

wireless measurement science activities at NIST.

Research results will be used as input into best practices reports on the performance measurement and use of industrial wireless systems in manufacturing applications. Integration of equipment into the testbed will be conducted at the expense of the responder. Participants will be expected to loan their equipment, through a Cooperative Research and Development Agreement (CRADA) with NIST, for a period of typically 6 months for use in the testbed. Participants will be expected to contribute in-kind engineering resources necessary to integrate and operate their equipment in the Testbed, including making any needed modifications to their equipment to achieve compatibility with Testbed interfaces, at no cost to NIST. Participants will have access to NIST test equipment associated with the Testbed, subject to availability. Industry participants are also encouraged to describe candidate use cases for possible inclusion in Testbed activities. More information on the NIST Wireless Systems for Industrial Environments may be found at <https://www.nist.gov/programs-projects/wireless-systems-industrial-environments>.

Interested participants should respond by sending an email to iwslab@nist.gov or writing to the address listed in the **ADDRESSES** section. Inquiry emails should include a brief explanation of the purpose statement no more than 500 words explaining the purpose of collaboration and the benefit to NIST industrial wireless research objectives. The email may include a brief research plan no more than two (2) pages in length in PDF format. Product marketing materials are not acceptable as a research plan.

The deadline for responding to this opportunity is June 30, 2017. NIST will accept up to five responders as collaborators in the proposed project, on a first come, first-served basis. Due to limited resources, the proposed research project will be limited to a maximum of five collaborators. Acceptance of participants will be aimed at achieving a diversity of industrial wireless equipment in the Testbed, and will depend on the level of commitment of the participant, the proposed equipment and engineering support resources, and the availability of NIST resources to support incorporation of equipment into the Testbed.
