

be welcome. What are the barriers to maintaining these controls? What factors are currently not being controlled that you feel are relevant to this effort?

3. How do you monitor for N95 respirator and high-level protective surgical gown deterioration? What are signs of deterioration you consider (*e.g.*, cosmetic, box damage, expiration dates)? What are barriers in determining deterioration?

4. If applicable, please describe your process for PPE rotation. For example, please describe your process for ensuring new products are purchased upon expiration of shelf-life for currently stockpiled N95 respirators/high-level surgical gowns. Quantity estimates of the stockpiled N95 respirator/surgical gown inventory exceeding the recommended shelf life would be valuable to the design of this study.

5. If stockpiled N95 respirators/surgical gowns are purchased from a distributor (*i.e.* not directly from the manufacturer), please describe your process for obtaining information on storage practices from these distributors.

6. What types of controls are available in the shipping environment? Do they instruct points-of-use on storage requirements? Other use limitations/instructions?

7. Please provide information about the N95 respirator and high-level surgical gown inventory available in the stockpile, including brands, models, and related estimated numbers to help us better understand the type and quantities of PPE that may be affected by this research.

Chief of Staff, National Institute for Occupational Safety and Health, Centers for Disease Control and Prevention.
