On December 23, 2016, the Commission released a Report and Order in IB Docket No. 13–213, FCC 16–181, titled “Terrestrial Use of the 2473–2495 MHz Band for Low-Power Mobile Broadband Networks; Amendments to Rules for the Ancillary Terrestrial Component (ATC) of Mobile Satellite Service Systems.” The revisions to 47 CFR part 25 adopted in the Report and Order remove a portion of the information collection requirements as it relates to a newly proposed low power broadband network, as described in document FCC 16–181. These revisions enable ATC licensees to operate low-power ATC using licensed

spectrum in the 2483.5–2495 MHz band. Although the original low-power ATC proposal described the use of the adjacent 2473–2483.5 MHz band, low-power terrestrial operations at 2473–2483.5 MHz were not authorized by the Report and Order. The revisions provide an exception for low-power ATC from the requirements contained in section 25.149(b) of the Commission’s rules, which require detailed showings concerning satellite system coverage and replacement satellites. The revisions also provide an exception from a rule requiring integrated service, which generally requires that service handsets be capable of communication with both satellites and terrestrial base stations. Accordingly, the provider of low-power ATC would be relieved from certain burdens that are currently in place in the existing information collection. To qualify for authority to deploy a low-power terrestrial network in the 2483.5–2495 MHz band, an ATC licensee would need to certify that it will utilize a Network Operating System to manage its terrestrial low-power network. Although the Report and Order also created new technical requirements for equipment designed to communicate with a low-power ATC network, satisfaction of these technical requirements relieves ATC licensees from meeting other technical requirements that apply to ATC systems generally. We also had a revision to this information collection to reflect the elimination of the elements of this information collection for 2 GHz MSS. See 78 FR 48621–22.

The purposes of the existing information collection are to obtain information necessary for licensing operators of Mobile-Satellite Service (MSS) networks to provide ancillary services in the U.S. via terrestrial base stations (Ancillary Terrestrial Components, or ATCs); obtain the legal and technical information required to facilitate the integration of ATCs into MSS networks in the L-Band and the 1.6/2.4 GHz Bands; and to ensure that ATC licensees meet the Commission’s legal and technical requirements to develop and maintain their MSS networks and operate their ATC systems without causing harmful interference to other radio systems.
