k. *Description of Request:* GRDA requests a temporary variance to deviate from the Article 401 reservoir elevation rule curve during the period of August 16, 2017 through October 31, 2017. GRDA says the requested variance would protect safety and property by reducing the risk of vessel groundings in late summer, improve recreation during a peak recreation season, and provide additional water storage to assist in making releases for maintenance of dissolved oxygen concentrations downstream.

This temporary variance request is separate from the application GRDA filed May 6, 2016, which proposes a permanent amendment of the project's Article 401 rule curve requirements. The May 6, 2016 permanent amendment application is currently under Commission review.

Under GRDA's proposed temporary variance, between August 16 and September 15, 2017, GRDA would maintain the reservoir at elevation 743 feet Pensacola Datum (PD), which is up to two feet higher than the current rule curve. Between September 16 and September 30, the elevation would be lowered from 743 to 742 feet PD, which is up to two feet higher than the current rule curve. Between October 1 and October 31, the reservoir would then be maintained at elevation 742 feet PD, which is up to one foot higher than the current rule curve. After October 31, reservoir elevations would follow the current rule curve.

As part of its application, GRDA includes a Storm Adaptive Management Plan that would be followed to address high water conditions upstream and downstream of Grand Lake during major precipitation events in the river basin. GRDA also includes a Drought Adaptive Management Plan that would be followed to determine project operation, including deviations from the rule curve elevations, to allow releases for maintenance of downstream water quality and reliable operation of GRDA's downstream Salina Pumped Storage Project if certain drought conditions occur.
