SUPPLEMENTARY INFORMATION: On March 24, 2017 (82 FR 14987), the NRC published a direct final rule amending § 72.214 of title 10 of the *Code of Federal Regulations* by revising the "List of approved spent fuel storage casks" to add the TN Americas NUHOMS® EOS Dry Spent Fuel Storage System as CoC No. 1042. The NUHOMS® EOS System provides

horizontal storage of high burnup spent pressurized water reactor (PWR) and boiling water reactor (BWR) fuel assemblies in dry shielded canisters (DSCs). The new PWR and BWR DSCs are the EOS-37PTH DSC and the EOS-89BTH DSC, respectively.

In the direct final rule, the NRC stated that if no significant adverse comments were received, the direct final rule would become effective on June 7, 2017. As described more fully in the direct final rule, a significant adverse comment is a comment where the commenter explains why the rule would be inappropriate, including challenges to the rule's underlying premise or approach, or would be ineffective or unacceptable without a change. Because no significant adverse comments were received, the direct final rule will become effective as scheduled.

The final CoC, technical specifications, and the final Safety Evaluation Report for CoC No. 1042 are available in ADAMS under Package Accession No. ML17116A277.

Dated at Rockville, Maryland, this 24th day of May 2017.

SUPPLEMENTARY INFORMATION:

Reason for No Prior Notice and Comment Before Adoption

The substance of these special conditions has been subjected to the notice and comment period previously and has been derived without

Therefore, the FAA has determined that prior public notice and comment are unnecessary, impracticable, and contrary to the public interest, and finds good cause exists for adopting these special conditions upon issuance. The FAA is requesting comments to allow interested persons to submit views that may not have been submitted in response to the prior opportunities for comment.

We invite interested people to take part in this rulemaking by sending written comments, data, or views. The most helpful comments reference a specific portion of the special conditions, explain the reason for any recommended change, and include supporting data.

We will consider all comments we receive by the closing date for comments. We will consider comments filed late if it is possible to do so without incurring additional expense or delay. We may change these special conditions based on the comments we receive.

Background and Discussion

On March 20, 2015, Bell applied for a supplemental type certificate (STC) for installation of an optional SAR AFCS in certain Model 412EP helicopters. The Model 412EP helicopter, approved under Type Certificate No. H4SW, is a 14 CFR part 29 transport category helicopter certificated in both Category A and Category B and for operation under instrument flight rules under the requirements of Appendix B to Part 29. Bell designated certain serial-numbered Model 412EP helicopters for a specific configuration commercially identified as "412EPI." The 412 EPI configuration includes the following changes from the 412EP: Installation of the Pratt & Whitney Canada Model PT6T-9 Twin Power Section Turboshift Engine with Electronic Engine Control, and cockpit instruments and avionics replacement with the Bell BasiX-Pro® Integrated Avionics System. This rotorcraft has a maximum take-off weight of 12,200 pounds. It carries up to 13 passengers with maximum external load of almost 6,614 lbs. and a range up to 609 miles.

The use of dedicated AFCS upper modes, in which a fully coupled autopilot provides operational SAR profiles, is needed for SAR operations conducted over water in offshore areas clear of obstructions. The SAR modes enable the helicopter pilot to fly fully
