which deals solely with the HECM program, the language in the rule already addresses the commenter's concern.

Comment: HUD should retain the requirement that the mortgagee provide a single point of contact for HECM loan inquiries. The commenter stated that as seniors can be targets for fraud or elder abuse, providing a consistent point of contact can provide borrowers with a level of comfort when dealing with their reverse mortgage company.

HUD Response: With the growth of the HECM portfolio, the staffing turnover within the mortgage industry, and the challenges a borrower can face if their single point of contact is away from the office when needed, it is no longer feasible for borrowers to be provided the name of a single person with whom they may speak. HUD feels that having a group of mortgagee staff specializing in HECMs available to borrowers gives borrowers more opportunity to speak to someone who can assist them. HUD is adamant, however, that borrowers must be able to reach a live person when calling a mortgagee and not have to rely on voice mail and a return call.

28. Life Expectancy Set-Asides

Comment: HUD should allow the life expectancy set-aside to be re-evaluated after closing in order to use the correct property tax amount for that year rather than the previous year's amount.

HUD Response: Currently, HUD requires the servicing mortgagee to disburse payments based on the actual property tax and insurance amounts for that year.

Comment: Lenders should have the ability to change the first-year set-aside to \$0, as pre-closing charges are being paid from the loan proceeds.

HUD Response: Currently, HUD permits the mortgagee to require, or when requested by the borrower, to disburse funds for payment of taxes and insurance at closing, when such property charges are coming due within 30–45 days following closing. Payment of taxes and insurance by the Mortgagee usually requires multiple disbursements by the lender over the initial disbursement period depending on due dates for tax and insurance payments, thus, it is not feasible to omit the first year of Life Expectancy Set Aside payments.

Comment: The borrower's election to have the servicer pay taxes and insurance by drawing from a line of credit or withholding funds from monthly tenure payments should not be irreversible and should be available to borrowers at any time during the HECM. One commenter stated that few borrowers would elect this option without such flexibility.

HUD Response: HUD appreciates the recommendation and has added language that provides the Commissioner with the authority to issue a **Federal Register** Notice to expand the property charge payment options at a future date.

Comment: HUD should eliminate the lifetime and partial LESA and implement a three-year tax and insurance reserve set-aside. The commenter stated that LESAs can amount to hundreds of thousands of dollars or even exceed the entire amount of the potential HECM, particularly in higher property tax areas.

HUD Response: HUD explored various options to address its property charge default risk, including shorter periods. After careful consideration and review, the LESA provided the most security for allowing the borrower to age in place and comply with the terms and conditions of the mortgage.

Comment: Partially-funded LESAs should be paid directly to the tax authority or insurance company. The commenter stated that disbursement to

the borrower introduces additional risk that property charges will not be paid.

HUD Response: HUD explored various options to address its property charge default risk, including identifying prospective borrowers who have shown a willingness to pay their financial obligations but fall short of having the means to make the payment. The Partially-Funded LESA fills the gap for allowing the borrower to be responsible for such payments. Additionally, tax payments cannot be paid on a partial basis and would be operationally infeasible.

Comment: Thirty days is an insufficient time frame for a borrower to respond to the mortgagee's notification of a missed property charge payment. The commenter stated that thirty days is a short time to respond to the mortgagee's request regarding the non-payment, especially when there is a delay in the mortgagee's processing or mailing of the initial notice. The commenter suggested that the time period be extended to 90 days.

HUD Response: This provision simply codifies what has been implemented through ML 2015–10. HUD believes the timeframe is sufficient for a borrower to have contacted the mortgagee to express their willingness to repay the funds due.

Comment: HUD should provide a time frame or guidance concerning how the mortgagee is to determine the borrower is unwilling or unable to repay the mortgagee for funds advanced to pay property charges outside of a LESA.

HUD Response: ML 2015–11 provides the availability of loss mitigation options for a mortgagee to work with the borrower.

29. Allowable Charges and Fees After Endorsement

Comment: What is the goal of allowing a servicing charge to be included in the mortgage Note rate?

HUD Response: The option for allowing a servicing charge which is included in the mortgage Note Rate provides flexibility for the lender to cover servicing costs in a manner that is consistent with mortgage industry practices if a Servicing Fee Set Aside is not established. In addition, allowing the servicing charge to be included in the Note Rate provides the borrower access to more funds from which to draw against since such funds are not being withheld in the Servicing Fee Set Aside.

Question 1: What is an appropriate servicing fee range (minimum and maximum dollar amounts) for the flat monthly servicing fee, and what factors support the upper and lower bounds of that range?

Comment: HUD should not allow this charge. The commenter stated that the charge would infuriate and confuse the borrower, as well as complicating the loan and contributing to the headline that reverse mortgages are too expensive.

HUD Response: Servicing fee charges are an allowable fee that has been a part of the HECM program since inception. Servicing fees provide compensation to servicers for servicing the HECM loan.

Comment: HUD should increase the dollar amounts for allowable servicing fees based on the Consumer Price Index from the last servicing fee adjustment in 1998. The commenter stated that reverse mortgage borrowers usually require more time spent on servicing-related issues as compared to forward mortgage borrowers. The commenter also justified a raise in servicing fees based on the increase in servicing policy requirements implemented since 1998.

HUD Response: HUD will take these comments under consideration when implementing related policy through guidance.

Comment: There is no reason for the annual adjustable and fixed rate loans to have a different dollar amount servicing fee than the monthly adjustable HECMs. The commenter stated that all of these products have the same servicing requirements. *HUD Response:* Adjustable rate loans require additional support for future draws and payment plan changes.

Question 2: What is an appropriate servicing fee range, in basis points, that could be included in the Note rate, and what factors support the upper and lower bounds of that range?

Comment: There is no reason to separate the servicing fee from the lender margin. The commenter stated that on a fixed rate loan, the lender always has the option of charging a higher interest rate to cover increased servicing costs, and on an adjustable rate loan, the margin can be increased to cover rising servicing costs.

HUD Response: The Note rate includes the lender's margin and may also include a servicing fee as stated in § 206.207(b).

Comment: The basis range is acceptable as currently prescribed and adjustments to this range should be made by the Government National Mortgage Association (GNMA).

HUD Response: The current prescribed range is in accordance with GNMA servicing parameters.

30. Housing Counseling
Comment: HUD should include continuing education requirements so that counselors keep up-to-date on the ongoing changes in the HECM program. The commenter noted that some clients have indicated counselors have discouraged them from using a HECM and that the counselors seem unaware of the usefulness of a HECM ARM as a financial planning tool.

HUD Response: All counseling sessions are required to cover all the potential risk for a HECM, including property charges, ineligible NBS, etc. The rule would not change those existing counseling requirements in these areas. One of the primary purposes of HECM counseling is to provide education on all aspects of HECMs from an objective third party. The current HECM counselor roster rule requires that counselors take continuing education every 2 years and retake the HECM counselor test every 3 years. This ensures that counselors stay current with program requirements.

Comment: Counseling should be mandatory for all seniors considering FHA loans. The commenter stated that it is unconscionable for seniors to receive a forward 20–30-year loan and not receive counseling on the option of a HECM loan. *HUD Response:* Counseling by a counselor on the HECM roster is statutorily required. Given the unique nature of a HECM loan, the requirement for counseling is a critical consumer protection for an “at risk” population.

Comment: Borrowers are not very well-prepared for the multiple downside risks inherent in reverse mortgages. One commenter stated that many borrowers are told by unscrupulous loan brokers that there are no further obligations to fulfill once they receive the HECM, and that current counseling is ineffective at correcting those misrepresentations. The commenter suggested that HUD study this counseling problem and adjust counseling requirements accordingly. Another commenter stated that the counselors should have training and additional responsibility to inform the borrower whether a reverse mortgage is right for the borrower. Alternatively, the commenter stated, the counselor should be required to inform the borrower that they should seek financial or legal advice to understand the suitability and consequences of the HECM.

HUD Response: HUD disagrees with these comments. HUD believes HECM Roster Counselors are qualified and fully capable, based on their training

and continuing education, to thoroughly educate clients on reverse mortgages. Furthermore, HECM Roster Counselors must follow a strict protocol when providing counseling to potential HECM Borrowers. The protocol, found in Appendix 2 of HUD Handbook 7610.1, Rev.5, requires HECM Counselors to educate clients on the financial implications of obtaining a HECM, the effect of obtaining a HECM or other reverse mortgage product on public benefits and on borrower and non-borrower spouse post-closing obligations for items, including, but not limited to, repairs, payment of taxes and insurance and loan re-payment when the loan becomes due and payable.

HUD believes that the proper role of a HECM Counselor is to educate clients on the features of reverse mortgages and on the appropriateness of a reverse mortgage or other financial options to meet the client's needs. HUD further believes that it is not the role of the HECM Counselor to advise the client whether to proceed with a reverse mortgage, or which reverse mortgage product to use, but to provide guidance and resources to enable the client to make an informed decision. HUD disagrees that HECM Counselors should be required to inform clients that they should seek financial or legal advice to understand the suitability and consequences of the HECM. As with forward mortgages, it is the consumers' decision whether or not to seek financial or legal advice before entering into a loan transaction.

Comment: Counselors should not explicitly tell borrowers to shop for loans or that they can get certain terms such as a zero origination fee. One commenter stated that the role of the counselor should be strictly limited to providing counseling on how the program works and not to give the borrower advice.

HUD Response: A thorough HECM counseling session includes a presentation of all the alternatives to a HECM. Counselors may recommend that the borrower shop around for better priced products as part of such a session, but are not permitted to direct a client to any specific lender or provide lender price comparisons.

Comment: HUD should clarify to what “electronic database” the counselor needs to upload the counseling certificate. One commenter asked whether an electronically uploaded certificate would waive the requirement for an original borrower signature on the counseling certificate. Another commenter asked for clarification on this point. The commenter also stated that HUD should give seniors and

mortgagees the option to receive a hard copy of the counseling certificate.

HUD Response: Upon further consideration to require HECM counselors to upload the certificate to an “electronic database,” HUD is no longer pursuing this option as it would impose a financial burden upon borrowers to send a signed and dated copy of the certificate back to the counselor and difficult for the counselor to manage the process.

Comment: *Non-borrowing spouses should not have an additional counseling component.* The commenter stated that such a requirement would cause an unnecessary increase of fees as well as delay time to begin the HECM financing process. The commenter also stated that HUD would need to address the problem of educating all HECM counselors and updating the information they provide to borrowers and non-borrowing spouses.

HUD Response: Non-borrowing spouses have been required to receive counseling since 2009. HECM counselors make every effort to counsel both borrowers and non-borrowing spouses jointly unless extenuating circumstances exist that prevent this. This is part of the guidance to counselors in the HECM protocol. HECM counselors are also encouraged to include family members in a counseling session. The clients have the ultimate decision as to who to include in these sessions, and this may include legal counsel, financial advisors, etc.

Comment: *HUD should clarify that mortgagees may denote on the HECM mandated counseling disclosure that the borrower is required to undergo face-to-face counseling or be counseled by a counselor or counseling agency that is “domiciled” within a particular state.* The commenter also suggested that HUD indicate which counseling agencies can provide such face-to-face counseling or is domiciled within a state. The commenter stated that several states have face-to-face counseling requirements or requirements that the senior be counseled by a counselor or counseling agency that is “domiciled” in a particular state.

HUD Response: HUD will consider this recommendation as part of the current HECM counseling protocol revisions.

Comment: *HUD should require information about suitability to be provided to prospective borrowers prior to the counseling session.* One commenter suggested that HUD refer to California Civil Code Section 1923.5 as a guide for providing the potential borrower such information.

HUD Response: HUD will consider these suggestions as part of the current HECM counseling protocol revisions.

Comment: *Counseling should be in-person or face-to-face electronically and should be digitally recorded and broken up into two sessions.* The commenter also suggested that the counseling should include all members of the household in a discussion on inter-family loans and provide clear information on where to turn for help if the borrower later has problems with the reverse mortgage.

HUD Response: HUD will consider these suggestions as part of the current HECM counseling protocol revisions.

Comment: *HUD should not restrict financial professionals from helping borrowers seek professional money management advice.* The commenter stated that HUD should not ask the homeowner if they plan to use the HECM proceeds to purchase life or annuity products. The commenter also stated that almost all HECM lenders are trying to tie the product more closely with the financial and estate planning communities.

HUD Response: The language in the rule is consistent with the statutory requirement in § 255(d)(11) of the NHA.

31. Maximum Closing Costs Allowed on Sale of Property

Question 1: Is 11 percent a reasonable cap? HUD chose this percentage based on the policy for sale of its REO inventory, which allows for payment of 6 percent sales commission and 5 percent for other closing costs, but is interested in comments to indicate whether the amount should be higher or lower, and why the commenter believes the adjustment is appropriate.

Comment: *The maximum closing costs allowed should be based on a sliding scale so that the expenses are limited to the greater of \$15,000 or 11 percent of the sales price of the property.* The commenter stated that strictly limiting such charges to 11 percent for properties that sell for small dollar amounts may not even cover the actual expenses incurred by the mortgagee.

HUD Response: The final rule now states that closing costs shall not exceed the greater of: (a) 11 percent of the sales price; or (b) a fixed dollar amount as determined by the Commissioner. The amount as determined by the Commissioner will be issued through **Federal Register** notice.

Comment: *The schedule of allowable costs under the 11 percent cap should include lien payoff, cleaning, and repairs.* The commenter stated that the

economics of a HECM short sale often lead to property maintenance issues. The commenter also stated that allowable closing costs need to be clearly communicated to servicers.

HUD Response: Due to the non-recourse nature of HECM loans, short sales represent a risk to the FHA MMIF through claims. Furthermore, short sales do not allow the borrower or seller to retain any funds and the sales price is based on the “as is” appraised value. Therefore, it is not necessary for the borrower to make extensive repairs.

Comment: *This amount is unworkable for lower balance home values, unless there is a tiered approach.* One commenter stated that this limitation can result in a shortage of closing costs when selling lower value homes because many of the costs are fixed and unrelated to the sale price of the property.

HUD Response: The final rule states that closing costs shall not exceed the greater of: (a) 11 percent of the sales price; or (b) a fixed dollar amount as determined by the Commissioner. The amount as determined by the Commissioner will be issued through **Federal Register** notice.

Question 2: Should HUD implement a tiered approach to the maximum percent of closing costs in relation to sales price? For example, should a property selling for under \$100,000 be allowed a higher percentage of closing costs than a property selling for over \$100,000?

Comment: *HUD should adopt a tiered approach to take into account that 11 percent may not be sufficient for lower balance home values.* One commenter stated that a greater percentage should be assigned to lower sales prices.

HUD Response: The final rule now states that closing costs shall not exceed the greater of: (a) 11 percent of the sales price; or (b) a fixed dollar amount as determined by the Commissioner. The amount as determined by the Commissioner will be issued through **Federal Register** notice.

Question 3: Should HUD implement a tiered approach to the maximum dollar amount of closing costs in relation to the sales prices? For example, should a property selling for under \$100,000 be allowed a different dollar amount than a property selling for over \$100,000?

Comment: *HUD should set a minimum dollar amount for lower balance home values.*

HUD Response: The final rule now states that closing costs shall not exceed the greater of: (a) 11 percent of the sales price; or (b) a fixed dollar amount as

determined by the Commissioner. The amount as determined by the Commissioner will be issued through **Federal Register** notice.

Comment: A fixed closing costs dollar amount limitation in line with customary costs would be more appropriate if closing costs are to be capped. The commenter volunteered to work with HUD to establish customary costs based on the commenter's data and experience.

HUD Response: The final rule now states that closing costs shall not exceed the greater of: (a) 11 percent of the sales price; or (b) a fixed dollar amount as determined by the Commissioner. The amount as determined by the Commissioner will be issued through **Federal Register** notice.

32. Non-Borrowing Spouse Communication

Question 1: What difficulties have Non-Borrowing Spouses, heirs, and successors in interest had in obtaining information about HECMs and understanding and exercising their rights?

Comment: HUD should create a written guide for the heirs that is to be delivered by the servicer with the initial letter of repayment. The commenter opined that it would be very beneficial for all parties, including FHA's MMIF, if a standard guide was created to outline the steps the heirs should be taking, and that it would result in faster repayment, more participation in the Cash for Keys initiative, and fewer foreclosures. The commenter suggested alternatively that the guide could be created by a group chosen by NRMLA.

HUD Response: HUD will take this suggestion under consideration for future policy guidance.

Comment: Many servicers are not properly communicating about how someone can qualify as an Eligible Non-Borrowing Spouse. Commenters stated that servicers provide conflicting and inaccurate information, reject paperwork for unexplained reasons, and lose paperwork. One commenter suggested that HUD develop a standardized letter to contact non-borrowing spouses or heirs that is written in simple, clear language.

HUD Response: HUD expects mortgagees to comply with the regulatory requirements of § 206.125(a)(2), which specifies the information required to be provided to the borrower's estate or heirs. HUD does not intend to develop a standardized letter.

Comment: Heirs have had great difficulty getting information from the

servicer about options and steps required at the time of loan repayment.

HUD Response: HUD has clarified in the final rule that mortgagees must request that HECM borrowers designate a point of contact that mortgagees would be required to use in the event a problem arises or in the event of the borrower's death or incapacitation. Accordingly, HUD has revised § 206.40(c) to clarify that the contact person is not acting as an agent and that the mortgagee will be required to request the designation, but that the borrower is not required to designate such a contact person.

Question 2: What adjustments could HUD make to this rule to address the identified difficulties and facilitate communication with Non-Borrowing Spouses, heirs, and successors in interest?

Comment: HUD should encourage servicers to request that borrowers designate family members or others who are authorized to speak with them about a loan on behalf of a borrower or following the death of a borrower.

HUD Response: HUD has clarified in the final rule that mortgagees must request that HECM borrowers designate a point of contact that mortgagees would be required to use in the event a problem arises or in the event of the borrower's death or incapacitation. Accordingly, HUD has revised § 206.40(c) to clarify that the contact person is not acting as an agent and that the mortgagee will be required to request the designation, but that the borrower is not required to designate such a contact person. The mortgagee shall communicate with an alternate individual if one has been designated by the borrower.

Comment: HUD should produce and require collateral material regarding what happens when the loan is due and payable. The commenter stated that the material should be available to the non-borrowing spouse and the borrower's heirs, and should be available on HUD's Web site.

HUD Response: HUD will take this suggestion under consideration for future policy guidance.

Comment: HUD should create a template certification packet for all servicers to use for surviving non-borrowing spouse situations.

HUD Response: HUD certification language requirements for NBS are contained in ML 14-07 and ML 15-02.

Comment: HUD should require servicers to provide at least the loan balance and standard information about options for repayment to anyone who can prove an heir interest in the

property, or who is an executor of the estate. The commenter stated that the borrower should also be encouraged to designate who should have access to detailed information about the account.

HUD Response: HUD has clarified in the final rule that mortgagees must request that HECM borrowers designate an alternate individual that mortgagees would be required to use in the event a problem arises or in the event of the borrower's death or incapacitation. Accordingly, HUD has revised § 206.40(c) to clarify that the alternate individual is not acting as an agent and that the mortgagee will be required to request the designation, but that the borrower is not required to designate such an individual. If the borrower has designated an alternate individual, mortgagees would be required to contact the designated individual if they cannot reach the borrower directly in the event a problem arises or in the event of the borrower's death or incapacitation. HUD currently has procedures for communicating with the borrower's estate upon the death of the last borrower.

33. Benefits & Costs

Comment: The estimated \$1.9 billion cut in endorsements is very conservative if the changes to the HECM program are made as proposed. The commenter stated that the impact on endorsement volume of the financial assessment is not yet fully understood. The commenter also stated that the post-closing inspection requirement and including utilities as a property charge will drive away many of the affluent borrowers that are more common after the establishment of the financial assessment. The commenter also pointed to the super lien issue as a change that could cause an immediate drop in endorsement volume of \$1.9 billion on its own.

HUD Response: FHA appreciates your comments and will defer implementing this policy to allow further research and analysis to be conducted.

Comment: The RIA fails to quantify how disqualification of otherwise eligible HECM borrowers residing in community associations in association lien priority jurisdictions balances HUD's duty to protect taxpayers and ensure access to credit. The commenter stated that HUD did not demonstrate it considered less damaging but effective policy alternatives than their proposal on first lien status in the 22 jurisdictions with association lien priority statutes from the HECM program.

HUD Response: HUD appreciates your comments and will defer implementing

this policy to allow further research and analysis to be conducted.

34. Mortgagee Letter 2015–11

Comment: HUD should add an additional factor under the critical circumstances for the “at risk” loss mitigation option: a diagnosis of Alzheimer’s or other dementia of family member receiving care at the residence.

Comment: HUD should extend the repayment period for property charge advances and extend the foreclosure time frames for “at risk” homeowners.

HUD Response: These two comments reference a mortgagee letter outside the scope of this proposed rule. The proposed rule states, and the final rule continues to state, at § 206.205(e)(2)(ii) that “the mortgagee may provide any permissible loss mitigation made available by the Commissioner through notice.” Specific discretionary loss mitigation options are provided through mortgagee letters, not the regulations, and HUD will consider these comments in the development of such future policy guidance.

35. Other Comments & Suggestions

Comment: The limit on HECMs should be raised from \$625,000. One commenter stated that, due to the strong housing recovery, many housing markets have average appraised values well over \$625,000, and this limit unduly discriminates against seniors, so the cap should be raised to \$1 million. Another commenter suggested that the cap should be raised to \$1.5 million, or at the least, should be indexed to inflation.

HUD Response: HUD is unable to adopt this suggestion because HECM mortgage limits must comply with current statutory requirements. The private sector has the ability to develop a market for larger reverse mortgages.

Comment: There should be a new program using a fixed 5.06 percent that will pay off all current liens on the property up to 80 percent of the appraisal value regardless of the age of the youngest borrower. The current loan programs do not properly cover upside-down borrowers.

HUD Response: HUD continues to evaluate and monitor risks to the program and the MMIF. The current principal limit factors have been set to ensure the HECM program remains financially sound and viable for current and future senior borrowers.

Comment: HUD should work towards reducing costs and improving the image of its HECM program. One commenter stated that HUD should start a public relations campaign to highlight the features and benefits of the program,

just as it does for forward loans. The commenter also suggested that HUD respond to all the false and misleading comments made about the HECM program. Another commenter stated that HUD needs to improve consumer awareness by confirming safeguards and offering free education.

HUD Response: In addition to the required counseling for prospective HECM borrowers, HUD provides various online resources for prospective borrowers, HECM counselors, and HECM lenders.

Comment: HUD should explain why bridge loans are allowed with forward loans but not with reverse mortgages.

HUD Response: HUD does not have restrictions on the use of bridge loans for the HECM program. However, § 206.32 states that in order for a mortgage to be eligible for a HECM, a borrower must establish to the satisfaction of the mortgagee that after the initial payment of loan proceeds under § 206.25(a), there will be no outstanding or unpaid obligations incurred by the borrower in connection with the mortgage transaction, except for mortgage servicing charges permitted under § 206.27(b) and any future Repair Set Aside established pursuant to § 206.19(f)(1).

Comment: HUD should clarify what constitutes “sufficient inquiry” for the purposes under § 206.43. The commenter also asked for clarification that the mortgagee does not violate HUD regulations if the mortgagee does not make disbursements directly to the estate planning firm if it is determined that the borrower may have engaged such an estate planning firm.

HUD Response: HUD will clarify the meaning of “sufficient inquiry” through guidance.

Comment: The IRS should make a positive ruling to allow the carry-forward status of the accrued interest and MIP against retirement income.

HUD Response: The rulings of the IRS are outside of the scope of this rule and HUD’s authority in general.

Comment: HUD should emphasize the value of placing the property in a living trust with a durable power of attorney.

The commenter stated that many borrowers may become incapacitated, resulting in default, and that the servicer would be unable to discuss home retention or workout options without anyone having legal authority.

HUD Response: Trusts are currently eligible under the HECM program, but the homeowner has the responsibility for identifying the proper legal measures that can be taken to oversee their personal affairs if the homeowner becomes incapacitated.

Comment: HUD should examine the Property Assessed Clean Energy (PACE) program to determine if there is potential for default so that immediate notification can be sent to the borrowers warning them not to attach these liens to their properties. The commenter stated that PACE liens appear to be superior to HECMs and that property taxes may double or triple after the placement of the liens.

HUD Response: This recommendation is outside the scope of this rule. HUD’s recent guidance on the PACE program (ML 2016–11) states that properties with PACE obligations are not eligible for an FHA-insured HECM loan.

Comment: For all regulations and mortgagee letters, HUD should create accompanying template documents which all lenders and servicers are required to use. The commenter stated that such consistent and clear guidance would make it easier for HUD to have oversight, regulatory control, and enforcement capability.

HUD Response: HUD does not provide templates for every regulation and mortgagee letter because various state laws govern specific information that must be provided and because minor changes would require HUD to reissue multiple templates. Instead, HUD prescribes what information must be communicated and allows servicers to apply their business practices in creating the letters.

Comment: HUD should create or task a unit such as the National Servicing Center to help individual consumers understand their rights and options, provide immediate response to consumers with urgent issues such as foreclosure, and act as liaison between consumer and servicer when necessary.

HUD Response: This comment falls outside the scope of the proposed rule, but HUD believes that the National Servicing Center already provides many of these services to HECM borrowers.

Comment: HUD should put a moratorium on all tax and insurance defaults until HUD has a structure and system in place to review and enforce consumer protections to ensure defaults are compliant with consumer protection regulations and valid.

HUD Response: This is outside the scope of the proposed rule.

Comment: HUD should not allow changes by the servicer to the HECM contract.

HUD Response: This is outside the scope of the proposed rule.

Comment: Force-placed insurance premiums should not be a default trigger.

HUD Response: Regulations at § 206.27(b) require the borrower to pay

property charges, including insurance. A borrower's failure to obtain insurance causes the mortgagee to force-place insurance. A default occurs where there are no HECM funds to pay for insurance and a borrower fails to reimburse the mortgagee for the funds advanced to pay these charges.

Comment: There is concern over state law developments that purport to impose duties or limitations upon HECM servicers. The commenter stated that these state laws are viewed as inconsistent with HECM regulations and guidelines, conflicting with generally accepted servicing principles, and having the potential effect of harming consumers and property values.

HUD Response: HUD provides requirements that mortgagees must comply with to file for claim benefits. It is the mortgagee's responsibility to comply with both federal and state requirements in order to obtain claim benefits.

V. Findings and Certifications

Paperwork Reduction Act

The information collection requirements contained in this proposed have been approved by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520) and assigned OMB Collection Numbers 2502–0524 and 2502–0611. In accordance with the Paperwork Reduction Act, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection displays a currently valid OMB control number.

Regulatory Planning and Review—Executive Orders 12866 and 13563

Under Executive Order 12866 (Regulatory Planning and Review), a determination must be made whether a regulatory action is significant and, therefore, subject to review by OMB in accordance with the requirements of the order. This rule was determined to be a “significant regulatory action,” as defined in section 3(f) of Executive Order 12866.

Executive Order 13563 (Improving Regulations and Regulatory Review) directs executive agencies to analyze regulations that are outmoded, ineffective, insufficient, or excessively burdensome and to modify, streamline, expand, or repeal them in accordance with what has been learned. Executive Order 13563 also directs that, where relevant, feasible, and consistent with regulatory objectives, and to the extent permitted by law, agencies are to identify and consider regulatory

approaches that reduce burdens and maintain flexibility and freedom of choice for the public. This rule reduces burdens on mortgagees by codifying in one place all the regulatory policy related to the HECM program. Prior to this rule, mortgagees had to deduce the current program requirements by determining which HECM regulations in 24 CFR part 206 were superseded by HERA and RMSA mortgagee letters.

Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) generally requires an agency to conduct a regulatory flexibility analysis of any rule subject to notice and comment rulemaking requirements, unless the agency certifies that the rule will not have a significant economic impact on a substantial number of small entities. Many of the policies discussed in this rule, such as the requirement that mortgagees perform a Financial Assessment of prospective HECM borrowers, the requirements of the HECM for Purchase program, the introduction of the Single Lump Sum payment option, and the limitation on disbursements during the First 12-Month Disbursement Period, have already been implemented by mortgagees large and small. The codification of these policies will not impact large or small mortgagees, other than easing burden by providing them with one location to find all HECM regulatory requirements.

The new policy changes in this rule would address important concerns with the HECM program, including the risk the program has, in the past, posed to the MMIF, as well as the continued availability of this program for seniors. Some of the new policy proposals are expected to relieve burdens on all mortgagees, large and small. For example, the amendment to the definition of “expected average mortgage interest rate”, providing the mortgagee with the ability to lock in the expected average mortgage interest rate prior to the date of loan closing, will align the provision with current industry policy. Removing the duplicative appraisal requirement and creating a Cash for Keys incentive structure will both relieve burden on mortgagees. Other policies contained in the rule may result in mortgagees incurring additional costs. However, as detailed in the regulatory impact analysis for the rule, these costs are not estimated to rise to the level of having a significant impact on a substantial number of small entities. Moreover, HUD has attempted to mitigate the economic impacts of these provisions. One example is the requirement that all

mortgagees disclose all available HECM program options. To minimize the effect of this provision on all mortgagees, FHA intends to create disclosure documents listing all available options for mortgagees to provide to prospective borrowers. Another example is the limitation on insurance claim reimbursement for the mortgagee's payment of certain property charges. Rather than limiting this reimbursement based on the timing of the property charges, requiring mortgagees to track when each property charge occurred, HUD is limiting the reimbursement to two-thirds of all property charges, consistent with how mortgagees are reimbursed for foreclosure costs.

FHA believes that these policies are reasonable and provide mitigating features so that the FHA-approved mortgagees, large and small, will not be adversely affected by these policies.

Accordingly, the undersigned certifies that this rule would not have a significant economic impact on a substantial number of small entities.

Environmental Impact

A Finding of No Significant Impact (FONSI) with respect to the environment has been made at the proposed rule state in accordance with HUD regulations in 24 CFR part 50, which implemented section 102(2)(C) of the National Environmental Policy Act of 1969 (42 U.S.C. 4332(2)(C)). The FONSI remains applicable to this final rule and is available for public inspection during regular business hours in the Regulations Division, Office of General Counsel, Department of Housing and Urban Development, 451 7th Street SW., Room 10276, Washington, DC 20410–0500. Due to security measures at the HUD Headquarters building, please schedule an appointment to review the FONSI by calling the Regulations Division at (202) 708–3055 (this is not a toll-free number). Individuals with speech or hearing impairments may access this number via TTY by calling the Federal Relay Service at (800) 877–8339.

Executive Order 13132, Federalism

Executive Order 13132 (entitled “Federalism”) prohibits, to the extent practicable and permitted by law, an agency from promulgating a regulation that has federalism implications and either imposes substantial direct compliance costs on state and local governments and is not required by statute, or preempts state law, unless the relevant requirements of section 6 of the executive order are met. This rule does not have federalism implications and does not impose substantial direct

compliance costs on state and local governments or preempt state law within the meaning of the executive order.

Catalog of Federal Domestic Assistance

The Catalog of Federal Domestic Assistance number for Home Equity Conversion Mortgages is 14.183.

Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) (UMRA) establishes requirements for federal agencies to assess the effects of their regulatory actions on state, local, and tribal governments, and on the private sector. This rule would not impose any federal mandates on any state, local, or tribal governments, or on the private sector, within the meaning of the UMRA.

List of Subjects

24 CFR Part 30

Administrative practice and procedure, Grant programs—housing and community development, Loan programs—housing and community development, Mortgage insurance, Penalties.

24 CFR Part 206

Aged condominiums, Loan programs, Housing and community development, Mortgage insurance, Reporting and recordkeeping requirements.

Accordingly, for the reasons stated in the preamble, HUD amends 24 CFR parts 30 and 206 to read as follows:

PART 30—CIVIL MONEY PENALTIES: CERTAIN PROHIBITED CONDUCT

■ 1. The authority citation for part 30 continues to read as follows:

Authority: 12 U.S.C. 1701q–1; 1703, 1723i, 1735f–14, and 1735f–15; 15 U.S.C. 1717a; 28 U.S.C. 2461 note; 42 U.S.C. 1437z–1 and 3535(d).

■ 2. Revise paragraphs (a)(8) and (a)(10) of § 30.35 to read as follows:

§ 30.35 Mortgagees and lenders.

(a) * * *

(8) Fails to timely submit documents that are complete and accurate in connection with a conveyance of a property or a claim for insurance benefits, in accordance with §§ 203.365, 203.366, or 203.368, or a claim for insurance benefits in accordance with § 206.127 of this title;

* * * * *

(10) Fails to service FHA insured mortgages, in accordance with the requirements of 24 CFR parts 201, 203, 206, and 235;

* * * * *

■ 3. Revise part 206 to read as follows:

PART 206—HOME EQUITY CONVERSION MORTGAGE INSURANCE

Subpart A—General

Sec.

206.1 Purpose.

206.3 Definitions.

206.7 Effect of amendments.

206.8 Preemption.

Subpart B—Eligibility; Endorsement

206.9 Eligible mortgagees.

206.13 Disclosure of available HECM program options.

206.15 Insurance.

Eligible Mortgagees

206.17 Eligible mortgages: general.

206.19 Payment options.

206.21 Interest rate.

206.23 Shared appreciation.

206.25 Calculation of disbursements.

206.26 Change in payment option.

206.27 Mortgage provisions.

206.31 Allowable charges and fees.

206.32 No outstanding unpaid obligations.

Eligible Borrowers

206.33 Age of borrower.

206.34 Limitation on number of mortgages.

206.35 Title of property which is security for HECM.

206.36 Seasoning requirements for existing non-HECM liens.

206.37 Credit standing.

206.39 Principal residence.

206.40 Disclosure, verification and certifications.

206.41 Counseling.

206.43 Information to borrower.

206.44 Monetary investment for HECM for Purchase program.

Eligible Properties

206.45 Eligible properties.

206.47 Property standards; repair work.

206.51 Eligibility of mortgages involving a dwelling unit in a condominium.

206.52 Eligible sale of property—HECM for Purchase.

Refinancing of Existing Home Equity Conversion Mortgages

206.53 Refinancing a HECM loan.

Deferral of Due and Payable Status

206.55 Deferral of due and payable status for Eligible Non-Borrowing Spouses.

206.57 Cure provision enabling reinstatement of Deferral Period.

206.59 Obligations of mortgagee.

206.61 HECM proceeds during a Deferral Period.

Subpart C—Contract Rights and Obligations

Sale, Assignment and Pledge

206.101 Sale, assignment and pledge of insured mortgages.

206.102 Insurance Funds.

Mortgage Insurance Premiums

206.103 Payment of MIP.

206.105 Amount of MIP.

206.107 Mortgagee election of assignment or shared premium option.

206.109 Amount of mortgagee share of premium.

206.111 Due date of MIP.

206.113 Late charge and interest.

206.115 Insurance of mortgage.

206.116 Refunds.

HUD Responsibility to Borrowers

206.117 General.

206.119 [Reserved]

206.121 Commissioner authorized to make payments.

Claim Procedure

206.123 Claim procedures in general.

206.125 Acquisition and sale of the property.

206.127 Application for insurance benefits.

206.129 Payment of claim.

Condominiums

206.131 Contract rights and obligations for mortgages on individual dwelling units in a condominium.

Termination of Insurance Contract

206.133 Termination of insurance contract.

Additional Requirements

206.134 Partial release, addition or substitution of security.

206.135 Application for insurance benefits and fiscal data.

206.136 Conditions for assignment.

206.137 Effect of noncompliance with regulations.

206.138 Mortgagee's liability for certain expenditures.

206.140 Inspection and preservation of properties.

206.141 Property condition.

206.142 Adjustment for damage or neglect.

206.143 Certificate of property condition.

206.144 Final payment.

206.145 Items deducted from payment.

206.146 Debenture interest rate.

Subpart D—Servicing Responsibilities

206.201 Mortgage servicing generally; sanctions.

206.203 Providing information.

206.205 Property charges.

206.207 Allowable charges and fees after endorsement.

206.209 Prepayment.

206.211 Determination of principal residence and contact information.

Subpart E—HECM Counselor Roster

206.300 General.

206.302 Establishment of the HECM Counselor Roster.

206.304 Eligibility for placement on the HECM Counselor Roster.

206.306 Removal from the HECM Counselor Roster. 206.308 Continuing education requirements of counselors listed on the HECM Counselor Roster.

Authority: Authority: 12 U.S.C. 1715b, 1715z–20; 42 U.S.C. 3535(d).

Subpart A—General

§ 206.1 Purpose.

The purposes of the Home Equity Conversion Mortgage (HECM) Insurance

program are set out in section 255(a) of the National Housing Act, Public Law 73–479, 48 Stat. 1246 (12 U.S.C. 1715z–20) (“NHA”).

§ 206.3 Definitions.

As used in this part, the following terms shall have the meaning indicated.

Bona fide tenant means a tenant of the property who is not a mortgagor, borrower, a spouse or child of a mortgagor or borrower, or any other member of a mortgagor’s or borrower’s family.

Borrower means a mortgagor who is an original borrower under the HECM Loan Agreement and Note. The term does not include successors or assigns of a borrower.

Borrower’s Advance means the funds advanced to the borrower at the closing of a fixed interest rate HECM in accordance with § 206.25.

CMT Index means the U.S. Constant Maturity Treasury Index.

Commissioner means the Federal Housing Commissioner or the Commissioner’s authorized representative.

Contract of insurance means the agreement evidenced by the issuance of a Mortgage Insurance Certificate or by the endorsement of the Commissioner upon the credit instrument given in connection with an insured mortgage, incorporating by reference the regulations in subpart C of this part and the applicable provisions of the National Housing Act.

Day means calendar day, except where the term *business day* is used.

Deferral Period means the period of time following the death of the last surviving borrower during which the due and payable status of a HECM is deferred for an Eligible Non-Borrowing Spouse provided that the Qualifying Attributes and all other FHA requirements continue to be satisfied.

Eligible Non-Borrowing Spouse means a Non-Borrowing Spouse who meets all Qualifying Attributes for a Deferral Period.

Estate planning service firm means an individual or entity that is not a mortgagee approved under part 202 of this chapter or a participating agency approved under subpart B of 24 CFR part 214 and that charges a fee that is:

(1) Contingent on the prospective borrower obtaining a mortgage loan under this part, except the origination fee authorized by § 206.31 or a fee specifically authorized by the Commissioner; or

(2) For information that borrowers and Eligible and Ineligible Non-Borrowing Spouses, if applicable, must receive under § 206.41, except a fee by:

(i) A participating agency approved under subpart B of 24 CFR part 214; or
(ii) An individual or company, such as an attorney or accountant, in the *bona fide* business of generally providing tax or other legal or financial advice; or

(3) For other services that the provider of the services represents are, in whole or in part, for the purpose of improving a prospective borrower’s access to mortgages covered by this part, except where the fee is for services specifically authorized by the Commissioner.

Expected average mortgage interest rate means the interest rate used to calculate the principal limit established at closing. For fixed interest rate HECMs, the expected average mortgage interest rate is the same as the fixed mortgage (Note) interest rate and is set simultaneously with the fixed interest rate. For adjustable interest rate HECMs, it is either the sum of the mortgagee’s margin plus the weekly average yield for U.S. Treasury securities adjusted to a constant maturity of 10 years, or it is the sum of the mortgagee’s margin plus the 10-year LIBOR swap rate, depending on which interest rate index is chosen by the borrower. The margin is determined by the mortgagee and is defined as the amount that is added to the index value to compute the expected average mortgage interest rate. The index type (CMT or LIBOR) used to calculate the expected average mortgage interest rate must be the same index type used to calculate mortgage interest rate adjustments—commingling of index types is not allowed. The mortgagee’s margin is the same margin used to determine the initial interest rate and the periodic adjustments to the interest rate. Mortgagees, with the agreement of the borrower, may simultaneously lock in the expected average mortgage interest rate and the mortgagee’s margin prior to the date of loan closing or simultaneously establish the expected average mortgage interest rate and the mortgagee’s margin on the date of loan closing.

First 12-Month Disbursement Period means the period beginning on the day of loan closing and ending on the day before the loan closing anniversary date. When the day before the anniversary date of loan closing falls on a Federally-observed holiday, Saturday, or Sunday, the end period will be on the next business day after the Federally-observed holiday, Saturday or Sunday.

HECM means a Home Equity Conversion Mortgage.

HECM counselor means an independent third party who is currently active on FHA’s HECM Counselor Roster and who is not, either

directly or indirectly, associated with or compensated by, a party involved in originating, servicing, or funding the HECM, or the sale of annuities, investments, long-term care insurance, or any other type of financial or insurance product who provides statutorily required counseling to prospective borrowers who may be eligible for or interested in obtaining an FHA-insured HECM. This counseling assists elderly prospective borrowers who seek to convert equity in their homes into income that can be used to pay for home improvements, medical costs, living expenses, or other expenses.

Ineligible Non-Borrowing Spouse means a Non-Borrowing Spouse who does not meet all Qualifying Attributes for a Deferral Period.

Initial Disbursement Limit means the maximum amount of funds that can be advanced to a borrower of an adjustable interest rate HECM allowed at loan closing and during the First 12-Month Disbursement Period in accordance with § 206.25.

Insured mortgage means a mortgage which has been insured as evidenced by the issuance of a Mortgage Insurance Certificate.

LIBOR means the London Interbank Offered Rate.

Loan documents mean the credit instrument, or Note, secured by the lien, and the loan agreement.

Mandatory Obligations are fees and charges incurred in connection with the origination of the HECM that are requirements for loan approval and which will be paid at closing or during the First 12-Month Disbursement Period in accordance with § 206.25.

Maximum claim amount means the lesser of the appraised value of the property, as determined by the appraisal used in underwriting the loan; the sales price of the property being purchased for the sole purpose of being the principal residence; or the national mortgage limit for a one-family residence under subsections 255(g) or (m) of the National Housing Act (as adjusted where applicable under section 214 of the National Housing Act) as of the date of loan closing. The initial mortgage insurance premium must not be taken into account in the calculation of the maximum claim amount. Closing costs must not be taken into account in determining appraised value.

MIP means the mortgage insurance premium paid by the mortgagee to the Commissioner in consideration of the contract of insurance.

Mortgage means a first lien on real estate under the laws of the jurisdiction where the real estate is located. If the

dwelling unit is in a condominium, the term *mortgage* means a first lien covering a fee interest or eligible leasehold interest in a one-family unit in a condominium project, together with an undivided interest in the common areas and facilities serving the project, and such restricted common areas and facilities as may be designated. The term refers to a security instrument creating a lien, whether called a *mortgage*, *deed of trust*, *security deed*, or another term used in a particular jurisdiction.

Mortgagee means original lender under a mortgage and its successors and assigns, as are approved by the Commissioner.

Mortgagor means each original mortgagor under a HECM mortgage and his heirs, executors, administrators, and assigns.

Non-Borrowing Spouse means the spouse, as defined by the law of the state in which the spouse and borrower reside or the state of celebration, of the HECM borrower at the time of closing and who is also not a borrower.

Participating agency means all housing counseling and intermediary organizations participating in HUD's Housing Counseling program, including HUD-approved agencies, and affiliates and branches of HUD-approved intermediaries, HUD-approved multi-state organizations (MSOs), and state housing finance agencies.

Principal limit means the maximum amount calculated, taking into account the age of the youngest borrower or Eligible Non-Borrowing Spouse, the expected average mortgage interest rate, and the maximum claim amount. The principal limit is calculated for the first month that a mortgage could be outstanding using factors provided by the Commissioner. It increases each month thereafter at a rate equal to one-twelfth of the mortgage interest rate in effect at that time, plus one-twelfth of the annual mortgage insurance rate. For an adjustable interest rate HECM, the principal limit increase may be made available to the borrower each month thereafter except that the availability during the First 12-Month Disbursement Period may be restricted. Although the principal limit of a fixed interest rate HECM will continue to increase at the rate provided by the Commissioner, no further funds may be made available for the borrower to draw against after closing. The principal limit may decrease because of insurance or condemnation proceeds applied to the outstanding loan balance under § 206.209(b).

Principal residence means the dwelling where the borrower and, if applicable, Non-Borrowing Spouse,

maintain their permanent place of abode, and typically spend the majority of the calendar year. A person may have only one principal residence at any one time. The property shall be considered to be the principal residence of any borrower who is temporarily in a health care institution provided the borrower's residency in a health care institution does not exceed twelve consecutive months. The property shall be considered to be the principal residence of any Non-Borrowing Spouse, who is temporarily in a health care institution, as long as the property is the principal residence of his or her borrower spouse, who physically resides in the property. During a Deferral Period, the property shall continue to be considered to be the principal residence of any Non-Borrowing Spouse, who is temporarily in a health care institution, provided he or she qualified as an Eligible Non-Borrowing Spouse and physically occupied the property immediately prior to entering the health care institution and his or her residency in a health care institution does not exceed twelve consecutive months.

Property charges means, unless otherwise specified, obligations of the borrower that include property taxes, hazard insurance premiums, any applicable flood insurance premiums, ground rents, condominium fees, planned unit development fees, homeowners' association fees, and any other special assessments that may be levied by municipalities or state law.

Qualifying Attributes means the requirements which must be met by a Non-Borrowing Spouse in order to be an Eligible Non-Borrowing Spouse.

§ 206.7 Effect of amendments.

The regulations in this part may be amended by the Commissioner at any time and from time to time, in whole or in part, but amendments to subparts B and C of this part will not adversely affect the interests of a mortgagee on any mortgage to be insured for which either the Direct Endorsement mortgagee or Lender Insurance mortgagee has approved the borrower and all terms and conditions of the mortgage, or the Commissioner has made a commitment to insure. Such amendments will not adversely affect the interests of a borrower in the case of a default by a mortgagee where the Commissioner makes payments to the borrower.

§ 206.8 Preemption.

(a) *Lien priority.* The full amount secured by the mortgage shall have the same priority over any other liens on the property as if the full amount had been disbursed on the date the initial

disbursement was made, regardless of the actual date of any disbursement. The amount secured by the mortgage shall include all direct payments by the mortgagee to the borrower and all other loan advances permitted by the mortgage for any purpose, including loan advances for interest, property charges, mortgage insurance premiums, required repairs, servicing charges, counseling charges, and costs of collection, regardless of when the payments or loan advances were made. The priority provided by this section shall apply notwithstanding any State constitution, law, or regulation.

(b) *Second mortgage.* If the Commissioner holds a second mortgage, it shall have a priority subordinate only to the first mortgage (and any senior liens permitted by paragraph (a) of this section).

Subpart B—Eligibility; Endorsement

§ 206.9 Eligible mortgagees.

(a) *Statutory requirements.* See sections (b)(2), (c), and 255(d)(1) of the NHA.

(b) *HUD approved mortgagees.* Any mortgagee authorized under paragraph (a) of this section and approved under part 202 of this chapter, except an investing mortgagee approved under § 202.9 of this chapter, is eligible to apply for insurance. A mortgagee approved under §§ 202.6, 202.7, 202.9 or 202.10 of this chapter may purchase, hold and sell mortgages insured under this part without additional approval.

§ 206.13 Disclosure of available HECM program options.

At the time of initial contact, the mortgagee shall inform the prospective HECM borrower, in a manner acceptable to the Commissioner, of all products, features, and options of the HECM program that FHA will insure under this part, including: fixed interest rate mortgages with the Single Lump Sum payment option; adjustable interest rate mortgages with tenure, term, and line of credit disbursement options, or a combination of these; any other FHA insurable disbursement options; and initial mortgage insurance premium options, and how those affect the availability of other mortgage and disbursement options.

§ 206.15 Insurance.

Mortgages originated under this part must be endorsed through the Direct Endorsement program under § 203.5 of this chapter, except that any references to § 203.255 in § 203.5 shall mean § 206.115. The mortgagee shall submit the information as described in § 206.115(b) for the Direct Endorsement

program; the certificate of housing counseling as described in § 206.41; a copy of the title insurance commitment satisfactory to the Commissioner (or other acceptable title evidence if the Commissioner has determined not to require title insurance under § 206.45(a)); the mortgagee's election of either the assignment or shared premium option under § 206.107; and any other documentation required by the Commissioner. If the mortgagee has complied with the requirements of §§ 203.3 and 203.5, except that any reference to § 203.255 in these sections shall mean § 206.115 for purposes of this section, and other requirements of this part, and the mortgage is determined to be eligible, the Commissioner will endorse the mortgage for insurance by issuing a Mortgage Insurance Certificate.

Eligible Mortgages

§ 206.17 Eligible mortgages: general.

(a) [Reserved]

(b) *Interest rate and payment options.* A HECM shall provide for either fixed or adjustable interest rates in accordance with § 206.21.

(1) Fixed interest rate mortgages shall use the Single Lump Sum payment option (§ 206.19(e)).

(2) Adjustable interest rate mortgages shall initially provide for the term (§ 206.19(a)), the tenure (§ 206.19(b)), the line of credit (§ 206.19(c)), or a modified term or modified tenure (§ 206.19(d)) payment option, subject to a later change in accordance with § 206.26.

(c) *Shared appreciation.* A mortgage may provide for shared appreciation in accordance with § 206.23.

§ 206.19 Payment options.

(a) *Term payment option.* Under the term payment option, equal monthly payments are made by the mortgagee to the borrower for a fixed term of months chosen by the borrower in accordance with this section and § 206.25(e), unless the mortgage is prepaid in full or becomes due and payable earlier under § 206.27(c).

(b) *Tenure payment option.* Under the tenure payment option, equal monthly payments are made by the mortgagee to the borrower in accordance with this section and with § 206.25(f), unless the mortgage is prepaid in full or becomes due and payable under § 206.27(c).

(c) *Line of credit payment option.* Under the line of credit payment option, payments are made by the mortgagee to the borrower at times and in amounts determined by the borrower as long as the amounts do not exceed the payment amounts permitted by § 206.25.

(d) *Modified term or modified tenure payment option.* Under the modified term or modified tenure payment options, equal monthly payments are made by the mortgagee and the mortgagee shall set aside a portion of the principal limit to be drawn down as a line of credit as long as the amounts do not exceed the payment amounts permitted by § 206.25.

(e) *Single Lump Sum payment option.* Under the Single Lump Sum payment option, the Borrower's Advance will be made by the mortgagee to the borrower in an amount that does not exceed the payment amount permitted in § 206.25. The Single Lump Sum payment option will be available only for fixed interest rate HECMs. Set asides requiring disbursements after close may be offered in accordance with paragraphs (f)(1) through (3) of this section.

(f) *Principal limit set asides—(1) Repair Set Aside.* When repairs required by § 206.47 will be completed after closing, the mortgagee shall set aside a portion of the principal limit equal to 150 percent of the Commissioner's estimated cost of repairs, plus the repair administration fee.

(2) *Property Charge Set Aside—(i) Life Expectancy Set Aside (LESA).* When required by § 206.205(b)(1) or selected by the borrower under § 206.205(b)(2)(i)(B), the mortgagee shall set aside a portion of the principal limit, consistent with the requirements of § 206.205, for payment of the following property charges: property taxes including special assessments levied by municipalities or state law, and flood and hazard insurance premiums.

(ii) *Borrower elects to have mortgagee pay property charges—(A) First year property charges.* When required by § 206.205(d), the mortgagee shall set aside a portion of the principal limit for payment of the following property charges that must be paid during the First 12-Month Disbursement Period: property taxes including special assessments levied by municipalities or state law, and flood and hazard insurance premiums. The mortgagee's estimate of withholding amount shall be based on the best information available as to probable payments which will be required to be made for property charges in the coming year. The mortgagee may not require the withholding of amounts in excess of the current estimated total annual requirement, unless expressly requested by the borrower. Each month's withholding for property charges shall equal one-twelfth of the annual amounts as reasonably estimated by the mortgagee.

(B) *Property charges for subsequent years.* For subsequent year property

charges, the mortgagee's estimate of withholding amount shall be based on the best information available as to probable payments which will be required to be made for property charges in the coming year. If actual disbursements during the preceding year are used as the basis, the resulting estimate may deviate from those disbursements by as much as ten percent. The mortgagee may not require the withholding of amounts in excess of the current estimated total annual requirement, unless expressly requested by the borrower. Each month's withholding for property charges shall equal one-twelfth of the annual amounts as reasonably estimated by the mortgagee.

(3) *Servicing Fee Set Aside.* When servicing charges will be made as permitted by § 206.207(b), the mortgagee shall set aside a portion of the principal limit sufficient to cover charges through a period equal to the payment term which would be used to calculate tenure payments under § 206.25(f).

(g) *Interest accrual and repayment.* The interest charged on the outstanding loan balance shall begin to accrue from the funding date and shall be added to the outstanding loan balance monthly as provided in the mortgage. Under all payment options, repayment of the outstanding loan balance is deferred until the mortgage becomes due and payable under § 206.27(c).

(h) *Disbursement limits.* (1) For all HECMs, no disbursements shall be made under any of the payment options, notwithstanding anything to the contrary in this section or in § 206.25, in an amount which shall cause the outstanding loan balance after the payment to exceed any maximum mortgage amount stated in the security instruments or to otherwise exceed the amount secured by a first lien.

(2) For adjustable interest rate HECMs:

(i) No disbursements shall be made under any of the payment options during the First 12-Month Disbursement Period in excess of the Initial Disbursement Limit.

(ii) If the borrower makes a partial prepayment of the outstanding loan balance during the First 12-Month Disbursement Period, the mortgagee shall apply the funds from the partial prepayment in accordance with the Note.

(3) For fixed interest rate HECMs, if the borrower makes a partial prepayment of the outstanding loan balance any time after loan closing and before the contract of insurance is terminated, the mortgagee shall apply the funds from the partial prepayment

in accordance with the Note. Any increase in the available principal limit by the amount applied towards the outstanding loan balance shall not be available for the borrower to draw against.

§ 206.21 Interest rate.

(a) *Fixed interest rate.* A fixed interest rate is agreed upon by the borrower and mortgagee.

(b) *Adjustable interest rate.* An initial expected average mortgage interest rate, which defines the mortgagee's margin, is agreed upon by the borrower and mortgagee as of the date of loan closing, or as of the date of rate lock-in, if the expected average mortgage interest rate was locked in prior to closing. The interest rate shall be adjusted in one of two ways depending on the option selected by the borrower, in accordance with paragraphs (b)(1) and (b)(2) of this section. Whenever an interest rate is adjusted, the new interest rate applies to the entire loan balance. The difference between the initial interest rate and the index figure applicable when the firm commitment is issued shall equal the margin used to determine interest rate adjustments. If the expected average mortgage interest rate is locked in prior to closing, the difference between the expected average mortgage interest rate and the value of the appropriate index at the time of rate lock-in shall equal the margin used to determine interest rate adjustments.

(1) *Annual adjustable interest rate HECMs.* A mortgagee offering an annual adjustable interest rate shall offer a mortgage with an interest rate cap structure that limits the periodic interest rate increases and decreases as follows:

(i) *Types of mortgages insurable.* The types of adjustable interest rate mortgages that are insurable are those for which the interest rate may be adjusted annually by the mortgagee, beginning after one year from the date of the closing.

(ii) *Interest rate index.* Changes in the interest rate charged on an adjustable interest rate mortgage must correspond either to changes in the one-year LIBOR or to changes in the weekly average yield on U.S. Treasury securities, adjusted to a constant maturity of one year. Except as otherwise provided in this section, each change in the mortgage interest rate must correspond to the upward and downward change in the index.

(iii) *Frequency of interest rate changes.* (A) The interest rate adjustments must occur annually, calculated from the date of the closing, except that the first adjustment shall be

no sooner than 12 months or later than 18 months.

(B) To set the new interest rate, the mortgagee will determine the change between the initial (*i.e.*, base) index figure and the current index figure, or will add a specific margin to the current index figure. The initial index figure shall be the most recent figure available before the date of mortgage loan origination. The current index figure shall be the most recent index figure available 30 days before the date of each interest rate adjustment.

(iv) *Magnitude of changes.* The adjustable interest rate mortgage initial contract interest rate shall be agreed upon by the mortgagee and the borrower. The first adjustment to the contract interest rate shall take place in accordance with the schedule set forth under paragraph (b)(1)(iii) of this section. Thereafter, for all annual adjustable interest rate mortgages, the adjustment shall be made annually and shall occur on the anniversary date of the first adjustment, subject to the following conditions and limitations:

(A) For all annual adjustable interest rate HECMs, no single adjustment to the interest rate shall result in a change in either direction of more than two percentage points from the interest rate in effect for the period immediately preceding that adjustment. Index changes in excess of two percentage points may not be carried over for inclusion in an adjustment for a subsequent year. Adjustments in the effective rate of interest over the entire term of the mortgage may not result in a change in either direction of more than five percentage points from the initial contract interest rate.

(B) At each adjustment date for annual adjustable interest rate HECMs, changes in the index interest rate, whether increases or decreases, must be translated into the adjusted mortgage interest rate, except that the mortgage may provide for minimum interest rate change limitations and for minimum increments of interest rate changes.

(2) *Monthly adjustable interest rate HECMs.* If a mortgage meeting the requirements of paragraph (b)(1) of this section is offered, the mortgagee may also offer a mortgage which provides for monthly adjustments to the interest rate such that changes in the interest rate charged on an adjustable interest rate mortgage correspond either to changes in the one-year LIBOR or to changes in the weekly average yield on U.S. Treasury securities, adjusted to a constant maturity of one year (except as otherwise provided in this section, each change in the mortgage interest rate must correspond to the upward and

downward change in the index), or to the one-month CMT index or one-month LIBOR index, and which sets a maximum interest rate that can be charged.

(c) *Pre-loan disclosure.* (1) At the time the mortgagee provides the borrower with a loan application, a mortgagee shall provide a borrower with a written explanation of all adjustable interest rate features of a mortgage. The explanation must include the following items:

(i) The circumstances under which the rate may increase;

(ii) Any limitations on the increase; and

(iii) The effect of an increase.

(2) Compliance with pre-loan disclosure provisions of 12 CFR part 1026 (Truth in Lending) shall constitute full compliance with paragraph (c)(1) of this section.

(d) *Post-loan disclosure.* At least 25 days before any adjustment to the interest rate may occur, the mortgagee must advise the borrower of the following:

(1) The current index amount;

(2) The date of publication of the index; and

(3) The new interest rate.

§ 206.23 Shared appreciation.

(a) *Additional interest based on net appreciated value.* Any mortgage for which the mortgagee has chosen the shared premium option (§ 206.107) may provide for shared appreciation. At the time the mortgage becomes due and payable or is paid in full, whichever occurs first, the borrower shall pay an additional amount of interest equal to a percentage of any net appreciated value of the property during the life of the mortgage. The percentage of net appreciated value to be paid to the mortgagee, referred to as the appreciation margin, shall be no more than twenty-five percent, subject to an effective interest rate cap of no more than twenty percent.

(b) *Computation of mortgage share.* The mortgagee's share of net appreciated value is computed as follows:

(1) If the outstanding loan balance at the time the mortgagee's share of net appreciated value becomes payable is less than the appraised value of the property at the time of loan origination, the mortgagee's share is calculated by subtracting the appraised value at the time of loan origination from the adjusted sales proceeds (*i.e.*, sales proceeds less transfer costs and capital improvement costs incurred by the borrower, but excluding any liens) and multiplying by the appreciation margin.

(2) If the outstanding loan balance is greater than the appraised value at the time of loan origination but less than the adjusted proceeds, the mortgagee's share is calculated by subtracting the outstanding loan balance from the adjusted sales proceeds and multiplying by the appreciation margin.

(3) If the outstanding loan balance is greater than the adjusted sales proceeds, the net appreciated value is zero.

(4) If there has been no sale or transfer involving satisfaction of the mortgage at the time the mortgagee's share of net appreciated value becomes payable, *sales proceeds* for purposes of this section shall be the appraised value as determined in accordance with procedures approved by the Commissioner.

(c) *Effective interest rate.* To determine the effective interest rate, the amount of interest which accrued in the twelve months prior to the sale of the property or the prepayment is added to the mortgagee's share of the net appreciated value. The sum of the mortgagee's share of the net appreciated value and the interest, when divided by the sum of the outstanding loan balance at the beginning of the twelve-month period prior to sale or prepayment plus the payments to or on behalf of the borrower (but not including interest) in the twelve months prior to the sale or prepayment, shall not exceed an effective interest rate of twenty percent.

(d) *Disclosure.* At the time the mortgagee provides the borrower with a loan application for a mortgage with shared appreciation, the mortgagee shall disclose to the borrower the principal limit, payments and interest rate which are applicable to a comparable mortgage offered by the mortgagee without shared appreciation.

§ 206.25 Calculation of disbursements.

(a) *Initial disbursements*—(1) *Initial Disbursement Limit*—*Adjustable Interest Rate HECMs*: for term, tenure, line of credit, modified term, and modified tenure payment options:

(i) The mortgagee is responsible for determining the maximum Initial Disbursement Limit.

(ii) The maximum disbursement allowed at closing and during the First 12-Month Disbursement Period is the lesser of:

(A) The greater of an amount established by the Commissioner through notice which shall not be less than 50 percent of the principal limit; or the sum of Mandatory Obligations and a percentage of the principal limit established by the Commissioner through notice which shall not be less than 10 percent; or

(B) The principal limit less the sum of the funds in the LESA for payment beyond the First 12-Month Disbursement Period and the Servicing Fee Set Aside.

(iii) The amount in the First 12-Month Disbursement Period or at any point in time may not exceed the principal limit.

(iv) Mortgagees shall monitor and track all disbursements that occur at loan closing and during the First 12-Month Disbursement Period; the total amount of disbursements shall not exceed the maximum Initial Disbursement Limit.

(v) The borrower shall notify the mortgagee at loan closing of the amount of the additional percentage of the principal limit beyond Mandatory Obligations that the borrower will draw or that will remain available to be drawn during the First 12-Month Disbursement Period. The borrower may not increase or decrease this election after closing.

(2) *Borrower's Advance*—*Fixed Interest Rate HECMs*: for the Single Lump Sum payment option:

(i) The mortgagee is responsible for determining the maximum Borrower's Advance.

(ii) The disbursement shall only be taken at the time of closing and the maximum disbursement shall not exceed the lesser of:

(A) The greater of an amount established by the Commissioner through notice which shall not be less than 50 percent of the principal limit; or the sum of Mandatory Obligations and a percentage of the principal limit established by the Commissioner through notice which shall not be less than 10 percent; or

(B) The principal limit less the sum of the funds in the LESA for payment beyond the First 12-Month Disbursement Period and the Servicing Fee Set Aside.

(iii) The borrower shall notify the mortgagee at loan closing of the amount of the additional percentage of the principal limit beyond Mandatory Obligations that the borrower will draw. The borrower may not increase or decrease this election after closing.

(b) Mandatory Obligations for traditional and refinance transactions include:

(1) Initial MIP under § 206.105(a);
(2) Loan origination fee;
(3) HECM counseling fee;
(4) Reasonable and customary amounts, but not more than the amount actually paid by the mortgagee for any of the following items:

(i) Recording fees and recording taxes, or other charges incident to the recordation of the insured mortgage;

(ii) Credit report;

(iii) Survey, if required by the mortgagee or the borrower;

(iv) Title examination;

(v) Mortgagee's title insurance;

(vi) Fees paid to an appraiser for the initial appraisal of the property; and

(vii) Flood certifications.

(5) Repair Set Asides;

(6) Repair administration fee;

(7) Delinquent Federal debt;

(8) Amounts required to discharge any existing liens on the property;

(9) Customary fees and charges for warranties, inspections, surveys, and engineer certifications;

(10) Funds to pay contractors who performed repairs as a condition of closing, in accordance with standard FHA requirements for repairs required by the appraiser;

(11) Property tax and flood and hazard insurance payments required by the mortgagee to be paid at loan closing;

(12) Property charges not included in paragraph (b)(11) of this section and which are scheduled for payment during the First 12-Month Disbursement Period, as follows:

(i) *Adjustable Interest Rate HECMs.*

(A) The total amount of property charge payments scheduled for payment from the borrower authorized option under § 206.205(d) during the First 12-Month Disbursement Period;

(B) The total amount of semi-annual disbursements scheduled to be made during the First 12-Month Disbursement Period to the borrower from a Partially-Funded LESA; or

(C) The total amount of property charges scheduled for payment during the First 12-Month Disbursement Period from a Fully-Funded LESA.

(D) Mortgagees shall use the actual insurance premium and actual tax amount; if a new tax bill has not been issued, the mortgagee must use the prior year's amount multiplied by 1.04 or an amount set by the Commissioner through notice.

(ii) *Fixed Interest Rate HECMs.* (A) The total amount of property charges scheduled for payment during the First 12-Month Disbursement Period from a Fully-Funded LESA.

(B) Mortgagees shall use the actual insurance premium and actual tax amount; if a new tax bill has not been issued, the mortgagee must use the prior year's amount multiplied by 1.04 or an amount set by the Commissioner through notice;

(13) Required pay-off of debt not secured by the property, as defined by the Commissioner through **Federal Register** notice; and

(14) Other charges as authorized by the Commissioner through notice.

(c) Mandatory Obligations for HECM for Purchase transactions include:

- (1) Initial MIP under § 206.105(a);
- (2) Loan origination fee;
- (3) HECM counseling fee;
- (4) Reasonable and customary

amounts, but not more than the amount actually paid by the mortgagee for any of the following items:

- (i) Recording fees and recording taxes, or other charges incident to the recordation of the insured mortgage;
 - (ii) Credit report;
 - (iii) Survey, if required by the mortgagee or the borrower;
 - (iv) Title examination;
 - (v) Mortgagee's title insurance;
 - (vi) Fees paid to an appraiser for the initial appraisal of the property; and
 - (vii) Flood certifications.
- (5) Delinquent Federal debt;
- (6) Fees and charges for real estate purchase contracts, warranties, inspections, surveys, and engineer certifications;

(7) The amount of the principal that is advanced towards the purchase price of the subject property;

(8) Property tax and flood and hazard insurance payments required by the mortgagee to be paid at loan closing;

(9) Property charges not included in paragraph (c)(8) of this section and which are scheduled for payment during the First 12-Month Disbursement Period, as follows:

(i) *Adjustable Interest Rate HECMs.*

(A) The total amount of property charge payments scheduled for payment from the borrower authorized option under § 206.205(d) during the First 12-Month Disbursement Period;

(B) The total amount of semi-annual disbursements scheduled to be made during the First 12-Month Disbursement Period to the borrower from a Partially-Funded LESA; or

(C) The total amount of property charges scheduled for payment during the First 12-Month Disbursement Period from a Fully-Funded LESA.

(D) Mortgagees shall use the actual insurance premium and actual tax amount; if a new tax bill has not been issued, the mortgagee must use the prior year's amount multiplied by 1.04 or an amount set by the Commissioner through notice.

(ii) *Fixed Interest Rate HECMs.* (A) The total amount of property charges scheduled for payment during the First 12-Month Disbursement Period from a Fully-Funded LESA.

(B) Mortgagees shall use the actual insurance premium and actual tax amount; if a new tax bill has not been issued, the mortgagee must use the prior year's amount multiplied by 1.04 or an amount set by the Commissioner through notice;

(10) Required pay-off of debt not secured by the property, as defined by the Commissioner through **Federal Register** notice; and

(11) Other charges as authorized by the Commissioner through notice.

(d) *Timing of disbursements.*

Mortgage proceeds may not be disbursed until after the expiration of the 3-day rescission period under 12 CFR part 1026, if applicable.

(e) *Monthly disbursements—term option.* (1) Using factors provided by the Commissioner, the mortgagee shall calculate the monthly disbursement so that the sum of paragraphs (e)(1)(i) or (e)(1)(ii) of this section added to paragraphs (e)(1)(iii), (e)(1)(iv), and (e)(1)(v) of this section shall be equal to the principal limit at the end of the payment term.

(i) An initial disbursement under paragraph (a) of this section plus any initial servicing charge set aside under § 206.19(f)(3); or

(ii) The outstanding loan balance at the time of a change in payment option in accordance with § 206.26, plus any remaining servicing charge set aside under § 206.19(f)(3); and

(iii) The amount of the principal limit set aside in accordance with § 206.19(f) which is not included in the amount set aside in paragraphs (e)(1)(i) or (e)(1)(ii) of this section;

(iv) All MIP or monthly charges due to the Commissioner in lieu of mortgage insurance premiums due through the payment term; and

(v) All interest through the remainder of the payment term. The expected average mortgage interest rate shall be used for this purpose.

(2) The mortgagee shall make all monthly disbursements through the payment term even if the outstanding loan balance exceeds the principal limit because the actual average mortgage interest rate exceeds the expected average mortgage interest rate unless the HECM becomes due and payable under § 206.27(c). In the event of a deferral of due and payable status in accordance with § 206.27(c)(3), disbursements shall cease immediately upon the death of the borrower and no further disbursements are permissible.

(3) Mortgagees shall ensure that term monthly disbursements made to the borrower during the First 12-Month Disbursement Period do not exceed the Initial Disbursement Limit. If the sum of disbursements made during the First 12-Month Disbursement Period would exceed the Initial Disbursement Limit for that time period, the mortgagee shall decrease the monthly disbursements during the First 12-Month Disbursement Period to conform with the Initial

Disbursement Limit; upon conclusion of the First 12-Month Disbursement Period, the borrower may request a payment plan recalculation.

(4) If the borrower makes a partial prepayment of the outstanding loan balance during the First 12-Month Disbursement Period, the mortgagee shall apply the funds from the partial prepayment in accordance with the Note.

(5) If the mortgagee receives repayment from insurance or condemnation proceeds after restoration or repair of the damaged property, the available principal limit and outstanding loan balance shall be reduced by the amount of such payments.

(f) *Monthly disbursements—tenure option.* (1) Monthly disbursements under the tenure payment option shall be calculated as if the number of months in the payment term equals 100 minus the lesser of the age of the youngest borrower or 95, multiplied by 12, but payments shall continue until the mortgage becomes due and payable under § 206.27(c), except that in the event that payments would exceed any maximum mortgage amount stated in the security instrument or would otherwise exceed the amount secured by the first lien, in accordance with § 206.19(h) payments will cease immediately; payments may be reinstated only in the event a new Note and mortgage are executed in accordance with § 206.27(b)(10); and in the event of a deferral of due and payable status in accordance with § 206.27(c)(3) payments will cease immediately upon the death of the borrower.

(2) Mortgagees shall ensure that tenure monthly disbursements made to the borrower during the First 12-Month Disbursement Period do not exceed the Initial Disbursement Limit. If the sum of disbursements made during the First 12-Month Disbursement Period would exceed the Initial Disbursement Limit for that time period, the mortgagee shall decrease the monthly disbursements during the First 12-Month Disbursement Period to conform with the maximum Initial Disbursement Limit; upon conclusion of the First 12-Month Disbursement Period, the borrower may request a payment plan recalculation.

(3) If the borrower makes a partial prepayment of the outstanding loan balance during the First 12-Month Disbursement Period, the mortgagee shall apply the funds from the partial prepayment in accordance with the Note.

(4) If the mortgagee receives repayment from insurance or

condemnation proceeds after restoration or repair of the damaged property, the available principal limit and outstanding loan balance shall be reduced by the amount of such payments.

(g) *Line of credit separately or with monthly disbursements.* If the borrower has a line of credit, separately or combined with the term or tenure payment option, the principal limit is divided into an amount set aside for servicing charges under § 206.19(f)(3), an amount equal to the line of credit (including any portion of the principal limit set aside for repairs or property charges under § 206.19(f)(1) or (2)), and the remaining amount of the principal limit (if any). The line of credit amount increases at the same rate as the total principal limit increases under § 206.3. The sum of disbursements made during the First 12-Month Disbursement Period shall not exceed the Initial Disbursement Limit. If a requested disbursement would exceed the Initial Disbursement Limit, the mortgagee may make a partial disbursement to the borrower for the amount that will not exceed the limit. Upon the conclusion of the First 12-Month Disbursement Period, the borrower may request subsequent disbursements up to the available principal limit.

(h) *Single Lump Sum payment option.* (1) Under the Single Lump Sum payment option, the Borrower's Advance shall be made by the mortgagee to the borrower in an amount that does not exceed the maximum allowable Borrower's Advance under paragraph (a)(2) of this section.

(2) If the borrower makes a partial prepayment of the outstanding loan balance any time after loan closing and before the contract of insurance is terminated, the mortgagee shall apply the funds from the partial prepayment in accordance with the Note.

(i) *Payment of MIP and interest.* At the end of each month, including the first month, interest accrued during that month shall be added to the outstanding loan balance. Where the first month is a partial month, a prorated amount of interest shall be added. Monthly MIP, which will accrue from the closing date, shall be added to the outstanding loan balance beginning with the first day of the second month after closing when paid to the Commissioner.

(j) *Mortgagee late charge.* The mortgagee shall pay a late charge to the borrower for any late disbursement. If the mortgagee does not mail or electronically transfer a scheduled monthly disbursement to the borrower on the first business day of the month or make a line of credit disbursement

within 5 business days of the date the mortgagee received the request, the late charge shall be 10 percent of the entire amount that should have been paid to the borrower for that month or as a result of that request. In no event shall the total late charge exceed five hundred dollars. For each additional day that the borrower does not receive payment, the mortgagee shall pay interest at the mortgage interest rate on the late payment. Any late charge and interest shall be paid from the mortgagee's funds and shall not be added to the outstanding loan balance.

(k) *No minimum payments.* A mortgagee shall not require, as a condition of providing a loan secured by a mortgage insured under this part, that the monthly payments under the term or tenure payment option or draws under the line of credit payment option exceed a minimum amount established by the mortgagee.

§ 206.26 Change in payment option.

(a) *General.* The payment option may be changed as provided in this section.

(b) *Borrower request for payment plan change—(1) Adjustable Interest Rate HECMs.* (i) During the First 12-Month Disbursement Period, no payment plan change shall cause disbursements to exceed the Initial Disbursement Limit.

(ii) After the First 12-Month Disbursement Period, as long as the outstanding loan balance is less than the principal limit, a borrower may request a recalculation of the current payment option, a change from any payment option to another available payment option or a disbursement of any amount (not to exceed the difference between the principal limit and the sum of the outstanding loan balance and any set asides for repairs, servicing charges or property charges). A mortgagee will continue to bear interest at an adjustable interest rate as agreed between the mortgagee and the borrower at loan origination. The mortgagee shall recalculate any future monthly payments in accordance with § 206.25.

(iii) *Fee for change in payment.* The mortgagee may charge a fee, not to exceed an amount determined by the Commissioner, whenever there is a payment plan change or whenever payments are recalculated.

(iv) *Limitations.* The Commissioner may, through notice, establish limitations on the frequency of payment plan changes, a minimum notice period that a borrower must provide in order to make a request under paragraph (b)(1)(ii) of this section, or other limitations on payment plan change requests by the borrower.

(2) Fixed Interest Rate HECMs.

Borrowers may not request a change in payment option.

(c) *Change due to initial repairs.* When initial repairs after closing under § 206.47 are required using a Repair Set Aside, mortgagees shall comply with the following:

(1) *Adjustable Interest Rate HECMs.* (i) If repairs after closing under § 206.47 are completed without using all of the funds set aside for repairs, the mortgagee shall transfer the remaining amount to a line of credit, modified term, or modified tenure payment option and inform the borrower of the sum available to be drawn.

(ii) If repairs after closing under § 206.47 cannot be completed with the funds set aside for repairs, the mortgagee may advance additional funds to complete repairs from an existing line of credit. If a line of credit is not sufficient to make the advance or if no line of credit exists, future monthly disbursements shall be recalculated for use as a line of credit in accordance with § 206.25.

(iii) If repairs are not completed when required by the mortgage, the mortgagee shall stop monthly payments and the mortgage shall convert to the line of credit payment option. Until the repairs are completed, the mortgagee shall make no line of credit disbursements except as needed to pay for repairs required by the mortgage.

(2) *Fixed Interest Rate HECMs.* No unused set aside funds shall be made available to the borrower, except that a borrower may be reimbursed for the cost of repair materials (not including labor), in accordance with § 206.47, under conditions established by the Commissioner.

§ 206.27 Mortgage provisions.

(a) *Form.* The mortgage shall be in a form meeting the requirements of the Commissioner.

(b) *Provisions.* The terms of the mortgage shall contain an explanation of how payments will be made to the borrower, how interest will be charged, and when the mortgage will be due and payable. The mortgage shall include a provision deferring the due and payable status that occurs because of the death of the last surviving borrower for an Eligible Non-Borrowing Spouse. It shall also contain provisions designed to ensure compliance with this part and provisions on the following additional matters:

(1) Disbursements by the mortgagee under the term or tenure payment options shall be mailed to the borrower or electronically transferred to an account of the borrower on the first

business day of each month beginning with the first month after closing. Disbursements under the line of credit payment option shall be mailed to the borrower or electronically transferred to an account of the borrower within five business days after the mortgagee has received a written request for disbursement by the borrower. In accordance with § 206.55, in no event may disbursements continue during a Deferral Period.

(2) The borrower shall insure all improvements on the property that serves as collateral for the HECM whether in existence at the time of origination or subsequently erected, against any hazards, casualties, and contingencies, including but not limited to fire and flood, for which the mortgagee requires insurance. Such insurance shall be maintained in the amount and for the period of time that is necessary to protect the mortgagee's investment. Whether or not the mortgagee imposes a flood insurance requirement, the borrower shall at a minimum insure all improvements on the property, whether in existence at the time of origination or subsequently erected, against loss by floods to the extent required by the Commissioner. If the mortgagee imposes insurance requirements, all insurance shall be carried with companies acceptable to the mortgagee, and the insurance policies and any renewals shall be held by the mortgagee and shall include loss payable clauses in favor of and in a form acceptable to the mortgagee.

(3) The borrower shall not participate in a real estate tax deferral program or permit any liens to be recorded against the property, unless such liens are subordinate to the insured mortgage and, if applicable, any second mortgage held by the Commissioner.

(4) A mortgage may be prepaid in full or in part in accordance with § 206.209.

(5) The borrower must keep the property in good repair.

(6) The borrower must provide for the payment of property charges in accordance with § 206.205.

(7) The payment of monthly MIP may be added to the outstanding principal balance.

(8) The borrower shall have no personal liability for payment of the outstanding loan balance. The mortgagee shall enforce the debt only through sale of the property. The mortgagee shall not be permitted to obtain a deficiency judgment against the borrower if the mortgage is foreclosed.

(9) If the mortgage is assigned to the Commissioner under § 206.121(b), the borrower shall not be liable for any difference between the insurance

benefits paid to the mortgagee and the outstanding loan balance including accrued interest, owed by the borrower at the time of the assignment.

(10) If State law limits the first lien status of the mortgage as originally executed and recorded to a maximum amount of debt or a maximum number of years, the borrower shall agree to execute any additional documents required by the mortgagee and approved by the Commissioner to extend the first lien status to an additional amount of debt and an additional number of years and to cause any other liens to be removed or subordinated.

(c) *Date the mortgage comes due and payable.* (1) The mortgage shall state that the outstanding loan balance will be due and payable in full if a borrower dies and the property is not the principal residence of at least one surviving borrower, except that the due and payable status shall be deferred in accordance with paragraph (c)(3) of this section if the requirements of the Deferral Period are met; or if a borrower conveys all of his or her title in the property and no other borrower retains title to the property. For purposes of the preceding sentence, a borrower retains title in the property if the borrower continues to hold title to any part of the property in fee simple, as a leasehold interest as set forth in § 206.45(a), or as a life estate.

(2) The mortgage shall state that the outstanding loan balance shall be due and payable in full, upon approval of the Commissioner, if any of the following occur:

(i) The property ceases to be the principal residence of a borrower for reasons other than death and the property is not the principal residence of at least one other borrower;

(ii) For a period of longer than 12 consecutive months, a borrower fails to occupy the property because of physical or mental illness and the property is not the principal residence of at least one other borrower;

(iii) The borrower does not provide for the payment of property charges in accordance with § 206.205; or

(iv) An obligation of the borrower under the mortgage is not performed.

(3) *Deferral of due and payable status.* The mortgage documents shall contain a provision deferring due and payable status, called the Deferral Period, for an Eligible Non-Borrowing Spouse until the death of the last Eligible Non-Borrowing Spouse or the requirements of the Deferral Period in § 206.55 cease to be met and have not been cured as provided for in § 206.57.

(d) *Second mortgage to Commissioner.* Unless otherwise

provided by the Commissioner, a second mortgage to secure any payments by the Commissioner as provided in § 206.121(c) must be given to the Commissioner before a Mortgage Insurance Certificate is issued for the mortgage. If the Commissioner does not require a second mortgage to be given to the Commissioner prior to the issuance of a Mortgage Insurance Certificate, the Commissioner may require a second mortgage to be given to the Commissioner at a later day in order to secure payments by the Commissioner as provided in § 206.121(c).

§ 206.31 Allowable charges and fees.

(a) *Fees at closing.* The mortgagee may collect, either in cash at the time of closing or through an initial payment under the mortgage, the following charges and fees incurred in connection with the origination, processing, and closing of the mortgage loan:

(1) *Loan Origination Fee.* Mortgagees may charge a loan origination fee and may use such fee to pay for services performed by a sponsored third-party originator. The loan origination fee limit shall be the greater of \$2,500 or two percent of the maximum claim amount of \$200,000, plus one percent of any portion of the maximum claim amount that is greater than \$200,000.

Mortgagees may accept a lower origination fee. Mortgagees may pay fees for services performed by a sponsored third-party originator and these fees may be included as part of the loan origination fee. The total amount of the loan origination fee may not exceed \$6,000, except that the Commissioner may through notice adjust the maximum limit in accordance with the annual percentage increase in the Consumer Price Index of the Bureau of Labor Statistics of the Department of Labor in increments of \$500 only when the percentage increase in such index, when applied to the maximum origination fee, produces dollar increases that exceed \$500. The loan origination fee may be fully financed with the mortgage.

(2) *Reasonable and customary amounts.* Reasonable and customary amounts, but not more than the amount actually paid by the mortgagee, for any of the following items:

(i) Recording fees and recording taxes, or other charges incident to the recordation of the insured mortgage;

(ii) Credit report;

(iii) Survey, if required by the mortgagee or the borrower;

(iv) Title examination;

(v) Mortgagee's title insurance;

(vi) Fees paid to an appraiser for the initial appraisal of the property;

(vii) Flood certifications; and

(viii) Such other charges as may be authorized by the Commissioner.

(b) *Repair administration fee.* If the property requires repairs after closing in order to meet FHA requirements, the mortgagee may collect a fee for each occurrence as compensation for administrative duties relating to repair work pursuant to § 206.47(c) and (d), not to exceed the greater of one and one-half percent of the amount advanced for the repairs or fifty dollars. The mortgagee shall collect the repair fee by adding it to the outstanding loan balance.

§ 206.32 No outstanding unpaid obligations.

In order for a mortgage to be eligible under this part, a borrower must establish to the satisfaction of the mortgagee that after the initial payment of loan proceeds under § 206.25(a), there will be no outstanding or unpaid obligations incurred by the borrower in connection with the mortgage transaction, except for mortgage servicing charges permitted under § 206.207(b) and any future Repair Set Aside established pursuant to § 206.19(f)(1); and the initial disbursement will not be used for any payment to or on behalf of an estate planning service firm.

Eligible Borrowers

§ 206.33 Age of borrower.

The youngest borrower shall be 62 years of age or older at the time of loan closing.

§ 206.34 Limitation on number of mortgages.

(a) Once a borrower has obtained an insured mortgage under this part, the borrower is eligible to obtain future insured HECM loan financing if the existing HECM is satisfied prior to or at the closing of the new HECM, or the borrower provides legal documentation, in a manner acceptable to the Commissioner, evidencing release of the borrower's financial obligation to satisfy the existing HECM.

(b) Current HECM borrowers that plan to sell their existing residence and use the HECM for Purchase program to obtain a new principal residence must pay off the existing FHA-insured mortgage before the HECM for Purchase mortgage can be insured.

§ 206.35 Title of property which is security for HECM.

(a) A mortgagor is not required to be a borrower; however, any borrower is required to be on title to the property which serves as collateral for the HECM,

and is therefore, by definition, also a mortgagor.

(b) The mortgagor shall hold title to the entire property which is the security for the mortgage. If there are multiple mortgagors, all the mortgagors must collectively hold title to the entire property which is the security for the mortgage. If one or more mortgagors hold a life estate in the property, for purposes of this section only, the term "mortgagor" shall include each holder of a future interest in the property (remainder or reversion) who has executed the mortgage.

(c) If Non-Borrowing Spouses and non-borrowing owners of the property will continue to hold title to the property which serves as collateral for the HECM, such Non-Borrowing Spouses and non-borrowing owners must sign the mortgage as mortgagors, evidencing their commitment of the property as security for the mortgage.

(d) All Non-Borrowing Spouses and non-borrowing owners shall sign a certification that:

- (1) Consents to their spouse or other borrowing owner obtaining the HECM;
- (2) Acknowledges the terms and conditions of the mortgage; and
- (3) Acknowledges that the property will serve as collateral for the HECM as evidenced by mortgage lien(s).

§ 206.36 Seasoning requirements for existing non-HECM liens.

(a) The Commissioner may establish, through notice, seasoning requirements for existing non-HECM liens. Such seasoning requirements shall not prohibit the payoff of existing non-HECM liens using HECM proceeds if the liens have been in place for longer than 12 months prior to the HECM closing or if the liens have resulted in cash to the borrower in an amount of \$500 or less, whether at closing or through cumulative draws prior to the date of the HECM closing.

(b) Mortgagees must provide documentation satisfactory to the Commissioner as established by notice that the seasoning requirement was met.

(c) *Home Equity Lines of Credit.* The borrower may pay off, at closing, a Home Equity Line of Credit (HELOC) that does not meet seasoning requirements from borrower funds, the HECM funds, or a combination of HECM funds and borrower funds, as long as the draw from HECM funds does not exceed the percentage approved by the Commissioner under the authority of § 206.25(a).

§ 206.37 Credit standing.

(a) Each borrower shall have a general credit standing satisfactory to the Commissioner.

(b) *Required Financial Assessment—*
(1) *Requirement for Financial Assessment prior to loan approval.* Prior to loan approval, the mortgagee shall assess the financial capacity of the borrower to comply with the terms of the mortgage and evaluate whether the HECM is a sustainable solution for the borrower, in accordance with instructions established by the Commissioner through notice. The Financial Assessment shall consider the borrower's credit history, cash flow and residual income, extenuating circumstances, and compensating factors.

(i) *Credit history.* In accordance with FHA guidelines in existence at the time of FHA Case Number assignment, mortgagees shall conduct an in-depth credit history analysis to determine if the borrower has demonstrated the willingness to meet his or her financial obligations.

(ii) *Cash flow and residual income analysis.* In accordance with FHA guidelines in existence at the time of FHA Case Number assignment, mortgagees shall conduct a cash flow and residual income analysis to determine the capacity of the borrower to meet his or her documented financial obligations with his or her documented income.

(iii) *Extenuating circumstances.* Where the borrower's credit history does not meet the criteria set by the mortgagee based on FHA guidelines in existence at the time of FHA Case Number assignment, mortgagees shall consider and document, as part of the Financial Assessment, extenuating circumstances that led to the credit issues.

(iv) *Compensating factors.* The mortgagee shall document and identify in the Financial Assessment any considered compensating factors.

(2) *Completion and approval of Financial Assessment.* The Financial Assessment shall be completed and approved by a DE Underwriter registered in HUD's system of record by the underwriting mortgagee.

(3) *Nondiscrimination.* (i) The Financial Assessment shall be conducted in a uniform manner that shall not discriminate because of race, color, religion, sex, national origin, familial status, disability, marital status, actual or perceived sexual orientation, gender identity, source of income of the borrower, location of the property, or because the applicant has in good faith exercised any right under the Consumer Credit Protection Act (15 U.S.C. 1601 *et seq.*).

(ii) The Financial Assessment shall be conducted in compliance with all

applicable laws and regulations, including but not limited to, the following:

- (A) Fair Housing Act (42 U.S.C. 3601 *et seq.*);
- (B) Fair Credit Reporting Act (15 U.S.C. 1681 *et seq.*);
- (C) Equal Credit Opportunity Act (15 U.S.C. 1691 *et seq.*); and
- (D) Regulation B (12 CFR part 1002).

§ 206.39 Principal residence.

(a) The property must be the principal residence of each borrower, and if applicable, Eligible Non-Borrowing Spouse, at closing.

(b) *HECM for Purchase.* For HECM for Purchase transactions, each borrower, and if applicable, Eligible Non-Borrowing Spouse, must occupy the property within 60 days from the date of closing.

§ 206.40 Disclosure, verification and certifications.

(a) *Disclosure and certification of Social Security and Employer Identification Numbers—(1) Borrower.* The borrower must meet the requirements for the disclosure and verification of Social Security and Employer Identification Numbers, as provided by part 200, subpart U, of this chapter.

(2) *Eligible Non-Borrowing Spouse.* The Eligible Non-Borrowing Spouse shall comply with the requirements for disclosure and verification of Social Security and Employer Identification Numbers by borrowers in paragraph (a)(1) of this section.

(b) *Certifications.* Each borrower and each Non-Borrowing Spouse shall provide all required certifications to HUD and the mortgagee, as required by the Commissioner.

(c) *Designation of alternate individual.* At the time of origination, the mortgagee shall request that the borrower designate an alternate individual for the purpose of communicating with the mortgagee if the mortgagee has not been able to reach the borrower. The designation of the alternate individual is at the discretion of the borrower. If the mortgagee is unable to make contact or communicate with the borrower for any reason, including death or incapacitation, the mortgagee shall communicate with the alternate individual, if one has been designated by the borrower.

§ 206.41 Counseling.

(a) *List provided.* At the time of the initial contact with the prospective borrower, the mortgagee shall give the borrower a list of the names, addresses, and telephone numbers of HECM

counselors and their employing agencies, which have been approved by the Commissioner, in accordance with subpart E of this part, as qualified and able to provide the information described in paragraph (b) of this section. The borrower, any Eligible or Ineligible Non-Borrowing Spouse, and any non-borrowing owner must receive counseling.

(b) *Information to be provided.* (1) A HECM counselor must discuss with the borrower:

- (i) The information required by section 255(f) of the NHA;
- (ii) Whether the borrower has signed a contract or agreement with an estate planning service firm that requires, or purports to require, the borrower to pay a fee on or after closing that may exceed amounts permitted by the Commissioner or this part;
- (iii) If such a contract has been signed under paragraph (b)(1)(ii) of this section, the extent to which services under the contract may not be needed or may be available at nominal or no cost from other sources, including the mortgagee; and
- (iv) Any other requirements determined by the Commissioner.

(2) If the HECM borrower has an Eligible Non-Borrowing Spouse, in addition to meeting the requirements of paragraph (b)(1) of this section, a HECM counselor shall discuss with the borrower and Eligible Non-Borrowing Spouse:

- (i) The requirement that the Eligible Non-Borrowing Spouse must obtain ownership of the property or other legal right to remain in the property for life, upon the death of the last surviving borrower;
- (ii) A failure to obtain ownership or other legal right to remain in the property for life will result in the HECM becoming due and payable and the Eligible Non-Borrowing Spouse will not receive the benefit of the Deferral Period;
- (iii) The requirement that the property must be the principal residence of the Eligible Non-Borrowing Spouse prior to and after the death of the borrowing spouse;
- (iv) The requirement that the Eligible Non-Borrowing Spouse fulfills all obligations of the mortgage, including the payment of property charges and upkeep of the property; and
- (v) Any other requirements determined by the Commissioner.

(3) If the HECM borrower has an Ineligible Non-Borrowing Spouse, in addition to meeting the requirements of paragraph (b)(1) of this section, a HECM counselor shall discuss with the

borrower and Ineligible Non-Borrowing Spouse:

- (i) The Deferral Period will not be applicable;
 - (ii) The HECM will become due and payable upon the death of the last surviving borrower; and
 - (iii) Any other requirements determined by the Commissioner.
- (c) *Certificate.* The HECM counselor will provide the borrower with a certificate stating that the borrower, Non-Borrowing Spouse, and non-borrowing owner, as applicable, has received counseling. The borrower shall provide the mortgagee with a physical copy of the certificate.

§ 206.43 Information to borrower.

(a) *Disclosure of costs of obtaining mortgage.* The mortgagee shall ensure that the borrower has received full disclosure of all costs of obtaining the mortgage. The mortgagee shall ask the borrower about any costs or other obligations that the borrower has incurred to obtain the mortgage, as defined by the Commissioner, in addition to providing any disclosures required by law. The mortgagee shall clearly state to the borrower which charges are required to obtain the mortgage and which are not required to obtain the mortgage.

(b) *Lump sum disbursement.* (1) If the borrower requests that at least 25 percent of the principal limit amount (after deducting amounts excluded in the following sentence) be disbursed at closing to the borrower (or as otherwise permitted by § 206.25), the mortgagee must make sufficient inquiry at closing to confirm that the borrower will not use any part of the amount disbursed for payments to or on behalf of an estate planning service firm, with an explanation of § 206.32 as necessary or appropriate.

(2) This paragraph does not apply to any part of the principal limit used for the following:

- (i) Initial MIP under § 206.105(a) or fees and charges allowed under § 206.31(a) paid by the mortgagee from mortgage proceeds instead of by the borrower in cash; and
- (ii) Amounts set aside in accordance with § 206.19(f) for repairs under § 206.47, for property charges under § 206.205, or for servicing charges under § 206.207(b).

§ 206.44 Monetary investment for HECM for Purchase program.

(a) *Monetary investment.* At closing, HECM for Purchase borrowers shall provide a monetary investment that will be applied to satisfy the difference between the principal limit and the sale

price for the property, plus any HECM loan-related fees that are not financed into the loan, minus the amount of the earnest deposit.

(b) *Funding sources.* To satisfy the required monetary investment, borrowers may use:

- (1) Cash on hand;
- (2) Cash from the sale or liquidation of the borrower's assets;
- (3) HECM mortgage proceeds; or
- (4) Other approved funding sources as determined by the Commissioner through notice.

(c) *Interested party contributions.* (1) The following interested party contributions are permissible:

- (i) Fees required to be paid by a seller under state or local law;
- (ii) Fees customarily paid by a seller in the subject property locality; and
- (iii) The purchase of the Home Warranty policy by the seller.

(2) The Commissioner may define additional permissible interested party contributions and impose requirements for permissible interested party contributions through a notice in the **Federal Register**.

Eligible Properties

§ 206.45 Eligible properties.

(a) *Title.* A mortgage must be on real estate held in fee simple; or on a leasehold that is under a lease with a duration lasting until the later of: 99 years, if such lease is renewable; or the actuarial life expectancy of the mortgagor plus a number of years specified by the Commissioner, which shall not be more than 99 years. The mortgagee shall obtain a title insurance policy satisfactory to the Commissioner. If the Commissioner determines that title insurance for reverse mortgages is not available for reasonable rates in a state, then the Commissioner may specify other acceptable forms of title evidence in lieu of title insurance.

(b) *Type of property.* The property shall include a dwelling designed principally as a residence for one family or such additional families as the Commissioner shall determine. A condominium unit designed for one-family occupancy shall also be an eligible property.

(c) *Borrower and mortgagee requirement for maintaining flood insurance coverage.* (1) During such time as the mortgage is insured, the borrower and mortgagee shall be obligated, by a special condition to be included in the mortgage commitment, to obtain and to maintain National Flood Insurance Program (NFIP) flood insurance coverage on the property improvements (dwelling and related

structures/equipment essential to the value of the property and subject to flood damage) if NFIP flood insurance is available with respect to the property improvements that:

(i) Are located in an area designated by the Federal Emergency Management Agency (FEMA) as a floodplain area having special flood hazards; or

(ii) Are otherwise determined by the Commissioner to be subject to a flood hazard.

(2) No mortgage may be insured that covers property improvements located in an area that has been identified by FEMA as an area having special flood hazards, unless the community in which the area is situated is participating in the NFIP and such insurance is obtained by the borrower. Such requirement for flood insurance shall be effective one year after the date of notification by FEMA to the chief executive officer of a flood prone community that such community has been identified as having special flood hazards.

(3) The flood insurance must be maintained during such time as the mortgage is insured in an amount at least equal to the lowest of the following:

(i) 100 percent replacement cost of the insurable value of the improvements, which consists of the development or project cost less estimated land cost; or

(ii) The maximum amount of the NFIP insurance available with respect to the particular type of the property; or

(iii) The outstanding principal balance of the loan.

(d) *Lead-based paint poisoning prevention.* If the appraiser of a dwelling constructed prior to 1978 finds defective paint surfaces, 24 CFR 200.810(d) shall apply unless the borrower certifies that no child who is less than six years of age resides or is expected to reside in the dwelling, except that any reference to "mortgagor" in 24 CFR 200.810(d) shall mean "borrower" for purposes of this paragraph.

(e) *Restrictions on conveyance.* The property must be freely marketable. Conveyance of the property may only be restricted as permitted under 24 CFR 203.41 or 24 CFR 234.66 and this part, except that a right of first refusal to purchase a unit in a condominium project is permitted if the right is held by the condominium association for the project.

(f) *Location of property.* The mortgaged property shall be located within the United States, Puerto Rico, Guam, the Virgin Islands, the Commonwealth of the Northern Mariana Islands, and American Samoa. The

mortgaged property, if otherwise acceptable to the Commissioner, may be located in any location where the housing standards meet the requirements of the Commissioner.

(g) *HECM for Purchase.* (1) A HECM for Purchase transaction is where title to the property is transferred to the HECM borrower and, at the time of closing, the HECM first and second liens, if applicable, will be the only liens against the property.

(2) Properties are eligible for FHA insurance under the HECM for Purchase program when construction is completed and the property is habitable, as evidenced by the issuance of a Certificate of Occupancy or its equivalent, by the local jurisdiction.

§ 206.47 Property standards; repair work.

(a) *Need for repairs.* Properties must meet the applicable property requirements of the Commissioner in order to be eligible. Properties that do not meet the property requirements must be repaired in order to ensure that the repaired property will serve as adequate security for the insured mortgage.

(b) *Assurance that repairs are made.* The mortgage may be closed before the repair work is completed if the Commissioner estimates that the cost of the remaining repair work will not exceed 15 percent of the maximum claim amount and the mortgage contains provisions approved by the Commissioner concerning payment for the repairs.

(c) *Reimbursement to contractor.* When repair work is completed after closing by a contractor, the mortgagee shall cause one or more inspections of the property to be made by an inspector or other qualified individual acceptable to the Commissioner in order to ensure that the repair work is satisfactory, and prior to the release of funds from the Repair Set Aside. The mortgagee shall hold back a portion of the contract price attributable to the work done before each interim release of funds, and the total of the hold backs will be released after the final inspection and approval of the release by the mortgagee. The mortgagee shall ensure that all mechanics' and materialmen's liens are released of record.

(d) *Reimbursement to borrower.* The mortgagee shall not reimburse the borrower for any labor the borrower performed. The mortgagee may reimburse the borrower for the actual cost of repair materials from the Repair Set Aside, provided that the mortgagee causes one or more inspections of the property by an inspector or other qualified individual acceptable to the

Commissioner and meets all reimbursement requirements established by the Commissioner.

(e) *HECM for Purchase*. For HECM for Purchase transactions, where major property deficiencies threaten the health and safety of the homeowner or jeopardize the soundness and security of the property, all repairs must be completed by the seller prior to closing. Appraisers shall complete the appraisal report as "Subject To" the completion of the repairs.

§ 206.51 Eligibility of mortgages involving a dwelling unit in a condominium.

If the mortgage involves a dwelling unit in a condominium, the project in which the unit is located shall have been committed to a plan of condominium ownership by deed, or other recorded instrument, that is acceptable to the Commissioner.

§ 206.52 Eligible sale of property—HECM for Purchase.

(a) *Sale by owner of record*—(1) *Owner of record requirement*. To be eligible for a mortgage insured by FHA, the property must be purchased from the owner of record and the transaction may not involve any sale or assignment of the sales contract.

(2) *Supporting documentation*. The mortgagee shall obtain documentation verifying that the seller is the owner of record and must submit this documentation to FHA as part of the application for mortgage insurance, in accordance with §§ 206.15 and 206.115(b)(9).

(b) *Time restrictions on re-sales*—(1) *General*. The eligibility of a property for a mortgage insured by FHA is dependent on the time that has elapsed between the date the seller acquired the property (based upon the date of settlement) and the date of execution of the sales contract that will result in the FHA mortgage insurance (the re-sale date). The mortgagee shall obtain documentation verifying compliance with the time restrictions described in this paragraph and must submit this documentation to FHA as part of the application for mortgage insurance, in accordance with § 206.115(b).

(2) *Re-sales occurring 90 days or less following acquisition*. If the re-sale date is 90 days or less following the date of acquisition by the seller, the property is not eligible for a mortgage to be insured by FHA.

(3) *Re-sales occurring between 91 days and 180 days following acquisition*. (i) If the re-sale date is between 91 days and 180 days following acquisition by the seller, the property is

generally eligible for a mortgage insured by FHA.

(ii) However, FHA will require that the mortgagee obtain additional documentation if the re-sale price is 100 percent over the purchase price. Such documentation must include an appraisal from another appraiser. The mortgagee may also document its loan file to support the increased value by establishing that the increased value results from the rehabilitation of the property.

(iii) FHA may revise the level at which additional documentation is required under paragraph (b)(3) of this section at 50 to 150 percent over the original purchase price. FHA will revise this level by **Federal Register** notice with a 30 day delayed effective date.

(4) *Authority to address property flipping for re-sales occurring between 91 days and 12 months following acquisition*. (i) If the re-sale date is more than 90 days after the date of acquisition by the seller, but before the end of the twelfth month after the date of acquisition, the property is eligible for a mortgage to be insured by FHA.

(ii) However, FHA may require that the mortgagee provide additional documentation to support the re-sale value of the property if the re-sale price is 5 percent or greater than the lowest sales price of the property during the preceding 12 months (as evidenced by the contract of sale). At FHA's discretion, such documentation must include, but is not limited to, an appraisal from another appraiser. FHA may exclude re-sales of less than a specific dollar amount from the additional value documentation requirements.

(iii) If the additional value documentation supports a value of the property that is more than 5 percent lower than the value supported by the first appraisal, the lower value will be used to calculate the maximum claim amount. Otherwise, the value supported by the first appraisal will be used to calculate the maximum claim amount.

(iv) FHA will announce its determination to require additional value documentation through issuance of a **Federal Register** notice. The requirement for additional value documentation may be established either on a nationwide or regional basis. Further, the **Federal Register** notice will specify the percentage increase in the re-sale price that will trigger the need for additional documentation, and will specify the acceptable types of documentation. The **Federal Register** notice may also exclude re-sales of less than a specific dollar amount from the additional value documentation

requirements. Any such **Federal Register** notice, and any subsequent revisions, will be issued at least thirty days before taking effect.

(v) The level at which additional documentation is required under paragraph (b)(4) of this section shall supersede that under paragraph (b)(3) of this section.

(5) *Re-sales occurring more than 12 months following acquisition*. If the re-sale date is more than 12 months following the date of acquisition by the seller, the property is eligible for a mortgage insured by FHA.

(c) *Exceptions to the time restrictions on sales*. The time restrictions on sales described in paragraph (b) of this section do not apply to:

(1) Sales by HUD of Real Estate-Owned (REO) properties under 24 CFR part 291 and of single family assets in revitalization areas pursuant to section 204 of the NHA (12 U.S.C. 1710);

(2) Sales by another agency of the United States Government of REO single family properties pursuant to programs operated by these agencies;

(3) Sales of properties by nonprofit organizations approved to purchase HUD REO single family properties at a discount with resale restrictions;

(4) Sales of properties that were acquired by the sellers by inheritance;

(5) Sales of properties purchased by an employer or relocation agency in connection with the relocation of an employee;

(6) Sales of properties by state- and federally-chartered financial institutions and government-sponsored enterprises (GSEs);

(7) Sales of properties by local and state government agencies; and

(8) Only upon announcement by FHA through issuance of a notice, sales of properties located in areas designated by the President as federal disaster areas. The notice will specify how long the exception will be in effect.

(d) *Sanctions and indemnification*. Failure of a mortgagee to comply with the requirements of this section may result in HUD requesting indemnification of the mortgage loan, or seeking other appropriate remedies under 24 CFR part 25.

Refinancing of Existing Home Equity Conversion Mortgages

§ 206.53 Refinancing a HECM loan.

(a) *General*. Except as otherwise provided in this section, all requirements applicable to the insurance of HECMs under this part apply to the insurance of refinanced HECMs. FHA may, upon application by a mortgagee, insure any mortgage given

to refinance an existing HECM insured under this part, including loans assigned to the Commissioner as described in § 206.107(a)(1) and § 206.121(b).

(b) *Definition of “total cost of the refinancing”.* For purposes of paragraphs (d) and (e) of this section, the term “total cost of the refinancing” means the sum of the allowable charges and fees permitted under § 206.31 and the initial MIP described in § 206.105(a) and paragraph (c) of this section.

(c) *Initial MIP limit.* (1) The initial MIP paid by the mortgagee pursuant to § 206.105(a) shall not exceed the difference between: three percent of the increase in the maximum claim amount for the new HECM, minus the amount of the initial MIP already charged and paid by the borrower for the existing HECM that is being refinanced. No refunds will be given if the initial MIP paid on the existing HECM exceeds the initial MIP due on the new HECM.

(2) The HECM refinance authority is only applicable when the property that serves as collateral for the FHA-insured mortgage remains the same.

(3) Existing HECM borrowers refinancing an existing HECM are eligible for a MIP reduction under the conditions of this section, but existing HECM borrowers who participate in a HECM for Purchase transaction are ineligible for a reduction in the initial MIP.

(d) *Anti-churning disclosure—(1) Contents of anti-churning disclosure.* In addition to providing the required disclosures under § 206.43, the mortgagee shall provide to the borrower its best estimate of:

(i) The total cost of the refinancing to the borrower; and

(ii) The increase in the borrower's principal limit as measured by the estimated initial principal limit on the mortgage to be insured less the current principal limit on the HECM that is being refinanced under this section.

(2) *Timing of anti-churning disclosure.* The mortgagee shall provide the anti-churning disclosure concurrently with the disclosures required under § 206.43.

(e) *Waiver of counseling requirement.* The borrower and any Non-Borrowing Spouse may elect not to receive counseling under § 206.41, but only if:

(1) The original HECM was assigned a Case Number on or after August 4, 2014, and the borrower and Non-Borrowing Spouse, if applicable, received counseling required under § 206.41; or where the original HECM was assigned a Case Number prior to August 4, 2014, and there is no applicable Non-Borrowing Spouse.

(2) The borrower has received the anti-churning disclosure required under paragraph (d) of this section.

(3) The increase in the borrower's principal limit (as provided in the anti-churning disclosure) exceeds the total cost of the refinancing by an amount established by the Commissioner through **Federal Register** notice. FHA may periodically update this amount through publication of a notice in the **Federal Register**. Publication of any such revised amount will occur at least 30 days before the revision becomes effective.

(4) The time between the date of the closing on the original HECM and the date of the application for refinancing under this section does not exceed five years (even if less than five years have passed since a previous refinancing under this section).

Deferral of Due and Payable Status

§ 206.55 Deferral of due and payable status for Eligible Non-Borrowing Spouses.

(a) *Deferral Period.* If the last surviving borrower predeceases an Eligible Non-Borrowing Spouse, and if the requirements of paragraph (d) of this section are satisfied, the due and payable status will be deferred for as long as the Eligible Non-Borrowing Spouse continues to meet the Qualifying Attributes in paragraph (c) of this section and the requirements of paragraphs (d) and (e) of this section.

(b) *End of Deferral Period.* (1) If a Deferral Period ceases or becomes unavailable because a Non-Borrowing Spouse no longer satisfies the Qualifying Attributes and has become an Ineligible Non-Borrowing Spouse, a mortgagee may not provide an opportunity to cure the default, and the HECM will become immediately due and payable as a result of the death of the last surviving borrower.

(2) If a Deferral Period ceases but the Eligible Non-Borrowing Spouse continues to meet the Qualifying Attributes, the mortgagee must provide an Eligible Non-Borrowing Spouse with 30 days to cure the default, in accordance with § 206.57.

(c) *Qualifying Attributes.* (1) In order to qualify as an Eligible Non-Borrowing Spouse, the Non-Borrowing Spouse must:

(i) Have been the spouse of a HECM borrower at the time of loan closing and remained the spouse of such HECM borrower for the duration of the HECM borrower's lifetime;

(ii) Have been properly disclosed to the mortgagee at origination and specifically named as an Eligible Non-Borrowing Spouse in the HECM mortgage and loan documents;

(iii) Have occupied, and continue to occupy, the property securing the HECM as his or her principal residence; and

(iv) Meet any other requirements as the Commissioner may prescribe by **Federal Register** notice for comment.

(2) A Non-Borrowing Spouse who meets the Qualifying Attributes in paragraph (c)(1) of this section at origination is an Eligible Non-Borrowing Spouse and may not elect to be ineligible for the Deferral Period. A Non-Borrowing Spouse that is ineligible for the Deferral Period at the time of loan origination because he or she failed to satisfy the Qualifying Attributes requirements in paragraph (c)(1) of this section is not subsequently eligible for a Deferral Period when the borrowing spouse dies or moves out of the home.

(3) An Eligible Non-Borrowing Spouse shall become an Ineligible Non-Borrowing Spouse should any of the Qualifying Attributes requirements in paragraph (c)(1) of this section cease to be met.

(d) *Additional requirements for Deferral Period.* An Eligible Non-Borrowing Spouse must satisfy and continue to satisfy the following requirements:

(1) Within 90 days from the death of the last surviving HECM borrower, establish legal ownership or other ongoing legal right to remain for life in the property securing the HECM;

(2) After the death of the last surviving borrower, ensure all other obligations of the HECM borrower(s) contained in the loan documents continue to be satisfied; and

(3) After the death of the last surviving borrower, ensure that the HECM does not become eligible to be called due and payable for any other reason.

(e) *Unaffected terms of HECM.* All applicable terms and conditions of the mortgage and loan documents, and all FHA requirements, continue to apply and must be satisfied.

(f) Nothing in this section may be construed as interrupting or interfering with the ability of the borrower's estate or heir(s) to dispose of the property if they are otherwise legally entitled to do so.

§ 206.57 Cure provision enabling reinstatement of Deferral Period.

(a) When the mortgagee is required by § 206.55(b)(2) to provide an Eligible Non-Borrowing Spouse with 30 days to cure the default, this section shall apply.

(b) If the default is cured within the 30-day timeframe, the Deferral Period shall be reinstated, unless:

(1) The mortgagee has reinstated the Deferral Period within the past two years immediately preceding the current notification to the Eligible Non-Borrowing Spouse that the mortgage is due and payable;

(2) The reinstatement of the Deferral Period will preclude foreclosure if the mortgage becomes due and payable at a later date; or

(3) The reinstatement of the Deferral Period will adversely affect the priority of the mortgage lien.

(c) If the default is not cured within the 30-day timeframe, the mortgagee shall proceed in accordance with the established timeframes to initiate foreclosure and reasonable diligence in prosecuting foreclosure.

(d) Even after a foreclosure proceeding has been initiated, the mortgagee shall permit an Eligible Non-Borrowing Spouse to cure the condition which resulted in the Deferral Period ceasing, consistent with § 206.55(b)(2), and to reinstate the mortgage and Deferral Period, and the mortgage insurance shall continue in effect. The mortgagee may require the Eligible Non-Borrowing Spouse to pay any costs that the mortgagee incurred to reinstate the mortgage, including foreclosure costs and reasonable attorney's fees. Such costs may not be added to the outstanding loan balance and shall be paid from some other source of funds. The mortgagee shall reinstate the Deferral Period unless:

(1) The mortgagee has reinstated the Deferral Period within the past two years immediately preceding the latest notification to the Eligible Non-Borrowing Spouse that the mortgage is due and payable;

(2) The reinstatement of the Deferral Period will preclude foreclosure if the mortgage becomes due and payable at a later date; or

(3) The reinstatement of the Deferral Period will adversely affect the priority of the mortgage lien.

§ 206.59 Obligations of mortgagee.

(a) *Certifications and disclosures at closing.* At closing, the mortgagee shall obtain the appropriate certification from each borrower identified as married as well as from each identified Non-Borrowing Spouse. When a HECM borrower has identified an Ineligible Non-Borrowing Spouse, the mortgagee shall also disclose the amount of mortgage proceeds that would have been available under the HECM if he or she were an Eligible Non-Borrowing Spouse.

(b) *Divorce.* In the event of a divorce between the HECM borrower and Eligible Non-Borrowing Spouse, a

mortgagee shall obtain a copy of the final divorce decree and shall not require the now Ineligible Non-Borrowing Spouse to fulfill any further requirements.

(c) *Death of borrower.* Within 30 days of being notified of the death of the borrower, the mortgagee shall:

(1) Obtain all certifications, as required by the Commissioner, from the Eligible Non-Borrowing Spouse, and continue to obtain the required certifications no less than annually thereafter for the duration of the Deferral Period; and

(2) Notify any Eligible Non-Borrowing Spouse that the due and payable status of the loan is in a Deferral Period only for the amount of time that such Eligible Non-Borrowing Spouse continues to meet all requirements established by the Commissioner.

(d) *Non-compliance with requirements.* If the Eligible Non-Borrowing Spouse ceases to meet any requirements established by the Commissioner, the mortgagee shall notify the Eligible Non-Borrowing Spouse within 30 days that the Deferral Period has ended and the HECM is immediately due and payable, unless the Deferral Period is reinstated in accordance with § 206.57. The mortgagee shall obtain documentation validating the reason for the cessation of the Deferral Period and, if applicable, the reason for reinstatement of the Deferral Period.

§ 206.61 HECM proceeds during a Deferral Period.

(a) The HECM is not assumable. HECM proceeds may not be disbursed to any party during a Deferral Period, except as determined by the Commissioner through notice.

(b) If a Repair Set Aside was established as a condition of the HECM, funds may be disbursed from the Repair Set Aside during a Deferral Period for the sole purpose of paying the cost of those repairs that were specifically identified prior to origination as necessary to the insurance of the HECM. Repairs under this paragraph shall only be paid for using funds from the Repair Set Aside if the repairs are satisfactorily completed during the time period established in the Repair Rider or such additional time as provided by the Commissioner. Unused funds remaining beyond the established time period shall not be disbursed.

Subpart C—Contract Rights and Obligations

Sale, Assignment and Pledge

§ 206.101 Sale, assignment and pledge of insured mortgages.

(a) *Sale of interests in insured mortgages.* No mortgagee may sell or otherwise dispose of any mortgage insured under this part, or group of mortgages insured under this part, or any partial interest in such mortgage or mortgages by means of any agreement, arrangement or device except pursuant to this subpart.

(b) *Sale of insured mortgage to approved mortgagee.* A mortgage insured under this part may be sold to another approved mortgagee. The seller shall notify the Commissioner of the sale within 15 calendar days, on a form prescribed by the Commissioner and acknowledged by the buyer.

(c) *Effect of sale of insured mortgage.* When a mortgage insured under this part is sold to another approved mortgagee, the buyer shall thereupon succeed to all the rights and become bound by all the obligations of the seller under the contract of insurance and the seller shall be released from its obligations under the contract, provided that the seller shall not be relieved of its obligation to pay mortgage insurance premiums until the notice required by § 206.101(b) is received by the Commissioner.

(d) *Assignments, pledges and transfers by approved mortgagee.* (1) An assignment, pledge, or transfer of a mortgage or group of mortgages insured under this part, not constituting a final sale, may be made by an approved mortgagee to another approved mortgagee provided the following requirements are met:

(i) The assignor, pledgor or transferor shall remain the mortgagee of record.

(ii) The Commissioner shall have no obligation to recognize or deal with any party other than the mortgagee of record with respect to the rights, benefits and obligations of the mortgagee under the contract of insurance.

(2) An assignment or transfer of an insured mortgage or group of insured mortgages may be made by an approved mortgagee to other than an approved mortgagee provided the requirements under paragraphs (d)(1)(i) and (d)(1)(ii) of this section are met and the following additional requirements are met:

(i) The assignee or transferee shall be a corporation, trust or organization (including but not limited to any pension trust or profit-sharing plan) which certifies to the approved mortgagee that:

(A) It has assets of \$100,000 or more; and

(B) It has lawful authority to hold an insured mortgage or group of insured mortgages.

(ii) The assignment or transfer shall be made pursuant to an agreement under which the transferor or assignor is obligated to take one of the following alternate courses of action within 1 year from the date of the assignment or within such additional period of time as may be approved by the Commissioner:

(A) The transferor or assignor shall repurchase and accept a reassignment of such mortgage or group of mortgages.

(B) The transferor or assignor shall obtain a sale and transfer of such mortgage or group of mortgages to an approved mortgagee.

(3) Notice to or approval of the Commissioner is not required in connection with assignments, pledges or transfers pursuant to this section.

(e) *Declaration of trust.* A sale of a beneficial interest in a group of mortgages insured under this part, where the interest to be acquired is related to all of the mortgages as an entirety, rather than an interest in a specific mortgage, shall be made only pursuant to a declaration of trust, which has been approved by the Commissioner prior to any such sale.

(f) *Transfers of partial interests.* A partial interest in a mortgage insured under this part may be transferred under a participation agreement without obtaining the approval of the Commissioner, if the following conditions are met:

(1) *Principal mortgagee.* The insured mortgage shall be held by an approved mortgagee which, for the purposes of this section, shall be referred to as the *principal mortgagee*.

(2) *Interest of principal mortgagee.* The principal mortgagee shall retain and hold for its own account a financial interest in the insured mortgage.

(3) *Qualification for holding partial interest.* A partial interest in an insured mortgage shall be issued to and held only by:

(i) A mortgagee approved by the Commissioner; or

(ii) A corporation, trust or organization (including, but not limited to any pension fund, pension trust, or profit-sharing plan) which certifies to the principal mortgagee that:

(A) It has assets of \$100,000 or more; and

(B) It has lawful authority to acquire a partial interest in an insured mortgage.

(4) *Participation agreement provisions.* The participation agreement shall include provisions that:

(i) The principal mortgagee shall retain title to the mortgage and remain

the mortgagee of record under the contract of mortgage insurance.

(ii) The Commissioner shall have no obligation to recognize or deal with anyone other than the principal mortgagee with respect to the rights, benefits and obligations of the mortgagee under the contract of insurance.

(iii) The mortgage and loan documents shall remain in the custody of the principal mortgagee.

(iv) The responsibility for servicing the insured mortgages shall remain with the principal mortgagee.

§ 206.102 Insurance Funds.

Loans endorsed for insurance under this part, prior to October 1, 2008, shall be obligations of the General Insurance Fund. Loans endorsed for insurance under this part, on or after October 1, 2008, shall be obligations of the MMIF.

Mortgage Insurance Premiums

§ 206.103 Payment of MIP.

(a) The payment of any MIP due under this subpart shall be made to the Commissioner by the mortgagee in cash until an event described in paragraph (b) or (c) of this section occurs.

(b) *Payment of the mortgage.* The MIP shall no longer be remitted if the mortgage is paid in full.

(c) *Acquisition of title.* (1) If the mortgagee or a party other than the mortgagee acquires title at a foreclosure sale, or the mortgagee acquires title by a deed in lieu of foreclosure, and the mortgagee notifies the Commissioner that a claim for the payment of the insurance benefits will not be presented, the MIP shall no longer be remitted.

(2) If the mortgagee or a party other than the mortgagee acquires title at a foreclosure sale or the mortgagee acquires title by a deed in lieu of foreclosure, or where the property is sold in accordance with § 206.125(c), and a claim for the payment of the insurance benefits will be presented, the MIP shall no longer be remitted as of the date of the foreclosure sale, the date the deed in lieu of foreclosure is recorded, or the date in which the sale in accordance with § 206.125(c) is completed, as applicable.

§ 206.105 Amount of MIP.

(a) *Initial MIP.* The mortgagee shall pay to the Commissioner an initial MIP that does not exceed three percent of the maximum claim amount.

(b) *Monthly MIP.* The Commissioner may establish and collect a monthly MIP, which will accrue daily from the closing date, at a rate not to exceed 1.50 percent of the remaining insured principal balance, or up to 1.55 percent

for any mortgage involving an original principal obligation that is greater than 95 percent of appraised value of the property. A mortgagee may only add the monthly MIP to the loan balance when paid to the Commissioner.

(c) *Calculation of the initial MIP.* The mortgagee shall calculate the initial MIP based on the amount of funds the borrower has elected to be made available during the First 12-Month Disbursement Period, except that the calculation shall not include any funds set aside in the Servicing Fee Set Aside, if applicable. The initial MIP calculation shall be determined based on the sum of the following amounts:

(1) For adjustable interest rate HECMs, the amount of Mandatory Obligations, the amount disbursed to the borrower at loan closing, and the amount of the available Initial Disbursement Limit not taken by the borrower at loan closing that the borrower selects to remain available during the First 12-Month Disbursement Period.

(2) For fixed interest rate HECMs, the amount of Mandatory Obligations and the amount disbursed to the borrower at loan closing.

(d) *Adjustments to initial or monthly MIP.* The Commissioner may adjust the amount of any initial or monthly MIP through notice. Such notice shall establish the effective date of any premium adjustment therein.

§ 206.107 Mortgagee election of assignment or shared premium option.

(a) *Election of option.* Before the mortgage is submitted for insurance endorsement, the mortgagee shall elect either the assignment option or the shared premium option.

(1) Under the assignment option, the mortgagee shall have the option of assigning the mortgage to the Commissioner if the outstanding loan balance is equal to or greater than 98 percent of the maximum claim amount, regardless of the deferral status, or the borrower has requested a payment which exceeds the difference between the maximum claim amount and the outstanding loan balance and:

(i) The mortgagee is current in making the required payments under the mortgage to the borrower;

(ii) The mortgagee is current in its payment of the MIP (and late charges and interest on the MIP, if any) to the Commissioner;

(iii) The mortgage is not due and payable under § 206.27(c)(1), or, if due and payable under § 206.27(c)(1), its due and payable status has been deferred pursuant to a Deferral Period;

(iv) An event described in § 206.27(c)(2) has not occurred, or the Commissioner has been so informed but has denied approval for the mortgage to be due and payable. At the mortgagee's option, the mortgagee may forgo assignment of the mortgage and file a claim under any of the circumstances described in § 206.123(a)(3)–(5); and

(v) The mortgage is a first lien of record and title to the property securing the mortgage is good and marketable. The provisions of § 206.136 pertaining to mortgagee certifications also apply.

(2) Under the shared premium option, the mortgagee may not assign a mortgage to the Commissioner unless the mortgagee fails to make payments and the Commissioner demands assignment (§ 206.123(a)(2)), but the mortgagee shall only be required to remit a reduced monthly MIP to the Commissioner. The mortgagee shall collect from the borrower the full amount of the monthly MIP provided in § 206.105(b) but shall retain a portion of the monthly MIP paid by the borrower as compensation for the default risk assumed by the mortgagee. The portion of the MIP to be retained by a mortgagee shall be determined by the Commissioner as calculated in § 206.109. For a particular mortgage, the applicable portion shall be determined as of the date of the commitment. The mortgagee retains the right to file a claim under any of the circumstances described in § 206.123(a)(2)–(5).

(b) *No election for shared appreciation.* Shared appreciation mortgages shall be insured by the Commissioner only under the shared premium option.

§ 206.109 Amount of mortgagee share of premium.

Using the factors provided by the Commissioner, the amount of the mortgagee share of the premium shall be determined for each mortgage based upon the age of the youngest borrower or Eligible Non-Borrowing Spouse and the expected average mortgage interest rate.

§ 206.111 Due date of MIP.

(a) *Initial MIP.* The mortgagee shall pay the initial MIP to the Commissioner within fifteen days of closing and as a condition to the endorsement of the mortgage for insurance.

(b) *Monthly MIP.* Each monthly MIP shall be due to the Commissioner on the first business day of each month except the month in which the mortgage is closed.

§ 206.113 Late charge and interest.

(a) *Late charge.* Initial MIP remitted to the Commissioner more than 5 days

after the payment date in § 206.111(a) and monthly MIP remitted to the Commissioner more than 5 days after the payment date in § 206.111(b) shall include a late charge of four percent of the amount owed.

(b) *Interest.* In addition to any late charge provided in paragraph (a) of this section, the mortgagee shall pay interest on any initial MIP remitted to the Commissioner more than 20 days after closing, and interest on any monthly MIP remitted to the Commissioner more than 5 days after the payment date prescribed in § 206.111(b). Such interest rate shall be paid at a rate set in conformity with the Treasury Financial Manual.

(c) *Paid by mortgagee.* Any late charge and interest owed may not be added to the outstanding loan balance and must be paid by the mortgagee.

§ 206.115 Insurance of mortgage.

(a) *Mortgages with firm commitments.* For applications for insurance involving mortgages not eligible to be originated under the Direct Endorsement program under § 203.5 (any reference to § 203.255 in § 203.5 shall mean § 206.115 for purposes of this section), the Commissioner will endorse the mortgage for insurance by issuing a Mortgage Insurance Certificate.

(b) *Endorsement with Direct Endorsement processing.* For applications for insurance involving mortgages originated under the Direct Endorsement program under § 203.5 (any reference to § 203.255 in § 203.5 shall mean § 206.115 for purposes of this section), the mortgagee shall submit to the Commissioner, within 60 days after the date of closing of the loan or such additional time as permitted by the Commissioner, properly completed documentation and certifications as listed in this paragraph (b):

(1) Property appraisal upon a form meeting the requirements of the Commissioner (including, if required, any additional documentation supporting the appraised value of the property under § 206.52), and a HUD conditional commitment, or a Lender's Notice of Value issued by the Lender Appraisal Processing Program (LAPP) approved lender when the appraisal was originally completed for use in a VA application, but only if the appraiser was also on the FHA roster as of the effective date of the appraisal, and all accompanying documents required by the Commissioner;

(2) An application for insurance of the mortgage in a form prescribed by the Commissioner;

(3) A certified copy of the mortgage and loan documents executed upon

forms which meet the requirements of the Commissioner;

(4) An underwriter certification, on a form prescribed by the Commissioner, stating that the underwriter has personally reviewed the appraisal report and credit application (including the analysis performed on the worksheets) and that the proposed mortgage complies with FHA underwriting requirements, and incorporates each of the underwriter certification items that apply to the mortgage submitted for endorsement, as set forth in the applicable handbook or similar publication that is distributed to all Direct Endorsement mortgagees, except that if FHA makes the TOTAL Mortgage Scorecard available to HECM mortgagees by setting out requirements applicable for the use of the TOTAL Mortgage Scorecard in a **Federal**

Register notice for comment, mortgagees may follow such procedures and meet such requirements in lieu of providing the underwriter certification;

(5) Where applicable, a certificate under oath and contract regarding use of the dwelling for transient or hotel purposes;

(6) Where an individual water or sewer system is being used, an approval letter from the local health authority indicating approval of the system in accordance with § 200.926d(f);

(7) A mortgage certification on a form prescribed by the Commissioner, stating that the authorized representative of the mortgagee who is making the certification has personally reviewed the mortgage documents and the application for insurance endorsement, and certifying that the mortgage complies with the requirements of paragraph (b) of this section. The certification shall incorporate each of the mortgagee certification items that apply to the mortgage loan submitted for endorsement, as set forth in the applicable handbook or similar publication that is distributed to all Direct Endorsement mortgagees;

(8) Documents required by § 206.15;

(9) Documentation providing that the seller is the owner of record in accordance with § 206.52(a) and the time restriction requirements of § 206.52(b) are met;

(10) For HECM for Purchase transactions, a Certificate of Occupancy, or its equivalent, if required for new construction; and

(11) Such other documents as the Commissioner may require.

(c) *Pre-endorsement review for Direct Endorsement.* (1) Upon submission by an approved mortgagee of the documents required by paragraph (b) of this section, the Commissioner will

review the documents and determine that:

(i) The mortgage is executed on a form which meets the requirements of the Commissioner;

(ii) The mortgage maturity meets the requirements of the applicable program;

(iii) The stated mortgage amount does not exceed 150 percent of the maximum claim amount;

(iv) All documents required by paragraph (b) of this section are submitted;

(v) All necessary certifications are made in accordance with paragraph (b) of this section;

(vi) There is no mortgage insurance premium, late charge or interest due to the Commissioner; and

(vii) The mortgage was not in default when submitted for insurance or, if submitted for insurance more than 60 days after closing, the mortgagee certifies that the borrower is current in paying all property charges or is otherwise in compliance with all the terms and conditions of the mortgage documents.

(2) The Commissioner is authorized to determine if there is any information indicating that any certification or required document is false, misleading, or constitutes fraud or misrepresentation on the part of any party, or that the mortgage fails to meet a statutory or regulatory requirement. If, following this review, the mortgage is determined to be eligible, the Commissioner will endorse the mortgage for insurance by issuance of a Mortgage Insurance Certificate. If the mortgage is determined to be ineligible, the Commissioner will inform the mortgagee in writing of this determination, and include the reasons for the determination and any corrective actions that may be taken.

(d) *Submission by mortgagee other than originating mortgagee.* If the originating mortgagee assigns the mortgage to another approved mortgagee before pre-endorsement review under paragraph (c) of this section, the assignee may submit the required documents for pre-endorsement review in the name of the originating mortgagee. All certifications must be executed by the originating mortgagee (or its underwriter, if appropriate). The purchasing mortgagee may pay any required mortgage insurance premium, late charge and interest.

(e) *Post-Endorsement review for Direct Endorsement.* Following endorsement for insurance, the Commissioner may review all documents required by paragraph (b) of this section. If, following this review, the Commissioner determines that the mortgage does not

satisfy the requirements of the Direct Endorsement program, the Commissioner may place the mortgagee on Direct Endorsement probation, or terminate the authority of the mortgagee to participate in the Direct Endorsement program pursuant to § 206.15, or refer the matter to the Mortgagee Review Board for action pursuant to part 25 of this title.

(f) *Creation of the contract.* The mortgage shall be an insured mortgage from the date of the issuance of a Mortgage Insurance Certificate, from the date of the endorsement of the credit instrument, or from the date of FHA's electronic acknowledgement to the mortgagee that the mortgage is insured, as applicable. The Commissioner and the mortgagee are thereafter bound by the regulations in this subpart with the same force and to the same extent as if a separate contract had been executed relating to the insured mortgage, including the provisions of the regulations in this subpart and of the National Housing Act.

§ 206.116 Refunds.

No amount of the initial MIP shall be refundable except as authorized by the Commissioner.

HUD Responsibility to Borrowers

§ 206.117 General.

The Commissioner is required by statute to take any action necessary to provide a borrower with funds to which the borrower is entitled under the mortgage and which the borrower does not receive because of the default of the mortgagee. The Commissioner may hold a second mortgage to secure repayment by the borrower under § 206.27(d). Where the Commissioner does not hold a second mortgage, but makes a payment to the borrower, and such payment is not reimbursed by the mortgagee, the Commissioner shall accept assignment of the first mortgage.

§ 206.119 [Reserved]

§ 206.121 Commissioner authorized to make payments.

(a) *Investigation.* The Commissioner will investigate all complaints by a borrower concerning late payments. If the Commissioner determines that the mortgagee is unable or unwilling to make all payments required under the mortgage, including late charges, the Commissioner shall pay such payments and late charges to the borrower.

(b) *Reimbursement or assignment.* The Commissioner may demand that within 30 days from the demand, the mortgagee reimburse the Commissioner, with interest from the date of payment

by the Commissioner, or assign the insured mortgage to the Commissioner. Interest shall be paid at a rate set in conformity with the Treasury Financial Manual. If the mortgagee complies with the reimbursement demand, then the contract of insurance shall not be affected. If the mortgagee complies by assigning the mortgage for record within 30 days of the demand, then the Commissioner shall pay an insurance claim as provided in § 206.129(e)(3) and assume all responsibilities of the mortgagee under the first mortgage. If the mortgagee fails to comply with the demand within 30 days, the contract of insurance will terminate as provided in § 206.133(c).

(c) *Second mortgage.* If the contract of insurance is terminated as provided in § 206.133(c), all payments to the borrower by the Commissioner will be secured by the second mortgage, unless otherwise provided by the Commissioner. Payments will be due and payable in the same manner as under the insured first mortgage. The liability of the borrower under the first mortgage shall be limited to payments actually made by the mortgagee to or on behalf of the borrower (including prior recoupment of the MIP remitted by the mortgagee and billed to the borrower), and shall exclude accrued interest, whether or not it has been included in the outstanding loan balance, and shared appreciation, if any. Interest will stop accruing on the first mortgage when the Commissioner begins to make payments under the second mortgage. The first mortgage will not be due and payable until the second mortgage is due and payable.

Claim Procedure

§ 206.123 Claim procedures in general.

(a) *Claims.* Mortgagees may submit claims for the payment of the mortgage insurance benefits if:

(1) The conditions of § 206.107(a)(1) pertaining to the optional assignment of the mortgage by the mortgagee have been met and the mortgagee assigns the mortgage to the Commissioner;

(2) The mortgagee is unable or unwilling to make the payments under the mortgage and assigns the mortgage to the Commissioner pursuant to the Commissioner's demand, as provided in § 206.121(b);

(3) The borrower or other permissible party sells the property for less than the outstanding loan balance and the mortgagee releases the mortgage of record to facilitate the sale, as provided in § 206.125(c);

(4) The mortgagee acquires title to the property by foreclosure or a deed in lieu

of foreclosure and sells the property as provided in § 206.125(g) for an amount which does not satisfy the outstanding loan balance or fails to sell the property as provided in § 206.127(a)(2); or

(5) The mortgagee forecloses and a bidder other than the mortgagee purchases the property for an amount that is not sufficient to satisfy the outstanding loan balance, as provided in § 206.125(e).

(b) [Reserved]

§ 206.125 Acquisition and sale of the property.

(a) *Initial action by the mortgagee.* (1) The mortgagee shall notify the Commissioner within 60 days of the mortgage becoming due and payable when the conditions stated in the mortgage, as required by § 206.27(c)(1) have occurred or when the Deferral Period ends. The mortgagee shall notify the Commissioner within 30 days when one of the conditions stated in the mortgage, as required by § 206.27(c)(2), has occurred.

(2) After notifying and receiving approval of the Commissioner when needed, the mortgagee shall notify the borrower, Eligible Non-Borrowing Spouse, borrower's estate, and borrower's heir(s), as applicable, within 30 days of the later of notifying the Commissioner or receiving approval, if needed, that the mortgage is due and payable. The mortgagee shall give the applicable party 30 days from the date of notice to engage in the following actions:

(i) Pay the outstanding loan balance, including any accrued interest, MIP, and mortgagee advances in full;

(ii) Sell the property for an amount not to be less than the amount determined by the Commissioner through notice, which shall not exceed 95 percent of the appraised value as determined under § 206.125(b), with the net proceeds of the sale to be applied towards the outstanding loan balance. Closing costs shall not exceed the greater of: 11 percent of the sales price; or a fixed dollar amount as determined by the Commissioner through **Federal Register** notice. For the purposes of this section, *sell* includes the transfer of title by operation of law;

(iii) Provide the mortgagee with a deed in lieu of foreclosure;

(iv) Correct the condition which resulted in the mortgage coming due and payable for reasons other than the death of the last surviving borrower;

(v) For an Eligible Non-Borrowing Spouse, correct the condition which resulted in an end to the Deferral Period in accordance with § 206.57; or

(vi) Such other actions as permitted by the Commissioner through notice.

(3) For a borrower, even after a foreclosure proceeding is begun, the mortgagee shall permit the borrower to correct the condition which resulted in the mortgage coming due and payable and to reinstate the mortgage, and the mortgage insurance shall continue in effect. The mortgagee may require the borrower to pay any costs that the mortgagee incurred to reinstate the borrower, including foreclosure costs and reasonable attorney's fees. Such costs shall be paid by adding them to the outstanding loan balance. The mortgagee may refuse reinstatement by the borrower if:

(i) The mortgagee has accepted reinstatement of the mortgage within the past two years immediately preceding the current notification to the borrower that the mortgage is due and payable;

(ii) Reinstatement will preclude foreclosure if the mortgage becomes due and payable at a later date; or

(iii) Reinstatement will adversely affect the priority of the mortgage lien.

(4) For an Eligible Non-Borrowing Spouse, even after a foreclosure proceeding is begun, the mortgagee shall permit the Eligible Non-Borrowing Spouse to cure the condition which resulted in the Deferral Period ceasing, in accordance with § 206.57(d).

(b) *Appraisal.* The mortgagee shall have the property appraised by an appraiser on the FHA roster, or other appraiser acceptable to, and identified by, the Commissioner through **Federal Register** notice, no later than 30 days after receipt of the request by an applicable party in connection with a potential property sale. The property shall be appraised before a foreclosure sale and have an effective appraisal date that is no more than 30 days before such sale. The appraisal shall be at the requesting party's expense unless the mortgage is due and payable. If the mortgage is due and payable, the appraisal shall be at the mortgagee's expense but the mortgagee shall have a right to be reimbursed out of the proceeds of any sale by the borrower or other permissible party. The Commissioner may, through **Federal Register** notice, identify other acceptable types of valuation for establishing the value of HECMs for the purpose of sale.

(c) *Sale by borrower or other permissible party.* Where the HECM is not due and payable, the borrower or an authorized representative of the borrower may sell the property for at least the lesser of the outstanding loan balance or the appraised value. Where the HECM is due and payable at the

time the contract for sale is executed, the borrower or other party with legal right to dispose of the property may sell the property in accordance with the amount established by § 206.125(a)(2)(ii). The mortgagee shall satisfy the mortgage of record (and the Commissioner will satisfy any second mortgage required by the Commissioner under § 206.27(d) of record) in order to facilitate the sale, provided that there are no junior liens (except the mortgage to secure payments by the Commissioner if required under § 206.27(d)) and all the net proceeds from the sale are paid to the mortgagee.

(d) *Initiation of foreclosure.* (1) The mortgagee shall commence foreclosure of the mortgage within six months of the due date defined in § 206.129(d)(1), or within such additional time as may be approved by the Commissioner.

(2) If the laws of the State, city, or municipality or other political subdivision in which the mortgaged property is located or if Federal bankruptcy law does not permit the commencement of the foreclosure in accordance with § 206.125(d)(1), the mortgagee shall commence foreclosure within six months after the expiration of the time during which such foreclosure is prohibited by such laws.

(3) The mortgagee shall give written notice to the Commissioner within 30 days after the initiation of foreclosure proceedings, and shall exercise reasonable diligence in prosecuting the foreclosure proceedings to completion and in acquiring title to and possession of the property. A time frame that is determined by the Commissioner to constitute "reasonable diligence" for each State is made available to mortgagees.

(4) The mortgagee shall bid at the foreclosure sale an amount at least equal to the lesser of the sum of the outstanding loan balance and any and all other incurred expenses, or the current appraised value of the property. Such a bid by any party other than the mortgagee, for the full loan balance and all associated expenses, will result in a full payoff of the loan and no claim for insurance benefits being presented to FHA.

(e) *Other bidders at foreclosure sale.* If a party other than the mortgagee is the successful bidder at the foreclosure sale, the net proceeds of the sale shall be applied to the outstanding loan balance.

(f) *Deed in lieu of foreclosure.* (1)(i) In order to avoid delays and additional expense as a result of instituting and completing a foreclosure action, the mortgagee shall accept a deed in lieu of foreclosure from the borrower or other party with legal right to dispose of the

property provided it is filed for recording within 9 months of the due date and the mortgagee is able to obtain good and marketable title.

(ii) *Cash for Keys*. The Commissioner may provide a financial incentive, in an amount to be determined by the Commissioner, to be paid by the mortgagee and reimbursed through any subsequent claim where a borrower or other party with a legal right to do so deeds the property within 6 months of the due date.

(2) In exchange for the executed and delivered deed, the mortgagee shall cancel the credit instrument and deliver it to the borrower and satisfy the mortgage of record. If applicable, the mortgagee shall request that the Commissioner cancel the credit instrument and deliver it to the borrower and satisfy the mortgage of record.

(g) *Sale of the acquired property*. (1) Upon acquisition of the property by foreclosure or deed in lieu of foreclosure, the mortgagee shall take possession of, preserve, and repair the property and shall make diligent efforts to sell the property within six months from the date the mortgagee acquired the property, or such additional time as provided by the Commissioner. The mortgagee shall sell the property for an amount not less than the appraised value (as provided under paragraph (b) of this section) unless the mortgagee does not file an application for insurance benefits or written permission is obtained from the Commissioner authorizing a sale at a lower price.

(2) Repairs shall not exceed those required by local law, or the requirements of the Commissioner or the Secretary of Veterans Affairs if the sale of the property is financed with a mortgage insured by the Commissioner or guaranteed, insured, or taken by the Secretary of Veterans Affairs. No other repairs shall be made without the specific advance approval of the Commissioner.

(3) The mortgagee shall not enter into a contract for the preservation, repair, or sale of the property with any officer, employee, or owner of ten percent or more interest in the mortgagee or with any other person or organization having an identity of interest with the mortgagee or with any relative of such officer, employee, owner, or person.

(4) The Commissioner may provide financial incentive, in an amount to be determined by the Commissioner, to be paid by the mortgagee and reimbursed through a subsequent claim when a bona fide tenant vacates the property prior to an eviction being initiated by the mortgagee.

§ 206.127 Application for insurance benefits.

(a) *Mortgagee acquires title*. (1) The mortgagee shall apply for the payment of the insurance benefits within 30 days after the sale of the property by the mortgagee or within such additional time as approved by the Commissioner. Application shall be made by notifying the Commissioner of the sale of the property, the sale price, and income and expenses incurred in connection with the acquisition, repair, and sale of the property.

(2) If the property will not be sold within six months from the foreclosure sale date where the mortgagee is the successful bidder, the mortgagee shall apply for the insurance benefit not later than 30 days after the end of the six-month period, substituting the appraised value, using a valid appraisal, for the sale price. The mortgagee may add the cost of the appraisal to the claim amount.

(b) *Party other than the mortgagee acquires title*. The mortgagee shall apply for the payment of the insurance benefits within 30 days after a party other than the mortgagee acquires title to the property. Application shall be made by notifying the Commissioner of the sale of the property and the sale price. Transferring a portfolio that includes REO properties to another entity does not constitute a “sale” under this section.

(c) *Mortgagee assigns the mortgage*. The mortgagee shall file its claim for the payment of insurance benefits within 15 days after the date the assignment of the mortgage to the Commissioner is filed for recording. The application for the payment of the insurance benefits shall include the items listed in § 206.135(a) and the certification required under § 206.136.

(d) *Contract of insurance not terminated*. Mortgagees may only file an application for insurance benefits provided the contract of insurance has not terminated.

§ 206.129 Payment of claim.

(a) *General*. If the claim for the payment of the insurance benefits is acceptable to the Commissioner, payment shall be made in cash in the amount determined under this section.

(b) *Limit on claim amount*. (1) For HECMs assigned Case Numbers prior to September 19, 2017, in no case may the claim paid under this subpart exceed the maximum claim amount. The interest allowance provided in paragraphs (d)(3)(x), (e)(2), and (f)(2)(i) of this section shall not be included in determining the limit on the claim amount.

(2) For HECMs assigned Case Numbers on or after September 19, 2017, in no case may the claim paid under this subpart exceed the maximum claim amount, as defined in § 206.3. The interest allowance provided in paragraphs (d)(3)(x), (e)(2) and (f)(2)(ii) of this section shall be made in cash in the amount determined under this section and shall be included in determining the limit on the claim amount.

(c) *Shared appreciation mortgages*. The terms *loan balance* and *accrued interest* as used in this section do not include interest attributable to the mortgagee's share of the appreciated value of the property.

(d) *Amount of payment—mortgagee acquires title or is unsuccessful bidder*. This paragraph describes the amount of payment if the mortgagee acquires title by purchase, foreclosure, or deed in lieu of foreclosure, or when a party other than the mortgagee is the successful bidder at the foreclosure sale.

(1) *Due and payable date* means the date when the mortgagee notifies or should have notified the Commissioner that the mortgage is due and payable under the conditions stated in the mortgage, as required by § 206.27(c)(1) or the date that the Deferral Period, as provided for in the mortgage by § 206.27(c)(3), ends; or the date the Commissioner approved a due and payable request as provided for in the mortgage by § 206.27(c)(2).

(2) The amount of the claim shall be computed by:

(i) Totaling the outstanding loan balance and any accrued interest and servicing fees which have not been added to the outstanding loan balance as of the due and payable date, and allowances for items set forth in paragraph (d)(3) of this section; and

(ii) Subtracting from that total the amount for which the property was sold (or the appraised value determined under § 206.127(a)(2)) and the items set forth in paragraph (d)(4) of this section.

(3) The claim shall include items listed in paragraphs (d)(3)(i) through (xiv) of this section. For HECMs with Case Numbers assigned on or after September 19, 2017, the inclusion of items listed in paragraphs (d)(3)(i), (ii), and (iii) of this section shall be limited to two-thirds of advances made by the mortgagee on such expenses.

(i) Taxes, ground rents, water rates, and utility charges that are liens prior to the mortgage;

(ii) Special assessments, which are noted on the application for insurance or which become liens after the insurance of the mortgage;

(iii) Hazard and flood insurance premiums on the mortgaged property not in excess of a *reasonable rate*;

(A) For purposes of this section, *reasonable rate* means a rate that is not in excess of the rate or advisory rate set by the principal State-licensed rating organization for essential property insurance in the voluntary market, or if coverage is available under a FAIR Plan, the FAIR Plan rate;

(B) If a State has neither a FAIR Plan nor a State-licensed rating organization for essential property insurance in the voluntary market, the mortgagee must provide to the Home Ownership Center (HOC) having jurisdiction, information concerning the lowest rates available from an insurer for the types of coverage involved, with a request for a determination of whether the rate is reasonable. FHA will determine the rate to be reasonable if it approximates the rate assessed for comparable insurance coverage applicable to similarly situated properties in a State that offers a FAIR Plan or maintains a State-licensed rating organization;

(iv) Taxes imposed upon any deeds or other instruments by which said property was acquired by the mortgagee pursuant to § 206.125;

(v) Reasonable payments made by the mortgagee, with the approval of the Commissioner, for the purpose of protecting, operating, or preserving the property, or removing debris from the property;

(vi) Reasonable costs for performing property inspections required by § 206.140 and to determine if the property is vacant or abandoned are considered to be costs of protecting, operating or preserving the property;

(vii) Charges for the administration, operation, maintenance, or repair of community-owned property or the maintenance or repair of the mortgaged property, paid by the mortgagee for the purpose of discharging an obligation arising out of a covenant filed for record prior to the issuance of the mortgage; and charges for the repair or maintenance of the mortgaged property required by, and in an amount approved by, the Commissioner under § 206.142;

(viii) Reasonable costs of the title search ordered by the mortgagee, in accordance with procedures prescribed by FHA, to determine if the criteria for approval of the mortgagee's acceptance of a deed in lieu of foreclosure or to determine clear title to complete a pre-foreclosure sale;

(ix) Foreclosure costs or costs of acquiring the property in accordance with such conditions as the Commissioner shall prescribe;

(x) An amount equal to the interest allowance which would have been earned, from the due and payable date to the date when payment of the claim is made, if the claim had been paid in debentures, except that when the mortgagee fails to meet any one of the applicable requirements of §§ 206.125 and 206.127 of this subpart within the specified time, and in a manner satisfactory to the Commissioner (or within such further time as the Commissioner may approve in writing), the interest allowance in such cash payment shall be computed only to the date on which the particular required action should have been taken or to which it was extended.

(A) *Debenture interest rate.* The debenture interest rate provided for in § 206.146 shall be used.

(B) *Maturity of debentures.* Debentures shall mature 20 years from the date of issue.

(C) *Registration of debentures.* Debentures shall be registered as to principal and interest.

(D) *Form and amounts of debentures.* Debentures issued under this part shall be in such form and amounts; and shall be subject to such terms and conditions; and shall include such provisions for redemption, if any, as may be prescribed by the Commissioner, with the approval of the Secretary of the Treasury; and may be in book entry or certificated registered form, or such other form as the Commissioner by regulation may prescribe.

(E) *Redemption of debentures.* Debentures shall, at the option of the Commissioner and with the approval of the Secretary of the Treasury, be redeemable at par plus accrued interest on any semiannual interest payment date on three months' notice of redemption given in such manner as the Commissioner shall prescribe. The debenture interest on the debentures called for redemption shall cease on the semiannual interest payment date designated in the call notice. The Commissioner may include with the notice of redemption an offer to purchase the debentures at par plus accrued interest at any time during the period between the notice of redemption and the redemption date. If the debentures are purchased by the Commissioner after such call and prior to the named redemption date, the debenture interest shall cease on the date of purchase.

(F) *Issue date of debentures.* The issue date of debentures is determined by the due and payable date as defined in paragraph (d)(1) of this section.

(G) *Cash adjustment.* Any difference of less than \$50 between the amount of

debentures to be issued to the mortgagee and the total amount of the mortgagee's claim, as approved by the Commissioner, may be adjusted by the issuance of a check in payment thereof;

(xi) Any amount of incentive paid by the mortgagee in accordance with § 206.125(f)(1)(ii) or § 206.125(g)(4);

(xii) Costs of any appraisal under §§ 206.125 or 206.127, provided that the property was appraised after the mortgage became due and payable and that the mortgagee is not otherwise reimbursed for such costs;

(xiii) Reasonable payments made by the mortgagee for:

(A) Preservation and maintenance of the property;

(B) Repairs necessary to meet the objectives of the property standards required for mortgages insured by the Commissioner, those required by local law, and such additional repairs as may be specifically approved in advance by the Commissioner; and

(C) Expenses in connection with the sale of the property including a sales commission at the rate customarily paid in the community and, if the sale to the buyer involves a mortgage insured by the Commissioner or guaranteed by the Secretary of Veterans Affairs, a discount at a rate not to exceed the maximum allowable by the Commissioner, as of the date of execution of the discounted loan. Closing costs shall not exceed the greater of: 11 percent of the sales price; or a fixed dollar amount as determined by the Commissioner through **Federal Register** notice; and

(xiv) A certification that the property is undamaged in accordance with § 206.143.

(4) There shall be deducted from the amount computed in paragraph (d)(2)(i) of this section:

(i) The items listed in § 206.145; and

(ii) Any adjustment for damage or neglect to the property pursuant to §§ 206.140, 206.141, and 206.142.

(e) *Amount of payment—assigned mortgages.* This paragraph describes the amount of payment if the mortgagee assigns a mortgage to the Commissioner under § 206.107(a)(1) or § 206.121(b).

(1) When a mortgagee assigns a mortgage which is eligible for assignment under § 206.107(a)(1), the amount of payment shall be computed by subtracting from the outstanding loan balance on the date of assignment all cash retained by the mortgagee, including amounts held or deposited for the account of the borrower or to which it is entitled under the mortgage transaction that have not been applied in reduction of the principal mortgage indebtedness, and any adjustments for damage or neglect to the property

pursuant to §§ 206.140, 206.141 and 206.142.

(2) The claim shall also include:

(i) Reimbursement for such costs and attorney's fees as the Commissioner finds were properly incurred in connection with the assignment of the mortgage to the Commissioner; and

(ii) An amount equivalent to the interest allowance which will have been earned from the date the mortgage was assigned to the Commissioner to the date the claim is paid, if the claim had been paid in debentures, except that if the mortgagee fails to meet any of the requirements of § 206.127(c), or § 206.131 if applicable, within the specified time and in a manner satisfactory to the Commissioner (or within such further time as the Commissioner may approve in writing), the interest allowance in the payment of the claim shall be computed only to the date on which the particular required action should have been taken or to which it was extended. The provisions of paragraphs (d)(3)(x)(A)-(G) of this section pertaining to debentures are applicable except that the issue date of the debentures shall be the date the mortgage was assigned to the Commissioner.

(3) When a mortgagee assigns a mortgage under § 206.121(b) after demand by the Commissioner, the mortgagee will not receive the entire claim payment as contained in paragraphs (e)(1) and (2) of this section. The amount of the claim shall be computed by totaling the payments made by the mortgagee to the borrower or for the benefit of the borrower, and subtracting from the total the cash retained by the mortgagee, including amounts held or deposited for the account of the borrower or to which it is entitled under the mortgage transaction that have not been applied in reduction of the principal mortgage indebtedness, and any adjustments for damage or neglect to the property pursuant to §§ 206.141 and 206.142. The claim shall also be reduced by an amount determined by the Commissioner to reimburse the Commissioner for administrative expenses incurred in assuming the mortgagee's responsibility under the mortgage, which may include expenses for staff time. If more than one mortgage is assigned to the Commissioner, the administrative expenses incurred for all the mortgages assigned shall be allocated among the mortgages as determined by the Commissioner. The claim shall not include accrued interest whether or not it has been included in the loan balance.

(f) *Amount of payment-borrower sells the property.* This paragraph describes the amount of payment if the property is sold in accordance with § 206.125(c) to one other than the mortgagee for less than the outstanding loan balance, and the mortgagee releases the mortgage to facilitate the sale.

(1)(i) *For HECMs assigned Case Numbers prior to September 19, 2017,* the amount of the claim shall be computed by totaling the outstanding loan balance and any accrued interest and servicing fees which have not been added to the outstanding loan balance on the date the deed is recorded, and an allowance for items set forth in paragraphs (d)(3)(i)–(vii) and (d)(3)(xii) of this section, and subtracting from the total the amount for which the property was sold.

(ii) *For HECMs assigned Case Numbers on or after September 19, 2017, the following provisions apply:*

(A) *When the loan is not in due and payable status.* The amount of the claim shall be computed by totaling the outstanding loan balance and any accrued interest and servicing fees which have not been added to the outstanding loan balance on the date the deed is recorded, and an allowance for items set forth in paragraph (d)(3)(xiii)(C) of this section, and subtracting from the total the amount for which the property was sold.

(B) *When the loan is in due and payable status.* The amount of the claim shall be computed by totaling the outstanding loan balance and any accrued interest and servicing fees which have not been added to the outstanding loan balance as of the due date, the items set forth in paragraph (d)(3) of this section, and subtracting from the total the amount for which the property was sold.

(2)(i) *For HECMs assigned Case Numbers prior to September 19, 2017,* the claim shall also include an amount equivalent to the interest allowance which would have been earned from the date the deed is recorded to the date when payment of the claim is made, if the claim had been paid in debentures, and in a manner satisfactory to the Commissioner; the interest allowance in such cash payment shall be computed only to the date on which the particular action should have been taken or to which it was extended. The provisions of paragraphs (d)(3)(x)(A)-(G) of this section pertaining to debentures apply except that the issue date of the debentures is the date the deed is recorded instead of the due date.

(ii) *For HECMs assigned Case Numbers on or after September 19, 2017, the following provisions apply:*

(A) *When the loan is not in due and payable status.* The claim shall also include an amount equivalent to the interest allowance which would have been earned from the date the deed is recorded to the date when payment of the claim is made, if the claim had been paid in debentures, and in a manner satisfactory to the Commissioner; the interest allowance in such cash payment shall be computed only to the date on which the particular action should have been taken or to which it was extended. The provisions of paragraphs (d)(3)(x)(A)-(G) of this section pertaining to debentures apply except that the issue date of the debentures shall be the date the deed is recorded.

(B) *When the loan is in due and payable status.* The claim shall also include an amount equivalent to the interest allowance which would have been earned from the due and payable date to the date when payment of the claim is made, if the claim had been paid in debentures, except that when the mortgagee fails to meet any of the applicable requirements of §§ 206.125 and 206.127 within the specified time determined by the due and payable date, as defined in paragraph (d)(1) of this section (or within such further time as the Commissioner may approve in writing), and in a manner satisfactory to the Commissioner; the interest allowance in such cash payment shall be computed only to the date on which the particular action should have been taken or to which it was extended. The provisions of paragraphs (d)(3)(x)(A)-(G) of this section pertaining to debentures apply.

Condominiums

§ 206.131 Contract rights and obligations for mortgages on individual dwelling units in a condominium.

(a) *Additional requirements.* The requirements of this subpart shall be applicable to mortgages on individual dwelling units in a condominium, except as modified by this section.

(b) *References.* The term *property* as used in this subpart shall be construed to include the individual dwelling unit and the undivided interest in the common areas and facilities as may be designated.

(c) *Assignment of the mortgage.* If the mortgagee assigns the mortgage on the individual dwelling unit to the Commissioner, the mortgagee shall certify:

(1) To any changes in the plan of apartment ownership including the administration of the property;

(2) That as of the date the assignment is filed for record, the family unit is

assessed and subject to assessment for taxes pertaining only to that unit; and

(3) To the condition of the property as of the date the assignment is filed for record. Section 234.275 of this chapter concerning the certification of condition is incorporated by reference.

(d) *Condition of the multifamily structure.* The provisions of § 234.270 (a) and (b) of this chapter concerning the condition of the multifamily structure in which the property is located shall be applicable to mortgages insured under this part which are assigned to the Commissioner.

Termination of Insurance Contract

§ 206.133 Termination of insurance contract.

(a) *Payment of the mortgage.* The contract of insurance shall be terminated if the mortgage is paid in full.

(b) *Acquisition of title.* (1) If the mortgagee or a party other than the mortgagee acquires title at a foreclosure sale, or the mortgagee acquires title by a deed in lieu of foreclosure, and the mortgagee notifies the Commissioner that a claim for the payment of the insurance benefits will not be presented, the contract of insurance shall be terminated.

(2) For HECMs with Case Numbers assigned on or after September 19, 2017, if the mortgagee or a party other than the mortgagee acquires title at a foreclosure sale or the mortgagee acquires title by a deed in lieu of foreclosure and a claim for the payment of the insurance benefits will be presented, the contract of insurance shall be terminated as of claim payment.

(c) *Mortgagee fails to make payments.* If the mortgagee fails to make the payments to the borrower as required under the mortgage, and does not reimburse the Commissioner or assign the mortgage to the Commissioner within 30 days from the demand by the Commissioner for reimbursement or assignment, the contract of insurance shall automatically terminate. The Commissioner may later reinstate the contract of insurance, which shall continue in force as if no termination had occurred, upon reimbursement with interest as provided in § 206.121. Upon reinstatement, the mortgagee shall be liable for all MIP which would have been due if no termination had occurred, including late charge and interest as provided in § 206.113.

(d) *Notice of termination.* The mortgagee shall give written notice to the Commissioner, or other notice acceptable to the Commissioner, within 15 days of the occurrence of an event

under paragraphs (a) and (b) of this section. No contract of insurance shall be terminated under paragraphs (a) or (b) of this section unless such notice is given.

(e) *Voluntary termination.* The mortgagor and the mortgagee may jointly request the Commissioner to approve the voluntary termination of the mortgage insurance contract. Prior to approval, the Commissioner shall make certain that the borrower is aware of the consequences which could arise out of the voluntary termination of the contract of insurance. The mortgagee shall cancel the insurance endorsement on the Mortgage Insurance Certificate or Note upon receipt of notice from the Commissioner that the contract of insurance is terminated. Notwithstanding any provision in a mortgage instrument, there shall be no voluntary termination charge due the Commissioner on account of the voluntary termination of any mortgage insurance contract where the request for termination is received by the Commissioner.

(f) *Effect of termination.* When the insurance contract is terminated, all rights of the mortgagee shall terminate, including the right to file a claim for insurance benefits. All obligations of the Commissioner shall also cease immediately.

Additional Requirements

§ 206.134 Partial release, addition or substitution of security.

(a) A mortgagee shall not release the security or any part thereof, while the mortgage is insured, without the prior consent of the Commissioner.

(b) A mortgagee may, with the prior consent of the Commissioner, accept an addition to, or substitution of, security for the purpose of removing the dwelling to a new lot or replacing the dwelling with a similar or like kind on the existing lot under the following conditions:

(1) The mortgagee obtains a good and valid first lien on the property to which the dwelling is removed or the existing lot upon which the dwelling is rebuilt;

(2) All damages to the structure are repaired or all rebuilding of the structure is completed without cost to FHA; and

(3) The property to which the dwelling is removed or rebuilt is in an area known to be reasonably free from natural hazards or, if in a flood zone, the borrower will insure or reinsure under the National Flood Insurance Program.

(c) A mortgagee may, without the prior consent of the Commissioner, accept an addition to, or substitution of,

security for the purpose of removing the dwelling to a new lot under the following conditions:

(1) The dwelling has survived an earthquake or other disaster with little damage, but continued location on the property might be hazardous;

(2) The conditions stated in paragraph (b) of this section exist; and

(3) Immediately following the emergency removal the mortgagee notifies the Commissioner of the reasons for removal.

§ 206.135 Application for insurance benefits and fiscal data.

(a) On the date the application for assignment is filed, the mortgagee shall submit to the Commissioner:

(1) *Credit and security instrument.* The original credit and security instruments assigned without recourse or warranty, except that no act or omission of the mortgagee shall have impaired the validity and priority of the mortgage.

(2) *Proposed assignment instrument.* A copy of the proposed assignment of mortgage.

(3) *Hazard and flood insurance.* All hazard and flood insurance (if applicable) policies held in connection with the mortgaged property, together with a copy of the mortgagee's notification to the carrier authorizing the amendment of the loss payable clause substituting the Commissioner as the mortgagee.

(4) *Rights and interests.* An assignment of all rights and interests arising under the mortgage, and all claims of the mortgagee against the borrower or others arising out of the mortgage transaction.

(5) *Property.* All property of the borrower held by the mortgagee or to which it is entitled (other than the cash items which are to be retained by the mortgagee).

(6) *Records and accounts.* All records, ledger cards, documents, books, papers and accounts relating to the mortgage transaction.

(7) *Additional information.* Any additional information or data which the Commissioner may require.

(8) *Title evidence.* All title evidence held by the mortgagee. It need not be extended to include the recordation of the assignment. The title insurance policy shall be endorsed from the mortgage insurance company up to the point of assignment. At the point of assignment, the Commissioner shall be named insured under such policy.

(b) All documents required in paragraph (a) of this section must be submitted and approved before a claim for assignment may be submitted.

(c) *Recorded assignment instrument.* The original of the recorded assignment of mortgage shall be forwarded to the Commissioner as soon as received by the mortgagee, but in no case shall it be longer than 12 months after recordation. If the original of the assignment is not available, a copy shall be furnished and the original forwarded as soon as possible.

§ 206.136 Conditions for assignment.

(a) In order for a HECM to be eligible for assignment, the following must be met:

(1) *Priority of mortgage to liens.* The mortgage is prior to all mechanics' and materialmen's liens, regardless of when such liens attach, and prior to all liens and encumbrances, or defects which may arise based on any act or omission by the mortgagee except such liens or other matters as may have been approved by the Commissioner.

(2) *Amount due.* The amount stated in the instrument of assignment is actually due and owing under the mortgage.

(3) *Offsets or counterclaims.* There are no offsets or counterclaims thereto and the mortgagee has a good right to assign.

(b) The mortgagee shall certify that the conditions of paragraph (a) have been met.

§ 206.137 Effect of noncompliance with regulations.

If, for any reason, the mortgagee fails to comply with the regulations in this subpart, the Commissioner may hold processing of the application for insurance benefits in abeyance for a reasonable time in order to permit the mortgagee to comply. In the alternative to holding processing in abeyance, the Commissioner may reconvey title to the property or reassign the mortgage to the mortgagee, in which event the application for insurance benefits shall be considered as cancelled and the mortgagee shall refund the insurance benefits to the Commissioner as well as other funds required by § 206.138. The mortgagee may reapply for insurance benefits at a subsequent date; provided, however, that the mortgagee may not be reimbursed for any expenses incurred in connection with the property after it has been reconveyed or the mortgage reassigned by the Commissioner, or paid any debenture interest accrued after the date of initial conveyance, whichever is earlier, and there will be deducted from the insurance benefits any reduction in the Commissioner's estimate of the value of the property occurring from the time of reconveyance or mortgage reassignment to the time of reapplication.

§ 206.138 Mortgagee's liability for certain expenditures.

Where the Commissioner accepts an assignment, acquires a property after accepting an assignment of a mortgage, or otherwise pays a claim for insurance benefits and thereafter it becomes necessary for the Commissioner to either reconvey the property or reassign the mortgage to the mortgagee due to the mortgagee's noncompliance with these regulations, the mortgagee shall reimburse the Commissioner for all expenses incurred in connection with such acquisition and reconveyance or reassignment. The reimbursement shall include interest on the amount of insurance benefits refunded by the mortgagee from the date the insurance benefits were paid to the date of refund at an interest rate set in conformity with the Treasury Fiscal Requirements Manual, and the Commissioner's cost of holding the property or servicing the mortgage, accruing on a daily basis, from the date of assignment or claim payment to the date of reconveyance or reassignment. These costs are based on the Commissioner's estimate of the taxes, maintenance and operating expenses of the property, and administrative expenses. Appropriate adjustments shall be made by the Commissioner on account of any income received from the property.

§ 206.140 Inspection and preservation of properties.

The mortgagee, upon learning that a property subject to a mortgage insured under this part is vacant or abandoned, shall be responsible for the inspection of such property at least monthly, if the loan is in a due and payable status. When a mortgage is in due and payable status and efforts to reach the borrower or applicable party by telephone within that period have been unsuccessful, the mortgagee shall be responsible for a visual inspection of the security property to determine whether the property is vacant. The mortgagee shall take reasonable action to protect and preserve such security property when it is determined or should have been determined to be vacant or abandoned until assigned to the Commissioner or an application for insurance benefits is filed, if such action does not constitute an illegal trespass. "Reasonable action" includes the commencement of foreclosure within the time required by § 206.125.

§ 206.141 Property condition.

(a) *Condition at time of transfer.* When the mortgage is assigned to the Commissioner or the property is sold by the mortgagee, the property shall be

undamaged by fire, earthquake, flood, or tornado, except as set forth in this subpart.

(b) *Damage to property by waste.* The mortgagee shall not be liable for damage to the property by waste committed by the borrower, its heirs, successors or assigns in connection with mortgage insurance claims.

(c) *Mortgagee responsibility.* The mortgagee shall be responsible for:

(1) Damage by fire, flood, earthquake, hurricane, or tornado; and

(2) Damage to or destruction of security properties on which the loans are in default and which properties are vacant or abandoned, when such damage or destruction is due to the mortgagee's failure to take reasonable action to inspect, protect and preserve such properties as required by § 206.140.

(d) *Limitation.* The mortgagee's responsibility for property damage shall not exceed the amount of its insurance claim as to a particular property.

§ 206.142 Adjustment for damage or neglect.

(a) Except as provided for in paragraphs (a)(1) and (a)(2) of this section: if the property has been damaged by fire, flood, earthquake, hurricane, or tornado, the damage must be repaired before assignment of the mortgage to the Commissioner; if the property has suffered damage because of the mortgagee's failure to take action as required by § 206.140, the damage must be repaired before the mortgagee sells the property.

(1) If the prior approval of the Commissioner is obtained, there will be deducted from the insurance benefits the Commissioner's estimate of the cost of repairing the damage or any insurance recovery received by the mortgagee, whichever is greater.

(2) If the property has been damaged by fire and was not covered by fire insurance at the time of the damage, or the amount of insurance coverage was inadequate to repair fully the damage, only the amount of insurance recovery received by the mortgagee, if any, will be deducted from the insurance benefits, provided the mortgagee certifies, at the time that a claim is filed for insurance benefits, that:

(i) At the time the mortgage was insured, the property was covered by fire insurance in an amount at least equal to the lesser of 100 percent of the insurable value of the improvements, or the principal loan balance of the mortgage;

(ii) The insurer later cancelled this coverage or refused to renew it for

reasons other than nonpayment of premium;

(iii) The mortgagee made diligent though unsuccessful efforts within 30 days of any cancellation or non-renewal of hazard insurance, and at least annually thereafter, to secure other coverage or coverage under a FAIR Plan, in an amount described in paragraph (a)(2)(i) of this section, or if coverage to such an extent was unavailable at a reasonable rate, the greatest extent of coverage that was available at a reasonable rate;

(iv) The extent of coverage obtained by the mortgagee in accordance with paragraph (a)(2)(iii) of this section was the greatest available at a reasonable rate, or if the mortgagee was unable to obtain insurance, none was available at a reasonable rate; and

(v) The mortgagee took the actions required by § 206.140.

(b) If the property has been damaged during the time of the mortgagee's possession by events other than fire, flood, earthquake, hurricane, or tornado, or if it was damaged notwithstanding reasonable action by the mortgagee as required by § 206.140, the mortgagee must provide notice of such damage to the Commissioner and may not sell the property until directed to do so by the Commissioner. The Commissioner will either:

(1) Allow the mortgagee to sell the property damaged; or

(2) Require the mortgagee to repair the damage before sale, and the Commissioner will reimburse the mortgagee for reasonable payments not in excess of the Commissioner's estimate of the cost of repair, less any insurance recovery.

§ 206.143 Certificate of property condition.

(a) The mortgagee shall certify that as of the date the mortgagee sold the property in accordance with § 206.125(g) or assignment of the mortgage to the Commissioner, the property was:

(1) Undamaged by fire, flood, earthquake, hurricane or tornado; and

(2) Undamaged due to failure of the mortgagee to take action as required by § 206.140; and

(3) Undamaged while the property was in the possession of the mortgagee.

(b) In the absence of evidence to the contrary, the mortgagee's certificate or description of the damage shall be accepted by the Commissioner as establishing the condition of the property, as of the date of mortgage sale or assignment of the mortgage to the Commissioner.

§ 206.144 Final payment.

The mortgagee may not file any supplemental claims to its mortgage insurance claim after six months from settlement by the Commissioner of the claim payment except where the Commissioner determines it appropriate and expressly authorizes an extension of time for supplemental claim filings.

§ 206.145 Items deducted from payment.

(a) There shall be deducted from the total of the added items in § 206.129 the following cash items:

(1) All amounts received by the mortgagee on account of the mortgage after the institution of foreclosure proceedings or the acquisition of the property or otherwise after due and payable.

(2) All amounts received by the mortgagee from any source relating to the property on account of rent or other income after deducting reasonable expenses incurred in handling the property.

(3) All cash retained by the mortgagee including amounts held or deposited for the account of the borrower or to which it is entitled under the mortgage transaction that have not been applied in reduction of the outstanding loan balance.

(4) With regard to claims filed pursuant to successful short sales, all amounts received by the mortgagee relating to the sale of the property.

(b) [Reserved]

§ 206.146 Debenture interest rate.

(a) Debentures shall bear interest from the date of issue, payable semiannually on the first day of January and the first day of July of each year at the rate in effect as of the day the commitment was issued, or as of the date the mortgage was endorsed for insurance, whichever rate is higher. For applications involving mortgages originated under the single family Direct Endorsement program, debentures shall bear interest from the date of issue, payable semiannually on the first day of January and on the first day of July of each year at the rate in effect as of the date the mortgage was endorsed for insurance;

(b) For mortgages endorsed for insurance after January 23, 2004, if an insurance claim is paid in cash, the debenture interest rate for purposes of calculating such a claim shall be the monthly average yield, for the month in which the default on the mortgage occurred, on United States Treasury Securities adjusted to a constant maturity of 10 years.

Subpart D—Servicing Responsibilities

§ 206.201 Mortgage servicing generally; sanctions.

(a) *General.* This subpart identifies servicing practices that the Commissioner considers acceptable mortgage servicing practices of lending institutions servicing mortgages insured by the Commissioner. Failure to comply with this subpart shall not be a basis for denial of the insurance benefits, but a pattern of refusal or failure to comply will be cause for withdrawal of FHA mortgagee approval.

(b) *Importance of timely payments.* The paramount servicing responsibility is to make timely payments in full as required by the mortgage. Any failure of a mortgagee to make all payments required by the mortgage in a timely manner will be grounds for administrative sanctions authorized by regulations, including 2 CFR part 2424 (Debarment, Suspension, and Limited Denial of Participation), and 24 CFR part 25 (Mortgagee Review Board).

(c) *Responsibility for servicing.* (1) Servicing of insured mortgages must be performed by a mortgagee that is approved by FHA to service insured mortgages. The servicer must fully discharge the servicing responsibilities of the mortgagee as outlined in this part. The mortgagee shall remain fully responsible to the Commissioner for proper servicing, and the actions of its servicer shall be considered to be the actions of the mortgagee. The servicer also shall be fully responsible to the Commissioner for its actions as a servicer.

(2) Whenever servicing of any mortgage is transferred from one mortgagee or servicer to another, notice of the transfer of service shall be delivered:

(i) By the transferor mortgagee or servicer to the borrower. The notification shall be delivered not less than 15 days before the effective date of the transfer and shall contain the information required in 12 CFR 1024.33(b)(4); and

(ii) By the transferee mortgagee or servicer:

(A) *To the borrower.* The notification shall be delivered not less than 15 days before the effective date of the transfer and shall contain the information required in 12 CFR 1024.33(b)(4); and

(B) *To the Commissioner.* This notification shall be delivered within 15 days of the transfer, in a format prescribed by the Commissioner.

§ 206.203 Providing information.

(a) *Statements of account activity.* The mortgagee shall provide to the borrower

a monthly statement regarding the activity of the mortgage for each month, as well as for the calendar year. The statement shall summarize the total principal amount which has been paid to the borrower under the mortgage during that calendar year, the MIP paid to the Commissioner and charged to the borrower, the total amount of deferred interest added to the outstanding loan balance, the total outstanding loan balance, and the current principal limit. The mortgagee shall include an accounting of all payments for property charges. The statement shall be provided to the borrower monthly until the mortgage is paid in full by the borrower. The mortgagee shall provide the borrower with a new payment plan every time it recalculates monthly payments or the payment option is changed. The statements shall be in a format acceptable to the Commissioner.

(b) [Reserved]

(c) *Servicing—Providing information.*

(1) Mortgagees shall provide loan information to borrowers and arrange for individual loan consultation on request. The mortgagee must establish written procedures and controls to assure prompt responses to inquiries. One or more of the following means of making information readily available to borrowers is required:

(i) A servicing office staffed with competent personnel located within 200 miles of the property, capable of providing timely responses to requests for information. Complete records need not be maintained in such an office if the staff is able to secure needed information and pass it on to the borrower.

(ii) Toll-free telephone service at an office capable of providing needed information.

(2)(i) All borrowers must be informed of and reminded annually of the system available for obtaining answers to loan inquiries and the office from which needed information may be obtained. Toll-free telephone service need not be provided to a borrower other than at the office designated to serve the borrower nor other than from the immediate vicinity of the security property.

(ii) The mortgagee shall provide the borrower with the telephone number where the borrower may speak to employee(s) specifically designated by the mortgagee or its servicer to address inquiries concerning mortgages insured under this part. Such information shall be provided annually and whenever the servicer or the designated employee (or employee group) changes.

(3) Mortgagees must respond to FHA requests for information concerning individual accounts.

§ 206.205 Property charges.

(a) *General.* (1) The borrower shall be responsible for the payment of the following property charges before or on the due date: ground rents, condominium fees, planned unit development fees, and homeowners' association fees.

(2) Payment of the following property charges are obligations of the borrower and shall be made through the LESA, by the borrower, or by the mortgagee, in accordance with paragraphs (b) through (e) of this section on or before the due date: property taxes, including any special assessments levied by local or State law, hazard insurance premiums, and applicable flood insurance premiums.

(b) *Method of property charge payment—*

(1) *LESA required.* For fixed or adjustable interest rate HECMs, based on the results of the Financial Assessment, the mortgagee may require the borrower to have a Fully-Funded LESA for the payment of property charges identified in paragraph (a)(2) of this section. For adjustable interest rate HECMs, based on the results of the Financial Assessment, the mortgagee may require the borrower to have a Partially-Funded LESA for the payment of property charges identified in paragraph (a)(2) of this section.

(2) *LESA not required.* (i) If, based on the results of the Financial Assessment, the mortgagee does not require the borrower to have a LESA, the borrower shall elect one of the following at closing, whereby an election of the option in paragraph (b)(2)(i)(B) or (C) of this section cannot be cancelled by the borrower:

(A) Borrower is responsible for the independent payment of all property charges;

(B) Borrower elects to have a Fully-Funded LESA for the payment of property charges identified in paragraph (a)(2) of this section; or

(C) For adjustable interest rate HECMs only, borrower elects to have the mortgagee pay property charges listed in paragraph (a)(2) of this section which would have otherwise been required to be paid by the borrower, in accordance with paragraph (d) of this section.

(ii) Through **Federal Register** notice, the Commissioner may establish an incentive for voluntarily electing a LESA under paragraph (b)(2)(i)(B) of this section.

(c) *Life Expectancy Set Aside—*(1) *General.* (i) For a Fully-Funded LESA, the mortgagee shall:

(A) Make payments for property charges identified in paragraph (a)(2) of this section before bills become delinquent and establish controls to

ensure that the information needed to pay such bills is obtained on a timely basis;

(B) Make early payments to take advantage of a discount whenever it is to the borrower's advantage;

(C) Not charge the borrower penalties for late payments for property charges unless it can be shown that the penalty was the direct result of the borrower's error or omission;

(D) Ensure that LESA funds are not held in an escrow account;

(E) Add payments for property charges to the outstanding loan balance when the mortgagee disburses funds to the taxing authority or insurance carrier; and

(F) Provide written notification to the borrower and FHA within 30 days of the mortgagee receiving notification that a property charge payment is outstanding when there are no funds or insufficient funds remaining in the LESA, and recommend that the borrower speak with a HUD-Approved Housing Counselor.

(ii) For a Partially-Funded LESA, the mortgagee shall:

(A) Ensure that LESA funds are disbursed to the borrower semi-annually;

(B) Establish controls to ensure the taxing authority, insurance carrier, or both, received the borrower's payment;

(C) Ensure the LESA funds are not held in an escrow account;

(D) Add payments disbursed to the borrower for the payment of property charges identified in paragraph (a)(2) to the outstanding loan balance when the mortgagee disburses the funds; and

(E) Provide written notification to the borrower and FHA within 30 days of the mortgagee receiving notification that a property charge payment is outstanding when there are no funds or insufficient funds remaining in the LESA, and recommend that the borrower speak with a HUD-Approved Housing Counselor.

(2) *Calculation of property charges.* (i) The projected cost of property charges that will be required over the life expectancy of the youngest borrower shall be calculated based on a formula established by the Commissioner.

(ii) The mortgagee shall not require any LESA to be funded in excess of the projected cost of property charges.

(iii) For a Fully-Funded LESA, the amount withheld from the mortgage proceeds shall equal the projected cost of property charges.

(iv) For a Partially-Funded LESA, the amount withheld from the mortgage proceeds is based on a calculation of the gap in residual income and may not

exceed the projected cost of property charges.

(v) Mortgagees shall use the *HECM Financial Assessment and Property Charge Guide*, or subsequent guide issued by the Commissioner, to determine whether a LESA is required; view the formula for calculating the projected costs of property charges; and view the formulas for calculating the Fully- and Partially-Funded LESA amounts.

(3) *Annual analysis of LESA.* Mortgagees shall perform an annual analysis of the LESA to determine whether the funds are sufficient to make required distributions for the next year. If funds are exhausted or there is an insufficient balance determination, the mortgagee shall notify the borrower, in writing and within 15 calendar days of the annual analysis of the determination, that LESA funds are exhausted or insufficient and the borrower will be responsible for the payment of property charges.

(4) *Non-payment of property charges*—(i) *Fully-Funded LESA for an adjustable interest rate HECM with no remaining funds.* (A) If the LESA is exhausted and the borrower fails to make property charge payments, the mortgagee shall use any available principal limit to pay the outstanding property charge amount in full and charge the borrower's account.

(B) The mortgagee shall provide the borrower with a written notification within 30 days of the mortgagee receiving notification that a property charge payment is outstanding. The borrower shall have 30 days to respond to the mortgagee to explain the circumstances which resulted in the non-payment. (C) If there is no available principal limit from which the mortgagee can pay the property charge amount in full, and the borrower fails to pay the property charges, the mortgage will become due and payable under § 206.27(c)(2).

(ii) *Fully-Funded LESA for a fixed interest rate HECM with no remaining funds.* If the LESA is exhausted and the borrower fails to make property charge payments, the mortgage will become due and payable under § 206.27(c)(2).

(iii) *Partially-Funded LESA with remaining funds.* If funds remain in the LESA and the borrower fails to make property charge payments, the mortgagee shall:

(A) Immediately suspend future semi-annual payments to the borrower from the Partially-Funded LESA, although scheduled and unscheduled payments from the borrower's payment option may continue;

(B) Disburse funds from the Partially-Funded LESA to pay the full amount owed for the past due property charge; and

(C) Provide written notification to the borrower, within 30 days of the mortgagee receiving notification that a property charge payment is outstanding, that funds were advanced from the Partially-Funded LESA to pay the outstanding property charge. The borrower shall have 30 days to respond to the mortgagee to explain the circumstances which resulted in the non-payment.

(iv) *Partially-Funded LESA with no remaining funds.* (A) If the LESA is exhausted and the borrower fails to make property charge payments when due, the mortgagee shall use any funds available in the principal limit to pay the outstanding property charge amount in full and charge the borrower's account.

(B) The mortgagee shall provide written notification to the borrower within 30 days of the mortgagee receiving notification that a property charge payment is outstanding. The borrower shall have 30 days to respond to the mortgagee to explain the circumstances which resulted in the non-payment.

(C) If there is no available principal limit from which the mortgagee can pay the property charge amount in full, and the borrower fails to pay the property charges, the mortgage will become due and payable under § 206.27(c)(2).

(5) *Unused LESA funds.* During a Deferral Period or when one of the events listed in § 206.27(c)(1) or (c)(2) have occurred, no unused funds from the LESA shall be disbursed.

(6) *Assignment of mortgage to the Commissioner.* If the insured first mortgage is assigned to the Commissioner, or if payments are made through the second mortgage under the Demand Assignment process, the Commissioner is not required to assume the responsibility for property charge payments, but may continue to administer payments for property charges for a borrower with a Fully-Funded LESA or semi-annual disbursements to a borrower with a Partially-Funded LESA to the extent that there are any funds available in the LESA. For adjustable interest rate HECMs, if the LESA has a positive remaining balance but funds are insufficient to pay all property charges due or semi-annual disbursements to the borrower, the Commissioner may provide the remaining funds to the borrower as a line of credit.

(d) *Borrower elects to have mortgagee pay property charges.* If, based on the

results of the Financial Assessment, the mortgagee does not require the borrower to have a LESA, for adjustable interest rate HECMs, the borrower may elect at closing to require the mortgagee to pay property charges identified in paragraph (a)(2) of this section by withholding funds from monthly payments due to the borrower or by charging such funds to a line of credit. This voluntary election to have funds withheld by the mortgagee to pay property charges cannot be canceled by the borrower at any time. If the sum of the outstanding loan balance and any unused set aside for repairs and servicing charges has reached the principal limit or the HECM proceeds are otherwise insufficient to pay the property charges, the borrower shall pay such property charges, even though the borrower elected payment to be made by the mortgagee. Through **Federal Register** notice, the Commissioner may expand the borrower's options for property charge payment by the mortgagee.

(1) *Assignment of mortgage to the Commissioner.* If the insured first mortgage is assigned to the Commissioner under § 206.107(a)(1) or § 206.121(b), or if payments are made through the second mortgage under § 206.121(c), the Commissioner is not required to assume the mortgagee's responsibility under paragraph (d) of this section, despite the election by the borrower.

(2) *Mortgagee's responsibilities.* (i) Funds withheld from payments due to the borrower for property charges under paragraph (d) of this section shall not be paid into an escrow account. When property charges are actually paid, the mortgagee may add the amount paid to the outstanding loan balance.

(ii) It is the mortgagee's responsibility to make disbursements for property charges before bills become delinquent. Mortgagees shall establish controls to ensure that the information needed to pay such bills is obtained on a timely basis. Penalties for late payments for property charges must not be charged to the borrower unless it can be shown that the penalty was the direct result of the borrower's error or omission. Early payment of a bill to take advantage of a discount should be made whenever it is to the borrower's benefit.

(iii) Not later than the end of the second loan year the mortgagee shall establish a system for the periodic analysis of the amounts withheld from monthly payments. The analysis shall be performed at least once a year thereafter. The amount shall be adjusted, after analysis, to provide sufficient available funds to make anticipated disbursements during the

ensuing year. The borrower shall be given at least ten days' notice of adjustment in the amount of withholding and an adequate explanation of the reasons for any change. When the amount withheld is analyzed in accordance with this paragraph, any surplus shall be paid to the borrower and added to the outstanding loan balance. Any shortage shall be corrected through increasing the monthly withholding as provided in paragraph (d)(2)(iv) of this section. If amounts withheld are insufficient to pay a property charge before it is delinquent, and the borrower could request a payment equal to the shortage under § 206.26(b), then the mortgagee shall pay the full property charge and treat payment of the shortage as a payment requested by the borrower under § 206.26(b).

(iv) The mortgagee's estimate of withholding amount shall be based on the best information available as to probable payments which will be required to be made for property charges in the coming year. If actual disbursements during the preceding year are used as the basis, the resulting estimate may deviate from those disbursements by as much as ten percent. The mortgagee may not require withholding in excess of the current estimated total annual requirement, unless expressly requested by the borrower. Each monthly withholding for property charges shall equal one-twelfth of the annual amounts as reasonably estimated by the mortgagee.

(e) *Borrower elects to pay property charges.* (1) If, based on the results of the Financial Assessment, the mortgagee does not require the borrower to have a LESA, the borrower may elect to be responsible for the independent payment of all property charges and shall pay all property charges in a timely manner and shall provide evidence of payment to the mortgagee as required in the mortgage.

(2) *Failure to pay property charges.* If the borrower fails to pay the property charges in a timely manner, and has not elected to have the mortgagee make the payments in accordance with paragraph (d) of this section:

(i) The mortgagee may make the payment for the borrower and charge the borrower's account if there are available funds from which the mortgagee may make payment. If a pattern of missed payments occurs, the mortgagee may establish procedures to pay the property charges from the borrower's funds as if the borrower elected to have the mortgagee pay the property charges under this section.

(ii) The mortgagee shall provide a written notification to the borrower and notify the Commissioner that an obligation of the mortgage has not been performed within 30 days of the mortgagee receiving notification of a missed payment when there are no available HECM funds from which the mortgagee may make payment. The borrower shall have 30 days to respond to the mortgagee to explain the circumstances which resulted in the non-payment. The mortgagee may provide any permissible loss mitigation made available by the Commissioner through notice. If the borrower is unable or unwilling to repay the mortgagee for any funds advanced by the mortgagee to pay property charges outside of a LESA, the mortgagee shall submit a due and payable request under the provisions of § 206.27(c)(2).

§ 206.207 Allowable charges and fees after endorsement.

(a) *Reasonable and customary charges.* The mortgagee may collect reasonable and customary charges and fees from the borrower after insurance endorsement, only to the extent that the mortgagee is not reimbursed for such fees by FHA, by adding them to the outstanding loan balance, but only for: items listed in paragraph (a)(1) of this section; items authorized by the Commissioner under paragraph (a)(2) of this section, or as provided at § 206.26(b)(1)(iii); or charges and fees related to additional documents described in § 206.27(b)(10) and related title search costs.

(1)(i) Charges for substitution of a hazard insurance policy at other than the expiration of term of the existing hazard insurance policy;

(ii) Attorney's and trustee's fees and expenses actually incurred (including the cost of appraisals and cost of advertising) when a case has been referred for foreclosure in accordance with the provisions of this part after a firm decision to foreclose if foreclosure is not completed because of a reinstatement of the account (no attorney's fee may be charged for the services of the mortgagee's or servicer's staff attorney or for the services of a collection attorney other than the attorney handling the foreclosure);

(iii) A trustee's fee if the security instrument in deed-of-trust states provides for payment of such a fee for execution of a satisfactory, release, or trustee's deed when the deed of trust is paid in full;

(iv) Where permitted by the security instrument, attorney's fees and expenses actually incurred in the defense of any suit or legal proceeding wherein the

mortgagee shall be made a party thereto by reason of the mortgage (no attorney's fee may be charged for the services of the mortgagee's or servicer's staff attorney); and

(v) Property preservation expenses incurred pursuant to § 206.140.

(2) Such other reasonable and customary charges as may be authorized by the Commissioner, but which shall not include:

(i) Charges for servicing activities of the mortgagee or servicer;

(ii) Fees charged by independent tax service organizations which contract to furnish data and information necessary for the payment of property taxes;

(iii) *Satisfaction, termination, or reconveyance* fees when a mortgage is paid in full (other than as provided in paragraph (a)(1)(iii) of this section); or

(iv) The fee for recordation of a satisfaction of the mortgage in states where recordation is the responsibility of the mortgagee.

(b) *Servicing charges.* (1) If the following conditions are met, the mortgagee may include a servicing charge in the mortgage Note rate, starting with the month of loan closing and continuing through the life of the loan, including any applicable Deferral Period:

(i) The charge is authorized by the Commissioner;

(ii) The charge is selected by the mortgagee;

(iii) The charge is within the range established by the Commissioner, which shall be set, through notice, in an amount which shall be between 36 and 150 basis points. The Commissioner may, through a **Federal Register** notice for comment, extend the range of permissible charges below 36 basis points and above 150 basis points; and

(iv) The charge is disclosed as required by § 206.43 to the borrower in a manner acceptable to the Commissioner at the time the mortgagee provides the borrower with a loan application; or

(2) If the following conditions are met, the mortgagee may collect a fixed monthly charge for servicing activities of the mortgagee or servicer, starting with the month of loan closing and continuing through the life of the loan, including any applicable Deferral Period.

(i) The charge is authorized by the Commissioner;

(ii) The charge is disclosed as required by § 206.43 to the borrower in a manner acceptable to the Commissioner at the time the mortgagee provides the borrower with a loan application;

(iii) Amounts to pay the charge are set aside as a portion of the principal limit in accordance with § 206.19(f)(3); and

(iv) The charge is payable only from the Servicing Fee Set Aside.

§ 206.209 Prepayment.

(a) *No charge or penalty.* The borrower may repay a mortgage in full or prepay a mortgage in part without charge or penalty at any time, regardless of any limitations on repayment or prepayment stated in a mortgage.

(b) *Insurance and condemnation proceeds.* If insurance or condemnation proceeds are paid to the mortgagee, the principal limit and the outstanding loan balance shall be reduced by the amount of the proceeds not applied to restoration or repair of the damaged property.

(c) Funds received from a partial prepayment shall be applied in accordance with the Note.

§ 206.211 Determination of principal residence and contact information.

(a) *Annual certification.* At least once during each calendar year, the mortgagee shall verify the contact information for the borrower(s) and determine whether or not the property is the principal residence of at least one borrower. The mortgagee shall require each borrower to make an annual certification of his or her contact information and principal residence. As part of the annual certification, the borrower may designate an alternate individual as specified in § 206.40 to receive copies of the notifications from the mortgagee, and who the mortgagee shall contact if the borrower is unwilling or unable to reply to requests from the mortgagee. The mortgagee may rely on the certification unless it has information indicating that the certification may be false.

(b) *Requirements when an Eligible Non-Borrowing Spouse exists.* Where an Eligible Non-Borrowing Spouse has been identified, the mortgagee shall obtain an additional annual certification from the borrower confirming the Eligible Non-Borrowing Spouse remains his or her spouse and the Eligible Non-Borrowing Spouse continues to reside in the property as his or her principal residence.

(1) *Death of borrower with Eligible Non-Borrowing Spouse.* If a borrower with an Eligible Non-Borrowing Spouse has died, the mortgagee shall obtain the annual certification in paragraph (a) of this section from the Eligible Non-Borrowing Spouse. For purposes of this paragraph, the term “Eligible Non-Borrowing Spouse” shall replace the

term “borrower” in paragraph (a) of this section.

(2) *Failure of previously Eligible Non-Borrowing Spouse to reside in the property as his or her principal residence.* If a Non-Borrowing Spouse fails to reside in the property as his or her principal residence, the Non-Borrowing Spouse becomes an Ineligible Non-Borrowing Spouse and the deferral of due and payable status that would prevent the displacement of an Eligible Non-Borrowing Spouse will no longer be in effect. Once this occurs, the Eligible Non-Borrowing Spouse annual certifications are no longer required to be obtained.

Subpart E—HECM Counselor Roster

§ 206.300 General.

This subpart provides for the establishment of the HECM Counselor Roster (Roster) and sets forth the requirements for the operation of the HECM Counselor Roster.

§ 206.302 Establishment of the HECM Counselor Roster.

(a) *HECM Counselor Roster.* FHA maintains a Roster of HECM counselors. Only counselors listed on the Roster and employed by a participating agency are approved to provide HECM counseling. A prospective borrower applying for a HECM loan to be insured by FHA must receive the required HECM counseling from one of the counselors on the Roster.

(b) *Disclaimer.* The inclusion of a HECM counselor on the Roster does not create or imply a warranty or endorsement by FHA of the listed counselor to a prospective HECM borrower or to any other organization or individual, nor does it represent a warranty of any counseling provided by the listed HECM counselor. The inclusion of a counselor on the Roster means that a listed counselor has met the FHA-prescribed qualifications and conditions for inclusion on the Roster and that the counselor is approved to provide HECM counseling by telephone or face-to-face.

§ 206.304 Eligibility for placement on the HECM Counselor Roster.

(a) *Application.* To be considered for placement on the Roster, a housing counselor must apply to FHA in a form and in a manner prescribed by the Commissioner.

(b) *Eligibility.* FHA will approve an application for placement on the Roster if the application demonstrates that the housing counselor:

(1) Is employed by a HUD-approved housing counseling agency or an affiliate of a HUD-approved

intermediary or State housing finance agency;

(2) Successfully passed a standardized HECM counseling exam administered by FHA, or a party selected by FHA, within the last 3 years. In order to maintain eligibility, a HECM counselor must successfully pass a standardized HECM counseling exam every 3 years;

(3) Received training and education related to HECMs within the prior 2 years;

(4) Has access to and is supported by technology that enables FHA to track the results of the counseling offered to each loan applicant, *e.g.*, what action(s), if any, did the client take after receiving the HECM counseling; and

(5) Is not listed on:

(i) The General Services Administration's Suspension and Debarment List;

(ii) HUD's Limited Denial of Participation List; or

(iii) HUD's Credit Alert Interactive Response System.

§ 206.306 Removal from the HECM Counselor Roster.

(a) *General.* FHA reserves the right to remove a HECM counselor from the Roster, in accordance with this section.

(b) *Cause for removal.* Cause for removal of a HECM counselor from the Roster includes, but is not limited to:

(1) Failure to comply with the education and training requirements of § 206.308;

(2) Failure to respond within a reasonable time to HUD inquiries or requests for documentation;

(3) Misrepresentation or fraudulent statements;

(4) Promotion, representation, or recommendation of any specific mortgagee;

(5) Failure to comply with applicable fair housing and civil rights requirements;

(6) Failure to comply with applicable statutes and regulations;

(7) Failure to comply with applicable statutory counseling requirements found at section 255(f) of the National Housing Act, which include, but are not limited to, providing information about: options other than a HECM, the financial implications of entering into a HECM, the tax consequences of a HECM, and any other information that HUD or the applicant may request;

(8) Failure to maintain any registration, license, or certification requirements of a State or local authority;

(9) Unsatisfactory performance in providing counseling to HECM loan applicants. FHA may determine that a HECM counselor's performance is

unsatisfactory based on a review of counseling files or other monitoring activities, or if the counselor fails to employ the minimum competencies, as measured by the FHA-administered HECM counseling exam; or

(10) For any other reason HUD determines to be so serious as to justify an administrative sanction.

(c) *Automatic removal from HECM Counselor Roster for failure to maintain required State or local licensure.* A HECM counselor who is required to maintain a State or local registration, license, or certification and whose registration or certification is revoked, suspended, or surrendered will be automatically suspended from the Roster until FHA receives evidence demonstrating that the local- or State-imposed sanction has been lifted.

(d) *Removal procedure.* Except as provided in paragraph (c) of this section, the following procedures apply to removal of a HECM counselor from the Roster.

(1) FHA will give the HECM counselor written notice of the proposed removal. The notice will state the reasons for and the duration of the proposed removal.

(2) The HECM counselor will have 30 days from the date of receipt of the notice (or such time as described in the notice, but in no event less than a period of 30 days) to submit a written appeal of the proposed removal, along with a written request for a conference.

(3) An FHA official will review the appeal and render a response affirming, modifying, or canceling the removal.

The FHA official will not be a person who was involved in FHA's initial removal decision. FHA will respond with a decision within 30 days after the date of receiving the appeal or, if the HECM counselor has requested a conference, within 30 days after the conference was held. FHA may extend the 30-day period by providing written notice to the counselor.

(4) If the HECM counselor does not submit a timely written response, the removal will be effective 31 days after the date of FHA's initial removal notice (or after the period provided in the notice, if longer than 30 days). If a written response is submitted, and the removal decision is affirmed or modified, the removal will be effective on the date of FHA's notice affirming or modifying the initial removal decision.

(e) *Maximum time period of removal.* The maximum time period for removal from the Roster is 12 months from the effective date of removal for all removed counselors. A counselor who has been removed must apply for reinstatement on the Roster.

(f) *Placement on the Roster after removal.* A counselor who has been removed from the Roster must apply for reinstatement on the Roster (in accordance with § 206.304) after the period of the counselor's removal from the Roster has expired. FHA may require the counselor to retake and pass the HECM exam for reinstatement when the reason for removal from the Roster was particularly egregious. Typically, the counselor will not be required to take and pass the HECM exam; however,

FHA must be ensured by the counselor that the HECM counseling requirements are understood and will be followed. An application from a counselor for reinstatement on the Roster will be rejected if the period of the counselor's removal from the Roster has not expired.

(g) *Voluntary removal.* A HECM counselor will be removed from the Roster upon FHA's receipt of a written request from the counselor.

(h) *Other action.* Nothing in this section prohibits HUD from taking such other action against a HECM counselor or from seeking any other remedy against a counselor available to HUD by statute or other authority.

§ 206.308 Continuing education requirements of counselors listed on the HECM Counselor Roster.

A HECM counselor listed on the Roster must receive, on a continuing basis, training, education, and technical assistance related to HECMs. The HECM counselor must maintain evidence of the successful completion of such continuing education, and such evidence must be made available to FHA upon request. FHA will consider a HECM counselor's successful completion of a HECM course no less than once every 2 years as satisfying the requirements of this section.

Dated: January 12, 2017.

Nani A. Coloretti,
Deputy Secretary.

ACTION: Final rule.

SUMMARY: The departments and agencies listed in this document announce revisions to modernize, strengthen, and make more effective the Federal Policy for the Protection of Human Subjects that was originally promulgated as a Common Rule in 1991. This final rule is intended to better protect human subjects involved in research, while facilitating valuable research and reducing burden, delay, and ambiguity for investigators. These revisions are an effort to modernize, simplify, and enhance the current system of oversight.

DATES: This rule is effective on January 19, 2018. The compliance date for this rule, except for § _____.114(b) (cooperative research), is January 19, 2018. The compliance date for § _____.114(b) (cooperative research) is January 20, 2020.

ADDRESSES: Jerry Menikoff, M.D., J.D., OHRP, 1101 Wootton Parkway, Suite 200, Rockville, MD 20852.

Final Regulatory Text

Executive Summary**Purpose of the Regulatory Action**

Individuals who are the subjects of research may be asked to contribute their time and assume risk to advance the research enterprise, which benefits society at large. U.S. federal regulations governing the protection of human subjects in research have been in existence for more than three decades. The Department of Health, Education, and Welfare first published regulations for the protection of human subjects in 1974, and the Department of Health and Human Services (HHS) revised them in the early 1980s. During the 1980s, HHS began a process that eventually led to the adoption of a revised version of the regulations by 15 U.S. federal departments and agencies in 1991. The purpose of this effort was to promote uniformity, understanding, and compliance with human subject protections as well as to create a uniform body of regulations across federal departments and agencies (subpart A of 45 Code of Federal Regulations [CFR] part 46), often referred to as the “Common Rule” or “Protection of Human Subjects Regulations.” Those regulations were last amended in 2005, and have remained unchanged until the issuance of this final rule.

Since the Common Rule was promulgated, the volume and landscape of research involving human subjects have changed considerably. Research with human subjects has grown in scale and become more diverse. Examples of developments include: an expansion in the number and types of clinical trials, as well as observational studies and cohort studies; a diversification of the types of social and behavioral research being used in human subjects research; increased use of sophisticated analytic techniques to study human biospecimens; and the growing use of electronic health data and other digital records to enable very large datasets to be rapidly analyzed and combined in novel ways. Yet these developments have not been accompanied by major change in the human subjects research oversight system, which has remained largely unaltered over the past two decades.

On July 26, 2011, the Office of the Secretary of HHS, in coordination with the Executive Office of the President's Office of Science and Technology Policy (OSTP), published an advance notice of proposed rulemaking (ANPRM) to request comment on how current regulations for protecting those who participate in research might be modernized and revised to be more effective.¹

On September 8, 2015, HHS and 15 other federal departments and agencies published a Notice of Proposed Rulemaking (NPRM) proposing revisions to the regulations for protection of human subjects in research.² Like the ANPRM, the NPRM sought comment on how to better protect research subjects while facilitating valuable research and reducing burden, delay, and ambiguity for investigators. Public comments on both the ANPRM and the NPRM have informed the final rule that is now being promulgated.

The final rule is designed to more thoroughly address the broader types of research conducted or otherwise supported by all of the Common Rule departments and agencies such as behavioral and social science research. It also benefits from continuing efforts to harmonize human subjects policies across federal departments and agencies.

Summary of the Major Changes in the Final Rule

The final rule differs in important ways from the NPRM. Most significantly, several proposals are not being adopted:

- The final rule does not adopt the proposal to require that research involving nonidentified biospecimens be subject to the Common Rule, and that consent would need to be obtained in order to conduct such research.
- To the extent some of the NPRM proposals relied on standards that had not yet been proposed, the final rule either does not adopt those proposals or includes revisions to eliminate such reliance.
- The final rule does not expand the policy to cover clinical trials that are not federally funded.
- The final rule does not adopt the proposed new concept of "excluded" activities. Generally, activities proposed to be excluded are now either described as not satisfying the definition of what constitutes research under the regulations or are classified as exempt.
- The proposed revisions to the exemption categories have been modified to better align with the long-standing ordering in the final rule. The final rule does not include the proposed requirement that exemption determinations need to be made in specified ways.
- The final rule does not include the proposed standardized privacy safeguards for identifiable private information and identifiable biospecimens. Aspects of proposals that relied on those safeguards have been modified or are not being adopted.
- The final rule does not adopt the most restrictive proposed criteria for obtaining a waiver of the consent requirements relating to research with identifiable biospecimens.

The final rule makes the following significant changes to the Common Rule:

- Establishes new requirements regarding the information that must be given to prospective research subjects as part of the informed consent process.
- Allows the use of broad consent (*i.e.*, seeking prospective consent to unspecified future research) from a subject for storage, maintenance, and secondary research use of identifiable private information and identifiable biospecimens. Broad consent will be an optional alternative that an investigator may choose instead of, for example,

conducting the research on nonidentified information and nonidentified biospecimens, having an institutional review board (IRB) waive the requirement for informed consent, or obtaining consent for a specific study.

- Establishes new exempt categories of research based on their risk profile. Under some of the new categories, exempt research would be required to undergo limited IRB review to ensure that there are adequate privacy safeguards for identifiable private information and identifiable biospecimens.

- Creates a requirement for U.S.-based institutions engaged in cooperative research to use a single IRB for that portion of the research that takes place within the United States, with certain exceptions. This requirement becomes effective 3 years after publication of the final rule.

- Removes the requirement to conduct continuing review of ongoing research for studies that undergo expedited review and for studies that have completed study interventions and are merely analyzing study data or involve only observational follow up in conjunction with standard clinical care.

Other minor changes have been to improve the rule and for purposes of clarity and accuracy.

Estimated Costs and Benefits

Table 1 summarizes the quantified and nonquantified benefits and costs of all changes to the Common Rule. Over the 2017–2026 period, present value benefits of \$1,904 million and annualized benefits of \$223 million are estimated using a 3 percent discount rate; present value benefits of \$1,494 million and annualized benefits of \$213 million are estimated using a 7 percent discount rate. Present value costs of \$528 million and annualized costs of \$62.0 million are estimated using a 3 percent discount rate; present value costs of \$474 million and annualized costs of \$67.0 million are estimated using a 7 percent discount rate. Nonquantified benefits include improved human subjects protections in research; enhanced oversight of research reviewed by IRBs not operated by a Federalwide Assurance (FWA)-holding institution; and increased uniformity in regulatory requirements among Common Rule departments and agencies. Nonquantified costs include the time needed for consultation among

Common Rule agencies before federal guidance is issued.

TABLE 1—ACCOUNTING TABLE OF BENEFITS AND COSTS OF ALL CHANGES

	Present value of 10 years by discount rate (millions of 2015 dollars)		Annualized value over 10 years by discount rate (millions of 2015 dollars)	
	3 percent	7 percent	3 percent	7 percent
Benefits:				
Quantified Benefits	1,904	1,493	223	213
Nonquantified Benefits:				
Improved human subjects protections in research; enhanced oversight in research reviewed by IRBs not operated by an FWA-holding institution; and increased uniformity in regulatory requirements among Common Rule departments and agencies.				
Costs:				
Quantified Costs	528	474	62.0	67.0
Nonquantified Benefits:				
Time for consultation among Common Rule agencies before federal guidance is issued.				

I. The Rationale for Modernizing the Common Rule

A. The Changing Nature of Research

This final rule recognizes that in the past two decades a paradigm shift has occurred in how research is conducted. Evolving technologies—including imaging, mobile technologies, and the growth in computing power—have changed the scale and nature of information collected in many disciplines. Computer scientists, engineers, and social scientists are developing techniques to integrate different types of data so they can be combined, mined, analyzed, and shared. The advent of sophisticated computer software programs, the Internet, and mobile technology has created new areas of research activity, particularly within the social and behavioral sciences. In biomedical science, the Human Genome Project laid the foundation for precision medicine and promoted an environment of data sharing and innovation in analytics and technology, and drew attention to the need for policies that support a changing research landscape. New technologies, including genomic sequencing, have quickly led to exponential growth in the data to which investigators have access. The sheer volume of data that can be generated in research, the ease with which it can be shared, and the ways in which it can be used to identify individuals were simply not possible, or even imaginable, when the Common Rule was first adopted.

Research settings are also shifting. Although much biomedical research continues to be conducted in academic medical centers, more research is being conducted in clinical care settings, thus

combining research and medical data. Biospecimen repositories and large databases have made it easier to do research on existing (stored) biospecimens and data. Clinical research networks connected through electronic health records have developed methods for extracting clinical data for research purposes and are working toward integration of research data into electronic health records in a meaningful way. The scientific community recognizes the value of data sharing and open-source resources and understands that pooling intellectual resources and capitalizing on efficient uses of data and technology represent the best ways to advance knowledge.

At the same time, the level of public engagement in the research enterprise has changed. More people want to play an active role in research, particularly related to health.

As technology evolves, so does the nature of the risks and benefits of participating in certain types of research. Many studies do not involve interaction with research subjects, but instead involve secondary analysis of data or biospecimens. Risks related to these types of research studies are largely informational, not physical; that is, harms could result primarily from the inappropriate disclosure of information and not from the research interventions themselves. Nonetheless, those harms can be significant.

Because of these shifts in science, technology, and public engagement and expectations, a wide range of stakeholders have raised concerns about the limitations of the existing regulatory framework, arguing for a re-evaluation of how the fundamental principles of

the 1979 *Belmont Report*³ that underlie the Common Rule—respect for persons, beneficence, and justice—are applied in practice to the myriad new contexts in which U.S. research is conducted in the 21st century. The changes that are being implemented in the final rule continue to be shaped by those principles (a detailed background discussion of which was provided in the NPRM).

Finally, it is important to note that, to the extent appropriate, the intent is to eventually amend the other subparts of the HHS human subjects protection regulations in 45 CFR part 46 (subparts B, C, D, and E), and consider the need for updates to FDA regulations and other relevant federal departmental or agency regulations with overlapping scope.

B. Public Comments, Expert Advice, Stakeholder Dialogue

The revisions to the Common Rule are based on a variety of sources of public, stakeholder, and expert comments and advice, including comments received on the 2011 ANPRM and the 2015 NPRM. They also benefit from guidance provided by a 2014 National Research Council consensus report, *Proposed Revisions to the Common Rule for the Protection of Human Subjects in the Behavioral and Social Sciences*,⁴ and

³ National Commission for the Protection of Human Subjects of Biomedical and Behavioral Research. *Belmont Report*. Washington, DC: U.S. Department of Health and Human Services. 1979. Retrieved from <http://www.hhs.gov/ohrp/humansubjects/guidance/belmont.html>.

Continued

the National Academies of Science, Engineering, and Medicine 2016 report *Optimizing the Nation's Investment in Academic Research: A New Regulatory Framework for the 21st Century*.⁵

Since the publication of the 2011 ANPRM, HHS has continued to solicit public comment on a variety of policy issues related to human subjects protections, including consent, the use of a single IRB for multi-institutional studies, and sharing of genomic data. Although these policies were more specific than the issues raised in the ANPRM, the responses received from public comments provide insight for refining the proposals initially put forward in the ANPRM. Of particular relevance are the National Institutes of Health's (NIH's) recently issued policy on the use of a single IRB for multi-institutional research,⁶ the Office for Human Research Protection's (OHRP's) draft guidance on the required content of consent language for research conducted within the standard of care,⁷ and NIH's policy to promote sharing of large-scale human genomic data generated from studies funded or conducted by NIH.⁸

Other developments include the enactment of the Newborn Screening Saves Lives Reauthorization Act of 2014 (Pub. L. 113–240) in December 2014. The law made a number of changes relevant to the HHS regulations for protecting research subjects, including asserting that research with newborn dried blood spots (DBS) that is federally funded pursuant to the Public Health Service Act is to be considered research with human subjects, and that the provisions allowing IRBs to waive consent would not apply. By statute, the changes made by this law applied only until changes to the Common Rule are promulgated. Thus, the changes made by this statute will no longer apply after the effective date of this rule, January 19, 2018. In addition, in April 2015, the

⁸ Information about the NIH Genomic Data Sharing policy is available at <https://gds.nih.gov/03policy2.html>.

Medicare Access and Children's Health Insurance Program Reauthorization Act of 2015 (Pub. L. 114–10) was passed. That law requires HHS to issue a clarification or modification of the Common Rule with regard to how the regulatory requirements should be applied to activities involving clinical data registries. In addition, in December 2016 the 21st Century Cures Act (Pub. L. 114–255) was enacted.

Finally, as a result of conducting a variety of public discussions associated with the President's Precision Medicine Initiative,^{9 10 11} many perspectives were heard, with much alignment around the central tenet that participants should be active partners in such research and not merely passive subjects of research studies.

1. Summary of Public Comments on Structural, Conceptual, and Policy Implications of the Proposed Rule

The NPRM received more than 2,100 public comments, the majority of which were from people writing in their individual capacity. The remaining comments were submitted by institutions, professional organizations and societies, and membership organizations. The proposals receiving the most comments were those related to biospecimens (expanded definition of human subject, broad consent, and tightened criteria for waiver of consent). Here we summarize comments on the overall structural, conceptual, and policy implications of the proposed rule. Comments regarding the specific provisions of the rule appear throughout this preamble.

The NPRM asked for public comment on whether the proposed changes will achieve the objectives of: (1) decreasing administrative burden, delay, and ambiguity for investigators, institutions, and institutional review boards (IRBs); and (2) strengthening, modernizing, and making the regulations more effective in protecting research subjects. In response, many public commenters expressed concern about the overall complexity and length of the NPRM, the unavailability of key deliverables, proposals being internally inconsistent,

⁹ The White House, Office of the Press Secretary. Fact Sheets: President Obama's Precision Medicine Initiative. January 30, 2015. Retrieved from <https://www.whitehouse.gov/the-press-office/2015/01/30/fact-sheet-president-obama-s-precision-medicine-initiative>.

and proposals giving investigators too much leeway to determine if their research is exempt or falls outside the scope of the rule.

Several commenters expressed concerns that they were unable to adequately or meaningfully comment on particular provisions proposed in the NPRM because an underlying document, tool, or list had not been developed or shared with the public at the time the NPRM was published, specifically: (1) the proposed broad consent templates; (2) the proposed standards for privacy protection; (3) the proposed list of eligible expedited procedures; and (4) the proposed exemption decision tool. Several commenters suggested that these items should be removed from the final rule and developed independently, urging government personnel to work collaboratively with representatives from the research community and funding agencies in the development of such documents, tools, and lists.

Some commenters suggested issuing a new NPRM that would be more complete and would include details on the privacy protection standards, exemption decision tool, and broad consent templates. Another commenter recommended that only the fully developed, less controversial provisions of the NPRM should be adopted into a final rule. Another commenter urged the Common Rule departments and agencies to reissue the NPRM to solicit comment on several of these documents, tools, and lists, arguing that it would be unlawful for a final rule to be issued until such an action were taken. This commenter noted that for members of the public to reasonably participate in rulemaking, agencies must provide enough factual detail and rationale to allow interested parties to comment meaningfully on the rule. This commenter also argued that the NPRM did not satisfy the requirement set forth in the Administrative Procedure Act that the notice provided to the public in rulemaking include either the terms or substance of the proposed rule or a description of the subjects and issues involved. In sum, the commenter argued that the NPRM sought comments on numerous provisions without providing the “terms or substance” of the specific proposals.

Some commenters encouraged dropping the proposal to require consent for research use of nonidentified biospecimens and instead exploring a system of public notification and opportunity to opt out of such research through issuance of a new NPRM following widespread consultation. A few commenters

suggested that Common Rule departments and agencies fund pilot studies to better understand how such a system might work. Additional commenters focused on the importance of public education about the research enterprise regardless of the policy choices pursued in a final rule.

Commenters, including state health departments and other health entities involved in newborn screening activities, raised concerns that several of the NPRM proposals represented unfunded mandates, specifically the expansion of the definition of human subject to include all biospecimens regardless of identifiability, expansion of the policy to apply to all clinical trials that meet certain conditions, and mandatory single IRB review of cooperative research. Several institutions and disease advocacy groups noted that statewide newborn screening programs are often modestly funded, and the NPRM proposals would impose processes that could cost millions of dollars each year.

In addition, commenters raised concerns that HHS and other Common Rule departments and agencies are not authorized under 42 U.S.C. 289 to regulate humanities and social science research.

Public comments also discussed several ideas for consideration in a final rule that were not otherwise proposed in the NPRM, including:

- Develop or strengthen sanctions and penalties for investigators or institutions that re-identify subjects without proper authorization or review, rather than focusing solely on obtaining consent as the way to protect subjects. To this end, several commenters suggested that a separate section be added to the Common Rule focused on investigator responsibilities.
- Develop an IRB efficiency rating system.
- Deem research about IRB operations as an excluded, exempt, or expeditable activity to foster research into IRB operations.
- Include provisions about compensation for research-related injuries.
- More fully review and address how the rule should or should not apply to prisoners, children, and pregnant women and fetuses.
- Include provisions about U.S.-funded studies in developing countries with regard to defining standards of care and addressing post-trial access to proven therapies.

2. Response to Public Comments on Structural, Conceptual, and Policy Implications of the Proposed Rule

The final rule differs in numerous, major ways from what was proposed in the NPRM. Most significantly, the provisions relating to making nonidentified biospecimens subject to the Common Rule are not being implemented. That change alone addresses many of the public comments on the NPRM. Eliminating that proposal is intended to address concerns about the complexity of and lack of justification for the proposed changes in the rule, as well as concerns about embarking on significant changes without evidence that they would improve the system. Responses to public comments on specific provisions appear throughout this preamble. Below we summarize our responses to comments that addressed major structural or organizational issues or perceived insufficiencies in the NPRM proposals and their presentation.

Concerns about the overall complexity of the proposed changes have been addressed in several ways. For example, concerns about creating a new category of “excluded” activities have been addressed by not adopting that concept in the final rule. Instead, the goal of clarifying what is covered by the rule has been accomplished by modifying the definition of what constitutes research, and by adding or modifying exemptions that were already in the pre-2018 rule.¹² And, even where existing concepts are modified, we have attempted to make those modifications in ways that minimize the extent of the change (such as largely preserving much of the core structure of the previous exemption categories).

To reduce public concerns about the aspects of the proposal that were not yet developed, we chose not to implement most of those provisions. For example, given the changes made to the proposals regarding broad consent, the final rule does not reference or include the concept of broad consent templates. The requirement that the Secretary of HHS develop a list of proposed privacy safeguards has been eliminated, as has the proposed exemption decision tool. In addition, we have dropped the regulatory requirement for the Secretary

of HHS to publish a list of activities that are minimal risk (as was proposed in the NPRM in the definition of minimal risk). The final rule retains the requirement at § ___.110(a) that the Secretary of HHS will establish and publish for public comment a list of categories of research that may be reviewed by an IRB through the expedited review procedure, consistent with the pre-2018 rule.

Some of the “new ideas” for altering the system for protecting research subjects that were presented by commenters—for example, addressing compensation for research-related injuries or the meaning of equivalent protections when research is conducted in foreign countries—were either very innovative or not yet widely discussed. This made it difficult to adopt them at this point without further study and additional notice and opportunity for public comment. Therefore, the fact that one or another of these ideas was not incorporated into the final rule should not be viewed as a rejection of their possible merits, or an indication that they might not be explored in some future revision of the Common Rule or in guidance.

a. Process Issues

We carefully considered concerns voiced by commenters about the process that led to this final rule, and other legal concerns about the adequacy of that process. We concluded that the approach proposed in the NPRM and the approach adopted in this final rule are consistent with the Federal Government’s obligations under the Administrative Procedure Act.

Regarding the concerns expressed that the Common Rule departments and agencies are not authorized to regulate humanities and social science research, this challenge had been asserted previously against the 1981 HHS protection of human subjects regulations,¹³ as well as the 1991 Common Rule,¹⁴ and in each case the regulatory agencies concluded that the regulation of humanities and social science research is justified. We continue to assert the authority to regulate humanities and social science research that falls within the scope of the final rule.

¹² For purposes of this preamble, the terms “pre-2018 requirements” or “pre-2018 rule” refer to the Common Rule as published in the 2016 edition of the Code of Federal Regulations (*i.e.*, the Federal Policy for the Protection of Human Subjects, originally published on June 18, 1991 and subsequently amended on June 23, 2005). In addition, the term “this rule” or “final rule” refers to the 2018 requirements as presented in this issuance.

C. Signatories to the Common Rule

This section provides information about where each Common Rule department or agency's statutory authority for enacting and revising human subjects research protection regulation lies, and provides additional information about new signatories to the Common Rule.

The regulations are codified in each department or agency's title or chapter of the CFR. The Common Rule was based on HHS's regulations, 45 CFR part 46, subpart A, and includes identical language in the separate regulations of each department and agency.

Although they did not previously issue the Common Rule in regulations, four departments and agencies have historically complied with all subparts of the HHS protection of human subjects regulations at 45 CFR part 46. These are the Central Intelligence Agency (CIA), the Office of the Director of National Intelligence (ODNI), the Department of Homeland Security (DHS), and the Social Security Administration (SSA).

Pursuant to Executive Order 12333 of December 4, 1981, as amended, elements of the Intelligence Community must comply with the guidelines issued by HHS regarding research on human subjects found in 45 CFR part 46. This final rule does not supersede the Executive Order. The CIA will continue to adhere to the HHS regulations at 45 CFR part 46, pursuant to the Executive Order.

Through this rulemaking, DHS is codifying the final rule into its own agency regulations. DHS, which was created after issuance of the pre-2018 rule, has been required by statute (Pub. L. 108–458, title VIII, section 8306) to comply with 45 CFR part 46, or with equivalent regulations promulgated by the Secretary of Homeland Security or his designee. Through this rulemaking, DHS is issuing equivalent regulations, consistent with statute, and will comply with the DHS regulations as the requirements will be equivalent to compliance with HHS regulations at 45 CFR part 46, subpart A.

Through this rulemaking, SSA is codifying the final rule into its own agency regulations. SSA was separated from HHS in 1995 and, pursuant to the transition rules provided in Section 106 of title 1 of Pub. L. 103–296, has been required to apply regulations that applied to SSA before the separation, absent action by the Commissioner. With this rulemaking, SSA will follow the SSA regulations (adopting the provisions of this final rule) instead of HHS regulations at 45 CFR part 46,

subpart A. (See Pub. L. 103–296 §106(b), 108 Stat. 1464, 1476.)

The Department of Labor (DOL), which was not a signatory to the pre-2018 rule, is now a signatory to this rulemaking and is codifying the final rule in DOL regulations for human subjects research that DOL conducts or supports.

The Consumer Product Safety Commission (CPSC), subject to Commission vote, intends to adopt this rule through a separate rulemaking.

The legal authority for the departments and agencies that are signatories to this action is as follows:

Department of Homeland Security, 5 U.S.C. 301; Pub. L. 107–296, sec. 102, 306(c); Pub. L. 108–458, sec. 8306. Department of Agriculture, 5 U.S.C. 301; 42 U.S.C. 300v–1(b). Department of Energy, 5 U.S.C. 301; 42 U.S.C. 7254; 42 U.S.C. 300v–1(b). National Aeronautics and Space Administration, 5 U.S.C. 301; 42 U.S.C. 300v–1(b). Department of Commerce, 5 U.S.C. 301; 42 U.S.C. 300v–1(b). Social Security Administration, 5 U.S.C. 301; 42 U.S.C. 289(a). Agency for International Development, 5 U.S.C. 301; 42 U.S.C. 300v–1(b), unless otherwise noted. Department of Housing and Urban Development, 5 U.S.C. 301; 42 U.S.C. 300v–1(b) and 3535(d). Department of Labor, 5 U.S.C. 301; 29 U.S.C. 551. Department of Defense, 5 U.S.C. 301. Department of Education, 5 U.S.C. 301; 20 U.S.C. 1221e–3, 3474; 42 U.S.C. 300v–1(b). Department of Veterans Affairs, 5 U.S.C. 301; 38 U.S.C. 501, 7331, 7334; 42 U.S.C. 300v–1(b). Environmental Protection Agency, 5 U.S.C. 301; 7 U.S.C. 136a(a) and 136w(a)(1); 21 U.S.C. 346a(e)(1)(C); sec. 201, Pub. L. 109–54, 119 Stat. 531; and 42 U.S.C. 300v–1(b). Department of Health and Human Services, 5 U.S.C. 301; 42 U.S.C. 289(a); 42 U.S.C. 300v–1(b). National Science Foundation, 5 U.S.C. 301; 42 U.S.C. 300v–1(b). Department of Transportation, 5 U.S.C. 301; 42 U.S.C. 300v–1(b).

II. To what does this policy apply?

Scope and Applicability of the Regulations

This section of the preamble describes changes made in the final rule with regard to its scope and applicability. Specifically, it addresses which entities are subject to the rule; coverage of clinical trials; department and agency discretion in applying the rule; the relevance of state and local laws; coverage of research conducted in foreign countries; the goal of harmonizing guidance across the federal

entities; effective and compliance dates; and severability.

A. IRBs Not Operated by an Institution Holding a Federalwide Assurance (§ ____ .101(a)(1))

1. Background and Pre-2018 Requirements

Before this final rule, IRBs not operated by an institution holding an FWA were not directly subject to oversight for compliance with the Common Rule. In situations in which an institution relied on an IRB not operated by the institution, OHRP's practice was to hold the institution engaged in human subjects research accountable for compliance violations, even in circumstances in which the regulatory violation was directly related to the responsibilities of the IRB.

An institution might rely on an IRB not operated by that institution to review cooperative research, that is, research conducted at more than one institution. However, for some, such reliance has been considered problematic due to lack of direct regulatory accountability for these IRBs. Previously, the choice to have cooperative research reviewed by a single IRB was voluntary and, for federally funded research, most institutions have been reluctant to replace review by their own IRB with review by a single IRB not operated by that institution.

2. NPRM Proposal To Cover IRBs not Operated by an Institution Holding an FWA

For the reasons outlined above, and based on comments to OHRP's 2011 ANPRM, the NPRM proposed adding a new provision at § ____ .101(a) that would explicitly give Common Rule departments and agencies the authority to enforce compliance directly against IRBs that are not operated by an FWA-holding institution (sometimes referred to as “independent IRBs”). Under the pre-2018 rule, even if an institution engaged in research relied on an IRB operated by another FWA-holding institution, OHRP's practice has been to enforce compliance through the engaged institution and not the reviewing IRB.

Relatedly, another NPRM proposal would require single IRB review of multi-institution studies (see Section XII of this preamble). This proposal would place responsibility for meeting the relevant regulatory requirements on the IRB of record in a multi-institutional study, rather than on the institution engaged in the research.

3. Public Comments

Approximately 50 comments addressed this proposal, largely in support, because it would encourage institutions to rely on IRBs not operated by an FWA-holding institution when necessary and would place responsibility on the IRB and its decisions rather than on the institution relying on the IRB's determination. Commenters stated that this change could increase IRB accountability and protect institutions relying on IRBs that they do not operate. However, a few commenters supported the proposal only if the mandate for a single IRB of record in multi-institutional research was not implemented. That is, they supported the concept of holding IRBs not operated by the institution engaged in research accountable for compliance, but did not support it if it was intended solely to facilitate mandatory single IRB review for cooperative research, because they opposed that mandate. One organization that advocates for human subjects protections opposed the proposal because it did not believe that any research should be reviewed by an independent IRB, and feared this practice would become more frequent with this change. Several academic institutions opposed the proposal, as did a large trade organization, stating that this extension of the rule was not necessary.

4. Response to Comments and Explanation of the Final Rule: Authority To Enforce Compliance Directly Against IRBs Not Operated by an FWA-Holding Institution

New language at § ___.101(a) is adopted that gives Common Rule departments and agencies the authority to enforce compliance directly against IRBs that are not operated by an assured institution. This authority will allow Common Rule departments and agencies to avoid involving other engaged institutions in enforcement activities related to the responsibilities of the designated IRB. It is anticipated that this change will reassure institutions using an IRB that they do not operate because compliance actions could be taken directly against the IRB responsible for the regulatory noncompliance, rather than against the institutions that relied on that review.

B. Coverage of Clinical Trials

1. Background and Pre-2018 Requirements

The Common Rule has historically applied to human subjects research that is conducted or supported by a Common Rule department or agency. Research

that is not federally conducted or supported has not been subject to the Common Rule's requirements unless the U.S. institution receiving federal funding for research voluntarily extended the Common Rule to all research conducted at that institution, regardless of funding source.

The Institute of Medicine,¹⁵ the National Bioethics Advisory Commission,¹⁶ and others have stated that human subjects would be best protected by applying consistent ethical standards and a uniform system of regulatory oversight to all human subjects research conducted in the United States. Common Rule departments and agencies do not have statutory authority to directly apply the Common Rule to all human subjects research conducted in the United States. However, departments and agencies can require U.S. institutions that receive some federal funding from a Common Rule department or agency for research with human subjects to extend regulatory protections to all research studies conducted at the institution as a condition of funding. The 2011 ANPRM sought comment on this approach.

2. NPRM Proposal

The NPRM proposed changes in the regulatory language to extend the rule to all clinical trials, irrespective of funding source, that met three conditions: (1) The clinical trials are conducted at an institution that receives support from a federal department or agency for human subjects research that was not proposed to be excluded under the NPRM and was not exempt; (2) the clinical trials are not subject to FDA regulation; and (3) the clinical trials are conducted at an institution located within the United States.

The purpose of the proposed clinical trials extension was to ensure that clinical trials involving significant risks that would otherwise not be covered be subject to federal oversight. It was for that reason that the proposed extension excluded clinical trials subject to FDA oversight. The proposed extension also was based on whether an institution received funding specifically for other human subjects research that had to comply with the substantive requirements of the Common Rule. The Common Rule departments and agencies have a more substantial relationship with institutions that

receive federal support to conduct research subject to the regulatory requirements than they do with institutions that receive such support for only exempt human subjects research.

The NPRM proposed that a clinical trial be defined as a research study in which one or more human subjects are prospectively assigned to one or more interventions (which may include placebo or other control) to evaluate the effects of the interventions on biomedical or behavioral health-related outcomes. By the term "behavioral health-related outcomes," the NPRM recognized that clinical trials may occur outside of the biomedical context, and further stated that the studies addressed in the proposed definition of clinical trial are more likely to present more than minimal risk to subjects, and, therefore, require the highest level of oversight.

3. Public Comments

Approximately 70 comments discussed the proposal to extend the Common Rule to cover certain clinical trials. Opinion was mixed, with a slim majority opposing the proposed change. Universities and medical centers providing comments largely opposed the proposed measure, while professional associations and advocacy groups largely supported the proposal. We note that some of those who opposed the clinical trial extension did so because they felt that the proposal did not go far enough to include additional types of research.

Those supporting the proposed change indicated that it had the potential to ensure greater consistency of rules and protections for research subjects, thereby aiding efficiency and speeding the review process of study protocols. However, even those commenters who supported the proposal indicated that such an extension must fulfill the intent of a risk-based, streamlined approach to human subject protection, considering the effects of this extension on certain minimal risk research activities, such as student research, and social, behavioral, and educational research.

Those expressing opposition to this expansion of coverage noted concerns that: (1) Because the research institutions likely to engage in clinical trials already require IRB review of such research, the expansion would only increase administrative burdens (such as federal reporting requirements) for this type of research without a meaningful increase in protections to human subjects; (2) the regulatory extension to nonfederally funded

¹⁵ Federman DD, Hanna KE, Rodriguez LL, eds. *Responsible Research: A Systems Approach to Protecting Research Participants*. Washington, DC: National Academies Press; 2002.

¹⁶ National Bioethics Advisory Commission. *Ethical and Policy Issues in Research Involving Human Participants*. Bethesda, MD; 2001.

clinical trials would encompass many minimal-risk social and behavioral research activities and currently unregulated institutional activities that involve randomization (such as nonfederally funded quality improvement or quality assurance activities); and (3) because an institution's funding status may change, implementation of this proposal would be complicated. Several commenters expressed concern about the lack of detail in the NPRM regarding the planned implementation of the proposed requirement.

Several commenters also expressed concern that the unfunded clinical trials encompassed by this proposal would be subject to the single IRB mandate without a corresponding provision of federal funds to implement that requirement.

Some commenters suggested that the proposed change in the NPRM will not address the real gap in human subjects protections—facilities that receive no federal funding—and that if broad concern exists that some subjects are not being adequately protected in research that is not federally funded, then Congress would be the appropriate body to address any such deficiency through legislation. Further, some commenters expressed concern that extending the Common Rule to nonfederally funded clinical trials might have an overall effect of decreasing human subject protections by discouraging some smaller organizations from accepting any federal funding, thus removing federal oversight of their work.

One research institution noted that, if finalized, the proposed clinical trials extension would be implemented at the same time the ability of institutions to formally extend the application of the rule to all research conducted at the institution is being eliminated. Some states, such as Virginia, have state human subjects regulations that must be applied to research when federal regulations are not required. The commenter noted that removing the option to voluntarily extend the FWA would have the effect of reducing uniform application of the federal standards, as nonfederally funded research that does not meet the proposed definition of a clinical trial would by default be subject to state law.

A few commenters challenged whether the legal authority provided by the Public Health Service Act was sufficient to extend the Common Rule to nonfederally funded clinical trials. Commenters also suggested that this proposal is an unfunded mandate from the Federal Government with no benefit

accruing to subjects or the research enterprise.

4. Response to Comments and Explanation of the Final Rule: Coverage of Certain Clinical Trials

The final rule does not adopt the NPRM proposal. Although we continue to maintain the position that increased harmonization of appropriate standards for ethical oversight of human subjects research is an important and desirable endpoint, we agree with the concerns expressed by commenters suggesting that our proposal for extending the Common Rule to currently unregulated clinical trials would benefit from further deliberation. Some commenters asserted that, in our attempt to close the perceived “gap” in oversight, the NPRM created a structure that would be both confusing and complicated for institutions to implement. We received multiple comments objecting to the administrative complexity involved in applying a regulatory extension triggered by the receipt of Common Rule department or agency funding for other nonexempt research, and asserting that the administrative burden is not offset by a corresponding increase in the meaningful protection of human subjects. Additionally, it is apparent from the public comments received that our intention to apply the Common Rule to cover the most risky types of research—clinical trials—was not accomplished through the NPRM proposal, given the definition of “clinical trial” included in the NPRM, as that definition encompassed research that would pose no more than minimal risk to subjects. Commenters were further concerned that an unintended consequence might be that the proposed extension would apply to low-risk student research and social, behavioral, or educational research, and would cause currently unregulated institutional activities, such as certain quality improvement or quality assurance activities, to fall within regulatory oversight. Upon reflection on the perspectives expressed by these commenters, we are persuaded that the proposed extension of the Common Rule is not appropriate to include in a final rule at this time. We will continue to carefully consider the related issues.

As an alternative, we contemplated explicitly limiting the extension of this policy to clinical trials that present greater than minimal risk to subjects in order to better align with the intent of this extension, as described in the preamble to the NPRM. However, such an alteration of the rule would itself introduce a variety of complexities, including the question of how a

determination would be made that a particular activity involves more than minimal risk. Thus, there would be a very real possibility that such a rule would lead to an administrative burden on substantially more activities than the rule itself would be targeting (such as many minimal risk quality improvement activities).

We also considered the alternative of maintaining the pre-2018 standard of allowing institutions to voluntarily extend their FWAs to nonfederally funded research. We concluded that this alternative would not further the expressed goal of increasing the application of consistent protections to clinical trials, regardless of the source of support, because the extension of the FWA would be optional. We therefore plan to implement the proposed nonregulatory change to the assurance mechanism to eliminate the voluntary extension of the FWA to nonfederally funded research.

We note the concern expressed by commenters that a gap in federal oversight will remain for nonfederally funded research, and the comment that Congress would be the appropriate body to address any such deficiency through legislation. We recognize that institutions may choose to establish an institutional policy that would require IRB review of research that is not funded by a Common Rule department or agency (and indeed, as commenters noted, almost all institutions already do this), and nothing in this final rule precludes institutions from providing protections to human subjects in this way. As a result, the final rule continues to allow institutions the same wide degree of flexibility that they currently have with regard to making other similar determinations regarding ethical oversight of research not regulated by the Common Rule.

Although we are not implementing the proposed extension of the Common Rule to “clinical trials” (as defined by this policy), the proposed definition of “clinical trial” is still relevant to the final rule provision requiring posting of one IRB-approved consent form used to enroll subjects for a clinical trial conducted or supported by a federal department or agency, at § ___.116(h). The definition of clinical trial is unaltered from the NPRM proposal and appears at § ___.102(b).

C. Activities Deemed Not To Be Research Appear at § ___.102(l) and Research Exempt From This Policy Appears at § ___.104

In response to the public comments, the NPRM's general approach of designating various categories of

activities as excluded is not included in the final rule. The final rule reverts to the general structure of the pre-2018 rule and integrates some of the categories proposed for exclusion in the NPRM into that structure. Some changes to the categories are also included in the final rule.

In the final rule, some of the proposed exclusions from the requirements of the Common Rule are addressed in the definition of research, which includes a provision identifying “activities that are deemed not to be research” (see Section III). In addition, some of the proposed exclusions are included as exemptions in the final rule. Under § _____.101(b) of the pre-2018 rule, six categories of research were considered exempt from this policy unless otherwise required by department or agency heads. In the final rule, exempt research is now described at § _____.104 and eight categories are included (see Section V).

D. Department or Agency Discretion in Applying the Policy (§ _____.101(c), (d), (i))

1. Background and Pre-2018 Requirements

The pre-2018 requirements included provisions at § _____.101 that allowed federal department or agency heads to determine which specific activities or classes of activities are covered by the rule and whether certain requirements could be waived. This flexibility was allowed in recognition of the varying missions of the federal departments and agencies, the possibility that there may be superseding or alternative statutes or regulations governing their activities, and the possibility that a given situation requires either more stringent oversight (e.g., “sensitive research”) or reduced requirements (e.g., a public health emergency).

2. NPRM Proposals

The NPRM proposed to retain the Common Rule’s pre-2018 requirement that federal department or agency heads retain final judgment about the coverage of particular research activities under the Common Rule (§ _____.101(c)) and proposed an additional requirement that federal department or agency heads exercise their authority consistent with the principles of the *Belmont Report*.

The NPRM also proposed at § _____.101(d) that a department or agency may require additional protections for specific types of research it supports or conducts, or that is otherwise subject to regulation by the federal department or agency but not otherwise covered by the Common Rule. However, advance public notice would

be required when those additional requirements apply to entities outside of the federal department or agency itself. This latter requirement was intended to promote harmonization among federal agencies or departments, to the extent possible, and to ensure transparency between funding entities and the regulated community.

Finally, at § _____.101(i) the NPRM proposed to amend the criteria for a department or agency waiving the applicability of some or all of the provisions of the policy, by stating that the alternative procedures to be followed must be consistent with the principles of the *Belmont Report*. The addition of this provision was to make explicit the ethical basis underpinning how waiver decisions have and must be considered. The NPRM also proposed that such waivers be posted on a publicly accessible federal Web site.

3. Public Comments

Approximately 25 comments related to the NPRM proposals at § _____.101(c) and (i) and none on § _____.101(d). Comments received on these proposals generally expressed opposition to ever granting the authority to department or agency heads to retain final judgment as to whether a particular activity is covered by this policy, or to waive certain requirements, even though these provisions existed in the pre-2018 rule. These commenters were concerned about the potential for Common Rule departments and agencies to exclude certain activities for political purposes or for expediency, such as certain activities that might involve surveillance or criminal investigative aims. With regard to § _____.101(i), some commenters stated that reference to the ethical principles of the *Belmont Report* was too narrow. That is, one might rely on additional ethical considerations to evaluate the applicability of the regulations.

4. Response to Public Comments and Explanation of the Final Rule: Department or Agency Discretion About Applicability of the Policy

The final rule adopts the NPRM proposals in § _____.101(c). Thus, under § _____.101(c), department or agency heads retain final judgment as to whether a particular activity is covered by the Common Rule, and this judgment should be exercised consistent with the ethical principles of the *Belmont Report*. We note that under the pre-2018 requirements Common Rule departments and agencies retained final authority as to whether a particular human subjects research study conducted or supported by that

department or agency is covered by the Common Rule (§ _____.101(c)) and that authority continues under the final regulations, but with the new limitation that this judgment must be consistent with the ethical principles of the *Belmont Report*. This discretion provides important flexibility given the varying missions and policies of the many departments and agencies.

Although some commenters were opposed to ever granting departments or agencies the authority permitted by § _____.101(c), we believe requiring that these decisions be consistent with the principles of the *Belmont Report* is an approach that promotes accountability while still giving federal departments and agencies the necessary flexibility to achieve their respective missions.

The final rule in § _____.101(d) does not adopt the NPRM proposals, and instead retains the pre-2018 language. The NPRM proposed to modify § _____.101(d) to say that department or agency heads could require additional protections to research activities conducted or supported by federal departments or agencies, but that were not otherwise covered by the Common Rule. This language was intended as a clarification to the pre-2018 language. However, we determined that the term “additional protections” could potentially be confusing in that the activities at issue in this provision are those for which no Common Rule protections are required; thus the protections imposed by department or agency heads might be the only protections to which these activities are subject. We also note that departments or agencies conducting or supporting an activity subject to the Common Rule may require additional protections for human subjects.

The final rule also does not incorporate the NPRM proposal in § _____.101(d) that advance public notice must be provided when a department or agency head requires that the Common Rule, or part of it, be applied to research activities not otherwise subject to the rule. Upon further assessment, we decided that such a requirement could hinder the ability of a department or agency to move quickly in cases where the department or agency determined that additional protections are warranted.

Section _____.101(i) of the final rule adopts a majority of the NPRM proposals. As proposed in the NPRM, § _____.101(i) is modified to require that any alternative procedures adopted by departments or agency heads are consistent with the principles of the *Belmont Report*. Also as proposed in the NPRM, § _____.101(i) is modified to state

that, unless otherwise required by statute or executive order, notice of these alternative procedures must be forwarded to OHRP (or any successor office), or to the equivalent office within the appropriate federal department or agency. The pre-2018 rule only listed OHRP (or any successor office) as the office to which notices must be sent. This final rule modification is intended to ensure that if a non-HHS department or agency allows for alternative procedures, the appropriate office within that same department or agency receives notification. The final rule retains the pre-2018 requirement for the notice to also be published in the **Federal Register** or in such other manner provided for in department or agency procedures.

The final rule also adopts in § _____.101(i) the NPRM proposal to require that the waiver notice include a statement that identifies the conditions under which the waiver will be applied and a justification as to why the waiver is appropriate for the research, including how the decision is consistent with the principles in the *Belmont Report*.

Section _____.101(i) of the final rule does not include the NPRM proposal that would have required each federal department or agency conducting or supporting the research to establish on a publicly accessible federal Web site a list of the research for which a waiver has been issued. We decided that the rule's requirement to publish the waiver notice in the **Federal Register**, or in such other manner as provided in department or agency procedures, adequately ensures that the waiver notice will be available to the public without also requiring that such notices be listed on a federal Web site. We note that some departments, such as HHS, currently post such notices on their Web sites.

The final rule thus formally codifies in § _____.101(c) and (i) the general practice that the ethical standards articulated in the Belmont Report are the ethical standards that Common Rule departments or agencies will use in determining whether an activity is covered under this policy or whether to grant a waiver of the applicability of some or all of the provisions (unless otherwise required by law). The addition of the reference to the Belmont Report makes explicit the ethical basis underpinning how waiver decisions have and must be considered.

E. State and Local Laws That Provide Additional Protections for Human Subjects (§ _____.101(f))

1. Background and Pre-2018 Requirements

The pre-2018 rule specified that the policy does not affect any state or local laws or regulations that may otherwise be applicable and that provide additional protections for human subjects. The NPRM did not propose any changes to this statement. However, questions raised by public comments, as described below, led to some clarifications to the final rule.

1. Public Comments

Several public comments raised questions and concerns about the ability of tribal nations to require additional protections that might be needed for research involving American Indian/Alaska Native (AI/AN) populations.

One tribal government noted the documented mistrust of research by AI/AN people and communities, and advocated for specific provisions acknowledging the authority and role of tribal nations in overseeing research that happens on their lands and with their citizens. Additionally, this entity noted that tribal nations do not always have their own regulatory bodies for human subject research protections, expressing concern about external groups deciding what constitute risks and benefits for the community.

Other AI/AN Population concerns of commenters included:

- *Tribal (i.e., group) and individual consent for secondary research with biospecimens:* Commenters noted that group consent can occur and should inform the proposed changes in the rule. They also noted that broad consent for future, unspecified research use of biospecimens presents a challenge to the ongoing ability of both tribes and individuals to choose to remove their data from research, or to understand how their information is being used to benefit, or put at risk, themselves or others.

- *Tribal and individual consent for research with biospecimens or other data from people who are no longer alive:* AI/AN groups noted the need to address protections for biospecimens initially collected from living humans after those humans pass away.

- *Research oversight by tribal IRBs and other tribal regulatory bodies:* AI/AN groups raised concerns about the use of a single IRB in cooperative and multi-institutional research, which does not foster community-based governance and oversight of research that has the

potential to improve outcomes for tribal and minority populations.

- *Research oversight for categories of research and activities important in tribal contexts:* Commenters noted concerns about the proposed changes related to the exclusion of certain categories of activities (e.g., oral history, biography), addition of exempt categories of research (e.g., educational tests, surveys, interviews), and elimination of continuing review requirements for some studies because tribal research review often extends the scope of examination beyond individual-level protections to enact community-level protections important for maintaining the integrity of culturally significant information and practices. Changes to excluded and exempt categories of research and eliminating some continuing review requirements, especially where no clear mechanism for additional tribal oversight and input has been established, are a cause for concern for the AI/AN community.

2. Response to Public Comments and Explanation of the Final Rule: State and Local Laws That Provide Additional Protections

Consistent with the pre-2018 rule, this final rule retains the language in § _____.101(f) providing that the Common Rule does not affect any state or local laws or regulations that may otherwise be applicable and that provide additional protections for human subjects. However, the final rule adds clarifying language providing that the referenced state or local laws or regulations include tribal laws passed by the official governing body of an AI/AN tribe. Thus, if the official governing body of a tribe passes a tribal law that provides additional protections for human subjects, the Common Rule does not affect or alter the applicability of such tribal law. (Note that a similar change was also made to § _____.116(i) and (j) to provide the same clarification.) In addition, for purposes of the exception to the single IRB review requirement for cooperative research, relating to circumstances where review by more than a single IRB is required by law, § _____.114(b)(2)(i) specifies that tribal law is to be considered in assessing whether more than single IRB review is required by law.

F. Research Covered by This Policy Conducted in Foreign Countries (§ _____.101(h))

1. Background and Pre-2018 Requirements

The pre-2018 requirements at § _____.101(h) stated that when research covered by this policy takes place in foreign countries, procedures normally followed in those countries to protect human subjects may differ from those set forth in this policy. The previous rule cited the Declaration of Helsinki, as amended in 1989, as an example of internationally recognized ethical standards that a foreign country might use as its ethical standard. The rule provided that if a department or agency head determined that procedures prescribed by the institution in the foreign country afforded protections that are at least equivalent to those provided in this policy, the department or agency head may approve the substitution of the foreign procedures in lieu of the procedural requirements provided in this policy.

2. NPRM Proposal

The NPRM proposed to remove the specific reference to the Declaration of Helsinki in this provision. A concern with providing a specific example of an internationally recognized ethical document is that such a document is subject to change independent of Common Rule departments and agencies, and therefore could be modified to contain provisions that are inconsistent with future U.S. laws and regulations.

3. Public Comments

A few comments addressed the removal of the reference to the Declaration of Helsinki. These comments were equally divided between those opposed and those supportive or generally supportive. Those opposed feared that the removal of the reference would suggest that the Declaration of Helsinki does not apply and that it was cited in the pre-2018 requirements as an example, not as an equivalent replacement for the Common Rule. These commenters also noted that the United States had refused to sign on to some recent revisions to the Declaration. One organization commented that it would have been useful for the NPRM to address the issue of equivalent protections for U.S.-funded research conducted in foreign countries, as that might have addressed ongoing concerns about the use of alternative systems of protections when research is conducted outside the United States. Those supportive of

removing the reference to the Declaration of Helsinki agreed with the arguments laid out in the NPRM and felt that it was judicious to not align U.S. regulations with other standards because those standards are likely to change, perhaps in ways inconsistent with U.S. policy.

4. Response to Public Comments and Explanation of Final Rule: Removing the Reference to the Declaration of Helsinki

The final rule adopts the NPRM proposal. Although the pre-2018 requirements cited the Declaration of Helsinki as an example of internationally recognized ethical standards that a foreign country might use as its ethical base, we note that providing a specific example of an internationally recognized ethical document is concerning because such a document is subject to change independent of Common Rule department or agency policies, and therefore might be modified in ways that create standards that are inconsistent with U.S. laws and regulations.

G. Harmonization of Department and Agency Guidance (§ _____.101(j))

1. Background and Pre-2018 Requirements

Each Common Rule department and agency and the Food and Drug Administration (FDA) are authorized to issue its own guidance with regard to interpreting and implementing the regulations protecting human subjects. That guidance may differ substantially across entities. Currently, multiple efforts are underway to address variation in guidance across the Federal Government, but no regulatory requirement exists for departments and agencies to consult with other departments before issuing a policy, to the extent appropriate. As a result, interdepartmental communication has been at times uneven, leading to potentially avoidable inconsistencies. The Common Rule departments and agencies have procedures for sharing proposed guidance before it is adopted, and these procedures have generally been successful. Additionally, FDA and OHRP have worked closely to ensure harmonization of guidance to the extent possible, given the differing statutory authorities and regulatory missions. Also, as mentioned earlier in section I.B., the 21st Century Cures Act was enacted in December 2016. Among other things, it requires that the Secretary of HHS, to the extent practicable and consistent with other statutory provisions, harmonize the differences

between 45 CFR part 46, subpart A, and FDA's human subject regulations.

2. NPRM Proposal

Responses to questions in the 2011 ANPRM about the need for harmonization of guidance across Common Rule departments and agencies reflected widespread support for such efforts. Several commenters acknowledged the difficulty of getting all Common Rule departments and agencies to agree on all issues, as each has a different mission and research portfolio. However, they encouraged seeking harmonized guidance whenever possible. Thus the NPRM proposed that the regulations contain language requiring consultation among the Common Rule departments and agencies for the purpose of harmonization of guidance, to the extent appropriate, before guidance on the Common Rule is issued, unless such consultation is not feasible. The NPRM requested public comment on whether the proposed language would be effective in achieving greater harmonization of department and agency guidance, and if not, how it should be modified.

3. Public Comments

Approximately 60 comments were received regarding this proposal, and they were almost equally divided for and against it, although some of those opposed thought it did not go far enough to achieve the intended goal. Those who supported the proposal, either fully or partially, cited concerns they have as institutions, investigators, or IRBs in navigating different sets of regulations and different department or agency guidance documents. As noted above, among those who opposed the proposal, some expressed concern that the proposed language about harmonization did not go far enough. That is, they thought the language should mandate harmonization in guidance across Common Rule departments and agencies. These commenters felt that without a requirement to harmonize, federal departments and agencies will continue with business as usual and policy and guidance will continue to differ, creating complexity in the research environment. For example, one large research university emphasized the importance of harmonization across federal departments and agencies regarding guidance on the protections of human subjects for investigators, IRB administrators, and human subjects, and felt that the proposed language in the Common Rule NPRM might be ineffective in harmonizing agency

guidance. Several commenters emphasized the need, in particular, for greater harmonization between the Common Rule and FDA requirements, and between the Common Rule and the requirements of the Health Insurance Portability and Accountability Act of 1996 (HIPAA; Pub. L. 104–191).

Others were concerned that this provision would, in effect, mean that Common Rule departments and agencies issue fewer guidance documents because of lengthy internal government review and approval processes.

4. Response to Public Comments and Explanation of the Final Rule: Harmonization of Guidance

We believe there is a compelling case for as much consistency as is possible regarding guidance on the protections of human subjects. As such, the final rule implements the NPRM proposal at § _____.101(j). The final rule creates a requirement that guidance should be issued only after consultation among the Common Rule departments and agencies, while also permitting guidance to be issued without such consultation when it is not feasible. The proposal recognizes that harmonization will not always be possible or desirable given the varied missions of the departments and agencies that oversee the protection of human subjects and differences in their statutory authorities.

We note that some public comments expressed concern about the acceptable degree of variability among departments and agencies and encouraged attention to these concerns when diverging on guidance. The departments and agencies that oversee the protection of human subjects have a variety of missions and functions, including regulatory agencies and agencies that conduct and support research. In addition, in some cases, statutory differences among the departments and agencies have resulted in different regulatory requirements and guidance. They also oversee very different types and phases of research and thus may have reasonable justifications for differences in guidance. However, we agree that efforts should be made to issue collective guidance when possible and feasible and in a timely manner. We do not believe that this provision will result in the issuance of less guidance, because it largely codifies what has been the working practice among Common Rule departments and agencies up to this point.

H. Compliance Dates and Transition Provisions of the Final Rule (§ _____.101(l))

1. NPRM Proposal

In the NPRM, we shared the expectation that both the effective date of the final rule (meaning the date that the regulatory text is published in the Code of Federal Regulations) and the general compliance date of the final rule (meaning the date after which, as a general matter, regulated entities must comply with this rule) would be 1 year after publication of the final rule in the **Federal Register**. The NPRM also proposed two exceptions that would provide different compliance dates for two provisions. The first proposed exception pertained to the NPRM's proposal that the Common Rule be extended to cover all biospecimens regardless of identifiability. The second proposed exception pertained to the NPRM's proposal that a single IRB would be responsible for certain multi-institutional clinical trials, also described as cooperative research. The NPRM proposed that both of these provisions would have compliance dates of 3 years after publication of the final rule in the **Federal Register**. The intent behind this proposed delay was to enable institutions to develop institutional policies and procedures necessary to implement these new requirements. The NPRM sought public comments about the advisability of this proposed approach as well as possible alternatives.

The preamble to the NPRM also discussed the option for institutions or investigators to implement provisions of the final rule anticipated to provide additional regulatory flexibilities voluntarily 90 days after publication of the final rule in the **Federal Register**. This proposed approach was intended to enable institutions or investigators to gain the benefit of revisions to the Common Rule as soon as possible. The NPRM proposed a 90-day timeframe for this flexibility to enable the Common Rule departments and agencies time to develop the documents and tools needed to assist institutions in implementing the rule's regulatory flexibilities (e.g., the Secretary's broad consent templates) and the Secretary's list of privacy safeguards.

The NPRM also explained that the proposed extension of the Common Rule to clinical trials that are not directly funded by a Common Rule department or agency, but that are conducted at an institution that receives funding from a Common Rule department or agency for other human subjects research, would not apply to an

institution until the institution had received federal funding for nonexempt research in an award made after the effective date of the final rule.

The NPRM also proposed that ongoing human subjects research initiated before the effective date of the final rule would not need to comply with particular regulatory requirements.

In addition, the NPRM proposed a grandfather clause for research involving the use of biospecimens collected before the compliance date. This clause applied to the provision that would extend the Common Rule to cover all biospecimens, regardless of identifiability. Specifically, the NPRM proposed that such research would not need to comply with the final rule if any research uses of the biospecimens occurred only after removal of any individually identifiable information.

2. Public Comments

A majority of comments received on the effective dates opposed the NPRM's proposal that only nonidentified biospecimens would be grandfathered. Others commented on the proposed 3-year compliance date for the proposed expansion of the definition of human subjects to all biospecimens, regardless of their identifiability. In Section III, we discuss the determination not to finalize the biospecimen provisions, which addresses these comments. Some commenters expressed support for the general compliance date, as well as the delayed compliance date for the cooperative research provision.

Many commenters expressed the viewpoint that regulated entities would need to invest significant time and resources before they would be able to comply with the changes to the Common Rule proposed in the NPRM. Some commenters (including an academic institution and a hospital association) noted that such investments would have implications not only for research operations, but also for clinical care. Some commenters also noted their concern that 1 year was not enough time for institutions to comply with the large number of new and different regulatory requirements proposed in the NPRM and that such changes would necessitate significant modifications to their research and clinical enterprises and might impose hardships on IRBs, IRB staff, institutional leadership, and the regulated research community. Several commenters explained that the proposed 1-year general compliance period would not provide enough time to update written IRB procedures (which are required under the Common Rule), disseminate such procedures, update related documents (e.g., forms),

and develop appropriate training materials. One of these commenters explained that accredited institutions will need time for accrediting bodies to align their accreditation standards with the revised regulatory standards or risk conflicts between meeting proposed regulatory standards and losing accreditations.

Other commenters recommended 2-year or 3-year general compliance dates (including some that recommended permitting institutions to comply earlier), noting that compliance would be particularly challenging for institutions with smaller research programs. At least one commenter argued that the 3-year compliance date for the proposed cooperative research provision was inadequate given the significant costs and time that would be associated with establishing reliance agreements between collaborating research sites, maintaining required documents at the reviewing IRB, and ensuring that applicable laws were followed. At least one commenter argued that the proposed effective and compliance provisions left institutions with the discretion to remove studies from the oversight of the Common Rule without establishing any protective standards for doing so.

One group representing multiple professional societies stated that the efficiencies achieved by eliminating protracted negotiations concerning consent forms and institutional responsibilities will far outweigh any upfront costs incurred through implementation of this policy, and advocated for a faster timeframe for compliance than the proposed 3 years from the time of final publication: 1 year for clinical trials and 2 years for research studies. Another commenter echoed these views.

We did not receive many comments concerning the proposal to allow institutions to implement provisions offering regulatory flexibilities before the compliance date.

3. Response to Comments and Explanation of the Final Rule: Compliance Dates and Transition Provisions

The effective date and compliance dates included in this final rule are intended to meet the same general objectives as those described in the NPRM. Nonetheless, the approach adopted in the final rule is different in certain respects from the approach proposed in the NPRM.

As a general matter, none of the proposed dates in the NPRM related to research with biospecimens will be implemented because the proposal

included to extend the Common Rule to research with all biospecimens, regardless of identifiability, is not being implemented.

The final rule adopts an effective date and a general compliance date of 1 year from publication of this final rule in the **Federal Register**. During this 1-year timeframe, institutions will be able to revise forms, documents, and practices for consistency with the revisions reflected in this regulation. Although we recognize the work associated with compliance, we concluded that 1 year is a reasonable and adequate timeframe. We note that ongoing research studies that were initially approved by an IRB, waived pursuant to § _____.101(i), or determined to be exempt before January 19, 2018 will not be required to comply with the changes reflected in this final rule.

Section 101(l) describes the regulatory requirements that will apply to specific categories of research once the final rule goes into effect. For clarity, § _____.101(l) begins by defining two sets of requirements. First, as set forth in § _____.101(l)(1), the pre-2018 rule is described as the “pre-2018 Requirements”, which refers to the Common Rule as published in the 2016 edition of the Code of Federal Regulations. As described below, certain ongoing research may be subject to these requirements.

Section 101(l)(3)–(4) describes the different regulatory requirements that apply to different categories of research. For clarity and in order to have an easy-to-implement standard, these categories are generally based upon the date the research was initially approved by an IRB, waived pursuant to § _____.101(i), or determined to be exempt.

The first category of research, described in § _____.101(l)(3), applies to research initially approved by an IRB, waived pursuant to § _____.101(i), or determined to be exempt before January 19, 2018. We believe that such research (e.g., research for which an initial determination was made before the effective date of this final rule) should, as a general rule, be able to follow the same set of standards throughout the entire course of the research. The intent is to minimize burdens associated with research conducted over a period of time and to avoid a requirement that such research be subject to two sets of rules during the lifetime of the research. For that reason, this regulation adopts as a default rule, set forth in § _____.101(l)(3), that research initially approved by an IRB, waived pursuant to § _____.101(i), or determined to be exempted before January 19, 2018 (the effective date of this final rule) will not

be subject to this final rule but will continue to be subject to the requirements of the Common Rule in place before January 19, 2018.

However, we also recognize that institutions may prefer, for a particular study initiated before January 19, 2018, to comply with this final rule given the benefits that it offers and for administrative simplicity such as common regulatory requirements across an institution. Thus, § _____.101(l)(3) permits institutions engaged in ongoing research that was initially approved by an IRB, waived pursuant to § _____.101(i), or determined to be exempted before January 19, 2018, to choose, on a study-by-study basis, whether such research will be subject to the pre-2018 requirements (the rule in place before January 19, 2018, or the final rule. This is an exception and is offered as an additional flexibility to regulated entities. If an institution engaged in such research determines that it prefers to comply with the final rule for a particular research study, such research will be subject to the final rule if the institution formally makes a determination that the final rule will apply to such research and an IRB documents the decision made by the institution. If these requirements are not met or if the institution makes no decision, the pre-2018 requirements will apply to such research.

The second category of research, described in § _____.101(l)(4), applies to *research initially approved by an IRB, waived pursuant to § _____.101(i), or determined to be exempted on or after January 19, 2018*. Because such research does not begin and is not conducted until after the general compliance date of this final rule, this category of research is subject to the final rule throughout its lifetime.

A single IRB requirement for cooperative research has been adopted in § _____.114(b) of this final rule. As set forth in § _____.101(l)(2), this final rule adopts the proposed 3-year compliance date for this requirement to afford affected institutions sufficient time to prepare for and implement this requirement (e.g., developing institutional policies and procedures).

Although we understand the concerns expressed concerning the complexities that will be involved in establishing reliance agreements to satisfy the cooperative research provision adopted in this final rule, this final rule reflects the conclusion that a 3-year compliance date is adequate for this provision, based on our belief that this provision will offer significant benefits to institutions, particularly as the regulated community becomes

accustomed to this requirement. In addition, we believe it is likely that the institutional policies, procedures, and standard documents needed to implement this regulatory provision will, over time, become increasingly standardized, which will significantly minimize the burden on institutions associated with this requirement. So long as all other regulatory requirements are satisfied, institutions may use a single IRB to oversee cooperative research even before this compliance date occurs with respect to any research that institutions believe may benefit from this approach.

This final rule does not adopt the proposal mentioned in the preamble to the NPRM to permit institutions and

investigators to voluntarily implement provisions in the final rule that allow additional flexibilities 90 days after publication of the final rule. We determined that the approach adopted at § _____.101(l)(3), and described above, offers institutions and investigators similar advantages with respect to the conduct of ongoing research, while providing greater clarity and more simplicity concerning which set of regulatory requirements apply to particular studies.

We disagree with the comment that the proposed timelines enable institutions to remove their studies from the oversight of the Common Rule without establishing appropriate standards for doing so. The final rule

does not enable institutions to opt out of compliance with the Common Rule. The effective dates do afford institutions the discretion to choose, on a study-specific basis whether existing research should comply with the Common Rule in place when the research was initiated (the pre-2018 requirements) or this final rule (the 2018 requirements). This flexibility is offered only for certain ongoing research studies that were initially approved, determined to be exempt, or subject to a § _____.101(i) waiver before the effective date of this final rule.

To explain the approach adopted in this final rule, the following chart describes the standards that apply to different categories of research:

Research Study Initiation Date	Standards
Research initially approved by an IRB, waived pursuant to § _____.101(i), or determined to be exempt before January 19, 2018.	These studies are by default subject to the pre-2018 rule (the Common Rule as published in the 2016 edition of the Code of Federal Regulations). However, an institution engaged in such research may choose to comply with the final rule (2018 requirements) for such a study if the institution makes a determination to apply the final rule to the study and an IRB documents this determination.
Research initially approved by an IRB, waived pursuant to § _____.101(i), or determined to be exempt on or after January 19, 2018.	These studies are subject to the final rule (2018 requirements).

I. Severability (§ _____.101(m))

A severability clause has been added as § _____.101(m), providing that if any provision of this final rule is held to be unenforceable in one set of circumstances, it should be construed to give maximum effect to the provision as applied to other persons or circumstances. Similarly, if a provision is held to be invalid or unenforceable, that provision should be severable from, and have no impact on the application of, the remainder of the rule. This provision reflects our intention regarding the way that this final rule, and the pre-2018 rule, should be construed and interpreted and is meant as a clarification.

III. Definitions for Purposes of this Policy (§ _____.102)

The final rule revises and adds new definitions of key terms for the purposes of this policy, as summarized below. Some of the changes are made to clarify new provisions that appear elsewhere in the final rule. In addition, the definitions have been placed in alphabetical order to facilitate searching by the reader. The definitions of institution, IRB, and IRB approval are unchanged but appear in a different place in the regulatory language.

A. Certification (§ _____.102(a))

Although “certification” was defined in the pre-2018 requirements, as was proposed in the NPRM, the final rule clarifies that notification by the institution that a proposed research study has been reviewed and approved is made to the supporting “federal” department or agency and that it might be a component of the agency or department that is notified rather than the entity as a whole. This clarification relates to the change included in the final rule at § _____.102(d) regarding the definition of “federal department or agency” that clarifies that this phrase refers to the department or agency itself, not its bureaus, offices, or divisions. There were no public comments on this clarification.

B. Clinical Trial (§ _____.102(b))

1. Background and Pre-2018 Requirements

The pre-2018 rule did not include a definition of “clinical trial.”

2. NPRM Proposal

The NPRM proposed defining “clinical trial,” for purposes of this policy, as a research study in which one or more human subjects are prospectively assigned to one or more interventions (which may include placebo or other control) to evaluate the

effects of the interventions on biomedical or behavioral health-related outcomes. In addition, the NPRM requested public comment on whether the proposed definition should include additional explanation of what is encompassed by the term behavioral health-related outcomes.

3. Public Comments

Approximately 20 comments explicitly addressed the definition of “clinical trial” included in the NPRM. All expressed concern that the proposed definition encompassed more activities than intended, given the NPRM discussion that the definition was intended to cover the riskiest research. Commenters who responded asked for some type of clarification, either in guidance or in the regulatory language itself about the term “behavioral health-related outcomes.” One commenter noted that clinical trials involving activities such as behavioral interventions, psychotherapy, or skills training, for example, should be included in the proposed regulations of clinical trials in a risk-based manner, as for nonbehavioral studies. That is, greater oversight would be required for trials with a higher potential degree of risk, regardless of what type of trial. The commenter noted that certain populations for whom behavioral health research is conducted are high risk by

nature, such as chronically suicidal individuals. Another commenter asked that the regulatory language include additional explanation of what is encompassed by the term “behavioral health-related outcomes” because practitioners and researchers conceptualize the term differently.

4. Response to Comments and Explanation of the Final Rule Definition of Clinical Trial

The final rule at § _____.102(b) adopts the NPRM definition of “clinical trial,” which is a research study in which one or more human subjects are prospectively assigned to one or more interventions (which may include placebo or other control) to evaluate the effects of the interventions on biomedical or behavioral health-related outcomes. We generally expect that this definition will be applied harmoniously with the definition of clinical trial recently promulgated in the ClinicalTrials.gov final rule.¹⁷

In response to public concerns about an overly expansive definition of “clinical trial” given the importance of that definition to the proposed extension of the rule to clinical trials previously not covered by the rule, we have eliminated that proposed expansion of coverage in this final rule. As such, the definition that appears in the final rule will only be relevant to the requirement for posting of consent forms for clinical trials conducted or supported by Federal departments or agencies (§ _____.116(h)). It should be appropriate for that relatively narrow regulatory purpose.

C. Department or Agency Head and Federal Department or Agency/Institutions (§ _____.102(c) (d) and (f))

1. Background and Pre-2018 Requirements

The pre-2018 rule provided a definition of “department or agency head.” The phrase appeared repeatedly throughout the regulations.

2. NPRM Proposals

New definitions of “department or agency head” and “federal department or agency” were proposed in the NPRM to clarify requirements related to federal department and agency discretion in applying the policy to their funded or conducted research.

3. Public Comments

There were no comments directly related to these proposed revisions.

4. Explanation of the Final Rule: Definition of Department or Agency Head, Federal Department or Agency, and Institution

The final rule adopts the NPRM proposals to provide new definitions of “department or agency head” and “federal department or agency,” which appear at § _____.102(c) and (d). “Department or agency head” at § _____.102(c) refers to the head of any federal department or agency, for example, the Secretary of HHS, and any other officer or employee of any federal department or agency to whom authority has been delegated. To add clarity to the definition found in the pre-2018 regulations, the example of the Secretary of HHS was inserted.

The final rule provides at § _____.102(d) a definition of “federal department or agency” in order to avoid confusion as to whether this phrase encompasses federal departments and agencies that do not follow the Common Rule. The definition also clarifies that this phrase refers to the department or agency itself, not its bureaus, offices, or divisions. This is consistent with the historical interpretation of the Common Rule. Related to this, the definition of “institution” was changed at § _____.102(f) in the final rule to clarify that departments can be considered institutions for the purposes of this policy. The final rule provides examples of what is intended by this definition: HHS, the Department of Defense, and the Central Intelligence Agency.

D. Human Subject (§ _____.102(e))

1. Background and Pre-2018 Requirements

The pre-2018 rule defined “human subject” as a living individual about whom an investigator (whether professional or student) conducting research obtains (1) data through intervention or interaction with the individual, or (2) identifiable private information. Further, the pre-2018 rule asserted that “private information” was considered individually identifiable if the identity of the subject is or may readily be ascertained by the investigator or is associated with the information.

Thus, in cases where no intervention or interaction with an individual occurred, determining the meaning of “identifiable” and “readily ascertainable” was central to determining whether human subjects were involved in a research activity

covered by the pre-2018 rule. Under the pre-2018 rule, provided the data were collected for purposes other than the currently proposed research, it was permissible for investigators to conduct research on biospecimens and data that had been stripped of all identifiers or coded without obtaining consent because the nonidentified biospecimens and data did not meet the regulatory definition of a human subject.

Moreover, “private information” was not considered to be identifiable under the pre-2018 rule if the identity of the subject is not or may not be “readily ascertained” by the investigator from the information or associated with the information.

If the definition of “human subject” was met, together with the other significant requirements, the pre-2018 rule required IRB review and approval unless the study was exempt. IRB waiver of informed consent was allowable under the Common Rule, if the research study satisfied the criteria for waiver of informed consent.

2. NPRM Proposal

The NPRM proposed to revise the definition of “human subject” to include research in which an investigator obtains, uses, studies, or analyzes biospecimens, regardless of identifiability. Thus, the focus of this proposal was to require informed consent for research involving biospecimens in all but a limited number of circumstances. In addition, the NPRM proposal would have still permitted IRBs to waive the requirement for informed consent for research use of biospecimens, but the requirements for approval of such waivers would have been very strict, and such waivers would have occurred only in rare circumstances (see Section XIV on waiver of informed consent). This expansion of the definition of “human subject” would also have triggered other provisions of the NPRM relating to the use of biospecimens, including security measures. Thus, it was a complex and far-reaching proposal.

The NPRM also offered two alternative proposals to altering the definition of “human subject,” both of which maintained “identifiability” as a major aspect of determining applicability of the Common Rule to biospecimens. The public was asked to comment on which of the three proposals achieved the most reasonable tradeoff between the principles of autonomy and beneficence.

Alternative Proposal A would have expanded the definition of “human subject” to include whole genome sequencing (WGS). Under this

¹⁷ HHS. Clinical Trials Registration and Results Information Submission. 81 FR 64981. (Sept. 21, 2016). Retrieved from <https://www.federalregister.gov/documents/2016/09/21/2016-22129/clinical-trials-registration-and-results-information-submission>

alternative, WGS would have been considered to be the sequencing of a human germline or somatic biospecimen with the intent to generate the genome or exome sequence of that biospecimen.

Alternative Proposal B would have expanded the definition of “human subject” to include the research use of information that was produced using a technology applied to a biospecimen that generated information unique to an individual. In such a case, it was foreseeable that, when used in combination with publicly available information, the individual could have been identified. Information that met this standard would have been referred to as “bio-unique information.”

The NPRM also asked the public to comment on whether the rule should include a definition of “biospecimen” and whether the rule should be clearer and more direct about the definition of “identifiable private information.”

The NPRM also proposed some minor changes to the wording of the definition of “human subject” merely to clarify how the word “obtains” has been interpreted.

The NPRM did not propose any major substantive modifications to the descriptions of “private information” and “identifiable private information” found in the pre-2018 rule. However, the NPRM proposed clarifying language with regard to “private information” and “identifiable private information.” The pre-2018 rule used the example of a medical record as constituting private information. The NPRM added the example of a biospecimen in keeping with the proposal to expand the definition of “human subject” to include all biospecimens. In addition, the NPRM proposed adding the words “shared or” to the description of what constitutes “private information,” for the purpose of expanding the scope of the information that would be described by that term.

In addition, the NPRM asked for public comment about whether a different identifiability standard would be appropriate. One alternative discussed was to adopt the term “identifiable private information” with the term used across the Federal Government: “personally identifiable information” (PII). PII refers to information that can be used to distinguish or trace an individual’s identity (such as name, social security number, biometric records) alone, or when combined with other personal or identifying information that is linked or linkable to a specific individual, such as date and place of birth, or mother’s maiden name. It acknowledged that

replacing “identifiable private information” with “PII” would increase the scope of what is subject to the Common Rule. Subsequent to the release of the NPRM, the Office of Management and Budget (OMB) updated government-wide guidance for managing personally identifiable information.¹⁸

Related to this issue, the NPRM noted new legislative developments, specifically the Newborn Screening Saves Lives Reauthorization Act of 2014 (Pub. L. 113–240), signed into law in December 2014. The law required consent for federally funded research with newborn dried blood spots and prohibits IRBs from waiving consent. These changes were to be effective until updates to the Common Rule were promulgated, and applied whether or not the newborn dried blood spots would be considered “identifiable private information” under the regulatory definition.

3. Public Comments

a. Public Comments on the Primary NPRM Proposal

The proposal regarding revising the definition of “human subject” to include biospecimens regardless of identifiability was commented on by almost 50 percent of the commenters. Others commented on the effects such an expansion would have on consent requirements, the ability to waive consent, and the applicability of exemptions and exclusions. The vast majority of commenters who addressed this expansion (80 percent) were opposed to it for a variety of reasons, particularly because of the implications of this change for requiring consent for most research uses of biospecimens that were collected as part of clinical care.

A majority of these commenters responded as members of the general public (that is, not explicitly affiliated with a specific organization or institution) or as patients (including family members of patients). Patients tended to oppose these proposals, focusing on the additional and more stringent criteria for waiver of informed consent because they believed the effects of the proposals would be that many people would not provide consent, thus restricting access by investigators to biospecimens, which

would in turn slow research.

Investigators also expressed concerns about the negative impact on research. Organizations and institutions with some affiliation with the research enterprise expressed opposition to this suite of proposals as well, but for different reasons, as discussed further below.

Most support for the expansion of the definition of “human subject” to encompass all biospecimens and its implications for consent, waiver of consent, and exempt research came from members of the public who argued that they wanted to always be consulted before their biospecimens were used in research, without exception. Within this group, a strong majority opposed the comprehensive biospecimen-related proposals because they were uncomfortable with the concept of broad consent (as discussed in Section IV of this preamble) to any future research use of those biospecimens and the existence of any type of over-ride by an IRB of the requirement to obtain informed consent.

Many of the commenters supporting the expansion stated that it would respect autonomy by requiring that nearly all research with biospecimens be subject to IRB review and informed consent requirements. Others expressed distrust of the medical and scientific enterprises. One member of the public felt that consent should be required for government research seeking to use an individual’s biospecimens, and that researchers should be required to inform the individual of the “who, what, how, and why” of the desired research.

Many of those who expressed support for this proposal also indicated that they felt it important for their biospecimens to be anonymized in research activities. For example, a member of the public with experience in biobanking expressed a willingness to consent to the use of his biospecimens to advance science, but called for a mechanism to inform the public about such research use even if some individuals might decline to participate. The commenter stressed the importance of respecting the individual’s right to know and refuse, citing privacy concerns and stressing the importance of anonymity of biospecimens to protect individuals from potential negative consequences.

Still others supported the expansion of the definition of “human subject” to include all biospecimens because of a desire to receive research results or to financially profit from discoveries, implying that retaining identifying information with biospecimens would enable both of these possibilities. Some who felt there is an entitlement to

¹⁸ CIRCULAR NO. A–130 Memorandum to: The Heads of Executive Departments and Agencies Subject: “Managing Information as a Strategic Resource”. July 7, 2016. See especially, *Appendix II: Responsibilities for Managing Personally Identifiable Information*. Retrieved from <https://www.federalregister.gov/documents/2016/07/28/2016-17872/revision-of-omb-circular-no-a-130-managing-information-as-a-strategic-resource>

financially profit from discoveries described biospecimens as personal property. For example, one commenter compared the use of an individual's biospecimens without consent to one party illegally taking another's property such as land, a house, or an arm.

Several commenters noted that medical services should not be allowed to be contingent upon a person's consent to use of their leftover biospecimens for research despite the fact that this was not proposed in the NPRM. In fact, the pre-2018 rule states that informed consent must include a statement that "refusal to participate will involve no penalty or loss of benefits to which the subject is otherwise entitled" and that element appears in the final rule as well.

For example, one commenter indicated that patients should be informed and be given the opportunity to consent to the use of their body tissues, and if one declines consent, the individual should not be denied treatment or receive diminished care. In other words, they felt that consent should never be a condition of treatment.

The reasons for opposing the expansion of the definition of "human subject" to include all biospecimens were numerous, including: the feasibility of obtaining broad consent in a clinical setting; the costs of obtaining, tagging, and tracking consents given the low risk nature of the research in question; allowing autonomy to trump beneficence and justice; insufficient evidence of risk or public concern about the issue; the fact that it would result in fewer specimens collected from fewer sources, with adverse implications for rare diseases and for justice; the idea that requiring all biospecimens to remain identified poses greater privacy and confidentiality risks than the current system; and overall negative impacts on research.

Many expressed concern about the number of biospecimens that might no longer be available for research, not out of concern that individuals would decline to have their leftover tissue used in research, but rather because many hospitals and medical providers might decline to enact the expensive consent and tracking system that the NPRM envisioned. Some commenters were concerned that this would then limit the heterogeneity of biospecimens obtained and stored, as community hospitals and clinics might opt out of participating in such collections.

Several comments suggested that for academic medical centers where a large amount of research is conducted, research activities often do not result in

profits, and that the proposed policies would come at great costs to institutions already struggling to financially sustain a healthy research enterprise. For example, one commenter noted that the NPRM proposal would require additional resources to obtain consent, which would hinder smaller institutions with fewer staff or resources available in their ability to contribute to scientific and medical research, and limit the opportunities for patients at these facilities to participate in research. The commenter also pointed out that academic institutions rarely receive significant financial gain from their research, and institutions sometimes share biospecimens, which can be valuable in research, especially in the case of uncommon and poorly understood diseases. Thus, this commenter expressed concern that biospecimens might not be available for research given the requirements of the proposed policy.

Many members of the public with rare diseases commented on how research into their specific diseases might be affected should the NPRM proposal be finalized. For example, several commenters expressed interest in the proposed rule because they or a family member had been diagnosed with a desmoid tumor, which are often limb threatening and sometimes life threatening. Research using tissue blocks is critical to determine how to treat these tumors, which are rare and can vary among patients. The commenter felt that the proposed rule would make desmoid tumor research virtually impossible by reducing access to the already low number of tissue blocks available for research.

More than one academic medical center asserted that there was a lack of evidence that patients value their autonomy over the potential for innovative diagnostics, treatments, cures, or preventative interventions that could result from research with leftover biospecimens, and called for empirical research on whether patients, patient advocacy groups, and the general public value autonomy (in the form of written consent for research use of nonidentified biospecimens) above other values when explained in light of potential impact on medical advances.

Some public commenters pointed out the illogic of treating biospecimens differently from information for the purposes of defining what constitutes a human subject. For instance, one professional organization composed of investigative pathologists and dozens of individual pathologists around the country noted that there are several areas in which the NPRM proposes

treating biospecimens differently from identifiable information unjustifiably since both create the potential for identification of the donor and a potential negative impact on the individual and their family, such as employment or insurance discrimination, embarrassment, or stigmatization. That organization noted that no empirical evidence has been provided to indicate either that biospecimens pose a risk greater than that posed for identifiable information or that the public is more concerned about the use of biospecimens compared to the use of identifiable private information.

One member of the public asserted that the research use of leftover biospecimens in medical research poses less of a privacy risk to individuals than market research that analyzes one's attitudes, words, and behaviors and is used to generate commercial profit.

Several commenters noted that the proposed expansion of the definition of "human subject" creates a cascade of consequences throughout the rule that are overly complex and unnecessary given the minimal risk of such research.

Other commenters suggested that the NPRM proposals would have negative impacts on the advancement of precision medicine. For example, a research university felt that mandating consent for de-identified biospecimens would impair the ability to achieve precision medicine for all. The commenter asserted that to offer care tailored to the needs of each individual based on understanding how each person is affected by disease requires understanding differences in the origins and manifestations of disease in individual patients who differ in genetics and environmental exposures. The commenter felt that restricting access to nonidentified biospecimens would violate the principles of justice and beneficence because many health care facilities serving under-represented minorities and economically-disadvantaged individuals, particularly those in rural settings, might not have the financial resources to obtain and track consent. As a result, medical research therefore might represent a skewed population of individuals receiving care at large, research intensive referral centers. In addition, the commenter felt that compliance would impose an onerous and expensive bureaucratic burden that would result in many institutions no longer collecting and using these critically important specimens with the net effect of thwarting efforts to provide precision medicine for all citizens.

Many commenters expressed the opinion that the existing regulatory framework is adequate and that current practices should be maintained, stressing that the research use of nonidentified data or biospecimens involves minimal or low risk to the research subject. Furthermore, several commenters noted that, although it is theoretically plausible to identify a person based on their biospecimen, the likelihood remains remote enough to argue against the presumption that the sources of all biospecimens are identifiable and cited a study showing that the risk of re-identification from a system intrusion of databases was only 0.22 percent.¹⁹ Other commenters noted that the existing definition of human subject is sufficient because once a biospecimen becomes identifiable in research, such research is considered to involve human subjects and therefore IRB review and consent or waiver of consent would be required. They argued that the current policy works and there has been no evidence provided that it needs to be fixed.

The NPRM specifically asked whether the final rule should include a definition of “biospecimen” to assist the regulated community in understanding what types of activities might fall under the rule. Approximately 100 comments answered this question. A majority of these comments did not provide a suggestion for how biospecimen should be defined, but suggested that the Federal Government convene panels and solicit input from governmental and nongovernmental experts.

One university emergency medical department suggested including in this definition biological samples from human subjects which contain DNA and are being obtained for the purpose of medical analysis and provided examples of biospecimens which would fall under this definition, including excised tissue (fresh, fixed, or paraffin embedded), whole blood, urine (when hematuria is known to exist), and saliva among others. The commenter also provided examples of biospecimens which would not fit in this definition, including serum or plasma, urine (when no hematuria is known to exist), and processed tissues where the DNA has been removed as a part of the processing.

¹⁹ Kwok P, et al. Harder Than You Think: A Case Study of Re-Identification Risk of HIPAA-Compliant Records. NORC at The University of Chicago and Office of the National Coordinator for Health Information Technology. 2011. Retrieved from <http://www.amstat.org/meetings/jsm/2011/onlineprogram/AbstractDetails.cfm?abstractid=302255>.

Others indicated that the definition of biospecimen used by the National Cancer Institute²⁰ seemed appropriate and workable for this rule.

A majority of comments on the definition of “biospecimen” asked for explicit clarification on how certain biospecimens would be treated under the rule. Several comments asked whether microbiology biospecimens would be considered covered under the NPRM proposal. One research university requested specification that biologic material of organisms that use human biospecimens merely as a host (e.g., bacteria, viruses, fungi) not be considered to involve human subjects.

The NPRM also asked whether covering only biospecimens that include nucleic acids would be a reasonable definition. A majority of those who responded to this said it would not be a good line to draw. One commenter specifically noted that the presence of nucleic acids does not guarantee re-identification.

b. Public Comments on Alternative NPRM Proposals A and B

Some of the alternative NPRM proposals were partly based on the premise that biospecimens could at some point become readily identifiable as a result of increasingly sophisticated technology. Many public commenters stated that a better approach to protecting privacy than requiring consent is to impose sanctions against investigators who aim to or do re-identify biospecimens without authorization by an IRB or other body. Such an approach, they said, would be less onerous for the entire enterprise, and if accompanied by clear guidance from funding agencies, would do more to protect privacy and guard against potential harms to subject rights and welfare.

Few commenters, approximately 20, explicitly supported Alternative A or B over the NPRM proposal or the pre-2018 rule.

The Presidential Commission for the Study of Bioethical Issues explicitly supported Alternative B, noting that it is the most forward-looking of all three

²⁰ NCI defines “biospecimen” as, “A quantity of tissue, blood, urine, or other human-derived material. A single biopsy may generate several biospecimens, including multiple paraffin blocks or frozen biospecimens. A biospecimen can comprise subcellular structures, cells, tissue (e.g., bone, muscle, connective tissue, and skin), organs (e.g., liver, bladder, heart, and kidney), blood, gametes (sperm and ova), embryos, fetal tissue, and waste (urine, feces, sweat, hair and nail clippings, shed epithelial cells, and placenta). Portions or aliquots of a biospecimen are referred to as samples (NCI Best Practices working definition).” Retrieved from <http://biospecimens.cancer.gov/bestpractices/got/#B>. Last modified March 16, 2016.

proposals, using “bio-unique” data as human subjects research with a focus on the technology and its ability to identify donors using small amounts of data, as opposed to tying the definition of human subjects research to a particular kind of data.²¹ Another commenter identified alternative B as the best proposal to keep pace with advances in technology (including technologies driving personalized medicine), protect research participants, respect autonomy, increase trust, and close the gap in protection in the current regulations.

Those who supported the primary NPRM proposal—to expand the definition of “human subject” to include all biospecimens—indicated that Alternatives A and B would not give individuals who wanted to control the use of their biospecimens the opportunity to do so.

Approximately 250 commenters (about 12 percent of the total comments received) said that they endorsed the pre-2018 policy, but that if the Federal Government must do something other than maintain the current definition of human subject, Alternative A would be preferable to the NPRM proposal or to Alternative B. These comments argued that Alternative A would be the least disruptive to the research enterprise, but that the pre-2018 policy would be better.

However, the majority of those commenters addressing the alternative proposals indicated that neither struck an appropriate balance among the *Belmont Report* principles. A research university concluded that both alternatives lack balance, emphasizing respect for persons with little regard for the principles of beneficence and justice.

Additional concerns about Alternative A included the fact that while limiting the expansion of the scope of activities covered by the rule to whole genome sequencing may be a reasonable line for inclusion today, that line might not be inclusive enough in the future.

Additional concerns about Alternative B included that by requiring continual re-review of technologies and databases by the federal government, there would be an “inevitable lag” between when a technology might be identified and when it would be added to the list. Thus, these commenters argued that the list might end up being useless.

²¹ The Commission had previously addressed related issues in its October 2012 report, *Privacy and Progress in Whole Genome Sequencing*. Washington, DC: Presidential Advisory Commission for the Study of Bioethical Issues. Retrieved from http://bioethics.gov/sites/default/files/PrivacyProgress508_1.pdf.

c. Alternative Proposals Offered by Public Commenters

Many commenters proposed or endorsed alternatives to the NPRM proposals. Generally, these alternatives involved maintaining the existing schema, developing a system of notice and opt out, engaging in a public education campaign about how the research enterprise works, and developing penalties and sanctions for re-identification of biospecimens and information. A policy that requires notice, opt out, and public education were generally endorsed or discussed together.

The Secretary's Advisory Committee on Human Research Protections (SACHRP) offered one of the most detailed alternative proposals. SACHRP indicated that existing practices of research with biospecimens and data that have been collected for nonresearch uses (most often in the course of clinical care) should be revised to better protect subjects through greater transparency, public education about research with biospecimens, more exacting standards for protecting against dignity harms, allowing individuals to opt out, requiring IRB or institutional review and approval of specific research uses of identified biospecimens and identified data, and through strict legal consequences for re-identification of de-identified biospecimens and data that have been shared for research purposes.

SACHRP also proposed that data security protections be developed to safeguard biospecimen-associated data and identified data against unauthorized release or access, and focused review of the storage, maintenance, or secondary research use of identified biospecimens and identified data to determine whether the proposed activity is likely to be objectionable.

A professional organization of investigative pathologists urged consideration of opt-out broad consent models for nonidentified biospecimens collected in research and nonresearch settings, and suggested that this model would bring consent for the broad use of nonidentified biospecimens in line with HIPAA privacy practices, preserving the ability for an individual to decide not to participate in research efforts. This organization asserted that this option would be less burdensome and an inclusive, respectful, and functional way to promote ethically conducted biomedical research on biospecimens.

d. Public Comments on Identifiability

Approximately 40 comments were received in response to the request to

comment on the definition of identifiable private information. Comments were mixed. The largest proportion of those comments (approximately 13) supported the definition in the pre-2018 rule. Others felt that the pre-2018 definition of identifiable private information was sufficient, but that additional guidance would be needed to implement it. Another group of commenters supported adopting a different identifiability standard in the final rule (such as the federal government's personally identifiable information standard, or the HIPAA identifiability standard).

Several public comments claimed that the meaning of "identifiable" with regard to information and biospecimens will change as technology advances. They indicated that the technique of whole genome sequencing altered the conversations about the identifiability of biospecimens and future technological advances using advanced computing and large databases could provide methods for easily aggregating disparate data for the purposes of identifying an individual.

Public comments received from a large professional association related to the definition of identifiable private information noted that the modifier "may be readily ascertainable" that was included in the definition of identifiable private information within the definition of human subject allows for changes in scientific technology and data sharing over time since what was readily ascertainable 10 years ago has changed and will be different 10 years from now. The commenter noted that this allows IRBs and investigators to assess identifiability based on current technology, data sharing and computing capabilities, rather than comparing it to an enumerated list of identifiers or scientific technologies.

Some commenters expressed a desire for guidance to be issued on these definitions or for the definitions to be better clarified and explained in the regulatory text. Several comments specifically suggested a need for a definition of or guidance on the term "readily ascertainable."

Approximately 10 comments endorsed replacing the Common Rule's identifiability standard with either the Federal Government's concept of personally identifiable information (PII) or HIPAA's concept of protected health information (PHI).

One academic medical center felt that the concept of PII would unnecessarily broaden the scope of the Common Rule and create a larger administrative burden due to the vagueness of the PII

definition without providing substantial added protection to human subjects, and suggested replacing the term "identifiable private information" with the definition of "protected health information," which can be found at 45 CFR 160.103.

Those who supported the use of the PII concept noted that it would harmonize other definitions of identifiability used in other Federal Government regulations. One state department of health and human services noted that adopting PII would be consistent with other confidentiality laws, policies, and industry standards that require organizations to protect the privacy and security of PII, achieving consistency across standards and helping organizations comply with the various privacy and security requirements. The commenter felt that replacing the identifiable private information standard with the concept of PII should not be overly burdensome on the research community since exemptions and waivers of informed consent would likely apply in many contexts.

A few commenters also noted that regardless of how identifiability might be defined, some concerns about group harms still were not addressed in the NPRM.

Several other commenters noted that a change to the definition of PII would not increase public trust or understanding of the system, nor would it likely clarify for investigators whether biospecimens or private information are identifiable.

A majority of the commenters noted that whatever direction the final rule takes; additional guidance will be necessary to reduce ambiguity within the regulated community.

e. Public Comments on Newborn Dried Blood Spots

Approximately 50 comments discussed how issues related to research use of residual newborn dried blood spots (DBS) were addressed by the proposal to expand the definition of human subject. Of those comments, 35 supported the idea of parental consent for research with DBS. Thirty-two comments stated that specific consent should be required for all research uses, in other words, that the exemptions and exclusion categories should not apply to research involving DBS. Those who felt that parental consent should always be required for the research use of DBS expressed the need to respect autonomy and parents' rights, and frequently conveyed a distrust of medicine and scientists. These individuals generally supported the spirit of the main NPRM

proposal, but objected to any exemptions, exclusions, and waivers of informed consent.

Fifteen comments expressed concerns that the biospecimen proposals in the NPRM would impede research involving DBS, which could negatively affect the expansion and improvement of newborn screening programs due to, among other things, a possible lack of resources for obtaining consent. In this regard, an employee of a California state health department described the health department's experience of seeking and obtaining consent for the research use of DBS. This individual noted that 52 percent of new parents were offered the opportunity to consent. Of those offered the opportunity, 90 percent said yes. This employee was thus concerned that due to staffing constraints, the majority of new parents simply would not be asked to provide consent to future research uses of DBS.

Others indicated that some kind of notice and opt-out process would be acceptable, but that as a general matter the research community would benefit from guidance on the extent to which the exemptions and exclusions apply to this type of work.

4. Response to Comments and Explanation of the Final Rule: Definition of Human Subject

The final rule does not implement the proposed expansion of the definition of "human subject" to include all biospecimens regardless of identifiability. It is clear from the comments received that the public has significant and appropriate concern about both the need for obtaining consent before using such biospecimens for research, and the potential negative impacts of implementing that proposal on the ability to conduct research. And, while it does not substantially change the definition of "identifiable private information," the final rule includes a new process by which Common Rule departments and agencies can regularly assess the scientific and technological landscape to determine whether new developments merit reconsideration of how identifiability of either information or biospecimens is interpreted in the context of research. Because the final rule does not implement the NPRM's proposed expansion to the definition of "human subject," it also does not implement the NPRM proposal to exclude certain research activities involving nonidentified biospecimens.

With regard to changing the definition of "human subject" to include all biospecimens, the majority of commenters who addressed this expansion opposed it for a variety of

reasons, as described above. As explained in the NPRM, one of the core reasons for proposing that the rule be broadened to cover all biospecimens, regardless of identifiability, was based on the premise that continuing to allow secondary research with biospecimens collected without consent for research places the publicly funded research enterprise in an increasingly untenable position because it is not consistent with the majority of the public's wishes, which reflect legitimate autonomy interests. However, the public comments on this proposal raise sufficient questions about this premise such that we have determined that the proposal should not be adopted in this final rule.

Further, the current regulatory policy appears to sufficiently protect against the unauthorized research use of identifiable biospecimens. Under the pre-2018 rule, if an investigator funded by a Common Rule department or agency uses nonidentified biospecimens and manages to re-identify them, that investigator would then be conducting human subjects research without IRB approval, in violation of the rules. It should also be noted that the position adopted in the final rule does not eliminate any authority, separate and apart from the Common Rule, that Common Rule departments and agencies have to establish policies with additional requirements related to consent for research involving nonidentifiable biospecimens or nonidentifiable private information, or preclude them from exercising such authority.

Nonetheless, we acknowledge the need to also appropriately respect and promote autonomy interests. Any future proposals aimed at promoting autonomy should jointly evaluate the importance of the autonomy interests at issue, as well as explicitly quantify the potential negative impacts the proposal might have on the ability to conduct research, including such consequences on the representativeness of biospecimens available for research.

In the final rule, we have added requirements to the informed consent process to increase transparency so that potential subjects will have more information about how their biospecimens or private information might be used. Specifically, prospective subjects will be told that identifiers might be removed from their biospecimens or private information and used for future research, if this might be a possibility. Finally, as some public comments addressed the desire to share in any profits that might accrue as a result of research use of their

biospecimens, an additional element of consent will require, as appropriate, a statement that the subject's biospecimens may be used for commercial profit and whether the subject will or will not share in this commercial profit. We believe that this increased attention to transparency in the consent process will allow individuals to make informed choices about whether they want to consent to current or future research uses of their biospecimens. A few clarifying changes are made in the final rule pertaining to the definition of "human subject" and the components within that definition, particularly referring to both information and biospecimens as key determinants of whether a human subject is involved in research.

With respect to the definition of "identifiable private information," although the pre-2018 definition of "identifiable" did not incorporate a specific process for considering the growing volume of information being generated and shared in research (including from biospecimens), or consider how evolving technology can ease and speed the ability to re-identify information or biospecimens previously considered nonidentifiable, we appreciate that a change in that definition could have collateral implications with respect to imposing unwarranted consent requirements on activities that were not subject to the regulations. We appreciate the commenter requests for more guidance on how they should interpret the definition of identifiable private information. Thus, although the final rule only makes minor changes to the existing definition of "identifiable private information," it sets in place a process (§ ___.102(e)(7), discussed below) that will help facilitate any necessary future updates to the understanding of that term.

In the final rule the language at § ___.102(e)(1)(i) relating to information obtained through intervention or interaction with an individual was adopted and modified by replacing the reference to data, as proposed in the NPRM, with a reference to information or biospecimens, and by adding the NPRM-proposed language relating to using, studying, or analyzing the information or biospecimens. The explicit reference to biospecimens in this context is intended as a mere clarification of the previous understanding of how the pre-2018 rule operated.

Likewise, the final rule adopts the NPRM-proposed language at § ___.102(e)(1)(ii) relating to obtaining identifiable private information, but

modifies it by adding an explicit reference to “identifiable biospecimens.” This is also intended as a mere clarification of the previous understanding of how the pre-2018 rule operated as applied to biospecimens. Similarly, the definition of intervention has been modified to clarify that information or biospecimens might be gathered, replacing the former reference only to data. This, too, is merely a clarification of the existing understanding of that concept.

A definition of “identifiable biospecimen” has been added at § _____.102(e)(6). This new definition was not added as a result of any substantive change, but rather to enable greater clarity in other provisions of these regulations in explaining when a particular provision relates to either identifiable private information alone (not including biospecimens), or identifiable biospecimens alone, or both. The pre-2018 rule’s concept of “identifiable private information” had encompassed the concept of an identifiable biospecimen, whereas under the final rule that concept has been “cleaved off” from that definition and given its own definition. Note that a biospecimen is deemed to include private information (consistent with the understanding of this concept under the pre-2018 rule), so there is no need to add the adjective “private” in the definition of an “identifiable biospecimen.” In effect, once a biospecimen becomes identifiable (for example, by being tagged with the name or other information that indicates the person from whom the biospecimen was obtained), then an investigator using that biospecimen is already using something to which § _____.102(e)(1)(ii) would apply. There is no need to make any additional determination about the “private” aspects of what is taking place.

In addition, the minor clarifying change in the language for the concept of “private information” that was proposed in the NPRM, namely adding the phrase “shared or,” was not adopted. It was decided that because any information that should not be shared would always meet the standard of being information that should not be made public, this change would not actually expand the amount of information that is considered private information.

Although the description of when private information is identifiable was not significantly changed, a new provision has been added at § _____.102(e)(7) requiring federal departments and agencies that implement the Common Rule to

regularly, upon consultation with appropriate experts, reexamine the meaning of the terms “identifiable private information,” as defined in § _____.102(e)(5), and “identifiable biospecimen,” as defined in § _____.102(e)(6). Such reexamination shall take place at least every 4 years. This new provision specifically requires that the federal departments and agencies implementing this policy collaborate on this process to avoid a duplication of efforts and in order to have a consistent interpretation of these terms.

This new process responds to the growing volume of information being generated and shared in research (including from biospecimens), and evolving technology that can ease and speed the ability to re-identify information or biospecimens previously considered nonidentifiable. With an increase in the number of exemptions included in this final rule, it will be important to reconsider the potential identifiability of information and biospecimens and facilitate uniform interpretation to ensure adequate privacy and security measures are in place.

Section 102(e)(7) also provides that, after conducting this process, if it is determined to be appropriate and permitted by law, Common Rule departments and agencies could alter the interpretation of identifiable private information or identifiable biospecimens, including through the use of guidance.

In addition, there will occur, also at least every 4 years and as a collaborative process among those federal departments and agencies, upon consultation with appropriate experts, an assessment as to whether there are analytic technologies and techniques that should be considered by investigators to generate identifiable private information or identifiable biospecimens. The ultimate goal is to implement the Common Rule in a way that is aligned with the evolving understanding of the concept of identifiability while protecting subjects and encouraging and facilitating valuable research.

To the extent that this process leads to a determination that particular analytic technologies or techniques, when applied to information or biospecimens that are not identified, do lead to the generation of identifiable private information or identifiable biospecimens, those technologies or techniques will be placed on a list of technologies and techniques satisfying that determination, and recommendations might accordingly be

made with regard to relevant issues relating to consent and privacy and data security protections. The result may be that such technologies and techniques could therefore only be used in instances where the person has provided their consent (broad or study-specific) which meets the requirements of the Common Rule, or where an IRB has waived the requirement for consent.

Notice and the opportunity for public comment would take place before a technology or technique could be placed on this list. The expectation is that whole genome sequencing will be one of the first technologies to be evaluated to determine whether it should be placed on this list.

It is important to note that an investigator who possesses information or biospecimens to which such a technology or technique might be applied is not to be considered in possession of identifiable private information or identifiable biospecimens merely as a result of such a circumstance: that would only be true were the investigator to actually apply the technology or technique to generate identifiable private information or identifiable biospecimens.

This new provision is not being added as a result of any pre-conceived determination that there is indeed a need to change, whether by guidance or otherwise, the interpretation of “individually identifiable” as that concept is currently interpreted. Consistent with a core theme underpinning the process that led to this final rule, it would be inappropriate to expand the scope of coverage of the Common Rule with regard to activities that usually involve very little risk absent good reason to think that there is a problem that the added administrative burden will be correcting. The public comments on both the ANPRM and the NPRM do not identify a specific problem, but clarification from the regulatory agencies might be useful. Thus, apart from the consequences of placing technologies and techniques on the new list, the most significant effect of § _____.102(e)(7) may be the issuance of guidance from time to time that facilitates understanding of and compliance with existing interpretations.

Finally, with regard to the use of newborn DBS, retaining the pre-2018 approach toward nonidentified biospecimens resolves many of the concerns expressed by commenters who felt that important research involving newborn screening would be halted or inhibited under the NPRM. The Newborn Screening Saves Lives Reauthorization Act of 2014 (Pub. L.

113–240) will no longer be effective following the effective date of this final rule, given that its changes applied only until changes to the Common Rule were promulgated. As a result, under the final rule, secondary research with nonidentified newborn DBS would be treated in the same way as secondary research with any other type of nonidentified biospecimen. Such research would not be considered research with human subjects under the final rule, and thus would not be subject to the rule.

E. Legally Authorized Representative (§ ____ .102(i))

1. Background and Pre-2018 Requirements

The Common Rule contains a definition of legally authorized representative to clarify who can consent on behalf of a prospective subject who is unable to consent to research participation on his or her own behalf. Under the pre-2018 rule, a legally authorized representative was defined as an individual or judicial or other body authorized under applicable law to consent on behalf of a prospective subject to the subject's participation in the procedure(s) involved in the research.

As there is no federal legal standard as to who, or what entity, is authorized to serve as a legally authorized representative to provide consent to a subject's research participation, the issue of who can serve as a legally authorized representative has been determined by the laws of the jurisdiction in which the research will be conducted. Within the United States, this generally means state or local law. "Applicable law" could be a state statute or regulation, case law on point, an opinion of a State Attorney General, or a combination of these.

Some states and jurisdictions have statutes, regulations, or common law that specifically address consent by someone other than the subject for participation in research. Most states and jurisdictions have no law specifically addressing the issue of consent in the research context. In these states and jurisdictions, law that addresses who is authorized to give consent on behalf of another person to specific medical procedures or generally to clinical care may be relevant if those types of procedures are the procedures involved in the research. The long-standing interpretation by OHRP has been that such laws relating to surrogate consent in the clinical context can be used for purposes of the Common Rule.

In every state, a legally authorized representative can be authorized through an advance directive or by a court through guardianship proceedings. However some states have no law specifically addressing the issue of consent by a surrogate in the research setting, and some states have no applicable statutes, regulations, or common law specifying when an individual can provide consent for another to medical treatment. In the absence of such law, it is usually the case that community or other standards (such as institutional policies) define hierarchies or identify individuals who are allowed to provide consent, for medical treatment purposes, on behalf of others who cannot consent for themselves.

SACHRP and the Presidential Commission for the Study of Bioethical Issues have raised concerns that the definition of legally authorized representative may be inappropriately hindering the conduct of research with subjects who lack capacity to consent. In the second part of its report on neuroscience and ethics, *Gray Matters: Topics at the Intersection of Neuroscience, Ethics, and Society (Volume 2)*, the Commission recommended that federal regulatory agencies establish clear requirements to identify who can serve as legally authorized representatives for individuals with impaired decision-making capacity to support their responsible inclusion in research.²²

2. NPRM Proposal

Although the NPRM did not propose regulatory text that would change the definition of "legally authorized representative," it requested public comment on whether we should modify the definition in light of the definition's reference to persons or entities "authorized under applicable law."

The NPRM sought comment on whether expansion of the current definition to permit a legally authorized representative to be defined by an accepted common practice standard within a state or jurisdiction that lacks applicable state law for determining who can legally consent to clinical care would be consistent with the ethical principles underlying the Common Rule. The NPRM proposed to allow use of this alternative standard only in jurisdictions in which there is also no

applicable law affirmatively authorizing a legally authorized representative to provide consent to the subject's research participation.

3. Public Comments

Approximately 60 commenters discussed the Common Rule's definition of "legally authorized representative." A clear majority supported the goal of addressing the barrier that the regulatory definition of "legally authorized representative" poses in jurisdictions that have no applicable law affirmatively authorizing an individual to provide consent for another. Commenters also favored the suggested approach and responded that including the allowance of an accepted common practice standard would still appropriately protect subjects. About one-third of the commenters responding to this question, including disability rights organizations, advocacy organizations, and academic institutions, did not agree with the direction of the contemplated modification or whether this issue should be addressed through regulatory change.

Those supporting a modified definition generally agreed that broadening the definition to cover anyone considered acceptable to provide consent for another individual in the clinical setting would be appropriate, would represent an alignment with accepted common practice, and would bring consistency to the consent process for the jurisdictions that are silent on both who may provide consent for clinical care and who may provide consent for research. A number of commenters who supported the proposal for modification noted that state law authorizing individuals to provide consent would continue to apply.

Among the commenters who opposed the modification, several said state law provides sufficient guidance regarding the hierarchy of those who can consent for an adult incapable of consenting on his or her own behalf, and reduces the institution's liability in the event that an inappropriate person consents for the subject. A research institution recommended that we reassess this proposal and include more specific requirements and details as to the role and authority of the legally authorized representative. A disability rights organization, while recognizing that the pre-2018 standard is not acceptable, commented that the problem is not solved by incorporating broad discretion among different jurisdictions. The organization also opined that a common practice standard does not provide

²² Presidential Commission for the Study of Bioethical Issues. *Gray Matters: Topics at the Intersection of Neuroscience, Ethics, and Society (Volume 2)*. Washington, DC: Presidential Commission for the Study of Bioethical Issues, 2015. Retrieved from http://bioethics.gov/sites/default/files/GrayMatter_V2_508.pdf

sufficient guidance to assess and balance reasonable risk, considering that a legally authorized representative's consent is not equivalent to an autonomous decision by the subject. A research subject advocacy organization expressed concern that such a change would not provide sufficient oversight of investigators, who might use this standard in a way that would violate local law. Another commenter stated that certain individuals may be considered able to give consent for participation in clinical procedures for individuals unable to do so for themselves, but may not have the best interests of the individual in mind.

Commenters responded specifically to the solicitation of comment on the proposed standard of "accepted common practice" and indicated that practices for surrogate consent should be those used in clinical settings. Several commenters provided ideas for a more specific approach to interpreting the terms "accepted" and "common." A researchers' association commented that interpretation of these terms should include standards that define hierarchies or identify individuals who may provide legally acceptable consent, for clinical purposes, on behalf of others who cannot consent for themselves. One commenter supporting the modification suggested that the terms could be defined to refer to the historically used form of governing and familial decision making within the group of subjects. A research institution commented that an IRB's careful review and documentation of who may serve as a legally authorized representative would be preferable to an accepted common practice standard, as that standard is vague. A research institution commenting in support of broadening the definition to those who are allowed to consent to clinical procedures advised that this would reduce confusion between physicians and researchers as to who can consent for whom in research situations, and suggested that the terms "accepted" and "common" should refer to the conducting institution's own policies on who can provide consent to clinical procedures.

4. Responses to Comments and Explanation of the Final Rule: Definition of Legally Authorized Representative

The definition of legally authorized representative in the final rule at § _____.102(i) has been modified to address jurisdictions in which no applicable law authorizes a legally authorized representative to provide consent on behalf of a prospective research subject. In these jurisdictions,

an individual recognized by institutional policy as acceptable for providing consent in the nonresearch context to the subject's participation in the procedures involved in the research, will now be considered a legally authorized representative for purposes of this rule.

The change made from the NPRM discussion that "accepted common practice" could be used to identify a legally authorized representative is in response to objections to the vagueness of these terms and the potential for confusion in implementation, which was expressed by the majority of commenters opposed to the proposal. We agree with the commenters' suggestion that an institution's own policies as to surrogate consent may be a better touchstone than "accepted common practice," as a standard referencing institutional policy will provide additional clarity as to who may serve as a legally authorized representative at that particular institution.

The final rule also differs from the NPRM discussion in that it allows institutional policies applicable to surrogate consent in either the clinical context, or other nonresearch contexts, to authorize a legally authorized representative. We expect that implementation of this aspect of the final rule definition will in large part rely on institutional policies for determining surrogates for clinical decision making. In those instances, there is relatively little risk that this rule will have inappropriate consequences, as far more significant considerations, not related to the Common Rule, play a role in shaping and constraining an institution's policies relating to surrogate decision making in the clinical context.

However, we recognize that some studies could be taking place that do not relate to the types of decisions that are involved in clinical care, or that do not involve procedures utilized in the clinical context. If the institution has a policy relating to who acts as a surrogate outside of the research context for those types of decisions, then such a policy could be employed in the research context. Similar to our assessment of policies relating to surrogate decision making in the clinical context, we expect that considerations not related to the Common Rule would constrain the institution's design and implementation of policies in other nonresearch contexts, and thus see relatively little risk that this added regulatory flexibility will have inappropriate consequences.

Maintaining the pre-2018 standard would have continued to allow

disparate results in terms of when research can take place in those states that have specific laws governing either surrogate clinical consent or research consent, and those that do not. Accepting that the Common Rule has been interpreted to allow the use of laws governing surrogate consent in the clinical context to be applied to surrogate decision making in the research context, it is difficult to see why there should be different outcomes in terms of what research is allowable based on whether the standards for surrogate consent in the clinical context in a state are based on specific laws or some other accepted regime.

This outcome also appears inconsistent with the *Belmont Report* principle of justice. Individuals who lack the capacity to consent to research ought not be inappropriately excluded from research participation based solely on these circumstances. Research that an IRB has approved as ethical to conduct with the participation of subjects with impaired decision-making capacity ought not be prohibited in the few states and jurisdictions in which no affirmative law authorizing a legally authorized representative exists, while being allowed to proceed in the vast majority of states and jurisdictions that have laws specifically authorizing consent by a legally authorized representative in the clinical or research context.

Reduced ambiguity in the interpretation of the regulatory requirements will facilitate research that may offer the promise of improved medical treatment for this subject population, thus increasing beneficence. This approach reflects the calls for increased clarity in the regulatory requirements regarding who may serve as a legally authorized representative, which will serve to facilitate the responsible inclusion of subjects who cannot consent on their own behalf to research participation.

F. Minimal Risk (§ _____.102(j))

1. Background and Pre-2018 Requirements

The concept of "minimal risk" is central to numerous aspects of the Common Rule, as it affects the type of review required, the permissibility of waiver of informed consent, considerations for IRBs in the review process, and the frequency of review. In sum, the review process has been calibrated, for the most part, to the risk of the research. For example, under the pre-2018 rule at § _____.110, a research study could receive expedited review if the research activities to be conducted

appeared on the list of activities published by the Secretary of HHS that are eligible for such review,²³ and found by the reviewer(s) to involve no more than minimal risk. Under an expedited review procedure, the review could be carried out by the IRB chairperson or by one or more experienced reviewers designated by the chairperson.

The definition of “minimal risk” in the pre-2018 rule at § ___.102(i) encompassed research activities where the probability and magnitude of harm or discomfort anticipated in the research are not greater in and of themselves than those ordinarily encountered in daily life or during the performance of routine physical or psychological examinations or tests. IRBs report challenges in assessing the level of risk presented by some studies in order to make the critical minimal risk determination. This is, in part, due to the difficulties in applying the definition of minimal risk under the pre-2018 rule, particularly because the terms “ordinarily encountered in daily life” and “routine physical or psychological examinations or tests” are not clarified.

2. NPRM Proposal

The NPRM did not propose to modify the definition of “minimal risk,” but rather proposed adding to the definition a requirement that the Secretary of HHS create and publish a list of activities that qualify as “minimal risk.” This list would be re-evaluated periodically, but at least every 8 years, based on recommendations from federal departments and agencies and the public. This would not be an exhaustive list of all activities that should be considered minimal risk under the Common Rule, but would allow IRBs to rely on the determination of minimal risk for activities appearing on the list. IRBs would still need to make minimal risk determinations about activities that do not appear on this list. The public was asked to comment on whether 8 years was a reasonable time period for updating the list and whether advice should be solicited from outside parties when updating the list. The public was also asked to comment on whether the Secretary’s list would be a useful tool for the research community, and whether it would represent a loss of IRB flexibility in risk determinations.

3. Public Comments

Approximately 100 comments were received on this proposal. A strong majority supported the proposal, stating that it would be useful to have such a list, and some even suggested that the list of minimal risk activities should be reviewed more often than once every 8 years. One research university suggested that it is impossible to determine the future direction of human research and therefore a list of minimal risk activities would need to be updated at least yearly.

Several commenters, including those who supported this proposal generally, stated that even though this list of minimal risk activities was a good idea in theory, it should be developed separately from a final rule to allow for more time to work collaboratively with other Common Rule departments and agencies and with members of the regulated community. Some of those who supported the proposal asked that there be widely solicited public input on the list. Others who supported the proposal noted the list does not represent a loss of flexibility because the IRB can still override the presumption of minimal risk as long as the rationale is documented. One large research university felt that the Secretary’s list should not replace the IRB’s discretion to review a study, particularly if it will only be updated periodically. One commenter was opposed to the NPRM proposal that the list be further codified, suggesting that it should instead be eliminated as a regulatory yardstick to simplify the regulations and remove added administrative burden.

4. Response to Comments and Explanation of the Final Rule: Definition of Minimal Risk

Although this proposal received significant support, several commenters expressed concern that the Secretary’s list was another NPRM deliverable that the public did not have a chance to see and comment on during the NPRM public comment period. These commenters suggested that this proposal be removed from a final rule and developed on a separate track. We agree that this list should be developed as a separate process from the final rule promulgation, and thus this proposal has not been included in the final rule.

Thus, no change is made to the definition of “minimal risk” in the final rule at § ___.102(j). We still intend to publish guidance on this issue and could still pursue publication of such a list in the future.

G. Public Health Authority (§ ___.102(k))

The pre-2018 rule did not provide a definition of “public health authority.” As proposed in the NPRM, the final rule now defines the term so that references to it in the definition of research are understood. Specifically, because the definition of “research” (§ ___.102(l)(2)) removes from that definition public health surveillance activities that are conducted, supported, requested, ordered, required, or authorized by a public health authority, this definition of “public health authority” clarifies the scope of the activities removed from the definition of “research” for the purposes of this final rule.

In the final rule, as in the NPRM, the term “public health authority”²⁴ means an agency or authority of the United States, a state, a territory, a political subdivision of a state or territory, an Indian tribe, or a foreign government, or a person or entity acting under a grant of authority from or contract with such public agency, including the employees or agents of such public agency or its contractors or persons or entities to whom it has granted authority, that is responsible for public health matters as part of its official mandate. We received no public comments on this definition.

H. Research (§ ___.102(l))

1. Background and Pre-2018 Requirements

The pre-2018 rule defined “research” as a systematic investigation, including research development, testing, and evaluation, designed to develop or contribute to generalizable knowledge. Activities that met this definition constituted research for the purposes of that rule. An activity was only subject to that rule if it met this definition (in addition to meeting various other criteria). The pre-2018 rule also included categories of research involving human subjects that would be considered exempt from the rule.

The pre-2018 rule was criticized for not being clear about how to interpret which activities were covered by the rule and which were not. Some commenters also criticized the pre-2018 rule for extending to activities that should not be covered and for inhibiting the conduct of certain activities. According to some, the definition of “research” did not provide a sufficiently clear and precise way to distinguish between similar activities in a way that made it immediately obvious which

²³ HHS. Office for Human Research Protections. Categories of Research That May Be Reviewed by the Institutional Review Board (IRB) through an Expedited Review Procedure. November 9, 1998. Retrieved from <http://www.hhs.gov/ohrp/policy/expedited98.html>.

²⁴ Consistent with 45 CFR 164.501 in the Privacy Rule.

activities fell under the definition and which did not.

2. NPRM Proposals

The NPRM proposed creating a new section in the regulations referred to as “exclusions.” By proposing exclusion categories, the NPRM intended to make clear that these activities would not have to satisfy the regulatory requirements of the Common Rule. That is, the proposed excluded activities would have been outside the scope of the Common Rule.

Three of the proposed exclusions sought to reduce uncertainty about whether certain internal program improvement activities, historical or journalistic inquiries, or quality assurance or improvement activities satisfied the Common Rule’s definition of research.

Another three proposed exclusions pertained to activities that are part of inherently governmental functions with purposes other than research, such as responsibilities to protect public health and welfare (*i.e.*, criminal investigations, public health surveillance, and national security missions). It was proposed that these activities promote recognized specific goods that are crucial to the public welfare.

An additional four categories of proposed exclusions included human subjects research activities that were either considered low risk, or for which there were appropriate safeguards already in place independent of the Common Rule. These four categories pertained to: (1) Research that involves the use of educational tests, survey procedures, interview procedures, or observation of public behavior uninfluenced by the investigators; (2) research involving the collection or study of information that has been or will be acquired solely for non-research activities or were acquired for research studies other than the proposed research study; (3) research conducted by a federal government agency using federal government-generated non-research information when certain criteria are met; and (4) research regulated as “health care operations,” “public health activities,” or “research” under HIPAA. As noted in the NPRM, in these categories the principle of beneficence alone could support the conduct of these activities after considering the level of risk, potential benefits, and nature of human participation in these activities, without the need to add the protections of the Common Rule.

A final proposed exclusion would have applied to research involving the secondary use of nonidentified

biospecimens when the research was limited to generating information about the subject that is already known by the subject (*e.g.*, disease diagnosis). As such, this research would not need any additional protections provided by these regulations. This proposed exclusion was directly related to the proposed changes in the definition of “human subject” to include all biospecimens, regardless of whether they are identifiable (as discussed above in Section III, that proposal has not been adopted).

3. Public Comments, Response to Comments, and Description of the Final Rule: Definition of Research

a. Overview

Approximately 375 public comments discussed at least one aspect of the proposed NPRM exclusions. General concerns about the exclusions included that they added a layer of unnecessary complexity in determining what studies fall under the Common Rule, and that overlapping categories of exclusions and exemptions were proposed. Comments also expressed the concern about the lack of requirements on who would decide whether an activity met the criteria for an exclusion, including investigators, or whether those decisions would be documented in any way.

In response to the public comments, the NPRM’s general approach of designating various categories of activities as excluded has not been adopted. Instead, the final rule reverts to the general structure of the pre-2018 rule and integrates some of the categories proposed for exclusion in the NPRM into that structure, with some changes to the categories.

The final rule retains the wording of the pre-2018 definition of research, and explicitly removes four categories of activities from activities that would meet that definition. These revisions are intended to make the rule simpler, more familiar to readers who are aware of the pre-2018 rule and its definition of research, and easier to understand.

The four categories of activities removed from the definition of research are set out in order to make clear that they are not within the jurisdiction of the rule. The four categories pertain to certain scholarly and journalistic activities, public health surveillance activities, criminal justice activities, and authorized operational activities in support of national security missions. These categories were proposed as exclusions in the NPRM; the final rule retains these categories, with some

changes made in the wording for clarity, in response to public comments.

The category of certain scholarly or journalistic activities is removed from the definition in order to resolve longstanding debate and uncertainty about whether these activities are considered research in the sense of the regulatory definition. We believe that these activities should not be considered research in the context of the Common Rule, and that making this explicit in the final rule will help to resolve the uncertainty.

The final rule includes a simpler definition of national security missions not considered to be human subject research, as a response to concern that the earlier draft language in the NPRM could be interpreted too broadly or too narrowly due to the specific activities listed, such as surveys, interviews, surveillance activities and related analyses, and the collection and use of biospecimens. These authorized operational activities, as determined by each agency, do not include research activities as defined by the Common Rule, nor have they ever in the past been considered regulated by the Common Rule. This category of activity is removed from the definition of research to make explicit that the requirements of the final rule do not apply to authorized operational activities in support of national security missions.

The other two categories of activities deemed not to be research under the final rule (pertaining to public health surveillance activities and criminal justice activities) include many activities that under the pre-2018 rule do not fit the definition of research, and some activities that otherwise might. These categories are included in the final rule in order to make it explicit that the requirements of the final rule do not apply to them.

Three categories of activities proposed as exclusions have been eliminated from the final rule. The proposed exclusion for certain quality assurance/quality improvement (QA/QI) activities has been dropped because it could create more confusion than it resolved, and it might have inadvertently created inappropriate obstacles to those QA/QI activities that should not fall under the rule. The proposed exclusion for internal program improvement activities has been dropped due to similar considerations. The category regarding secondary research involving nonidentified biospecimens designed only to generate information about an individual that is already known has been dropped because it is no longer necessary given that the NPRM proposal

to modify the definition of human subject to include all biospecimens regardless of identifiability is not included in the final rule. The discussion of the proposed exclusion for certain research activities with nonidentified biospecimens appears in additional detail in Section III.D.

The four exclusions proposed in the NPRM that are incorporated into the exemptions in the final rule are: (1) The proposed exclusion for certain educational tests, survey or interview procedures or observation of public behavior; (2) the proposed exclusion for secondary research use of information that is publicly available or recorded without identifiers; (3) the proposed exclusion regarding secondary research use of information collected by the Federal Government for other purposes and subject to certain privacy laws; and (4) the proposed exclusion regarding secondary research use of information covered by HIPAA protections.

b. Scholarly and Journalistic Activities (e.g., Oral History, Journalism, Biography, Literary Criticism, Legal Research, and Historical Scholarship) (§ _____.102(l)(1))

i. Public Comments

Approximately 50 comments discussed the NPRM proposal to exclude scholarly and journalistic articles from coverage by the rule. The majority of these comments supported the intent of the exclusion, although several comments suggested possible changes. The minority of the comments expressed concerns. Those who opposed this exclusion generally opposed all exclusions, arguing that investigators should be required to get permission from subjects before engaging in these activities.

One commenter expressed concern about an exclusion that would permit oral history activities with tribal nations without oversight. This commenter noted that some oral history with tribal nations is tantamount to cultural appropriation, and the concern of tribal nations might not be adequately protected by the ethical standards of various professions.

Several commenters discussed that the wording of the NPRM regulatory text here might be more restrictive than necessary. Specifically, several commenters noted that in calling out specific disciplines and methodologies, the regulatory text seems counter to the NPRM policy goal of allowing this type of research (as opposed to research in these specific fields) to occur.

A few commenters discussed the need for ethnographic research to be

explicitly called out in this exclusion. One commenter also raised cultural anthropology as another academic discipline that should be referenced in this exclusion.

Several commenters, including academic discipline advocacy groups, noted that the exclusion conflated broad disciplines (journalism) with methodologies (oral history), which could be confusing to those attempting to implement the exclusion.

Several commenters also questioned whether the provision “that focus directly on the specific individuals about whom the information is collected” applied only to historical scholarship activities or to all of the activities and disciplines noted in the exclusion. Several other commenters indicated that they supported a full exclusion of all oral history, journalism, biographical, and historical scholarship activities, suggesting that those several individuals do not presume that the provision “that focus directly on the specific individuals about whom the information is collected” served as a limitation on what activities were covered under this exclusion.

A minority of commenters—including accreditation bodies, human research protection experts, and research universities—suggested that an exclusion for these activities was not needed, and that this topic could be addressed through guidance. These comments also indicated that addressing this topic in guidance might be clearer to the regulated community as well. Others indicated that the exclusion is not warranted because the excluded activities are those that would not contribute to generalizable knowledge and thus already would not fall under the rule.

The NPRM also asked whether biospecimens should be included in this exclusion. Very few individuals answered this question, and those that did indicated that biospecimens should not be included.

One research university indicated that with respect to oral history, the exclusion should make a distinction between oral history projects that meet the definition of research and those that do not, suggesting that the exclusion should not exempt all projects that might fall under the “oral history” banner. One commenter noted that oral history should be defined in order to distinguish that activity from interviews.

ii. Response to Comments and Explanation of the Final Rule: Scholarly and Journalistic Activities

The final rule explicitly removes a category of activities consisting of certain scholarly and journalistic activities from the definition of research and the scope of the regulations. This category of activities concerns certain activities in various fields that focus directly on the specific individuals about whom information are collected. As described above, this category is removed from the definition in order to resolve long-standing debate and uncertainty about whether these activities are considered research in the sense of the regulatory definition. We believe that these activities should not be considered research in the context of the Common Rule, and that making this explicit in the final rule will help to resolve the uncertainty.

In these activities, the ethical requirement is to provide an accurate and evidence-based portrayal of the individuals involved, and not necessarily to protect them from public scrutiny. For example, a biographer might collect and present factual information to support the biographer’s opinion about the character of an individual to show that the individual does not deserve the positive reputation he or she enjoys in society. These fields of research have their own codes of ethics, according to which, for example, consent is obtained for oral histories. We note that this consent standard should address the issue of oral histories of tribal members. For these reasons, we have determined that it is appropriate to remove these activities from the definition of research and from the scope of the Common Rule.

In response to public comments, § _____.102(l)(1) refers to more fields and methodological traditions than were proposed in the NPRM. The final rule also explicitly cites those fields and traditions as examples, in order to clarify that the focus is on the specific activities that collect and use information about specific individuals themselves, and not generalizing to other individuals, and that such activities occur in various fields of inquiry and methodological traditions. Literary criticism has been added as an example because while a piece of literary criticism might focus on information about the author(s), it would typically focus on the specific author(s) in view. Legal research has been added as an example because it would often focus on the circumstances of specific plaintiffs or parties involved in a case. It is not the particular field

that removes the activity from the definition, but rather the particular activity's focus on specific individuals.

Activities described in § _____.102(l)(1) may sometimes be performed in the fields of anthropology or sociology, but not all activities characteristic of these fields are outside of the rule. Studies using methods such as participant observation and ethnographic studies, in which investigators gather information from individuals in order to understand their beliefs, customs, and practices, and the findings apply to the studied community or group, and not just the individuals from whom the information was obtained, fall within the scope of the definition of research of the final rule.

c. Public Health Surveillance
(§ _____.102(l)(2))

i. Public Comments

Approximately 80 comments discussed the proposed exclusion for certain public health surveillance activities. Public comments were generally mixed with many comments suggesting that the regulated community will need to see additional examples of activities that satisfy this exclusion and activities that fall outside its scope. Those who supported this exclusion generally said that this would streamline important public health surveillance activities.

Several comments discussed the importance of this exclusion with respect to residual newborn DBS screening programs. These comments generally expressed the opinion that most state mandated public health reporting of such program activities would fall under this exclusion. Commenters requested additional explanation of what aspects of these state newborn screening programs would be covered under this exclusion, and listed components of the program that should be covered, including validity testing and test development. Others suggested that this exclusion should also exclude minimal risk efforts to evaluate surveillance methods. Others suggested that this exclusion should also exclude minimal risk efforts to evaluate surveillance methods. Another comment suggested that a final rule address, in this exclusion or elsewhere, the issue of research that must be conducted during public health emergencies, citing the example of HHS's emergency use provision with a waiver of informed consent, which describes limited circumstances in which a patient is physically incapacitated or otherwise unable to give consent.

Those who opposed excluding these activities argued that in some cases, research activities for which informed consent should be sought and obtained are sometimes conducted under the auspices of public health surveillance; the importance of the activity itself should not be an argument to avoid seeking and obtaining consent. Others argued that consent should always be sought and obtained for research activities and that all of the exemptions and exclusions discussed in the NPRM should be covered activities. One institution indicated that this exclusion was simply not needed because the activities described did not meet the definition of "research" and thus were not subject to the Common Rule.

Another commenter indicated that while the intent of the exclusion seemed reasonable, implementation of the regulatory intent would be difficult, and there are many examples of modern public health surveillance activities where informed consent would have been appropriate.

A few comments that opposed the exclusion indicated concern that it might be abused, and cited the Tuskegee Syphilis study²⁵ as an example of what they feared might be included under this exclusion category. We do not think that study would fall within this category, because it involved research interventions with the subjects, including the provision of substandard treatment and efforts to prevent subjects from obtaining effective treatment, which under no circumstances could be considered surveillance about a condition of public health importance.

²⁵ The Tuskegee Syphilis study "initially involved 600 black men—399 with syphilis, 201 who did not have the disease. The study was conducted without the benefit of patients' informed consent. Researchers told the men they were being treated for 'bad blood,' a local term used to describe several ailments, including syphilis, anemia, and fatigue. In truth, they did not receive the proper treatment needed to cure their illness. In exchange for taking part in the study, the men received free medical exams, free meals, and burial insurance. Although originally projected to last 6 months, the study actually went on for 40 years.

The [federal government panel investigating this study] found that the men had agreed freely to be examined and treated. However, there was no evidence that researchers had informed them of the study or its real purpose. In fact, the men had been misled and had not been given all the facts required to provide informed consent . . . The men were never given adequate treatment for their disease. Even when penicillin became the drug of choice for syphilis in 1947, researchers did not offer it to the subjects. The advisory panel [investigating this study] found nothing to show that subjects were ever given the choice of quitting the study, even when this new, highly effective treatment became widely used." Source: "The Tuskegee Timeline." Centers for Disease Control and Prevention, last updated 19 Feb 2016. Retrieved from <http://www.cdc.gov/tuskegee/timeline.htm>.)

The NPRM asked whether the parameters of this exclusion were sufficiently clear, and if not, how the exclusion could be clarified. In response, one private organization conducting public health research stated that it was unclear if this only applies to governmental entities like the Centers for Disease Control and Prevention (CDC), or if it applies to other organizations as well. Another institution suggested that the community needed additional clarification of what types of activities fall under this exclusion. One research university requested clarification on whether public health surveillance activities falling under this exclusion is subject to subpart B and C, that is, research involving pregnant women or prisoners, respectively. One organization indicated that it would be helpful for the examples used in the NPRM preamble to be published as a separate guidance document.

Another comment noted that the examples included in the preamble only addressed acute infectious disease surveillance and no other types of public health surveillance activities, specifically, chronic disease surveillance and biomonitoring for toxic chemical compounds and metabolites, which should be covered under this exclusion.

Another research organization noted that the regulatory text and examples provided might be too narrow, suggesting the exclusion be broadened to clarify that it applies to public health monitoring aimed at evaluating the degree to which affected individuals seek and obtain treatment, barriers to care, quality of care, treatment outcomes, and health disparities.

Commenters also requested additional explanation of what aspects of state newborn screening programs would be covered under this exclusion, and listed a variety of components of the program, including validity testing and development of new tests, that should be covered by the exclusion. Commenters asked that clarification of the parameters of the public health exclusion be provided so that state newborn screening programs can undertake the activities necessary for new test development. They added that if the parameters are not clarified, given the past controversies associated with the retention and secondary use of newborn DBS, many programs may not undertake activities for which they have not been given express permission to pursue.

ii. Response to Comments and Explanation of the Final Rule: Public Health Surveillance

The final rule adopts the NPRM proposal related to deeming certain public health surveillance activities as explicitly outside of the scope of the Common Rule. Several editorial modifications have been made to this category to improve readability. Additionally, the final rule explicitly specifies that the collection of information is permitted under this category of activities.

The final rule codifies the current interpretation that the definition of research does not include a category of activities that solely involve public health surveillance, including collecting and testing information or biospecimens in activities that are conducted, supported, requested, ordered, required, or authorized by a public health authority and that are limited to those necessary to allow the public health authority to identify, monitor, assess, or investigate potential public health signals, onsets of disease outbreaks, or conditions of public health importance. Such surveillance activities can include collecting information about trends, signals, risk factors, patterns in diseases, or increases in injuries from using consumer products. Such activities include those associated with providing timely situational awareness and priority-setting during the course of an event or crisis that threatens public health, including natural or man-made disasters.

This codification of public health surveillance activities as outside the definition of research is designed to remove uncertainty, but is not intended to change the scope of activities subject to or not subject to the Common Rule. When a public health authority conducts public health surveillance activities to fulfill its legal mandate to protect and maintain the health and welfare of the populations it oversees, the regulatory protections of the Common Rule should not impede that authority's ability to accomplish its mandated mission of promoting this recognized public good, in keeping with the principle of beneficence. Other protections independent of the Common Rule exist that serve to protect the rights and welfare of individuals participating in such activities, including federal and state policies to protect privacy, confidentiality, and security safeguards for the information collected.

Public health surveillance refers to collecting, analyzing, and using data to target public health and disease prevention. It is the foundation of

public health practice. Surveillance uses data from a variety of sources, including mandatory reporting of certain conditions, routine monitoring, vital records, medical billing records, and public health investigations. The line between public health surveillance and epidemiological research can be difficult to draw, as the same epidemiological techniques may be used in both. Generally, the difference between the activities is the purpose or context in which the investigation is being conducted and the role of the public health authority.

The following are examples of public health surveillance activities being codified as outside of the definition of research in this regulation:

- Safety and injury surveillance activities designed to enable a public health authority to identify, monitor, assess, and investigate potential safety signals for a specific product or class of products (for example, the surveillance activities of the FDA's Adverse Event Reporting System,²⁶ the Vaccine Adverse Event Reporting System,²⁷ Manufacturer and User Facility Device Experience database,²⁸ the Medical Product Safety Network,²⁹ and the Sentinel Initiative);³⁰
- Surveillance activities designed to enable a public health authority to identify unexpected changes in the incidence or prevalence of a certain disease in a defined geographic region where specific public health concerns have been raised (e.g., the U.S. influenza surveillance system, which allows CDC to find out when and where influenza activity is occurring, track influenza-related illness, determine what strains of influenza virus are circulating, detect changes in influenza viruses, and measure the impact influenza is having on hospitalizations and deaths in the United States);
- Surveillance activities designed to enable a public health authority to identify the prevalence of known risk factors associated with a health problem in the context of a domestic or international public health emergency;
- Surveillance activities designed to enable a public health authority to locate the range and source of a disease outbreak or to identify cases of a disease outbreak;

- Surveillance activities designed to enable a public health authority to detect the onset of disease outbreaks or provide timely situational awareness during the course of an event or crisis that threatens the public health, such as a natural or man-made disaster; and,

- Surveillance activities designed to enable a public health authority to identify the prevalence of a condition of public health importance, known risk factors associated with a condition of public health importance, or behaviors or medical practices related to prevalence of a known condition of public health importance (e.g., surveillance of the prevalence of: tobacco use, exposure to secondhand smoke, lung cancer, or use of smoking cessation treatments).

On the other hand, subsequent research using information collected during a public health surveillance activity, for instance, genetic analysis of biospecimens, would not be removed from the definition.

This clarification of current interpretation would not remove the following activities from the definition of "research": exploratory studies designed to better understand risk factors for chronic diseases, including genetic predisposition, for chronic diseases; exploratory studies designed to elucidate the relationships between biomarkers of exposure and biomarkers of disease; and exploratory studies of potential relationships between behavioral factors (e.g., diet) and indicators of environmental exposures. These types of activities would be considered research because they would not be conducted solely for the purposes described in § _____.102(l)(2), and thus would be covered by the Common Rule if they involved human subjects, even if conducted by a federal agency with a public health mandate. Again, they might fall within an exemption, depending on how they are carried out.

We note that this provision does apply to some activities responding to emergencies, and that various department or agency activities, not just those of HHS, will be affected. Research evaluations of public health surveillance activities are not included in this category because the nature of such evaluations is to create generalizable knowledge. We also recognize that in some public health surveillance activities, it may be appropriate to obtain consent from the individuals from whom information or biospecimens are collected.

We recognize the public comments stating that the boundaries of public health surveillance activities being removed from the definition of research

²⁶ See <http://www.fda.gov/Drugs/InformationOnDrugs/ucm135151.htm>.

²⁷ See <https://vaers.hhs.gov/index>.

²⁸ See <http://www.fda.gov/MedicalDevices/DeviceRegulationandGuidance/PostmarketRequirements/ReportingAdverseEvents/ucm127891.htm>.

²⁹ See <http://www.fda.gov/MedicalDevices/Safety/MedSunMedicalProductSafetyNetwork/>.

³⁰ See <http://www.fda.gov/Safety/FDAsSentinelInitiative/ucm2007250.htm>.

are not entirely clear. We recognize that some of the activities in this category are not research, but believe that the inclusion of this provision will help to resolve uncertainty in some circumstances about whether the rule applies. We believe that developing guidance in this area will be useful.

Finally, to clarify what public health surveillance activities are being removed from the definition of research, the final rule contains a new definition of “public health authority” at § _____.102(k).

d. Criminal Justice Activities (§ _____.102(l)(3)) and Authorized Operational Activities in Support of National Security Missions (§ _____.102(l)(4))

i. Public Comments

Approximately 60 comments discussed the exclusion for certain criminal justice activities, the exclusion for intelligence surveillance activities, or both. The majority of commenters opposed these provisions.

Several commenters stated that the two exclusions seemed to contradict President Clinton’s Memorandum of 1997, which stated that classified research activities are subject to the Common Rule and directed that the regulations be revised to include certain protections specific to classified research activities.³¹

The majority of commenters discussing these provisions also expressed concern about what appeared to be an expansion of activities not covered by the Common Rule. These commenters also discussed concerns about how this exclusion would affect human subjects protections in classified research activities.

Those who supported these exclusions generally did not provide the rationale for why they supported them.

One research organization noted that additional clarification on the exclusion for certain criminal justice activities would be needed, and noted that such activities should continue to be subject to the Common Rule because this type of research often includes the collection of sensitive, identifiable information, which, if disclosed could present risks to the subjects.

ii. Response to Comments and Explanation of the Final Rule: Criminal Justice Activities

The final rule clarifies that, consistent with current practice, data collection

and analysis that enables the conduct of certain activities carried out as part of the criminal justice system is not research. The scope of these activities is collection and analysis of information, biospecimens, or records by or for a criminal justice agency for activities authorized by law or court order solely for criminal justice or criminal investigative purposes. The activities are necessary for the operation and implementation of the criminal justice system. The final rule changes the wording of the category from that proposed in the NPRM only by substituting the word “information” for “data,” for consistency with other parts of the rule.

The provision essentially codifies current federal interpretation that such activities are not considered to be research under the Common Rule. Revising the regulations to explicitly remove such activities from the scope of research subject to the rule is designed to avoid the imposition of disparate requirements by IRBs with overlapping jurisdictions when information collection or analysis encompasses the development of methods required by law or court order for criminal justice or criminal investigative purposes. For example, the Federal Bureau of Investigation (FBI) is charged by law with setting standards governing the collection and processing of DNA biospecimens and information taken (forcibly if necessary) from certain federal and state criminal suspects or offenders incident to their arrest or conviction for prescribed offenses under the National DNA Identification Act of 1994 and other acts. Similarly, the FBI is charged by law with setting standards governing the collection and processing of fingerprints and related biographical information taken from federal and state criminal suspects or offenders and certain sensitive civil employment applicants. Many criminal law enforcement agencies routinely collect human biospecimens at crime scenes from or relating to victims, suspects, and offenders both known and unknown. Incident to these activities, the FBI is also charged with maintaining, and authenticating through identification processes, the criminal record history of criminal offenders for federal government agencies and for the overwhelming majority of state governments that elect to participate and share information through those systems. We have determined that this category of activities does not meet the definition of research in the final rule, so that these activities can be conducted

in accordance with the legitimate goals of the criminal justice system.

We do not believe that this provision contradicts President Clinton’s 1997 memorandum, which addressed the regulatory requirements for certain activities that are considered research under the regulations. This category pertains to activities that are outside of the regulatory requirements.

This category is also not intended to include social and behavioral studies of the causes of criminal behavior. Such studies would be considered research under the final rule.

iii. Response to Comments and Explanation of the Final Rule: Authorized Operational Activities in Support of National Security Missions

The final rule clarifies current federal practice that the definition of research does not include authorized operational activities (as determined by each agency) in support of intelligence, homeland security, defense, or other national security missions. This clarification codifies the interpretation of the pre-2018 Common Rule.

As described above, the final rule includes a simpler reference to authorized operational activities in support of national security missions not considered to be human subject research, as a response to concern that the NPRM proposal could be interpreted too broadly or too narrowly due to the specific activities listed, such as surveys, interviews, surveillance activities and related analyses, and the collection and use of biospecimens. These authorized operational activities, as determined by each agency, do not include research activities as defined by the Common Rule, nor have they ever in the past been considered regulated by the Common Rule. This category of activity is removed from the definition of research to make explicit that the requirements of the final rule do not apply to authorized operational activities in support of national security missions. This clarification is not intended to narrow the scope of the Common Rule.

We do not believe that this category contradicts President Clinton’s Memorandum of 1997 regarding classified research, because this category is merely clarifying what activities are not considered to meet the definition of research. The Clinton Memorandum calls for a number of requirements to be added to protections for classified research activities, but it does not address activities that are not considered research.

³¹ Memorandum of March 27, 1997. Strengthened Protections for Human Subjects of Classified Research. 62 FR 26367 (May 13, 1997). Retrieved from <http://www.fas.org/sgp/clinton/humexp.html>.

4. NPRM Exclusions Not Included in the Final Rule

a. Certain Quality Assurance and Quality Improvement Activities

i. Public Comments

Approximately 90 comments discussed the proposed exclusion for certain QA/QI activities in the NPRM involving the implementation of an accepted practice. A majority of comments supported the concept of excluding some QA/QI activities from the Common Rule, although some stated that the QA/QI exclusion proposed in the NPRM was too narrow to cover what has evolved as current practice.

These commenters expressed concerns that: (1) The NPRM proposed to exclude only the QA/QI activities that met the exclusion, and that all other QA/QI activities would fall under the rule; or (2) the exclusion would be interpreted to mean that the activities described in the exclusion were the only QA/QI activities that could be considered not covered by the rule.

The most commonly discussed suggestions for expanding the scope of this exclusion included:

- Expanding the exclusion beyond “accepted practices”
- Permitting the collection of outcome measures in the category of activities proposed to be excluded by the NPRM

One hospital noted that QA/QI is not limited to implementation of an “accepted practice” and that limiting the exclusion in this way might impede innovation, for example, accessing an electronic medical record system for QA/QI to test incorporating clinical information to analyze and test best-practice pop-up alerts that signal important information for healthcare providers in caring for a patient. This commenter asserted that there is no current “accepted practice” for activities like this, yet they should be excluded from the definition of research to avoid confusion and to support ongoing innovation and care improvement activities. This commenter also suggested that any QA/QI exclusion should permit activities that allow medical centers to analyze how they deliver care, improve outcomes, and modify processes to achieve healthcare reform goals.

One commenter also noted that the “accepted practice” limitation would also be problematic in the social sciences. This commenter disagreed that the proposed exclusion for quality improvement or assurance practices should be limited to “an accepted practice,” and felt that it should apply

to the evaluation of alternative practices. In social sciences research an “accepted practice” is generally not as well defined, can evolve rapidly, and vary by considerations such as timing, culture, geography, and nature of service. In social science research, this limitation could severely limit the use of this exclusion for research that is equally low in risk and therefore does not require review.

A few commenters explicitly referenced the importance of QA/QI activities in the context of a learning health care system, and discussed the need for a broader exclusion in order to achieve the goals of a learning health system.

A professional organization focused on advancing the fields of health services research and health policy noted that a basic tenet of the learning health system is the expectation of continuous learning from routine care, which often is accomplished by evaluating health outcomes. The intentional assessment of the outcomes related to a QI activity by itself should not make the activity subject to the Common Rule.

A medical education membership organization felt that routine evaluation of practices and continuous incorporation of knowledge learned into patient care is fundamental to a learning health system and should not be impeded by the regulatory framework. It stated that the current Common Rule provides insufficient guidance to distinguish research and improvement in care delivery in a consistent manner. The organization indicated that the revised Common Rule explicitly recognizes that efforts to improve care by evaluating an accepted practice and the resulting effects are not research that should be regulated under the Common Rule.

Commenters suggested many other QA/QI activities that should be explicitly excluded or exempted from the Common Rule, such as:

- Activities mandated by the Clinical Laboratory Improvement Amendments (CLIA)
- Evaluations of systems-level interventions to improve quality and safety
- Comparative assessment of alternative practices to determine relative effectiveness
- All QA/QI research for the purpose of health care operations, including patient-centered comparative effectiveness research
- Evaluation of competing QA/QI strategies for implementation of accepted medical practices, which should not be subject to IRB review

• Evaluation of competing low-risk interventions that would typically be implemented in a QA/QI framework without further research: these typically are not direct medical treatments but ancillary aspects of care.

• The use of other analytic assessment methods, such as interrupted time series analysis, or randomization of clusters (including stepped wedge designs)

• Dissemination of QA/QI results, or the intention to disseminate results, including by publication, which should not by itself make the activity subject to IRB review (consistent with current OHRP guidance)

• Multi-institution collaborations of otherwise routine QA/QI activities

• Public health-related QA/QI activities

• Comparative benchmarking

Others expressed approval for the proposed exclusion, but suggested that substantial guidance would be necessary for the regulated community to apply this exclusion appropriately. Specifically, several commenters asked about the extent to which OHRP’s current guidance on QA/QI activities would still apply. Others asked for clarification about the extent to which the NPRM proposal would apply in situations where a hospital system with several hospitals implemented different accepted practices at different hospitals within the system, and compared outcomes to determine which accepted practice would be best for that hospital system.

Several comments did not support the NPRM’s QA/QI proposal. Reasons included: believing that the activities excluded by the NPRM already did not meet the definition of research and thus did not need to be explicitly excluded; believing that these activities should be subject to some type of review because of concerns about investigator self-determination; and, believing that even in QA/QI activities, human subjects should be offered the opportunity to know that they are subjects in a research activity and should be offered the option to consent.

One patient advocacy group noted that because much research is done in the guise of administration or QI, this proposed exclusion might encourage researchers to evade human subjects protections while the projects may put primary subjects and third parties at risk. It stated that although some hospital-based projects might incur minimal risk to primary subjects, they might pose greater risk to other parties, for example, patients. Thus, the group argued that this exclusion should be

stricken and that if personal information and biospecimens are to be collected and analyzed for purposes other than the individual patient's care, then that activity should be subject to the Common Rule.

One research institution felt that the proposed change suggests that patient consent will be necessary for many activities designed to ensure QA/QI in health care settings, and could interfere with the imperative to design and evaluate new approaches to enhance patient safety and clinical outcomes. The commenter added that the implications of this provision should be assessed by clinical practitioners and hospital administrators in addition to researchers and research institutions.

Another commenter noted that the proposed exclusion of QA/QI activities fails to exclude important activities that are considered "not research" under the current Common Rule, arguing that the new NPRM exclusion is more in line with evidence-based practice than with QI. Institutions are required under The Joint Commission to perform continuous QI activities, which typically are small, iterative changes to improve clinical care; these activities are seen as part of hospital operations rather than research. The commenter stated that the proposed limitations would make certain QI activities subject to IRB review and possible informed consent requirements, which could result in overregulating an activity that is currently not subject to the Common Rule.

Several of these commenters generally indicated that they interpreted the proposed exclusion as providing a definition of QA/QI, as opposed to excluding a specific type of QA/QI activity. Several of these commenters suggested deleting a QA/QI exclusion from the rule so that IRBs and investigators would not be confused. One hospital suggested eliminating quality activities from the NPRM since by specifying that certain quality activities are not research, the NPRM seems to designate all other quality activities as research by default.

ii. Response to Comments and Explanation of the Final Rule: Certain Quality Assurance and Quality Improvement Activities

The proposed exclusion for QA/QI activities is not included in the final rule. The degree of concern expressed by the public comments on this topic is significant. We recognize that human subject protections would be meaningful and appropriate for some QA/QI research activities, but not for others. However, to avoid increasing

confusion and unnecessary obstacles to innovation, the final rule does not single out certain QA/QI activities as meeting or not meeting the definition of research.

b. Program Improvement Activities

i. Public Comments

Approximately 20 comments were received on this proposed exclusion regarding data collection and analysis for internal operational monitoring and program improvement purposes, with a strong majority in support. Commenters indicated that the proposed exclusion would require significant guidance because it was unclear what types of activities it might include and when. Several commenters supported the proposed exclusion, but noted that the exclusion should specifically reference QI activities instead of just program improvement activities. One commenter suggested that activities defined as "health care operations" under HIPAA also be included in this exclusion. One commenter opposed this exclusion because of the lack of specific reference to QI. Another opposed this exclusion because they felt it was too narrowly written.

One large private research firm indicated opposition to this proposal because it was too confusing. Further, this group questioned the need for an exclusion that seemed to only reference activities that would not be considered to fall under the rule because these activities would not satisfy the definition of research (specifically, these activities would not be designed to contribute to generalizable knowledge).

Of those who opposed this proposal, a minority suggested that the proposed exclusion could be abused by investigators, especially given that the NPRM did not propose to require any institutional oversight of exclusion determinations. One commenter noted that because many research activities might be conducted under the guise of internal improvement activities, this exclusion seemed to be giving investigators significant opportunities to conduct human research activities outside the confines of the rule.

One commenter who supported this provision suggested that it could be merged with the QA/QI exclusion proposed in the NPRM. This commenter also suggested that a definition of program improvement and operational monitoring be provided.

The NPRM asked whether the use of biospecimens should be permitted in this exclusion. Of those who answered this question, a majority indicated yes. This majority generally referenced a

belief that many activities with residual newborn DBS (see Section III.D) would fall under this exclusion. One commenter who opposed the inclusion of biospecimens in this excluded category indicated that if the goal of the NPRM was to cover all nonidentified biospecimens, then this exclusion should not include the research use of biospecimens.

ii. Response to Comments and Explanation of the Final Rule: Program Improvement Activities

The proposed exclusion for program improvement activities is not included in the final rule. Based on the public comments it does not seem useful for this category of activities to be singled out as not meeting the definition of research. As with the NPRM proposed exclusion regarding QI/QA activities implementing accepted practices, public commenters raised concerns that this exclusion would have created more misunderstanding and confusion than it would have resolved. As with QI/QA activities, some program improvement activities involve research and deserve the protections of the rule, while others are not research and are not under the rule. We believe that this topic would be better addressed through other means.

I. Written or in Writing (§ ____ .102(m))

The final rule includes a definition that was not included in the NPRM nor in the pre-2018 rule. The definition of "written or in writing" is included at § ____ .102(m) to clarify that, in accordance with the longstanding interpretation of the pre-2018 rule, these terms include electronic formats, which are increasingly used to fulfill many of the documentation requirements that appear throughout the rule.

Although public comments did not directly address this issue, we are aware that some in the regulated community are uncertain of whether, for example, consent forms may be in electronic formats. This definition is intended to address this concern. Note that the definition of "written or in writing" does not preclude the possibility that consent forms could be in media other than paper or electronic formats and still meet the requirements of the Common Rule.

IV. Ensuring Compliance With This Policy (§ ____ .103)

A. Background and Pre-2018 Requirements

Requirements in the pre-2018 rule at § ____ .103 delineated procedural requirements for institutions and IRBs to follow to comply with the rule. The

requirements pertained to written assurances (through FWAs) that institutions engaged in research are in compliance with the regulations and that the content of such assurances include: a statement of principles governing the institution in the discharge of its responsibilities to protect research subjects; designation of one or more IRBs; a detailed IRB membership roster; and written procedures for IRBs and reporting of unanticipated problems. A U.S. institution also was able to voluntarily pledge to conduct all of its nonexempt human subjects research, regardless of funding source, in compliance with the Common Rule or the Common Rule and subparts B, C, and D of 45 CFR part 46—often referred to as “checking the box” on the assurance form.

The pre-2018 rule also stated who will execute and evaluate assurances. Finally, the rule described the process by which institutions certify that nonexempt research has been reviewed and approved by an IRB. There has been concern expressed by some that the assurance process may have been unduly burdensome for institutions and did not provide meaningful protections for human subjects.

B. NPRM Proposals

The NPRM proposed a number of substantive and procedural modifications to § ___.103 of the Common Rule. First, the NPRM proposed to move several requirements from § ___.103 to § ___.108, which pertains to IRB functions and operations: (1) The IRB recordkeeping requirements; (2) the requirement in the pre-2018 rule that IRBs have sufficient meeting space and staff to support IRB reviews and record keeping requirements; and (3) the pre-2018 requirement that an up-to-date list of the IRB members and their qualifications be included in an institution’s assurance. The NPRM also proposed to modify the IRB membership requirement such that this up-to-date list would no longer be required as part of an institution’s assurance. Instead, an IRB or an institution would be required to prepare and maintain a current list of IRB members.

The NPRM proposed to delete several requirements found in the pre-2018 rule: (1) The requirement that an institution provide a statement of ethical principles by which the institution will abide, as part of the assurance process; (2) the pre-2018 rule requirement that an institution designate one or more IRBs on its FWA; (3) the provision found in the pre-2018 rule that a department or agency head’s

evaluation of an assurance will take into consideration the adequacy of the proposed IRB(s) designated under the assurance, in light of the anticipated scope of the institution’s activities and the types of subject populations likely to be involved, the appropriateness of the proposed initial and continuing review procedures in light of the probable risks, and the size and complexity of the institution; and (4) the requirement that grant applications undergo IRB review and approval for the purposes of certification.

Note that under the NPRM federal departments or agencies would retain the ability to ask for information about which IRBs review research conducted at an institution as part of the assurance process, even if providing this information is not explicitly mandated.

According to the NPRM, an additional, nonregulatory change was proposed for the assurance mechanism. The current option of “checking the box” on an FWA (described in section IV.A above) would be eliminated.

To further strengthen the proposed new provision at § ___.101(a), giving Common Rule departments and agencies explicit authority to enforce compliance directly against IRBs that are not operated by an assured institution, language was proposed requiring that for nonexempt research involving human subjects that is covered by this policy and takes place at an institution in which IRB oversight is conducted by an IRB that is not operated by the institution, the institution and the organization operating the IRB shall establish and follow procedures for documenting the institution’s reliance on the IRB for oversight of the research and the responsibilities that each entity will undertake to ensure compliance with the requirements of this policy (*e.g.*, a written agreement between the institution and the IRB, or by implementation of an institution-wide policy directive providing the allocation of responsibilities between the institution and an IRB that is not operated by the institution).

The NPRM requested public comment on whether protection for human subjects in research would be enhanced if OHRP conducted routine periodic inspections to ensure that the membership of IRBs designated under FWAs satisfy the requirements of § ___.107.

C. Public Comments

Very few comments were received on the proposals at § ___.103. Four commenters expressed their views on the proposal to delete the requirement

that an institution provide a statement of ethical principles as part of the assurance process, with three supporting the proposal and one opposing it.

Four commenters supported the proposal to eliminate the requirement that an institution designate one or more IRBs on its FWA.

Two comments were received, one in support and one opposed, on the proposed elimination of the requirement that an up-to-date list of the IRB members and their qualifications be included in an institution’s assurance. Two comments, one for and one against, were received on the proposal to remove the requirement that a department or agency head’s evaluation of an assurance take into consideration the adequacy of the proposed IRBs. Responses to the question about periodic inspections to ensure IRBs were compliant were mixed, with most commenters saying that it is not clear that ensuring IRBs are compliant would enhance human subjects protections. Others questioned the need for this requirement, given other incentives institutions have to ensure they have a duly constituted IRB, and still others asked what was meant by “periodic.”

Approximately 30 commenters supported the proposal to delete the requirement that the IRB review grant applications, with only one commenter opposed to the proposal.

D. Response to Comments and Explanation of the Final Rule: Assuring Compliance With the Policy

As proposed in the NPRM, the final rule eliminates the pre-2018 rule requirement that an institution provide a statement of ethical principles by which an institution will abide as part of the assurance process. We believe this requirement is unnecessary. Further, for international institutions that may receive federal funding for research activities, it creates the impression that these international institutions must modify their internal procedures to comport with the set of principles designated on the FWA for activities conducted at those institutions that receive no federal funding. OHRP has received many questions about the extent to which international institutions must adhere to the ethical principles designated as part of the assurance process for research activities conducted by the institution that receive no Common Rule department or agency funding. That such measures are not required will be made clear by deletion of this requirement in the final rule.

Additionally, as proposed in the NPRM, the final rule eliminates the

requirement that appeared in the pre-2018 rule that an up-to-date list of the IRB members and their qualifications be included in an institution's assurance. Instead, §§ _____.108(a)(2) and _____.115(a)(5) in the final rule require that an IRB or the institution prepare and maintain a current list of IRB members. This eliminates the previous requirement that changes in IRB membership be reported to the department or agency head, or to OHRP when the existence of an assurance approved by HHS for federal-wide use is accepted. Of note, SACHRP recommended in March, 2008 that OHRP pursue harmonizing the Common Rule with FDA's human subjects protection regulations by eliminating the requirement to submit IRB membership lists.

The final rule, as proposed in the NPRM, also eliminates the requirement that appeared in the pre-2018 rule that an institution designate one or more IRBs on its FWA. Federal departments or agencies retain the ability to ask for information about which IRBs review research conducted at an institution as part of the assurance process, even if that requirement is not explicitly mandated in the regulations.

An additional, a nonregulatory change that was described in the NPRM will be made to the assurance mechanism. The prior option that enabled institutions with an active FWA to "check the box" (described in section IV.A above) is being eliminated. Importantly, institutions could, if they so desire, continue for purposes of their own internal rules to voluntarily extend the regulations to all research conducted by the institution, but this voluntary extension will no longer be part of the assurance process and such research will not be subject to OHRP oversight. We expect this change to have the beneficial effect of encouraging some institutions to explore a variety of flexible approaches to overseeing low-risk research that is not funded by a Common Rule department or agency, without reducing protection of human subjects, thus furthering the goal to decrease inappropriate administrative burdens.

In addition, as proposed in the NPRM, the final rule removes the provision found in the pre-2018 rule that a department or agency head's evaluation of an assurance will take into consideration the adequacy of the proposed IRB(s) designated under the assurance in light of the anticipated scope of the institution's activities and the types of subject populations likely to be involved, the appropriateness of the proposed initial and continuing review

procedures in light of the probable risks, and the size and complexity of the institution. We believe this deletion aligns the regulations with changes made in December 2000 to OHRP's implementation of the FWA process. Those changes streamlined and simplified the assurance process and eliminated OHRP's institution-specific evaluation of the adequacy of each IRB designated under the assurance.

Each FWA-holding institution continues to have responsibility for ensuring that the IRBs on which it relies are registered with OHRP and are appropriately constituted to review and approve the institution's human subjects research, as required under §§ _____.107 and _____.108 of the final rule.

The final rule contains language at § _____.103(e) requiring that for nonexempt research involving human subjects (or exempt research that requires limited IRB review) that takes place at an institution for which an IRB not operated by that institution exercises oversight, the institution and the organization operating the IRB must document the institution's reliance on the IRB for its research oversight. The final rule also requires that this documentation include the responsibilities of each entity to ensure compliance with the requirements of the rule.

The requirement included in the final rule for documenting an institution's reliance on an IRB that it does not operate is more flexible than what was proposed in the NPRM. The final rule only requires that the reliance agreement between the institution and the organization operating the IRB be documented. It does not include the NPRM proposal that the institution and the organization operating the IRB establish and follow procedures for documenting the institution's reliance on the IRB for oversight of the research and delineating the responsibilities that each entity would assume to ensure compliance with the requirements of the rule.

In considering the public comments, we determined that it was unnecessary to require that such reliance relationships be described in institutional procedures. Under the final rule, compliance with this provision could be achieved in a variety of flexible ways, for example, through a written agreement between the institution and a specific IRB, through language contained in a protocol of a multi-institutional study, or more broadly, by implementation of an institution-wide policy directive providing the allocation of responsibilities between the

institution and all IRBs that are not operated by the institution. Documenting the responsibilities of the institution and the IRB is already a requirement under the terms of an FWA, but is now a regulatory requirement. An additional requirement has been added at § _____.115(a)(9) that such documentation be part of the IRB records.

We acknowledge that the new requirement could increase administrative burden for some institutions, but believe that the examples cited above reflecting the various options an institution may use to document reliance on an IRB not operated by that institution are generally already standard practice in the regulated community.

Finally, the final rule eliminates the requirement in the pre-2018 rule at § _____.103(f) that grant applications undergo IRB review and approval for the purposes of certification. The grant application is often outdated by the time the research study is submitted for IRB review and contains detailed information about the costs of a study, personnel, and administrative issues that go beyond the mission of the IRB to protect human subjects. Therefore, experience suggests that review and approval of the grant application is not a productive use of IRB time.

V. Exempt Research (§ _____.104)

A. Applicability of Exemptions to Subparts B, C, and D

1. Background and Pre-2018 Requirements

In the pre-2018 rule, the application of the exemptions to research under subparts B, C, and D was specified through footnote 1, which stated that the exemptions do not apply to research involving prisoners, and are also limited in their application to research involving children. Regarding the latter issue, the pre-2018 exemption at § _____.101(b)(2) for research involving educational tests, survey or interview procedures or observations of public behavior did not apply to subpart D (*i.e.*, such research did not qualify for this exemption), except for research involving educational tests, or observations of public behavior when the investigator does not participate in the activities being observed. The pre-2018 exemptions did apply to subpart B.

2. NPRM Proposals

Although some of the exemptions proposed in the NPRM were based largely on exemptions in the pre-2018 rule, not all would have applied to subparts B, C, and D. Language in the

NPRM explained how the proposed exemptions may have applied to the subparts. The NPRM proposed that all of the exemptions be applied to research conducted under subpart B, and that none of the exemptions may be applied to research conducted under subpart C, except for research aimed at a broader population that consists mostly of nonprisoners but that incidentally includes some number of prisoners. The NPRM proposed that some of the exemptions may be applied to research conducted under subpart D. Under the NPRM, the exemption at proposed § ____ .104(e)(1) (Research Involving Educational Tests, Surveys, Interviews, or Observation of Public Behavior if the Information is Recorded with Identifiers and even if the Information is Sensitive) could not be applied to research involving children under subpart D. This was because protections including IRB review and parental permission are appropriate for research involving educational tests, surveys or interview procedures, or observation of public behavior when the information collected may be individually identified and sensitive in nature.

Although the NPRM did not propose changes to the HHS regulations at 45 CFR part 46, subparts B, C and D, consideration was given to whether the proposed exemption categories should apply to research involving prisoners under subpart C, either if the research consists mostly of nonprisoners and only incidentally includes some number of prisoners, or if the research intends to involve prisoners as research subjects. Public comment was requested on whether the revised exemption categories should be permitted to apply to research involving prisoners. The NPRM explained considerations including the following: The history of HHS subpart C research certifications to date; the preponderance of low-risk, sociobehavioral research focused on prisoner welfare, substance abuse treatment, community reintegration, and services utilization; the occurrence of prisoner-subjects in databases or registries; and the broad interpretation of the subpart C “prisoner” definition that includes, for example, subjects in court-mandated residential substance abuse treatment.

The NPRM posed a question asking whether language in the final rule should resemble the 2003 waiver of the applicability of certain provisions of the rule for HHS-conducted or -supported epidemiologic research involving prisoners and state that the exemptions apply except for research where prisoners are a particular focus of the

research.³² The language of the 2003 waiver criteria are broader than what was proposed in the NPRM, and already familiar to the research community. They apply to epidemiological research that presents no more than minimal risk and no more than inconvenience to the prisoner/subjects. A question was also asked whether the proposed application of the exemptions to subparts B and D was appropriate.

3. Public Comments

Approximately 50 comments were received on the applicability of the proposed exclusions and exemptions to the subparts of the rule. Eight comments addressed the applicability of the exemptions to subparts B and D. However, responses to the question, “Is the proposed application of the exemptions to subparts B and D appropriate?” uniformly agreed with the proposal. A strong majority of the comments addressed the applicability of the exemptions to subpart C.

The NPRM sought comment on the proposal to allow the exemptions to apply in research that only incidentally involves prisoners, but that is enrolling a primarily nonprisoner population. This would represent a policy shift in how the exemptions historically have been applied to subpart C. Comments regarding this proposal were mixed. Some responses claimed that the proposal expanded the application of the exemptions to all research under subpart C, rather than a small subset of subpart C research. Other comments opposed the proposal, pointing to the troubled history of research with prisoners, and suggesting that research involving prisoners, regardless of the risk level, should always go through subpart C IRB review. A narrow majority of comments responded that the exemptions should be permitted to apply to subpart C in a limited way. However, responses regarding the proposed language or which exemptions should be applicable to subpart C prisoners varied. Some felt a study should be exempted only if it offered some benefit to the prison population. Others felt it could be exempt so long as there was no identifiable sensitive information or biospecimens involved. Some who supported the proposal indicated that because the NPRM did

not propose to expand the applicability of the exemptions to research targeting prisoners, the proposal seemed to be a reasonable expansion. One comment noted that permitting a broader interpretation might enable more prisoner-subjects to participate in potentially low-risk beneficial research. A few commenters addressed whether the language describing the applicability of the subparts to research involving subpart C should resemble the 2003 epidemiological waiver criteria. Of these, comments were mixed, with some indicating that the 2003 epidemiological waiver criteria would be too ambiguous, others indicating that it would be appropriate language to use, and a final minority reiterating their opinion that the exemptions should never be permitted in research conducted under subpart C.

4. Response to Comments and Explanation of the Final Rule: Applicability of Exemptions to Subparts

The NPRM proposal regarding how the proposed exemptions may be applied to the subparts is largely unchanged in the final rule. The language at § ____ .104(b)(2) regarding subpart C has been modified slightly to reduce ambiguity and potential administrative burden, and in response to public comment, to narrow the scope of exemption application. The final rule does not adopt the 2003 epidemiological waiver language due to concerns from public comments that such language would be ambiguous and difficult to interpret.

The final rule section ____ .104(b)(1) states that all of the exemptions at § ____ .104 may be applied to research conducted under subpart B if the conditions of the exemption are met. Language at § ____ .104(b)(2) states that none of the § ____ .104 exemptions may be applied to research conducted under subpart C, except for research aimed at involving a broader subject population that only incidentally includes prisoners. This is a modification of the NPRM language, which proposed that the exemptions could apply if research consisted “mostly of nonprisoners and only incidentally” included some number of prisoners. The language was changed in order to avoid the implied need (“mostly”) for institutions to project and track the percentage of prisoners participating in nonexempt research. The revision also more clearly describes and limits the circumstances in which exempt research may include prisoners. The language at § ____ .104(b)(3) relevant to subpart D has been modified to reflect the revised structure of the final rule, and now

³² HHS. Waiver of the Applicability of Certain Provisions of Department of Health and Human Services Regulations for Protection of Human Research Subjects for Department of Health and Human Services Conducted or Supported Epidemiologic Research Involving Prisoners as Subjects. FR 68(119):36929 (June 20, 2003). Retrieved from <https://www.gpo.gov/fdsys/pkg/FR-2003-06-20/pdf/03-15580.pdf>.

states that the exemptions at paragraphs (d)(1), and (d)(4)–(8) of this section may be applied to research that is subject to subpart D if the conditions of the exemption are met. Paragraphs (d)(2)(i) and (ii) of this section may apply only to research activities that are subject to subpart D involving educational tests or the observation of public behavior when the investigator(s) do not participate in the activities being observed. Paragraph (d)(2)(iii) of this section may not be applied to research that is subject to subpart D, because protections, including IRB review and parental permission, are appropriate for research involving children and educational tests, surveys or interview procedures, or observation of public behavior when the information collected may be individually identified and sensitive in nature.

The final rule does not make revisions to the HHS regulations at 45 CFR part 46, subparts B, C, and D. Throughout this rulemaking process, the intent has been to revise subpart A, and to address revisions to subparts B, C, and D at a later time. However, particular consideration has been given to the specific issue of whether the proposed exemption categories should apply in the context of research that is aimed at a broad population and only incidentally includes prisoners. We concur with the comments expressing support for this change.

In such instances, the specific protections required by subpart C are frequently not relevant to the research subjects. The permitted inclusion of this subset of prisoners under the exemptions at § 46.104 is intended to allow an appropriate reduction in IRB administrative burden while preventing IRBs from necessarily prohibiting the participation of this group in exempt research activities, assuming the conditions of the exemptions are fully satisfied.

We believe this subpart C change is narrow in scope, affecting only a small subset of subjects who are prisoners. This change will permit, for example, the exempt secondary research use of information or biospecimens from subjects who are prisoners, if that analysis is not seeking to examine prisoners as a population and only incidentally includes prisoners in the broader study. Such inclusion would previously have required IRB review under subpart C, including review by an IRB prisoner representative, followed by certification to and authorization by OHRP. In addition, if the research did not fit into a § 46.306(a)(2) subpart C category of permissible research, prisoners could not be included as

subjects in the study, thereby causing problems involving identifying and removing these subjects from the analysis of repositories and databases.

Similarly, the narrow expansion would allow a subject to continue participation in exempt research if he or she became a prisoner during the course of an exempt study, assuming the study was aimed at a broad nonprisoner population, without the need for subpart C IRB review and certification to OHRP. For example, an exempt study that recruited subjects from a local community center to participate in a comparison of HIV educational materials would continue to be exempt, and would not trigger the need for review under subpart C, even if some of the subjects became prisoners after enrollment. On the other hand, a study that recruited subjects from a jail or prison to participate in a comparison of HIV educational materials would continue to be nonexempt under the final rule and require both subpart A and subpart C review, including certification to OHRP.

B. Exemption Determination

1. Background and Pre-2018 Requirements

The pre-2018 rule did not specify who at an institution may determine that research is exempt. However, in the past, OHRP has recommended that because of the potential for conflict of interest, investigators not be given the authority to make an independent determination that their human subjects research is exempt. OHRP has recommended that institutions implement exemption policies that most effectively address the local setting and programs of research. OHRP has recognized that this may result in a variety of configurations of exemption authority, any of which were acceptable assuming compliance with the pre-2018 regulations. In addition, OHRP guidance provided that institutional policies and procedures should identify clearly who is responsible for making exemption decisions. We note that under the pre-2018 and final rule a Common Rule department or agency retains final authority as to whether a particular human subjects research study conducted or supported by that department or agency is exempt from the Common Rule.

2. NPRM Proposals

The NPRM proposed to adopt a requirement that exemption determinations be documented, and that such determinations could be made only in two specified ways. To assist

investigators and institutions in making a timely and accurate determination of exemption status the NPRM proposed that federal departments or agencies would develop one or more exemption determination tools (the use of which would constitute one of the ways in which determinations could be made). Federal departments or agencies would create their own tool, or rely on a tool created by another department or agency (including a web-based tool created by HHS). Institutions would have discretion as to whether or not to implement such a tool. As proposed in the NPRM, it would be designed in such a way that if the person using the tool inputs accurate information about the study, the tool would produce a determination of whether the study is exempt. Institutions could rely on the use of the federally developed tool by investigators as a “safe harbor” for this determination. Use of the tool would be voluntary, and each institution and agency would decide whether to rely on the decision tool for their determinations, and if so, who would be allowed to use it. Institutions that chose not to use the tool for particular determinations would be required to have such determinations made by an individual who is knowledgeable about the exemption categories and who has access to sufficient information to make an informed and reasonable determination. In general, as envisioned in the NPRM, it was expected that investigators would not be allowed to make exemption determinations for themselves without the use of the decision tool, due to considerations of a conflict of interest.

The NPRM requested public comment on several aspects of the proposal to develop a decision tool: (1) The likelihood of an institution allowing investigators to use the tool; (2) the ease of investigators contriving answers in using the tool; (3) whether use of the tool should be restricted to certain exempt categories of research; (4) whether deployment of such a tool would erode public trust in research; and (5) what additional information should be required to be kept as a record other than the information submitted into the decision tool.

The NPRM also proposed that the institution or IRB be required to maintain records of exemption determinations, which records must include, at a minimum, the name of the research study, the name of the investigator, and the exemption category applied to the research study. As described in the NPRM, maintenance of the output of the completed decision tool would fulfill this recordkeeping

requirement. Although the NPRM did not propose an auditing requirement for assessing the accuracy of exemption determinations, it sought public comment about the need for one.

3. Public Comments

This was one of the more commented-on provisions of the NPRM, receiving approximately 280 comments. Public comment was generally mixed, with approximately half supporting and half opposing this proposal. A large majority noted that they felt unable to adequately respond to this proposal without seeing the decision tool first. Many of those who indicated general support for this proposal noted substantial qualifications to their support, such as the need to see the tool before deciding. Some requested that this proposal not be included in a final rule, and that a separate NPRM be issued specific to this proposal. Many commenters said that for simplicity and consistency, one tool should be agreed on by all of the sponsoring departments and agencies and that the departments and agencies should involve research administration professionals in developing such a tool so that it would have field-friendly workability and produces trustworthy results. Further, they thought that the tool should be pilot tested and validated by institutions and investigators before being deployed. For those who supported the concept of a decision tool, they felt that its use would speed the review process for exempt research. Some cited long wait times to receive an exemption determination from their institution's IRB.

Some commenters stated that the tool should clearly indicate that although it determines exemption from federal regulations, state restrictions still apply. A large academic center argued that though the tool could be useful, for institutions that provide services, treatment, and care for vulnerable populations it might be prudent to have someone with expertise in human research protections independently review research proposals to determine whether they are exempt or excluded from IRB review, rather than rely on the tool.

One large research university questioned the need for such a tool, asserting that properly designed oversight and review of exempt research should take minimal time and ensure that only exempt research is conducted without IRB approval. This commenter preferred comprehensive guidance on exempt research to support IRBs in making efficient and expeditious exemption determinations. A large academic/research organization

concurred, pointing out confusion among investigators about exempt categories, which requires careful conversation with IRB officers to understand how their project fits into the human protection framework. This organization believed that these conversations promote safe and effective research decision making and argued that use of the tool could fail to properly educate investigators about the complexities of exempt research determinations.

Some commenters noted that the decisions produced by the tool would be only as good as the tool and the materials and guidance that accompany it. Some commenters added that it is unlikely, however, that the use of a federal decision tool would shield the institution or investigator from liability in third-party actions. Still others went so far as to say that they doubted their institution would allow its use, at least for some time after which it was proven. To the extent institutions are not engaged in the exemption determination process through the tool, some argued that institutions should not be held accountable for any unintended outcomes.

Of those who commented on whether investigators should be allowed and trusted to use the exemption determination tool, some noted that it seemed inappropriate and a conflict of interest for investigators to be allowed to use the tool to generate exemption determinations for their own research activities. Others noted that an investigator might be able to use the tool, but that the proposed exemptions categories were so nuanced that experienced IRB staff might have difficulty determining what qualifies for an exemption. To that end, these comments noted that the tool would need to be accompanied with substantial guidance for an investigator to be able to accurately input information into it. Finally, some commenters expressed concern about the possibility that investigators might enter inaccurate or misleading information into the tool to "game the system," while others noted that that possibility, although remote, exists in the current protocol submission process and that a well-developed tool could include a means for validating certain types of inputs to assess accuracy.

4. Response to Comments and Explanation of the Final Rule: Exemption Determination

The final rule does not adopt the NPRM proposal at this time. Therefore, the final rule does not require that exemption determinations be

documented, as had been proposed in the NPRM, and continues to permit flexibility in how exemption determinations are made. We recognize it was difficult to provide detailed feedback in the absence of an exemption decision tool to evaluate. However, we continue to believe that a well-designed, tested, and validated exemption decision tool could offer an expedient mechanism for determining whether research studies are exempt. Thus, we will continue to explore development of an exemption decision tool. If and when an exemption decision tool is developed, we would issue a subsequent (separate) **Federal Register** notice for public comment. The notice would also give the public the opportunity to comment on whether the use of the tool would be appropriate in making exemption determinations under this final rule. Thus, members of the public would be afforded a sufficient opportunity to provide meaningful comments on such a proposed decision tool.

C. Categories of Exempt Research

The following sections describe the categories of exempt research found in the final rule. Note that several categories of activities proposed in the NPRM as exclusions appear in the final rule as exemptions.

1. Background and Pre-2018 Rule

Under the pre-2018 rule, a research activity qualified for exemption from the Common Rule if it fell into one or more of six categories at § ___.101(b)(1)–(6). Such studies were fully exempt from the regulations. That is, so long as a study did indeed fall within a category, it did not need to satisfy any other regulatory requirements that it needed to satisfy under the pre-2018 rule.

2. NPRM Proposals

The NPRM proposed that all exemption language would be found at § ___.104. The NPRM proposed retaining all of the exemption categories in the pre-2018 rule in one form or another except for the exemption pertaining to research involving the use of educational tests, survey or interview procedures or observation of public behavior if the subjects are elected or appointed officials, or if the confidentiality of the information were protected by statute. However, the NPRM proposed re-classifying some of the pre-2018 rule's exemptions as exclusions under the NPRM (and thus they would not have been subject to administrative or IRB review), while retaining some of the pre-2018 rule's

exemptions as exemptions (versus exclusions).

The NPRM proposed eight exemptions divided into three categories: (1) Low-risk interventions for which there would have been no other requirement (*e.g.*, informed consent and privacy safeguards) other than the determination and recording requirements; (2) research activities that would have required application of privacy safeguards; and (3) secondary research involving biospecimens and identifiable private information that would have required application of privacy safeguards, broad consent, and limited IRB review. The NPRM proposed to have some exempt studies meet certain other regulatory requirements while not having to meet other requirements, making them not “fully exempt” in the sense of the pre-2018 rule.

The NPRM proposed retaining exemption categories § _____.101(b)(1), (5), and (6) from the pre-2018 rule. The NPRM proposed clarifying the exemption for research on public benefit programs or demonstration projects in the pre-2018 rule and explained that OHRP’s guidance would be changed to include the applicability of the exemption to cover research on public benefit and service programs that an agency does not itself administer through its own employees or agents. The NPRM proposed requiring federal departments or agencies conducting such studies to publish a list of studies under this exemption.

The NPRM proposed that new exemptions would be created for:

- Certain research involving benign interventions;
- Certain research involving educational tests, survey or interview procedures, or observation of public behavior where identifiable private information was recorded, so long as data protection standards are met;
- Secondary research use of identifiable private information originally collected for nonresearch purposes;
- Activities relating to storing and maintaining biospecimens and identifiable private information for secondary research use, if subjects provided broad consent;
- Secondary research studies that would use the biospecimens and identifiable private information stored or maintained under the above exemption.

The NPRM asked for public comment on several aspects of these proposals, as they appeared as either exemptions or exclusions and whether their placement in the NPRM was appropriate with

regard to protecting human subjects in research. Comment was requested on whether guidance would be needed to help make exemption determinations and whether the scopes of the proposed exemptions or proposed exclusions were appropriate. That is, whether particular exclusions or exemptions were either too narrow or too broad. For example, several questions were posed about whether research should be exempt if it involved psychological risks. The NPRM asked about whether notice should be given to subjects for any of the activities. The public was asked to comment on whether and how exempt activities could comply with the NPRM’s proposed privacy safeguards.

The NPRM also inquired whether the exemption category related to research conducted in established or commonly accepted educational settings should apply only to research activities in which notice is given to prospective subjects or their legally authorized representatives as a regulatory requirement, when not already required under the Privacy Act of 1974. If so, comment was sought on the type of information to include in the notice and on how such notice should be delivered.

The NPRM asked for feedback on whether the proposed privacy safeguards should apply to research included in the proposed exempt category related to research conducted in established or commonly accepted educational setting, given that such research may involve risk of disclosing identifiable private information. The public was also asked to comment on whether the protections provided by the HIPAA Rules for identifiable health information used for health care operations, public health activities, and research activities are sufficient to protect human subjects involved in such activities, and whether the current process of seeking IRB approval meaningfully adds to the protection of subjects involved in such research studies.

The NPRM asked about the extent to which the HIPAA Rules and the Health Information Technology for Economic and Clinical Health (HITECH) Act³³ adequately address the beneficence, autonomy, and justice considerations related to collecting new information and whether any exemption for such collection should be limited to data collected or generated in the course of clinical practice.

With regard to the proposed exemption related to research and

demonstration projects conducted or supported by a federal department or agency, the public was asked to comment on: (1) Whether notice should be given to prospective subjects and the nature of such notice; (2) whether such activities can involve greater than minimal risk and whether they are appropriate as exemptions; and (3) whether existing privacy safeguards for such activities were sufficient.

A proposed new exemption category was intended to facilitate secondary research using identifiable private information that would have been or would be collected or generated for nonresearch purposes, when prior notice had been given and privacy safeguards and prohibitions on re-use of the information were in place. The public was asked to comment on what types of research should fall under this proposed exemption, whether it should be limited to research in which individuals have been informed of the potential for future research use of their information and given the opportunity to opt out, and whether the exemption would be appropriate for clinical data registries.

Finally, public comment was sought on two related proposed exemptions for research involving the use of biospecimens or identifiable private information that would have been stored or maintained for secondary research use, if consent for the storage and maintenance of the information and biospecimens had been obtained using a broad consent template that the NPRM proposed would be developed by the Secretary of HHS.

3. Public Comments, Response to Comments, and Explanation of the Final Rule: Exemption Categories

All exemption categories, of which there are eight, appear at § _____.104 in the final rule. Four of the exemption categories were proposed as exclusions under the NPRM. In addition, the proposed exclusion concerning certain research involving educational tests, survey or interview procedures, or observation of public behavior has been combined with the exemption regarding additional research activities using the same research methods. The rule includes four exemptions for research involving normal educational practices, research involving benign behavioral interventions, research involving public benefit or service programs, and research involving taste and food quality, all of which were also proposed in the NPRM.

Three exemptions pertain to secondary research uses of identifiable private information or identifiable

³³ The legislative language can be found at https://www.healthit.gov/sites/default/files/hitech_act_excerpt_from_arra_with_index.pdf.

biospecimens. One exemption, at § _____.104(d)(4), which concerns secondary research for which consent is not required, which consists of three of the proposals for exclusions in the NPRM. A second exemption, at § _____.104(d)(7), pertains to storage or maintenance of identifiable private information or identifiable biospecimens for which broad consent is required, and a third exemption, at § _____.104(d)(8), concerns secondary use of identifiable private information or identifiable biospecimens for which broad consent is required. As will be discussed in more detail below, some of the conditions associated with the finalized exemptions differ from what was proposed in the NPRM.

In the final rule, similar to what was proposed in the NPRM, “exempt” does not always mean exempt from all of the requirements of the Common Rule; the activity must fit the description of the exempt category and not include nonexempt research activities. For example, the exemption categories in the final rule at § _____.104(d)(7) and (8) identify specific regulatory requirements that must be met (*e.g.*, limited IRB review, the use of broad consent) as a condition of being exempt from other regulatory requirements.

Public comments, responses to comments, and explanations of the final rule for each exemption category follow.

a. Research Conducted in Established or Commonly Accepted Educational Settings When It Specifically Involves Normal Educational Practices (§ _____.104(d)(1))

i. Public Comments

Approximately 50 comments discussed this exemption, which was a slight modification of an exemption that existed in the pre-2018 rule. The NPRM asked two questions about this exemption: (1) whether it should require some type of notice and if so, how notice should be delivered; and (2) whether the proposed privacy safeguards should apply to this exemption.

One commenter (a research dean from a university) suggested that the wording of the exemption be modified from “research conducted in established or commonly accepted educational settings” to “research conducted in established or commonly accepted educational or other settings” in order to allow more flexibility in how this exemption could be applied.

Other commenters noted a need for guidance on how this exemption should be interpreted. For example, one comment suggested that a wide array of

“normal” educational practices exists, and the intention of this language was difficult to discern. Another comment noted that clarification was needed about permissible data collection methods under this exemption.

One commenter discussing the addition of the limitation that the study should not be likely to adversely affect students’ opportunity to learn noted that it might be difficult to predict ahead of time if the research contemplated under this exemption might have this adverse impact.

Several commenters discussed whether notice should be required. The majority of these comments indicated that some type of notice should be required. A few specifically discussed the importance of notifying subjects of these activities (with one commenter stating that parental consent should be required), stating that lack of notice could erode public trust in research.

Groups representing AI/AN tribal interests argued that notice for this type of research should be required. Specifically, they asserted that transparency around research-related activities and policies, especially in school settings, can build trust among AI/AN populations and ensure that individual and community benefits of participation in research are achieved. They also noted that tribal consultation facilitates decisions about appropriate ways to implement such notices, and observed that the rural nature of many AI/AN communities requires the use of multiple modes of communication and more time spent reaching the intended audience. The commenter also noted that potential subjects should be given the opportunity to opt out of research activities.

One commenter argued that notice is generally an insufficient standard for this type of research and is not a suitable substitute for informed consent.

Approximately 20 comments discussed whether the proposed privacy safeguards that appeared at § _____.105 in the NPRM should apply to this exclusion. Comments were generally mixed about whether this would be appropriate, with a small majority indicating that the privacy safeguards should not apply. These comments generally argued that if an activity is exempt, no additional requirements should be placed on that research activity.

A privacy advocacy organization that supported both notice and attaching the proposed privacy safeguards to this provision, stated that notice in this context is also important because other federal standards (*e.g.*, Family Educational Rights and Privacy Act

[FERPA; 20 U.S.C. 1232g; 34 CFR part 99], Protection of Pupil Rights Amendment [PPRA; 20 U.S.C. 1232h; 34 CFR part 98]) are not acceptable proxies for privacy protection. This commenter indicated that the notice should be robust with detailed information presented to parents directly. As justification for providing additional protections in this context, this group noted that the consequences for misuse of data are greater for children; that is, lost, misused, or leaked information about children could have lifelong consequences. The commenter argued that if an exemption is proposed for this class of research, then the lack of IRB oversight should require that researchers must comply with appropriate privacy safeguards.

ii. Response to Comments and Explanation of the Final Rule: Exemption for Certain Research Conducted in Certain Educational Settings

The final rule includes an exemption at § _____.104(d)(1) for research conducted in established or commonly accepted educational settings that specifically involves normal educational practices, so long as the research is not likely to adversely affect students’ opportunity to learn required educational content or the assessment of educators who provide instruction. This includes most research on regular and special education instructional strategies, and research on the effectiveness of, or the comparison among, instructional techniques, curricula, or classroom management methods.

This exemption is a revised version of the first exemption in the pre-2018 rule and a modified version of the exemption as proposed in the NPRM. This change is based on concerns about whether the conduct of some research projects of this type might draw enough time and attention away from the delivery of the regular educational curriculum that they could have a detrimental effect on student achievement. The wording of the exemption has been modified to include a condition that the research is not likely to have these adverse impacts. This was the original intent of the NPRM proposal, and it is an important qualification that should apply to any research activity that is exempt under this provision. It also drops the phrase “in that educational setting,” because that phrase is redundant.

The exemption is retained to allow for the conduct of education research that may contribute to the important public good of improving education, consistent with the principle of beneficence. The

exemption retains the condition that the research activity takes place in established or commonly accepted educational settings, because otherwise IRB review would be warranted for such research activities being conducted in unconventional settings.

We recognize that providing notice for this type of research could involve a significant administrative burden and that it is not always appropriate, and therefore have decided not to include it as a regulatory requirement at this time. We note that making these activities exempt does not mean that there ought not to be tribal consultation about the research activities, and that such consultation may lead to a notice requirement. Where appropriate or mandated by tribal law, tribal consultation should take place irrespective of whether the activity has to meet the requirements of this final rule. Such consultation would represent a free-standing legal obligation, as is referred to in § _____.101(f). When appropriate, investigators may provide notice in a manner that is appropriate to the research activity and the cultural context in which it occurs.

This exemption is largely unchanged from the pre-2018 rule, and does not add requirements for safeguarding privacy at this time.

b. Research That Includes Only Interactions Involving Educational Tests (Cognitive, Diagnostic, Aptitude, Achievement), Survey Procedures, Interview Procedures, or Observation of Public Behavior (Including Visual or Auditory Recording), If at Least One of Three Criteria Is Met (§ _____.104(d)(2))

This exemption in the final rule is a revised version of an exemption in the pre-2018 rule, and is a combination of a provision proposed as an exclusion in the NPRM, and a provision proposed as an exemption in the NPRM. Thus, public comments on both of these proposals follow here.

i. Public Comments

Approximately 80 comments discussed this proposed exclusion, which was an exemption in the pre-2018 rule. Public comments were mixed. Some felt that moving these activities from the exemption to exclusion category would streamline this type of low-risk, common research activity and allow IRBs to focus time and attention on more complicated and higher risk activities. Others, including SACHRP and many research universities, argued that based on their experience, investigators have difficulty making the assessments required to determine whether an activity falls

under this exemption. For example, investigators have a difficult time determining whether disclosure outside of the research context might put someone at risk of criminal or civil liability.

Commenters also expressed concern about whether the three statutes cited in the third prong of the proposed exclusion would provide a comparable level of protections to human subjects as does the Common Rule. Many of these commenters noted that they simply were not sure what types of protections would be afforded to subjects under the Privacy Act, the Paperwork Reduction Act, and the E-Government Act of 2002. Others noted that the main protections provided by these statutes involved notice and not ethics review.

The NPRM requested comment on the extent to which covering educational tests, survey procedures, interview procedures, or observation of public behavior under the Common Rule would substantially add to the protections provided to human subjects. Public comment was mixed, but the majority of commenters felt that these activities should be exempt rather than excluded. One commenter indicated that contrary to the primary justification for excluding these categories of research, these activities cannot always be considered to be low risk and could pose significant risks depending on the nature of the research and sensitivity of the data collected.

One commenter expressed strong opposition to excluding these activities from Common Rule protections, indicating that excluding them would compromise the rights and welfare of research subjects. The commenter emphasized that consent cannot be inherent to participation in the activity because researchers cannot know with certainty that participants are familiar with common forms of educational tests, surveys, and interview procedures and the potential risks inherent to information disclosure. In addition, the commenter pointed out, assuming that even vulnerable subjects know the risks associated with participation in surveys and interviews is contrary to the *Belmont Report's* assertion that vulnerable subjects need additional protection.

Some comments were mixed, for example, suggesting that observation of public behavior might be an acceptable exclusion, whereas surveys and interviews ought to remain exempt. One commenter indicated that it might be reasonable for these activities to be excluded if an exclusion determination tool was available to help investigators make the decision. Another commenter

suggested that whether the activities are exempt or excluded, notice should be required, to indicate the purpose of the activity, describe privacy safeguards, state that participation is voluntary, and provide information on opting out.

Other commenters expressed concern that investigators might not be able to effectively make these determinations, and pointed out that IRBs, with a broad range of experience and expertise in data identifiability, provide a check for researchers' judgment and are better placed to make consistent and informed decisions about exemptions.

Even so, some other commenters felt that Common Rule protections do not substantially add to the protection of human subjects in these categories of activities. Thus, categorizing them as an exemption just adds administrative burden.

The NPRM asked whether this exclusion should apply only to research activities in which notice is given to prospective subjects or their legally authorized representatives as a regulatory requirement, and if so, what information should be included in the notice. Some commenters supported a requirement for notice or at a minimum, some sort of tracking system for these activities. One emphasized that the ethical principle of respect for persons demands some sort of notice. Some indicated that requiring notice prevents these activities from being excluded and might necessitate including them on the list of activities for expedited review rather than deeming them exempt activities.

Other commenters expressed concern about the proposed exclusion. For example, one indicated that it might not be correct to assume that people agree to participate, and understand that they can opt out, by virtue of their participation, and another reiterated concern about assuming that these activities are inherently low risk and expressed a desire to keep these activities in the exempt category to maintain a level of IRB oversight.

The NPRM asked whether it is reasonable to rely on investigators to make self-determinations for the types of research activities covered in this particular exclusion category, and if so, whether documentation of any kind should be generated and retained. One commenter expressed a strong opinion that investigators should be allowed make these self-determinations. However, the majority of comments responding to this question felt that investigators should not be solely responsible for making these determinations.

Some commenters felt that self-determination might work in certain cases or with certain groups but that there would be too much variability to allow it generally. One suggested a screening system that might check whether determinations were being made correctly.

Many commenters pointed out that it is unreasonable to expect investigators to be able to reliably discern levels of risk inherent to disclosure of information, and that what might seem innocuous to researchers could cause real harm to others. Other commenters expressed concern about conflicts of interest, and that investigators might be more likely to make a determination to not delay their research. Another commenter emphasized that oversight is necessary to avoid situations in which investigators inaccurately assume that subjects understand that they are participating in research, or that they are being recorded, for example.

The NPRM requested comment on whether some or all of these activities should be exemptions rather than exclusions. Response to this question was mixed. Some commenters felt that these activities should be excluded. Others felt that surveys and interview should be considered exempt while educational tests and observation of public behavior should be excluded. Still others felt that all should be exemptions except for observations of public behavior, which could be excluded.

The NPRM asked whether these exclusions should be narrowed such that studies with the potential for psychological risk are not included and whether certain topics that involve sensitive information should not be covered by this exclusion. There was general agreement among responses to this question that the exclusions should be narrowed so that studies with the potential for psychological risk were not included in the exclusion. Some commenters, however, indicated that it would be unrealistic to expect investigators to make this determination reliably, that it might be challenging to implement such a policy, and that guidance would be required from regulatory bodies.

Commenters felt that these activities should be exemptions rather than exclusions, to preserve a level of IRB oversight. One commenter pointed out that circumstances that occur in research for which psychological risks are possible are fairly common in this category of activities and that excluding them would leave the risk unaddressed. One professional organization emphasized that the “potential for

serious psychological harms that may be associated with participation in nonbiological research . . . [is] not merely the result of inappropriate disclosure of information.” It also indicated that “the probability and magnitude of this risk may vary by characteristics of individual participants, clinical expertise of the interviewer(s), as well as the risk-minimizing protections that are in place.”

The NPRM requested comment on whether for activities captured under the third element of this exclusion, the statutory, regulatory, and other policy requirements cited provide enough oversight and protection that being subject to expedited review under the Common Rule would produce minimal additional subject protections. If so, the NPRM asked whether the exclusion should be broadened to also cover secondary analysis of information collected pursuant to such activities. Of the few responses to this question, one commenter felt that existing protections are sufficient if information is stored in a secure information technology (IT) infrastructure.

Other organizations expressed strong sentiments that neither the Paperwork Reduction Act nor the Privacy Act were protective in the research context and that current privacy protections are inadequate. They stressed the importance of safeguarding IT and cyber infrastructure and provided examples of large data breaches.

The NPRM asked about the extent to which excluding any of these research activities from the Common Rule could result in an actual or perceived reduction or alteration of existing rights or protections provided to human subjects. That is, does excluding these research activities from the Common Rule pose any risks to scientific integrity or public trust? Commenters who responded to this question generally felt that excluding any of these research activities could result in an actual or perceived reduction or alteration of existing rights or protections provided to human subjects. One indicated that reduction in oversight would lead to subjects being exposed to unintended risks that otherwise would be preventable. Other commenters felt that improper assumptions about low levels of risk in these activities and allowing for self-determination could lead to a reduction in protections for human subjects.

ii. Public Comments on the Proposed Exemption for Research Involving Educational Tests, Surveys, Interviews, or Observation of Public Behavior If the Information Is Recorded With Identifiers, and Even If the Information Is Sensitive

Approximately 50 comments discussed the proposal to exempt educational tests, surveys, interviews, or observation of public behavior if the information is recorded with identifiers and even if the information is sensitive. Public comment here was mixed, with some agreeing that by mandating privacy safeguards, the proposal effectively addresses the primary risk that occurs in this type of research. Others argued that this type of research still benefits from some type of IRB review and thus should be considered covered rather than exempted research. Yet other comments noted that it was impossible to make a determination about this proposed exemption without seeing the proposed privacy safeguards that were proposed in the NPRM.

Several commenters noted that the parameters of this exclusion might be acceptable if it excluded sensitive topics or if it excluded research studies that posed psychological harm to potential subjects. One comment by a professional organization of psychology professionals noted that IRBs often misunderstand and overstate psychological risks in research. Because of this, this group argued that the rule should not include a limitation based on psychological risks because IRBs are not able to effectively assess psychological risks.

The NPRM also asked whether this exemption should be extended to research involving children. The majority of those who responded to this question were opposed to such an extension.

iii. Response to Comments and Explanation of the Final Rule: Exemption for Certain Research Involving Educational Tests, Surveys, Interviews, or Observation of Public Behavior Under Specific Conditions

The final rule includes an exemption at § ___.104(d)(2) that is a revised version of an exemption in the pre-2018 rule. The exemption applies to research that only includes interactions involving educational tests (cognitive, diagnostic, aptitude, achievement), survey procedures, interview procedures, or observation of public behavior (including visual or auditory recording) uninfluenced by the investigator if at least one of three criteria is met:

- The information obtained is recorded by the investigator in such a manner that the identity of the human subject cannot readily be ascertained, directly or through identifiers linked to the subjects;

- Any disclosure of the human subjects' responses outside the research would not reasonably place the subjects at risk of criminal or civil liability or be damaging to the subjects' financial standing, employability, educational advancement, or reputation; or

- The information obtained is recorded by the investigator in such a manner that the identity of human subjects can readily be ascertained, directly or through identifiers linked to the subjects, and an IRB conducts a limited IRB review to make the determination required by § _____.111(a)(7) (which relate to there being adequate provisions for protecting privacy and maintaining confidentiality).

The final rule does not include the language proposed in the NPRM that offered as one prong of the exemption (proposed as an exclusion) that the research be subject to the Privacy Act, the Paperwork Reduction Act, or the E-Government Act of 2002. The final rule simply includes § _____.104(d)(2)(iii), which requires limited IRB review as described at § _____.111(a)(7) if identifiable private information will be obtained and recorded in such a way that the identity of human subjects can readily be ascertained, either directly or through identifiers linked to the subject.

This exemption is based on the assumption that the potential risks raised by this category are largely informational and that subjects are aware of them, and thus the most important role that an IRB might play with respect to reducing potential harms is to ensure the application of privacy safeguards. Under this assumption, the exemption is consistent with the principle of respect for persons and the preservation of autonomy. In the case of observation of public behavior, even if the subject does not know that an investigator is watching his or her actions, the subject's behavior is public and could be observed by others, and thus the research observation is not inappropriately intrusive.

The term "survey" as used here refers to information collected about individuals through questionnaires or similar procedures (e.g., the Current Population Survey conducted by the U.S. Census). "Human subjects" do not include organizations or businesses. "Survey," as used here, does not include the collection of biospecimens. Thus, an activity that included the

collection of a biospecimen (e.g., a cheek swab), in addition to collecting verbal or written responses to questions, could not qualify for this exemption.

This exemption includes the research activities that appeared at § _____.101(b)(2) in the pre-2018 rule, as well as some additional information collection research activities using the same methods. As in the pre-2018 rule, this exemption includes research studies whose methods consist of the use of educational tests, survey or interview procedures, or observation of public behavior that does not involve an intervention, if the data are recorded anonymously, or the information is recorded with identifiers, but is not sensitive such that its disclosure could result in harm to the subjects. The exemption provides a list of the specific harms that must be considered, as did the pre-2018 rule, with the addition of the specific harm of potential damage to the subjects' educational advancement. This potential harm has been added because of the obvious relevance to the effects of the disclosure of responses in research involving educational tests.

This exemption has been expanded to include research using the same methods involving identifiable private information that might be sensitive or potentially harmful if disclosed, so long as the investigators adhere to the limited IRB requirements outlined in § _____.111(a)(7), and the research is not subject to Subpart D. The limited IRB review requirements are designed to provide privacy safeguards to reduce the chances that the disclosure of identifiable private information will occur and lead to harm.

The wording of the exemption is clarified to indicate (consistent with the interpretation of § _____.101(b)(2) in the pre-2018 rule) that the research cannot include interventions in addition to the educational tests, survey or interview procedures, or observation of public behavior. Research involving interventions that are distinct from those information collection methods allowable under this exemption do not satisfy the conditions of this exemption. For example, if a research study were to randomly assign students to take an educational test in a quiet room or in a room with a moderate level of noise, or to consume a snack (or not) before taking the test, this research would not be exempt under this exemption. It should be noted, however, that educational tests may include exposing test takers to certain materials as part of the test, and that such materials do not constitute interventions distinct from the test. For example, reading comprehension tests may direct test

takers to read a passage, and a geography test may present test takers with a map, and ask them to draw information from that map. Likewise, survey procedures may contain some information that the respondents are asked questions about, which would not be considered distinct interventions. However, research in which the purpose of the research is to see whether respondents answer survey questions differently depending on the gender of the interviewer would not satisfy the conditions of the exemption, because the manipulation of the interviewer would be a distinct intervention. Research involving observation of public behavior does not qualify for this exemption if the investigator intervenes with subjects, for example, by offering them an ostensibly lost wallet to see if they will accept it.

Part of the rationale for exempting the research activities at § _____.104(d)(2) from the Common Rule, even when the research is not otherwise subject to additional federal controls, is that for education tests, survey or interview procedures, agreement to participate is inherent in participation and that for much of this research the risks most likely to be experienced by subjects are related to disclosure of anonymous, nonsensitive information and are thus categorized as "low." In general, it is reasonable to expect that individuals, including vulnerable populations (other than children), would understand that actively providing responses to educational tests, surveys, or interview procedures constitutes agreement to participate and that the risks associated with such participation would be related to disclosure of the information they provided. The exemption of this type of activity rests in large part on the idea that all individuals, regardless of the setting or context in which the activity will take place, are generally familiar with common forms of educational tests and survey and interview procedures that they experience in their daily lives, and do not need additional measures to protect themselves and their privacy from investigators who seek their involvement in research activities involving these procedures. They can decline to participate, or to answer some questions. In addition, if the information collected is both identifiable and sensitive or potentially harmful, the safeguards offered by the limited IRB review requirements at § _____.111(a)(7) apply. This is accomplished through the added provision at § _____.104(d)(2)(iii).

Concerns have also been raised about psychological risks of participating in

surveys or interviews, and of situational risks where the simple awareness that someone was surveyed or interviewed poses a risk. We recognize that this is possible, but believe that this is rare enough that it does not warrant adding additional conditions to the exemption category.

With respect to applying this exemption to research with children, two subcategories of this exemption—concerning information recorded so that subjects cannot be identified (§ _____.104(d)(2)(i)), and concerning disclosures of the subjects' responses that would not place them at certain kinds of risk or create certain kinds of damage (§ _____.104(d)(2)(ii))—may apply to research involving children under subpart D if the research involves educational tests or observation of public behavior and the investigator does not participate in the activities being observed. The final subcategory of this exemption (§ _____.104(d)(2)(iii)), which allows for obtaining and recording identifiable private information, may not be applied to research involving children under subpart D.

c. Research Involving Benign Behavioral Interventions in Conjunction With the Collection of Information From an Adult Subject (§ _____.104(d)(3))

i. Public Comments

Approximately 50 comments discussed the NPRM proposed exemption involving benign interventions in conjunction with collecting information from an adult subject. Public comments here were mixed, with a majority favoring this exemption, and with the majority of commenters indicating that guidance will be needed for this exemption to be implemented properly. For example, one large research university stated, "The proposed category involving benign interventions needs further revision. While we are supportive of this category in general, the words 'benign intervention' without definition leaves too much room for different interpretations and these terms are not easily applicable to social science research, a context in which these types of activities are likely to occur." Those that favored this exemption generally agreed with the argument put forth in the NPRM that these activities were low in risk and IRB review did not provide subjects meaningful additional protections in this context.

Several comments requested clarification on the extent to which medical interventions might be covered under this exemption. For example, to

what extent could proven diagnostic methods that introduce energy but are not invasive (e.g., magnetic resonance imaging, ultrasound, computerized tomography scan) be considered a "benign intervention" for the purpose of this exemption? Another comment asked whether the provision included the use of medical devices, such as blood pressure monitors or thermometers.

Those who did not support this exemption offered a variety of reasons. One comment from a research university indicated that it did not support this exemption because it could cause studies like the "Milgram Obedience Experiment"³⁴ and the "Stanford Prison Study"³⁵ to occur without IRB review. Another comment reiterated the general stance that all research activities should require IRB review and informed consent.

One comment from a research ethics, public education, and professional organization noted that if the final rule includes an expansion of exemption categories such as the proposed benign intervention exemption in the NPRM, then investigator education on human subjects protection should be mandated.

Another comment noted that it should be clarified in the regulatory text that withholding the investigator's hypothesis from subjects is not deception.

The majority of commenters indicated that no additional requirements, be it notice or the proposed privacy safeguards, should be applied to this exemption category. A minority of comments indicated that some kind of notice should be required with this provision, generally asking for that notice to include the purpose of the study, the privacy and confidentiality protections in place, a statement that participation is voluntary, information on how to opt out of the study, and information about who to contact for more information. Comments that favored notice suggested that the notice should be study-specific.

Although commenters generally felt the examples of activities that would satisfy this exemption included in the regulatory text were sufficient, commenters also indicated that many of the terms used in this exemption

needed additional explanation, for example, "brief in duration," "painless," and "physically invasive." A large research university noted that the proposed language raised questions about what sorts of impact are significant and how long is "lasting."

One large professional organization representing research universities and organizations noted that the term "benign intervention" did not seem to encapsulate the types of activities that the NPRM contemplated. Specifically, this organization argued that "benign intervention" connotes a medical procedure, when the NPRM preamble suggested that this exemption encompasses nonmedical "benign interventions" generally. This organization also suggested that the activities contemplated by this exemption are more like interactions than interventions.

In response to a question about whether the decision tool could be relied on for making this exemption determination, a majority of those who responded indicated that it would be impossible to answer this question without first seeing the decision tool. Others indicated that without better definition of terms like "benign intervention," "prospectively agree," "long lasting," and "significant impact," it would be impossible for a tool to provide accurate determinations for this exemption.

ii. Response to Comments and Explanation of the Final Rule: Exemption for Certain Research Involving Benign Behavioral Interventions in Adults

This exemption at § _____.104(d)(3) was not in the pre-2018 rule, but was proposed in the NPRM. In response to public comments that expressed concern over the need to further clarify the term "benign interventions," the word "behavioral" has been inserted to modify the type of intervention which may be included. The intent of this change is to exclude the use of medical interventions (including medical tests, procedures and devices). The exemption being finalized is specifically for research involving benign "behavioral" interventions in conjunction with the collection of information from an adult subject through verbal or written responses (including data entry) or audiovisual recording if the subject prospectively agrees to the intervention and information collection and at least one of the following is met:

- The information obtained is recorded by the investigator in such a manner that the identity of the human subjects cannot readily be ascertained

³⁴ Milgram S. Behavioral Study of Obedience. *The Journal of Abnormal and Social Psychology*, 1963; 67(4):371–378. Retrieved from <http://www.columbia.edu/cu/psychology/terrace/w1001/readings/milgram.pdf>.

³⁵ Haney C, Banks WC, and Zimbardo PG. A study of prisoners and guards in a simulated prison. *Naval Research Review*, 1973, 30:4–17. Retrieved from <http://www.simplypsychology.org/zimbardo-paper.pdf>.

directly or through identifiers linked to the subjects;

- Any disclosure of the human subjects' responses outside the research would not reasonably place the subjects at risk of criminal or civil liability or be damaging to the subjects' financial standing, employability, educational advancement, or reputation; or
- The information obtained is recorded by the investigator in such a manner that the identity of the human subjects can readily be ascertained, directly or through identifiers linked to the subject, and an IRB conducts a limited IRB review to make the determination required by § _____.111(a)(7).

For the purpose of this provision, the exemption describes benign behavioral interventions as being brief in duration, harmless, painless, not physically invasive, not likely to have a significant adverse lasting impact on the subjects, and the investigator has no reason to think the subjects will find the interventions offensive or embarrassing. Provided all such criteria are met, examples of such benign behavioral interventions include having the subjects play an online game, solve puzzles under various noise conditions, or decide how to allocate a nominal amount of received cash between themselves and someone else.

Unlike the exemption at § _____.104(d)(2), this exemption allows for the intervention to be distinct from the data collection method; for example, a research study comparing test performance of test takers in quiet or noisy surroundings would qualify for this exemption. Also subjects could be asked to perform cognitive tasks, and audiovisual recording could be used to collect the data, without any educational test, survey or interview procedure occurring, and this research would qualify for this exemption.

If the research involves deceiving the subjects about the nature or purposes of the research, this exemption would not be applicable unless the subject authorizes the deception. For the purpose of this provision, authorized deception would be prospective agreement by the subject to participate in research where the subject is informed that he or she will be unaware of or misled regarding the nature or purposes of the research. The final rule allows this type of research to occur without the requirements of informed consent because the intervention is not likely to result in harm or offense to the subject, and the subject must prospectively agree to the intervention and the data collection.

Subjects must be adults, but the provision does not specify that they must be competent, and therefore tests of competency are not necessary. However, the presumption is that, in keeping with the principle of respect for persons, such subjects will not be exploited.

This new exemption category is added because respect for persons is accomplished through the prospective subject's forthcoming agreement or authorization to participate, the research activities pose little risk to subjects, and the use of this exemption for many social or behavioral studies will enable IRBs to devote more time and attention to research studies involving greater risks or ethical challenges. We note that the requirement for the agreement of the subject effectively serves as a kind of notice, because the subject is asked to agree to participate in the research, and the request will be tailored to the nature of the specific research study.

The final rule includes another condition that was not included in the NPRM, which broadens the type of research that may meet this exemption. The final rule at § _____.104(d)(3)(i)(C) permits investigators to obtain and record information in such a manner that the identity of the human subjects can readily be ascertained, directly or through identifiers linked to the subject, provided the research has undergone limited IRB review in accord with § _____.111(a)(7). This alternative condition was added to the final rule for reasons similar to the exemption at § _____.104(d)(2), as a way of providing additional protections when investigators obtain and record information in such a manner that human subjects can be identified directly or through identifiers linked to the subject. Because the risk associated with enabling investigators to obtain and record identifiable private information can be addressed by requiring adherence to the privacy safeguards provided through limited IRB review, we believe it is appropriate to allow such research to be exempt.

In addition, the final rule permits the collection of data through audiovisual recording, not just video recording, as was proposed in the NPRM. We believe that broadening the exemption in this way provides more flexibility to the permissible data collection methods without creating greater risk of harm to research subjects.

We acknowledge that guidance may be useful for interpreting some of the terms in this exemption, and that some cases will be debatable. However, we also believe that a substantial number of research activities will plainly fit this

exemption, and should be allowed to proceed without IRB review. We agree that investigator education is often desirable, but that the provisions of the exemption are not difficult to understand. We believe that Milgram's obedience experiments and the Stanford Prison Experiment would obviously not qualify for this exemption, because investigators had reason to think some subjects would find the interventions offensive or embarrassing. We acknowledge that in this exemption the word "deception" is used to include withholding the purpose of the research, which is consistent with how the term is often used in this context.

d. Secondary Research Use of Identifiable Private Information and Identifiable Biospecimens for Which Consent Is Not Required (§ _____.104(d)(4))

i. Overview

The final rule exemption at § _____.104(d)(4) is for secondary research use of identifiable private information and identifiable biospecimens for which consent is not required. This particular exemption combines several NPRM exclusion proposals. It exempts secondary research use of identifiable private information and identifiable biospecimens when:

- The identifiable private information or identifiable biospecimens are publicly available;
- The information is recorded by the investigator in such a way that the identity of subjects cannot readily be ascertained, and the investigator does not contact subjects or try to re-identify subjects;
- The secondary research activity is regulated under HIPAA; or
- The secondary research activity is conducted by or on behalf of a federal entity and involves the use of federally generated nonresearch information provided that the original collection was subject to specific federal privacy protections and continues to be protected.

By "secondary research," this exemption is referring to re-using identifiable information and identifiable biospecimens that are collected for some other "primary" or "initial" activity. The information or biospecimens that are covered by this exemption would generally be found by the investigator in some type of records (in the case of information) or some type of tissue repository (such as a hospital's department for storing clinical pathology specimens).

It is important to recognize that this exemption does not cover any primary collections of either information or biospecimens. For example, if an investigator wants to collect information directly from research subjects by asking them to complete a questionnaire, that would not be covered by this exemption. If an investigator wants to collect biospecimens by having subjects swab their cheek, that would similarly not be covered by this exemption. On the other hand, an investigator who wants to use information that is in some databank, or use biospecimens that are in a pathology laboratory, or use the "excess" portion of blood that was drawn for clinical purposes, could use this exemption assuming all of the relevant conditions are met.

Also, note that unlike the pre-2018 rule's exemption relating to certain secondary uses of information and biospecimens, the final rule has no requirement that the information and biospecimens must be pre-existing at the time that the investigator begins a particular research study. For example, an investigator could start a study that involves using biospecimens from clinical pathology laboratories, and could include specimens that are added to the laboratories during the course of the study (again assuming that the other conditions of the exemption are met).

Public comments on each of the exclusions proposed in the NPRM and combined in this exemption follow.

(1) Public Comments on the Proposed Exclusion for Research Involving the Collection or Study of Identifiable Private Information or Identifiable Biospecimens That Are Publicly Available or Recorded by the Investigator Without Identifiers

Approximately 50 commenters discussed this proposed exclusion about identifiable private information or identifiable biospecimens that are publicly available or recorded by the investigator without identifiers. Public comments were mixed, with many indicating that investigators should not themselves be allowed to determine whether their research fits under this exclusion, and many indicating that this should be an exemption rather than an exclusion. A majority supported the clarifying language that this category of activities could include information that will be collected.

One commenter indicated that the prohibition on re-identification should apply to activities in publicly available data sets. This commenter also indicated that any research involving re-identification should undergo IRB oversight. Another commenter

suggested that there should also be a prohibition in this category against the release or publication of information that would lead to re-identification.

One commenter indicated that the terminology used in this provision needed clarification. Specifically, the commenter wondered how one should interpret the term "recorded by the investigator" with respect to electronic data?

In response to a question posed in the NPRM about whether any of the exclusion categories should include biospecimens, a majority of those who responded to the question indicated that biospecimens should be included in this category.

The NPRM also asked whether this exclusion should apply to activities involving prisoners. Of those who responded to this question, responses were mixed with some indicating that this exclusion should apply to research with prisoners and others indicating that it would be inappropriate for research with prisoners to be allowed. One commenter indicated that allowing prisoners in this type of research would be a weakening of protections in activities involving vulnerable populations.

(2) Public Comments on the Proposed Exclusion for Certain Activities Covered by HIPAA

Approximately 50 comments discussed the NPRM proposal to exclude certain activities subject to HIPAA. Public comments were mixed, with many indicating that the protections required under HIPAA for "health care operations," "research," and "public health activities," were sufficient, and that for the types of activities identified by the exclusion, review under the Common Rule did not provide meaningful protections. In contrast, others argued that because the scope of a privacy review board is narrower than for an IRB, these activities should not receive a blanket exclusion from the Common Rule.

Under the HIPAA Privacy Rule, health information is de-identified and thus exempt from that rule only if it neither identifies nor provides a reasonable basis to believe that the information can be used to identify an individual. The HIPAA Privacy Rule provides two ways to de-identify information: (1) A formal determination by a qualified expert that the risk is very small that an individual could be identified; or (2) the removal of all 18 specified identifiers of the individual and of the individual's relatives, household members, and employers, as long as the covered entity has no actual

knowledge that the remaining information could be used to identify the individual (45 CFR 164.514(b)).

Otherwise, the HIPAA Privacy Rule addresses some informational risks by imposing restrictions on how individually identifiable health information collected by health plans, health care clearinghouses, and most health care providers ("covered entities") may be used and disclosed, including for research. In addition, the HIPAA Security Rule (45 CFR parts 160 and subparts A and C of part 164) requires that these entities implement certain administrative, physical, and technical safeguards to protect this information, when in electronic form, from unauthorized use or disclosure. However, the HIPAA Rules apply only to covered entities (and in certain situations to their business associates). Not all investigators are part of a covered entity and thus some investigators are not required to comply with those rules. Moreover, the HIPAA Rules do not apply specifically to biospecimens in and of themselves.

One commenter proposed that the exclusion be expanded so that investigators from noncovered entities (as defined in the HIPAA Rules) would be eligible for the exclusion as well. Another commenter suggested that the HIPAA exclusion should be expanded to cover business associates and researchers that comply with HIPAA.

The NPRM asked whether the protections provided by the HIPAA Rules for identifiable health information used for health care operations, public health activities, and research activities are sufficient to protect human subjects involved in such activities, and whether the current process of seeking IRB approval meaningfully adds to the protection of human subjects involved in such research studies. Approximately half of the comments that addressed this question suggested that HIPAA protections are sufficient and that no additional safeguards were needed. Others expressed concern, and suggested that in some, if not all, of the categories in the HIPAA exclusion, HIPAA protections would not be sufficient.

One commenter suggested that this exclusion might be appropriate for health care operations or public health activities, but that the HIPAA rules were not sufficiently protective for research activities. Specifically, one commenter expressed concern that excluding from the Common Rule the use of PHI for research activities in HIPAA-covered entities would weaken protections for patients, because HIPAA's privacy safeguards were never intended to

replace human subject protections and associated ethical and scientific review.

One commenter also noted that other HHS preambles to rules have discussed the differences between the Common Rule and HIPAA, and these preambles noted that HIPAA was not intended to replace the Common Rule. This commenter suggested that given the language included in previous HHS preambles, additional justification for this exclusion would be needed before being included in a final rule.

One commenter felt that the HIPAA rules and HITECH adequately address the *Belmont Report* principles with respect to these exclusions from the Common Rule, but felt the exclusion should not be limited to covered entities. The commenter suggested that the exclusion be extended to noncovered entities that receive PHI and are required to apply HIPAA safeguards in addition to institutions with equivalent protections. Others suggested that the HIPAA and HITECH standards are too protective for much research.

Other commenters felt that this set of exclusions violates the protective mandate because HIPAA's provisions are narrow and do not reflect research ethics concerns. They noted that HITECH addresses technical data security for covered PHI for health care use but not for research use, especially if the data are sent elsewhere. Commenters felt that data used for research should be subject to HITECH data security standards and should not be excluded from Common Rule coverage.

Few commented on whether additional collections (*i.e.*, collections beyond what would ordinarily be collected through routine medical care) should be covered by this exclusion, and those that did suggested that they should be subject to the Common Rule unless those additional collections are covered by another exemption and exclusion.

The NPRM asked whether additional or fewer activities regulated under the HIPAA Privacy Rule should be included in this exclusion. One commenter expressed concern that the HIPAA Privacy Rule was not appropriate because it both underregulates and overregulates research. Another commenter felt that the exclusion creates confusion because HHS has, in other contexts, discussed the differences between the Common Rule and HIPAA and the differing needs in separate contexts.

(3) Public Comments on Research Conducted by a Government Agency Using Government-Generated or Government-Collected Data Obtained for Nonresearch Activities

Approximately 20 comments discussed this proposed exclusion. Public comment was mixed, with several commenters suggesting that they did not understand the full scope of the information generated or collected by the government that would fall under this exclusion. A minority of comments indicated that this category of activities should be exempt rather than excluded.

The NPRM also asked whether this or a separate exclusion should also include research involving information collected for nonresearch purposes by nonfederal entities where comparable privacy safeguards have been established by state law or regulation. Few responded to this question. Of these, several indicated that this exclusion should not be expanded to cover nonresearch data, and should not be expanded to cover activities conducted by nongovernmental investigators using government-generated or -collected data. Several comments indicated that this category was acceptable as an exclusion, with a few commenters suggesting that the category could be further broadened.

One commenter suggested that this provision should apply to nonfederal entities if state laws are as protective as the federal laws cited. This commenter indicated that for these types of activities, the Common Rule protections did not provide meaningful additional protections to subjects. In contrast, several other commenters expressed concern that the privacy safeguards identified in this exclusion were not as protective of subjects as the Common Rule. One commenter indicated that clarifying what constitutes appropriate nonfederal use of this exclusion would be needed.

One commenter suggested that this exclusion might be reasonable as an exclusion if there were a public posting requirement for activities conducted under this exclusion. If this were the case, this commenter indicated that investigator self-determination of whether an activity fit under this exclusion would be reasonable.

In response generally to the question of whether any of the exclusions should apply to activities involving prisoners, a small number of comments addressed this question in the context of this exclusion. Of these responses, comments were mixed.

ii. Response to Public Comments and Explanation of the Final Rule: Exemption for Secondary Research for Which Consent Is Not Required

This exemption at § ___.104(d)(4) is for secondary research uses of identifiable private information or identifiable biospecimens when consent is not required, if at least one of the following criteria is met:

- The identifiable private information or identifiable biospecimens are publicly available;
- Information, which may include information about the biospecimens, is recorded by the investigator in such a manner that the identity of human subjects cannot readily be ascertained directly or through identifiers linked to the subjects, the investigator does not contact the subjects, and the investigator will not re-identify subjects;
- The research involves only information collection and analysis involving the investigator's use of identifiable health information when that use is regulated under 45 CFR parts 160 and 164, subparts A and E, for the purposes of "health care operations" or "research" as those terms are defined at 45 CFR 164.501 or for "public health activities and purposes" as described under 45 CFR 164.512(b); or
- The research is conducted by, or on behalf of, a federal department or agency using government-generated or government-collected information obtained for nonresearch activities, if the research generates identifiable private information that is or will be maintained on information technology that is subject to and in compliance with section 208(b) of the E-Government Act of 2002, 44 U.S.C. 3501 note, if all of the identifiable private information collected, used, or generated as part of the activity will be maintained in systems of records subject to the Privacy Act of 1974, 5 U.S.C. 552a, and, if applicable, the information used in the research was collected subject to the Paperwork Reduction Act of 1995, 44 U.S.C. 3501 *et seq.*

The criteria for this exemption were proposed in the NPRM as three exclusions. The final rule modifies the NPRM proposal to allow this exemption to apply to secondary research involving identifiable biospecimens, provided that the exemption's conditions are met. Note that because the NPRM proposal to alter the definition of a human subject to extend to research involving nonidentified biospecimens was not adopted, an exemption for research with such biospecimens is not needed. Accordingly, this exemption is only

relevant to secondary research use of identifiable biospecimens.

The goal of the exemption at § _____.104(d)(4) is to facilitate secondary research using identifiable private information or identifiable biospecimens that have been or will be collected or generated for nonresearch purposes or from research studies other than the proposed research study. Unlike two other new exemptions that also relate to secondary research (the ones at § _____.104(d)(7) and § _____.104(d)(8), discussed below), this exemption does not depend on any consent requirements imposed by the Common Rule being met.

The first two provisions of this exemption (§ _____.104(d)(4)(i) and (ii)) are a modified version of the fourth exemption under the pre-2018 rule. The modified provisions allow the exemption to include research with information and biospecimens that do not yet exist when the research study is proposed for exemption (*i.e.*, that could be collected, for purposes not related to the proposed research study, in the future).

The third and fourth provisions of the exemption have no precursors in the pre-2018 rule. The third provision applies the exemption to secondary research using identifiable private information covered under HIPAA, and the fourth provision applies the exemption to secondary research using identifiable private information collected for nonresearch purposes by the Federal Government, if compliant with the three cited federal statutes. These new rules will allow investigators to see identifiable private information, and also allow them to retain and record that information (including the identifiers) as part of their research records.

We also note that, according to new language at § _____.104(b)(2) adopted as part of this final rule, this exemption permits the secondary research use of identifiable private information or identifiable biospecimens obtained from subjects who are prisoners, if the research is not designed in a way that seeks to recruit prisoners as a population but rather only incidentally (*i.e.*, not intentionally) includes prisoners.

(1) Response to Public Comments and Explanation of the Final Rule: Research Involving the Collection or Study of Identifiable Private Information or Identifiable Biospecimens That Are Publicly Available

The exemption criterion at § _____.104(d)(4)(i) is for secondary research if the identifiable private

information or identifiable biospecimens are publicly available. This would apply to secondary research use of archives in a public library, for example, or to government or other institutional records where public access is provided on request, or from a commercial entity if the information is provided to members of the public on request or if the only requirement for obtaining the information is paying a user fee, registering or signing in as a visitor to an archive. It would also apply if a commercial entity made identifiable biospecimens publicly available to anyone on request or for a fee. This exemption effectively acknowledges that for secondary research with publicly available information or biospecimens, IRB review would not reduce the risk.

(2) Response to Public Comments and Explanation of the Final Rule: Research Involving the Collection or Study of Information (Which May Include Information About Biospecimens) That Has Been or Will Be Collected and Is Recorded Without Identifiers

The provision at § _____.104(d)(4)(ii) exempts research involving identifiable private information, which may include information about biospecimens, if information is recorded by the investigator in such a manner that the identity of human subjects cannot readily be ascertained directly or through identifiers linked to the subjects, the investigator does not contact the subjects, and the investigator will not re-identify subjects. As with the provision at § _____.104(d)(4)(i), this provision is related to an exemption that existed in the pre-2018 rule. In this instance, that prior exemption is being extended to now also cover research with information for which identifiers have been removed when the original collection of information or biospecimens occurs in the future.

(3) Response to Public Comments and Explanation of the Final Rule: The HIPAA Exclusion

The provision at § _____.104(d)(4)(iii) permits the secondary research use of identifiable private information or identifiable biospecimens when the research involves only information collection and analysis involving the investigator's use of identifiable health information when that use is regulated under 45 CFR parts 160 and 164 (the HIPAA Privacy Rule), subparts A and E, for the purposes of "health care operations" or "research" as those terms are defined at 45 CFR 164.501, or for "public health activities" as described under 45 CFR 164.512(b).

With regard to the criterion at § _____.104(d)(4)(iii), HIPAA also provides protections in the research context for the information that would be subject to this exemption (*e.g.*, clinical records), such that additional Common Rule requirements for consent should be unnecessary in those contexts. Under HIPAA, these protections include, where appropriate, requirements to obtain the individual's authorization for future, secondary research uses of protected health information, or waiver of that authorization by an IRB or HIPAA Privacy Board. This provision introduces a clearer distinction between when the Common Rule and the HIPAA Privacy Rule apply to research in order to avoid duplication of regulatory burden. We believe that the HIPAA protections are adequate for this type of research, and that it is unduly burdensome and confusing to require applying the protections of both HIPAA and an additional set of protections.

This provision was not part of the pre-2018 rule, and was proposed as an exclusion in the NPRM. It is included as a component of an exemption in the final rule, consistent with public comments supporting the proposal.

(4) Response to Public Comments and Explanation of the Final Rule: Research Conducted by a Government Agency Using Government Generated or Government Collected Data Obtained for Nonresearch Activities

The provision at § _____.104(d)(4)(iv) did not exist in the pre-2018 rule and was proposed as an exclusion in the NPRM. It appears as a component of an exemption in the final rule. The exemption permits the use of identifiable private information or identifiable biospecimens for secondary research conducted by, or on behalf of, a federal department or agency using government-generated or government-collected information obtained for nonresearch activities, if the information originally involved a collection that adheres to the federal standards for safeguarding privacy as described in this part of the exemption.

We believe that the privacy protections are adequate for this type of research, and that it is unduly burdensome and confusing to require these protections and an additional set of protections. This provision has been modified to apply the federal statutory privacy safeguards identified in the exemption provision to both the original collection of the information, and to the secondary research use of the information to which the exemption applies.

e. Research and Demonstration Projects Conducted or Supported by a Federal Department or Agency (§ _____.104(d)(5))

i. Public Comments

Approximately 35 comments discussed the changes proposed in the public benefit or service program exemption. Few of the comments discussed the proposed expansion in OHRP's interpretation of this exemption to include the applicability of the exemption to cover research on public benefit and service programs that an agency does not itself administer through its own employees or agents, with a majority supporting the NPRM proposed expansion. One research university indicated that OHRP should not expand its interpretation of this exemption, and that it should be limited to "federally funded studies evaluating federal programs." This institution did not offer justification for its comment.

Few comments were received about the proposed requirement for exemption designation of research or demonstration projects to be posted to a publicly available federal Web site. The comments discussing this proposed requirement supported it.

The majority of comments indicated that no additional requirements or limitations should be imposed on this exemption. These institutions argued that because this exemption represented a mechanism through which the Federal Government evaluated its own programs, additional limitations and restrictions in the Common Rule did not seem appropriate.

Specifically, with respect to whether or not some sort of notice should be required here, several commenters noted that any notice would need to be meaningful. One commenter indicated that because meaningful notice would be difficult, a notice requirement should not be imposed. One comment suggested that notice should only be required if opt-out would be permitted, and if not, no notice requirement should be imposed. Groups representing AI/AN populations supported the notice requirement and indicated that it should be required at a minimum.

ii. Response to Comments and Explanation of the Final Rule: Exemption for Certain Research and Demonstration Projects Conducted or Supported by a Federal Department or Agency

The final rule includes this exemption as a modified version of an exemption proposed in the NPRM. The exemption at § _____.104(d)(5) in the final rule applies to research and demonstration projects involving public benefit or

service programs, and is a slightly revised version of the exemption in the pre-2018 rule. This revision is designed to clarify the scope of the exemption so that more research studies would be eligible, and to make the exemption easier to apply. It is also designed to allow the Federal Government to carry out important evaluations of its public benefit and service programs to ensure that those programs are cost effective and provide the intended benefits or services, consistent with the principle of beneficence. The wording of the exemption has added "improve" to the purposes of these activities, to make more explicit the idea that the Federal Government conducts these activities in order to enable them to make the public benefit and service programs better, and not just to gauge their current quality.

This exemption is for research and demonstration projects that are conducted or supported by a federal department or agency, or otherwise subject to the approval of department or agency heads. It applies to activities that are designed to study, evaluate, improve, or otherwise examine public benefit or service programs, including, but not limited to: Procedures for obtaining benefits or services under those programs; possible changes in or alternatives to those programs or procedures; or possible changes in methods or levels of payment for benefits or services under those programs.

In addition, the final rule clarifies the language of the exemption to conform to OHRP's previous interpretation of public benefit and service programs that are being evaluated as part of the research. This interpretation includes public benefit or service programs that a Common Rule department or agency does not itself administer or conduct through its own employees or agents, but rather supports through a grant or contract program. Therefore, the exemption applies to research and demonstration projects supported through, for example, federal grants or cooperative agreements. These changes would bring the regulatory language into conformance with other provisions of the rule that refer to research "conducted or supported" by federal departments and agencies. These methods of administration are, of course, always subject to department or agency head approval, either directly or by delegation. In addition, some of these research and demonstration projects are conducted through waivers, interagency agreements, or other methods that also require agency head approval. Accordingly, both the previous and revised language allow for the full

panoply of methods by which research and demonstration projects on public benefit or service programs can be carried out.

The wording of the exemption also is clarified to specifically include projects involving waivers of otherwise mandatory requirements using authorities such as sections 1115 and 1115A of the Social Security Act, in order to make it plain that such research projects on public benefit or service programs qualify for the exemption. The relevant sections of the Social Security Act were also cited when this exemption was published in 1983.

In the interest of transparency, as was proposed in the NPRM, the final rule requires that each federal department or agency conducting or supporting the research and demonstration projects must establish, on a publicly accessible federal Web site or in such other manner as the department or agency head may determine, a list of the research and demonstration projects the federal department or agency conducts or supports under this provision. The research or demonstration project must be published on this list before beginning the research involving human subjects. The department or agency head can determine what sort of information will be included on this list and maintains its oversight. Departments and agencies that already publish research and demonstration projects on a publicly accessible Web site could satisfy this proposed requirement if the existing Web site includes a statement indicating which of the studies were determined to meet this exemption.

The goal of this proposed requirement is to promote transparency of federally conducted or supported activities affecting the public that are not subject to oversight under the Common Rule. It should not cause any delay to the research. HHS will develop a resource that all Common Rule departments and agencies may use to satisfy the requirement at § _____.104(d)(5)(i). Alternatively, an agency can create or modify its own Web site for this purpose.

The exemption is not modified to require notice, to apply only to minimal risk research activities, or to require the privacy safeguards, for reasons reflected in the public comments. We agree with the public comments that argued that in many cases notice would be difficult or impossible to achieve effectively, and that this exemption enables the Federal Government to conduct important evaluations of its own programs that provide significant benefits to the public. In addition, federal departments

and agencies are already subject to other laws and policies that protect the interests of research subjects (e.g., the Privacy Act).

f. Taste and Food Quality Evaluation and Consumer Acceptance Studies (§ _____.104(d)(6))

i. Public Comments

Approximately 20 comments discussed this exemption for taste and food quality evaluation and consumer acceptance studies. The NPRM did not propose changes to this exemption from what appeared in the pre-2018 rule. However, it did ask whether this exemption should be narrowed to apply only to activities for which prospective subjects have been given prior notice, and if so, how that notice should be issued. The NPRM further asked whether subjects should be allowed to opt out of exempt research.

A majority of comments received indicated that the final rule should maintain this exemption without any additional requirements. Commenters generally did not include explanation of this position. A small minority of commenters indicated that subjects should explicitly be provided the opportunity to opt out of this type of activity. In addition, a small minority of commenters indicated that subjects should be given notice before participation. One comment suggested that this exemption include “odor” evaluations as well.

ii. Response to Comments and Explanation of the Final Rule: Exemption for Taste and Food Quality Evaluation and Consumer Acceptance Studies

The final rule retains the exemption from the pre-2018 rule, which was proposed in the NPRM without any change, for taste and food quality evaluation and consumer acceptance studies. This exemption applies if wholesome foods without additives are consumed, or if a food is consumed that contains a food ingredient at or below the level and for a use found to be safe, or agricultural, chemical or environmental contaminant at or below the level found to be safe by FDA or approved by the Environmental Protection Agency or the Food Safety and Inspection Service of the U.S. Department of Agriculture. This exemption is retained unchanged from the pre-2018 rule.

g. Secondary Research Use of Identifiable Private Information or Identifiable Biospecimens (or Storage or Maintenance for Such Secondary Research Use) for Which Broad Consent Is Required (§ _____.104(d)(7) and (8))

The final rule includes two exemptions related to the secondary research use (including storage or maintenance for such use) of identifiable private information and identifiable biospecimens that require a subject’s broad consent.

The first of these exemptions is in the final rule at § _____.104(d)(7), and applies to storing and maintaining identifiable private information or identifiable biospecimens for secondary research use.

The second of these exemptions is in the final rule at § _____.104(d)(8) and applies to the secondary research use of identifiable private information and identifiable biospecimens for specific secondary research studies. Secondary research under this exemption would generally be conducted with the information or biospecimens stored and maintained under the exemption at § _____.104(d)(7).

Both of these exemptions for the secondary use of identifiable private information and identifiable biospecimens require broad consent and are discussed in detail below. As with the secondary use exemptions that do not require the subject’s broad consent (discussed above in Section V.3.d. of the preamble), the two exemptions at § _____.104(d)(7) and (8) are also limited to “secondary research.” These exemptions pertain only to research that involves re-using information or biospecimens that were or will be collected for some other “primary” or “initial” activity distinct from using them in secondary research. These exemptions do not cover any primary collections of either information or biospecimens. In other words, if an investigator wants to collect information directly from research subjects, for example, by asking them to complete a questionnaire, that would not be covered by these exemptions. Or if an investigator wants to collect biospecimens by having subjects swab their cheeks, that collection would similarly not be covered by these exemptions. On the other hand, an investigator who wants to use information that is in some databank, or to use biospecimens that are in a pathology laboratory, could use these exemptions, assuming all of the relevant conditions of the exemptions were met.

i. Public Comments on the Proposed Exemptions for Secondary Research Use of Identifiable Private Information or Identifiable Biospecimens (or Storage or Maintenance for Such Secondary Research Use) for Which Broad Consent Is Required

In combination, approximately 150 comments discussed these proposals. Although commenters generally supported creating a pathway for low-risk research with biospecimens to occur without IRB review, a majority opposed the overarching proposal that these exemptions would, for the most part, be the only way (besides study-specific consent) for research with biospecimens to occur. Many of the arguments for and against these exemptions were outlined in section III.D, summarizing public comments received on the proposal to define “human subject” as including all biospecimens used in research, regardless of identifiability.

Many commenters opposed the idea that the exemption should allow specific secondary studies involving biospecimens retained with identifiers to occur without IRB review. These commenters noted that IRBs are required to assess more than privacy and confidentiality protections, and whether informed consent was sought and obtained. Other commenters noted that by effectively encouraging the retention of identifiers with biospecimens (which would likely be required to track which specimens could be used in research at an institution), the NPRM proposals effectively introduced new privacy and confidentiality risks to subjects that did not exist under the pre-2018 rule.

Some commenters who supported the expanded definition of human subject to include all biospecimens did not support these exemptions. These comments were mostly from members of the public and they generally argued that study-specific consent should be sought and obtained from subjects for every study involving that person’s biospecimens. These comments expressed concern that, with broad consent, investigators could still engage in research activities without the individuals’ knowledge.

Several commenters expressed opposition to the NPRM proposal that the exemption could not be used if the investigator intended to return research results to subjects. These commenters saw this as a disincentive to return research results and also noted that it seemed at odds with existing law (e.g., HIPAA) and policy. Specifically, they argued, because patients are entitled

under HIPAA to the contents of their medical records, investigators must always be ready to return research results to subjects enrolled in their studies.

The NPRM inquired about whether the proposed exemption was the best option, or whether there is a better way to balance respect for persons with facilitating research. Responses to this question were mixed, with a majority indicating that the proposed exemptions were not the best option. One comment indicated that broad consent would be reasonable if the consent was meaningful.

Other commenters opposed the proposal as written. One felt it provided too little information and another found the language too complex and subject to misinterpretation. One institution asserted that the exemption would pose a burden on the research enterprise, would make a significant subset of studies impracticable, and would increase costs.

Still other commenters indicated that consent should not be required for secondary research with biospecimens, noting that it was contradictory to determine that a type of research was exempt but still require consent, or that this exemption should not apply to state-mandated newborn DBS programs. One commenter suggested, "A far better option would be to include an exemption for the secondary research use of de-identified or nonidentified biospecimens, without the caveat of requiring a broad consent."

The NPRM requested public comment on whether and how the provision regarding the return of research results should be revised. Public comment was mixed in response to this question. Several comments indicated that the provision was too complex to follow.

Comments that supported the provision about the return of research results in the proposed exemption stressed the complexity of decisions around returning results and many indicated support for required IRB review of investigators' plans for returning research results. One professional organization also emphasized the need to communicate to potential participants during the informed consent process the policies concerning the return of individual research results. Many commenters also called for detailed OHRP guidance on this provision.

One commenter suggested that the broad consent required when biospecimens are collected for storage for future research use include an indication as to whether potential subjects would like to be re-contacted

with individual research results if applicable.

Other commenters were opposed to the provision as written. One large health system indicated that the provision discourages researchers from returning research results to participants and from providing participants with easy access to their individual research data. The commenter emphasized that "Respecting research participants as partners obligates us to avoid the assumptions that researchers, an IRB, or even a panel of experts . . . know best." The commenter went on to say: "While the NPRM suggests researchers cannot use the Common Rule as a shield from a request to deliver a designated record set upon request, the policy seems to discourage equitable research practices and allows informational disparities to continue. This does not serve the interest of justice."

In addition, one professional organization indicated concern that the provision might be interpreted by some to say that IRBs should not allow return of results, which it felt would create a bad situation.

The NPRM sought comment on whether there should be an additional exemption that would permit the collection of biospecimens through minimally invasive procedures (*e.g.*, cheek swab, saliva). A strong majority of commenters indicated no need for an additional exemption to permit the collection of biospecimens through minimally invasive procedures. One professional organization asserted that specimens should not be treated differently based on how they were collected. Other commenters indicated that obtaining specimens through minimally invasive procedures is similar to data collection and should be treated the same way.

ii. Explanation of the Final Rule: Exemptions for Secondary Research Use of Identifiable Private Information or Identifiable Biospecimens (or Storage or Maintenance for Such Secondary Research Use) for Which Broad Consent Is Required

(1) Exemption for the Storage or Maintenance for Secondary Use of Identifiable Private Information or Identifiable Biospecimens for Which Broad Consent is Required (§ ____ .104(d)(7))

Section ____ .104(d)(7) is an exemption for the storage or maintenance for secondary research use of identifiable private information or identifiable biospecimens. It requires that an IRB conduct limited IRB review

to make the following determinations (required by § ____ .111(a)(8)):

- Broad consent for storage, maintenance, and secondary research use of identifiable private information or identifiable biospecimens is obtained in accordance with the requirements of § ____ .116(a)(1)–(4), and (a)(6), and (d);
- Broad consent is appropriately documented or waiver of documentation is appropriate, in accordance with § ____ .117; and
- If a change is made for research purposes in the way the identifiable private information or identifiable biospecimens are stored or maintained, adequate provisions must be in place to protect the privacy of subjects and to maintain the confidentiality of data.

This exemption is similar to the exemption proposed in the NPRM at § ____ .104(f)(1), but it has been modified in some respects, and the operation of this exemption is also affected by other changes in the final rule that are different from the NPRM. Namely, the exemption has been modified to apply only to storage or maintenance for secondary research use of identifiable private information or identifiable biospecimens, because the final rule does not incorporate the NPRM proposal to alter the definition of a human subject to extend to research involving biospecimens regardless of their identifiability. This exemption was also modified given the decision not to adopt the privacy safeguards proposed in the NPRM at § ____ .105.

In addition, the Secretary's template for broad consent is not being finalized for this exemption. Instead, institutions will have the flexibility to create their own consent forms that satisfy requirements at § ____ .116(a)(1)–(4), (a)(6) and (d) (see Section XIV). The consent form may be electronic.

Given these changes from the NPRM proposal, the limited IRB review requirement for this exemption provided at § ____ .111(a)(8) has been expanded in the final rule to require that the IRB make the following determinations, some of which are similar to those proposed in the NPRM.

The final rule requires that for the exemption to apply, the IRB must determine that broad consent for storage, maintenance, and secondary research use of identifiable private information or identifiable biospecimens is obtained in accordance with the requirements of § ____ .116(a)(1)–(4), (a)(6), and (d); This includes the requirement proposed in the NPRM that there be IRB review of the process through which broad consent will be obtained.

Also, given that we are not finalizing the proposed requirement to use the Secretary's template for broad consent, the final rule includes in this requirement that an IRB determine that the broad consent includes the requirements and elements of consent in accordance with § _____.116(a)(1)–(4), (a)(6), and (d).

The final rule also requires that the IRB determine that broad consent is appropriately documented or waived in accordance with § _____.117. Although written broad consent generally will be required for this exemption to apply, the final rule also permits the exemption to apply when broad consent is obtained and an IRB has waived the documentation requirement for written informed consent under § _____.117(c)(1).

And because the proposed privacy safeguards proposed in the NPRM at § _____.105 are not included in the final rule, if a change will be made for research purposes in the way the identifiable private information or identifiable biospecimens are stored or maintained, the IRB must determine that when appropriate, adequate provisions are in place to protect the privacy of subjects and to maintain the confidentiality of data. This is the same IRB determination related to privacy and confidentiality that is required for nonexempt research. Importantly, this IRB determination is required only when a change is made for research purposes in the way the identifiable private information or identifiable biospecimens are stored or maintained, and only pertains to the aspects of storage and maintenance that are changed for research purposes. In this circumstance, the investigators are assuming responsibility for the manner in which the information and biospecimens are stored and maintained, and the IRB should be required to ensure that appropriate protections for the subjects are place with regard to the aspects of storage or maintenance that were changed for research purposes.

If, on the other hand, no changes are being made for research purposes to the storage or maintenance, then this IRB determination does not apply. The institution storing and maintaining the information or biospecimens of course still has its responsibility to determine what protections distinct from those required by the Common Rule are appropriate, which may include other legal or regulatory safeguards or institutional policies. In light of application of such additional safeguards, it appears unnecessary to require additional protections through a requirement of this final rule simply

because the individuals providing broad consent have agreed that their biospecimens or information could be used for research at some point in the future. And of course this provision regarding changes made for research purposes applies only when a Common Rule department or agency supports or conducts the research activity.

Note that in many instances the only change that results from a person having signed a broad consent form for research relating to storing and maintaining that person's biospecimens or information is that the institution that is already holding the biospecimens or information (for clinical purposes, for example) merely creates a record indicating that this person has signed such a consent form. The biospecimens and information could remain stored in whatever way (and for whatever period of time) that the institution had previously been storing them, based on the legitimate nonresearch or research-related reasons that the institution has used for initially collecting and storing those biospecimens and information. Any privacy and security protections (outside of the Common Rule) that already may apply to the institution's information record-keeping or biospecimen preservation activities would continue to apply. The Common Rule's protections would not apply before a change in storage or maintenance occurs for research purposes, but rather the institution would continue to operate in accordance with its pre-existing legitimate reasons for having and storing the biospecimens and information. The fact that the broad consent form has been signed does not by itself mean that there needs to be any alteration of what the institution is already doing with the biospecimens or information.

Examples of changed aspects of storage or maintenance for research purposes that would require the IRB to find, before those changes go into effect, whether there are adequate provisions to protect the privacy of subjects and maintain the confidentiality of data include the following: If information or biospecimens are moved from one electronic or physical storage location to another due to considerations related to research plans; if information or biospecimens will be stored for longer than they otherwise would have been for the original purpose; if information or biospecimens are placed in a research registry or repository created to serve as a resource for investigators; or investigators are given electronic or physical access to the information or biospecimens. The relevant changes do not necessarily involve moving

information or biospecimens from one location to another. Rather, the relevant changes include any change for research purposes that introduces or alters risks to the privacy or security of the stored information or biospecimens, including giving access to or transferring information or biospecimens for research purposes to someone who otherwise would not have access.

The rationale for this exemption is that with the requirement for limited IRB review and the specified required IRB determinations, including subjects' broad consent, this exemption respects subjects' autonomy and provides appropriate privacy safeguards. More specifically, we believe that broad consent provides some measure of autonomy for individuals to decide whether to allow the research use of their identifiable private information or identifiable biospecimens, without imposing the kind of burden on investigators that would result from a requirement for specific informed consent for each secondary research study. We believe that it is appropriate to create a mechanism for broad consent for secondary research use, even if it involves the potential risk of having identifiers associated with the identifiable private information or identifiable biospecimens. We believe the administrative burden is also acceptable in order to allow for broad consent for secondary research use.

(2) Exemption for Research Involving the Use of Identifiable Private Information or Identifiable Biospecimens for Which Broad Consent is Required (§ _____.104(d)(8))

Section _____.104(d)(8) is an exemption that also requires that broad consent has been obtained, and is for research involving the use of identifiable private information or identifiable biospecimens. This exemption will frequently be paired with the exemption at § _____.104(d)(7), which permits the storage and maintenance of identifiable private information and identifiable biospecimens for secondary research use. The exemption at § _____.104(d)(8) would apply to a specific secondary research study, provided that the following criteria are met:

- Broad consent for the storage, maintenance, and secondary research use of the identifiable private information or identifiable biospecimens was obtained in accordance with § _____.116(a)(1)–(4), (a)(6), and (d);
- Documentation of informed consent or waiver of documentation of consent

was obtained in accordance with § _____.117;

- An IRB conducts a limited IRB review to make the determination required by § _____.111(a)(7), and to make the determination that the research to be conducted is within the scope of the broad consent; and
- The investigator does not include returning individual research results to subjects as part of the study plan. However, it is permissible under this exemption to return individual research results when required by law regardless of whether or not such return is described in the study plan.

This exemption could also apply if the investigator obtains appropriate broad consent from the subject in addition to the consent to an original specific study, and then proceeds to use the information or biospecimen in a secondary study.

The exemption at § _____.104(d)(8) is similar to the exemption proposed in the NPRM, but it has been modified in some respects. As with the exemption at § _____.104(d)(7), the operation of the exemption at § _____.104(d)(8) is also affected by other provisions in the final rule that are different from what was proposed in the NPRM. Namely, the exemption has been modified to apply only to storage or maintenance for secondary research use of identifiable private information or identifiable biospecimens because the final rule does not incorporate the NPRM proposal to alter the definition of a human subject to extend to research involving biospecimens regardless of their identifiability.

Due to the decision not to adopt the proposed privacy and security safeguards proposed in the NPRM at § _____.105, this exemption was also modified to require that limited IRB review include an IRB determination that, when appropriate, adequate provisions are in place to protect the privacy of subjects and the confidentiality of data (§ _____.111(a)(7)). This is the same IRB approval criteria related to privacy and confidentiality that is required for nonexempt human subjects research.

In addition, because the final rule does not include a broad consent template when a specific study has been proposed, it is required that the study be reviewed by an IRB to determine whether the proposed secondary analysis fits within the parameters of the broad consent that was obtained for secondary research use.

We believe that the final rule's requirement for limited IRB review of the privacy and confidentiality protections and the adequacy of the

broad consent is responsive to commenters who believe that IRB oversight should be retained for the secondary research use of identifiable private information and identifiable biospecimens.

We recognize commenters' point that this exemption does not provide an incentive to investigators to provide individual research results to subjects, but we believe that the challenges of how and when to return such results warrant consultation with the IRB. We note that with the other revisions to the NPRM proposals, other options for research involving identifiable private information and identifiable biospecimens exist, which would be consistent with having plans for returning individual results. Although broad consent may include a statement that clinically relevant research results might be returned to subjects, we believe that when specific secondary studies include such a plan to return research results, it would almost always be appropriate for the study to be reviewed by an IRB, in part to better ensure that research results are disclosed to subjects in an appropriate manner. The only exceptions would be if the research qualified for another exemption, an IRB waived informed consent under § _____.116(e) or (f), or the research was carried out under a Secretarial waiver at § _____.101(i). We expect that as part of the IRB's review, the IRB would consider what subjects were told in the broad consent regarding the return of research results.

It should be noted that the two exemptions in the final rule at § _____.104(d)(7) and (8) create additional options for investigators to conduct secondary research studies with identifiable private information. The final rule retains, largely unchanged, the options previously available to investigators in the pre-2018 rule. For instance, the final rule retains the pre-2018 criteria for requesting a waiver of consent in order to carry out those studies without obtaining consent. Moreover, secondary research using nonidentified biospecimens would not have to meet these requirements, because the final rule does not finalize the NPRM proposal to alter the definition of a human subject to include research involving nonidentified biospecimens under the rule.

h. NPRM Proposal To Delete the Pre-2018 Rule's Exemption for Surveys and Interviews of Public Officials

The NPRM proposed to delete language found in the pre-2018 rule that exempted surveys and interviews with public officials. Approximately 100

comments discussed this proposed deletion and it was almost universally opposed. Political science professors, students, researchers, and academics from other disciplines generally addressed this deletion.

Comments argued that this deletion would have a chilling effect on political science research and might make political science researchers more vulnerable to law suits. Other comments noted that public officials are generally treated differently in numerous laws, and it is in fact appropriate for the Common Rule to have a different standard for surveys and interviews with public officials. Comments also suggested that this deletion could negatively affect the public's ability to hold public officials accountable for their actions. One commenter suggested that instead of deleting this exemption, a final rule might consider explicitly limiting this exemption to studies that relate to the public officials in their official capacity.

The final rule removes the exemption category in the pre-2018 rule at § _____.101(b)(3)(i), which pertained to research involving the use of educational tests, survey procedures, interview procedures, or observation of public behavior, if the human subjects are elected or appointed public officials or candidates for public office, or if federal statute requires without exception that the confidentiality of the personally identifiable information will be maintained throughout the research and thereafter. We note that many of the public comment concerns are addressed by other provisions in the final rule. Almost all of the research activities in this category would already be exempted under the final rule at § _____.104(d)(2), without needing to single out elected or appointed officials as being treated differently in this way. If the research is designed to provide sensitive generalizable knowledge about officials, then the identifiable private information obtained should be kept confidential as required by this final rule. If the purpose of the activity is in fact designed to hold specific elected or appointed officials up for public scrutiny, and not keep the information confidential, such an activity is not considered research under the provision at § _____.102(l)(2).

Thus, the final rule adopts the NPRM proposal.

i. NPRM Proposal To Exempt Secondary Research Use of Identifiable Private Information Where Notice Was Given

One exemption proposed in the NPRM is not included in the final rule. Note that exclusions proposed in the

NPRM and not included in the final rule also are described in Section III.I.4 of this preamble.

The NPRM proposed to exempt certain secondary research activities involving identifiable private information where notice of such use had been given. The proposed exemption was included, in part, to be responsive to section 511 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA), which requires the Secretary to issue a clarification or modification with respect to the application of these regulations to certain activities involving clinical data registries. The preamble for the Common Rule NPRM noted “. . . this exemption category might allow certain research activities of these clinical data registries not otherwise covered by the proposed HIPAA-related exclusion (*i.e.*, when the clinical data registries are not part of a HIPAA covered entity or acting as a business associate), such as when a clinical data registry may receive information from a health care entity for research purposes.”

Approximately 70 comments discussed this proposal, with the vast majority from institutions. A minority of commenters (14) supported the NPRM proposal as drafted. In addition, 11 commenters who did not indicate whether they supported the inclusion of this proposal in a final rule asked questions about implementation and the meaning of “notice” under this proposal.

A majority of commenters (41) opposed the proposal as drafted in the NPRM, citing a variety of conflicting reasons:

- Sixteen commenters felt that the NPRM proposal was too permissive as drafted, and that it would not provide adequate protections to prospective subjects. Many of these commenters also suggested that the proposal as drafted did not respect subject autonomy interests sufficiently in not providing subjects with an ability to opt out. They indicated that the exemption might be acceptable if additional requirements (such as subject opt out), or additional limitations (such as limiting the nonresearch information to which this exemption applies to data governed by certain privacy-oriented laws) were implemented.

- Fourteen commenters felt that the NPRM proposal was too restrictive, and that as drafted it would not achieve the stated goal of reducing administrative burden on IRBs. These commenters specifically discussed the implementation burdens involved in providing notice to prospective subjects.

These commenters also noted that providing an option to opt out would be very burdensome to IRBs and investigators, an outcome that seemed counter to the justifications the NPRM provided for this exemption.

- Five commenters felt that the type of research encompassed by this proposal should not be exempted from the Common Rule, and that IRB review or informed consent should be required instead.

Approximately 25 comments discussed whether the NPRM proposal was necessary to enable activities involving qualified clinical data registries. A majority of these comments indicated that because the activities would be subject to the HIPAA regulations, protection of subjects would not be enhanced by the proposed NPRM exemption. Several commenters pointed out that qualified clinical data registries also might qualify for exclusion under the NPRM proposal at 101(b)(2)(ii). Additional comments suggested that other NPRM exemptions and exclusions would cover activities with qualified clinical data registries without commenting on which exemptions and exclusions applied.

The NPRM included the exemption at § _____.104(e)(2), in part, to be responsive to section 511 of MACRA, but commenters expressed little support for this exemption, even for activities carried out by clinical data registries. Section 511 of MACRA has directed the Secretary of HHS to issue a clarification or modification with respect to the application of the Common Rule to activities involving clinical data registries, including quality improvement activities. With this final rule, the Secretary of HHS is providing that clarification here. Because clinical data registries are created for a variety of purposes, and are designed and used in different ways, there is no simple, single answer regarding how the Common Rule applies to clinical data registries. The Secretary of HHS has received advice from SACHRP on this topic, and SACHRP recommended that the pre-2018 rule was adequate to apply to clinical data registries without those registries being given any distinctive status. The Secretary of HHS believes that the same is true for the final rule, and so has not created a specific provision for clinical data registries.

The final rule does not impose any requirements on a large portion of the activities related to clinical data registries. The following points are important: First, the rule does not apply to clinical data registry activities not conducted or supported by a Common Rule department or agency. Second,

many clinical data registry activities, including many quality improvement activities, do not meet the definition of research, and so the Common Rule does not apply. For example, the creation of a clinical data registry designed to provide information about the performance quality of institutional care providers, and whose design is not influenced or altered to facilitate research, is not covered by this rule even if it is known that the registry will be used for research studies. Third, the Common Rule does not apply to a clinical data registry research study that only involves obtaining and analyzing nonidentified information because that activity would not involve a “human subject” as defined by the rule. Fourth, some clinical data registry research activities may qualify for exemption under the proposed provision at § _____.104(d). Fifth, if an institution solely releases identifiable private information that was obtained in the course of patient clinical care to a clinical data registry for research, that institution is considered to be not engaged in human subjects research, and no requirements of the rule apply to that institution.

In contrast, if investigators receive funding from a Common Rule department or agency to design a clinical data registry for research purposes and the registry includes identifiable private information, or involves interacting with individuals (*e.g.*, a research survey), then such an activity involves human subjects research, but may be exempt if it meets one or more of the exemption categories under § _____.104(d)(7). Similarly, if investigators use federal support to obtain identifiable private information from a clinical data registry to conduct a research study, then such secondary research use of clinical registry information would involve human subjects research and the requirements of the rule would apply, although the research may qualify for exemption under § _____.104(d)(8). This is comparable to how the rule applies to a research study that involves chart review of identifiable private information drawn directly from hospital medical records.

VI. Protection of Identifiable Private Information and Identifiable Biospecimens

A. Background and Pre-2018 Requirements

Increasing research use of genetic information, information obtained from analysis of biospecimens, and the ability to more easily merge multiple sources of

administrative and survey datasets (e.g., medical records, claims data, vital records, and information about lifestyle behaviors from surveys) are some examples of how advances in research have increased the risks of data breaches that reveal identifiable private information. For example, the unauthorized release or use of information about subjects such as the disclosure of Social Security or Medicare numbers may pose financial risks, and disclosure of illegal behavior, substance abuse, or chronic illness might jeopardize subjects' current or future employment, or cause emotional or social harm.

Based on questions from and conversations with members of the regulated community, we are aware that IRBs are not always equipped with the expertise needed to evaluate risks to privacy and confidentiality, specifically regarding sophisticated IT security. However, we note that no data suggest that IRBs are currently approving research without requiring appropriate privacy and confidentiality safeguards. Despite this, we recognized that setting standards could assure appropriate privacy and confidentiality consideration and consequent protections to all research subjects, without the administrative burden of needing a specific committee review of the privacy and confidentiality protections of each study. To that end, the 2011 ANPRM suggested establishing mandatory data security and information protection standards for all studies that involve the collection, generation, storage, or use of identifiable or potentially identifiable information that might exist electronically or in paper form or be contained in a biospecimen. It put forward the idea that these standards might adopt the categories used in the HIPAA Rules and asked a series of questions about how best to protect private information.

B. NPRM Proposal

A goal of the NPRM was to ensure that researchers protect the privacy of their participants and the security of the data, calibrated to the likelihood of identifiability and sensitivity of the information being collected. The NPRM proposed to require that investigators and institutions conducting research subject to the Common Rule implement reasonable safeguards for protecting against risks to the security or integrity of biospecimens or identifiable private information. Given the significant concerns of public commenters about an idea discussed in the 2011 ANPRM of adopting the standards solely modeled on certain standards of the HIPAA

Rules, the NPRM proposed several sets of standards, and allowed a choice about which set to use.

First, the NPRM proposed that the Secretary of HHS could publish a list of specific measures that an institution or investigator could use to meet the security requirements. The list would be evaluated and amended, as appropriate, after consultation with other Common Rule departments and agencies. The proposed list would be published in the **Federal Register**, and public comment on the proposed list would be sought before the list was finalized.

The specific safeguards that would be identified by the Secretary would be designed so that they could be readily implemented by the individual investigator, and could build on existing safeguards already in place to protect research data. These standards would include security safeguards to assure that access to physical biospecimens or data is limited only to those who need access for research purposes. The standards would also assure that access to electronic information is authorized only for appropriate use. Finally, the safeguards, collectively referred to as "privacy safeguards," would assure that information and biospecimens posing informational risks to subjects would be protected according to appropriate standards.

Second, the NPRM proposed that if an institution or investigator is currently required to comply with the HIPAA rules, then the safeguards required by the Common Rule would be satisfied. No additional requirements were proposed to protect information subject to the HIPAA Rules. The NPRM also proposed to clarify that the proposed provisions would not amend or repeal the requirements of 45 CFR parts 160 and 164 for the institutions or investigators to which these regulations apply pursuant to 45 CFR 160.102. Institutions or investigators that are not required to follow HIPAA could voluntarily implement the HIPAA Rules and be considered as satisfying the proposed requirements. The NPRM also proposed that for federal departments and agencies that conduct research activities that are or will be maintained on information technology that is subject to and in compliance with section 208(b) of the E-Government Act of 2002, 44 U.S.C. 3501 note, if all of the information collected, used, or generated as part of the activity will be maintained in systems of records subject to the Privacy Act of 1974, 5 U.S.C. 552a, and the research will involve a collection of information subject to the Paperwork Reduction Act of 1995, 44

U.S.C. 3501 *et seq.*, the requirements would be satisfied.

For purposes of informing the development of the proposed privacy safeguards, the NPRM sought comment on the types of safeguards that would be appropriate for the Secretary's list. The NPRM also noted that additional statutes or acts mandate the protection of privacy and confidentiality of identifiable private information. It might be reasonable to include these as additional standards that would meet the proposed requirement if they were met in research that is subject to those standards or for which an investigator or institution has voluntarily elected to comply. Public comment was sought on whether any of these existing statutes or acts would serve the goals of proposed privacy safeguards.

The NPRM also included conditions for use and disclosure of research information to other entities. It required that protections be in place when a biospecimen or identifiable private information is shared for appropriate research or other purposes. Unless required by law, the NPRM proposed to limit the re-disclosure of identifiable private information or release of biospecimens obtained for research.

The NPRM asked for feedback on whether limiting re-disclosure to four specific circumstances unless such a disclosure was "required by law" would be too restrictive, or whether more permissive standards would better facilitate the NPRM goal of fostering the secondary research use of information. The NPRM also whether the proposed limitations on re-disclosure were more or less restrictive than necessary and whether there should be additional purposes for which release of biospecimens or re-disclosure of identifiable private information would be permitted should be allowed.

The NPRM justified this change by arguing that its benefit would be that IRBs would not be required to review the individual plans for safeguarding information and biospecimens for each research study. Although the NPRM presumed that the proposed privacy safeguards would be sufficient, an IRB could determine that a particular activity would require more than what was proposed. Once IRBs became familiar with standard institutional and investigator-adopted protections, the NPRM anticipated that they would become more comfortable with the fact that they need not review every protocol for privacy safeguards. In addition, it was expected that if the proposed privacy safeguards were adopted, overall reduction in regulatory burden would occur because IRBs would not

have to review security provisions on a case-by-case basis.

Finally, as discussed in Section V, the NPRM contained proposed exemptions that would have permitted a larger number of protocols to proceed without IRB review if specific conditions were met, conditioned on investigators and institutions also meeting the proposed privacy and security requirements. Note that there was no requirement for an IRB to determine whether investigators were adhering to the privacy safeguards for such exempt research.

C. Public Comments

Approximately 130 comments addressed the privacy safeguards, with a majority generally supporting the proposal. Both those who supported the proposal and those who opposed it indicated that it was difficult to comment on the adequacy of privacy standards that had yet to be developed.

Those who supported the proposal stated that having standardized, minimum safeguards would create more consistency across IRBs in how biospecimens and identifiable private information are protected. Those who were opposed to the proposal stated that patient information is already covered by HIPAA security standards and student records are already covered by FERPA, arguing that these plus an array of other standards cover financial and various other types of sensitive information, making inclusion in the Common Rule redundant.

However, several comments asserted that the HIPAA standards, while appropriate for health information, would not be appropriate for other types of research data. Others noted that the wide range and nature of research makes it too challenging to develop a blanket standard. With regard to applying the standards to exempt research, one large association of research universities, medical centers, and independent research institutes argued that research covered by the proposed exempt or excluded categories should be low risk and therefore third party evaluation of privacy safeguards was not needed. Several academic research institutions urged that if the security and privacy requirements were included in the final rule, then the measures should be as simple as possible. For example, they suggested developing a single set of standards for all identifiable data rather than calibrating the safeguards to the sensitivity of the information to be collected.

A few comments addressed the proposed re-disclosure criteria. Of these, a majority indicated concerns with the

NPRM redisclosure provision. Most of the opposition was specifically aimed at imposing the sharing criteria for nonidentified biospecimens. These commenters indicated that for sharing nonidentified biospecimens, imposing HIPAA-like privacy safeguards was unnecessary and would be extremely burdensome. Several comments suggested that the Common Rule adopt the same permissible uses and disclosures of information without authorization that exists under HIPAA.

One scientific professional organization and more than 60 institutions endorsing its comments noted that specific redisclosure considerations should exist for identifiable biospecimens, stating that redisclosure of the identity of the source of a biospecimen is appropriate in rare situations in which a confirmed research finding may have a significant impact on the health of the donor of the specimen. A large, private higher education institution noted that the limitations on use, release, and disclosure as proposed seemed at odds with the permissible uses and disclosures allowed under HIPAA.

Others suggested that the language stating that biospecimens or identifiable private information could be released for any lawful purpose with the consent of the subject was too open-ended and permissive. One data privacy and security advocacy group also noted that the introductory language to the proposed safeguards could be read as requiring an investigator to release research biospecimens or disclose identifiable private information upon receipt of a valid request, as opposed to simply permitting an institution to do so. One academic research organization suggested an alternative approach—that the Federal Government clarify that institutions and networks may designate specialized privacy and security boards to review safeguards.

D. Response to Comments and Explanation of the Final Rule: Privacy and Security Protections

The final rule does not adopt the privacy and security protections proposed in the NPRM, but rather retains and acknowledges the IRB's role in ensuring that privacy safeguards are appropriate for the research studies that require IRB review. To better ensure that appropriate privacy protections are required by IRBs, the final rule includes a new provision in the IRB review and approval criteria at § _____.111(a)(7)(i) that requires the Secretary of HHS in consultation with OMB and the Common Rule departments and agencies to issue guidance to assist IRBs

in assessing what provisions are adequate to protect the privacy of subjects and to maintain the confidentiality of data. This requirement is discussed in more detail in Section XI.

Although we continue to believe that appropriately protecting the privacy of human subjects who provide identifiable private information and identifiable biospecimens as well as preventing security breaches is critically important, we agree with the public's concerns about requiring adherence to privacy and security standards when the safeguards to be issued by the Secretary of HHS have yet to be developed. The federal privacy and security laws would apply only to certain federally conducted research. Rather than promulgate a regulation that lacked sufficient specificity, we determined it would be preferable to maintain the requirement that IRBs review research studies to ensure that appropriate privacy and security safeguards are in place to protect research subjects, but include a commitment that the Secretary of HHS will issue guidance to assist IRBs in appropriately protecting subjects' privacy and confidentiality. This guidance would take into consideration, among other things, the level of identifiability and sensitivity of the information being collected. Although IRBs were not specifically designed to evaluate risk to privacy and confidentiality and the adequacy of safeguards to protect against those risks, IRBs have been responsible for evaluating such risks under the pre-2018 rule. We believe that guidance in this complex and evolving area will assist IRBs to identify appropriate protections, and may be better able than standardized protections, to address the variety of privacy and confidentiality concerns that arise in the broad range of research studies that are being carried out now and those that will be conducted in the years to come.

As discussed in Section V, certain NPRM exemption proposals required the application of the NPRM's proposed safeguards in whole or in part. To accommodate the fact that the final rule does not include the privacy safeguards, exemption categories in the final rule that are predicated on the need for some type of privacy safeguards will instead require that an IRB conduct a limited review to ensure that adequate provisions are in place to protect the privacy of subjects and to maintain the confidentiality of data.

The final rule exemptions subject to this limited IRB review requirement are:

- The exemption for research that includes only interactions involving

educational tests, survey procedures, interview procedures, or observations of public behavior regardless of the identifiability or sensitivity of the information collected/recorded (§ _____.104(d)(2)(iii));

- The exemption for research involving benign behavioral interventions in conjunction with the collection of information from an adult subject through verbal or written responses or video recording (regardless of the identifiability or sensitivity of the information collected/recorded (§ _____.104(d)(3)(i)(C));

- The exemption for the storage or maintenance of identifiable private information or identifiable biospecimens for which broad consent is required, when there is a change specific to the research activity in how the identifiable private information or identifiable biospecimens are stored and maintained (§ _____.104(d)(7)); and

- The exemption for the secondary research use of identifiable private information or identified biospecimens for which broad consent is required (§ _____.104(d)(8))

VII. IRB Membership and Modification to References to Vulnerability (§§ _____.107(a), _____.111(a)(3), and _____.111(b))

A. Background and Pre-2018 Requirements

The pre-2018 rule stipulated a condition of IRB membership at § _____.107(a) stating that IRBs should aim for membership that does not consist entirely of individuals of one gender, race, or cultural background. It referred again to the characteristics of IRB members at § _____.107(b), stating that efforts should be made to ensure that no IRB consists entirely of members of one gender or one profession.

The pre-2018 rule also referred to the concept of vulnerability and consideration of vulnerable populations in three provisions, one of which pertained to IRB membership (§ _____.107(a)), one with regard to selection of subjects (§ _____.111(a)(3)), and one with regard to additional protections needed for subjects vulnerable to coercion or undue influence (at § _____.111(b)). Under the pre-2018 rule, only § _____.111(b) of the three provisions specifically referred to *vulnerability to coercion or undue influence* as the type of vulnerability that should be considered. In addition, of these same three provisions in the pre-2018 rule, only § _____.107(a) identified “handicapped” individuals as a vulnerable category of subjects.

B. NPRM Proposal

The NPRM proposed eliminating the pre-2018 rule stipulation that IRBs should aim for membership that does not consist entirely of individuals of one gender or profession because the requirement that IRB membership reflect members of varying backgrounds and diversity, including gender, accomplishes the same goal.

Further, the NPRM proposed that the criterion at § _____.111(a)(3) be revised to align with the language of § _____.111(b) to reflect that the vulnerability of the populations in these research studies should be considered to be a function of the possibility of coercion or undue influence, and that this vulnerability alone should be the IRB focus of concern with respect to this criterion. The proposed change was intended to provide greater consistency and clarity in IRB consideration of vulnerability of subject populations in research activities and appropriate protections. A comparable change was also proposed at § _____.107(a), pertaining to IRB membership.

In addition, the NPRM proposed that the term “handicapped” be changed to “physically disabled” individuals. Therefore, to enhance consistency and clarity among these three provisions, it was proposed that the term “physically disabled” be inserted at § _____.111(a)(3) and (b). This would mean that physically disabled persons would be among the individuals that the IRB may consider in determining that the selection of subjects is equitable (§ _____.111(a)(3)), and that the IRB may consider to be vulnerable to coercion or undue influence (§ _____.111(b)). Public comment was sought on whether pregnant women and those with physical disabilities should be characterized as vulnerable to coercion or undue influence. Whether or not these subpopulations are considered vulnerable to coercion or undue influence would not affect the applicability of subpart B.

Finally, the NPRM proposed a change in § _____.107(a), involving the insertion of “economically or educationally disadvantaged persons” as an example of a vulnerable population, and requiring an IRB to give consideration to membership expertise in this area. This language was already included in the pre-2018 rule at § _____.111(a)(3) and § _____.111(b). Adding this category of individuals to those who may be considered vulnerable to coercion or undue influence at § _____.107(a) was intended to create greater consistency among these three provisions.

C. Public Comments

Between 40 and 50 NPRM comments discussed the language describing vulnerable populations found in §§ _____.107(a), _____.111(a)(3), and (b). A majority of these comments only discussed the inclusion of pregnant women as an example of a population that might be vulnerable. Typically, comments addressed only one of the three questions posed in the NPRM about these provisions. The questions asked whether the § _____.111(a)(3) and (b) focus on issues related to coercion or undue influence in research with vulnerable populations, and no other considerations related to vulnerability, was appropriate; whether pregnant women and those with physical disabilities should be included in the category of subpopulations that may be vulnerable to coercion or undue influence; and, whether populations should be considered vulnerable for reasons other than vulnerability to coercion or undue influence.

A majority of the comments stated that the inclusion of pregnant women as an example of a group that might be vulnerable to coercion or undue influence was inappropriate. These commenters noted that to suggest that noncognitive limitations make individuals inherently vulnerable is insulting to those populations. Of those comments that addressed these proposals, a minority discussed whether individuals with physical disabilities should be included as an example of a group that might be vulnerable to coercion and undue influence. As with pregnant women, these commenters stated that the insinuation that groups with physical disabilities might be inherently vulnerable to coercion and undue influence was insulting. One commenter noted that a physical condition might make one vulnerable to coercion or undue influence in the research context, but typically only when the research activity targets that vulnerability (as opposed to those populations always being vulnerable).

In terms of whether other types of vulnerabilities should be considered by IRBs, public comment was mixed. Some commenters indicated that in the research context, the specific concerns with respect to vulnerable populations are limited to vulnerability to coercion and undue influence, while others noted that the regulations do not preclude an IRB from considering other types of vulnerability and that because of this flexibility, additional regulatory text was not necessarily needed. Groups specifically concerned with issues related to research involving Native

American populations noted that there are issues broader than vulnerability to coercion and undue influence that should be considered, such as vulnerability to group harms; one commenter recommended that populations be considered vulnerable as a result of being historically marginalized, such as native/tribal communities; lesbian, gay, bisexual, and transgender (LGBT) individuals; and racial and ethnic groups.

Commenters who disagreed with this change generally felt that a history of societal marginalization, such as that experienced by LGBT groups or AI/AN tribes, should be a basis for determining vulnerability, and that a focus on only coercion or undue influence may be insufficient for IRB consideration.

Several comments discussed the fact that using the term mentally disabled is potentially patronizing. One commenter suggested that instead of listing mentally disabled individuals as a group that might be vulnerable to coercion and undue influence, the regulations should use the term "populations with impaired decision making ability." This suggestion echoes a recommendation made by SACHRP in 2009 as well.³⁶

Another commenter stated that vulnerability status should be based on situational context, not on membership in a population, which potentially promotes stigmatization. Rather, focus should be more on the risk of the research and the situation of each subject when asked to participate in research. Finally, it was suggested that terminally ill patients who have exhausted all standard therapies, and possibly other research interventions, should be considered vulnerable.

D. Response to Comments and Explanation of the Final Rule: References to Vulnerability

A majority of comments agreed that the focus on issues related to coercion or undue influence, and no other considerations related to vulnerability, was appropriate. We agree with this assessment, and have retained this language in the final rule. We believe this change will help guide IRBs when assessing the type of vulnerability that should be the focus of review. We note that the § _____.111(a)(3) approval criterion retains the reference to the purposes of the research and the setting in which it is conducted because these considerations are also relevant to the

assessment of the equitable selection of subjects, and may include factors such as societal marginalization or discrimination.

The language at the three provisions (§ _____.107(a), § _____.111(a)(3), and § _____.111(b)) has been made identical in referring to vulnerability as meaning vulnerability to coercion and undue influence, in recognition that coercion or undue influence refers to the ability to make an informed decision about participating in research.

We agree with comments that said that the list of example vulnerable populations listed in the pre-2018 rule is out of date.

In agreement with the majority of comments, the final rule no longer includes pregnant women or "handicapped" or physically disabled individuals as examples of populations that are potentially vulnerable to coercion or undue influence. Adopting a suggestion from public comment and SACHRP, the final rule uses the term "individuals with impaired decision-making ability" to replace the term "mentally disabled persons."

VIII. IRB Functions and Operations (§ _____.108)

A. Background and Pre-2018 Requirements

The pre-2018 rule outlined IRB functions and operations at §§ _____.103 and _____.108.

B. NPRM Proposals

The NPRM contained several proposals for changes in IRB functions and operations. Of relevance here, the requirements for recordkeeping by IRBs would no longer appear in § _____.103 of the rule but in § _____.108. Much of the discussion related to these changes appears in Section IV regarding the assurance process. The issues are summarized here.

The NPRM proposed that the requirement that a written assurance include a list of IRB members for each IRB designated under the assurance process be replaced. In its place, the NPRM proposed that the assurance include a statement for each designated IRB, prepared and maintained by the institution, or when appropriate the IRB, with a current detailed list of the IRB members including information sufficient to describe each member's chief anticipated contributions to IRB deliberation; and any employment or other relationship between each member and the institution. The regulatory requirement at § _____.103(b)(3) that changes in IRB membership be reported to the

department or agency head, or to OHRP when the existence of an HHS-approved assurance is accepted, would be deleted, eliminating the requirement. Instead, an institution would be required under proposed § _____.108(a)(2) to maintain a current IRB roster, but such a roster would not need to be submitted to OHRP or other agency managing the assurance of compliance process.

The NPRM also proposed to eliminate the requirement in § _____.103(b)(2) that an institution designate one or more IRBs on its FWA established in accordance with the Common Rule. The requirement in the pre-2018 Common Rule at § _____.103(b)(2) that IRBs have sufficient meeting space and staff to support IRB reviews and record keeping requirements was moved in the NPRM to § _____.108(a)(1). Note that under this proposal federal departments or agencies would retain the ability to ask for information about which IRBs review research conducted at an institution as part of the assurance process.

C. Public Comments

Approximately 10 comments were received on these proposals. Of those, all supported the NPRM proposal that changes in IRB membership no longer needed to be reported to the funding department or agency. All commenters supported the proposal that IRBs would simply need to prepare and maintain a current list of IRB members. Commenters agreed that the proposed changes to the IRB roster requirement would reduce administrative burden without having any significant impact on the protection of human subjects. Those who commented on the proposed deletion of the requirement to designate one or more IRBs on an institution's FWA generally supported the proposal.

No comments were received on the proposed movement of IRB policy and recordkeeping requirements from § _____.103 to § _____.108.

D. Explanation of the Final Rule: IRB Functions and Operations

The final rule adopts the NPRM proposals to move the IRB recordkeeping requirements from § _____.103(b)(3), (4), and (5) to § _____.108(a)(2), (3), and (4). (See Section IV regarding changes to § _____.103 as well.) The final rule also adopts the NPRM proposal that IRBs must maintain an accurate list of IRB members but are not required to submit changes to that roster to the funding department or agency. The final rule also adopts the NPRM proposal to delete the requirement in the pre-2018 rule

³⁶ HHS. SACHRP. Attachment: Recommendations Regarding Research Involving Individuals with Impaired Decision-making (2008, 2009). Retrieved from <http://www.hhs.gov/ohrp/sachrp-committee/recommendations/2009-july-15-letter-attachment/#>.

that institutions designate one or more IRBs on that institution's FWA.

IX. IRB Review of Research (§ _____.109)

A. Background and Pre-2018 Requirements

The pre-2018 rule listed four areas of responsibility for IRBs in the review process concerning their authority to approve, request modification, or disapprove research activities; ensure informed consent requirements are met (including documentation or waiver, as relevant); notify investigators of their determinations; and conduct continuing review of research. The rule at § _____.109(a) stated that IRBs have the authority to carry out these responsibilities for all research activities covered by the policy.

In particular, the pre-2018 rule at § _____.109(e) required that IRBs conduct continuing review of research covered by this policy at intervals appropriate to the degree of risk, but not less than once per year. Except when an expedited review procedure was used, continuing review of research was to occur at convened meetings at which a majority of the IRB members are present, including at least one member whose primary concerns are in nonscientific areas.

An IRB could use an expedited review procedure to conduct continuing review of research for some or all of the research appearing on the list of research eligible for expedited review³⁷ and found by the reviewer(s) to involve no more than minimal risk. The Common Rule departments and agencies could restrict, suspend, terminate, or choose not to authorize an IRB's use of the expedited review procedure (§ _____.110(d)).

B. NPRM Proposals

The NPRM proposed clarifying that the Common Rule does not give IRBs the authority to review or approve, require modification in or disapprove research that qualifies for the exemptions proposed in the NPRM.

The NPRM also proposed to eliminate continuing review for many minimal risk studies (namely those that qualify for expedited review), unless the reviewer documents why continuing review should take place, which would be required according to the NPRM. Moreover, for studies initially reviewed by a convened IRB, continuing review

would not be required, unless specifically mandated by the IRB, after the study reaches the stage where it involves only one or both of the following: (1) Analyzing data (even if it is identifiable private information); or (2) accessing follow-up clinical data from procedures that subjects would undergo as part of standard care for their medical condition or disease.

In addition, the NPRM proposed that continuing review would not be required for research involving certain secondary research using information and biospecimens that requires limited IRB review in order to qualify for an exemption proposed in the NPRM.

Further, the NPRM proposed that an IRB must receive annual confirmation that research is ongoing and that no changes have been made that would require the IRB to conduct continuing review (that is, the study still qualifies for expedited review because it still meets the criteria listed above and still involves no greater than minimal risk).

The NPRM also proposed a new requirement for IRBs to maintain records of continuing reviews. Because the NPRM proposed a new provision that eliminates the need for continuing review under specific circumstances, it also proposed that IRBs need to justify the need for continuing review in cases where it was not required. If an IRB chooses to conduct continuing review even when these conditions are met, the NPRM stated that the rationale for doing so must be documented.

C. Public Comments

Approximately four comments addressed the clarification proposed in the NPRM that IRBs were not authorized by this policy to review exempt research. All who commented opposed the proposed modification. Those who commented were concerned that IRBs and institutions would interpret the modifications to mean that IRBs were precluded from ever reviewing such research and pointed to the possibility, although rare, that there might be a need to do so, particularly if the initial exemption determination was flawed.

With regard to continuing review, approximately 120 comments discussed this proposal. A strong majority of comments (approximately 95) supported this proposal and approximately 15 opposed it. Other comments were mixed. Those who supported the proposal said that it would indeed alleviate IRB administrative burden without diminishing the protections afforded to human subjects. Those who did not support this proposal believed the continuing review process served an important role in allowing an institution

to periodically re-evaluate the benefits, risks, methods, and procedures used in research activities, and whether the research had been modified without approval. Some commenters who supported the proposal were opposed to the requirement for annual confirmation to the IRB that such research is ongoing and that no changes have been made that would require the IRB to conduct continuing review. They stated that the burden alleviated by eliminating the need for continuing review was offset by the requirement to submit an annual confirmation.

D. Response to Comments and Explanation of the Final Rule: Review of Research

The final rule at § _____.109(a) modifies the language of the pre-2018 rule to state that IRBs review and have the authority to approve, require modifications in, or disapprove all research activities covered by this policy, including exempt research activities under § _____.104 for which limited IRB review is a condition of exemption (§ _____.104(d)(2)(iii), § _____.104(d)(3)(i)(C), § _____.104(d)(7), and § _____.104(d)(8)). Since the final rule requires limited IRB review for certain categories of exempt research, the provision at § _____.109(a) has been modified to clarify that IRBs have the authority needed to conduct limited IRB review.

As proposed in the NPRM, and as generally supported in public comments, continuing review is eliminated for all studies that undergo expedited review, unless the reviewer explicitly justifies why continuing review would enhance protection of research subjects (§ _____.109(f)(1)(i) and § _____.115(a)(3)). For studies initially reviewed by a convened IRB, once certain specified procedures are all that remain for the study, continuing review would not be required, unless specifically mandated by the IRB. These activities include: (1) Research eligible for expedited review in accordance with § _____.110; or (2) Research that has progressed to the point that it involves only one or both of the following, which are part of the IRB-approved study: (a) Data analysis, including analysis of identifiable private information or identifiable biospecimens, or (b) Accessing follow-up clinical data from procedures that subjects would undergo as part of clinical care (at § _____.109(f)). In addition, the final rule states at § _____.109(f)(1)(ii) that continuing review is not required for research reviewed in accordance with the limited IRB review procedure described in § _____.104(d)(2)(iii),

³⁷ Office for Human Research Protections. Categories of Research That May Be Reviewed by the Institutional Review Board (IRB) through an Expedited Review Procedure. November 9, 1998. Retrieved from <http://www.hhs.gov/ohrp/policy/expedited98.html>.

§ _____.104(d)(3)(i)(C), § _____.104(d)(7), or § _____.104(d)(8).

The final rule does not require investigators to provide annual confirmation to the IRB that such research is ongoing and that no changes have been made that would require the IRB to conduct continuing review. Institutions that choose to require some accounting of ongoing research not subject to continuing review have significant flexibility in how they implement their own requirements. Note that under the final rule, investigators would still have the current obligations to report various developments (such as unanticipated problems or proposed changes to the study) to the IRB.

X. Expedited Review Procedures (§ _____.110)

A. Background and Pre-2018 Requirements

Under the pre-2018 rule, a research study could receive expedited review if the research activities to be conducted appear on the list of activities published by the Secretary of HHS that are eligible for such review,³⁸ and was found by the reviewer(s) to involve no more than minimal risk. Under an expedited review procedure, the review could be carried out by the IRB chairperson or by one or more experienced reviewers designated by the chairperson from among the members of the IRB. Research that was eligible for expedited review required continuing review at least annually.

B. NPRM Proposals

The NPRM proposed changes regarding expedited review, to allow expedited review to occur for studies on the Secretary's list unless the reviewer(s) determine(s) that the study involves more than minimal risk. This was in contrast to the pre-2018 regulations, which required that an IRB use the expedited review procedure only if the reviewer determines (and documents) that the research involves no more than minimal risk. In addition, OHRP has indicated that the activities on the current list should not be deemed to be of minimal risk simply because they are included on the list. In a related change, the NPRM contained a requirement that IRBs document the rationale for an expedited reviewer's determination that research appearing on the expedited review list is more

than minimal risk (*i.e.*, an override of the presumption that studies on the Secretary's list are minimal risk).

The NPRM proposed that IRBs reviewing the consent process (and, when required, the privacy safeguards) for studies eligible for the proposed exemption at § _____.104(f)(1) could use the expedited review procedure.

As discussed in Section III of this preamble, the NPRM did not propose to modify the definition of minimal risk, but rather proposed adding to the definition a requirement that the Secretary of HHS create and publish a list of activities that qualify as "minimal risk". This Secretary's list would be re-evaluated periodically, but at least every 8 years, based on recommendations from federal departments and agencies and the public. Note that this would not be an exhaustive list of all activities that would be considered minimal risk under the Common Rule, but would allow IRBs to rely on the determination of minimal risk for activities appearing on the list. IRBs would still need to make minimal risk determinations about activities that do not appear on this list.

In addition, the NPRM proposed to eliminate the parenthetical phrase "of one year or less" when referring to the IRB approval period, since annual continuing review of research eligible for expedited review would no longer be required.

The NPRM also proposed that the regulations be revised to require evaluation of the list of expedited review categories every 8 years, followed by publication in the **Federal Register** and solicitation of public comment. A revised list would be prepared for public comment outside the scope of the NPRM.

C. Public Comments

Approximately 50 comments were received regarding the proposal to update the Secretary's list of expedited review categories every 8 years. A strong majority supported this proposal although some recommended that the mandatory period of review occur more frequently than every 8 years.

Approximately 10 comments discussed the NPRM proposal that an IRB may use the expedited review procedure to satisfy limited IRB review of the consent process as required under the proposed NPRM exemption. A strong majority of these comments supported this proposal.

D. Response to Comments and Explanation of the Final Rule: Expedited Review Procedures

Under the final rule, a study is deemed to be minimal risk and thus

eligible for expedited review if the study only involves activities on the Secretary's list, unless the reviewer determines and documents that the study involves more than minimal risk (§ _____.110(a) and (b)(1)). Thus, we anticipate that more studies that involve no more than minimal risk will undergo expedited review, rather than full review, which will relieve burden on IRBs.

Further, IRBs will be required to document their rationale when they override the presumption that studies on the Secretary's expedited review list involve greater than minimal risk (at § _____.115(a)(8)). Although public comments argued that this documentation represented an unjustified burden on IRBs, we believe that such documentation could provide a basis for the Secretary's future determinations about the appropriateness of the list, and allow for greater consistency across institutions, and thus make the Common Rule more just.

At § _____.110(b)(1)(iii) the final rule adopts the NPRM proposal that an IRB may use the expedited review process when conducting limited IRB review as required by the exemptions at § _____.104(d)(2)(iii), § _____.104(d)(3)(i)(C), § _____.104(d)(7), and § _____.104(d)(8).

Finally, as proposed in the NPRM, evaluation of the list of expedited review categories will occur every 8 years, followed by publication in the **Federal Register** and solicitation of public comment.

XI. Criteria for IRB Approval of Research (§ _____.111)

A. Background and the Pre-2018 Requirements

The determinations that an IRB must make before it can approve a study were spelled out in the pre-2018 rule at § _____.111. These relate, among other things, to minimizing risks to subjects, determining that an appropriate relationship exists between risks and benefits, and ensuring the equitable selection of subjects. The regulations generally required all of these determinations to be made for any study that must undergo IRB review.

B. NPRM Proposals

The NPRM proposed a number of changes regarding the criteria for IRB approval of research, including (1) creating a new form of IRB review for activities relating to storing or maintaining data and biospecimens for later secondary use; (2) revising two of the existing criteria for approval of

³⁸ HHS. OHRP. Categories of Research That May Be Reviewed by the Institutional Review Board (IRB) through an Expedited Review Procedure. November 9, 1998. Retrieved from <http://www.hhs.gov/ohrp/policy/expedited98.html>.

research that have special considerations related to the involvement of vulnerable populations and for privacy and confidentiality of data provisions; and (3) adding a provision about plans to review the return of individual results to participants.

The first set of changes concerned updating the IRB review criteria for research activities relating to storing or maintaining information and biospecimens, and to the secondary use of such information and biospecimens. Paragraph (a)(9)(i) of proposed § _____.111 would have applied to a proposed exemption at § _____.104(f)(1) for storing or maintaining biospecimens or identifiable private information for use in secondary research. This provision would have eliminated the need for an IRB to make the usual determinations about such an activity. Instead, the IRB would have been required to determine that the procedures for obtaining broad consent to storing or maintaining the biospecimens or information were appropriate, and met the standards included in the introductory paragraph of § _____.116. In addition, if these storage and maintenance activities involved a change for research purposes from the way the biospecimens or information had been stored or maintained, then the IRB would have needed to determine that the proposed biospecimen and privacy safeguards at § _____.105 were satisfied for the creation of any related storage database or repository.

The second proposed change was related to the NPRM privacy safeguard proposal and clarified that it would not be an IRB responsibility to review the security plans for biospecimens and identifiable private information for every protocol (*i.e.*, on a case-by-case basis). Also, as discussed in Section VII, the NPRM proposed changing how vulnerable populations are referred to in the regulatory language at § _____.111(a)(3).

The third proposed change was the addition of section (a)(8) to § _____.111 clarifying that if an investigator submits as part of the protocol a plan for returning clinically relevant research results to subjects, the IRB would have to evaluate the appropriateness of the plan. This criterion was proposed in response to public discussions, including SACHRP, recommending that IRBs consider returning individual results to subjects.³⁹

C. Public Comments

Approximately 20 comments discussed the proposed modifications in § _____.111 related to the criteria for IRB approval of research. Of these comments, a majority discussed the proposal that an IRB be required to review the adequacy of plans to return research results, should a proposed study include such a plan. Comments on this proposal were mixed, with both those opposing and supporting the proposal indicating that HHS and other Common Rule departments and agencies would need to issue detailed guidance addressing what is considered an adequate plan in this context. Several commenters suggested deleting this provision due to the lack of clarity surrounding the IRB's role in such a review.

D. Response to Comments and Explanation of the Final Rule: Criteria for IRB Approval of Research

The final rule does not adopt all of the NPRM proposals. It does not include the NPRM proposal regarding IRB review of plans to review the return of clinically relevant results to subjects. This proposal was deleted due to concern over the criteria that would be required for an IRB to appropriately consider this area, the need for particular IRB expertise to appropriately assess the return of results, and ambiguity over the meaning of "clinically relevant."

The final rule does, however, revise two of the existing criteria for approval of research: (1) Special considerations related to the involvement of vulnerable populations, and (2) privacy and confidentiality of data provisions.

As discussed in more detail in Section VII, the language regarding vulnerable populations at § _____.111(a)(3) and (b) has been revised to reflect the current understanding of which populations should receive special consideration due to potential vulnerabilities specific to the purposes and context of human subjects studies and to parallel other references to vulnerable populations found at § _____.107(a).

Section _____.111(a)(7) in the final rule retains the pre-2018 language, but also adds an additional requirement, thereby serving a dual function as both the primary regulatory provision requiring IRB review of the adequacy of protections for the privacy of subjects and confidentiality of identifiable private information (including that obtained from the analysis of biospecimens), and as the primary limited IRB review requirement needed to satisfy certain exemption determinations in § _____.104(d).

In § _____.111(a)(7)(i) the Secretary of HHS commits to issuing guidance to assist IRBs in assessing what provisions are adequate to protect the privacy of subjects and to maintain the confidentiality of information, after consultation with OMB's privacy office and other federal departments and agencies that have adopted this policy. This modification is intended to serve a similar function as the privacy safeguards proposed in the NPRM (but not adopted in the final rule). The guidance might address the following considerations such as:

- The extent to which identifiable private information is or has been de-identified and the risk that such de-identified information can be re-identified;
- The use of the information;
- The extent to which the information will be shared or transferred to a third party or otherwise disclosed or released;
- The likely retention period or life of the information;
- The security controls that are in place to protect the confidentiality and integrity of the information; and
- The potential risk of harm to individuals should the information be lost, stolen, compromised, or otherwise used in a way contrary to the contours of the research under the exemption.

The final rule at § _____.111(a)(8) modifies the NPRM proposal on the limited IRB review required by § _____.104(d)(7). Section _____.111(a)(8) specifies that for the purposes of conducting the limited IRB review required by § _____.104(d)(7), the IRB must determine that broad consent for storage, maintenance, and secondary research use of identifiable biospecimens or identifiable private information is obtained in accordance with the requirements of § _____.116(a)(1)–(4), (a)(6), and (d). As part of its review of these requirements for broad consent, the IRB would review the appropriateness of the process proposed for obtaining broad consent, and ensure that the required elements of broad consent were appropriately included in the broad consent form (or process, if broad consent is to be obtained orally). Additionally, the IRB must determine that consent is appropriately documented, or that a waiver of documentation is appropriate, in accordance with § _____.117. Finally, if a change is made for research purposes in the way identifiable private information or identifiable biospecimens are stored or maintained, the IRB must determine that adequate provisions are in place to protect the privacy of subjects and to maintain the

³⁹ <http://www.hhs.gov/ohrp/sachrp-committee/recommendations/attachment-b-return-individual-research-results/index.html>.

confidentiality of data. It is expected that the guidance to be developed by the Secretary of HHS about protecting the privacy of subjects and maintaining the confidentiality of data will also be applicable to the privacy and confidentiality considerations included in this limited IRB review requirement.

XII. Cooperative Research (§ _____.114)

A. Background and Pre-2018 Requirements

The pre-2018 rule required that each institution engaged in a cooperative research study obtain IRB approval of the study, although it did not require that a separate local IRB at each institution conduct such review. In many cases, however, a local IRB for each institution would independently review the research protocol, and informed consent forms and other materials, often resulting in multiple reviews for one study. When any one of these IRBs would require changes to the research protocol that are adopted for the entire study, investigators would have to re-submit the revised protocol to all of the reviewing IRBs. This process could take many months and significantly delay the initiation of research projects and recruitment of subjects into studies. More importantly, little evidence has suggested that the time and effort put into these activities by investigators (in providing materials to IRBs) and IRBs have significantly increased the well-being of research subjects.

B. NPRM Proposals

Taking into consideration the history of public debate on this topic and various sources of public comments, the NPRM proposed a requirement mandating that all institutions located in the United States engaged in cooperative research rely on a single IRB as their reviewing IRB for that study. Under this proposal, this requirement would not apply to: (1) Cooperative research for which more than single IRB review is required by law; or (2) research for which the federal department or agency supporting or conducting the research determines and documents that the use of a single IRB is not appropriate for the particular study. Public comment was sought on whether it would be useful for this requirement to include criteria that federal departments or agencies would need to apply in determining whether to make exceptions to the use of a single IRB requirement and what those criteria might be. Further the public was asked whether the exceptions proposed were appropriate and sufficient, or whether

this mandate should have additional exceptions for single IRB review than those proposed in the NPRM.

The change proposed by the NPRM would apply only to U.S.-conducted portions of studies because the flexibility to make use of local IRB reviews at international sites should be maintained. It might be difficult for an IRB in the United States to adequately evaluate local conditions in a foreign country that could play an important role in the ethical evaluation of the study.

This policy would apply regardless of whether the study underwent convened review or expedited review. Under the NPRM, the IRB of record would be expected to be selected either by the funding agency or, if there is no funding agency, by the lead institution conducting the study. An agency may, but is not required, to solicit input regarding which IRB would be most appropriate to designate as the IRB of record. Public comment was sought on how this would work in practice.

This policy would not relieve any site of its other obligations under the regulations to protect human subjects. Nor would it prohibit institutions from choosing, for their own purposes, to conduct additional IRB or other administrative reviews, though such reviews would no longer have any regulatory status in terms of compliance with the Common Rule.

Some concerns about a mandated single IRB review for cooperative research point to implementation logistics, and the time necessary to establish new policies, procedures, and agreements. Recognizing this concern, the proposed compliance date was 3 years from the publication of the final rule. Public comment was sought on whether this was a realistic timeframe.

The public was asked to comment on whether mandated single IRB review for all cooperative research was a realistic option, and what the likely costs and benefits to institutions might be. Further, the public was asked to comment on whether additional resources would be necessary to meet this requirement in the short term and whether savings might be anticipated in the long run. Finally, public comment was sought regarding in what areas guidance would be needed for institutions to comply with this requirement and whether the Common Rule departments and agencies could take actions to address concerns about institutional liability, such as developing model written agreements.

C. Public Comments

This proposal was one of the most commented on in the NPRM, receiving more than 300 comments. Public comment was divided on whether a final rule should implement the proposal to mandate one IRB of record in domestic cooperative research studies. Of those who commented on this proposal, approximately 130 supported the proposal, and approximately 140 opposed it. Others had mixed views.

Research institutions tended to oppose this proposal, while individuals (*i.e.*, those who were not providing comment in an official institutional capacity) and scientific organizations tended to support the proposal. A strong majority of those who opposed the proposal indicated that the final rule should encourage, rather than mandate, a single IRB of record in cooperative research studies. Arguments against the proposal cited the need for local review and potential loss of accountability, as well as operational issues such as the increased administrative capacity and technological systems required for a site to function effectively as a single IRB. One comment stated that mandated single IRB review would not eliminate the challenges associated with multi-institutional trials. The commenter argued that it would shift the burden from sponsors to investigators and at the institutional level, centralized systems would have to be developed and sustained in order to manage single IRB reviews.

Some who supported the proposal stated that it would decrease administrative burdens and inefficiencies for investigators and institutions. Conversely, some commenters stated that the proposal should not be implemented because it would ultimately increase burdens and inefficiencies for investigators and institutions.

In addition to the broad themes for and against this proposal, some commenters such as SACHRP noted that the proposed requirement seems premature at this time and suggested that more data are needed before such a provision could be implemented. Others said the scope of the proposal seemed overly broad. Many cited the alternative, narrower approach discussed in SACHRP's public comment as a reasonable option.⁴⁰ Further commenters stated that the lead institution likely would experience

⁴⁰ SACHRP's public comment to the NPRM is available here: <https://www.hhs.gov/ohrp/sachrp-committee/recommendations/2016-january-5-recommendation-nprm-attachment-a/index.html>.

increased costs if this proposal were implemented because of the obligations it would have to assume. In addition, some commenters said that the proposal does not address risk of liability to institutions and IRBs that are not considered the lead.

Commenters also noted that long review times for prospective research studies are not solely related to the IRB review and approval itself. Rather, commenters noted that long review times are caused by the sum total of the many different types of reviews either mandated by other regulations or by institutional policy (e.g., radiation safety board review, privacy board review, departmental scientific review) that must be completed. These other reviews would likely not be affected by the NPRM proposal.

Several commenters expressed concern that according to the NPRM proposal, the supporting federal department or agency would select the IRB of record as required by the provision. These commenters were concerned that the provisions did not seem to allow for grantee or awardee input on what IRB should be the IRB of record nor did they seem to suggest that funding departments or agencies should consult with the institutions receiving funding about the IRB of record. Several public comments also expressed concern about the burden this provision would place on nonfederally supported studies subject to the rule solely based on the clinical trials expansion proposed in the NPRM.

Representatives of AI/AN tribes also provided comments emphasizing the sovereign status of their governments, and stating that nonlocal review would be inappropriate for their communities.

D. Response to Public Comments and Explanation of the Final Rule: Cooperative Research

The final rule adopts the NPRM proposal with modifications that are responsive to public comment. We agree with commenters who speculated that mandated single IRB review would ultimately decrease administrative burdens and inefficiencies for investigators and institutions, while acknowledging that the transition to this model would require significant time and an adjustment to institutional structures and policies. We concur that, rather than offering additional protections, in many cases multiple IRB approvals increase burden and frequently delay the implementation of studies, increasing the costs of clinical trials and potentially stalling access to new therapies. We note comments that expressed frustration with the frequent

occurrence of central IRB participating sites insisting on separate institutional reviews. One comment noted that these additional IRB reviews generally reach the same conclusions, or conclusions with minor changes, that are then imposed solely on that site. When working optimally, we expect the central IRB model will work more efficiently and require less personnel time and fewer resources for tracking and implementing IRB changes and approvals, thereby eliminating the potential for unnecessarily duplicative reviews.

Although a large number of comments believed that single IRB review should be encouraged rather than mandated, we feel that this incentivized approach would ultimately fail to yield substantive positive change in the system. Rather, systematic efficiencies have the best chance of occurring if single IRB review is required for all review in domestic research involving more than one institution. We acknowledge that further guidance for this requirement will need to be developed and that initial cost projections may have been low. However, we feel this change supports the best interests of the research infrastructure through increasing efficiency. Note that the final rule permits appropriate flexibilities that will assist in implementation. Institutions may still choose to conduct additional internal IRB reviews for their own purposes, though such reviews would no longer have any regulatory status in terms of compliance with the Common Rule.

We agree with comments recommending that a greater role should be provided for grantee input on choosing the IRB of record, and have modified the language accordingly. The language at § _____.114(b)(1) now states that the reviewing IRB (i.e., the IRB of record) will be identified by the federal department or agency supporting or conducting the research, yet allows lead institutions to propose the reviewing IRB, subject to the acceptance of the federal department or agency supporting the research. This provision is consistent with the NIH single IRB policy, which was published on June 21, 2016.

This final rule adopts (in § _____.114(b)(2)(i)) the NPRM's proposal that cooperative research for which more than single IRB review is required by law is not subject to the requirements of § _____.114. The rule also adds clarifying language providing that this provision extends to tribal laws passed by the official governing body of an AI/AN tribe. Thus, if the official governing

body of an AI/AN tribe passes a tribal law that requires more than single IRB review for certain cooperative research, the requirement for single IRB review does not apply to such cooperative research. In addition, we highlight that § _____.114(b)(2)(ii) allows a federal department or agency the flexibility to determine that the use of a single IRB is not appropriate for certain contexts, thereby permitting additional IRB review and consideration of local and regional variations in some circumstances.

Finally, the final rule adopts the NPRM proposal for this provision to have a delayed compliance date of 3-years from the date the final rule is published in the **Federal Register**. This transition period is intended to allow the regulated community appropriate time and flexibility in adjusting to this new model.

XIII. IRB Records (§ _____.115)

A. Background and Pre-2018 Requirements

The pre-2018 rule at § _____.115 outlined requirements for IRBs in preparing and documenting its activities and for maintaining records.

B. NPRM Proposals

As discussed in Section IV, the NPRM proposed to revise the pre-2018 requirement that an up-to-date list of the IRB members and their qualifications be included in an institution's assurance. Instead, the NPRM proposed the requirement that an IRB or the institution prepare and maintain a current list of IRB members.

As discussed in Section IX, the NPRM proposed a new requirement for IRBs to maintain, as part of their records of continuing reviews, the rationale for conducting continuing review of research that was deemed eligible for elimination of continuing review per proposed changes at § _____.109(f)(1)(ii). Specifically, this would apply to research that had progressed to the point that it involves only one or both of the following, which are part of the IRB-approved study: (1) Conducting data analysis, including analysis of identifiable private information, or (2) accessing follow-up clinical data from procedures that subjects would undergo as part of standard care for their medical condition.

Also, as discussed in Section IX, the NPRM proposed eliminating continuing review for many minimal risk studies (namely those that qualify for expedited review), unless the reviewer finds and documents why continuing review should take place for the study. Finally,

the NPRM contained a requirement that IRBs document the rationale for an expedited reviewer's determination that research appearing on the expedited review list is more than minimal risk (*i.e.*, overturning the presumption that studies on the Secretary's list are minimal risk).

New in the NPRM was a proposal to require that an IRB maintain records of exemption determinations. Additionally, the NPRM proposed that the use of the proposed exemption determination tool would satisfy the proposed documentation requirement.

In addition, a new provision was proposed to require that the institution or IRB that retains IRB records should safeguard, if relevant, individually identifiable private information contained in those records in compliance with the proposed privacy safeguards.

Finally, the NPRM proposed a modification of the pre-2018 rule clarifying that IRB records may be maintained in print or electronic form.

C. Public Comment

The proposed modifications to § _____.115 received approximately 25 comments. A majority focused on three proposed revisions. The NPRM proposed to require that reviewers document why an IRB required continuing review when continuing review was not required as proposed in the NPRM. The majority of commenters opposed this requirement stating that it merely shifted administrative burden from one activity to another with no increase in protections.

The NPRM also proposed to require that a reviewer document why a research activity appearing on the expedited review list is more than minimal risk, and thus should be subject to full IRB review. This was opposed by the majority of commenters who indicated that this proposal was an unjustified administrative burden.

One commenter stated that the proposed documentation requirements would be punitive to IRBs. Several others suggested that this requirement served as a disincentive to institutions who wanted to implement additional protections than those required by the Common Rule. These commenters noted that this seemed in contrast to the longstanding policy articulation that the Common Rule served as a "floor" for protections and that institutions could require additional protections for research conducted at their institutions.

D. Response to Comments and Explanation of the Final Rule: IRB Records

A majority of the changes proposed in the NPRM in § _____.115 have been retained in the final rule without alteration. However, the final rule differs from the NPRM in a few ways. First, the NPRM included two provisions requiring documentation of continuing review activities; these have been merged into one provision in the final rule at § _____.115(a)(3). Second, the NPRM required that the IRB keep records of the IRB reliance agreements between an institution and the IRBs not operated by that institution that review said institution's nonexempt research activities. Instead, the final rule includes language at § _____.115(a)(9) that requires each institution to maintain adequate documentation of the responsibilities that each entity will undertake to ensure compliance with this policy. This provision differs from the NPRM proposal to correspond to the more flexible provision included at § _____.103(e), which does not require the creation of a written agreement between an institution and a reviewing IRB that said institution does not operate.

Because the final rule does not include an exemption determination requirement, the exemption documentation requirement proposed in the NPRM is not included in the final rule. Additionally, because the final rule does not include specified privacy safeguards, the NPRM proposal for an IRB to safeguard records as required by the proposed privacy safeguards is not included.

The final rule includes the NPRM proposal that IRBs document decisions to require continuing review or full board review even in circumstances when such review is not required because we believe it is important to document why an IRB is making a determination that differs from the regulatory baseline. This also helps to promote the principle of justice (as applied to IRB operations). Note that nothing in these regulations prevents an institution from authorizing an IRB to apply standards that exceed those in the regulations, if indeed the institution has chosen to do so.

In addition, while the NPRM proposed to require that IRB records that contain identifiable private information be safeguarded through compliance with the proposed privacy safeguards, the final rule does not require such safeguards. Although no public comments were received on this provision, in deciding not to include the

NPRM's proposed privacy safeguard requirements in the final rule, we determined that it was unnecessary for the Common Rule to impose additional privacy requirements on IRB records as we are unaware of instances in which IRB records were breached. In addition, IRB records are not the regulatory equivalent of research records, which should be adequately secured or safeguarded against inappropriate uses or disclosures of identifiable private information. IRB records will generally be secured for a variety of reasons. These include not only protecting identifiable private information, but also, for example, protecting discrete information and intellectual property that might be included in a protocol. There are other means for ensuring institutions and IRBs protect their records beyond what is required by the Common Rule.

XIV. General Requirements for Informed Consent (§ _____.116)

The final rule contains several major revisions to the requirements for informed consent, specifically with respect to: (1) New requirements relating to the content, organization, and presentation of information included in the consent form and process to facilitate a prospective subject's decision about whether to participate in research; (2) the basic and additional elements of consent; (3) the elements of broad consent for the storage, maintenance, or secondary research use of identifiable private information and identifiable biospecimens; (4) attendant changes in the waiver or alteration criteria for consent; (5) a new provision that allows IRBs to approve a research proposal for which investigators obtain information or biospecimens without individuals' informed consent for the purpose of screening, recruiting, or determining the eligibility of prospective human subjects of research, provided certain conditions are met; and, (6) a new requirement to post to a federal Web site a copy of an IRB-approved version of the consent form that was used for enrollment purposes for each clinical trial conducted or supported by a federal department or agency. Each of the final rule provisions are discussed separately below.

A. General Requirements for Informed Consent (§ _____.116(a))

1. Background and Pre-2018 Requirements

Under the pre-2018 rule, many fundamental requirements applicable to all informed consents were set forth in

an introductory (and unnumbered) paragraph at the beginning of § _____.116.

In considering changes to the general requirements set forth in § _____.116(a), we considered arguments put forth by some that consent forms have evolved to protect institutions rather than to provide potential research subjects with the most important pieces of information that a person would need in order to make an informed decision about whether to enroll in a research study.⁴¹ Instead of presenting the information in a way that is most helpful to prospective subjects—such as explaining why someone might want to choose not to enroll—these individuals argued the forms may function more as sales documents or as a means to protect against institutional liability.⁴² We also considered a growing body of literature that suggests informed consent forms have grown too lengthy and complex, adversely affecting their ability to effectively convey the information needed for prospective participants to make an informed decision about participating in research.⁴³

2. NPRM Proposals

The NPRM proposed adding new language to the introductory text of § _____.116 to emphasize the need to first provide essential information that a reasonable person would want to know in order to make an informed decision about whether to participate in research, and to provide an opportunity to discuss that information. Furthermore, in recognition of complaints that consent forms are too often complicated documents primarily used to protect sponsors from legal liability, the NPRM proposed requiring that the information in these forms be organized and presented in a way that does not merely provide lists of isolated facts, but rather facilitated the prospective subject's or representative's understanding of the reasons why one might or might not want to participate in the research.

The NPRM also proposed that an investigator seeking to obtain informed consent be required to present first the information required by § _____.116, which has been recognized by the Common Rule departments and agencies as the most fundamental and required content of informed consent,

before providing other information, if any, to the subject. As proposed under the NPRM, the main portion of a consent document could include only the elements of informed consent that were required by the Common Rule, with any other information included in an appendix. This change was intended to lead to substantially shorter “core” sections of consent forms, with prospective subjects receiving the most important information in the body of these relatively short forms, instead of that key information being buried in long and overly complex documents. As proposed, additional information could be set forth in appendices to consent forms.

Given the consensus that informed consent forms should be written in appropriate language, this proposal reinforced the need to include information using language understandable to the subject. This goal was consistent with Federal Plain Language guidelines and the Federal Plain Writing Act of 2010. The NPRM proposed that the Secretary publish guidance at a later time to explain how consent forms could be written to comply with this regulatory requirement. Public comments were sought on what topics should be addressed in future guidance on improving the understandability of informed consents. As explained in the NPRM, it was not envisioned that the revised Common Rule would require a formal assessment to evaluate an individual's competency, but we acknowledged that such a practice might be appropriate for certain populations or studies.

In addition, the NPRM proposed to clarify in the introductory language at § _____.116 that if a HIPAA authorization is combined with a consent form, the authorization elements required by 45 CFR 164.508 (part of the HIPAA Privacy regulations) must be included in the consent document and not the appendices. In other words, when informed consent for research under the Common Rule is combined with a HIPAA authorization, the NPRM proposed that the authorization elements would be considered to constitute one of the required elements of informed consent.

3. Public Comments

Approximately 200 comments discussed the proposal to include information required by the Common Rule in the consent form and place other information in appendices. A majority of those (approximately 140) supported the proposal and approximately 35 commenters opposed

this proposal. Those who expressed support for this proposal generally noted agreement with the NPRM's rationale for the proposed revisions. Even those who supported the proposal stated that guidance would be needed for the proposal to be implemented and for the proposal to have the desired effect. Among those who opposed this proposal, all indicated support for the intention behind it. Reasons for opposing this proposal included:

- Concern that having a “dual document” system (with a primary consent form and appendices) would not actually improve subjects' understanding specifically and the informed consent process generally.
- Concerns that in some circumstances, the information that one might require to make an informed decision about research participation may not always be information required under the Common Rule when seeking and obtaining informed consent.
- Concern that the proposed language for the § _____.116 introductory paragraph should not be promulgated as regulatory text (and would be more appropriate as guidance).
- Concern that because the proposed language does not include specific standards and specific criteria, the provision would ultimately be impossible to implement and enforce.
- Concern that the language as proposed would not reduce the complexity and length of consent forms because much of the information generally contained in an informed consent document is required by various regulatory agencies. To this end, several commenters noted that the NPRM proposed an additional four required elements of consent, which would add to the quantity of information that is required to be discussed in an informed consent document.

Some comments noted that although they liked the general idea of the proposal for the introductory paragraph of § _____.116, they felt that the proposal should not focus on the length of a consent form, but rather on clarity and understandability. One comment expressed a need for guidance on how to implement the proposed language in the introductory paragraph of § _____.116 and the requirement at § _____.109(b) of the pre-2018 rule.⁴⁴ The NPRM did not

⁴¹ Levine RJ. Informed consent: Some challenges to the universal validity of the western model. *J Law Med Ethics* 1991;19(3-4):207-213.

⁴² Menikoff J., Richards E. *What the Doctor Didn't Say: The Hidden Truth about Medical Research*. New York, NY: Oxford University Press; 2006:113-123.

⁴³ Beardsley E. et al. Longer Consent Forms for Clinical Trials Compromise Patient Understanding: So Why Are They Lengthening? *Journal of Clinical Oncology*. 2007 Mar 20;25(9):e13-4.

⁴⁴ Section _____.109(b) of the pre-2018 rule states that an IRB shall require that information given to subjects as part of informed consent is in accordance with § _____.116. The IRB may require that information, in addition to that specifically mentioned in § _____.116, be given to the subjects when in the IRB's judgment the information would

propose changing the latter item, which mandated that IRBs require that information given to subjects as part of informed consent conform with the requirement. However, the NPRM also permitted IRBs to require additional information if it would meaningfully add to the protection of the rights and welfare of subjects. This comment was made in light of the NPRM's proposal that information not required as an element of consent at § _____.116 must be provided after providing the required elements of consent.

The NPRM asked about what topics should be addressed in future guidance on improving the understandability of informed consent. Approximately 35 commenters answered this question, a majority of which were universities and research institutions. Several commenters questioned whether the proposals in the introductory paragraph of § _____.116 would be enforceable, and how Common Rule departments and agencies would assess and enforce compliance.

Several commenters indicated that mandating the order in which the content of consent forms should be presented may not always facilitate increased understanding by potential subjects because the best way to facilitate understanding is likely to be study specific. In other words, the order of importance of issues could be dependent on unique aspects of a given study. Others noted that most information in consent forms is there because the regulations require it to be included. Thus, the proposal to include the information required by the regulations up front, with all other information included as an appendix, is not a requirement that will inherently improve consent forms. Some commenters suggested that more research was needed on the informed consent process before prescribing specific approaches.

Many commenters asked that future guidance be developed to assist in drafting consent forms that addresses language level, literacy, risk communication, and best practices in use of alternative media in the informed consent process (e.g., interactive presentation on a tablet, comic strips for pediatric populations). In this regard, some comments objected to the singular focus on a "form" in the proposed language, stating that this sends the message that alternative and innovative approaches to improving the informed consent process would be discouraged. Others noted that future guidance

should include topics of interest to tribal groups, such as acknowledgement of community-level implications of research and clarification about the handling of biospecimens in a study.

Several commenters noted that guidance should focus on how to foster understanding rather than focusing on mandatory length limitations on consent forms. However, a few comments endorsed a recommended page length maximum, citing it as perhaps the only way to force investigators and institutions to be brief and concise in the presentation of relevant information.

4. Response to Comments and Explanation of the Final Rule: General Requirements for Informed Consent

Before addressing how the general requirements for informed consent proposed in the NPRM have been adopted and altered in the final rule, it is important to note that the structure for this regulatory text has been altered. In the pre-2018 rule, the general requirements were included in an unnumbered introductory paragraph. The NPRM proposed the same approach. To emphasize the fact that this paragraph includes multiple independent and important regulatory requirements, and to enable stakeholders and Common Rule departments and agencies to more easily reference particular requirements, these general requirements have been redesignated into a new § _____.116(a). In addition, the general requirement for consent in the final rule at § _____.116(a)(6) removes the reference to oral or written consent that was in the pre-2018 rule. This is the provision that addresses the prohibition on including exculpatory language through which the subject or the legally authorized representative is made to waive or appear to waive any of the subject's legal rights, or releases or appears to release the investigator, the sponsor, the institution, or its agents from liability for negligence. The reference to oral or written consent was removed from this provision in the final rule. In its place, a similar reference was included in to § _____.116(a) to clarify that all the requirements set forth in § _____.116(a) apply to written and oral consent.

Another change made in the final rule, as compared with the pre-2018 rule and the language proposed in the NPRM, is that § _____.116(a) contains introductory language summarizing each paragraph of § _____.116 and the relationship between those paragraphs. Given that the framework for informed consent has been altered and reorganized through this regulation, this introductory language is intended to

explain the overall approach set forth in revised § _____.116, as well as the significance of each paragraph. This introductory language is also intended to explain the role of broad consent under revised § _____.116. The introductory paragraph explains that the general requirements for informed consent are now set forth in § _____.116(a) and that these general requirements apply with respect to informed consent obtained pursuant to § _____.116(b), (c), and (d) (except, as described later, § _____.116(a)(5) does not apply to broad consent obtained under § _____.116(d)). This introductory language also explains that the basic elements of informed consent (which were described in § _____.116(a) of the pre-2018 rule) are included in § _____.116(b) of this final rule and that additional elements of informed consent that pertain only to certain studies (which were described in § _____.116(b) of the pre-2018 rule) are included in § _____.116(c) of this final rule.

In addition, this introductory language explains that the requirements for broad consent (a concept not specifically addressed in the pre-2018 rule) are described in § _____.116(d) of this final rule. As discussed below, broad consent under this final rule differs from the broad consent approach proposed for § _____.116(c) in the NPRM. The introductory language of § _____.116(a) explains that broad consent may be obtained in lieu of informed consent obtained under § _____.116(b) and § _____.116(c) (which describe basic elements of informed consent as a general matter and additional elements of informed consent that apply only to certain studies, respectively) for certain purposes. Specifically, in lieu of obtaining study-specific informed consent in accordance with § _____.116(b) and (c), broad consent may be obtained under § _____.116(d) for the use of identifiable private information or identifiable biospecimens collected for either research studies other than the proposed research or nonresearch purposes for: (1) storage and maintenance for secondary research use; and (2) secondary research. For those purposes (and no others), broad consent under § _____.116(d) may be obtained instead of specific consent under § _____.116(b) and (c).

New introductory language at § _____.116(a) also summarizes the provisions describing circumstances in which waiver or alteration of the requirements of informed consent are permitted. These circumstances pertain to research involving public benefit and service programs conducted by or

meaningfully add to the protection of the rights and welfare of subjects.

subject to the approval of state or local officials at § _____.116(e), and to research more generally at § _____.116(f) (see below).

Another change reflected in the final rule is that specific requirements for informed consent have been included in subparagraphs for clarity and emphasis. For example, the requirement that information that is given to the subject or the legally authorized representative shall be in language understandable to such subject or representative is no longer included as part of a general introductory paragraph and is instead included as § _____.116(a)(3). Except as noted here, these requirements remain the same as they were under the pre-2018 rule.

The final rule adopts, almost verbatim, all of the proposals made in the NPRM to improve and clarify the general requirements for informed consent. For example, the final rule adopts the proposed requirement specifying that the information provided in an informed consent form must be presented in sufficient detail relating to the research, and must be organized and presented in a way that does not merely provide lists of isolated facts, but rather facilitates the prospective subject's or legally authorized representative's understanding of the reasons why one might or might not want to participate. The final rule also adopts new language clarifying that this requirement applies to the informed consent as a whole. In addition, the final rule adopts the NPRM's proposal that prospective subjects or legally authorized representative must be provided with key information that is most likely to assist a prospective subject or legally authorized representative in making a decision about participating in research, and to provide an opportunity to discuss that information. Moreover, the final rule adopts an approach, consistent with many public comments, emphasizing efforts to foster understanding overall rather than imposing specific length limitations on the entire consent forms.

The final rule also includes language slightly different from that proposed in the NPRM for clarity or for conformance with other language in the final rule. For example, the final rule replaces references to a subject's representative with references to a subject's legally authorized representative (a term defined in § _____.102) for clarity.

As discussed above, a significant proposal in the NPRM was that in obtaining informed consent, investigators would first have to present the information required by § _____.116, before presenting any other information,

if any. In addition, the NPRM proposed mandating that consent forms must include only the required information under § _____.116 and that any other information be included in appendices. The final rule does not adopt a requirement that certain information be included only in appendices. This approach is responsive to public comments expressing concerns that such a mandate might sometimes undermine the informed consent process. The final rule adopts a slight variation of that approach in response to public comments about perceived lack of flexibility in the proposed language. Whereas the NPRM referred to the "body" of the consent form as opposed to appendices to the consent form, the final rule replaces those concepts with references to material that must be at the beginning of the consent form, versus material that can appear after that beginning section. The final rule does not limit the information that can be provided in the beginning of a consent form to *only* the § _____.116 requirements, but instead offers a more flexible and meaningful approach in response to public concerns that the NPRM proposal was too prescriptive. Moreover, the approach recognizes public comments that expressed concerns about creating a "dual document" system. As such, the final rule does not address appendices to the informed consent. However, the NPRM's references to the appendices of the consent form have in general been conceptually replaced by references to the material in a consent form that follows the "beginning" section.

In particular, the final rule imposes a new requirement (set forth in § _____.116(a)(5)(i)) that the informed consent begin with a concise and focused presentation of the key information that is most likely to assist a prospective subject or legally authorized representative in understanding the reasons why one might or might not want to participate in the research. This provision further requires that this beginning portion of the informed consent must be organized and presented in a way that facilitates comprehension. This requirement applies to all informed consents, except for broad consents obtained pursuant to § _____.116(d), which may warrant a different presentation.

This new requirement included at § _____.116(a)(5)(i) is somewhat similar to the proposal advanced in the NPRM insofar as both emphasize the importance of presenting the information that would be most important to a subject (or a legally authorized representative) before

presenting other information. However, the requirement included in § _____.116(a)(5)(i) is more specific, detailed, and flexible. First, this provision requires that key information be included in the beginning of the informed consent in a concise and focused presentation. We recognize that how this requirement applies will depend on the nature of the specific research study and the information presented in the informed consent and believe that this requirement strikes an appropriate balance between facilitating the comprehension of subjects of key issues and allowing study-specific flexibilities. In general, our expectation is that this initial presentation of the key pieces of information will be relatively short. This section of the consent could, in appropriate circumstances, include a summary of relevant pieces of information that are explained in greater detail later in the consent form.

The requirement that key information be presented in a concise and focused way will require an assessment that is specific to a study and its informed consent. For example, for most complicated clinical trials involving cancer patients with long (e.g., 20- to 25-page) consent documents, our expectation would be that the concise and focused presentation referred to in § _____.116(a)(5)(i) would be no more than a few pages, and would provide the key pieces of information about the trial in such a manner that facilitates a person's comprehension of why they might or might not want to participate in the research.

In such cases, for example, we would not consider a 10-page description of elements such as potential risks, accompanied by lengthy and complex charts and graphs, to satisfy the "concise and focused" requirement of § _____.116(a)(5)(i). With regard to risks in the type of cancer trial mentioned above, for example, instead of needing to mention every reasonably foreseeable risk, which would be required by § _____.116(b)(2), this beginning section of the consent form should identify the most important risks, similar to the information that a doctor might deliver in the clinical context in telling a patient how sick the chemotherapy drugs will make them, but with a particular emphasis on how those risks are changed by participating in the study.

We recognize the advantages of allowing institutions to design informed consents, consistent with § _____.116(a)(5)(i), that are tailored to particular research studies to assist prospective subjects in understanding the most fundamental aspects of the

informed consent. For this reason, the final rule does not strictly specify the types of information that should or should not be included to satisfy § _____.116(a)(5)(i), or the length of such concise and focused presentations. This flexibility is responsive to public comments recommending against a rigid approach to enable institutions and individuals to tailor informed consents to the circumstances of particular studies. A discussion of the key information to be included in the beginning section of the consent form, and how it will operate in practice, may be further clarified in future guidance.

We also recognize that for some relatively simple research studies with limited risks or benefits, the entire informed consent document may be relatively brief and still satisfy § _____.116. In such circumstances, an institution may determine that virtually all of the information required by § _____.116 would also satisfy § _____.116(a)(5)(i). In such cases, the informed consent document could include the concise and focused presentation of § _____.116(a)(5)(i) at the beginning of the informed consent document, followed by limited additional information required to satisfy § _____.116.

In all circumstances (those involving lengthy and complex informed consents as well as short and relatively simple informed consents), if information included at the beginning of the informed consent satisfies both § _____.116(a)(5)(i) and the elements of informed consent under § _____.116(b) and § _____.116(c) more generally, the information included at the beginning need not be repeated later in the body of the informed consent. Thus, with respect to the example provided above concerning a clinical trial with cancer patients, the most important reasonably foreseeable risks to subjects would be summarized at the beginning of the informed consent as part of § _____.116(a)(5)(i)'s concise and focused presentation, but that a more comprehensive and detailed description of reasonably foreseeable risks to subjects would be included later in the body of the informed consent. In contrast, with respect to a relatively simple research study with limited risks, we would expect that all of the information provided to potential subjects concerning such risks might satisfy both § _____.116(a)(5)(i) (as part of a concise and focused presentation of key information) and § _____.116(b)(2) (a description of any reasonably foreseeable risks or discomforts to the subject). In such circumstances, the information provided at the beginning

of the informed consent would not need to be repeated or further detailed in the informed consent and the entire informed consent could be relatively short.

In general, we would expect that to satisfy § _____.116(a)(5)(i), the beginning of an informed consent would include a concise explanation of the following: (1) the fact that consent is being sought for research and that participation is voluntary; (2) the purposes of the research, the expected duration of the prospective subject's participation, and the procedures to be followed in the research; (3) the reasonably foreseeable risks or discomforts to the prospective subject; (4) the benefits to the prospective subject or to others that may reasonably be expected from the research; and (5) appropriate alternative procedures or courses of treatment, if any, that might be advantageous to the prospective subject. As a general matter, a brief description of these five factors would encompass the key information most likely to assist a reasonable person (or legally authorized representative) in understanding the reasons why one might or might not want to participate in research, as required by § _____.116(a)(5)(i) and § _____.116(a)(4). However, we recognize that this determination is necessarily fact-specific and that IRBs and institutions may require that somewhat different (or additional) information be presented at the beginning of an informed consent to satisfy § _____.116(a)(5)(i).

The NPRM also proposed adding a new requirement to the general introductory paragraph of § _____.116, which would provide that if an authorization required by 45 CFR parts 160 and 164 (parts of the HIPAA Privacy Rule) is combined with a consent form, the authorization elements required by 45 CFR 164.508 must be included in the consent form (and not the appendices). Because this final rule does not incorporate the distinction proposed in the NPRM between the informed consent and appendices, the final rule does not incorporate this language.

We are satisfied that the approach adopted in this final rule will enable regulated entities and individuals to pursue different and innovative approaches to obtaining informed consent, as recommended in some public comments, while ensuring that the important aspects of informed consent are clearly communicated to prospective subjects and subjects.

B. Basic Elements of Informed Consent (§ _____.116(b))

1. Background and Pre-2018 Requirements

Under the pre-2018 rule, investigators were generally required to obtain the subjects' informed consent to participate in research.⁴⁵ The regulations required that the consent form include at least eight specific items of information, including: (1) an explanation of the purposes of the research, its duration, and procedures involved, and identification of any procedures which are experimental; (2) a description of the reasonably foreseeable risks; (3) a description of any potential benefits; (4) a disclosure of appropriate alternative procedures or courses of treatment, as relevant; (5) information about confidentiality of records, compensation, and treatments if injury occurs; (6) for research involving more than minimal risk, an explanation as to whether any compensation or medical treatments are available if injury occurs; (7) contact information; and (8) a statement that participation is voluntary, and that refusal to participate or decision to withdraw will involve no penalty or loss of benefits to which the subject is otherwise entitled.

2. NPRM Proposals

In the NPRM it was proposed that research with nonidentified data continue to be considered not to involve "human subjects." However, to better ensure that subjects are informed of the possibility that identifiers collected as part of a research study could be removed from the data and then be used for secondary research studies without the protections provided by this policy, it was proposed that a new element of informed consent be required. The new basic element of consent proposed in the NPRM at § _____.116(a)(9) would apply to all research collecting identifiable private information. Based on the investigator's plans, the informed consent form and process would need to inform subjects either that: (1)

⁴⁵ For general requirements for informed consent see § _____.116 in the pre-2018 Rule, and 21 CFR 50.20, .25 in FDA's comparable requirements. There are provisions under the Common Rule, that allow for the waiver of some or all of the elements of informed consent (see § _____.116(e) and (f)). The Federal Food, Drug, and Cosmetic Act limits the circumstances under which informed consent can be waived. See, e.g., section 520(g) (21 U.S.C. 360j(g)). Currently, FDA regulations contain only two exceptions from informed consent in certain life-threatening and emergency situations under 21 CFR 50.23–24. However, the 21st Century Cures Act recently amended the Federal Food, Drug and Cosmetic Act to allow waiver of informed consent for certain FDA-regulated minimal risk investigations.

identifiers might be removed from the data and that the nonidentified data could be used for future research studies or distributed to another investigator for future research studies without additional informed consent from the subject or the representative, if this might be a possibility; or (2) the subject's data collected as part of the research, from which identifiers are removed, would not be used or distributed for future research studies.

3. Public Comments

Approximately 40 public comments were received on the proposed new required element of informed consent found in the NPRM at proposed § _____.116(a)(9). A large majority favored this proposal. Those who supported this proposal indicated that it provided useful information to prospective subjects about how private information obtained from a study might be used in the future. They also commented that it enhanced transparency in research, providing potential subjects with the information they need to decide whether to participate. Those who opposed this proposal suggested that it would increase the length of consent forms without appreciably improving potential subjects' understanding of a specific research activity.

4. Response to Comments and Explanation of the Final Rule: Basic Elements of Informed Consent

The final rule, at § _____.116(b)(9), adopts the NPRM proposal to inform potential subjects about the possible use of their identifiable private information with two clarifying changes. First, because the final rule at § _____.102(e)(1) now states that the definition of human subject, in part, includes research in which an investigator obtains, uses, studies, analyzes, or generates *identifiable* biospecimens or identifiable private information, this new element of informed consent has been clarified to specifically apply to any research that involves the collection of identifiable biospecimens, rather than all biospecimens, in addition to research that involves the collection of identifiable private information. In addition, a change to what was proposed in the NPRM has been made to the new element of consent in the final rule at § _____.116(b)(9)(ii), to clarify that it is intended to inform subjects that their information or biospecimens collected as part of the research will not be used or distributed for future research, even if identifiers are removed.

We agree with the public comments that indicated this new element of consent will provide useful information to prospective subjects about whether their identifiable private information or identifiable biospecimens might be stripped of identifiers and used for future research studies or distributed to another investigator for future research studies without additional informed consent from the subject or the legally authorized representative.

We expect that this information can usually be provided in a brief statement, and disagree with the commenters that suggested that this new basic element of consent would increase the length of consent forms without appreciably improving potential subjects' understanding of a specific research activity. This new requirement is intended to give the potential subject a right to know that identifiers might be removed from information or biospecimens and be used for future research without additional consent, when such a possibility exists, so he or she can make a fully informed decision about whether to participate in the research. If subjects' identifiable private information or identifiable biospecimens will not be used for future research studies, even if identifiers are removed, this new element of consent requires that subjects be informed of this as well. Finally, if a specific technology or technique determined to be capable of generating identifiable private information or identifiable biospecimens through the consultative process described at § _____.102(e)(7) will be used, that information should be included in the description of the research at § _____.116(b)(1).

C. Additional Elements of Informed Consent (§ _____.116(c))

1. Background and Pre-2018 Requirements

The pre-2018 rule contained six additional elements of consent required when appropriate: (1) A statement that the particular treatment or procedure may involve risks to the subject (or to the embryo or fetus, if the subject is or may become pregnant) which are currently unforeseeable; (2) anticipated circumstances under which the subject's participation may be terminated by the investigator without regard to the subject's consent; (3) any additional costs to the subject that may result from participation in the research; (4) the consequences of a subject's decision to withdraw from the research and procedures for orderly termination of participation by the subject; (5) a statement that significant new findings

developed during the course of the research which may relate to the subject's willingness to continue participation will be provided to the subject; and (6) the approximate number of subjects involved in the study.

2. NPRM Proposals

The NPRM proposed adding three additional elements of consent that, when appropriate, would be required to be included in the informed consent form and process. These proposed additional elements of consent pertain to issues that have become more relevant in recent years as science has advanced and the nature of research has changed. One proposed new element would require that prospective subjects be informed that their biospecimens may be used for commercial profit and whether the subject will or will not share in this commercial profit. A second proposed element would require that prospective subjects be informed of whether clinically relevant research results, including individual research results, will be disclosed to subjects, and if so, under what conditions. A third proposed new element would provide subjects or their legally authorized representatives with an option to consent, or refuse to consent, to investigators re-contacting the research subject to obtain additional information or biospecimens, or for future research.

3. Public Comments

Each of the proposed additional elements of informed consent found in the NPRM at § _____.116(b)(7)–(9) received approximately 50 comments. All three proposals were generally favored by the public. With respect to the proposed element of consent at § _____.116(b)(7), requiring that prospective subjects be informed that their biospecimens may be used for commercial profit and whether the subject will or will not share in this commercial profit, comments, especially from individual members of the public not identified with any institution or organization, indicated that the extent to which an investigator might profit from information or biospecimens collected or used during a study was an important decision point as to whether a prospective subject would want to participate in a study. In response to proposed element § _____.116(b)(8)—requiring that prospective subjects be informed of whether clinically relevant research results, including individual research results, will be disclosed to subjects, and if so, under what conditions—several public comments stated that knowing whether or not

research results would be returned to them was an important piece of information for them to know and understand in deciding whether to participate in a study.

Finally, comments discussing § _____.116(b)(9) regarding the potential to be contacted for future studies noted that allowing an individual to indicate whether or not he or she might be contacted for future research studies respected subject autonomy. Those who opposed the provision noted that while the intent of the provision was laudable, the ensuing tracking system that would need to be developed by institutions to track who had said “yes” or “no” to being re-contacted, and in what circumstances, would be difficult to develop and maintain, and would also represent significant costs to institutions without a corresponding tangible increase in the protections afforded to human subjects.

4. Response to Comments and Explanation of the Final Rule: Additional Elements of Consent

The final rule contains two of the three proposed additional elements of consent. The final rule does not include the additional element proposed in the NPRM relating to providing subjects or their legally authorized representatives the option to consent or refuse to consent to being re-contacted to obtain additional information or biospecimens, or for future research.

New additional elements included in the final rule are: (1) A statement that the subject’s biospecimens (even if identifiers are removed) may be used for commercial profit and whether the subject will or will not share in this commercial profit (§ _____.116(c)(7)); and (2) a statement regarding whether clinically relevant research results, including individual research results, will be disclosed to subjects, and if so, under what conditions (§ _____.116(c)(8)). Because many public comments addressed a desire to share in the profits of successful products developed using their biospecimens, we believe that investigators, when appropriate, should inform prospective subjects about whether they might or might not benefit commercially from future products resulting from the research, should that possibility be important in their decision making process. Also, several comments received from individuals who reported participation in research studies described disappointment that research results were not returned to them. We believe that potential subjects should be aware of the possibility that they might not receive research results, as well as

the possibility that they might, so that they can factor that information into their decision about whether to consent to research. This provision is intended to pertain to all clinically relevant research results, including general or aggregate research findings and individual research results.

We are also including in the final rule an additional element that when appropriate for research involving biospecimens, subjects be informed of whether the research will (if known) or might include whole genome sequencing (WGS) (§ _____.116(c)(9)). This provision of the final rule describes WGS as the sequencing of a human germline or somatic specimen with the intent to generate the genome or exome sequence of that specimen. WGS generates an extremely large amount of information about people, including factors that will contribute to their future medical conditions. As was recognized in the NPRM’s Alternative Proposal A to expand the definition of “human subject” to include WGS (discussed in Section III), data obtained through WGS can provide important insights into the health of individuals as well as their biological family. It is also possible that WGS data gathered for one purpose may reveal important information, perhaps unanticipated and unplanned for, years later. Given the unique implications of the information that can be developed through WGS, if it is either known that a specific research study will include this technique, or might include it, we believe that this aspect of the research must be disclosed to prospective subjects as part of the informed consent process. It is recognized that under the pre-2018 rule, if a research study were to involve WGS, this research procedure would have almost always been included in the description of the research. However, to remove any ambiguity about whether such information would need to be included in the informed consent, the final rule makes this requirement explicit through this new element of consent.

The information that would have to be disclosed under these additional elements of consent is often relevant to an individual’s decision of whether to participate in a research study. Such information may have been included in informed consent forms under the pre-2018 rule. However, the final rule now requires inclusion of these additional elements, when appropriate.

The additional element of consent proposed in the NPRM that was not included in the final rule would have required providing subjects or their legally authorized representatives with

an option to consent, or refuse to consent, to investigators re-contacting the subject to seek additional information or biospecimens or to discuss participation in another research study. Although for some research studies, it will be desirable to inform prospective subjects about investigators’ plan to re-contact subjects for certain purposes, and give them the option to agree or disagree to such re-contact, we agree with the public comments that questioned the importance of requiring that such information be included in the consent form. Although the final rule does not include this additional element of consent, this information can be included in the consent form.

D. Elements of Broad Consent for the Storage, Maintenance, and Secondary Research Use of Identifiable Private Information or Identifiable Biospecimens (§ _____.116(d))

1. Background and Pre-2018 Requirements

Under the pre-2018 rule, if identifiers are removed from information and biospecimens such that the identity of the subject could not be readily ascertained by an investigator or associated with the information or biospecimens, then such information and biospecimens that have been collected for purposes other than the proposed research could be used without any requirement for informed consent. Similarly, under the HIPAA Privacy Rule, if data are de-identified or HIPAA identifiers do not accompany biospecimens, then the Privacy Rule does not apply. When identifiers have not been removed, under the pre-2018 rule investigators were allowed in certain situations to obtain a consent that is broader than for a specific research study, such as for creating a research repository that involves obtaining biospecimens from living individuals for use in future research studies. In these cases, an IRB could determine that the original consent for the creation of the research repository satisfied the requirements of the Common Rule for the conduct of the future research, provided that the elements of consent continue to be satisfied for the future research. Despite this flexibility in the Common Rule, stakeholders and the Common Rule departments and agencies believe that the elements of consent required under § _____.116 of the pre-2018 rule often were not satisfied in the case of broad consent for future unspecified research use of identifiable private information or identifiable biospecimens.

With respect to HIPAA, HHS's pre-2013 interpretation of the HIPAA Privacy Rule was that authorizations for research needed to be study-specific, and thus, that such authorizations could not authorize certain future unspecified research. However, in January 2013, the Office for Civil Rights modified its prior interpretation.⁴⁶ Under the new interpretation, an authorization now may be obtained from an individual for uses and disclosures of protected health information for future research purposes, so long as the authorization adequately describes the future research such that it would be reasonable for the individual to expect that his or her protected health information could be used or disclosed for the future research purposes.

Because biospecimens and information that have been collected for clinical use or purposes other than for the proposed research are often an important source of information and material for investigators, and the re-use of existing information and materials can be an efficient mechanism for conducting research without presenting additional physical or psychological risks to the individual, it seemed prudent to consider changes to current regulations relating to those issues.

2. NPRM Proposals

The NPRM proposed to allow broad consent to cover the storage or maintenance for secondary research use of all biospecimens (regardless of identifiability) and identifiable private information. Broad consent would be permissible for the storage or maintenance for secondary research of such information and biospecimens that were originally collected for either research studies other than the proposed research or nonresearch purposes. The broad consent document would also meet the consent requirement for the use of such stored biospecimens and information for individual research studies. The NPRM made a separate case for nonidentified private information than it did for biospecimens, stating that consent would not be required for the secondary research use of nonidentified private information, such as the research use of medical records that have had all identifiers removed. Because the NPRM proposed that the definition of human

subject be expanded to include all biospecimens, it also proposed to facilitate research using biospecimens by permitting broad consent to be obtained for their storage or maintenance for secondary research.

It was envisioned that the proposed broad consent provision would be used by institutions and investigators to give individuals the choice to either allow or disallow the use of their biospecimens and identifiable private information for secondary research. In some cases, institutions would be expected to seek broad consent as part of a research protocol to create a research repository of biospecimens or information. However, in other cases it was expected that institutions, particularly those that do not typically conduct human subjects research, might not develop a research protocol to create a research repository, but still choose to seek broad consent from individuals for the research use of their biospecimens or identifiable private information. In such cases, these institutions might simply "tag" biospecimens and information as either available or not available for secondary research.

Because broad consent is a different form of consent than the consent that is obtained for a specific research study, the NPRM proposed required elements for broad consent that would include several of the basic and additional elements of informed consent, but not all, and would include several additional required elements. The NPRM proposed to require that the information included in broad consent describe the biospecimens and identifiable private information that would be covered by the consent, recognizing that the biospecimens and information to be used in future research studies might be collected after the consent was obtained. Further, the NPRM proposed that broad consent for the research use of biospecimens or identifiable private information obtained for nonresearch purposes would be limited to covering either or both of the following: (1) Biospecimens or identifiable private information that exist at the time at which broad consent is sought; and (2) biospecimens or identifiable private information that will be collected up to 10 years after broad consent is obtained for adult subjects, and, for research involving children as subjects, biospecimens or identifiable private information that will be collected up to 10 years after broad consent is obtained or until the child reaches the legal age of consent to the treatments or procedures involved in the research, whichever comes first.

The NPRM proposed to include the standard concerning who is a child based upon the definition of "children" as defined at 45 CFR 46.402(a). At the time the child becomes an adult, the broad consent or permission would no longer be valid and either broad consent would need to be sought from the child-turned-adult, or the investigator would need to seek a waiver of informed consent in order to use the individual's biospecimens or identifiable private information for research, unless one of the exclusions or exemptions were applicable.

A proposed element of broad consent in the NPRM included a requirement that subjects be informed that they may withdraw consent, if feasible, for research use or distribution of the subject's information or biospecimens at any time without penalty or loss of benefits to which the subject is otherwise entitled. However, information that has been stripped of identifiers might not be traceable. Thus, it might not be feasible to withdraw consent for future use or distribution in this case. If, however, an investigator committed to permitting a subject to discontinue the use of such information, it was expected that the investigator would honor this commitment by not stripping identifiers and using the information or biospecimens in research. The proposed regulations would not require investigators to make such a commitment.

Another proposed element of broad consent in the NPRM related to the public posting of nonidentified data about a subject. This proposed element of broad consent would include an option, when relevant, for an adult subject or the subject's legally authorized representative to consent or refuse to consent to the inclusion of the subject's data with removal of the identifiers listed in the HIPAA Privacy Rule at 45 CFR 164.514(b)(2)(i)(A) through (Q), in a database that is publicly available and openly accessible to anyone. This provision was proposed in the context of increasing interest in inviting study participants to allow their study data, in some cases including genomic data, to be made publicly available in order to maximize the potential for research that spurs increased understanding of disease processes. Under this provision, the consent document would be required to prominently note the option for the participant to allow the investigator to publically post (e.g., on a Web site) the participant's genomic or other potentially identifiable sensitive information, and to include a

⁴⁶ HHS. Modifications to the HIPAA Privacy, Security, Enforcement, and Breach Notification Rules Under the Health Information Technology for Economic and Clinical Health Act and the Genetic Information Nondiscrimination Act; Other Modifications to the HIPAA Rules. 78 FR 5611 (Jan. 25, 2013). Retrieved from <https://www.gpo.gov/fdsys/pkg/FR-2013-01-25/pdf/2013-01073.pdf>.

description of the risks associated with public access to the data.

To facilitate the use of broad consent, the NPRM proposed that the Secretary of HHS would publish in the **Federal Register** templates for broad consent that would contain all of the required elements of consent in these situations. It was envisioned that at least two broad consent templates would be developed: one for information and biospecimens originally collected in the research context, and another for information and biospecimens originally collected in the nonresearch context.

Public comment was sought on whether broad consent to secondary research use of information and biospecimens collected for nonresearch purposes should be permissible without a boundary, or whether a time limitation or some other type of limitation should be imposed on information and biospecimens collected in the future that could be included in the broad consent as proposed in the NPRM. If a time limit should be required, public comment was sought on whether the NPRM proposal of up to 10 years was a reasonable limitation and whether a limitation related to an identified clinical encounter would better inform individuals of the clinical information and biospecimens that would be covered by a broad consent. Public comment was also sought on whether all of the elements of broad consent proposed in the NPRM should be required for the secondary use of biospecimens or identifiable private information originally collected as part of a research study that was conducted without consent because (1) either the original research study met an exclusion or exempt category of research, or (2) a waiver of consent was approved by an IRB.

Public comment was sought on how likely investigators are to seek broad consent for the use of identifiable private information (as contrasted with biospecimens), given that provisions within the NPRM would make it easier to do such research without consent. In this regard, the NPRM proposal to prohibit waiver of consent by an IRB if a person has been asked for broad consent and refused to provide it could create a disincentive on the part of investigators from choosing to seek broad consent for research involving secondary use of identifiable private information. Given the costs and time and effort involved in implementing the system for obtaining broad consent for the use of identifiable private information and tracking when people provide consent or refuse to do so, the public was asked to comment on

whether the benefits to the system were likely to outweigh the costs, and if so, whether the broad consent provisions should be limited to obtaining broad consent for research use of biospecimens.

3. Public Comments

Approximately 475 comments addressed broad consent, a majority of which expressed opposition to broad consent as proposed and discussed in the NPRM. The basis of this opposition was largely related to the NPRM proposal that some type of consent (broad or specific) would be required for research with nonidentified biospecimens. A smaller number of comments (approximately 150) addressed the adequacy or inadequacy of broad consent as a concept, or the proposed broad consent templates to be created by HHS.

Public comment on the proposed, but not yet developed, broad consent templates was mixed, with a majority of comments stating that it was impossible to comment on a template that had not yet been created. Even among those who supported the use of broad consent, some had questions about whether broad consent provided at one institution would be sufficient for research ultimately conducted at another institution. Many comments further noted that the entire regulatory schema around broad consent (e.g., exemptions dependent on broad consent, prohibition on an IRB waiving broad consent if broad consent had been sought and someone declined) required additional study and discussion and recommended that the department issue another NPRM on these issues following some form of systematic analysis and broader public consultation. A professional investigative pathology association and many of its members endorsed the concept of broad consent and the development of templates by the Federal Government, writing that they would be less burdensome but still a functional way of promoting ethically conducted biomedical research with biospecimens.

Several commenters suggested that institutions needed to retain the ability to create and amend broad consent forms tailored to a variety of situations rather than rely on a federal template. These comments also generally stressed the importance of retaining an IRB's active role in reviewing the broad consent process and specific secondary research studies to ensure that interests other than autonomy and concerns other than those related to privacy were considered in a proposed study. A minority of commenters additionally

expressed concern with the Federal Government's ability to develop broad consent templates that the regulated community might feel were sufficiently informative.

Public comments were also mixed on whether or not broad consent as proposed in the NPRM would constitute meaningful consent. Many comments noted that a consent form sufficiently broad to cover all potential future secondary research uses of biospecimens or identifiable private information might be so broad and vague as to be not meaningful or informative to prospective research subjects. Others doubted the meaningfulness of broad consent obtained in the clinical setting. One academic research institution questioned whether it was really consent at all, but rather an agreement or permission, and another commenter questioned whether broad consent would increase subjects' autonomy.

Many of the commenters who opposed broad consent also argued against any requirement to obtain consent for the use of nonidentified biospecimens. One academic research institution raised serious concerns about obtaining meaningful broad consent, which undermines existing privacy and other protections for subjects in research. Others noted that requiring broad consent for all secondary use of all biospecimens would require that there always be a link or code between the biospecimen and the subject's identity, which ultimately would result in an overall increase in privacy risks. Many commenters favored an opt-out system for broad consent (especially with respect to broad consent for use of nonidentified biospecimens). An AI/AN organization expressed overall concern about the concept of broad consent, noting that many AI/AN people believe that specimens and blood are considered sacred and recommending that all secondary uses of collected specimens and data should require an additional consent process, including tribal consent when specimens and data are obtained from AI/AN populations.

Few comments were received on the actual proposed elements of broad consent. Of these, a majority expressed confusion with the proposals related to the duration of the consent and the scope of the biospecimens and identifiable information that could be collected.

The NPRM also asked whether broad consent to secondary research use of information and biospecimens collected for nonresearch purposes should be permissible without a boundary, or whether a time limitation or some other

type of limitation should be imposed on information and biospecimens collected in the future that could be included in the broad consent. If a time limit should be required, the NPRM asked whether up to 10 years was a reasonable limitation. It also asked whether a limitation related to an identified clinical encounter would better inform individuals of the clinical information and biospecimens that would be covered by a broad consent document. Approximately 65 commenters specifically answered this question.

Most who commented were opposed to the 10-year limitation on the period of time that an institution could collect biospecimens and information from an individual once broad consent had been sought and obtained. They stated that the limitation was arbitrary, not supportable by anything discussed in the NPRM, and presented an administrative burden for institutions and investigators to time stamp and track the 10-year limit for each subject. A few commenters stated that a 10-year limit is a reasonable boundary, but were concerned about the need to re-consent people once they reach the legal age of consent. In large data sets, identifying such people could be very challenging as people often move locations during such lengths of time, which would create an administrative barrier. A few commenters suggested that 10-year boundary was too long and one research institution commented that in its experience individuals seem to prefer shorter time limits tied to specific periods (*e.g.*, a series of clinical encounters, participation in an ongoing study).

A few comments stated that any time limit could have a negative effect on rare disease research as the numbers of affected people are so small and, as discoveries are made, there is often a need to go back to years' worth of information or stored biospecimens to search for markers, mutations, or clinical information that is related to the new discovery. Such commenters expressed concern that this could be deleterious to individuals with rare disease seeking a diagnosis.

Some commenters were confused about how the 10-year boundary proposed in the NPRM was supposed to function. Some comments assumed that one could only use the biospecimens or data for a 10-year period and after that period one would be required to get consent again for the use of those items. Others assumed that investigators would have to re-consent people every 10 years, but the information and biospecimens could be used indefinitely. For these reasons, many

comments on the 10-year boundary said it was unreasonable and unworkable operationally. Some suggested that instead of 10-year boundary, patients could be routinely reminded that they gave consent and can be reminded that they can opt out at any time. Several large research institutions commented that the time limit would necessitate a lot of tracking for institutions and could lead to smaller health care institutions ceasing their collection of biospecimens for research, which would ultimately have a negative impact on research.

The NPRM also asked whether all of the elements of consent proposed at § _____.116(c) should be required for the secondary use of biospecimens or identifiable private information originally collected as part of a research study that was conducted without consent because either the original research study met an exclusion or exempt category of research, or a waiver of consent was approved by an IRB. Approximately 30 comments answered this question. Responses ranged from those saying the elements are not as relevant as the burden of having to seek consent every 10 years. Many stated that the elements of consent appeared to be growing in the proposed rule at the same time that the rule was requiring simpler and shorter consent forms. As such, efforts should not be made to include all of the elements required in specific consent to broad consent; otherwise the intent of broad consent would be lost.

The NPRM also asked whether oral consent should be permissible in limited circumstances as proposed under the exemption for the storage and maintenance of biospecimens and identifiable private information. More than 60 pathologists, pathology departments, and pathology organizations suggested that oral consent should not be allowed in this context because it raises too many administrative challenges and may undermine public trust. A few commenters felt oral consent should be permitted but generally did not provide a rationale.

Finally, some comments indicated that broad consent as a concept should not be included in a final rule, and that the standards that exist under the pre-2018 rule for secondary research (*i.e.*, either that an investigator obtains study specific consent or a waiver of informed consent from an IRB) should be maintained in a final rule.

4. Response to Comments and Explanation of the Final Rule: Elements of Broad Consent

The final rule includes an option to obtain broad consent for the storage, maintenance, and secondary research use of identifiable private information or identifiable biospecimens, as defined at § _____.102(e)(5) and (6), but several significant changes were made in response to public comments. Although in some ways the final rule's broad consent provision resembles the provision that was proposed in the NPRM, it is important to recognize a very fundamental difference between the role that this provision will play under the final rule, as compared to the role it was intended to play under the NPRM. This key difference relates to the fact that the provisions in the NPRM that would have generally required consent for secondary research use of nonidentified biospecimens, including imposing narrow stringent criteria for IRB waiver of consent with respect to such research, are not being implemented because the NPRM's proposal that all biospecimens, regardless of their identifiability, be covered under the Common Rule has not been adopted. Importantly, under the final rule, broad consent is permissible only for secondary research and no other types of research.

Thus, had all of those NPRM provisions been implemented, investigators who wanted to conduct secondary research with biospecimens would in most instances have found themselves essentially forced to use the new broad consent provisions as their only practical option for conducting such research. This is because generally, under the NPRM proposals, they would no longer have had the option to de-identify information or biospecimens, or to use them in coded form, to avoid application of the Common Rule's requirements. Under the NPRM's proposals, had investigators not obtained broad consent, they would often not practicably be able to meet the informed consent requirements relating to such research (which would have been covered under the Common Rule). Therefore, it would generally have been the case that they would have had little choice but to obtain broad consent, assuming they did not want to undertake the alternative of obtaining study-specific consent from subjects each and every time they conducted a study involving secondary use of biospecimens.

Given that we did not adopt the NPRM's proposal to cover all biospecimens regardless of their

identifiability under the Common Rule, the final rule also does not adopt proposed consent requirements for secondary research with nonidentified biospecimens. For this reason, the final rule's provisions relating to broad consent now play a very different role from those proposed in the NPRM. In most instances, these provisions will be providing new options—that is, new flexibility—to an investigator, in addition to those options that an investigator would have had under the pre-2018 rule. An investigator wishing to do secondary research with biospecimens will continue to have the option of doing secondary research with nonidentifiable biospecimens, as was the case in the pre-2018 rule. An investigator also could continue to use biospecimens that are coded, thus allowing the collection of additional information about the subjects over time.⁴⁷ In both of those instances, no additional consent would be required because the research would not involve human subjects as defined by the final rule. Furthermore, even if the investigator wanted to use the biospecimens with identifiers attached, he or she would still have the option of asking an IRB to waive the requirement to obtain informed consent: the waiver criteria are in most respects unchanged under the final rule.

For these reasons, the broad consent provisions at § _____.116(d) afford investigators wishing to conduct secondary research on identifiable private information or identifiable biospecimens an additional alternative to obtaining an IRB waiver of consent or to obtaining study-specific consent. Given that these new broad consent provisions are essentially a new alternative to other options that are very similar to those that existed under the pre-2018 rule, these provisions are not increasing any regulatory burden or making it more difficult to do research. Indeed, just the opposite is the case. The changes made in the final rule are responsive to the significant criticisms expressed by many of the commenters about what the NPRM proposed, under which obtaining broad consent would have imposed substantial new burdens on a vast amount of secondary research with biospecimens. In contrast, when investigators choose to use the broad consent provisions under the final rule, they will presumably be doing so because this new option is less

burdensome to them than their other (largely unchanged) options for conducting such research.

Although we recognize public commenters' concern that broad consent might not be as meaningful or informative as study-specific consent, it is also important to note that when an investigator chooses to use this new option, doing so will generally provide increased protection to the autonomy of research subjects. It will give them a choice to say no to such research, in contrast to most of the other routes by which an investigator might generally choose to conduct this type of research, such as with a waiver of informed consent, which allows research to take place regardless of the wishes of the person whose information or biospecimens are being studied, and without their knowledge. In addition, in response to the public's concerns that broad consent would not be meaningful, some of the elements of broad consent have changed from what was proposed in the NPRM to require more specific information about the research that may be conducted. As discussed in the NPRM, one of the main purposes of the final rule is to facilitate the conduct of minimal risk research, while enhancing subjects' autonomy. We believe that the option to obtain broad consent furthers this goal.

It is important to recognize that broad consent is a permissible option only for secondary research. Secondary research is limited to research using identifiable private information or identifiable biospecimens that are collected for either research studies other than the proposed research or nonresearch purposes. It is not permissible to obtain broad consent for any other type of research (e.g., research involving the collection of information or biospecimens through a research interaction or intervention with a subject). The informed consent requirements in § _____.116(b) and (c) will be applicable to all human subjects research for which broad consent is not an option. However, it is envisioned that research requiring study-specific consent, such as research involving the collection of information or biospecimens through a research interaction or intervention with a subject, will sometimes also involve seeking subjects' broad consent for the secondary research use of identifiable private information or identifiable biospecimens obtained as part of the original research study.

When broad consent is obtained, the general requirements for informed consent in § _____.116(a) apply, except that the requirements at § _____.116(a)(5)

(imposing certain requirements concerning the presentation of information for informed consent and prescribing the order in which consent information is presented) do not apply to broad consent.

We expect that, given the different requirements set forth for study-specific consent and broad consent, some institutions and investigators may elect to pursue study-specific consents for the storage, maintenance, and secondary research uses of identifiable private information and identifiable biospecimens (or for some subset of such research) whereas other institutions and investigators may elect to pursue broad consent for the same types of research (or for some subset of such research). For instance, with regard to the public comments raising concern about broad consent being sought from AI/AN peoples, it is expected that institutions, investigators, and IRBs will consider these concerns when determining when it might be appropriate to seek study-specific consent for the secondary research use of identifiable biospecimens, as well as the need for tribal consent, when appropriate.

Perhaps even more commonly, however, given that the NPRM proposal regarding generally requiring consent for research use of nonidentifiable biospecimens has not been adopted, many investigators may choose to use the routes that previously existed under the pre-2018 rule, and will continue to exist, for conducting such research without informed consent under the Common Rule. Those options include using nonidentifiable biospecimens, including perhaps having a code maintained that will allow the investigator to obtain additional information about the subjects, or obtaining a waiver from an IRB of the need to obtain informed consent.

The broad consent provision in the final rule is different in three main ways from what was proposed in the NPRM. First, consistent with the decision not to revise the definition of human subject to include biospecimens regardless of identifiability, the broad consent provision in § _____.116(d) only applies to secondary research using identifiable private information and identifiable biospecimens.

Second, the elements of broad consent have been strengthened and simplified in response to public comments. The final rule strengthens the element of broad consent proposed in the NPRM regarding the need to provide a general description of the types of research that may be conducted with identifiable private information and identifiable

⁴⁷ HHS. Office for Human Research Protections. Coded Private Information or Specimens Use in Research, Guidance. October 16, 2008. Retrieved from <https://www.hhs.gov/ohrp/regulations-and-policy/guidance/research-involving-coded-private-information/index.html>.

biospecimens. It does this by requiring that this description must include sufficient information to allow a reasonable person to expect that the broad consent would permit the types of research conducted. This “reasonable person” standard is consistent with the interpretation that the Office for Civil Rights provided for authorization obtained from an individual for the use or disclosure of protected health information for future research purposes. In addition, the final rule has been strengthened to require that when subjects will not be informed about the details for any specific research studies that might be conducted using their identifiable private information or identifiable biospecimens, the broad consent must disclose this fact and inform subjects that they might have chosen not to consent to some of those specific research studies. It is envisioned that for certain types of research, such as research for which there is reason to believe some subjects will find the research controversial or objectionable, a more robust description of the research will be required in order to meet this “reasonable person” standard. This requirement has been included in the final rule in recognition of the concerns raised by some public commenters that broad consent would not be meaningful because it will not provide detailed information about specific research studies that might be conducted with the individual’s identifiable private information or identifiable biospecimens.

As proposed in the NPRM, the final rule permits broad consent to be sought for either a narrow type of research to be conducted in the future (e.g., cancer research), or a broader scope of research. Given this flexibility, while the final rule includes an exemption for secondary research for which broad consent is required, the exemption is contingent on several criteria being satisfied, including that an IRB determines that the research to be conducted is within the scope of the broad consent (§ _____.104(d)(8)). This exemption is further discussed in Section V. For research that is not exempt, the IRB is expected to assess whether the description of the research included in the broad consent form is adequate to permit a reasonable person to expect that they were providing consent for the currently proposed secondary research study.

While strengthening the broad consent requirements, the final rule also adopts simplified and more flexible elements of broad consent than what was proposed in the NPRM. For example, the final rule requires that the

broad consent include a description of the identifiable private information or identifiable biospecimens that might be used in research, whether sharing of such information or biospecimens might occur, and the types of institutions or investigators that might conduct research with such information or biospecimens. However, the final rule does not adopt the NPRM’s proposed limitations on the research use of biospecimens or identifiable private information obtained for nonresearch purposes, that would have only permitted a broad consent to cover either or both of the following: (1) Biospecimens or identifiable private information that exist at the time at which broad consent is sought; and (2) biospecimens or identifiable private information that will be collected up to 10 years after broad consent is obtained or until the child reaches the legal age of consent to the treatments or procedures involved in the research, whichever comes first. We were persuaded by the public comments that raised concerns about the complexity and tracking burden that such limitations would impose, without clearly offering individuals a more meaningful way to control the use of their information or biospecimens.

In addition, the broad consent requirements have been simplified to avoid creating redundant requirements with the basic elements of informed consent under § _____.116(b) that must also be included in broad consent obtained under § _____.116(d). For example, in the final rule, it is required that broad consent include a statement that participation is voluntary, refusal to participate will involve no penalty or loss of benefits to which the subject is otherwise entitled, and the subject may discontinue participation at any time without loss of benefits to which the subject is otherwise entitled ((§ _____.116(d)(1), incorporating § _____.116(b)(8) for broad consent). Therefore, the comparable element of broad consent that was proposed in the NPRM is not included in the final rule.

As discussed in the NPRM, we expect that, when appropriate, this element of broad consent will inform subjects that information that has been stripped of identifiers might not be traceable, and thus it might not be feasible to withdraw consent for future use or distribution in this case. However, if an investigator commits to permitting a subject to discontinue use of the subject’s identifiable private information or identifiable biospecimens, it is expected that the investigator will honor this commitment by not removing identifiers.

Similarly, the final rule also does not include the element of broad consent proposed in the NPRM that, when relevant, would have required the broad consent to include an option for an adult subject or the representative to consent, or refuse to consent, to the inclusion of the subject’s data, with removal of the identifiers listed in 45 CFR 164.514(b)(2)(i)(A) through (Q), in a database that is publicly and openly accessible to anyone, and that this option be prominently noted and include a description of the risks of public access to the data. We believe this proposed requirement is unnecessary because it overlaps with the broad consent elements included in the final rule requiring a statement describing the extent, if any, to which confidentiality of records identifying the subject will be maintained (§ _____.116(d)(1), incorporating § _____.116(b)(5) for broad consent), and a description of any reasonably foreseeable risks or discomforts to the subject (§ _____.116(d)(1), incorporating § _____.116(b)(2) for broad consent).

The final rule includes a slightly different provision relating to the return of research results than that proposed in the NPRM. As set forth in § _____.116(d)(6) of the final rule, unless it is known that clinically relevant research results, including individual research results, will be disclosed to the subject in all circumstances, a statement that such results may not be disclosed to the subject must be included in the broad consent. This element of broad consent differs from the related requirement in § _____.116(c)(8) that pertains when an investigator is seeking consent for a specific study, since unlike the circumstances under which broad consent is likely to be sought, investigators seeking consent for a specific study will know if the study includes a plan to return research results to subjects. The NPRM proposed that a general element of informed consent be included as part of a broad consent, namely that the consent include a statement regarding whether clinically relevant research results, including individual research results, would be disclosed to subjects, and if so, under what conditions. The language adopted in the final rule is intended to provide transparency, but is tailored to the broad consent context as those seeking broad consent may not know whether clinically relevant research results, including individual research results, will always be disclosed to subjects, and if so, under what conditions. Nonetheless, unless investigators know that such results will

be disclosed to subjects in all circumstances, subjects will be informed through a broad consent of the possibility that such results will not be disclosed to them. This provision is intended to pertain to all clinically relevant research results, including general or aggregate research findings and individual research results. This element of broad consent will affect the applicability of the exemption set forth at § _____.104(d)(8), for secondary research for which broad consent is required. This exemption applies only if the investigator does not include returning individual research results to subjects as part of the study plan (noting, however, that this provision does not prevent an investigator from abiding by any legal requirements to return individual research results). Although it is envisioned that broad consent will often be sought with the expectation that specific secondary research studies using identifiable private information or identifiable biospecimens will be exempt under § _____.104(d)(8), this will not always be the case. Broad consent can also be obtained for secondary research that will not qualify for this exemption, such as secondary research that will involve returning clinically relevant research results to subjects. In these cases, the specific secondary research study will need to undergo IRB review and approval under § _____.111, and we expect that the IRB would consider what subjects were told in the broad consent regarding the return of research results. The only exception to the requirement for IRB review of such research, if covered by this policy, is if the research qualifies for another exemption or the research is carried out under a Secretarial waiver at § _____.101(i).

Finally, the third main difference between the NPRM and final rule provision on broad consent is that the final rule does not include broad consent templates to be established by the Secretary of HHS. We agree with the public comments that favored allowing institutions to create their own broad consent forms that could be tailored to a variety of circumstances. Therefore, under the final rule, investigators and institutions may develop broad consent forms, which, provided specified conditions are satisfied, would meet the exemption for the storage and maintenance for secondary research use of identifiable biospecimens or identifiable private information (§ _____.104(d)(7)). This exemption is further discussed in Section V. At a later time, the Secretary of HHS expects to

develop guidance on broad consent, which could include broad consent templates.

In addition, we are also including in the final rule an element that for research involving biospecimens, when appropriate, the broad consent must state whether the research will (if known) or might include whole genome sequencing (WGS) (§ _____.116(d)(1), incorporating § _____.116(c)(9)). The reasons for requiring this element in the broad consent are similar to those discussed above regarding the addition of this requirement in the additional elements of consent at § _____.116(c)(9). WGS generates an extremely large amount of data, which when analyzed can yield information about an individual, including factors that could contribute to their future medical conditions. Therefore, given the implications of WGS information for an individual and his or her biological family, if it is known that the broad consent will or might permit the use of individuals' biospecimens for WGS, we believe that this aspect of the research must be disclosed to prospective subjects as part of the broad consent process. The broad consent must include a general description of the types of research that may be conducted with the identifiable private information or identifiable biospecimens, with sufficient information to allow a reasonable person to expect that the broad consent would permit the types of research conducted (§ _____.116(d)(2)). Including an additional element of broad consent that specifically addresses WGS makes it clear that such information must be disclosed to prospective subjects.

Under the final rule, if the subject or the subject's legally authorized representative is asked to provide broad consent, the broad consent must satisfy the general informed consent requirements at § _____.116(a)(1)-(4), and (a)(6), and must include all of the following 12 elements that are applicable:

- A description of any reasonably foreseeable risks or discomforts to the subjects (§ _____.116(d)(1), incorporating basic elements of informed consent in § _____.116(b)(2));
- A description of any benefits to the subject or to others that may reasonably be expected from the research (§ _____.116(d)(1), incorporating basic elements of informed consent in § _____.116(b)(3));
- A statement describing the extent, if any, to which confidentiality of records identifying the subject will be maintained (§ _____.116(d)(1),

incorporating basic elements of informed consent in § _____.116(b)(5));

- A statement that participation is voluntary, refusal to participate will involve no penalty or loss of benefits to which the subject is otherwise entitled, and the subject may discontinue participation at any time without penalty or loss of benefits to which the subject is otherwise entitled (§ _____.116(d)(1), incorporating basic elements of informed consent in § _____.116(b)(8));

- If applicable, a statement that the subject's biospecimens (even if identifiers are removed) may be used for commercial profit and whether the subject will or will not share in this commercial profit (§ _____.116(d)(1), incorporating additional elements of consent in § _____.116(c)(7));

- When appropriate, for research involving biospecimens, whether the research will (if known) or might include WGS (*i.e.*, sequencing of a human germline or somatic specimen with the intent to generate the genome or exome sequence of that specimen.) (§ _____.116(d)(1), incorporating the additional element of consent in § _____.116(c)(9));

- A general description of the types of research that may be conducted with identifiable private information or identifiable biospecimens. This description must include sufficient information to permit a reasonable person to expect that the broad consent would permit the types of research conducted (§ _____.116(d)(2));

- A description of the identifiable private information or identifiable biospecimens that might be used in research, whether sharing of such information or biospecimens might occur, and the types of institutions or investigators that might conduct research with such information or biospecimens (§ _____.116(d)(3));

- A description of the period of time allowed that the identifiable private information or identifiable biospecimens may be stored and maintained (which period of time could be indefinite), and a description of the period of time that such information or biospecimens may be used for research purposes (which period of time could be indefinite) (§ _____.116(d)(4));

- Unless the subject or legally authorized representative will be provided details about specific research studies, a statement that they will not be informed of the details of any specific research studies that might be conducted using the subject's identifiable private information or identifiable biospecimens, including the purposes of the research and that they

might have chosen not to consent to some of those specific research studies (§ _____.116(d)(5));

- Unless it is known that clinically relevant research results, including individual research results, will be disclosed to the subject in all circumstances, a statement that such results may not be disclosed to the subject; (§ _____.116(d)(6)); and
- An explanation of whom to contact for answers to questions about the subject's rights about storage and use of the subject's identifiable private information or identifiable biospecimens, and whom to contact in the event of a research-related harm (§ _____.116(d)(7)).

The elements of broad consent described in the first six bullet points above are not unique to broad consent, while the elements described in the last six bullet points are specific to the requirements of broad consent.

E. Waiver or Alteration of Informed Consent Involving Public Benefit and Service Programs (§ _____.116(e))

1. Background and Pre-2018 Requirements

The pre-2018 rule permitted an IRB to waive the requirements for obtaining informed consent, or to alter such requirements, under two sets of circumstances described at § _____.116(c) or (d) of the pre-2018 rule. The first set of circumstances, described at § _____.116(c) of the pre-2018 rule was more narrow and was limited to certain research or demonstration projects conducted by or subject to the approval of state or local government officials. These projects are similar in some ways to the projects identified in the exemption at § _____.104(d)(5) of this final rule. The broader provisions concerning waivers or alterations of the requirements of informed consent that apply beyond the circumstances described in § _____.116(c) of the pre-2018 rule are discussed below in the section concerning § _____.116(f).

2. NPRM Proposal

The NPRM proposed retaining the waiver and alteration of informed consent provisions included in the pre-2018 rule with respect to research involving public benefit and service programs conducted by or subject to the approval of state or local officials, with two exceptions. First, the NPRM proposed (for proposed § _____.116(e)(2)), additional criteria for waiver or alteration of consent for biospecimens. This was tied to the NPRM's proposal that all biospecimens, regardless of their identifiability, be covered under the

Common Rule. Under these proposed criteria, IRBs would be able to approve waivers or alterations of the required informed consent elements only if an IRB found and documented both that there were compelling scientific reasons to conduct the research and that the research could not be conducted with other biospecimens for which informed consent was obtained or could be obtained. Second, the NPRM proposed new language (for proposed § _____.116(e)(3)), providing that if an individual was asked to consent to the storage or maintenance for secondary research use of biospecimens or identifiable private information in accordance with the proposed broad consent provisions and that individual refused to consent, the IRB would be prohibited from waiving consent for the storage, maintenance, or the secondary research use of the biospecimens or information.

3. Response to Comments and Explanation of the Final Rule: Waiver or Alteration of Informed Consent Involving Public Benefit and Service Programs

Public comments on this proposal are described in section F below because the comments submitted generally addressed the waiver and alteration criteria under both proposed § _____.116(e) and § _____.116(f).

The final rule adopts one of the two proposals made in the NPRM for proposed § _____.116(e). The final rule adopts (in § _____.116(e)(1)) the language proposed in the NPRM providing that if an individual was asked to consent to the storage or maintenance for secondary research use of identifiable private information or identifiable biospecimens in accordance with the proposed broad consent provisions and such individual refused to consent, the IRB would be prohibited from waiving consent for the storage, maintenance, or the secondary research use of such biospecimens or information. The references in this provision to biospecimens are changed to refer specifically to identifiable biospecimens as the final rule does not apply to the research use of nonidentifiable biospecimens. This change is intended to honor the autonomy of individuals and to further the *Belmont Report* principle of respect for persons, in that this provision will prevent an individual's refusal to consent to additional research use of information or biospecimens from being overridden.

The final rule does not incorporate the NPRM's proposed additional waiver criterion to apply to research involving the use of biospecimens. This change is

not necessary given that the proposal in the NPRM that the Common Rule extend to *all* biospecimens has not been adopted in the final rule. We determined that the waiver and alteration criteria included in the final rule are appropriately protective of identifiable biospecimens, as defined at § _____.102(e)(6) and that an additional waiver criterion for such biospecimens is not warranted. For example, § _____.116(e)(3)(ii) mandates that an IRB may not waive or alter the requirements of informed consent with respect to research under this category unless the research could not practicably be carried out without the waiver or alteration.

The format and organization of § _____.116(e) in the final rule is different from that included in the pre-2018 rule or proposed in the NPRM. These changes were implemented to be clearer about the effect of each requirement. Most significantly, § _____.116(e) in the final rule provides separate paragraphs concerning the applicable criteria for waiver and the applicable criteria for alteration of the requirements for informed consent. This differs from the approach proposed in the NPRM, and the approach included in the pre-2018 rule, that did not separate those discussions. We concluded that separating the discussion of waiver and the discussion of alteration would help clarify the applicable criteria, particularly given that the final rule addresses broad consent.

Section _____.116(e)(1) describes the general framework for an IRB to waive the requirements for informed consent. This paragraph explains that an IRB may waive the requirement to obtain informed consent under § _____.116(a) (general requirements for informed consent), § _____.116(b) (basic elements of informed consent), or § _____.116(c) (additional elements of informed consent that apply to certain research) if the IRB satisfies the criteria set forth at § _____.116(e)(3) (discussed below). As explained above, the ability to satisfy the requirement to obtain informed consent of a subject or a subject's legally authorized representative through use of a broad consent in particular circumstances is a flexibility offered to institutions, but institutions are never required to obtain informed consent through a broad consent process. For this reason, § _____.116(e)(1) does not provide that an IRB may waive the requirement to obtain informed consent under § _____.116(d) (broad consent) because use of broad consent is not a requirement. As noted above, and to honor the autonomy of individuals, § _____.116(e)(1) prohibits an IRB from

waiving consent for the storage, maintenance, or secondary research uses of identifiable private biospecimens or identifiable private information if an individual was asked to provide broad consent for such purposes and refused to provide such consent.

Section _____.116(e)(2) describes the general framework for an IRB to alter the requirements for informed consent. An IRB may omit or alter some or all of the elements of informed consent under § _____.116(b) (basic elements of informed consent) or § _____.116(c) (additional elements of informed consent that apply to certain research) if the IRB satisfies the criteria set forth at § _____.116(e)(3) (discussed below). This is consistent with the proposal made in the NPRM. This paragraph further explains that an IRB may not omit or alter any of the requirements described in § _____.116(a) (general requirements for informed consent). This is also consistent with the proposal made in the NPRM (which proposed permitting an IRB to omit or alter elements of informed consent, but did not propose permitting omissions or alterations of the general requirements of informed consent that were included in the unnumbered introductory paragraph in the pre-2018 rule at § _____.116). This paragraph also specifies that if a broad consent is used, an IRB may not omit or alter any of the elements required under § _____.116(d). We determined that it would not be appropriate to permit the omission or alteration of any of the broad consent elements given the fact that the required elements of broad consent are limited and given our view that each of these elements (described at § _____.116(d)) is critical for the purpose of soliciting broad consent that is both informed and ethically appropriate. This approach is different from what was proposed in the NPRM because of the NPRM's different approach to broad consent than that adopted in the final rule.

Section _____.116(e)(3) sets forth the specific criteria that an IRB must find and document to waive or alter the requirements for informed consent, consistent with the limitations set forth in § _____.116(e)(1) and § _____.116(e)(2). These criteria are the same as those proposed in the NPRM. First, the IRB must find and document that the research or demonstration project is to be conducted by or subject to the approval of state or local government officials and is designed to study, evaluate, or otherwise examine public benefit or service programs; procedures for obtaining benefits or services under those programs; possible changes in or

alternatives to those programs or procedures; or possible changes in methods or levels of payment for benefits or services under those programs. Second, the IRB must find and document that the research could not practicably be carried out without the waiver or alteration.

F. General Waiver or Alteration of Informed Consent (§ _____.116(f))

1. Background and Pre-2018 Requirements

Beyond the circumstances addressed in § _____.116(c) of the pre-2018 rule (which is limited to certain research conducted by or subject to the approval of state or local government officials), the pre-2018 rule includes a more general provision that is not limited to any particular type of research and that permits an IRB to either waive the requirements for obtaining informed consent, or to alter such requirements. Waiver or alteration of the requirements of informed consent under this general provision requires that the following four criteria be satisfied: (1) the research involves no more than minimal risk to the subjects; (2) the waiver or alteration will not adversely affect the rights and welfare of the subjects; (3) the research could not practicably be carried out without the waiver or alteration; and (4) whenever appropriate, the subjects will be provided with additional pertinent information after participation.

Concerns have been expressed that requirements for obtaining waivers of informed consent or waivers of documentation of informed consent were confusing and inflexible, resulting in inconsistent application and a lack of uniformity in interpretation, which led to the proposals in the NPRM.

2. NPRM Proposals

The NPRM offered three substantive proposals related to the general waiver or alteration of informed consent provisions. First, the NPRM proposed to add a new waiver criterion that would require that for research involving access to or use of identifiable biospecimens or identifiable private information, the requirements of informed consent could only be waived or altered if the research could not practicably be carried out without accessing or using identifiers. This criterion was modeled on the comparable criterion in the HIPAA Privacy Rule, which requires as a condition of waiver of the requirement to obtain an individual's authorization that the research could not practicably be conducted without access to and use of protected health information. The

principle embodied in this additional proposed criterion was that nonidentified information should be used whenever possible in order to respect subjects' interests in protecting the confidentiality of their data and biospecimens.

Second, the NPRM proposed two additional waiver criteria for research involving the use of biospecimens. For such research, the NPRM proposed that the requirements of informed consent could only be waived or altered if an IRB found and documented that: (1) there were compelling scientific reasons for the research use of the biospecimens; and (2) the research could not be conducted with other biospecimens for which informed consent was or could be obtained.

Third, the NPRM proposed that the Common Rule prohibit IRBs from waiving informed consent if individuals were asked and refused to provide broad consent to the storage and maintenance for secondary research use of biospecimens and identifiable private information. If a subject refused to provide broad consent, it was proposed that this refusal would need to be recorded by the investigator to better ensure that the subject's wishes would be honored.

3. Public Comments

Approximately 975 public comments discussed the NPRM proposals found at § _____.116(f) either directly, or as related to linked provisions related to the definition of human subject, the broad consent proposal, or proposed exemptions. A majority of these discussed the NPRM proposals related to the more stringent waiver criteria for research involving biospecimens. A majority of these comments were from patients (including family members of patients) and other individuals who commented anonymously. Patients tended to oppose these proposals because they believed they would severely restrict access to biospecimens, which would slow research. Some commenters were opposed to waiver of consent under any conditions, whether specific or broad consent.

Approximately 40 comments were received on the NPRM's proposal to prohibit an IRB from waiving consent for the storage, maintenance, or secondary research uses of identifiable biospecimens or identifiable private information if an individual was asked to provide broad consent for such purposes and refused to provide such consent. Public comment was mixed. Those who supported it indicated that this requirement made sense in order to respect subject autonomy. Those who

opposed the proposal indicated that it would be impossible for an IRB to know the reasons why an individual refused to sign a broad consent form. Thus, these individuals argued, the prohibition on waiver of consent did not seem appropriate given the difficulty in understanding why someone refused to sign a broad consent form. Several commenters noted that it would be reasonable to prohibit an IRB from waiving a subject's refusal to provide consent to a specific study, but that such a prohibition in the context of broad consent seemed unduly burdensome.

The NPRM sought comments concerning language in the pre-2018 rule (that the NPRM proposed retaining) that waiver or alteration of informed consent only occur if the IRB finds that the research could not practicably be carried out without the requested waiver or alteration. Several commenters recommended further defining or clarifying the meaning of "practicably." Some members of the public felt that this criterion was too open-ended and that greater emphasis should be placed on respect for persons over other ethical concerns and scientific validity. Several commenters favored SACHRP's recommendations on this topic, including that this requirement be interpreted to mean that it would be impracticable to perform the research, not impracticable to obtain consent due to financial or administrative burdens, without the waiver or alteration. Another commenter argued that because of a lack of clarity as to the meaning of terms including "minimal risk," "practicably," and "the rights and welfare of subjects," as well as the potential that IRBs may not apply the criteria uniformly, IRBs should not be able to waive or alter consent. The following suggestions were offered as replacement language: "reasonably done without excessive time or financial constraints to the researcher that would delay the project so significantly as to make it impossible to conduct the research," "capable of being done or accomplished with available means or resources," "reasonably feasible," "capable of being effective," and "could practicably be obtained." Several commenters favored retaining the term "practicably" and were satisfied that it was clear.

Other comments raised different issues about waiver or alteration. Many commenters who opposed all classified research conducted without consent recommended that waivers be prohibited with respect to classified research involving humans. One

commenter recommended a reorganization of the waiver and alteration provisions to clarify the different standards that apply to waivers and alterations. Another commenter expressed concern that the NPRM's proposed waiver provision would unreasonably limit the flexibility of IRBs. One commenter believed that the § ___.116(f) alteration criteria were too rigid and that the final rule should incorporate a notion of risk adjustment. Another commenter (a professional medical organization) supported SACHRP's proposed revisions to the waiver criteria at § ___.116(f) to allow an IRB to approve the storage, maintenance, and secondary research use of identified data.

The NPRM sought public comment on the proposed differences between the criteria for waiving informed consent for the research use of biospecimens versus identifiable information. Approximately 60 comments stated that no justification exists for treating biospecimens and information differently. Some also noted that the proposed criteria for waiver of consent for use of biospecimens is so high as to be virtually impossible to meet and asked why biospecimens should have a higher standard than information (which theoretically could be more easily identifiable). One commenter noted that the proposed waiver criteria promotes "biospecimen exceptionalism" and that data and biospecimens should be treated the same.

A request in the NPRM for public comment on whether the proposal to permit an IRB to waive consent for research involving the use of biospecimens should be included in the regulations received few comments. One commenter noted that it seemed incongruous to include biospecimens in the definition of "human subject," but then allow waiver based on different criteria. Others stated that IRBs should continue to have the ability to waive consent.

The NPRM sought public comment regarding how likely investigators are to seek broad consent for the use of identifiable private information (as contrasted with biospecimens), given that the NPRM contains provisions that would make it easier to do such research without consent (such as the new exemption proposed for § ___.104(e)(2)). Approximately 30 commenters responded to this question. A majority said they would not use the broad consent mechanism for secondary use of information if other options were available. Some said that they suspected that investigators would continue to seek consent waivers for secondary use

of identifiable private information instead of seeking broad consent.

The NPRM also sought public comment on several aspects of the proposed prohibition on waiving consent when an individual has been asked to provide broad consent and refused, including the following questions: In particular, how would this prohibition on waiving consent affect the secondary research use of identifiable private information? If an individual was asked to provide such consent, should the absence of a signed secondary use consent be considered a refusal? Does this prohibition on waiving consent for the secondary use of identifiable private information create a disincentive for institutions to seek broad consent for secondary use and instead seek a waiver of consent from an IRB? Under what circumstances, if any, would it be justified to permit an IRB to waive consent even if an individual declined or refused to consent?

Approximately 35 comments were received on this set of questions. Approximately half of these stated that "no means no." If someone was asked to give broad consent and the person specifically said no, researchers should not be allowed to obtain a waiver of consent. Those who opposed the idea of a prohibition on waiver argued that it would be very difficult for institutions to understand why someone said no to providing broad consent. In other words, a blanket prohibition does not accurately address all the issues that can occur in this situation.

A majority of the responses did not address the questions of how a broad consent form with no indication either way should be treated. The responses we received to this question suggested that absence of a signed form should not be treated as if the individual explicitly said no to broad consent (*i.e.*, that in those situations, waiver should be permitted).

A majority of the responses that we received on the question of whether the prohibition on waiver in the broad consent context created a disincentive for the use of broad consent with identifiable private information answered in the affirmative.

4. Response to Comments and Explanation of the Final Rule: General Waiver of Alteration of Consent

Overall, two of the three proposals made in the NPRM for proposed § ___.116(f) have been retained. The final rule adopts (in § ___.116(f)(3)(iii)) a new waiver criterion very similar to that proposed in the NPRM, which now mandates that for research involving access to or use of identifiable private

information or identifiable biospecimens, the requirements of informed consent can be waived or altered only if the research could not practicably be carried out without using such information or biospecimens in an identifiable format. The minor wording change made in the language of this provision, as compared with that proposed in the NPRM, is intended for clarity. This change is intended to protect the privacy of individuals, while not unduly inhibiting research. After considering the diversity of opinions expressed in the public comments on this issue, including many comments seeking further guidance concerning the proper interpretation of the “practicably” language, the final rule does not define this language (which was also included in the pre-2018 rule). We have concluded that the requirements for waiver and alteration in § _____.116(e) and (f) appropriately honor respect for persons and balances this with other ethical principles.

The final rule also adopts (in § _____.116(f)(1)) the language proposed in the NPRM (for § _____.116(f)(3)) prohibiting IRBs from waiving informed consent if individuals were asked and declined to provide broad consent to the storage and maintenance for secondary research use of identifiable private information or identifiable biospecimens (except that the final rule’s formulation is limited to identifiable biospecimens, consistent with changes made in the final rule). We considered public comments that opposed this prohibition and understand that IRBs may not always understand the reason that individuals refused to sign a consent form and that the effects of this broad prohibition could be significant in the context of broad consent (given the broad scope of research that such a broad consent could potentially extend to). Nonetheless, we determined that it is important to prevent an individual’s refusal to consent to additional research use of such information or biospecimens from being overridden. This change to the Common Rule is intended to honor the autonomy of individuals and to further the *Belmont Report* principle of respect for persons.

The final rule does not incorporate the NPRM’s proposed additional waiver criteria (proposed for § _____.116(f)(2)) to apply to research involving the use of biospecimens. This change is not necessary given that the proposal in the NPRM that the Common Rule extend to *all* biospecimens regardless of their identifiability has not been adopted in the final rule. We determined that the waiver and alteration criteria included

in the final rule are appropriately protective of identifiable biospecimens and that an additional waiver criterion for such biospecimens is not warranted. For example, § _____.116(f)(3)(iii) in the final rule is a research criterion specific to research that involves using identifiable private information or identifiable biospecimens. Under this criterion, an IRB may not waive or alter requirements of informed consent with respect to such research unless the IRB finds and documents that the research could not practicably be carried out without using such information or biospecimens in an identifiable format.

The format and organization of § _____.116(f) in the final rule are different from the proposed § _____.116(f) described in the NPRM. We made these changes in an effort to be clear about the effect of each requirement. Most significantly, § _____.116(f) in the final rule provides separate paragraphs concerning the applicable criteria for waiver and the applicable criteria for alteration of the requirements for informed consent. This differs from the approach proposed in the NPRM, and the approach included in the pre-2018 rule that did not separate those discussions. We conclude that separating the discussion of waiver and alteration will help clarify the applicable criteria, particularly given that the final rule addresses the application of the waiver and alteration provisions in the context of broad consent.

Section _____.116(f)(1) describes the general framework for an IRB to waive the requirements for informed consent. This paragraph explains that an IRB may waive the requirement to obtain informed consent under § _____.116(a) (general requirements for informed consent), § _____.116(b) (basic elements of informed consent), or § _____.116(c) (additional elements of informed consent that apply to certain research) if the research satisfies the criteria set forth at § _____.116(f)(3) (discussed below). As explained above, the ability to satisfy the requirement to obtain informed consent of a subject or a subject’s legally authorized representative through use of a broad consent in particular circumstances is a flexibility offered to institutions, but institutions are never required to obtain informed consent through a broad consent process. For this reason, § _____.116(f)(1) does not provide that an IRB may waive the requirement to obtain informed consent under § _____.116(d) (broad consent) because use of broad consent is a regulatory flexibility, and not a requirement. Consistent with the proposal made in

the NPRM (proposed § _____.116(f)(3)), § _____.116(f)(1) provides that if an individual was asked to provide broad consent for the storage, maintenance, and secondary research use of identifiable private information or identifiable biospecimens and refused to consent, an IRB cannot waive consent for either the storage, maintenance, or secondary research use of such biospecimens or information.

Section _____.116(f)(2) describes the general framework for an IRB to alter the requirements for informed consent. This paragraph explains that an IRB may omit or alter some or all of the elements of informed consent under § _____.116(b) (basic elements of informed consent) or § _____.116(c) (additional elements of informed consent that apply to certain research) if the IRB satisfies the criteria set forth at § _____.116(f)(3) (discussed below). This is consistent with the proposal made in the NPRM. This paragraph further explains that an IRB may not omit or alter any of the requirements described in § _____.116(a) (general requirements for informed consent). This is also consistent with the proposal made in the NPRM (which proposed permitting an IRB to omit or alter elements of informed consent, but did not propose permitting omissions or alterations of the general requirements of informed consent that were included in the unnumbered introductory paragraph in the pre-2018 rule at § _____.116). This paragraph also specifies that when reviewing a broad consent, an IRB may not omit or alter any of the elements required under § _____.116(d). As with § _____.116(e)(2), we determined that it would not be appropriate to permit the omission or alteration of any of the broad consent elements in § _____.116(f). The elements of broad consent reflected in this NPRM are limited. We have concluded that each of these elements (which are included at § _____.116(d)) is critical to the solicitation of an informed and ethically appropriate broad consent. For that reason, none of the elements of broad consent may be omitted or altered if broad consent is solicited. This prohibition is different than the NPRM’s proposal given the different formulation of broad consent represented in this final rule.

Section 116(f)(3) sets forth the specific criteria that an IRB must find and document in order to waive or alter the requirements for informed consent. These criteria are the same as those proposed in the NPRM, except that the third criterion includes minor wording changes that were made for clarity: (1) the research involves no more than minimal risk to the subjects; (2) the

research could not practicably be carried out without the requested waiver or alteration; (3) if the research involves using identifiable private information or identifiable biospecimens, the research could not practicably be carried out without using such information or biospecimens in an identifiable format; (4) the waiver or alteration will not adversely affect the rights and welfare of the subjects; and (5) whenever appropriate, the subjects will be provided with additional pertinent information after participation.

G. IRB Approval of Research Involving Screening, Recruiting, or Determining Eligibility of Prospective Subjects (§ ____ .116(g))

1. Background and Pre-2018 Requirements

The pre-2018 rule required an IRB to determine that informed consent can be waived under § ____ .116(d) before investigators could record identifiable private information for the purpose of identifying and contacting prospective subjects for a research study. This requirement to waive informed consent has been viewed as burdensome and unnecessary for protecting subjects, and is not consistent with FDA's regulations, which do not require informed consent or a waiver of informed consent for such activities.

2. NPRM Proposal

The NPRM proposed a new provision at § ____ .116(g) that would authorize an IRB to approve a research proposal in which investigators obtain identifiable private information without individuals' informed consent for the purpose of screening, recruiting, or determining the eligibility of prospective human subjects of research. The IRB would be permitted to approve a research proposal only in such circumstances if the proposal included an assurance that the investigator would implement standards for protecting the information obtained, in accordance with and to the extent required by proposed § ____ .105. This proposal was intended to address concerns that the pre-2018 rule required an IRB to determine that informed consent can be waived before investigators could record identifiable private information for the purpose of identifying and contacting prospective subjects for a research study.

3. Public Comments

Few comments were received regarding this proposal. All were generally supportive. One academic institution noted that "This review is

unnecessary considering the low potential risk to subjects and will expedite research endeavors and ensure harmonization between FDA's expectations and the Common Rule." However, one commenter thought that prospective subjects should be notified that this might be a possibility. Another commenter said that it should be clear that this is not an IRB waiver of consent, but rather it is an exception to the consent requirement.

4. Response to Comments and Explanation of the Final Rule: Approval of Research Involving Screening, Recruiting, or Determining Eligibility of Prospective Subjects

The final rule adopts the NPRM proposal at § ____ .116(g), with minor changes made for clarity, and without a requirement that investigators adhere to the proposed privacy safeguards at § ____ .105, since this provision is not included in the final rule. The provision at § ____ .116(g) addresses concerns that the pre-2018 regulations required an IRB to determine that informed consent can be waived before investigators may record identifiable private information for the purpose of identifying and contacting prospective subjects for a research study. This change is intended to address these concerns by eliminating the requirement for the IRB to waive informed consent for these activities. In response to public comments, we are clarifying that this is not a waiver of the consent requirement but rather an exception to the requirement. This change is also responsive to SACHRP's recommendation regarding how the Common Rule should apply to activities that are conducted before subjects provide consent to participate in research, such as identifying potential subjects, contacting subjects, and recruiting subjects.⁴⁸

The final rule includes some minor changes from the NPRM proposal, to clarify the circumstances in which the IRB may approve the investigator's proposal to obtain information directly from a prospective subject, or to obtain already collected identifiable private information or identifiable biospecimens by accessing records or stored biospecimens, for purposes of screening, recruiting, or eligibility assessment, without the informed

consent of the prospective subject or the subject's legally authorized representative. The final rule also adds a reference to the subject's legally authorized representative at § ____ .116(g)(1) to clarify that this exception to informed consent will also apply in circumstances in which the prospective subject has a legally authorized representative who will provide information about the prospective subject through oral or written communication with the investigator.

We note that in approving this exception to informed consent for the purpose of screening, recruiting, or determining the eligibility of prospective subjects, the IRB will be reviewing and approving the entire research proposal. Therefore, all of the IRB approval criteria at § ____ .111 will need to be satisfied, including that when appropriate, there are adequate provisions to protect the privacy of subjects and to maintain the confidentiality of data (§ ____ .111(a)(7)). Thus, as part of its review and approval of the research, the IRB must determine that there are adequate privacy and confidentiality safeguards for information obtained by investigators for these preparatory-to-research activities.

We believe that these preparatory-to-research activities are critical means by which to identify subjects that do not involve additional risks, given their limited nature. If prospective subjects are identified through these "screening" activities, then all other relevant requirements of this rule must be met if they are subsequently recruited to participate in the research.

H. Posting of Consent Forms (§ ____ .116(h))

1. Background and Pre-2018 Requirements

The pre-2018 rule did not have a requirement to post consent forms from clinical trials.

2. NPRM Proposal

The NPRM proposed a new provision that would require that a copy of the final version of the consent form (absent any signatures) for each clinical trial conducted or supported by a Common Rule department or agency be posted on a publicly available federal Web site that will be established as a repository for such consent forms. The name of the protocol and contact information would be required to be included with the submission of the consent form. Under the NPRM proposal, the consent form would have to be published on the Web

⁴⁸ See Secretary's Advisory Committee on Human Research Protections (SACHRP). Attachment C: Approved by SACHRP July 20, 2011. SACHRP Recommendation regarding application of 45 CFR 46 and 21 CFR 56 to early processes in research, such as identifying potential subjects, contacting subjects and recruiting subjects. (July 20, 2011). Retrieved from <http://www.hhs.gov/ohrp/sachrp-committee/recommendations/2011-october-13-letter-attachment-c/index.html>.

site within 60 days after the trial is closed for recruitment.

3. Public Comments

The NPRM proposal received approximately 130 comments, most of which opposed the proposal in whole or in part. Many commenters expressed concern that the proposal represented administrative burden without a corresponding increase in protections to human subjects or benefit to the research community. Some commenters felt that the proposal represented a waste of resources that would not increase compliance with the regulations, and might result in longer consent forms if researchers felt the need to include an abundance of additional information to protect against perceived regulatory noncompliance or legal challenge. These commenters expressed concern that the repository of posted consent forms might be used to seek out instances of noncompliance. For example, one large medical school indicated that the posting requirement creates a rich environment for litigation and represents an effort to publicly shame investigators to improve quality of documents that will not work.

Other commenters, including some private research firms, were concerned that the proposal as drafted would not allow for the redaction of proprietary or institutionally sensitive information from consent forms before they would be posted to the Web site, and allow competing research entities access to detailed information about investigational drug or research programs beyond what is publicly available already. Additional concern was expressed about the proposed timeframe in which consent forms needed to be posted. Some felt that more time was needed. Other commenters felt it would be more beneficial to research participants if consent forms were posted before or during recruitment. In addition, some commenters felt that researchers should be allowed or encouraged to update posted consent forms if they are updated for the study. Others felt that requiring that consent forms be posted once (even if the forms were updated after being posted) would lead to potential confusion among research participants. For example, several commenters noted that should a subject participating in a trial see a consent form for a particular study that differed from the form that he or she originally signed, that discrepancy could cause unnecessary concern and confusion.

Still other commenters expressed concern that the high volume of consent forms that would be posted as a result

of this requirement would make the collection cumbersome and difficult to use, negating any potential benefit gained by increased transparency. Others expressed a concern that requiring all studies to post consent forms might lead to the perpetuation of poorly written forms, as researchers might use poor examples from the database to write their own informed consent documents in addition to excellent ones. A few major research universities suggested that guidance, best practices, or exemplary informed consent forms should be selected and shared publicly, rather than all informed consent forms. Some commenters suggested limiting the posting requirement to a subset of research studies, for example, to only high risk or large multi-institution studies.

Those who supported the proposal agreed that it would help increase accountability and promote transparency in informed consent forms. To that end, a minority of commenters said that this proposal should be extended to all research that is subject to the Common Rule, not just to studies meeting the definition of a clinical trial. Some commenters supported the idea of publicly sharing informed consent documents but felt it would be best accomplished through guidance or optional posting. One federal level advisory committee supported the proposal and recommended the creation of robust guidance with the goal of minimizing confusion and misuse of the posted documents, and facilitating the use of the posted forms to educate investigators, institutions, and regulators to improve future informed consent documents and the informed consent process generally. Others felt it would be helpful to post additional information and documents along with consent forms. For example, one investigator suggested that copies of IRB proposals and decisions be made public along with approved informed consent documents to provide additional transparency and accountability. Another commenter suggested that investigators be given the option to post assessment tools for evaluating prospective subjects' understanding of important study information.

Both those who supported and opposed the proposal indicated that in terms of implementing this proposal, consent forms should be posted to *ClinicalTrials.gov* as opposed to creating a new federal Web site in order to limit the additional administrative burden that this proposal would impose.

4. Response to Comments and Explanation of the Final Rule: Posting of Consent Forms

The final rule adopts the NPRM proposal with some modifications and clarifications. The primary purpose of this provision is to improve the quality of consent forms in federally funded research by assuring that—contrary to current practices, under which it is often very difficult to ever obtain a copy of these documents—they eventually would become subject to public scrutiny and that they will provide useful models for others. The consent form plays a key role in making sure that someone asked to enter a clinical trial receives the information they need to be making an informed decision about whether to enroll in that trial. Accordingly, it also plays a key role in supporting and justifying the public's trust in the integrity of our clinical trial enterprise.

We are not persuaded by the arguments of those commenters who suggest that potential negative consequences of this proposal outweigh its benefits. Fundamentally, this proposal is about increasing the transparency of one of the most important aspects of our human subjects protection system. Increased transparency is in general a good thing, and in this instance, as in many others, it offers multiple benefits—including increased trust—at very low cost. This provision is not a form of shaming, but rather an effort to ask people to work together to create a system that will improve the quality of informed consent. Moreover, the new standards for determining the acceptable content of a consent form—including § ___.116(a)(5), which will require a concise presentation of key information at the beginning of the consent form—should counter any consequences of attempts to pad consent forms with additional information as a response to the posting requirement.

We agree with the conclusions of SACHRP that implementing this proposal will indeed result in better consent forms. Having a repository of such forms freely available for analysis and public discussion will create multiple opportunities for improving these forms. In an era in which we have previously unheard of capabilities for analyzing textual material and processing large amounts of data, the fact that there will be a high volume of consent forms posted should be a minor impediment, if any, to the ability to learn from the content of this database.

With regard to those who suggested that it would indeed be desirable to

make consent forms more public, but that posting should be optional, we note that nothing in the pre-2018 rule prevents the people in charge of research from making their consent forms public, yet that is rarely done. In order to significantly increase the transparency of this portion of our system for protecting subjects, we are finalizing this proposal.

With regard to the commenters who were concerned that posting consent forms would create a rich environment for litigation, it is noteworthy that the existing evidence fails to suggest that there has been much of a problem with regard to inappropriate litigation over clinical trials. Whatever disincentives currently exist for such litigation, it seems unlikely that the mere fact that consent forms would now be more available will dramatically alter such disincentives. With regard to the commenters who were concerned about the added regulatory burden, we note that this change, compared to the traditional costs of clinical trials, will add a relatively small amount of additional burden, one that is well justified in comparison to the likely increase in transparency. This new provision has specifically been designed to minimize that burden. And the final rule has been modified in a number of respects from the NPRM proposal in response to public comments. As discussed below in detail, the time by which a consent form must be posted has been greatly extended. That change would also address the concerns of some commenters that the posted consent forms might create confusion among research subjects. Furthermore, provisions have been added that allow for redaction, as necessary, of portions of consent forms.

As a means of increasing transparency and facilitating the development of more informative consent forms, the final rule accordingly requires at § _____.116(h)(1) that for clinical trials conducted or supported by a Common Rule department or agency, a copy of an IRB-approved version of a consent form that was used to enroll subjects would need to be posted by the awardee or the federal department or agency conducting the trial on a publicly available federal Web site that will be established as a repository for such forms. Unlike the NPRM, which required that the “final version” of the consent form be posted, the final rule adds flexibility in merely requiring that it be an IRB-approved consent form that was used for enrollment purposes. There is accordingly no further restriction as to which version of a consent form (which might have been

subject to many modifications over the course of time) must be posted. The final rule also gives greater flexibility than the NPRM proposal in terms of when that posting needs to be done. It can take place any time after the trial is closed to recruitment, so long as the posting is no later than 60 days after the last study visit by any subject (as required by the protocol). If the federal department or agency supporting or conducting the clinical trial determines that certain information should not be made publicly available on a federal Web site (e.g., confidential commercial information), the department or agency may permit appropriate redactions to the information posted. In rare instances, it could be the case that the federal department or agency would determine that the very existence of a particular clinical trial should not be publicly disclosed, in which case no posting relating to such a trial would be required.

The final rule differs from the NPRM proposal in that it no longer specifies that certain information needs to be posted in addition to the consent form. This change eliminates the need for mandatory posting of information that might not be justified by the purposes of this provision.

Only one posting would be required for each multi-institution study. There is accordingly no expectation that a version would need to be posted for each class of subjects in the study (for example, a posting both for adults and for minors), nor for each study site.

We also note that this provision applies only to those clinical trials that are conducted or supported by a federal department or agency.

A Web site will be developed by HHS, which could be used by other federal departments or agencies, or the other federal departments or agencies could create their own Web sites for the posting of these consent forms. Public posting of consent forms is intended to increase transparency, enhance confidence in the research enterprise, increase accountability, and inform the development of future consent forms. It is anticipated that the Web site will be searchable. With regard to the comments suggesting that *ClinicalTrials.gov* might be an appropriate choice as the Web site, we agree that such a choice has the possibility of minimizing administrative burdens. Using *ClinicalTrials.gov* has another advantage, in addition to what some of the commenters said. Many clinical trials funded by HHS have records in *ClinicalTrials.gov* due to requirements that certain clinical trials register and submit results information

to that database (section 402(j) of the Public Health Service Act and 42 CFR part 11, and other policies that incentivize trial registration and results submission, such as the NIH Policy on Dissemination of NIH-Funded Clinical Trial Information). The fact that these trials already have a record in the database will mean that the burden of submission of the informed consent document will be substantially lower. Accordingly, we will take these points into consideration as we determine what federal Web site will be used to implement this provision.

XV. Documentation of Informed Consent (§ _____.117)

A. Background and Pre-2018 Requirements

The pre-2018 rule at § _____.117 described the requirements for documenting informed consent and when the waiver for obtaining a written and signed consent form was allowable.

B. NPRM Proposals

The NPRM proposed to alter the language at § _____.117(b)(1) to specify that the consent document should include only the language required by § _____.116, with appendices included to cover any additional information.

In addition, the NPRM would make it explicit in the regulatory language at proposed § _____.117(c)(1)(iii) that if the subjects are members of a distinct cultural group or community for whom signing documents is not the norm, so long as the research presents no more than minimal risk of harm to subjects and provided there is an appropriate alternative mechanism for documenting that informed consent was obtained, the requirement to obtain a signed consent form may be waived. Documentation must include a description as to why signing forms is not the norm for the distinct cultural group or community.

Additionally, to facilitate the tracking of broad consent to storage or maintenance for secondary research use of biospecimens or identifiable private information, and to provide information to IRBs should IRB review be required, the NPRM proposed that waiver of documentation of consent for the research use of such biospecimens would not be allowed based upon a new provision at § _____.117(c)(3).

The NPRM also introduced the term “oral consent” in the context of the various provisions related to the broad consent for the storage, maintenance, and secondary use of biospecimens and identifiable private information. As a general matter, under the pre-2018 rule, individuals wanting to obtain oral

consent from subjects in a nonexempt research activity needed to seek a waiver of documentation of informed consent under § _____.117(c). Therefore, the NPRM proposed to permit investigators to obtain oral broad consent for the storage, maintenance, and secondary research use in limited circumstances. Specifically, the NPRM proposals would allow an investigator to obtain oral broad consent if:

- An investigator used the proposed broad consent template;
- Investigators only sought oral broad consent only for the storage, maintenance, and secondary research use context for the use of identifiable private information, not for biospecimens;

- If broad consent for the storage, maintenance, and secondary research use was obtained only as part of a separate, primary research study; and
- The oral broad consent was sought as part of the consent process in a study eligible for one specific exclusion or three specific exemptions related to the collection of identifiable information.

Finally, the regulatory language proposed at § _____.117(c)(4) was intended to clarify that waivers of documentation may not be permitted for research subject to regulation by FDA.

C. Public Comments

Approximately 15 comments were received on the proposals found in the NPRM at § _____.117. Several commenters discussing the proposed requirement at § _____.117(b)(1) indicated that even if consent forms are split into a primary document and appendices, there should be an expectation that the content included in the appendices are discussed with prospective subjects as part of the informed consent process. Although very few comments discussed the requirements of proposed § _____.117(b)(1) specifically, many of the comments discussing the NPRM proposal found in the introductory paragraph of § _____.116 discussed the concept of including only the required information in the main body of a consent form, and all additional information in appendices.

Few comments were received on the proposal found in § _____.117(c)(1)(iii) that documentation of informed consent may be waived if consent is being sought amongst subjects who are members of a distinct cultural group or community in which signing forms is not the norm. Comments received on this proposal were generally favorable.

Those who commented on the proposals related to oral broad consent indicated that the provisions were

confusing and difficult to understand. We note that these proposals were found in the NPRM through a series of interrelated cross references in §§ _____.116(d), _____.117(c), and _____.104(f)(1)–(2).

Several commenters discussed the statement found in § _____.117(c)(4) that waiver of documentation of consent is generally not permitted for research subject to regulation by the FDA. These commenters noted that this would be true regardless of whether this was included in the Common Rule. Additionally, commenters noted that if the FDA regulations ever permitted waiver of documentation of consent, the existence of this provision in the Common Rule might result in confusion and contradictory requirements for dually regulated research.

D. Response to Comments and Explanation of the Final Rule: Documentation of Informed Consent

The language at § _____.117(b)(1) and (2) are altered in the final rule to conform to the requirements included at § _____.116, which are discussed above. The goal in §§ _____.116 and _____.117 of the final rule is to facilitate a prospective subject's or legally authorized representative's understanding of the reasons why one might or might not want to participate in the research, in part by requiring that only the key information essential to decision making receive priority by appearing at the beginning of the consent document. In the final rule, these requirements also apply when a short form written informed consent process is used, or the requirement for written informed consent is waived.

We agree with the majority of public comments that favored adding a new provision allowing a waiver of the requirement for a signed consent form if the subjects are members of a distinct cultural group or community for whom signing documents is not the norm, provided that the research presents no more than minimal risk of harm to subjects and there is an appropriate alternative method for documenting that informed consent was obtained. Therefore, this new provision is added at § _____.117(c)(1)(iii). The final rule includes a reference to the subject's legally authorized representative to clarify that this provision applies when a subject has a legally authorized representative who is a member of a distinct cultural group or community in which signing forms is not the norm.

The final rule does not include the NPRM's proposal at § _____.117(c)(3) to prohibit a waiver of documentation of broad consent for the storage,

maintenance, or secondary research use of biospecimens.

Some of those who commented on the NPRM proposals related to oral broad consent found it to be unnecessarily confusing. In response to these comments, the final rule permits waiver of documentation of informed consent under § _____.117(c) when a broad consent procedure is used. No additional criteria or special restrictions apply. Additionally, the final rule removes all NPRM references to "oral consent" to reduce confusion.

However, we expect that it will rarely be permissible to waive documentation of broad consent for the secondary research use of medical records or stored biospecimens because there will likely be a need to track which individuals have provided broad consent and which have not, so the informed consent would not be the only record linking the subject and the research as required for a waiver under § _____.117(c)(1)(i). Additionally, when identifiable information and identifiable biospecimens are shared for a nonresearch purposes, the person's consent is usually required, so we expect that documentation of consent often could not be waived under § _____.117(c)(1)(ii), which requires that the research involves only procedures for which written consent is not normally required outside of the research context.

One instance when we believe it may be appropriate for the IRB to waive the requirement for a signed broad consent form is when the initial activity involved obtaining information from a person through oral communication, such as a phone survey, because there might not be an opportunity to obtain written broad consent from such individuals for the secondary research use of their information. In this scenario, documentation of broad consent could be waived under § _____.117(c)(1)(ii) if the research presents no more than minimal risk of harm to subjects and involves no procedures for which written consent is normally required outside of the research context. In addition, it might be appropriate for an IRB to waive the requirement for a signed broad consent document under the provision included in the final rule related to when the subjects or their legally authorized representatives are members of a distinct cultural group or community for whom signing documents is not the norm, provided that the research presents no more than minimal risk of harm to subjects and an appropriate alternative method is available for

documenting that informed consent was obtained (§ _____.117(c)(1)(iii)).

The final rule also does not include the NPRM's proposed clarification that waivers of documentation may not be permitted for research subject to regulation by FDA. Because this is not the only difference between what is permitted under the Common Rule and the FDA regulations, we determined that clarifying only this specific difference in the final rule is likely to create more confusion rather than provide clarification.

XVI. Applications and Proposals Lacking Definite Plans for Involvement of Human Subjects (§ _____.118)

A. Background and Pre-2018 Requirements

This provision of the pre-2018 rule stated that while an award or grant may be made for a project with indefinite plans to involve human subjects, that project must be reviewed by an IRB before human subjects may be involved.

B. NPRM Proposals

The NPRM language clarified that IRB review and approval was required before human subjects could be involved in a study unless the study was excluded under § _____.101(b), waived under § _____.101(i), or exempted under § _____.104(d), (e) or (f)(2).

C. Public Comments

No comments were received.

D. Explanation of the Final Rule

The final rule adopts the language of the NPRM, with updated citations. This provision makes explicit that it applies only to nonexempt human subjects research.

XVII. Research Undertaken Without the Intention of Involving Human Subjects (§ _____.119)

A. Background and Pre-2018 Requirements

This provision of the regulations outlines the process that an institution must undergo when a federally funded research project that was designed without the intention of involving human subjects later involves human subjects as defined by this policy.

B. NPRM Proposals

The NPRM proposed to add language to make clear that this provision applies only to nonexempt human subjects research. It also clarifies its reference to department or agency to mean a federal department or agency component supporting the research.

C. Public Comments

No comments were received.

D. Explanation of the Final Rule

The final rule adopts the language of the NPRM, with updated citations. This provision makes explicit that it applies only to nonexempt human subjects research, and clarifies the reference to department or agency to be a federal department or agency component supporting the research.

XVIII. Conditions (§ _____.124)

A. Background and Pre-2018 Requirements

This provision of the regulations allows departments and agencies to impose additional requirements on human subjects research when such requirements are deemed necessary for the protection of human subjects.

B. NPRM Proposals

The NPRM provided more specific language at § _____.124, stating that with respect to any research project or any class of research projects the department or agency head of either the conducting or the supporting federal department or agency may impose additional conditions prior to or at the time of approval when in the judgment of the department or agency additional conditions are necessary for the protection of human subjects.

C. Public Comments

One commenter discussed this NPRM proposal, arguing that this would increase variance in implementation of the Common Rule, rather than promote harmonization as the NPRM suggested.

D. Explanation of the Final Rule

The final rule adopts the NPRM language, which clarifies the pre-2018 rule by stating that the head of either the conducting or the supporting federal department or agency may impose additional conditions on research, when necessary for the protection of human subjects.

XIX. Regulatory Impact Analyses

A. Introduction

HHS has examined the impacts of this final rule under Executive Order 12866 on Regulatory Planning and Review (September 30, 1993); Executive Order 13563 on Improving Regulation and Regulatory Review (January 18, 2011); the Regulatory Flexibility Act of 1980, Pub. L. 96–354 (September 19, 1980); the Unfunded Mandates Reform Act of 1995, Pub. L. 104–4 (March 22, 1995); and Executive Order 13132 on Federalism (August 4, 1999).

Executive Order 12866 directs agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects; distributive impacts; and equity). Executive Order 13563 is supplemental to and reaffirms the principles, structures, and definitions governing regulatory review as established in Executive Order 12866. HHS expects that this rule will have an annual effect on the economy of \$100 million or more in any one year and therefore is a significant regulatory action as defined by Executive Order 12866.

The Regulatory Flexibility Act (RFA) requires agencies that issue a regulation to analyze options for regulatory relief for small businesses if a rule has a significant impact on a substantial number of small entities.⁴⁹ The RFA generally defines a “small entity” as (1) a proprietary firm meeting the size standards of the Small Business Administration (SBA); (2) a nonprofit organization that is not dominant in its field; or (3) a small government jurisdiction with a population of less than 50,000 (states and individuals are not included in the definition of “small entity”).⁵⁰ HHS considers a rule to have a significant economic impact on a substantial number of small entities if at least 5 percent of small entities experience an impact of more than 3 percent of revenue. HHS anticipates that the rule will not have a significant economic impact on a substantial number of small entities. Supporting analysis is provided in Section XIX.F below.

Section 202(a) of the Unfunded Mandates Reform Act of 1995⁵¹ requires that agencies prepare a written statement, including an assessment of anticipated costs and benefits, before proposing “any rule that includes any Federal mandate that may result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of \$100,000,000 or more (adjusted annually for inflation) in any one year.” The current threshold after adjustment for inflation is \$146 million, using the most current (2015) implicit price deflator for the gross domestic product. HHS expects this rule to result in expenditures that will exceed this amount.

Executive Order 13132 establishes certain requirements that an agency

⁴⁹ 5 U.S.C. 603.

⁵⁰ 5 U.S.C. 601.

⁵¹ 2 U.S.C. 1532.

must meet when it promulgates a rule that imposes substantial direct requirement costs on state and local governments or has federalism implications. HHS has determined that the rule will not contain policies that would have substantial direct effects on the States, on the relationship between the Federal Government and the States, or on the distribution of power and responsibilities among the various levels of government. The changes in the rule represent the Federal Government regulating its own program. Accordingly, HHS concludes that the rule does not contain policies that have federalism implications as defined in Executive Order 13132 and, consequently, a federalism summary impact statement is not required.

B. Need for the Final Rule and Summary

This final rule is being issued to modernize, strengthen, and make more effective the regulations for protecting human subjects in research. Although professional organizations have codes of conduct and guidelines for members conducting research, only the Federal Government has the authority to regulate the activities of institutions using public funds for human subjects research. Since the Common Rule was developed, the volume of research has increased, evolved, and diversified.

Thus, the final rule includes a number of measures to address the issues described above. Provisions that strengthen the requirements for informed consent and promote transparency in the informed consent process include: (1) Requiring that the informed consent form be designed and presented in such a way that facilitates a prospective subject's understanding of why one would want to participate in a

research study or not; (2) revising and adding to the required elements of consent; (3) requiring for certain clinical trials the posting of a copy of at least one version of a consent form on a publicly available federal Web site; and (4) clarifying the conditions and requirements for waiver or alteration of consent to remove ambiguity, including a new provision that, under specific conditions, an IRB may approve a research proposal in which investigators obtain information without individuals' informed consent for the purpose of screening, recruiting, or determining eligibility of prospective human subjects of research.

Provisions that strengthen the extent to which regulations promotes the principle of respect for persons include: (1) Requiring that informed consent forms present the key information to potential subjects at the beginning of a consent process; (2) allowing investigators the option of obtaining broad consent from a potential subject for future, unspecified research use of identifiable private information and identifiable biospecimens; and (3) adding a provision that would prohibit a waiver of consent if someone has been asked to provide their broad consent for the storage, maintenance, and secondary research use of identifiable biospecimens or identifiable private information and refused to do so.

New provisions that would allow IRBs greater flexibility to focus resources on higher-risk research include: (1) Distinguishing categories of activities that are deemed not to be research; and (2) expanding and clarifying categories of exempt research.

Provisions that streamline or reduce burden for IRBs or institutions include: (1) Requiring consultation among the

Common Rule agencies for the purpose of harmonizing guidance (to the extent appropriate); (2) eliminating an administrative requirement for reporting IRB membership; (3) removing the requirement that IRBs must review and approve grant applications; (4) eliminating, under certain circumstances, continuing review; (5) mandating the use of a single IRB for multi-institutional studies; and (6) holding IRBs not operated by an FWA-holding institution directly responsible for compliance when appropriate.

1. Accounting Table

Table 1 summarizes the quantified and nonquantified benefits and costs of all changes to the Common Rule. Over the 2017–2026 period, present value benefits of \$1,904 million and annualized benefits of \$223 million are estimated using a 3 percent discount rate; present value benefits of \$1,494 million and annualized benefits of \$213 million are estimated using a 7 percent discount rate. Present value costs of \$528 million and annualized costs of \$62.0 million are estimated using a 3 percent discount rate; present value costs of \$474 million and annualized costs of \$67.0 million are estimated using a 7 percent discount rate. Nonquantified benefits include improved human subjects protections in research; enhanced oversight of research reviewed by IRBs not operated by an FWA-holding institution; and increased uniformity in regulatory requirements among Common Rule departments and agencies. Nonquantified costs include the time needed for consultation among Common Rule agencies before federal guidance is issued.

TABLE 1—ACCOUNTING TABLE OF BENEFITS AND COSTS OF ALL CHANGES

	Present value of 10 years by discount rate (millions of 2015 dollars)		Annualized value over 10 years by discount rate (millions of 2015 dollars)	
	3 percent	7 percent	3 percent	7 percent
Benefits:				
Quantified Benefits	1,904	1,494	223	213
Nonquantified Benefits:				
Improved human subjects protections in research; enhanced oversight in research reviewed by IRBs not operated by an FWA-holding institution; and increased uniformity in regulatory requirements among Common Rule departments and agencies.				
Costs:				
Quantified Costs:	528	474	62.0	67.0
Nonquantified Costs:				
Time for consultation among Common Rule agencies before federal guidance is issued.				

Table 2 summarizes the quantified present value benefits and costs of each

change to the Common Rule using a 3 percent discount rate.

TABLE 2—ACCOUNTING TABLE OF QUANTIFIED BENEFITS AND COSTS OF EACH CHANGE

Change	Present value of 10 years at a 3 percent discount rate (millions of 2015 dollars)	
	Benefits	Costs
Costs to Learn New Requirements and Develop Training Materials; OHRP Costs to Develop Training and Guidance Materials, and to Implement the Rule		213
Extending Oversight to IRBs Unaffiliated with an Institution Holding an FWA (impact to IRBs not operated by an FWA-holding institution)		85.6
Excluding Activities from the Requirements of the Common Rule because They are not Research	36.2	
Clarifying and Harmonizing Regulatory Requirements and Agency Guidance		
Modifying the Assurance Requirements	5.93	
Requirement for Written Procedures and Agreements for Reliance on IRBs Not Operated by the Engaged Institution (impact to FWA-holding institutions)		11.4
Eliminating the Requirement that the Grant Application Undergo IRB Review and Approval	326	
Expansion of Research Activities Exempt from Full IRB Review	798	0.37
Elimination of Continuing Review of Research Under Specific Conditions	148	41.0
Amending the Expedited Review Procedures	51.0	
Cooperative Research (single IRB mandate in multi-institutional research)	538	157
Changes in the Basic Elements of Consent, Including Documentation		4.62
Obtaining Consent to Secondary Use of Identifiable biospecimens and Identifiable private information		
Elimination of Pre-2018 Rule Requirement to Waive Consent in Certain Subject Recruitment Activities	1.25	
Requirement for Posting of Consent Forms for Clinical Trials Conducted or supported by Common Rule Department or Agencies		15.4
Alteration in Waiver for Documentation of Informed Consent in Certain Circumstances		

C. Public Comments and Response to Public Comments

1. General Comments

Approximately 50 comments discussed the specific cost estimates provided in the NPRM's Regulatory Impact Analyses (RIA). Several commenters strongly suggested that the final rule eliminate the proposals related to biospecimens, cooperative research, and expanding coverage to nonfederally funded clinical research because the NPRM failed to appreciate the cost and burden that would result from implementing these proposals. Although a majority of the comments received on the RIA suggested that several of the cost estimates were significantly underestimated, few commenters described specific changes to the cost and benefit estimates included in the NPRM RIA.

One commenter noted that the NPRM cost estimates are derived from a 1998 NIH-sponsored evaluation of the implementation of Section 491 of the Public Health Service Act and "because of the lack of available data about IRB effectiveness and how IRBs function operationally, many of the estimations in this analysis are based on anecdotal evidence." This commenter stated that reliance on outdated and anecdotal "evidence" means that the NPRM assumptions seriously underestimate predictable costs, such as those derived from current salary data for health care workers who would have at least some background sufficient to explain consent, and the time needed to obtain

consent. They also claimed that the NPRM analysis also seriously overestimates cost savings because excluding an activity from the Common Rule does not necessarily remove it from the purview of the IRB pursuant to other laws, such as the HIPAA regulations, and may simply shift the economic burden of responsible oversight to personnel elsewhere within the organization. This commenter also noted that the initial transition costs estimated in the NPRM are staggering, mostly due to costs related to biospecimen provisions.

One commenter stated that a review of the tables indicates that the costs used for hourly wages of individuals affected by the proposed changes may be underestimated by as much as 12 to 139 percent. Similarly, the hours associated with the proposed changes are substantially underestimated.

One commenter stated that an institutional official must be administratively high enough to insist on any necessary institutional changes, most likely a Vice President or higher, and felt that such an official would make at least \$250 per hour. This commenter stated that the \$48.20 estimate in the proposed rules may apply to liberal arts colleges, but the proportion of medical research conducted at such institutions is small and strongly recommends that salary data from medical institutions (published for public institutions) be used to generate a revised cost estimate. One commenter stated that the estimates of the salary rates presented in the

NPRM for institutional officials, IRB members and staff, and investigators are far below the national average for these roles. Likewise, they state that the anticipated benefits of the new proposed rule appear to be grossly overstated.

One commenter stated that the rule as proposed was officially estimated to add \$1.4 billion a year to the cost of the current system, but the true cost increase will be at least triple that due to egregious underestimates of wage costs, substantial underestimates of time spent on red tape by investigators, and many underestimated or omitted costs, as well as some estimates that misrepresent the effects of the rule. They claim that the rule is likely to impose about \$5 billion a year in needless costs, while reducing rather than improving protection of human subjects. One commenter stated that, at their institution, analysts average far greater pay levels than \$15 per hour, and many of the tasks will have to be borne by faculty whose salaries exceed what is identified in the current cost analyses.

One commenter proposed to mandate instead that institutions sufficiently resource their IRBs so as to protect 10 percent of their IRBs' and IRB administrators' time (about 1 meeting/year for an IRB that meets monthly; about 200 hours/year for a full-time equivalent IRB administrator with 2 weeks' vacation and 40-hour work weeks) to devote to finding efficiencies and innovations in the IRB review process.

a. Response to General Comments

We note that the NPRM discussed the fact that data about IRB effectiveness and how IRBs function operationally⁵² is generally unavailable. The NPRM further noted that many of the NPRM RIA assumptions were based on anecdotal evidence; the NPRM requested comment on the accuracy of the assumptions presented and on whether better data sources might be available to support the analyses. RIA comments did not provide the evidence necessary to improve our estimates, and thus, limited changes have been made.

We note that the NPRM RIA used a national average for the salary estimates. We received no compelling evidence to change cost estimates because we must account for the fact that personnel and salaries in affected categories vary widely.

2. Extension of the Common Rule to Certain Nonfederally Funded Clinical Trials

One commenter stated that coverage of this subset of projects will extend requirements, such as the single IRB requirement, without any consideration or mechanism for how to implement or fund this requirement and they do not believe that they should be required to accept added cost and burdens without any meaningful or measureable benefit to the welfare of human subjects.

One commenter stated that the inclusion of nonregulated, unfunded trials under the regulations for the subset of organizations that receive federal grants would lead to a significant increase in burden, delay, ambiguity, and cost, and a loss of valuable research without increasing protections for human subjects.

One commenter stated that an unintended burden would be the increased administrative costs of requiring reporting of all clinical trial Unanticipated Problems Involving Risks to Subjects or Others (unanticipated problems) to OHRP. They estimated requiring all unanticipated problems to be reported would increase their institution's necessary reporting by 25 percent.

a. Response to Comments on Extension of the Common Rule to Certain Nonfederally Funded Clinical Trials

The final rule does not adopt this proposal.

3. Biospecimens

With respect to expanding the definition of human subject to include nonidentifiable biospecimens and creating an exemption for secondary research on these specimens and identifiable information, many commenters claimed the NPRM significantly underestimated the cost of including nonidentified biospecimens under human subjects regulations and the consequent requirement for informed consent. Comments of a professional association, which were endorsed by numerous other commenters, stated that the NPRM has underestimated the financial impact of the Common Rule changes by a factor of at least 10, failing to account for the significant volume of specimens gathered outside of the federally funded environment, vastly underestimating the required time commitment and the requirements of administering a database to track consents, failing to include the expense incurred should an individual withdraw his or her consent for future research, and not including the potential expenditures required to develop a robust database that may be queried by researchers to identify biospecimens for use in future research projects. This association, and the numerous commenters who endorsed their comments, also felt that the increased administrative and cost burden to obtain informed consent for nonidentified biospecimens will disproportionately affect departments of pathology and laboratory medicine and will further increase indirect costs, which will eventually be built into the cost recovery rate from NIH, thereby reducing funds available for research when the NIH budget is fixed. One commenter stated that a major operations issue, and the one most necessary to ensure compliance with such a change, is the appropriate cataloging of biospecimens. Inherent in this new process are costs that will vary greatly based on the size of the stock of biospecimens held. Another commenter stated that the estimate for these costs was not plausible given the costs of developing or re-designing electronic systems.

a. Response to Comments on Biospecimens Proposals

As noted above in the preamble, the provisions relating to making nonidentified biospecimens subject to the Common Rule have been entirely eliminated. The final rule RIA does include impact estimates related to this proposal in Section XIX.E of this

preamble, discussing the impact of regulatory alternatives considered.

4. Broad Consent

One commenter wrote that the NPRM stated that institutions would need to obtain broad consent from only a third of the 30 million individuals who are estimated to provide research and clinical biospecimens each year.

Several commenters stated that this assertion fails to recognize that broad consent would need to be obtained from most individuals, not just those identified as research subjects, and underestimates the amount of time needed to revise consent processes and obtain such consent. For one institution, assuming staff time to obtain broad consent averages 20 minutes and the minimal staff salary is \$25 per hour, this cost alone would be \$2.54 million per year. Several commenters noted that the NPRM estimates that, per subject, the investigator or dedicated health care professional will spend 5 to 10 minutes obtaining broad consent, but this institution believes that a more appropriate standard for obtaining broad consents, particularly in the initial years, would be 20 to 30 minutes. One commenter stated that literally hundreds of employees would need extensive training and periodic retraining in research ethics to obtain broad consent, and they calculate that every procedure that involves any tissue collection should take a minimum of 10 to 15 minutes of additional staff time to be able to even attempt to make the process meaningful.

Many other commenters stated that tracking broad consent would impose significant costs, and require significant resources and infrastructure restructuring, given the complicated framework proposed by the NPRM.

One of these commenters also stated that a significant cost absent from the NPRM analysis is the potential need for rebuilding existing biorepositories and databanks that may be invalidated under the NPRM because: (1) The samples were collected without initial broad consent; (2) the samples are coded and thus not eligible for the transition provisions; (3) consenting all human sources would not be feasible; and (4) the revised and limited waiver mechanism would not be available. One commenter estimated that it will require millions of dollars to build and support the necessary IT and infrastructure required to keep track of the consents. One commenter stated that, if the NPRM's concern for "respect for persons" is really sincere, then the cost estimates involved should be increased by a factor of 4 to 10 times what is

⁵² See, e.g., Abbott L, Grady C. A Systematic Review of the Empirical Literature Evaluating IRBs: What We Know and What We Still Need to Learn. Retrieved from <http://www.ncbi.nlm.nih.gov/pmc/articles/PMC3235475/>.

estimated in the NPRM. One commenter stated estimates that the biospecimen changes alone will cost their institution close to half a million U.S. dollars just in system changes to allow for the added administrative consent processes followed by the tracking mechanisms that will have to be put into place to accommodate the regulatory changes.

a. Response to Comments on Broad Consent

As noted above in the preamble, the provisions relating to making nonidentified biospecimens subject to the Common Rule have been entirely eliminated. Eliminating that proposal largely addresses the concerns regarding costs of the Broad Consent proposal. Note that in response to public comments, we have modified our estimates of the time it would take to seek, obtain, and document broad consent under the regulatory alternatives section of the RIA.

5. Exemptions

One commenter stated that even if a decision tool is used, IRBs will likely still need to review protocols to confirm the exempt classification, which will therefore not result in any cost savings.

a. Response to Comments on Exemptions

The final rule does not include the exemption determination and documentation requirement proposed in the NPRM.

6. Privacy Safeguards

One commenter stated that mandatory use of HIPAA or alternative, but yet-to-be determined, data security provisions would lead to a significant increase in burden, delay, ambiguity, and cost; this commenter also asserted that these safeguards might result in a loss of valuable research without increasing protections for human subjects.

One commenter noted that a large component of the data security safeguards is only necessary because of the 10-fold increase in the number of identified biospecimens due to tracking informed consent and that this adds significantly to the cost of this requirement, well beyond what was represented in the NPRM RIA.

a. Response to Comments on Privacy Safeguards

The final rule does not adopt the NPRM's proposal to implement standardized privacy safeguards.

7. Continuing Review

One commenter applauded the NPRM for recognizing the cost-benefit value of

eliminating continuing review for many studies. This will have a positive impact on the workload of investigators and IRBs.

8. Single IRB Review

Several commenters stated that mandated single IRB review would not decrease the burden for investigators but would, in fact, increase the burden in both the long and short term. They stated that investigators who currently work only with a single IRB (their institution's IRB) will now have to work with multiple IRBs, adding to burden. Further, the resources needed to use a commercial IRB would be beyond the capacity of small trials, which often have limited resources. One of these commenters estimated that, an investigator who has 50 protocols and currently two IRBs of record, would have a minimum of 10 different IRBs of record under the regulations proposed in the NPRM. As a result, the investigator would need to work with at least an additional 8 IRBs (10 in total), each with unique and complex requirements.

One commenter stated that the NPRM grossly underestimates in its assumption that a central IRB administrator would cost \$15 per hour.

One commenter stated that developing the infrastructure to support this effort will involve significant financial costs. Although using single IRBs for multi-institutional studies has the potential for long-term cost savings and reduction of burden when implemented well, reaching that point requires a substantial initial investment. Many other commenters agreed that the NPRM underestimated these initial costs. They stated that these "start-up costs" include but are not limited to: The creation of electronic management systems that are interoperable among institutions; the adaptation of automated processes to multiple institutions; the communications tools necessary to link investigators and IRBs; the staff time necessary to develop agreements, consensus documents, or standard operating procedures; and the interaction necessary to build and maintain trusting relationships among institutional officials. One university received an estimate from the vendor of such a system that costs to accommodate this change would be in excess of \$220,000 for the initial changes, with increased maintenance costs thereafter. In addition, the university would need to hire at least one full-time-equivalent (FTE) to handle the interface with all of the potential central IRBs and this position has a salary mid-point of \$54,000, to which

would be applied fringe benefits costs of \$19,500. Several commenters noted that, even for institutions not serving as the IRB of record, there are real financial implications of participating in the centralized process in terms of adapting existing software systems and protocols.

One commenter noted that the RIA section of the NPRM assigned nearly one-third of the total financial benefit of the revised Common Rule to savings achieved by the use of single IRBs for cooperative research. The RIA arrived at its estimate by assuming that when a single IRB of record reviews a protocol, all institutional costs are eliminated. The commenting institution uses numerous single IRBs, and they say they know from experience that the assumptions in the RIA are erroneous and no net savings accrue for IRB staff when using single IRBs of record. This same commenter noted that the NPRM states that its authors believe that, over time, standardization of agreements will occur so that all issues that currently take weeks or months to negotiate will be resolved. This commenter stated that no data to support this assumption and that, with each new single IRB required by NIH, they find a new set of requirements that requires the negotiation of hundreds of agreements with other institutions. They believe that study initiation will often be delayed because of this requirement and will result in additional software system needs and costs that are not even contemplated in the NPRM. They also stated that the vast majority of research-intensive universities are already over the federal mandated 26 percent facilities and administrative cap. Therefore, the commenter noted, the universities have no mechanism for funding the additional costs of serving as a central IRB because IRB costs are included in the portion of the facilities and administrative costs.

One commenter estimated the costs of ensuring an appropriate data flow between an institution and each new IRB of record, with respect to research studies conducted, to require an extra 200 hours of IRB administrator time, in addition to software customization, configuration, and development costs. This commenter estimated the true costs far exceed those included in the NPRM by a factor of 1433 percent (2150 hours required in total for 10 IRBs of record, versus 150 hours). Even splitting the difference to only a factor of 767 percent (1150 hours required in total for 10 IRBs of record versus 150 hours), the true costs of this approach virtually eclipse any possible quantified benefits estimated in the NPRM.

Two commenters cautioned that the costs to implement single IRB review in multi-institutional studies should not be factored into the overall cost breakdown of a contract or grant. In other words, federal departments and agencies supporting research should make additional funds available to cover the costs associated with implementing § _____.¹¹⁴

a. Response to Comments on Single IRB Review

We agree with commenters who felt that mandated single IRB review will ultimately decrease administrative burdens and inefficiencies for investigators and institutions, while acknowledging that the transition to this model will require time and an adjustment to institutional structures and policies. To incorporate this into our estimates, we assume that investigators for which multi-institutional reviews are eliminated will face a reduction in burden associated with the elimination of the site-specific protocol review, but will face increased burden in the form of coordination with investigators at other sites, for example to ensure that the results of the IRB review are effectively communicated. Specifically, we assume that the elimination of multi-institutional reviews will result in investigators spending half as much time engaging with the review process as they would have if IRB review had taken place at all sites. As a result, the estimated quantified benefits associated with the elimination of multi-institutional review have been revised downward by 27 percent.

9. Posting of Clinical Trial Informed Consent Forms

Several commenters stated that they do not see the utility of the proposed provision to publish consent forms to a public Web site as it creates a new administrative burden without providing any clear additional protection for research subjects or benefit to the public at large. One commenter stated that the cost estimates that the NPRM attaches to this proposed requirement are unrealistically low. One commenter stated that if the site is either *ClinicalTrials.gov* or some future site that is of equal difficulty to use, the cost estimates for investigators and institutions to upload to the site are greatly underestimated. This institution has found that their investigators have found *ClinicalTrials.gov* sufficiently difficult that they have had to add and train staff devoted solely to meet this requirement.

a. Response to Comments on Posting of Consent Forms

We note that this change, compared to the huge costs of clinical trials, will add a relatively small amount of additional burden. The time by which a consent form must be posted has been greatly extended. Furthermore, provisions have been added that allow for redaction of certain portions of consent forms, including the entire form in appropriate instances. We estimate that the revised rule will not affect the quantified and nonquantified costs summarized in the NPRM.

D. Analysis of Benefits and Costs

In this section, we present the analysis of the quantified and nonquantified benefits and costs of the changes to the Common Rule. First, we discuss the common assumptions of the analysis. Then we present the estimated quantified and nonquantified benefits and costs of the specific changes. As discussed above and in the NPRM, because of the lack of available data about IRB effectiveness and how IRBs function operationally, many of the estimations in this analysis are based on anecdotal evidence.

1. Analytic Assumptions

The analysis relies on common data elements and assumptions, detailed below, concerning the domestic entities, individuals, and IRB reviews affected by the changes to the Common Rule. Many of the estimates are derived from a 1998 NIH-sponsored evaluation of the implementation of Section 491 of the Public Health Service Act, which involved nationally representative surveys of IRBs, institutions, and investigators. Based on a review of the literature, this study contains the best available data on the time spent on protocol reviews as well as the characteristics of the reviews themselves. Additionally, OHRP processes the majority of FWAs and IRB registrations for all Common Rule departments or agencies. Thus, using information from the OHRP database of assured institutions and registered institutions or organizations and their IRBs is a reasonable way to estimate the number of institutions and IRBs regulated by all Common Rule departments or agencies that will be affected by these changes. OHRP's IRB registration process requires institutions and organizations to provide information about the approximate number of active protocols reviewed by IRBs during the preceding 12 months. Thus, OHRP's IRB database is the best source for determining the total number

of protocols reviewed by IRBs at this time.

According to the OHRP database of assured institutions and registered institutions or organizations and their IRBs, approximately 8,035 institutions in the United States have an FWA, of which 2,871 have an IRB. Some institutions have multiple IRBs and some IRBs are not affiliated with an institution with an FWA. In total, 3,499 registered IRBs are in the United States.

The OHRP database of assured institutions and registered institutions or organizations and their IRBs shows that 675,390 annual reviews of nonexempt protocols involving human subjects are conducted. It is estimated that of this total, 324,187 are initial protocol reviews (48 percent) and 351,203 are continuing protocol reviews (52 percent) based on estimates reported in Bell et al.⁵³ In each category, it is estimated that 69 percent of these reviews are convened and 31 percent are expedited based on estimates reported in Bell et al.

It is estimated that 472,773 reviews of single-site protocols (70 percent) and 202,617 reviews of multi-institutional protocols (30 percent) take place, based on estimates reported in Bell et al. This analysis also assumes that, on average, 5 IRB reviews take place per multiple-site protocol. This implies 472,773 single-site protocols and 40,523 multi-institutional protocols, for a total of 513,296 protocols. The above also implies approximately 246,382 new protocols each year.

Based on queries of *ClinicalTrials.gov*, we estimated that HHS supports 909 new clinical trials annually, of which 575 are regulated by FDA. In addition, based on queries of *ClinicalTrials.gov*, non-HHS Common Rule departments and agencies support approximately 5,270 studies.

Many individuals in various occupations would be affected by the changes to the Common Rule. We estimated that an average of one institution official at each institution with an FWA would be affected by these changes, for a total of 2,871 institution officials. The OHRP database of registered IRBs shows that IRBs have 10,197 full-time equivalents (FTEs) staff persons working as administrators or administrative staff, and that 89.8 percent of IRBs have an administrator. It is assumed that these individuals work full-time, implying a total of 3,193 IRB administrators and 7,004 IRB

⁵³ Bell J., Whiton J., and Connelly S., Final Report: Evaluation of NIH Implementation of Section 491 of the Public Health Service Act, Mandating a Program of Protection for Research Subjects, 1998.

administrative staff. The OHRP database of IRB membership rosters contains 3,359 individuals who serve as IRB chairs and an additional 32,518 voting members. The number of IRB chairs is less than the number of IRBs because some individuals chair multiple IRBs. It is assumed that 439,968 investigators conduct human subjects research in the United States.⁵⁴

We estimated the hourly wages of individuals affected by the changes to the Common Rule using information on annual salaries provided by the U.S. Bureau of Labor Statistics and the U.S. Office of Personal Management. The salary of postsecondary education administrators is used as a proxy for the salary of institution officials; the salary of lawyers is used as a proxy for the salary of institution legal staff and IRB administrators; the salary of office and administrative support workers is used as a proxy for the salary of IRB administrative staff; the salary of postsecondary health teachers is used as

a proxy for the salary of IRB chairs and IRB voting members; the salary of postsecondary teachers is used as a proxy for the salary of investigators; the salary of database and systems administrators and network architects is used as a proxy for the salary of database administrators; and the salary of all occupations, as a proxy for the salary of prospective human subjects. The federal employees affected by the changes to the Common Rule are assumed to be Step 5 within their GS-level and earn locality pay for the District of Columbia, Baltimore, and Northern Virginia. Annual salaries are divided by 2,087 hours to derive hourly wages. To project wages over 2017–2026, wages are adjusted for growth over time using the average annual per capita growth in real wage income over 1929–2012 reported by the U.S. Bureau of Economic Analysis, which is 2.1 percent. The total dollar value of labor, which includes wages, benefits, and

overhead, is assumed to be equal to 200 percent of the wage rate.

We calculated person-hours by occupation per initial protocol review and per continuing protocol review based on each occupation's share of total person-hours reported in Bell et al. In particular, Bell et al. reports that institution officials account for 4 percent, IRB administrators account for 28 percent, IRB administrative staff account for 30 percent, IRB chairs account for 7 percent, and IRB voting members account for 31 percent of total person-hours. We assumed that the average number of person-hours spent per review equals the weighted average of the person-hours spent per convened review and the person-hours spent per expedited review. We further assumed that convened review requires twice as many person-hours as expedited review.

Table 3 shows the number of entities affected by the changes to the Common Rule and other common assumptions of the analysis (described above).

TABLE 3—NUMBER OF AFFECTED ENTITIES AND OTHER COMMON ASSUMPTIONS

Description	Estimate
U.S. Institutions and IRBs:	
Institutions with an FWA	8,035
FWA Institutions with an IRB	2,871
FWA Institutions without an IRB	5,164
U.S. IRBs	3,499
Occupations:	
Institution officials	2,871
IRB administrators	3,193
IRB administrative staff	7,004
IRB chairs	3,359
IRB voting members	32,518
Investigators	439,968
Hourly Wages:	
Institution officials (2015)	\$49.17
Institution legal staff (2015)	\$65.29
IRB administrators (2015)	\$65.29
IRB administrative staff (2015)	\$17.41
IRB chairs (2015)	\$50.06
IRB voting members (2015)	\$50.06
Investigators (2015)	\$37.13
Database administrators (2015)	\$40.37
Prospective Human Subjects (2015)	\$23.15
Federal employees in the District of Columbia, Baltimore, and Northern Virginia (2015)	
GS–11 Step 5	\$34.60
GS–13 Step 5	\$49.32
GS–14 Step 5	\$58.28
GS–15 Step 5	\$68.56
Average annual per capita growth in real wage income	2.1%
IRB Reviews of Human Subjects Research Protocols at U.S. Institutions:	
Annual reviews of nonexempt protocols	675,390
Initial protocol reviews (48%)	324,187
Convened reviews (69%)	223,689
Expedited reviews (31%)	100,498
Continuing protocol reviews (52%)	351,203
Convened reviews (69%)	242,30
Expedited reviews (31%)	108,873
Annual reviews of single-site protocols (70%)	472,773

⁵⁴ To derive this estimate, the number of new protocols, estimated above, is divided by the average number of new protocol submissions reported per investigator. This is estimated to be 2.8

based on Bell et al. This number is then multiplied by the average number of investigators working on each protocol (which is assumed to be 5). This allows for an accounting of investigators working

on multiple protocols as well as protocols with multiple investigators.

TABLE 3—NUMBER OF AFFECTED ENTITIES AND OTHER COMMON ASSUMPTIONS—Continued

Description	Estimate
Annual reviews of multi-institutional protocols (30%)	202,617
Human Subjects Research Protocols at U.S. Institutions:	
Active protocols	513,296
Single-site protocols	472,773
Multi-site protocols	40,523
New protocols (48%)	246,382
Average number of IRB reviews per active multi-institutional protocol	5
Clinical Trials:	
New clinical trials supported by HHS annually	909
Regulated by FDA	575
Clinical Trials supported by Common Rule Agencies	5,270
Person-Hours per Protocol Reviewed by Occupation and Type of Review:	
Institution officials:	
Initial protocol reviews:	
Convened reviews	0.52
Expedited reviews	0.26
Continuing protocol reviews:	
Convened reviews	0.10
Expedited reviews	0.05
IRB administrators:	
Initial protocol reviews:	
Convened reviews	3.64
Expedited reviews	1.82
Continuing protocol reviews:	
Convened reviews	0.68
Expedited reviews	0.34
IRB administrative staff:	
Initial protocol reviews:	
Convened reviews	3.91

Convened reviews	0.17
Expedited reviews	0.08
IRB voting members:	
Initial protocol reviews:	
Convened reviews	2.70
Expedited reviews	1.35
Exempt reviews	0.50
Continuing protocol reviews:	
Convened reviews	0.75
Expedited reviews	0.38
Investigators:	
Initial protocol reviews:	
Convened reviews	13.65
Expedited reviews	7.15
Exempt reviews	0.50
Continuing protocol reviews:	
Convened reviews	6.83
Expedited reviews	3.58

2. Analysis of Changes

We present below an analysis of the quantified and nonquantified benefits and costs of the changes to the Common Rule. For each change, we describe the change, provide a qualitative summary of the anticipated benefits and costs, describe the methods we use to quantify benefits and costs, and then present estimates.

a. Costs for the Regulated Community To Learn New Requirements and Develop Training Materials; Costs for OHRP To Develop Materials and Guidance

Domestic institutions, IRBs, and investigators would need to spend time learning the changes to the Common Rule once training materials become available to them. In addition, IRBs and OHRP would need to update training

materials for investigators. OHRP also would need to develop guidance, templates, and a number of electronic resources.

We estimate that institution officials, IRB administrators, IRB administrative staff, IRB chairs, IRB voting members, and investigators would each spend 5 hours to learn the changes to the Common Rule. We also estimate that institution officials would spend 2

hours to learn new procedures, IRB administrators would spend 20 hours, and administrative staff would spend 80 hours. Based on the estimates presented in Table 3, the dollar value of their time is calculated by multiplying hours by their estimated 2016 wages and adjusting for overhead and benefits. For example, to calculate the dollar value of time spent by institution officials to learn the changes to the Common Rule in 2017, we multiply the number of institution officials (2,871) by the number of hours spent per institutional official (5), by the projected hourly wage of institution officials (\$49.17), and by the adjustment factor for benefits and overhead (2).

In order to develop the resources required by the final rule, we anticipate that OHRP would need:

- Three staff people at the GS–14 level and three staff people at the GS–13 level to: (1) Promote harmonization efforts to issue guidance across Common Rule agencies and departments; (2) develop guidance for the regulated community; (3) develop template

agreements for use by the regulated community; (4) manage the administrative transition to the new processes in the final rule; and, (5) develop web-based posting portals.

- One staff person at the GS–13 level to manage process changes in the final rule, and assist with implementation for the web-based portals.

- One staff person at the GS–11 level to provide technical support for the web-based portals in the final rule.

In addition, the first year after the final rule is published staffing resources beyond what is described above would be necessary:

- Three staff people at the GS–14 level to draft new guidance and revise old guidance.
- One staff person at the GS–14 level to conduct educational seminars.

OHRP also anticipates the following in nonpersonnel costs:

- Technical development of two Web-based portals for investigators to post final consent forms for HHS-funded clinical trials, and for investigators who conduct certain types of demonstration

projects to post information about said projects (\$350,000)

- Developing five educational seminars (including travel) to educate the public about the requirements of the new rule (\$150,000)

- Upgrading equipment for education activities (\$50,000)

We also note that additional staff time throughout the Common Rule departments and agencies will be needed to fulfill the consultation requirement found in § _____.102(e)(7). As we assume that this consultation will not involve the hiring of additional personnel to fulfill, we consider this a nonquantified cost.

Present value costs of \$214 million and annualized costs of \$25.0 million are estimated using a 3 percent discount rate; present value costs of \$204 million and annualized costs of \$29.1 million are estimated using a 7 percent discount rate. Table 4 summarizes the quantified and nonquantified benefits and costs to learn new requirements and develop training materials.

TABLE 4—SUMMARY OF ESTIMATED BENEFITS AND COSTS TO LEARN NEW REQUIREMENTS AND DEVELOP TRAINING MATERIALS

	Present value of 10 years by discount rate (millions of 2015 dollars)		Annualized value over 10 years by discount rate (millions of 2015 dollars)	
	3 percent	7 percent	3 percent	7 percent
BENEFITS:				
Quantified Benefits:				
None
Nonquantified Benefits:				
None.				
COSTS:				
Quantified Costs:				
Time and money to learn new requirements, update training materials, develop tools and conduct consultations	214	204	25.0	29.1
Nonquantified Costs:				
Implementation of consultation requirements.				

b. Extending Oversight to IRBs Unaffiliated With an Institution Holding an FWA (§ _____.101(a))

As outlined in the NPRM, and as generally supported by public commenters, the final rule includes a new provision at § _____.101(a) that gives Common Rule departments and agencies the authority to enforce compliance directly against IRBs that are not operated by an assured institution. We anticipate that this change will encourage institutions to rely on IRBs not operated by an FWA-holding institution more often and also will assist in the implementation of the

requirements at § _____.114. Here, we estimate the impact that this proposal will have on IRBs that are not operated by an FWA-holding institution. The estimated impact of this and other related proposals on FWA-holding institutions is addressed in Section XIX.D.2.f of this RIA.

The OHRP database of assured institutions and registered IRBs shows that approximately 449 IRBs not affiliated with an institution holding an FWA will now be subject to oversight. These IRBs will develop an estimated average of 10 written agreements with other institutions each year as a result

of this rule. It is further estimated that each agreement will require an average of 10 hours of institution legal staff time and 5 hours of IRB administrator time to complete.

The estimated costs to institution officials, IRB administrators, IRB administrative staff, IRB chairs, IRB voting members, and investigators of conducting these reviews are based on the estimates presented in Table 3. The dollar value of their time is calculated by multiplying hours by their estimated 2017–2026 wages and adjusting for overhead and benefits.

Present value costs of \$85.6 million and annualized costs of \$10.0 million

are estimated using a 3 percent discount rate; present value costs of \$70.0 million and annualized costs of \$10.0 million

are estimated using a 7 percent discount rate. Table 5 summarizes the quantified and nonquantified benefits and costs of

extending oversight to IRBs unaffiliated with an institution holding an FWA.

TABLE 5—SUMMARY OF ESTIMATED BENEFITS AND COSTS OF EXTENDING OVERSIGHT TO IRBs UNAFFILIATED WITH AN INSTITUTION HOLDING AN FWA (§ _____.101(a))

	Present value of 10 years by discount rate (millions of 2015 dollars)		Annualized value over 10 years by discount rate (millions of 2015 dollars)	
	3 percent	7 percent	3 percent	7 percent
BENEFITS:				
Quantified Benefits:				
None
Nonquantified Benefits:				
Encouraging institutions to rely on single IRBs of record in multi-institutional studies when appropriate.				
COSTS:				
Quantified Costs:				
Developing IRB authorization agreements or other procedures	85.6	70.0	10.0	10.0
Nonquantified Costs:				
None.				

c. Explicit Carve-Outs of Activities From the Definition of Research (§ _____.102(l))

The final rule includes four categories that are explicitly deemed to be not research (final rule at § _____.102(l)(1)–(4)). These categories include: (1) Scholarly and journalistic activities (e.g., oral history, journalism, biography, literary criticism, legal research and historical scholarship), including the collection and use of information that focuses directly on the specific individuals about whom the information is collected; (2) certain public health surveillance activities; (3) certain collection and analysis activities conducted by a criminal justice agency; and (4) certain activities conducted by a defense, national security, or homeland security authority.

Institutions, investigators, and IRBs involved in supporting, conducting, or

reviewing these activities will no longer incur the costs of IRB review and approval and continuing review. Activities that were not intended to be subject to the regulations will clearly be removed from the definition of research, allowing such activities to proceed without delays caused by the need for IRB submission, review, and approval.

We estimate that 3,376 annual reviews of protocols (0.5 percent) will no longer be conducted as a result of the activities deemed not to be research in § _____.102(l)(1)–(4). Of these reviews, 1,118 will have undergone convened initial review, 502 will have undergone expedited initial review, 1,212 will have undergone convened continuing review, and 544 will have undergone expedited continuing review based on the distribution of reviews presented in Table 3.

The estimated costs to institution officials, IRB administrators, IRB administrative staff, IRB chairs, IRB voting members, and investigators of conducting these reviews are based on the estimates presented in Table 3. The dollar value of their time is calculated by multiplying hours by their estimated 2017–2026 wages and adjusting for overhead and benefits.

Present value benefits of \$36.2 million and annualized benefits of \$4.24 million are estimated using a 3 percent discount rate, and present value benefits of \$29.6 million and annualized benefits of \$4.22 million are estimated using a 7 percent discount rate. Table 6 summarizes the quantified and nonquantified benefits and costs of excluding these activities from the requirements of the Common Rule.

TABLE 6—SUMMARY OF ESTIMATED BENEFITS AND COSTS OF § _____.102(l)

	Present value of 10 years by discount rate (millions of 2015 dollars)		Annualized value over 10 years by discount rate (millions of 2015 dollars)	
	3 percent	7 percent	3 percent	7 percent
BENEFITS:				
Quantified Benefits:				
Reduction in number of reviews	36.2	29.6	4.24	4.22
Nonquantified Benefits:				
Increased clarity in what must be reviewed; ability for IRBs to focus efforts on reviews of higher-risk, more complex research activities.				
COSTS:				
Quantified Costs:				
None
Nonquantified Costs:				
None.				

d. Clarifying and Harmonizing Regulatory Requirements and Agency Guidance (§ _____.101(j))

The final rule at § _____.101(j) requires consultation among the Common Rule departments and agencies for the purpose of harmonization of guidance (to the extent appropriate) before federal guidance on the Common Rule is

issued, unless such consultation is not feasible.

As this change likely will not affect staffing requirements in the Federal Government, no costs are quantified here. It is possible however, that the harmonization requirement could result in it taking longer for Common Rule department or agency guidance to be

approved and issued to the public. Similarly, as the extent to which this change will reduce the time IRBs spend on reviewing protocols is unclear, benefits are also not quantified. Table 7 summarizes the nonquantified benefits and costs of clarifying and harmonizing regulatory requirements and agency guidance.

TABLE 7—SUMMARY OF ESTIMATED BENEFITS AND COSTS OF CLARIFYING AND HARMONIZING REGULATORY REQUIREMENTS AND AGENCY GUIDANCE (§ _____.101(j))

	Present value of 10 years by discount rate (millions of 2015 dollars)		Annualized value over 10 years by discount rate (millions of 2015 dollars)	
	3 percent	7 percent	3 percent	7 percent
BENEFITS:				
Quantified Benefits:				
None
Nonquantified Benefits:				
Increased uniformity in regulatory requirements among Common Rule agencies; increased clarity to the regulated community about how regulations should be interpreted.				
COSTS:				
Quantified Costs:				
None
Nonquantified Costs:				
Time for consultation among Common Rule agencies before federal guidance is issued.				

e. Modifying the Assurance Requirements (§ _____.103)

The final rule modifies the requirements of the assurance process in the following ways. First, the final rule does not include the pre-2018 requirement of identifying a statement of principles governing all research at an institution. The requirement for institutions to designate a set of ethical principles by which that institution will abide in all research activities was generally not enforced. Further, for international institutions that received U.S. Government funding for research activities, it created the impression that these international institutions must modify their internal procedures to comport with the set of principles designated on the FWA for activities conducted at those institutions that received no U.S. Government funding. This provision was deleted from the final rule to provide clarity to these international institutions that such measures are not required for activities that receive no Common Rule department or agency support.

The requirement in the pre-2018 rule that a written assurance include a list of IRB members for each IRB designated under the assurance has been moved to

§ _____.108(a)(2) and modified. The final rule requires that an institution, or when appropriate the IRB, prepare and maintain a current detailed list of the IRB members with information sufficient to describe each member's chief anticipated contributions to IRB deliberation, and any employment or other relationship between each member and the institution. The final rule also deletes the pre-2018 requirement that changes in IRB membership be reported to the department or agency head, or to OHRP when the existence of an HHS-approved assurance is accepted.

The changes to the IRB roster requirement are expected to reduce administrative burden without having any significant impact on the protection of human subjects:

Finally, the requirement in the pre-2018 rule that a department or agency head's evaluation of an assurance take certain factors into consideration has been deleted. These factors include the adequacy of the proposed IRB in light of the anticipated scope of the institution's activities and the types of subject populations likely to be involved, the appropriateness of the proposed initial and continuing review procedures in

light of the probable risks, and the size and complexity of the institution. Deletion of that provision eliminates an administrative process that was no longer meaningful given the purpose and design of the FWA and OHRP's processes for reviewing IRB registrations and reviewing and approving FWAs. This change also harmonizes the Common Rule with FDA's human subjects protection regulations by eliminating the requirement to submit IRB membership lists.

We estimate that administrative staff at each IRB would spend 5 fewer hours complying with the assurance requirements. Based on the estimates presented in Table 3, the dollar value of their time is calculated by multiplying hours by their estimated 2017–2026 wages and adjusting for overhead and benefits.

Present value benefits of \$5.93 million and annualized benefits of \$0.69 million are estimated using a 3 percent discount rate; present value benefits of \$4.18 million and annualized benefits of \$0.60 million are estimated using a 7 percent discount rate. Table 8 summarizes the quantified and nonquantified benefits and costs of the proposed change to the IRB roster requirement.

TABLE 8—SUMMARY OF ESTIMATED BENEFITS AND COSTS OF CHANGES TO MODIFYING THE ASSURANCE REQUIREMENTS (PRE-2018 RULE AT § ___.103(b)(1), (b)(3), (d))

	Present value of 10 years by discount rate (millions of 2015 dollars)		Annualized value over 10 years by discount rate (millions of 2015 dollars)

f. Requirement for Documenting Reliance on IRBs Not Operated by the FWA-Holding Institution (§§ ___.103(e) and ___.115(a)(9))

The final rule contains a requirement at § ___.103(e) that, to ensure compliance with the requirements of the Common Rule, nonexempt human subjects research subject to this policy that takes place at an institution in which IRB oversight is conducted by an IRB that is not operated by the institution, the institution and the organization operating the IRB shall document the institution's reliance on the IRB for oversight of the research and the responsibilities that each entity will undertake. This requirement could be satisfied, for example, by: (1) Developing a written agreement between the institution and the IRB; (2) implementing an institution-wide policy directive providing the allocation of responsibilities between the institution and an IRB that is not affiliated with the institution; or (3)

describing the allocation of responsibilities in a research protocol. In addition, a requirement is added at § ___.115(a)(9) of the final rule that institutions or IRBs retain this written agreement or other procedures undertaken to ensure compliance with the requirements of this policy, as described in § ___.103(e).

Initially, costs would be involved in drafting, revising, and conducting managerial review of agreements to ensure they satisfy these new requirements. Anticipated benefits include greater reliance on IRBs not operated by the institutions as the IRB of record for cooperative research.

Table 3 shows that 5,164 FWA-holding institutions do not have an IRB and 2,871 FWA-holding institutions have an IRB. We assume that the 5,164 FWA-holding institutions without an IRB have an average of 1 IRB authorization agreement that will need to be modified as a result of the new requirements for agreements between institutions and IRBs not operated by

the institutions in 2017. In addition, we assume that the 2,871 FWA-holding institutions with an IRB have an average of 0.20 IRB authorization agreements that would need to be modified in 2017. We estimate that each agreement will require an average of 10 hours of institution legal staff time and 5 hours of IRB administrator time to complete. The dollar value of their time is calculated by multiplying hours by their estimated 2017 wages and adjusting for overhead and benefits.

Present value costs of \$11.4 million and annualized costs of \$1.33 million are estimated using a 3 percent discount rate; present value costs of \$10.9 million and annualized costs of \$1.56 million are estimated using a 7 percent discount rate. Table 9 summarizes the quantified and nonquantified benefits and costs of the requirement for written procedures and agreements for reliance on IRBs not operated by the FWA-holding institution (§§ ___.103(e) and ___.115(a)(9) in the final rule).

TABLE 9—SUMMARY OF REQUIREMENT FOR WRITTEN PROCEDURES AND AGREEMENTS FOR RELIANCE ON IRBs NOT OPERATED BY THE FWA-HOLDING INSTITUTION (§§ ___.103(e) AND ___.115(a)(10))

g. Eliminating the Requirement That the Grant Application Undergo IRB Review and Approval (Pre-2018 Rule at § ____ .103(f))

The final rule eliminates the requirement in the pre-2018 rule that grant applications undergo IRB review and approval for the purposes of certification. The grant application is often outdated by the time the research study is submitted for IRB review and contains detailed information about the costs of a study, personnel, and administrative issues that go beyond the mission of the IRB to protect human subjects. Therefore, experience suggests that review and approval of the grant application is not a productive use of IRB time, and the change likely will not

reduce protections for human subjects or impose other costs.

We estimate that 324,187 initial reviews of protocols occur annually, of which 223,689 involve convened review and 100,498 involve expedited review based on the distribution of reviews presented in Table 3. For the purpose of this analysis, we assume that each protocol reviewed by an IRB is associated with one grant application or other funding proposal. We estimate that investigators spend an average of 15 minutes compiling their grant applications when they submit a protocol for initial review. Further, we estimate that IRBs typically use two primary reviewers for convened review and one primary reviewer for expedited review, and that primary reviewers

spend an average of 30 minutes reviewing the grant application. Based on the estimates in Table 3, the dollar value of their time is calculated by multiplying hours by their estimated 2017–2026 wages and adjusting for overhead and benefits.

Present value benefits of \$326 million and annualized benefits of \$38.2 million are estimated using a 3 percent discount rate and present value benefits of \$230 million and annualized benefits of \$32.7 million are estimated using a 7 percent discount rate. Table 10 below summarizes the quantified and nonquantified benefits and costs of eliminating the requirement that the grant application undergo IRB review and approval.

TABLE 10—SUMMARY OF ESTIMATED BENEFITS AND COSTS OF ELIMINATING THE REQUIREMENT THAT THE GRANT APPLICATION UNDERGO IRB REVIEW AND APPROVAL (PRE-2018 RULE AT § ____ .103(f))

Nonquantified Costs:
None.

h. Expansion of Exemption Categories (§ ____ .104(d))

The final rule includes eight exemption categories. Some of these categories include subcategories of exemptions.

We note that one pre-2018 exemption does not appear in the final rule (exemption for educational tests, survey procedures, interview procedures, or observation of public behavior where a statute requires confidentiality of the information collected, or where the

human subjects involved in the activity are public figures). We also note that several of the final rule exemptions were proposed in the NPRM as exclusions. Finally, we note that only one pre-2018 exemption has been unmodified in the final rule (the exemption for taste and food quality evaluations).

The exemptions included in the final rule are:

- Certain research involving normal educational practices

- Certain research that involves the use of educational tests, survey procedures, interview procedures, or observation of public behavior

- Research involving benign behavioral interventions in conjunction with the collection of information from an adult subject through verbal or written responses or video recording

- Research involving the secondary use of identifiable private information or identifiable biospecimens provided that:

- The sources are publicly available
- The information is recorded in such a manner that the identity of subjects is not readily ascertainable by the investigator

- The research is regulated as “health care operations,” “public health activities,” or “research” under HIPAA

- The research is conducted by or on behalf of a federal department or agency using government-generated or government-collected nonresearch information, provided that certain conditions are met

- Research and demonstration projects conducted or supported by a federal department or agency

- In addition to OHRP’s interpretation of this exemption expanding under the final rule, and language being modified in this exemption to reflect that expanded interpretation, the final rule also includes a requirement that federal departments or agencies conducting or supporting demonstration projects post information about these studies on a publicly accessible federal Web site

- Taste and food quality evaluation and consumer acceptance studies
- The storage and maintenance of identifiable biospecimens or identifiable private information for unspecified secondary research studies

- The secondary research use of identifiable biospecimens or identifiable private information where broad consent has been sought and obtained

The goal of the posting requirement in the exemption for research and demonstration projects (final rule at § _____.104(d)(5)) is to promote transparency in federally conducted or supported activities affecting the public that are not subject to oversight under the Common Rule. It should not create any delay in research. HHS will develop

a resource that all Common Rule departments and agencies may use to satisfy the posting requirement (accounted for in Section XIX.D.2.a of this RIA). Alternatively, an agency can create or modify its own Web site for this purpose. Thus, increased transparency in federally funded or supported demonstration projects is a non-quantified benefit of the final rule modifications.

Other nonquantified benefits of the expansion to the modifications of exempt research include clearer instructions to the regulated community about the extent to which creating a system for storing and maintaining identifiable biospecimens and identifiable private information for future, unspecified secondary research activities is governed by this rule. Additionally, by reducing the IRB burden associated with approving this type of activity, the new exemption for storing and maintaining identifiable biospecimens and identifiable private information also incentivizes the creation of institution-wide, comprehensive systems for storing and maintaining such biospecimens and information. We anticipate that this will, in turn, foster research while also giving human subjects increased control over how their identifiable biospecimens and identifiable private information will be used (promoting the principle of respect for persons).

Consistent with the NPRM, we estimate that 70,916 annual reviews of protocols (10.5 percent) would no longer be conducted as a result of the changes at § _____.104(d). Of these reviews, 23,487 will have undergone convened initial review, 10,552 will have undergone expedited initial review, 25,445 will have undergone

convened continuing review, and 11,432 will have undergone expedited continuing review based on the distribution of reviews presented in Table 3.

Further, we estimate that that 1,000 exempt research and demonstration studies are currently conducted each year.⁵⁵ We further estimate that due to the change in OHRP’s interpretation of the research and demonstration project exemption at § _____.104(d)(5), an additional 3,376 annual reviews of protocols (0.5 percent) will no longer be conducted. Of these 3,376 reviews, 1,118 would have undergone convened initial review, 502 would have undergone expedited initial review, 1,212 would have undergone convened continuing review, and 544 would have undergone expedited continuing review based on the distribution of reviews presented in Table 3. The 4,376 estimated annual studies conducted under this exemption will need to be posted on a federal Web site as required by § _____.104(d)(5)(i). We anticipate that it will take individuals at the IRB administrative staff level 15 minutes per study to post the study on the Web site.

Present value benefits of \$798 million and annualized benefits of \$93.6 million are estimated using a 3 percent discount rate, and present value benefits of \$653 million and annualized benefits of \$93.0 million are estimated using a 7 percent discount rate. Present value costs of \$0.37 million and annualized costs of \$0.04 million are estimated using a 3 percent discount rate; present value costs of \$0.30 million and annualized costs of \$0.04 million are estimated using a 7 percent discount rate. Table 11 summarizes the quantified and nonquantified benefits and costs of amending an exempt category.

i. Elimination of Continuing Review of Research Under Specific Conditions (§§ _____.109(f) and _____.115(a)(3))

The final rule eliminates continuing review for many minimal risk studies, as detailed at § _____.109(f). Unless an IRB determines otherwise, continuing review of research is not required if: (1) The research is eligible for expedited review in accordance with § _____.110; (2) the research is reviewed by the IRB in accordance with the limited IRB review procedure described in several of the exemption categories (specifically, § _____.104(d)(2)(iii), § _____.104(d)(3)(i)(C), § _____.104(d)(7), or § _____.104(d)(8)); or (3) the research has progressed to the point that it only involves data analysis (including analysis of identifiable information or identifiable biospecimens) or access to follow-up clinical data from procedures that subjects would undergo as part of clinical care. If an IRB chooses to conduct continuing review even when these conditions are met, the rationale for doing so must be documented

according to a new provision at § _____.115(a)(3).

We estimate that 108,873 expedited continuing reviews of protocols occur annually, based on the distribution of reviews presented in Table 3. Of these reviews, we further estimate that 81,546 reviews (75 percent) will not be eliminated by other changes to the Common Rule (such as the modifications at § _____.104(d)). It is estimated that 40,773 of these 81,546 reviews (50 percent) will be discontinued under § _____.109(f), and the remaining 40,773 reviews (50 percent) will still require documentation of the rationale for doing so (as required under § _____.115(a)(3)). We also estimate that IRB voting members will spend 1 hour per review providing the necessary documentation. In addition, administrative staff at each IRB will spend an estimated 10 hours in 2017 updating their communication systems to no longer send continuing review reminders to affected investigators.

The estimated costs to institution officials, IRB administrators, IRB administrative staff, IRB chairs, IRB voting members, and investigators of conducting these reviews are based on the estimates presented in Table 3. The dollar value of their time is calculated by multiplying hours by their estimated 2017–2026 wages and adjusting for overhead and benefits.

Present value benefits of \$148 million and annualized benefits of \$17.4 million are estimated using a 3 percent discount rate, and present value benefits of \$121 million and annualized benefits of \$17.3 million are estimated using a 7 percent discount rate. Present value costs of \$41.0 million and annualized costs of \$4.80 million are estimated using a 3 percent discount rate; present value costs of \$33.7 million and annualized costs of \$4.80 million are estimated using a 7 percent discount rate. Table 12 summarizes the quantified and nonquantified benefits and costs of the elimination of continuing review of research under specific conditions.

TABLE 12—SUMMARY OF ESTIMATED BENEFITS AND COSTS OF THE ELIMINATION OF CONTINUING REVIEW OF RESEARCH UNDER SPECIFIC CONDITIONS (§§ _____.109(f) AND _____.115(a)(3))

Nonquantified Costs:				
None.				

j. Expedited Review Procedures (§§ ____ .110 and ____ .115(a)(8))

The final rule changes the default position such that any research activity appearing on the expedited review list is presumed to be minimal risk. Additionally, the final rule requires that, in consultation with other Common Rule departments or agencies, the expedited review categories be reviewed every 8 years and amended as appropriate, followed by publication in the **Federal Register** and solicitation of public comment. Finally, the final rule contains a new requirement at § ____ .115(a)(8) concerning IRB records, requiring that IRBs document the rationale for an expedited reviewer's determination that research activities appearing on the expedited review list are more than minimal risk (*i.e.*, an override of the presumption that studies

on the Secretary's list of expedited review activities are minimal risk). We note that because the final rule does not include a proposal to develop guidance with a list of activities presumed to be minimal risk, cost estimates in the final rule have been modified accordingly.

Changes to the expedited review procedures are expected to reduce IRB workload by decreasing the amount of time IRB voting members spend making minimal risk determinations and documenting such determinations. Nonquantified benefits include a reduction in the number of studies that require full, convened IRB review should more categories of activities be added to the expedited review list.

According to the estimates presented in Table 3, 209,371 protocols undergo expedited review each year. For these protocols, we estimate that, as a result

of these changes, IRB voting members will spend an average of 15 fewer minutes per protocol developing and documenting a rationale for why certain activities that are permitted to be reviewed under the expedited review procedure are minimal risk.

The dollar value of IRB voting member time is calculated by multiplying hours by their estimated 2017–2026 wages and adjusting for overhead and benefits.

Present value benefits of \$51.0 million and annualized benefits of \$5.98 million are estimated using a 3 percent discount rate, and present value benefits of \$41.7 million and annualized benefits of \$5.94 million are estimated using a 7 percent discount rate. Table 13 summarizes the quantified and nonquantified benefits and costs of amending expedited review procedures.

TABLE 13—SUMMARY OF ESTIMATED BENEFITS AND COSTS OF AMENDING THE EXPEDITED REVIEW PROCEDURES (§§ ____ .110 AND ____ .115(a)(8))

Nonquantified Costs:				
None.				

k. Cooperative Research (§ ____ .114))

The final rule requires under § ____ .114 that any institution located in the United States that is engaged in cooperative research shall rely on approval by a single IRB for that portion of the research that is conducted in the United States. This policy has two exceptions (detailed in § ____ .114(b)(2)): (1) Cooperative research for which more than single IRB review is required by law (including tribal law passed by the official governing body of a American Indian or Alaska Native tribe); and (2) research for which any federal department or agency supporting or conducting the research determines and documents that the use of a single IRB is not appropriate for the particular study. Nonquantified benefits of this change include standardization of

human subjects protections in multi-institutional studies.

Ultimately, these revisions are expected to lower costs associated with multiple reviews for investigators, institutions, and IRBs. Some cost shifting may occur as certain IRBs assume the role of reviewing IRB. However, these will be offset by savings at other IRBs that are no longer required to conduct additional reviews of the same research study. Initially, IRBs and institutions will have to draft and revise their policies regarding their reliance on single IRBs. It is expected that, over time, reliance agreements and other methods of documenting external reliance will become standardized, which will result in reduced costs associated with multiple reviews and

time savings for investigators who no longer must wait for multiple reviews.

The OHRP database of registered institutions and IRBs shows that 8,035 institutions have an FWA. We estimate that these institutions will develop an average of 10 written joint review agreements with other institutions in 2019 before the first year of compliance. We further estimate that each agreement will require an average of 10 hours of institution legal staff time and 5 hours of IRB administrator time to complete. The dollar value of their time is calculated by multiplying hours by their estimated wages and adjusting for overhead and benefits.

We estimate that 202,617 annual reviews of multi-institutional protocols take place, and an average of 5 reviews per multi-institutional protocol,

implying that 40,523 multi-institutional protocols are reviewed each year. We further estimate that 16,209 (40 percent) of these multi-institutional studies are funded by NIH⁵⁶ and thus will already be subject to NIH's single IRB review policy. Accordingly, we estimate that approximately 97,256 annual reviews of protocols will no longer be conducted as a result of these proposed changes. Of these reviews, 32,211 would have undergone convened initial review, 14,472 would have undergone expedited initial review, 34,896 would have undergone convened continuing review, and 15,678 would have undergone expedited continuing review based on the distribution of reviews presented in Table 3.

In response to comments on the NPRM RIA, we have modified our assumptions of how much time would ultimately be saved by the implementation of this proposal (see

Section XIX.C of this RIA). We assume that investigators for whom multi-institutional reviews are eliminated will face a reduction in burden associated with the elimination of the site-specific protocol review, but will face increased burden in the form of coordination with investigators at other sites, for example, to ensure that the results of the IRB review are effectively communicated. Specifically, we assume that the elimination of multi-institutional reviews will result in investigators spending half as much time engaging with the review process as they would have if IRB review had taken place at all sites.

The estimated costs to institution officials, IRB administrators, IRB administrative staff, IRB chairs, IRB voting members, and investigators of conducting these reviews are based on the estimates presented in Table 3, adjusted accordingly to account for our

assumption that the time savings for these eliminated reviews is reduced by half for investigators. The dollar value of their time is calculated by multiplying hours by their estimated 2020–2026 wages and adjusting for overhead and benefits.

Present value benefits of \$538 million and annualized benefits of \$63.1 million are estimated using a 3 percent discount rate, and present value benefits of \$414 million and annualized benefits of \$59.0 million are estimated using a 7 percent discount rate. Present value costs of \$157 million and annualized costs of \$18.3 million are estimated using a 3 percent discount rate; present value costs of \$140 million and annualized costs of \$19.9 million are estimated using a 7 percent discount rate. Table 14 summarizes the quantified and nonquantified benefits and costs of cooperative research.

1. Changes in the Elements of Consent, Including Documentation (§§ _____.116(a)(5), (b)(9), (c)(7)–(9), and _____.117(b))

The final rule imposes a new requirement at § _____.116(a)(5)(i) that informed consent must begin with a concise and focused presentation of the key information that is most likely to assist a prospective subject or legally authorized representative in understanding the reasons why one might or might not want to participate in the research. This provision further mandates that this part of the informed consent must be organized and presented in a way that facilitates comprehension. This requirement

applies to all informed consent processes, except for broad consent obtained pursuant to § _____.116(d), which may warrant a different presentation.

The final rule includes a new element of consent at § _____.116(b)(9) that requires one of the following statements be included for any research that involves the collection of identifiable private information or identifiable biospecimens:

- A statement that identifiers might be removed from the identifiable private information or identifiable biospecimens and that, after such removal, the information or biospecimens could be used for future

research studies or distributed to another investigator for future research studies without additional informed consent from the subject or the legally authorized representative, if this might be a possibility; or

- A statement that the subject's information or biospecimens collected as part of the research, even if identifiers are removed, will not be used or distributed for future research studies.

This new requirement is intended to give the potential subject the knowledge that identifiers might be removed from information or biospecimens for their use in future research without additional consent, when such a

⁵⁶ *Moral Science: Protecting Participants in Human Subjects Research*. Washington, DC:

Presidential Advisory Commission for the Study of Bioethical Issues. Retrieved from [http://](http://bioethics.gov/sites/default/files/Moral%20Science%20June%202012.pdf)

bioethics.gov/sites/default/files/Moral%20Science%20June%202012.pdf, p. 34.

possibility exists, so he or she can make a fully informed decision about whether to participate in the research. If subjects' identifiable private information or identifiable biospecimens will not be used for future research studies, even if identifiers are removed, this new element of consent requires that subjects be informed of this as well.

The final rule's three additional elements of consent are in § _____.116(c)(7), (8), and (9). These require that a subject be informed of the following, when appropriate:

- That the subject's biospecimens (even if identifiers are removed) may be used for commercial profit and whether the subject will or will not share in this commercial profit;
- Whether clinically relevant research results, including individual research results, will be disclosed to subjects, and if so, under what conditions.
- For research involving biospecimens, whether the research will (if known) or might include whole genome sequencing (*i.e.*, sequencing of a human germline or somatic specimen

with the intent to generate the genome or exome sequence of that specimen.

These three additional elements of consent will promote respect for persons and greater transparency in the research enterprise. Additionally, including the information referenced in these provisions in a consent form will help ensure that prospective subjects are given information necessary for understanding why one might want to participate (or not) in a research study.

The language at § _____.117(b)(1) in the final rule was modified to reference § _____.116(a)(5)(i) and state that if a short form consent process is used, the key information required by § _____.116(a)(5)(i) must be presented first to the prospective subject, before other information, if any, is provided.

We estimate that 246,382 new protocols annually use identifiable information. For each protocol, we estimate that investigators will spend an average of 15 minutes in 2017 updating consent forms to comply with the new requirements found in the final rule at § _____.116(a)(5), (b)(9), (c)(7), (c)(8), or

(c)(9). Based on the estimates presented in Table 3, the dollar value of investigators' time is calculated by multiplying hours by their estimated 2017 wages and adjusting for overhead and benefits.

We assume that few additional investigators will elect to offer the second option at § _____.116(b)(9), and that the investigators who currently offer equivalent options already track the permissible and impermissible uses of information in line with the requirements discussed above. As a result, we estimate that no additional costs are associated with tracking.

Present value costs of \$4.62 million and annualized costs of \$0.54 million are estimated using a 3 percent discount rate; present value costs of \$4.32 million and annualized costs of \$0.62 million are estimated using a 7 percent discount rate. Table 15 summarizes the quantified and nonquantified benefits and costs of changes in the basic elements of consent, including documentation.

TABLE 15—SUMMARY OF ESTIMATED BENEFITS AND COSTS OF CHANGES IN THE ELEMENTS OF CONSENT, INCLUDING DOCUMENTATION (§§ _____.116(a)(5), (b)(9), (c)(7), (c)(8) AND _____.117(b))

None.				

m. Obtaining Consent to Secondary Use of Identifiable Biospecimens and Identifiable Private Information (§ _____.116(d))

Because the final rule does not adopt the NPRM proposal to consider all biospecimens as human subjects regardless of identifiability, the costs associated with seeking, obtaining, and tracking broad consent are reduced significantly. As noted above, comments on the NPRM suggest that the costs associated with building systems to track broad consent are very burdensome. Therefore, we expect that broad consent and institution-wide

tracking systems will be pursued only in situations where it generates net benefits. As a result, in the short term, we are unsure of the extent to which institutions will adopt institution-wide mechanisms to seek, obtain, and track broad consent. We anticipate in the short term that broad consent (and the attendant tracking and maintenance obligations) will be a system used and managed by investigators or teams of investigators in their research portfolios. However, we believe that it will be adopted more over time at an institutional level as IT systems evolve at research institutions through normal practice. We lack data to estimate the

number of research studies for which this option will be adopted. Each of these studies will have some variable costs (*e.g.*, consent, tracking) and fixed costs (IT infrastructure). Because this is optional, we believe that it will be pursued only if private benefits exceed private costs. Therefore, we anticipate benefits, in terms of improvements in the quality and efficiency of human subjects research, proportional to the adoption of broad consent. We note that the voluntary nature of adoption implies that broad consent may not be sought in some situations where its social benefit exceeds its social cost.

Time and infrastructure required to obtain and track broad consent.				

n. Allowing IRBs To Approve a Research Proposal for Subject Recruitment Activities Without Granting a Waiver of Consent (§ ____ .116(g))

The final rule will allow an IRB to approve a research proposal in which investigators obtain information or biospecimens without individuals' informed consent for the purpose of screening, recruiting, or determining the eligibility of prospective human subjects of research in certain circumstances.

This addresses concerns that the pre-2018 regulations required an IRB to determine that informed consent could be waived before investigators could record identifiable private information for the purpose of screening, recruiting, or determining the eligibility of prospective subjects for a research study. The pre-2018 rule requirement was viewed as burdensome without

providing meaningful protections to subjects.

The policy adopted in the final rule should result in time and cost savings for investigators and IRBs, but they likely will be small. The savings will come from IRBs no longer needing to consider whether informed consent can be waived for such preparatory-to-research activities. Savings will accrue for investigators who can proceed with such activities in less time.

We estimate that 1,620 annual initial reviews of protocols (0.5 percent) involve a waiver of consent for recruitment activities that will not be required as a result of these changes. Of these reviews, 1,118 will have undergone convened initial review and 502 will have undergone expedited initial review based on the distribution of reviews presented in Table 3. We estimate that investigators spend an average of 15 minutes requesting a waiver of consent for recruitment

activities when they submit a protocol for initial review. We further estimate that IRBs typically use two primary reviewers for convened review and one primary reviewer for expedited review, and that primary reviewers spend an average of 15 minutes determining whether informed consent can be waived. Based on the estimates in Table 3, the dollar value of their time is calculated by multiplying hours by their estimated 2017–2026 wages and adjusting for overhead and benefits.

Present value benefits of \$1.25 million and annualized benefits of \$0.15 million are estimated using a 3 percent discount rate, and present value benefits of \$0.88 million and annualized benefits of \$0.13 million are estimated using a 7 percent discount rate. Table 17 summarizes the quantified and nonquantified benefits and costs of eliminating the requirement to waive consent in certain subject recruitment activities.

o. Requirement for Posting of Consent Forms for Common Rule Department or Agency-Supported Clinical Trials (§ _____.116(h))

The final rule requires that for each clinical trial conducted or supported by a Federal department or agency, one IRB-approved form used to recruit subjects must be posted by the awardee or the federal department or agency component conducting the trial on a publicly available federal Web site that will be established as a repository for such informed consent forms. The consent form must be posted after the clinical trial is closed to recruitment and no later than 60 days after the last study visit by any subject, as required by the protocol. This provision permits federal departments or agencies to require or permit redactions to these consent forms. As described in Section XIV.H, federal departments or agencies have great latitude in what they may permit or require be redacted.

We believe that public posting of consent forms will increase transparency, enhance confidence in the research enterprise, increase accountability, and inform the

development of future consent forms, possibly resulting in future savings in time for investigators developing consent forms. Costs to the Federal Government in creating and maintaining such a repository are described in Section XIX.D.2.a of this RIA.

According to queries of ClinicalTrials.gov, estimated 5,270 clinical trials are conducted or supported by Common Rule agencies, of which an estimated 575 are regulated by provisions in the Federal Food, Drug, and Cosmetic (FD&C) Act and Trade Secrets Act based on the information presented in Table 3. For the purpose of this analysis, it is assumed that each clinical trial is associated with one consent form that must be submitted to the federal system by an investigator.

It is unknown at this time in what other circumstances federal departments or agencies might permit or require redaction, thus the RIA calculates redaction time only in those studies for which the FD&C Act and Trade Secrets Act applies. For the 575 clinical trials regulated by provisions in the FD&C Act and Trade Secrets Act, it is estimated that investigators will spend an average of 30 minutes redacting information

before submission. We estimate that investigators will spend an average of 15 minutes submitting each consent form.

Based on the estimates presented in Table 3, the dollar value of investigator time is calculated by multiplying hours by their estimated 2017–2026 wages and adjusting for overhead and benefits.

In addition, submitted consent forms must be reviewed and made accessible to persons with disabilities in compliance with Section 508 Amendment to the Rehabilitation Act of 1973. We estimate that each consent form contains an average of 10 pages and that making each page 508-compliant costs an average of \$30 per page.

Present value costs of \$15.4 million and annualized costs of \$1.80 million are estimated using a 3 percent discount rate; present value costs of \$11.0 million and annualized costs of \$1.56 million are estimated using a 7 percent discount rate. Table 18 summarizes the quantified and nonquantified benefits and the requirement for posting of consent forms for Common Rule department or agency-supported clinical trials.

TABLE 18—SUMMARY OF ESTIMATED BENEFITS AND COSTS OF REQUIREMENT FOR POSTING OF CONSENT FORMS FOR COMMON RULE DEPARTMENT OR AGENCY-SUPPORTED CLINICAL TRIALS (§ _____.116(h))

Nonquantified Costs: None.				

p. Alteration in Waiver for Documentation of Informed Consent in Certain Circumstances (§ ____ .117(c)(1)(iii))

The final rule adds a provision allowing a waiver of the requirement to obtain a signed informed consent form if the subjects are members of a distinct cultural group or community in which signing documents is not the norm. This will be allowed only if the research presents no more than minimal risk of harm to subjects and provided an appropriate alternative method is

available to document that informed consent was obtained.

Under the pre-2018 rule, IRBs could waive the requirement for the investigator to obtain a signed consent form for some or all subjects. The pre-2018 criteria for such a waiver may not have been flexible enough for dealing with a variety of circumstances, such as when federally sponsored research is conducted in an international setting where, for example, cultural or historical reasons suggest that signing documents may be viewed as offensive and problematic.

This should not involve cost as its intent is to improve the informed consent process by providing more flexibility regarding the documentation of consent (an ethical gain) while reducing administrative requirements for investigators and research subjects in specific circumstances. Thus, benefits and costs of this new provision are not quantified. Table 19 summarizes the nonquantified benefits and costs of alteration in waiver for documentation of informed consent in certain circumstances.

TABLE 19—SUMMARY OF ESTIMATED BENEFITS AND COSTS OF ALTERATION IN WAIVER FOR DOCUMENTATION OF INFORMED CONSENT IN CERTAIN CIRCUMSTANCES (§ ____ .117(c)(1)(iii))

E. Alternative Approaches to the Definition of Human Subject (NPRM at § ____ .102(e)) and Related Provisions

1. Overview

We carefully considered the option of not pursuing regulatory action. However, because of shifts in science, technology, public engagement, and public expectations in the past 2 decades, a wide range of stakeholders have raised concerns about the limitations of the existing ethical framework in research, arguing for a re-evaluation of how the fundamental principles that underlie the Common Rule—respect for persons, beneficence, and justice—are applied in practice to the myriad new contexts in which U.S. research is conducted in the 21st century.

The final rule addresses these concerns through three aims. The first aim is to increase human subjects' ability and opportunity to make informed decisions. The second aim is to reduce potential for harm and promote justice by increasing the uniformity of human subject protections. The third aim is to facilitate current and evolving types of research

that offer promising approaches to treating and preventing medical and societal problems by reducing ambiguity in interpretation of the regulations, increasing efficiencies in the review system, and reducing requirements on investigators when said requirements do not appear to provide meaningful protections to human subjects. We hope that these changes will also build public trust in the research system. We estimate that the benefits of this regulatory action exceed its costs, and as a result we have chosen to pursue this regulatory action.

The NPRM proposed to expand the definition of human subjects to include research in which an investigator obtains, uses, studies or analyzes a biospecimen. This would have applied regardless of the identifiability of the biospecimen. Generally, investigators would not have been allowed to remove identifiers from biospecimens without obtaining informed consent or a waiver of consent. The NPRM also proposed to modify the criteria for waiver of consent in research involving biospecimens such that a waiver would be very rare. Written consent would generally have been required for such activities. Thus,

this change would have significantly expanded the amount of research subject to the Common Rule. This requirement would not have applied to biospecimens and information already collected at the time the final rule is published. The NPRM proposed to exclude from its scope research activities involving nonidentified biospecimens where no new information about an individual is generated. Although activities such as developing new testing assays could have been excluded under this provision, it is anticipated that under the NPRM proposals, most research with biospecimens would have come under the rule.

In addition to promoting respect for persons in the research enterprise, the alternative regulatory structure for research with biospecimens (whereby consent is sought for almost all research activities involving biospecimens) would have encouraged investigators to retain identifiers, which can enhance research by preserving the ability to link biospecimens to important additional information about the subject. Additionally, members of the regulated community have reported situations

where, even though not currently required by regulation, investigators were told by an IRB that they needed to obtain study-specific consent for research activities involving nonidentified biospecimens. Under the NPRM proposals, such a situation would not occur because consent—be it broad or study-specific—would always be obtained for research involving biospecimens.

Though this proposal would promote the ethical principle of respect for persons, it also would have significantly increased the volume of studies for which investigators must seek and document informed consent (unless more stringent waiver criteria were met). Additionally, the NPRM acknowledged, and the regulated community reiterated, during the public comment period, that the majority of the studies that the NPRM proposal would have newly regulated were studies involving no more than minimal risk to human subjects.

As an example of the tradeoffs between the NPRM proposal and the ultimate position taken in the final rule, some commenters noted that the proposal to cover all biospecimens under the Common Rule regardless of identifiability might privilege the *Belmont Report's* principle of autonomy over the principle of justice. Because the NPRM would have required investigators to obtain informed consent in all but rare circumstances for research involving biospecimens, concern was expressed that this could result in lower representation rates in research of minority groups, marginalized members of society, and citizens receiving care in community health clinics (which would be less able to cover the costs of tracking consent status over time). We note that although the available literature suggests that minority consent rates are generally high, minority consent rates in some cases may be lower than for nonminorities.^{57 58 59} This discrepancy in turn could create issues in the applicability of research discoveries on the population as a whole. Respecting persons is a worthy goal, but the need to achieve representative samples (and thus helping to ensure the applicability

of research findings across a population) also must be taken into consideration. In addition, the principle of beneficence requires that all reasonable efforts be made to improve the public good. To balance these sometimes competing interests, the final rule incentivizes asking potential subjects for permission in minimal risk activities (even if a waiver of informed consent could be sought from an IRB), while still allowing other avenues for this research to occur should compelling reasons exist or not obtaining informed consent.

2. Estimated Impact of Alternative Approaches to the Final Rule

The benefit and cost estimations presented below are based upon the proposals and structure presented in the NPRM, not the provisions included in the final rule.

a. Estimating How Many Studies Involving Nonidentified Biospecimens Occur Each Year

We estimate that each year 250,000 studies are not currently subject to oversight by either the Common Rule or FDA regulations because they use biospecimens that have been stripped of identifiers. Extrapolations from 1999 data⁶⁰ suggest that biospecimens are collected from as many as 30 million individuals each year and are stored for both clinical and research purposes. Based on conversations with experts in this area, this 1999 report represents the most recent, comprehensive analysis of the volume of nonidentified biospecimens used in research activities.

Approximately 9 million individuals' biospecimens (30 percent of those collected) are collected for research purposes. Approximately 6.3 million individuals' biospecimens (30 percent) could potentially be used in future research studies. Thus, it is possible that investigators would have had to seek consent to secondary use of biospecimens or a waiver of consent for an additional 15 million individuals annually for secondary use of biospecimens.

In the absence of comprehensive data, to calculate the number of protocols that would have been covered, we proposed two approaches. Under method one, we estimated that approximately 50 biospecimens would have been used on average per research protocol involving biospecimens. This gave a potential 300,000 new research protocols using nonidentified biospecimens. This

estimate of 300,000 new research protocols was rounded down to 250,000 new studies based on ANPRM comments and industry data, because it seemed reasonable to assume that the number of new biospecimen studies covered by the alternative proposal would equal the total number of new protocols conducted each year (*i.e.*, the number of new biospecimen studies was likely close to the estimate of 246,382 new annual studies each year).

Under method two, biospecimen repository representatives reported that roughly 90 percent of their collections were used in nonidentified form in research activities that did not fall under the pre-2018 rule. Thus, only 10 percent of biospecimen studies were covered under the pre-2018 rule, representing a 9:1 ratio of studies involving nonidentified biospecimens to studies involving identifiable biospecimens. Of the 246,382 new protocols each year that were nonexempt (Table 3), we assumed that 10 to 15 percent used identifiable biospecimens. This equated to between 24,638 and 36,957 new studies each year using identifiable biospecimens. We estimated that the number of biospecimen studies that occurred on nonidentified biospecimens each year was approximately 9 times the number of studies using identifiable biospecimens, or between 221,742 and 332,613 studies each year. Thus, under method two, an estimate of 250,000 new studies on nonidentified biospecimens each year was also reasonable.

To facilitate research with biospecimens, the NPRM proposed to create separate elements of broad consent such that investigators and institutions could seek, and individuals could grant, consent for future unspecified research activities. The NPRM also proposed an exemption that relied on obtaining broad consent for future, unspecified research studies. To be eligible for the proposed exemption for specific secondary studies, broad consent must have been sought and obtained using the proposed Secretary's template for broad consent, and the investigator must not have anticipated returning individual research results to subjects.

b. Facilitating Research With Nonidentified Biospecimens Under the NPRM: Exemption for Specific, Secondary Studies When Broad Consent Had Been Sought and Obtained

The NPRM proposed to allow broad consent to secondary research use of biospecimens or identifiable private information for unspecified research purposes. Such broad consent would

⁵⁷ Pentz RD, et al. Research on Stored Biological Samples: Views of African American and White American Cancer Patients. *American Journal of Medical Genetics*, Part A. 2006 Apr; 140(7):733–739.

⁵⁸ Chen, DT et al. Research With Stored Biological Samples; What Do Research Participants Want? *Archives of Internal Medicine* 2005 Mar; 165(6):652–655.

⁶⁰ Eiseman E., Haga S. *Handbook of Human Tissue Sources: A National Resource of Human Tissue Samples*. Washington, DC: RAND Corporation; 1999.

have specified elements and limitations, and could have been obtained in both the research and nonresearch setting.

The proposed exemption was specifically for secondary research studies involving biospecimens and identifiable private information that had been or would have been acquired for purposes other than the currently proposed research study. If a secondary research study did not meet the requirements of this exemption, the investigator would have needed to seek IRB review of the study, and would have needed to obtain either study-specific consent or a waiver of informed consent. Note that for biospecimens, an IRB would have applied the more stringent waiver criteria under which waiver of informed consent in research involving biospecimens would have been rare. For identifiable private information, an IRB would have applied the waiver criteria almost identical to the criteria in the pre-2018 rule.

We anticipated that a majority of studies that would have used this exemption would have been biospecimen studies. The extent to which individuals conducting secondary research studies involving identifiable private information would have used this exemption is unknown, given the proposed rule provided additional pathways to facilitate such studies. To that end, the benefits and costs associated take into consideration only secondary research involving biospecimens. We further anticipated that the NPRM proposals would have resulted in higher value research with biospecimens being conducted with subjects' consent and without the need for full IRB review, or the need to go back to subjects to obtain consent for every secondary research study, as long as certain conditions were met.

Because the estimated 250,000 biospecimen studies each year that would have been newly covered under the rule as a result of the proposed modification to the definition of human subject would likely have been minimal risk, we assume that all of these would have been eligible for the exemption for secondary use as long as broad consent had been sought and obtained.

Benefits and costs associated with obtaining and tracking broad consent under this alternative proposal are discussed below.

Because the compliance date for the expansion to the definition of human subject would have been 3 years after the date of publication of a final rule, the benefits and costs described below assume a start date of 2020. In the absence of the proposed exemption for secondary research studies, but taking

into consideration the expansion to the definition of human subject, we estimate that each year, all 250,000 of these studies would undergo convened initial review. In subsequent years, we estimate that 120,000 protocols would undergo convened initial review, 89,700 would undergo convened continuing review, and 40,300 would undergo expedited continuing review based on the distribution of reviews presented in Table 3. The estimated costs to institution officials, IRB administrators, IRB administrative staff, IRB chairs, IRB voting members, and investigators conducting these reviews are based on the estimates presented in Table 3. The dollar value of their time is calculated by multiplying hours by their estimated 2017–2026 wages and adjusting for overhead and benefits.

c. Facilitating Research With Nonidentified Biospecimens Under the NPRM: Seeking and Obtaining Broad Consent

To facilitate secondary research using biospecimens and identifiable private information, the NPRM also proposed an exemption for storing and maintaining biospecimens and identifiable private information for future, unspecified, secondary research activities. Given the creation of this exemption, the NPRM envisioned that institutions would need to develop tracking systems to monitor which biospecimens or information could be used in secondary research by investigators. Because both the exemption for secondary research use described above, and the exemption required using the proposed Secretary's broad consent, the NPRM assumed that a majority of investigators and institutions would employ the Secretary's consent template. Thus, the NPRM anticipated that minimal time would have been spent updating consent forms or drafting new broad consent forms.

We estimate that 6,428 FWA-holding institutions (80 percent) would have stored and maintained clinical and nonclinical biospecimens and identifiable private information for unspecified future research studies in the manner prescribed under the NPRM. As also discussed previously, extrapolations from 1999 data suggest that biospecimens are collected from as many as 30 million individuals each year and stored for both clinical and research purposes. Approximately 9 million individuals' biospecimens (30 percent) are collected for research purposes, and thus consent would be sought in the research context for the secondary use of these biospecimens.

For these 9 million individuals per year, an investigator would spend an estimated 20 minutes per person conducting the consent process specific to seeking broad consent, and the subjects would spend an estimated 20 minutes engaging in the process of having their broad consent for future research uses of their biospecimens or information sought. This estimate of the investigator's time also includes the time for the investigator to log the information into the appropriate database. We note that the NPRM RIA estimated that it would take 5 minutes for an investigator to seek broad consent in the research setting, and that prospective subjects would spend 5 minutes having their broad consent sought. Based on public comments, we have revised this estimate to better reflect experience in the regulated community about how long it takes to seek and obtain consent. We further estimate that investigators would spend 10 minutes of time per protocol updating their study specific consent form to include the language from the Secretary's consent template.

In the clinical setting, approximately 21 million individuals' biospecimens (70 percent of the estimated 30 million individuals' biospecimens collected each year) are collected for clinical purposes. In the first year that the proposed changes would have been implemented, as many as 21 million broad, secondary use consent forms could have been collected from individuals. We anticipate 30 minutes of a subject's time to engage in the consent process. We further anticipate 30 minutes of an institutional employee's time at the IRB Administrative Staff level to seek consent and put the information in the appropriate tracking system. As with the estimate for seeking and obtaining broad consent in the clinical setting, we have increased the estimate of how long it would take institutional employees to seek broad consent and how long prospective subjects would spend participating in the broad consent process based on public comments.

The NPRM proposed that once an individual gave broad consent to use his or her biospecimens in future, unspecified research studies, that consent could cover any biospecimen collected from that individual over the course of a 10-year period. Note that an institution could retain and use the biospecimens collected indefinitely. This provision merely stated that every 10 years an institution must ask people whether or not they may use newly collected biospecimens in research. Given that an institution needed to seek

broad consent from an individual only once over the course of a 10-year period, we assumed that after the first year the NPRM was implemented, the number of individuals from whom an institution would seek broad consent would decrease.

To account for this, the RIA alternative approach assumes that after the first year, a fraction of the clinical subjects from whom broad consent was sought in year one would be sought in subsequent years. We anticipate that in year two, secondary use consent would be sought in the clinical context from 10.5 million subjects (50 percent of the number of individuals involved in the year one estimates). We anticipate that in year three and after, secondary use consent would be sought in the clinical context from approximately 6.3 million subjects each year (30 percent of the number of individuals involved in the year one estimates). As in year one, we assume that a prospective subject would spend 30 minutes of time undergoing the consent process and that an institutional employee at the IRB Administrative Staff level would spend 30 minutes of time conducting the consent process with an individual and

updating the appropriate tracking system.

d. Estimating the Cost of the Broad Consent Tracking System

To appropriately track biospecimens or identifiable private information for which broad consent had been sought and obtained on an institutional level, an institution would need to develop an institution-wide repository-like schema. The costs include the design, implementation, and operation of the informatics system that would be required to document and keep current thousands of consent documents per year. In addition, the institution would have to come up with a system to mark or otherwise flag which biospecimens and pieces of identifiable private information could be used in future unspecified secondary research studies.

Under the NPRM proposal, we estimate that 80 percent of the 8,035 institutions with FWAs would develop these informatics systems (or modify existing systems) to facilitate research with nonidentified biospecimens. We estimate that under this proposal, institutions on average would require 1.0 database administrator FTE to develop and maintain these systems. We note that as this estimate is a

nationwide average, and we expect some institutions would require more database administrators, and others would require fewer.

For all of the estimates described above, the estimated costs to institution officials, IRB administrators, IRB administrative staff, IRB chairs, IRB voting members, database administrators, and investigators of are based on the estimates presented in Table 3. The dollar value of their time is calculated by multiplying hours by their estimated 2017–2026 wages and adjusting for overhead and benefits.

For the alternative proposal (*i.e.*, the NPRM proposal to treat all biospecimens regardless of identifiability as covered under the Common Rule), present value costs of \$19.7 billion and annualized costs of \$2.31 billion are estimated using a 3 percent discount rate; and present value costs of \$14.2 billion and annualized costs of \$2.02 billion are estimated using a 7 percent discount rate. Table 20 summarizes the quantified and nonquantified benefits and costs of amending the definition of human subject and obtaining consent to secondary use of biospecimens and identifiable private information.

TABLE 20—ALTERNATIVE PROPOSAL TO TREAT ALL BIOSPECIMENS AS COVERED UNDER THE COMMON RULE

	Present value of 10 years by discount rate (millions of 2015 dollars)		Annualized value over 10 years by discount rate (millions of 2015 dollars)

Quantified Costs:				
Increase in number of reviews; time to update consent forms; document and track permissible and impermissible secondary uses of information and biospecimens; and cost to develop and maintain tracking system	19,670	14,214	2,306	2,024
Nonquantified Costs:				
None.				

F. Regulatory Flexibility Analysis

As discussed above, the RFA requires agencies that issue a regulation to analyze options for regulatory relief of small entities if a rule has a significant impact on a substantial number of small entities. HHS considers a rule to have a significant economic impact on a substantial number of small entities if at least 5 percent of small entities

experience an impact of more than 3 percent of revenue.

We calculate the costs of the proposed changes to the Common Rule over 2017–2026 to institutions with an FWA. The estimated annualized cost to institutions with an FWA, on average, is \$2,516 using a 3 percent discount rate. The U.S. Small Business Administration establishes size standards that define a small entity. According to these

standards, colleges, universities, and professional schools with revenues below \$27.5 million and hospitals with revenues below \$38.5 million are considered small entities. It is not anticipated that a majority of institutions with an FWA are in any of these categories.

XX. Environmental Impact

We have determined under 21 CFR 25.30(k) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

XXI. Paperwork Reduction Analysis

This final rule contains collections of information that are subject to review and approval by the Office of Management and Budget (OMB) under the Paperwork Reduction Act (PRA), as amended (44 U.S.C. 3501–3520). A description of these provisions is given in this document with an estimate of the annual reporting and recordkeeping burden.

Title: Federal Policy for the Protection of Human Subjects.

Description: In this document is a discussion of the regulatory provisions we believe are subject to the PRA and the probable information collection burden associated with these provisions. In general, the following actions trigger the PRA: (i) Reporting; (ii) Recordkeeping.

Description of Respondents: The reporting and recordkeeping requirements in this document are imposed on institutions, institutional review boards, and investigators involved in human subjects research conducted or supported or otherwise subject to regulation by any federal department or agency that takes administrative action that makes the policy applicable to such research.

§ ____ .101(a)(1) Extending Oversight to IRBs-Not Operated by an Institution Holding an FWA (OMB Control No 0990–0260)

Section ____ .101 is amended, as described in § ____ .101(a), to give Common Rule departments and agencies the authority to enforce compliance directly against IRBs that, are not operated by an assured institution. It is anticipated that institutions using an IRB that it does not operate will be reassured because compliance actions can be taken directly against the IRB responsible for the regulatory noncompliance, rather than the institutions that relied on that review. As a result of this change, we anticipate that FWA-holding institutions will increase their reliance on IRBs not operated by an FWA-holding institution when appropriate.

The OHRP database of assured institutions and registered IRBs shows that approximately 449 IRBs not

operated by an institution holding an FWA will now be subject to oversight. These IRBs will develop an estimated average of 10 written agreements with other institutions each year as a result of this rule. We further estimate that each agreement will require an average of 10 hours of institution legal staff time and 5 hours of IRB administrator time to complete. We note that elsewhere in the final rule (specifically §§ ____ .103(e) and ____ .115(a)(9)) requires that IRBs document the specific responsibilities that an institution and an organization operating an IRB each will undertake, when an institution relies on an IRB that it does not operate. The impact of these provisions on FWA-holding institutions is described below.

§ ____ .103(e) Documentation of IRB Oversight Reliance Requirement for Institution and Organization Operating the IRB (OMB Control No 0990–0260)

To further strengthen the compliance enforcement authority provision in § ____ .101(a) and provide a record for oversight and compliance purposes, the final rule contains a requirement at § ____ .103(e), that for nonexempt research involving human subjects covered by this policy (or exempt research for which limited IRB takes place pursuant to § ____ .104(d)(2)(iii), § ____ .104(d)(3)(i)(C), § ____ .104(d)(7), or § ____ .104(d)(8)) that take place at an institution in which IRB oversight is conducted by an IRB that is not operated by the institution, the institution and the organization operating the IRB shall document the institution's reliance on the IRB for oversight of the research and the responsibilities that each entity will undertake to ensure compliance with the requirements of this policy. This might be accomplished through a written agreement between the institution and the IRB, or by implementing an institution-wide policy directive providing the allocation of responsibilities between the institution and an IRB that is not affiliated with the institution, or as set forth in a research protocol). In addition, a requirement is included at § ____ .115(a)(9) that an institution include documentation of such arrangements in the IRB records.

Table 3 of the RIA section of the preamble shows that 5,164 FWA-holding institutions do not have an IRB and 2,871 FWA-holding institutions have an IRB. We assume that the 5,164 FWA-holding institutions without an IRB have an average of 1 IRB authorization agreement that will need to be modified as a result of the new requirements for agreements between

institutions and IRBs not operated by the institutions in 2017. In addition, we assume that the 2,871 FWA-holding institutions with an IRB have an average of 0.20 IRB authorization agreements that will need to be modified in 2017. We estimate that each agreement will require an average of 10 hours of institution legal staff time and 5 hours of IRB administrator time to complete. The dollar value of their time is calculated by multiplying hours by their estimated 2017 wages and adjusting for overhead and benefits.

§ ____ .104(d)(5)(i) Posting of Information About Federally Funded or Supported Demonstration Projects

Section 104(d)(5)(i) requires each federal department or agency conducting or supporting the research or demonstration projects covered under this exemption to establish, on a publicly accessible federal Web site or in such other manner as the department or agency head may determine, a list of the research and demonstration projects that the federal department or agency conducts or supports under this provision. We estimate that under the pre-2018 rule, approximately 1,000 demonstration projects occurred each year. Under the modifications to this exemption in the final rule, we estimate that an additional 3,376 studies will fall under this exemption. Thus, approximately 4,376 studies will be subject to this posting requirement each year. We anticipate that investigators will spend approximately 15 minutes per study submitting information about these studies to the federal Web site.

§ ____ .114 Cooperative Research (OMB Control No 0990–0260)

The final rule requires any institution located in the United States that is engaged in cooperative research to rely upon approval by a single IRB for that portion of the research that is conducted in the United States, as detailed in § ____ .114 (b)(1). The following research is not subject to the requirements of this provision, as described in § ____ .114 (b)(2): (1) Cooperative research for which more than single IRB review is required by law (including tribal law passed by the official governing body of a Native American or Alaska Native tribe); or (2) research for which any federal department or agency supporting or conducting the research determines and documents that the use of a single IRB is not appropriate for the particular study.

The OHRP database of assurances shows that 8,035 institutions in the United States have an FWA. We estimate that these institutions will

develop an average of 10 written joint IRB review agreements with other institutions or organizations in 2019 before the first year of compliance. We further estimate that each agreement will require an average of 10 hours of institution legal staff time and 5 hours of IRB administrator time to complete.

We estimate that 202,617 annual reviews of multi-institutional protocols take place, and an average of 5 reviews per multi-institutional protocol, implying that 40,523 multi-institutional protocols are reviewed each year. We further estimate that 16,209 (40 percent) of these multi-institutional studies are funded by NIH and thus will already be subject to NIH's single IRB review policy. Accordingly, we estimate that approximately 97,256 annual reviews of protocols will no longer be conducted as a result of these proposed changes. Of these reviews, 32,211 would have undergone convened initial review, 14,472 would have undergone expedited initial review, 34,896 would have undergone convened continuing review, and 15,678 would have undergone expedited continuing review based on the distribution of reviews presented in Table 3 in the RIA section of the preamble.

§ _____.115(a)(3) Documenting the Rationale for Conducting Continuing Review of Research That Otherwise Would Not Require Continuing Review (OMB Control No 0990-0260)

The final rule eliminates continuing review for many minimal risk studies, as detailed at § _____.109(f). Unless an IRB determines otherwise, continuing review of research is not required if: (1) The research is eligible for expedited review in accordance with § _____.110; (2) the research is reviewed by the IRB in accordance with the limited IRB review procedure described in several of the exemption categories (specifically, § _____.104(d)(2)(iii), § _____.104(d)(3)(i)(C), § _____.104(d)(7), or § _____.104(d)(8)); or (3) the research has progressed to the point that it involves data analysis (including analysis of identifiable information or identifiable biospecimens) or access to follow-up clinical data from procedures that subjects would undergo as part of clinical care. If an IRB chooses to conduct continuing review even when these conditions are met, the rationale for doing so must be documented according to a new provision at § _____.115(a)(3).

We estimate that 40,773 reviews will require documentation of the rationale for doing so (as required under § _____.115(a)(3)). We also estimate that IRB voting members will spend 1 hour

per review providing the necessary documentation.

§§ _____.116(a)(5), (b)(9), (c)(7)–(9) and _____.117(b) Changes in the Elements of Consent, Including Documentation (OMB Control No 0990-0260)

The final rule imposes a new requirement at § _____.116(a)(5)(i) informed consent must begin with a concise and focused presentation of the key information that is most likely to assist a prospective subject or legally authorized representative in understanding the reasons why one might or might not want to participate in the research. This part of informed consent must be organized and presented in a way that facilitates comprehension. This requirement applies to all informed consent process, except for broad consent obtained pursuant to § _____.116(d), which may warrant a different presentation.

The final rule includes a new element of consent at § _____.116(b)(9) that requires one of the following statements be included for any research that involves the collection of identifiable private information or identifiable biospecimens: (1) A statement that identifiers might be removed from the identifiable private information or identifiable biospecimens and that after such removal, the information or biospecimens could be used for future research studies or distributed to another investigator for future research studies without additional informed consent from the subject or the legally authorized representative, if this might be a possibility; or (2) a statement that the subject's information or biospecimens collected as part of the research, even if identifiers are removed, will not be used or distributed for future research studies.

The final rule's three additional elements of consent are in § _____.116(c)(7), (8), and (9). These require that a subject be informed of the following, when appropriate:

- That the subject's biospecimens (even if identifiers are removed) may be used for commercial profit and whether the subject will or will not share in this commercial profit;
- Whether clinically relevant research results, including individual research results, will be disclosed to subjects, and if so, under what conditions;
- For research involving biospecimens, whether the research will (if known) or might include whole genome sequencing (*i.e.*, sequencing of a human germline or somatic specimen with the intent to generate the genome or exome sequence of that specimen.

These additional elements of consent will promote respect for persons and greater transparency in the research enterprise. Additionally, including the information referenced in these provisions in a consent form will help ensure that prospective subjects are given information necessary for understanding why one might choose whether to participate in a research study.

The language at § _____.117(b)(1) in the final rule was modified to reference § _____.116(a)(5)(i) and state that if a short form consent process is used, the key information required by § _____.116(a)(5)(i) must be presented first to the prospective subject, before other information, if any, is provided.

We estimate that 246,382 new protocols annually will use identifiable private information. For each protocol, we estimate that investigators will spend an average of 15 minutes in 2017 updating consent forms to comply with the new requirements found in the final rule at § _____.116(a)(5), (b)(9), (c)(7), (c)(8), or (c)(9) (in Table 3 in the RIA section).

We assume that few additional investigators will elect to offer the second option at § _____.116(b)(9), and that the investigators who currently offer equivalent options already track the permissible and impermissible uses of information in line with the requirements discussed above. As a result, we estimate that tracking will have no additional associated impacts.

§ _____.116(h) Requirement for Posting of Consent Forms for Common Rule Department or Agency-Supported or Conducted Clinical Trials (OMB Control No 0990-0260)

A new provision in the final rule, § _____.116(h), requires that, for each clinical trial conducted or supported by a federal department or agency, one IRB-approved informed consent form used to enroll subjects must be posted by the awardee or federal department or agency component conducting the trial on a publicly available federal Web site that is established as a repository for such informed consent forms. The informed consent form must be published on the federal Web site after the trial is closed to recruitment, and no later than 60 days after the last study visit by any subject, as required by the protocol.

If the federal department or agency supporting or conducting the clinical trial determines that certain information should not be made publicly available on a federal Web site (*e.g.*, confidential commercial information), such Federal department or agency may permit or

require redactions to the information posted.

We believe that public posting of consent forms will increase transparency, enhance confidence in the research enterprise, increase accountability, and inform the development of future consent forms, possibly resulting in future savings in time for investigators developing consent forms.

According to queries of *ClinicalTrials.gov*, an estimated 5,270 clinical trials are conducted or supported by Common Rule agencies, of which an estimated 575 are regulated by provisions in the FD&C Act and Trade Secrets Act based on the information presented in Table 3 in the RIA section of the preamble. We assume that each clinical trial is associated with one consent form that must be submitted to

the HHS system by an investigator. We estimate that investigators will spend an average of 15 minutes submitting each consent form. In addition, for the 575 clinical trials regulated by provisions in the FD&C Act and Trade Secrets Act, we estimate that investigators will spend an average of 30 minutes redacting information before submission.

TABLE 21—ESTIMATED ANNUAL REPORTING BURDEN

Sec. description	Description of burden	Number of respondents	Number of responses per respondent	Total annual responses	Average hours per response	Total hours
101(a)—Extending Oversight Authority to IRBs not operated by an FWA-holding institution.	Develop agreements	449	10	4,490	15	67,350
103(e)—IRB Reliance Documentation (institutions without an internal IRB).	Modify agreements	5,164	1	5,164	15	77,460
103(e)—IRB Reliance Documentation (institutions with an internal IRB).	Develop agreements	2,871	0.20	574.20	15	8,613
104(d)(5)(i)—Posting information about demonstration projects.	Posting information	4,376	1	4,376	0.25	1,094
114—Cooperative Review ..	Time to create agreements for all institutions involved in a study will rely on one IRB of record.	8,035	10	80,350	15	1,205,250
115(a)(3)—Continuing Review Rationale Documentation.	Provide rationale	40,773	1	40,773	1	40,773
116(a)(5), (b)(9), (c)(7)—(8) & 117(b)—Changes in elements of informed consent, including documentation.	Updating IC forms with new elements.	246,382	1	246,382	0.25	61,596
116(h)—Requirement for posting consent forms for Common Rule department or agency-supported clinical trials.	Posting consent forms for new clinical trials.	5,270	1	5,270	0.25	1,318
116(h)—Requirement for posting consent forms for Common Rule department or agency-supported clinical trials.	Redact information from consent forms.	575	1	575	0.50	288
Total	1,422,968

The total estimated burden imposed by these information collection requirements is 1,422,968 burden hours.

It should be noted that the burden estimates for the Common Rule include approved information requirements in OMB No. 0990–0260, Protection of Human Subjects: Compliance with Federal Policy/IRB Recordkeeping/Informed Consent/Consent Documentation, approved through May 31, 2018. As such, it will be amended and submitted to OMB as revisions to currently approved collections once the

rule is finalized and the collections are due for renewal.

In compliance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3507(d)), the information collection provisions of this rule will be submitted to OMB for review. These requirements will not be effective until OMB approves them.

XXII. Tribal Consultation Statement

We are committed to consulting with AI/AN tribes and tribal leadership to the extent practicable and permitted by law before promulgating any regulation that has tribal implications. As we

developed this rule, we engaged with tribes through tribal consultation and the public comment process. The requirements in this final rule were informed by consultations with and comments from tribal representatives.

On January 5, 2016, HHS conducted a tribal consultation through conference call in accordance with the HHS Tribal Consultation Policy⁶¹ with tribal representatives to obtain comments on

⁶¹ U.S. Department of Health and Human Services Tribal Consultation Policy. Retrieved from <https://www.hhs.gov/sites/default/files/iea/tribal/tribalconsultation/hhs-consultation-policy.pdf>.

the proposed changes to the Common Rule. This conference call was moderated by Elizabeth Carr, a Tribal Affairs Specialist within HHS and a federal representative of HHS's American Indian and Alaska Native Health Research Advisory Council. Tribal leaders and other interested parties were informed of this consultation through written communication. The written invitation included a solicitation for formal comments and information on how to submit a formal comment to the public docket. Public comments were also solicited during the consultation conference call. A transcript of this call was posted to the *Regulations.gov* public docket for the Common Rule on January 13, 2016.

During the tribal consultation conference call, participants discussed:

- Concern about the NPRM not acknowledging the role of tribal governments in research oversight of research occurring on tribal land or with tribal citizens;
- Concern about the pre-2018 rule and the NPRM not explicitly acknowledging tribal sovereignty. HHS representatives acknowledged an outstanding legal question about whether rules created by tribal governments were encompassed by the provision in the pre-2018 rule and the NPRM's statement that the policy does not affect any state or local laws or regulations that may otherwise be applicable and that provide additional protections for human subjects;
- Concern about the NPRM not acknowledging the unique and significant impact that the proposed changes would have on American Indian and Alaska Native populations;
- Concern that the NPRM does not address risks of research to communities and only addresses individual risks;
- Concern that the NPRM proposals seem to reduce institutional responsibility but increase investigator responsibility. This presents a unique challenge when institutions have entered into agreements with tribal governments or tribal representatives, as opposed to individual investigators entering into these arrangements. The exemption decision tool was cited as an example of the proposals placing more responsibility on the investigators while perhaps reducing responsibility on the institutions; and
- Concern about the single IRB review mandate for multi-institutional studies affecting the ability of tribal communities to conduct local reviews of research involving tribal citizens or research that takes place on tribal land. One commenter noted that a one size

fits all approach to addressing American Indian and Alaska Native concerns in human subjects protections might not be appropriate as needs and concerns might vary from tribe to tribe.

HHS reiterated its commitment to engaging in an ongoing dialogue with tribal communities and tribal representatives, and welcomed ongoing discussion and comment on how the Common Rule affects these groups.

In addition to the January 2016 tribal consultation, we reviewed public comments from tribal representatives, and individuals and groups representing tribal interests to the ANPRM and NPRM. We received one comment on the ANPRM from a group representing tribal interests. This group noted "the long and challenging history" of research involving AI/AN populations, and how this history informs current research activities involving these groups. This comment argued that, for research involving AI/AN populations:

- Continuing review should be required;
- IRBs, not investigators or other parties, should determine whether a prospective study is exempt or excluded from the Common Rule;
- IRBs should be required to consider potential harms to populations or groups, not just individuals, when reviewing research activities;
- Incorporating tribal IRBs into the process for multi-institutional studies is a crucial aspect of respecting these populations and ensuring human subjects protections;
- Study-specific informed consent forms should be required, and general, multi-purpose consent forms should be avoided;
- Mandated information and biospecimen privacy safeguards would be a welcome improvement to the current research landscape and would help prevent harm to human subjects; and
- Consultation with tribal representatives would be crucial should a proposed rule or final rule mandate single IRB review for multi-institutional studies.

We received approximately 15 comments on the NPRM from groups representing tribal interests. As described in Section II.E of this preamble, overarching concerns raised by these groups in comments to the NPRM included:

- Lack of group consent requirements proposed in the NPRM;
- Concern about the allowance for broad consent for future unspecified research uses;
- Lack of consideration for research activities involving research with

biospecimens or information from individuals who are no longer alive;

- Mandating the use of single IRB review in multi-institutional research activities undermining the ability of tribal groups to conduct local review of studies; and
- Concern about the breadth and depth of exclusions and exemptions proposed in the NPRM exempting or excluding activities that tribal populations might find sensitive and requiring IRB review.

Commenters also raised concerns about the timing of the tribal consultation call and noted that the tribal consultation call occurred one day before the closing of the extended comment period for the NPRM. When HHS received notice that tribal representatives desired to consult on this proposed rule, a consultation was immediately scheduled in accordance with HHS policy.

The final rule includes a modification to the provision requiring single IRB review, and several clarifications specifying that regulatory references to state and local law are intended to include tribal law, in response to concerns raised during the tribal consultation and in the NPRM public comments. As described in this preamble, the final rule clarifies in § ___.101(f) that tribal governments can develop laws related to the protection of human subjects that are more protective than the Common Rule, and that these laws must be followed by federally funded researches in activities involving these populations. Section ___.114 now provides that if a tribal government requires review by more than one IRB by law in multi-institutional research, the single IRB review requirement in § ___.114 does not apply. Additional clarification has also been made to § ___.116(i) that tribal governments can develop their own informed consent standards that provide additional protections to subjects and that investigators conducting research involving populations under the jurisdiction of the tribal governments would have to follow these rules. Finally, additional language has been added to § ___.116(j) noting that nothing in § ___.116 is intended to limit the authority of a treating physician to the extent the authority is granted by tribal law.

Additional details of public comments from individuals representing tribal interests are included above in the relevant public comment summaries for the various final rule provisions discussed in Sections II through XVIII of this preamble.

For the reasons set forth in this preamble, the Federal Policy for the Protection of Human Subjects is amended.

Text of the Final Common Rule

The text of the final common rule appears below:

1. Part/subpart ____ is amended/
revised/added to read as follows:

PART ____—PROTECTION OF HUMAN SUBJECTS

- ____.101 To what does this policy apply?
- ____.102 Definitions for purposes of this policy.
- ____.103 Assuring compliance with this policy—research conducted or supported by any Federal department or agency.
- ____.104 Exempt research.
- ____.105 [Reserved]
- ____.106 [Reserved]
- ____.107 IRB membership.
- ____.108 IRB functions and operations.
- ____.109 IRB review of research.
- ____.110 Expedited review procedures for certain kinds of research involving no more than minimal risk, and for minor changes in approved research.
- ____.111 Criteria for IRB approval of research.
- ____.112 Review by institution.
- ____.113 Suspension or termination of IRB approval of research.
- ____.114 Cooperative research.
- ____.115 IRB records.
- ____.116 General requirements for informed consent.
- ____.117 Documentation of informed consent.
- ____.118 Applications and proposals lacking definite plans for involvement of human subjects.
- ____.119 Research undertaken without the intention of involving human subjects.
- ____.120 Evaluation and disposition of applications and proposals for research to be conducted or supported by a Federal department or agency.
- ____.121 [Reserved]
- ____.122 Use of Federal funds.
- ____.123 Early termination of research support: Evaluation of applications and proposals.
- ____.124 Conditions.

§ ____ .101 To what does this policy apply?

(a) Except as detailed in § ____ .104, this policy applies to all research involving human subjects conducted, supported, or otherwise subject to regulation by any Federal department or agency that takes appropriate administrative action to make the policy applicable to such research. This includes research conducted by Federal civilian employees or military personnel, except that each department or agency head may adopt such procedural modifications as may be appropriate from an administrative standpoint. It also includes research

conducted, supported, or otherwise subject to regulation by the Federal Government outside the United States. Institutions that are engaged in research described in this paragraph and institutional review boards (IRBs) reviewing research that is subject to this policy must comply with this policy.

(b) [Reserved]

(c) Department or agency heads retain final judgment as to whether a particular activity is covered by this policy and this judgment shall be exercised consistent with the ethical principles of the Belmont Report.⁶²

(d) Department or agency heads may require that specific research activities or classes of research activities conducted, supported, or otherwise subject to regulation by the Federal department or agency but not otherwise covered by this policy comply with some or all of the requirements of this policy.

(e) Compliance with this policy requires compliance with pertinent federal laws or regulations that provide additional protections for human subjects.

(f) This policy does not affect any state or local laws or regulations (including tribal law passed by the official governing body of an American Indian or Alaska Native tribe) that may otherwise be applicable and that provide additional protections for human subjects.

(g) This policy does not affect any foreign laws or regulations that may otherwise be applicable and that provide additional protections to human subjects of research.

(h) When research covered by this policy takes place in foreign countries, procedures normally followed in the foreign countries to protect human subjects may differ from those set forth in this policy. In these circumstances, if a department or agency head determines that the procedures prescribed by the institution afford protections that are at least equivalent to those provided in this policy, the department or agency head may approve the substitution of the foreign procedures in lieu of the procedural requirements provided in this policy. Except when otherwise required by statute, Executive Order, or the department or agency head, notices of these actions as they occur will be published in the **Federal Register** or will be otherwise published as provided in department or agency procedures.

(i) Unless otherwise required by law, department or agency heads may waive

the applicability of some or all of the provisions of this policy to specific research activities or classes of research activities otherwise covered by this policy, provided the alternative procedures to be followed are consistent with the principles of the Belmont Report.⁶³ Except when otherwise required by statute or Executive Order, the department or agency head shall forward advance notices of these actions to the Office for Human Research Protections, Department of Health and Human Services (HHS), or any successor office, or to the equivalent office within the appropriate Federal department or agency, and shall also publish them in the **Federal Register** or in such other manner as provided in department or agency procedures. The waiver notice must include a statement that identifies the conditions under which the waiver will be applied and a justification as to why the waiver is appropriate for the research, including how the decision is consistent with the principles of the Belmont Report.

(j) Federal guidance on the requirements of this policy shall be issued only after consultation, for the purpose of harmonization (to the extent appropriate), with other Federal departments and agencies that have adopted this policy, unless such consultation is not feasible.

(k) [Reserved]

(l) Compliance dates and transition provisions:

(1) For purposes of this section, the *pre-2018 Requirements* means this subpart as published in the 2016 edition of the Code of Federal Regulations.

(2) For purposes of this section, the *2018 Requirements* means the Federal Policy for the Protection of Human Subjects requirements contained in this subpart. The compliance date for § ____ .114(b) (cooperative research) of the 2018 Requirements is January 20, 2020.

(3) Research initially approved by an IRB, for which such review was waived pursuant to § ____ .101(i), or for which a determination was made that the research was exempt before January 19, 2018, shall comply with the pre-2018 Requirements, except that an institution engaged in such research on or after January 19, 2018, may instead comply with the 2018 Requirements if the institution determines that such ongoing research will comply with the 2018 Requirements and an IRB documents such determination.

(4) Research initially approved by an IRB, for which such review was waived pursuant to § ____ .101(i), or for which a

⁶² The National Commission for the Protection of Human Subjects of Biomedical and Behavioral Research.— Belmont Report. Washington, DC: U.S. Department of Health and Human Services. 1979.

⁶³ *Id.*

determination was made that the research was exempt on or after January 19, 2018, shall comply with the 2018 Requirements.

(m) **Severability:** Any provision of this part held to be invalid or unenforceable by its terms, or as applied to any person or circumstance, shall be construed so as to continue to give maximum effect to the provision permitted by law, unless such holding shall be one of utter invalidity or unenforceability, in which event the provision shall be severable from this part and shall not affect the remainder thereof or the application of the provision to other persons not similarly situated or to other dissimilar circumstances.

§ 102 Definitions for purposes of this policy.

(a) *Certification* means the official notification by the institution to the supporting Federal department or agency component, in accordance with the requirements of this policy, that a research project or activity involving human subjects has been reviewed and approved by an IRB in accordance with an approved assurance.

(b) *Clinical trial* means a research study in which one or more human subjects are prospectively assigned to one or more interventions (which may include placebo or other control) to evaluate the effects of the interventions on biomedical or behavioral health-related outcomes.

(c) *Department or agency head* means the head of any Federal department or agency, for example, the Secretary of HHS, and any other officer or employee of any Federal department or agency to whom the authority provided by these regulations to the department or agency head has been delegated.

(d) *Federal department or agency* refers to a federal department or agency (the department or agency itself rather than its bureaus, offices or divisions) that takes appropriate administrative action to make this policy applicable to the research involving human subjects it conducts, supports, or otherwise regulates (e.g., the U.S. Department of Health and Human Services, the U.S. Department of Defense, or the Central Intelligence Agency).

(e)(1) *Human subject* means a living individual about whom an investigator (whether professional or student) conducting research:

(i) Obtains information or biospecimens through intervention or interaction with the individual, and uses, studies, or analyzes the information or biospecimens; or (ii) Obtains, uses, studies, analyzes, or generates identifiable private

information or identifiable biospecimens.

(2) *Intervention* includes both physical procedures by which information or biospecimens are gathered (e.g., venipuncture) and manipulations of the subject or the subject's environment that are performed for research purposes.

(3) *Interaction* includes communication or interpersonal contact between investigator and subject.

(4) *Private information* includes information about behavior that occurs in a context in which an individual can reasonably expect that no observation or recording is taking place, and information that has been provided for specific purposes by an individual and that the individual can reasonably expect will not be made public (e.g., a medical record).

(5) *Identifiable private information* is private information for which the identity of the subject is or may readily be ascertained by the investigator or associated with the information.

(6) *An identifiable biospecimen* is a biospecimen for which the identity of the subject is or may readily be ascertained by the investigator or associated with the biospecimen.

(7) Federal departments or agencies implementing this policy shall:

(i) Upon consultation with appropriate experts (including experts in data matching and re-identification), reexamine the meaning of "identifiable private information," as defined in paragraph (e)(5) of this section, and "identifiable biospecimen," as defined in paragraph (e)(6) of this section. This reexamination shall take place within 1 year and regularly thereafter (at least every 4 years). This process will be conducted by collaboration among the Federal departments and agencies implementing this policy. If appropriate and permitted by law, such Federal departments and agencies may alter the interpretation of these terms, including through the use of guidance.

(ii) Upon consultation with appropriate experts, assess whether there are analytic technologies or techniques that should be considered by investigators to generate "identifiable private information," as defined in paragraph (e)(5) of this section, or an "identifiable biospecimen," as defined in paragraph (e)(6) of this section. This assessment shall take place within 1 year and regularly thereafter (at least every 4 years). This process will be conducted by collaboration among the Federal departments and agencies implementing this policy. Any such technologies or techniques will be included on a list of technologies or

techniques that produce identifiable private information or identifiable biospecimens. This list will be published in the **Federal Register** after notice and an opportunity for public comment. The Secretary, HHS, shall maintain the list on a publicly accessible Web site.

(f) *Institution* means any public or private entity, or department or agency (including federal, state, and other agencies).

(g) *IRB* means an institutional review board established in accord with and for the purposes expressed in this policy.

(h) *IRB approval* means the determination of the IRB that the research has been reviewed and may be conducted at an institution within the constraints set forth by the IRB and by other institutional and federal requirements.

(i) *Legally authorized representative* means an individual or judicial or other body authorized under applicable law to consent on behalf of a prospective subject to the subject's participation in the procedure(s) involved in the research. If there is no applicable law addressing this issue, *legally authorized representative* means an individual recognized by institutional policy as acceptable for providing consent in the nonresearch context on behalf of the prospective subject to the subject's participation in the procedure(s) involved in the research.

(j) *Minimal risk* means that the probability and magnitude of harm or discomfort anticipated in the research are not greater in and of themselves than those ordinarily encountered in daily life or during the performance of routine physical or psychological examinations or tests.

(k) *Public health authority* means an agency or authority of the United States, a state, a territory, a political subdivision of a state or territory, an Indian tribe, or a foreign government, or a person or entity acting under a grant of authority from or contract with such public agency, including the employees or agents of such public agency or its contractors or persons or entities to whom it has granted authority, that is responsible for public health matters as part of its official mandate.

(l) *Research* means a systematic investigation, including research development, testing, and evaluation, designed to develop or contribute to generalizable knowledge. Activities that meet this definition constitute research for purposes of this policy, whether or not they are conducted or supported under a program that is considered research for other purposes. For example, some demonstration and

service programs may include research activities. For purposes of this part, the following activities are deemed not to be research:

(1) Scholarly and journalistic activities (e.g., oral history, journalism, biography, literary criticism, legal research, and historical scholarship), including the collection and use of information, that focus directly on the specific individuals about whom the information is collected.

(2) Public health surveillance activities, including the collection and testing of information or biospecimens, conducted, supported, requested, ordered, required, or authorized by a public health authority. Such activities are limited to those necessary to allow a public health authority to identify, monitor, assess, or investigate potential public health signals, onsets of disease outbreaks, or conditions of public health importance (including trends, signals, risk factors, patterns in diseases, or increases in injuries from using consumer products). Such activities include those associated with providing timely situational awareness and priority setting during the course of an event or crisis that threatens public health (including natural or man-made disasters).

(3) Collection and analysis of information, biospecimens, or records by or for a criminal justice agency for activities authorized by law or court order solely for criminal justice or criminal investigative purposes.

(4) Authorized operational activities (as determined by each agency) in support of intelligence, homeland security, defense, or other national security missions.

(m) *Written, or in writing*, for purposes of this part, refers to writing on a tangible medium (e.g., paper) or in an electronic format.

§ ____ .103 Assuring compliance with this policy—research conducted or supported by any Federal department or agency.

(a) Each institution engaged in research that is covered by this policy, with the exception of research eligible for exemption under § ____ .104, and that is conducted or supported by a Federal department or agency, shall provide written assurance satisfactory to the department or agency head that it will comply with the requirements of this policy. In lieu of requiring submission of an assurance, individual department or agency heads shall accept the existence of a current assurance, appropriate for the research in question, on file with the Office for Human Research Protections, HHS, or any

successor office, and approved for Federal-wide use by that office. When the existence of an HHS-approved assurance is accepted in lieu of requiring submission of an assurance, reports (except certification) required by this policy to be made to department and agency heads shall also be made to the Office for Human Research Protections, HHS, or any successor office. Federal departments and agencies will conduct or support research covered by this policy only if the institution has provided an assurance that it will comply with the requirements of this policy, as provided in this section, and only if the institution has certified to the department or agency head that the research has been reviewed and approved by an IRB (if such certification is required by § ____ .103(d)).

(b) The assurance shall be executed by an individual authorized to act for the institution and to assume on behalf of the institution the obligations imposed by this policy and shall be filed in such form and manner as the department or agency head prescribes.

(c) The department or agency head may limit the period during which any assurance shall remain effective or otherwise condition or restrict the assurance.

(d) Certification is required when the research is supported by a Federal department or agency and not otherwise waived under § ____ .101(i) or exempted under § ____ .104. For such research, institutions shall certify that each proposed research study covered by the assurance and this section has been reviewed and approved by the IRB. Such certification must be submitted as prescribed by the Federal department or agency component supporting the research. Under no condition shall research covered by this section be initiated prior to receipt of the certification that the research has been reviewed and approved by the IRB.

(e) For nonexempt research involving human subjects covered by this policy (or exempt research for which limited IRB review takes place pursuant to § ____ .104(d)(2)(iii), (d)(3)(i)(C), or (d)(7) or (8)) that takes place at an institution in which IRB oversight is conducted by an IRB that is not operated by the institution, the institution and the organization operating the IRB shall document the institution's reliance on the IRB for oversight of the research and the responsibilities that each entity will undertake to ensure compliance with the requirements of this policy (e.g., in a written agreement between the institution and the IRB, by implementation of an institution-wide

policy directive providing the allocation of responsibilities between the institution and an IRB that is not affiliated with the institution, or as set forth in a research protocol).

(Approved by the Office of Management and Budget under Control Number 0990-0260)

§ ____ .104 Exempt research.

(a) Unless otherwise required by law or by department or agency heads, research activities in which the only involvement of human subjects will be in one or more of the categories in paragraph (d) of this section are exempt from the requirements of this policy, except that such activities must comply with the requirements of this section and as specified in each category.

(b) Use of the exemption categories for research subject to the requirements of subparts B, C, and D: Application of the exemption categories to research subject to the requirements of 45 CFR part 46, subparts B, C, and D, is as follows:

(1) *Subpart B*. Each of the exemptions at this section may be applied to research subject to subpart B if the conditions of the exemption are met.

(2) *Subpart C*. The exemptions at this section do not apply to research subject to subpart C, except for research aimed at involving a broader subject population that only incidentally includes prisoners.

(3) *Subpart D*. The exemptions at paragraphs (d)(1), (4), (5), (6), (7), and (8) of this section may be applied to research subject to subpart D if the conditions of the exemption are met. Paragraphs (d)(2)(i) and (ii) of this section only may apply to research subject to subpart D involving educational tests or the observation of public behavior when the investigator(s) do not participate in the activities being observed. Paragraph (d)(2)(iii) of this section may not be applied to research subject to subpart D.

(c) [Reserved.]

(d) Except as described in paragraph (a) of this section, the following categories of human subjects research are exempt from this policy:

(1) Research, conducted in established or commonly accepted educational settings, that specifically involves normal educational practices that are not likely to adversely impact students' opportunity to learn required educational content or the assessment of educators who provide instruction. This includes most research on regular and special education instructional strategies, and research on the effectiveness of or the comparison among instructional techniques,

curricula, or classroom management methods.

(2) Research that only includes interactions involving educational tests (cognitive, diagnostic, aptitude, achievement), survey procedures, interview procedures, or observation of public behavior (including visual or auditory recording) if at least one of the following criteria is met:

(i) The information obtained is recorded by the investigator in such a manner that the identity of the human subjects cannot readily be ascertained, directly or through identifiers linked to the subjects;

(ii) Any disclosure of the human subjects' responses outside the research would not reasonably place the subjects at risk of criminal or civil liability or be damaging to the subjects' financial standing, employability, educational advancement, or reputation; or

(iii) The information obtained is recorded by the investigator in such a manner that the identity of the human subjects can readily be ascertained, directly or through identifiers linked to the subjects, and an IRB conducts a limited IRB review to make the determination required by § 111(a)(7).

(3)(i) Research involving benign behavioral interventions in conjunction with the collection of information from an adult subject through verbal or written responses (including data entry) or audiovisual recording if the subject prospectively agrees to the intervention and information collection and at least one of the following criteria is met:

(A) The information obtained is recorded by the investigator in such a manner that the identity of the human subjects cannot readily be ascertained, directly or through identifiers linked to the subjects;

(B) Any disclosure of the human subjects' responses outside the research would not reasonably place the subjects at risk of criminal or civil liability or be damaging to the subjects' financial standing, employability, educational advancement, or reputation; or

(C) The information obtained is recorded by the investigator in such a manner that the identity of the human subjects can readily be ascertained, directly or through identifiers linked to the subjects, and an IRB conducts a limited IRB review to make the determination required by § 111(a)(7).

(ii) For the purpose of this provision, benign behavioral interventions are brief in duration, harmless, painless, not physically invasive, not likely to have a significant adverse lasting impact on the subjects, and the investigator has no

reason to think the subjects will find the interventions offensive or embarrassing. Provided all such criteria are met, examples of such benign behavioral interventions would include having the subjects play an online game, having them solve puzzles under various noise conditions, or having them decide how to allocate a nominal amount of received cash between themselves and someone else.

(iii) If the research involves deceiving the subjects regarding the nature or purposes of the research, this exemption is not applicable unless the subject authorizes the deception through a prospective agreement to participate in research in circumstances in which the subject is informed that he or she will be unaware of or misled regarding the nature or purposes of the research.

(4) Secondary research for which consent is not required: Secondary research uses of identifiable private information or identifiable biospecimens, if at least one of the following criteria is met:

(i) The identifiable private information or identifiable biospecimens are publicly available;

(ii) Information, which may include information about biospecimens, is recorded by the investigator in such a manner that the identity of the human subjects cannot readily be ascertained directly or through identifiers linked to the subjects, the investigator does not contact the subjects, and the investigator will not re-identify subjects;

(iii) The research involves only information collection and analysis involving the investigator's use of identifiable health information when that use is regulated under 45 CFR parts 160 and 164, subparts A and E, for the purposes of "health care operations" or "research" as those terms are defined at 45 CFR 164.501 or for "public health activities and purposes" as described under 45 CFR 164.512(b); or

(iv) The research is conducted by, or on behalf of, a Federal department or agency using government-generated or government-collected information obtained for nonresearch activities, if the research generates identifiable private information that is or will be maintained on information technology that is subject to and in compliance with section 208(b) of the E-Government Act of 2002, 44 U.S.C. 3501 note, if all of the identifiable private information collected, used, or generated as part of the activity will be maintained in systems of records subject to the Privacy Act of 1974, 5 U.S.C. 552a, and, if applicable, the information used in the research was collected subject to the

Paperwork Reduction Act of 1995, 44 U.S.C. 3501 *et seq.*

(5) Research and demonstration projects that are conducted or supported by a Federal department or agency, or otherwise subject to the approval of department or agency heads (or the approval of the heads of bureaus or other subordinate agencies that have been delegated authority to conduct the research and demonstration projects), and that are designed to study, evaluate, improve, or otherwise examine public benefit or service programs, including procedures for obtaining benefits or services under those programs, possible changes in or alternatives to those programs or procedures, or possible changes in methods or levels of payment for benefits or services under those programs. Such projects include, but are not limited to, internal studies by Federal employees, and studies under contracts or consulting arrangements, cooperative agreements, or grants. Exempt projects also include waivers of otherwise mandatory requirements using authorities such as sections 1115 and 1115A of the Social Security Act, as amended.

(i) Each Federal department or agency conducting or supporting the research and demonstration projects must establish, on a publicly accessible Federal Web site or in such other manner as the department or agency head may determine, a list of the research and demonstration projects that the Federal department or agency conducts or supports under this provision. The research or demonstration project must be published on this list prior to commencing the research involving human subjects.

(ii) [Reserved]

(6) Taste and food quality evaluation and consumer acceptance studies:

(i) If wholesome foods without additives are consumed, or

(ii) If a food is consumed that contains a food ingredient at or below the level and for a use found to be safe, or agricultural chemical or environmental contaminant at or below the level found to be safe, by the Food and Drug Administration or approved by the Environmental Protection Agency or the Food Safety and Inspection Service of the U.S. Department of Agriculture.

(7) Storage or maintenance for secondary research for which broad consent is required: Storage or maintenance of identifiable private information or identifiable biospecimens for potential secondary research use if an IRB conducts a limited IRB review and makes the

determinations required by § _____.111(a)(8).

(8) Secondary research for which broad consent is required: Research involving the use of identifiable private information or identifiable biospecimens for secondary research use, if the following criteria are met:

(i) Broad consent for the storage, maintenance, and secondary research use of the identifiable private information or identifiable biospecimens was obtained in accordance with § _____.116(a)(1) through (4), (a)(6), and (d);

(ii) Documentation of informed consent or waiver of documentation of consent was obtained in accordance with § _____.117;

(iii) An IRB conducts a limited IRB review and makes the determination required by § _____.111(a)(7) and makes the determination that the research to be conducted is within the scope of the broad consent referenced in paragraph (d)(8)(i) of this section; and (iv) The investigator does not include returning individual research results to subjects as part of the study plan. This provision does not prevent an investigator from abiding by any legal requirements to return individual research results.

(Approved by the Office of Management and Budget under Control Number 0990-0260)

§ _____.105 [Reserved.]

§ _____.106 [Reserved]

§ _____.107 IRB membership.

(a) Each IRB shall have at least five members, with varying backgrounds to promote complete and adequate review of research activities commonly conducted by the institution. The IRB shall be sufficiently qualified through the experience and expertise of its members (professional competence), and the diversity of its members, including race, gender, and cultural backgrounds and sensitivity to such issues as community attitudes, to promote respect for its advice and counsel in safeguarding the rights and welfare of human subjects. The IRB shall be able to ascertain the acceptability of proposed research in terms of institutional commitments (including policies and resources) and regulations, applicable law, and standards of professional conduct and practice. The IRB shall therefore include persons knowledgeable in these areas. If an IRB regularly reviews research that involves a category of subjects that is vulnerable to coercion or undue influence, such as children, prisoners, individuals with impaired decision-making capacity, or economically or

educationally disadvantaged persons, consideration shall be given to the inclusion of one or more individuals who are knowledgeable about and experienced in working with these categories of subjects.

(b) Each IRB shall include at least one member whose primary concerns are in scientific areas and at least one member whose primary concerns are in nonscientific areas.

(c) Each IRB shall include at least one member who is not otherwise affiliated with the institution and who is not part of the immediate family of a person who is affiliated with the institution.

(d) No IRB may have a member participate in the IRB's initial or continuing review of any project in which the member has a conflicting interest, except to provide information requested by the IRB.

(e) An IRB may, in its discretion, invite individuals with competence in special areas to assist in the review of issues that require expertise beyond or in addition to that available on the IRB. These individuals may not vote with the IRB.

§ _____.108 IRB functions and operations.

(a) In order to fulfill the requirements of this policy each IRB shall:

(1) Have access to meeting space and sufficient staff to support the IRB's review and recordkeeping duties;

(2) Prepare and maintain a current list of the IRB members identified by name; earned degrees; representative capacity; indications of experience such as board certifications or licenses sufficient to describe each member's chief anticipated contributions to IRB deliberations; and any employment or other relationship between each member and the institution, for example, full-time employee, part-time employee, member of governing panel or board, stockholder, paid or unpaid consultant;

(3) Establish and follow written procedures for:

(i) Conducting its initial and continuing review of research and for reporting its findings and actions to the investigator and the institution;

(ii) Determining which projects require review more often than annually and which projects need verification from sources other than the investigators that no material changes have occurred since previous IRB review; and

(iii) Ensuring prompt reporting to the IRB of proposed changes in a research activity, and for ensuring that investigators will conduct the research activity in accordance with the terms of

the IRB approval until any proposed changes have been reviewed and approved by the IRB, except when necessary to eliminate apparent immediate hazards to the subject.

(4) Establish and follow written procedures for ensuring prompt reporting to the IRB; appropriate institutional officials; the department or agency head; and the Office for Human Research Protections, HHS, or any successor office, or the equivalent office within the appropriate Federal department or agency of

(i) Any unanticipated problems involving risks to subjects or others or any serious or continuing noncompliance with this policy or the requirements or determinations of the IRB; and

(ii) Any suspension or termination of IRB approval.

(b) Except when an expedited review procedure is used (as described in § _____.110), an IRB must review proposed research at convened meetings at which a majority of the members of the IRB are present, including at least one member whose primary concerns are in nonscientific areas. In order for the research to be approved, it shall receive the approval of a majority of those members present at the meeting.

(Approved by the Office of Management and Budget under Control Number 0990-0260)

§ _____.109 IRB review of research.

(a) An IRB shall review and have authority to approve, require modifications in (to secure approval), or disapprove all research activities covered by this policy, including exempt research activities under § _____.104 for which limited IRB review is a condition of exemption (under § _____.104(d)(2)(iii), (d)(3)(i)(C), and (d)(7), and (8)).

(b) An IRB shall require that information given to subjects (or legally authorized representatives, when appropriate) as part of informed consent is in accordance with § _____.116. The IRB may require that information, in addition to that specifically mentioned in § _____.116, be given to the subjects when in the IRB's judgment the information would meaningfully add to the protection of the rights and welfare of subjects.

(c) An IRB shall require documentation of informed consent or may waive documentation in accordance with § _____.117.

(d) An IRB shall notify investigators and the institution in writing of its decision to approve or disapprove the proposed research activity, or of modifications required to secure IRB

approval of the research activity. If the IRB decides to disapprove a research activity, it shall include in its written notification a statement of the reasons for its decision and give the investigator an opportunity to respond in person or in writing.

(e) An IRB shall conduct continuing review of research requiring review by the convened IRB at intervals appropriate to the degree of risk, not less than once per year, except as described in § _____.109(f).

(f)(1) Unless an IRB determines otherwise, continuing review of research is not required in the following circumstances:

- (i) Research eligible for expedited review in accordance with § _____.110;
- (ii) Research reviewed by the IRB in accordance with the limited IRB review described in § _____.104(d)(2)(iii), (d)(3)(i)(C), or (d)(7) or (8);
- (iii) Research that has progressed to the point that it involves only one or both of the following, which are part of the IRB-approved study:

(A) Data analysis, including analysis of identifiable private information or identifiable biospecimens, or

(B) Accessing follow-up clinical data from procedures that subjects would undergo as part of clinical care.

(2) [Reserved.]

(g) An IRB shall have authority to observe or have a third party observe the consent process and the research.

(Approved by the Office of Management and Budget under Control Number 0990-0260)

§ _____.110 Expedited review procedures for certain kinds of research involving no more than minimal risk, and for minor changes in approved research.

(a) The Secretary of HHS has established, and published as a Notice in the **Federal Register**, a list of categories of research that may be reviewed by the IRB through an expedited review procedure. The Secretary will evaluate the list at least every 8 years and amend it, as appropriate, after consultation with other federal departments and agencies and after publication in the **Federal Register** for public comment. A copy of the list is available from the Office for Human Research Protections, HHS, or any successor office.

(b)(1) An IRB may use the expedited review procedure to review the following:

(i) Some or all of the research appearing on the list described in paragraph (a) of this section, unless the reviewer determines that the study involves more than minimal risk;

(ii) Minor changes in previously approved research during the period for which approval is authorized; or

(iii) Research for which limited IRB review is a condition of exemption under § _____.104(d)(2)(iii), (d)(3)(i)(C), and (d)(7) and (8).

(2) Under an expedited review procedure, the review may be carried out by the IRB chairperson or by one or more experienced reviewers designated by the chairperson from among members of the IRB. In reviewing the research, the reviewers may exercise all of the authorities of the IRB except that the reviewers may not disapprove the research. A research activity may be disapproved only after review in accordance with the nonexpedited procedure set forth in § _____.108(b).

(c) Each IRB that uses an expedited review procedure shall adopt a method for keeping all members advised of research proposals that have been approved under the procedure.

(d) The department or agency head may restrict, suspend, terminate, or choose not to authorize an institution's or IRB's use of the expedited review procedure.

§ _____.111 Criteria for IRB approval of research.

(a) In order to approve research covered by this policy the IRB shall determine that all of the following requirements are satisfied:

(1) Risks to subjects are minimized:

(i) By using procedures that are consistent with sound research design and that do not unnecessarily expose subjects to risk, and

(ii) Whenever appropriate, by using procedures already being performed on the subjects for diagnostic or treatment purposes.

(2) Risks to subjects are reasonable in relation to anticipated benefits, if any, to subjects, and the importance of the knowledge that may reasonably be expected to result. In evaluating risks and benefits, the IRB should consider only those risks and benefits that may result from the research (as distinguished from risks and benefits of therapies subjects would receive even if not participating in the research). The IRB should not consider possible long-range effects of applying knowledge gained in the research (e.g., the possible effects of the research on public policy) as among those research risks that fall within the purview of its responsibility.

(3) Selection of subjects is equitable. In making this assessment the IRB should take into account the purposes of the research and the setting in which the research will be conducted. The IRB should be particularly cognizant of the

special problems of research that involves a category of subjects who are vulnerable to coercion or undue influence, such as children, prisoners, individuals with impaired decision-making capacity, or economically or educationally disadvantaged persons.

(4) Informed consent will be sought from each prospective subject or the subject's legally authorized representative, in accordance with, and to the extent required by, § _____.116.

(5) Informed consent will be appropriately documented or appropriately waived in accordance with § _____.117.

(6) When appropriate, the research plan makes adequate provision for monitoring the data collected to ensure the safety of subjects.

(7) When appropriate, there are adequate provisions to protect the privacy of subjects and to maintain the confidentiality of data.

(i) The Secretary of HHS will, after consultation with the Office of Management and Budget's privacy office and other Federal departments and agencies that have adopted this policy, issue guidance to assist IRBs in assessing what provisions are adequate to protect the privacy of subjects and to maintain the confidentiality of data.

(ii) [Reserved.]

(8) For purposes of conducting the limited IRB review required by § _____.104(d)(7)), the IRB need not make the determinations at paragraphs (a)(1) through (7) of this section, and shall make the following determinations:

(i) Broad consent for storage, maintenance, and secondary research use of identifiable private information or identifiable biospecimens is obtained in accordance with the requirements of § _____.116(a)(1)-(4), (a)(6), and (d);

(ii) Broad consent is appropriately documented or waiver of documentation is appropriate, in accordance with § _____.117; and

(iii) If there is a change made for research purposes in the way the identifiable private information or identifiable biospecimens are stored or maintained, there are adequate provisions to protect the privacy of subjects and to maintain the confidentiality of data.

(b) When some or all of the subjects are likely to be vulnerable to coercion or undue influence, such as children, prisoners, individuals with impaired decision-making capacity, or economically or educationally disadvantaged persons, additional safeguards have been included in the study to protect the rights and welfare of these subjects.

§ ____ .112 Review by Institution

Research covered by this policy that has been approved by an IRB may be subject to further appropriate review and approval or disapproval by officials of the institution. However, those officials may not approve the research if it has not been approved by an IRB.

§ ____ .113 Suspension or Termination of IRB Approval of Research

An IRB shall have authority to suspend or terminate approval of research that is not being conducted in accordance with the IRB's requirements or that has been associated with unexpected serious harm to subjects. Any suspension or termination of approval shall include a statement of the reasons for the IRB's action and shall be reported promptly to the investigator, appropriate institutional officials, and the department or agency head.

(Approved by the Office of Management and Budget under Control Number 0990-0260)

§ ____ .114 Cooperative Research

(a) Cooperative research projects are those projects covered by this policy that involve more than one institution. In the conduct of cooperative research projects, each institution is responsible for safeguarding the rights and welfare of human subjects and for complying with this policy.

(b)(1) Any institution located in the United States that is engaged in cooperative research must rely upon approval by a single IRB for that portion of the research that is conducted in the United States. The reviewing IRB will be identified by the Federal department or agency supporting or conducting the research or proposed by the lead institution subject to the acceptance of the Federal department or agency supporting the research.

(2) The following research is not subject to this provision:

(i) Cooperative research for which more than single IRB review is required by law (including tribal law passed by the official governing body of an American Indian or Alaska Native tribe); or

(ii) Research for which any Federal department or agency supporting or conducting the research determines and documents that the use of a single IRB is not appropriate for the particular context.

(c) For research not subject to paragraph (b) of this section, an institution participating in a cooperative project may enter into a joint review arrangement, rely on the review of another IRB, or make similar

arrangements for avoiding duplication of effort.

§ ____ .115 IRB Records

(a) An institution, or when appropriate an IRB, shall prepare and maintain adequate documentation of IRB activities, including the following:

(1) Copies of all research proposals reviewed, scientific evaluations, if any, that accompany the proposals, approved sample consent forms, progress reports submitted by investigators, and reports of injuries to subjects.

(2) Minutes of IRB meetings, which shall be in sufficient detail to show attendance at the meetings; actions taken by the IRB; the vote on these actions including the number of members voting for, against, and abstaining; the basis for requiring changes in or disapproving research; and a written summary of the discussion of controverted issues and their resolution.

(3) Records of continuing review activities, including the rationale for conducting continuing review of research that otherwise would not require continuing review as described in § ____ .109(f)(1).

(4) Copies of all correspondence between the IRB and the investigators.

(5) A list of IRB members in the same detail as described in § ____ .108(a)(2).

(6) Written procedures for the IRB in the same detail as described in § ____ .108(a)(3) and (4).

(7) Statements of significant new findings provided to subjects, as required by § ____ .116(c)(5).

(8) The rationale for an expedited reviewer's determination under § ____ .110(b)(1)(i) that research appearing on the expedited review list described in § ____ .110(a) is more than minimal risk.

(9) Documentation specifying the responsibilities that an institution and an organization operating an IRB each will undertake to ensure compliance with the requirements of this policy, as described in § ____ .103(e).

(b) The records required by this policy shall be retained for at least 3 years, and records relating to research that is conducted shall be retained for at least 3 years after completion of the research. The institution or IRB may maintain the records in printed form, or electronically. All records shall be accessible for inspection and copying by authorized representatives of the Federal department or agency at reasonable times and in a reasonable manner.

(Approved by the Office of Management and Budget under Control Number 0990-0260)

§ ____ .116 General Requirements for Informed Consent

(a) *General.* General requirements for informed consent, whether written or oral, are set forth in this paragraph and apply to consent obtained in accordance with the requirements set forth in paragraphs (b) through (d) of this section. Broad consent may be obtained in lieu of informed consent obtained in accordance with paragraphs (b) and (c) of this section only with respect to the storage, maintenance, and secondary research uses of identifiable private information and identifiable biospecimens. Waiver or alteration of consent in research involving public benefit and service programs conducted by or subject to the approval of state or local officials is described in paragraph (e) of this section. General waiver or alteration of informed consent is described in paragraph (f) of this section. Except as provided elsewhere in this policy:

(1) Before involving a human subject in research covered by this policy, an investigator shall obtain the legally effective informed consent of the subject or the subject's legally authorized representative.

(2) An investigator shall seek informed consent only under circumstances that provide the prospective subject or the legally authorized representative sufficient opportunity to discuss and consider whether or not to participate and that minimize the possibility of coercion or undue influence.

(3) The information that is given to the subject or the legally authorized representative shall be in language understandable to the subject or the legally authorized representative.

(4) The prospective subject or the legally authorized representative must be provided with the information that a reasonable person would want to have in order to make an informed decision about whether to participate, and an opportunity to discuss that information.

(5) Except for broad consent obtained in accordance with paragraph (d) of this section:

(i) Informed consent must begin with a concise and focused presentation of the key information that is most likely to assist a prospective subject or legally authorized representative in understanding the reasons why one might or might not want to participate in the research. This part of the informed consent must be organized and presented in a way that facilitates comprehension.

(ii) Informed consent as a whole must present information in sufficient detail

relating to the research, and must be organized and presented in a way that does not merely provide lists of isolated facts, but rather facilitates the prospective subject's or legally authorized representative's understanding of the reasons why one might or might not want to participate.

(6) No informed consent may include any exculpatory language through which the subject or the legally authorized representative is made to waive or appear to waive any of the subject's legal rights, or releases or appears to release the investigator, the sponsor, the institution, or its agents from liability for negligence.

(b) *Basic elements of informed consent.* Except as provided in paragraph (d), (e), or (f) of this section, in seeking informed consent the following information shall be provided to each subject or the legally authorized representative:

(1) A statement that the study involves research, an explanation of the purposes of the research and the expected duration of the subject's participation, a description of the procedures to be followed, and identification of any procedures that are experimental;

(2) A description of any reasonably foreseeable risks or discomforts to the subject;

(3) A description of any benefits to the subject or to others that may reasonably be expected from the research;

(4) A disclosure of appropriate alternative procedures or courses of treatment, if any, that might be advantageous to the subject;

(5) A statement describing the extent, if any, to which confidentiality of records identifying the subject will be maintained;

(6) For research involving more than minimal risk, an explanation as to whether any compensation and an explanation as to whether any medical treatments are available if injury occurs and, if so, what they consist of, or where further information may be obtained;

(7) An explanation of whom to contact for answers to pertinent questions about the research and research subjects' rights, and whom to contact in the event of a research-related injury to the subject;

(8) A statement that participation is voluntary, refusal to participate will involve no penalty or loss of benefits to which the subject is otherwise entitled, and the subject may discontinue participation at any time without penalty or loss of benefits to which the subject is otherwise entitled; and

(9) One of the following statements about any research that involves the

collection of identifiable private information or identifiable biospecimens:

(i) A statement that identifiers might be removed from the identifiable private information or identifiable biospecimens and that, after such removal, the information or biospecimens could be used for future research studies or distributed to another investigator for future research studies without additional informed consent from the subject or the legally authorized representative, if this might be a possibility; or

(ii) A statement that the subject's information or biospecimens collected as part of the research, even if identifiers are removed, will not be used or distributed for future research studies.

(c) *Additional elements of informed consent.* Except as provided in paragraph (d), (e), or (f) of this section, one or more of the following elements of information, when appropriate, shall also be provided to each subject or the legally authorized representative:

(1) A statement that the particular treatment or procedure may involve risks to the subject (or to the embryo or fetus, if the subject is or may become pregnant) that are currently unforeseeable;

(2) Anticipated circumstances under which the subject's participation may be terminated by the investigator without regard to the subject's or the legally authorized representative's consent;

(3) Any additional costs to the subject that may result from participation in the research;

(4) The consequences of a subject's decision to withdraw from the research and procedures for orderly termination of participation by the subject;

(5) A statement that significant new findings developed during the course of the research that may relate to the subject's willingness to continue participation will be provided to the subject;

(6) The approximate number of subjects involved in the study;

(7) A statement that the subject's biospecimens (even if identifiers are removed) may be used for commercial profit and whether the subject will or will not share in this commercial profit;

(8) A statement regarding whether clinically relevant research results, including individual research results, will be disclosed to subjects, and if so, under what conditions; and

(9) For research involving biospecimens, whether the research will (if known) or might include whole genome sequencing (*i.e.*, sequencing of a human germline or somatic specimen

with the intent to generate the genome or exome sequence of that specimen).

(d) *Elements of broad consent for the storage, maintenance, and secondary research use of identifiable private information or identifiable biospecimens.* Broad consent for the storage, maintenance, and secondary research use of identifiable private information or identifiable biospecimens (collected for either research studies other than the proposed research or nonresearch purposes) is permitted as an alternative to the informed consent requirements in paragraphs (b) and (c) of this section. If the subject or the legally authorized representative is asked to provide broad consent, the following shall be provided to each subject or the subject's legally authorized representative:

(1) The information required in paragraphs (b)(2), (b)(3), (b)(5), and (b)(8) and, when appropriate, (c)(7) and (9) of this section;

(2) A general description of the types of research that may be conducted with the identifiable private information or identifiable biospecimens. This description must include sufficient information such that a reasonable person would expect that the broad consent would permit the types of research conducted;

(3) A description of the identifiable private information or identifiable biospecimens that might be used in research, whether sharing of identifiable private information or identifiable biospecimens might occur, and the types of institutions or researchers that might conduct research with the identifiable private information or identifiable biospecimens;

(4) A description of the period of time that the identifiable private information or identifiable biospecimens may be stored and maintained (which period of time could be indefinite), and a description of the period of time that the identifiable private information or identifiable biospecimens may be used for research purposes (which period of time could be indefinite);

(5) Unless the subject or legally authorized representative will be provided details about specific research studies, a statement that they will not be informed of the details of any specific research studies that might be conducted using the subject's identifiable private information or identifiable biospecimens, including the purposes of the research, and that they might have chosen not to consent to some of those specific research studies;

(6) Unless it is known that clinically relevant research results, including individual research results, will be

disclosed to the subject in all circumstances, a statement that such results may not be disclosed to the subject; and

(7) An explanation of whom to contact for answers to questions about the subject's rights and about storage and use of the subject's identifiable private information or identifiable biospecimens, and whom to contact in the event of a research-related harm.

(e) *Waiver or alteration of consent in research involving public benefit and service programs conducted by or subject to the approval of state or local officials*—(1) *Waiver*. An IRB may waive the requirement to obtain informed consent for research under paragraphs (a) through (c) of this section, provided the IRB satisfies the requirements of paragraph (e)(3) of this section. If an individual was asked to provide broad consent for the storage, maintenance, and secondary research use of identifiable private information or identifiable biospecimens in accordance with the requirements at paragraph (d) of this section, and refused to consent, an IRB cannot waive consent for the storage, maintenance, or secondary research use of the identifiable private information or identifiable biospecimens.

(2) *Alteration*. An IRB may approve a consent procedure that omits some, or alters some or all, of the elements of informed consent set forth in paragraphs (b) and (c) of this section provided the IRB satisfies the requirements of paragraph (e)(3) of this section. An IRB may not omit or alter any of the requirements described in paragraph (a) of this section. If a broad consent procedure is used, an IRB may not omit or alter any of the elements required under paragraph (d) of this section.

(3) *Requirements for waiver and alteration*. In order for an IRB to waive or alter consent as described in this subsection, the IRB must find and document that:

(i) The research or demonstration project is to be conducted by or subject to the approval of state or local government officials and is designed to study, evaluate, or otherwise examine:

(A) Public benefit or service programs;

(B) Procedures for obtaining benefits or services under those programs;

(C) Possible changes in or alternatives to those programs or procedures; or

(D) Possible changes in methods or levels of payment for benefits or services under those programs; and

(ii) The research could not practicably be carried out without the waiver or alteration.

(f) *General waiver or alteration of consent*—(1) *Waiver*. An IRB may waive

the requirement to obtain informed consent for research under paragraphs (a) through (c) of this section, provided the IRB satisfies the requirements of paragraph (f)(3) of this section. If an individual was asked to provide broad consent for the storage, maintenance, and secondary research use of identifiable private information or identifiable biospecimens in accordance with the requirements at paragraph (d) of this section, and refused to consent, an IRB cannot waive consent for the storage, maintenance, or secondary research use of the identifiable private information or identifiable biospecimens.

(2) *Alteration*. An IRB may approve a consent procedure that omits some, or alters some or all, of the elements of informed consent set forth in paragraphs (b) and (c) of this section provided the IRB satisfies the requirements of paragraph (f)(3) of this section. An IRB may not omit or alter any of the requirements described in paragraph (a) of this section. If a broad consent procedure is used, an IRB may not omit or alter any of the elements required under paragraph (d) of this section.

(3) *Requirements for waiver and alteration*. In order for an IRB to waive or alter consent as described in this subsection, the IRB must find and document that:

(i) The research involves no more than minimal risk to the subjects;

(ii) The research could not practicably be carried out without the requested waiver or alteration;

(iii) If the research involves using identifiable private information or identifiable biospecimens, the research could not practicably be carried out without using such information or biospecimens in an identifiable format;

(iv) The waiver or alteration will not adversely affect the rights and welfare of the subjects; and

(v) Whenever appropriate, the subjects or legally authorized representatives will be provided with additional pertinent information after participation.

(g) *Screening, recruiting, or determining eligibility*. An IRB may approve a research proposal in which an investigator will obtain information or biospecimens for the purpose of screening, recruiting, or determining the eligibility of prospective subjects without the informed consent of the prospective subject or the subject's legally authorized representative, if either of the following conditions are met:

(1) The investigator will obtain information through oral or written communication with the prospective

subject or legally authorized representative, or

(2) The investigator will obtain identifiable private information or identifiable biospecimens by accessing records or stored identifiable biospecimens.

(h) *Posting of clinical trial consent form*. (1) For each clinical trial conducted or supported by a Federal department or agency, one IRB-approved informed consent form used to enroll subjects must be posted by the awardee or the Federal department or agency component conducting the trial on a publicly available Federal Web site that will be established as a repository for such informed consent forms.

(2) If the Federal department or agency supporting or conducting the clinical trial determines that certain information should not be made publicly available on a Federal Web site (e.g. confidential commercial information), such Federal department or agency may permit or require redactions to the information posted.

(3) The informed consent form must be posted on the Federal Web site after the clinical trial is closed to recruitment, and no later than 60 days after the last study visit by any subject, as required by the protocol.

(i) *Preemption*. The informed consent requirements in this policy are not intended to preempt any applicable Federal, state, or local laws (including tribal laws passed by the official governing body of an American Indian or Alaska Native tribe) that require additional information to be disclosed in order for informed consent to be legally effective.

(j) *Emergency medical care*. Nothing in this policy is intended to limit the authority of a physician to provide emergency medical care, to the extent the physician is permitted to do so under applicable Federal, state, or local law (including tribal law passed by the official governing body of an American Indian or Alaska Native tribe).

(Approved by the Office of Management and Budget under Control Number 0990-0260)

§ 117 Documentation of informed consent.

(a) Except as provided in paragraph (c) of this section, informed consent shall be documented by the use of a written informed consent form approved by the IRB and signed (including in an electronic format) by the subject or the subject's legally authorized representative. A written copy shall be given to the person signing the informed consent form.

(b) Except as provided in paragraph (c) of this section, the informed consent form may be either of the following:

(1) A written informed consent form that meets the requirements of § _____.116. The investigator shall give either the subject or the subject's legally authorized representative adequate opportunity to read the informed consent form before it is signed; alternatively, this form may be read to the subject or the subject's legally authorized representative.

(2) A short form written informed consent form stating that the elements of informed consent required by § _____.116 have been presented orally to the subject or the subject's legally authorized representative, and that the key information required by § _____.116(a)(5)(i) was presented first to the subject, before other information, if any, was provided. The IRB shall approve a written summary of what is to be said to the subject or the legally authorized representative. When this method is used, there shall be a witness to the oral presentation. Only the short form itself is to be signed by the subject or the subject's legally authorized representative. However, the witness shall sign both the short form and a copy of the summary, and the person actually obtaining consent shall sign a copy of the summary. A copy of the summary shall be given to the subject or the subject's legally authorized representative, in addition to a copy of the short form.

(c)(1) An IRB may waive the requirement for the investigator to obtain a signed informed consent form for some or all subjects if it finds any of the following:

(i) That the only record linking the subject and the research would be the informed consent form and the principal risk would be potential harm resulting from a breach of confidentiality. Each subject (or legally authorized representative) will be asked whether the subject wants documentation linking the subject with the research, and the subject's wishes will govern;

(ii) That the research presents no more than minimal risk of harm to subjects and involves no procedures for which written consent is normally required outside of the research context; or

(iii) If the subjects or legally authorized representatives are members of a distinct cultural group or community in which signing forms is not the norm, that the research presents no more than minimal risk of harm to subjects and provided there is an appropriate alternative mechanism for

documenting that informed consent was obtained.

(2) In cases in which the documentation requirement is waived, the IRB may require the investigator to provide subjects or legally authorized representatives with a written statement regarding the research.

(Approved by the Office of Management and Budget under Control Number 0990-0260)

§ _____.118 Applications and proposals lacking definite plans for involvement of human subjects.

Certain types of applications for grants, cooperative agreements, or contracts are submitted to Federal departments or agencies with the knowledge that subjects may be involved within the period of support, but definite plans would not normally be set forth in the application or proposal. These include activities such as institutional type grants when selection of specific projects is the institution's responsibility; research training grants in which the activities involving subjects remain to be selected; and projects in which human subjects' involvement will depend upon completion of instruments, prior animal studies, or purification of compounds. Except for research waived under § _____.101(i) or exempted under § _____.104, no human subjects may be involved in any project supported by these awards until the project has been reviewed and approved by the IRB, as provided in this policy, and certification submitted, by the institution, to the Federal department or agency component supporting the research.

§ _____.119 Research undertaken without the intention of involving human subjects.

Except for research waived under § _____.101(i) or exempted under § _____.104, in the event research is undertaken without the intention of involving human subjects, but it is later proposed to involve human subjects in the research, the research shall first be reviewed and approved by an IRB, as provided in this policy, a certification submitted by the institution to the Federal department or agency component supporting the research, and final approval given to the proposed change by the Federal department or agency component.

§ _____.120 Evaluation and disposition of applications and proposals for research to be conducted or supported by a Federal department or agency.

(a) The department or agency head will evaluate all applications and proposals involving human subjects

submitted to the Federal department or agency through such officers and employees of the Federal department or agency and such experts and consultants as the department or agency head determines to be appropriate. This evaluation will take into consideration the risks to the subjects, the adequacy of protection against these risks, the potential benefits of the research to the subjects and others, and the importance of the knowledge gained or to be gained.

(b) On the basis of this evaluation, the department or agency head may approve or disapprove the application or proposal, or enter into negotiations to develop an approvable one.

§ _____.121 [Reserved]

§ _____.122 Use of Federal funds.

Federal funds administered by a Federal department or agency may not be expended for research involving human subjects unless the requirements of this policy have been satisfied.

§ _____.123 Early termination of research support: Evaluation of applications and proposals.

(a) The department or agency head may require that Federal department or agency support for any project be terminated or suspended in the manner prescribed in applicable program requirements, when the department or agency head finds an institution has materially failed to comply with the terms of this policy.

(b) In making decisions about supporting or approving applications or proposals covered by this policy the department or agency head may take into account, in addition to all other eligibility requirements and program criteria, factors such as whether the applicant has been subject to a termination or suspension under paragraph (a) of this section and whether the applicant or the person or persons who would direct or has/have directed the scientific and technical aspects of an activity has/have, in the judgment of the department or agency head, materially failed to discharge responsibility for the protection of the rights and welfare of human subjects (whether or not the research was subject to federal regulation).

§ _____.124 Conditions.

With respect to any research project or any class of research projects the department or agency head of either the conducting or the supporting Federal department or agency may impose additional conditions prior to or at the time of approval when in the judgment of the department or agency head

additional conditions are necessary for the protection of human subjects.

Adoption of the Common Rules

The adoption of the common rules by the participating agencies, as modified by agency-specific text, is set forth below.

DEPARTMENT OF HOMELAND SECURITY

List of Subjects in 6 CFR Part 46

Human research subjects, Reporting and record-keeping requirements, Research.

■ For the reasons stated in the preamble, the Department of Homeland Security adds 6 CFR part 46 as set forth at the end of the common preamble of this document.

PART 46—PROTECTION OF HUMAN SUBJECTS

- Sec.
- 46.101 To what does this policy apply?
- 46.102 Definitions for purposes of this policy.
- 46.103 Assuring compliance with this policy—research conducted or supported by any Federal department or agency.
- 46.104 Exempt research.
- 46.105 [Reserved]
- 46.106 [Reserved]
- 46.107 IRB membership.
- 46.108 IRB functions and operations.
- 46.109 IRB review of research.
- 46.110 Expedited review procedures for certain kinds of research involving no more than minimal risk, and for minor changes in approved research.
- 46.111 Criteria for IRB approval of research.
- 46.112 Review by institution.
- 46.113 Suspension or termination of IRB approval of research.
- 46.114 Cooperative research.
- 46.115 IRB records.
- 46.116 General requirements for informed consent.
- 46.117 Documentation of informed consent.
- 46.118 Applications and proposals lacking definite plans for involvement of human subjects.
- 46.119 Research undertaken without the intention of involving human subjects.
- 46.120 Evaluation and disposition of applications and proposals for research to be conducted or supported by a Federal department or agency.
- 46.121 [Reserved]
- 46.122 Use of Federal funds.
- 46.123 Early termination of research support: Evaluation of applications and proposals.
- 46.124 Conditions.

Authority: 5 U.S.C. 301; Pub. L. 107–296, sec. 102, 306(c); Pub. L. 108–458, sec. 8306.

Reginald Brothers,

Under Secretary for Science and Technology, DHS.

DEPARTMENT OF AGRICULTURE

List of Subjects in 7 CFR Part 1c

Human research subjects, Reporting and record-keeping requirements, Research.

■ For the reasons stated in the preamble, the Department of Agriculture revises 7 CFR part 1c as set forth at the end of the common preamble of this document.

PART 1c—PROTECTION OF HUMAN SUBJECTS

- Sec.
- 1c.101 To what does this policy apply?
- 1c.102 Definitions for purposes of this policy.
- 1c.103 Assuring compliance with this policy—research conducted or supported by any Federal department or agency.
- 1c.104 Exempt research.
- 1c.105 [Reserved]
- 1c.106 [Reserved]
- 1c.107 IRB membership.
- 1c.108 IRB functions and operations.
- 1c.109 IRB review of research.
- 1c.110 Expedited review procedures for certain kinds of research involving no more than minimal risk, and for minor changes in approved research.
- 1c.111 Criteria for IRB approval of research.
- 1c.112 Review by institution.
- 1c.113 Suspension or termination of IRB approval of research.
- 1c.114 Cooperative research.
- 1c.115 IRB records.
- 1c.116 General requirements for informed consent.
- 1c.117 Documentation of informed consent.
- 1c.118 Applications and proposals lacking definite plans for involvement of human subjects.
- 1c.119 Research undertaken without the intention of involving human subjects.
- 1c.120 Evaluation and disposition of applications and proposals for research to be conducted or supported by a Federal department or agency.
- 1c.121 [Reserved]
- 1c.122 Use of Federal funds.
- 1c.123 Early termination of research support: Evaluation of applications and proposals.
- 1c.124 Conditions.

Authority: 5 U.S.C. 301; 42 U.S.C. 300v–1(b).

Ann M. Bartuska,

Acting Under Secretary for Research, Education, and Economics, USDA.

DEPARTMENT OF ENERGY

List of Subjects in 10 CFR Part 745

10 CFR Part 745

Human research subjects, Reporting and record-keeping requirements, Research.

■ For the reasons stated in the preamble, the Department of Energy revises 10 CFR part 745 as set forth at the end of the common preamble of this document.

PART 745—PROTECTION OF HUMAN SUBJECTS

- Sec.
- 745.101 To what does this policy apply?
- 745.102 Definitions for purposes of this policy.
- 745.103 Assuring compliance with this policy—research conducted or supported by any Federal department or agency.
- 745.104 Exempt research.
- 745.105 [Reserved]
- 745.106 [Reserved]
- 745.107 IRB membership.
- 745.108 IRB functions and operations.
- 745.109 IRB review of research.
- 745.110 Expedited review procedures for certain kinds of research involving no more than minimal risk, and for minor changes in approved research.
- 745.111 Criteria for IRB approval of research.
- 745.112 Review by institution.
- 745.113 Suspension or termination of IRB approval of research.
- 745.114 Cooperative research.
- 745.115 IRB records.
- 745.116 General requirements for informed consent.
- 745.117 Documentation of informed consent.
- 745.118 Applications and proposals lacking definite plans for involvement of human subjects.
- 745.119 Research undertaken without the intention of involving human subjects.
- 745.120 Evaluation and disposition of applications and proposals for research to be conducted or supported by a Federal department or agency.
- 745.121 [Reserved]
- 745.122 Use of Federal funds.
- 745.123 Early termination of research support: Evaluation of applications and proposals.
- 745.124 Conditions.

Authority: 5 U.S.C. 301; 42 U.S.C. 7254; 42 U.S.C. 300v–1(b).

Elizabeth Sherwood-Randall,
Deputy Secretary of Energy.

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

List of Subjects in 14 CFR Part 1230

14 CFR Part 1230

Human research subjects, Reporting and record-keeping requirements, Research.

■ For the reasons stated in the preamble, the National Aeronautics and Space Administration revises 14 CFR part 1230 as set forth at the end of the common preamble of this document.

PART 1230—PROTECTION OF HUMAN SUBJECTS

- Sec.
- 1230.101 To what does this policy apply?
 - 1230.102 Definitions for purposes of this policy.
 - 1230.103 Assuring compliance with this policy—research conducted or supported by any Federal department or agency.
 - 1230.104 Exempt research.
 - 1230.105 [Reserved]
 - 1230.106 [Reserved]
 - 1230.107 IRB membership.
 - 1230.108 IRB functions and operations.
 - 1230.109 IRB review of research.
 - 1230.110 Expedited review procedures for certain kinds of research involving no more than minimal risk, and for minor changes in approved research.
 - 1230.111 Criteria for IRB approval of research.
 - 1230.112 Review by institution.
 - 1230.113 Suspension or termination of IRB approval of research.
 - 1230.114 Cooperative research.
 - 1230.115 IRB records.
 - 1230.116 General requirements for informed consent.
 - 1230.117 Documentation of informed consent.
 - 1230.118 Applications and proposals lacking definite plans for involvement of human subjects.
 - 1230.119 Research undertaken without the intention of involving human subjects.
 - 1230.120 Evaluation and disposition of applications and proposals for research to be conducted or supported by a Federal department or agency.
 - 1230.121 [Reserved]
 - 1230.122 Use of Federal funds.
 - 1230.123 Early termination of research support: Evaluation of applications and proposals.
 - 1230.124 Conditions.

Authority: 5 U.S.C. 301; 42 U.S.C. 300v–1(b).

James D. Polk,
Chief Health and Medical Officer, NASA.

DEPARTMENT OF COMMERCE

List of Subjects in 15 CFR Part 27

15 CFR Part 27

Human research subjects, Reporting and record-keeping requirements, Research.

■ For the reasons stated in the preamble, the Department of Commerce revises 15 CFR part 27 as set forth at the end of the common preamble of this document.

PART 27—PROTECTION OF HUMAN SUBJECTS

- Sec.
- 27.101 To what does this policy apply?
 - 27.102 Definitions for purposes of this policy.
 - 27.103 Assuring compliance with this policy—research conducted or supported by any Federal department or agency.
 - 27.104 Exempt research.
 - 27.105 [Reserved]
 - 27.106 [Reserved]
 - 27.107 IRB membership.
 - 27.108 IRB functions and operations.
 - 27.109 IRB review of research.
 - 27.110 Expedited review procedures for certain kinds of research involving no more than minimal risk, and for minor changes in approved research.
 - 27.111 Criteria for IRB approval of research.
 - 27.112 Review by institution.
 - 27.113 Suspension or termination of IRB approval of research.
 - 27.114 Cooperative research.
 - 27.115 IRB records.
 - 27.116 General requirements for informed consent.
 - 27.117 Documentation of informed consent.
 - 27.118 Applications and proposals lacking definite plans for involvement of human subjects.
 - 27.119 Research undertaken without the intention of involving human subjects.
 - 27.120 Evaluation and disposition of applications and proposals for research to be conducted or supported by a Federal department or agency.
 - 27.121 [Reserved]
 - 27.122 Use of Federal funds.
 - 27.123 Early termination of research support: Evaluation of applications and proposals.
 - 27.124 Conditions.

Authority: 5 U.S.C. 301; 42 U.S.C. 300v–1(b).

James Hock,
Chief of Staff, Department of Commerce.

SOCIAL SECURITY ADMINISTRATION

List of Subjects in 20 CFR Part 431

20 CFR Part 431

Human research subjects, Reporting and record-keeping requirements, Research.

■ For the reasons stated in the preamble, the Social Security Administration adds 20 CFR part 431 as set forth at the end of the common preamble of this document.

PART 431—PROTECTION OF HUMAN SUBJECTS

- Sec.
- 431.101 To what does this policy apply?
 - 431.102 Definitions for purposes of this policy.
 - 431.103 Assuring compliance with this policy—research conducted or supported by any Federal department or agency.
 - 431.104 Exempt research.
 - 431.105 [Reserved]
 - 431.106 [Reserved]
 - 431.107 IRB membership.
 - 431.108 IRB functions and operations.
 - 431.109 IRB review of research.
 - 431.110 Expedited review procedures for certain kinds of research involving no more than minimal risk, and for minor changes in approved research.
 - 431.111 Criteria for IRB approval of research.
 - 431.112 Review by institution.
 - 431.113 Suspension or termination of IRB approval of research.
 - 431.114 Cooperative research.
 - 431.115 IRB records.
 - 431.116 General requirements for informed consent.
 - 431.117 Documentation of informed consent.
 - 431.118 Applications and proposals lacking definite plans for involvement of human subjects.
 - 431.119 Research undertaken without the intention of involving human subjects.
 - 431.120 Evaluation and disposition of applications and proposals for research to be conducted or supported by a Federal department or agency.
 - 431.121 [Reserved]
 - 431.122 Use of Federal funds.
 - 431.123 Early termination of research support: Evaluation of applications and proposals.
 - 431.124 Conditions.

Authority: 5 U.S.C. 301; 42 U.S.C. 289(a).

Carolyn W. Colvin,

Acting Commissioner of Social Security.

AGENCY FOR INTERNATIONAL DEVELOPMENT

List of Subjects in 22 CFR Part 225

22 CFR Part 225

Human research subjects, Reporting and record-keeping requirements, Research.

■ For the reasons stated in the preamble, the Agency for International Development revises 22 CFR part 225 as set forth at the end of the common preamble of this document.

PART 225—PROTECTION OF HUMAN SUBJECTS

Sec.

225.101 To what does this policy apply?

225.102 Definitions for purposes of this policy.

225.103 Assuring compliance with this policy—research conducted or supported by any Federal department or agency.

225.104 Exempt research.

225.105 [Reserved]

225.106 [Reserved]

225.107 IRB membership.

225.108 IRB functions and operations.

225.109 IRB review of research.

225.110 Expedited review procedures for certain kinds of research involving no more than minimal risk, and for minor changes in approved research.

225.111 Criteria for IRB approval of research.

225.112 Review by institution.

225.113 Suspension or termination of IRB approval of research.

225.114 Cooperative research.

225.115 IRB records.

225.116 General requirements for informed consent.

225.117 Documentation of informed consent.

225.118 Applications and proposals lacking definite plans for involvement of human subjects.

225.119 Research undertaken without the intention of involving human subjects.

225.120 Evaluation and disposition of applications and proposals for research to be conducted or supported by a Federal department or agency.

225.121 [Reserved]

225.122 Use of Federal funds.

225.123 Early termination of research support: Evaluation of applications and proposals.

225.124 Conditions.

Authority: 5 U.S.C. 301; 42 U.S.C. 300v–1(b), unless otherwise noted.

Irene Koek,

Acting Deputy Assistant Administrator for Global Health, U.S. Agency for International Development.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

List of Subjects in 24 CFR Part 60

24 CFR Part 60

Human research subjects, Reporting and record-keeping requirements, Research.

■ For the reasons stated in the preamble, the Department of Housing and Urban Development revises 24 CFR part 60 as set forth at the end of the common preamble of this document.

PART 60—PROTECTION OF HUMAN SUBJECTS

Sec.

60.101 To what does this policy apply?

60.102 Definitions for purposes of this policy.

60.103 Assuring compliance with this policy—research conducted or supported by any Federal department or agency.

60.104 Exempt research.

60.105 [Reserved]

60.106 [Reserved]

60.107 IRB membership.

60.108 IRB functions and operations.

60.109 IRB review of research.

60.110 Expedited review procedures for certain kinds of research involving no more than minimal risk, and for minor changes in approved research.

60.111 Criteria for IRB approval of research.

60.112 Review by institution.

60.113 Suspension or termination of IRB approval of research.

60.114 Cooperative research.

60.115 IRB records.

60.116 General requirements for informed consent.

60.117 Documentation of informed consent.

60.118 Applications and proposals lacking definite plans for involvement of human subjects.

60.119 Research undertaken without the intention of involving human subjects.

60.120 Evaluation and disposition of applications and proposals for research to be conducted or supported by a Federal department or agency.

60.121 [Reserved]

60.122 Use of Federal funds.

60.123 Early termination of research support: Evaluation of applications and proposals.

60.124 Conditions.

Authority: 5 U.S.C. 301; 42 U.S.C. 300v–1(b) and 3535(d).

Katherine M. O'Regan,

Assistant Secretary for Policy Development and Research, Department of Housing and Urban Development.

DEPARTMENT OF LABOR

Energy Conservation Program: Energy Conservation Standards for General Service Lamps; Final Rules

DEPARTMENT OF ENERGY

10 CFR Part 430

[Docket Number EERE–2013–BT–STD–0051]

RIN 1904–AD09

Energy Conservation Program: Energy Conservation Standards for General Service Lamps

AGENCY: Office of Energy Efficiency and Renewable Energy, Department of Energy.

ACTION: Final rule.

SUMMARY: On March 17, 2016, the U.S. Department of Energy (DOE) published a notice of proposed rulemaking (NPR) proposing standards for general service lamps (GSLs) pursuant to the Energy Policy and Conservation Act of 1975 (EPCA), as amended. DOE responds to comments received on the NOPDDA in this final rule and adopts a revised definition of GSL and other supplemental definitions.

DATES: The effective date of this rule is January 1, 2020.

ADDRESSES: The docket, which includes **Federal Register** notices, public meeting attendee lists and transcripts, comments, and other supporting documents/materials, is available for review at www.regulations.gov. All documents in the docket are listed in the www.regulations.gov index. However, some documents listed in the index may not be publicly available, such as those containing information that is exempt from public disclosure.

A link to the docket Web page can be found at: https://www1.eere.energy.gov/buildings/appliance_standards/standards.aspx?productid=4. This Web page contains a link to the docket for this document on the www.regulations.gov site. The www.regulations.gov Web page contains simple instructions on how to access all documents, including public comments, in the docket.

I. Introduction

Title III, Part B of the Energy Policy and Conservation Act of 1975 (EPCA or the Act), Public Law 94–163 (42 U.S.C. 6291–6309, as codified) established the Energy Conservation Program for Consumer Products Other Than

Automobiles, a program covering most major household appliances (collectively referred to as “covered products”).¹ Subsequent amendments expanded Title III of EPCA to include additional consumer products, including general service lamps (GSLs)—the products that are the focus of this final rule.

In particular, amendments to EPCA in the Energy Independence and Security Act of 2007 (EISA 2007) directed DOE to engage in rulemakings regarding GSLs. (42 U.S.C. 6295(i)(6)(A)–(B)) EPCA, as amended by EISA 2007, directs DOE to initiate a rulemaking no later than January 1, 2014, to determine whether standards in effect for GSLs should be amended and determine whether exemptions for certain incandescent lamps should be maintained or discontinued. (42 U.S.C. 6295(i)(6)(A)(i)) The scope of the rulemaking is not limited to incandescent lamp technologies. (42 U.S.C. 6295(i)(6)(A)(ii)) Further, for this first cycle of rulemaking, the EISA 2007 amendments provide that DOE must consider a minimum standard of 45 lumens per watt (lm/W). (42 U.S.C. 6295(i)(6)(A)(ii)) If DOE fails to complete a rulemaking in accordance with 42 U.S.C. 6295(i)(6)(A)(i)–(iv) or a final rule from the first rulemaking cycle does not produce savings greater than or equal to the savings from a minimum efficacy standard of 45 lm/W, the statute provides a “backstop” under which DOE must prohibit sales of GSLs that do not meet a minimum 45 lm/W standard beginning on January 1, 2020. (42 U.S.C. 6295(i)(6)(A)(v))

In March 2016, DOE published a notice of proposed rulemaking (NPR) that proposed a revised definition of GSL and energy conservation standards for certain GSLs (hereafter the “March 2016 GSL ECS NOPR”). 81 FR 14528 (March 17, 2016). In conjunction with the March 2016 GSL ECS NOPR, DOE also published on its Web site the complete technical support document (TSD) for the proposed rule, which described the analyses DOE conducted and included technical documentation for each analysis. The TSD also included the life cycle cost (LCC) spreadsheet, the national impact analysis spreadsheet, and the manufacturer impact analysis (MIA) spreadsheet.²

DOE held a public meeting on April 20, 2016, to hear oral comments on and

¹ Part B was re-designated Part A on codification in the U.S. Code for editorial reasons.

² The spreadsheets developed for this rulemaking proceeding are available at: https://www1.eere.energy.gov/buildings/appliance_standards/standards.aspx?productid=4.

solicit information relevant to the proposed rule. At this meeting, DOE heard concerns from stakeholders regarding the expansion of scope in the proposed GSL definition and DOE's approach to analyzing the 22 GSL exemptions. In addition, DOE received written comments that reiterated concerns, and also provided additional data for DOE's consideration. Specifically, the National Electrical Manufacturers Association (NEMA) provided new data and information on the 22 exempted lamp types to inform DOE's evaluation of whether the exemptions should be maintained or discontinued as required by 42 U.S.C. 6295(i)(6)(A)(i)(II).

After the publication of the March 2016 GSL ECS NOPR, DOE analyzed the data submitted by NEMA and collected additional data where available. DOE published a notice of proposed definition and data availability (hereafter the "October 2016 NOPDDA") to: (1) Propose a revised definition of GSL; (2) announce the availability of the NEMA data and supplemental data collected by DOE; (3) request public comment on proposed definitions and compiled data; and (4) request any additional data that stakeholders may have in support of this evaluation. 81 FR 71794 (October 18, 2016). DOE also held a public meeting on October 21, 2016 to hear oral comments and solicit information relevant to the October 2016 NOPDDA.

Utility Coalition urged DOE to finalize this rulemaking before the January 1, 2017 deadline set by EISA 2007. Additionally, Utility Coalition recommended that if any of their comments would cause DOE to miss the deadline, then the comments should be deferred to the next GSL rulemaking. (Utility Coalition, No. 95 at pp. 1–2) Philips Lighting (Philips) also urged DOE to complete the rulemaking on time. (Philips, No. 96 at p. 2)

The following sections of this preamble respond to comments received on the October 2016 NOPDDA and during the NOPDDA public meeting, except those specifically related to incandescent reflector lamps, and describe the adopted GSL definition and additional data in more detail. In a separate final rule DOE is responding to comments specifically related to incandescent reflector lamps.

II. Authority and Rulemaking Process

DOE is required under the EISA 2007 amendments to EPCA to undertake the present rulemaking. Under EPCA, DOE shall initiate a rulemaking to determine whether standards in effect for GSLs should be amended to establish more

stringent standards; and determine whether exemptions for certain incandescent lamps should be maintained or discontinued. (42 U.S.C. 6295(i)(6)(A)(i)) In addition to that mandate, DOE has the authority to qualify lamps as general service lamps upon determining that they are "used to satisfy lighting applications traditionally served by general service incandescent lamps." (42 U.S.C. 6291(30)(BB)(i)(IV))

An additional statute relevant to this rulemaking is section 312 of the Consolidated and Further Continuing Appropriations Act, 2016 (Pub. L. 114–113, 129 Stat. 2419; hereafter referred to as the "Appropriations Rider") that prohibits expenditure of funds appropriated by that law to implement or enforce: (1) 10 CFR 430.32(x), which includes maximum wattage and minimum rated lifetime requirements for GSILs; and (2) standards set forth in section 325(i)(1)(B) of EPCA (42 U.S.C. 6295(i)(1)(B)), which sets minimum lamp efficiency ratings for incandescent reflector lamps (IRLs).³

This final rule constitutes a decision on whether to maintain or discontinue various lamp exemptions and, in addition, DOE is determining that certain types of lamps should be included as GSLs because they are used for lighting applications traditionally served by GSILs. This final rule does not determine whether DOE should impose or amend standards for any category of lamps, such as GSILs or GSLs.

As discussed in more detail, DOE is grounding the first of those decisions, namely which exemptions to maintain or discontinue, on an assessment of whether lamps within a given exemption would provide a convenient unregulated alternative to lamps that will be subject to energy conservation standards. In DOE's view, EPCA exempted certain categories of lamps because, on the one hand, some lamps in those categories have specialty applications; and on the other hand, it was not clear, when these lamp provisions were enacted, whether those lamps were part of the broader lamp market to which Congress wished to apply energy conservation standards. The purpose, then, of the decision that Congress entrusted to DOE, to maintain or to discontinue a given exemption, was that DOE should assess the role of

lamps of that type in the broader lighting market, bearing in mind the evident statutory purpose of achieving energy conservation by imposing efficiency standards for general lighting.

While the statute does not expressly state a criterion by which DOE should decide which exemptions to maintain—it simply identifies one important evidentiary input, sales data—DOE understands its instruction to be that DOE should maintain an exemption if doing so would be consistent with that statutory purpose, and discontinue the exemption if it would not. To carry out that instruction, DOE has assessed for each exemption whether lamps within that exemption are readily substitutable for lamps that are already categorized as general service lamps. Sales data, as the statute directs, are an important type of evidence informing that assessment.

The discontinuation of certain exemptions will render the lamps within those exemptions GSLs, to the extent they would otherwise qualify as GSLs, and for some lamps GSILs. As the October 2016 NOPDDA observed, DOE will then either impose standards on these lamps pursuant to its authority to develop GSL standards or apply the backstop standard prohibiting the sale of lamps not meeting a 45 lm/W efficacy standard.

Commenters, chief among them LEDVANCE, objected to both the procedures that DOE undertook and the substance of what it proposed to determine. In general, LEDVANCE contended that DOE cannot make lamps subject to a given standard—whether a DOE-developed standard or the backstop—simply by undertaking a definitional exercise such as it proposed in the October 2016 NOPDDA. (LEDVANCE, No. 90 at p. 3) LEDVANCE offered multiple, connected arguments in support of that general position.

First, LEDVANCE pointed out that, in general, section 6295 requires DOE to conduct certain analyses and carry out certain procedures when it amends standards. Under section 6295(o), "[a]ny new or amended energy conservation standard prescribed by the Secretary under this section . . . shall be designed to achieve the maximum improvement in energy efficiency" that is "technologically feasible and economically justified." 42 U.S.C. 6295(o)(2)(A). DOE cannot generally prescribe a new or amended standard if it has not prescribed a test procedure for the relevant product, or if DOE determines that the standard will not result in "significant conservation of energy." 42 U.S.C. 6295(o)(3). DOE also generally cannot prescribe a new or amended standard if it finds that the

³ This provision of the Consolidated and Further Continuing Appropriations Act, 2016 has been extended to the current appropriations authorization. See, The Continuing Appropriations and Military Construction, Veteran Affairs, and Related Agencies Appropriations Act, 2017 and Zika Response and Preparedness Act, 2017 (Pub. L. 114–223, 130 Stat. 908).

standard would “result in the unavailability in the United States” of a type of product “of performance characteristics . . . that are substantially the same as those generally available” at the time. 42 U.S.C. 6295(o)(4). Procedurally, in general to impose a new or amended standard, DOE must publish a proposed rule and permit 60 days of comment, and it cannot publish a final rule less than 90 days after the proposed rule. 42 U.S.C. 6295(p). In addition, DOE has typically taken various other procedural steps, such as publication of a framework document before the proposed rule, when it amends a standard.

(LEDVANCE, No. 90 at pp. 4–5)

LEDVANCE observed that DOE is evidently not engaging in comparable substantive analyses with respect to its definition of GSL, and that DOE has not undertaken comparable procedures (including 60 days of comment). (LEDVANCE, No. 90 at pp. 4–6) DOE acknowledges those observations to be correct, and it considers its approach appropriate and consistent with the statute. The requirements that LEDVANCE cited apply, by their terms, only when DOE prescribes a new or amended standard. This final rule does neither. Rather, DOE is deciding which lamp exemptions to discontinue and which to maintain and determining that certain lamps should be GSLs because they are used to satisfy lighting applications traditionally served by GSILs.

DOE acknowledges, of course, that a likely consequence of DOE’s including additional lamps in the definition of GSL is that those lamps will be subject to energy conservation standards. DOE has the authority to impose standards for GSLs; and if it does not impose such standards or does not impose standards that meet a certain condition, then EPCA specifies a minimum standard of 45 lm/W. In LEDVANCE’s view, this consequence means that DOE must, before including a given lamp as a GSL, carry out the same type of rulemaking (in both procedure and substance) as it would in prescribing a new or amended standard.

DOE sees a difference between the two modes in which GSLs may be subject to standards. Where DOE develops its own energy conservation standards, it carries out the analyses that section 6295(o) calls for and provides the procedure that section 6295(p) mandates. But it does so in the course of developing the standards, just as sections 6295(o) and 6295(p) provide. The decision to include a lamp within the scope of GSLs would only be a precursor to that standards

development. If DOE does not develop its own energy conservation standards for GSLs, section 6295(i)(6)(A)(v) requires it to impose a standard of 45 lm/W. If that obligation were to come into force, DOE would not perform the section 6295(o) analyses or follow the section 6295(p) procedure to fulfill it. Because in that circumstance the statute itself would require DOE to prohibit sales of lamps below that standard, DOE would not be “prescrib[ing] a new or amended standard,” the situation in which sections 6295(o) and 6295(p) apply. In addition, reading those provisions harmoniously with section 6295(i)(6), DOE does not believe the section 6295(o) and section 6295(p) requirements were meant to apply to a rulemaking imposing the section 6295(i)(6)(A)(v) backstop. The backstop provision specifies by number a particular efficacy standard and says DOE “shall” prohibit sales of lamps below that standard. If the general standards-setting provisions applied in that context, DOE would have discretion, depending on the evidence, to conclude that the 45 lm/W standard is not technologically feasible or not economically justified (on the basis of the multiple factors, including “other factors the Secretary considers relevant,” that inform that assessment under section 6295(o)). For DOE to retain that discretion would be inconsistent with the mandatory language of the backstop.

Of course, for lamps that will be GSLs only as a consequence of this final rule, DOE is exercising some discretion that will result in those lamps being subject to some standard (potentially the backstop or some standard that DOE develops). Nonetheless, DOE does not believe that fact obligates it to engage in section 6295(o) analyses or section 6295(p) procedures for this rule—either as a matter of law or for the sake of sound decision making.

The scheme that section 6295(i)(6) establishes for GSLs differs in important ways from what is in place for consumer products in general under section 6295. For most products, DOE has discretion to develop the initial standards or to amend, in the course of periodic reviews, standards initially set by statute. Using that authority, DOE could in principle set any type of standard, such as a level of performance or a design requirement, with far-reaching consequences for the products at issue. To guide that exercise of discretion, Congress has laid out various restrictions on the standards-setting authority and substantive factors that DOE must consider. By contrast, in section 6295(i)(6), Congress expressed a

strong preference for 45 lm/W as an efficacy standard. If DOE takes no other action, that will be the standard for GSLs. Congress permitted DOE to establish different standards if DOE chooses to do so and can demonstrate that an alternative set of standards would produce at least as much energy savings. But in the rulemaking to consider whether to set different standards, DOE must consider the alternative of effectively setting a 45 lm/W standard for all GSLs, whereby DOE would simply not take the option that Congress provided for setting other standards, and instead adopt Congress’s default standard.

At the same time, Congress exempted certain lamps from the GSL definition, and included within the scope of GSLs a category that left room for some additions. In both of these areas, DOE’s authority is tightly circumscribed. With respect to the exemptions, DOE maintains or discontinues the exemptions as written. With respect to additions to the scope of GSLs, DOE can include additional lamps only if they satisfy lighting applications traditionally served by GSILs. In DOE’s view, Congress simply deferred the last details of the definition of GSL for final assessment by DOE. By postponing the decision in that manner, Congress did not implicitly invoke, with respect to its 45 lm/W, the whole machinery of DOE standards rulemaking under EPCA.

The backstop reflects a congressional determination that a 45 lm/W standard is appropriate. For DOE to conduct an independent assessment of the technological feasibility, economic justification, and other such factors for the 45 lm/W standard as applied to a given set of lamps would risk being inconsistent with that congressional determination. DOE believes that the most important consideration with respect to the scope of GSLs is whether leaving a given set of lamps outside GSLs would undermine the regulation that Congress mandated for GSLs, by making readily available an unregulated substitute for lamps that are subject to the standard. If so, DOE cannot freely conduct its own evaluation of the 45 lm/W standard in the course of defining the scope of GSLs. For DOE to exclude from the definition of GSLs a lamp that consumers can use and do use in the same way they use GSLs, and do so on the ground that the 45 lm/W standard is not sound policy for that type of lamp, would be inconsistent with the policy Congress set in enacting EISA 2007.

DOE acknowledges that paragraph (i)(6)(A) did not, upon enactment, require that the 45 lm/W default or a DOE-developed substitute apply to

lamps within the exemptions. But DOE believes it would be inconsistent with the EISA 2007 policy for DOE to decide whether to maintain or discontinue an exemption by assessing whether the 45 lm/W standard would be economically justified—in the sense of section 6295(o)—for the exempt lamps. Conducting that analysis could mean that even though a lamp is readily substitutable for GSLs, so that the lamp would serve as a loophole to GSL standards, DOE would find GSL standards not economically justified for that lamp. That conclusion would imply that GSL standards are not economically justified in themselves, which would contravene the statutory policy.

Similarly, if DOE were to conclude that a lamp is readily substitutable for GSLs, yet the GSL standard is not technologically feasible for that lamp—in the sense of section 6295(o)—that conclusion would imply that the GSL standard is not technologically feasible overall. While it may not be possible to make incandescent lamps suitable for many current applications that meet a 45 lm/W standard, and consequently the paragraph (i)(6)(A) standards may result in the elimination of incandescent lamps covered by the standards, that outcome is the evident policy set by EISA 2007 regarding energy use in lighting. Therefore it is reasonable not to engage in a section 6295(o) analysis of technological feasibility in reviewing the GSL exemptions.

DOE bases the preceding discussion on the overall structure of section 6295(i)(6). The particular language describing DOE's tasks regarding the definition of GSLs further supports DOE's conclusion. With respect to the exemptions, section 6295(i)(6)(A)(i)(II) says that DOE shall make its decision to maintain or discontinue exemptions “based, in part, on exempted lamp sales collected . . . from manufacturers.” If DOE were supposed to carry out a full section 6295(o) analysis for this decision, lamp sales would be one among very many strands of evidence; under section 6295(o) DOE is to consider factors like the operating costs of a product over its lifetime, the energy savings from a proposed standard, how the standard will affect the utility of the product, the impact on competition, and other factors. 42 U.S.C. 6295(o)(2)(B). It seems odd that, among all the things at issue in a section 6295(o) analysis, section 6295(i)(6)(A)(i)(II) would call out just one specific item, sales data. By contrast, DOE believes its task is to assess whether lamps in a given exemption are a ready substitute for lamps that are not exempt, as that assessment relies upon sales data as an

important input. Thus, the statutory reference to a decision “based, in part, on exempted lamp sales” makes much more sense under DOE's reading of the statute.

With respect to the fourth type of GSLs provided for under the statutory definition, the statute requires a specific finding. DOE can include a lamp within GSLs if it determines that such lamps satisfy lighting applications traditionally served by GSILs. 42 U.S.C. 6291(30)(BB)(i)(IV). The particularity of that finding is not consistent with the notion that DOE should, in making that finding, carry out a section 6295(o) analysis. The factual question is whether a lamp satisfies traditional GSIL applications. Questions about, for example, how a given standard would affect the lamp's operating costs do not seem relevant to that factual question.

LEDVANCE offered several arguments against DOE's interpretation of section 6295(i)(6)(A). First, LEDVANCE pointed out that in some other parts of section 6295, a decision about what products are covered is subject to section 6295(o) analysis and section 6295(p) procedures. As examples, LEDVANCE cited sections 6295(g)(7)(B) and 6295(i)(5). The former says that DOE shall publish a rule to determine “whether to amend the standards in effect for fluorescent lamp ballasts, including whether such standards should be amended such that they would be applicable to additional fluorescent lamp ballasts.” The latter requires DOE to begin a rulemaking “to determine if the standards in effect for fluorescent lamps and incandescent lamps should be amended so that they would be applicable to additional” lamps. (LEDVANCE, No. 90 at pp. 4–6)

By their terms, however, these provisions say that certain decisions about scope involve setting standards, and therefore are textually different from sections 6295(i)(6)(A) and 6291(30)(BB). That textual difference is also consistent with the preceding framework. In a section 6295(g)(7)(B) or 6295(i)(5) rule, DOE would be developing its own “amended” standard and simultaneously might be imposing that amended standard on a new set of products. That is the sort of situation in which, pursuant to the preceding explanation, sections 6295(o) and 6295(p) could come into play. Here, by contrast, DOE is conducting a circumscribed coverage decision, in light of considerations coming from sections 6291(30)(BB) and 6295(i)(6)(A), that may result in products being subject to a standard already set by Congress.

LEDVANCE also observed that in final rules in 2009 and 2015, DOE engaged in section 6295(o)-type analysis when deciding what products to subject to the standards set in those rules. (LEDVANCE, No. 90 at p. 5) However, those past situations were different from today's. Both rules were, in relevant part, responses to section 6295(i)(5). Thus, the statutory requirements were different from those at issue in this rule, for the reasons just given. And, apart from the statutory mandate, the substantive factors that were important for the decisions were different, for the preceding reasons.

LEDVANCE offered an additional statutory argument based on EISA 2007. Section 321 of EISA included a provision under which “[a]ny person may petition the Secretary to establish standards for lamp shapes or bases that are excluded from the definition of general service lamps.” DOE “shall grant a petition,” said section 321, if the evidence shows “that commercial availability or sales of exempted incandescent lamp types of have increased significantly . . . and likely are being widely used in general lighting applications” and “significant energy savings could be achieved by covering exempted products.” If DOE were to grant such a petition, then it would have to conduct a rulemaking “to determine standards for the exempted lamp shape or base,” and it would be required to complete that rulemaking “not later than 18 months after the date on which notice is provided granting the petition.” Public Law 110–140, section 321(a)(3), 121 Stat. 1579.⁴ According to LEDVANCE, Congress would not have simultaneously prescribed this procedure and given DOE what LEDVANCE calls “nearly unfettered discretion to unilaterally remove these same exclusions without any substantive economic or technical analysis.” (LEDVANCE, No. 90 at p. 5)

DOE notes that its discretion regarding the exemptions is far from unfettered, and it rejects the notion that it is allowed to remove them, or is removing them, “without any substantive economic or technical analysis.” As laid out in the October 2016 NOPDDA, and as discussed in detail in section III.A.1, DOE's consideration of whether lamps in a

⁴ Section 321 added this provision as paragraph 325(i)(1)(E) of EPCA. Section 322(b) of EISA purported to strike paragraph 325(i)(1) in its entirety and replace it with a different text that did not include the material previously quoted. In its consideration of the argument that LEDVANCE put forward, DOE need not resolve how sections 321 and 322 interact and what is the current status of the provisions that section 321 added to EPCA section 325(i)(1).

given exemption are ready substitutes for lamps already considered GSLs reflects a range of factors. For example, DOE has considered sales data as evidence of how lamps are being used. These considerations are not the same as the analysis DOE would conduct in developing an amended standard, but it is incorrect to suggest that DOE has performed no substantive analysis at all.

In any case, the language in EISA section 321 is more consistent with DOE's understanding of its current task. DOE notes that the petition process was to proceed in two stages. First, DOE was to decide whether to grant a petition. The statute laid out certain criteria for that decision, including whether a given lamp type is likely being widely used in general lighting applications. Those criteria are different from the considerations described in 42 U.S.C. 6295(o). Second, if DOE granted a petition, it was to conduct a rulemaking to decide what standards to impose. Presumably, DOE would conduct a section 6295(o) analysis in evaluating standards at that point. But the section 321 language clearly distinguishes the two stages: It instructs DOE to do a standards-setting rulemaking "if" it grants a petition, and to complete the rulemaking within 18 months "after the date on which notice is provided granting the petition." Evidently, the decision on the petition itself is not a rule prescribing standards. Similarly and by analogy, the current rule defines what are GSLs, and is not a rule prescribing standards to which sections 6295(o) and 6295(p) apply.

LEDVANCE further contended that the adoption of the petition process forecloses DOE's authority to maintain or discontinue exemptions as it does in this rule. (LEDVANCE, No. 90 at p. 5) However, section 321 itself provided both mechanisms: The response to petitions and the decision whether to continue or maintain exemptions.⁵ Section 321 established certain procedures and criteria for responding to petitions. For the second type of decision, it did not prescribe the same considerations, either explicitly or by reference.

DOE does not read 42 U.S.C. 6295(i)(6)(A)(i)(II) to implicitly invoke the same considerations. The petition process is distinct and independent from the decision to discontinue an exemption. When DOE discontinues an exemption, the previously exempted

lamp is included among GSLs. By contrast, the petition provision from EISA section 321 does not suggest that DOE would end an exemption, thus rendering a type of lamp a GSL. To the contrary, the petition process applies only to lamps that *are* exempted. Through that process, DOE could, if the petition satisfies certain prerequisites, establish standards even though the lamps are exempted from being GSLs. Further, because discontinuing an exemption under section 6295(i)(6)(A)(i) causes the affected lamps to be GSLs, the lamps become susceptible to the backstop GSL standard; and, if DOE establishes GSL standards to substitute for the backstop, it must include the formerly exempt lamps in its analysis of whether the substitute standards are adequate. By contrast, the petition process from EISA section 321 does not purport to be part of the GSL standards-setting process. Indeed, the section 321 language specifically requires DOE to assess whether sales of a given lamp have "increased significantly since the date on which the standards on general service lamps were established." Thus, the section 321 process is only available after the initial GSL standards process. Then, after granting a petition, DOE would establish whatever standard was appropriate in the circumstances, without regard to the 45 lm/W backstop. In short, the petition process would be a separate mechanism, under which DOE had considerably more latitude regarding standards than it does for GSLs. Accordingly, EISA section 321 prescribed specific gating criteria before DOE could grant a petition.

To be sure, the fundamental concerns motivating the petition process and the authority granted to DOE to discontinue exemptions seem to be similar. The purpose of both, DOE believes, was to ensure that unregulated lamps do not present a loophole that would undermine the effect and purpose of energy conservation standards. To fulfill that purpose with respect to the exemptions, DOE is discontinuing an exemption if, considering sales data and technical features, it concludes that lamps within the exemption are already used in general lighting applications or are ready substitutes for GSLs. That analysis is comparable to what the petition provision prescribed. But it is not identical, because the processes are not identical.

The analysis DOE has conducted is more appropriate for the current decision, and indeed, the analysis that EISA section 321 describes would not be appropriate. EISA section 321 states that the Secretary shall grant a petition if "the petition presents evidence that

demonstrates that commercial availability or sales of exempted incandescent lamp types have increased significantly since the standards on general service lamps were established." DOE understands the point of that assessment to be that if lamp sales have increased significantly since the establishment of standards, that increase may show the lamp has become a less regulated alternative to GSLs. Thus, the baseline—the volume of sales when standards were established—is critical for the analysis. At this point, when no standards have yet been established, the sales analysis described in EISA section 321 would not be possible. DOE could assess whether sales of a lamp have increased in recent years, but increases or decreases, without reference to the baseline and the establishment of standards, would not demonstrate in the same way that a lamp has become a loophole to GSL standards.

The other substantive criterion for granting an EISA section 321 petition is whether "significant energy savings could be achieved by covering exempted products." As explained, the various conditions in the EISA section 321 petition provision do not apply to this final rule, because the paragraph (i)(6)(A)(i) decision about exemptions is different. Nonetheless, DOE acknowledges that it would not choose to discontinue an exemption unless doing so could achieve significant energy savings compared to maintaining the exemption. As discussed in the sections that follow, discontinuing the exemptions described in section III.A.1 could indeed lead to significant energy savings. As shown in Table III.1, six of the lamp categories for which DOE discontinued an exemption have annual sales that are several times the sales of the 15 lamp categories for which DOE maintained the exemption. The seventh lamp exemption that DOE is discontinuing, shatter-resistant lamps, presents a significant risk of lamp switching and maintaining its exemption could otherwise undermine potential standards for general service lamps.

Fourth, LEDVANCE urged that the D.C. Circuit's decision in *Hearth, Patio & Barbecue Ass'n v. U.S. Department of Energy*, 706 F.3d 499 (D.C. Circuit 2013), forecloses DOE from altering a product definition in a way that will have standards consequences without performing a section 6295(o) analysis. (LEDVANCE, No. 90 at p. 6) The *Hearth, Patio & Barbecue* opinion did not say so on its face. The case involved a question of whether DOE's inclusion of decorative fireplaces within the definition "direct heating equipment"

⁵ The apparent conflict between sections 321 and 322 of EISA does not affect EPCA section 325(i)(6)(A), the provision that is the basis for DOE's decisions on the various exemptions. EISA section 321 added section 325(i)(6), and section 322 did not alter it.

was impermissible; the court held that DOE's interpretation of "direct heating equipment" to permit that coverage was unreasonable. However, LEDVANCE argued that the case was "analogous" to the current situation, in that "altering a definition to change what falls within . . . a category of regulated products . . . 'is the essence of regulation.'" (LEDVANCE, No. 90 at p. 6 [quoting 706 F.3d at 508]). DOE does not consider the analogy sound. To be sure, this final rule is a species of regulation, and will bring certain products newly within the scope of regulation as GSLs. But the question, as ever in such matters, is what sort of regulation the statute authorizes, and what considerations and procedures it prescribes as prerequisites. LEDVANCE's comment suggests that because it has labeled sections 6295(o) and 6295(p) the "Rulemaking Requirements," DOE must comport with those provisions every time it engages in regulation under EPCA. Having considered the specific statutory provisions that authorize this rule, as discussed, DOE concludes that it is not obligated to conduct this rulemaking as though it were "prescrib[ing] a new or amended standard" pursuant to section 6295(o) or 6295(p).

LEDVANCE raised a second category of objection to the process by which it anticipated DOE would reach this final rule. Noting that DOE had proposed in March 2016 to amend standards for GSLs, and that the October 2016 NOPDDA seemed to contemplate finalizing a definition for GSLs without finalizing a standards amendment based on the March 2016 GSL ECS NOPR, LEDVANCE stated that DOE cannot bifurcate those procedures. (LEDVANCE, No. 90 at p. 3) In LEDVANCE's view, the statute does not permit DOE to issue multiple notices proposing different aspects of its GSL decisionmaking—whether to amend standards and whether to discontinue the exemptions. LEDVANCE contends that DOE must conclude those determinations in a single final rule, and that by finalizing amendments to the GSL definition, DOE is impermissibly circumventing EPCA rulemaking requirements and the Appropriations Rider. (LEDVANCE, No. 90 at p. 3) (LEDVANCE also argues, in what DOE takes to be an alternative argument, that lamps that qualify as GSLs only because of this final rule will not in fact be subject to the backstop standard; in this line of argument, LEDVANCE says the backstop standard can only apply to lamps that were already subject to standards.) Further,

LEDVANCE commented that DOE failed to provide appropriate notice of the standards that would apply to lamps considered under the October 2016 NOPDDA and that DOE must provide, in detail, the content and basis of a proposal to allow for meaningful and informed comment. (LEDVANCE, No. 90 at pp. 11–12)

DOE believes that EPCA does permit flexibility with respect to the rulemaking process it undertakes under section 6295(i)(6)(A)(i). Clause (i) says that DOE "shall initiate a rulemaking procedure" to make two distinct decisions: Whether to amend standards, and whether to maintain or discontinue exemptions. Because the statute says "a . . . procedure," LEDVANCE appears to believe it permits only a single NOPR and a single final rule. However, the general presumption in interpreting a federal statute is that the singular encompasses the plural. 1 U.S.C. 1. Thus, a reference to "a . . . procedure" would ordinarily permit a single procedure or multiple procedures.

DOE recognizes that context can lead in some instances to a contrary conclusion that a singular word truly means the singular and not the plural. But DOE has not identified any such contextual clues with respect to section 6295(i)(6)(A). Indeed, it would be unusual and counterproductive for a statute to restrict an agency to a single NOPR and a single final rule to achieve a specified objective. The decisions with which section 6295(i)(6)(A) tasks DOE are complex. DOE, like other agencies, often supplements its proposals with additional proposals and notices of further data and analysis. Yet if "a . . . procedure" permitted only a single proposal, then if DOE failed to prepare and assemble all of its analyses into a single proposal document the entire 6295(i)(6)(A) enterprise would fail for lack of authority. It seems unlikely that, having called for the 6295(i)(6)(A) assessments, Congress intended to make it so uncertain whether they could be achieved.

Further, even if "a rulemaking procedure" only permitted a single procedure, the statute leaves unclear what constitutes a "rulemaking procedure." LEDVANCE appears to take for granted that a "rulemaking procedure" consists of a single notice and a single final rule. But that is not the evident and unambiguous, or even the best, understanding of the phrase. A "rulemaking procedure" may include multiple notices and lead to multiple final rule documents, as and when appropriate under the circumstances. For example, in *Airtouch Paging v. FCC*, 234 F.3d 815 (2d Cir. 2000), the FCC

followed a proposed rule with "two principal reports and orders"; after a petition for reconsideration the agency issued a third order, in which it announced that it would take up certain issues in yet further orders. The court described this series of events as "a rulemaking procedure." Of course it was not significant in that case whether the several reports and orders constituted a single procedure or multiple procedures. But that is consistent with DOE's conclusion here. Whether to conceive of a set of proposals and decisions as a single "rulemaking procedure" or as several "rulemaking procedures" is rarely important. To infer that because section 6295(i)(6)(A) uses the singular form, DOE can only issue a single proposal and a single final rule, would read far too much precision into the concept of a "rulemaking procedure." DOE declines to do so, especially given how—as discussed—that interpretation would undermine the purposes of section 6295(i)(6).

LEDVANCE suggests that the entire scheme of section 6295(i)(6) requires DOE to make its decision in a single integrated rulemaking. According to LEDVANCE, DOE is required to decide what standards to apply to GSLs in the same rule in which it decides what lamps will be GSLs. The backstop standard would come into play only if the standards that DOE has set do not "produce savings that are greater than or equal to the savings from a minimum efficacy standard of 45 lm/W." That savings analysis, LEDVANCE asserts, must be holistic and market-wide rather than product-by-product. In other words, to avoid the backstop standard DOE need not impose a standard of 45 lm/W on each and every GSL. Rather, DOE can impose a more or less stringent standard on various types of lamps so long as the aggregate savings are at least the same as a uniform 45 lm/W standard would have achieved. Because, LEDVANCE says, DOE cannot know what overall savings its standards will achieve unless it knows what lamps will be subject to GSLs, it follows that DOE must define GSLs and set standards in the same final rule.

This argument does not lead to the conclusion LEDVANCE seems to draw. If, indeed, DOE were prohibited from imposing the 45 lm/W backstop standard unless it had conducted an overall market savings analysis, and if that analysis were impossible without defining the scope of GSLs, it would only follow that DOE must define GSLs before imposing the backstop standard. Once DOE had defined GSLs, it could decide what standards to impose, then conduct the savings analysis that

LEDVANCE stated is required. DOE does not see why this analytical process would have to take place in a single final rule. LEDVANCE may be suggesting that it is unavoidably arbitrary and capricious for DOE to include a lamp as a GSL without simultaneously deciding what standards will apply. But DOE regards those questions as analytically distinct. Its task with respect to the exemptions is to determine which among the lamps currently exempted from regulation as GSLs should be brought within the scope of the GSL definition and the applicable EPCA standards-setting authority. In that decision, the relevant issue is whether maintaining or discontinuing an exemption would better serve the purposes of section 6295(i)(6). As discussed, DOE believes an exemption should be discontinued if lamps within that exemption would be convenient substitutes for GSLs, so that exempting the lamps entirely from regulation (or maintaining a less stringent standard for the lamps) would open up a possibility for manufacturers and consumers to undercut EPCA lamp standards. That potential loophole would exist and be damaging regardless what standards DOE might then apply to the formerly exempted lamps or to other GSLs.

Moreover, LEDVANCE's argument seems premised on a notion that EPCA obligates DOE to develop standards for GSLs and then analyze the overall energy savings from those standards, and that absent the development of standards and an analysis that results in insufficient savings, the backstop standard would not be applicable. The statutory language and structure do not support that premise. Section 6295(i)(6) requires DOE to "initiate" a rulemaking procedure to decide whether to amend the GSL standards and to decide whether to maintain or discontinue lamp exemptions. It does not, by its plain terms, require DOE to conclude that rulemaking procedure via a final rule on either topic, except in one case. If DOE "determines that the standards in effect for [GSILs] should be amended," then DOE must publish a final rule doing so. (42 U.S.C. 295(i)(6)(A)(iii)) To be clear, DOE infers, from the language instructing it to initiate a rulemaking procedure, that EPCA authorizes it to complete the rulemaking by issuing final rules taking one or more of the actions on which section 6295(i)(6)(A)(i) calls for rulemaking. Otherwise the mandate to initiate a rulemaking would be pointless. It does not follow, and DOE does not infer, that DOE *must* issue final

rules on each of those items—aside, of course, from the circumstance just mentioned in which DOE determines GSIL standards should be amended.

The structure of section 6295(i)(6)(A) itself is consistent with DOE's interpretation. DOE notes that the statute explicitly and specifically requires DOE to issue a final rule in one particular situation. If the statute were meant to require DOE to issue 6295(i)(6)(A) rules regardless, it would presumably have said so rather than identifying that particular circumstance. (Conversely, reading section 6295(i)(6)(A)(iii) to require DOE to finalize the subparagraph (i) rules in all circumstances would make superfluous the clause in subparagraph (iii) that specifies a particular circumstance.)

The structure of section 6295 overall also supports DOE's interpretation. Repeatedly, the section specifies a point at which DOE must issue a proposed rule, and it follows that instruction with a requirement to publish a final rule. For example, subsection (b)(3) says DOE "shall publish a proposed rule" by a certain date on whether to amend refrigerator standards; it then says DOE "shall publish a final rule" by a second date "which shall contain such amendment, if any." (42 U.S.C. 6295(b)(3)(A)(i)) Subsection (m) says that within six years after amending a given standard, DOE shall publish either a notice of a determination that the standard does not at that time need to be amended, or "a notice of proposed rulemaking including new proposed standards." If DOE publishes the second type of notice, then within two years it "shall publish a final rule amending the standard." (42 U.S.C. 6295(m)) As a third example (among many that could be cited), if DOE receives a petition for an amended standard, it must publish a notice either granting or denying the petition. If it grants the petition, it must within three years publish either "a final rule that contains the new or amended standards" or "a determination that no new or amended standards are necessary." (42 U.S.C. 6295(n))

Thus, throughout section 6295, the statute distinguishes an obligation to propose a rule from an obligation to publish a final rule. When Congress wanted to require DOE to publish a final rule, it specified the conditions in which the requirement holds; the deadline for the final rule; and something about the content (*e.g.*, a final rule that includes amended standards). Section 6295(i)(6)(A) follows that pattern quite closely. It says that if DOE decides GSIL standards should be amended (the conditions leading to the

requirement), then by January 1, 2017 (the deadline), DOE must publish a final rule with an effective date at least three years later (the content). Given that pattern, DOE believes the most sensible interpretation of section 6295(i)(6)(A) is that it means exactly what it says. DOE was required to initiate rulemaking to decide whether to amend GSL standards and to decide which exemptions to maintain or to discontinue. DOE is only obligated to issue a final rule if it decides that GSIL standards should be amended. DOE has fulfilled the obligation to initiate a rulemaking through the publication of a notice announcing the availability of a framework document for general service lamps. 78 FR 73737 (December 9, 2013). It has not thus far concluded that GSIL standards should be amended, and therefore nothing in EPCA currently obligates DOE to issue a final rule amending GSL standards.

LEDVANCE contended that DOE cannot finalize a rule pursuant to section 6295(i)(6)(A)(i)(II)—regarding the exemptions—without finalizing a rule under subclause (I) on amending standards, because it cannot exercise the two authorities independently. (LEDVANCE, No. 90 at p. 8) But LEDVANCE identifies no language in EPCA that would impose such a restriction. As discussed, DOE does not believe paragraph (6)(A) requires it to complete a standards-setting rule at all. The regulatory program that EISA 2007 established was a preference and presumption for a 45 lm/W standard. The statute gives DOE the option to establish an alternative set of standards, on condition that those standards achieve energy savings at least as great as the 45 lm/W standard would. At the same time, Congress set some exemptions from the GSL regulatory scheme, and it authorized DOE to discontinue those exemptions if appropriate. Nothing in this framework would necessitate DOE's exercising the authorities just described in a single final rule. Consistent with that understanding of the policy underlying paragraph (6)(A), the text of the statute does not say DOE must do so.

LEDVANCE did contend that clause (iv) can support an inference that DOE must consider amended standards and discontinued exemptions in a single document. Clause (iv) says that DOE "shall consider phased-in effective dates under this subparagraph after considering" various economic issues such as "the impact of any amendment on manufacturers." In LEDVANCE's view, Congress would not have required DOE to consider those economic factors in isolation. That Congress specified

those factors therefore, LEDVANCE continued, demonstrates that Congress intended DOE to consider the section 6295(o) factors in a unitary rule about GSLs. (LEDVANCE, No. 90 at p. 8)

DOE regards that inference as inconsistent with the text of subparagraph (A) and with its purposes. Clause (iv) refers to “the impact of any amendment.” Evidently clause (iv) comes into play when DOE is considering an amendment to standards. Consistent with that understanding, clause (iii) says that if DOE decides to amend the standards, the final rule shall be published by January 1, 2017, “with an effective date that is not earlier than 3 years after the date” of publication. 42 U.S.C. 6295(i)(6)(A)(iii). Thus, when DOE establishes amended standards pursuant to subparagraph (A), it has discretion to set the effective date of the amendment (subject to the limitation that the effective date cannot be sooner than three years after publication). Clause (iv), then, instructs DOE, in the exercise of that discretion, to consider phased-in effective dates in light of certain factors like “the impact of [the] amendment.” However, if DOE fails to complete a rulemaking in accordance with clauses (i) through (iv) or if the final rule does not produce savings that are greater than or equal to the savings from a minimum efficacy standard of 45 lm/W, clause (v) says that DOE “shall prohibit” sales of lamps below the backstop standard “effective beginning January 1, 2020.” In that case, DOE would not have discretion regarding the effective date of the backstop standard. It would be odd, then, for the statute to require DOE to consider phased-in dates for the backstop. Clause (iv) can readily be interpreted to avoid that inconsistency.

Thus, all that clause (iv) requires is that DOE consider phased-in effective dates if and when it establishes amended standards under subparagraph (A). It seems like a *non sequitur* to conclude, from that requirement, that DOE must establish amended standards. That conclusion would be particularly strained in light of the preceding observation that Congress regularly in section 6295 specified when DOE must initiate and when it must conclude a rulemaking. If the intent was to require DOE to issue a final rule on amended standards, the ordinary way to set that requirement in EPCA would have been to say exactly that. To imply it, via the discussion of phased-in effective dates, would be an unusual and obscure way to require DOE to amend GSL standards. And, as discussed, DOE does not believe the policy of paragraph (6)(A) is that DOE must establish GSL standards.

Rather, Congress established a presumptive standard of 45 lm/W and allowed DOE, if it met the qualifications, to vary from that standard. Reading clause (iv) to apply only if DOE does vary from the 45 lm/W standard is consistent with that policy.

As an alternative argument, LEDVANCE suggested that even if DOE can issue this rule discontinuing certain GSL exemptions, the backstop would not apply to the formerly exempted lamps because there were no “standards in effect” for those lamps at the time of the rulemaking. (LEDVANCE, No. 90 at p. 8) DOE notes that the phrase “standards in effect” does not appear in clause (v), the text that describes the backstop. However, DOE takes LEDVANCE’s argument to be as follows. Clause (i)(I) instructs DOE to initiate a rulemaking to decide whether to amend “standards in effect for general service lamps.” Under clause (iii), if DOE decides that “the standards in effect” should be amended, it must publish a final rule to that effect by January 1, 2017. Clause (v) imposes the backstop “[i]f the Secretary fails to complete a rulemaking in accordance with clauses (i) through (iv).” Because such a rulemaking would be amending “the standards in effect,” and no standards were previously “in effect” for lamps that are currently exempt from being GSLs, LEDVANCE seems to be saying, the rulemaking “in accordance with clauses (i) through (iv)” cannot be about the standards for the previously exempt lamps. Therefore, LEDVANCE seems to infer, the backstop would not apply to those lamps.

However, the backstop provision does not limit itself to lamps for which standards were in effect. The status and content of the “rulemaking in accordance with clauses (i) through (iv)” determine whether the backstop will apply. But if it does, clause (v) says DOE shall prohibit the sale of “any general service lamp” that does not meet the backstop standard. The word “any” sweeps in all general service lamps, including those that were exempt before DOE discontinued an exemption. Clause (v) describes a prospective standard; it does not limit its scope to lamps that were subject to standards *before* the “rulemaking in accordance with clauses (i) through (iv).”

Moreover, LEDVANCE’s argument, as DOE understands it, risks making clause (i)(II) pointless. The argument would logically imply that DOE can only, under clause (i)(I), amend standards that were already “in effect”; thus, on LEDVANCE’s argument, DOE would not

be able to establish standards applicable to lamps for which it discontinued exemptions. If that were so, and if (as LEDVANCE posits) the backstop would not apply to those lamps either, there would be little point in discontinuing the exemption. DOE considers it more sensible and more consistent with the policies of paragraph (6)(A) to read clause (i) to permit it to establish standards for previously exempt lamps.

As a third category of objection, LEDVANCE stated that paragraph (6)(A) requires DOE to conduct a “fleet-wide analysis” of total energy savings from standards established by DOE. Under clause (v), after DOE sets its own standards pursuant to clauses (i) through (iv), the backstop would come into force if DOE’s standards do not “produce savings that are greater than or equal to the savings from” a uniform 45 lm/W standard. 42 U.S.C. 6295(i)(6)(A)(v). According to LEDVANCE, the “fleet-wide energy savings determination is integral to the EISA Rulemaking Proceeding and is a prerequisite to application of the EISA backstop provision.” (LEDVANCE, No. 90 at p. 9)

DOE notes that a “fleet-wide energy savings determination” is not in fact an exclusive prerequisite to the backstop. Under clause (v), DOE will be obligated to effectuate the backstop in either of two circumstances: If the energy savings from standards that DOE develops are insufficient, or “if the Secretary fails to complete a rulemaking in accordance with clauses (i) through (iv).” Thus, clause (v) expressly contemplates the possibility that DOE will not finalize a rule that develops alternative standards for GSLs. In that case, clause (v) by its text does not call for an analysis of energy savings; and of course there would be no energy savings to analyze. This structure is consistent with the understanding of paragraph (6)(A) as laid out before, that it sets 45 lm/W as a default and gives DOE the option—not the obligation—to develop alternative standards for GSLs. Thus, DOE disagrees that it must analyze fleet-wide energy savings from a DOE-imposed standard; and DOE disagrees that a rule defining GSLs is improper without an analysis of hypothetical DOE-imposed standards.⁶

⁶ LEDVANCE observed that under section 6295(o)(2)(B)(III), DOE must, in developing a standard, consider the “total projected amount” of energy savings; and LEDVANCE said DOE has typically “conducted a lifetime energy savings analysis for the entire class of covered products at issue.” (LEDVANCE, No. 90 at p. 9.) DOE need not address whether an analysis of energy savings pursuant to clause (v) would be on a similar basis, because DOE has not, at this point, developed

LEDVANCE suggested that it would also be impermissible for DOE to apply the backstop to lamps newly included in the definition of GSLs for a reason arising from the Administrative Procedure Act: That DOE did not provide adequate notice that application of the backstop would be a consequence of defining certain lamps to be GSLs. (LEDVANCE, No. 90 at p. 16) However, the October 2016 NOPDDA said that if DOE does not complete a standards rulemaking pursuant to clauses (i) through (iv), the backstop standard will come into effect for GSLs. 81 FR 71794, 71795 (October 18, 2016). It pointed out that when it discontinues an exemption, the lamps within that exemption will become GSLs (to the extent they otherwise fall within the definition of GSL). *Id.* at 71798. And DOE proposed “to discontinue a given exemption if the continuation of the exemption would undermine the 45 lm/W standard by providing a convenient unregulated alternative to GSLs.” *Id.* at 71799. Thus, an important premise of the decision as set forth in the notice was that DOE would include lamps as GSLs if it was important—in light of the considerations described in the notice—to ensure those lamps would be subject to the clause (v) backstop provision. Thus, DOE believes it provided adequate notice of the possibility that lamps newly included as GSLs would be subject to regulation as GSLs, including the clause (v) backstop provision if that becomes the standard for GSLs. DOE notes that many commenters, including LEDVANCE, discussed the issue in written comments and at the NOPDDA public meeting, indicating they were indeed aware of it.

A fourth category of objection, raised by LEDVANCE and by other commenters, was that DOE is not authorized to discontinue the exemptions set forth in section 6291(30)(D)(ii) and (BB)(ii)—the 22 exemptions for particular types of lamp that the notice discussed. (LEDVANCE, No. 90 at pp. 12–13) DOE notes that clause (i)(II) instructs DOE to initiate a rulemaking to decide whether “the exemptions . . . should be maintained or discontinued.” This language, particularly the reference to “the” exemptions, strongly suggests that Congress had a particular set of exemptions in mind about which DOE might make this decision. Consistent with ordinary principles of statutory interpretation and in order to fulfill the purposes of paragraph (6)(A), DOE is inclined to identify exemptions that it

can maintain or discontinue pursuant to clause (i)(II).

LEDVANCE argued that the “exemptions” at issue are the exemptions that EISA section 321(a)(3) authorized DOE to grant, upon petition. (LEDVANCE, No. 90 at p. 13) DOE does not believe those are the exemptions to which clause (i)(II) refers. Clause (i)(II) calls for a rulemaking, initiated by January 1, 2014, to decide whether “the exemptions” should be maintained or discontinued; that mandate presumes that “the exemptions” at issue existed as of January 2014. But the discretionary exemptions that EISA section 321(a)(3) permitted would only exist if persons had petitioned for exemptions, and if DOE had then granted those petitions. Were clause (i)(II) referring to those exemptions that might or might not exist at the beginning of 2014, a more natural phrasing would have been something like “any exemptions under this subsection.” Further, DOE could only grant an exemption under the process described in EISA section 321(a)(3) if it found, after a hearing, “that it is not technically feasible to serve a specialized lighting application . . . using a lamp that meets the requirements of this subsection,” and also found that “the exempted product is unlikely to be used in a general service lighting application.” Thus, to grant an exemption under that process DOE would have to engage in an assessment of specific technical issues. It seems unlikely, and contrary to the purpose of that petition process, that Congress would have called for DOE to initiate an overall rulemaking to decide whether to continue any exemptions it might have granted. Such a review would seem particularly odd because, given the timing of the requirements set in EISA section 321, DOE would not have received any petitions earlier than 2011. (In fact, DOE has not received any such petitions.) The clause (i)(II) rulemaking was to begin just a few years later. It seems unlikely that the technical facts underlying DOE’s decision on a petition would have changed in such a brief time.

Given DOE’s understanding of the framework Congress set up for GSLs, as described, DOE believes it is more consistent with the purposes of the statute to read “the exemptions” as referring to the lamp types that the original definition said are not GSILs or are not GSLs. Unlike lamps that DOE might exempt under the EISA section 321(a)(3) petition process, there has been no determination that these lamp types are unlikely to be used for general service lighting. DOE believes Congress

deferred that determination for DOE’s later assessment under clause (i)(II).

LEDVANCE did not identify any other exemptions to which clause (i)(II) might refer. However, DOE has also considered whether clause (i)(II) might address solely an exemption provided by an amendment in EISA section 322.⁷ That amendment imposed minimum efficiency standards on certain general service fluorescent lamps and incandescent reflector lamps. In delimiting the coverage of those standards, it said that “the standards specified in subparagraph (B) shall not apply to the following types of incandescent reflector lamps”: ER30, BR30, BR40, or ER40 lamps rated at 50 watts or less; BR30, BR40, or ER40 lamps rated at 65 watts; and R20 lamps rated 45 watts or less. DOE does not believe clause (i)(II) is solely about these exemptions. Clause (i)(II) in subparagraph (6)(A) is paired with clause (i)(I), which calls for a general rulemaking to review standards for GSLs across the board. It seems unlikely that, together with that broad-based rulemaking, Congress would have mandated a rulemaking just to assess the specific, narrow exemptions from the IRL standards set by EISA section 322. It bears mention that the scope of that rulemaking would be particularly narrow. Clause (i)(II) refers to “the exemptions for certain incandescent lamps,” but according to the definition of “incandescent lamp” only reflector lamps above 40 watts are incandescent lamps. 42 U.S.C. 6291(30)(C)(ii). Thus, the “incandescent lamps” exempted from the EISA section 322 standards are only ER30, BR30, BR40, or ER40 lamps between 40 and 50 watts; BR30, BR40, or ER40 lamps of 65 watts; and R20 lamps between 40 and 45 watts. While DOE has determined to address the exemption for IRLs in a separate document (discussed later in this section), limiting consideration of the exemptions only to this narrow set of lamp types would be an odd focus for a rulemaking alongside the broad clause (i)(I) standards review.

One commenter suggested that the clause (i)(II) authority to discontinue exemptions relates only to five types of lamps addressed by section 6295(I)(4). That paragraph requires DOE to collect sales data on five types of lamps (rough service lamps, vibration service lamps, 3-way incandescent lamps, 2,601–3,300

⁷ As noted, EISA sections 321 and 322 made conflicting amendments to section 325(i)(1) of EPCA. In assessing whether clause (i)(II) refers solely to the exemptions stated in the EISA section 322 amendment, DOE need not resolve the conflict; DOE assumes for purposes of argument that the EISA section 322 amendments are part of EPCA.

lumen general service incandescent lamps, and shatter-resistant lamps), and construct a model to extrapolate sales after 2006 from historical sales. 42 U.S.C. 6295(I)(4). For each type, if annual sales grow to be more than 100 percent above the extrapolated historical sales would have been, DOE is required to establish either a backstop mandated by the statute or come up with its own energy conservation standard.

DOE does not believe section 6295(i)(6)(A)(i)(II), which requires DOE to initiate a rulemaking on whether to maintain or discontinue “the exemptions for certain incandescent lamps,” refers to this framework of comparisons to forecast sales. The language of section 6295(I)(4), unlike that of section 6291(30)(D)(ii) and (BB)(ii), does not seem to describe exemptions. Paragraph (I)(4) simply says DOE “shall prescribe an energy efficiency standard” for the five types of lamp “in accordance with this paragraph.” It does not purport to exclude the five lamp types from being GSILs or GSLs; it simply sets a framework including a default standard for when sales grow more than expected. By contrast, section 6291(30)(D)(ii) and (BB)(ii) actually say certain lamps are “not included” as GSILs or GSLs; that language sounds much more like an exemption. Furthermore, subsection (I)(4) specifies conditions and timing for when DOE is to undertake a rulemaking for each of the five lamp types. It would be odd if subsection (i)(6)(A) required DOE to assess, separately, whether to cancel subsection (I)(4) for each type.

The remaining exemptions are those in the definitions of GSIL and GSL at 42 U.S.C. 6291(30)(D)(ii) and (BB)(ii). For the reasons discussed, DOE believes that those are the “exemptions” to which clause (i)(II) applies. It bears emphasis that DOE interprets clause (i)(II) to address both the (D)(ii) and the (BB)(ii) exemptions. DOE recognizes that clause (i)(II) refers to “the exemptions for certain incandescent lamps,” and subparagraph (BB)(ii) relates to GSLs rather than GSILs. However, the first type of exemption in subparagraph (BB)(ii) simply refers back to subparagraph (D)(ii): It says GSL does not include “any lighting application or bulb shape described in any of subclauses (I) through (XXII) of subparagraph (D)(ii).” DOE takes “the exemptions” to encompass the subparagraph (D)(ii) exemptions both as exemptions from the definition of GSIL and through their effect on the definition of GSL.

DOE recognizes that clause (i)(II) is ambiguous on this point because, as previously noted, it does not identify “the exemptions” specifically and does not say what “the exemptions” are exemptions from. However, DOE believes the interpretation described here appropriately fulfills the purposes of subsection (i)(6)(A). DOE notes that clause (i)(II) is a counterpart to clause (i)(I), which instructs DOE to consider developing standards for GSLs. Thus, clause (i) as a whole is about GSL standards, and it would be natural for “the exemptions” involved in subclause (II) to include exemptions from the definition of GSL. If subclause (II) only involved the definition of GSIL, it would be hard to see why Congress would require DOE to initiate a rulemaking on that issue at the same time as it initiated a rulemaking on GSL standards; DOE already maintained GSIL standards and would have reviewed them periodically as for other consumer products.

DOE recognizes that because discontinuing an exemption from being GSILs makes the corresponding lamps GSILs (to the extent they otherwise satisfy the criteria in the GSIL definition), those lamps will also become GSLs. That fact actually further motivates DOE’s interpretation. As discussed in the NOPDDA and in section III.A.4.f.i, many of the 22 exemptions in clause (30)(D)(ii) encompass technologies besides incandescent filaments. If “the exemptions” in subclause (II) nonetheless included only exemptions from the GSIL definition, the result of discontinuing an exemption would be that a set of incandescent lamps become subject to GSL standards without the corresponding non-incandescent lamps being subject to the same standards. For example, DOE is discontinuing the exemption for CA shape lamps. If DOE were only permitted to regulate incandescent CA shape incandescent lamps as GSLs, and not other CA shape lamps such as CA shape compact fluorescent lamps, the result would be a skewed regulatory regime that seems inconsistent with the purposes of subsection (i)(6)(A).

Subsection (i)(6)(A) actually instructs DOE to avoid that result: Clause (ii) of subsection (i)(6)(A) specifies that “[t]he rulemaking”—the rulemaking that clause (i) calls for—“shall not be limited to incandescent technologies.” DOE interprets that language to mean that in setting standards and deciding on exemptions under clause (i), it should consider non-incandescent lamps alongside incandescent lamps. With respect to the exemptions, that means

addressing the section 6291(30)(BB)(ii) exemptions from the GSL definition.

LEDVANCE, along with other commenters, contended that the definitional provisions—particularly those listing the 22 types of lamp in (D)(ii) and (BB)(ii)—cannot be the subject of the clause (i)(II) rulemaking because they are “exclusions” rather than “exemptions.” (LEDVANCE, No. 90 at pp. 12–13) DOE notes that the texts of section 6291(30)(D)(ii) and (BB)(ii) do not actually state that they provide “exclusions.” That word appears only in the headings of the provisions. Headings “can be a useful aid in resolving a statutory text’s ambiguity,” *United States v. Quality Stores, Inc.*, 134 S. Ct. 1395, 1401 (2014); but titling subparagraphs (D) and (BB) “Exclusions” does not clearly indicate that the substance of those provisions describe exclusions and not exemptions.

The texts of those provisions say that the respective defined terms (GSIL and GSL) “do[] not include” certain lamps. 42 U.S.C. 6291(30)(D)(ii); 6291(30)(BB)(ii). The language “does not include” is consistent with stating an exemption. “Exemption,” in ordinary English, simply means freeing or excusing one set of persons or things from an obligation to which others are subject (*see American Heritage Dictionary*). GSILs and GSLs are subject to regulatory requirements under EPCA; by stating that certain lamps are “not include[d]” in those categories, subparagraphs (D) and (BB) exempt them from the regulatory requirements.

LEDVANCE stressed that the words “exclusion” and “exemption” are different, and urged that DOE’s interpretation of clause (i)(II) must reflect that difference.⁸ (LEDVANCE, No. 90 at pp. 12–13) While DOE recognizes that differences in statutory language are usually significant, “Congress sometimes uses slightly different language to convey the same message,” *DePierre v. United States*, 564 U.S. 70, 83 (2011). *See also McNeil v. United States*, 508 U.S. 106, 112 (1993) (“In its statutory context, we think the normal interpretation of the word ‘institute’ is synonymous with the words ‘begin’ and ‘commence.’”). The words “exemption” and “exclusion” can be synonymous in ordinary English.⁹ *See, e.g., Public Investors*

⁸ This argument is somewhat misplaced because, as just noted, the text of the GSIL and GSL definitions does not use the word “exclusions.”

⁹ LEDVANCE said that the D.C. Circuit’s *Hearth, Patio & Barbecue* decision held that “exclusions” and “exemptions” are different. The opinion actually seems to use the words “exclude” and

Arbitration Bar Ass'n v. SEC, 771 F.3d 1, 8 (D.C. Cir. 2014) (Brown, J., concurring) (“We began in 1978 by interpreting Exemption 8’s categorically narrow exclusion broadly.”); *Friends of Animals v. Jewell*, 824 F.3d 1033, 1036 (D.C. Cir. 2016) (citing agency decision titled “Exclusion of U.S. Captive-Bred Scimitar-Horned Oryx, Addax, and Dama Gazelle from Certain Prohibitions (‘Captive-Bred Exemption’)”).

Indeed, Congress used them synonymously in other parts of subsection (i) added by the same provision of EISA 2007 that added both paragraph (6)(A) and the list of 22 lamp types not included as GSILs or GSLs. The provision in EISA section 321(a)(3) allowing the public to petition DOE to regulate additional types of lamps, discussed, reads as follows. “Any person may petition the Secretary to establish standards for lamp shapes or bases that are excluded from the definition of general service lamps.” “The petition shall include evidence that the availability or sales of exempted incandescent lamps have increased significantly.” Surely what Congress had in mind is that when a petitioner asks for standards on a given type of lamp, the petition should demonstrate that the availability or sales of that type of lamp have increased. But in the first sentence refers to the subject of the petition as “lamps excluded from the definition of general service lamps,” and the second calls it “exempted lamps.” Evidently Congress considered the text that “exclude[s]” certain lamps from the definition of GSLs to be an exemption.

A commenter also argued that DOE cannot discontinue exemptions for any set of lamps for which EPCA already imposes standards—or for lamps for which EPCA specifies future standards like the five lamp types addressed by subsection (I)(4). According to this commenter, such lamps are not “exempt” so there are no “exemptions” to discontinue. In considering this argument, DOE observes that to complete a concept of an “exemption” or of “exempting,” it is necessary to say what the exemption is protecting from. In referring to “the exemptions,” section 6295(i)(6)(A)(i)(II) does not provide that information, leaving an unavoidable ambiguity for DOE to reconcile. On the commenter’s view, “the exemptions” means exemptions from regulation

under EPCA; thus if a type of lamp is subject to regulation of any kind under EPCA, it does not enjoy an “exemption” that DOE may discontinue under subsection (i)(6)(A)(i). However, DOE considers it more sensible to read “the exemptions” as meaning exemptions from being regulated as GSLs. That understanding would be consistent with the structure of clause (i), which calls for DOE to consider amending GSL standards and to consider discontinuing exemptions. If these two parts of clause (i) are about the same content, “the exemptions” would be exemptions that protect lamps from GSL standards.

DOE believes its interpretation appropriately fulfills the purposes of subsection (i)(6) and of EPCA as a whole. As discussed, DOE believes subsection (i)(6) was meant to establish a particular level of energy savings, namely the amount that could be achieved by imposing a 45 lm/W standard on GSLs. As the fourth category of GSL indicates, Congress left some flexibility about the concept of GSL, so that it could encompass lamps that fulfill the same sorts of functions as GSILs. Consistent with that understanding, DOE believes the purpose of discontinuing exemptions is to ensure that a given type of lamp does not provide a ready substitute for lamps regulated as GSLs, because the availability of such a substitute will significantly erode the savings achieved by GSL regulation. On that understanding, it is straightforward that Congress would want DOE to assess whether a given type of lamps should be exempt from GSL regulation.

By contrast, to leave lamps out—as the commenter suggested—simply because they are subject to other types of regulation and different standards would largely defeat the purpose of GSL regulation just described. For some lamp types, the criterion that commenters label a “standard” is a definitional limit; for example a G shape lamp is exempt only if it has a diameter of 5 inches or more, and a T shape lamp is exempt only if it uses less than 40 watts or has a length of 10 inches or more. Commenters disagree with DOE’s characterization of these limits as definitional criteria rather than standards. Regardless, they are not GSL standards, and they are not of the same character or stringency as the GSL backstop that is the default GSL standard, and are presumably less stringent than any standard that DOE might develop to achieve energy savings comparable to those from the 45 lm/W backstop standard. It seems unlikely that Congress would have considered such criteria adequate alternatives to

GSL standards. Therefore, DOE considers it more consistent with the scheme of subsection (i)(6) that DOE should assess whether to subject to GSL regulation the lamps within such an exemption. For example, with respect to T shape lamps, DOE must assess whether lamps over 10 inches or lamps under 40 watts are ready substitutes for GSLs.

Commenters also argued that DOE cannot discontinue the exemption for incandescent reflector lamps in particular. DOE will address these comments in a separate rule. This final rule does not include a determination whether to maintain or discontinue the exemption for incandescent reflector lamps and does not include those lamps within the definition of GSLs. This rule does address the exemption for “reflector lamps”; as discussed in section III.A.1.a, the rule addresses only reflector lamps that are not “incandescent reflector lamps” as defined in EPCA.

In the following sections, DOE provides detailed discussions of how the definition of GSL adopted in this final rule is consistent with the authorities discussed in this section.

III. Adopted Definition of General Service Lamp

A. General Service Lamp Definition

The term general service lamp (GSL) includes general service incandescent lamps (GSILs), compact fluorescent lamps (CFLs), general service light-emitting diode (LED) and organic light-emitting diode (OLED) lamps, and any other lamps that DOE determines are used to satisfy lighting applications traditionally served by GSILs; however, GSLs do not include any lighting application or bulb shape that under 42 U.S.C. 6291(30)(D)(ii) is not included in the “general service incandescent lamp” definition, or any general service fluorescent lamp or incandescent reflector lamp. (42 U.S.C. 6291(30)(BB)) The October 2016 NOPDDA revisited the proposed definition of GSL from the March 2016 GSL ECS NOPR, including the exemptions contained in the GSIL and GSL definitions, and proposed a revised definition of “general service lamp” in § 430.2 to capture various criteria and delineate the lamp types considered to be GSLs. 81 FR 71806–71807. More specifically, DOE proposed the a definition for GSL in the October 2016 NOPDDA A general service lamp, as proposed, would be a lamp that has an ANSI base, operates at any voltage, has an initial lumen output of greater than or equal to 310 lumens (or 232 lumens for modified spectrum general

“exempt” interchangeably. At any rate, DOE acknowledges that in many contexts “exclusion” and “exemption” can refer to different concepts. Its observation here is simply that the two words can also be synonymous, and that statutory context and purpose must inform DOE’s interpretation of the word “exemption” here.

service incandescent lamps) and less than or equal to 4,000 lumens, is not a light fixture, is not an LED downlight retrofit kit, and is used in general lighting applications. General service lamps include, but are not limited to, general service incandescent lamps, compact fluorescent lamps, general service light-emitting diode lamps, and general service organic light-emitting diode lamps, but do not include general service fluorescent lamps; linear fluorescent lamps of lengths from one to eight feet; circline fluorescent lamps; fluorescent lamps specifically designed for cold temperature applications; impact-resistant fluorescent lamps; reflectorized or aperture fluorescent lamps; fluorescent lamps designed for use in reprographic equipment; fluorescent lamps primarily designed to produce radiation in the ultra-violet region of the spectrum; fluorescent lamps with a color rendering index of 87 or greater; R20 short lamps; specialty MR lamps; appliance lamps; black light lamps; bug lamps; colored lamps; infrared lamps; left-hand thread lamps, marine lamps, marine signal service lamps; mine service lamps; plant light lamps; sign service lamps; silver bowl lamps, showcase lamps, and traffic signal lamps.

DOE received general comments on its proposed definition.

California Energy Commission (CEC), Southern California Edison (SCE), National Resources Defense Council (NRDC), Rutgers Law School Environmental Law Society (RELS), Northeast Energy Efficiency Partnerships (NEEP), Utility Coalition, and Appliance Standard Awareness Project (ASAP) expressed strong support for DOE's proposed definition of GSL. CEC and RELS commented that the revised proposal encourages high performance requirements for technology-neutral GSLs and will result in significant additional energy savings for the nation as well as increased consumer savings. NRDC and NEEP noted that the revised definition addressed stakeholder input including many of their concerns on previous proposals. In particular, NRDC and CEC agreed with DOE's approach of including lamps regardless of shape or base type in order to prevent gaming of the system. Citing reflector lamps as an example, NRDC stated that manufacturers have taken advantage of definitions in the past by creating new lamp shapes outside of the product definition that then increase in sales. NEEP stated its overall support for proposed scope of GSLs, and asserted there will be a wide variety of highly efficacious and low cost lamps that will

fill the needs for consumers. ASAP added that with a few minor changes to the definitions, the definitions will be consistent with the statute, and DOE will be able to implement the backstop standard as required by Congress and issue a final rule to complete this critical rulemaking. (CEC, No. 81 at p. 1; SCE, No. 83 at pp. 23–24; NRDC, No. 83 at pp. 9–10; ASAP, No. 83 at pp. 20–21; NEEP, No. 83 at p. 13; NRDC, No. 85 at pp. 1–2; RELS, No. 86 at p. 1; CEC, No. 91 at p. 1)

SCE stated that both utilities and industry played a critical role in transforming the market and added that progress will continue after the rulemaking ends. ASAP also emphasized the role of utilities, noting that utilities have spent billions of dollars to move the market to the level of efficiency available today and remain interested in how to make the transition to a GSL standard successful. (SCE, No. 83 at pp. 23–24; ASAP, No. 83 at pp. 17–19)

In contrast, Avalos stated that the expanded definition simply broadens the scope of GSL and does not clarify what lamps are considered GSLs. Avalos added that several lamps are included under the revised definition that are not general service lamps and suggested defining GSL to include lamps that are used on a regular basis. (Avalos, No. 80 at p. 1)

NEMA also commented that the scope of the proposed GSL definition is too broad. NEMA stated that available sales and market data should be used to determine the scope rather than speculating whether lamp types may become loopholes in the future. NEMA added that the sales data collected from the section 6295(l) rulemaking indicates that some of the lamp types that look like 60 W incandescent lamps, such as rough service and vibration service, are being used as substitutes. However, NEMA also noted that there are very small or large lamps, such as 2,000 lumen sign lamps and G40 lamps, which would fall within DOE's proposed definition but that are not effective substitutes for GSILs because they cannot fit in the same fixtures or applications. (NEMA, No. 83 at pp. 50–52) Westinghouse also expressed concern about DOE's proposed definition, stating that because it is so broad some lamp types will be inadvertently included in the scope of the GSL definition. (Westinghouse, No. 83 at p. 135)

DOE acknowledges that it has proposed a broad definition for general service lamp. However, DOE does not intend for the definition to include lamps that are not properly considered

general service lamps. In the following sections, DOE discusses key aspects of the definition and revisions implemented for this final rule.

1. GSILs

As stated previously, GSILs include GSILs. (42 U.S.C. 6291(30)(BB)(i)(I)) The current definition of “general service incandescent lamp” is a standard incandescent or halogen type lamp that is intended for general service applications; has a medium screw base; has a lumen range of not less than 310 lumens and not more than 2,600 lumens or, in the case of a modified spectrum lamp, not less than 232 lumens and not more than 1,950 lumens; and is capable of being operated at a voltage range at least partially within 110 and 130 volts; however this definition does not apply to the following incandescent lamps: An appliance lamp; A black light lamp; A bug lamp; A colored lamp; An infrared lamp; A left-hand thread lamp; A marine lamp; A marine signal service lamp; A mine service lamp; A plant light lamp; A reflector lamp; A rough service lamp; A shatter-resistant lamp (including a shatter-proof lamp and a shatter-protected lamp); A sign service lamp; A silver bowl lamp; A showcase lamp; A 3-way incandescent lamp; A traffic signal lamp; A vibration service lamp; A G shape lamp (as defined in ANSI C78.20 and ANSI C79.1–2002) with a diameter of 5 inches or more; A T shape lamp (as defined in ANSI C78.20 and ANSI C79.1–2002) and that uses not more than 40 watts or has a length of more than 10 inches; and A B, BA, CA, F, G16–1/2, G–25, G30, S, or M–14 lamp (as defined in ANSI C79.1–2002 and ANSI C78.20) of 40 watts or less. 10 CFR 430.2.

In the March 2016 GSL ECS NOPR, DOE declined to make a determination about discontinuing the 22 GSIL exemptions from the GSIL definition. DOE initially concluded that, because the Appropriations Rider prohibits DOE from using appropriated funds to implement or enforce standards for GSILs, DOE could not re-evaluate the existing exemptions for GSILs in the GSL rulemaking. 81 FR 14540. Specifically, DOE stated that, by definition, GSL does not apply to any lighting application or bulb shape that, under 42 U.S.C. 6291(30)(D), is not included within the “general service incandescent lamp” definition. (42 U.S.C. 6291(30)(BB)) Therefore, based on the GSL definition, the 22 incandescent lamps that are excluded in EPCA from the definition of GSIL would not be GSILs. Further, DOE stated that the formerly exempted lamp types would have to be considered GSILs in

order for DOE to regulate the lamps under its authority to promulgate standards for GSLs. Since the Appropriations Rider prohibits the expenditure of funds to implement or enforce standards for GSILs, DOE reasoned that it would not be able to establish or amend energy conservation standards for any of these lamps. As a result, making a determination about discontinuing the exemption from the GSIL definition for any of the 22 medium screw base lamps would make no difference in the GSL rulemaking, and DOE declined to address the exemptions at that time. 81 FR 14541.

Upon consideration of the comments received on the March 2016 GSL ECS NOPR and further review of the relevant authorities, DOE revisited its interpretation in the October 2016 NOPDDA with respect to the proposed definition of GSL and application of the Appropriations Rider. DOE noted that the focus of the March 2016 GSL ECS NOPR was to propose new energy conservation standards for GSLs; in that context, DOE did not propose to modify the GSIL exemptions and then impose new standards for GSILs. By contrast, the October 2016 NOPDDA neither implemented nor sought to enforce any standard. Rather, the October 2016 NOPDDA sought to define what constitutes a GSIL and what constitutes a GSL under 42 U.S.C. 6295(i)(6)(A)(i)(II), an exercise distinct from establishing standards. As previously noted, the Appropriations Rider restricts DOE from “implementing or enforcing” the standards imposed on GSILs by 10 CFR 430.32(x). However, it does not preclude DOE from utilizing its authority under EPCA to revisit and alter the scope of GSIL and GSL, even if a consequence of that decision will be that additional incandescent lamps may become subject to the backstop standard.

In the October 2016 NOPDDA, DOE noted it believes this is a reasonable interpretation of the Appropriations Rider because, in evaluating the exemptions, DOE followed a directive related to a GSL rulemaking to define the scope of GSLs. DOE did not conduct any analysis in support of establishing energy conservation standards for GSILs. Although a collateral effect is to broaden the scope of the GSIL definition, DOE simply proposed to define what lamps constitute GSLs so that both manufacturers and DOE can understand how the regulations apply to the market. As discussed, DOE’s defining the scope of GSL in light of the 45 lm/W backstop standard set in 42 U.S.C. 6295(i)(6)(A)(v) is not the same as DOE establishing standards.

Furthermore, as previously noted, in the event standards were established, leaving certain exemptions in place would diminish the energy savings that would otherwise be achieved because the excluded lamps would provide a less efficient option to meet the same general service lighting application. 81 FR 71797–71798.

Commenters inquired why DOE had apparently changed its interpretation of the Appropriations Rider. As noted, the March 2016 GSL ECS NOPR focused on establishing amended standards. The October 2016 NOPDDA and this final rule are addressed solely to the definition of GSL, recognizing that the additional lamps that DOE includes as GSILs will become subject to either a DOE-developed standard or to the 45 lm/W backstop standard that EPCA set as the default. In this context, interpreting the Appropriations Rider to block DOE from assessing the 22 exemptions would risk undermining the 45 lm/W backstop standard that Congress set. That consequence is quite different from what DOE faced with respect to the March 2016 GSL ECS NOPR, with respect to which a broad interpretation of the Appropriations Rider would only have restricted DOE’s ability to develop its own standards. DOE, therefore, interpreted the Appropriations Rider as applying differently in the context of the October 2016 NOPDDA, and similarly does not interpret the Appropriations Rider as precluding its assessment of the exemptions in this final rule.

In the October 2016 NOPDDA, DOE evaluated the 22 lighting applications or bulb shapes exempted under the GSIL definition to determine whether such exemptions should be maintained or discontinued. 81 FR 71798. In the October 2016 NOPDDA, DOE proposed to discontinue eight GSIL exemptions (for reflector lamps, rough service lamps, shatter-resistant lamps, 3-way incandescent lamps, vibration service lamps, and lamps with specific shapes) based on compiled sales data and consideration of additional, applicable factors. DOE proposed to maintain 14 of the GSIL exemptions due to low sales and low potential for use in GSL applications.

In this final rule, DOE is maintaining 15 of the exemptions and discontinuing seven of them. To summarize the analytical approach discussed later with reference to comments, DOE believes the purpose of the decision that subsection (i)(6)(A)(i)(II) calls for is to ensure that a given exemption will not impair the effectiveness of GSL standards by leaving available a convenient substitute that is not

regulated as a GSL. Therefore, DOE has based its decision on each exemption on an assessment of whether the exemption encompasses lamps that can provide general illumination and can functionally be a ready substitute for lamps already covered as GSLs.

The technical characteristics of lamps in a given exemption and the volume of sales of those lamps are among the considerations relevant to that assessment. High annual sales indicates that the product is likely used in general lighting applications,¹⁰ because the sales of lamps for specialty applications tend to be relatively small compared to sales for general-purpose lighting. However, sales data are not the only consideration. It may be appropriate to discontinue an exemption even though current sales are relatively low, if technical characteristics of the exempted lamps make them likely to serve as ready substitutes for GSLs once GSL standards are in place. For example, as discussed in section III.A.1.a, DOE believes shatter-resistant lamps are similar enough to rough service and vibration service lamps that shatter-resistant lamps will be substitutable for GSILs just as rough service and vibration service lamps have become substitutes for GSILs. Further, as discussed later in this section, for a lamp to be a viable substitute for GSILs, DOE does not think the lamp has to fit into the same existing fixtures as some type of GSL. Markets will shift in response to GSL standards, and DOE would expect some substitution of fixtures to occur as part of substituting non-GSL lamps for GSILs.

DOE received several comments regarding its authority to reconsider the 22 GSIL exemptions. NEMA stated that DOE was not authorized to redefine GSIL to include any of the 22 lighting applications or bulb shapes exempted from the definition of GSIL. (NEMA No. 93 at p. 3) NEMA further stated that Congress defined GSIL in very specific terms, limiting the term to “standard incandescent or halogen type lamps” and that the 22 listed lamps are not standard incandescent lamps, and are therefore excluded from the GSIL definition. (NEMA No. 93 at p. 3) NEMA stated that in contrast to the “standard” incandescent lamp, some of the 22 excluded lamps lack a “medium screw base,” some have lower lumen output than the minimum lumens for GSILs, and some of them are separately regulated. (NEMA, No. 93 at p. 3) NEMA

¹⁰ DOE notes that the annual sales of six lamp categories for which exemptions were discontinued in this notice were several times greater than the fifteen lamp categories for which exemptions were maintained.

stated DOE has no authority to change the GSIL definition and urged DOE to retain the existing definition. (NEMA, No. 93 at p. 22)

EPCA does not define “standard” in the context of incandescent lamp.¹¹ However, DOE considers it unlikely that the exemptions encompass solely lamps that are not “standard.” Were that the case, the exemptions would be superfluous, because the word “standard” in the definition of GSIL would on its own have ensured that none of those lamps are GSILs. For example, one of the 22 exemptions is for 3-way incandescent lamps. With respect to this type of lamp, the GSIL definition reads: “a standard incandescent or halogen type lamp that” meets four qualifications (“intended for general service applications,” medium screw base, 310–2,600 lumens, and functional at 110–130 volts), but not including 3-way incandescent lamps. If no 3-way incandescent lamps are “standard,” then the exemption for those lamps was unnecessary. To be clear, DOE acknowledges that this argument does not imply that all 3-way incandescent lamps are “standard,” or that all 3-way incandescent lamps would meet the other GSIL qualifications (such as lumen range or screw base). Nonetheless, it seems likely that the 22 exemptions cover some lamps that would, absent the exemption, be GSILs.

Regarding DOE’s decision to maintain or discontinue the 22 GSIL exemptions, PG&E supported DOE’s decision to bring previously exempted lamp types into the scope of coverage of the GSL rule. PG&E added that these lamp types pose a significant risk to energy savings as they can easily replace GSLs in many applications. Further PG&E stated that LED versions are dropping in price while increasing in efficiency and are available in range of shapes, sizes, lumen outputs, correlated color temperature (CCT), beam angles, and base types. (PG&E, No. 83 at pp. 14–15) CEC, Utility Coalition, NEEP, and NRDC also supported DOE’s proposed approach and agreed with the eight lamp types DOE proposed to no longer exempt based on the sales of these lamp types and their potential for lamp switching. NEEP and NRDC added that these categories all have high-efficiency alternatives that produce general illumination. (CEC, No. 81 at p. 1; Utility Coalition, No. 95 at p. 3; NEEP, No. 92 at p. 1; NRDC, No. 85 at pp. 1–2) However, NEMA stated that DOE should maintain all 22 GSIL exemptions except for vibration service lamps and

rough service lamps. (NEMA, No. 83 at p. 93)

In support of its analysis of whether to maintain or discontinue the 22 GSIL exemptions, in the October 2016 NOPDDA DOE presented estimated sales data for the 22 exempted lamp types. NEMA stated that sales for most of the 22 exempted lamps are declining and that it was the intent of Congress to require that DOE find sales increasing as a prerequisite to discontinue an exemption. (NEMA, No. 83 at p. 34; NEMA No. 93 at p. 12) NEMA pointed to the petition process established under section 321 of EISA 2007 as indicative of that intent. (NEMA, No. 93 at p. 12–13) NEMA and LEDVANCE noted that Congress required a demonstration of increased sales as a prerequisite for DOE to grant a petition submitted by the public to reconsider an exemption, and that DOE must be guided by the same consideration when determining whether an exemption should be maintained under 42 U.S.C. 6295(i)(6)(A)(i)(II). (NEMA, No. 83 at pp. 33–34; LEDVANCE, No. 90 at pp. 25–27) NEMA and LEDVANCE cited the requirement under 42 U.S.C. 6295(i)(6)(A)(i)(II) for DOE to consider, in part, “exempted lamp sales” collected by DOE as supporting the requirement for increased lamp sales in order to discontinue an exemption. (NEMA, No. 93 at 5; LEDVANCE, No. 90 at p. 26) NEMA and LEDVANCE added that a determination of lamp switching must be driven by data showing increased sales. (NEMA No. 93 at p. 13; LEDVANCE, No. 90 at pp. 25–27) NEMA and LEDVANCE concluded that the October 2016 NOPDDA did not provide data indicating that lamp switching was occurring, and rather data from the Energy Information Administration¹² shows that sales are decreasing. NEMA and LEDVANCE commented that if DOE was petitioned under section 325(i)(3)(E), it would not grant the petition or decide to regulate these specialty lamps and therefore any other action taken under section 325(i)(6)(A) is illogical. (NEMA, No. 93 at p. 13; LEDVANCE, No. 90 at pp. 25–27) John Taxpayer stated that DOE’s inclusion of these specialty lamps was regulatory overreach and Congress had specifically stated these lamps should be regulated if and only if their sales increased over 100 percent. Taxpayer commented that many excluded specialty lamps are not available at

hardware stores and will not fit in normal table lamps or recessed ceiling fixtures. (Taxpayer, No. 84 at p. 1)

While NRDC found the sales data presented by DOE in the October 2016 NOPDDA to be accurate, it commented that historical lamp sales are only one factor for consideration in DOE’s determination of whether an exemption should be maintained. The California Investor Owned Utilities (CA IOUs) and NRDC cautioned that the presented data reflected current standards and sales could increase dramatically for exempted lamp types when the next more efficient standards go into effect in 2020. (CA IOUs, No. 83 at pp. 64–65; NRDC, No. 83 at pp. 29–30, 35) NRDC and CA IOUs both commented that the market has previously seen the sales volume of lamps increase when the lamps were exempted from standards or subject to less stringent standards (e.g., BR lamps and modified spectrum lamps) and that historic sales records do not necessarily capture the potential for lamp switching. (NRDC, No. 85 at p. 1; CA IOUs, No. 83 at pp. 64–65) ASAP noted that market dynamics change as a result of setting standards for an inefficient lamp and that in some cases, an exempted low-volume, high-priced niche variant of an inefficient lamp can become a high-volume, low-priced loophole, thus undercutting the effect of the standard. ASAP added that DOE’s definition of “designed and marketed” has not prevented inefficient low-volume high-priced specialty lamps from becoming loopholes in standards thus far. (ASAP, No. 94 at p. 5)

As discussed, the petition process from EISA section 321(a)(3) is distinct from the decision that subparagraph (6)(A)(i)(II) calls for about maintaining or discontinuing exemptions. The statute does not require DOE to consider the same factors in the clause (i)(II) decision that it would in reviewing a petition. In particular, it does not restrict DOE to discontinuing an exemption only if sales of lamps within that exemption are increasing. While increases or decreases in lamp sales are an important consideration, DOE believes it can in some circumstances be appropriate to discontinue an exemption even at a time when sales of those lamps are decreasing. As described by GE, LEDVANCE, and Westinghouse, incandescent sales can be decreasing because consumers are purchasing LED versions of the same lamp. Thus, the lamp itself is not unpopular but rather is undergoing a shift in technology. For example, GE stated that sales of reflector lamps that are incandescent have been declining significantly over the last five years but

¹¹ DOE’s understanding of the word “standard” in this context is discussed in section III.A.4.b.

¹² See Energy Information Administration, Sales of specialty incandescent bulbs decline despite exemption from efficiency standards (April 2, 2013) available at: <http://www.eia.gov/todayinenergy/detail.php?id=10631>.

that was in large part caused by the increasing sales of LED reflector lamps. (GE, No. 83 at pp. 38, 84–85; LEDVANCE, No. 90 at p. 35; Westinghouse, No. 83 at pp. 128–129) Consequently, it can in some circumstances be appropriate to consider the overall volume of sales in assessing an exemption, even if the volume is currently decreasing.

DOE also considered the potential of lamp switching that may occur in response to any GSL standard. If an exempted lamp has the same utility to lamp users as a lamp subject to a standard as a GSL, DOE considered the potential increase in the use of the exempted lamp in response to a standard. As noted by the comments from CA IOUs and NRDC, prior to the effective date of any new standard the sales trends of exempted lamps do not necessarily capture the potential for lamp switching. As such, current lamp sale trends are only part of the consideration. DOE is permitted to account for future changes in consumer behavior so as to avoid the creation of loopholes.

DOE received several comments regarding whether a lamp could serve as a replacement for a GSL and therefore present a risk of lamp switching. CA IOUs stated that evaluations of the exemptions should be based on whether the exempted lamp type could serve as a replacement for a general service lamp. (CA IOUs, No. 83 at p. 107) Westinghouse stated that there are low-cost products on the market that consumers do not use as replacements for GSLs because they are not the appropriate shape or design. Avalos noted that a couple of exempted lamp types could be considered GSILs but are not due to their lamp structure. (Westinghouse, No. 83 at p. 30; Avalos, No. 80 at p. 1)

GE and LEDVANCE stated that DOE should consider the traditional omnidirectional incandescent lamp when considering the potential for lamp switching. (GE, No. 83 at pp. 37–38; LEDVANCE No. 83 at p. 59) GE stated that the definition of GSIL describes a lamp with a medium screw base, that produces between 310 and 2,600 lumens, and can operate on a voltage between 110 and 130 V, and that in order for a lamp to be considered as having the potential for “lamp switching” the lamp must maintain these same attributes. (GE, No. 88 at pp. 2–3) NEMA further stated that the definition of GSL authorizes DOE to consider “other lamps” and that “other lamps” must be used to satisfy lighting applications traditionally served by GSILs. (NEMA, No. 93 at p. 6) NEMA

stated that the use of the word “used,” past tense, establishes that there must be evidence for the basis of a finding that other lamps are operating in applications traditionally served by GSILs. (NEMA, No. 93 at p. 6) Westinghouse stated that consideration of lamp switching should be limited to whether a consumer could use an exempted lamp to replace a lamp that the consumer is currently using, and that consideration of how the use of fixtures may change in response to standards (*e.g.*, changes in fixtures used in new home construction) would be inconsistent with EPCA. (Westinghouse, No. 83 at pp. 39–40)

Other commenters stated that consideration of lamp switching should include the ability of an exempted lamp to provide similar function as a traditional GSIL, regardless of the fixture traditionally used with GSILs. ASAP stated that the presence of directional lamps in residences in the U.S. has grown significantly over time due to changes in new construction. (ASAP, No. 83 at pp. 38–39) ASAP stated that lighting in homes that traditionally was provided by A shape lamps in floor and table fixtures is being provided in newer construction through reflector lamps in recessed can lighting. (ASAP, No. 83 at pp. 58–59)

As previously noted, DOE understands the purpose of the decision that EPCA calls for on maintaining or discontinuing exemptions to be to ensure that consumers and manufacturers do not switch to readily available substitutes once standards for GSLs come into force. In making this assessment, the potential for an exempted lamp to be placed in a fixture that traditionally used a GSIL, and the potential change in the fixtures used to provide lighting in an application that was traditionally served by a GSIL are important considerations that DOE appropriately takes into account. Separate from the determinations to be made regarding certain exemptions, DOE is authorized to include in the definition of GSL other lamps that are used to satisfy lighting applications traditionally served by GSILs. (42 U.S.C. 6291(30)(BB)(i)(IV)) While 42 U.S.C. 6295(i)(6)(A)(i)(II) does not expressly direct DOE to consider whether an exempted lamp is used to satisfy the lighting applications traditionally served by GSILs, DOE has determined this consideration to be instructive in the overall assessment regarding the exemptions. As noted by commenters, the function traditionally provided by GSILs can, in some instances, be provided by more than one type of fixture. In order to minimize the

potential for loopholes, DOE has considered the potential for a consumer to change the type of lamp used in an existing fixture, and the potential change in the type of fixture used to provide the same function as traditionally provided by a fixture using a GSIL.

CA IOUs stated that evaluations of the 22 GSIL exemptions should also be based on whether the exempted lamp type can be made as an LED lamp. (That consideration would be relevant because it is almost certain that incandescent lamps will not be able to satisfy the 45 lm/W backstop standard if it comes into force.) (CA IOUs, No. 83 at p. 107) ASAP further stated that of the 15 lamp types that DOE is proposing to continue to exempt there are LED replacements available for all but the infrared lamp. ASAP noted LED replacements that are able to function in high temperature applications could serve as replacements for appliance lamps. (ASAP, No. 83 at pp. 98–99)

DOE is aware that LED replacements may exist for some of the exempt lamp categories. DOE did consider the existence or absence of LED replacements, though not as the only reason to discontinue or maintain a GSIL exemption. DOE’s consideration of lamps for which no equivalent LED replacements exist is discussed in section III.A.4.f.

NEMA provided updated sales information for this final rule. NEMA provided sales data from four members, which represents a significant portion of the market, for each of the exemptions that DOE proposed to discontinue. NEMA stated that although not all members are included, it conferred with other members that did not provide data to confirm the general trend of decreasing sales and shipments of specialty incandescent lamps since standards went into effect for GSILs between 2010 and 2012. (NEMA, No. 93 at pp. 9–10) DOE has updated Table III.1 to reflect this new data. DOE notes that, except with respect to certain lamps discussed in the sections that follow, the data from NEMA are consistent with the estimates and data that the October 2016 NOPDDA presented.

NEMA estimated the annual domestic sales of general service lamps (as defined in 42 U.S.C. 6291(BB)(I)–(III)) to be 600 million units. NEMA noted that this estimate excludes the shipments of the exemption categories proposed to be discontinued noting that each of the exempt lamp categories represents well below 1 percent of the total number of GSLs. NEMA and LEDVANCE stated that the October 2016 NOPDDA appeared to arbitrarily determine that

any number of annual unit sales above 3 million qualifies to be included in the definition of “general service lamp” regardless of whether lamp switching is occurring. NEMA and LEDVANCE cited the example in NEMA’s comments on the March 2016 GSL ECS NOPR that standards for globe lamps, which had an estimated 7 million annual unit sales, would not be justified because these lamps would not consume an average of 100 kWh of electricity per year as required by section 322(b) of EPCA. NEMA and LEDVANCE concluded that the decision to regulate a specialty lamp with declining sales and energy consumption that would not justify regulation as a new consumer product is arbitrary and capricious and contrary to law. (NEMA, No. 93 at pp. 13–14; LEDVANCE, No. 90 at pp. 25–27)

As discussed previously, DOE is not limited to considering only lamp sales when determining whether to maintain or discontinue an exemption. EPCA states lamps sales are only to be a part of the consideration, signifying that DOE is authorized to include other considerations. (42 U.S.C. 6295(i)(6)(A)(i)) As previously discussed, DOE considered the potential for lamp switching in order to minimize the potential for loopholes to any

standard(s) that may be established. Lamp sales are part of that consideration. Again, DOE recognized that historical sales data are not always predictive of future lamp switching. Lamp sales, therefore, were considered in conjunction with the characteristics of a lamp.

Additionally, the specific direction from Congress to consider whether to maintain or discontinue exemptions for certain lamps is separate and distinct from the EPCA requirements for classifying a consumer product as a covered product under 42 U.S.C. 6292(b), which requires minimum energy savings, and from the requirements set out in 42 U.S.C. 6295(o) for establishing new or amended standards. EPCA directs DOE to determine whether to include in the definition of an existing covered product lamps currently excluded. DOE is not designating previously exempt lamps as separate covered products. DOE is determining the scope of an existing covered product pursuant to a specific mandate from section 6295(i)(6)(A), and as such, 42 U.S.C. 6292(b) is inapplicable.

DOE continues to believe it is reasonable to make decisions about the various exemptions without assessing

the average household energy consumption of each, as it would if it conducted a separate section 6292(b) analysis for each exemption. For GSLs as a whole, Congress has determined that regulation is appropriate. (Although DOE of course respects Congress’s decision as sufficient, DOE notes that average household energy consumption of GSLs is well above the section 6292(b) threshold.) The nature of the exemptions is that most of them currently represent relatively small portions of the overall lamp market. Consistent with the preceding framework, DOE believes the exemption decision is meant to ensure that a given type of lamp does not become a loophole for the GSL standards at the time when manufacturers are required to comply with those standards. If a lamp is a ready substitute for GSLs and DOE leaves that type of lamp exempt, energy consumption for that lamp type would presumably increase in the future; but the average rate of current energy consumption for a particular exempt lamp type is not as important a consideration.

Table III.1 summarizes the exemptions maintained or discontinued in this final rule and the sales data for each exemption.

TABLE III.1—DETERMINATIONS REGARDING EXEMPTIONS

GSIL exempted lamp category	Estimated sales data (units annual sales)	DOE’s determination on exemption status
Appliance Lamp	Approximately 2 million	Maintain exemption.
Black Light Lamp	<1 million	Maintain exemption.
Bug Lamp	<1 million	Maintain exemption.
Colored Lamp	<2 million	Maintain exemption.
Infrared Lamp	<1 million	Maintain exemption.
Left-Hand Thread Lamp	<1 million	Maintain exemption.
Marine Lamp	<1 million	Maintain exemption.
Marine Signal Service Lamp	<1 million	Maintain exemption.
Mine Service Lamp	<1 million	Maintain exemption.
Plant Light Lamp	<1 million	Maintain exemption.
Reflector Lamp	Approximately 30 million	Discontinue exemption.
Rough Service Lamp*	10,914,000	Discontinue exemption.
Shatter-Resistant Lamp	689,000	Discontinue exemption.
Sign Service Lamp	Approximately 1 million	Maintain exemption.
Silver Bowl Lamp	Approximately 1 million	Maintain exemption.
Showcase Lamp	<1 million	Maintain exemption.
3-way Incandescent Lamp	32,665,000	Discontinue exemption.
Traffic Signal Lamp	<1 million	Maintain exemption.
Vibration Service Lamp	7,071,000	Discontinue exemption.
G shape Lamp with diameter of 5 inches or more	859,867	Maintain exemption.
T shape lamp of 40 W or less or length of 10 inches or more	9,750,395	Discontinue exemption.
B, BA, CA, F, G16–1/2, G25, G30, S, M–14 lamp of 40 W or less	71,702,637	Discontinue exemption.

*NEMA submitted revised data for rough service lamps following the publication of the notice of data availability for five lamp types. See 81 FR 20261 (April 7, 2016). The revised data showed sales of 10,914,000 rough service lamps in 2015, which results in a requirement for DOE under 42 U.S.C. 6295(l)(4), to initiate an accelerated rulemaking to establish an energy conservation standard for rough service lamps. See ex parte memorandum published in the docket at: <https://www.regulations.gov/document?D=EERE-2011-BT-NOA-0013-0019>.

As shown in Table III.1, based on the revised sales data and a consideration of additional, applicable factors, DOE has determined to discontinue seven GSIL

exemptions. As discussed in section II, DOE believes the lamp categories for which it discontinued exemptions represent significant energy savings

potential either due to high annual sales or by preventing a loophole from forming. DOE is maintaining 15 of the GSIL exemptions due to low sales and

low potential for use in GSL applications. DOE discusses each of the exemptions and comments received on the proposal in the October 2016 NOPDDA in the sections that follow.

a. Exemptions Proposed To Be Discontinued in October 2016 NOPDDA

In the October 2016 NOPDDA, DOE proposed to discontinue eight exemptions from the definition of GSIL. 81 FR 71799. DOE assessed data available for medium screw base reflector lamps that are incandescent and preliminarily concluded that these lamps have high annual sales. To be clear, the following discussion relates only to reflector lamps that are not IRLs. The market includes many reflector lamps that use incandescent technology but do not fall within the statutory definition of IRL, for example, medium screw base reflector lamps with diameters of 2.25 inches or less (*e.g.*, PAR16 or MR16 lamps) or with rated wattages less than 40 W (*e.g.*, 39 W PAR20 lamps). At present, IRLs are exempt from being GSLs; while DOE proposed to discontinue that exemption, DOE will be addressing that proposal in a separate final rule and does not discuss it here. Accordingly, in the following discussion, except where noted, DOE uses the phrase “reflector lamp” to refer only to lamps that are not IRLs.

DOE estimated the sales of medium base reflector lamps that are incandescent as approximately 30 million units per year. DOE believed medium screw base reflector lamps are capable of providing overall illumination and could be used as a replacement for GSILs. Therefore, DOE found there was also high potential for lamp switching and subsequently creating a loophole. For these reasons, DOE proposed to discontinue the exemption for reflector lamps in the October 2016 NOPDDA. *Id.* at 71800.

DOE received several comments in support of its decision to expand the scope of the GSL definition to include reflector lamps. ASAP commented that they strongly supported covering all reflector lamps in the scope of this rulemaking and noted that hundreds of millions of reflector lamps (including IRLs) are sold each year. ASAP stated that directional lamps of all technology types are a growing presence in homes. ASAP noted that there are more efficient alternatives widely available at affordable prices, and including reflector lamps that are incandescent as GSLs is a step towards technological neutrality which will benefit the environment, industry and consumers. (ASAP, No. 83 at pp. 38–39; ASAP, No.

94 at pp. 1–2) NRDC and Utility Coalition supported DOE’s proposal to discontinue the exemption for reflector lamps and noted that there would be a significant impact on energy savings as a result. (NRDC, No. 83 at p. 11; NRDC, No. 85 at p. 2; Utility Coalition, No. 95 at p. 2) Soraa also supported DOE’s proposal to include reflector lamps as GSILs noting that they are used or can be used to provide overall illumination. (Soraa, No. 87 at p. 2) CEC also commented in support of DOE’s proposal to discontinue the GSIL exemption for reflector lamps due in part to their high lamp sales and potential for lamp switching. (CEC, No. 91 at pp. 4–5)

In contrast, GE recommended that reflector lamps (in GE’s comment, primarily IRLs) continue to be regulated separately and that it is not appropriate to evaluate reflector type lamps as GSLs because these products cannot successfully be used to satisfy lighting applications traditionally served by GSILs. (GE, No. 88 at p. 2) GE added that each reflector lamp has unique optical properties that must be considered when applying a minimum efficacy requirement and noted that these products cannot meet the same efficiency limits designed for general service A shape lamps. (GE, No. 88 at p. 2)

In support of their assertion that reflector lamps should be regulated separately, several commenters disagreed with DOE’s determination that reflector lamps posed a risk of lamp switching. GE stated that reflector lamps would not fit in most fixtures in which GSILs are used. Even if a reflector lamp could fit in such a fixture it could not deliver the omnidirectional light output provided by the GSIL. Therefore, GE asserted reflector lamps would not be suitable replacements for the standard GSILs and needed to be evaluated in their own rulemaking. (GE, No. 83 at pp. 37–38) LEDVANCE agreed and stated that the consumer will not obtain effective light by putting a reflector lamp in a fixture that does not have some type of directional functionality. (LEDVANCE, No. 83 at pp. 59–61)

CA IOUs stated that while it may not be always be optimal, reflector lamps can be used in general service applications. (CA IOUs, No. 83 at p. 66) NRDC stated that reflector lamps can be used in applications other than down lights. NRDC pointed out that reflector lamps come in various shapes and there was nothing to prevent a manufacturer from altering the reflector lamp design so more light goes in different directions. (NRDC, No. 83 at p. 45) CA IOUs further noted that as the cheaper

product, the use of reflector lamps that are incandescent in general service applications may increase due to new market pressures in 2020. (CA IOUs, No. 83 at p. 66) CEC agreed that medium screw base reflector lamps represent a lamp switching risk adding that lamp shape does not determine whether a lamp can provide general service lighting and general service lamps are not limited to omnidirectional lighting. (CEC, No. 91 at pp. 4–5) Utility Coalition also stated that LED lamps are suitable replacements for GSLs in many applications because they have the same base types and therefore represent a significant risk of undercutting the energy savings of the 45 lm/W standard if they are not included. (Utility Coalition, No. 95 at pp. 1–2)

Additionally, Utility Coalition commented that there are LED versions of reflector lamps available in a wide variety of shapes and sizes, lumen outputs, CCT, beam angles, and base types and that decreasing prices and increasing efficiency make these products cost-effective to consumers. NRDC also noted that there are several cost-effective, dimmable LED lamps available that serve as excellent replacements for reflector lamps that are incandescent in a variety of form factors, light outputs, and colors and urged DOE to move forward with its proposal to remove the exemption for these lamps. (NRDC, No. 83 at pp. 45–46; Utility Coalition, No. 95 at pp. 1–2) CEC stated that as of June 15, 2015, 658 models of medium screw base reflector lamps complied with Tier 1 of the adopted California standard thus indicating that cost effective, highly-efficacious LED alternatives exist. CEC added that making incremental improvements to existing LED reflector lamps was extremely cost-effective and technically feasible. (CEC, No. 91 at pp. 4–5) Soraa also stated that LED replacements that provide a wide variety of product features, such as color rendering index (CRI), CCT, beam angle, whiteness rendering, and low flicker, are available for the majority of directional incandescent lamps. Soraa noted that customers in quality-sensitive fields such as high-end retail and hospitality have transitioned from halogen to LED technology. Soraa added while there are still some lamp types that are difficult to replicate in LED technology, such as narrow-beam MR16 lamps with the highest wattages, incremental progress in technology will likely make these products available by 2020. Additionally, Soraa stated that the limit of 45 lm/W can be met by

currently-existing products with higher-level features. (Soraa, No. 87 at p. 2)

As discussed previously in this document, DOE did not limit its consideration of lamp switching to the ability to replace a lamp in a fixture currently used by a consumer that had been using a traditional incandescent lamp. As indicated by comments from ASAP previously in this document, the presence of reflector lamps in residences in the U.S. has grown significantly over time due to changes in new construction. (ASAP, No. 83 at pp. 38–39) Lighting in homes that traditionally was provided by A shape lamps in floor and table fixtures is being provided in newer construction through reflector lamps in recessed lighting. (ASAP, No. 83 at pp. 58–59)

The basic design characteristic of a reflector lamp, as defined in the industry standard by the Illuminating Engineering Society of North America (IES) RP–16–10, is that it directs the light. But it is possible to direct the omnidirectional light from an incandescent filament into a somewhat more limited set of angles and still have a lamp that provides general illumination. The reflector lamps now being widely used in recessed can lighting are an important example. In such an application (with the lamp mounted in the ceiling), the reflector redirects light that was initially emitted upward. But the resulting light distribution spreads broadly over the area downward from the lamp, so that a consumer can readily use the lamp to provide general illumination for a room. In light of these observations, DOE concludes that “omnidirectional illumination” is not a prerequisite for the traditional functions of incandescent lamps, as GE suggested. Rather, DOE may consider a lamp a ready substitute for GSILs—for purposes of assessing an exemption—if the lamp can provide the same sort of general illumination that GSILs provide.

As presented in Table III.1, DOE estimates that the sales of medium base reflector lamps that are incandescent (and, as noted, do not meet the definition of IRL) are approximately 30 million units per year. 81 FR 71794, 71800. DOE notes that of the 22 exempted lamp types, the category of medium screw base reflector lamps that are incandescent and do not meet the definition of IRL is the third highest annual unit sales, thus indicating that these lamps are likely used in general lighting applications. In addition, because medium screw base reflector lamps are capable of providing overall illumination and could be used as replacements for GSILs, there is also

high potential for lamp switching. For these reasons, DOE is discontinuing the exemption from the GSIL definition for reflector lamps that are incandescent lamps.

While DOE proposed to discontinue the exemption for reflector lamps generally, DOE noted R20 short lamps would continue not to be subject to standards. R20 short lamps are defined as R20 incandescent reflector lamps that have a rated wattage of 100 W; have a maximum overall length of 3 and 5/8, or 3.625, inches; and are designed, labeled, and marketed specifically for pool and spa applications. In a final rule published on November 14, 2013, DOE determined that standards for these lamps would not result in significant energy savings because such lamps are designed for special applications or have special characteristics not available in reasonably substitutable lamp types. 78 FR 68331, 68340. Pursuant to 42 U.S.C. 6291(30)(E), one consequence of DOE’s determination is that these lamps are specifically not incandescent lamps and therefore do not become GSILs when the reflector lamp exemption is discontinued. 81 FR 71800.

ASAP stated that DOE’s analysis on R20 lamps was performed in 2013, before LED substitutes were available for R20 lamps. ASAP asserted that if DOE performed this analysis again that LED substitutes would be available. (ASAP, No. 94 at p. 2)

DOE acknowledges that the analysis on R20 short lamps was conducted in 2013. DOE did consider available LED substitutes at that time. DOE has not reconsidered the lamps in this rulemaking. The final determination regarding R20 lamps was not based solely on the lack of an available substitute. As provided by EPCA, a lamp may be excluded from the definition of “incandescent lamp” by DOE, by rule, as a result of a determination that standards for such lamp would not result in significant energy savings because such lamp is designed for special applications or has special characteristics not available in reasonably substitutable lamp types. (42 U.S.C. 6291(30)(E), emphasis added) DOE determined that in addition to lacking reasonably substitutable lamp types, the application-specific design characteristics of the R20 short lamp and the marketing and non-traditional distribution channels used by these lamp types, are evidence that R20 lamps are designed for pool and spa applications (*i.e.*, a specialty application). 78 FR 68331, 68334. Indeed, R20 lamps must be labeled and marketed specifically for pool and spa

applications. 10 CFR 430.2. Also relevant to DOE’s decision not to include R20 lamps as GSILs under this rulemaking, the lamp did not experience a market migration to other applications even when R20 lamps were perceived not to be regulated (*i.e.*, lamp switching did not occur). 78 FR 68331, 68334. For these reasons, DOE is maintaining the exclusion of R20 lamps from the definition of “incandescent lamp.”

In the October 2016 NOPDDA, DOE also provided data for medium screw base incandescent lamps of the following specific shapes: B, BA, CA, F, G16–1/2, G25, G30, S, M–14 lamps (as defined in ANSI C78.20 and ANSI C79.1–2002) of 40 W or less; G shape lamps (as defined in ANSI C78.20 and ANSI C79.1–2002) with a diameter of 5 inches or more; T shape lamps (as defined in ANSI C78.20 and ANSI C79.1–2002) that use not more than 40 W or have a length of more than 10 inches. For B, BA, CA, F, G16–1/2, G25, G30, S, and M–14 lamps of 40 W or less, DOE estimated the annual sales as approximately 42 million. For G shape lamps with a diameter of 5 inches or more, DOE estimated the annual sales as approximately 8 million units. In addition to the sizeable sales of larger globe shape lamps, DOE noted it is likely that larger globe shape lamps may be used as substitutes for the G16.5, G25, and G30 lamps if the exemption is not also discontinued. Regarding T shape lamps that use not more than 40 W or have a length of more than 10 inches, DOE estimated the annual sales of these lamps as roughly 7 million units. Further, the lamps of the specific shapes discussed in this paragraph are frequently used in general lighting applications and thus DOE believed there is a significant risk for lamp switching. Therefore, due to the high potential for lamp switching—reflected in part by high sales—DOE proposed to discontinue the GSIL exemption for these specific shapes in the October 2016 NOPDDA. 81 FR 71800.

Regarding T shape lamps, NEMA and LEDVANCE stated that they are often used in applications such as museum or other display cases and in music stands. NEMA and LEDVANCE stated that 40 W T shape lamps (the maximum allowable wattage for these lamps) have low sales volume, and because the majority of T shape lamps are 15 W and 25 W lamps, applying a 45 lm/W standard to this lamp would not yield significant energy savings. They also noted that there is a continuing need for incandescent T shape lamps in exit sign fixtures designed for T-shaped incandescent lamps, pointing out that the UL–1993

safety standard specifically warns that CFLs and LED lamps should not be used in these fixtures. Therefore, NEMA and LEDVANCE commented that eliminating these lamps forces building owners to replace entire exit sign fixtures without an analysis of payback or higher initial costs to consumers. NEMA also provided sales data that show that over the past four years the reported sales of these lamps have fallen by 12.7 percent. (NEMA, No. 93 at p. 17; LEDVANCE, No. 90 at p. 29)

As presented in Table III.1, DOE revised its estimate of the annual sales of T shape lamps of 40 W or less or length of 10 inches or more based on the sales data submitted by NEMA. For the year 2015, the most recent year for which NEMA submitted data, NEMA estimated the annual sales of these T shape lamps as 9,750,395 units. Based on the revised estimate, the T shape lamp category has one of the highest annual sales of the 22 exempted lamp categories, thus suggesting that these lamps are likely used in general lighting applications. In addition to the sizable sales of these T shape lamps, DOE determined that T shape lamps are capable of providing overall illumination and therefore have a high potential for lamp switching. Due to the high potential for lamp switching—reflected in part by high sales—DOE is discontinuing the exemption from the GSIL definition for T shape lamps of 40 W or less or length of 10 inches or more.

Regarding NEMA and LEDVANCE's concern that incandescent T shape lamps are required for use in installed exit signs, DOE was unable to find a UL safety requirement that supported this claim. UL–1993, the standard cited by NEMA and LEDVANCE, states that emergency exit fixtures are outside of the scope of the standard. DOE is aware that certain incandescent lamps, particularly those without equivalent LED replacements, may need to be maintained for safety reasons. DOE has exempted certain specialty lamps as described in section III.A.4.f.

DOE also received feedback on its estimate of sales for the G shape lamp with a diameter of 5 inches or more. NEMA, with LEDVANCE's concurrence, stated that unit sales of G shape lamps with a diameter of 5 inches or more comprise a small portion of the overall unit sales of G shape lamps and noted that DOE's sales estimate of 8 million units attributed to these G shape lamps is inaccurate. NEMA provided data showing that sales of G shape lamps with a diameter of 5 inches have decreased each year since 2012 and were under 1 million units in 2015. (NEMA, No. 83 at pp. 81–82; NEMA,

No. 93 at p. 17; LEDVANCE, No. 90 at p. 27)

Several commenters also disagreed with DOE's assessment that G shape lamps with a diameter of 5 inches or more posed a risk for lamp switching. NEMA commented that this lamp type, due to its large shape, will not fit in most fixtures. Therefore, NEMA noted that instead of consumers switching to this lamp type in applications served by GSILs, they will continue to use it in the specialty applications that it is used in currently. NEMA added that for this reason, and the declining annual sales discussed previously, this lamp type does not pose a risk for lamp switching. (NEMA, No. 83 at p. 85; NEMA, No. 93 at p. 17) LEDVANCE agreed, noting that a consumer is unlikely to replace an A19 shape lamp with a 5-inch diameter lamp. (LEDVANCE, No. 83 at pp. 59–61) NEMA and Westinghouse also argued that the G40 shape incandescent lamp typically is more expensive than GSILs, medium screw base CFLs, and many general service LED lamps on the market. They concluded that the higher price point would also decrease the likelihood of lamp switching. (NEMA, No. 83 at p. 85; NEMA, No. 93 at p. 17; Westinghouse, No. 83 at pp. 87–88) Westinghouse added that LED products that are not UL certified or that are failed market attempts may be priced lower and therefore assessments should be based on average prices rather than the lowest price. (Westinghouse, No. 83 at pp. 87–88) ASAP cautioned that lamp prices are fluid and not necessarily tied to the cost of materials; instead they often fluctuate with demand. ASAP also stated that filament-style G shape LED lamps have become popular in retail food establishments and are reasonably priced. ASAP added that if the volume of G shape lamps were to increase, the price of G shape lamps would likely decrease as well. (ASAP, No. 83 at pp. 82–83, 86–87, 89)

In this final rule, DOE has revised its sales estimate for G shape lamps with a diameter of 5 inches or greater based on the data submitted by NEMA. As shown in Table III.1, the estimated annual sales of this lamp category are 859,867 units. In the October 2016 NOPDDA, DOE had estimated the sales of this lamp category to be approximately 8 million units. As described in the October 2016 NOPDDA, in the absence of actual data DOE estimated annual shipments by extrapolating from DOE's product database based on an inventory of available products. DOE accepts the actual data that NEMA submitted as a more accurate representation of the level of sales of these lamps.

These annual sales, which are substantially lower than what DOE had previously estimated, have motivated DOE to maintain the exemption for G shape lamps with diameter of 5 inches or greater. Low annual sales is not, on its own, a dispositive fact. DOE's previous estimate of annual sales suggested to DOE that consumers were using G shape lamps with large diameters in general lighting applications. However, given the low actual sales, DOE believes that the exempt G shape lamps (*i.e.*, G shape lamps with diameters over 5 inches) are not used in such applications. DOE will continue to monitor the market and may reconsider this decision in the future if G shape lamps with a diameter of 5 inches or greater are used in general lighting applications.

DOE also received comments on medium screw base incandescent lamps of the following specific shapes: B, BA, CA, F, G16–1/2, G25, G30, S, M–14 lamps (as defined in ANSI C78.20 and ANSI C79.1–2002) of 40 W or less. NEMA and LEDVANCE stated that medium screw base decorative lamps (*e.g.*, B, BA, CA, and F shape lamps) have lower lumen output than GSILs and cannot be used interchangeably. They also noted that the sales of the medium screw base versions of these lamps are much smaller than the candelabra base versions. NEMA and LEDVANCE noted that the decorative shape lamps are designed for longer lifetimes, and extend the lifetime of incandescent lamp at the expense of lumen output. NEMA and LEDVANCE added that the statutory wattage cap of 40 W considerably limits the lumen output of decorative shapes compared to typical incandescent or halogen lamps. NEMA and LEDVANCE stated that the smaller size of these lamps prevents manufacturers from making suitable LED alternatives as aesthetically pleasing as incandescent versions or as efficient as larger A shape LED lamps, adding that there is insufficient room to put the required electronics in these lamps to match the efficiency of the A shape LED lamps. NEMA also provided data from its members that show sales of these lamps are declining and that the reported sales are lower in 2015 than they were in 2012. (NEMA, No. 93 at p. 18; LEDVANCE, No. 90 at p. 29)

NEMA and LEDVANCE continued that S-shaped lamps are service lamps typically used as sign lamps. They noted that this is a commercial product that is unlikely to be used in residential applications or in general service lamp fixtures. NEMA and LEDVANCE also commented that M–14 lamps are no longer manufactured as it is an outdated

lamp type. NEMA added that as a result, its annual sales have been zero units over the past four years. (NEMA, No. 93 at pp. 19–20; LEDVANCE, No. 90 at p. 29)

Regarding the other globe shape categories within this list, NEMA and LEDVANCE stated that G16–1/2 shape lamps are the smallest version of a globe shape lamp and that their primary application is in lighting used around dressing room mirrors in theaters. They added that lamp switching is unlikely with this lamp type due to its small size and low lumen output. NEMA and LEDVANCE also noted that the G25 shape is the most popular of the globe shape lamps and that it is used primarily in bathroom vanities and bathroom lamp strips. They argued that lamp switching is also unlikely with this lamp type because of its low lumen output. NEMA and LEDVANCE stated that the G30 shape lamp has declined in popularity in favor of G25 shape lamps, thus its market share has declined significantly. NEMA provided sales data that show sales of these globe shape lamps have been declining over the last four years. (NEMA, No. 93 at p. 19; LEDVANCE, No. 90 at p. 28)

In addition, NEMA disagreed with DOE's decision to include B, BA, CA, F, G16–1/2, G25, G30, S, and M–14 shape lamps all in the same category. NEMA argued that they should be categorized separately because they are used in different lighting applications. NEMA stated that Congress only included these lamps in the same clause of the exclusions list to prevent the list of exclusions from being too lengthy. NEMA added that several of these lamp shape types currently have less than a million units of annual sales with declining sales, which makes lamp switching unlikely. (NEMA, No. 93 at p. 14)

In contrast, NRDC argued that DOE's annual sales estimate of 42 million lamps for the decorative lamps' category is underestimated. NRDC added that the estimate seems low based on DOE's LED adoption report, "Adoption of Light Emitting Diodes in Commercial Lighting Applications," that estimates an installed base of 1.2 billion decorative shape lamps, which would primarily be 25 W and 40 W decorative shaped lamps. (NRDC, No. 85 at p. 5) Thus, NRDC asked DOE to not only focus on the A shape, 5-inch G shape, or 10-inch T shape lamps but also on the B, BA, CA shape lamps as they are very common and could fit in many applications including table or desk lamps. NRDC commented that the pear shape of these decorative lamps (*i.e.*, B, BA, CA, and F shape lamps) does not prevent them

from providing the same amount of light at a low cost. NRDC also added that these lamps, of typically 25 W or 40 W, are used in applications that have high annual hours of use, so they present an opportunity for significant energy savings. NRDC noted that the incandescent CA shape lamps, which are used in sets of 5 or 10 in chandeliers, can be replaced by 7 W LED versions. Further, NRDC stated that by discontinuing these exemptions, though technological limitations may currently exist, there are tremendous benefits that could be gained. (NRDC, No. 83 at pp. 85–86; NRDC, No. 85 at p. 3)

Westinghouse elaborated that the challenge for these decorative lamp shapes is lumen range and efficiency scale. Westinghouse noted that there are not many versions of the decorative lamp shapes in halogen technology because it is not easy to put a double-ended halogen burner in a small size lamp due to heat and space issues. (Westinghouse, No. 83 at pp. 87–88)

While NRDC encouraged a conversation regarding potential hardships in making LED replacements for these lamp shapes in larger form factors, it cautioned DOE not to lose sight of the benefits of discontinuing these exemptions. (NRDC, No. 83 at pp. 85–86) ASAP also acknowledged that not every application of the LED version can be technically and economically feasible. However, citing the popularity of the 500 W double-ended halogen lamp ten years ago, ASAP asserted that the selection of products manufactured and their price points are dictated by market demands. (ASAP, No. 83 at pp. 89–90)

DOE revised its estimate in this final rule for the sales of lamps with specific shapes based on the additional data submitted by NEMA. As shown in Table III.1, the estimated annual sales of this lamp category is 71,702,637 units. While DOE understands that some of these lamps are smaller than A shape lamps, they can still be used to provide overall illumination. DOE further notes that the pear shapes and globe shapes characterized by the majority of lamps in this category would not prevent consumers from using them in general service lighting applications. As indicated by the very high sales data of this category, DOE believes that these lamps are very common and can be used in general lighting applications. Regarding the technical limitations of more efficient versions of these products, DOE reviewed product availability to determine which form factor and light output combinations may not be available in fluorescent or

LED technology. For more information on DOE's consideration of technical feasibility issues, see section III.A.4.a.

Regarding the comment from NEMA suggesting that DOE consider the lamps excluded under 42 U.S.C. 6291(30)(D)(ii)(XXII) separately, DOE notes that Congress listed these lamps together in paragraph (XXII). If the lamps were grouped merely for the purpose of drafting convenience, as suggested by NEMA, it is not clear why Congress would not have also included G shape and T shape lamps in the grouping as well. Instead, G shape and T shape lamps are each listed separately in paragraphs (XX) and (XXI), respectively. (42 U.S.C. 6291(30)(D)(ii)(XX) and (XXI))

DOE has considered whether to maintain the exemption for these lamps as a group due to its concern with lamp switching. DOE recognizes that the lamps listed in clause (XXII) may each not be substituted for one another in existing fixtures. However, as discussed previously, DOE also considers the potential for lamp switching through the future use of different fixtures. There is the potential that inclusion of some but not all of the lamps in the group would shift the market to the lamp or lamps that remain exempt. Thus, due to the very high sales volume and risk of lamp switching of the lamp types, DOE is discontinuing exemptions for B, BA, CA, F, G16–1/2, G25, G30, S, M–14 lamp of 40 W or less.

Regarding other exempt lamp categories, pursuant to 42 U.S.C. 6295(l)(4), DOE is required to collect unit sales data for rough service, shatter-resistant, 3-way incandescent lamps, and vibration service lamps. Section 321(a)(3)(B) of EISA 2007 in part amends subsection 325(l)(4) of EPCA by adding paragraphs (D) through (H), which direct DOE to take regulatory action if the actual annual unit sales of any of these lamp types are more than 200 percent of the predicted shipments (*i.e.*, more than double the benchmark unit sales estimate). (42 U.S.C. 6295(l)(4)(D)–(H)) DOE published a notice of data availability (NODA) in April 2016, which indicated that the shipments of vibration service lamps were over 7 million units in 2015, which equates to 272.5 percent of the benchmark estimate. 81 FR 20261, 20263 (April 7, 2016). Furthermore, NEMA submitted revised data for rough service lamps that showed sales of 10,914,000 rough service lamps in 2015, which exceeds 200 percent of their benchmark estimate. Although the sales of shatter-resistant and 3-way incandescent lamps have not yet exceeded their estimated benchmarks,

DOE expects these sales will likely increase since these lamps could be used as replacements for other regulated lamp types. Based on the high sales volume and probability of consumers switching to these lamp types, DOE proposed to discontinue the exemptions of rough service, shatter-resistant, 3-way incandescent, and vibration service lamps from GSILs in the October 2016 NOPDDA. 81 FR 71800.

NEMA supported the regulation of rough service and vibration service incandescent lamps but opposed treating these lamps as “general service incandescent lamps” because they are specialty lamps that were intended to be regulated using a wattage cap as indicated by the statute (see 42 U.S.C. 6295(i)(4)(D)(ii) and (E)(ii)) rather than a lumens per watt or modified lumens per watt regulation. NEMA encouraged DOE to adopt NEMA’s proposal of maximum wattage caps for regulating these two specialty products, which NEMA asserted is consistent with the congressional intent reflected in EISA 2007. (NEMA, No. 93 at p. 12) Additionally, NEMA, LEDVANCE, and Philips asserted that DOE is authorized to establish standards for rough service lamps, shatter-resistant, 3-way incandescent, and vibration service lamps only under the provisions in 42 U.S.C. 6295(l)(4) and that the sales thresholds required under that section to regulate shatter-resistant and 3-way incandescent lamps have not been met. (NEMA, No. 93 at p. 12; LEDVANCE, No. 90 at pp. 19–20; Philips, No. 96 at p. 4) LEDVANCE stated that the more specific reference to regulate rough service lamps, shatter-resistant lamps, 3-way incandescent lamps and vibration service lamps must be read as governing the regulation of these lamps, as opposed to the more general provision in 42 U.S.C. 6295(i)(6)(A)(i)(II). (LEDVANCE, No. 90 at p. 20)

Under 42 U.S.C. 6295(l)(4), DOE is required to undertake a standards rulemaking for rough service lamps, shatter-resistant lamps, 3-way incandescent lamps and vibration service lamps when the sales of these lamps meet specified thresholds. DOE is also required, in consultation with NEMA, to collect sales data for these lamps and construct a model to predict future sales. (42 U.S.C. 6295(l)(4)(B)) DOE must then track the actual sales data, and when sales exceed sales projected by the model by 100 percent, DOE must initiate a rulemaking. (42 U.S.C. 6295(l)(4)(D), (E), (F), (H)) If DOE does not complete the accelerated rulemaking in the specified time period, it must impose a backstop requirement

for that lamp. (42 U.S.C.

6295(l)(4)(D)(ii), (E)(ii), (F)(ii), (H)(ii))

However, this is not the only way in which DOE can regulate these lamps. The text of section 6295(i) and 6295(l) does not state that the section 6295(l) process operates to the exclusion of regulating these lamps as GSILs. As commenters noted with respect to the section 6295(i)(6)(A)(v) backstop, GSILs may become subject to a default standard of 45 lm/W; but DOE is authorized to impose alternative standards for GSILs in general so long as the overall savings from such a rule are at least as great as a uniform 45 lm/W standard would achieve. Thus, in regulating the five types of section 6295(l) lamp as GSILs, DOE would be able to establish a range of possible standards. However, for these particular lamps, when sales have increased to a certain point, section 6295(l) requires DOE to conduct an accelerated rulemaking, and absent that rulemaking, specifies certain minimum standards. That requirement is not inconsistent with the regulatory framework applicable to GSILs, and Congress’s decision to set a separate backstop for these lamps (conditioned on factual circumstances) does not suggest that Congress meant to exclude them from the broader regulatory program.

Additionally, as DOE explained in the October 2016 NOPDDA, DOE understands the reference to “data collected” by DOE under the GSL rulemaking provision to mean the data collected as required for rough service lamps, vibration service lamps, 3-way incandescent lamps, and shatter-resistant lamps. 81 FR 71794, 71798. As noted, DOE is required to collect sales data for these lamps. (42 U.S.C. 6295(l)(4)(B)) The consideration of sales data collected by DOE in making a determination under 42 U.S.C. 6295(i)(6)(A)(i)(II) further demonstrates that the determination is to include rough service lamps, vibration service lamps, 3-way incandescent lamps, and shatter-resistant lamps.

GE agreed with regulating vibration service lamps and rough service lamps as the sales of these lamps have been increasing and have surpassed the allowed sales threshold. GE added that these lamps resemble and, therefore, are being purchased to replace the standard incandescent A shape lamp. (GE, No. 83 at p. 72; GE, No. 88 at p. 2) However, GE stated that shatter-resistant lamps and 3-way lamps are declining in sales, indicating low risk of lamp switching. GE added that the risk of lamp switching is particularly low for the 3-way lamp. GE explained that these lamps are made in A21 and A23 shapes

because the filament must be placed farther from the glass due to the increased heat. Therefore, these lamps may not fit in existing fixtures where A19 shape lamps are used and also may not meet the UL wattage limit on many fixtures in the home. (GE, No. 83 at pp. 72–73; GE, No. 88 at p. 2) NEMA agreed that lamp switching for 3-way lamps is unlikely because the A21 lamp size is larger than the size of the regular A19 lamp and is not a suitable replacement for a regular incandescent lamp. NEMA also added that the safety standard UL 1598 contains a thermal requirement for most common general service lighting fixtures that limits lamp wattage to 100 W and thus higher 150 W 3-way incandescent lamps cannot be used in these fixtures. Further, NEMA commented that many light switches are incapable of controlling the 3-way functionality of a 3-way lamp and it is unlikely a consumer would purchase a more expensive 3-way lamp if the functionality is not desired or cannot be used. (NEMA, No. 93 at p. 16)

NEMA also disagreed with DOE’s proposal to consider shatter-resistant lamps as GSILs noting that sales have fallen 50 percent since 1997, did not increase when traditional GSILs were phased out from 2010–2012, and have not exceeded the statutory threshold under section 325(l)(4)(H). NEMA noted that DOE cannot justify regulating shatter-resistant lamps using a potential for lamp switching because Congress established a clear threshold for the regulation of these lamps of exceeding the estimated sales by 100 percent. Thus, NEMA concluded that DOE does not have the discretion to determine that shatter-resistant lamps are GSILs and must adhere to the limits of the statute. (NEMA, No. 93 at p. 15) Additionally, NEMA commented that the coating on the shatter-resistant lamp reduces the lumen output significantly, making it not ideal as a replacement for a GSIL or general service LED lamp. NEMA added that the lumen output of a 60 W shatter-resistant lamp is identical to the lumen output of a 40 W standard incandescent lamp. As a result of the lumen output differences, NEMA noted that lamp switching is not likely to occur as consumer will not treat a lower lumen lamp as an effective substitute. (NEMA, No. 93 at pp. 15–16) Westinghouse noted that when standards from EISA 2007 became effective consumers did not switch to 3-way lamps, rough service lamps, or shatter-resistant lamps at the time. (Westinghouse, No. 83 at pp. 74–76)

In contrast, CA IOUs, NRDC, and Utility Coalition supported the proposal to discontinue exemptions for shatter-

resistant lamps, rough service lamps, vibration service lamps, and 3-way lamps because these lamps pose a lamp switching risk. (NRDC, No. 83 at p. 74; CA IOUs, No. 83 at p. 77; Utility Coalition, No. 95 at p. 3) NRDC stated that these lamp types look and operate like a standard incandescent lamp and can be used in general service lighting applications. NRDC and Utility Coalition further noted that there are a wide range of efficient alternatives available for these lamp types and NRDC added if they are not regulated their sales would increase dramatically when the next standards go into effect. NRDC also countered that while the sales of 3-way lamps may not be increasing today, there was nothing to prevent them from doing so in the future. It would cost very little to put a coating over a standard incandescent lamp and make it a shatter-resistant lamp, which would dramatically increase sales and reduce purchase price. NRDC added that these lamps would also use considerably more energy than lamps that must comply with a standard and cost consumers significantly more to operate. (NRDC, No. 83 at pp. 10–11, 73–74; NRDC, No. 85 at pp. 1–2; Utility Coalition, No. 95 at p. 3) Utility Coalition noted that LED lamps are inherently durable and provide the necessary utility to serve in the applications of rough service, shatter-resistant, and vibration service. Thus, Utility Coalition concluded that these lamp types should be held to the same standard as all other LED lamps. Additionally, Utility Coalition noted that the incandescent versions of these lamps are even less efficient than standard GSILs, with rough service lamps commonly performing around 10 lm/W. (Utility Coalition, No. 95 at p. 3)

CA IOUs agreed that LED replacements that provide the same functionality are available for these lamp types, in particular the 3-way lamp type. CA IOUs noted that many of the major manufacturers provide 3-way LED replacements and these lamps are highly efficient and reasonably priced in the \$10–\$14 range. Utility Coalition added that DOE testing confirmed that 3-way LED lamps are highly efficient with an efficiency of 111.4 lm/W at the middle setting. (CA IOUs, No. 83 at p. 77; Utility Coalition, No. 95 at p. 3) Westinghouse disagreed citing a high cost differential for consumers to switch to 3-way LED lamps. Westinghouse stated that a 3-way incandescent lamp costs \$2.19 while a 3-way LED lamp is in the \$20–\$22 range with older versions on clearance at \$15–\$16. (Westinghouse, No. 83 at pp. 74–76)

DOE reviewed the sales data submitted by NEMA for the shatter-resistant and 3-way incandescent lamps. The sales of shatter-resistant lamps declined between 2012 and 2015. The sales of 3-way incandescent lamps increased between 2012 through 2014 and then decreased in 2015. However, sales of these lamps have declined over a limited time period. Further, NEMA submitted data for 2015 that indicated that almost 32 million¹³ 3-way incandescent lamps (67.2 percent of the benchmark estimate) and nearly 700,000 shatter-resistant lamps (41.1 percent of the benchmark estimate) were sold in that year. 81 FR at 20263–64 (April 7, 2016).

Regarding the lamp switching potential of 3-way lamps, as stated by NEMA and GE, UL 1598 prescribes wattage requirements for certain luminaires. However, UL 1598 is not a comprehensive standard of all fixtures that could be used in general lighting applications. DOE notes that, as stated previously, lamp switching includes shifting to the use of different fixtures in the future and therefore lamp size does not necessarily prevent switching. Regarding the lamp switching potential of shatter-resistant lamps, DOE notes that shatter-resistant lamps are capable of providing overall illumination despite the lower lumen output resulting from the shatter-resistant coating. As noted by NEMA, a 60 W shatter-resistant lamp is still an appropriate replacement for a 40 W standard incandescent lamp.

DOE also expects the sales of these lamps to increase since they could be used as replacements for other regulated lamp types. Shatter-resistant lamps are similar to rough service and vibration service lamps, two lamp categories for which sales have already increased as a result of standards for GSILs. Whereas rough service and vibration service lamps possess a filament strengthened with additional supports, shatter-resistant lamps possess a reinforced outer bulb to contain glass pieces in the event that the bulb breaks. For all three lamp types the consumer may be under the impression that they are purchasing primarily a more durable product rather than a lamp with subpar performance as claimed by NEMA. Some lamps are even offered with more than one of these criteria (e.g., a shatter-resistant lamp with vibration service filaments). Although these lamps must be designated as rough service, vibration service, or shatter-resistant on the lamp packaging, that designation did not

prevent rough service and vibration service lamps from serving as a loophole to standards for GSILs.¹⁴ Furthermore, for all three of these lamp types, LED versions inherently provide the consumer the desired functionality in the sense that LED lamps do not have metal filaments and typically do not use glass outer bulbs. Because the sales of rough service and vibration service lamps have already showed that consumers view these lamps as convenient, unregulated substitutes for GSILs and choose them even though LED lamps provide the same functionality, DOE expects that sales of shatter-resistant lamps will similarly increase if left unregulated. Therefore, based on the high sales volume and probability of consumers switching to these lamp types, DOE is discontinuing the exemptions of shatter-resistant and 3-way incandescent lamps.

As noted, the sales threshold set by EPCA for vibration service incandescent lamps and rough service incandescent lamps has been exceeded. The increasing sales of these lamp types and industry's feedback on their use indicate that these products are used in general lighting applications as substitutes for GSILs. (Westinghouse, No. 83 at pp. 41–42; NEMA, No. 83 at pp. 52–53; GE, No. 83 at p. 73). Therefore, DOE is also discontinuing the exemptions of rough service and vibration service lamps from GSILs in this final rule.

In summary, DOE is discontinuing the following exemptions from the definition of GSIL in this final rule: Reflector lamps; T shape lamps that use not more than 40 W or has a length of more than 10 inches; B, BA, CA, F, G16–1/2, G25, G30, S, M–14 lamps of 40 W or less; rough service lamps; shatter-resistant lamps; 3-way incandescent lamps; and vibration service lamps.

¹⁴ NEMA points out that the coating used to protect shatter-resistant lamps causes such a lamp to provide less output light, for a given wattage, than a comparable non-protected lamp. DOE recognizes also that, while it considers shatter-resistant lamps to be similar in important respects to rough service and vibration service lamps, sales of the former have not thus far increased alongside sales of the latter two. These observations do not undermine DOE's conclusion here. They may reveal that shatter-resistant lamps are less desirable substitutes for GSILs at a time when GSILs are subject only to their own standards. DOE is discontinuing the exemption for shatter-resistant lamps because it believes they will be convenient substitutes for GSILs at a time when GSIL standards effectively preclude the use of incandescent technology for GSILs. In that context, DOE does not believe the reduction in light output that the shatter-resistant glass coating causes will discourage customers from buying these lamps for GSIL-type applications.

¹³ This value was incorrectly stated as 38 million in the October 2016 GSL NOPDDA.

b. Exemptions Proposed To Be Maintained in October 2016 NOPDDA

In the October 2016 NOPDDA, DOE proposed to maintain 14 exemptions from the definition of GSIL. DOE found that medium screw base incandescent lamps that are appliance; black light; bug; colored; infrared; left-hand thread; marine; marine signal service; mine service; plant light; sign service; silver bowl; showcase; and traffic signal lamps had low sales data thus indicating that these are low volume products. DOE estimated that 12 of the 14 exemptions have annual unit sales of 1 million units or less. The remaining two exemptions, appliance lamps and colored lamps, were estimated to have less than 3 million annual unit sales and less than 2 million annual unit sales, respectively. DOE also tentatively concluded that several of these exempted lamp types are unable to serve in general lighting applications and cannot provide overall illumination. Specifically, black light; bug; colored; infrared; and plant light lamps produce radiant power in specific wavelengths of the electromagnetic spectrum that would prevent these lamps from serving in general lighting applications. Further, DOE noted that proposing definitions for these exempted lamp types will help to prevent them from becoming loopholes. (See section III.B for a discussion of the definitions proposed for exemptions.) 81 FR 71801. DOE received comments on the 14 GSIL exemptions proposed to be maintained in the October 2016 NOPDDA.

CEC supported DOE's decision to maintain the 14 exemptions from the GSIL definition that it believes are unable to serve in general lighting applications and cannot provide overall illumination. (CEC, No. 91 at p. 5) NEMA, Philips, and GE also agreed with the 14 exemptions from the GSIL definition that DOE proposed to maintain. (NEMA, No. 93 at p. 22; Philips, No. 96 at p. 3; GE, No. 88 at p. 2) GE commented that sales of the 14 exemption categories are small and decreasing, while offering little opportunity for energy savings. (GE, No. 88 at p. 2) Philips added that these lamps serve many niche applications that currently do not have LED replacements in the same form factor and are unlikely to in the future due to technology limitations. Philips stated that it prefers to leverage improvements in SSL technology to improve performance, reduce cost, and offer innovative versions of mainstream products rather than invest in low volume R&D intensive niche products.

Philips concluded that this will encourage consumer adoption and increase energy savings. (Philips, No. 96 at p. 3)

In contrast, ASAP recommended discontinuing several of the 14 exemptions from the GSIL definition noting that the proposed definitions were not specific enough to prevent potential loopholes.

ASAP recommended discontinuing the exemptions for marine and mine lamps because there is little difference in manufacturing or performance of these lamps compared to GSILs, and there are energy-efficient replacements available. (ASAP, No. 94 at p. 5) Utility Coalition also recommended DOE not exempt marine lamps noting that they agreed with DOE's determination that marine lamps provide overall illumination and argued that DOE should not exempt the incandescent versions of these lamps because a potential loophole may result. In addition, Utility Coalition stated that LED versions of marine lamps are now available with substantially higher efficiencies than the incandescent versions. (Utility Coalition, No. 95 at p. 7)

For marine lamps and mine service lamps, as shown in Table III.1, DOE estimates that the annual sales were less than 1 million units for each lamp type and therefore concludes that marine lamps and mine service lamps are low volume products. Further, DOE has adopted definitions in this final rule requiring that these lamps are designed and labeled for their respective applications in order to discourage their use in general lighting applications. (See sections III.B.10 and III.B.4 for the adopted definitions of mine service lamp and marine lamp, respectively.) For these reasons, DOE has maintained the exemptions from the GSIL definition for marine lamps and mine service lamps.

ASAP also recommended discontinuing the exemption for showcase lamps to prevent a potential loophole noting they are widely available, can fit in many light fixtures, and are similar to the T shape lamps that DOE proposed to include. (ASAP, No. 94 at p. 5) DOE determined that showcase applications generally have space constraints and therefore typically require the use of lamps with specific shapes and characteristics to serve in this specialty application. As shown in Table III.1, DOE estimates the annual sales of showcase lamps to be less than 1 million units and thus concludes that these lamps are low volume products. In addition, DOE has adopted a definition in this final rule that includes only

specific shapes and wattages and requires that showcase lamps be designed and labeled for their specialty application in order to discourage their use in general lighting applications. (See section III.B.5 for the adopted definition of showcase lamp.) Given the specific characteristics of showcase lamps outlined in the definition, DOE concluded that the continued exemption of showcase lamps is unlikely to create a loophole. Thus, DOE has maintained the exemption for showcase lamps from the GSIL definition in this final rule.

ASAP noted that the exemption for bug lamp should be discontinued because it was found recently in a study presented at the American Academy of Arts and Sciences 2016 Annual Meeting that warm light LED lamps attracted fewer bugs than incandescents, CFLs, halogens, cool light LED lamps, and incandescent bug lamps. (ASAP, No. 94 at p. 5) DOE understands that research has been conducted to assess the most effective sources for preventing bug attraction. The abstract of the study¹⁵ cited by ASAP stated that it was the first and only study to directly compare the effectiveness of different lamp technologies designed for outdoor residential use in preventing the attraction of bugs. Further, the study appears to be limited to a specific geographic region and time of year. DOE appreciates ASAP directing its attention to the study but is withholding from making a determination on the effectiveness of various technologies based on the limited research available thus far. DOE estimates the annual sales of bug lamps to be less than 1 million units and thus concludes that these lamps are low volume products. In addition, DOE determined that the features of a bug lamp, including radiant power in a specific portion of the electromagnetic spectrum and visible yellow coating, would discourage its use in general lighting applications and limit its ability to provide overall illumination. Further, DOE has adopted a definition for bug lamp in this final rule reflecting these unique characteristics and requiring that bug lamps be specifically designed and labeled for their specialty application in order to discourage their use in general lighting applications. (See section III.B.1 for the adopted definition of bug lamp.) For these reasons, DOE has maintained

¹⁵ Light Pollution and Insects: Insect Attraction to Various Types of Residential Lights abstract is available at: <http://www.aas.org/abstract/light-pollution-and-insects-insect-attraction-various-types-residential-lights>.

the exemption for bug lamp from the GSIL definition in this final rule.

Regarding plant light lamps, ASAP commented that the LED versions of these lamps are a better alternative to incandescent plant light lamps and less expensive to operate. (ASAP, No. 94 at p.5) DOE acknowledges the potential for LED lamps to be well suited to provide light in specific spectral ranges to encourage plant growth; however, DOE also believes this to be an area of continuing research¹⁶ and is not assessing the effectiveness of different technologies on plant growth. As shown in Table III.1, DOE estimates the annual sales of plant light lamps to be less than 1 million units and thus concludes that these lamps are low volume products. In addition, DOE determined that plant light lamps produce radiant power in specific wavelengths of the electromagnetic spectrum that would prevent these lamps from serving in general lighting applications. DOE has adopted a definition in this final rule specifying radiant power requirements and requiring that these lamps be designed and marketed for their specialty application in order to discourage their use in general lighting applications. (See section III.B.1 for the adopted definition of plant light lamp.) For these reasons, DOE has maintained the exemption for plant light lamp from the GSIL definition in this final rule.

ASAP recommended including traffic signal lamps in the definition of GSIL. (ASAP, No. 94 at p. 4) NRDC stated that the exemption for traffic signal lamps is not warranted because these lamps are suitable for general lighting applications and are comparable to rough service or vibration service lamps through the use of a sturdier filament. NRDC noted that these lamps available in medium screw bases, have input voltages of 120 V and 130 V, and have significant light output comparable to 40 W or 60 W lamps. NRDC added that LED lamps can serve as suitable replacements for traffic signal lamps, as they are physically durable, have long lifetimes, and already exist at the desired voltages and light output levels. (NRDC, No. 83 at pp. 12, 95; NRDC, No. 85 at p. 8) Utility Coalition also recommended DOE not exempt traffic signal lamps from the GSIL definition. Utility Coalition noted that they agreed with DOE's determination that traffic signal lamps provide overall illumination and argued that DOE should not exempt the

incandescent versions of these lamps because a potential loophole may result. In addition, Utility Coalition noted that LED versions of traffic signal lamps are now available with substantially higher efficiencies than the incandescent versions. (Utility Coalition, No. 95 at p. 7)

DOE understands that traffic signal lamps may share characteristics with rough service or vibration service lamps; however, DOE also identified a characteristic of traffic signal lamps—a very long lifetime, which indicated they were designed for a specialty application. As shown in Table III.1, DOE estimates the annual sales of traffic signal lamps to be less than 1 million units and thus concludes that these lamps are low volume products. In addition, DOE believes removing the exemption for traffic signal lamps could result in safety concerns or stranded equipment. DOE has adopted a definition in this final rule specifying a minimum lifetime requirement and requiring that these lamps be designed and marketed for their specialty application in order to discourage their use in general lighting applications. (See section III.B.6 for the adopted definition of traffic signal lamp.) For the reasons discussed in this paragraph, DOE has maintained the exemption for traffic signal lamp from the GSIL definition in this final rule. DOE will continue to monitor the market and may reconsider this decision in the future if traffic signal lamps are used in general lighting applications.

CA IOUs acknowledged that silver bowl lamps are unique in that they have an aluminum cover at the top that reflects light back into the fixture. However, CA IOUs stated that these lamp types are becoming more popular and being used for general illumination, often in restaurants, because they can still project light into an area and provide overall illumination. CA IOUs and ASAP added that silver bowl LED lamps are also becoming more common and offered in different form factors. Therefore, CA IOUs recommended that the exemption for silver bowl lamps from GSILs be discontinued. (CA IOUs, No. 83 at pp. 107–108; ASAP, No. 94 at p.5) Utility Coalition also recommended that DOE not exempt silver bowl lamps from the GSIL definition. Utility Coalition noted that they agreed with DOE's determination that silver bowl lamps provide overall illumination and argued that DOE should not exempt the incandescent versions of these lamps because a potential loophole may result. (Utility Coalition, No. 95 at p. 7)

As shown in Table III.1, DOE estimates the annual sales of silver bowl

lamps to be approximately 1 million units and thus concludes that these lamps are low volume products. In addition, DOE has determined that silver bowl lamps use an opaque reflective coating to provide diffuse light concentrated in an upward direction which other lamps, such as omnidirectional or reflector lamps, are unable to provide without the use of additional components. DOE has adopted a definition in this final rule specifying the inclusion of an opaque reflective coating and requiring that these lamps be designed and marketed for their specialty application in order to discourage their use in general lighting applications. (See section III.B.7 for the adopted definition of silver bowl lamp.) For these reasons, DOE has maintained the exemption for silver bowl lamp from the GSIL definition in this final rule.

Utility Coalition also recommended that DOE not exempt left-hand thread lamps from the GSIL definition. Utility Coalition noted that they agreed with DOE's determination that left-hand thread lamps provide overall illumination and argued that DOE should not exempt the incandescent versions of these lamps because a potential loophole may result. In addition, Utility Coalition noted that LED versions of left-hand thread lamps are now available with substantially higher efficacies than the incandescent versions. (Utility Coalition, No. 95 at p. 7)

As shown in Table III.1, DOE estimates the annual sales of left-hand thread lamps to be less than 1 million units and thus concludes that these lamps are low volume products. In addition, DOE has adopted a definition in this final rule requiring that these lamps be designed and marketed for their specialty application in order to discourage their use in general lighting applications. (See section III.B.10 for the adopted definition of left-hand thread lamp.) Given the very low sales and the adopted definition, DOE concluded that the continued exemption of left-hand thread lamps is unlikely to create a loophole. Thus, DOE has maintained the exemption for left-hand thread lamps from the GSIL definition in this final rule. DOE will continue to monitor the market and may reconsider this decision in the future if left-hand thread lamps are used in general lighting applications.

Westinghouse stated that the lumen output of heat lamps (or infrared lamps) is low but was not sure if it is below 310 lumens which would exclude them from the GSIL definition. (Westinghouse, No. 83 at p. 43) DOE notes that

¹⁶ Massa, G., Kim, H.-H., & Wheeler, R. *Plant Productivity in Response to LED Lighting*. HortScience. December 2008. (Last accessed November 20, 2016.) <<http://hortsci.ashspublications.org/content/43/7/1951.full>>

information available for infrared lamps is very limited and lumen output was generally not available since the primary purpose of these lamps is to provide heat. DOE determined that infrared lamps predominately provide radiant power in the infrared region of the electromagnetic spectrum and also typically have a wattage of 125 W or greater. As shown in Table III.1, DOE estimates the annual sales of infrared lamps to be less than 1 million units and thus concludes that these lamps are low volume products. In addition, DOE has adopted a definition in this final rule specifying the design parameters and requiring that infrared lamps be designed and marketed for their specialty application in order to discourage their use in general lighting applications. (See section III.B.2 for the adopted definition of infrared lamp.) For these reasons, DOE has maintained the exemption for infrared lamp from the GSIL definition in this final rule.

DOE also estimated the sales data of medium screw base incandescent lamps that are appliance lamps; black light lamps; colored lamps; marine signal service lamps; and sign service lamps. As indicated in Table III.1, the annual sales of black light, marine signal service, and sign service lamps were 1 million units or less. Appliance lamps and colored lamps were estimated to have annual sales of 2 million units or less. Having received no comments to the contrary, DOE has maintained the exemptions for these lamps due to low sales and the inability or unlikelihood of these lamps to serve in general lighting applications. Further, DOE adopted definitions for these exempted lamp types to prevent them from becoming loopholes. (See section III.B for a discussion of the adopted definitions.)

As discussed in section III.A.1.a, in this final rule, DOE is also maintaining the exemption of G shape lamps with a diameter of 5 inches or greater. As stated previously, DOE will continue to monitor the market and may reconsider this decision in the future if G shape lamps with a diameter of 5 inches or greater are used in general lighting applications.

c. Amended Definition for GSIL

Based on the preliminary determinations in the October 2016 NOPDDA, DOE proposed a new definition for GSIL. GSILs are included in the definition of GSL. (42 U.S.C. 6291(30)(BB)(i)(I)) Thus, any lamp that meets the definition of a GSIL would be a GSL. ASAP supported DOE's proposed revisions to the GSIL definition stating that it is clearer and reduces the chances

of loophole products emerging that can undercut the energy savings from the 45 lm/W backstop standard. (ASAP, No. 94 at p. 3)

In this final rule, DOE is adopting a revised definition of GSIL. A general service incandescent lamp is a standard incandescent or halogen type lamp that is intended for general service applications; has a medium screw base; has a lumen range of not less than 310 lumens and not more than 2,600 lumens or, in the case of a modified spectrum lamp, not less than 232 lumens and not more than 1,950 lumens; and is capable of being operated at a voltage range at least partially within 110 and 130 volts; however this definition does not apply to the following incandescent lamps: An appliance lamp; a black light lamp; a bug lamp; a colored lamp; a G shape lamp with a diameter of 5 inches or more as defined in ANSI C79.1–2002; a n infrared lamp; a left-hand thread lamp; a marine lamp; a marine signal service lamp; a mine service lamp; a plant light lamp; an R20 short lamp; a sign service lamp; a silver bowl lamp; a showcase lamp; and a traffic signal lamp. See the amendments to § 430.2 for the revised definition in its entirety.

2. CFLs

CFLs are also included in the definition of GSL; however, the term “compact fluorescent lamp” was not previously defined. DOE adopted a definition for CFL in the August 2016 CFL test procedure final rule. 81 FR 59386, 59403 (August 29, 2016). DOE incorporated language from the industry standards published by IES RP–16–10 and IES LM–66–14 to define CFL without inappropriately excluding or including lamps. A CFL is an integrated or non-integrated single-base, low pressure mercury, electric-discharge source in which a fluorescing coating transforms some of the ultraviolet energy generated by the mercury discharge into light; the term does not include circline or U-shaped lamps. 10 CFR 430.2.

DOE did not receive any comments regarding this definition and therefore considers CFLs to be lamps as described in the definition adopted in the August 2016 CFL test procedure final rule.

3. General Service LED Lamps and OLED Lamps

General service LED and OLED lamps are included in the definition of GSL under 42 U.S.C. 6291(30)(BB). DOE proposed definitions for both terms in the October 2016 NOPDDA. 81 FR 71803. NEMA recommended and LEDVANCE supported their recommendation that the definition of

general service LED lamp be modified to include lamps marketed for vibration service, rough service, and vibration resistance and exclude specialty lamps and specialty base lamps as defined by NEMA. (NEMA, No. 93 at p. 26; LEDVANCE, No. 90 at pp. 32–33)

As described in section III.A.1.a, DOE discontinued exemptions for vibration service and rough service lamps from the definition of GSIL and therefore these lamps are also included in the definition of GSL. 81 FR 71801. DOE has addressed other specialty lamps as they relate to the definition of GSL in section III.A.4. Therefore, DOE has not revised the definition of “general service LED lamp” in this final rule.

DOE is definitions for “general service LED lamp” and “general service OLED lamp” as detailed in the amendments to § 430.2.

4. Other Lamps

As stated previously, the definition of GSL includes (subject to the exemptions to the extent DOE maintains them) any other lamps that DOE determines are used to satisfy lighting applications traditionally served by GSILs. (42 U.S.C. 6291(30)(BB)(i)(IV)) In addition to GSILs, CFLs, and general service LED and OLED lamps, DOE proposed in the October 2016 NOPDDA a determination that any other lamps that are intended to serve in general lighting applications and have specific features would meet the statutory criterion of lamps used to satisfy lighting applications traditionally served by GSILs. To implement this determination in the October 2016 NOPDDA, DOE proposed to define general service lamp as a lamp capable of serving in general lighting applications and that has the following basic characteristics: (1) An ANSI base (with the exclusion of light fixtures and LED downlight retrofit kits); (2) a lumen output of greater than or equal to 310 lumens and less than or equal to 4,000 lumens; (3) an ability to operate at any voltage; and (4) no designation or label for use in non-general applications. 81 FR 71807. “General lighting application” is currently defined at 10 CFR 430.2 as lighting that provides an interior or exterior area with overall illumination. The key aspects of the proposed definition of GSL and specific comments received regarding these features are discussed in the following sections.

a. Product Availability

Regarding DOE's authority to include other lamps as GSILs, DOE received several comments regarding the availability of equivalent LED substitutes. Westinghouse commented

that there should be two considerations: (1) Whether a lamp type can be made in an LED form and (2) whether it makes economic sense to make the LED version of a lamp type. Westinghouse added that while it is sometimes possible to make the LED version of a specialty lamp, it may not make sense if the sales are declining and potential energy savings are very small. (Westinghouse, No. 83 at pp. 62–64) Westinghouse stated that there are products with small form factors and high lumen output that simply cannot be made as LED replacements. Westinghouse added that they are not aware of any current technology pathways to make certain lamps despite funding opportunities offered by DOE and the utilities. (Westinghouse, No. 83 at pp. 22–23) GE agreed with Westinghouse that there are many halogen lamps used for commercial applications for which it would be physically impossible to make LED replacements. (GE, No. 83 at pp. 129–130) Westinghouse stated that halogen lamps are declining in sales due to a shift towards integrated LED fixtures, but that as long as these sockets remain, consideration should be given to lamps that cannot be made using LED technology. (Westinghouse, No. 83 at pp. 126–129)

After reviewing product availability, technical information, and comments from stakeholders, DOE believes there are three main categories of lamps: (1) Lamps with more efficient, equivalent replacements (*i.e.*, the same form factor and light output); (2) lamps currently without equivalent replacements but for which replacements can likely be made in the future; and (3) lamps for which industry is unlikely to ever be able to create equivalent replacements using more efficient technology.

Regarding the third category of lamps, DOE believes that there are certain lamps that cannot be made with fluorescent or LED technology while reasonably maintaining the same form factor and light output, and thus more efficient, equivalent replacements are technically infeasible for these lamps. For example, certain bipin and double-ended halogen lamps have such small form factors that current information shows it is unlikely that these lamps can be made using a more efficient technology while maintaining a similar form factor and light output. DOE is aware of ongoing research regarding the design challenges when adapting LED technology to the compact form factors of the incandescent and halogen lamps

they are intending to replace.¹⁷ One of the most significant challenges for LED lamps is thermal management, as LED lamps must dissipate a substantial amount of the heat generated to avoid degrading performance (*e.g.*, efficiency, lifetime, color). LED lamps use conduction and convection to transfer heat away from the LEDs and circuitry to a heat sink and eventually to the ambient environment. Comparatively, incandescent lamps dissipate heat generated by the filament to the ambient environment directly through infrared radiation (*i.e.*, absent a heat sink component).¹⁸ The additional components required for LED lamps create design constraints when attempting to maintain the compact form factors of the lamps they are intended to replace. Thus, DOE believes that the dimensions of certain lamps prevent the development of equivalent LED replacement lamps in the desired form factors and lumen outputs.

DOE believes this conclusion is significant because the unavailability of non-incandescent substitutes for a given lamp suggests that lamp is not being used for traditional GSIL applications. The applications traditionally served by GSILs involve general illumination, and DOE believes non-incandescent lamps such as CFLs and LED lamps can adequately serve that application. Indeed, that premise is fundamental to the policy set by EISA 2007 regarding energy use in lighting; the 45 lm/W default standard would likely preclude the use of incandescent technology for any lamp to which it applied. DOE recognizes that various lighting applications do not involve general illumination, and that many of those applications involve technical requirements that necessitate design features in lamps such as specific sizes, shapes, and lumen outputs. If the design characteristics of lamps for a given application are such that non-incandescent lamps cannot be made with the same characteristics, DOE believes it cannot, at present, conclude that those lamps are being used for general illumination. Consequently, DOE is not including such lamps as “other lamps” in its definition of GSL. In the discussion that follows, DOE refers to lamps that it, for this reason, is excluding from GSLs as “specialty products.” But DOE emphasizes that it uses that language only for convenience in explaining its decisions. It is not in

fact determining that such lamps are “specialty products.” Rather, and consistent with the “other lamps” clause, DOE is simply declining to determine that such lamps are used for traditional GSIL applications.

DOE has reviewed product availability to determine which form factor and light output combinations may not be available in fluorescent or LED technology. For the second category of lamps, products that do not currently have more efficient replacements with the same form factor and light output but for which replacements can likely be made in the future, DOE believes that it is possible to manufacture equivalent replacements but that companies have chosen not to do so because the market demand has not yet been great enough. These products have been included in the definition of general service lamp, to the extent they satisfy other aspects of the definition. As discussed in the following sections, DOE has developed multiple criteria that together justify a determination that a lamp is used for traditional GSIL applications. For lamps that cannot be made with non-incandescent technology, those criteria may be insufficient and DOE has excluded such lamps from being GSLs. But for lamps that can be made with non-incandescent technology, DOE believes the criteria it has developed will be adequate for the “other lamps” determination, just as for lamps that are already available with non-incandescent technology.

b. General Lighting Applications

As stated previously, EISA 2007 added the definition of GSL to EPCA and defined the term, in part, to include GSILs, CFLs, general service LED and OLED lamps, and any other lamp that DOE determines is used to satisfy lighting applications traditionally served by GSILs (“other lamps” authority). (42 U.S.C. 6291(30)(BB)(i)(IV)).

To implement this provision, DOE must determine what types of lighting applications have been traditionally served by GSILs; and then it must establish criteria for determining whether a given lamp is used in such applications. With respect to the first issue, the October 2016 NOPDDA noted that GSILs have traditionally provided overall illumination. DOE bases that conclusion on the definition of GSIL and its review of lamps in the market that fulfill that definition. A GSIL, as defined in section 6291(30)(D), is (subject to exemptions) “a standard incandescent or halogen type lamp” that “is intended for general service

¹⁷ Chen, H., S.Y. Hui, S. Li, S. Tan, and E. Waffenschmidt. Power Flow Analysis and Critical Design Issues of Retrofit Light-Emitting Diode (LED) Light Bulb. IEEE Transactions on Power Electronics. 2015. 30(7): pp. 3830–3840.

¹⁸ *Id.*

applications”; that “has a medium screw base”; that has a lumen range as specified in the definition; and that is capable of being operated between 110 and 130 volts. DOE believes that traditionally, lamps that are standard incandescent or halogen and that satisfy the other criteria have served general lighting applications. By “general lighting applications,” DOE means lighting that provides an interior or exterior area with overall illumination. As described in the October 2016 NOPDDA, DOE considers the term “overall illumination” to be similar in meaning to the term “general lighting” as defined in the industry standard ANSI/IES RP-16-10 (hereafter “RP-16”). RP-16 states that “general lighting” means lighting designed to provide a substantially uniform level of illuminance throughout an area, exclusive of any provision for special local requirements.

GE stated that the phrase “used in general lighting applications” that DOE included in the proposed definition of GSL was too vague and DOE should instead include the phrase “used to satisfy lighting applications traditionally served by general service incandescent lamps.” GE explained that for a product to satisfy light applications traditionally served by GSILs it should have a medium screw base, produce between 310 and 2,600 lumens, and operate on a voltage between 110 and 130 V per the current definition of GSILs. (GE, No. 83 at p. 130; GE, No. 88 at pp. 2–4)

NEMA commented that the authority to include other lamps that are used to satisfy lighting applications traditionally served by GSILs is limited to consideration of new technologies given that the EISA 2007 amendment establishing the GSL definition was enacted when halogen technology was just beginning to be introduced and development of LED technology was underway. (NEMA, No. 93 at pp. 3–4)

DOE acknowledges that the phrase identified by GE is the same one used in the statutory definition of GSL. While including the phrase would ensure consistency with the statutory definition, it is clear from the comments on this rulemaking that the phrase is ambiguous and needs further clarification.

With respect to NEMA’s comment, nothing in the language of the statute limits the consideration of “other lamps” to “new technologies.” EPCA directs DOE to consider how GSILs have traditionally been used (*i.e.*, in what applications GSILs served). Also, it would frustrate the purposes of the statute for DOE to assess what counts as

a “new technology.” DOE would have to conduct a historical assessment to see what the status of a given lighting technology was in 2007, and DOE would need to know what degree of development would have been sufficient for Congress to have considered in 2007 whether to include that technology explicitly in the statute. Moreover, DOE would be presuming that if a technology had reached a certain degree of development, then Congress certainly would have decided whether to include or exclude the technology. Yet there are no signs in the statute or the legislative history that Congress engaged in that searching analysis of technological developments. If DOE were mistaken in its presumption that Congress would have considered a technology during the 2007 deliberations, then it might end up overlooking a set of lamps that could be widely used to provide general illumination. This “new technology” assessment, for which the statute provides no guidance, seems inconsistent with the framework established by EISA 2007. Rather, DOE believes that Congress deferred to DOE the assessment whether, over the course of time, a given set of lamps is being used for GSIL-type applications—regardless whether that set of lamps existed in 2007 as a technological matter.

In developing a definition for GSL that includes “other lamps,” DOE has also considered how to determine whether a lamp is used for traditional GSIL applications. EPCA does not specify to what extent a lamp must be used to satisfy those applications in order to be considered a GSL, and DOE does not interpret the definition to require that the use of other lamps be extensive. As in its consideration of whether to maintain an exemption under the GSL definition, DOE also considered the potential of lamp switching that may occur in response to any GSL standard when evaluating “other lamps.” Even if a lamp is currently used in only very limited instances to satisfy lighting applications traditionally served by GSILs, that use has the potential to increase in response to a standard for GSLs.

DOE does not have data on every application in which a lamp is used, so absent complete data on actual use, DOE considers the characteristics of a lamp relevant for assessing whether it is used to satisfy lighting applications traditionally served by GSILs. In looking at the application of a GSIL, DOE considered the lighting characteristics of a GSIL, *i.e.*, DOE considered what lighting characteristics allow a GSIL to

meet the needs of a general service application and what lighting characteristics would satisfy a lighting application traditionally served by a GSIL. DOE believes that if a lamp is capable of being used in general lighting applications and has the additional features that DOE is including in the definition of GSL, that lamp is actually being used to some extent in applications traditionally served by GSILs. As GSILs have traditionally provided overall illumination, a lamp that would satisfy the same application as traditionally served by GSILs is one that would provide overall illumination. 81 FR 71803–71804.

Utility Coalition and CA IOUs asserted that the scope of GSL is not limited to residential products. The definition of “general lighting application” means “lighting that provides an interior or exterior area with overall illumination,” with no mention of sector. Utility Coalition stated that the inclusion of all voltages and bases in the proposed GSL definition reinforces that this rulemaking is not specific to only residential products. Further Utility Coalition asserted that the existence of exemptions for clearly non-residential lamps, such as marine lamps and traffic signal lamps, indicated that the scope of GSLs is not only residential products. (Utility Coalition, No. 95 at p. 4; CA IOUs, No. 83 at p. 136)

With respect to whether “other lamps” must be for residential use, DOE notes that GSLs are regulated under Title III, Part B of EPCA, The Energy Conservation Program for Consumer Products Other Than Automobiles; *i.e.*, GSILs are regulated as consumer products. (42 U.S.C. 6291–6309) “Consumer product” is not necessarily restricted to a product used in a residential setting. EPCA defines “consumer product,” in part, as any article of a type which to any significant extent is distributed in commerce for personal use or consumption by individuals, without regard to whether such article of such type is in fact distributed in commerce for personal use or consumption by an individual. (42 U.S.C. 6291(1)(B)) Because a consumer product need only be distributed “to a significant extent” for consumer use, evidently many sales of the product type could be for non-consumer uses; and the definition explicitly says that a particular product with no consumer sales can still be a consumer product if it is of a type that is “to a significant extent” sold for consumer use. Meanwhile, the phrase “applications traditionally served by general service incandescent lamps” is

not limited to residential applications. Thus, GSILs can be sold extensively for non-consumer applications and the “other lamps” provision does not suggest DOE should regard “applications traditionally served” by GSILs as comprising only consumer use. Accordingly, DOE did not limit its analysis to certain market sectors when considering which lamps served in these applications.

Nothing in the language of the statute limits the consideration of “other lamps” to “new technologies.” EPCA directs DOE to consider how GSILs have traditionally been used (*i.e.*, in what applications GSILs served). Also, it would frustrate the purposes of the statute for DOE to assess what counts as a “new technology.” DOE would have to conduct a historical assessment to see what the status of a given lighting technology was in 2007, and DOE would need to know what degree of development would have been sufficient for Congress to have considered in 2007 whether to include that technology explicitly in the statute. Moreover, DOE would be presuming that if a technology had reached a certain degree of development, then Congress certainly would have decided whether to include or exclude the technology. Yet there are no signs in the statute or the legislative history that Congress engaged in that searching analysis of technological developments. If DOE were mistaken in its presumption that Congress would have considered a technology during the 2007 deliberations, then it might end up overlooking a set of lamps that could be widely used to provide general illumination. This “new technology” assessment, for which the statute provides no guidance, seems inconsistent with the framework established by EISA 2007. Rather, DOE believes that Congress deferred to DOE the assessment whether, over the course of time, a given set of lamps is being used for GSIL-type applications—regardless of the state of the technology of the set of lamps in 2007.

As described in the October 2016 NOPDDA, GSILs have traditionally provided overall illumination. Therefore, a lamp that would satisfy the same application as traditionally served by GSILs is one that would provide overall illumination. DOE included the phrase “is used in general lighting applications” in the definition of GSL because “general lighting application” means lighting that provides an interior or exterior area with overall illumination. As described in the October 2016 NOPDDA, DOE considers the term “overall illumination” to be

similar in meaning to the term “general lighting” as defined in the industry standard ANSI/IES RP-16-10 (hereafter “RP-16”). RP-16 states that “general lighting” means lighting designed to provide a substantially uniform level of illuminance throughout an area, exclusive of any provision for special local requirements.

DOE acknowledges the point that some commenters made, that the “other lamps” subclause in the GSL definition refers to lamps that “are used” for traditional GSIL applications, not lamps that could be so used or are likely to be so used. DOE’s approach is consistent with that language. A lamp that is capable of being used for general illumination could, in many cases, be used for traditional GSIL applications. But, as previously described, that capability is not sufficient, on its own, to qualify a lamp as an “other lamp” under DOE’s definition. Rather, a lamp must have specific additional characteristics, described in later sections. DOE believes that this set of market characteristics, in light of market realities, is sufficient to identify lamps that *are* used for traditional GSIL applications.

As noted, DOE does not interpret “are used” to impose a particular threshold of how prevalent a GSIL-type use must be before a lamp can qualify as an “other lamp.” In addition, the statute does not specify that the GSIL-type uses be the only uses of a lamp for it to qualify as an “other lamp.”

Finally, DOE does not believe that by referring to lamps that “are used” for GSIL-type applications, EPCA requires DOE to have direct evidence of such uses. As usual with factual determinations, this one can be made on the basis of expert judgment and circumstantial evidence. The criteria discussed in later sections are relevant in that respect; these are characteristics that make a lamp particularly suitable for consumers’ use as a substitute for GSILs. DOE notes that lamps—like other products—tend to be designed and optimized for the applications in which buyers actually use them. Consistent with that observation, specialty lamps tend to have a range of design characteristics which make them especially suitable for their particular applications, and at the same time make it more difficult to use them in the same applications as GSILs. Thus, if a lamp that is capable of providing general illumination has design features that make it highly suitable for performing that task in the sort of application that GSILs have traditionally served, DOE infers that manufacturers of that lamp are, to some extent, serving buyers that

use the lamps in that way. The marketing or labeling of a lamp also helps reveal the uses to which a lamp is actually put. If a lamp is marketed solely for specialty purposes, that fact makes it less likely that the lamp is used for traditional GSIL applications. DOE has reflected this consideration by excluding from the definition of GSL certain specialty lamps.

c. ANSI Bases

In the October 2016 NOPDDA, DOE proposed that a GSL must have an ANSI base, with the exclusion of light fixtures and LED downlight retrofit kits. DOE noted that it considers an ANSI base to be a lamp base standardized by the American National Standards Institute. To better clarify the term ANSI base, DOE proposed a definition in the October 2016 NOPDDA. 81 FR 71804. More specifically, an

ANSI base, as proposed, would be a base type specified in ANSI C81.61-2016 or IEC 60061-1:2005. Id.

Utility Coalition supported DOE’s proposal to include all bases specified in ANSI C81.61-2016 or IEC 60061-1:2005 in the GSL definition and noted the wide availability of base types in LED lamps. (Utility Coalition, No. 95 at p. 4) ASAP also commented that the ANSI base type specification is appropriate. ASAP noted that bases commonly found in residential applications are driven by the applications or fixture types that are popular at that point in time and can be driven by changes in the market or manufacturing decisions to take advantage of existing standards. (ASAP, No. 83 at pp. 117–118)

However, GE commented that base type needs to be limited because lamps are included in the GSL scope that have never been nor cannot ever be used in a home, and instead are intended for use in specialty commercial or industrial applications. GE explained that most fixtures in homes have predominantly medium screw base sockets with some candelabra base sockets and very few intermediate base sockets. (GE, No. 83 at p. 130) NEMA stated that DOE should include only common base types as only they would be used to satisfy lighting applications traditionally served by GSILs. Maxlite agreed that the ANSI base specification is too broad and suggested limiting general service lamps to those with bases that are common in consumer and residential products. (NEMA, No. 93 at pp. 27–28; Maxlite, No. 83 at p. 123)

As noted in section III.A.4.b, EPCA directs DOE to include as GSLs lamps that are used to satisfy lighting

applications traditionally served by GSILs. DOE has determined that lamps that would satisfy the same applications as traditionally served by GSILs are ones that would provide overall illumination. DOE is not directed to limit its analysis to lamps that provide overall illumination in only the residential sector or, more specifically, only in homes. Therefore, DOE has not used this criterion in deciding whether certain lamps are general service lamps.

For this final rule, DOE reviewed available product offerings by ANSI base type. While DOE is maintaining the specification that GSLs must have an ANSI base, DOE has concluded that certain incandescent/halogen lamps without more efficient, equivalent replacements should not—for the reasons previously given—be included in the definition of GSL. As described in more detail in section III.A.4.f, DOE is excluding lamps with the following ANSI bases from the definition of GSL: Wedge bases; prefocus bases; reflector lamps with a diameter less than 2 inches that do not have E26/24, E26d, E26/50x39, E26/53x39, E29/28, E29/53x39, E39, E39d, EP39, or EX39 bases; and J, JC, JCD, JCS, JCV, JCX, JD, JS, and JT shape lamps that do not have Edison screw bases. DOE did not receive comments specific to its proposed definition of ANSI base. However, upon further deliberation, DOE has concluded that the term “ANSI base” is clear enough that it does not need a specific regulatory definition.

d. Lumen Range

In the October 2016 NOPDDA, DOE proposed to prescribe a maximum lumen output when defining GSL. DOE noted that it believes that lamps with lumen outputs greater than 2,600 can be used in overall illumination and therefore would meet the definition of GSL. However, DOE reviewed available product information and proposed a maximum lumen output in the definition of GSL. At the time of the October 2016 NOPDDA, DOE noted that overall product offerings of general service lamps significantly decreased around 4,000 lumens. Using product offerings as a proxy for overall sales, DOE concluded that sales of lamps with lumen outputs greater than 4,000 lumens were also much lower than lamps with lumen outputs between 310 and 4,000 lumens. While sales are not necessarily an indication of use in general lighting applications, DOE tentatively concluded that the limited and unique product offerings above 4,000 lumens indicated that these lamps may be used mainly in specialty applications rather than for applications

traditionally served by GSILs. Therefore, DOE proposed that general service lamps must have lumen outputs greater than or equal to 310 lumens and less than or equal to 4,000 lumens. 81 FR 71804.

NEMA and LEDVANCE argued that DOE cannot regulate high lumen lamps (2,601–3,300 lumen lamps) unless the sales threshold specified in 42 U.S.C. 6295(l)(4)(G) is met (*i.e.*, at least 100 percent higher than modeled unit sales). (NEMA, No. 93 at p. 20; LEDVANCE, No. 90 at p. 21) NEMA stated that sales for high lumen lamps have declined each year from 2012. (NEMA, No. 93 p. 20) Additionally, LEDVANCE stated that high lumen lamps are not in any “exclusion” or “exemption” from the definition of GSIL and that DOE does not have authority to amend the definition of GSIL to alter the lumen range. (LEDVANCE No. 90, at p. 21)

NEMA commented that DOE does not acknowledge that sales of high lumen incandescent lamps have been decreasing over the last several years and that DOE states that most product offerings between 2,601 and 3,300 lumens are CFLs and LED lamps without providing sales data to support this claim. NEMA stated that although this observation may be correct, DOE is proposing to eliminate high lumen incandescent lamps from the market by applying the 45 lm/W backstop standard without considering the statutory requirement for regulating this lamp type. NEMA stated that DOE cannot include all three lamp technologies in one category noting that DOE has not provided evidence that such a standard would be economically justified for high lumen CFL and LED lamps or would achieve significant energy savings. NEMA added that DOE did not identify high lumen incandescent lamps as posing a lamp switching risk and noted that, following DOE’s proposed reasoning, these lamps provide no lamp switching risk. In addition, NEMA stated that DOE must adhere to the requirements outlined by Congress for regulating these lamps and cannot use its discretion alone. Further, NEMA concluded that these lamps are not used to satisfy lighting applications traditionally served by GSILs, noting that high lumen incandescent lamps are mostly used in commercial and outdoor applications where very bright light is required. (NEMA, No. 93 at p. 21)

As DOE explained for shatter-resistant incandescent and 3-way incandescent lamps in III.A.1.a, 42 U.S.C. 6295(l)(4)(G) requires DOE to complete a rulemaking for high lumen lamps when the sales threshold is met. However, as previously explained, the

mandatory rulemaking under 42 U.S.C. 6295(l)(4) is not the only avenue for DOE to regulate high lumen lamps. Additionally, DOE is not making a determination as to the lumen limit in the definition of GSIL. As commenters noted, the definition of GSIL applies to lamps that have a lumen range of not less than 310 lumens and not more than 2,600 lumens (or, in the case of a modified spectrum lamp, not less than 232 lumens and not more than 1,950 lumens). The definition of GSIL remains limited to lamps that have a lumen range of not less than 310 lumens and not more than 2,600 lumens (or, in the case of a modified spectrum lamp, not less than 232 lumens and not more than 1,950 lumens). DOE is adding a lumen range of greater than or equal to 310 lumens (or 232 lumens for modified spectrum general service incandescent lamps) and less than or equal to 3,300 lumens to the definition of GSL for “other lamps.” As discussed previously in this document, consideration of including lamps in the definition of GSL under the “other lamps” authority is a separate consideration from whether to maintain or discontinue an exemption from the GSL (and GSIL) definition. DOE is establishing this lumen range as part of the definition of GSL as authorized under the “other lamps” provision in the statutory definition of GSL. (42 U.S.C. 6291(30)(BB)(i)(IV)).

The consideration of “other lamps” is not limited by a lumen range. Where Congress intended to limit the definition of GSL based on certain lamp characteristics, it did so (*e.g.*, Congress initially excluded from the definition of GSL the lighting applications and bulb shapes excluded from the definition of GSIL). (42 U.S.C. 6291(30)(BB)(ii)(I)) While the statutory definition of GSIL includes a lumen limit, Congress did not provide a comparable lumen range for lamps that may be determined to be “other lamps.” DOE is to consider whether a lamp is used to satisfy a lighting application traditionally served by a GSIL. The lumen range of a GSIL may be informative for this consideration, but Congress did not impose it as a limit. Instead Congress directed DOE to consider a lamp’s application. As previously discussed, DOE considers the characteristics of a lamp to determine whether it is used to satisfy lighting applications traditionally served by GSILs. In the October 2016 NOPDDA, DOE proposed that lamps within the lumen range of greater than or equal to 310 lumens (or 232 lumens for modified spectrum general service incandescent lamps) and less than or equal to 4,000 lumens and

that meet the other characteristics of GSL as defined in this final rule have the capacity to satisfy lighting applications traditionally served by general service incandescent lamps.

DOE also received comments recommending both raising and lowering the upper lumen limit. NRDC commented that they support the upper lumen limit of 4,000 lumens but noted that they identified several lamps around 3,910 lumens, and therefore suggested increasing the lumen range to around 4,500 lumens to prevent a potential loophole. (NRDC, No. 83 at pp. 10; 138) While supporting an upper lumen bound, NEMA and GE stated that DOE should not set the maximum lumens for GSLs beyond 3,300 lumens per Congress' definition of high lumen incandescent lamps (42 U.S.C. 6295(l)(4)(G)). (NEMA, No. 93 at p. 23; GE, No. 88 at p. 3) NEMA stated that high lumen lamps above 3,300 lumens are too bright to be used in households, where GSILs are predominantly used. NEMA further stated that 200 W incandescent lamps and 40–45 W CFLs in the 2,650–3,600 lumen range are not found in homes because, in addition to being too bright, they are extremely expensive (*i.e.*, about \$15–16 for CFLs and \$10–\$12 for incandescent lamps). (NEMA, No. 93 at p. 23–24) GE stated that fixtures typically have wattage limits prescribed by UL and very few fixtures found in homes can accommodate 200 W (*i.e.*, 4,000 lumen) lamps. (GE, No. 83 at pp. 139–140) Philips recommended DOE align with the definition of GSILs and set the upper lumen limit of GSLs at 2,600 lumens. Philips stated that while the proposed 4,000 lumen maximum would exclude higher wattage high intensity discharge (HID) lamps, it does not exclude all such lamp types. (Philips, No. 96 at p. 4)

For this final rule, DOE reviewed available product offerings to determine whether to raise, lower, or maintain the 4,000 lumen upper limit proposed in the October 2016 NOPDDA. As described in section III.A.4.b, DOE did not limit its analysis to lamps used in only the residential sector. DOE is aware that implementing any lumen limits, regardless of the value, may encourage industry to develop products just outside of the prescribed range. However, DOE believes that lumen output is an important characteristic for determining whether a lamp is used in traditional GSIL applications, particularly since the definition of GSIL itself includes only lamps up to 2,600 lumens in output. While, as noted, that limit in the definition of GSIL does not circumscribe DOE's authority to include

lamps as "other lamps," it does illustrate what applications GSILs have traditionally served. Applications that require high-output lamps have not traditionally been served by lamps up to 2,600 lumens. DOE's current approach recognizes that fact, but also recognizes that lamps with higher outputs are actually used for some of the same applications as GSILs.

Upon reviewing current product offerings, DOE has concluded that it is appropriate to lower the upper lumen bound from 4,000 to 3,300 lumens. DOE determined that there are lamps within the range of 3,301 to 4,000 lumens not intended for use in general lighting applications. For example, lamps marketed for use in stage and studio applications fall within the range of 3,301 to 4,000 lumens. Further, as noted in the October 2016 NOPDDA, although the reported sales of these incandescent lamps are declining, the majority of product offerings between 2,601 and 3,300 lumens are CFLs or LED lamps and are thus not captured in the sales data. Based on product offerings, DOE found that establishing the upper lumen limit at 3,300 was appropriate for including lamps used in applications traditionally served by GSILs.

DOE also received several comments regarding the lower lumen bound in the proposed definition of GSL. NRDC, NEEP, and ASAP stated that DOE should reduce its proposed minimum lumen output for GSLs from 310 to 120 to include 25 W and 40 W equivalent decorative lamps. NRDC added that this would prevent manufacturers from tweaking the lumen output of their current incandescent products, such as globe shape lamps at 320 lumens, to exclude them from the GSL definition. (NRDC, No. 85 at pp. 5–6; NEEP, No. 92 at p. 3) NRDC further stated that lamps between 120 and 310 lumens should be included in the GSL definition because hundreds of millions of sockets contain these lamps; they have high hours of use in commercial settings; and they are available in LED replacements that are mostly dimmable and offered in a variety of shapes, base types, and optics. (NRDC, No. 85 at p. 6; NEEP, No. 92 at p. 3; ASAP, No. 94 at p. 3) RELS agreed with NRDC's proposal, stating that a more inclusive GSL definition would lead to more energy savings, lowering the environmental impact of these products. (RELS, No. 86 at p. 1)

NEEP noted that when many bulbs are used together (*e.g.*, in a chandelier), 25 W and 40 W equivalent lamps can provide acceptable general illumination. NEEP further stated that there are over 80 ENERGY STAR® LED lamps with less than 310 lumens. NEEP

recommended lowering the lower lumen limit from 310 to 120 lumens for all GSILs or, if that change would cause unintended consequences, to lower it to 120 lumens for B, BA, CA, F, G16–1/2, G–25, G30, S or M–14 lamps that are less than or equal to 40 W. (NEEP, No. 92 at p. 3)

CEC recommended a few changes to the lower lumen limit in the definition of GSL to maintain consistency with its own regulations. CEC stated that its general service LED lamp regulation applies to E12 base lamps with 150 lumens or greater and all other lamps of 200 lumens or greater. CEC stated that because 25 W equivalent lamps with lumens less than 310 are used for general illumination (*e.g.*, chandeliers) and have more efficient replacements, they should be included in the GSL definition. (CEC, No. 91 at p. 7) Utility Coalition also recommended DOE align the GSL minimum lumen limit with CEC's general service LED lamps rulemaking but added that DOE should apply the 150 lumen minimum to E17 bases as well. Utility Coalition provided examples of products less than 310 lumens that, it asserted, are marketed and sold for general service applications. (Utility Coalition, No. 95 at p. 4)

Similar to establishing an upper lumen bound, establishing a lower lumen bound can provide an incentive for manufacturers to create products just below the lumen limit. Stakeholders are concerned about this result and have provided several suggestions regarding where this lower lumen bound should be to prevent this problem. Stakeholders have suggested lowering the lower lumen bound from 310 lumens to 120, 150, or 200 lumens to include 25 W equivalent lamps. DOE acknowledges that some lamps with lumen outputs less than 310 lumens can be marketed as 25 W equivalents. However, there is inconsistency in how these lamps are marketed. There are no Federal guidelines that govern the "equivalency" claims of lamps. As such, there is great variety in equivalency claims. Even when equivalency guidelines exist, there is variety in what a 25 W equivalent may be. For example, the ENERGY STAR Lamps V2.0 Specification defines the typical light output of a 25 W omnidirectional lamp to be at least 250 lumens and the typical lumen output of an 25 W omnidirectional decorative lamp (which is also omnidirectional) to be at least 150 lumens. DOE has reviewed available product offerings and instead of trying to include every lamp that is marketed as a 25 W equivalent, DOE has determined the minimum lumen output

of lamps that provide overall illumination. At this time, DOE has determined that lumen output to be 310 lumens, and DOE has therefore established the lower lumen bound at 310 lumens.

GE stated that high lumen lamps, which it considered to be the 150 W and 200 W incandescent lamps, also tend to have larger bulb sizes. GE stated that these lamps are made in A21 and A23 shapes because the filament must be placed farther from the glass due to the increased heat. Therefore, these lamps may not fit in existing fixtures where A19 size lamps are used and also may not meet the UL wattage limit on many fixtures in the home (NEMA estimates that about 95 percent of GSL fixtures will not accommodate 200 W incandescent lamps because it is prohibited by UL 1598). (GE, No. 83 at pp. 72–73) In contrast, NRDC disagreed that the slightly larger size of the 150 W and 200 W incandescent lamps would be too large to be used as a replacement for a standard incandescent lamp in household fixtures. (NRDC, No. 83 at pp. 73–74)

DOE reviewed the lamp dimensions of the A19, A21, and A23 bulb shapes. Per the typical naming convention, the number after the “A” indicates the diameter of the bulb in eighths of an inch. DOE agrees that the bulb shapes of higher lumen lamps are generally larger than those with lumen outputs between 310 and 2,600 lumens. DOE notes that this difference is a quarter to a half of an inch increase in lamp diameter. While there are potentially fixtures that cannot accommodate this increase in size, there is no requirement that all lamps that meet the definition of general service lamp have the same size as GSILs (as currently defined). General service lamps included through the “other lamps” category are those that are used in lighting applications traditionally served by GSILs. Larger diameters would not preclude use of a higher-output lamp in a different fixture. DOE does not believe that, in light of the complete set of characteristics it is using to define “other lamps,” a larger diameter would mean that a lamp is not used in those applications.

e. Operating Voltage

In the October 2016 NOPDDA, DOE did not propose a specific voltage range when defining GSL. 81 FR 71804. ASAP and Utility Coalition agreed with the operating voltage criterion. ASAP commented that they support not specifying a voltage range because adding a range creates the opportunity for manufacturers to specify that

products operate outside of the range even though the products can also operate at common voltages, thus creating a loophole. (ASAP, No. 83 at p. 118; Utility Coalition, No. 95 at p. 4) However, several stakeholders commented that including lamps that operate at all voltages would have unintended consequences.

Westinghouse and Maxlite noted that the voltage range is too broad and could have unintended consequences if products are inadvertently included. (Westinghouse, No. 83 at pp. 119–120; Maxlite, No. 83 at p. 123) GE asserted that by not limiting the operating voltage, DOE was including lamps intended for use in specialty commercial or industrial applications such as airplanes, trains, and automobiles. (GE, No. 83 at p. 130)

Maxlite suggested limiting the operating voltage range to voltages that are common in consumer and residential products. (Maxlite, No. 83 at p. 123) GE stated that 98 percent of GSILs are used in homes according to the 2010 LMC, and nearly all lighting systems in homes operate at 120 V, with a few at 12 V. (GE, No. 88 at p. 4) NEMA stated and Philips agreed that the GSL definition should specify a voltage range from 110 to 130 V or 11 to 13 V. (NEMA, No. 93 at pp. 27–28; Philips, No. 96 at p. 5) NEMA provided a list of specialty applications in which lamps of uncommon voltages are used. (NEMA, No. 93 at pp. 27–28) In order to narrow the scope while preventing loopholes, Westinghouse suggested writing the regulatory language to prevent manufacturers from rating a lamp for an exempted voltage if the lamp is intended to operate at 12 V or 120 V by stating that if the lamp “can operate at 120 V” or “can operate at 12 V,” it would meet the definition of GSL. (Westinghouse, No. 83 at pp. 119–120)

NRDC commented that an operating voltage cap at 120 V does not make sense because 130 V products are increasingly being sold and therefore should be covered too. (NRDC, No. 83 at p. 132) Maxlite added that they agreed with including 130 V products but requested that 277 V products and other voltages not be included. (Maxlite, No. 83 at pp. 132–133) CEC stated that while it agrees with DOE not proposing a specific voltage range in the definition for GSILs, voltage limitations may be useful when defining what is not covered within the GSL definition. (CEC, No. 91 at p. 4)

Northwest Energy Efficiency Alliance (NEEA) and Philips requested clarification on whether certain lamps, such as non-integrated CFLs and HID lamps, are included in the definition of

GSL because these lamps operate on a ballast rather than “at any voltage” as specified in the proposed GSL definition. Philips noted these lamps will not operate if placed directly on a DC or AC sinusoidal waveform and therefore requested that DOE clarify the language in the proposed GSL definition. NEEA noted that these are popular products and that they should be included in the scope. (NEEA, No. 83 at pp. 134–135; Philips, No. 83 at p. 124)

As noted in section III.A.4.b, EPCA directs DOE to include as GSILs lamps which are used to satisfy lighting applications traditionally served by GSILs. DOE has determined that lamps that would satisfy the same applications as traditionally served by GSILs are ones that would provide overall illumination. DOE is not directed to limit its analysis to lamps that provide overall illumination in only the residential sector or, more specifically, only in homes. Therefore, DOE has not used this criterion in deciding whether certain lamps are general service lamps.

DOE reviewed available product offerings to determine whether lamps of all operating voltages are used in general lighting applications. DOE found that certain operating voltages could be an indicator that the lamp is used in specialty applications. For example, lamps with an input voltage of 6.6 V are typically used in airport or aviation applications. DOE has therefore revised the operating voltage criteria for this final rule. Instead of including lamps that operate at all input voltages, DOE is including integrated lamps that are capable of operating at or between input voltages of 12 V, 24 V, 100 to 130 V, 220 to 240 V, or 277 V. DOE determined that lamps capable of operating at these voltages generally provide overall illumination. For example, lamps operating at 12 V and 24 V are commonly MR16 lamps, and lamps operating at 277 V are commonly spiral CFLs. All non-integrated lamps of any voltage are included, assuming they meet the other specified criteria. DOE found that the operating voltage of non-integrated lamps did not correlate to use in specialty applications.

f. Exempted Lamps From GSL

i. GSIL Exemptions

By definition, GSL does not apply to any lighting application or bulb shape that under 42 U.S.C. 6291(30)(D) is not included in the “general service incandescent lamp” definition. (42 U.S.C. 6291(30)(BB))(ii)(I)) DOE tentatively determined in the October 2016 NOPDDA that the language of the

“exclusions provision” under 42 U.S.C. 6291(30)(BB)(ii)(I) is not limited to lamps that are medium screw base or lamps that use incandescent technology. The GSL definition excludes lamps that serve the lighting application or are of the same lamp shape described in the GSIL “exclusions” provision, and makes no express reference to lighting technology or base type. Nonetheless, although the language of 42 U.S.C. 6291(30)(BB)(ii)(I) is not specific to incandescent technology, some of the lamp applications and bulb shapes described under the exemptions to the GSIL definition may be specific to incandescent lamps. 81 FR 71805.

In the October 2016 NOPDDA, DOE assessed each of the 22 lamp categories within the GSIL exemptions to determine whether the Secretary should discontinue or maintain these exemptions for purposes of the GSL definition. DOE tentatively concluded that 14 of the 22 GSIL exemptions for medium screw base incandescent lamps should be maintained, while eight of the GSIL exemptions should be discontinued and considered as GSLs. Consistent with that tentative determination, DOE then assessed the remaining 14 lamp categories in the GSIL exemptions to determine whether the application or lamp shape described is specific to an incandescent technology in order to determine the applicability of each exemption to GSLs other than GSILs. DOE tentatively determined that appliance lamps; black light lamps; bug lamps; colored lamps; infrared lamps; left-hand thread lamps; marine lamps; marine signal service lamps; mine service lamps; plant light lamps; sign service lamps; silver bowl lamps; showcase lamps; and traffic signal lamps are not specific to incandescent technology. Therefore, DOE proposed to extend the exemptions for all 14 lamp categories to all GSLs. 81 FR 71805.

Philips agreed with DOE’s determination of exemption types that are not specific to incandescent technology and that the exemption should be technology neutral. However, Philips cautioned DOE that certain wattages and shapes may be specific only to incandescent technology due to size and heat management issues. (Philips, No. 96 at p. 3) NEEP also agreed that many exempt lamp categories are not specific to incandescent technology. In support of their point, NEEP cited the following as having high efficiency replacements: Appliance lamps; black light lamps; bug lamps; colored lamps; left-hand thread lamps; marine lamps; plant light lamps; sign service lamps; silver bowl lamps;

showcase lamps; and traffic signal lamps. (NEEP, No. 92 at p. 3)

NEMA and LEDVANCE stated that the exemptions for incandescent, CFL, and LED versions of these 14 lamp categories should be maintained, noting that some do not have a CFL or LED replacement. (LEDVANCE, No. 90 at pp. 29–30; NEMA, No. 93 at p. 22) For any specialty lamp types with a CFL or LED replacement, NEMA explained that there is no evidence that lamp shifting is occurring to these lamps, and therefore saw no reason to discontinue exemptions for the CFL or LED versions. NEMA stated that an exemption from energy conservation standards should extend to all technologies for a particular lamp type if no energy conservation standards have been set for that lamp. However, NEMA did remind DOE of its comments in response to the March 2016 GSL ECS NOPR to consider energy conservation standards for certain specialty LED lamps excluded from the definition of general service lamp. (NEMA, No. 93 at p. 22) NEMA also referenced a table from its comments in response to the March 2016 GSL ECS NOPR explaining what sort of technologies are available for the lamp types that may be impacted by the general service lamp rulemaking. (NEMA, No. 66 at pp. 38–40)

As described section III.A.1, in this final rule, DOE concluded that 15 of the 22 GSIL exemptions for medium screw base incandescent lamps should be maintained. Consistent with that determination, DOE then assessed the 15 lamp categories to determine whether the application or lamp shape described is specific to an incandescent technology in order to determine the applicability of each exemption to GSLs other than GSILs. DOE determined that appliance lamps; black light lamps; bug lamps; colored lamps; G shape lamps with a diameter of 5 inches or more; infrared lamps; left-hand thread lamps; marine lamps; marine signal service lamps; mine service lamps; plant light lamps; sign service lamps; silver bowl lamps; showcase lamps; and traffic signal lamps are not specific to incandescent technology. Therefore, DOE is extending the exemptions for all 15 lamp categories to all GSLs.

ii. Specialty MR Lamps

In addition to the aforementioned exempted lamp types, DOE surveyed the market in the October 2016 NOPDDA for MR-shaped lamps with smaller diameters than the common MR16 lamps that are used in non-general lighting applications. DOE found and confirmed that these lamps are typically marketed for use in non-general lighting

applications such as projectors, scientific illumination equipment, theater lighting, studio lighting, stage lighting, film lighting, medical equipment lighting, and emergency lighting. In addition, DOE found that these lamps are significantly more expensive and have shorter lifetimes than MR-shaped lamps designed for general lighting applications. Further, DOE noted it is unsure whether higher efficiency replacements are technologically feasible for these lamps due to their specific optical working distances and smaller form factors. Due to their use in specialty applications and lack of more efficacious equivalent replacements, DOE proposed in the October 2016 NOPDDA that MR-shaped lamps with diameters less than 2 inches that are designed and marketed for use in projectors, scientific illumination equipment, theater lighting, studio lighting, stage lighting, film lighting, medical equipment lighting, and emergency lighting not be included in the GSL definition. 81 FR 71806.

DOE received several comments regarding whether specialty MR lamps should be exempt from the definition of GSL. NRDC agreed with exempting specialty MR16 lamps but stated that regular MR16 lamps should not be exempted because there are LED versions available. (NRDC, No. 83 at pp. 150–151) NRDC and ASAP suggested defining specialty MR16 lamps by specifying a maximum lifetime or voltage requirement. (NRDC, No. 83 at pp. 150–151; NRDC, No. 85 at pp. 2–3; ASAP, No. 94 at p. 2) NEEP also agreed that specialty MR lamps should be exempted. However, NEEP expressed support for covering all MR lamps and requiring petitions to consider individual lamps as specialty MR lamps. NEEP reasoned that this requirement would avoid any potential loopholes for MR-shaped lamps that have a diameter just less than 2 inches and also for higher efficiency replacements. NEEP stressed that there are LED MR14 and MR11 lamps currently being used in general service applications and that unless technical restrictions prevent them from being used as replacements for small form factors, they should be included in the GSL definition. (NEEP, No. 92 at pp. 3–4)

GE commented that MR lamps originated from specialty equipment and have since become commonly used for accent lighting. GE noted that the MR lamps used in general service lighting applications typically operate at 12 V and have a lifetime from 2,000 to 5,000 hours. However, GE stated that MR lamps designed for specialty

equipment typically have very high light output, operate at odd voltages, and have short lifetimes because light output is more important than lifetime. Specifically, GE stated that specialty MR lamps may operate at strange voltages, such as 42, 52, or 82 V, because the lamps are designed for the voltage of the equipment. In addition, specialty MR lamps have lifetimes as low as 200 to 600 hours because they are designed for short operating periods. Additionally, GE noted that the light output is more focused. The ellipsoidal reflector shape has two focal points and the second focal point of specialty MR lamps is designed for the specific distances of the equipment in which it operates. GE further noted that specialty MR lamps are expensive and are not typically sold into the residential market since they are designed for specific applications such as projectors, and medical, scientific, optical equipment, air rail, and roadway. GE concluded that due to their odd voltages, shorter lifetimes and high prices, specialty MR lamps would not be an acceptable replacement for general service lighting. (GE, No. 83 at pp. 143–146; 148–150; GE, No. 88 at p. 2) NEMA noted that for the California regulations, a short lifetime was required for specialty MR16s, thus discouraging use in homes along with their higher price point. (NEMA, No. 83 at pp. 147–148)

NEMA commented that while MR16 lamps are used in both specialty and general lighting applications, if MR16 lamps are eliminated, millions of dollars in equipment designed to use these lamps, such as medical and ophthalmology equipment, will be stranded. NEMA added that because of the small form factor, an LED alternative cannot be made that fits older equipment. (NEMA, No. 83 at pp. 147–148)

NEMA again drew attention to its proposal submitted in response to the March 2016 GSL ECS NOPR to establish wattage caps of 15 W for LED versions and 50 W for incandescent versions of MR lamps. NEMA explained that the 45 lm/W limit would be problematic for LED MR-shaped lamps and the wattage caps would be technologically feasible, economically justified, and reduce testing and certification burden. (NEMA, No. 93 at pp. 25–26) LEDVANCE added that there are no lamps that can replace the functionality of MR lamps and therefore DOE cannot impose an efficacy standard and make them unavailable. (LEDVANCE, No. 90 at pp. 21–22)

After reviewing available product offerings, DOE agrees that certain MR lamps are specialty lamps. These lamps

are labeled for use in applications such as projector lighting, film lighting, and audio/visual lighting. In addition, certain MR lamps are used in specialized equipment (such as scientific illumination and medical equipment) or emergency lighting installations which would be either inoperable or lose their UL safety rating if these lamps were to be removed from the market.

DOE received several comments regarding how to revise the definition of specialty MR lamp. CEC recommended that DOE align its specialty MR lamp definition with CEC's definition for small diameter directional lamps (SDDLs) which it had worked with NEMA to develop. CEC stated the definition of specialty MR lamps should be based on physical and electrical characteristics instead of applications. CEC recommended the definition require the MR bulb shape to be as defined in ANSI C79.1 with a diameter of 2.25 inches or less and meet one of the following criteria: Not be capable of operating at 12 V, 24 V, or 120 V, not have an ANSI compliant pin base or E26 base, have a lumen output of more than 850 lumens, have a wattage of more than 75 W, or have a lifetime of 300 hours or less. (CEC, No. 91 at pp. 7–8)

Utility Coalition also recommended that DOE refer to CEC's definition of SDDL to inform its definition of specialty MR lamps. Utility Coalition stated their research found specialty MR lamps to have extremely high wattages, high lumens, and short lifetimes (50–100 hours) and LED SDDLs are currently not available as adequate substitutes. Utility Coalition further noted that a 300-hour lifetime maximum would prevent them from being used in general service applications. (Utility Coalition, No. 95 at pp. 11–12)

GE, LEDVANCE, and NEMA disagreed with DOE's proposed requirement that specialty MR lamps have a diameter less than 2 inches noting that many MR16 lamps, with a diameter of exactly 2 inches, are specialty lamps. (GE, No. 88 at p. 2; LEDVANCE, No. 90 at pp. 21–22; NEMA, No. 93 at pp. 24–25) GE suggested defining specialty MR lamps to have a maximum diameter of 2.25 inches, to operate at voltages other than 12 or 120 volts, to have a lifetime less than 1,000 hours, or to have a wattage of more than 75 W. (GE, No. 88 at p. 3) NEMA and LEDVANCE recommended the same diameter requirements. NEMA also recommended the same lifetime and wattage criteria as GE but specified the lamps not operate at 11–13 V or 120–130 V. Further, NEMA specified that if any of these characteristics are

not applicable, it could also be considered a specialty MR lamp if it is listed in Table 8 of ANSI Special Report 24f. LEDVANCE stated that Table 8 shows various lamp voltages, wattages, bases, lengths, working distances (which are application critical), and beam characteristics. LEDVANCE asserted that none of the lamps in Table 8 have characteristics that are identical to a 20 W, 30 W, or 50 W GU5.3 bipin base, less than 4 inch length MR16 lamp. Philips expressed support for NEMA's proposed definition. (NEMA, No. 93 at pp. 24–25; LEDVANCE, No. 90 at pp. 31–32; Philips, No. 96 at pp. 4–5)

Additionally, LEDVANCE and NEMA stated that the applications outlined in the proposed specialty MR lamp definition were limiting as they did not capture all of the specialty uses of these lamps, in particular aviation applications, and therefore should be removed. (NEMA, No. 93 at pp. 24–25; LEDVANCE, No. 90 at pp. 31–32) Philips explained that some halogen MR lamps are used in exit sign applications and any LED replacements for the lamps would need to meet several different lighting and electrical safety requirements from NFPA, UL, and local safety codes. (Philips, No. 96 at pp. 4–5)

After reviewing available MR lamps, DOE agrees that revisions to the definition of specialty MR lamp are appropriate. In addition to product offerings in catalogs, DOE reviewed the Lighting Facts database and ANSI Special Report 24f to determine which MR lamps were specialty products and should therefore be included in the definition of specialty MR lamp. DOE considered factors such as whether the lamp had a specific feature that prevented or made it unlikely for use in general lighting applications; whether the lamp was labeled for a specialty application; and whether the lamp must exist for reasons of safety. Regarding whether equivalent LED replacements exist (*i.e.*, lamps with reasonably the same form factor and light output but that use LED technology), see section III.A.4.f.iv.

DOE has decided to revise specifications for lamp diameter and a specialty application label in the definition of specialty MR lamp. To include specialty MR16 lamps, DOE has revised the diameter requirement to include MR lamps with diameters of 2.25 inches or less. DOE continues to include smaller MR-shaped lamps (such as MR11s and MR14s) in the definition of specialty MR lamp because DOE found numerous smaller MR-shaped lamps marketed for use in specialty

applications. DOE agrees that by listing all applications of specialty MR lamps in the definition, it may inadvertently fail to include one. As such, DOE has removed the long list of applications from the specialty MR lamp definition. However, DOE has maintained the requirement that the lamp be designed and marketed for a specialty application. DOE believes this requirement will further convey to consumers that the lamp is not intended for general service applications.

DOE has also decided to add a specification for lifetime in the definition of specialty MR lamp. DOE has reviewed available product information and agrees that this qualifier should be added to ensure only specialty MR lamps are included in the definition. DOE agrees with stakeholders that specialty MR lamps tend to have short lifetimes because lumen output is valued over their longevity. CEC suggested a lifetime requirement of 300 hours or less whereas industry suggested a lifetime requirement of 1,000 hours or less. DOE notes that 1,000 hours is the same lifetime as many lamps used in general service applications, such as GSILs. Furthermore, DOE reviewed available specialty lamps and found that the majority had a lifetime of 300 hours or less. DOE is therefore including a requirement that specialty MR lamps have a lifetime of 300 hours or less in the definition adopted in this final rule.

Although DOE also received comments regarding voltage and wattage (or lumen output), DOE is not including requirements for these quantities in the definition of specialty MR lamp. As described in section III.A.4.e, DOE has modified the input voltage requirements for all general service lamps. DOE has included in the definition of GSL non-integrated lamps that operate at any voltage and integrated lamps that are capable of operating at 12 V, 24 V, 100 to 130 V, 220 to 240 V, and 277 V. Lamps that cannot operate at these voltages are not included in the definition of general service lamp. DOE has found that it is not necessary to limit input voltage requirements for specialty MR lamps beyond the requirements already established for general service lamps. Regarding light output, DOE believes that there are certain lamps that cannot be made with fluorescent or LED technology while reasonably maintaining the same form factor and light output. These lamps are discussed in section III.A.4.a.

iii. R20 Short Lamps

As recounted in the October 2016 NOPDDA, DOE determined in a final

rule published on November 14, 2013 that standards for R20 short lamps would not result in significant energy savings because such lamps are designed for special applications or have special characteristics not available in reasonably substitutable lamp types. 78 FR 68331, 68340. Therefore, DOE proposed in the October 2016 NOPDDA to maintain the exemption for these lamps from GSIL and exempt R20 short lamps from the definition of GSL. 81 FR 71806. As described in section III.A.1.a, DOE is maintaining this exemption in this final rule.

iv. Other Specialty Lamps

As described in section III.A.4.a, DOE believes there are three main categories of lamps: (1) Lamps with more efficient, equivalent replacements (*i.e.*, the same form factor and light output); (2) lamps currently without equivalent replacements but for which replacements can likely be made in the future; and (3) lamps for which industry is unlikely to ever be able to create equivalent replacements using more efficient technology. Regarding the third category of lamps, DOE has concluded that some form factor and light output combinations are unlikely to ever be available using more efficient technology due to technical limitations. As discussed in section III.A.4.a, DOE is declining to determine that lamps with those particular characteristics are used for traditional GSIL applications, and DOE is accordingly not including those lamps as GSILs.

Utility Coalition agreed with DOE's process to begin with a broad scope and exempt products that do not have general service applications or do not have an LED replacement. Utility Coalition stressed that DOE should only exempt products if commenters can specifically explain why a product cannot be manufactured with LED technology. (Utility Coalition, No. 95 at p. 4)

Several stakeholders provided specific examples of lamps that do not have more efficient, equivalent replacements. Westinghouse noted that for certain incandescent/halogen specialty lamps there is no design path to develop LED products with equivalent lumen output and similar form factor. Hence Westinghouse noted that because they are specialty and not available in more efficient technology, they should not be included in the GSL definition. Specifically, Westinghouse noted the following lamps: JC and JCD shaped lamps with G4, G8, G9, GU4, GU7.9, GU8, GY6.35, GY7.9, GY8, and GY8.6 base types; T shape lamps with

diameters of 1 inch or less (T8 or smaller) that do not have medium screw bases; lamps with wedge bases; T shape lamps with diameters of 0.75 inch or less (T6 or smaller) with double-ended double contact, metal fin bases; and miniature reflector lamps with diameter less than 2 inches. (Westinghouse, No. 83 at pp. 126–129; Westinghouse, No. 89 at pp. 1–2) Maxlite agreed, commenting that lamps operating at 12 V with small bases such as G4, G9, wedge, and festoon, are typically halogen lamps with high lumens and when made in LED form, are significantly larger and no longer fit in the traditional luminaires for which they were designed. GE and NEMA added that halogen bipin lamps cannot be made using LED technology and should not be included as general service lamps. (Maxlite, No. 83 at pp. 133–134; NEMA, No. 83 at pp. 52–53; GE, No. 88 at p. 4)

GE stated that if specialty MR lamps are exempt from the GSL definition, specialty PAR lamps should be exempted as well. GE explained that only PAR20, 30, and 38 lamps with medium screw bases that operate at 120 V are used in general service applications. All other PAR lamps should be considered specialty PAR lamps. (GE, No. 88 at p. 3)

NEMA and GE expressed concern that including lamps of all voltages and base types in the GSL definition would include specialty lamps. (NEMA, No. 93 at pp. 27–28; GE, No. 88 at p. 5) NEMA stated that LED replacements do not exist for the following applications: Airport; airplane; airway; locomotive; automobiles; photographic; stage; studio; medical; and dental. GE added the following to NEMA's list of applications for which equivalent LED replacements do not exist: Projection; television service; headlight; street railway or other transportation service; microscope; map; and microfilm or other specialized equipment service. Hence the inclusion of these lamp types in the GSL definition may create an absence of products resulting in safety and security concerns. Philips also stated that it was important to maintain the incandescent/halogen versions because recent Caliper reports indicate issues with compatibility of LED reflector lamps with dimming/control systems. (Philips, No. 96 at p. 6) NEMA submitted ANSI Special Report 24f that provides details on some but not all specialty lamps. (NEMA, No. 93 at pp. 27–28; GE, No. 88 at p. 4)

In contrast, Utility Coalition stated that LED replacements are widely available in an array of screw bases like medium screw bases (E26/E27);

candelabra bases (E12); mogul bases (E39); intermediate bases (E17); E5 and E10 bases; pin bases such as G4 and G13; various sizes of GX, GU, GY, and GZ bases; wedge bases; and bayonet bases (BA). Additionally LED replacements of double-ended halogen lamps with recessed single contact bases are available. Utility Coalition also noted the availability of LED replacements in a wide array of lamp shapes including A, R, PAR, BR, ER, MR, C, CA, F, G, E, and T shapes. Utility Coalition asserted that high efficiency lamps are affordable, noting that CFLs are below \$2–3, and LED lamp prices are declining dramatically, with some available below \$3–5. (Utility Coalition, No. 95 at pp. 1–2) Utility Coalition also provided price data and trends on LED lamps based on data it has been collecting since 2013, which show that lamps with the highest efficiencies have dropped in price by at least 30 percent since 2013. (Utility Coalition, No. 95 at p. 13) Several other commenters, including NRDC, Soraa, ASAP, and NEEP, noted the wide spread availability of various LED lamp replacements. (NRDC No. 85 at p. 6; NRDC, No. 83 at p. 11; Soraa, No. 87 at p. 2; NEEP, No. 83 at pp. 13–14; ASAP, No. 83 at pp. 98–99, 170–171)

ASAP suggested using a similar approach as DOE's motors rulemaking and defining the specific base types and voltages that are problematic and excluding them from the definition of GSL. (ASAP, No. 83 at pp. 120–121)

In section III.A.4.a, DOE discusses the three categories of lamp identified: (1) Lamps with more efficient, equivalent replacements (*i.e.*, the same form factor and light output); (2) lamps currently without equivalent replacements but for which replacements can likely be made in the future; and (3) lamps for which industry is unlikely to ever be able to create an equivalent replacement using more efficient technology. DOE has reviewed available product offerings to identify lamps that do not have equivalent replacements (*i.e.*, the same form factor and light output) using more efficient technology. For some of those lamps DOE concluded that, based on information available at this time, it was unlikely that industry would ever be able to create an equivalent replacement using more efficient technology. DOE has therefore excluded them from the definition of GSL in this final rule, for the reasons given in section III.A.4.a. DOE has concluded that the remaining lamps without more efficient equivalent replacements can likely be made, but manufacturers have chosen not to do so because market demand is not yet sufficient. DOE has included those

lamps as general service lamps. See section V for information regarding DOE's enforcement policy.

After identifying lamps without more efficient equivalent replacements, DOE considered the size of the ANSI base, the dimensions of the bulb shape, and the lumen output gap between existing incandescent products and existing LED replacements to evaluate whether equivalent replacements could be produced. DOE determined that the larger the ANSI base, the greater the bulb volume, and the smaller the lumen gap between existing incandescent and LED products, the more likely that an equivalent LED replacement could be produced. Larger ANSI bases and bulb shapes allow for more space to accommodate a heat sink and/or additional electronics needed to support LED technology. For example, a medium screw base LED filament lamp can accommodate the electronics of an LED driver in the ANSI base. However, lamps with very small bases, such as wedge bases, or lamps with very small shapes, such as T shape lamps with diameters of 1 inch or less, cannot accommodate the LED driver and/or the LEDs themselves in the same form factor and light output combinations as is possible with incandescent technology. Furthermore, certain lamp types have already shown progress in developing equivalent LED replacements. For example, incandescent/halogen candelabra base lamps with B10 shapes are available with lumen outputs up to 760 lumens. Equivalent LED replacements are currently available with lumen outputs only up to 500 lumens. A small lumen output gap between existing incandescent and LED products indicates that only modest improvements in technology, electronics, or design are necessary to increase product performance.

After reviewing these factors, DOE concludes that lamps were included in the definition of GSL proposed in the October 2016 NOPDDA that should not have been included because they do not and likely cannot have equivalent replacements using more efficient technology. DOE is excluding these lamps from the definition of general service lamp for the reasons given in section III.A.4.a. DOE has determined that it must use a combination of shape, base, length, and diameter to capture all of these specialty lamps. The excluded products include:¹⁹

- T shape lamps that have a first number symbol less than or equal to 8 (diameter less than or equal to 1 inch) as defined in ANSI C79.1–2002, nominal overall length less than 12 inches, and that are not compact fluorescent lamps;

- S shape or G shape lamps that have a first number symbol less than or equal to 12.5 (diameter less than or equal to 1.5625 inches) as defined in ANSI C79.1–2002;

- Reflector lamps that have a first number symbol less than 16 (diameter less than 2 inches) as defined in ANSI C79.1–2002 and that do not have E26/24, E26d, E26/50x39, E26/53x39, E29/28, E29/53x39, E39, E39d, EP39, or EX39 bases;

- MR shape lamps that have a first number symbol equal to 16 (diameter equal to 2 inches) as defined in ANSI C79.1–2002, operate at 12 volts, and have a lumen output greater than or equal to 800;

- J, JC, JCD, JCS, JCV, JCX, JD, JS, and JT shape lamps that do not have Edison screw bases; and

- Lamps that have a wedge base or prefocus base.

g. Lamps Subject to Other Rulemakings

In the March 2016 GSL ECS NOPR, DOE proposed that a GSL cannot be a lamp that is the subject of other ongoing rulemakings. 81 FR 14528, 14543. In the October 2016 NOPDDA, DOE proposed to discontinue this criteria regarding other rulemakings. DOE continued to exempt GSFLs from the definition of GSL. 81 FR 71806. Because the definition of GSFL and the supporting definition of fluorescent lamp are structured in a certain way, DOE added some exemptions to the proposed rule to exclude lamps from the definition of GSL that are specifically and currently excluded from the GSFL and fluorescent lamp definitions. For example, DOE exempted circline lamps, which were considered to be GSFLs in the January 2015 rulemaking but for which DOE did not evaluate standards, and DOE exempted fluorescent lamps with a CRI of 87 or greater because they are statutorily exempt from standards. However, DOE did not propose to exempt other lamps that were the subject of other ongoing rulemakings. For example, DOE did not specifically propose to exempt HID lamps that otherwise meet the GSL criteria. 81 FR 71806.

NEMA agreed with exempting GSFLs from the definition of general service lamp, noting that Congress intended to

¹⁹ DOE notes that for several of these exclusions, the October 2016 NOPDDA included references to appropriate industry standards to define terms like "wedge base" or "EX39 base." DOE is omitting those references from this final rule because on further deliberation, it believes those terms are

terms of art whose meaning will be clear to participants in the lighting market.

keep GSFLs out of this rulemaking because there were already energy conservation standards for these products. (NEMA, No. 83 at pp. 48–49) However, ASAP voiced concern that the proposed definition in the October 2016 NOPDDA was unintentionally applying exemptions for linear fluorescent lamps, such as those for cold temperature, impact-resistant, and reflectorized lamp types, to CFLs. (ASAP, No. 83 at pp. 20–21, 109–110)

After reviewing the proposed exemptions for fluorescent lamps, DOE agrees that some revisions are necessary to ensure terms related to fluorescent lamps are used consistently. In this final rule, DOE is adopting a definition of “other fluorescent lamps, which grouped these exemptions and made clear that the lamps included are circline lamps and certain double-ended lamps that use fluorescent technology. An “other fluorescent lamps” is a low pressure mercury electric-discharge sources in which a fluorescing coating transforms some of the ultraviolet energy generated by the mercury discharge into light and include circline lamps and include double-ended lamps with the following characteristics: Lengths from one to eight feet; designed for cold temperature applications; designed for use in reprographic equipment; designed to produce radiation in the ultra-violet region of the spectrum; impact-resistant; reflectorized or aperture; or a CRI of 87 or greater.

GE, NEMA and LEDVANCE pointed to what they saw as a contradiction in DOE attempting to include HID lamps in the GSL definition to be regulated when in a recent rulemaking DOE had determined that regulations on HID lamps were either not technologically feasible, economically justified, or would not result in significant energy savings. (GE, No. 88 at p. 4, NEMA, No. 93 at pp. 23–24, LEDVANCE, No. 90 at p. 22, Philips, No. 96 at p. 4) NEMA noted that in the HID determination DOE had stated that significant energy savings would not result from standards for directional HID lamps. (NEMA, No. 93 at pp. 23–24)

GE stated that HID fixtures are never found in the home and are rarely found outside it. (GE, No. 88 at p. 4) Philips stated that because HID lamps require a ballast, are extremely expensive, and have a warm-up time, they are not typically used by consumers and thus do not pose a risk for lamp switching. (Philips, No. 96 at p. 5) NEMA added that 2015 sales for HID lamps with 4,000 lumens or lower were 33 percent below 2012 sales and expected to fall. (NEMA, No. 93 at pp. 23–24) LEDVANCE pointed out that currently there are no

viable replacements for HID lamps.

(LEDVANCE, No. 90 at p. 22)

NEMA asserted that, had Congress intended for HID lamps to be included as GSFLs, it would have done so expressly, but instead authorized DOE to regulate HID lamps as commercial equipment. (NEMA, No. 93 at pp. 23–24) Finally, NEMA and Philips stated there is no DOE test procedure for HID lamps. (Philips, No. 96 at p. 4; NEMA, No. 93 at pp. 23–24)

LEDVANCE stated that should DOE regulate HID lamps as GSFLs, it needs to exclude the lamps exempted from analysis in DOE’s final determination for HID lamps. 80 FR 76355, December 9, 2015. Specifically, these were for lamps less than 50 W, directional lamps, specialty lamps, and lamps that run exclusively on electronic ballasts, which LEDVANCE asserted would eliminate most HID lamps from the scope of this final rule. LEDVANCE added that while direct LED lamp replacements are available for high wattage HID lamps, there are no such lamp replacements for low wattage lamps. LEDVANCE explained that to replace low wattage HID lamps, consumers would have to replace the entire fixture and DOE has not done the necessary payback analysis for this scenario. (LEDVANCE, No. 90 at pp. 30–31)

DOE acknowledges the various comments that HID lamps are primarily used for specialty applications. Given the particular characteristics of HID lamps regarding startup, DOE believes that the criteria it has developed for the “other lamps” category may not be adequate to support an inference that an HID lamp, in particular, is actually used in traditional GSIL applications. Accordingly, DOE will not include HID lamps as GSFLs in this rulemaking and will continue to study the issue. DOE notes that if it notices an influx of HID lamps for the general service lamp market, then DOE may revisit this decision.

DOE further notes that although DOE determined in the recent HID lamps rulemaking that standards for HID lamps are either not technologically feasible or not economically justified, that analysis was based on a different set of lamps than would be analyzed as part of a rulemaking for GSFLs. For example, the HID lamp determination considered only mercury vapor, high pressure sodium, and metal halide technology. In addition, the determination did not analyze self-ballasted or directional HID lamps, among other types. Thus, the previous determination is not relevant and an analysis conducted in the context of a rulemaking for GSFLs could well come to

a different conclusion. However, per the preceding discussion, DOE has determined to exclude HID lamps from the definition of GSFL.

5. Summary and Adopted Regulatory Text Definition

DOE proposed a revised definition of GSFL in the October 2016 NOPDDA. Westinghouse recommended DOE revise the definition of GSFL to capture only those products intended by Congress to be regulated and exclude lamps which are specialty products or covered by existing regulations. (Westinghouse, No. 89 at p. 2)

NEMA recommended the following changes to the proposed GSFL definition: Include lamps that operate only at voltages between 110 to 130 V or 11 to 13 V and have maximum lumens of 3,300; and exclude incandescent reflector lamps, specialty lamps, and specialty base lamps. NEMA also provided definitions for specialty lamp and specialty base lamps. NEMA defined specialty lamp as a lamp designed for and used in special applications and listed the current 22 exempted lamp types specified in the GSIL definition. NEMA defined a specialty base lamp as a lamp with an intermediate base (E17), candelabra base (E12), mini-candelabra base (E11), bayonet base, double ended base, screw terminal base, medium side prong base, mogul prong base, recessed single contact, mogul screw, mogul bi-post, G53, double contact prefocus, 2-pin GY6.35, 2-pin G8, and 2-pin G9 when used with any lamp; or 2-pin G4 when used with non-reflector lamp. (NEMA, No. 93 at p. 27) LEDVANCE supported NEMA’s recommended changes for the GSFL definition. (LEDVANCE, No. 90 at pp. 32–33) Philips agreed with NEMA’s proposed voltage range for the GSFL definition. (Philips, No. 96 at p. 6)

GE recommended DOE modify the GSFL definition to include only lamps with medium screw bases and candelabra bases; that operate between 110 and 130 V or at 12 V, have maximum lumens at 3,300, and “satisfy lighting applications traditionally served by general service incandescent lamps;” and exclude HID lamps. Additionally, GE suggested the definition exclude lamps with the following applications: Airway, airport, aircraft, photo, projection, stage, studio or television service, headlight, locomotive, street railway, or other transportation service; medical or dental service, microscope, map, microfilm, or other specialized equipment service. (GE, No. 88 at pp. 3–4)

In the preceding sections, DOE has reviewed all aspects of the GSFL

definition. DOE has identified the criteria pertinent to lamps that serve in general lighting applications and also identified specialty products that should be exempt from the definition of GSL. In this final rule, DOE is defining general service lamp as a lamp intended to serve in general lighting applications and that has the following basic characteristics: (1) An ANSI base (with the exclusion of light fixtures, LED downlight retrofit kits, and exemptions for specific base types); (2) a lumen output of greater than or equal to 310 lumens and less than or equal to 3,300 lumens; (3) an ability to operate at or between 12 V, 24 V, 100 to 130 V, 220 to 240 V, or 277 V; and (4) no designation or label for use in non-general applications. Regarding the fourth criteria, DOE notes that this requirement is not explicitly stated in the regulatory definition of GSL adopted in this rule. Rather, DOE has listed each of the non-general applications identified or lamps used in such applications in order to clearly define the scope of the definition. The definition excludes certain types of lamp, as discussed elsewhere in this notice.

DOE notes that the definition adopted in this final rule excludes incandescent reflector lamps. That exclusion simply mirrors the exemption for IRLs from the statutory definition of GSL. DOE had proposed to discontinue the IRL exemption. But it is not reaching a decision on that issue in this final rule; DOE will address the status of IRLs in a separate final rule. Accordingly, as of this final rule the exemption for IRLs stands and DOE is replicating that exemption in its definition of GSL.

Thus, DOE is adopting a definition of “general service lamp” in § 430.2 to capture the criteria and the exemptions discussed in previous sections. A general service lamp is a lamp that has an ANSI base; is able to operate at a voltage of 12 volts or 24 volts, at or between 100 to 130 volts, at or between 220 to 240 volts, or of 277 volts for integrated lamps (as defined in this section), or is able to operate at any voltage for non-integrated lamps (as defined in this section); has an initial lumen output of greater than or equal to 310 lumens (or 232 lumens for modified spectrum general service incandescent lamps) and less than or equal to 3,300 lumens; is not a light fixture; is not an LED downlight retrofit kit; and is used in general lighting applications. General service lamps include, but are not limited to, general service incandescent lamps, compact fluorescent lamps, general service light-emitting diode lamps, and general service organic light-

emitting diode lamps. General service lamps do not include:²⁰ Appliance lamps, black light lamps, bug lamps, colored lamps, G shape lamps with a diameter of 5 inches or more as defined in ANSI C79.1–2002, general service fluorescent lamps, high intensity discharge lamps, infrared lamps, J, JC, JCD, JCS, JCV, JCX, JD, JS, and JT shape lamps that do not have Edison screw bases, lamps that have a wedge base or prefocus base, left-hand thread lamps, marine lamps, marine signal service lamps, mine service lamps, MR shape lamps that have a first number symbol equal to 16 (diameter equal to 2 inches) as defined in ANSI C79.1–2002, operate at 12 volts, and have a lumen output greater than or equal to 800, other fluorescent lamps, plant light lamps, R20 short lamps, reflector lamps that have a first number symbol less than 16 (diameter less than 2 inches) as defined in ANSI C79.1–2002, and that do not have E26/E24, E26d, E26/50x39, E26/53x39, E29/28, E29/53x39, E39, E39d, EP39, or EX39 bases, S shape or G shape lamps that have a first number symbol less than or equal to 12.5 (diameter less than or equal to 1.5625 inches) as defined in ANSI C79.1–2002, sign service lamps, silver bowl lamps, showcase lamps, specialty MR lamps, T shape lamps that have a first number symbol less than or equal to 8 (diameter less than or equal to 1 inch) as defined in ANSI C79.1–2002, nominal overall length less than 12 inches, and that are not compact fluorescent lamps, traffic signal lamps, incandescent reflector lamps. See the amendments to § 430.2 for the definition of general service lamp in its entirety.

B. Supporting Definitions

In the October 2016 NOPDDA, DOE proposed several definitions to support its proposed definition of “general service lamp.” Specifically, DOE proposed definitions for “integrated lamp,” “non-integrated lamp,” “light fixture,” “pin base lamp,” “GU24 base,” “LED downlight retrofit kit,” and several terms to better define the lamp types described in section III.A.4 that are exempt from the definition of general service lamp.

LEDVANCE and Philips agreed with the proposed supporting definitions and emphasized that further specifications were not necessary since manufacturers

have produced no products that would take advantage of any potential loopholes. (LEDVANCE, No. 90 at p. 34; Philips, No. 96 at p. 5) CEC stated DOE should base definitions of exempted lamp types on physical and electrical characteristics rather than application, whenever possible. (CEC, No. 91 at p. 5) DOE discusses specific comments regarding the proposed definitions in the following sections.

1. Black Light Lamp, Colored Lamp, Plant Light Lamp, and Bug Lamp

DOE proposed definitions for “black light lamp,” “colored lamp,” “plant light lamp,” and “bug lamp” in the October 2016 NOPDDA. 81 FR 71807. DOE received several comments regarding these definitions.

ASAP commented that while they supported DOE’s approach of using the electromagnetic spectrum to define bug lamps, colored lamps, infrared lamps, and black light lamps, they would suggest defining exempted lamps by specifying a percentage of radiated power within a band of the spectrum rather than just a peak as stated in the proposed definitions. ASAP noted that fluorescent lamps, which can have multiple peaks in the spectrum, could become a loophole and therefore the definitions should be more specific. (ASAP, No. 83 at pp. 44, 99, 105)

The proposed definition of black light lamp would require radiant power peaks in UV–A portion of the electromagnetic spectrum. Typical incandescent lamps and fluorescent lamps do not have their highest radiant power peak in the UV–A portion of the electromagnetic spectrum. Hence, DOE finds that specifying this limited region of the lower end of the electromagnetic spectrum is sufficiently distinctive for identifying black light lamps. Therefore, in this final rule, DOE is adopting the definition of “black light lamp” as proposed in the October 2016 NOPDDA. A black light lamp is a lamp that is designed and marketed as a black light lamp and is an ultraviolet lamp with the highest radiant power peaks in the UV–A band (315 to 400 nm) of the electromagnetic spectrum.

The proposed definition for colored lamp would apply to lamps that satisfy one of two conditions—either a CRI less than 40 or a CCT lower than or greater than a designated value. NRDC, NEEP, and ASAP requested that DOE modify the definition of colored lamp to require that lamps meet both the CRI and the CCT requirement in order to be considered colored lamps. In addition, several stakeholders suggested modifying the lower CCT value. NRDC suggested changing the lower bound

²⁰ DOE notes that for several of these exclusions, the October 2016 NOPDDA included references to appropriate industry standards to define terms like “JT shape” or “EX39 base.” DOE is omitting those references from this final rule because on further deliberation, it believes those terms are terms of art whose meaning will be clear to participants in the lighting market.

CCT value to 2,100 K instead of 2,500 K because incandescent lamps have a CCT around 2,700 K, which is very close to 2,500 K. NEEP, ASAP, and Utility Coalition suggested changing the lower bound CCT value to 2,000 K. NEEP noted that with advancements in color tunable lamps, there is little risk of eliminating lamps with lower CCT values from the market. In addition, NRDC and NEEP stated that the ENERGY STAR Lamps Specification V2.0 includes CCT values of 2,200 K and 2,500 K for filament lamps. Further, NRDC and Utility Coalition pointed out that filament LED lamps have CCT values below 2,500 K. NEEP added that while the lamps with a CCT of 2,000 K are quite visually orange, they are gaining popularity, and coupled with a high CRI, could serve as general illumination bulbs. (NRDC, No. 83 at pp. 12–13, 96; NRDC, No. 85 at p. 10; ASAP, No. 83 at p. 20; ASAP, No. 94 at p. 6; NEEP, No. 83 at p. 97; NEEP, No. 92 at pp. 1–3; Utility Coalition, No. 95 at pp. 10–11)

Maxlite noted that it had supported the inclusion of 2,200 K and 2,500 K for filament lamps in ENERGY STAR Lamps Specification V2.0 as these are becoming popular colors for ultra-warm products. However, Maxlite cautioned DOE not to make categorizations of these CCTs part of the colored lamp definition. Maxlite explained that filament LED lamps with a CCT of 2,200 K or 2,400 K that are designed to mimic incandescent lamps were very popular when introduced. However, Maxlite stated that recent market feedback has shown a preference for a slightly higher CCT of 2,700 K. Westinghouse agreed that consumers may prefer a different color temperature because they have experienced consumers returning lamps with CCTs of 2,200 K and 2,400 K. (Maxlite, No. 83 at pp. 105–106; Westinghouse, No. 83 at pp. 101–102)

NEMA, LEDVANCE, and GE stated the proposed definition of colored lamp was one that has been used by industry for many years and has proven to be both clear and effective. NEMA, LEDVANCE, and GE noted that changing the definition could have the unintended consequence of preventing colored lamps from being produced. In particular, NEMA and LEDVANCE explained that if the definition included CCT and CRI requirements instead of one or the other, then a number of colored lamps would no longer be included in the definition. NEMA and LEDVANCE stated that meeting just one criteria was sufficient to be considered a colored lamp. (GE, No. 83 at p. 104; NEMA, No. 93 at pp. 28–29; LEDVANCE, No. 90 at p. 34)

CCT and CRI are both metrics that characterize the color of light emitted by a light source. CCT is measured by examining how close the light source's chromaticity is to the reference blackbody locus. CRI is calculated from the differences in the chromaticities of eight standard color samples when illuminated by a light source compared to a reference illuminant of the same CCT. Hence, each measurement provides an independent method of determining if the light emitted by a light source is colored. Regarding the proposed requirement of CCT less than 2,500 K, DOE notes that ENERGY STAR Lamps Specification V2.0 includes CCTs of 2,200 K for only filament lamps. As noted by stakeholders, lamps with a CCT of 2,200 K are relatively new products and it is still uncertain how they will be used. Therefore, DOE is maintaining the lower bound threshold of 2,500 K for colored lamps. DOE will continue monitor the market to understand the impact of new products at low CCTs and may revise the definition of colored lamp in the future.

ASAP also noted that in the “colored lamp” definition, as well as specifying that the lamp be designed and marketed as a colored lamp, DOE stated the lamp not be designed and marketed for general service applications. ASAP commented DOE had not added the latter prohibitive phrase in any other definition of an exempted lamp type and suggested DOE either remove it or specify it in all definitions. (ASAP, No. 94 at p. 7)

DOE agrees that the term “designed and marketed” should be consistently used in definitions of exempted lamp types. Therefore, in this final rule, DOE removes the phrase “not designed and marketed for general lighting applications” because the definition of colored lamp already includes the phrase “designed and marketed as a colored lamp.” DOE is adopting a slightly modified definition of colored lamp in the final rule. A colored lamp is a colored fluorescent lamp, a colored incandescent lamp, or a lamp designed and marketed as a colored lamp with either of the following characteristics (if multiple modes of operation are possible [such as variable CCT], either of the below characteristics must be maintained throughout all modes of operation): a CRI less than 40, as determined according to the method set forth in CIE Publication 13.3; or a CCT less than 2,500 K or greater than 7,000 K.²¹

The proposed definition of plant light lamp would require radiant power

peaks in the red and blue region of the electromagnetic spectrum. NRDC commented that plant light lamps could have radiant power peaks in the green portion of the spectrum in addition to the blue or red portions thus making them suitable for general lighting applications. NRDC recommended adding a maximum allowable CRI to ensure general service lamps are not characterized as plant light lamps. (NRDC, No. 83 at pp. 96–97; NRDC, No. 85 at p. 10) ASAP agreed that the radiant power peak requirements specified for plant light lamps could easily be met by fluorescent lamps and possibly by incandescent lamps. ASAP also noted the availability and growing market of efficient LED lamps that emit light beneficial for plants and recommended that plant light lamps be included in the definition of GSILs. (ASAP, No. 94 at pp. 3–7)

A high CRI is not required for the lamp to effectively function and emit the highest radiant power peaks in blue and red wavelengths. Hence, a CRI requirement is not appropriate for defining a plant light lamp. While DOE finds that requirements for radiant power peak may not be exclusively applicable to plant light lamps, the additional requirement that the lamp be designed and marketed for plant growing applications is sufficient to discourage consumers from using plant light lamps in general light applications. For discussion regarding the inclusion of this lamp type in the GSIL definition, see section III.A.1.b. In this final rule DOE is adopting the definition of “plant light lamp” as proposed in the October 2016 NOPDDA. A plant light lamp is a lamp that is designed to promote plant growth by emitting its highest radiant power peaks in the regions of the electromagnetic spectrum that promote photosynthesis: Blue (440 nm to 490 nm) and/or red (620 to 740 nm), and is designed and marketed for plant growing applications.

NRDC commented that the definition of bug lamp, which requires the lamp to have a visible yellow coating, should also specify the amount of coating to prevent possible loopholes. However, GE commented that the requirement that bug lamps produce the majority of radiant power above 550 nm paired with the requirement of a visible yellow coating would prevent general service lamps from meeting the definition of bug lamp. They stated that the definition as proposed is sufficient and well understood by industry. (NRDC, No. 83 at p. 153; GE, No. 83 at p. 154) ASAP stated that fluorescent lamps exhibit peak radiant power above 550 nm and therefore could easily meet the

²¹ DOE notes that the October 2016 NOPDDA included references to appropriate industry standards to define “CCT.” DOE is omitting those references from this final rule because on further deliberation, it believes CCT is a term of art well understood in the lighting industry.

definition of a bug lamp. ASAP added that some fluorescent lamps naturally appear yellowish due their phosphor mix. Noting a study that found that warm light LED lamps attracted fewer insects than conventional and bug incandescent lamps, CFLs, halogens, and cool light LED lamps, ASAP stated DOE should discontinue the exemption of bug lamps from the definition of GSILs. (ASAP, No. 94 at pp. 3–7)

DOE concludes that requiring the yellow coating to be visible on the lamp is sufficient and quantifying it is unnecessary. DOE understands that the requirements for radiant power peak may not be exclusively applicable to bug lamps. However, DOE finds that the combination of requirements for radiant power peak and visible yellow coating should discourage this lamp type from being used in general service applications. For discussion regarding the inclusion of this lamp type in the GSIL definition, see section III.A.1.b. In this final rule, DOE is adopting the definition of “bug lamp” proposed in the October 2016 NOPDDA. A bug lamp is a lamp that is designed and marketed as a bug lamp, has radiant power peaks above 550 nm on the electromagnetic spectrum, and has a visible yellow coating.

2. Infrared Lamp

In the October 2016 NOPDDA, DOE proposed a definition for “infrared lamp” to support the definition of “general service lamp.” 81 FR 71809. NRDC, Utility Coalition, ASAP, and NEEP stated that the proposed definition of infrared lamp, which states that the highest radiant power peaks are in the infrared region of the electromagnetic spectrum, describes any incandescent lamp. They noted that the definition’s requirement that the primary purpose is to provide heat is the only difference from a standard incandescent lamp. NRDC, Utility Coalition, ASAP, and NEEP suggested several possible modifications to the definition. First, they recommended specifying a limit on the percentage of radiant power in the visible spectrum. Specifically, NEEP suggested stating that the lamp must generate more than 95 percent of energy towards heat rather than lighting and ASAP suggested that the share of radiant power in visible range be limited to a maximum of 1 percent. NEEP and ASAP suggested applying a wattage minimum to ensure that only infrared lamps were included, while NRDC recommended a wattage minimum of 125 W coupled with a minimum lamp diameter of 5 inches. Utility Coalition recommended an approach of using maximum lumen

output whereas NEEP suggested using a lumens per watt limit. (NRDC, No. 83 at pp. 12–13, 94–95; NRDC, No. 85 at pp. 6–7; NRDC, No. 85 at p. 7; NEEP, No. 92 at pp. 1–3; Utility Coalition, No. 95 at p. 10; ASAP, No. 94 at p. 6)

Westinghouse commented that the proposed definition of infrared lamp is sufficient and that these lamps are not at risk for use in general service applications because of their low lumen output. Westinghouse added that a lumen range could be added if necessary. (Westinghouse, No. 83 at pp. 41–42) LEDVANCE and NEMA supported the definition. They explained that using “and” in the definition, to require an infrared lamp to have radiant power peaks in the infrared region and have a primary purpose of providing heat, means that these lamps would be distinct from any GSIL and prevent any lamp switching. (NEMA, No. 93 at p. 29; LEDVANCE, No. 90 at pp. 34–35)

DOE understands that the requirement of a radiant power peak is not exclusively applicable to infrared lamps. In this final rule, DOE reviewed the definition of “infrared lamp” and determined that most infrared lamps are at least 125 W. This high wattage aligns with the use of this lamp type to provide heat. Hence, DOE is including a wattage minimum in the definition of “infrared lamp.” In this final rule, DOE is adopting a slightly modified definition for “infrared lamp.” An infrared lamp is a lamp that is designed and marketed as an infrared lamp; has its highest radiant power peaks in the infrared region of the electromagnetic spectrum (770 nm to 1 mm); has a rated wattage of 125 watts or greater; and which has a primary purpose of providing heat.

3. Appliance Lamp

DOE received comments on its use of the statutory definition of “appliance lamp,” which is defined at 42 U.S.C. 6291(30)(T).

NRDC and NEEP stated that appliance lamps resemble a conventional incandescent light bulb to a consumer, except they have smaller bulb dimensions, and therefore can serve as a replacement for 40 W incandescent lamps. NEEP explained that these lamps would particularly be attractive as a replacement due to their low price. NRDC recommended that appliance lamps should be able to operate in high temperature environments throughout the product’s rated lifetime. This requirement would make the lamp more robust and expensive and therefore, an unsuitable replacement for general light applications. NEEP suggested adding

the criteria of high temperature operation or a lumen maximum. (NRDC, No. 85 at p. 8; NEEP, No. 92 at pp. 1–3)

Most appliance lamps are intended for use in a variety of appliances and therefore are designed to operate in low and high temperature environments. Therefore, a criterion for high temperature operation would not be appropriate for defining these lamp types. DOE finds that the specifications in the definition for designating and marketing the lamp for use in appliances is sufficiently clear, thus discouraging consumers from using appliance lamps in general lighting applications. DOE will continue to monitor the market and may revise this definition if needed in the future.

4. Marine Lamp

In the October 2016 NOPDDA, DOE proposed a definition of “marine lamp.” 81 FR 71808. NRDC and NEEP commented that additional detail was needed for the definition of marine lamps to avoid potential loopholes. NRDC noted that these lamps likely operate on 12 or 24 V and recommended that marine lamps be defined as not able to operate at more than 25 V. NEEP suggested adding at least one qualifier to this definition relating to either operating voltage, outdoor temperature operation, or waterproof capability. (NRDC, No. 83 at pp. 95–96; NRDC, No. 85 at p. 9; NEEP, No. 92 at pp. 1–3)

DOE reviewed the performance characteristics of marine lamps and determined that most operate at voltages 12 V to 13.5 V. DOE finds that these operating voltages likely align with the use of these lamps in marine applications. Hence in this final rule DOE is adopting the definition of “marine lamps” with a voltage specification. A marine lamp means a lamp that is designed and marketed for use on boats and can operate at or between 12 volts and 13.5 volts.

5. Showcase Lamp

ASAP commented that the proposed definition for showcase lamp is insufficient to prevent loopholes and that widely available incandescent showcase lamps could fit into many light fixtures. Additionally, ASAP noted that DOE is proposing to include many T shape lamps in the definition of GSILs and recommended that showcase lamps also be included. (ASAP, No. 94 at pp. 3–7)

DOE finds that the shape and wattage specifications as well as the requirement that these lamps be designed and marketed as a showcase lamp is sufficient to discourage consumers from

using these lamps in general lighting applications. For discussion regarding the exemption of this lamp type in the definition of GSIL, see section III.A.1.b. In this final rule DOE is adopting the definition of “showcase lamp” as proposed in the October 2016 NOPDDA. A showcase lamp is a lamp that has a T shape as specified in ANSI C78.20–2003 and ANSI C79.1–2002, is designed and marketed as a showcase lamp, and has a maximum rated wattage of 75 watts. See the amendments to § 430.2 for the definition in its entirety.

6. Traffic Signal Lamp

NRDC stated that given their medium screw base and residential voltage as well as likeness to incandescent lamps, traffic signal lamps would appeal to consumers. Further, the unique characteristics of a strengthened filament and longer life liken these lamps to vibration and rough service lamps. NRDC recommended that DOE remove the exemption for traffic signal lamps to avoid potential lamp switching scenarios. NRDC also commented that LED lamps already meet the needs of traffic signal lamps. (NRDC, No. 85 at p. 8)

NEMA and LEDVANCE agreed with the proposed definition of traffic signal lamp. LEDVANCE explained that these replacement traffic signal lamps have a low lumen output, longer life, A21 shapes; and are more robustly constructed and expensive compared to a GSIL. LEDVANCE stated that due to these factors consumers would not use these lamps as replacements. LEDVANCE added that these lamps cannot be found in typical distribution channels such as retail stores. NEMA and LEDVANCE also stated that this type of lamp has seen dramatic decreases in sales because of the EPCA mandate to use LED technology in new traffic signal modules. (NEMA, No. 93 at p. 30; LEDVANCE, No. 90 at p. 35)

In its review of the definition for traffic signal lamps, DOE found that most traffic signal lamps have a lifetime of 8,000 hours, which is longer than typical incandescent lamps. This distinctive characteristic aligns with the use of these lamp types in traffic signals, in which long lifetimes are likely a desirable feature. Hence, DOE is amending its proposed definition of “traffic signal lamps” to include a lifetime specification. A traffic signal lamp means a lamp that is designed and marketed for traffic signal applications and has a lifetime of 8,000 hours or greater.

7. Silver Bowl Lamp

NEMA and LEDVANCE agreed with DOE’s proposed definition of silver bowl lamp. Both stated that this is a specialty lamp used for pendant and hanging light fixtures and that the lamp has an opaque silver coating causing the light to reflect towards the ceiling to create a specific lighting atmosphere. NEMA and LEDVANCE asserted that these lamps are not suitable for general service lighting applications. (NEMA, No. 93 at pp. 29–30; LEDVANCE, No. 90 at p. 35)

ASAP disagreed and recommended that the definition for “silver bowl lamp” be revised to include a minimum requirement for the percentage of total bulb surface that has a reflective coating. ASAP also suggested that the coating be required to be opaque. Finally, ASAP noted that more efficient alternatives to the incandescent silver bowl lamps are available and that silver bowl lamps should also be included in the definition of GSILs. (ASAP, No. 94 at p. 4)

Manufacturer catalogs and product specifications do not provide the amount of coating used in silver bowl lamps and therefore, it is difficult to determine a consistent value applicable across all products. DOE agrees that an opaque coating is necessary for the primary purpose of the lamp to reflect light towards the lamp base. DOE has therefore included the term “opaque” in the definition. For discussion regarding the exclusion of this lamp type in the GSIL definition, see section III.A.1.b. In this final rule, DOE amends the proposed definition to specify an opaque coating and is adopting a definition of “silver bowl lamp.” A silver bowl lamp is a lamp that has an opaque reflective coating applied directly to part of the bulb surface that reflects light toward the lamp base and that is designed and marketed as a silver bowl lamp.

8. Specialty MR Lamp

In the October 2016 NOPDDA, DOE proposed to exempt certain MR-shaped lamps that have smaller diameters than MR16 lamps and are marketed for use in specialty applications. In doing so, DOE found it necessary to establish a definition for “specialty MR lamp” to describe the lamps used in these specialty applications. As described in section III.A.4.f, DOE has revised the definition of specialty MR lamp for this final rule. A specialty MR lamp is a lamp that has an MR shape as defined in ANSI C79.1–2002, a diameter of less than or equal to 2.25 inches, a lifetime of less than or equal to 300 hours, and

that is designed and marketed for a specialty application.

NEMA recommended and LEDVANCE supported a definition for “MR lamp,” describing it as “a curved focusing reflectorized bulb which may have a multifaceted inner surface that is generally dichroic coated and referred to as a multifaceted reflector lamp with a GU10, GU11, GU5.3, GUX5.3, GU8, GU4, or E26 base” and providing information regarding common light sources and diameters used in the lamp type. (NEMA, No. 93 at p. 27; LEDVANCE, No. 90 at pp. 32–33) DOE does not find that a general definition for MR-shaped lamps is necessary to clarify the scope of this rulemaking. Additionally, the details regarding the bulb shape provided in NEMA’s proposed definition are very similar to those in the ANSI standard that DOE references in its definition of “specialty MR lamp.”

9. Designed and Marketed

In the October 2016 NOPDDA, DOE proposed a definition for “designed and marketed” to provide additional detail regarding the use of the term in several of the supporting definitions. 81 FR 71809. NEEP, Utility Coalition, and ASAP recommended the addition of the words “prominently displayed” in the definition to provide clarity in product labels regarding the application of the product. NEEP commented that this requirement would not overly impact the manufacturer’s packaging process. Further, Utility Coalition and ASAP explained that this requirement would reduce confusion among consumers about how the lamp should be used. (NEEP, No. 92 at pp. 1–3; Utility Coalition, No. 95 at p. 11; ASAP, No. 94 at p. 7)

DOE agrees that the specification of “prominently displayed” would help ensure that the application for which the product is intended is clearly communicated to consumers. Hence in this final rule, DOE amends the proposed definition of “designed and marketed” to specify that the application designation be prominently displayed. Designed and marketed is exclusively designed to fulfill the indicated application and, when distributed in commerce, designated and marketed solely for that application, with the designation prominently displayed on the packaging and all publicly available documents (e.g., product literature, catalogs, and packaging labels). This definition is applicable to terms related to the following covered lighting products: Fluorescent lamp ballasts; fluorescent lamps; general service fluorescent

lamps; general service incandescent lamps; general service lamps; incandescent lamps; incandescent reflector lamps; medium base compact fluorescent lamps; and specialty application mercury vapor lamp ballasts.

10. Other Definitions

In the October 2016 NOPDDA, DOE also proposed definitions for “GU24 base,” “integrated lamp,” “LED downlight retrofit kit,” “left-hand thread lamp,” “light fixture,” “marine signal service lamp,” “mine service lamp,” “non-integrated lamp,” “non-reflector lamp,” “pin base lamp,” “reflector lamp,” and “sign service lamp.” 81 FR 71807, 71809. DOE believes the definitions for “GU24 base” and “non-reflector lamp” are no longer necessary. DOE did not receive any comments on the other definitions and is adopting a definition for integrated lamp, LED downlight retrofit kit, left hand thread lamp, light fixture, marine signal service lamp, mine service lamp, non-integrated lamp, pin-base lamp, sign-service lamp in § 430.2 in this final rule.²²

Although DOE received no comments on the definition of reflector lamp, DOE believes the phrase “is used to provide directional light” describes the function of a reflector lamp better than “is used to direct light.” DOE has therefore revised the definition of reflector lamp in the final rule. A reflector lamp is a lamp that has an R, PAR, BPAR, BR, ER, MR, or similar bulb shape (as defined in ANSI C78.20–2003 and ANSI C79.1–2002) and is used to provide directional light.

IV. Energy Conservation Standards

A. Energy Conservation Standards Proposed in the March 2016 GSL ECS NOPR

In the March 2016 GSL ECS NOPR, DOE proposed standards for GSLs. Although the October 2016 NOPDDA did not specifically address the proposed standards, DOE received a number of general comments regarding the proposed standards. CEC and RELS urged DOE to consider a minimum efficiency standard that achieves feasible and prospective energy savings for products in the GSL scope once the definition of GSL is finalized. (CEC, No. 81 at p. 1; CEC, No. 83 at pp. 32–33;

RELS, No. 86 at p. 1) CEC stated that significant energy savings would result in shifting from an incandescent lamp to an LED lamp or shifting from an LED lamp to a more efficient LED lamp for SDDLs and medium screw base LED reflector lamps. CEC also provided an estimate of current availability of LED replacements at 80 lm/W or higher for SDDLs and medium screw base directional lamps. (CEC, No. 91 at pp. 7–8)

NEEP commented that given the range of LED products available on the market that are high quality and high efficiency, NEEP believes that the federal minimum standard for 2020 and corresponding scope are very achievable. (NEEP, No. 83 at pp. 13–14)

This final rule adopts a definition for GSL, as well as related definitions. DOE is not addressing proposed standards in this final rule. DOE acknowledges the comments regarding the proposed standards for GSLs, and will address them at such time as standards may be finalized.

B. Backstop

If DOE fails to complete a rulemaking in accordance with 42 U.S.C. 6295(i)(6)(A)(i)–(iv) or a final rule from the first rulemaking cycle does not produce savings greater than or equal to the savings from a minimum efficacy standard of 45 lm/W, the statute provides a “backstop” under which DOE must prohibit sales of GSLs that do not meet a minimum 45 lm/W standard beginning on January 1, 2020. (42 U.S.C. 6295(i)(6)(A)(v)) DOE received a number of comments regarding the backstop standard.

CEC commented on the potential for DOE to exercise enforcement discretion if the backstop standard was applicable. (CEC, No. 91 at p. 10) CEC stated that if DOE were to exercise enforcement discretion, that the backstop standard would still be applicable in the context of California building codes (which incorporate Federal appliance standards), and in the context of California’s appliance efficiency standards (which require product certification for federally covered products). (CEC, No. 91 at p. 10)

As of the issuance date of this document the backstop standard would not be applicable. The backstop standard is not applicable unless DOE fails to complete the rulemaking as prescribed by EPCA by January 1, 2017, or the final rule does not produce savings that are greater than or equal to the savings from a minimum efficacy standard of 45 lm/W. (42 U.S.C. 6295(i)(6)(A)(iv))

C. Preemption

Federal energy conservation requirements generally supersede state laws or regulations concerning energy conservation testing, labeling, and standards. (42 U.S.C. 6297(a)–(c)) Generally, preemption applies both before an energy conservation standard becomes effective, and after an energy conservation standard becomes effective. (42 U.S.C. 6297(b) and (c)) For energy conservation standards applicable to GSLs, EISA 2007 established additional preemption provisions specific to California and Nevada. Namely, beginning January 1, 2018, no provision of law can preclude these states from adopting: (1) Standards established in a final DOE rule adopted in accordance with 42 U.S.C. 6295(i)(6)(A)(i)–(iv); (2) the minimum efficacy standard of the backstop standard (45 lm/W) if no final rule was adopted in accordance with 42 U.S.C. 6295(i)(6)(A)(i)–(iv); or (3) for the State of California, any California regulations related to the covered products adopted pursuant to state statute in effect as of the date of enactment of EISA 2007 (*i.e.*, December 19, 2007). (42 U.S.C. 6295(i)(6)(A)(vi)) Other than these narrow exceptions, EPCA’s statutory preemption provision prohibits any state from adopting energy conservation standards for any type of GSL regardless of whether DOE sets standards for that type of GSL.

CEC stated that California has already established a 45 lm/W standard with an effective date of January 1, 2018. (CEC, No. 91 at p. 10) CEC stated that the technology neutral approach to the scope of GSLs would minimize lamp switching that would otherwise limit the energy savings and consumer benefits achieved by the 45 lm/W requirement effective January 1, 2018 in California and in January 1, 2020 in the rest of the nation. (CEC, No. 91 at p. 1) Philips asked if CFL and LED reflector lamps would be GSLs under the definitions proposed in the October 2016 NOPDDA, whether they would be subject to the backstop standard, and if so, whether the backstop standard would preempt the California Title 20 regulation. (Philips, No. 96 at p. 6)

Except for the narrow exception to the preemption provision provided in 42 U.S.C. 6295(i)(6)(A)(vi), the general EPCA preemption provisions apply to GSLs. Federal test procedures for GSLs supersede state test procedures that require testing in any manner other than the Federal test procedure. (42 U.S.C. 6297(a)(1)(A)) Prior to the effective date of standards for GSLs, no state regulation regarding energy efficiency or

²² DOE notes that for several of these definitions, the October 2016 NOPDDA included references to appropriate industry standards to define terms like “retrofit kit” or “single pin base system.” DOE is omitting those references from this final rule because on further deliberation, it believes those terms are terms of art whose meaning will be clear to participants in the lighting market.

energy use shall be effective with respect to such covered products.²³ (42 U.S.C. 6297(b)) Preemption continues to apply after a Federal energy conservation standard for GSLs becomes effective. (42 U.S.C. 6297(c))

V. Manufacturer Impacts

NEMA noted that in response to the March 2016 ECS NOPR, it had commented that in 2020 manufacturers would have to supply the entire nation with general service LED lamps as incandescent lamps would not be available. NEMA had explained in its comment that this would mean a 300 percent increase in the steady state demand and require tripling capacity for only that year. NEMA stated that the proposed definitions in the October 2016 NOPDDA increased the scope of GSLs to a wider range of specialty products than what was proposed in the March 2016 GSL ECS NOPR. Hence the projected spike in demand in 2020 would now be even higher. Therefore, NEMA encouraged DOE to either not impose regulations or postpone them for a few years on niche products. (NEMA, No. 83 at pp. 157–158)

NRDC noted that stakeholders have known that standards set by DOE and/or the 45 lm/W backstop standard would be implemented in 2020. NRDC stated that sales from a recent quarter showing LED market share was at 25 percent indicated that industry has done an amazing job preparing for this standard. Further NRDC noted that supply chains worldwide would be impacted as Europe and China are also phasing out incandescent lamps. Hence, NRDC asserted that industry would be adequately prepared for to meet demand in 2020. (NRDC, No. 83 at pp. 164–165)

GE, NEMA and LEDVANCE urged DOE to reconsider its interpretation of the Appropriations Rider and EISA 2007 and pointed out that expanding the scope of GSLs will further increase the amount of stranded inventory and consequently the time it will take to sell the lamps, adding that a minimum of 2–3 years will be required to sell stranded inventory and exit the businesses. GE, NEMA and LEDVANCE stated that typically DOE allows existing inventory of noncompliant products to be sold after a standard goes into effect while the backstop standard prohibits sale of noncompliant products at a certain date.

(GE, No. 88 at pp. 5–6; NEMA, No. 93 at p. 31; LEDVANCE, No. 90 at p. 36) Philips and LEDVANCE added that enforcement of a prohibition of sale date would also impact the electrical distribution market. Philips recommended DOE consider a prohibition on manufacturing and not sales. LEDVANCE stated DOE should allow manufacturers and retailers to sell inventory they have on-hand before the date of prohibition. (Philips, No. 96 at p. 6; LEDVANCE, No. 90 at pp. 16–17) To avoid imposing severe financial burdens on industry, NEMA stated that DOE should withdraw its proposed expansion of GSL scope and evaluate discontinuing exemptions in the second GSL rulemaking Congress authorized to begin in 2020. (NEMA, No. 93 at p. 31)

CEC agreed that a prohibition on sale would pose difficulties for the industry. CEC noted that use of date-of-manufacture for the compliance date would be more easily enforced and would ensure that retailers are not unfairly penalized for incorrectly determining the exact amount of stock that can be sold prior to the compliance date, but CEC also commented that it understood the backstop standard to establish a date-of-sale compliance date. (CEC, No. 91 at pp. 9–10)

NEMA also encouraged DOE to consider establishing an energy conservation standard that caps energy use (wattage) as it is significantly less burdensome compared to a lumens per watt requirement. NEMA explained a wattage limit is particularly applicable to rough service, vibration service, and shatter-resistant lamps, appliance lamps, intermediate base lamps, candelabra base lamps, T shape lamps and other lamps that have 40 W restrictions as well as high lumen lamps. NEMA stated because there is no hard evidence that lamp switching from general service LED lamps to specialty versions is even possible and will result in loss of significant energy savings, there is no reason for DOE to impose testing burden on manufacturers by regulating specialty LED lamps. (NEMA, No. 93 at p. 11) In addition to test burden, Philips and NEMA noted the significantly increased burden on manufacturers if DOE required certification reports to be submitted for all products to certify to the 45 lm/W standard. (Philips, No. 83 at p. 163; Philips, No. 96 at p. 6; NEMA, No. 93 at p. 11)

NEMA noted that they, as well as domestic lighting manufacturers, are advocates for domestic manufacturing and employment. Thus, in addition to energy savings and energy efficiency, NEMA argued that DOE must consider

the fact that the proposed rule will destroy domestic jobs. (NEMA, No. 83 at p. 16)

However, NRDC and ASAP commented that many LED lamps are designed and produced by domestic companies, and therefore recommended comparing the number of jobs in the U.S. associated with making LED lamps compared to less efficient products. (NRDC, No. 83 at p. 46; ASAP, No. 94 at p. 7) NRDC and Utility Coalition added that, to their knowledge, incandescent/halogen lamps by leading manufacturers such as GE and Philips Lighting are not made in the U.S. They cited domestic producers of SSLs and their employee numbers and asserted that domestic jobs related to designing, testing, and marketing LED lamps and their components would outnumber domestic jobs related to production of incandescent lamps. (Utility Coalition, No. 95 at pp. 5–6; NRDC, No. 85 at pp. 10–11)

DOE acknowledges that manufacturers may face a difficult transition if required to comply with a 45 lm/W standard. Manufacturers have voiced concern regarding the loss of domestic manufacturing jobs, the stranding of inventory, the ability to meet the demand for all general service lamps with lamps using LED technology, and the burden associated with testing and certifying compliance for all general service lamps in DOE's Compliance Certification Management System (CCMS). Manufacturers have requested an end to or delay in imposing any new standards for general service lamps and a two to three year delay in enforcing the backstop standard.

DOE is committed to working with manufacturers to ensure a successful transition if the backstop standard goes into effect.²⁴ DOE will continue to have an active dialogue with industry, including meetings and other stakeholder outreach, throughout the period between publication of this rule and the compliance date of any backstop standard for general service

²⁴ In that vein, DOE also notes NEMA's comment that because the backstop requires DOE to "prohibit sales," it could present a substantial practical difficulty regarding compliance. For most products, NEMA states, after a standard comes into effect distributors can continue to sell inventory still on hand that complied with the previous standard. If, by contrast, distributors cannot sell old lamp inventory after January 1, 2020, that inventory will be stranded. Although it is premature for DOE to explain in detail how the backstop would work if it comes into force, DOE notes that under subsection (i)(2), "it shall not be unlawful for a manufacturer to sell a lamp which is in compliance with the law at the time such lamp was manufactured." DOE expects it would interpret and apply the backstop with subsection (i)(2) in mind.

²³ 42 U.S.C. 6297(b)(1)(B) provided California and Nevada a limited exception to the preemption of the standards for general service incandescent lamps, intermediate base incandescent lamps, or candelabra base lamps established in EISA prior to their effective date. The Federal standards have since gone into effect and that preemption provision is no longer relevant.

lamps. During this period, DOE will keep stakeholders and the public apprised of its plans for any broad exercise of enforcement discretion with respect to the standard.

VI. Clarifications to Regulatory Text

In the October 2016 NOPDDA, DOE proposed editorial modifications to regulatory text to align with the recently adopted test procedure for integrated LED lamps. Specifically, DOE proposed changes to 10 CFR 429.56 regarding the certification and reporting requirements of integrated LED lamps. In the July 2016 LED test procedure (TP) final rule, DOE adopted the requirement that testing of integrated LED lamps be conducted by test laboratories accredited by an Accreditation Body that is a signatory member to the International Laboratory Accreditation Cooperation (ILAC) Mutual Recognition Arrangement (MRA). 81 FR 43404, 43419 (July 1, 2016). To align with this requirement, DOE proposed in the October 2016 NOPDDA to modify the certification report language in 429.56(b)(2) to specify that the testing laboratory's ILAC accreditation body's identification number or other approved identification assigned by the ILAC accreditation body must be included in the certification report. In addition, DOE proposed that manufacturers must also report CRI in the certification report for integrated LED lamps. 81 FR 71809.

LEDVANCE requested clarification on DOE's citation of an ILAC accreditor identification number while NEMA pointed out that there are no identification numbers for ILAC accreditors. NEMA, LEDVANCE, and Philips also asked DOE to reconsider including CRI in the certification reporting requirements to minimize the regulatory and testing burden especially because CRI is not a part of the energy conservation standard for general service incandescent lamps or general service LED lamps. (LEDVANCE, No. 90 at p. 35; NEMA, No. 93 at p. 30; Philips, No. 96 at p. 5)

This final rule document finalizes the definition for GSL and related definitions. DOE is not making changes to the certification and reporting requirements in this final rule. DOE recognizes the comments received regarding the reporting of a testing laboratory's ILAC accreditation number and the reporting of the CRI for integrated lamps, and will address these comments to the extent the proposed revisions are considered at a later date.

VII. Effective Date

For the changes described in the various definitions in this final rule,

DOE is adopting a January 1, 2020 effective date.

VIII. Procedural Issues and Regulatory Review

A. Review Under Executive Orders 12866 and 13563

This final rule neither implements nor seeks to enforce any standard. Rather, this final rule merely defines what constitutes a GSIL and what constitutes a GSL. Lamps that are GSLs will become subject to either a standard developed by DOE or to a 45 lm/W backstop standard, but this rule does not determine what standard will be applicable to lamps that are being newly included as GSLs. Accordingly, this action does not constitute a significant regulatory action under Executive Orders 12866 and 13563.

NEMA commented that DOE failed to meet the requirements of Executive Order 12866 in that DOE did not consider regulatory alternatives to the regulation adopted in this document including the alternative of not regulating and that DOE must choose the regulatory approach that maximizes net benefits unless a statute requires another regulatory approach. (NEMA, No. 93 at p. 10)

As explained throughout the preamble, DOE has undertaken revisions to the GSIL and GSL definitions as authorized by EPCA. (42 U.S.C. 6295(i)(6)(A)(i)(II)) In amending the definitions, DOE considered the potential that lamps exempted from the definition of GSL would create loopholes should a GSL standard or standards be adopted. However, this rule does not establish standards.

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires that when an agency promulgates a final rule under 5 U.S.C. 553, after being required by that section or any other law to publish a general NOPR, the agency shall prepare a final regulatory flexibility analysis (FRFA), unless the agency certifies that the rule will not have a significant economic impact on a substantial number of small entities. As required by Executive Order 13272, "Proper Consideration of Small Entities in Agency Rulemaking," 67 FR 53461 (August 16, 2002), DOE published procedures and policies on February 19, 2003, to ensure that the potential impacts of its rules on small entities are properly considered during the rulemaking process. 68 FR 7990. DOE has made its procedures and policies available on the Office of the General

Counsel's Web site (<http://energy.gov/gc/office-general-counsel>).

DOE reviewed the definitions for GSL and related terms adopted in this final rule under the provisions of the Regulatory Flexibility Act and the procedures and policies published on February 19, 2003. DOE certifies that this final rule does not have a significant economic impact on a substantial number of small entities. The factual basis for this certification is set forth in the following paragraphs.

For manufacturers of GSLs, the SBA has set a size threshold, which defines those entities classified as "small businesses" for the purposes of the statute. DOE used the SBA's small business size standards to determine whether any small entities would be subject to the requirements of the rule. (See 13 CFR part 121.) The size standards are listed by NAICS code and industry description and are available at http://www.sba.gov/sites/default/files/files/Size_Standards_Table.pdf. Manufacturing of GSLs is classified under NAICS 335110, "Electric Lamp Bulb and Part Manufacturing." The SBA sets a threshold of 1,250 employees or less for an entity to be considered as a small business for this category.

To estimate the number of companies that could be small businesses that manufacture GSLs covered by this rulemaking, DOE conducted a market survey using publicly available information. DOE's research involved information provided by trade associations (e.g., NEMA²⁵) and information from DOE's CCMS Database,²⁶ EPA's ENERGY STAR Certified Light Bulbs Database,²⁷ DOE's LED Lighting Facts Database,²⁸ previous rulemakings, individual company Web sites, SBA's database, and market research tools (e.g., Hoover's reports²⁹). DOE used information from these sources to create a list of companies that potentially manufacture or sell GSLs and would be impacted by this

²⁶ DOE's Compliance Certification Database | Lamps—Bare or Covered (No Reflector) Medium Base Compact Fluorescent, <http://www.regulations.doe.gov/certification-data> (last accessed November 21, 2016).

²⁷ ENERGY STAR Qualified Lamps Product List, http://downloads.energystar.gov/bi/qpllist/Lamps_Qualified_Product_List.xls?dee3-e997 (last accessed November 21, 2016).

²⁸ LED Lighting Facts Database, <http://www.lightingfacts.com/products> (last accessed November 21, 2016).

²⁹ Hoovers | Company Information | Industry Information | Lists, <http://www.hoovers.com> (last accessed November 21, 2016).

rulemaking. DOE screened out companies that do not offer products covered by this rulemaking, do not meet the definition of a “small business,” or are completely foreign owned and operated. DOE determined that nine companies are small businesses that maintain domestic production facilities for general service lamps.

DOE notes that this final rule merely defines what constitutes a GSIL and what constitutes a GSL. Manufacturers of general service lamps are required to use DOE’s test procedures to make representations and certify compliance with standards, if required. The test procedure rulemakings for CFLs, integrated LED lamps, and other general service lamps³⁰ addressed impacts on small businesses due to test procedure requirements. 81 FR 59386 (August 29, 2016); 81 FR 43404 (July 1, 2016). The effective date allows reasonable time for manufacturers to transition, while reducing the number of redesigns needed, should manufacturers need to comply with a 45 lm/W statutory standard beginning on January 1, 2020. For these reasons, DOE concludes and certifies that the new adopted definitions do not have a significant economic impact on a substantial number of small entities, and the preparation of an FRFA is not warranted.

C. Review Under the Paperwork Reduction Act

Manufacturers of GSLs must certify to DOE that their products comply with any applicable energy conservation standards. In certifying compliance, manufacturers must test their products according to DOE test procedures for GSLs, including any amendments adopted for those test procedures. DOE has established regulations for the certification and recordkeeping requirements for all covered consumer products and commercial equipment. 76 FR 12422 (March 7, 2011). The collection-of-information requirement for the certification and recordkeeping is subject to review and approval by OMB under the Paperwork Reduction Act (PRA). This requirement has been approved by OMB under OMB control number 1910–1400. DOE requested OMB approval of an extension of this information collection for three years, specifically including the collection of information adopted in the present rulemaking, and estimated that the

annual number of burden hours under this extension is 30 hours per company. In response to DOE’s request, OMB approved DOE’s information collection requirements covered under OMB control number 1910–1400 through November 30, 2017. 80 FR 5099 (January 30, 2015).

Notwithstanding any other provision of the law, no person is required to respond to, nor shall any person be subject to a penalty for failure to comply with, a collection of information subject to the requirements of the PRA, unless that collection of information displays a currently valid OMB control number.

D. Review Under the National Environmental Policy Act of 1969

Pursuant to the National Environmental Policy Act (NEPA) of 1969, DOE has determined that the rule fits within the category of actions included in Categorical Exclusion (CX) B5.1 and otherwise meets the requirements for application of a CX. (See 10 CFR part 1021, App. B, B5.1(b); 1021.410(b) and App. B, B(1)–(5).) The rule fits within this category of actions because it is a rulemaking that changes the definition of a covered class of products for which there are existing energy conservation standards, and for which none of the exceptions identified in CX B5.1(b) apply. Therefore, DOE has made a CX determination for this rulemaking, and DOE does not need to prepare an Environmental Assessment or Environmental Impact Statement for this rule. DOE’s CX determination for this rule is available at <http://energy.gov/nepa/categorical-exclusion-cx-determinations-cx>.

E. Review Under Executive Order 13132

Executive Order 13132, “Federalism,” 64 FR 43255 (August 10, 1999), imposes certain requirements on federal agencies formulating and implementing policies or regulations that preempt state law or that have Federalism implications. The Executive Order requires agencies to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the states and to carefully assess the necessity for such actions. The Executive Order also requires agencies to have an accountable process to ensure meaningful and timely input by state and local officials in the development of regulatory policies that have Federalism implications. On March 14, 2000, DOE published a statement of policy describing the intergovernmental consultation process it will follow in the development of such regulations. 65 FR 13735. DOE has examined this rule and has determined

that it would not have a substantial direct effect on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government. EPCA governs and prescribes federal preemption of state regulations as to energy conservation for the products that are the subject of this final rule. States can petition DOE for exemption from such preemption to the extent, and based on criteria, set forth in EPCA. (42 U.S.C. 6297) Therefore, no further action is required by Executive Order 13132.

F. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of Executive Order 12988, “Civil Justice Reform,” imposes on federal agencies the general duty to adhere to the following requirements: (1) Eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; (3) provide a clear legal standard for affected conduct rather than a general standard; and (4) promote simplification and burden reduction. 61 FR 4729 (Feb. 7, 1996). Regarding the review required by section 3(a), section 3(b) of Executive Order 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) Clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General. Section 3(c) of Executive Order 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. DOE has completed the required review and determined that, to the extent permitted by law, this final rule meets the relevant standards of Executive Order 12988.

G. Review Under the Unfunded Mandates Reform Act of 1995

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) requires each federal agency to assess the effects of federal regulatory actions on state, local, and tribal governments and the private sector. Public Law 104–4, sec. 201 (codified at 2 U.S.C. 1531). For a

³⁰ The pre-publication of the general service lamps test procedure final rule was issued on September 30, 2016 and is available at: <http://energy.gov/sites/prod/files/2016/09/f33/General%20Service%20Lamps%20TP%20Final%20Rule.pdf>.

regulatory action likely to result in a rule that includes a Federal mandate that may result in the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of \$100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. (2 U.S.C. 1532(a), (b)) The UMRA also requires a federal agency to develop an effective process to permit timely input by elected officers of state, local, and tribal governments on a proposed “significant intergovernmental mandate,” and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect them. On March 18, 1997, DOE published a statement of policy on its process for intergovernmental consultation under UMRA. 62 FR 12820. DOE’s policy statement is also available at http://energy.gov/sites/prod/files/gcprod/documents/umra_97.pdf.

DOE examined this final rule according to UMRA and its statement of policy and determined that the rule contains neither an intergovernmental mandate, nor a mandate that may result in the expenditure of \$100 million or more in any year, so these requirements do not apply.

H. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277) requires federal agencies to issue a Family Policymaking Assessment for any rule that may affect family well-being. This rule would not have any impact on the autonomy or integrity of the family as an institution. Accordingly, DOE has concluded that it is not necessary to prepare a Family Policymaking Assessment.

I. Review Under Executive Order 12630

Pursuant to Executive Order 12630, “Governmental Actions and Interference with Constitutionally Protected Property Rights,” 53 FR 8859 (March 15, 1988), DOE has determined that this rule would not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

J. Review Under the Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516 note) provides for federal agencies to review most disseminations of information to the public under information quality guidelines established by each agency pursuant to general guidelines issued by OMB. OMB’s guidelines were published at 67 FR 8452 (Feb. 22, 2002), and DOE’s guidelines were published at 67 FR 62446 (Oct. 7, 2002). DOE has reviewed this final rule under the OMB and DOE guidelines and has concluded that it is consistent with applicable policies in those guidelines.

K. Review Under Executive Order 13211

Executive Order 13211, “Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use,” 66 FR 28355 (May 22, 2001), requires federal agencies to prepare and submit to OIRA at OMB, a Statement of Energy Effects for any significant energy action. A “significant energy action” is defined as any action by an agency that promulgates or is expected to lead to promulgation of a final rule, and that: (1) Is a significant regulatory action under Executive Order 12866, or any successor order; and (2) is likely to have a significant adverse effect on the supply, distribution, or use of energy, or (3) is designated by the Administrator of OIRA as a significant energy action. For any significant energy action, the agency must give a detailed statement of any adverse effects on energy supply, distribution, or use should the proposal be implemented, and of reasonable alternatives to the action and their expected benefits on energy supply, distribution, and use.

This regulatory action to adopt definitions for GSL and related terms is not a significant regulatory action under Executive Order 12866. Moreover, it would not have a significant adverse effect on the supply, distribution, or use of energy, nor has it been designated as a significant energy action by the Administrator of OIRA. Therefore, it is not a significant energy action, and, accordingly, DOE has not prepared a Statement of Energy Effects.

L. Review Under Section 32 of the Federal Energy Administration Act of 1974

Under section 301 of the Department of Energy Organization Act (Pub. L. 95–91; 42 U.S.C. 7101), DOE must comply with section 32 of the Federal Energy Administration Act of 1974, as amended

by the Federal Energy Administration Authorization Act of 1977. (15 U.S.C. 788; FEAA) Section 32 essentially provides in relevant part that, where a rule authorizes or requires use of commercial standards, the NOPR must inform the public of the use and background of such standards. In addition, section 32(c) requires DOE to consult with the Attorney General and the Chairman of the Federal Trade Commission (FTC) concerning the impact of the commercial or industry standards on competition.

The modifications to the definition of general service lamp and the associated supporting definitions adopted in this final rule references the following commercial standards that are already incorporated by reference in 10 CFR part 430:

- (1) ANSI C78.20–2003, Revision of ANSI C78.20–1995 (“ANSI C78.20”), American National Standard for electric lamps—A, G, PS, and Similar Shapes with E26 Medium Screw Bases, approved October 30, 2003.
- (2) ANSI C79.1–2002, American National Standard for Electric Lamps—Nomenclature for Glass Bulbs Intended for Use with Electric Lamps, approved September 16, 2002.
- (3) CIE 13.3–1995 (“CIE 13.3”), Technical Report: Method of Measuring and Specifying Colour Rendering Properties of Light Sources, 1995, ISBN 3 900 734 57 7.

DOE previously consulted with both the Attorney General and the Chairman of the FTC about the impact on competition of referencing these standards and at that time received no comments objecting to their use.

M. Congressional Notification

As required by 5 U.S.C. 801, DOE will report to Congress on the promulgation of this rule prior to its effective date. The report will state that it has been determined that the rule is not a “major rule” as defined by 5 U.S.C. 804(2).

IX. Approval of the Office of the Secretary

The Secretary of Energy has approved publication of this final rule.

List of Subjects in 10 CFR Part 430

Administrative practice and procedure, Confidential business information, Energy conservation, Household appliances, Imports, Incorporation by reference, Intergovernmental relations, Small businesses.

Issued in Washington, DC, on December 29, 2016.

David Nemtzw,

Acting Deputy Assistant Secretary for Energy Efficiency, Energy Efficiency and Renewable Energy.

For the reasons set forth in the preamble, DOE amends part 430 of chapter II, subchapter D, of title 10 of the Code of Federal Regulations, as set forth below:

PART 430—ENERGY CONSERVATION PROGRAM FOR CONSUMER PRODUCTS

■ 1. The authority citation for part 430 continues to read as follows:

Authority: 42 U.S.C. 6291–6309; 28 U.S.C. 2461 note.

■ 2. Section 430.2 is amended by:

- a. Adding in alphabetical order the definitions of “Black light lamp,” “Bug lamp,” “Colored lamp,” “General service light-emitting diode (LED) lamp,” “General service organic lighting-emitting diode (OLED) lamp,” “Infrared lamp,” “Integrated lamp,” “LED Downlight Retrofit Kit,” “Left-hand thread lamp,” “Light fixture,” “Marine lamp,” “Marine signal service lamp,” “Mine service lamp,” “Non-integrated lamp,” “Other fluorescent lamp,” “Pin base lamp,” “Plant light lamp,” “Reflector lamp,” “Showcase Lamp,” “Sign service lamp,” “Silver bowl lamp,” “Specialty MR lamp,” and “Traffic signal lamp;” and
- b. Revising the definitions of “designed and marketed,” “general service incandescent lamp,” and “general service lamp.”

The additions and revisions read as follows:

§ 430.2 Definitions.

* * * * *

Black light lamp means a lamp that is designed and marketed as a black light lamp and is an ultraviolet lamp with the highest radiant power peaks in the UV–A band (315 to 400 nm) of the electromagnetic spectrum.

* * * * *

Bug lamp means a lamp that is designed and marketed as a bug lamp, has radiant power peaks above 550 nm on the electromagnetic spectrum, and has a visible yellow coating.

* * * * *

Colored lamp means a colored fluorescent lamp, a colored incandescent lamp, or a lamp designed and marketed as a colored lamp with either of the following characteristics (if multiple modes of operation are possible [such as variable CCT], either of the below characteristics must be

maintained throughout all modes of operation):

(1) A CRI less than 40, as determined according to the method set forth in CIE Publication 13.3 (incorporated by reference; see § 430.3); or

(2) A CCT less than 2,500 K or greater than 7,000 K.

* * * * *

Designed and marketed means exclusively designed to fulfill the indicated application and, when distributed in commerce, designated and marketed solely for that application, with the designation prominently displayed on the packaging and all publicly available documents (e.g., product literature, catalogs, and packaging labels). This definition is applicable to terms related to the following covered lighting products: Fluorescent lamp ballasts; fluorescent lamps; general service fluorescent lamps; general service incandescent lamps; general service lamps; incandescent lamps; incandescent reflector lamps; medium base compact fluorescent lamps; and specialty application mercury vapor lamp ballasts.

* * * * *

General service incandescent lamp means a standard incandescent or halogen type lamp that is intended for general service applications; has a medium screw base; has a lumen range of not less than 310 lumens and not more than 2,600 lumens or, in the case of a modified spectrum lamp, not less than 232 lumens and not more than 1,950 lumens; and is capable of being operated at a voltage range at least partially within 110 and 130 volts; however this definition does not apply to the following incandescent lamps—

- (1) An appliance lamp;
- (2) A black light lamp;
- (3) A bug lamp;
- (4) A colored lamp;
- (5) A G shape lamp with a diameter of 5 inches or more as defined in ANSI C79.1–2002 (incorporated by reference; see § 430.3);
- (6) An infrared lamp;
- (7) A left-hand thread lamp;
- (8) A marine lamp;
- (9) A marine signal service lamp;
- (10) A mine service lamp;
- (11) A plant light lamp;
- (12) An R20 short lamp;
- (13) A sign service lamp;
- (14) A silver bowl lamp;
- (15) A showcase lamp; and
- (16) A traffic signal lamp.

General service lamp means a lamp that has an ANSI base; is able to operate at a voltage of 12 volts or 24 volts, at or between 100 to 130 volts, at or between

220 to 240 volts, or of 277 volts for integrated lamps (as defined in this section), or is able to operate at any voltage for non-integrated lamps (as defined in this section); has an initial lumen output of greater than or equal to 310 lumens (or 232 lumens for modified spectrum general service incandescent lamps) and less than or equal to 3,300 lumens; is not a light fixture; is not an LED downlight retrofit kit; and is used in general lighting applications. General service lamps include, but are not limited to, general service incandescent lamps, compact fluorescent lamps, general service light-emitting diode lamps, and general service organic light-emitting diode lamps. General service lamps do not include:

- (1) Appliance lamps;
- (2) Black light lamps;
- (3) Bug lamps;
- (4) Colored lamps;
- (5) G shape lamps with a diameter of 5 inches or more as defined in ANSI C79.1–2002 (incorporated by reference; see § 430.3);
- (6) General service fluorescent lamps;
- (7) High intensity discharge lamps;
- (8) Infrared lamps;
- (9) J, JC, JCD, JCS, JCV, JCX, JD, JS, and JT shape lamps that do not have Edison screw bases;
- (10) Lamps that have a wedge base or prefocus base;
- (11) Left-hand thread lamps;
- (12) Marine lamps;
- (13) Marine signal service lamps;
- (14) Mine service lamps;
- (15) MR shape lamps that have a first number symbol equal to 16 (diameter equal to 2 inches) as defined in ANSI C79.1–2002 (incorporated by reference; see § 430.3), operate at 12 volts, and have a lumen output greater than or equal to 800;
- (16) Other fluorescent lamps;
- (17) Plant light lamps;
- (18) R20 short lamps;
- (19) Reflector lamps (as defined in this section) that have a first number symbol less than 16 (diameter less than 2 inches) as defined in ANSI C79.1–2002 (incorporated by reference; see § 430.3) and that do not have E26/E24, E26d, E26/50x39, E26/53x39, E29/28, E29/53x39, E39, E39d, EP39, or EX39 bases;
- (20) S shape or G shape lamps that have a first number symbol less than or equal to 12.5 (diameter less than or equal to 1.5625 inches) as defined in ANSI C79.1–2002 (incorporated by reference; see § 430.3);
- (21) Sign service lamps;
- (22) Silver bowl lamps;
- (23) Showcase lamps;
- (24) Specialty MR lamps;
- (25) T shape lamps that have a first number symbol less than or equal to 8

(diameter less than or equal to 1 inch) as defined in ANSI C79.1–2002 (incorporated by reference; see § 430.3), nominal overall length less than 12 inches, and that are not compact fluorescent lamps (as defined in this section);

(26) Traffic signal lamps;

(27) Incandescent reflector lamps.

General service light-emitting diode (LED) lamp means an integrated or non-integrated LED lamp designed for use in general lighting applications (as defined in this section) and that uses light-emitting diodes as the primary source of light.

General service organic light-emitting diode (OLED) lamp means an integrated or non-integrated OLED lamp designed for use in general lighting applications (as defined in this section) and that uses organic light-emitting diodes as the primary source of light.

* * * * *

Infrared lamp means a lamp that is designed and marketed as an infrared lamp; has its highest radiant power peaks in the infrared region of the electromagnetic spectrum (770 nm to 1 mm); has a rated wattage of 125 watts or greater; and which has a primary purpose of providing heat.

* * * * *

Integrated lamp means a lamp that contains all components necessary for the starting and stable operation of the lamp, does not include any replaceable or interchangeable parts, and is connected directly to a branch circuit through an ANSI base and corresponding ANSI standard lamp-holder (socket).

* * * * *

LED Downlight Retrofit Kit means a product designed and marketed to install into an existing downlight, replacing the existing light source and related electrical components, typically employing an ANSI standard lamp base, either integrated or connected to the downlight retrofit by wire leads, and is a retrofit kit. LED downlight retrofit kit does not include integrated lamps or non-integrated lamps.

Left-hand thread lamp means a lamp with direction of threads on the lamp base oriented in the left-hand direction.

* * * * *

Light fixture means a complete lighting unit consisting of light source(s) and ballast(s) or driver(s) (when applicable) together with the parts designed to distribute the light, to position and protect the light source, and to connect the light source(s) to the power supply.

* * * * *

Marine lamp means a lamp that is designed and marketed for use on boats and can operate at or between 12 volts and 13.5 volts.

Marine signal service lamp means a lamp that is designed and marketed for marine signal service applications.

* * * * *

Mine service lamp means a lamp that is designed and marketed for mine service applications.

* * * * *

Non-integrated lamp means a lamp that is not an integrated lamp.

* * * * *

Other fluorescent lamp means low pressure mercury electric-discharge sources in which a fluorescing coating transforms some of the ultraviolet energy generated by the mercury discharge into light and include circline lamps and include double-ended lamps with the following characteristics: Lengths from one to eight feet; designed for cold temperature applications; designed for use in reprographic equipment; designed to produce radiation in the ultra-violet region of the spectrum; impact-resistant; reflectorized or aperture; or a CRI of 87 or greater.

* * * * *

Pin base lamp means a lamp that uses a base type designated as a single pin base or multiple pin base system.

* * * * *

Plant light lamp means a lamp that is designed to promote plant growth by emitting its highest radiant power peaks in the regions of the electromagnetic spectrum that promote photosynthesis: Blue (440 nm to 490 nm) and/or red (620 to 740 nm), and is designed and marketed for plant growing applications.

* * * * *

Reflector lamp means a lamp that has an R, PAR, BPAR, BR, ER, MR, or similar bulb shape as defined in ANSI C78.20–2003 (incorporated by reference; see § 430.3) and ANSI C79.1–2002 (incorporated by reference; see § 430.3) and is used to provide directional light.

* * * * *

Showcase lamp means a lamp that has a T shape as specified in ANSI C78.20–2003 (incorporated by reference; see § 430.3) and ANSI C79.1–2002 (incorporated by reference; see § 430.3), is designed and marketed as a showcase lamp, and has a maximum rated wattage of 75 watts.

* * * * *

Sign service lamp means a vacuum type or gas-filled lamp that has sufficiently low bulb temperature to permit exposed outdoor use on high-speed flashing circuits, is designed and

marketed as a sign service lamp, and has a maximum rated wattage of 15 watts.

Silver bowl lamp means a lamp that has an opaque reflective coating applied directly to part of the bulb surface that reflects light toward the lamp base and that is designed and marketed as a silver bowl lamp.

* * * * *

Specialty MR lamp means a lamp that has an MR shape as defined in ANSI C79.1–2002 (incorporated by reference; see § 430.3), a diameter of less than or equal to 2.25 inches, a lifetime of less than or equal to 300 hours, and that is designed and marketed for a specialty application.

* * * * *

Traffic signal lamp means a lamp that is designed and marketed for traffic signal applications and has a lifetime of 8,000 hours or greater.

* * * * *

[FR Doc. 2016–32013 Filed 1–18–17; 8:45 am]

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

10 CFR Part 430

[Docket Number EERE–2013–BT–STD–0051]

RIN 1904–AD09

Energy Conservation Program: Energy Conservation Standards for General Service Lamps

AGENCY: Office of Energy Efficiency and Renewable Energy, Department of Energy.

ACTION: Final rule.

SUMMARY: On March 17, 2016, the U.S. Department of Energy (DOE) published a notice of proposed rulemaking (NPR) proposing standards for general service lamps (GSLs) pursuant to the Energy Policy and Conservation Act of 1975 (EPCA), as amended. In this final rule DOE responds to comments received on the October 2016 NOPDDA regarding IRLs and amends the definition of GSL.

DATES: The effective date of this rule is January 1, 2020.

ADDRESSES: The docket, which includes **Federal Register** notices, public meeting attendee lists and transcripts, comments, and other supporting documents/materials, is available for review at www.regulations.gov. All documents in the docket are listed in the www.regulations.gov index. However, some documents listed in the index may not be publicly available, such as those containing information that is exempt from public disclosure.

A link to the docket Web page can be found at: https://www1.eere.energy.gov/buildings/appliance_standards/standards.aspx?productid=4. This Web page contains a link to the docket for this document on the www.regulations.gov site. The www.regulations.gov Web page contains simple instructions on how to access all documents, including public comments, in the docket.

I. Introduction

Title III, Part B of the Energy Policy and Conservation Act of 1975 (EPCA or the Act), Public Law 94-163 (42 U.S.C. 6291-6309, as codified) established the Energy Conservation Program for Consumer Products Other Than Automobiles, a program covering most major household appliances (collectively referred to as “covered products”).¹ Subsequent amendments expanded Title III of EPCA to include additional consumer products,

including general service lamps (GSLs)—the products that are the focus of this final rule.

In particular, amendments to EPCA in the Energy Independence and Security Act of 2007 (EISA 2007) directed DOE to engage in rulemakings regarding GSLs. (42 U.S.C. 6295(i)(6)(A)–(B)) EPCA, as amended by EISA 2007, directs DOE to initiate a rulemaking no later than January 1, 2014, to determine whether standards in effect for GSLs should be amended and determine whether exemptions for certain incandescent lamps should be maintained or discontinued. (42 U.S.C. 6295(i)(6)(A)(i)) The scope of the rulemaking is not limited to incandescent lamp technologies. (42 U.S.C. 6295(i)(6)(A)(ii)) Further, for this first cycle of rulemaking, the EISA 2007 amendments provide that DOE must consider a minimum standard of 45 lumens per watt (lm/W). (42 U.S.C. 6295(i)(6)(A)(ii)) If DOE fails to complete a rulemaking in accordance with 42 U.S.C. 6295(i)(6)(A)(i)–(iv) or a final rule from the first rulemaking cycle does not produce savings greater than or equal to the savings from a minimum efficacy standard of 45 lm/W, the statute provides a “backstop” under which DOE must prohibit sales of GSLs that do not meet a minimum 45 lm/W standard beginning on January 1, 2020. (42 U.S.C. 6295(i)(6)(A)(v))

In March 2016, DOE published a notice of proposed rulemaking (NOPR) that proposed a revised definition of GSL and energy conservation standards for certain GSLs (hereafter the “March 2016 GSL ECS NOPR”). 81 FR 14528 (March 17, 2016). In conjunction with the March 2016 GSL ECS NOPR, DOE also published on its Web site the complete technical support document (TSD) for the proposed rule, which described the analyses DOE conducted and included technical documentation for each analysis. The TSD also included the life cycle cost (LCC) spreadsheet, the national impact analysis spreadsheet, and the manufacturer impact analysis (MIA) spreadsheet.²

DOE held a public meeting on April 20, 2016, to hear oral comments on and solicit information relevant to the proposed rule. At this meeting, DOE heard concerns from stakeholders regarding the expansion of scope in the proposed GSL definition and DOE’s approach to analyzing the 22 GSIL exemptions. In addition, DOE received

written comments that reiterated these concerns, and also provided additional data for DOE’s consideration.

Specifically, the National Electrical Manufacturers Association (NEMA) provided new data and information on the 22 exempted lamp types to inform DOE’s evaluation of whether the exemptions should be maintained or discontinued as required by 42 U.S.C. 6295(i)(6)(A)(i)(II).

After the publication of the March 2016 GSL ECS NOPR, DOE analyzed the data submitted by NEMA and collected additional data where available. DOE published a notice of proposed definition and data availability (hereafter the “October 2016 NOPDDA”) to: (1) Propose a revised definition of GSL that included, among other lamp types, IRLs; (2) announce the availability of the NEMA data and supplemental data collected by DOE; (3) request public comment on proposed definitions and compiled data; and (4) request any additional data that stakeholders may have in support of this evaluation. 81 FR 71794 (October 18, 2016). DOE also held a public meeting on October 21, 2016 to hear oral comments and solicit information relevant to the October 2016 NOPDDA.

In a separate final rule being published in the same issue of the **Federal Register**, DOE has adopted a definition of GSL that reflects its discontinuation of certain exemptions and its maintaining of others, and its interpretation and application of certain clauses of the statutory definition of GSL (hereafter the “GSL definition final rule”). In that rule, DOE postponed its decision on the IRL exemption, which it had previously proposed to discontinue. Accordingly, that rule perpetuated the IRL exemption in DOE’s regulatory definition. In this final rule, DOE determines to discontinue the IRL exemption, and it is amending its definition of GSL accordingly.

The following sections of this final rule respond to comments received on the October 2016 NOPDDA and during the NOPDDA public meeting regarding IRLs in more detail.

II. Authority and Rulemaking Process

DOE is required under the EISA 2007 amendments to EPCA to undertake the present rulemaking. Under EPCA, DOE shall initiate a rulemaking to determine whether standards in effect for GSLs should be amended to establish more stringent standards; and determine whether exemptions for certain incandescent lamps should be maintained or discontinued. (42 U.S.C. 6295(i)(6)(A)(i)) In addition to that mandate, DOE has the authority to

¹ Part B was re-designated Part A on codification in the U.S. Code for editorial reasons.

² The spreadsheets developed for this rulemaking proceeding are available at: https://www1.eere.energy.gov/buildings/appliance_standards/standards.aspx?productid=4.

qualify lamps as general service lamps upon determining that they are “used to satisfy lighting applications traditionally served by general service incandescent lamps.” (42 U.S.C. 6291(30)(BB)(i)(IV))

An additional statute relevant to this rulemaking is section 312 of the Consolidated and Further Continuing Appropriations Act, 2016 (Pub. L. 114–113, 129 Stat. 2419; hereafter referred to as the “Appropriations Rider”) that prohibits expenditure of funds appropriated by that law to implement or enforce: (1) 10 CFR 430.32(x), which includes maximum wattage and minimum rated lifetime requirements for GSILs; and (2) standards set forth in section 325(i)(1)(B) of EPCA (42 U.S.C. 6295(i)(1)(B)), which sets minimum lamp efficiency ratings for incandescent reflector lamps (IRLs).³

This final rule constitutes a decision on whether to maintain or discontinue the exemption for IRLs, and include IRLs as GSLs if discontinued. This final rule does not determine whether DOE should impose or amend standards for any category of lamps, such as GSILs or GSLs.

As discussed in more detail, DOE is grounding the decision of whether to maintain or discontinue the IRL exemption on an assessment of whether IRLs would provide a convenient unregulated alternative to lamps that will be subject to energy conservation standards. In DOE’s view, EPCA exempted certain categories of lamps from the definition of GSL because, on the one hand, some lamps in those categories have specialty applications; and on the other hand, it was not clear, when these lamp provisions were enacted, whether those lamps were part of the broader lamp market to which Congress wished to apply energy conservation standards. For certain lamps exempted from regulation as a GSL, EPCA established standards. With regard to IRLs, EPCA imposed efficiency standards ranging from 10.5 to 15 lm/W. (42 U.S.C. 6295(i)(1)(B)). The purpose, then, of the decision that Congress entrusted to DOE, to maintain or to discontinue a given exemption, was that DOE should assess the role of lamps of that type in the broader lighting market, bearing in mind the evident statutory purpose of achieving energy

conservation by imposing efficiency standards for general lighting.

While the statute does not expressly state a criterion by which DOE should decide which exemptions to maintain—it simply identifies one important evidentiary input, sales data—DOE understands its instruction to be that DOE should maintain an exemption if doing so would be consistent with that statutory purpose, and discontinue the exemption if it would not. To carry out that instruction, DOE has assessed whether lamps within the IRL exemption are readily substitutable for lamps that are already categorized as general service lamps. Sales data, as the statute directs, are an important type of evidence informing that assessment.

The discontinuation of the IRL exemption will render the lamps within that exemption GSLs, to the extent they would otherwise qualify as GSLs. As the October 2016 NOPDDA observed, DOE will then either impose standards on these lamps pursuant to its authority to develop GSL standards or apply the backstop standard prohibiting the sale of lamps not meeting a 45 lm/W efficacy standard.

Commenters on the March 2016 GSL ECS NOPR and October 2016 NOPDDA contended that DOE lacked authority to discontinue exemptions in the way it proposed and objected to the procedures DOE had undertaken. DOE discussed those comments in the GSL definition final rule that is being published in the same issue of the **Federal Register**. In many ways, DOE’s interpretations of EPCA relevant to this final rule are similar to those in the GSL definition final rule; and the procedures are comparable in that this final rule proceeds from the same notices that led to the GSL definition final rule. That said, DOE’s decision regarding IRLs is independent from the decisions it made in the GSL definition final rule, and it has considered the comments and issues independently with respect to this rule. After reviewing those comments and issues again, DOE has come to the same conclusions as it did in the GSL definition final rule, for the reasons given in the preamble to that rule. For convenience, DOE does not repeat those discussions here, as the explanations provided in the GSL definition final rule—regarding which exemptions DOE has the authority to discontinue, what factors DOE is considering in a decision whether to discontinue an exemption, and what procedures DOE has followed—are adequate. In this rule, DOE discusses its consideration of comments and issues specifically related to IRLs.

Besides the 22 lamp types listed in section 6291(30)(D)(ii), which the GSL definition final rule addressed, DOE is also interpreting “the exemptions” in section 6291(i)(6)(A)(i)(II) to include the exemption in section 6291(30)(BB)(ii) for incandescent reflector lamps. Clause (i)(II) refers to “the exemptions for certain incandescent lamps”; and the (BB)(ii) carve-out for “incandescent reflector lamps” readily fits that description so long as it can properly be viewed as an “exemption.” In the GSL definition final rule that is being published in the same issue of the **Federal Register**, DOE explained its understanding of what clause (i)(II) means by an “exemption.” DOE adheres to its conclusion in the GSL definition final rule that the 22 lamp types listed in subparagraph (D)(ii) are “exemptions” for these purposes, and the language of the IRL carve-out is the same as that for the 22 types. Therefore, DOE believes it is also an “exemption.”

DOE recognizes that, as a commenter pointed out, IRLs are already subject to standards under EPCA. The GSL definition final rule that is being published in the same issue of the **Federal Register** explained DOE’s view that a lamp subject to some standards under EPCA can still be “exempt” for purposes of the clause (i)(II) rulemaking, because the “exemptions” that DOE is reviewing are exemptions from GSL regulation. DOE adheres to that view in this final rule.

For IRLs, the existing standards are much less stringent than the 45 lm/W backstop standard, and presumably less stringent than any standard that DOE might develop to achieve energy savings comparable to those from the 45 lm/W backstop standard. For example, when EISA 2007 was adopted, the standard for incandescent reflector lamps ranged from 10.5 to 15 lm/W. It seems unlikely that Congress would have considered that standard an adequate alternative to GSL standards. Therefore, DOE considers it consistent with the scheme of subsection (i)(6) that DOE should assess whether to subject to GSL regulation the lamps within the IRL exemption.

Commenters also argued that DOE cannot discontinue the exemption for IRLs because, the commenters observed, the statute exempts these lamps from being GSLs twice. First, “reflector lamps” are one of the 22 types of lamp exempted by section 6291(30)(BB)(ii)(I); and second section 6291(30)(BB)(ii)(II) specifically exempts incandescent reflector lamps. By exempting them twice, the commenters suggest, Congress made quite clear that incandescent

³ This provision of the Consolidated and Further Continuing Appropriations Act, 2016 has been extended to the current appropriations authorization. See, The Continuing Appropriations and Military Construction, Veteran Affairs, and Related Agencies Appropriations Act, 2017 and Zika Response and Preparedness Act, 2017 (Pub. L. 114–223, 130 Stat. 908).

reflector lamps are not to be considered GSLs.

The interpretation that these commenters advance would significantly impair the standards regime established by EISA 2007. That statute's amendments to EPCA imposed standards for general service fluorescent lamps and incandescent reflector lamps, the two categories of lamp that subclause (30)(BB)(ii)(II) exempts from being GSLs. For general service fluorescent lamps, when EISA was enacted the standards ranged from 64 to 80 lm/W, substantially above the backstop that the EISA amendments specify as the default for GSLs. For incandescent reflector lamps, the standards when EISA 2007 was enacted ranged from 10.5 to 15.0 lumens per watt, well below the backstop. Today, incandescent reflector lamps are widely used for general illumination just as GSILs are. If EPCA mandated that IRLs continue being exempt from GSLs, then they would present a convenient alternative product, subject to much less stringent standards than GSLs. The GSL standards (potentially the backstop or standards developed by DOE) would save far less energy if consumers and manufacturers can switch many lighting applications to less-efficient IRLs. That outcome would be especially odd in light of the authority that Congress provided DOE to assess whether to maintain or discontinue exemptions—a decision that, as DOE has explained, DOE believes was meant to focus on which exempted lamps would be substitutes for regulated GSLs. DOE's interpretation, under which paragraph (i)(6) authorizes it to make the same sort of determination with respect to IRLs, is a more consistent and coherent interpretation of the EISA amendments.

Of course, if the statute unambiguously foreclosed that interpretation or indicated that DOE must not discontinue the IRL exemption, that command would trump the policy considerations just discussed. But with respect to IRLs, the statute does permit DOE's interpretation that the IRL exemption is one that DOE can discontinue in a subsection (i)(6)(A)(i)(II) rulemaking. As explained in the paragraphs that follow, through a careful exploration of sections 6291 and 6295, DOE believes the “reflector lamp” exemption in section 6291(30)(D)(ii) is not necessarily as broad as the IRL exemption. DOE believes “reflector lamp” was meant to encompass a different range of lamps, with a scope left to DOE to interpret, while IRL is a defined term with a broad scope. Thus, the “reflector lamp” and IRL exemptions are somewhat different in

nature, and EPCA calls on DOE to decide whether to maintain or discontinue each. DOE addressed the “reflector lamp” exemption, as applied to lamps that are not IRLs, in the GSL definition final rule that is being published in the same issue of the **Federal Register**.

Paragraph (30)(C) defines “incandescent lamp” to “includ[e] only the following”: “[a]ny lamp . . . that is not a reflector lamp” and meets certain criteria, such as a rated wattage between 30 and 199 watts; “[a]ny lamp (commonly referred to as a reflector lamp) which is not colored or designed for rough or vibration services applications, that contains an inner reflective coating on the outer bulb to direct the light,” and meets additional technical criteria like bulb shape; and “[a]ny general service incandescent lamp” rated above 199 watts. DOE notes that paragraph (30)(C) did not define “reflector lamp” to mean a lamp described in the terms just quoted; rather, paragraph (30)(C) noted that such lamps commonly are called reflector lamps. By contrast, paragraph (30)(F) does define the term IRL to mean “a lamp described in subparagraph (C)(ii).” Finally, paragraph (30)(D) defines GSIL, and that definition states that GSILs do not include any of 22 lamp types, one of which is “reflector lamps.”

From this set of definitions, DOE infers that “reflector lamp” does not necessarily mean the same thing as “incandescent reflector lamp.” Had Congress wanted to define “reflector lamp,” it could easily have done so. That it did not suggests that Congress left the term, as used in the list of 22 lamp types, for DOE to elaborate. Furthermore, if “reflector lamp” was meant to be necessarily coextensive with subparagraph (C)(ii), the definition of GSIL contains a curious circular redundancy. The statute defines “incandescent lamp” to include the lamps described in subparagraph (C)(ii); it defines “general service incandescent lamp” to be an incandescent lamp or halogen lamp with certain additional attributes; and then it says general service incandescent lamps do not include “reflector lamp[s].” If that usage of “reflector lamp” necessarily has the same scope as subparagraph (C)(ii), the statute included them in GSILs only to exclude them.

The context further suggests that “reflector lamp,” as used in the list of 22 exempted lamp types, was meant to exempt a scope different from, and in some respects narrower than, paragraph (C)(ii). Each of the other exemptions describes a narrow category of lamp, such as “mine service lamp,” “traffic

signal lamp,” or “vibration service lamp,” that has specialty applications and that Congress could have thought might have few or no general service applications. The statute does not reflect a final judgment on that point; instead it defers the decision for DOE to make in a section 6295(i)(6)(A)(i)(II) rulemaking. Still, the general character of the 22 exemptions is that they are lamp types about which such a judgment—whether the exempted lamps have substantial general service applications—would be necessary in deciding whether to impose general lamp standards. By contrast, subparagraph (C)(ii), which defines IRLs, encompasses a wide range of lamps which certainly had general service applications; and EPCA reflected that reality by imposing efficiency standards (ranging from 10.5 to 15 lm/W) on IRLs since 1995. Public Law 102–486, section 123(f), 106 Stat. 2824.

It bears mention also that EPCA first added “reflector lamps” among the 22 exempted lamp types as a result of EISA amendments in 2007. EISA 2007 section 321 also established the first statutory standards for GSILs. Public Law 110–140, section 321(a)(3), 121 Stat. 1577. While those standards were expressed in terms of a maximum wattage for a given range of lumen output, the minimum efficiency needed to satisfy those standards would be from 17 to 36 lm/W in the wattage range that includes IRLs.⁴ If the “reflector lamp” exemption was necessarily coextensive with IRLs, then the statute imposing the new standard simultaneously created a major loophole by leaving IRLs—a category of lamp that already in 2007 was widely used for general illumination—subject only to the much older and lower efficiency standard effective at the time, which was 10.5 to 15 lm/W. That would be an odd outcome. Had Congress intended to undermine its own standard in that way, it could have done so explicitly by defining “reflector lamp” to have the same scope (with respect to incandescent lamps) as IRL. Instead, in a statute which tweaked subparagraph (C)(ii) and added definitions for various specific lamp types, it left “reflector lamp” undefined.

In light of these observations, DOE understands the definition of “general service lamp” as follows (as concerns reflector lamps and IRLs): Until DOE discontinued the relevant exemptions, no “reflector lamps,” as the term is used in section 6291(30)(D)(ii), were GSILs or

⁴ The EISA section 321 standards imposed a maximum wattage of 29 watts for lamps between 310 and 749 lumens of output. Meanwhile IRLs, according to section 6291(30)(C)(ii), include only lamps above 40 watts.

GSLs. Depending on how DOE interprets the “reflector lamp” exemption, some IRLs may be GSILs (due to not falling in the possibly narrower “reflector lamp” exemption).⁵ However, even those that are GSILs are not GSLs, because the definition of GSLs says they include GSILs but do not include IRLs.

In principle, then, DOE has had two tasks regarding exemptions relevant for reflector lamps. With respect to “reflector lamps,” it was to assess whether that one of the relatively narrow 22 listed lamp types—the scope of which the statute does not make clear—has uses in general illumination, and whether sales data and other evidence indicate that such lamps are ready substitutes for lamps that are already included as GSLs. DOE has finalized this analysis in a separate final rule, the GSL definition final rule. By contrast, as noted previously, the category of IRLs includes lamps that, as of 2007, it was already evident were being used in general lighting applications. However, DOE must still analyze whether, in light of sales data and other evidence, IRLs are an important enough substitute for lamps already included as GSLs to warrant discontinuing their exemption. This analysis is the subject of this final rule and discussed in more detail in the section that follows.

III. Definition of General Service Lamp

A. Incandescent Reflector Lamps

The term general service lamp (GSL) includes general service incandescent lamps (GSILs), compact fluorescent lamps (CFLs), general service light-emitting diode (LED) and organic light-emitting diode (OLED) lamps, and any other lamps that DOE determines are used to satisfy lighting applications traditionally served by GSILs; however, GSLs do not include any lighting application or bulb shape that under 42 U.S.C. 6291(30)(D)(ii) is not included in the “general service incandescent lamp” definition, or any general service fluorescent lamp or incandescent reflector lamp. (42 U.S.C. 6291(30)(BB)) The October 2016 NOPDDA revisited the proposed definition of GSL from the March 2016 GSL ECS NOPR, including the exemptions contained in the GSIL and GSL definitions, and proposed a revised definition of “general service lamp” in § 430.2 to capture various criteria and delineate the lamp types considered to be GSLs. 81 FR 71806–71807. More specifically, DOE proposed

a definition for GSL in the October 2016 NOPDDA. A general service lamp, as proposed, would be a lamp that has an ANSI base, operates at any voltage, has an initial lumen output of greater than or equal to 310 lumens (or 232 lumens for modified spectrum general service incandescent lamps) and less than or equal to 4,000 lumens, is not a light fixture, is not an LED downlight retrofit kit, and is used in general lighting applications. General service lamps include, but are not limited to, general service incandescent lamps, compact fluorescent lamps, general service light-emitting diode lamps, and general service organic light-emitting diode lamps, but do not include general service fluorescent lamps; linear fluorescent lamps of lengths from one to eight feet; circline fluorescent lamps; fluorescent lamps specifically designed for cold temperature applications; impact-resistant fluorescent lamps; reflectorized or aperture fluorescent lamps; fluorescent lamps designed for use in reprographic equipment; fluorescent lamps primarily designed to produce radiation in the ultra-violet region of the spectrum; fluorescent lamps with a color rendering index of 87 or greater; R20 short lamps; specialty MR lamps; appliance lamps; black light lamps; bug lamps; colored lamps; infrared lamps; left-hand thread lamps, marine lamps, marine signal service lamps; mine service lamps; plant light lamps; sign service lamps; silver bowl lamps, showcase lamps, and traffic signal lamps.

In support of its analysis of whether to maintain or discontinue an exemption, in the October 2016 NOPDDA DOE presented estimated sales data. NEMA stated that sales for most of the exempted lamps are declining and that it was the intent of Congress to require that DOE find sales increasing as a prerequisite to discontinue an exemption. (NEMA, No. 83 at p. 34; NEMA No. 93 at p. 12) NEMA pointed to the petition process established under section 321 of EISA 2007 as indicative of that intent. (NEMA, No. 93 at pp. 12–13) NEMA and LEDVANCE noted that Congress required a demonstration of increased sales as a prerequisite for DOE to grant a petition submitted by the public to reconsider an exemption, and that DOE must be guided by the same consideration when determining whether an exemption should be maintained under 42 U.S.C. 6295(i)(6)(A)(i)(II). (NEMA, No. 83 at pp. 33–34; LEDVANCE, No. 90 at pp. 25–27) NEMA and LEDVANCE cited the requirement under 42 U.S.C.

6295(i)(6)(A)(i)(II) for DOE to consider, in part, “exempted lamp sales” collected by DOE as supporting the requirement for increased lamp sales in order to discontinue an exemption. (NEMA, No. 93 at 5; LEDVANCE, No. 90 at p. 26) NEMA and LEDVANCE added that a determination of lamp switching must be driven by data showing increased sales. (NEMA No. 93 at p. 13; LEDVANCE, No. 90 at pp. 25–27) NEMA and LEDVANCE concluded that the October 2016 NOPDDA did not provide data indicating that lamp switching was occurring, and rather data from the Energy Information Administration⁶ shows that sales are decreasing. NEMA and LEDVANCE commented that if DOE was petitioned under section 325(i)(3)(E), it would not grant the petition or decide to regulate these specialty lamps and therefore any other action taken under section 325(i)(6)(A) is illogical. (NEMA, No. 93 at p. 13; LEDVANCE, No. 90 at pp. 25–27)

As DOE has explained in the GSL definition final rule that is being published in the same issue of the **Federal Register**, the petition process from EISA section 321(a)(3) is distinct from the decision that subparagraph (6)(A)(i)(II) calls for about maintaining or discontinuing exemptions. The statute does not require DOE to consider the same factors in the clause (i)(II) decision that it would in reviewing a petition. In particular, it does not restrict DOE to discontinuing an exemption only if sales of lamps within that exemption are increasing. While increases or decreases in lamp sales are an important consideration, DOE believes it can in some circumstances be appropriate to discontinue an exemption even at a time when sales of those lamps are decreasing. As described by GE, LEDVANCE, and Westinghouse, incandescent sales can be decreasing because consumers are purchasing LED versions of the same lamp. Thus, the lamp itself is not unpopular but rather is undergoing a shift in technology. For example, GE stated that sales of IRLs have been declining significantly over the last five years but that was in large part caused by the increasing sales of LED reflector lamps. (GE, No. 83 at pp. 38, 84–85; LEDVANCE, No. 90 at p. 35; Westinghouse, No. 83 at pp. 128–129) Consequently, it can in some circumstances be appropriate to

⁵ DOE has not thus far articulated an interpretation of the “reflector lamp” exemption that would resolve the status of IRLs.

⁶ See Energy Information Administration, Sales of specialty incandescent bulbs decline despite exemption from efficiency standards (April 2, 2013) available at: <http://www.eia.gov/todayinenergy/detail.php?id=10631>.

consider the overall volume of sales in assessing an exemption, even if the volume is currently decreasing.

DOE also considered the potential of lamp switching that may occur in response to any GSL standard. If an exempted lamp has the same utility to lamp users as a lamp subject to a standard as a GSL, DOE considered the potential increase in the use of the exempted lamp in response to a standard. As noted by commenters, prior to the effective date of any new standard the sales trends of exempted lamps do not necessarily capture the potential for lamp switching. As such, current lamp sale trends are only part of the consideration. DOE is permitted to account for future changes in consumer behavior so as to avoid the creation of loopholes.

DOE received several comments regarding whether a lamp could serve as a replacement for a GSL and therefore present a risk of lamp switching. California Investor Owned Utilities (CA IOUs) stated that evaluations of the exemptions should be based on whether the exempted lamp type could serve as a replacement for a general service lamp. (CA IOUs, No. 83 at p. 107) Westinghouse stated that there are low-cost products on the market that consumers do not use as replacements for GSLs because they are not the appropriate shape or design. Avalos noted that a couple of exempted lamp types could be considered GSILs but are not due to their lamp structure. (Westinghouse, No. 83 at p. 30; Avalos, No. 80 at p. 1)

GE and LEDVANCE stated that DOE should consider the traditional omnidirectional incandescent lamp when considering the potential for lamp switching. (GE, No. 83 at pp. 37–38; LEDVANCE No. 83 at p. 59) GE stated that the definition of GSIL (a type of GSL) describes a lamp with a medium

screw base, that produces between 310 and 2,600 lumens, and can operate on a voltage between 110 and 130 V, and that in order for a lamp to be considered as having the potential for “lamp switching” the lamp must maintain these same attributes. (GE, No. 88 at pp. 2–3) Westinghouse stated that consideration of lamp switching should be limited to whether a consumer could use an exempted lamp to replace a lamp that the consumer is currently using, and that consideration of how the use of fixtures may change in response to standards (e.g., changes in fixtures used in new home construction) would be inconsistent with EPCA. (Westinghouse, No. 83 at pp. 39–40)

Other commenters stated that consideration of lamp switching should include the ability of an exempted lamp to provide similar function as a traditional GSIL, regardless of the fixture traditionally used with GSILs. ASAP stated that the presence of directional lamps in residences in the U.S. has grown significantly over time due to changes in new construction. (ASAP, No. 83 at pp. 38–39) ASAP stated that lighting in homes that traditionally was provided by A shape lamps in floor and table fixtures is being provided in newer construction through reflector lamps in recessed can lighting. (ASAP, No. 83 at pp. 58–59)

As noted previously, DOE understands the purpose of the decision that EPCA calls for on maintaining or discontinuing exemptions to be to ensure that consumers and manufacturers do not switch to readily available substitutes once standards for GSLs come into force. In making this assessment, the potential for an exempted lamp to be placed in a fixture that traditionally used a GSIL, and the potential change in the fixtures used to provide lighting in an application that was traditionally served by a GSIL are

important considerations that DOE appropriately takes into account. As noted by commenters, the function traditionally provided by GSILs can, in some instances, be provided by more than one type of fixture. In order to minimize the potential for loopholes, DOE has considered the potential for a consumer to change the type of lamp used in an existing fixture, and the potential change in the type of fixture used to provide the same function as traditionally provided by a fixture using a GSIL.

CA IOUs stated that evaluations of the exemptions should also be based on whether the exempted lamp type can be made as an LED lamp. (That consideration would be relevant because it is almost certain that incandescent lamps will not be able to satisfy the 45 lm/W backstop standard if it comes into force.) (CA IOUs, No. 83 at p. 107) DOE is aware that LED replacements may exist for some of the exempt lamp categories. DOE did consider the existence or absence of LED replacements for IRLs, though not as the only reason to discontinue or maintain an exemption.

NEMA provided updated sales information for this final rule. NEMA provided sales data from four members, which represents a significant portion of the market, for each of the exemptions that DOE proposed to discontinue. NEMA stated that although not all members are included, it conferred with other members that did not provide data to confirm the general trend of decreasing sales and shipments of specialty incandescent lamps since standards went into effect for GSILs between 2010 and 2012. (NEMA, No. 93 at pp. 9–10) DOE has updated Table III.1 to reflect this new data.

Table III.1 summarizes the IRL exemption discontinued in this final rule.

TABLE III.1—DETERMINATION REGARDING IRLS

[Units annual sales]

GSL exempt lamp category	Estimated sales data	DOE's determination on exemption status
IRLs	Approximately 270 million	Discontinue exemption.

DOE believes that discontinuing the exemption for IRLs could lead to significant energy savings. As shown in Table III.1, IRLs have annual sales that are several times the sales of the largest-volume lamp category among those exemptions that DOE has already discontinued. See the GSL definition final rule for more information that is

being published in the same issue of the **Federal Register**.

In the October 2016 NOPDDA, DOE assessed data available for IRLs and preliminarily concluded that these lamps have high annual sales. Specifically, DOE estimated that the sales of IRLs are approximately 270 million units per year. DOE believed

IRLs are capable of providing overall illumination and could be used as a replacement for GSILs. Therefore, DOE found there was also high potential for lamp switching and subsequently creating a loophole. For these reasons, DOE proposed to discontinue the exemption for IRLs in the October 2016 NOPDDA. *Id.* at 71800.

As noted at the outset of this document, this final rule amending the definition of GSL does not establish standards for GSLs. Inclusion of IRLs in the definition of GSL does not amend the standards currently applicable to IRLs. EPCA directs DOE to consider whether to amend the standards for GSLs, and whether the definition of GSL should be amended. (42 U.S.C. 6295(i)(6)(A)(i)(II)) In order to evaluate any potential standards or amendments to standards for GSL, DOE must first determine the scope of the GSL definition. As explained previously, DOE has considered lamp sales and the potential for lamp switching in an effort to ensure all lamps that can be used in general lighting applications are included.

Of course, DOE makes this decision cognizant of the fact that IRLs are already subject to minimum efficiency standards. However, DOE does not believe section 6295(i)(6) reveals an intention that, because of those standards, DOE should maintain the IRL exemption from being regulated as GSLs. The IRL standards in the statute dating from 1992—which were the extant standards when EISA added subsection (i)(6)—are substantially less stringent than the standards that EISA section 321 specified for GSILs and even further less stringent than the GSL backstop. Given that some IRLs have long been used for general illumination, as discussed previously, it would be odd for Congress to have left open, unalterably, such a large loophole to its own standards. Rather, DOE believes that in enacting EISA 2007, Congress chose not to update the statutory standards for IRLs because instead it was directing DOE to decide whether to regulate those lamps as GSLs. Thus, the fact that IRLs are already subject to IRL-specific standards does not preclude DOE's decision in this final rule. It simply means that, consistent with EPCA, DOE is to perform a particular assessment for IRLs bearing in mind the existing standards. DOE has carried out that assessment.

DOE received several comments in support of its decision to expand the scope of the GSL definition to include IRLs. ASAP commented that they strongly supported covering IRLs in the scope of this rulemaking noting that hundreds of millions of IRLs are sold each year. ASAP stated that IRLs of all technology types are a growing presence in homes. ASAP noted that there are more efficient alternatives widely available at affordable prices, and including IRLs as GSLs is a step towards technological neutrality which will benefit the environment, industry and

consumers. ASAP added that the fact IRLs are regulated under their own standards does not preclude them from inclusion as GSLs. (ASAP, No. 83 at pp. 38–39; ASAP, No. 94 at pp. 1–2) NRDC and Utility Coalition supported DOE's proposal to include IRLs as GSLs. NRDC stated this was indicative of a shift to a technology-based approach which has been discussed at DOE for many years. NRDC and Utility Coalition added that including IRLs as GSLs will deliver significant energy and consumer savings when considering DOE's estimate of 270 million IRLs sold per year. (NRDC, No. 83 at p. 11; NRDC, No. 85 at p. 2; Utility Coalition, No. 95 at pp. 1–2) Soraa also supported DOE's proposal to include IRLs as GSLs noting that reflector lamps are used or can be used to provide overall illumination. (Soraa, No. 87 at p. 2)

CEC supported DOE's proposal to discontinue the exemption for reflector lamps due in part to their high lamp sales and potential for lamp switching. CEC agreed with DOE's estimate of the annual sales of IRLs of approximately 270 million units, noting that California's existing stock of medium screw base incandescent and halogen reflector lamps is estimated to be more than 60 million units with annual shipments in 2016 estimated at nearly 35 million units. CEC added that although LED reflector lamps are gaining market share from IRLs, CEC's recent general service LED lamps rulemaking determined that incandescent technology would represent the vast majority of medium screw base directional lamp shipments in 2029 if the IRL exemption were maintained. (CEC, No. 91 at pp. 4–5)

In contrast, GE recommended that reflector lamps (in GE's comment, primarily IRLs) continue to be regulated separately and that it is not appropriate to evaluate reflector type lamps as GSLs because these products cannot successfully be used to satisfy lighting applications traditionally served by GSILs. (GE, No. 88 at p. 2) GE added that each reflector lamp has unique optical properties that must be considered when applying a minimum efficacy requirement and noted that these products cannot meet the same efficiency limits designed for general service A shape lamps. (GE, No. 88 at p. 2) Westinghouse stated that while there is energy savings potential in regulating IRLs, it should be done in an IRL standards rulemaking rather than in a GSL standards rulemaking. (Westinghouse, No. 83 at pp. 21–22) Westinghouse stated it is not suggesting that LED versions for R20, BR30, and R40 shapes used in the residential

sector for general purposes are not suitable replacements. However, Westinghouse asserted that to ensure that efficiencies are achievable for this shape and due consideration is given to economic feasibility, IRLs should be considered in their own rulemaking. (Westinghouse, No. 83 at pp. 47–48; Westinghouse, No. 83 at pp. 55–56)

In support of their assertion that reflector lamps should be regulated separately, several commenters disagreed with DOE's determination that reflector lamps posed a risk of lamp switching. GE stated that while a large number of IRLs are still in use, sales have declined significantly over the past 5 years, in large part, due to a shift to LED reflector lamps. Further GE stated that reflector lamps would not fit in most fixtures in which GSILs are used. Even if a reflector lamp could fit in such a fixture it could not deliver the omnidirectional light output provided by the GSIL. Therefore, GE asserted reflector lamps would not be suitable replacements for the standard GSILs and needed to be evaluated in their own rulemaking. (GE, No. 83 at pp. 37–38) LEDVANCE agreed and stated that the consumer will not obtain effective light by putting a reflector lamp such as a PAR30 in a fixture that does not have some type of directional functionality. (LEDVANCE, No. 83 at pp. 59–61)

CA IOUs stated that while it may not be always be optimal, reflector lamps can be used in general service applications. (CA IOUs, No. 83 at p. 66) NRDC stated that reflector lamps can be used in applications other than down lights. NRDC pointed out that reflector lamps come in various shapes and there was nothing to prevent a manufacturer from altering the reflector lamp design so more light goes in different directions. (NRDC, No. 83 at p. 45) CA IOUs further noted that as the cheaper product, the use of IRLs in general service applications may increase due to new market pressures in 2020. (CA IOUs, No. 83 at p. 66) CEC agreed that medium screw base reflector lamps represent a lamp switching risk adding that lamp shape does not determine whether a lamp can provide general service lighting and general service lamps are not limited to omnidirectional lighting. (CEC, No. 91 at pp. 4–5) Utility Coalition also stated that LED lamps are suitable replacements for GSLs in many applications because they have the same base types and therefore represent a significant risk of undercutting the energy savings of the 45 lm/W standard if they are not included. (Utility Coalition, No. 95 at pp. 1–2)

Additionally, Utility Coalition commented that there are LED versions

of reflector lamps available in a wide variety of shapes and sizes, lumen outputs, CCT, beam angles, and base types and that decreasing prices and increasing efficiency make these products cost-effective to consumers. NRDC also noted that there are several cost-effective, dimmable LED lamps available that serve as excellent replacements for IRLs in a variety of form factors, light outputs, and colors and urged DOE to move forward with its proposal to remove the exemption for these lamps. (NRDC, No. 83 at pp. 45–46; Utility Coalition, No. 95 at pp. 1–2) CEC stated that as of June 15, 2015, 658 models of medium screw base reflector lamps complied with Tier 1 of the adopted California standard thus indicating that cost effective, highly-efficient LED alternatives exist. CEC added that making incremental improvements to existing LED reflector lamps was extremely cost-effective and technically feasible. (CEC, No. 91 at pp. 4–5) Soraa also stated that LED replacements that provide a wide variety of product features, such as color rendering index (CRI), CCT, beam angle, whiteness rendering, and low flicker, are available for the majority of existing IRLs. Soraa noted that customers in quality-sensitive fields such as high-end retail and hospitality have transitioned from halogen to LED technology. Soraa added while there are still some lamp types that are difficult to replicate in LED technology, incremental progress in technology will likely make these products available by 2020. Additionally, Soraa stated that the limit of 45 lm/W can be met by currently-existing products with higher-level features. (Soraa, No. 87 at p. 2)

As discussed previously in this document, DOE did not limit its consideration of lamp switching to the ability to replace a lamp in a fixture currently used by a consumer that had been using a traditional incandescent lamp. As indicated by comments from ASAP previously in this document, the presence of reflector lamps in residences in the U.S. has grown significantly over time due to changes in new construction. (ASAP, No. 83 at pp. 38–39) Lighting in homes that traditionally was provided by A shape lamps in floor and table fixtures is being provided in newer construction through reflector lamps in recessed lighting. (ASAP, No. 83 at pp. 58–59)

The basic design characteristic of an “incandescent reflector lamp,” as EPCA defines the term, is that it directs the light. But it is possible to direct the omnidirectional light from an incandescent filament into a somewhat more limited set of angles and still have

a lamp that provides general illumination. The reflector lamps now being widely used in recessed can lighting are an important example. In such an application (with the lamp mounted in the ceiling), the reflector redirects light that was initially emitted upward. But the resulting light distribution spreads broadly over the area downward from the lamp, so that a consumer can readily use the lamp to provide general illumination for a room. In light of these observations, DOE concludes that “omnidirectional illumination” is not a prerequisite for the traditional functions of incandescent lamps, as GE suggested. Rather, DOE may consider a lamp a ready substitute for GSLs—for purposes of assessing an exemption—if the lamp can provide the same sort of general illumination that GSLs provide.

As presented in Table III.1, DOE estimates that the sales of incandescent reflector lamps are approximately 270 million units per year. 81 FR 71794, 71800. DOE notes that incandescent reflector lamps have higher annual sales than any of the 22 exempt lamp types, thus indicating that these lamps are likely used in general lighting applications. In addition, because IRLs are capable of providing overall illumination and could be used as replacements for GSILs, there is also high potential for lamp switching. For these reasons, DOE is discontinuing the exemption from the GSL definition for IRLs.

LEDVANCE noted that in January 2015, DOE said it found new standards for IRLs not economically justified. 80 FR 4042, 4043 (Jan. 26, 2015). (LEDVANCE, No. 90 at pp. 6–7) NEMA asserted that inclusion of IRLs in the definition of GSL given DOE’s previous determination that standards for IRLs would not be economically justified or technically feasible can only be understood as an attempt by DOE to eliminate the product from the market, an outcome prohibited under EPCA. (NEMA, No. 93 at p. 14)

DOE acknowledges that a recent rulemaking was completed for IRLs. DOE completed a final rule in January 2015 that concluded that amended energy conservation standards for IRLs (other than ER30, BR30, BR40, and ER40 lamps of 50 W or less; BR30, BR40, and ER40 lamps of 65 W; and R20 lamps of 45 W or less) would not be economically justified. 80 FR 4042 (January 26, 2015). DOE notes that there are established test procedures for IRLs. See, Appendix R to 49 CFR 430 subpart B. While the recent IRL rulemaking considered energy conservation standards for a limited segment of IRLs,

this rule defines what is and is not a general service lamp. As such, DOE is addressing a fundamentally different question. The purpose of this rulemaking is not to establish energy conservation standards, but to determine whether certain lamps because of functional and design characteristics should be included in the definition of general service lamp.

DOE has determined that lamps of different shapes, even those that are not omnidirectional, can provide overall illumination. Therefore, even though reflector lamps are designed to direct the light they provide, DOE has concluded that they should be included as general service lamps. DOE’s previous conclusion regarding energy conservation standards for a subset of IRLs (less than half of the IRL market) has no bearing on their ability to be a general service lamp, assuming they meet the other criteria in the adopted definition.

Further, DOE notes that the conclusion reached in the previous rulemaking was based on an analysis of incandescent technology. The January 2015 IRL rulemaking concluded that an amended standard based on more efficient incandescent technology would not be economically justified. An analysis conducted under the general service lamps authority could well come to a different conclusion because more efficient replacements could use incandescent, fluorescent, or LED technology. Thus, the cost-benefit analysis would be different and the cost-benefit analysis from the January 2015 rulemaking is not applicable here.

DOE notes that incandescent reflector lamps have high annual sales, indicating that they are likely used in general lighting applications. Further, as noted by several commenters, IRLs that are currently exempt from standards have ballooned in sales and have gone from representing a minority of the market to a majority of the market. Thus, industry has shown that consumers of IRLs find various distributions of light acceptable in their applications because the ER- and BR-shaped lamps that increased in sales have broader distributions of light than the PAR-shaped lamps they replaced.

DOE also received comments regarding the impacts on manufacturers of including IRLs in the definition of GSL. NEMA noted that in response to the March 2016 ECS NOPR, it had commented that in 2020 manufacturers would have to supply the entire nation with general service LED lamps as incandescent lamps would not be available. NEMA had explained in its comment that this would mean a 300

percent increase in the steady state demand and require tripling capacity for only that year. NEMA stated that the proposed definitions in the October 2016 NOPDDA increased the scope of GSLs to a wider range of specialty products than what was proposed in the March 2016 GSL ECS NOPR. Hence the projected spike in demand in 2020 would now be even higher. Therefore, NEMA encouraged DOE to either not impose regulations or postpone them for a few years on niche products. (NEMA, No. 83 at pp. 157–158) LEDVANCE requested clarification on whether an employment impact analysis was conducted for IRLs given that DOE's proposal to remove the exemption for IRLs could have an impact on domestic manufacturing. (LEDVANCE, No. 83 at pp. 59–61)

DOE acknowledges that manufacturers may face a difficult transition if required to comply with a 45 lm/W standard, particularly for IRLs. Regarding concerns that the application of the backstop standard would eliminate domestic manufacturing of IRLs, DOE determined that manufacturers are already planning to close or move out of the country several domestic production facilities related to the manufacturing of IRLs due to reduced demand. In press releases regarding these closures, manufacturers noted that the market is moving away from traditional technologies, such as IRLs and other incandescent lamps, and transitioning to LED technology.⁷

DOE is committed to working with manufacturers to ensure a successful transition if the backstop standard goes into effect.⁸ DOE will continue to have an active dialogue with industry, including meetings and other stakeholder outreach, throughout the period between publication of this rule and the compliance date of any backstop standard for general service lamps, including IRLs. During this period, DOE will keep stakeholders and

the public apprised of its plans for any broad exercise of enforcement discretion with respect to the standard.

B. Summary and Regulatory Text Definition

DOE is amending the definition of “general service lamp” in § 430.2 to include IRLs. A general service lamp is a lamp that has an ANSI base; is able to operate at a voltage of 12 volts or 24 volts, at or between 100 to 130 volts, at or between 220 to 240 volts, or of 277 volts for integrated lamps (as defined in this section), or is able to operate at any voltage for non-integrated lamps (as defined in this section); has an initial lumen output of greater than or equal to 310 lumens (or 232 lumens for modified spectrum general service incandescent lamps) and less than or equal to 3,300 lumens; is not a light fixture; is not an LED downlight retrofit kit; and is used in general lighting applications. General service lamps include, but are not limited to, general service incandescent lamps, compact fluorescent lamps, general service light-emitting diode lamps, and general service organic light-emitting diode lamps. General service lamps do not include:

- Appliance lamps;
- Black light lamps;
- Bug lamps;
- Colored lamps;
- G shape lamps with a diameter of 5 inches or more as defined in ANSI C79.1–2002;
- General service fluorescent lamps;
- High intensity discharge lamps;
- Infrared lamps;
- J, JC, JCD, JCS, JCV, JCX, JD, JS, and JT shape lamps that do not have Edison screw bases;
- Lamps that have a wedge base or prefocus base;
- Left-hand thread lamps;
- Marine lamps;
- Marine signal service lamps;
- Mine service lamps;
- MR shape lamps that have a first number symbol equal to 16 (diameter equal to 2 inches) as defined in ANSI C79.1–2002, operate at 12 volts, and have a lumen output greater than or equal to 800;
- Other fluorescent lamps;
- Plant light lamps;
- R20 short lamps;
- Reflector lamps (as defined in this section) that have a first number symbol less than 16 (diameter less than 2 inches) as defined in ANSI C79.1–2002 and that do not have E26/E24, E26d, E26/50x39, E26/53x39, E29/28, E29/53x39, E39, E39d, EP39, or EX39 bases;
- S shape or G shape lamps that have a first number symbol less than or equal to 12.5 (diameter less than or equal to

1.5625 inches) as defined in ANSI C79.1–2002;

- Sign service lamps;
- Silver bowl lamps;
- Showcase lamps;
- Specialty MR lamps;
- T shape lamps that have a first number symbol less than or equal to 8 (diameter less than or equal to 1 inch) as defined in ANSI C79.1–2002, nominal overall length less than 12 inches, and that are not compact fluorescent lamps (as defined in this section);
- Traffic signal lamps.

IV. Effective Date

For the changes described in this final rule, DOE is adopting a January 1, 2020 effective date.

V. Procedural Issues and Regulatory Review

A. Review Under Executive Orders 12866 and 13563

This final rule neither implements nor seeks to enforce any standard. Rather, this final rule merely defines what constitutes a GSL. Lamps that are GSLs will become subject to either a standard developed by DOE or to a 45 lm/W backstop standard, but this rule does not determine what standard will be applicable to lamps that are being newly included as GSLs. Accordingly, this action does not constitute a significant regulatory action under Executive Orders 12866 and 13563.

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires that when an agency promulgates a final rule under 5 U.S.C. 553, after being required by that section or any other law to publish a general NOPR, the agency shall prepare a final regulatory flexibility analysis (FRFA), unless the agency certifies that the rule will not have a significant economic impact on a substantial number of small entities. As required by Executive Order 13272, “Proper Consideration of Small Entities in Agency Rulemaking,” 67 FR 53461 (August 16, 2002), DOE published procedures and policies on February 19, 2003, to ensure that the potential impacts of its rules on small entities are properly considered during the rulemaking process. 68 FR 7990. DOE has made its procedures and policies available on the Office of the General Counsel’s Web site (<http://energy.gov/gc/office-general-counsel>).

DOE reviewed the definition of GSL amended in this final rule under the provisions of the Regulatory Flexibility

⁷ See press releases from OSI and GE regarding domestic manufacturing closures available in the docket at: <https://www.regulations.gov/#!docketDetail;D=EERE-2013-BT-STD-0051>.

⁸ In that vein, DOE also notes NEMA’s comment that because the backstop requires DOE to “prohibit sales,” it could present a substantial practical difficulty regarding compliance. For most products, NEMA states, after a standard comes into effect distributors can continue to sell inventory still on hand that complied with the previous standard. If, by contrast, distributors cannot sell old lamp inventory after January 1, 2020, that inventory will be stranded. Although it is premature for DOE to explain in detail how the backstop would work if it comes into force, DOE notes that under subsection (i)(2), “it shall not be unlawful for a manufacturer to sell a lamp which is in compliance with the law at the time such lamp was manufactured.” DOE expects it would interpret and apply the backstop with subsection (i)(2) in mind.

Act and the procedures and policies published on February 19, 2003. DOE certifies that this final rule does not have a significant economic impact on a substantial number of small entities. The factual basis for this certification is set forth in the following paragraphs.

For manufacturers of IRLs, the SBA has set a size threshold, which defines those entities classified as “small businesses” for the purposes of the statute. DOE used the SBA’s small business size standards to determine whether any small entities would be subject to the requirements of the rule. (See 13 CFR part 121.) The size standards are listed by NAICS code and industry description and are available at http://www.sba.gov/sites/default/files/files/Size_Standards_Table.pdf. Manufacturing of GSLs is classified under NAICS 335110, “Electric Lamp Bulb and Part Manufacturing.” The SBA sets a threshold of 1,250 employees or less for an entity to be considered as a small business for this category.

To estimate the number of companies that could be small businesses that manufacture IRLs covered by this rulemaking, DOE conducted a market survey using publicly available information. DOE’s research involved information provided by trade associations (e.g., NEMA⁹) and information from DOE’s CCMS Database,¹⁰ previous rulemakings, individual company Web sites, SBA’s database, and market research tools (e.g., Hoover’s reports¹¹). DOE used information from these sources to create a list of companies that potentially manufacture or sell IRLs and would be impacted by this rulemaking. DOE screened out companies that do not offer products covered by this rulemaking, do not meet the definition of a “small business,” or are completely foreign owned and operated. DOE determined that there are no small businesses that maintain domestic production facilities for IRLs.

DOE notes that this final rule merely includes IRLs in the regulatory definition of GSLs. Manufacturers of GSLs, including IRLs, are required to use DOE’s test procedures to make representations and certify compliance

with standards, if required. The effective date allows reasonable time for manufacturers to transition, while reducing the number of redesigns needed, should manufacturers need to comply with a 45 lm/W statutory standard beginning on January 1, 2020. For these reasons, DOE concludes and certifies that the new amended definition of GSL, which includes IRLs, does not have a significant economic impact on a substantial number of small entities, and the preparation of an FRFA is not warranted.

C. Review Under the Paperwork Reduction Act

Manufacturers of GSLs must certify to DOE that their products comply with any applicable energy conservation standards. In certifying compliance, manufacturers must test their products according to DOE test procedures for GSLs, including any amendments adopted for those test procedures. DOE has established regulations for the certification and recordkeeping requirements for all covered consumer products and commercial equipment. 76 FR 12422 (March 7, 2011). The collection-of-information requirement for the certification and recordkeeping is subject to review and approval by OMB under the Paperwork Reduction Act (PRA). This requirement has been approved by OMB under OMB control number 1910–1400. DOE requested OMB approval of an extension of this information collection for three years, specifically including the collection of information adopted in the present rulemaking, and estimated that the annual number of burden hours under this extension is 30 hours per company. In response to DOE’s request, OMB approved DOE’s information collection requirements covered under OMB control number 1910–1400 through November 30, 2017. 80 FR 5099 (January 30, 2015).

Notwithstanding any other provision of the law, no person is required to respond to, nor shall any person be subject to a penalty for failure to comply with, a collection of information subject to the requirements of the PRA, unless that collection of information displays a currently valid OMB control number.

D. Review Under the National Environmental Policy Act of 1969

Pursuant to the National Environmental Policy Act (NEPA) of 1969, DOE has determined that the rule fits within the category of actions included in Categorical Exclusion (CX) B5.1 and otherwise meets the requirements for application of a CX. (See 10 CFR part 1021, App. B, B5.1(b);

1021.410(b) and App. B, B(1)–(5).) The rule fits within this category of actions because it is a rulemaking that changes the definition of a covered class of products for which there are existing energy conservation standards, and for which none of the exceptions identified in CX B5.1(b) apply. Therefore, DOE has made a CX determination for this rulemaking, and DOE does not need to prepare an Environmental Assessment or Environmental Impact Statement for this rule. DOE’s CX determination for this rule is available at <http://energy.gov/nepa/categorical-exclusion-cx-determinations-cx>.

E. Review Under Executive Order 13132

Executive Order 13132, “Federalism,” 64 FR 43255 (August 10, 1999), imposes certain requirements on federal agencies formulating and implementing policies or regulations that preempt state law or that have Federalism implications. The Executive Order requires agencies to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the states and to carefully assess the necessity for such actions. The Executive Order also requires agencies to have an accountable process to ensure meaningful and timely input by state and local officials in the development of regulatory policies that have Federalism implications. On March 14, 2000, DOE published a statement of policy describing the intergovernmental consultation process it will follow in the development of such regulations. 65 FR 13735. DOE has examined this rule and has determined that it would not have a substantial direct effect on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government. EPCA governs and prescribes federal preemption of state regulations as to energy conservation for the products that are the subject of this final rule. States can petition DOE for exemption from such preemption to the extent, and based on criteria, set forth in EPCA. (42 U.S.C. 6297) Therefore, no further action is required by Executive Order 13132.

F. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of Executive Order 12988, “Civil Justice Reform,” imposes on federal agencies the general duty to adhere to the following requirements: (1) Eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; (3)

⁹ National Electric Manufacturers Association | Member Products | Lighting Systems | Related Manufacturers, <http://www.nema.org/Products/Pages/Lighting-Systems.aspx> (last accessed November 21, 2016).

¹⁰ DOE’s Compliance Certification Database | Lamps—Bare or Covered (No Reflector) Medium Base Compact Fluorescent, <http://www.regulations.doe.gov/certification-data> (last accessed November 21, 2016).

¹¹ Hoovers | Company Information | Industry Information | Lists, <http://www.hoovers.com> (last accessed November 21, 2016).

provide a clear legal standard for affected conduct rather than a general standard; and (4) promote simplification and burden reduction. 61 FR 4729 (Feb. 7, 1996). Regarding the review required by section 3(a), section 3(b) of Executive Order 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) Clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General. Section 3(c) of Executive Order 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. DOE has completed the required review and determined that, to the extent permitted by law, this final rule meets the relevant standards of Executive Order 12988.

G. Review Under the Unfunded Mandates Reform Act of 1995

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) requires each federal agency to assess the effects of federal regulatory actions on state, local, and tribal governments and the private sector. Public Law 104–4, sec. 201 (codified at 2 U.S.C. 1531). For a regulatory action likely to result in a rule that includes a Federal mandate that may result in the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of \$100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. (2 U.S.C. 1532(a), (b)) The UMRA also requires a federal agency to develop an effective process to permit timely input by elected officers of state, local, and tribal governments on a proposed “significant intergovernmental mandate,” and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect them. On March 18, 1997, DOE published a statement of policy on its process for intergovernmental consultation under UMRA. 62 FR 12820. DOE’s policy

statement is also available at http://energy.gov/sites/prod/files/gcprod/documents/umra_97.pdf.

DOE examined this final rule according to UMRA and its statement of policy and determined that the rule contains neither an intergovernmental mandate, nor a mandate that may result in the expenditure of \$100 million or more in any year, so these requirements do not apply.

H. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277) requires federal agencies to issue a Family Policymaking Assessment for any rule that may affect family well-being. This rule would not have any impact on the autonomy or integrity of the family as an institution. Accordingly, DOE has concluded that it is not necessary to prepare a Family Policymaking Assessment.

I. Review Under Executive Order 12630

Pursuant to Executive Order 12630, “Governmental Actions and Interference with Constitutionally Protected Property Rights,” 53 FR 8859 (March 15, 1988), DOE has determined that this rule would not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

J. Review Under the Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516 note) provides for federal agencies to review most disseminations of information to the public under information quality guidelines established by each agency pursuant to general guidelines issued by OMB. OMB’s guidelines were published at 67 FR 8452 (Feb. 22, 2002), and DOE’s guidelines were published at 67 FR 62446 (Oct. 7, 2002). DOE has reviewed this final rule under the OMB and DOE guidelines and has concluded that it is consistent with applicable policies in those guidelines.

K. Review Under Executive Order 13211

Executive Order 13211, “Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use,” 66 FR 28355 (May 22, 2001), requires federal agencies to prepare and submit to OIRA at OMB, a Statement of Energy Effects for any significant energy action. A “significant energy action” is defined as any action

by an agency that promulgates or is expected to lead to promulgation of a final rule, and that: (1) Is a significant regulatory action under Executive Order 12866, or any successor order; and (2) is likely to have a significant adverse effect on the supply, distribution, or use of energy, or (3) is designated by the Administrator of OIRA as a significant energy action. For any significant energy action, the agency must give a detailed statement of any adverse effects on energy supply, distribution, or use should the proposal be implemented, and of reasonable alternatives to the action and their expected benefits on energy supply, distribution, and use.

This regulatory action to amend a definition for GSL is not a significant regulatory action under Executive Order 12866. Moreover, it would not have a significant adverse effect on the supply, distribution, or use of energy, nor has it been designated as a significant energy action by the Administrator of OIRA. Therefore, it is not a significant energy action, and, accordingly, DOE has not prepared a Statement of Energy Effects.

L. Review Under Section 32 of the Federal Energy Administration Act of 1974

Under section 301 of the Department of Energy Organization Act (Pub. L. 95–91; 42 U.S.C. 7101), DOE must comply with section 32 of the Federal Energy Administration Act of 1974, as amended by the Federal Energy Administration Authorization Act of 1977. (15 U.S.C. 788; FEAA) Section 32 essentially provides in relevant part that, where a rule authorizes or requires use of commercial standards, the NOPR must inform the public of the use and background of such standards. In addition, section 32(c) requires DOE to consult with the Attorney General and the Chairman of the Federal Trade Commission (FTC) concerning the impact of the commercial or industry standards on competition. DOE has not incorporated by reference any industry standards in this rulemaking that were not already incorporated and therefore there is no impact on competition.

M. Congressional Notification

As required by 5 U.S.C. 801, DOE will report to Congress on the promulgation of this rule prior to its effective date. The report will state that it has been determined that the rule is not a “major rule” as defined by 5 U.S.C. 804(2).

VI. Approval of the Office of the Secretary

The Secretary of Energy has approved publication of this final rule.

List of Subjects in 10 CFR Part 430

Administrative practice and procedure, Confidential business information, Energy conservation, Household appliances, Imports, Incorporation by reference, Intergovernmental relations, Small businesses.

Issued in Washington, DC, on December 29, 2016.

David Nemtzow,

Acting Deputy Assistant Secretary for Energy Efficiency, Energy Efficiency and Renewable Energy.

For the reasons set forth in the preamble, the final rule for part 430 of chapter II, subchapter D, of title 10 of the Code of Federal Regulations effective beginning January 1, 2020, is amended as set forth below:

PART 430—ENERGY CONSERVATION PROGRAM FOR CONSUMER PRODUCTS

■ 1. The authority citation for part 430 continues to read as follows:

Authority: 42 U.S.C. 6291–6309; 28 U.S.C. 2461 note.

■ 2. In § 430.2, the definition for general service lamp is amended by removing paragraph (27).

Employee Benefits Security Administration

29 CFR Part 2550

Proposed Best Interest Contract Exemption for Insurance Intermediaries;
Proposed Rule

DEPARTMENT OF LABOR**Employee Benefits Security Administration****29 CFR Part 2550**

[Application No. D-11926]

ZRIN 1210-ZA26**Proposed Best Interest Contract Exemption for Insurance Intermediaries**

AGENCY: Employee Benefits Security Administration, U.S. Department of Labor.

ACTION: Notification of Proposed Class exemption.

SUMMARY: This document contains a notice of pendency before the Department of Labor of a proposed class exemption from certain prohibited transaction restrictions of the Employee Retirement Income Security Act of 1974, as amended (ERISA), and the Internal Revenue Code of 1986, as amended (the Code). The provisions at issue generally prohibit fiduciaries with respect to employee benefit plans and individual retirement accounts (IRAs) from engaging in self-dealing and receiving compensation from third parties in connection with transactions involving the plans and IRAs. The exemption proposed in this document, if granted, would allow certain insurance intermediaries, and the insurance agents and insurance companies they contract with, to receive compensation in connection with fixed annuity transactions that may otherwise give rise to prohibited transactions as a result of the provision of investment advice to plan participants and beneficiaries, IRA owners and certain plan fiduciaries (including small plan sponsors). The proposed exemption includes protective conditions to safeguard the interests of the plans, participants and beneficiaries and IRA owners and is similar to the Department's Best Interest Contract Exemption (PTE 2016-01) granted on April 8, 2016, at 81 FR 21002, as corrected at 81 FR 44773 (July 11, 2016).

DATES: *Comments:* Written comments and requests for a public hearing on the proposed exemption must be submitted to the Department within 30 days from the date of publication of this **Federal Register** document. *Applicability:* The Department proposes to make this exemption available on April 10, 2017. Transition relief is proposed for the period from April 10, 2017, through August 15, 2018; see "Transition Relief," below.

ADDRESSES: All written comments and requests for a hearing concerning the proposed class exemption should be sent to the Office of Exemption Determinations by any of the following methods, identified by ZRIN 1210-ZA26:

Federal eRulemaking Portal: <http://www.regulations.gov> at Docket ID number: EBSA-2016-0026. Follow the instructions for submitting comments.

Email to: e-OED@dol.gov.

Fax to: (202) 693-8474.

Mail: Office of Exemption

Determinations, Employee Benefits Security Administration, (Attention: D-11926), U.S. Department of Labor, 200 Constitution Avenue NW., Suite 400, Washington, DC 20210.

Hand Delivery/Courier: Office of Exemption Determinations, Employee Benefits Security Administration, (Attention: D-11926), U.S. Department of Labor, 122 C St. NW., Suite 400, Washington, DC 20001.

Instructions: All comments and requests for a hearing must be received by the end of the comment period. Requests for a hearing must state the issues to be addressed and include a general description of the evidence to be presented at the hearing. The comments and hearing requests will be available for public inspection in the Public Disclosure Room of the Employee Benefits Security Administration, U.S. Department of Labor, Room N-1513, 200 Constitution Avenue NW., Washington, DC 20210. Comments and hearing requests will also be available online at www.regulations.gov, at Docket ID number: EBSA-2016-0026 and www.dol.gov/ebbsa, at no charge.

Warning: All comments and hearing requests will be made available to the public. Do not include any personally identifiable information (such as Social Security number, name, address, or other contact information) or confidential business information that you do not want publicly disclosed. All comments and hearing requests may be posted on the Internet and can be retrieved by most Internet search engines.

FOR FURTHER INFORMATION CONTACT: Brian Shiker or Erin Hesse, telephone (202) 693-8540, Office of Exemption Determinations, Employee Benefits Security Administration, U.S. Department of Labor (this is not a toll-free number).

SUPPLEMENTARY INFORMATION: The Department is proposing this class exemption on its own motion pursuant to ERISA section 408(a) and Code section 4975(c)(2), and in accordance with procedures set forth in 29 CFR part

2570, subpart B (76 FR 66637, 66644, October 27, 2011). Effective December 31, 1978, section 102 of Reorganization Plan No. 4 of 1978, 5 U.S.C. App. 1 (1996), transferred the authority of the Secretary of the Treasury to issue exemptions of the type proposed by the Secretary of Labor.

Executive Summary**Purpose of Regulatory Action**

The Department is proposing this exemption in connection with its regulation under ERISA section 3(21)(A)(ii) and Code section 4975(e)(3)(B) (Regulation), published in the **Federal Register** on April 8, 2016, and effective on April 10, 2017.¹ The Regulation defines who is a "fiduciary" of an employee benefit plan under ERISA as a result of giving investment advice to a plan or its participants or beneficiaries. The Regulation also applies to the definition of a "fiduciary" of a plan (including an IRA) under the Code. The Regulation amended a prior regulation, dating to 1975, specifying when a person is a "fiduciary" under ERISA and the Code by reason of the provision of investment advice for a fee or other compensation regarding assets of a plan or IRA. The Regulation takes into account the advent of 401(k) plans and IRAs, the dramatic increase in rollovers, and other developments that have transformed the retirement plan landscape and the associated investment market over the four decades since the 1975 regulation was issued. In light of the extensive changes in retirement investment practices and relationships, the Regulation updates existing rules to distinguish more appropriately between the sorts of advice relationships that should be treated as fiduciary in nature and those that should not.

In conjunction with the Regulation, the Department granted Prohibited Transaction Exemption (PTE) 2016-01 (the Best Interest Contract Exemption), also on April 8, 2016, and corrected on July 11, 2016. The Best Interest Contract Exemption is designed to promote the provision of investment advice that is in the best interest of retail investors such as plan participants and beneficiaries, IRA owners, and certain plan fiduciaries, including small plan sponsors (Retirement Investors). ERISA and the Code generally prohibit fiduciaries from receiving payments from third parties and from acting on conflicts of interest, including using their authority to affect or increase their

¹ See Definition of the Term "Fiduciary"; Conflict of Interest Rule—Retirement Investment Advice, 81 FR 20946.

own compensation, in connection with transactions involving a plan or IRA. Certain types of fees and compensation common in the retail market, such as brokerage or insurance commissions, 12b–1 fees and revenue sharing payments, may fall within these prohibitions when received by fiduciaries as a result of transactions involving advice to the plan, plan participants and beneficiaries, and IRA owners.

To facilitate continued provision of advice to Retirement Investors under conditions designed to safeguard the interests of these investors, the Best Interest Contract Exemption allows certain investment advice fiduciaries (Financial Institutions and Advisers) to receive various forms of compensation that, in the absence of an exemption, would not be permitted under ERISA and the Code. “Financial Institutions,” defined in the exemption to include banks, investment advisers registered under the Investment Advisers Act of 1940 or state law, broker-dealers, and insurance companies, and individual “Advisers” must adhere to basic standards of impartial conduct (Impartial Conduct Standards), namely, giving prudent advice that is in the customer’s best interest, avoiding misleading statements, and receiving no more than reasonable compensation. Additionally, Financial Institutions must exercise supervisory authority over Advisers by adopting anti-conflict policies and procedures and insulating the Advisers from incentives to violate the exemption’s Impartial Conduct Standards.

The class exemption proposed in this document would provide relief that is similar to the Best Interest Contract Exemption for certain insurance intermediaries that commit to act as Financial Institutions. Insurance intermediaries typically recruit, train and support independent insurance agents and market and distribute insurance products such as traditional fixed rate annuities and fixed indexed annuities. The intermediaries include organizations commonly referred to as independent marketing organizations (IMOs), field marketing organizations (FMOs) and brokerage general agencies (BGAs). The exemption would apply to recommendations of “Fixed Annuity Contracts,” which are generally defined as fixed rate annuities and fixed indexed annuities. If the conditions of the exemption are satisfied, insurance intermediaries that satisfy the definition of “Financial Institution,” as well as the insurance agents and insurance companies that they contract with, would be permitted to receive

compensation and other consideration as a result of the provision of investment advice to Retirement Investors in connection with transactions involving these annuities.

ERISA section 408(a) specifically authorizes the Secretary of Labor to grant administrative exemptions from ERISA’s prohibited transaction provisions.² Regulations at 29 CFR 2570.30 to 2570.52 describe the procedures for applying for an administrative exemption. Before granting an exemption, the Department must find that the exemption is administratively feasible, in the interests of plans and their participants and beneficiaries and IRA owners, and protective of the rights of participants and beneficiaries of plans and IRA owners. Interested parties are permitted to submit comments to the Department through February 21, 2017.

Summary of the Major Provisions

The proposed exemption would be available for insurance intermediaries satisfying the definition of “Financial Institution,” and insurance agents (Advisers) and insurance companies with whom they contract, as well as their affiliates and related entities (as defined in the proposal), when they

² Code section 4975(c)(2) authorizes the Secretary of the Treasury to grant exemptions from the parallel prohibited transaction provisions of the Code. Reorganization Plan No. 4 of 1978 (5 U.S.C. app. at 214 (2000)) (the Reorganization Plan) generally transferred the authority of the Secretary of the Treasury to grant administrative exemptions under Code section 4975 to the Secretary of Labor. To rationalize the administration and interpretation of dual provisions under ERISA and the Code, the Reorganization Plan divided the interpretive and rulemaking authority for these provisions between the Secretaries of Labor and of the Treasury, so that, in general, the agency with responsibility for a given provision of Title I of ERISA would also have responsibility for the corresponding provision in the Code. Among the sections transferred to the Department were the prohibited transaction provisions and the definition of a fiduciary in both Title I of ERISA and in the Code. ERISA’s prohibited transaction rules, 29 U.S.C. 1106–1108, apply to ERISA-covered plans, and the Code’s corresponding prohibited transaction rules, 26 U.S.C. 4975(c), apply both to ERISA-covered pension plans that are tax-qualified pension plans, as well as other tax-advantaged arrangements, such as IRAs, that are not subject to the fiduciary responsibility and prohibited transaction rules in ERISA. Specifically, section 102(a) of the Reorganization Plan provides the Department of Labor with “all authority” for “regulations, rulings, opinions, and exemptions under section 4975 [of the Code]” subject to certain exceptions not relevant here. Reorganization Plan section 102. In President Carter’s message to Congress regarding the Reorganization Plan, he made explicitly clear that as a result of the plan, “Labor will have statutory authority for fiduciary obligations. . . . Labor will be responsible for overseeing fiduciary conduct under these provisions.” Reorganization Plan, Message of the President. This exemption would provide relief from the indicated prohibited transaction provisions of both ERISA and the Code.

make investment recommendations regarding Fixed Annuity Contracts to retail “Retirement Investors.” Retirement Investors are plan participants and beneficiaries, IRA³ owners, and non-institutional (or “retail”) fiduciaries. As a condition of receiving compensation that would otherwise be prohibited under ERISA and the Code, the exemption would require the Financial Institutions to acknowledge their fiduciary status and the fiduciary status of the Advisers with whom they contract in writing. The Financial Institution and Advisers would have to adhere to enforceable standards of fiduciary conduct and fair dealing with respect to their advice. In the case of IRAs and non-ERISA plans, the exemption would require that the standards be set forth in an enforceable contract with the Retirement Investor. Under the exemption’s terms, the Financial Institution would not be required to enter into a contract with ERISA plan investors, but it would be obligated to adhere to these same standards of fiduciary conduct, which the investors could effectively enforce pursuant to ERISA section 502(a)(2) and (3).

The proposed exemption is designed to cover commissions and other forms of compensation received in connection with the recommendation of Fixed Annuity Contracts. Rather than prohibit such compensation structures, the exemption would permit individual Advisers⁴ and related Financial Institutions to receive commissions and other common forms of compensation, provided that they implement appropriate safeguards against the harmful impact of conflicts of interest on investment advice. The proposed exemption strives to ensure that Advisers’ recommendations reflect the best interest of their Retirement Investor customers, rather than the conflicting financial interests of the Advisers and the Financial Institutions with whom they contract. Protected Retirement Investors include plan participants and beneficiaries, IRA owners, and “retail” fiduciaries of plans or IRAs (generally persons who hold or manage less than \$50 million in assets, and are not banks, insurance carriers, registered investment

³ For purposes of the proposed exemption, “IRA” means any account or annuity described in Code section 4975(e)(1)(B) through (F).

⁴ By using the term “Adviser,” the Department does not intend to limit the exemption to investment advisers registered under the Investment Advisers Act of 1940 or under state law. For purposes of this proposal, an Adviser is an employee, independent contractor, or agent of an insurance intermediary that satisfies the definition of Financial Institution in the proposed exemption.

advisers or broker dealers), including small plan sponsors.

In order to protect the interests of plan participants and beneficiaries, IRA owners, and plan fiduciaries, the exemption would require the Financial Institution to acknowledge fiduciary status for itself and its Advisers. The Financial Institutions and Advisers would have to adhere to basic standards of impartial conduct. In particular, under the proposal's standards-based approach, the Adviser and Financial Institution must give prudent advice that is in the customer's best interest, avoid misleading statements, and receive no more than reasonable compensation. Additionally, Financial Institutions generally must adopt policies and procedures reasonably designed to mitigate any harmful impact of conflicts of interest, and disclose basic information about their conflicts of interest, the recommended Fixed Annuity Contract and the cost of their advice. The exemption is calibrated to align the Adviser's interests with those of the plan or IRA customer, while leaving the Adviser and Financial Institution the flexibility and discretion necessary to determine how best to satisfy the exemption's standards in light of the unique attributes of their business.

Background

Regulation Defining a Fiduciary

As explained more fully in the preamble to the Regulation, ERISA is a comprehensive statute designed to protect the interests of plan participants and beneficiaries, the integrity of employee benefit plans, and the security of retirement, health, and other critical benefits. The broad public interest in ERISA-covered plans is reflected in its imposition of fiduciary responsibilities on parties engaging in important plan activities, as well as in the tax-favored status of plan assets and investments. One of the chief ways in which ERISA protects employee benefit plans is by requiring that plan fiduciaries comply with fundamental obligations rooted in the law of trusts. In particular, plan fiduciaries must manage plan assets prudently and with undivided loyalty to the plans and their participants and beneficiaries.⁵ In addition, they must refrain from engaging in "prohibited transactions," which ERISA does not permit because of the dangers posed by the fiduciaries' conflicts of interest with respect to the transactions.⁶ When

fiduciaries violate ERISA's fiduciary duties or the prohibited transaction rules, they may be held personally liable for the breach.⁷ In addition, violations of the prohibited transaction rules are subject to excise taxes under the Code.⁸

The Code also has rules regarding fiduciary conduct with respect to tax-favored accounts that are not generally covered by ERISA, such as IRAs. In particular, fiduciaries of these arrangements, including IRAs, are subject to the prohibited transaction rules and, when they violate the rules, to the imposition of an excise tax enforced by the Internal Revenue Service. Unlike participants in plans covered by Title I of ERISA, IRA owners do not have a statutory right to bring suit against fiduciaries for violations of the prohibited transaction rules.

Under this statutory framework, the determination of who is a "fiduciary" is of central importance. Many of ERISA's and the Code's protections, duties, and liabilities hinge on fiduciary status. In relevant part, ERISA section 3(21)(A) and Code section 4975(e)(3) provide that a person is a fiduciary with respect to a plan or IRA to the extent he or she (i) exercises any discretionary authority or discretionary control with respect to management of such plan or IRA, or exercises any authority or control with respect to management or disposition of its assets; (ii) renders investment advice for a fee or other compensation, direct or indirect, with respect to any moneys or other property of such plan or IRA, or has any authority or responsibility to do so; or, (iii) has any discretionary authority or discretionary responsibility in the administration of such plan or IRA.

The statutory definition deliberately casts a wide net in assigning fiduciary responsibility with respect to plan and IRA assets. Thus, "any authority or control" over plan or IRA assets is sufficient to confer fiduciary status, and any persons who render "investment advice for a fee or other compensation, direct or indirect" are fiduciaries, regardless of whether they have direct control over the plan's or IRA's assets and regardless of their status as an investment adviser or broker under the federal securities laws. The statutory definition and associated responsibilities were enacted to ensure that plans, plan participants and beneficiaries, and IRA owners can depend on persons who provide investment advice for a fee to provide recommendations that are untainted by conflicts of interest. In the absence of

fiduciary status, the providers of investment advice are neither subject to ERISA's fundamental fiduciary standards, nor accountable under ERISA or the Code for imprudent, disloyal, or biased advice.

As amended, the Regulation provides that a person renders investment advice with respect to assets of a plan or IRA if, among other things, the person provides, directly to a plan, a plan fiduciary, plan participant or beneficiary, IRA or IRA owner, the following types of advice, for a fee or other compensation, whether direct or indirect:

(i) A recommendation as to the advisability of acquiring, holding, disposing of, or exchanging, securities or other investment property, or a recommendation as to how securities or other investment property should be invested after the securities or other investment property are rolled over, transferred or distributed from the plan or IRA; and

(ii) A recommendation as to the management of securities or other investment property, including, among other things, recommendations on investment policies or strategies, portfolio composition, selection of other persons to provide investment advice or investment management services, types of investment account arrangements (brokerage versus advisory), or recommendations with respect to rollovers, transfers or distributions from a plan or IRA, including whether, in what amount, in what form, and to what destination such a rollover, transfer or distribution should be made.

In addition, in order to be treated as a fiduciary, such person, either directly or indirectly (*e.g.*, through or together with any affiliate), must: Represent or acknowledge that it is acting as a fiduciary within the meaning of ERISA or the Code with respect to the advice described; represent or acknowledge that it is acting as a fiduciary within the meaning of ERISA or the Code; render the advice pursuant to a written or verbal agreement, arrangement or understanding that the advice is based on the particular investment needs of the advice recipient; or direct the advice to a specific advice recipient or recipients regarding the advisability of a particular investment or management decision with respect to securities or other investment property of the plan or IRA.

The Regulation also provides that as a threshold matter in order to be fiduciary advice, the communication must be a "recommendation," which is defined as "a communication that, based on its content, context, and

⁵ ERISA section 404(a).

⁶ ERISA section 406. ERISA also prohibits certain transactions between a plan and a "party in interest."

⁷ ERISA section 409; *see also* ERISA section 405.

⁸ Code section 4975.

presentation, would reasonably be viewed as a suggestion that the advice recipient engage in or refrain from taking a particular course of action.”⁹ The Regulation, as a matter of clarification, provides that a variety of other communications do not constitute “recommendations,” including non-fiduciary investment education; general communications; and specified communications by platform providers. These communications which do not rise to the level of “recommendations” under the Regulation are discussed more fully in the preamble to the final Regulation.¹⁰

The Regulation also specifies certain circumstances where the Department has determined that a person will not be treated as an investment advice fiduciary even though the person’s activities technically may satisfy the definition of investment advice. For example, the Regulation contains a provision excluding recommendations to independent fiduciaries with financial expertise that are acting on behalf of plans or IRAs in arm’s length transactions, if certain conditions are met. The independent fiduciary must be a bank, insurance carrier qualified to do business in more than one state, investment adviser registered under the Investment Advisers Act of 1940 or by a state, broker-dealer registered under the Securities Exchange Act of 1934 (Exchange Act), or any other independent fiduciary that holds, or has under management or control, assets of at least \$50 million, and:

(i) The person making the recommendation must know or reasonably believe that the independent fiduciary of the plan or IRA is capable of evaluating investment risks independently, both in general and with regard to particular transactions and investment strategies (the person may rely on written representations from the plan or independent fiduciary to satisfy this condition);

(ii) the person must fairly inform the independent fiduciary that the person is not undertaking to provide impartial investment advice, or to give advice in a fiduciary capacity, in connection with the transaction and must fairly inform the independent fiduciary of the existence and nature of the person’s financial interests in the transaction;

(iii) the person must know or reasonably believe that the independent fiduciary of the plan or IRA is a fiduciary under ERISA or the Code, or both, with respect to the transaction and is responsible for exercising

independent judgment in evaluating the transaction (the person may rely on written representations from the plan or independent fiduciary to satisfy this condition); and

(iv) the person cannot receive a fee or other compensation directly from the plan, plan fiduciary, plan participant or beneficiary, IRA, or IRA owner for the provision of investment advice (as opposed to other services) in connection with the transaction.

Similarly, the Regulation provides that the provision of any advice to an employee benefit plan (as described in ERISA section 3(3)) by a person who is a swap dealer, security-based swap dealer, major swap participant, major security-based swap participant, or a swap clearing firm in connection with a swap or security-based swap, as defined in section 1a of the Commodity Exchange Act (7 U.S.C. 1a) and section 3(a) of the Exchange Act (15 U.S.C. 78c(a)) is not investment advice if certain conditions are met. Finally, the Regulation describes certain communications by employees of a plan sponsor, plan, or plan fiduciary that would not cause the employee to be an investment advice fiduciary if certain conditions are met.

Prohibited Transactions

The Department anticipates that the Regulation will cover many investment professionals who did not previously consider themselves to be fiduciaries under ERISA or the Code. Under the Regulation, these entities will be subject to the prohibited transaction restrictions in ERISA and the Code that apply specifically to fiduciaries. ERISA section 406(b)(1) and Code section 4975(c)(1)(E) prohibit a fiduciary from dealing with the income or assets of a plan or IRA in his own interest or his own account. ERISA section 406(b)(2), which does not apply to IRAs, provides that a fiduciary shall not “in his individual or in any other capacity act in any transaction involving the plan on behalf of a party (or represent a party) whose interests are adverse to the interests of the plan or the interests of its participants or beneficiaries.” ERISA section 406(b)(3) and Code section 4975(c)(1)(F) prohibit a fiduciary from receiving any consideration for his own personal account from any party dealing with the plan or IRA in connection with a transaction involving assets of the plan or IRA.

Parallel regulations issued by the Departments of Labor and the Treasury explain that these provisions impose on fiduciaries of plans and IRAs a duty not to act on conflicts of interest that may affect the fiduciary’s best judgment on

behalf of the plan or IRA.¹¹ The prohibitions extend to a fiduciary causing a plan or IRA to pay an additional fee to such fiduciary, or to a person in which such fiduciary has an interest that may affect the exercise of the fiduciary’s best judgment as a fiduciary. Likewise, a fiduciary is prohibited from receiving compensation from third parties in connection with a transaction involving the plan or IRA.¹²

Investment professionals often receive compensation for services to Retirement Investors in the retail market through a variety of arrangements that violate the prohibited transaction rules applicable to plan fiduciaries. These include commissions paid by the plan, participant or beneficiary, or IRA, or commissions and other payments from third parties that provide investment products. A fiduciary’s receipt of such payments would generally violate the prohibited transaction provisions of ERISA section 406(b) and Code section 4975(c)(1)(E) and (F) because the amount of the fiduciary’s compensation is affected by the use of its authority in providing investment advice, unless such payments meet the requirements of an exemption.

Prohibited Transaction Exemptions

As the prohibited transaction provisions demonstrate, ERISA and the Code strongly disfavor conflicts of interest. In appropriate cases, however, the statutes provide exemptions from their broad prohibitions on conflicts of interest. For example, ERISA section 408(b)(14) and Code section 4975(d)(17) specifically exempt transactions involving the provision of fiduciary investment advice to a participant or beneficiary of an individual account plan or IRA owner if the advice, resulting transaction, and the Adviser’s fees meet stringent conditions carefully designed to guard against conflicts of interest.

In addition, the Secretary of Labor has discretionary authority to grant administrative exemptions under ERISA and the Code on an individual or class basis, but only if the Secretary first finds that the exemptions are (1)

¹¹ Subsequent to the issuance of these regulations, Reorganization Plan No. 4 of 1978, 5 U.S.C. App. (2010), divided rulemaking and interpretive authority between the Secretaries of Labor and the Treasury. The Secretary of Labor was given interpretive and rulemaking authority regarding the definition of fiduciary under both Title I of ERISA and the Internal Revenue Code. *Id.* section 102(a) (“all authority of the Secretary of the Treasury to issue [regulations, rulings opinions, and exemptions under section 4975 of the Code] is hereby transferred to the Secretary of Labor”).

¹² 29 CFR 2550.408b–2(e); 26 CFR 54.4975–6(a)(5).

⁹ 29 CFR 2510.3–21(b)(1).

¹⁰ See 81 FR 20946 (April 8, 2016).

administratively feasible, (2) in the interests of plans and their participants and beneficiaries and IRA owners, and (3) protective of the rights of the participants and beneficiaries of such plans and IRA owners. Accordingly, fiduciary advisers may always give advice without need of an exemption if they avoid the sorts of conflicts of interest that result in prohibited transactions. However, when they choose to give advice in situations in which they have a conflict of interest, they must rely upon an exemption.

Pursuant to its exemptive authority, the Department has previously granted several conditional administrative class exemptions that are available to fiduciary advisers in defined circumstances. As a general proposition, these exemptions focused on specific advice arrangements and provided relief for narrow categories of compensation. However, the new Best Interest Contract Exemption (PTE 2016–01) is specifically designed to address the conflicts of interest associated with the wide variety of payments advisers receive in connection with retail transactions involving plans and IRAs. Similarly, the Department has granted a new exemption for principal transactions, Exemption for Principal Transactions in Certain Assets between Investment Advice Fiduciaries and Employee Benefit Plans and IRAs (Principal Transactions Exemption) (PTE 2016–02),¹³ that permits investment advice fiduciaries to sell or purchase certain debt securities and other investments in principal transactions and riskless principal transactions with plans and IRAs.

At the same time that the Department granted the new exemptions, it also amended existing exemptions to, among other things, ensure uniform application of the Impartial Conduct Standards, which are fundamental obligations of fair dealing and fiduciary conduct, and include obligations to act in the customer's best interest, avoid misleading statements, and receive no more than reasonable compensation.¹⁴ Taken together, the new exemptions and amendments to existing exemptions ensure that Retirement Investors are consistently protected by Impartial Conduct Standards, regardless of the particular exemption upon which the adviser relies.

The amendments also revoked in whole or in part certain existing exemptions, which provided little or no protections to IRA and non-ERISA plan participants, in favor of a more uniform application of the Best Interest Contract Exemption in the market for retail investments. Most notably for purposes of this proposal, PTE 84–24,¹⁵ an exemption previously providing relief for transactions involving all annuity contracts, was amended to apply only to transactions involving “fixed rate annuity contracts,” as defined in the exemption.¹⁶ As a result, the exemption no longer provides relief for variable annuities, indexed annuities and any other annuities that do not satisfy the definition of fixed rate annuity contracts.

With limited exceptions, it is the Department's intent that investment advice fiduciaries in the retail investment market rely on statutory exemptions, the Best Interest Contract Exemption or this proposed exemption, if granted, to the extent that they receive conflicted forms of compensation that would otherwise be prohibited. The new and amended exemptions reflect the Department's view that Retirement Investors should be protected by a more consistent application of fundamental fiduciary standards across a wide range of investment products and advice relationships, and that retail investors, in particular, should be protected by the stringent protections set forth in the Best Interest Contract Exemption or this proposed exemption, if granted. When fiduciaries have conflicts of interest, they will uniformly be expected to adhere to fiduciary norms and to make recommendations that are in their customer's best interest.

¹⁵ Class Exemption for Certain Transactions Involving Insurance Agents and Brokers, Pension Consultants, Insurance Companies, Investment Companies and Investment Company Principal Underwriters, 49 FR 13208 (April 3, 1984), as amended, 71 FR 5887 (February 3, 2006), as amended 81 FR 21147 (April 8, 2016).

¹⁶ The definition of “fixed rate annuity contract” in PTE 84–24, as amended, is “a fixed annuity contract issued by an insurance company that is either an immediate annuity contract or a deferred annuity contract that (i) satisfies applicable state standard nonforfeiture laws at the time of issue, or (ii) in the case of a group fixed annuity, guarantees return of principal net of reasonable compensation and provides a guaranteed declared minimum interest rate in accordance with the rates specified in the standard nonforfeiture laws in that state that are applicable to individual annuities; in either case, the benefits of which do not vary, in part or in whole, based on the investment experience of a separate account or accounts maintained by the insurer or the investment experience of an index or investment model. A Fixed Rate Annuity Contract does not include a variable annuity or an indexed annuity or similar annuity.”

The Best Interest Contract Exemption

In broadest outline, the Best Interest Contract Exemption permits Advisers and the Financial Institutions (as defined in the exemption) that employ or otherwise retain them to receive many common forms of compensation that ERISA and the Code would otherwise prohibit, provided that they give advice that is in their customers' best interest and the Financial Institution implements basic protections against the dangers posed by conflicts of interest. More specifically, under the Best Interest Contract Exemption, Financial Institutions generally must:

- Acknowledge fiduciary status with respect to investment advice to the Retirement Investor;
- Adhere to Impartial Conduct Standards requiring them to:
 - Give advice that is in the Retirement Investor's best interest (*i.e.*, prudent advice that is based on the investment objectives, risk tolerance, financial circumstances, and needs of the Retirement Investor, without regard to financial or other interests of the Adviser, Financial Institution, or their affiliates, related entities or other parties);
 - Charge no more than reasonable compensation; and
 - Make no misleading statements about investment transactions, compensation, and conflicts of interest;
- Implement policies and procedures reasonably and prudently designed to prevent violations of the Impartial Conduct Standards;
- Refrain from giving or using incentives for Advisers to act contrary to the customer's best interest; and
- Fairly disclose the fees, compensation, and material conflicts of interest, associated with their recommendations.

Advisers relying on the exemption must adhere to the Impartial Conduct Standards when making investment recommendations. In order for relief to be available under the exemption, there must be a “Financial Institution” that meets the definition set forth in the exemption and that satisfies the applicable conditions.

Section VIII(e) of the Best Interest Contract Exemption states that a “Financial Institution” can be a registered investment adviser (RIA), a bank or similar financial institution, a broker-dealer or an insurance company. The Department noted in the preamble to the exemption that these entities were identified by Congress as advice providers in the statutory exemption for investment advice under ERISA section 408(g) and Code section 4975(f)(8) and

¹³ 81 FR 21089 (April 8, 2016), as corrected at 81 FR 44784 (July 11, 2016).

¹⁴ The amended exemptions are Prohibited Transaction Exemption (PTE) 75–1; PTE 77–4; PTE 80–83; PTE 83–1; PTE 84–24, and PTE 86–128. *See* 81 FR 21208; 21139; 21147; and 21181 (April 8, 2016).

that they are subject to well-established regulatory conditions and oversight.¹⁷ However, in response to requests to broaden the definition to include marketing and distribution intermediaries, the Department added section VIII(e)(5), which states that a Financial Institution also includes “an entity that is described in the definition of Financial Institution in an individual exemption . . . that provides relief for the receipt of compensation in connection with investment advice provided by an investment advice fiduciary, under the same conditions as [the Best Interest Contract Exemption].”¹⁸

Thus, although the definition of Financial Institution in the Best Interest Contract Exemption was limited to certain specified entities, the exemption provided a mechanism under which the definition can be expanded if an individual exemption is granted to another type of entity, under the same conditions. In that event, the individual exemption would provide relief to the applicants identified in the exemption, but the definition of Financial Institution in the Best Interest Contract Exemption would be expanded so that other entities that satisfy the definition in the individual exemption can rely on the Best Interest Contract Exemption. In the preamble to the Best Interest Contract Exemption, the Department stated that “[i]f parties wish to expand the definition of Financial Institution to include marketing intermediaries or other entities, they can submit an application to the Department for an individual exemption, with information regarding their role in the distribution of financial products, the regulatory oversight of such entities, and their ability to effectively supervise individual Advisers’ compliance with the terms of this exemption.”¹⁹

Pursuant to section VIII(e)(5) of the Best Interest Contract Exemption, the Department received 22 applications for individual exemptions from insurance intermediaries that contract with independent insurance agents to sell fixed annuities (applicants). The applicants describe themselves as “independent marketing organizations,” “insurance marketing organizations” and “field marketing organizations.”

Collectively, the Department refers to the applicants and similar entities as either “insurance intermediaries” or “IMOs.” The applicants sought individual exemptions under the same conditions as the Best Interest Contract

Exemption, but with a new definition of “Financial Institution” incorporating insurance intermediaries.

Because of the large number of applications, the Department determined to propose, on its own motion, a class exemption for such intermediaries based on the facts and representations in the individual applications received by the Department. The applicants employ a wide variety of business models and approaches, however, and the proposal, while designed to provide class relief for insurance intermediaries, may not be available to all the applicants depending on their individual circumstances. As discussed below, there are a variety of compliance options available to the insurance industry under the Best Interest Contract Exemption. This proposed exemption would supplement these options by permitting the IMO or other intermediary to act as a covered “Financial Institution” with supervisory responsibilities under specified conditions, many of which parallel the conditions of the Best Interest Contract Exemption. To the extent insurance intermediaries wish to pursue additional exemptive relief, the Department will consider such additional requests.

Primarily, it is important to note that insurance intermediaries are not required to act as Financial Institutions under this exemption, if granted, in order to participate in the marketplace. They may provide valuable compliance assistance and other services to insurance companies or other insurance intermediaries that act as Financial Institutions under the Best Interest Contract Exemption or this exemption, if granted, and receive compensation for their services. In this regard, both the Best Interest Contract Exemption and this proposal, if granted, would specifically provide relief for compensation paid to “affiliates” and “related entities” of an Adviser and Financial Institution, which would typically include IMOs.²⁰ Therefore, an IMO that does not meet the definition of Financial Institution under this proposal can nevertheless continue to work with an insurance company or other intermediary, and receive compensation, if the insurance agent and the insurance company or other intermediary complies with the conditions applicable to Advisers and Financial Institutions, respectively, in

the Best Interest Contract Exemption or this exemption, if granted.²¹ As the Department noted in recent guidance, even if it decided not to grant this exemption, an insurer could bolster its oversight by contractually requiring an IMO to implement policies and procedures designed to ensure that all of the agents associated with the IMO adhere to the Impartial Conduct Standards. See *FAQs about Conflict of Interest Rules and Exemptions, Part I*, FAQs 22 and 23. Under this approach, the IMO could eliminate potentially troubling compensation incentives across all the insurance companies that work with the IMO. While the insurance company would remain responsible for compliance with the full Best Interest Contract Exemption, nothing in that exemption would preclude insurers from contracting with other parties, such as IMOs, for compliance work.

Alternatively, even without this new exemption, an insurer could take direct responsibility for supervising agents, regardless of whether it chooses to market its products through a captive sales force, independent agents, or other channels, much as insurers currently have responsibility to oversee the activities of their agents—including independent agents—under state-law suitability rules. As FAQ 22 noted, the insurer’s responsibility under the Best Interest Contract Exemption is to oversee the recommendation and sale of its products, not recommendations and transactions involving other insurers. See *FAQs about Conflict of Interest Rules and Exemptions, Part I*, FAQ 22. Under the Best Interest Contract Exemption, the insurer must adopt and implement prudent supervisory and review mechanisms to safeguard the agent’s compliance with the Impartial Conduct Standards when recommending the insurer’s products; avoid improper incentives to preferentially push the products, riders, and annuity features that are the most lucrative for the insurer at the customer’s expense; ensure that the insurer and agent receive no more than reasonable compensation for their services in connection with the transaction; and adhere to the disclosure and other conditions set forth in its exemption. Thus, for example, an insurer could adopt policies and procedures that require agents (including independent agents) to engage in a process specified by the

²⁰ If an IMO is not an affiliate or related entity, or otherwise a party in interest or disqualified person with respect to the plan or IRA, the IMO’s receipt of payments as a result of an Adviser’s advice would not be a prohibited transaction requiring compliance with an exemption.

²¹ See *FAQs about Conflict of Interest Rules and Exemptions, Part I*, FAQs 22 and 23, <https://www.dol.gov/sites/default/files/ebsa/about-ebsa/our-activities/resource-center/faqs/coi-rules-and-exemptions-part-1.pdf>.

¹⁷ See 81 FR at 21067.

¹⁸ See *id.*; *id.* at 21083.

¹⁹ See *id.* at 21067.

insurer for making prudent recommendations; review the agent's final recommendation in light of the customer's investment objectives, risk tolerance, financial circumstances, and needs; ensure that its own compensation practices are in line with industry standards for reasonable compensation for the agent's services; and avoid creating any misaligned incentives that encourage the Adviser to choose between the insurer's various offerings based on the financial interests of the insurer or its affiliates, rather than the customer's interest. If the insurer believes that an independent agent may be improperly motivated by the size of the insurer's commissions as compared to its competitors, it may need to review the agent's recommendations particularly carefully and seek additional assurances from the agent as to the basis of its recommendations. However, nothing in the Best Interest Contract Exemption requires the insurer to pay precisely the same compensation to its agents as its competitors, as long as the compensation is reasonable in relation to the services rendered, and the insurer carefully oversees the recommendations for compliance with the Impartial Conduct Standards.²²

Applicants for Individual Exemptions

The following entities submitted applications for individual exemptions permitting them to act as Financial Institutions under the Best Interest Contract Exemption: Gradient Insurance Brokerage, Inc., C2P Advisory Group, LLC dba Clarity to Prosperity, Legacy Marketing Group, LLC, InForce Solutions, LLC, Futurity First Insurance Agency, Financial Independence Group, Brokers International Ltd, Insurance Advocates, Advisors Excel, AmeriLife Group, LLC, InsurMark, Annexus, Ideal Producers Group, ECA Marketing, Saybrus Partners, Inc., Alpine Brokerage Services, The Annuity Source, Inc., M&O Financial, Inc., Kestler Financial Group, Inc., First Income Advisors, Crump Life Insurance Services, Inc., and The IMPACT Partnership, LLC. The applicants provided background information on the distribution of fixed

annuities, described their business models and discussed their anticipated approaches to compliance with the proposed exemption.

Distribution of Fixed Annuities

As described by various applicants, fixed annuities—and in particular, fixed indexed annuities—are commonly distributed by independent insurance agents. Independent insurance agents distribute the products of not one insurance company, but rather multiple insurance companies.

Typically, insurance intermediaries recruit, train and support independent insurance agents and market and distribute insurance products. Since the independent agents are not associated with any one particular insurance company, the intermediary steps in to develop sales processes, provide marketing material, and formulate supervisory procedures and methods for the independent agents to use. The insurance companies and the agents have come to rely on these insurance intermediaries to serve a wide variety of functions relating to the distribution of fixed annuities through the independent insurance agent channel. Insurance intermediaries commonly provide services that include: Agent recruitment and screening, licensing and contracting services, creation of product illustrations, case management, IT services, marketing services, new business processing, training and supervising agents and ensuring compliance with existing standards under state insurance law.

Further, insurance intermediaries can serve an important compliance function. Insurance intermediaries may serve to facilitate statutory and regulatory compliance as well as help to resolve compliance issues that may arise between state regulators, the insurance company and an agent. In performing this role, insurance intermediaries can perform compliance reviews, create policies and procedures and vet the practices of agents. Many insurance intermediaries contractually require that an agent comply with specific standards that are set by the insurance intermediary, as well as the federal and state laws and regulations that govern insurance.

Some insurance intermediaries currently work with the insurance companies to ensure that annuities sold by agents are “suitable” for their clients. This suitability standard generally requires agents and insurance companies to review detailed information about the client to determine if the fixed annuity purchase complies with the suitability standards

under state insurance law (*see* 2010 NAIC Suitability in Annuity Transactions Model Regulation, which applicants state has been adopted by most state insurance regulators). In order to assist the insurance company and the agent, the insurance intermediary will ensure that the agent has considered, at a minimum, the client's prospective age, annual income, financial situation and needs (including the source of the funds used to purchase the annuity), financial experience, financial objectives, intended use of the annuity, financial time horizon, existing assets (including investment and life insurance), liquidity needs, liquid net worth, risk tolerance and tax status.

The distribution services provided by the insurance intermediary generate multiple forms of compensation for the insurance intermediary. Most prominently, the sale of an annuity usually triggers the payment of a commission to the insurance intermediary. The commission can be based on many factors, including, but not limited to, the specific annuity product sold, the state in which it is sold, the premium amount and the age of the annuity owner. An insurance intermediary can also receive compensation for additional services, including, but not limited to, product development, marketing, administrative and compliance services and field support services. The specific compensation terms are generally spelled out in the contracts between the insurance intermediary and the insurance company and the insurance intermediary and the agent.

The compensation payments received by insurance intermediaries may trigger prohibited transaction concerns under both ERISA and the Code. After the applicability date of the Regulation, insurance agents who recommend fixed annuity products will generally be fiduciaries with respect to a Retirement Investor's account. The receipt of a commission or other compensation by a fiduciary, or an entity in which the fiduciary has an interest that would affect its judgment as a fiduciary, as a result of the provision of investment advice is a prohibited transaction for which an exemption is needed.

Under this fixed annuity distribution and compensation model, an insurance company could serve as a “Financial Institution” for purposes of the Best Interest Contract Exemption. However, the applicants express concern that insurance companies may not necessarily agree to satisfy the role of the Financial Institution under the Best Interest Contract Exemption with respect to independent insurance

²² In general, as noted in the Department's FAQs Part I, the Financial Institution can comply with its obligations to pay no more than reasonable compensation by being attentive to market prices and benchmarks for the services; providing the investor proper disclosure of relevant costs, charges, and conflicts of interest, prudently evaluating the customer's need for the services; and avoiding fraudulent or abusive practices with respect to the service arrangement. *See FAQs about Conflict of Interest Rules and Exemptions, Part I, FAQ 33, <https://www.dol.gov/sites/default/files/ebsa/about-ebsa/our-activities/resource-center/faqs/coi-rules-and-exemptions-part-1.pdf>.*

agents, or may prefer to rely upon a captive sales force when relying upon that exemption. Additionally, some of the applicants stated that independent insurance agents do not want to lose the flexibility of their independent status.

The applicants represent that the independent insurance agent model benefits consumers because independent agents can offer a wider variety of products to satisfy consumers' goals. Thus, the applicants take the position that permitting insurance intermediaries to serve as Financial Institutions will facilitate independent insurance agents' continued sale of fixed annuities in the Retirement Investor marketplace under a single set of policies and procedures. The exemption proposed herein would apply to commissions and other compensation received by an insurance agent, insurance intermediary, insurance companies and any other affiliates and related entities, as a result of a plan's or IRA's purchase of Fixed Annuity Contracts.

Business Models

Many of the applicants stated that they had direct contractual relationships with the majority of the insurance companies for which they distribute fixed annuities. Frequently, these direct contractual relationships with the insurance companies assigned responsibility for the oversight of agents and sub-IMOs to the intermediaries. Some applicants indicated they are at the highest level of an insurance company's distribution hierarchy, or at the "top-tier" or "top-level."

As top-level IMOs, most applicants represented that they oversee independent, insurance-only agents or sub-IMOs (which in turn oversee independent insurance-only agents), or both. This oversight is accomplished through the top-level IMO's use of its compliance structure and other business and administrative tools. The applicants use their compliance structure to directly oversee agents or to assist sub-IMOs in the distribution of fixed annuities and the oversight of their agents. One applicant, however, stated that it is a sub-IMO. As a sub-IMO, the applicant represents that it has contractual relationships with the insurance companies for which it distributes fixed annuities, but that it also has a contractual relationship with a top-level IMO. The top-level IMO provides the sub-IMO with distribution and other support services. Further, the top-level IMO assists the sub-IMO in accessing a wide variety of insurance products. The sub-IMO represents that contracting with a top-level IMO to

provide this access and these services allows it to focus on the training and support of its agents.

Further, other applicants, in addition to describing themselves as top-level IMOs, also represented that they are affiliated with large insurance companies. One of these applicants wholly owns numerous sub-IMOs. Despite the differences in the ownership structure, the applicants represent that they, like the other top-level IMOs, assist in the distribution of fixed annuities, both their affiliates' and those sold by other insurance companies, and provide valuable business and administrative assistance to sub-IMOs and agents.

Finally, some applicants indicated that their services extend to assisting insurance companies in the design of insurance products.

Compliance Approach

The applicants represented to the Department that they have broad experience that will contribute to their ability to satisfy the conditions of the exemption. Some applicants pointed to their experience in providing oversight of independent agents for insurance law compliance. A number of the applicants indicated that they planned to rely on affiliated registered investment advisers and/or broker-dealer entities in developing systems to comply with the exemption.

The applicants generally indicated that they would maintain internal compliance departments and adopt supervisory structures to ensure compliance with the exemption. Several applicants pointed to technology that they would use to ensure compliance. Some applicants indicated that insurance agents would be required to use the intermediary's technology to ensure that clients receive the disclosures and a contract, where required. Agents would also be required to use the intermediary's Web site services and maintain records centrally.

Some of the applicants additionally described how their sales practices would ensure best interest recommendations. A number of the applicants plan to require centralized approval of agent recommendations; in some cases, the recommendations would be reviewed by salaried employees of the intermediary with additional credentials, such as Certified Financial Planners. One applicant indicated that internal review would include a comparison of the proposed product to other similar fixed indexed annuity products available in the marketplace in order to ensure it is appropriate for the purchaser, and that

the analysis would include utilizing third party benchmarking services and industry comparisons. Another applicant indicated that it would ensure that an RIA representative would work with insurance-only agents where a recommendation would involve the liquidation of securities, to ensure that both state and federal securities laws are properly followed.

Some applicants additionally stated that their contracts with insurance agents would include certain specific requirements, including: Adherence to the intermediary's policies and procedures with respect to advertising, market conduct and point of sale processes, transparency and documentation; provision of advice in accordance with practices developed by the intermediary; and agreement that the agents will not accept any compensation, direct or indirect, from an insurance company, except as specifically approved by the intermediary. A number of the applicants indicated that they would perform background checks and rigorous selection processes before working with agents and would require ongoing training regarding compliance with the exemption.

A few of the applicants addressed product selection. These applicants indicated that agents making recommendations pursuant to the exemption would be limited to certain products and insurance companies. The applicants indicated there would be ongoing due diligence with respect to insurance companies and product offerings under the exemption.

After consideration of the applicants' representations and the information provided in the applications, the Department has decided to propose a class exemption for insurance intermediaries. The proposal is described below.

Description of the Proposed Exemption

General

Section I of the proposed exemption would provide relief for the receipt of compensation by insurance intermediary Financial Institutions and their "Advisers," "Affiliates," and "Related Entities," as a result of the Adviser's or Financial Institution's provision of investment advice within the meaning of ERISA section 3(21)(A)(ii) or Code section 4975(e)(3)(B) to a "Retirement Investor" regarding the purchase of a Fixed Annuity Contract. The proposed exemption would broadly provide relief from the restrictions of ERISA section 406(b) and the sanctions imposed by

Code section 4975(a) and (b), by reason of Code section 4975(c)(1)(E) and (F).²³

The definitions and conditions of the proposal vary in certain respects from those in the Best Interest Contract Exemption, as discussed below. The differences are intended to ensure that transactions involving fixed annuity contracts that are sold by independent insurance agents through insurance intermediaries occur only when they are in the best interest of Retirement Investors. Fixed indexed annuities, with their blend of limited financial market exposures and minimum guaranteed values, can play an important and beneficial role in retirement preparation, as the Department noted in its Regulatory Impact Analysis for the Regulation.²⁴ At the same time, however, these annuities, which are anticipated to be the primary type of fixed annuities sold under this exemption, often pose special risks and complexities for investors.²⁵ Furthermore, when the Department promulgated the Best Interest Contract Exemption, it limited Financial Institution status to entities with well-established regulatory conditions and oversight.²⁶ Insurance intermediaries are not subject to the same regulatory oversight, and often have not played the same supervisory role with respect to advisers, as the Financial Institutions covered by that exemption. As a result of such considerations, this proposal contains a restricted definition of Financial Institution and additional required policies and procedures and disclosures.

These additional protections correspond to concerns, noted previously by the Department and expressed by other regulators, including the Securities and Exchange Commission (SEC) staff, the Financial Industry Regulatory Authority (FINRA), and the North American Securities Administrators Association, regarding fixed indexed annuities and the way they are marketed. Although indexed annuities are often sold as simple “no risk” products, they are neither simple nor risk free. Without proper care, Retirement Investors can all too easily be misled about the terms, guarantees, and risks associated with these products.

As FINRA noted in its Investor Alert, “Equity-Indexed Annuities: A Complex Choice”:

Sales of equity-indexed annuities (EIAs) . . . have grown considerably in recent years. Although one insurance company at one time included the word ‘simple’ in the name of its product, EIAs are anything but easy to understand. One of the most confusing features of an EIA is the method used to calculate the gain in the index to which the annuity is linked. To make matters worse, there is not one, but several different indexing methods. Because of the variety and complexity of the methods used to credit interest, investors will find it difficult to compare one EIA to another.²⁷

FINRA also explained that equity-indexed annuities “give you more risk (but more potential return) than a fixed annuity but less risk (and less potential return) than a variable annuity.”²⁸

Similarly, in its 2011 “Investor Bulletin: Indexed Annuities,” the SEC staff stated: “You can lose money buying an indexed annuity. If you need to cancel your annuity early, you may have to pay a significant surrender charge and tax penalties. A surrender charge may result in a loss of principal, so that an investor may receive less than his original purchase payments. Thus, even with a specified minimum value from the insurance company, it can take several years for an investment in an indexed annuity to ‘break even.’”²⁹ As the SEC staff additionally observed, “[i]t is important to note that indexed annuity contracts commonly allow the insurance company to change the participation rate, cap, and/or margin/spread/asset or administrative fee on a periodic—such as annual—basis. Such changes could adversely affect your return.”³⁰

The North American Securities Administrators Association, the association of state securities regulators, issued the following statement on equity indexed annuities:

Equity indexed annuities are extremely complex investment products that have often been used as instruments of fraud and abuse. For years, they have taken an especially heavy toll on our nation’s most vulnerable investors, our senior citizens for whom they are clearly unsuitable.³¹

³⁰ *Id.*

³¹ See NASAA Statement on SEC Equity-Indexed Annuity Rule (December 17, 2008) available at <http://www.nasaa.org/5611/statement-on-sec-equity-indexed-annuity-rule/>.

In the Department’s view, the complexity and conflicted payment structures associated with fixed indexed annuities heighten the dangers posed by conflicts of interest when Advisers recommend these products to Retirement Investors. These are complex products requiring careful consideration of their terms and risks. Assessing the prudence of a particular indexed annuity requires an understanding of surrender terms and charges; interest rate caps; the particular market index or indexes to which the annuity is linked; the scope of any downside risk; associated administrative and other charges; the insurer’s authority to revise terms and charges over the life of the investment; and the specific methodology used to compute the index-linked interest rate and any optional benefits that may be offered, such as living benefits and death benefits. In operation, the index-linked interest rate can be affected by participation rates; spread, margin or asset fees; interest rate caps; the particular method for determining the change in the relevant index over the annuity’s period (annual, high water mark, or point-to-point); and the method for calculating interest earned during the annuity’s term (e.g., simple or compounded interest). Investors can all too easily overestimate the value of these contracts, misunderstand the linkage between the contract and index performance, underestimate the costs of the contract, and overestimate the scope of their protection from downside risk (or wrongly believe they have no risk of loss). As a result, Retirement Investors are acutely dependent on sound advice that is untainted by the conflicts of interest posed by Advisers’ incentives to secure the annuity purchase, which can be quite substantial.

Accordingly, the Department has taken care to address these concerns, while preserving the beneficial and important role these products can play for retirement investors.³² As noted above, when prudently recommended, fixed indexed annuities can promote investor interests because of their combination of limited financial market exposures and minimum guaranteed values. In addition, the Department seeks additional comments on insurers’ ability to change the terms of a fixed indexed annuity contract during the life of the annuity, particularly during the period in which a surrender charge is in effect. To the extent that the insurer can change critical terms, such as the participation rate, indexing method,

³² See Regulatory Impact Analysis for the Regulation, p. 8, available at www.dol.gov/ebsa.

²³ Relief is also proposed from ERISA section 406(a)(1)(D) and Code section 4975(c)(1)(D), which prohibit transfer of plan assets to, or use of plan assets for the benefit of, a party in interest (including a fiduciary).

²⁴ See Regulatory Impact Analysis for the Regulation, p. 8, available at www.dol.gov/ebsa.

²⁵ See Best Interest Contract Exemption, 81 FR 21001, 21017 (April 8, 2016).

²⁶ See *id.* at 21067.

cap, or relevant fees and charges, it can directly affect its own compensation. And to the extent it can make such changes during the surrender period, it can place the customer in a lose-lose situation: The customer must either accept an unfavorable change to the terms of the annuity or surrender the annuity and incur a charge against the amount of the annuity. The Department asks for comment on these issues and features, with the intent of providing additional guidance on them in the final exemption, if it is granted, or potentially limiting the exemption to annuity contracts that do not permit insurers to change critical terms during periods in which the customer is subject to a surrender charge or penalty. Specifically, the Department asks parties to provide information on how commonly fixed indexed annuity contracts are structured in this manner. In practice, how commonly do insurers make such changes to critical terms during surrender periods? What constraints are imposed on such conduct by state law or otherwise? Similarly, what constraints are placed on the size of surrender charges or the methodology for calculating the charges? How are these rights and practices disclosed to consumers? How commonly do insurers give consumers advance notice of the changes coupled with a right to withdraw assets without penalty before the changes take effect? To what extent can an Adviser prudently recommend a fixed indexed annuity if it is potentially subject to changes in key terms during the surrender period? To the extent insurers can unilaterally increase their compensation by changing key terms during the surrender period, do they need a separate exemption for the exercise of that authority? Finally, to what extent should the Department be concerned about similar issues with respect to fixed rate annuities?

Definition of Fixed Annuity Contract

As stated above, the proposed exemption is limited to transactions involving Fixed Annuity Contracts. To ensure that the exemption would not be used more broadly than intended, the proposal includes a definition of Fixed Annuity Contract, which is “an annuity contract that satisfies applicable state standard nonforfeiture laws at the time of issue and the benefits of which do not vary, in whole or in part, on the basis of the investment experience of a separate account or accounts maintained by the insurer. This includes both fixed rate annuity contracts and fixed indexed annuity contracts.” The definition is intended to

include fixed immediate annuities but exclude variable annuity contracts, which the Department understands are typically sold through securities distribution channels.

If this proposed exemption is granted, therefore, relief will be available for sales of fixed rate annuities sold by insurance intermediaries and independent insurance agents under several different exemptions. Relief for all annuity sales is available under the Best Interest Contract Exemption if, as discussed above, an insurance company acts as the Financial Institution under the terms of that exemption. Alternatively, relief for fixed rate annuity contracts is available under PTE 84–24. By also proposing relief for such transactions in this exemption, the Department is not indicating that these other exemptions are unavailable. The intent is to provide flexibility to parties depending on their individual circumstances.

The Department requests comment on the proposed definition of Fixed Annuity Contract. Does the definition adequately describe fixed annuities and carve out variable annuities? Are there other attributes of fixed annuity contracts that should be identified in the definition? Finally, should the definition address group annuity contracts, which may not be required to satisfy state nonforfeiture laws? Is relief necessary in this distribution channel for group annuity contracts? If so, should the definition provide that rather than satisfying the state nonforfeiture laws, the group annuity contract must “guarantee return of principal net of reasonable compensation, and provide a guaranteed declared minimum interest rate in accordance with the rates specified in the standard nonforfeiture laws in the state that are applicable to individual annuities”?³³

Definition of Adviser

The proposed definition of Adviser in Section VIII(a) generally mirrors the definition in the Best Interest Contract Exemption, although a reference to banking law was not included in this proposed definition as the Department did not believe it was relevant. The definition states:

“Adviser” means an individual who:

(1) Is a fiduciary of the Plan or IRA by reason of the provision of investment advice described in ERISA section 3(21)(A)(ii) or Code section 4975(e)(3)(B), or both, and the applicable regulations, with respect to the assets of the Plan or IRA involved in the recommended transaction;

(2) Is an employee, independent contractor, or agent of a Financial Institution; and

(3) Satisfies the federal and state regulatory and licensing requirements of insurance laws with respect to the covered transaction, as applicable.

The Department requests comment on whether this definition accurately describes the relationship between independent insurance agents and insurance intermediaries who will serve as Financial Institutions under the exemption, and, if not, how the definition should be revised.

Definition of Financial Institution

The proposal includes a new definition of Financial Institution that would apply with respect to insurance intermediaries. See Section VIII(e). As the Department stated in the preamble to the Best Interest Contract Exemption, the definition of Financial Institution in that exemption included entities identified in the statutory exemption for investment advice under ERISA section 408(g) and Code section 4975(f)(8) and that are subject to well-established regulatory conditions and oversight.³⁴ In addition, in that preamble, the Department requested that intermediaries seeking to serve as Financial Institutions provide information as to their ability to effectively supervise Advisers’ compliance with the terms of the exemption.³⁵ The applicants described their ability to oversee Advisers and proposed a variety of safeguards that they believed would be protective of Retirement Investors engaging in these transactions.

The proposed definition of Financial Institution is based on the applicants’ representations and suggestions and the Department’s additional analysis of how best to safeguard Retirement Investors’ interests in this distribution channel. The components of the definition are intended to describe insurance intermediaries that are likely to be able to comply with the exemption and provide meaningful oversight of Advisers working in the fixed annuity marketplace. The proposal seeks to identify insurance intermediaries with the financial stability and operational capacity to implement the anti-conflict policies and procedures required by the exemption. Additionally, insurance intermediaries described in the definition are sufficiently large and established to stand behind their contractual and other commitments to Retirement Investors, and to police conflicts of interest associated with a

³³ See Final Amendment to PTE 84–24, 81 FR 21147, 21176 (April 8, 2016) (definition of “Fixed Rate Annuity Contract”).

³⁴ See 81 FR 21067.

³⁵ See *id.*

wide range of insurance products offered by a wide range of insurance companies.

As an initial matter, the proposal defines a Financial Institution as an insurance intermediary that has a direct written contract regarding the distribution of Fixed Annuity Contracts with both the insurance company issuing the annuity contract and the Adviser or another intermediary (sub-intermediary) that has a direct written contract with the Adviser. Additional exemption conditions describe the terms of the required contract, see proposed Section II(d)(6) and (7). By requiring a contractual relationship between the insurance company and the intermediary, the proposal would ensure that the insurance intermediary and the insurance company have a direct relationship that will enable the insurance intermediary to satisfy its obligations under the exemption. By also requiring a contractual relationship between the intermediary and the Adviser or sub-intermediary, the proposal would further ensure that the intermediary will have the right to implement its oversight obligations as a Financial Institution pursuant to the requirements of the exemption, if granted. The Department requests comment on whether this condition should be adjusted to allow for multiple levels of intermediaries.

In addition to the baseline contractual relationship requirement, the proposal sets forth a series of conditions that would apply to the insurance intermediary. Subsection (1) of the proposed definition would require the insurance intermediary to satisfy the applicable licensing requirements of the insurance laws of each state in which it conducts business. Accordingly, the intermediary would be required to operate in accordance with the states' requirements in this respect.

Next, the proposal seeks to confirm that the insurance intermediary has sound business practices that have been reviewed by an independent entity. Subsection (2) of the proposed definition would require that the intermediary have financial statements that are audited annually by an independent certified public accountant. This condition would utilize the definition of Independent in Section VIII(f) of the proposed exemption.³⁶ In addition, under

proposed Section III(b)(vii), the audited financial statements must be provided on the Financial Institution's Web site.

This condition was suggested in several individual applications. Some applicants believed that periodic financial audits would provide reasonable assurance of the entity's financial health. The Department agrees. The Department anticipates that requiring an annual audit of the financial statements, coupled with the Financial Institution's web disclosures, will provide an opportunity for the Department and other interested persons to be alerted to any financial weaknesses or other items of concern with respect to the stability or solvency of the Financial Institution, or its ability to stand behind its commitments to Retirement Investors.

As an alternative to an audit of financial statements, one applicant suggested that the audit should relate to the intermediary's internal controls and procedures. The applicant noted that banks and trust companies are currently required to obtain these reports under SSAE 16 (formerly SAS 70), and that the applicant could work with its auditors to prepare a similar report, but suggested that such an approach would require additional transition relief as the accounting industry would have to agree on the appropriate data points for an internal controls audit for an insurance intermediary and the resulting topics of the SSAE 16-like report.

The Department requests comment on the utility of the proposed audited financial statements requirement as a protection of Retirement Investors, and the suggested alternative audit of internal controls and procedures. The Department also requests information on the cost of these alternatives to insurance intermediaries intending to rely on the exemption.

Insurance or Assets Set Aside for Potential Liability

Subsection (3) of the proposed definition would require the Financial Institution to maintain fiduciary liability insurance, or unencumbered cash, bonds, bank certificates of deposit, U.S. Treasury Obligations, or a combination of all of these, available to satisfy potential liability under ERISA or the Code as a result of the firm's failure to meet the terms of this

exemption, or any contract entered into pursuant to Section II(a). The aggregate amount of these items must equal at least 1% of the average annual amount of premium sales of Fixed Annuity Contracts by the Financial Institution to Retirement Investors over the prior three fiscal years of the Financial Institution. To the extent this condition is satisfied by insurance, the proposal states that the insurance must apply solely to actions brought by the Department of Labor, the Department of Treasury, the Pension Benefit Guaranty Corporation, Retirement Investors or plan fiduciaries (or their representatives) relating to Fixed Annuity Contract transactions, including but not limited to, actions for failure to comply with the exemption or any contract entered into pursuant to Section II(a), and it may not contain an exclusion for Fixed Annuity Contracts sold pursuant to the exemption. Any such insurance also may not have a deductible that exceeds 5% of the policy limits and may not exclude coverage based on a self-insured retention or otherwise specify an amount that the Financial Institution must pay before a claim is covered by the fiduciary liability policy. To the extent this condition is satisfied by retaining assets, the assets must be unencumbered and not subject to security interests or other creditors.

This provision of the proposal seeks to ensure that the Financial Institution can stand behind its commitments to retirement investors and satisfy potential liabilities under the exemption. The Financial Institution's ability to back its commitments ensures that it can be held accountable when it violates its obligations and, thereby, promotes compliance. A number of the applicants specifically suggested that they would obtain insurance to cover potential liability under the exemption, although the approaches and suggested amounts varied. Additionally, as some applicants indicated uncertainty as to the current availability of insurance for liability under the exemption, the proposal would provide flexibility to the intermediaries to determine whether to acquire insurance or set aside assets to satisfy potential liability.

The Department has concluded that the condition should be included in this proposal based on the suggestion of applicants, as well as its understanding that insurance intermediaries often are not legally required to maintain, and do not maintain, significant amounts of capital. Particularly because these entities do not necessarily have the sort of history of regulatory oversight and supervisory experience that characterize Financial Institutions identified in the

³⁶ Under section VIII(f), "Independent" means a person that: (1) Is not the Adviser, the Financial Institution or any Affiliate relying on the exemption; (2) Does not have a relationship to or an interest in the Adviser, the Financial Institution or Affiliate that might affect the exercise of the person's best judgment in connection with

transactions described in this exemption; and (3) Does not receive or is not projected to receive within the current federal income tax year, compensation or other consideration for his or her own account from the Adviser, Financial Institution or Affiliate in excess of 2% of the person's annual revenues based upon its prior income tax year.

Best Interest Contract Exemption, the Department believes that this additional condition is a necessary enhancement of the protections necessary to ensure that the intermediaries maintain full responsibility for compliance with the proposed exemption's conditions.

The Department requests comment on the approach taken in proposed subsection (3) of the definition. First, do commenters agree that the exemption should specify that insurance/assets should be based on a percentage of prior sales of Fixed Annuity Contracts? Is a three-year average an appropriate method for determining the amount of premium sales? Should a different and or minimum/maximum amount be specified, or should there be no specific level at all? For example, should the exemption instead require that a "reasonable" amount of insurance be obtained or assets set aside? As an additional protection for Retirement Investors, should individual Advisers be required to carry insurance themselves?

Moreover, should the final exemption retain the proposal's approach of allowing Financial Institutions flexibility to either obtain fiduciary liability insurance or set aside assets to satisfy potential liabilities? If the Department adopts this approach, should it specify how assets should be held (*i.e.*, in an escrow account) in order to ensure they are available in the event there is a judgment against the intermediary? Further, should the condition describe with more specificity which assets are acceptable, how they are to be valued, or how they are to be insulated from the claims of creditors other than Retirement Investors? As an alternative, should the final exemption require both fiduciary liability insurance coverage and a minimum level of assets set aside? If so, how should the requirement for a minimum level of assets be defined?

Premium Threshold

Finally, subsection (4) of the proposed definition would require the insurance intermediary to have had annual Fixed Annuity Contract sales averaging at least \$1.5 billion in premiums over each of the three prior fiscal years to qualify as a Financial Institution. This proposed threshold is intended to identify insurance intermediaries that have the financial stability and operational capacity to implement the anti-conflict policies and procedures required by the exemption. The proposed condition aims to ensure that the insurance intermediary is in a position to meaningfully mitigate compensation conflicts across products and insurers, which is a critical safeguard of the

exemption, as proposed. Although this proposed threshold would limit entities that could operate as the supervisory Financial Institution to larger intermediaries, it would not prevent smaller intermediaries from working with larger intermediaries, similarly to how some of them currently operate.

The proposed \$1.5 billion threshold is based on a variety of factors. The intermediaries that approached the Department for individual exemptions and expressed their willingness and ability to function in a supervisory capacity to mitigate conflicts generally indicated sales of this amount or more in their applications, although not all applicants provided this information. Additionally, the Department believes that the \$1.5 billion dollar threshold will cover those intermediaries that are most likely to make beneficial use of the exemption because economies of scale are likely to yield advantages in efficiently carrying out compliance responsibilities under this proposed exemption, especially if they step into the role that insurance companies would otherwise serve under the Best Interest Contract Exemption. The Department is also concerned that the conditions of the exemption will not serve their purpose in protecting Retirement Investors from conflicts of interest if the insurance intermediary does not have the requisite experience and resources to be able to effectively mitigate the potential adverse impact of these incentives.

To this point, the Department questions whether intermediaries with lower levels of annual sales will be able to effectively mitigate conflicts in an environment that is so heavily dependent on commission compensation, particularly without the history of regulatory oversight and supervisory experience that characterize other Financial Institutions, such as banks, insurance companies, and broker-dealers. One of the chief reasons for extending Financial Institution status to insurance intermediaries is their ability to mitigate the conflicts of interest posed by the variable compensation that independent agents may receive from different insurance companies paying different compensation. Sufficiently large intermediaries that sell many products from a wide variety of insurance companies are in a position to control the compensation that the agent stands to receive from the various insurers and products and, thereby, minimize or eliminate the independent agents' conflicts of interest in choosing between insurance companies and products. In addition, the anti-conflict purpose of the

exemption's conditions would not be served with respect to an entity that is so small that the difference between the firm's conflicts and the individual advisers' conflicts is essentially non-existent.

The proposed requirement that the premium threshold be met using the preceding three-year average is intended, again, to identify intermediaries with an established history of significant sales. However, it is not intended as a barrier to new entities becoming Financial Institutions or for smaller intermediaries to operate under this exemption, albeit not as a Financial Institution. The Department notes that while a large intermediary would be responsible for acting as the Financial Institution under the exemption, smaller intermediaries will typically be eligible to obtain prohibited transaction relief under the proposed exemption's provisions that extend to "affiliates" and "related entities." In this regard, the Department understands that the marketplace of intermediaries that distributes fixed annuities is hierarchical. Smaller intermediaries commonly work with larger intermediaries, and receive materials and support from the larger intermediaries in exchange for a fee or a portion of the sales commission. Therefore, smaller intermediaries could obtain relief from ERISA's prohibited transaction rules as long as there is an intermediary in their distribution hierarchy that acts as the Financial Institution and provides the requisite anti-conflict and supervisory role under the exemption, including execution of the best interest contract.³⁷ Accordingly, where several intermediaries (a top-level intermediary and one or more sub-intermediaries) receive commission compensation in connection with an annuity transaction, each intermediary would be eligible for prohibited transaction relief under this proposed exemption, although only one would act as the Financial Institution and need to satisfy the premium threshold.

Importantly, in determining whether an intermediary meets the \$1.5 billion threshold, each intermediary that receives a commission for an annuity transaction could count the total premium amount involved towards the required premium threshold. This will facilitate the ability of smaller intermediaries to satisfy the premium

³⁷ If an intermediary is not an affiliate or related entity, or otherwise a party in interest or disqualified person with respect to the plan or IRA, the intermediary's receipt of payments as a result of an Adviser's advice would not be a prohibited transaction requiring compliance with an exemption.

threshold under this exemption, and act as a Financial Institution, if desired. For example, assume an Annuity Adviser contracts with IMO A, which in turn is a part of IMO B's network. IMO B is a Financial Institution under this exemption. If Annuity Adviser sells an annuity to a Retirement Investor for \$100,000, both IMO A and IMO B can count the \$100,000 towards their own \$1.5 billion threshold. If IMO A eventually reaches the \$1.5 billion threshold (averaged over three years), it could act as a Financial Institution under this exemption, but would not be required to do so, as long as IMO B or another Financial Institution acts in the requisite role.

The Department notes that applicants suggested various other methods of defining which intermediaries should qualify as Financial Institutions. The most prevalent suggestion was to limit the exemption to "top tier" intermediaries with a significant number of direct relationships with insurance carriers. The "top tier" intermediary was generally described as the entity at the top of an insurance carrier's distribution hierarchy. Some applicants stated that the exemption should focus on the "top tier" intermediaries because such entities have a closer tie with the insurance company.

The Department's proposal is not limited to intermediaries with "top tier" status. As an initial matter, the Department understands that many insurance intermediaries have direct contracts with insurance carriers regardless of the intermediary's size and it may not be clear whether a particular contractual relationship is properly characterized as a "top tier" relationship. Additionally, even assuming that "top tier" could be defined objectively, the Department is not certain that status at the top of an insurance company's distribution hierarchy is necessary to indicate that an intermediary is an established entity capable of providing effective oversight of Advisers and mitigating compensation incentives. Accordingly, the Department has tentatively concluded that the premium threshold is a better indicator that an intermediary can serve these functions based on its involvement in a significant amount of sales over its three prior fiscal years.

The Department requests comment on a variety of aspects of the proposed premium threshold condition and possible alternatives. First, the Department seeks comment on alternative approaches to identifying intermediaries that are likely to be able to comply with the exemption and

provide meaningful oversight of Advisers working in the fixed annuity marketplace. More specifically, the Department asks whether focusing on premium levels is an effective measure of compliance and conflict mitigation capability. The Department also seeks comment on the requirement that the premium condition be met by averaging premiums over the preceding three fiscal years. In particular, the Department asks the following questions:

- Is the \$1.5 billion threshold likely to identify intermediaries with the history and capability of handling supervisory and regulatory compliance of this nature? If there is a threshold, should it be set at a different level?
- If a premium threshold is adopted, should it be indexed to grow with consumer price inflation or some other reference?
- If a premium threshold is included, is basing it on an average over the prior three years an effective way to account for fluctuations in annual sales to ensure intermediaries have certainty that they will continue to qualify as a Financial Institution? Are there alternative ways to address annual sales fluctuations to provide such certainty?
- In addition to entities that have satisfied the premium threshold, should the Financial Institution definition extend to entities with a "reasonable expectation" of meeting the threshold over the next three years, to ensure that newer or growing entities can more readily become Financial Institutions? Would a subjective threshold of this type provide adequate protections to Retirement Investors? How should the exemption apply to intermediaries that fail to meet the threshold, notwithstanding their previously "reasonable expectation" that they would meet the threshold?
- If the exemption did not include a premium threshold, would smaller intermediaries nevertheless be likely to rely on larger intermediaries for exemption compliance due to cost savings, efficiency, or other reasons?
- Are there a large number of smaller intermediaries selling fixed annuities that do not work with any other intermediaries that could satisfy the \$1.5 billion or similar threshold?
- Should the premium threshold apply specifically to fixed annuity sales, or should it apply more broadly to all sales of insurance and annuity products? If it applies to insurance sales other than fixed annuities, how

should premiums for those sales be measured?

- As an alternative or in addition to a premium threshold, should the exemption have a threshold based on the number of annuity contracts sold by the intermediary annually?
- Should a "top tier" requirement replace or be added to a premium threshold requirement? If so, how would the Department define "top tier" status, and should intermediaries be required to have a certain minimum number of contractual relationships with different insurance companies to satisfy such a requirement?
- Alternatively, or in addition to, either a premium threshold or a "top tier" requirement, should the exemption require that the intermediary also have agreements to sell fixed annuities with a specified minimum number of different insurance companies? If so, what would be an appropriate minimum number and why?
- Are there other conditions (*e.g.*, minimum number of employees, annual revenue threshold, capitalization requirement) that would satisfy the Department's intent to ensure the covered Financial Institutions are able and likely to comply with the exemption and engage in meaningful oversight of Advisers working in the fixed annuity marketplace?

Conditions

Sections II through V of the proposal contain the conditions proposed for relief under the exemption. The conditions are the same as the Best Interest Contract Exemption in many respects, but some of the conditions have been revised, augmented or deleted, as discussed in this section. The Department requests comments on these revisions.

Sections II(a), (b), (c)

Section II sets forth the requirements that establish the Retirement Investor's enforceable right to adherence to the Impartial Conduct Standards and related conditions. For advice to certain Retirement Investors—specifically, advice regarding IRA investments, and plans that are not covered by Title I of ERISA (non-ERISA plans), such as plans covering only partners or sole proprietors—Section II(a) requires the Financial Institution and Retirement Investor to enter into a written contract that includes the provisions described in Section II(b)–(d) of the exemption and that also does not include any of the ineligible provisions described in

Section II(f) of the exemption. Financial Institutions additionally must provide the disclosures set forth in Section II(e).³⁸

The contract with Retirement Investors regarding IRAs and non-ERISA plans must include the Financial Institution's acknowledgment of its fiduciary status and that of its Advisers, as required by Section II(b) and the Financial Institution's agreement that it and its Advisers will adhere to the Impartial Conduct Standards as required by Section II(c). The Impartial Conduct Standards require Advisers and Financial Institutions to provide advice that is in the Retirement Investor's best interest (*i.e.*, prudent advice that is based on the investment objectives, risk tolerance, financial circumstances, and needs of the Retirement Investor, without regard to financial or other interests of the Adviser, Financial Institution, or their affiliates, related entities or other parties); charge no more than reasonable compensation; and make no misleading statements about investment transactions, compensation, and conflicts of interest. These provisions are unchanged from the Best Interest Contract Exemption.

In this regard, the Department cautions Financial Institutions and Advisers to avoid inaccurate or misleading statements regarding the risk characteristics of fixed indexed annuity contracts, particularly statements that inaccurately suggest these products have only upside potential and no risk of loss of principal. *See* Equity-Indexed Annuities: Member Responsibilities for Supervising Sales of Unregistered Equity-Indexed Annuities, available at <http://www.finra.org/industry/notices/05-50>. In particular, firms and Advisers violate the Impartial Conduct Standards if they fail to explain any limitations on the upside of the investments (*e.g.*, as imposed by caps, participation rates, and crediting practices), or if they

falsely describe fixed indexed annuities as "no risk" products or state that there can be no loss of principal with Fixed Annuity Contracts, without acknowledging the potential impact of surrender charges or other provisions that could, in fact, result in the consumer's receiving less than he or she paid for the contract. As further discussed below, this proposal includes a new proposed Section II(d)(4) that would require that, as part of the policies and procedures requirement, the Financial Institution approve marketing materials used by Advisers, to increase oversight in this area.

Section II(d)—Policies and Procedures

Under Section II(d), the Financial Institution must warrant that it has adopted, and in fact must comply with, anti-conflict policies and procedures reasonably and prudently designed to ensure that Advisers adhere to the Impartial Conduct Standards. The policies and procedures requirements generally include all the elements in the Best Interest Contract Exemption, including the requirement that the Financial Institution designate a person or persons responsible for addressing material conflicts of interest and monitoring Advisers' adherence to the Impartial Conduct Standards. *See* Section II(d)(2).

Proposed Section II(d)(3)

Proposed Section II(d)(3) specifically addresses incentives to Advisers, and provides that the Financial Institution's policies and procedures must prohibit the use of quotas, appraisals, or performance or personnel actions, bonuses, contests, special awards, differential compensation, or other actions or incentives if they are intended or would reasonably be expected to cause Advisers to make recommendations that are not in the best interest of the Retirement Investor. The condition applies regardless of the source of the incentive. Independent insurance agents distribute the products of multiple insurance companies and accordingly, may be subject to more than one company's incentives. In some cases, the agents may also work for more than one intermediary. Under the terms of the exemption, however, the intermediary would be expected to ensure that these arrangements did not incentivize the agents to make recommendations that run counter to the best interest standard.

The insurance intermediaries indicated they are well positioned to mitigate the impact of the competing financial incentives offered by multiple insurance companies. Consistent with

the intermediaries' representations, one of the key protections of this exemption is the requirement that the insurance intermediary Financial Institution manage the conflicts of interest that independent agents and other Advisers face in recommending the products of multiple insurance companies. Proposed Section II(d)(3) would tolerate differential compensation—regardless of source—only to the extent that it is not intended or reasonably expected to cause Advisers to make recommendations that are not in the best interest of the Retirement Investor. Financial Institutions can allow Advisers to receive differential compensation if it is justified by neutral factors tied to the differences in the services delivered to Retirement Investors. *See* Best Interest Contract Exemption, 81 FR at 21039–40 (preamble discussion of neutral factors analysis); *FAQs about Conflict of Interest Rules and Exemptions, Part I*, FAQ 9 (addressing compensation incentives).³⁹

The Department views this as a critical safeguard of this proposed exemption. The proposed condition is intended to ensure that an Adviser's relationship with multiple insurance companies and even multiple insurance intermediaries does not generate compensation or incentive structures that undermine the Adviser's provision of advice that is in Retirement Investors' best interest.

Proposed Section II(d)(3) retains the principles based approach of the Best Interest Contract Exemption, and does not purport to detail any single approach for compliance with the condition. A number of applicants indicated that they expect their

³⁸ Unlike the Best Interest Contract Exemption, this proposal does not contain provisions addressing relief in the event of the failure to enter into a contract. *See* Best Interest Contract Exemption, section II(a)(1)(iii). This provision was included in the Best Interest Contract Exemption to address concerns voiced generally in the context of mutual fund transactions. Commenters raised concerns that it would be possible for a Retirement Investor to receive advice from an Adviser to enter into a transaction but fail to open an account with the particular Adviser or Financial Institution, yet nevertheless follow the advice in a way that generates additional compensation for the Financial Institution or an affiliate or related entity. The Department does not anticipate that such concerns are present in the context of the annuity transactions covered in this proposal and has therefore not included provisions in this proposal to parallel section II(a)(1)(iii) of the Best Interest Contract Exemption; however, the Department requests comment on this approach.

³⁹ *See* <https://www.dol.gov/sites/default/files/ebsa/about-ebsa/our-activities/resource-center/faqs/coi-rules-and-exemptions-part-1.pdf>. This is a broader requirement for the elimination or mitigation of conflicts of interest than would apply to an individual insurance company relying on section II(d)(3) of the Best Interest Contract Exemption. As discussed above (and in the Department's FAQ 22), the insurer's responsibility under the Best Interest Contract Exemption is to oversee the recommendation and sale of its products, not recommendations and transactions involving other insurers. Thus, under the Best Interest Contract Exemption, the insurance company has an obligation to ensure that it and its affiliates and related entities do not use or create inappropriate incentives, but it does not have an obligation to control the compensation incentives independently created by other insurance companies or parties. The different business model of IMOs and other intermediaries, however, enables them to broadly eliminate differential compensation that is not tied to neutral factors based upon differences in the services provided by the Adviser. This exemption requires them to eliminate such differentials and to avoid misaligned incentives with respect to all the independent agent's recommendations.

relationships with Advisers to be exclusive with respect to the sale of Fixed Annuity Contracts to Retirement Investors. In that case, the Financial Institution would have a ready means of supervising the insurers and product that the Adviser recommended and controlling associated incentive structures. The proposal does not mandate exclusivity, however; a Financial Institution could alternatively require an Adviser to provide information to the Financial Institution regarding all the compensation and incentives provided by all the other insurance companies and intermediaries through which the Adviser sells Fixed Annuity Contracts. Whatever approach is adopted by a Financial Institution, the Financial Institution will ultimately be responsible for implementing the policies and procedures across all the Advisers' incentive arrangements.

New Proposed Policies and Procedures Requirements

A new proposed Section II(d)(4) would require Financial Institutions to approve in advance all written marketing materials used by Advisers after determining that such materials provide a balanced description of the risks and features of the annuity contracts to be recommended. The condition ensures that Advisers are not using marketing materials that do not fully and fairly disclose the risks and characteristics of an annuity.

New proposed Section II(d)(5) would impose additional requirements on the person or persons designated as responsible for addressing material conflicts of interest and monitoring Advisers' adherence to the Impartial Conduct Standards. The new section would require the person to approve, in writing, recommended annuity applications involving Retirement Investors prior to transmitting the applications to the insurance company. While a specific approval requirement is not in the Best Interest Contract Exemption, a number of applicants suggested they would have internal compliance departments review recommendations prior to the transmittal of an annuity contract to an insurance company. The condition would reinforce the duty of the Financial Institution to monitor and supervise the Advisers operating within the Financial Institution's distribution chain. This may be particularly important when there are sub-intermediaries, who may be more involved in day-to-day activities, between the Adviser and the Financial Institution.

The proposal also would establish certain specific requirements for the relationship between the insurance intermediary and the Adviser. Section II(d)(6) would specify certain aspects of the written contract between the Financial Institution and the Adviser or sub-intermediary. First, the Financial Institution must require in its written contract with the Adviser or sub-intermediary that Advisers may use written marketing materials only if they are approved by the Financial Institution. As discussed above, Section II(d)(4) of this proposal would require Financial Institutions to approve in advance all written marketing materials used by Advisers after determining that such materials provide a balanced description of the risks and features of the annuity contracts to be recommended.

Second, Advisers must be required to provide the transaction disclosure required by Section III(a) of the exemption and orally review the annuity-specific information required in Section III(a)(1) with the Retirement Investor, as discussed below. These marketing and disclosure conditions address the Department's objective that Advisers and Financial Institutions relying on the exemption should describe recommended annuity contracts fully and fairly, and that the Retirement Investor must be made aware of aspects of the annuity contract that could impact the amounts ultimately paid to the Retirement Investor.

New proposed Section II(d)(7) sets forth requirements that would govern the compensation of the Adviser and sub-intermediary. The applicants described two broad approaches to paying compensation, and Section II(d)(7) permits both. Under the first approach, all compensation to be paid to the Adviser or sub-intermediary with respect to the purchase of an annuity contract pursuant to the exemption must be paid to the Adviser or sub-intermediary exclusively by the insurance intermediary. Under this approach, the intermediary would contract with insurance companies to receive the entire commission itself, and then, in turn, would pay an Adviser and/or any sub-intermediary a portion of the commission.

Under the second approach, Advisers or sub-intermediaries could receive commissions from insurance companies for the sale of annuities to Retirement Investors provided that the commission structure was approved in advance by the insurance intermediary and all forms of compensation other than commissions, whether cash or non-

monetary, are paid to the Adviser or sub-intermediary exclusively by the insurance intermediary. In this approach, insurance companies can continue the practice of paying commissions directly to agents, with an override payment going to the intermediary.

Under the proposal, the insurance intermediary may elect either compensation approach or some combination of the two. The proposal offers this flexibility because different applicants had different preferences for accomplishing the same general result, that the insurance intermediaries take responsibility for Adviser compensation and other incentives. Some applicants preferred to take in all compensation from insurance companies in order to facilitate compliance with the exemption and avoid the potential for errors. Other applicants preferred the second approach, expressing the view that it would not require the establishment of new internal accounting procedures and the engagement of additional personnel.⁴⁰

A new proposed Section II(d)(8) would also require that Financial Institutions provide, and require Advisers to attend, annual training on compliance with the exemption, conducted by a person who has appropriate technical training and proficiency with ERISA and the Code. The training must, at a minimum, cover the policies and procedures, the Impartial Conduct Standards, material conflicts of interest, ERISA and Code compliance (including applicable fiduciary duties and the prohibited

⁴⁰ Several applicants indicated an interest in offering Advisers product-neutral incentives based solely on levels of sales activity. If this exemption is granted, entities relying on it would be subject to Section II(d)(3), under which Financial Institution must prohibit the use of quotas, appraisals, performance or personnel actions, bonuses, contests, special awards, differential compensation or other actions or incentives that are intended or would reasonably be expected to cause Advisers to make recommendations that are not in the best interest of the Retirement Investor. The extent to which such incentive programs satisfy the requirements of Section II(d) of the exemption (or the Best Interest Contract Exemption) would be based on all the factors surrounding the incentive programs. The Department has provided guidance on related issues in the context of compensation grids that escalate based on sales volume. See *FAQs about Conflict of Interest Rules and Exemptions, Part I, FAQ9*, <https://www.dol.gov/sites/default/files/ebsa/about-ebsa/our-activities/resource-center/faqs/coi-rules-and-exemptions-part-1.pdf>. These principles would apply equally to Financial Institutions under this proposed exemption, if granted. In particular, the Department cautions against compensation and other incentives that are disproportionate and can undermine the best interest standard and create misaligned incentives for Advisers to make recommendations based on their own financial interest, rather than the customer's interest in sound advice.

transaction provisions), ethical conduct, and the consequences for not complying with the conditions of this exemption (including any loss of exemptive relief provided herein). The Department notes that a number of the applicants emphasized the importance of training. The Department agrees and emphasizes that Advisers must be trained on important areas that are key to understanding their duty to Retirement Investors under the exemption and that are not likely covered by state insurance laws.

Sections II(e), (f) and (g)

Section II(e) requires the Financial Institution to disclose information about its services and applicable fees and compensation. Section II(e) is generally unchanged from the Best Interest Contract Exemption, although some of the provisions were revised in minor ways to reflect the fact that this proposed exemption is limited to Fixed Annuity Contracts.

Like the Best Interest Contract Exemption, Section II(e)(7) of this proposal would require the Financial Institution to disclose whether or not the Adviser and Financial Institution will monitor the Retirement Investor's annuity contract and alert the Retirement Investor to any recommended change to the contract, and, if monitoring, the frequency with which the monitoring will occur and the reasons for which the Retirement Investor will be alerted. Financial Institutions and their Advisers should not disclaim responsibility for monitoring if they will receive ongoing compensation justified in whole or in part based on the provision of such monitoring services.

Section II(f) generally provides that the exemption is unavailable if the contract includes exculpatory provisions or provisions waiving the rights and remedies of the plan, IRA or Retirement Investor, including their right to participate in a class action in court. The contract may, however, provide for binding arbitration of individual claims, and may waive contractual rights to punitive damages or rescission to the extent permitted by governing law. Pursuant to Section II(g) of the exemption, advice to Retirement Investors regarding ERISA plans does not have to be subject to a written contract, but Advisers and Financial Institutions must comply with the substantive standards established in Section II(b)–(e) to avoid liability for a non-exempt prohibited transaction. These conditions are unchanged from the Best Interest Contract Exemption.

Section II(h) of the Best Interest Contract Exemption established streamlined conditions for “level fee fiduciaries” defined in section VIII(h) of that exemption. Under that definition, a Financial Institution and Adviser can be level fee fiduciaries if the only fee received by them and their affiliates is a “level fee” that is disclosed in advance to the Retirement Investor. A “level fee” is defined as a fee or compensation that is provided as a fixed percentage of the value of the assets or a set fee that does not vary with the particular investment recommended, rather than a commission or other transaction-based fee.

This proposal, however, does not include provisions for “level fee fiduciaries.” Although some of the applicants acknowledged they would level commissions across product categories, the mere leveling of commissions would not cause these Advisers and Financial Institutions to be “level fee fiduciaries” as defined in the Best Interest Contract Exemption because each purchase of a fixed annuity by a Retirement Investor would initiate the payment of a commission based on that particular transaction. The Department seeks comment on this aspect of the proposal. Are there business models in existence for the recommendation and sale of Fixed Annuity Contracts that would satisfy the level fee provisions of the Best Interest Contract Exemption, as described above?⁴¹

Section III

Section III proposes certain disclosure requirements, in addition to the disclosures in Section II(e) of the exemption. Section III(a)'s provisions on “transaction disclosure” generally require the disclosure of material conflicts of interest and basic information relating to those conflicts and the advisory relationship. In this respect, the proposal mirrors the Best Interest Contract Exemption.

In addition, the transaction disclosure in this proposal has an annuity-specific disclosure requirement that would apply to recommendations of all Fixed Annuity Contracts. A new proposed Section III(a)(1) would require the Financial Institution to provide a transaction disclosure in accordance

with the most recent Annuity Disclosure Model Regulation published by the National Association of Insurance Commissioners (NAIC) or its successor.⁴² Broadly, the 2015 Annuity Disclosure Model Regulation requires the disclosure of information regarding the contract, including, among other items: (i) Value reductions caused by withdrawals or surrenders; (ii) the guaranteed and non-guaranteed elements of the Fixed Annuity Contract and their limitations, including, for fixed indexed annuities, the elements used to determine the index-based interest, such as the participation rates, caps or spreads, and an explanation of how they operate; (iii) an explanation of the initial crediting rate, or for fixed annuities, an explanation of how the index-based interest is determined; (iv) available periodic income options; (v) how values in the annuity contract can be accessed; (vi) the death benefit, if available; (vii) a summary of the federal tax status; (viii) the impact of any riders; and (ix) a list of charges and fees and how they apply.

Under the proposal, both the Adviser and the Retirement Investor must sign the disclosure after the Adviser orally reviews the information. The aim of this disclosure is to ensure that Retirement Investors are informed of the risks and features of annuity products prior to entering into the annuity contract. This disclosure would be required prior to the transmittal of the annuity application to the insurance company and would be required to be made in connection with any recommendations to make additional deposits into the contract. The Department understands that in some cases, insurance companies currently provide an advance disclosure document, commonly referred to as a “statement of understanding.” This condition of the exemption would be satisfied if the required information is provided in a “statement of understanding” in accordance with the applicable time frames specified in the condition. So long as the disclosure is delivered in a document that is distinct from the annuity contract, whether through a “statement of understanding” or otherwise the disclosure will satisfy the condition.

The Department requests comment on the proposed disclosure condition. Does the Annuity Disclosure Model Regulation require the information commenters believe is appropriate and necessary in transactions involving

⁴¹ Similarly, provisions applicable to “bank networking arrangements” are not included in this proposal, although they are in the Best Interest Contract Exemption. See Best Interest Contract Exemption, sections II(i) and VIII(c). Bank networking arrangements are defined to involve only banks or similar financial institutions, or savings associations and are therefore considered inapplicable to insurance intermediaries.

⁴² Annuity Disclosure Model Regulation, National Association of Insurance Commissioners (2015), available at <http://www.naic.org/store/free/MDL-245.pdf>.

Fixed Annuity Contracts sold pursuant to the exemption? Should the final exemption require disclosure of any additional information? In particular, with respect to fixed indexed annuity contracts, should the exemption require an illustration designed to convey the difference between the performance of the applicable index or indices and the amount credited to the customer's annuity, in light of the indexing features such as the participation rate; any spread, margin or asset fees; interest rate caps or floors; and the recognition of dividends. For example, should the exemption require that Financial Institutions provide a chart illustrating prior annual returns of an index for a certain number of years compared to the amounts that would have been credited annually under the terms of the indexed annuity contract? If commenters believe such a disclosure would be desirable, the Department requests comment on how it should be operationalized.

Section III(b) requires web-based disclosure that is intended to provide information about the Financial Institutions' arrangements with product manufacturers and other parties for Third Party Payments in connection with specific investments or classes of investments that are recommended to Retirement Investors, a description of the Financial Institution's business model and its compensation and incentive arrangements with Advisers and a copy of the Financial Institution's most recent audited financial statements as required pursuant to Section VIII(d)(2). Other than the disclosure of the audited financial statements, this provision is generally otherwise unchanged from the Best Interest Contract Exemption, except that certain provisions are revised in minor ways to account for the fact that the exemption will provide relief only for Fixed Annuity Contracts.

The Department requests comment on the proposed requirement to maintain a copy of the Financial Institution's most recent audited financial statements on the Web site.

Section IV

Section IV of the proposal relates to Financial Institutions that limit Advisers' investment recommendations, in whole or in part, based on whether the investments are Proprietary Products (as defined in Section VIII(j)) or to investments that generate Third Party Payments (as defined in Section VIII(n)). For purposes of this proposal, Section IV would apply to all Financial Institutions relying on the exemption because insurance intermediaries sell only investments that generate Third

Party Payments (from the insurance company). Among other things, Section IV requires Financial Institutions to document the limitations they place on their Advisers' investment recommendations, the material conflicts of interest associated with proprietary or third party arrangements, and the services that will be provided both to Retirement Investors as well as third parties in exchange for payments. Such Financial Institutions must then reasonably conclude that the limitations will not cause the Financial Institution or its Advisers to receive compensation in excess of reasonable compensation, and, after consideration of their policies and procedures, reasonably determine that the limitations and associated conflicts of interest will not cause the Financial Institution or its Advisers to recommend imprudent investments. Financial Institutions must document the bases for their conclusions in these respects and retain the documentation pursuant to the recordkeeping requirements of the exemption, for examination upon request by the Department and other parties set forth in that section.⁴³

Sections V, VI and VII

Section V of the proposed exemption would establish record retention and disclosure conditions that a Financial Institution must satisfy for the exemption to be available for compensation received in connection with recommended transactions. This provision is unchanged from the Best Interest Contract Exemption.

Sections VI and VII propose supplemental exemptions. Section VI would apply to certain prohibited transactions commonly associated with annuity purchases but which are not covered by Section I. Section I permits Advisers and Financial Institutions to receive compensation that would otherwise be prohibited by the self-dealing and conflicts of interest provisions of ERISA section 406(a)(1)(D) and 406(b), and Code section 4975(c)(1)(D)–(F). However, Section I does not extend to any other prohibited transaction sections of ERISA and the Code. ERISA section 406(a) and Code section 4975(c)(1)(A)–(D) contain additional prohibitions on certain specific transactions between plans and IRAs and "parties in interest" and "disqualified persons," including service providers. These additional prohibited transactions include: (i) The purchase of a Fixed Annuity Contract by a plan/IRA from a party in interest/disqualified person, and (ii) the transfer

of plan/IRA assets to a party in interest/disqualified person. These prohibited transactions are subject to excise tax and personal liability for the fiduciary.

Section VII proposes an exemption for pre-existing transactions involving Fixed Annuity Contracts. The exemption permits continued receipt of compensation based on transactions involving Fixed Annuity Contracts that occurred prior to the Applicability Date, as defined in Section VII(a), as well as the receipt of compensation for recommendations to continue to adhere to a systematic purchase program established before the Applicability Date. In this case, the Department anticipates that a systematic purchase program would involve a program in which a Retirement Investor would make regular, pre-scheduled contributions to an annuity contract; however, the Department requests comment on whether such relief is necessary or appropriate. The exemption also explicitly covers compensation received as a result of a recommendation to hold an annuity contract that was purchased prior to the Applicability Date but would not cover recommendations to exchange an annuity for another annuity. In addition, a few references to securities that are found in the Best Interest Contract Exemption were deleted from this exemption because it would not provide relief for securities transactions.

This preamble discussion focused on conditions in this proposal that differ from the Best Interest Contract Exemption. The preamble to the Best Interest Contract Exemption includes a lengthy and in-depth discussion of the remaining conditions, which is incorporated into this preamble by reference. Because of the significant length of that discussion, the Department did not repeat it in this document, but rather directs parties to the Best Interest Contract Exemption preamble for a more complete description of the scope, definitional terms, and conditions of the exemption.⁴⁴

Transition Relief

Section IX of the proposal provides for a transition period, from April 10, 2017, to August 15, 2018, under which fewer conditions would apply. During the transition period, the Financial Institution and its Advisers would be required to satisfy the conditions of Section IX(d) of the proposal. Prior to receiving compensation in reliance on the exemption, Financial Institutions would be required under Section IX(d)

⁴³ See Section IV(b)(3).

⁴⁴ 81 FR 21002 (April 8, 2016).

to notify the Department of their intention to rely on the exemption and make a specific representation to the Department regarding their active engagement in creating systems and safeguards to satisfy the conditions applicable to the relief in Section I, following the transition period. The proposed required representation is: “[Name of Financial Institution] is presently taking steps to put in place the systems necessary to comply with Section I of the Best Interest Contract Exemption for Insurance Intermediaries, and fully intends to comply with all applicable conditions for such relief after the expiration of the transition period.” The Department proposed a transition period to give Financial Institutions under the proposed exemption time to comply with all the exemption’s conditions, and the Department anticipates that parties relying on the transition period should be developing an approach to full compliance during the transition period.

During the transition period, the Adviser and Financial Institution must comply with the Impartial Conduct Standards. Additionally, the Financial Institution would be required to comply with applicable disclosure obligations under state insurance law with respect to the sale of the Fixed Annuity Contract, and certain additional disclosures would be required, including an acknowledgment of the Adviser’s and Financial Institution’s fiduciary status; a description of their material conflicts of interest; and a disclosure of whether they offer proprietary products or products that generate third party payments and the extent to which they limit investment recommendations on those bases. The Financial Institution would have to approve all written marketing materials used by Advisers, as described in Section II(d)(4). The Financial Institution would have to designate a person responsible for addressing material conflicts of interest and monitoring Advisers’ adherence to the Impartial Conduct Standards, and such person would be required to approve, in writing, recommended annuity applications involving Retirement Investors prior to transmitting them to the insurance company. Finally, the Financial Institution would have to comply with the recordkeeping requirements of Section V(b) and (c).

It is proposed that, starting on August 16, 2018, parties intending to rely on the exemption must comply with all of the applicable conditions in Sections II–V.

No Relief Proposed From ERISA Section 406(a)(1)(C) or Code Section 4975(c)(1)(C) for the Provision of Services

This proposed exemption would not provide relief from a transaction prohibited by ERISA section 406(a)(1)(C), or from the taxes imposed by Code section 4975(a) and (b) by reason of Code section 4975(c)(1)(C), regarding the furnishing of goods, services or facilities between a plan and a party in interest. The provision of investment advice to a plan under a contract with a plan fiduciary is a service to the plan and compliance with this exemption will not relieve an Adviser or Financial Institution of the need to comply with ERISA section 408(b)(2), Code section 4975(d)(2), and applicable regulations thereunder.

Regulatory Impact Analysis

Executive Order 12866 and 13563 Statement

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing and streamlining rules, and of promoting flexibility. It also requires federal agencies to develop a plan under which the agencies will periodically review their existing significant regulations to make the agencies’ regulatory programs more effective or less burdensome in achieving their regulatory objectives.

Under Executive Order 12866, “significant” regulatory actions are subject to the requirements of the Executive Order and review by the OMB. Section 3(f) of Executive Order 12866, defines a “significant regulatory action” as an action that is likely to result in a rule (1) having an annual effect on the economy of \$100 million or more, or adversely and materially affecting a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local or tribal governments or communities (also referred to as “economically significant” regulatory actions); (2) creating serious inconsistency or otherwise interfering with an action taken or planned by another agency; (3) materially altering the budgetary impacts of entitlement grants, user fees, or loan programs or the

rights and obligations of recipients thereof; or (4) raising novel legal or policy issues arising out of legal mandates, the President’s priorities, or the principles set forth in the Executive Order.

Pursuant to the terms of Executive Order 12866, OMB has tentatively determined that this proposed action is economically significant within the meaning of section 3(f)(1) of the Executive Order. Accordingly, OMB has reviewed the proposed prohibited transaction class exemption and the Department provides the following assessment of its impact.

Background of Proposed Exemption

As discussed earlier in this preamble, the prohibited transaction rules of ERISA and the Code prohibit employee benefit plan and individual retirement account (IRA) fiduciaries from receiving indirect or variable compensation as a result of their investment advice to the plans and IRAs. The exemption proposed in this document would allow certain insurance intermediaries, and the insurance agents and insurance companies with whom they contract, to receive compensation in connection with certain fixed annuity transactions that may otherwise give rise to prohibited transactions as a result of the provision of investment advice to plan participants and beneficiaries, IRA owners and certain plan fiduciaries. The proposed class exemption includes protective conditions, similar to those contained in the Department’s Best Interest Contract Exemption (PTE 2016–01) granted on April 8, 2016,⁴⁵ that are designed to safeguard the interests of plans, participants and beneficiaries, and IRA investors and ensure that they receive investment advice that is in their best interest.

The Best Interest Contract Exemption is available only to certain Financial Institutions that are subject to well-established regulatory conditions and oversight, namely banks, investment advisers registered under the Investment Advisers Act of 1940 or state law, broker-dealers, and insurance companies. However, the exemption provides a mechanism that would make it more broadly available to other entities that are described in the definition of Financial Institution in an individual prohibited transaction exemption providing relief under the same conditions as in the Best Interest Contract Exemption. Thus, if an individual exemption is granted, other entities that satisfy the applicable

⁴⁵ 81 FR 21002 (April 8, 2016) as corrected at 81 FR 44773 (July 11, 2016).

conditions could rely on the Best Interest Contract Exemption.⁴⁶

In response to this provision, the Department received 22 individual exemption applications from insurance intermediaries that work with independent insurance agents to sell fixed annuity products (“applicants”). The applicants describe themselves as “independent marketing organizations,” “insurance marketing organizations” and “field marketing organizations” among other names. Collectively, the Department refers to the applicants and similar entities as “IMOs” in this analysis. The applicants sought individual exemptions under the same conditions as the Best Interest Contract Exemption, but with a new definition of “Financial Institution” incorporating insurance intermediaries.

Because of the large number and similar characteristics of the applicants, the Department decided that instead of utilizing the individual exemption process described in the Best Interest Contract Exemption, it would propose, on its own motion, a class exemption for IMOs based on the facts and representations provided in the individual exemption applications received by the Department. As discussed more fully below, the Department believes this is the most efficient way to provide relief to IMOs from the prohibited transaction rules of ERISA and the Code so long as they meet the protective conditions of the exemption that would safeguard the interests of affected plans, participants

and beneficiaries, and IRA owners. Accordingly, the Department today is proposing a class exemption that would allow IMOs and associated independent insurance agents to continue to recommend fixed annuities in the Retirement Investor marketplace and receive commissions and other variable compensation.

Background Regarding Fixed-Indexed Annuities and IMOs

*Fixed-Indexed Annuities (FIA) and Their Distribution Channel*⁴⁷

As discussed in detail in section 3.2 of the Regulatory Impact Analysis for the Regulation,⁴⁸ unlike fixed rate annuities where an insurer agrees to credit no less than a specified rate of interest during the time that the account value is growing, fixed-indexed annuities (FIAs) are annuity contracts whose return is based on the performance of a specified market index. Traditionally, common indexes used in FIAs are equity indexes such as the S&P 500 or Dow Jones Industrial Average. Although the S&P 500 is still the most often used index, various alternative indexes—including gold and a hybrid derived from one or more other indexes—have gained market share.⁴⁹

Insurers generally guarantee FIA contract holders at least a zero return. However, the actual return on a FIA is not determined until the end of the crediting period and is based on the performance of the index or other external reference.

Similar to variable annuities, the returns of fixed-indexed annuities can vary widely, which results in a risk to investors. Furthermore, insurers generally reserve rights to change participation rates, interest caps, and fees, which can limit the investor's exposure to the upside of the market and effectively transfer investment risks from insurers to investors.

In 2015, FIA sales totaled a record high \$54.5 billion, which represents a 13% increase from sales of \$48.2 billion in 2014.⁵⁰ This upward trend in FIA sales continued in 2016. In the first-half of 2016, FIA sales increased by 32% to \$31.9 billion compared to the same period in 2015.⁵¹ FIA sales are projected to exceed \$64 billion by the end of 2016 according to LIMRA Secure Retirement Institute.⁵²

Table 1 shows the shares of FIA sales by distribution channel for 2008–2015. In 2015, approximately 63% of FIAs, \$34.1 billion, were sold through the independent agent distribution channel.⁵³ FIA sales through banks and broker-dealers (BDs) have been trending upward over time. In 2008, only 4% of FIAs were sold through banks and 2% were sold through independent BDs. By 2015, FIA sales by banks had steadily grown to 16% and sales by independent BDs had also grown to 12% of total FIA sales. In contrast, the share of FIA sales by independent agents has declined. For example, in 2008, 88% of FIAs were sold by independent agents; however by 2015 their share of FIA sales had decreased to 63%.

TABLE 1—SHARE OF FIXED INDEXED ANNUITY SALES BY DISTRIBUTION CHANNEL (%) 2008–2015

	2008 (%)	2009 (%)	2010 (%)	2011 (%)	2012 (%)	2013 (%)	2014 (%)	2015 (%)

Role of IMOs in Distributing Insurance Products and Market Structure

As discussed earlier in this preamble, the main function of IMOs is to market, distribute and wholesale various insurance products.⁵⁴ This intermediary structure is appealing to both insurance carriers (insurers) and independent insurance producers (insurance agents) because it allows insurers to reduce their overhead costs while facilitating the sale of the products by independent insurance agents, as opposed to their captive insurance agent counterparts.⁵⁵

There is no centralized database containing information identifying all existing IMOs in the U.S., because IMOs are licensed as insurance agents or agencies in each state where they operate. Therefore, it is difficult to reliably estimate how many IMOs currently exist in the U.S. Some evidence indicates that the number of IMOs could be in the hundreds,⁵⁶ or, more specifically, as many as 350.⁵⁷ Regardless of the total number, one industry observer reported that the top 20 IMOs conduct the lion's share of the business.⁵⁸ Many large IMOs, such as Annexus, Legacy Marketing Group and Market Synergy Group act as intermediaries between insurers and multiple small IMOs, and therefore, are referred to as Super-IMOs, or IMO aggregators. One media report additionally identifies M&O Marketing, InsurMark and Advisors Excel as other large IMOs.⁵⁹ In 2015, Annexus alone reported approximately \$4 billion in FIA sales representing approximately 7% of total FIA sales⁶⁰ and comprising

a network of 17 IMOs. Legacy Marketing Group, Inc. contracted with approximately 200 IMOs, and actively conducts business with 50 to 60.⁶¹ Market Synergy reported \$15 billion in fixed-indexed sales collectively and consisted of 11 sub-IMOs.⁶² This information suggests that the IMO market has a complex hierarchical structure.

*Common Characteristics of IMO Individual Exemption Applicants*⁶³

As discussed earlier in this preamble, the Department has studied the characteristics of IMOs that applied for the individual exemptions. The applications indicate that most IMOs applicants have been in business for 25 to 40 years and operate in all 50 states. For example, one IMO applicant has over 600 offices across 50 states.⁶⁴ IMO applicants tend to be large: Almost all IMO applicants were identified as Super-IMOs or larger IMOs by industry trade press. Of those applicant IMOs that disclosed their sales information, all indicated sales of more than \$1.5 billion in 2015, and two IMOs reported FIA sales of from \$4–5 billion in 2015.⁶⁵ Other IMOs reported from \$2–3 billion of annual fixed annuity sales. These data suggest that IMO applicants generate FIA sales equivalent to the FIA sales of some insurance companies. In 2015, FIA sales of the top 10 FIA issuers by sales ranged from \$8.7 billion (Allianz Life of North America) to \$1.8 billion (Security Benefit Life).⁶⁶

Most applicant IMOs partner with between 20 and 75 insurers. One IMO indicated that it conducts business with nine out of the top 10 insurers offering

FIA's.⁶⁷ Many of the applicants state that they have direct contractual relationships with the majority of the insurers for whom they distribute fixed annuities. Frequently, these direct contractual relationships include recognition that the applicants are contractually responsible for the oversight of agents and sub-IMOs. This oversight is accomplished through applying the top-level IMO's use of its compliance structure and other business and administrative tools. The applicants use their compliance structure to directly oversee agents or they use those same tools to assist sub-IMOs in the distribution of fixed annuities and the oversight of their agents.

Sub-IMOs have contractual relationships with the insurers for whom they distribute fixed annuities, and they also have contractual relationships with top-level IMOs. Top-level IMOs generally provide their related sub-IMOs with distribution and other support services. Top-level IMOs often assist these sub-IMOs in accessing a wide variety of insurance products. Sub-IMOs contract with top-level IMOs to obtain this access, and these services allow some sub-IMOs to focus on the training and support of their agents.

Some applicants, in addition to describing themselves as top-level IMOs, also represented that they are affiliated with large insurers. One of these applicants, in turn, wholly owns numerous sub-IMOs. Despite the differences in the ownership structure, these applicants represent that they, like the other top-level IMOs, assist in the distribution of fixed annuities, both for their affiliates and for other insurers, and provide valuable business and administrative assistance to sub-IMOs and agents.

The number of smaller IMOs or sub-IMOs that larger IMOs conduct business with varies widely, but most applicant IMOs that disclosed this information in their applications state that they conduct business with between 7 and 35 sub-IMOs. Two IMO applicants indicate that they work with over 100 other IMOs.⁶⁸ However, not all affiliated sub-

IMOs generate sales on a regular basis.⁶⁹ Several IMO applicants indicate that they work with approximately 2,000 to 4,000 agents and others report that they have approximately 120,000 to 200,000 affiliated agents nationwide. However, according to some IMO applicants, only approximately 20% to 30% of the large number of contracted agents generates sales through them on a regular basis.⁷⁰ These independent agents can work with multiple IMOs. However, two IMOs indicated that they work with an exclusive group of affiliated agents or employee agents that are selected after undergoing a rigorous screening process.⁷¹ The applications indicate that most IMOs currently not maintaining exclusive business relationships with independent agents would require independent agents to exclusively process FIA sales through them if the proposed exemption were granted.

Several IMO applicants are affiliated with BDs and/or registered investment advisers (RIAs). Moreover, some of the IMOs that currently are not affiliated with BDs or RIAs reported that they are developing a BD,⁷² or have a subsidiary that is in the process of becoming a RIA.⁷³ One IMO stated that it has partnered with nearly 20 BDs and provided extensive training and mentoring to registered representatives regarding selling FIAs.⁷⁴ Two IMOs also stated that they have an affiliated IT firm or proprietary technology platform that will help them comply with the exemption.

The applicants represented to the Department that they have experience in

a variety of areas that will contribute to their ability to satisfy the conditions of the Best Interest Contract Exemption. Some applicants pointed to direct experience providing oversight of independent agents for insurance law compliance, while some indicated that they planned to rely on affiliated RIAs and/or BD entities in developing systems to comply with the exemption. The cost of developing a new compliance platform often represents a large share of total compliance costs. Thus, if an IMO does not have to develop a new system, it would save costs significantly for itself and the insurance industry as a whole would save significant costs if other IMOs were similarly positioned. In addition, IMOs with affiliated BDs and/or RIAs can draw from the supervisory experience of BDs and RIAs regarding properly training, monitoring, and not inappropriately incentivizing agents and even share personnel with them. They also can use disclosure forms similar to their affiliated BDs and/or RIAs.

The applicants generally indicated they would maintain internal compliance departments and adopt supervisory structures to ensure compliance with the exemption. Several applicants pointed to technology that would be used in ensuring compliance. Some applicants indicated that insurance agents would be required to use their technology to ensure clients receive disclosures and a contract, where required. Agents would also be required to use the IMO's Web site services and maintain records centrally.

Some applicants additionally described how their sales practices would ensure best interest recommendations. A number of the applicants specifically proposed to require centralized approval of agent recommendations; in some cases, the recommendations would be reviewed by salaried employees of the IMO with additional credentials, such as Certified Financial Planners. One applicant indicated that internal review would include a comparison of the proposed product to other similar fixed indexed annuity products available in the marketplace to ensure it is appropriate for the purchaser, and that the analysis would include utilizing third-party benchmarking services and industry comparisons. Another applicant indicated that it would ensure that a RIA representative would work with insurance-only agents when a recommendation would involve the liquidation of securities to ensure that both state and federal securities laws are properly followed.

Some applicants additionally stated that their contracts with insurance agents would include certain specific requirements, including: Adherence to the IMO's policies and procedures with respect to advertising, market conduct and point of sale processes, transparency and documentation; provision of advice in accordance with practices developed by the IMO; and agreement that the agents will not accept any direct or indirect compensation from an insurance company, except as specifically approved by the IMO. A number of the applicants indicated that they would perform background checks and rigorous selection processes before working with agents and would require agents to receive ongoing training regarding compliance with the exemption.

A few of the applicants addressed product selection. These applicants indicated that agents making recommendations pursuant to the exemption would be limited to certain products and insurance companies. The applicants indicated there would be ongoing due diligence with respect to insurance companies and product offerings under the exemption.

Based on information contained in the submitted applications, some qualified and willing IMOs might be able to perform compliance responsibilities more cost effectively than some insurance companies. Many IMO applicants indicate that they have affiliated BDs or RIAs, and these IMOs have several advantages in managing compliance costs: They can utilize compliance platforms already developed and implemented for BDs and/or RIAs with some necessary adjustments. This would allow large IMOs to save some large start-up fixed costs to develop a new system.

The applications also indicate that some IMOs already have many of the capacities and much of the infrastructure in place that would be necessary to carry out compliance responsibilities required by the exemption, and thus might incur only relatively small, incremental costs to comply with the exemption conditions.

The Department cautions that although its careful review of individual exemption applications reveals that many applicant IMOs share the common characteristics discussed above, the Department is uncertain regarding the extent to which these characteristics can be generalized to the overall IMO market. The Department welcomes comments regarding whether these common characteristics can be extrapolated to the broader IMO market

or whether they are distinctive and unique to the IMO applicants.

Impact of Proposed Class Exemption

As discussed earlier in this preamble, IMOs are not included within the Financial Institution definition under the Best Interest Contract Exemption. Instead, the exemption provides a mechanism under which the definition can be expanded if an individual exemption is granted to another type of entity. In that event, the individual exemption would provide relief to the applicants identified in the exemption, but the definition of Financial Institution in the Best Interest Contract Exemption would be expanded so that other entities that satisfy the definition in the individual exemption could rely on the Best Interest Contract Exemption. The Department received 22 applications for individual exemptions from IMOs that work with independent insurance agents to sell fixed annuity products. Because of the large number of applications, the Department determined to propose, on its own motion, a class exemption for such intermediaries based on the facts and representations in the individual applications received by the Department.

The following discussion assesses the impact of this class exemption relative to the baseline associated with the aforementioned provision of the Best Interest Contract Exemption. Under this baseline scenario, the Department would have granted individual exemptions to one of more of the applicants. The specific contours of this baseline are necessarily hypothetical, because at this time the Department has neither granted nor proposed any such individual exemptions. For purposes of this assessment, the Department assumes that any such individual exemptions would have included all of the same conditions included in this class exemption, and made available the same exemptive relief to the same market participants. This assumption is reasonable insofar as at this time the Department has not reached a tentative finding with respect to any particular applicant that an exemption with fewer or different conditions would be beneficial to IRA investors and protective of their rights as is required before the Department grants an exemption.

Given this assumption that the scope and conditions of this class exemption are substantively the same as those associated with the appropriate baseline, it follows that the impact of this class exemption relative to the baseline is likely to be limited to the

procedural differences between the class and individual exemption procedures. With the exception of these procedural differences, under both the proposed class exemption and the baseline scenario, the same market participants would chiefly pursue the same courses of action and achieve the same results. However, notwithstanding the substantive equivalence of the proposed class exemption and the baseline, it is possible that some market participants would perceive substantive differences, and make different decisions with different results. The Department invites comments these or any other potential substantive impact of this proposed class exemption relative to the baseline scenario.

This proposed class exemption would extend to IMOs that satisfy its conditions relief that is similar to that for Financial Institutions under the Best Interest Contract Exemption. The Department anticipates that, like the Best Interest Contract Exemption, this proposed exemption will deliver benefits that justify its costs.⁷⁵

In issuing the Regulation and Best Interest Contract Exemption, the Department noted that compliance might be more burdensome for some industry segments than for others, that some insurers and some independent insurance agents might be among those needing to make more significant changes, and that this could impose some costs on affected Retirement Investors.

This proposed class exemption offers affected insurers, agents, and IMOs an alternative path to compliance that in some cases is likely to prove more economically efficient than existing paths. The applications that prompted this proposal support the premise that many IMOs have, or can affordably develop, the capacity to perform the functions required of Financial Institutions. In particular, some IMOs' positions as intermediaries between multiple insurers and multiple independent agents may be advantageous for purposes of mitigating agents' conflicts and ensuring that their recommendations are loyal to their customers' interests.

Under the proposed class exemption, market forces will favor migration of these functions to the entities that can

perform them most efficiently. To the extent that IMOs take advantage of relief under this proposed exemption to shoulder these responsibilities, insurers may be relieved of what would have been greater costs to perform the same functions. This would improve the efficiency of the market in which insurers, independent agents, and IMOs operate. Meanwhile, the conditions of this exemption aim to ensure that, like Financial Institutions under the Best Interest Contract Exemption, covered IMOs can be relied on to perform their role effectively. If IMOs and related independent agents sell their services and FIAs in efficiently competitive intermediate and consumer markets, then such efficiency would accrue mostly to Retirement Investors.

The Department believes that the proposed class exemption will be more beneficial than would the individual exemption approach that is contemplated under the relevant provision of the Best Interest Contract Exemption. The Department believes that as a practical matter, the same rules could be established via either approach. That is, an individual exemption issued pursuant to the relevant provision of the Best Interest Contract Exemption could be crafted to make the intended relief available to any IMO that satisfied the same conditions as those included in this proposed class exemption. The Department believes, however, that the proposed class exemption offers the less costly route to the desired result. The cost advantage arises not from any difference in ongoing compliance costs, which generally would be the same. Rather the Department anticipates that the availability of the class exemption will obviate the need for some or all current and potential future applicants to pursue to completion an application for an individual exemption,⁷⁶ and any attendant net procedural cost savings (relative to the baseline) would constitute benefits of this proposed class exemption. The Department invites comments on these potential net cost savings. In addition, although substantively the same as the baseline, by providing a single class exemption this proposal potentially will provide greater simplicity and clearer consistency, and a more clearly even playing field, than multiple individual exemptions might. Finally, relative to one or more individual exemptions, a class exemption may encourage more IMOs to accelerate their efforts to

⁷⁵ The Department provides a detailed discussion of the cost and benefits associated with the Best Interest Contract Exemption in its regulatory impact analysis for the Regulation and exemptions, which was published on the Department's Web site at the same time that the Regulation and exemptions were published in the **Federal Register** and is available at <https://www.dol.gov/ebsa/pdf/conflict-of-interest-ria.pdf>.

⁷⁶ The Department's individual exemption procedure is described in 29 CFR 2570.30 through 2570.52.

optimize their competitive market positions.

If the conditions of the exemption are satisfied, IMOs acting as Financial Institutions, and the independent agents and insurers they contract with, would be permitted to receive indirect and variable compensation in connection with recommendations of Fixed Annuity Contracts that would otherwise be prohibited as a result of the Regulation extending fiduciary status to many investment professionals who formerly were not treated as fiduciaries.⁷⁷ This would provide IMOs with flexibility to maintain their current business model in a cost-effective way, as was contemplated under the relevant provision of the Best Interest Contract Exemption. The applicants represent that the independent insurance agent model benefits consumers, because independent agents are able to offer a wider variety of products to satisfy consumers' goals. The class exemption would allow IMOs to serve as Financial Institutions, which will allow independent insurance agents to continue to recommend fixed annuities in the Retirement Investor marketplace under a single set of policies and procedures.

The Department expects that IMOs will determine whether to seek relief under this exemption's conditions based on their long-term strategic goals and will do so only if makes economic sense. IMOs that choose not to use the exemption, or that are unable to satisfy the conditions, may still play a role in the fixed annuity distribution channel by providing valuable compliance assistance and other services to insurance companies or other insurance intermediaries who act as Financial Institutions under the Best Interest Contract Exemption, or this exemption if granted, and receive compensation for their services.

The proposed class exemption would require IMOs to structure compensation received for transactions involving Fixed Annuity Contracts in a way that mitigates conflicts of interests and does not improperly incentivize independent agents to sell one product over another.⁷⁸ Furthermore, it requires

IMOs to satisfy some additional conditions that do not apply to Financial Institutions using the Best Interest Contract Exemption such as (i) conducting annual audits of financial statements, (ii) providing an annuity-specific disclosure to Retirement Investors, and (iii) obtaining fiduciary liability insurance coverage or setting aside sufficient reserves to cover potential liability exposure.⁷⁹

The Department considered the alternative of issuing the proposed class exemption without imposing additional conditions to those contained in the Best Interest Contract Exemption, but chose to propose these additional conditions to ensure that transactions involving recommendations for Retirement Investors to purchase FIAs that are sold by independent agents through IMOs occur only when they are in their clients' best interest. These protections respond to the Department's concern that IMOs are not subject to well-established regulatory conditions and oversight like those that apply to Financial Institutions eligible to act as Financial Institutions under the Best Interest Contract Exemption and concerns expressed by the SEC, FINRA, and North American Securities Administrators Administration regarding how FIAs have been designed and marketed. The conditions would provide additional protection to consumers to ensure that Retirement Investors are adequately protected from the deleterious effects of conflicts of interest. However, these additional conditions will impose some compliance burden on IMOs relying on the exemption. Due to data limitations, the Department only was able to quantify the incremental costs associated with additional annuity disclosure. The Department discusses the impact of these additional conditions below.

Obtain Fiduciary Liability Insurance or Set Aside Reserves: One of the

Insurance Agents" Available at <http://insurancene.wsnet.com/innarticle/fmo-proposes-finra-based-supervision-structure>.

⁷⁹ There are several other additional conditions that would apply, such as: (i) The IMO must approve written marketing materials used by Advisers (Section II(d)(4)); (ii) the IMO's compliance officer designated pursuant to Section II(d)(2) must approve recommended annuity applications prior to their submission to the insurance company (Section II(d)(5)); (iii) the IMO must provide, and require Advisers to attend, annual training on compliance with the exemption (Section II(d)(8)), and IMOs must meet the requirement of Section IV, because they limit product recommendations based on third-party payments. For purposes of this analysis, the Department has focused its discussion in the regulatory impact analysis on the conditions that it believes would have the most significant impact.

additional conditions requires IMOs to maintain fiduciary liability insurance, or cash, bonds, bank certificates of deposit, U.S. Treasury Obligations, or a combination of all of these, available to satisfy potential liability under ERISA or the Code as a result of this exemption. The aggregate amount of these items must equal at least 1% of the average annual amount of premium sales of Fixed Annuity Contract sales by the Financial Institution to Retirement Investors over the prior three fiscal years of the Financial Institution. For example, an IMO with average sales of \$2 billion could satisfy this condition by setting aside \$20 million. If valued at 7 percent (3 percent) net, the attendant opportunity cost for such an IMO would amount to \$1.4 million (\$600,000) in the first year. The aggregate opportunity cost would be proportional to the total sales of all IMOs pursuing this course, assuming a uniform valuation rate.

To the extent this condition is satisfied by insurance, the proposal states that the insurance must apply solely to actions brought by the Department of Labor, the Department of Treasury, the Pension Benefit Guaranty Corporation, Retirement Investors or plan fiduciaries (or their representatives) relating to Fixed Annuity Contract transactions, including but not limited to actions for failure to comply with the exemption or any contract entered into pursuant to the exemption, and it may not contain an exclusion for Fixed Annuity Contracts sold pursuant to the exemption. Any such insurance also may not have a deductible that exceeds 5% of the policy limits nor exclude coverage based on a self-insured retention or otherwise specify an amount that the Financial Institution must pay before a claim is covered by the fiduciary liability policy. To the extent this condition is satisfied by retaining assets, the assets must be unencumbered and not subject to security interests or other creditors.

This condition provides IMOs with the flexibility to either obtain fiduciary liability insurance or set aside sufficient assets to satisfy potential liabilities. The Department expects that IMOs will choose the option that makes the best sense for them economically. If insurance markets are efficient and loss ratios are not very high, it is likely that insurance will be more attractive, unless an IMO faces particularly high fiduciary risks. In addition, an IMO with a more profitable best use for cash is more likely to find insurance more attractive than a cash set-aside. A number of the applicants specifically suggested that they would obtain insurance to cover

⁷⁷ The proposed exemption would apply to commissions and other compensation received by an insurance agent, IMO insurance intermediary, insurance companies and any other affiliates and related entities, as a result of a plan's or IRA's purchase of Fixed Annuity Contracts.

⁷⁸ Cyril Tuohy, August 9, 2016, [insurancene.wsnet.com "6 IMOs Apply for 'Financial Institution' Status Under DOL Rule,"](http://insurancene.wsnet.com/innarticle/six-imos-apply-for-dol-fi-status) Available at <http://insurancene.wsnet.com/innarticle/six-imos-apply-for-dol-fi-status> Cyril Tuohy, August 17, 2016, insurancene.wsnet.com "Allianz FMO Proposes FINRA-Style Oversight of

potential liability under the exemption, although the approaches and suggested amounts varied. However, some applicants indicated uncertainty as to the current availability of insurance for liability under the exemption.

An upper bound on the costs of this provision an estimate is obtained by looking at the costs of using the set-aside reserve option. As discussed above, in 2015, approximately \$34.1 billion in total sales FIAs were sold through the independent agent distribution channel. If all sales in the independent agent distribution channel were through an IMO utilizing the exemption then one percent, or \$341 million, would have to be set aside as a reserve. The opportunity costs of this reserve using a return of 7 percent (3 percent) would be \$23.9 million (\$10.2 million) for one year. There are at least three reasons why this estimate is too high: not all sales through the independent agent channel would be made using this exemption, the estimate of the total sales includes not just FIAs sold to IRAs, but all FIA sales, and to the extent the insurance option is cheaper IMOs will use that less expensive option and costs will be lower.⁸⁰ The Department invites comments on these cost estimates.

This condition requiring IMOs to set aside cash or maintain insurance is likely to yield benefits for consumers. Set asides or insurance premiums that are paid out to compensate consumers for losses arising from fiduciary breaches will represent one, direct such benefit. In addition, the condition may deter fiduciary breaches. Some applicants indicated that they may pass on expenses attributable to this condition to advisers, particularly to advisers whose records or observed conduct indicate high fiduciary risk, or may step up efforts to screen advisers and end relationships with those deemed most risky. These steps by IMOs in turn could reinforce advisers' motivation to maintain high fiduciary standards.

The Department considered an alternative of requiring a fixed minimum amount of fiduciary liability insurance to be purchased and requiring individual Advisers to carry the insurance themselves. The Department, however, chose the alternative of basing the insurance coverage or reserve requirement on premiums, because it views this method as the most efficient way to ensure that Financial Institutions

have sufficient financial resources to satisfy any potential liabilities. The Department solicited comments on this approach and potential alternatives to the Department's chosen alternative earlier in this preamble.

Audited Financial Statements: In order to confirm that the IMO has sound business practices, the Department chose the alternative of requiring IMOs to have financial statements that are audited annually by an independent certified public accountant. In addition, the audited financial statements must be available on the IMO's Web site. The cost of such audits will depend on the degree to which IMOs currently maintain detailed, audit-ready records, and the extent and complexity of IMOs operations and records. The Department invites comments on these costs.

The Department understands that insurance companies submit their financial statements on a quarterly basis to the NAIC, which collects these data on behalf of state insurance commissioners.⁸¹ Unlike insurance companies; however, IMOs are generally not required to submit their financial statements to any regulatory authority. The Department does not believe IMOs will incur prohibitive costs to comply with the provision, because the condition was suggested by several applicants seeking individual exemptions. Some applicants indicated that periodic financial audits would provide reasonable assurance of the entity's financial health. The Department expects that requiring IMOs to conduct an annual audit of their financial statements, coupled with its disclosure on the Web site, will provide an opportunity for the Department and other interested persons to be alerted to any financial weaknesses or other items of concern with respect to the stability or solvency of the Financial Institution, or its ability to stand behind its commitments to Retirement Investors.

As an alternative to an audit of financial statements, one applicant suggested that the audit should relate to the intermediary's internal controls and procedures. The applicant noted that banks and trust companies are currently required to obtain these reports under SSAE 16 (formerly SAS 70), and that the applicant could work with its auditors to prepare a similar report, but suggested that such an approach would require additional transition relief as the accounting industry would have to agree on the appropriate data points for an internal controls audit for an

insurance intermediary and the resulting topics of the SSAE 16-like report. The Department did not propose this alternative, because there are no clear standards for such a compliance-based audit, and the Department believes it is most critical for financial statements to be audited to ensure that the financial viability of the IMO and its ability to meet its commitment to Retirement Investors can be determined and assessed.

Mitigate Adverse Incentives: Proposed Section II(d)(3) specifically addresses incentives to Advisers, and provides that the Financial Institution's policies and procedures would be required to prohibit the use of quotas, appraisals, or performance or personnel actions, bonuses, contests, special awards, differential compensation, or other actions or incentives if they are intended or would reasonably be expected to cause Advisers to make recommendations that are not in the best interest of the Retirement Investor. The condition applies regardless of the source of the incentive. Moreover, the Department understands that some independent agents work with more than one intermediary. As noted above, the IMO applicants indicated that they have the capability to mitigate the incentives with respect to multiple insurance companies. The Department views this as a critical safeguard of this proposed exemption. The proposed condition is intended to ensure that an Adviser's relationship with multiple insurance companies (or multiple insurance intermediaries) does not generate compensation or incentive structures that undermine the Adviser's provision of advice that is in Retirement Investors' best interest.

Proposed Section II(d)(3) does not specify the precise manner by which a Financial Institution must comply with the condition. The Department considered the alternative of requiring Financial Institutions to make their relationships with their Advisers exclusive with respect to the sale of Fixed Annuity Contracts to Retirement Investors. However, in order to provide maximum flexibility the Department chose not to require exclusivity in the proposal. Accordingly, a Financial Institution may take the alternative approach of contractually requiring an Adviser to provide information to the Financial Institution regarding all of the compensation and incentives provided by all of the other insurance companies and intermediaries through which the Adviser sells Fixed Annuity Contracts in which case the Financial Institution ultimately would be responsible for implementing the policies and

⁸⁰ The Department notes that these insurance costs discussed here are not a cost of this proposal but part of the baseline reflected in the Department's Regulatory Impact Analysis of the final rule.

⁸¹ NAIC Financial Statement Filing and Step through Guidance, Available at http://www.naic.org/industry_financial_filing.htm.

procedures to mitigate adverse incentives across all of the Advisers' incentive arrangements.

Annuity Specific Disclosure: Section III(a) of the proposed class exemption requires an annuity-specific disclosure in connection with recommendations of all Fixed Annuity Contracts. As stated, the disclosure applies to all Fixed Annuity Contracts; however, the elements of the disclosure are required to be made only to the extent applicable.

The objective of this disclosure is to ensure that Retirement Investors are informed of the risks and features of annuity products prior to entering into the annuity contract. While the information required to be disclosed could be available in the annuity contract or other document, the Department chose this alternative because it believes that the consumer will be better able to make an informed choice regarding whether to invest in the product if the features of the annuity contract are specifically highlighted in advance of the purchase in a separate, stand-alone written document. This disclosure would be required prior to the transmittal of the annuity application to the insurance company and would have to be made in connection with any recommendations to make additional deposits into the contract. The Department understands that in some cases, insurance companies currently provide an advance disclosure document, often referred to as a "statement of understanding." This condition of the exemption would be satisfied if the required information is provided in a statement of understanding or similar document in accordance with the applicable time frames specified in the condition. The Department provides an estimate regarding the costs associated with the annuity-specific disclosure in the "Paperwork Reduction Act" section below.

Premium Threshold: Finally, the proposed exemption would require IMOs to have transacted annual fixed annuity sales averaging at least \$1.5 billion in premiums over each of the three prior fiscal years. As discussed above, this threshold equates approximately to the sales of the top 20 insurance companies. Relative to the top insurers, in 2014, an IMO with \$1.5 billion sales in fixed annuities would have been 18th in sales, whereas in 2015, it would have been slightly below the top 20 in fixed annuity sales.

The Department chose the alternative of imposing this condition, to ensure that IMOs using the exemption are well-established entities possessing the financial stability and operational

capacity to implement the anti-conflict policies and procedures required by the exemption. This proposed condition aims to ensure that the IMO is in the position to mitigate compensation incentives across products, which is a critical safeguard of the proposed exemption.

The proposed \$1.5 billion threshold was based on the representations in the applications. Not all applicants provided this information, but the applicants that did generally indicated sales of this amount or more. In addition, almost all IMOs that applied for individual exemptions are identified in media reports as large IMOs or super-IMOs. Some IMO applicants reported \$4 billion to \$5 billion in FIA sales alone in 2015.⁸² Putting this into context, these sales are higher than FIA sales of all but 2 insurance companies.⁸³ In 2015, the insurance company that ranked 2nd in FIA sales reported \$6.8 billion, while the insurance company ranked 3rd reported \$3.7 billion in FIA sales.⁸⁴ Other IMO applicants reported more than \$2 billion in FIA sales in 2015.⁸⁵ This suggests that four IMOs seeking exemptions generated approximately 42% of FIA sales through the independent agent channel in 2015.⁸⁶

The Department believes that this dollar threshold covers IMOs most likely to make beneficial use of the exemption, because economies of scale are likely to yield advantages in efficiently carrying out compliance responsibilities. The largest share of compliance costs often is up-front fixed costs incurred to construct a compliance infrastructure. As the IMO gets larger, the burden of fixed costs can be spread out more widely.

Because the sales threshold is based on a three-year average, some year-to-year volatility in sales would not cause

IMOs to lose their eligibility for the exemption. Smoothing sales over three years provides IMOs with the degree of certainty and continuity that are necessary for IMOs to justify up-front expenditures to update compliance systems. However, if an exempted IMO falls slightly below this threshold, it may look for a way to boost sales volume, such as by acquiring another IMO or recruiting highly productive independent agents. Thus, in certain situations, this condition may accelerate mergers and acquisitions among IMOs. One applicant has reported that it already acquired three IMOs.⁸⁷ All of these additional conditions are designed to protect the interest of consumers who purchase annuity products through the IMO distribution channel.

These additional conditions could impose additional burdens on IMOs seeking exemptive relief that are not incurred by Financial Institutions seeking relief under the Best Interest Contract Exemption. However, with the exception of the annuity-specific disclosure, the Department does not have sufficient data to quantify the incremental costs associated with these conditions. Instead, the Department solicits public comments regarding costs related to the additional conditions set forth in the proposed class exemption.

Uncertainty

While the Department received 22 individual exemption applications from IMOs, it is uncertain regarding how many applicants and/or other IMOs would use the proposed class exemption, if it is granted. The Department also is uncertain about the extent to which covered IMOs' compliance burdens, including burdens attributable to the additional conditions not required of Financial Institutions under the Best Interest Contract Exemption, would be less than the reduction in burden that otherwise would be shouldered by insurers acting as Financial Institutions. The Department invites comments regarding the uncertainties discussed above.

Paperwork Reduction Act

As part of its continuing effort to reduce paperwork and respondent burden, the Department conducts a preclearance consultation program to provide the general public and Federal agencies with an opportunity to comment on proposed and continuing collections of information in accordance

⁸² In the application for the individual exemption, Advisors Excel disclosed its sales in FIA as \$5 billion in 2015. Annexus reported \$4 billion sales in FIA in 2015 according to Investment News article by Greg Iacurici on Jun 23, 2016.

⁸³ LIMRA Individual Annuity Report 2015.

⁸⁴ LIMRA "Individual Annuity Sales—Fixed Annuity Break-Out: 2015 Year-End Results" Available at http://www.limra.com/uploadedFiles/limra.com/LIMRA_Root/Posts/PR/_Media/PDFs/2015-Top-20-Fixed-Breakout.pdf

⁸⁵ In the application for exemption, InForce Solutions states its annual sales in FIAs exceed \$2.8 billion; Futurity First Financial reported \$2.5 billion sales in FIA in 2015 according to an article "IMOs Dance with DOL on Fiduciary Deadline" by John Hilton on October 19, 2016. Available at <http://insurancenewsnet.com/inarticle/1050689>.

⁸⁶ Total combined sales from these four IMOs are \$14.3 billion. FIA sales by independent agents are approximately \$34.1 billion in 2015. Thus \$14.3 billion FIA sales generated by these four IMOs are about 42% of \$34.1 billion FIA sales by independent agents.

⁸⁷ Kristen Beckman, July 29, 2016, LifeHealthPro, "Futurity First Financial Acquired Nationwide Annuity IMO" available at <http://www.lifehealthpro.com/2016/07/29/futurity-first-financial-acquires-nationwide-annui>.

with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)). This helps to ensure that the public understands the Department's collection instructions, respondents can provide the requested data in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the Department can properly assess the impact of collection requirements on respondents.

Currently, the Department is soliciting comments concerning the proposed information collection request (ICR) included in the Proposed Best Interest Contract Exemption for Insurance Intermediaries (PTE). A copy of the ICR may be obtained by contacting the PRA addressee shown below or at <http://www.RegInfo.gov>.

The Department has submitted a copy of the proposed PTE to the Office of Management and Budget (OMB) in accordance with 44 U.S.C. 3507(d) for review of its information collections. The Department and OMB are particularly interested in comments that:

- Evaluate whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Comments should be sent to the Office of Information and Regulatory Affairs, Office of Management and Budget, Room 10235, New Executive Office Building, Washington, DC 20503; Attention: Desk Officer for the Employee Benefits Security Administration. OMB requests that comments be received within 30 days of publication of the proposed PTE to ensure their consideration.

PRA Addressee: Address requests for copies of the ICR to G. Christopher Cosby, Office of Policy and Research, U.S. Department of Labor, Employee Benefits Security Administration, 200 Constitution Avenue NW., Room N-5718, Washington, DC 20210.

Telephone (202) 693-8410; Fax: (202) 219-5333. These are not toll-free numbers. ICRs submitted to OMB also are available at <http://www.RegInfo.gov>.

As discussed in detail below, the proposed class exemption will require Financial Institutions to enter into a contractual arrangement with Retirement Investors regarding investments in IRAs and plans not subject to Title I of ERISA (non-ERISA plans), adopt written policies and procedures and make disclosures to Retirement Investors (including with respect to ERISA plans), the Department, and on a publicly accessible Web site, in order to receive relief from ERISA's and the Code's prohibited transaction rules for the receipt of compensation as a result of a Financial Institution's and its Adviser's advice (i.e., prohibited compensation). Financial Institutions will have to prepare a written documentation regarding the limitations that they place on recommendations. Financial Institutions will be required to have all transactions reviewed internally by a senior compliance official and maintain records necessary to prove that the conditions of the exemption have been met. In addition, the exemption provides a transition period from the Applicability Date to August 15, 2018. As a condition of relief during the transition period, Financial Institutions must make a disclosure (transition disclosure) to all Retirement Investors (in ERISA plans, IRAs, and non-ERISA plans) prior to or at the same time as the execution of recommended transactions. These requirements are ICRs subject to the Paperwork Reduction Act.

The Department has made the following assumptions in order to establish a reasonable estimate of the paperwork burden associated with these ICRs:

- 51.8 percent of disclosures to ERISA plans and plan participants⁸⁸

⁸⁸ According to data from the National Telecommunications and Information Agency (NTIA), 33.4 percent of individuals age 25 and over have access to the internet at work. According to a Greenwald & Associates survey, 84 percent of plan participants find it acceptable to make electronic delivery the default option, which is used as the proxy for the number of participants who will not opt out that are automatically enrolled (for a total of 28.1 percent receiving electronic disclosure at work). Additionally, the NTIA reports that 38.9 percent of individuals age 25 and over have access to the internet outside of work. According to a Pew Research Center survey, 61 percent of internet users use online banking, which is used as the proxy for the number of internet users who will opt in for electronic disclosure (for a total of 23.7 percent receiving electronic disclosure outside of work). Combining the 28.1 percent who receive electronic disclosure at work with the 23.7 percent who receive electronic disclosure outside of

and 44.1 percent of contracts with and disclosures to IRAs and non-ERISA plans⁸⁹ will be distributed electronically via means already used by respondents in the normal course of business and the costs arising from electronic distribution will be negligible, while the remaining contracts and disclosures will be distributed on paper and mailed at a cost of \$0.05 per page for materials and \$0.47 for first class postage;

- Financial Institutions will use existing in-house resources to distribute required disclosures.

• Tasks associated with the ICRs performed by in-house personnel will be performed by clerical personnel at an hourly wage rate of \$54.74 and financial managers at an hourly wage rate of \$167.39.⁹⁰

- Financial Institutions will hire outside service providers to assist with nearly all other compliance costs;

• Outsourced legal assistance will be billed at an hourly rate of \$335.00.⁹¹

- Approximately 19 large insurance intermediary Financial Institutions will use this exemption.⁹² These Financial

work produces a total of 51.8 percent who will receive electronic disclosure overall.

⁸⁹ According to data from the NTIA, 72.4 percent of individuals age 25 and older have access to the Internet. According to a Pew Research Center survey, 61 percent of internet users use online banking, which is used as the proxy for the number of Internet users who will opt in for electronic disclosure. Combining these data produces an estimate of 44.1 percent of individuals who will receive electronic disclosures.

⁹⁰ For a description of the Department's methodology for calculating wage rates, see <http://www.dol.gov/ebsa/pdf/labor-cost-inputs-used-in-ebsa-opr-ria-and-pra-burden-calculations-august-2016.pdf>.

⁹¹ This rate is the average of the hourly rate of an attorney with 4–7 years of experience and an attorney with 8–10 years of experience, taken from the Laffey Matrix. See http://www.justice.gov/sites/default/files/usao-dc/legacy/2014/07/14/Laffey%20Matrix_2014-2015.pdf.

⁹² The Department obtained the sales information about seven IMOs from their exemption applications and media reports. All these seven IMOs met \$1.5 billion premium threshold and altogether reported approximately total \$20.45 billion sales in 2015. Some IMOs reported sales from only FIAs, while other IMOs reported sales from FIAs and fixed-rate annuities. According to the LIMRA U.S. Individual Annuity Year book 2015, \$38.4 billion total premiums—\$34.1 billion in FIAs and \$4.3 billion in fixed-rate annuities—were sold through the independent agent distribution channel in 2015. This implies that approximately \$17.95 billion FIA and fixed-rate annuity sales (\$38.40–\$20.45) were generated by other entities/agents. Assuming that \$17.95 billion sales were generated by IMOs, not by agents without any IMO affiliation and assuming that each IMO equally generated \$1.5 billion sales, the Department estimates that twelve (\$17.95 billion/\$1.5 billion) IMOs potentially would be eligible to use the exemption. Thus, in total, 19 (12+7) IMOs would potentially use the exemption. Although the Department recognizes that exemption-eligible IMOs would have all different sales records, in

Continued

Institutions will use this exemption in conjunction with any transactions involving recommendations regarding the purchase or sale of fixed annuity contracts in the retirement market.

Compliance Costs Substantially Similar to Those in PTE 2016–01

The Department believes that nearly all Financial Institutions will contract with outside service providers to implement the various compliance requirements of this exemption. As discussed previously, the conditions in this proposed PTE are similar to the conditions in the Department's Best Interest Contract Exemption (PTE 2016–01) but with some additional requirements. The Department believes it accurately estimated the aggregate burden imposed on the insurance industry in the Best Interest Contract Exemption, and it acknowledges that most of the entity-level burden attributed to insurance companies in the Best Interest Contract Exemption will instead be incurred by IMO covered by this proposed PTE. For the conditions that are substantially similar between this PTE and PTE 2016–01, the Department estimates that IMOs will incur compliance costs identical to similarly sized insurance companies. Accordingly, for the conditions in this PTE that are substantially similar to those in PTE 2016–01, the per-firm costs are as follows:

- *Start-Up Costs for Large Insurance Intermediaries:* \$6.6 million
- *Ongoing Costs for Large Insurance Intermediaries:* \$1.7 million

In order to receive compensation covered under this exemption, Section II requires Financial Institutions to acknowledge, in writing, their fiduciary status and adopt written policies and procedures designed to ensure compliance with the Impartial Conduct Standards. Financial Institutions and Advisers must make certain disclosures to Retirement Investors. Financial Institutions must generally enter into a written contract with Retirement Investors with respect to investments in IRAs and non-ERISA plans with certain required provisions, including affirmative agreement to adhere to the Impartial Conduct Standards.

order to estimate the upper-bound number of potentially eligible IMOs, the Department assumed that IMOs equally generate \$1.5 billion sales, the minimum premium sales threshold, for \$17.95 billion sales. This approach reflects the Department's conservative approach to estimating the compliance costs associated with the proposed class exemption. The Department welcomes any comments and information about the number of IMOs meeting the minimum sales threshold condition set forth in the exemption.

Sections III and V require Financial Institutions and Advisers to make certain disclosures. These disclosures include: (1) A pre-transaction disclosure, stating the best interest standard of care, describing any Material Conflicts of Interest with respect to the transaction, disclosing the recommendation of proprietary products and products that generate third party payments (where applicable), and informing the Retirement Investor of disclosures available on the Financial Institution's Web site and informing the Retirement Investor that the investor may receive specific disclosure of the costs, fees, and other compensation associated with the transaction; (2) a disclosure, on request, describing in detail the costs, fees, and other compensation associated with the transaction; (3) a web-based disclosure; and (4) a one-time disclosure to the Department.

Under Section IV, Financial Institutions will have to prepare a written documentation regarding the limitations they place on recommendations.

Section IX requires Financial Institutions to make a transition disclosure, acknowledging their fiduciary status and that of their Advisers with respect to the advice, stating the Best Interest standard of care, and describing the Financial Institution's Material Conflicts of Interest and any limitations on product offerings, prior to or at the same time as the execution of any transactions during the transition period from the Applicability Date to August 15, 2018. The transition disclosure can cover multiple transactions, or all transactions occurring in the transition period.

Financial Institutions will also be required to maintain records necessary to prove that the conditions of the exemption have been met.

The Department is able to disaggregate an estimate of many of the legal costs from the costs above; however, it is unable to disaggregate any of the other costs.

In response to a recommendation made during the Department's August 2015 public hearing on the proposed Regulation, and in an attempt to create estimates with a clearer empirical evidentiary basis, the Department itself drafted examples of certain portions of the required disclosures, including a sample contract, the one-time disclosure to the Department, and the transition disclosure. The Department believes that the time spent updating existing contracts and disclosures in future years would be no longer than the time necessary to create the original

disclosure. The Department did not attempt to draft the complete set of required disclosures because it expects that the amount of time necessary to draft such disclosures will vary greatly among firms. For example the Department did not attempt to draft sample policies and procedures, disclosures describing in detail the costs, fees, and other compensation associated with the transaction, documentation of the limitations regarding proprietary products or investments that generate third party payments, or a sample web disclosure. The Department expects the amount of time necessary to complete these disclosures will vary significantly based on a variety of factors including the nature of a firm's compensation structure, and the extent to which a firm's policies and procedures require review and signatures by different individuals.

Considered in conjunction with the estimates provided in the proposal for PTE 2016–01, the Department estimates that outsourced legal assistance to draft standard contracts, contract disclosures, pre-transaction disclosures, the one-time disclosure to the Department, and the transition disclosures will cost an average of \$3,857 per firm for a total of \$73,000 during the first year. In subsequent years, it will cost an average of \$3,076 per firm for a total of \$58,000 annually to update the contracts, contract disclosures, and pre-transaction disclosures.

The legal costs of these disclosures were disaggregated from the total compliance costs because these disclosures are expected to be relatively uniform. Although the tested disclosures generally took less time than many of the commenters on the proposal for PTE 2016–01 said they would, the Department acknowledges that the disclosures that were not tested are those that are expected to be the most time consuming. Importantly, as explained in greater detail in section 5.3 of the regulatory impact analysis for the Regulation, the Department is primarily relying on cost data provided by the Securities Industry and Financial Markets Association (SIFMA) and the Financial Services Institute (FSI) to calculate the total cost of the legal disclosures, rather than its own internal drafting of disclosures. Accordingly, in the event that any of the Department's estimates understate the time necessary to create and update the disclosures, it does not impact the total burden estimates. The total burden estimates were derived from SIFMA and FSI's all-inclusive costs. Therefore, in the event that legal costs are understated, other

cost estimates in this analysis would be overstated in an equal manner.

In addition to legal costs for creating the contracts and disclosures, the start-up cost estimates include the costs of implementing and updating the IT infrastructure, creating the Web disclosures, gathering and maintaining the records necessary to produce the various disclosures and to prove that the conditions of the exemption have been met, developing policies and procedures, documenting limitations regarding proprietary products or investments that generate third party payments, addressing material conflicts of interest, monitoring Advisers' adherence to the Impartial Conduct Standards, and any other steps necessary to ensure compliance with the conditions of the exemption not described elsewhere. In addition to legal costs for updating the contracts and disclosures, the ongoing cost estimates include the costs of updating the IT infrastructure, updating the Web disclosures, reviewing processes for gathering and maintaining the records necessary to produce the various disclosures and to prove that the conditions of the exemption have been met, reviewing the policies and procedures, producing the detailed transaction disclosures on request, documenting limitations regarding proprietary products or investments that generate third party payments, monitoring investments as agreed upon with the Retirement Investor, addressing material conflicts of interest, monitoring Advisers' adherence to the Impartial Conduct Standards, and any other steps necessary to ensure compliance with the conditions of the exemption not described elsewhere. These costs total \$126.1 million during the first year and \$31.4 million in subsequent years. These costs do not include the costs of distributing disclosures and contracts, nor do they include the costs of the additional requirements imposed on insurance intermediary Financial Institutions in this proposed PTE, all of which are discussed below.

Distribution of Disclosures and Contracts

The Department estimates that 15,000 Retirement Investors through ERISA plans and 212,000 Retirement Investors through IRAs and non-ERISA plans will receive a three-page transition disclosure during the first year.⁹³

⁹³ These estimates are based on LIMRA data on the number of fixed indexed annuity policies sold in 2015 to ERISA covered plans and IRAs and the market share held by independent agents, who might seek exemptive relief.

Additionally, 15,000 Retirement Investors with respect to ERISA plans will receive a fifteen-page contract disclosure, and 212,000 Retirement Investors with respect to IRAs and non-ERISA plans will receive a fifteen-page contract during the first year. In subsequent years, 4,300 Retirement Investors with respect to ERISA plans⁹⁴ will receive a fifteen-page contract disclosure and 42,000 Retirement Investors with respect to IRAs and non-ERISA plans⁹⁵ will receive a fifteen-page contract.

The transition disclosure will be distributed electronically to 51.8 percent of ERISA plan investors and 44.1 percent of IRAs and non-ERISA plan investors during the first year. Paper disclosures will be mailed to the remaining 48.2 percent of ERISA plan investors and 55.9 percent of IRAs and non-ERISA plan investors. The contract disclosure will be distributed electronically to 51.8 percent of ERISA plan investors during the first year or during any subsequent year in which the plan begins a new advisory relationship. Paper contract disclosures will be mailed to the remaining 48.2 percent of ERISA plan investors. The contract will be distributed electronically to 44.1 percent of IRAs and non-ERISA plan investors during the first year or during any subsequent year in which the investor enters into a new advisory relationship. Paper contracts will be mailed to the remaining 55.9 percent of IRAs and non-ERISA plan investors. The Department estimates that electronic distribution will result in de minimis cost, while paper distribution will cost approximately \$232,000 during the first year and \$31,000 during subsequent years. Paper distribution will also require two minutes of clerical time to print and mail the disclosure or contract, resulting in 8,400 hours at an equivalent cost of \$459,000 during the first year and 900 hours at an equivalent cost of \$47,000 during subsequent years.

The Department assumes that Retirement Investors interested in engaging in the purchase or sale of fixed indexed annuities will engage in one

⁹⁴ The Department estimates that approximately 28.7 percent of advisory relationships are new each year. (According to an analysis of Form 5500 Schedule C data conducted by Brightscope, Inc. and provided to the Department, 66,962 plans reported advisers in 2012, 22,302 plans changed advisers from 2012 to 2013, and 16,196 plans changed advisers from 2013 to 2014. $[(22,302 + 16,196)/2]/66,962 = 28.7$ percent.)

⁹⁵ The Department estimates that approximately 20 percent of advisory relationships are new each year. (2012 Cerulli data show that 20 percent of households opened a new account as a result of a new contact.)

transaction per year that requires a pre-transaction disclosure. Therefore, the Department estimates that plans and IRAs will receive 227,000 three-page pre-transaction disclosures during the second year and all subsequent years. The pre-transaction disclosures will be distributed electronically for 51.8 percent of the ERISA plan investors and 44.1 percent of the IRA holders and non-ERISA plan participants. The remaining 126,000 disclosures will be mailed. The Department estimates that electronic distribution will result in de minimis cost, while paper distribution will cost approximately \$78,000. Paper distribution will also require two minutes of clerical time to print and mail the statement, resulting in 4,200 hours at an equivalent cost of \$230,000 annually.

The Department estimates that Financial Institutions will receive ten requests per year for more detailed information on the fees, costs, and compensation associated with the transaction during the second year and all subsequent years. The Department solicits comments on the number of requests for more detailed information that Financial Institutions can expect to receive. The detailed disclosures will be distributed electronically for 51.8 percent of the ERISA plan investors and 44.1 percent of the IRA holders and non-ERISA plan participants. The Department believes that requests for additional information will be proportionally likely with each Retirement Investor type. Therefore, approximately 105 detailed disclosures will be distributed on paper. The Department estimates that electronic distribution will result in de minimis cost, while paper distribution will cost approximately \$76. Paper distribution will also require two minutes of clerical time to print and mail the statement, resulting in 4 hours at an equivalent cost of \$192 annually.

Finally, the Department estimates that all 19 Financial Institutions will submit the required one-page disclosure to the Department electronically at de minimis cost during the first year.

Costs for Provisions Not Included in PTE 2016-01

In order to receive compensation covered under this proposed exemption, Section II(d)(5) requires a person designated pursuant to Section II(d)(2) as responsible for addressing Material Conflicts of Interest and monitoring Advisers' adherence to Impartial Conduct Standards to approve, in writing, recommended annuity applications involving Retirement Investors prior to transmitting the

applications to the insurance company. Section III(a) requires the Financial Institution to furnish the Retirement Investor with a pre-transaction disclosure in accordance with the most recent Annuity Disclosure Model Regulation published by the NAIC or its successor. Section VIII(e)(2) requires a Financial Institution to have financial statements that are audited annually by an Independent certified public accountant.

As discussed previously in this analysis, the Department estimates that Advisers working on behalf of Financial Institutions will make 227,000 recommendations to Retirement Investors annually. The Department estimates that, on average, it will take a financial manager fifteen minutes to review and approve recommendations. This results in 57,000 hours annually at an equivalent cost of \$9.5 million.

The Department assumes that each of the 19 Financial Institutions will hire outside service providers to create a template for the pre-transaction annuity disclosure. The Department estimates that it will take legal service providers 1.5 hours to create the template during the first year and 1.5 hours to update the template during subsequent years. Once the template has been created, the disclosure itself will be populated by the IT systems (the costs of IT updates were discussed previously). The total cost burden for the outsourced legal assistance to create and update the template for the pre-transaction annuity disclosure is estimated to be \$10,000 annually.

The Department estimates that plans and IRAs will receive 227,000 one page pre-transaction annuity disclosures annually. The pre-transaction disclosures will be distributed electronically for 51.8 percent of the ERISA plan investors and 44.1 percent of the IRA holders and non-ERISA plan participants. The remaining 126,000 disclosures will be mailed. The Department estimates that electronic distribution will result in de minimis cost, while paper distribution will cost approximately \$65,000. Paper distribution will also require two minutes of clerical time to print and mail the statement, resulting in 4,200 hours at an equivalent cost of \$230,000 annually.

The Department assumes that maintaining financial statements that are audited annually by an Independent certified public accountant is a best practice for businesses in this industry and that Financial Institutions generally engage in this practice. Therefore, no additional burden is assessed for this requirement. The Department solicits

comment on how widespread the practice of obtaining annual audits is. In the event that it is not a usual and customary business practice, the Department solicits comments regarding the costs associated with this requirement.

Overall Summary

Overall, the Department estimates that in order to meet the conditions of this class exemption, Financial Institutions and Advisers will distribute approximately 681,000 disclosures and contracts during the first year and 501,000 disclosures and contracts annually during subsequent years. Distributing these disclosures and contracts, reviewing recommendations, and maintaining records that the conditions of the exemption have been fulfilled will result in a total of 69,000 hours of burden during the first year and 66,000 hours of burden annually during subsequent years. The equivalent cost of this burden is \$10.2 million during the first year and \$10.0 million annually in subsequent years. This exemption will result in an outsourced labor, materials, and postage cost burden of \$126.4 million during the first year and \$31.6 million annually during subsequent years.

These paperwork burden estimates are summarized as follows:

Type of Review: New collection.

Agency: Employee Benefits Security Administration, Department of Labor.

Title: Proposed Best Interest Contract Exemption for Insurance Intermediaries.

OMB Control Number: 1210-NEW.

Affected Public: Businesses or other for-profits; not for profit institutions.

Estimated Number of Respondents: 19.

Estimated Number of Annual Responses: 681,449 during the first year and 501,199 annually during subsequent years.

Frequency of Response: When engaging in exempted transaction.

Estimated Total Annual Burden Hours: 69,369 during the first year and 66,037 annually in subsequent years; includes 8,389 during the first year and 5,057 annually in subsequent years of duplicative burden that will be transferred over from OMB Control Number 1210-0156 upon approval of this information collection request.

Estimated Total Annual Burden Cost: \$126,369,454 during the first year and \$31,617,550 annually during subsequent years; includes \$126,294,476 during the first year and \$31,542,571 annually in subsequent years of duplicative burden that will be transferred over from OMB Control Number 1210-0156 upon

approval of this information collection request.

Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) (RFA) imposes certain requirements with respect to Federal rules that are subject to the notice and comment requirements of section 553(b) of the Administrative Procedure Act (5 U.S.C. 551 *et seq.*) and which are likely to have a significant economic impact on a substantial number of small entities. Unless an agency certifies that a rule will not have a significant economic impact on a substantial number of small entities, section 603 of the RFA requires the agency to present an initial regulatory flexibility analysis at the time of the publication of the notice of proposed rulemaking describing the impact of the rule on small entities. Small entities include small businesses, organizations and governmental jurisdictions.

As discussed above, only IMOs that have transacted sales averaging at least \$1.5 billion in premiums per fiscal year over its prior three fiscal years are eligible to use the proposed exemption. The Small Business Administration (SBA) defines a small business in the Financial Investments and Related Activities Sector as a business with up to \$38.5 million in annual receipts. Although the Department believes that revenues of IMOs are closely related to sales volume, the Department is uncertain regarding the exact relationship between sales and revenue for these entities.

Based on the limited information disclosed by the individual exemptions applicants, the Department believes that receipts of IMOs that are eligible to use proposed class exemption are likely to exceed the SBA revenue threshold and, therefore, such entities are unlikely to be considered small entities for purposes of the RFA.⁹⁶ Small IMOs not

⁹⁶ Only two applicant IMOs disclosed both sales and revenue information in their applications. One IMO reported that \$37.7 million in revenues were generated from \$1.55 billion sales in fixed rate annuities and FIAs in 2015. Another IMO reported that revenues of \$125 million were generated from \$2.1+ billion sales in various insurance products in 2015. The IMO applicant with the largest reported revenue exceeds the SBA size threshold by three times. The Department notes that the even the IMO with the smaller revenue comes extremely close to meeting the SBA size threshold. Furthermore, it reports only the subset of its entire revenues—revenues from fixed rate annuities and FIAs only. Most IMOs sell other types of insurance products such as life insurance. If it includes the revenues from other sources, the IMO with the smaller revenue is very likely to exceed the threshold set by the SBA. Thus, the Department believes that IMOs satisfying all conditions of this exemption are likely to have revenue that meets or exceeds the SBA size threshold. However, the Department is

meeting the sales threshold would not incur any compliance costs, because they are not eligible to use the exemption. These IMOs could partner with larger IMOs using the proposed exemption insurers using the Best Interest Contract Exemption in order to conduct commission-based sales.

Accordingly, based on the foregoing, pursuant to section 605(b) of the RFA, the Assistant Secretary of the Employee Benefits Security Administration hereby proposes to certify that the proposed rule will not have a significant economic impact on a substantial number of small entities.

Congressional Review Act

The proposed exemption is subject to the Congressional Review Act provisions of the Small Business Regulatory Enforcement Fairness Act of 1996 (5 U.S.C. 801 *et seq.*) and, if finalized, will be transmitted to Congress and the Comptroller General for review. The proposed exemption is a “major rule” as that term is defined in 5 U.S.C. 804, because it is likely to result in (1) an annual effect on the economy of \$100 million or more; (2) a major increase in costs or prices for consumers, individual industries, or Federal, State, or local government agencies, or geographic regions; or (3) significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic and export markets.

Federalism Statement

Executive Order 13132 outlines fundamental principles of federalism. It also requires adherence to specific criteria by federal agencies in formulating and implementing policies that have “substantial direct effects” on the states, the relationship between the national government and states, or on the distribution of power and responsibilities among the various levels of government. Federal agencies promulgating regulations that have these federalism implications must consult with state and local officials, and describe the extent of their consultation and the nature of the concerns of state and local officials in the preamble to the final regulation. The Department does not believe this proposed class exemption has federalism implications because it has

no substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

General Information

The attention of interested persons is directed to the following:

(1) The fact that a transaction is the subject of an exemption under ERISA section 408(a) and Code section 4975(c)(2) does not relieve a fiduciary, or other party in interest or disqualified person with respect to a plan, from certain other provisions of ERISA and the Code, including any prohibited transaction provisions to which the exemption does not apply and the general fiduciary responsibility provisions of ERISA section 404 which require, among other things, that a fiduciary act prudently and discharge his or her duties respecting the plan solely in the interests of the participants and beneficiaries of the plan. Additionally, the fact that a transaction is the subject of an exemption does not affect the requirement of Code section 401(a) that the plan must operate for the exclusive benefit of the employees of the employer maintaining the plan and their beneficiaries;

(2) Before the exemption may be granted under ERISA section 408(a) and Code section 4975(c)(2), the Department must find that the exemption is administratively feasible, in the interests of plans and their participants and beneficiaries and IRA owners, and protective of the rights of participants and beneficiaries of the plan and IRA owners;

(3) If granted, the proposed exemption is applicable to a particular transaction only if the transaction satisfies the conditions specified in the exemption; and

(4) The proposed exemption, if granted, is supplemental to, and not in derogation of, any other provisions of ERISA and the Code, including statutory or administrative exemptions and transitional rules. Furthermore, the fact that a transaction is subject to an administrative or statutory exemption is not dispositive of whether the transaction is in fact a prohibited transaction.

Proposed Exemption

Section I—Best Interest Contract Exemption for Insurance Intermediaries

(a) In general. ERISA and the Internal Revenue Code prohibit fiduciary advisers to employee benefit plans (Plans) and individual retirement

accounts (IRAs) from receiving compensation that varies based on their investment advice. Similarly, fiduciary advisers are prohibited from receiving compensation from third parties in connection with their advice. This exemption permits certain persons who provide investment advice to Retirement Investors, and associated Financial Institutions, Affiliates and other Related Entities, to receive such otherwise prohibited compensation as described below.

(b) Covered transactions. This exemption permits Advisers, Financial Institutions, and their Affiliates and Related Entities, to receive compensation as a result of their provision of investment advice within the meaning of ERISA section 3(21)(A)(ii) or Code section 4975(e)(3)(B) to a Retirement Investor regarding the purchase of a Fixed Annuity Contract, as defined in Section VIII(d).

As defined in Section VIII(m) of the exemption, a Retirement Investor is: (1) A participant or beneficiary of a Plan with authority to direct the investment of assets in his or her Plan account or to take a distribution; (2) the beneficial owner of an IRA acting on behalf of the IRA; or (3) a Retail Fiduciary with respect to a Plan or IRA.

As detailed below, Financial Institutions and Advisers seeking to rely on the exemption must adhere to Impartial Conduct Standards in rendering advice regarding Fixed Annuity Contracts. In addition, Financial Institutions must adopt policies and procedures designed to ensure that their individual Advisers adhere to the Impartial Conduct Standards; disclose important information relating to fees, compensation, and Material Conflicts of Interest; and retain records demonstrating compliance with the exemption. The exemption provides relief from the restrictions of ERISA section 406(a)(1)(D) and 406(b) and the sanctions imposed by Code section 4975(a) and (b), by reason of Code section 4975(c)(1)(D), (E) and (F). The Adviser and Financial Institution must comply with the applicable conditions of Sections II–V to rely on this exemption. This document also contains separate exemptions in Section VI (Exemption for Purchases of Fixed Annuity Contracts) and Section VII (Exemption for Pre-Existing Transactions).

(c) Exclusions. This exemption does not apply if:

(1) The Plan is covered by Title I of ERISA, and (i) the Adviser, Financial Institution or any Affiliate is the

uncertain regarding why two IMOs with similar sales generate quite different levels of revenues and welcomes any comments regarding how IMOs generate revenue from sales of fixed annuity products.

employer of employees covered by the Plan, or (ii) the Adviser or Financial Institution is a named fiduciary or plan administrator (as defined in ERISA section 3(16)(A)) with respect to the Plan, or an affiliate thereof, that was selected to provide advice to the Plan by a fiduciary who is not Independent;

(2) The compensation is received as a result of investment advice to a Retirement Investor generated solely by an interactive Web site in which computer software-based models or applications provide investment advice based on personal information each investor supplies through the Web site without any personal interaction or advice from an individual Adviser (*i.e.*, “robo-advice”); or

(3) The Adviser has or exercises any discretionary authority or discretionary control with respect to the recommended transaction.

Section II—Contract, Impartial Conduct, and Other Requirements

The conditions set forth in this section include certain Impartial Conduct Standards, such as a Best Interest Standard, that Advisers and Financial Institutions must satisfy to rely on the exemption. In addition, Section II(d) and (e) require Financial Institutions to adopt anti-conflict policies and procedures that are reasonably designed to ensure that Advisers adhere to the Impartial Conduct Standards, and requires disclosure of important information about the Financial Institutions’ services, applicable fees and compensation. With respect to IRAs and Plans not covered by Title I of ERISA, the Financial Institutions must agree that they and their Advisers will adhere to the exemption’s standards in a written contract that is enforceable by the Retirement Investors. To minimize compliance burdens, the exemption provides that the contract terms may be incorporated into annuity contracts or applications, and permits reliance on a negative consent process with respect to existing contract holders. Advisers and Financial Institutions need not execute the contract before they make a recommendation to the Retirement Investor. However, the contract must cover any advice given prior to the contract date in order for the exemption to apply to such advice. There is no contract requirement for recommendations to Retirement Investors about investments in Plans covered by Title I of ERISA, but the Impartial Conduct Standards and other requirements of Section II(b)–(e), including a written acknowledgment of fiduciary status, must be satisfied in

order for relief to be available under the exemption, as set forth in Section II(g). Section II imposes the following conditions on Financial Institutions and Advisers:

(a) **Contracts with Respect to Investments in IRAs and Other Plans Not Covered by Title I of ERISA.** If the investment advice concerns an IRA or a Plan that is not covered by Title I of ERISA, the advice is subject to an enforceable written contract on the part of the Financial Institution, which may be a master contract covering multiple recommendations, that is entered into in accordance with this Section II(a) and incorporates the terms set forth in Section II(b)–(d). The Financial Institution additionally must provide the disclosures required by Section II(e). The contract must cover advice rendered prior to the execution of the contract in order for the exemption to apply to such advice and related compensation.

(1) **Contract Execution and Assent.**

(i) **New Contracts.** Prior to or at the same time as the execution of the recommended transaction, the Financial Institution enters into a written contract with the Retirement Investor acting on behalf of the Plan, participant or beneficiary account, or IRA, incorporating the terms required by Section II(b)–(d). The terms of the contract may appear in a standalone document or they may be incorporated into an annuity contract or application, or similar document, or amendment thereto. The contract must be enforceable against the Financial Institution. The Retirement Investor’s assent to the contract may be evidenced by handwritten or electronic signatures.

(ii) **Amendment of Existing Contracts by Negative Consent.** As an alternative to executing a contract in the manner set forth in the preceding paragraph, the Financial Institution may amend Existing Contracts to include the terms required in Section II(b)–(d) by delivering the proposed amendment and the disclosure required by Section II(e) to the Retirement Investor prior to August 15, 2018, and considering the failure to terminate the amended contract within 30 days as assent. If the Retirement Investor does terminate the contract within that 30-day period, this exemption will provide relief for 14 days after the date on which the termination is received by the Financial Institution. An Existing Contract is an annuity contract that was executed before August 15, 2018, and remains in effect. If the Financial Institution elects to use the negative consent procedure, it may deliver the proposed amendment by mail or electronically, but it may not

impose any new contractual obligations, restrictions, or liabilities on the Retirement Investor by negative consent.

(2) **Notice.** The Financial Institution maintains an electronic copy of the Retirement Investor’s contract on its Web site that is accessible by the Retirement Investor.

(b) **Fiduciary.** The Financial Institution affirmatively states in writing that it and the Adviser(s) act as fiduciaries under ERISA or the Code, or both, with respect to any investment advice provided by the Financial Institution or the Adviser subject to the contract or, in the case of an ERISA plan, with respect to any investment recommendations regarding the Plan or participant or beneficiary account.

(c) **Impartial Conduct Standards.** The Financial Institution affirmatively states that it and its Advisers will adhere to the following standards and, they in fact, comply with the standards:

(1) When providing investment advice to the Retirement Investor, the Financial Institution and the Adviser(s) provide investment advice that is, at the time of the recommendation, in the Best Interest of the Retirement Investor. As further defined in Section VIII(c), such advice reflects the care, skill, prudence, and diligence under the circumstances then prevailing that a prudent person acting in a like capacity and familiar with such matters would use in the conduct of an enterprise of a like character and with like aims, based on the investment objectives, risk tolerance, financial circumstances, and needs of the Retirement Investor, without regard to the financial or other interests of the Adviser, Financial Institution or any Affiliate, Related Entity, or other party;

(2) The recommended transaction will not cause the Financial Institution, Adviser or their Affiliates or Related Entities to receive, directly or indirectly, compensation for their services that is in excess of reasonable compensation within the meaning of ERISA section 408(b)(2) and Code section 4975(d)(2).

(3) Statements by the Financial Institution and its Advisers to the Retirement Investor about the recommended transaction, fees and compensation, Material Conflicts of Interest, and any other matters relevant to a Retirement Investor’s investment decisions, will not be materially misleading at the time they are made.

(d) **Warranties.** The Financial Institution affirmatively warrants, and in fact complies with, the following:

(1) The Financial Institution has adopted and will comply with written policies and procedures reasonably and prudently designed to ensure that its Advisers adhere to the Impartial

Conduct Standards set forth in Section II(c);

(2) In formulating its policies and procedures, the Financial Institution has specifically identified and documented its Material Conflicts of Interest; adopted measures reasonably and prudently designed to prevent Material Conflicts of Interest from causing violations of the Impartial Conduct Standards set forth in Section II(c); and designated a person or persons, identified by name, title or function, responsible for addressing Material Conflicts of Interest and monitoring their Advisers' adherence to the Impartial Conduct Standards;

(3) The Financial Institution's policies and procedures prohibit the use of quotas, appraisals, performance or personnel actions, bonuses, contests, special awards, differential compensation or other actions or incentives that are intended or would reasonably be expected to cause Advisers to make recommendations that are not in the Best Interest of the Retirement Investor. Notwithstanding the foregoing, this Section II(d)(3) does not prevent the provision of differential compensation (whether in type or amount, and including, but not limited to, commissions) based on investment decisions by Plans, participant or beneficiary accounts, or IRAs, to the extent that the Financial Institution's policies and procedures and incentive practices, when viewed as a whole, are reasonably and prudently designed to avoid a misalignment of the interests of Advisers with the interests of the Retirement Investors they serve as fiduciaries (such compensation practices can include differential compensation based on neutral factors tied to the differences in the services delivered to the Retirement Investor with respect to the different types of investments, as opposed to the differences in the amounts of Third Party Payments the Financial Institution receives in connection with particular investment recommendations);

(4) The Financial Institution has approved in advance all written marketing materials used by Advisers after determining that such materials provide a balanced description of the risks and features of the Fixed Annuity Contracts to be recommended;

(5) A person designated pursuant to Section II(d)(2) as responsible for addressing Material Conflicts of Interest and monitoring Advisers' adherence to the Impartial Conduct Standards approves, in writing, recommended annuity applications involving Retirement Investors prior to

transmitting the applications to the insurance company;

(6) The Financial Institution requires in its written contract with Advisers or sub-intermediaries that Advisers must (i) use written marketing materials only if they are approved in advance by the Financial Institution as described in Section II(d)(4), and (ii) provide the disclosure required by Section III(a) and orally review the information in Section III(a)(1) with the Retirement Investor;

(7) The Financial Institution either: (i) Requires in its written contract with the insurance company and each Adviser or sub-intermediary that all compensation to be paid to the Adviser or sub-intermediary with respect to the purchase of a Fixed Annuity Contract by a Retirement Investor pursuant to this exemption must be paid to the Adviser or sub-intermediary exclusively by the Financial Institution; or (ii) requires in its written contract with the insurance company and each Adviser or sub-intermediary that with respect to the purchase of a Fixed Annuity Contract by a Retirement Investor pursuant to this exemption, (A) the Adviser or sub-intermediary may only sell annuities to Retirement Investors for which the commission structure has been approved in advance by the IMO and (B) all other forms of compensation, whether cash or non-monetary, must be paid to the Adviser or sub-intermediary exclusively by the Financial Institution; and

(8) The Financial Institution will provide, and require its Advisers to attend, annual training on compliance with the exemption that is conducted by a person who has appropriate technical training and proficiency with ERISA and the Code. The training must, at a minimum, cover the policies and procedures, the Impartial Conduct Standards, Material Conflicts of Interest, ERISA and Code compliance (including applicable fiduciary duties and the prohibited transaction provisions), ethical conduct, and the consequences of failure to comply with the conditions of this exemption (including any loss of exemptive relief provided herein).

(e) Disclosures. In the Best Interest Contract or in a separate single written disclosure provided to the Retirement Investor with the contract, or, with respect to ERISA plans, in another single written disclosure provided to the Plan prior to or at the same time as the execution of the recommended transaction, the Financial Institution clearly and prominently:

(1) States the Best Interest standard of care owed by the Adviser and Financial Institution to the Retirement Investor; informs the Retirement Investor of the

services provided by the Financial Institution and the Adviser; and describes how the Retirement Investor will pay for services, directly or through Third Party Payments. If, for example, the Retirement Investor will pay through commissions or other forms of transaction-based payments, the contract or writing must clearly disclose that fact;

(2) Describes Material Conflicts of Interest; discloses any fees or charges the Financial Institution, its Affiliates, or the Adviser imposes upon the Retirement Investor or the Retirement Investor's annuity; and states the types of compensation that the Financial Institution, its Affiliates, and the Adviser expect to receive from third parties in connection with Fixed Annuity Contracts recommended to Retirement Investors;

(3) Informs the Retirement Investor that the Retirement Investor has the right to obtain copies of the Financial Institution's written description of its policies and procedures adopted in accordance with Section II(d), as well as the specific disclosure of costs, fees, and compensation, including Third Party Payments, regarding recommended transactions, as set forth in Section III(a), below, described in dollar amounts, percentages, formulas, or other means reasonably designed to present materially accurate disclosure of their scope, magnitude, and nature in sufficient detail to permit the Retirement Investor to make an informed judgment about the costs of the transaction and about the significance and severity of the Material Conflicts of Interest, and describes how the Retirement Investor can get the information, free of charge; provided that if the Retirement Investor's request is made prior to the transaction, the information must be provided prior to the transaction, and if the request is made after the transaction, the information must be provided within 30 business days after the request;

(4) Includes a link to the Financial Institution's Web site as required by Section III(b), and informs the Retirement Investor that: (i) Model contract disclosures updated as necessary on a quarterly basis are maintained on the Web site, and (ii) the Financial Institution's written description of its policies and procedures adopted in accordance with Section II(d) are available free of charge on the Web site;

(5) Discloses to the Retirement Investor whether the Financial Institution offers Proprietary Products or receives Third Party Payments with respect to any recommended Fixed

Annuity Contracts; and to the extent the Financial Institution or Adviser limits investment recommendations, in whole or part, to Proprietary Products or annuities that generate Third Party Payments, notifies the Retirement Investor of the limitations placed on the universe of investments that the Adviser may offer for purchase, sale, exchange, or holding by the Retirement Investor. The notice is insufficient if it merely states that the Financial Institution or Adviser “may” limit investment recommendations based on whether the annuities are Proprietary Products or generate Third Party Payments, without specific disclosure of the extent to which recommendations are, in fact, limited on that basis;

(6) Provides contact information (telephone and email) for a representative of the Financial Institution that the Retirement Investor can use to contact the Financial Institution with any concerns about the advice or service they have received; and

(7) Describes whether or not the Adviser and Financial Institution will monitor the Retirement Investor’s annuity contract and alert the Retirement Investor to any recommended change to the annuity contract, and, if so monitoring, the frequency with which the monitoring will occur and the reasons for which the Retirement Investor will be alerted.

(8) The Financial Institution will not fail to satisfy this Section II(e), or violate a contractual provision based thereon, solely because it, acting in good faith and with reasonable diligence, makes an error or omission in disclosing the required information, provided the Financial Institution discloses the correct information as soon as practicable, but not later than 30 days after the date on which it discovers or reasonably should have discovered the error or omission. To the extent compliance with this Section II(e) requires Advisers and Financial Institutions to obtain information from entities that are not closely affiliated with them, they may rely in good faith on information and assurances from the other entities, as long as they do not know that the materials are incomplete or inaccurate. This good faith reliance applies unless the entity providing the information to the Adviser and Financial Institution is (1) a person directly or indirectly through one or more intermediaries, controlling, controlled by, or under common control with the Adviser or Financial Institution; or (2) any officer, director, employee, agent, registered representative, relative (as defined in

ERISA section 3(15)), member of family (as defined in Code section 4975(e)(6)) of, or partner in, the Adviser or Financial Institution.

(f) Ineligible Contractual Provisions. Relief is not available under the exemption if a Financial Institution’s contract contains the following:

(1) Exculpatory provisions disclaiming or otherwise limiting liability of the Adviser or Financial Institution for a violation of the contract’s terms;

(2) Except as provided in paragraph (f)(4) of this Section, a provision under which the Plan, IRA or Retirement Investor waives or qualifies its right to bring or participate in a class action or other representative action in court in a dispute with the Adviser or Financial Institution, or in an individual or class claim agrees to an amount representing liquidated damages for breach of the contract; provided that, the parties may knowingly agree to waive the Retirement Investor’s right to obtain punitive damages or rescission of recommended transactions to the extent such a waiver is permissible under applicable state or federal law; or

(3) Agreements to arbitrate or mediate individual claims in venues that are distant or that otherwise unreasonably limit the ability of the Retirement Investors to assert the claims safeguarded by this exemption.

(4) In the event that the provision on pre-dispute arbitration agreements for class or representative claims in paragraph (f)(2) of this Section is ruled invalid by a court of competent jurisdiction, this provision shall not be a condition of this exemption with respect to contracts subject to the court’s jurisdiction unless and until the court’s decision is reversed, but all other terms of the exemption shall remain in effect.

(g) ERISA plans. Section II(a) does not apply to recommendations to Retirement Investors regarding investments in Plans that are covered by Title I of ERISA. For such investment advice, relief under the exemption is conditioned upon the Adviser and Financial Institution complying with certain provisions of Section II, as follows:

(1) Prior to or at the same time as the execution of the recommended transaction, the Financial Institution provides the Retirement Investor with a written statement of the Financial Institution’s and its Advisers’ fiduciary status, in accordance with Section II(b).

(2) The Financial Institution and the Adviser comply with the Impartial Conduct Standards of Section II(c).

(3) The Financial Institution adopts policies and procedures incorporating

the requirements and prohibitions set forth in Section II(d), and the Financial Institution and Adviser comply with those requirements and prohibitions.

(4) The Financial Institution provides the disclosures required by Section II(e).

(5) The Financial Institution and Adviser do not in any contract, instrument, or communication: Purport to disclaim any responsibility or liability for any responsibility, obligation, or duty under Title I of ERISA to the extent the disclaimer would be prohibited by ERISA section 410; purport to waive or qualify the right of the Retirement Investor to bring or participate in a class action or other representative action in court in a dispute with the Adviser or Financial Institution, or require arbitration or mediation of individual claims in locations that are distant or that otherwise unreasonably limit the ability of the Retirement Investors to assert the claims safeguarded by this exemption.

Section III—Web and Transaction-Based Disclosures

The Financial Institution must satisfy the following conditions with respect to an investment recommendation, to be covered by this exemption:

(a) Transaction Disclosure. The Financial Institution provides the Retirement Investor, prior to the transmittal of a recommended application for a Fixed Annuity Contract to the insurance company, the following disclosure, clearly and prominently, in a single written document, that:

(1) Provides a disclosure regarding the Fixed Annuity Contract that is in accordance with the most recent Annuity Disclosure Model Regulation published by the National Association of Insurance Commissioners, or its successor, as of the time of the transaction;

(2) States the Best Interest standard of care owed by the Adviser and Financial Institution to the Retirement Investor; and describes any Material Conflicts of Interest;

(3) Informs the Retirement Investor that the Retirement Investor has the right to obtain copies of the Financial Institution’s written description of its policies and procedures adopted in accordance with Section II(d), as well as specific disclosure of costs, fees and other compensation including Third Party Payments regarding recommended transactions. The costs, fees, and other compensation may be described in dollar amounts, percentages, formulas, or other means reasonably designed to present materially accurate disclosure of their scope, magnitude, and nature in

sufficient detail to permit the Retirement Investor to make an informed judgment about the costs of the transaction and about the significance and severity of the Material Conflicts of Interest. The information required under this Section must be provided to the Retirement Investor prior to the transaction, if requested prior to the transaction, and, if the request is made after the transaction, the information must be provided within 30 business days after the request; and

(4) Includes a link to the Financial Institution's Web site as required by Section III(b) and informs the Retirement Investor that: (i) Model contract disclosures or other model notices, updated as necessary on a quarterly basis, are maintained on the Web site, and (ii) the Financial Institution's written description of its policies and procedures as required under Section III(b)(1)(iv) are available free of charge on the Web site.

(5) Following disclosure of the information in Section III(a)(1), the Adviser must orally review the information with the Retirement Investor, and both the Adviser and Retirement Investor must sign the transaction disclosure and indicate that the oral review has occurred.

(6) The disclosures in subsections (2)–(4) do not have to be repeated for subsequent recommendations by the Adviser and Financial Institution to invest in the same Fixed Annuity Contract within one year of the provision of the contract disclosure in Section II(e) or a previous disclosure pursuant to this Section III(a), unless there are material changes in the subject of the disclosure.

(b) Web Disclosure. For relief to be available under the exemption for any investment recommendation, the conditions of Section III(b) must be satisfied.

(1) The Financial Institution maintains a Web site, freely accessible to the public and updated no less than quarterly, which contains:

(i) A discussion of the Financial Institution's business model and the Material Conflicts of Interest associated with that business model;

(ii) A schedule of typical contract fees and service charges, if applicable;

(iii) A model contract or other model notice of the contractual terms (if applicable) and required disclosures described in Section II(b)–(e), which are reviewed for accuracy no less frequently than quarterly and updated within 30 days if necessary;

(iv) A written description of the Financial Institution's policies and procedures that accurately describes or

summarizes key components of the policies and procedures relating to conflict-mitigation and incentive practices in a manner that permits Retirement Investors to make an informed judgment about the stringency of the Financial Institution's protections against conflicts of interest;

(v) To the extent applicable, a list of all product manufacturers and other parties with whom the Financial Institution maintains arrangements that provide Third Party Payments to either the Adviser or the Financial Institution with respect to Fixed Annuity Contracts recommended to Retirement Investors; a description of the arrangements, including a statement on whether and how these arrangements impact Adviser compensation, and a statement on any benefits the Financial Institution provides to the product manufacturers or other parties in exchange for the Third Party Payments;

(vi) Disclosure of the Financial Institution's compensation and incentive arrangements with Advisers including, if applicable, any incentives (including both cash and non-monetary compensation or awards) to Advisers for recommending particular product manufacturers or Fixed Annuity Contracts to Retirement Investors, or for Advisers to move to the Financial Institution from another firm or to stay at the Financial Institution, and a full and fair description of any payout or compensation grids, but not including information that is specific to any individual Adviser's compensation or compensation arrangement; and

(vii) A copy of the Financial Institution's most recent audited financial statements required in accordance with Section VIII(e)(2).

(viii) The Web site may describe the above arrangements with product manufacturers, Advisers, and others by reference to dollar amounts, percentages, formulas, or other means reasonably calculated to present a materially accurate description of the arrangements. Similarly, the Web site may group disclosures based on reasonably-defined categories of Fixed Annuity Contracts, product manufacturers, Advisers, and arrangements, and it may disclose reasonable ranges of values, rather than specific values, as appropriate. But, however constructed, the Web site must fairly disclose the scope, magnitude, and nature of the compensation arrangements and Material Conflicts of Interest in sufficient detail to permit visitors to the Web site to make an informed judgment about the significance of the compensation practices and Material Conflicts of

Interest with respect to transactions recommended by the Financial Institution and its Advisers.

(2) To the extent the information required by this Section is provided in other disclosures which are made public, the Financial Institution may satisfy this Section III(b) by posting such disclosures to its Web site with an explanation that the information can be found in the disclosures and a link to where it can be found.

(3) The Financial Institution is not required to disclose information pursuant to this Section III(b) if such disclosure is otherwise prohibited by law.

(4) In addition to providing the written description of the Financial Institution's policies and procedures on its Web site, as required under Section III(b)(1)(iv), Financial Institutions must provide their complete policies and procedures adopted pursuant to Section II(d) to the Department upon request.

(5) In the event that a Financial Institution determines to group disclosures as described in subsection (1)(vii), it must retain the data and documentation supporting the group disclosure during the time that it is applicable to the disclosure on the Web site, and for six years after that, and make the data and documentation available to the Department within 90 days of the Department's request.

(c)(1) The Financial Institution will not fail to satisfy the conditions in this Section III solely because it, acting in good faith and with reasonable diligence, makes an error or omission in disclosing the required information, or if the Web site is temporarily inaccessible, provided that, (i) in the case of an error or omission on the Web site, the Financial Institution discloses the correct information as soon as practicable, but not later than seven (7) days after the date on which it discovers or reasonably should have discovered the error or omission, and (ii) in the case of an error or omission with respect to the transaction disclosure, the Financial Institution discloses the correct information as soon as practicable, but not later than 30 days after the date on which it discovers or reasonably should have discovered the error or omission.

(2) To the extent compliance with the Section III disclosures requires Advisers and Financial Institutions to obtain information from entities that are not closely affiliated with them, they may rely in good faith on information and assurances from the other entities, as long as they do not know that the materials are incomplete or inaccurate. This good faith reliance applies unless the entity providing the information to

the Adviser and Financial Institution is (i) a person directly or indirectly through one or more intermediaries, controlling, controlled by, or under common control with the Adviser or Financial Institution; or (ii) any officer, director, employee, agent, registered representative, relative (as defined in ERISA section 3(15)), member of family (as defined in Code section 4975(e)(6)) of, or partner in, the Adviser or Financial Institution.

(3) The good faith provisions of this Section apply to the requirement that the Financial Institution retain the data and documentation supporting the group disclosure during the time that it is applicable to the disclosure on the Web site and provide it to the Department upon request, as set forth in subsection (b)(1)(vii) and (b)(5) above. In addition, if such records are lost or destroyed, due to circumstances beyond the control of the Financial Institution, then no prohibited transaction will be considered to have occurred solely on the basis of the unavailability of those records; and no party, other than the Financial Institution responsible for complying with subsection (b)(1)(vii) and (b)(5) will be subject to the civil penalty that may be assessed under ERISA section 502(i) or the taxes imposed by Code section 4975(a) and (b), if applicable, if the records are not maintained or provided to the Department within the required timeframes.

Section IV—Proprietary Products and Third Party Payments

(a) General. A Financial Institution that at the time of the transaction restricts Advisers' investment recommendations, in whole or part, to Proprietary Products or to Fixed Annuity Contracts that generate Third Party Payments, may rely on this exemption provided all the applicable conditions of the exemption are satisfied.

(b) Satisfaction of the Best Interest standard. The Financial Institution satisfies the Best Interest standard of Section VIII(c) as follows:

(1) Prior to or at the same time as the execution of the recommended transaction, the Retirement Investor is clearly and prominently informed in writing that the Financial Institution offers Proprietary Products or receives Third Party Payments with respect to the purchase, sale, exchange, or holding of Fixed Annuity Contracts; and the Retirement Investor is informed in writing of the limitations placed on the universe of Fixed Annuity Contracts that the Adviser may recommend to the Retirement Investor. The notice is

insufficient if it merely states that the Financial Institution or Adviser "may" limit investment recommendations based on whether the annuities are Proprietary Products or generate Third Party Payments, without specific disclosure of the extent to which recommendations are, in fact, limited on that basis;

(2) Prior to or at the same time as the execution of the recommended transaction, the Retirement Investor is fully and fairly informed in writing of any Material Conflicts of Interest that the Financial Institution or Adviser have with respect to the recommended transaction, and the Adviser and Financial Institution comply with the disclosure requirements set forth in Section III above (providing for web and transaction-based disclosure of costs, fees, compensation, and Material Conflicts of Interest);

(3) The Financial Institution documents in writing its limitations on the universe of recommended Fixed Annuity Contracts; documents in writing the Material Conflicts of Interest associated with any contract, agreement, or arrangement providing for its receipt of Third Party Payments or associated with the sale or promotion of Proprietary Products; documents in writing any services it will provide to Retirement Investors in exchange for Third Party Payments, as well as any services or consideration it will furnish to any other party, including the payor, in exchange for the Third Party Payments; reasonably concludes that the limitations on the universe of recommended Fixed Annuity Contracts and Material Conflicts of Interest will not cause the Financial Institution or its Advisers to receive compensation in excess of reasonable compensation for Retirement Investors as set forth in Section II(c)(2); reasonably determines, after consideration of the policies and procedures established pursuant to Section II(d), that these limitations and Material Conflicts of Interest will not cause the Financial Institution or its Advisers to make imprudent investment recommendations; and documents in writing the bases for its conclusions;

(4) The Financial Institution adopts, monitors, implements, and adheres to policies and procedures and incentive practices that meet the terms of Section II(d); and, in accordance with Section II(d)(3), neither the Financial Institution nor (to the best of its knowledge) any Affiliate or Related Entity uses or relies upon quotas, appraisals, performance or personnel actions, bonuses, contests, special awards, differential compensation or other actions or incentives that are intended or would

reasonably be expected to cause the Adviser to make imprudent investment recommendations, to subordinate the interests of the Retirement Investor to the Adviser's own interests, or to make recommendations based on the Adviser's considerations of factors or interests other than the investment objectives, risk tolerance, financial circumstances, and needs of the Retirement Investor;

(5) At the time of the recommendation, the amount of compensation and other consideration reasonably anticipated to be paid, directly or indirectly, to the Adviser, Financial Institution, or their Affiliates or Related Entities for their services in connection with the recommended transaction is not in excess of reasonable compensation within the meaning of ERISA section 408(b)(2) and Code section 4975(d)(2); and

(6) The Adviser's recommendation reflects the care, skill, prudence, and diligence under the circumstances then prevailing that a prudent person acting in a like capacity and familiar with such matters would use in the conduct of an enterprise of a like character and with like aims, based on the investment objectives, risk tolerance, financial circumstances, and needs of the Retirement Investor; and the Adviser's recommendation is not based on the financial or other interests of the Adviser or on the Adviser's consideration of any factors or interests other than the investment objectives, risk tolerance, financial circumstances, and needs of the Retirement Investor.

Section V—Disclosure to the Department and Recordkeeping

This Section establishes record retention and disclosure conditions that a Financial Institution must satisfy for the exemption to be available for compensation received in connection with recommended transactions.

(a) EBSA Disclosure. Before receiving compensation in reliance on the exemption in Section I, the Financial Institution notifies the Department of its intention to rely on this exemption. The notice will remain in effect until revoked in writing by the Financial Institution. The notice need not identify any Plan or IRA. The notice must be provided by email to *e-BICE@dol.gov*.

(b) Recordkeeping. The Financial Institution maintains for a period of six (6) years, in a manner that is reasonably accessible for examination, the records necessary to enable the persons described in paragraph (c) of this Section to determine whether the conditions of this exemption have been

met with respect to a transaction, except that:

(1) If such records are lost or destroyed, due to circumstances beyond the control of the Financial Institution, then no prohibited transaction will be considered to have occurred solely on the basis of the unavailability of those records; and

(2) No party, other than the Financial Institution responsible for complying with this paragraph (c), will be subject to the civil penalty that may be assessed under ERISA section 502(i) or the taxes imposed by Code section 4975(a) and (b), if applicable, if the records are not maintained or are not available for examination as required by paragraph (c), below.

(c)(1) Except as provided in paragraph (c)(2) of this Section or precluded by 12 U.S.C. 484, and notwithstanding any provisions of ERISA section 504(a)(2) and (b), the records referred to in paragraph (b) of this Section are reasonably available at their customary location for examination during normal business hours by:

(i) Any authorized employee or representative of the Department or the Internal Revenue Service;

(ii) Any fiduciary of a Plan that engaged in an investment transaction pursuant to this exemption, or any authorized employee or representative of such fiduciary;

(iii) Any contributing employer and any employee organization whose members are covered by a Plan described in paragraph (c)(1)(ii), or any authorized employee or representative of these entities; or

(iv) Any participant or beneficiary of a Plan described in paragraph (c)(1)(ii), IRA owner, or the authorized representative of such participant, beneficiary or owner; and

(2) None of the persons described in paragraph (c)(1)(ii)–(iv) of this Section are authorized to examine records regarding a recommended transaction involving another Retirement Investor, privileged trade secrets or privileged commercial or financial information of the Financial Institution, or information identifying other individuals.

(3) Should the Financial Institution refuse to disclose information on the basis that the information is exempt from disclosure, the Financial Institution must, by the close of the thirtieth (30th) day following the request, provide a written notice advising the requestor of the reasons for the refusal and that the Department may request such information.

(4) Failure to maintain the required records necessary to determine whether the conditions of this exemption have

been met will result in the loss of the exemption only for the transaction or transactions for which records are missing or have not been maintained. It does not affect the relief for other transactions.

Section VI—Exemption for Purchases of Fixed Annuity Contracts

(a) In general. In addition to prohibiting fiduciaries from receiving compensation from third parties and compensation that varies based on their investment advice, ERISA and the Internal Revenue Code prohibit the purchase by a Plan, participant or beneficiary account, or IRA of a Fixed Annuity Contract from an insurance company that is a service provider to the Plan or IRA. This exemption permits a Plan, participant or beneficiary account, or IRA to engage in a purchase with a Financial Institution that is a service provider or other party in interest or disqualified person to the Plan or IRA. This exemption is provided because Fixed Annuity Contract transactions often involve prohibited purchases involving entities that have a pre-existing party in interest relationship to the Plan or IRA.

(b) Covered transactions. The restrictions of ERISA section 406(a)(1)(A) and (D), and the sanctions imposed by Code section 4975(a) and (b), by reason of Code section 4975(c)(1)(A) and (D), shall not apply to the purchase of a Fixed Annuity Contract by a Plan, participant or beneficiary account, or IRA, from a Financial Institution that is a party in interest or disqualified person.

(c) The following conditions are applicable to this exemption:

(1) The transaction is effected by the Financial Institution in the ordinary course of its business;

(2) The compensation, direct or indirect, for any services rendered by the Financial Institution and its Affiliates and Related Entities is not in excess of reasonable compensation within the meaning of ERISA section 408(b)(2) and Code section 4975(d)(2); and

(3) The terms of the transaction are at least as favorable to the Plan, participant or beneficiary account, or IRA as the terms generally available in an arm's length transaction with an unrelated party.

(d) *Exclusions:* The exemption in this Section VI does not apply if:

(1) The Plan is covered by Title I of ERISA and (i) the Adviser, Financial Institution or any Affiliate is the employer of employees covered by the Plan, or (ii) the Adviser and Financial Institution is a named fiduciary or plan

administrator (as defined in ERISA section 3(16)(A)) with respect to the Plan, or an affiliate thereof, that was selected to provide advice to the plan by a fiduciary who is not Independent.

(2) The compensation is received as a result of investment advice to a Retirement Investor generated solely by an interactive Web site in which computer software-based models or applications provide investment advice based on personal information each investor supplies through the Web site without any personal interaction or advice from an individual Adviser (*i.e.*, “robo-advice”); or

(3) The Adviser has or exercises any discretionary authority or discretionary control with respect to the recommended transaction.

Section VII—Exemption for Pre-Existing Transactions

(a) In general. ERISA and the Internal Revenue Code prohibit Advisers, Financial Institutions and their Affiliates and Related Entities from receiving compensation that varies based on their investment advice. Similarly, fiduciary advisers are prohibited from receiving compensation from third parties in connection with their advice. Some Advisers and Financial Institutions did not consider themselves fiduciaries within the meaning of 29 CFR 2510–3.21 before the applicability date of the amendment to 29 CFR 2510–3.21 (the Applicability Date). Other Advisers and Financial Institutions entered into transactions involving Plans, participant or beneficiary accounts, or IRAs before the Applicability Date, in accordance with the terms of a prohibited transaction exemption that has since been amended. This exemption permits Advisers, Financial Institutions, and their Affiliates and Related Entities, to receive compensation in connection with a Plan's, participant or beneficiary account's or IRA's purchase, exchange, or holding of a Fixed Annuity Contract that was acquired prior to the Applicability Date, as described and limited below.

(b) Covered transaction. Subject to the applicable conditions described below, the restrictions of ERISA section 406(a)(1)(A), 406(a)(1)(D) and 406(b) and the sanctions imposed by Code section 4975(a) and (b), by reason of Code section 4975(c)(1)(A), (D), (E) and (F), shall not apply to the receipt of compensation by an Adviser, Financial Institution, and any Affiliate and Related Entity, as a result of investment advice (including advice to hold) provided to a Plan, participant or beneficiary or IRA owner in connection

with the purchase, or holding of a fixed annuity (i) that was acquired before the Applicability Date, or (ii) that was acquired pursuant to a recommendation to continue to adhere to a systematic purchase program established before the Applicability Date. This Exemption for Pre-Existing Transactions is conditioned on the following:

(1) The compensation is received pursuant to an agreement, arrangement or understanding that was entered into prior to the Applicability Date and that has not expired or come up for renewal post-Applicability Date;

(2) The purchase, exchange, holding or sale of the investment property was not otherwise a non-exempt prohibited transaction pursuant to ERISA section 406 and Code section 4975 on the date it occurred;

(3) The compensation is not received in connection with the Plan's, participant or beneficiary account's or IRA's investment of additional amounts in the previously acquired investment vehicle;

(4) The amount of the compensation paid, directly or indirectly, to the Adviser, Financial Institution, or their Affiliates or Related Entities in connection with the transaction is not in excess of reasonable compensation within the meaning of ERISA section 408(b)(2) and Code section 4975(d)(2); and

(5) Any investment recommendations made after the Applicability Date by the Financial Institution or Adviser with respect to the investment property reflect the care, skill, prudence, and diligence under the circumstances then prevailing that a prudent person acting in a like capacity and familiar with such matters would use in the conduct of an enterprise of a like character and with like aims, based on the investment objectives, risk tolerance, financial circumstances, and needs of the Retirement Investor, and are made without regard to the financial or other interests of the Adviser, Financial Institution or any Affiliate, Related Entity, or other party.

Section VIII—Definitions

For purposes of this exemption:

(a) "Adviser" means an individual who:

(1) Is a fiduciary of the Plan or IRA by reason of the provision of investment advice described in ERISA section 3(21)(A)(ii) or Code section 4975(e)(3)(B), or both, and the applicable regulations, with respect to the assets of the Plan or IRA involved in the recommended transaction;

(2) Is an employee, independent contractor, or agent of a Financial Institution; and

(3) Satisfies the federal and state regulatory and licensing requirements of insurance laws with respect to the covered transaction, as applicable

(b) "Affiliate" of an Adviser or Financial Institution means—

(1) Any person directly or indirectly through one or more intermediaries, controlling, controlled by, or under common control with the Adviser or Financial Institution. For this purpose, "control" means the power to exercise a controlling influence over the management or policies of a person other than an individual;

(2) Any officer, director, partner, employee, or relative (as defined in ERISA section 3(15)), of the Adviser or Financial Institution; and

(3) Any corporation or partnership of which the Adviser or Financial Institution is an officer, director, or partner.

(c) Investment advice is in the "Best Interest" of the Retirement Investor when the Adviser and Financial Institution providing the advice act with the care, skill, prudence, and diligence under the circumstances then prevailing that a prudent person acting in a like capacity and familiar with such matters would use in the conduct of an enterprise of a like character and with like aims, based on the investment objectives, risk tolerance, financial circumstances, and needs of the Retirement Investor, without regard to the financial or other interests of the Adviser, Financial Institution or any Affiliate, Related Entity, or other party.

(d) "Fixed Annuity Contract" means an annuity contract that satisfies applicable state standard nonforfeiture laws at the time of issue and the benefits of which do not vary, in whole or in part, on the basis of the investment experience of a separate account or accounts maintained by the insurer. Fixed Annuity Contracts includes fixed rate annuity contracts and fixed indexed annuity contracts.

(e) "Financial Institution" means an insurance intermediary that has a direct written contract regarding the distribution of Fixed Annuity Contracts with both (i) the insurance company issuing the Fixed Annuity Contract and (ii) the Adviser or another intermediary (sub-intermediary) that has a direct written contract with the Adviser, and that also:

(1) Satisfies the applicable licensing requirements of the insurance laws of each state in which it conducts business;

(2) Has financial statements that are audited annually by an Independent certified public accountant;

(3) Maintains, to satisfy potential liability under ERISA or the Code as a result of this exemption, or any contract entered into pursuant to Section II(a), in an aggregate amount which must be at least 1% of the average annual amount of premium sales of Fixed Annuity Contracts sold by the Financial Institution to Retirement Investors pursuant to this exemption over its prior three fiscal years:

(A) Fiduciary liability insurance that:

(i) Applies solely to actions brought by the Department of Labor, the Department of Treasury, the Pension Benefit Guaranty Corporation, Retirement Investors or plan fiduciaries (or their representatives) relating to Fixed Annuity Contract transactions, including but not limited to actions for failure to comply with the exemption or any contract entered into pursuant to Section II(a);

(ii) does not contain an exclusion of Fixed Annuity Contracts;

(iii) has a deductible that does not exceed 5% of the policy limits; and

(iv) does not exclude claims coverage based on a self-insured retention or otherwise specify an amount that the Financial Institution must pay before a claim is covered by the fiduciary liability policy;

(B) cash, bonds, bank certificates of deposit, U.S. Treasury Obligations that are unencumbered and not subject to security interests or other creditors, or

(C) a combination of (A) and (B); and

(4) Has transacted sales of Fixed Annuity Contracts averaging at least \$1.5 billion in premiums per fiscal year over its prior three fiscal years;

(f) "Independent" means a person that:

(1) Is not the Adviser, the Financial Institution or any Affiliate relying on the exemption;

(2) Does not have a relationship to or an interest in the Adviser, the Financial Institution or Affiliate that might affect the exercise of the person's best judgment in connection with transactions described in this exemption; and

(3) Does not receive or is not projected to receive within the current federal income tax year, compensation or other consideration for his or her own account from the Adviser, Financial Institution or Affiliate in excess of 2% of the person's annual revenues based upon its prior income tax year.

(g) "Individual Retirement Account" or "IRA" means any account or annuity described in Code section 4975(e)(1)(B) through (F), including, for example, an

individual retirement account described in section 408(a) of the Code and a health savings account described in Code section 223(d).

(h) A “Material Conflict of Interest” exists when an Adviser or Financial Institution has a financial interest that a reasonable person would conclude could affect the exercise of its best judgment as a fiduciary in rendering advice to a Retirement Investor.

(i) “Plan” means any employee benefit plan described in section 3(3) of ERISA and any plan described in section 4975(e)(1)(A) of the Code.

(j) “Proprietary Product” means a product that is managed, issued or sponsored by the Financial Institution or any of its Affiliates.

(k) “Related Entity” means any entity other than an Affiliate in which the Adviser or Financial Institution has an interest which may affect the exercise of its best judgment as a fiduciary.

(l) A “Retail Fiduciary” means a fiduciary of a Plan or IRA that is not described in section (c)(1)(i) of the Regulation (29 CFR 2510.3–21(c)(1)(i)).

(m) “Retirement Investor” means—

(1) A participant or beneficiary of a Plan subject to Title I of ERISA or described in section 4975(e)(1)(A) of the Code, with authority to direct the investment of assets in his or her Plan account or to take a distribution,

(2) The beneficial owner of an IRA acting on behalf of the IRA, or

(3) A Retail Fiduciary with respect to a Plan subject to Title I of ERISA or described in section 4975(e)(1)(A) of the Code or IRA.

(n) “Third-Party Payments” include sales charges and insurance commissions when not paid directly by the Plan, participant or beneficiary account, or IRA; gross dealer concessions; revenue sharing payments; distribution, solicitation or referral fees; volume-based fees; fees for seminars and educational programs; and any other compensation, consideration or financial benefit provided to the Financial Institution or an Affiliate or Related Entity by a third party as a result of a transaction involving a Plan, participant or beneficiary account, or IRA.

Section IX—Transition Period for Exemption

(a) In general. ERISA and the Internal Revenue Code prohibit fiduciary advisers to Plans and IRAs from receiving compensation that varies based on their investment advice. Similarly, fiduciary advisers are prohibited from receiving compensation from third parties in connection with their advice. This transition period

provides relief from the restrictions of ERISA section 406(a)(1)(D), and 406(b) and the sanctions imposed by Code section 4975(a) and (b) by reason of Code section 4975(c)(1) (D), (E), and (F) for the period from April 10, 2017, to August 15, 2018 (the Transition Period) for Advisers, Financial Institutions, and their Affiliates and Related Entities, to receive such otherwise prohibited compensation subject to the conditions described in Section IX(d).

(b) Covered transactions. This provision permits Advisers, Financial Institutions, and their Affiliates and Related Entities to receive compensation as a result of their provision of investment advice within the meaning of ERISA section 3(21)(A)(ii) or Code section 4975(e)(3)(B) to a Retirement Investor regarding Fixed Annuity Contracts during the Transition Period.

(c) Exclusions. This provision does not apply if:

(1) The Plan is covered by Title I of ERISA, and (i) the Adviser, Financial Institution or any Affiliate is the employer of employees covered by the Plan, or (ii) the Adviser or Financial Institution is a named fiduciary or plan administrator (as defined in ERISA section 3(16)(A)) with respect to the Plan, or an Affiliate thereof, that was selected to provide advice to the Plan by a fiduciary who is not Independent;

(2) The compensation is received as a result of investment advice to a Retirement Investor generated solely by an interactive Web site in which computer software-based models or applications provide investment advice based on personal information each investor supplies through the Web site without any personal interaction or advice from an individual Adviser (*i.e.*, “robo-advice”); or

(3) The Adviser has or exercises any discretionary authority or discretionary control with respect to the recommended transaction.

(d) Conditions. The provision is subject to the following conditions:

(1) Before receiving compensation in reliance on the exemption in this Section IX, the Financial Institution notifies the Department of its intention to rely on this exemption and makes the following representation to the Department: “[Name of Financial Institution] is presently taking steps to put in place the systems necessary to comply with Section I of the Best Interest Contract Exemption for Insurance Intermediaries, and fully intends to comply with all applicable conditions for such relief after the expiration of the transition period.” The notice will remain in effect until revoked in writing by the Financial

Institution. The notice need not identify any Plan or IRA. The notice must be provided by email to e-BICE@dol.gov.
