stating that participation would be limited to CAHs in four of the States. To apply, CAHs were required to meet the eligibility requirements in the authorizing legislation, and, in addition, to describe a proposal to enhance health-related services that would complement those currently provided by the CAH and better serve the community’s needs. In addition, in the RFA, CMS interpreted the eligible entity definition in the statute as meaning a CAH that receives funding through the MHRFP. The RFA identified four interventions, under which specific waivers of Medicare payment rules would allow for enhanced payment for telehealth, skilled nursing facility/nursing facility beds, ambulance services, and home health services, respectively. These waivers were formulated with the goal of increasing access to care with no net increase in costs.

Ten CAHs were selected for participation in the demonstration, which started on August 1, 2016. These CAHs are located in Montana, Nevada and North Dakota, and they are participating in three of the four interventions identified in the FY 2017 IPPS/LTCH PPS final rule. Eight CAHs are participating in the telehealth intervention, three CAHs are participating in the skilled nursing facility/nursing facility bed intervention, and two CAHs are participating in the ambulance services intervention. Each CAH is allowed to participate in more than one of the interventions. None of the selected CAHs are participants in the home health intervention, which was the fourth intervention proposed in the RFA.

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57064 through 57065), we finalized a policy to address the budget neutrality requirement for the demonstration. As explained in the FY 2017 IPPS/LTCH PPS final rule, we based our selection of CAHs for participation with the goal of maintaining the budget neutrality of the demonstration on its own terms (that is, the demonstration will produce savings from reduced transfers and admissions to other health care providers, thus offsetting any increase in payments resulting from the demonstration). However, because of the small size of this demonstration and uncertainty associated with projected Medicare utilization and costs, we adopted a contingency plan to ensure that the budget neutrality requirement in section 123 of Public Law 110–275 is met. If analysis of claims data for Medicare beneficiaries receiving services at each

of the participating CAHs, as well as from other data sources, including cost reports for these CAHs, shows that increases in Medicare payments under the demonstration during the 3-year period are not sufficiently offset by reductions elsewhere, we will recoup the additional expenditures attributable to the demonstration through a reduction in payments to all CAHs nationwide. Because of the small scale of the demonstration, we indicated that we did not believe it would be feasible to implement budget neutrality by reducing payments to only the participating CAHs. Therefore, in the event that this demonstration is found to result in aggregate payments in excess of the amount that would have been paid if this demonstration were not implemented, we will comply with the budget neutrality requirement by reducing payments to all CAHs, not just those participating in the demonstration. We stated that we believe it is appropriate to make any payment reductions across all CAHs because the FCHIP demonstration is specifically designed to test innovations that affect delivery of services by the CAH provider category. We explained our belief that the language of the statutory budget neutrality requirement at section 123(g)(1)(B) of Public Law 110–275 permits the agency to implement the budget neutrality provision in this manner. The statutory language merely refers to ensuring that aggregate payments made by the Secretary do not exceed the amount which the Secretary estimates would have been paid if the demonstration project was not implemented, and does not identify the range across which aggregate payments must be held equal.

Based on actuarial analysis using cost report settlements for FYs 2013 and 2014, the demonstration is projected to satisfy the budget neutrality requirement and likely yield a total net savings. For the FY 2017 IPPS/LTCH PPS final rule, we estimated that the total impact of the payment recoupment would be no greater than 0.03 percent of CAHs’ total Medicare payments within one fiscal year (that is, Medicare Part A and Part B). The final budget neutrality estimates for the FCHIP demonstration will be based on the demonstration period, which is August 1, 2016 through July 31, 2019.

The demonstration is projected to impact payments to participating CAHs under both Medicare Part A and Part B. As stated in the FY 2017 IPPS/LTCH PPS final rule, in the event the demonstration is found not to have been budget neutral, any excess costs will be recouped over a period of 3 cost

reporting years, beginning in CY 2020. The 3-year period for recoupment will allow for a reasonable timeframe for the payment reduction and to minimize any impact on CAHs' operations. Therefore, because any reduction to CAH payments in order to recoup excess costs under the demonstration will not begin until CY 2020, this policy will have no impact for any national payment system for FY 2018.

We did not receive any public comments on our discussion of this demonstration in the proposed rule.

### 3. Physician Certification Requirement for Payment of Inpatient CAH Services Under Medicare Part A

#### a. Background

For inpatient CAH services to be payable under Medicare Part A, section 1814(a)(8) of the Act requires that a physician certify that the individual may reasonably be expected to be discharged or transferred to a hospital within 96 hours after admission to the CAH. The regulations implementing this statutory requirement are located at 42 CFR 424.15.

We most recently addressed the 96-hour certification requirement in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50163 through 50165). In that rule, we finalized a policy regarding the timing of this physician certification requirement. We revised the regulations such that all physician certification requirements must be completed, signed, and documented in the medical record no later than 1 day before the date on which the claim for payment for the inpatient CAH service is submitted. This policy change was effective October 1, 2014. Prior to that revision, our policy, which was in effect during FY 2014, had been that the certification began with the order for inpatient admission and was required to be completed, signed, and documented in the medical record prior to discharge.

In addition to this change regarding the timing of the 96-hour certification requirement, we also provided a general review of this certification requirement in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50165). We stated that because the statutory requirement at section 1814(a)(8) of the Act is based on an expectation, if a physician certifies, in good faith, that an individual may reasonably be expected to be discharged or transferred to a hospital within 96 hours after admission to the CAH and then something unforeseen occurs that causes the individual to stay longer at the CAH, Medicare will pay for the costs of treating that patient and there would not be a problem with regard to the CAH

designation as long as that individual's stay does not cause the CAH to exceed its 96-hour annual average condition of participation (CoP) requirement under 42 CFR 485.620(b) (which we note is separate and distinct from the 96-hour physician certification requirement). However, if a physician cannot in good faith certify that an individual may reasonably be expected to be discharged or transferred within 96 hours after admission to the CAH, the CAH will not receive Medicare Part A payment for any portion of that individual's inpatient stay (79 FR 50165). We further noted that time as an outpatient at the CAH is not included in applying the 96-hour requirement, nor does time in a CAH swing bed, which is being used to provide skilled nursing services, count towards the 96-hour requirement. The clock for the 96 hours only begins once the individual is admitted to the CAH as an inpatient.

#### b. Notice Regarding Changes to Instructions for the Review of the CAH 96-Hour Certification Requirement

As discussed in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20007), based on feedback from stakeholders, we reviewed the CAH 96-hour certification requirement to determine if there were ways to minimize providers' concerns regarding this requirement. We noted that the requirement is statutory and cannot be modified through regulation. However, we do have discretion to determine how CMS will prioritize monitoring and enforcement of the requirement. In order to minimize the concerns of CAHs with respect to the 96-hour certification requirement, in the FY 2018 IPPS/LTCH PPS proposed rule, we provided notice that CMS will direct Quality Improvement Organizations (QIOs), Medicare Administrative Contractors (MACs), the Supplemental Medical Review Contractor (SMRC), and Recovery Audit Contractors (RACs) to make the CAH 96-hour certification requirement a low priority for medical record reviews conducted on or after October 1, 2017. We stated that this means that, absent concerns of probable fraud, waste, or abuse, these contractors will not conduct medical record reviews with respect to the 96-hour certification requirement. Reviews by other entities, including, but not limited to, Zone Program Integrity Contractors (ZPICs), the Office of Inspector General, and the Department of Justice will continue as appropriate. Quality reviews and automated reviews (for example, those reviews that do not involve medical records) will also continue as appropriate.

We stated that, in the past, RACs have never performed medical record reviews for CAH claims, and we will not approve medical record review of CAHs for only the 96-hour certification requirement. We provided notice that, beginning October 1, 2017, CMS will direct the QIOs, MACs, and the SMRC to make medical record review of CAHs for only the 96-hour certification requirement a low priority. We stated that QIOs and MACs may continue to conduct medical record review of CAH claims for the purposes of verifying compliance with other requirements, such as beneficiary complaints, quality of care reviews, higher weighted DRG reviews, readmission reviews, and the requirement that procedures be medically necessary.

In the FY 2018 IPPS/LTCH PPS proposed rule, we stated that, under the revised instructions to contractors, CAHs will not receive any medical record requests from MACs, RACs, QIOs, or the SMRC related to the 96-hour certification requirement unless CMS or its contractors find evidence of gaming or a failure to comply with CMS' provider screening and revalidation requirements, or if medical review is needed for other issues. If this occurs, the MACs, RACs, QIOs, or the SMRC could also review the 96-hour certification requirement. In addition, if data analysis or other information indicates that possible fraud exists, CAHs may also receive medical record requests for the 96-hour certification requirement.

*Comment:* Commenters supported CMS' notice in the FY 2018 IPPS/LTCH PPS proposed rule that, with respect to the 96-hour certification requirement, CMS is directing QIOs, MACs, the SMRC, and RACs to make the CAH 96-hour certification requirement a low priority for medical record reviews conducted on or after October 1, 2017.

Commenters requested permanent removal of the 96-hour certification requirement, and many noted they are continuing to advocate for a legislative solution.

Commenters stated they appreciated CMS recognizing that the 96-hour certification requirement could hinder the promotion of essential and life-saving health care services to rural America. Commenters also noted they appreciated CMS recognizing the conflict between the 96-hour certification requirement and the 96-hour annual average CoP requirement, as well as the administrative complexity associated with the certification requirement. Some commenters urged CMS to finalize the proposed notice so that CAHs can be assured that the 96-

hour certification requirement will not be the subject of future audits. Other commenters stated that providing notice that the CAH 96-hour certification requirement is a low priority for medical record reviews is a positive first step. One commenter stated that the notice demonstrates that CMS is aware of the problems inherent in the 96-hour certification requirement, and asked CMS to provide a solution for these problems in future rulemaking that goes beyond instructing contractors to forego reviews of medical records associated with the 96-hour certification requirement apart from instances where there are specific concerns related to program integrity.

Other commenters stated they appreciated CMS' notice but were concerned that the notice, as included in the proposed rule, is too ambiguous because it does not remove the 96-hour certification requirement from the statute, and, therefore, CAHs are still at risk for penalties. The commenters believed there would be varying levels of enforcement of the 96-hour certification because of both broad definitions and concerns of fraud, waste and abuse. They encouraged CMS to finalize permanent removal of the 96-hour certification requirement to give CAHs certainty that CMS will not engage in future audits related to the 96-hour certification requirement.

One commenter appreciated the recognition that the 96-hour certification requirement is burdensome and unnecessary. However, the commenter indicated that the notice regarding the 96-hour certification requirement included in the proposed rule is not a permanent moratorium. The commenter stated that CAHs must still comply with the requirement and, therefore, can still be audited for noncompliance. The commenter expressed concern regarding the impact on large health systems where failures of one hospital in the system can result in consequences for the entire system. The commenter stated that the notice included in the proposed rule "muddies the waters" and urged CMS to eliminate the 96-hour certification requirement.

Commenters stated that, while the notice provides some relief, it does not remove the 96-hour certification requirement from statute, and, therefore, there are concerns that CAHs may still be at risk for penalties, including liability under the False Claims Act, as well as outside auditors using the 96-hour certification requirement to target and penalize CAHs.

*Response:* We appreciate commenters' support of the notice included in the proposed rule regarding the 96-hour

certification requirement. In this final rule, we are reiterating that CMS will direct QIOs, MACs, the SMRC, and RACs to make the CAH 96-hour certification requirement a low priority for medical record reviews conducted on or after October 1, 2017. CAHs should not expect to receive any medical record requests from QIOs, MACs, RACs, or the SMRC related to the 96-hour certification requirement unless CMS or its contractors find evidence of gaming or a failure to comply with CMS' provider screening and revalidation requirements, or if medical review is needed for other issues. As commenters have noted, the 96-hour certification requirement is statutory; therefore, removal of this requirement requires legislative action.

*Comment:* Commenters expressed their concerns with respect to the 96-hour certification requirement in general. Commenters stated that while CAHs may meet the 96-hour annual average length of stay CoP requirement, they also provide medical services that require inpatient stays of more than 96 hours. In these situations, CAHs cannot adhere to the 96-hour certification requirement because a physician cannot, in good faith, certify that the beneficiary's stay will be 96 hours or less. In this scenario, if the 96-hour certification requirement were to be enforced, a CAH would not receive payment for the specific inpatient service and, as a result, patients would no longer have access to critical services that require an inpatient length of stay of more than 96 hours. Commenters further noted that because Medicare payments comprise approximately 47 percent of CAHs' revenues, any change in these payments is difficult to absorb and affects CAHs' ability to provide care to those living in rural areas.

One commenter stated that from the inception of the CAH program through late 2013, the 96-hour annual average CoP requirement provided CAHs with greater flexibility within the CAH designation process. The commenter stated that strict enforcement of the 96-hour certification requirement leads to unnecessary red tape and barriers for CAHs as well as eliminates the flexibility to allow general surgical services to be provided by high quality local providers. The commenter stated that the 96-hour certification requirement is not consistent with congressional intent to provide CAHs with greater flexibility. The commenter referenced the change made as part of the Balanced Budget Refinement Act of 1999 (Pub. L. 106-113), which amended the CAH CoP length of stay requirement such that it became based on an annual

average number of hours. The commenter stated that the 96-hour certification requirement limits access to rural health care because it does not permit providers to focus on patient care. The commenter further stated that the 96-hour certification requirement interferes with practitioner judgment because high quality and qualified local providers are placed in a situation where they cannot care for their patients, and therefore patients have to travel further from home to receive care. The commenter believed these transfers result in additional Medicare expenditures because it is 2.5 percent less expensive to provide the same Medicare services in a rural setting versus an urban or suburban setting. The commenter referred to a study published in the *Journal of the American Medical Association* (JAMA), which stated that Medicare expenditures for minor general surgical procedures, when adjusted for patient factors and procedure type, are lower in CAHs, and that such procedures are associated with lower rates of serious complications when performed in CAHs. The commenter noted that these are the types of procedures generally called into question under the 96-hour certification requirement. Another comment raised concerns regarding "judgmental pressure" placed on admitting physicians and inconveniences placed on patients and their families with respect to meeting the 96-hour certification requirement.

One commenter stated that the 96-hour certification requirement has imposed significant burdens on the surgical community, whose members extend essential surgical care to Medicare's rural beneficiaries. The commenter also expressed concerns regarding compliance with the 96-hour certification requirement and its intersection with the Emergency Medical Treatment and Labor Act (EMTALA) and the CoPs. Another commenter communicated concern that the 96-hour certification requirement is a quality and safety CoP requirement and is, therefore, for enforcement purposes, required to be included in accrediting body manuals. The commenter requested that CMS remove the 96-hour certification requirement from the quality and safety CoPs and instead rely on MACs such that accrediting organizations are not required to enforce the requirement but rather it is a part of CMS' fiscal oversight.

*Response:* We appreciate commenters sharing their concerns regarding the 96-hour certification requirement. As noted throughout this section of the preamble,

the 96-hour certification requirement is statutory and cannot be amended through notice-and-comment rulemaking without a change in legislation. We also clarify that the 96-hour certification requirement (section 1814(a)(8) of the Act) is separate and distinct from the 96-hour annual average length of inpatient stay CoP (meaning condition of participation) requirement (section 1820(c)(2)(B)(iii) of the Act). The 96-hour certification requirement is not directly relevant to determining whether a facility remains eligible for designation as a CAH, but rather is applicable to determining whether a CAH may receive Medicare payment under Part A for inpatient CAH services. Therefore, primary enforcement of the 96-hour certification requirement should not be conducted by accrediting bodies.

In summary, as stated earlier, we are reiterating that CMS will direct QIOs, MACs, the SMRC, and RACs to make the CAH 96-hour certification requirement a low priority for medical record reviews conducted on or after October 1, 2017. CAHs should not expect to receive any medical record requests from QIOs, MACs, RACs, or the SMRC related to the 96-hour certification requirement unless CMS or its contractors find evidence of gaming or a failure to comply with CMS' provider screening and revalidation requirements or if medical review is needed for other issues.

### **VIII. Changes to the Long-Term Care Hospital Prospective Payment System (LTCH PPS) for FY 2018**

#### *A. Background of the LTCH PPS*

##### **1. Legislative and Regulatory Authority**

Section 123 of the Medicare, Medicaid, and SCHIP (State Children's Health Insurance Program) Balanced Budget Refinement Act of 1999 (BBRA) (Pub. L. 106–113) as amended by section 307(b) of the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA) (Pub. L. 106–554) provides for payment for both the operating and capital-related costs of hospital inpatient stays in long-term care hospitals (LTCHs) under Medicare Part A based on prospectively set rates. The Medicare prospective payment system (PPS) for LTCHs applies to hospitals that are described in section 1886(d)(1)(B)(iv) of the Act, effective for cost reporting periods beginning on or after October 1, 2002.

Section 1886(d)(1)(B)(iv)(I) of the Act originally defined an LTCH as a hospital which has an average inpatient length of stay (as determined by the Secretary) of

greater than 25 days. Section 1886(d)(1)(B)(iv)(II) of the Act also provided an alternative definition of LTCHs: Specifically, a hospital that first received payment under section 1886(d) of the Act in 1986 and had an average inpatient length of stay (as determined by the Secretary of Health and Human Services (the Secretary)) of greater than 20 days and had 80 percent or more of its annual Medicare inpatient discharges with a principal diagnosis that reflected a finding of neoplastic disease in the 12-month cost reporting period ending in FY 1997. However, as discussed below, section 15008 of the 21st Century Cures Act (Pub. L. 114–255) amended section 1886 of the Act to exclude former "subclause II" LTCHs from payment under the LTCH PPS and created a new category of IPPS-excluded hospitals (named in the proposed rule "long-term care neoplastic disease hospitals" but renamed in this final rule "extended neoplastic disease care hospitals") for hospitals that were formally classified as "subclause (II)" LTCHs.

Section 123 of the BBRA requires the PPS for LTCHs to be a "per discharge" system with a diagnosis-related group (DRG) based patient classification system that reflects the differences in patient resources and costs in LTCHs.

Section 307(b)(1) of the BIPA, among other things, mandates that the Secretary shall examine, and may provide for, adjustments to payments under the LTCH PPS, including adjustments to DRG weights, area wage adjustments, geographic reclassification, outliers, updates, and a disproportionate share adjustment.

In the August 30, 2002 **Federal Register**, we issued a final rule that implemented the LTCH PPS authorized under the BBRA and BIPA (67 FR 55954). For the initial implementation of the LTCH PPS (FYs 2003 through FY 2007), the system used information from LTCH patient records to classify patients into distinct long-term care diagnosis-related groups (LTC-DRGs) based on clinical characteristics and expected resource needs. Beginning in FY 2008, we adopted the Medicare severity long-term care diagnosis-related groups (MS-LTC-DRGs) as the patient classification system used under the LTCH PPS. Payments are calculated for each MS-LTC-DRG and provisions are made for appropriate payment adjustments. Payment rates under the LTCH PPS are updated annually and published in the **Federal Register**.

The LTCH PPS replaced the reasonable cost-based payment system under the Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA) (Pub. L. 97–248) for payments for

inpatient services provided by an LTCH with a cost reporting period beginning on or after October 1, 2002. (The regulations implementing the TEFRA reasonable cost-based payment provisions are located at 42 CFR part 413.) With the implementation of the PPS for acute care hospitals authorized by the Social Security Amendments of 1983 (Pub. L. 98–21), which added section 1886(d) to the Act, certain hospitals, including LTCHs, were excluded from the PPS for acute care hospitals and were paid their reasonable costs for inpatient services subject to a per discharge limitation or target amount under the TEFRA system. For each cost reporting period, a hospital-specific ceiling on payments was determined by multiplying the hospital's updated target amount by the number of total current year Medicare discharges. (Generally, in this section of the preamble of this final rule, when we refer to discharges, we describe Medicare discharges.) The August 30, 2002 final rule further details the payment policy under the TEFRA system (67 FR 55954).

In the August 30, 2002 final rule, we provided for a 5-year transition period from payments under the TEFRA system to payments under the LTCH PPS. During this 5-year transition period, an LTCH's total payment under the PPS was based on an increasing percentage of the Federal rate with a corresponding decrease in the percentage of the LTCH PPS payment that is based on reasonable cost concepts, unless an LTCH made a one-time election to be paid based on 100 percent of the Federal rate. Beginning with LTCHs' cost reporting periods beginning on or after October 1, 2006, total LTCH PPS payments are based on 100 percent of the Federal rate.

In addition, in the August 30, 2002 final rule, we presented an in-depth discussion of the LTCH PPS, including the patient classification system, relative weights, payment rates, additional payments, and the budget neutrality requirements mandated by section 123 of the BBRA. The same final rule that established regulations for the LTCH PPS under 42 CFR part 412, subpart O, also contained LTCH provisions related to covered inpatient services, limitation on charges to beneficiaries, medical review requirements, furnishing of inpatient hospital services directly or under arrangement, and reporting and recordkeeping requirements. We refer readers to the August 30, 2002 final rule for a comprehensive discussion of the research and data that supported the

establishment of the LTCH PPS (67 FR 55954).

In the FY 2016 IPPS/LTCH PPS final rule (80 FR 49601 through 49623), we implemented the provisions of the Pathway for Sustainable Growth Rate (SGR) Reform Act of 2013 (Pub. L. 113–67), which mandated the application of the “site neutral” payment rate under the LTCH PPS for discharges that do not meet the statutory criteria for exclusion beginning in FY 2016. For cost reporting periods beginning on or after October 1, 2015, discharges that do not meet certain statutory criteria for exclusion are paid based on the site neutral payment rate. Discharges that do meet the statutory criteria continue to receive payment based on the LTCH PPS standard Federal payment rate. For more information on the statutory requirements of the Pathway for SGR Reform Act of 2013, we refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49601 through 49623).

Section 231 of Consolidated Appropriations Act, 2016 (Pub. L. 114–113) amended section 1886(m)(6) of the Act by revising subparagraph (A)(i) and adding new subparagraph (E), which established a temporary exception to the site neutral payment rate for certain severe wound care discharges occurring prior to January 1, 2017 from LTCHs identified by the amendment made by section 4417(a) of the Balanced Budget Act of 1997 that are located in a rural area (as defined in section 1886(d)(2)(D) of the Act) or treated as being so located in accordance with section 1886(d)(8)(E) of the Act.

We implemented the provisions of section 231 of Public Law 114–113, and amended our regulations at 42 CFR 412.522 to reflect those policies, in an interim final rule with comment period (IFC) that appeared in the **Federal Register** on April 21, 2016 (81 FR 23428 through 23438). In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57068), we finalized the provisions of the April 21, 2016 IFC and made limited modifications of those policies set forth in the April 21, 2016 IFC by revising the definitions of a “wound with morbid obesity” and an “infected wound,” and adding additional ICD–10 diagnosis codes to our list of such codes to identify cases that meet the established definition of a “severe wound” for the six severe wound categories other than the categories of a “wound with morbid obesity” and an “infected wound.” The provisions implementing section 231 of Public Law 114–113 were effective for LTCH discharges from qualifying LTCHs for discharges on or after April 21, 2016, through December 31, 2016. For a full discussion of these provisions, we refer

readers to the April 21, 2016 IFC (81 FR 23428) and the FY 2017 IPPS/LTCH PPS final rule (81 FR 57068 through 57075).

The 21st Century Cures Act (“the Cures Act”) (Pub. L. 114–255) contains several provisions that affect the LTCH PPS. Section 15004 of Public Law 114–255 contains provisions that change the moratorium on increasing the number of beds in existing LTCHs and LTCH satellite facilities. We discuss our implementation of the provisions of section 15004 in section VIII.H. of the preamble of this final rule. The provisions of section 15004 also included a change to the payment methodology for high-cost outlier payments made to LTCHs. We discuss our proposals and final policies related to high-cost outlier payments in section V.D. of the Addendum of this final rule. The provisions of section 15006 of Public Law 114–255 extended various moratoria on the implementation of the 25-percent threshold policy. We discuss our proposals and final policy related to the provisions of section 15006 in section VIII.G. of the preamble of this final rule. The provisions of section 15007 of Public Law 114–255 revised the requirements of the average length-of-stay criterion for LTCH classification. We discuss our proposals and final policy related to the provisions of section 15007 in section VIII.I. of the preamble of this final rule. The provisions of section 15008 of Public Law 114–255 changed the classification of certain hospitals. We discuss our proposals and final policy related to the provisions of section 15008 in section VIII.J. of the preamble of this final rule. The provisions of section 15009 of Public Law 114–255 contain a temporary exception to the site neutral payment rate for certain spinal cord specialty hospitals. We discuss our proposals and final policy related to the provisions of section 15009 in section VIII.E. of the preamble of this final rule. The provisions of section 15010 of Public Law 114–255 contain a temporary exception to the site neutral payment rate for certain severe wound care discharges from certain LTCHs. We discuss our proposals and final policy related to the provisions of section 15010 in section VIII.F. of the preamble of this final rule. In addition, as we proposed in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20009), in this final rule we are amending 42 CFR 412.500 to include Public Law 114–255 as one of the bases and scope of subpart O of part 412.

We received several public comments that addressed issues that were outside the scope of the FY 2018 proposed rule. We will keep these comments in mind

and may consider them for future rulemaking.

## 2. Criteria for Classification as an LTCH

### a. Classification as an LTCH

Under the regulations at § 412.23(e)(1), to qualify to be paid under the LTCH PPS, a hospital must have a provider agreement with Medicare. Furthermore, § 412.23(e)(2)(i), which implements section 1886(d)(1)(B)(iv) of the Act, requires that a hospital have an average Medicare inpatient length of stay of greater than 25 days to be paid under the LTCH PPS. Alternatively, existing § 412.23(e)(2)(ii) states that, for cost reporting periods beginning on or after August 5, 1997, a hospital that was first excluded from the PPS in 1986 and can demonstrate that at least 80 percent of its annual Medicare inpatient discharges in the 12-month cost reporting period ending in FY 1997 have a principal diagnosis that reflects a finding of neoplastic disease must have an average inpatient length of stay for all patients, including both Medicare and non-Medicare inpatients, of greater than 20 days (referred to as “subclause (II)” LTCHs). In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20029), under our proposed changes to § 412.23(e)(2)(ii) of the regulations to implement the provisions of section 15008 of Public Law 114–255, we proposed to add a sunset date to subclause (II) LTCHs (which have become a new category of IPPS-excluded hospitals named in the proposed rule “long-term care neoplastic disease hospitals” but renamed “extended neoplastic disease care hospitals” in this final rule). Extended neoplastic disease care hospitals are discussed in greater detail in section VIII.J. of the preamble of this final rule. In addition, in section VIII.I. of the preamble of the proposed rule and this final rule, we discuss the proposed and finalized changes to the calculation of the greater than 25-day average length-of-stay requirement provided by the provisions of section 15007 of Public Law 114–255.

### b. Hospitals Excluded From the LTCH PPS

The following hospitals are paid under special payment provisions, as described in § 412.22(c) and, therefore, are not subject to the LTCH PPS rules:

- Veterans Administration hospitals.
- Hospitals that are reimbursed under State cost control systems approved under 42 CFR part 403.
- Hospitals that are reimbursed in accordance with demonstration projects authorized under section 402(a) of the

Social Security Amendments of 1967 (Pub. L. 90–248) (42 U.S.C. 1395b–1), section 222(a) of the Social Security Amendments of 1972 (Pub. L. 92–603) (42 U.S.C. 1395b–1 (note)) (Statewide all-payer systems, subject to the rate-of-increase test at section 1814(b) of the Act), or section 3201 of the Patient Protection and Affordable Care Act (Pub. L. 111–148 (42 U.S.C. 1315a)).

- Nonparticipating hospitals furnishing emergency services to Medicare beneficiaries.

### 3. Limitation on Charges to Beneficiaries

In the August 30, 2002 final rule, we presented an in-depth discussion of beneficiary liability under the LTCH PPS (67 FR 55974 through 55975). This discussion was further clarified in the RY 2005 LTCH PPS final rule (69 FR 25676). In keeping with those discussions, if the Medicare payment to the LTCH is the full LTC–DRG payment amount, consistent with other established hospital prospective payment systems, § 412.507 currently provides that an LTCH may not bill a Medicare beneficiary for more than the deductible and coinsurance amounts as specified under §§ 409.82, 409.83, and 409.87 and for items and services specified under § 489.30(a). However, under the LTCH PPS, Medicare will only pay for days for which the beneficiary has coverage until the short-stay outlier (SSO) threshold is exceeded. If the Medicare payment was for a SSO case (§ 412.529), and that payment was less than the full LTC–DRG payment amount because the beneficiary had insufficient remaining Medicare days, the LTCH is currently also permitted to charge the beneficiary for services delivered on those uncovered days (§ 412.507). In the FY 2016 IPPS/LTCH PPS final rule (80 FR 49623), we amended our regulations to expressly limit the charges that may be imposed on beneficiaries whose discharges are paid at the site neutral payment rate under the LTCH PPS.

In section VII.G. of the preamble of the FY 2017 IPPS/LTCH PPS final rule (81 FR 57102), we also amended the existing regulations relating to the limitation on charges to expressly address beneficiary charges for LTCH services provided by subclause (II) LTCHs as part of our refinement of the payment adjustment for subclause (II) LTCHs under § 412.526. We also amended the regulations under § 412.507 to clarify our existing policy that blended payments made to an LTCH during its transitional period (that is, payment for discharges occurring in cost reporting periods beginning in FY

2016 or 2017) are considered to be site neutral payment rate payments.

### 4. Administrative Simplification Compliance Act (ASCA) and Health Insurance Portability and Accountability Act (HIPAA) Compliance

Claims submitted to Medicare must comply with both the Administrative Simplification Compliance Act (ASCA) (Pub. L. 107–105), and the Health Insurance Portability and Accountability Act of 1996 (HIPAA) (Pub. L. 104–191). Section 3 of the ASCA generally requires that the Medicare Program deny payment under Part A or Part B for any expenses incurred for items or services for which a claim is submitted other than in an electronic form specified by the Secretary. Section 1862(h) of the Act (as added by section 3(a) of the ASCA) provides that the Secretary shall waive such denial in two specific types of cases, and may also waive such denial in such unusual cases as the Secretary finds appropriate (68 FR 48805). Section 3 of the ASCA operates in the context of the HIPAA regulations, which include, among other provisions, the transactions and code sets standards requirements codified under 45 CFR parts 160 and 162 (generally known as the Transactions Rule). The Transactions Rule requires covered entities, including covered health care providers, to conduct certain electronic health care transactions according to the applicable transactions and code sets standards.

The Department of Health and Human Services (HHS) has a number of initiatives designed to encourage and support the adoption of health information technology (health IT) and promote nationwide health information exchange to improve health care. The Office of the National Coordinator for Health Information Technology (ONC) leads these efforts in collaboration with other agencies, including CMS and the Office of the Assistant Secretary for Planning and Evaluation (ASPE). Through a number of activities, including several open government initiatives, HHS is promoting the adoption of health IT products, including electronic health record (EHR) technology certified under the ONC Health IT Certification Program (<https://www.healthit.gov/policy-researchers-implementers/about-onc-health-it-certification-program>) developed to support secure, interoperable, health information exchange. We believe that the use of certified EHRs by LTCHs (and other types of providers that are ineligible for the Medicare and

Medicaid EHR Incentive Programs) can effectively and efficiently help providers improve internal care delivery practices, support the exchange of important information across care partners and during transitions of care, and enable the reporting of electronically specified clinical quality measures (eCQMs) (as described elsewhere in this final rule). In 2015, ONC released a document entitled “Connecting Health and Care for the Nation: A Shared Nationwide Interoperability Roadmap” (available at: <https://www.healthit.gov/sites/default/files/hie-interoperability/nationwide-interoperability-roadmap-final-version-1.0.pdf>). In the near term, the Roadmap focuses on actions that will enable individuals and providers across the care continuum to send, receive, find, and use a common set of electronic clinical information at the nationwide level by the end of 2017. The Roadmap’s goals also align with the Improving Medicare Post-Acute Care Transformation Act of 2014 (Pub. L. 113–185) (IMPACT Act), which requires assessment data to be standardized and interoperable to allow for exchange of the data. Moreover, the vision described in the Roadmap significantly expands the types of electronic health information, information sources, and information users well beyond clinical information derived from EHRs. The Roadmap identifies four critical pathways that health IT stakeholders should focus on now in order to create a foundation for long-term success: (1) Improve technical standards and implementation guidance for priority data domains and associated elements; (2) rapidly shift and align Federal, State, and commercial payment policies from fee-for-service to value-based models to stimulate the demand for interoperability; (3) clarify and align Federal and State privacy and security requirements that enable interoperability; and (4) align and promote the use of consistent policies and business practices that support interoperability and address those that impede interoperability, in coordination with stakeholders.

In support of the goals of the Roadmap, ONC released the 2017 Interoperability Standards Advisory (ISA) (available at: <https://www.healthit.gov/standards-advisory>), a coordinated catalog of standards and implementation specifications developed and used to meet specific interoperability needs. The ISA is intended to serve as an industry resource to further the use of

interoperable electronic health information exchange.

*B. Medicare Severity Long-Term Care Diagnosis-Related Group (MS-LTC-DRG) Classifications and Relative Weights for FY 2018*

1. Background

Section 123 of the BBRA required that the Secretary implement a PPS for LTCHs to replace the cost-based payment system under TEFRA. Section 307(b)(1) of the BIPA modified the requirements of section 123 of the BBRA by requiring that the Secretary examine the feasibility and the impact of basing payment under the LTCH PPS on the use of existing (or refined) hospital DRGs that have been modified to account for different resource use of LTCH patients.

When the LTCH PPS was implemented for cost reporting periods beginning on or after October 1, 2002, we adopted the same DRG patient classification system utilized at that time under the IPPS. As a component of the LTCH PPS, we refer to this patient classification system as the “long-term care diagnosis-related groups (LTC-DRGs).” Although the patient classification system used under both the LTCH PPS and the IPPS are the same, the relative weights are different. The established relative weight methodology and data used under the LTCH PPS result in relative weights under the LTCH PPS that reflect the differences in patient resource use of LTCH patients, consistent with section 123(a)(1) of the BBRA (Pub. L. 106–113).

As part of our efforts to better recognize severity of illness among patients, in the FY 2008 IPPS final rule with comment period (72 FR 47130), the MS-DRGs and the Medicare severity long-term care diagnosis-related groups (MS-LTC-DRGs) were adopted under the IPPS and the LTCH PPS, respectively, effective beginning October 1, 2007 (FY 2008). For a full description of the development, implementation, and rationale for the use of the MS-DRGs and MS-LTC-DRGs, we refer readers to the FY 2008 IPPS final rule with comment period (72 FR 47141 through 47175 and 47277 through 47299). (We note that, in that same final rule, we revised the regulations at § 412.503 to specify that for LTCH discharges occurring on or after October 1, 2007, when applying the provisions of 42 CFR part 412, subpart O applicable to LTCHs for policy descriptions and payment calculations, all references to LTC-DRGs would be considered a reference to MS-LTC-DRGs. For the remainder of

this section, we present the discussion in terms of the current MS-LTC-DRG patient classification system unless specifically referring to the previous LTC-DRG patient classification system that was in effect before October 1, 2007.)

The MS-DRGs adopted in FY 2008 represent an increase in the number of DRGs by 207 (that is, from 538 to 745) (72 FR 47171). The MS-DRG classifications are updated annually. There are currently 757 MS-DRG groupings. For FY 2018, there will be 754 MS-DRG groupings based on the changes discussed in section II.F. of the preamble of this FY 2018 IPPS/LTCH PPS final rule. Consistent with section 123 of the BBRA, as amended by section 307(b)(1) of the BIPA, and § 412.515 of the regulations, we use information derived from LTCH PPS patient records to classify LTCH discharges into distinct MS-LTC-DRGs based on clinical characteristics and estimated resource needs. We then assign an appropriate weight to the MS-LTC-DRGs to account for the difference in resource use by patients exhibiting the case complexity and multiple medical problems characteristic of LTCHs.

In this section of the final rule, we provide a general summary of our existing methodology for determining the FY 2018 MS-LTC-DRG relative weights under the LTCH PPS.

As we proposed, in this final rule, in general, for FY 2018, we are continuing to use our existing methodology to determine the proposed MS-LTC-DRG relative weights (as discussed in greater detail in section VIII.B.3. of the preamble of this final rule). As we established when we implemented the dual rate LTCH PPS payment structure codified under § 412.522, which began in FY 2016, the annual recalibration of the MS-LTC-DRG relative weights are determined: (1) Using only data from available LTCH PPS claims that would have qualified for payment under the new LTCH PPS standard Federal payment rate if that rate had been in effect at the time of discharge when claims data from time periods before the dual rate LTCH PPS payment structure applies are used to calculate the relative weights; and (2) using only data from available LTCH PPS claims that qualify for payment under the new LTCH PPS standard Federal payment rate when claims data from time periods after the dual rate LTCH PPS payment structure applies are used to calculate the relative weights (80 FR 49624). That is, under our current methodology, our MS-LTC-DRG relative weight calculations do not use data from cases paid at the site neutral payment rate under

§ 412.522(c)(1) or data from cases that would have been paid at the site neutral payment rate if the dual rate LTCH PPS payment structure had been in effect at the time of that discharge. For the remainder of this discussion, we use the phrase “applicable LTCH cases” or “applicable LTCH data” when referring to the resulting claims data set used to calculate the relative weights (as described later in greater detail in section VIII.B.3.c. of the preamble of this final rule). In addition, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20011), for FY 2018, we proposed to continue to exclude the data from all-inclusive rate providers and LTCHs paid in accordance with demonstration projects, as well as any Medicare Advantage claims from the MS-LTC-DRG relative weight calculations for the reasons discussed in section VIII.B.3.c. of the preamble of the proposed rule.

Furthermore, for FY 2018, in using data from applicable LTCH cases to establish MS-LTC-DRG relative weights, we proposed to continue to establish low-volume MS-LTC-DRGs (that is, MS-LTC-DRGs with less than 25 cases) using our quintile methodology in determining the MS-LTC-DRG relative weights because LTCHs do not typically treat the full range of diagnoses as do acute care hospitals. Therefore, for purposes of determining the relative weights for the large number of low-volume MS-LTC-DRGs, we group all of the low-volume MS-LTC-DRGs into five quintiles based on average charges per discharge. Then, under our existing methodology, we account for adjustments made to LTCH PPS standard Federal payments for short-stay outlier (SSO) cases (that is, cases where the covered length of stay at the LTCH is less than or equal to five-sixths of the geometric average length of stay for the MS-LTC-DRG), and we make adjustments to account for nonmonotonically increasing weights, when necessary. The methodology is premised on more severe cases under the MS-LTC-DRG system requiring greater expenditure of medical care resources and higher average charges such that, in the severity levels within a base MS-LTC-DRG, the relative weights should increase monotonically with severity from the lowest to highest severity level. (We discuss each of these components of our MS-LTC-DRG relative weight methodology in greater detail in section VIII.B.3.g. of the preamble of this final rule.)

We did not receive any public comments on these proposals. Therefore, we are finalizing our proposals for calculating the MS-LTC-

DRG relative weights for FY 2018 without modification.

## 2. Patient Classifications Into MS–LTC–DRGs

### a. Background

The MS–DRGs (used under the IPPS) and the MS–LTC–DRGs (used under the LTCH PPS) are based on the CMS DRG structure. As noted previously in this section, we refer to the DRGs under the LTCH PPS as MS–LTC–DRGs although they are structurally identical to the MS–DRGs used under the IPPS.

The MS–DRGs are organized into 25 major diagnostic categories (MDCs), most of which are based on a particular organ system of the body; the remainder involve multiple organ systems (such as MDC 22, Burns). Within most MDCs, cases are then divided into surgical DRGs and medical DRGs. Surgical DRGs are assigned based on a surgical hierarchy that orders operating room (O.R.) procedures or groups of O.R. procedures by resource intensity. The GROUPER software program does not recognize all ICD–10–PCS procedure codes as procedures affecting DRG assignment. That is, procedures that are not surgical (for example, EKGs), or minor surgical procedures (for example, a biopsy of skin and subcutaneous tissue (procedure code 0JBH3ZX)) do not affect the MS–LTC–DRG assignment based on their presence on the claim.

Generally, under the LTCH PPS, a Medicare payment is made at a predetermined specific rate for each discharge that varies based on the MS–LTC–DRG to which a beneficiary's discharge is assigned. Cases are classified into MS–LTC–DRGs for payment based on the following six data elements:

- Principal diagnosis;
- Additional or secondary diagnoses;
- Surgical procedures;
- Age;
- Sex; and
- Discharge status of the patient.

Currently, for claims submitted using version ASC X12 5010 format, up to 25 diagnosis codes and 25 procedure codes are considered for an MS–DRG assignment. This includes one principal diagnosis and up to 24 secondary diagnoses for severity of illness determinations. (For additional information on the processing of up to 25 diagnosis codes and 25 procedure codes on hospital inpatient claims, we refer readers to section II.G.11.c. of the preamble of the FY 2011 IPPS/LTCH PPS final rule (75 FR 50127).)

Under the HIPAA transactions and code sets regulations at 45 CFR parts 160 and 162, covered entities must

comply with the adopted transaction standards and operating rules specified in Subparts I through S of Part 162. Among other requirements, by January 1, 2012, covered entities were required to use the ASC X12 Standards for Electronic Data Interchange Technical Report Type 3—Health Care Claim: Institutional (837), May 2006, ASC X12N/005010X223, and Type 1 Errata to Health Care Claim: Institutional (837) ASC X12 Standards for Electronic Data Interchange Technical Report Type 3, October 2007, ASC X12N/005010X233A1 for the health care claims or equivalent encounter information transaction (45 CFR 162.1102(c)).

HIPAA requires covered entities to use the applicable medical data code set requirements when conducting HIPAA transactions (45 CFR 162.1000). Currently, upon the discharge of the patient, the LTCH must assign appropriate diagnosis and procedure codes from the most current version of the International Classification of Diseases, 10th Revision, Clinical Modification (ICD–10–CM) for diagnosis coding and the International Classification of Diseases, 10th Revision, Procedure Coding System (ICD–10–PCS) for inpatient hospital procedure coding, both of which were required to be implemented October 1, 2015 (45 CFR 162.1002(c)(2) and (3)). For additional information on the implementation of the ICD–10 coding system, we refer readers to section II.F.1. of the FY 2017 IPPS/LTCH PPS final rule (81 FR 56787 through 56790) and section II.F.1. of the preamble of this final rule. Additional coding instructions and examples are published in the AHA's *Coding Clinic for ICD-10-CM/PCS*.

To create the MS–DRGs (and by extension, the MS–LTC–DRGs), base DRGs were subdivided according to the presence of specific secondary diagnoses designated as complications or comorbidities (CCs) into one, two, or three levels of severity, depending on the impact of the CCs on resources used for those cases. Specifically, there are sets of MS–DRGs that are split into 2 or 3 subgroups based on the presence or absence of a CC or a major complication or comorbidity (MCC). We refer readers to section II.D. of the FY 2008 IPPS final rule with comment period for a detailed discussion about the creation of MS–DRGs based on severity of illness levels (72 FR 47141 through 47175).

MACs enter the clinical and demographic information submitted by LTCHs into their claims processing systems and subject this information to a series of automated screening

processes called the Medicare Code Editor (MCE). These screens are designed to identify cases that require further review before assignment into a MS–LTC–DRG can be made. During this process, certain cases are selected for further explanation (74 FR 43949).

After screening through the MCE, each claim is classified into the appropriate MS–LTC–DRG by the Medicare LTCH GROUPER software on the basis of diagnosis and procedure codes and other demographic information (age, sex, and discharge status). The GROUPER software used under the LTCH PPS is the same GROUPER software program used under the IPPS. Following the MS–LTC–DRG assignment, the MAC determines the prospective payment amount by using the Medicare PRICER program, which accounts for hospital-specific adjustments. Under the LTCH PPS, we provide an opportunity for LTCHs to review the MS–LTC–DRG assignments made by the MAC and to submit additional information within a specified timeframe as provided in § 412.513(c).

The GROUPER software is used both to classify past cases to measure relative hospital resource consumption to establish the MS–LTC–DRG relative weights and to classify current cases for purposes of determining payment. The records for all Medicare hospital inpatient discharges are maintained in the MedPAR file. The data in this file are used to evaluate possible MS–DRG and MS–LTC–DRG classification changes and to recalibrate the MS–DRG and MS–LTC–DRG relative weights during our annual update under both the IPPS (§ 412.60(e)) and the LTCH PPS (§ 412.517), respectively.

### b. Changes to the MS–LTC–DRGs for FY 2018

As specified by our regulations at § 412.517(a), which require that the MS–LTC–DRG classifications and relative weights be updated annually, and consistent with our historical practice of using the same patient classification system under the LTCH PPS as is used under the IPPS, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20012), we proposed to update the MS–LTC–DRG classifications effective October 1, 2017, through September 30, 2018 (FY 2018), consistent with the proposed changes to specific MS–DRG classifications presented in section II.F. of the preamble of the proposed rule. Accordingly, the MS–LTC–DRGs for FY 2018 presented in the proposed rule and this final rule are the same as the MS–DRGs that will be used under the IPPS for FY 2018. In addition, because the

MS-LTC-DRGs for FY 2018 are the same as the MS-DRGs for FY 2018, the other changes that affect MS-DRG (and by extension MS-LTC-DRG) assignments under GROUPER Version 35 as discussed in section II.F. of the preamble of this final rule, including the changes to the MCE software and the ICD-10-CM/PCS coding system, also will be applicable under the LTCH PPS for FY 2018.

### 3. Development of the FY 2018 MS-LTC-DRG Relative Weights

#### a. General Overview of the Development of the MS-LTC-DRG Relative Weights

One of the primary goals for the implementation of the LTCH PPS is to pay each LTCH an appropriate amount for the efficient delivery of medical care to Medicare patients. The system must be able to account adequately for each LTCH's case-mix in order to ensure both fair distribution of Medicare payments and access to adequate care for those Medicare patients whose care is more costly (67 FR 55984). To accomplish these goals, we have annually adjusted the LTCH PPS standard Federal prospective payment rate by the applicable relative weight in determining payment to LTCHs for each case. In order to make these annual adjustments under the dual rate LTCH PPS payment structure, beginning with FY 2016, we recalibrate the MS-LTC-DRG relative weighting factors annually using data from applicable LTCH cases (80 FR 49614 through 49617). Under this policy, the resulting MS-LTC-DRG relative weights would continue to be used to adjust the LTCH PPS standard Federal payment rate when calculating the payment for LTCH PPS standard Federal payment rate cases.

The established methodology to develop the MS-LTC-DRG relative weights is generally consistent with the methodology established when the LTCH PPS was implemented in the August 30, 2002 LTCH PPS final rule (67 FR 55989 through 55991). However, there have been some modifications of our historical procedures for assigning relative weights in cases of zero volume and/or nonmonotonicity resulting from the adoption of the MS-LTC-DRGs, along with the change made in conjunction with the implementation of the dual rate LTCH PPS payment structure beginning in FY 2016 to use LTCH claims data from only LTCH PPS standard Federal payment rate cases (or LTCH PPS cases that would have qualified for payment under the LTCH PPS standard Federal payment rate if the dual rate LTCH PPS payment structure had been in effect at the time

of the discharge). (For details on the modifications to our historical procedures for assigning relative weights in cases of zero volume and/or nonmonotonicity, we refer readers to the FY 2008 IPPS final rule with comment period (72 FR 47289 through 47295) and the FY 2009 IPPS final rule (73 FR 48542 through 48550).) For details on the change in our historical methodology to use LTCH claims data only from LTCH PPS standard Federal payment rate cases (or cases that would have qualified for such payment had the LTCH PPS dual payment rate structure been in effect at the time) to determine the MS-LTC-DRG relative weights, we refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49614 through 49617). Under the LTCH PPS, relative weights for each MS-LTC-DRG are a primary element used to account for the variations in cost per discharge and resource utilization among the payment groups (§ 412.515). To ensure that Medicare patients classified to each MS-LTC-DRG have access to an appropriate level of services and to encourage efficiency, we calculate a relative weight for each MS-LTC-DRG that represents the resources needed by an average inpatient LTCH case in that MS-LTC-DRG. For example, cases in an MS-LTC-DRG with a relative weight of 2 would, on average, cost twice as much to treat as cases in an MS-LTC-DRG with a relative weight of 1.

#### b. Development of the MS-LTC-DRG Relative Weights for FY 2018

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57078 through 57079), we presented our policies for the development of the MS-LTC-DRG relative weights for FY 2017.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20013), we proposed to continue to use our current methodology to determine the MS-LTC-DRG relative weights for FY 2018, including the continued application of established policies related to: The hospital-specific relative value methodology, the treatment of severity levels in the MS-LTC-DRGs, low-volume and no-volume MS-LTC-DRGs, adjustments for nonmonotonicity, the steps for calculating the MS-LTC-DRG relative weights with a budget neutrality factor, and only using data from applicable LTCH cases (which includes our policy of only using cases that would meet the criteria for exclusion from the site neutral payment rate (or, for discharges occurring prior to the implementation of the dual rate LTCH PPS payment structure, would have met the criteria for exclusion had those

criteria been in effect at the time of the discharge)).

In this section, we present our application of our existing methodology for determining the MS-LTC-DRG relative weights for FY 2018, and we discuss the effects of our policies concerning the data used to determine the FY 2018 MS-LTC-DRG relative weights on the various components of our existing methodology in the discussion that follows.

#### c. Data

For this final rule, consistent with our policies regarding the calculation of the MS-LTC-DRG relative weights for FY 2018, we obtained total charges from FY 2016 Medicare LTCH claims data from the March 2017 update of the FY 2016 MedPAR file, which are the best available data at this time, and we are using Version 35 of the GROUPER to classify LTCH cases. Consistent with our historical practice, we used those data and the finalized Version 35 of the GROUPER in establishing the FY 2018 MS-LTC-DRG relative weights in this final rule. To calculate the FY 2018 MS-LTC-DRG relative weights under the dual rate LTCH PPS payment structure, we are continuing to use applicable LTCH data, which includes our policy of only using cases that meet the criteria for exclusion from the site neutral payment rate (or would have met the criteria had they been in effect at the time of the discharge) (80 FR 49624). Specifically, we began by first evaluating the LTCH claims data in the March 2017 update of the FY 2016 MedPAR file to determine which LTCH cases would meet the criteria for exclusion from the site neutral payment rate under § 412.522(b) had the dual rate LTCH PPS payment structure been in effect at the time of discharge. (We note that while the dual rate LTCH PPS payment structure began to be phased in during FY 2016, due to the statutory requirement that individual LTCHs begin to receive payment under the dual rate LTCH PPS payment structure based on their individual cost reporting periods, there are LTCH discharges that occurred in FY 2016 that would not have been paid under that structure.) We identified the FY 2016 LTCH cases that were not assigned to MS-LTC-DRGs 876, 880, 881, 882, 883, 884, 885, 886, 887, 894, 895, 896, 897, 945 and 946, which identify LTCH cases that do not have a principal diagnosis relating to a psychiatric diagnosis or to rehabilitation; and that either—

- The admission to the LTCH was “immediately preceded” by discharge from a subsection (d) hospital and the immediately preceding stay in that

subsection (d) hospital included at least 3 days in an ICU, as we define under the ICU criterion; or

- The admission to the LTCH was “immediately preceded” by discharge from a subsection (d) hospital and the claim for the LTCH discharge includes the applicable procedure code that indicates at least 96 hours of ventilator services were provided during the LTCH stay, as we define under the ventilator criterion. Claims data from the FY 2016 MedPAR file that reported ICD–10–PCS procedure code 5A1955Z were used to identify cases involving at least 96 hours of ventilator services in accordance with the ventilator criterion. We note that, for purposes of developing the FY 2018 MS–LTC–DRG relative weights using our current methodology, we did not make any proposals regarding the identification of cases that would have been excluded from the site neutral payment rate under the statutory provisions that provided for temporary exception from the site neutral payment rate under the LTCH PPS for certain severe wound care discharges from certain LTCHs or for certain spinal cord specialty hospitals provided by sections 15009 and 15010 of Public Law 114–255, respectively, had our implementation of that law and the dual rate LTCH PPS payment structure been in effect at the time of the discharge. At this time, it is uncertain how many LTCHs and how many cases in the claims data we are using for this final rule would have met the criteria to be excluded from the site neutral payment rate under those exceptions (had the dual rate LTCH PPS payment structure been in effect at the time of the discharge). Therefore, for the remainder of this section, when we refer to LTCH claims only from cases that meet the criteria for exclusion from the site neutral payment rate (or would have met the criteria had the applicable statutes been in effect at the time of the discharge), such data do not include any discharges that would have been paid based on the LTCH PPS standard Federal payment rate under the provisions of sections 15009 and 15010 of Public Law 114–255, had the exception been in effect at the time of the discharge.

Furthermore, consistent with our historical methodology, as we proposed, we are excluding any claims in the resulting data set that were submitted by LTCHs that are all-inclusive rate providers and LTCHs that are paid in accordance with demonstration projects authorized under section 402(a) of Public Law 90–248 or section 222(a) of Public Law 92–603. In addition, consistent with our historical practice

and our policies, we are excluding any Medicare Advantage (Part C) claims in the resulting data. Such claims were identified based on the presence of a GHO Paid indicator value of “1” in the MedPAR files. The claims that remained after these three trims (that is, the applicable LTCH data) were then used to calculate the MS–LTC–DRG relative weights for FY 2018. In summary, in general, we identified the claims data used in the development of the FY 2018 MS–LTC–DRG relative weights in this final rule, as we proposed, by trimming claims data that would have been paid the site neutral rate had the dual payment rate structure been in effect (except for discharges which would have been excluded from the site neutral payment under the temporary exception for certain severe wound care discharges from certain LTCHs and under the temporary exception for certain spinal cord specialty hospitals), as well as the claims data of 9 all-inclusive rate providers reported in the March 2017 update of the FY 2016 MedPAR file and any Medicare Advantage claims data. (We note that there were no data from any LTCHs that are paid in accordance with a demonstration project reported in the March 2017 update of the FY 2016 MedPAR file. However, had there been we would trim the claims data from those LTCHs as well, in accordance with our established policy.) We used the remaining data (that is, the applicable LTCH data) to calculate the relative weights for FY 2018.

#### d. Hospital-Specific Relative Value (HSRV) Methodology

By nature, LTCHs often specialize in certain areas, such as ventilator-dependent patients. Some case types (MS–LTC–DRGs) may be treated, to a large extent, in hospitals that have, from a perspective of charges, relatively high (or low) charges. This nonrandom distribution of cases with relatively high (or low) charges in specific MS–LTC–DRGs has the potential to inappropriately distort the measure of average charges. To account for the fact that cases may not be randomly distributed across LTCHs, consistent with the methodology we have used since the implementation of the LTCH PPS, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20014), we proposed to continue to use a hospital-specific relative value (HSRV) methodology to calculate the MS–LTC–DRG relative weights for FY 2018. We believe that this method removes this hospital-specific source of bias in measuring LTCH average charges (67 FR 55985). Specifically, under this

methodology, we proposed to reduce the impact of the variation in charges across providers on any particular MS–LTC–DRG relative weight by converting each LTCH’s charge for an applicable LTCH case to a relative value based on that LTCH’s average charge for such cases.

Under the HSRV methodology, we standardize charges for each LTCH by converting its charges for each applicable LTCH case to hospital-specific relative charge values and then adjusting those values for the LTCH’s case-mix. The adjustment for case-mix is needed to rescale the hospital-specific relative charge values (which, by definition, average 1.0 for each LTCH). The average relative weight for an LTCH is its case-mix; therefore, it is reasonable to scale each LTCH’s average relative charge value by its case-mix. In this way, each LTCH’s relative charge value is adjusted by its case-mix to an average that reflects the complexity of the applicable LTCH cases it treats relative to the complexity of the applicable LTCH cases treated by all other LTCHs (the average LTCH PPS case-mix of all applicable LTCH cases across all LTCHs).

In accordance with our established methodology, for FY 2018, as we proposed, we are continuing to standardize charges for each applicable LTCH case by first dividing the adjusted charge for the case (adjusted for SSOs under § 412.529 as described in section VIII.B.3.g. (Step 3) of the preamble of this final rule) by the average adjusted charge for all applicable LTCH cases at the LTCH in which the case was treated. SSO cases are cases with a length of stay that is less than or equal to five-sixths the average length of stay of the MS–LTC–DRG (§ 412.529 and § 412.503). The average adjusted charge reflects the average intensity of the health care services delivered by a particular LTCH and the average cost level of that LTCH. The resulting ratio is multiplied by that LTCH’s case-mix index to determine the standardized charge for the case.

Multiplying the resulting ratio by the LTCH’s case-mix index accounts for the fact that the same relative charges are given greater weight at an LTCH with higher average costs than they would at a LTCH with low average costs, which is needed to adjust each LTCH’s relative charge value to reflect its case-mix relative to the average case-mix for all LTCHs. By standardizing charges in this manner, we count charges for a Medicare patient at an LTCH with high average charges as less resource intensive than they would be at an LTCH with low average charges. For example, a \$10,000 charge for a case at

an LTCH with an average adjusted charge of \$17,500 reflects a higher level of relative resource use than a \$10,000 charge for a case at an LTCH with the same case-mix, but an average adjusted charge of \$35,000. We believe that the adjusted charge of an individual case more accurately reflects actual resource use for an individual LTCH because the variation in charges due to systematic differences in the markup of charges among LTCHs is taken into account.

e. Treatment of Severity Levels in Developing the MS-LTC-DRG Relative Weights

For purposes of determining the MS-LTC-DRG relative weights, under our historical methodology, there are three different categories of MS-DRGs based on volume of cases within specific MS-LTC-DRGs: (1) MS-LTC-DRGs with at least 25 applicable LTCH cases in the data used to calculate the relative weight, which are each assigned a unique relative weight; (2) low-volume MS-LTC-DRGs (that is, MS-LTC-DRGs that contain between 1 and 24 applicable LTCH cases that are grouped into quintiles (as described later in this section of the final rule) and assigned the relative weight of the quintile); and (3) no-volume MS-LTC-DRGs that are cross-walked to other MS-LTC-DRGs based on the clinical similarities and assigned the relative weight of the cross-walked MS-LTC-DRG (as described in greater detail below). For FY 2018, we proposed to continue to use applicable LTCH cases to establish the same volume-based categories to calculate the FY 2018 MS-LTC-DRG relative weights.

In determining the FY 2018 MS-LTC-DRG relative weights, when necessary, as is our longstanding practice, as we proposed, we make adjustments to account for nonmonotonicity, as discussed in greater detail later in Step 6 of section VIII.B.3.g. of the preamble of this final rule. We refer readers to the discussion in the FY 2010 IPPS/R Y 2010 LTCH PPS final rule for our rationale for including an adjustment for nonmonotonicity (74 FR 43953 through 43954).

f. Low-Volume MS-LTC-DRGs

In order to account for MS-LTC-DRGs with low-volume (that is, with fewer than 25 applicable LTCH cases), consistent with our existing methodology, we proposed to continue to employ the quintile methodology for low-volume MS-LTC-DRGs, such that we group the “low-volume MS-LTC-DRGs” (that is, MS-LTC-DRGs that contain between 1 and 24 applicable LTCH cases into one of five categories (quintiles) based on average charges (67

FR 55984 through 55995; 72 FR 47283 through 47288; and 81 FR 25148)). In cases where the initial assignment of a low-volume MS-LTC-DRG to a quintile results in nonmonotonicity within a base-DRG, as we proposed, we make adjustments to the resulting low-volume MS-LTC-DRGs to preserve monotonicity, as discussed in detail in section VIII.B.3.g. (Step 6) of the preamble of this final rule.

In this final rule, based on the best available data (that is, the March 2017 update of the FY 2016 MedPAR files), we identified 262 MS-LTC-DRGs that contained between 1 and 24 applicable LTCH cases. This list of MS-LTC-DRGs was then divided into one of the 5 low-volume quintiles, each containing at least 52 MS-LTC-DRGs ( $262/5 = 52$  with a remainder of 2). We assigned the low-volume MS-LTC-DRGs to specific low-volume quintiles by sorting the low-volume MS-LTC-DRGs in ascending order by average charge in accordance with our established methodology. Based on the data available for the proposed rule, the number of MS-LTC-DRGs with less than 25 applicable LTCH cases was not evenly divisible by 5 and, therefore, we employed our historical methodology for determining which of the proposed low-volume quintiles contain the additional proposed low-volume MS-LTC-DRG. However, based on the data available for this final rule, the number of MS-LTC-DRGs with less than 25 applicable LTCH cases was not evenly divisible by 5 and, therefore, we employed our historical methodology for determining which of the low-volume quintiles contain the additional proposed low-volume MS-LTC-DRG. Specifically for this final rule, after organizing the MS-LTC-DRGs by ascending order by average charge, we assigned the first 52 (1st through 52nd) of low-volume MS-LTC-DRGs (with the lowest average charge) into Quintile 1. The 52 MS-LTC-DRGs with the highest average charge cases were assigned into Quintile 5. Because the average charge of the 105th low-volume MS-LTC-DRG in the sorted list was closer to the average charge of the 104th low-volume MS-LTC-DRG (assigned to Quintile 2) than to the average charge of the 106th low-volume MS-LTC-DRG (assigned to Quintile 3), we assigned it to Quintile 2 (such that Quintile 2 contains 53 low-volume MS-LTC-DRGs before any adjustments for nonmonotonicity, as discussed below). Because the average charge of the 158th low-volume MS-LTC-DRG in the sorted list was closer to the 157th low-volume MS-LTC-DRG (assigned to Quintile 3) than to the

average charge of the 159th low-volume MS-LTC-DRG (assigned to Quintile 4), we assigned it to Quintile 3 (such that Quintile 3 contains 53 low-volume MS-LTC-DRGs before any adjustments for nonmonotonicity, as discussed below). This results in 3 of the 5 low-volume quintiles containing 52 MS-LTC-DRGs (Quintiles 1, 4, and 5) and 2 low-volume quintiles containing 53 MS-LTC-DRGs (Quintiles 2 and 3). Table 13A, listed in section VI. of the Addendum to this final rule and available via the Internet, lists the composition of the low-volume quintiles for MS-LTC-DRGs for FY 2018.

In order to determine the FY 2018 relative weights for the low-volume MS-LTC-DRGs, consistent with our historical practice, we used the five low-volume quintiles described previously. We determined a relative weight and (geometric) average length of stay for each of the five low-volume quintiles using the methodology described in section VIII.B.3.g. of the preamble of this final rule. We assigned the same relative weight and average length of stay to each of the low-volume MS-LTC-DRGs that make up an individual low-volume quintile. We note that, as this system is dynamic, it is possible that the number and specific type of MS-LTC-DRGs with a low-volume of applicable LTCH cases will vary in the future. Furthermore, we note that we continue to monitor the volume (that is, the number of applicable LTCH cases) in the low-volume quintiles to ensure that our quintile assignments used in determining the MS-LTC-DRG relative weights result in appropriate payment for LTCH cases grouped to low-volume MS-LTC-DRGs and do not result in an unintended financial incentive for LTCHs to inappropriately admit these types of cases.

g. Steps for Determining the FY 2018 MS-LTC-DRG Relative Weights

In this final rule, as we proposed, we are continuing to use our current methodology to determine the FY 2018 MS-LTC-DRG relative weights.

In summary, to determine the FY 2018 MS-LTC-DRG relative weights, we grouped applicable LTCH cases to the appropriate MS-LTC-DRG, while taking into account the low-volume quintiles (as described above) and cross-walked no-volume MS-LTC-DRGs (as described later in this section). After establishing the appropriate MS-LTC-DRG (or low-volume quintile), as we proposed, we calculated the FY 2018 relative weights by first removing cases with a length of stay of 7 days or less and statistical outliers (Steps 1 and 2 below). Next, we adjusted the number of applicable LTCH

cases in each MS–LTC–DRG (or low-volume quintile) for the effect of SSO cases (Step 3 below). After removing applicable LTCH cases with a length of stay of 7 days or less (Step 1 below) and statistical outliers (Step 2 below), which are the SSO-adjusted applicable LTCH cases and corresponding charges (step 3 below), we calculated “relative adjusted weights” for each MS–LTC–DRG (or proposed low-volume quintile) using the HSRV method.

*Step 1*—Remove cases with a length of stay of 7 days or less.

The first step in our calculation of the FY 2018 MS–LTC–DRG relative weights is to remove cases with a length of stay of 7 days or less. The MS–LTC–DRG relative weights reflect the average of resources used on representative cases of a specific type.

Generally, cases with a length of stay of 7 days or less do not belong in an LTCH because these stays do not fully receive or benefit from treatment that is typical in an LTCH stay, and full resources are often not used in the earlier stages of admission to an LTCH. If we were to include stays of 7 days or less in the computation of the FY 2018 MS–LTC–DRG relative weights, the value of many relative weights would decrease and, therefore, payments would decrease to a level that may no longer be appropriate. We do not believe that it would be appropriate to compromise the integrity of the payment determination for those LTCH cases that actually benefit from and receive a full course of treatment at an LTCH by including data from these very short stays. Therefore, consistent with our existing relative weight methodology and as proposed, in determining the FY 2018 MS–LTC–DRG relative weights, we removed LTCH cases with a length of stay of 7 days or less from applicable LTCH cases. (For additional information on what is removed in this step of the relative weight methodology, we refer readers to 67 FR 55989 and 74 FR 43959.)

*Step 2*—Remove statistical outliers.

The next step in our calculation of the FY 2018 MS–LTC–DRG relative weights is to remove statistical outlier cases from the LTCH cases with a length of stay of at least 8 days. Consistent with our existing relative weight methodology, as we proposed, we continued to define statistical outliers as cases that are outside of 3.0 standard deviations from the mean of the log distribution of both charges per case and the charges per day for each MS–LTC–DRG. These statistical outliers are removed prior to calculating the relative weights because we believe that they may represent aberrations in the data

that distort the measure of average resource use. Including those LTCH cases in the calculation of the relative weights could result in an inaccurate relative weight that does not truly reflect relative resource use among those MS–LTC–DRGs. (For additional information on what is removed in this step of the relative weight methodology, we refer readers to 67 FR 55989 and 74 FR 43959.) After removing cases with a length of stay of 7 days or less and statistical outliers, we are left with applicable LTCH cases that have a length of stay greater than or equal to 8 days. In this final rule, we refer to these cases as “trimmed applicable LTCH cases.”

*Step 3*—Adjust charges for the effects of SSOs.

As the next step in the calculation of the FY 2018 MS–LTC–DRG relative weights, consistent with our historical approach and as we proposed, we adjusted each LTCH’s charges per discharge for those remaining cases (that is, trimmed applicable LTCH cases) for the effects of SSOs (as defined in § 412.529(a) in conjunction with § 412.503). Specifically, we made this adjustment by counting an SSO case as a fraction of a discharge based on the ratio of the length of stay of the case to the average length of stay for the MS–LTC–DRG for non-SSO cases. This has the effect of proportionately reducing the impact of the lower charges for the SSO cases in calculating the average charge for the MS–LTC–DRG. This process produces the same result as if the actual charges per discharge of an SSO case were adjusted to what they would have been had the patient’s length of stay been equal to the average length of stay of the MS–LTC–DRG.

Counting SSO cases as full LTCH cases with no adjustment in determining the FY 2018 MS–LTC–DRG relative weights would lower the FY 2018 MS–LTC–DRG relative weight for affected MS–LTC–DRGs because the relatively lower charges of the SSO cases would bring down the average charge for all cases within a MS–LTC–DRG. This would result in an “underpayment” for non-SSO cases and an “overpayment” for SSO cases. Therefore, as we proposed, we are continuing to adjust for SSO cases under § 412.529 in this manner because it would result in more appropriate payments for all LTCH PPS standard Federal payment rate cases. (For additional information on this step of the relative weight methodology, we refer readers to 67 FR 55989 and 74 FR 43959.)

*Step 4*—Calculate the FY 2018 MS–LTC–DRG relative weights on an iterative basis.

Consistent with our historical relative weight methodology and as we proposed, we calculated the FY 2018 MS–LTC–DRG relative weights using the HSRV methodology, which is an iterative process. First, for each SSO-adjusted trimmed applicable LTCH case, we calculate a hospital-specific relative charge value by dividing the charge per discharge after adjusting for SSOs of the LTCH case (from Step 3) by the average charge per SSO-adjusted discharge for the LTCH in which the case occurred. The resulting ratio is then multiplied by the LTCH’s case-mix index to produce an adjusted hospital-specific relative charge value for the case. We used an initial case-mix index value of 1.0 for each LTCH.

For each MS–LTC–DRG, we calculated the FY 2018 relative weight by dividing the SSO-adjusted average of the hospital-specific relative charge values for applicable LTCH cases for the MS–LTC–DRG (that is, the sum of the hospital-specific relative charge value from above divided by the sum of equivalent cases from Step 3 for each MS–LTC–DRG) by the overall SSO-adjusted average hospital-specific relative charge value across all applicable LTCH cases for all LTCHs (that is, the sum of the hospital-specific relative charge value from above divided by the sum of equivalent applicable LTCH cases from Step 3 for each MS–LTC–DRG). Using these recalculated MS–LTC–DRG relative weights, each LTCH’s average relative weight for all of its SSO-adjusted trimmed applicable LTCH cases (that is, its case-mix) was calculated by dividing the sum of all the LTCH’s MS–LTC–DRG relative weights by its total number of SSO-adjusted trimmed applicable LTCH cases. The LTCHs’ hospital-specific relative charge values (from previous) are then multiplied by the hospital-specific case-mix indexes. The hospital-specific case-mix adjusted relative charge values are then used to calculate a new set of MS–LTC–DRG relative weights across all LTCHs. This iterative process continued until there was convergence between the relative weights produced at adjacent steps, for example, when the maximum difference was less than 0.0001.

*Step 5*—Determine a FY 2018 relative weight for MS–LTC–DRGs with no applicable LTCH cases.

Using the trimmed applicable LTCH cases, consistent with our historical methodology and as we proposed, we identified the MS–LTC–DRGs for which there were no claims in the March 2017

update of the FY 2016 MedPAR file and, therefore, for which no charge data was available for these MS-LTC-DRGs. Because patients with a number of the diagnoses under these MS-LTC-DRGs may be treated at LTCHs, consistent with our historical methodology, we generally assign a relative weight to each of the no-volume MS-LTC-DRGs based on clinical similarity and relative costliness (with the exception of “transplant” MS-LTC-DRGs, “error” MS-LTC-DRGs, and MS-LTC-DRGs that indicate a principal diagnosis related to a psychiatric diagnosis or rehabilitation (referred to as the “psychiatric or rehabilitation” MS-LTC-DRGs), as discussed later in this section of this final rule). (For additional information on this step of the relative weight methodology, we refer readers to 67 FR 55991 and 74 FR 43959 through 43960.)

We cross-walked each no-volume MS-LTC-DRG to another MS-LTC-DRG for which we calculated a relative weight (determined in accordance with the methodology described above). Then, the “no-volume” MS-LTC-DRG was assigned the same relative weight (and average length of stay) of the MS-LTC-DRG to which it was cross-walked (as described in greater detail in this section of this final rule).

Of the 754 MS-LTC-DRGs for FY 2018, we identified 348 MS-LTC-DRGs for which there are no trimmed applicable LTCH cases (the number identified includes the 8 “transplant” MS-LTC-DRGs, the 2 “error” MS-LTC-DRGs, and the 15 “psychiatric or rehabilitation” MS-LTC-DRGs, which are discussed below). We assigned relative weights to each of the 348 no-volume MS-LTC-DRGs that contained trimmed applicable LTCH cases based on clinical similarity and relative costliness to 1 of the remaining 406 (754 - 348 = 406) MS-LTC-DRGs for which we calculated relative weights based on the trimmed applicable LTCH cases in the FY 2016 MedPAR file data using the steps described previously. (For the remainder of this discussion, we refer to the “cross-walked” MS-LTC-DRGs as the MS-LTC-DRGs to which we cross-walked 1 of the 348 “no volume” MS-LTC-DRGs.) Then, we generally assigned the 348 no-volume MS-LTC-DRGs the relative weight of the cross-walked MS-LTC-DRG. (As explained below in Step 6, when necessary, we made adjustments to account for nonmonotonicity.)

We cross-walked the no-volume MS-LTC-DRG to a MS-LTC-DRG for which we calculated relative weights based on the March 2017 update of the FY 2016 MedPAR file, and to which it is similar

clinically in intensity of use of resources and relative costliness as determined by criteria such as care provided during the period of time surrounding surgery, surgical approach (if applicable), length of time of surgical procedure, postoperative care, and length of stay. (For more details on our process for evaluating relative costliness, we refer readers to the FY 2010 IPPS/RV 2010 LTCH PPS final rule (73 FR 48543).) We believe in the rare event that there would be a few LTCH cases grouped to one of the no-volume MS-LTC-DRGs in FY 2017, the relative weights assigned based on the cross-walked MS-LTC-DRGs would result in an appropriate LTCH PPS payment because the crosswalks, which are based on clinical similarity and relative costliness, would be expected to generally require equivalent relative resource use.

We then assigned the relative weight of the cross-walked MS-LTC-DRG as the relative weight for the no-volume MS-LTC-DRG such that both of these MS-LTC-DRGs (that is, the no-volume MS-LTC-DRG and the cross-walked MS-LTC-DRG) have the same relative weight (and average length of stay) for FY 2018. We note that, if the cross-walked MS-LTC-DRG had 25 applicable LTCH cases or more, its relative weight (calculated using the methodology described in Steps 1 through 4 above) is assigned to the no-volume MS-LTC-DRG as well. Similarly, if the MS-LTC-DRG to which the no-volume MS-LTC-DRG was cross-walked had 24 or less cases and, therefore, is designated to 1 of the low-volume quintiles for purposes of determining the relative weights, we assigned the relative weight of the applicable low-volume quintile to the no-volume MS-LTC-DRG such that both of these MS-LTC-DRGs (that is, the no-volume MS-LTC-DRG and the cross-walked MS-LTC-DRG) have the same relative weight for FY 2018. (As we noted previously, in the infrequent case where nonmonotonicity involving a no-volume MS-LTC-DRG resulted, additional adjustments as described in Step 6 are required in order to maintain monotonically increasing relative weights.)

For this final rule, a list of the no-volume MS-LTC-DRGs and the MS-LTC-DRGs to which each was cross-walked (that is, the cross-walked MS-LTC-DRGs) for FY 2018 is shown in Table 13B, which is listed in section VI of the Addendum to this final rule and is available via the Internet on the CMS Web site.

To illustrate this methodology for determining the relative weights for the proposed FY 2018 MS-LTC-DRGs with

no applicable LTCH cases, we are providing the following example, which refers to the no-volume proposed MS-LTC-DRGs crosswalk information for FY 2018 provided in Table 13B.

*Example:* There were no trimmed applicable LTCH cases in the FY 2016 MedPAR file that we are using for this final rule for MS-LTC-DRG 061 (Acute Ischemic Stroke with Use of Thrombolytic Agent with MCC). We determined that MS-LTC-DRG 070 (Nonspecific Cerebrovascular Disorders with MCC) is similar clinically and based on resource use to MS-LTC-DRG 061. Therefore, we assigned the same relative weight (and average length of stay) of MS-LTC-DRG 70 of 0.8833 for FY 2018 to MS-LTC-DRG 061 (we refer readers to Table 11, which is listed in section VI of the Addendum to this final rule and is available via the Internet on the CMS Web site). Again, we note that, as this system is dynamic, it is entirely possible that the number of MS-LTC-DRGs with no volume will vary in the future. Consistent with our historical practice, we used the most recent available claims data to identify the trimmed applicable LTCH cases from which we determined the relative weights in this rule.

For FY 2018, consistent with our historical relative weight methodology and as we proposed, we are establishing a relative weight of 0.0000 for the following transplant MS-LTC-DRGs: Heart Transplant or Implant of Heart Assist System with MCC (MS-LTC-DRG 001); Heart Transplant or Implant of Heart Assist System without MCC (MS-LTC-DRG 002); Liver Transplant with MCC or Intestinal Transplant (MS-LTC-DRG 005); Liver Transplant without MCC (MS-LTC-DRG 006); Lung Transplant (MS-LTC-DRG 007); Simultaneous Pancreas/Kidney Transplant (MS-LTC-DRG 008); Pancreas Transplant (MS-LTC-DRG 010); and Kidney Transplant (MS-LTC-DRG 652). This is because Medicare only covers these procedures if they are performed at a hospital that has been certified for the specific procedures by Medicare and presently no LTCH has been so certified. At the present time, we include these eight transplant MS-LTC-DRGs in the GROUPER program for administrative purposes only. Because we use the same GROUPER program for LTCHs as is used under the IPPS, removing these MS-LTC-DRGs would be administratively burdensome. (For additional information regarding our treatment of transplant MS-LTC-DRGs, we refer readers to the RY 2010 LTCH PPS final rule (74 FR 43964).) In addition, consistent with our historical policy and as we proposed, we are

establishing a relative weight of 0.0000 for the 2 “error” MS–LTC–DRGs (that is, MS–LTC–DRG 998 (Principal Diagnosis Invalid as Discharge Diagnosis) and MS–LTC–DRG 999 (Ungroupable)) because applicable LTCH cases grouped to these MS–LTC–DRGs cannot be properly assigned to an MS–LTC–DRG according to the grouping logic.

In this final rule, consistent with our practice in FYs 2016 and 2017 and as we proposed, we are establishing a relative weight for FY 2018 equal to the respective FY 2015 relative weight of the MS–LTC–DRGs for the following “psychiatric or rehabilitation” MS–LTC–DRGs: MS–LTC–DRG 876 (O.R. Procedure with Principal Diagnoses of Mental Illness); MS–LTC–DRG 880 (Acute Adjustment Reaction & Psychosocial Dysfunction); MS–LTC–DRG 881 (Depressive Neuroses); MS–LTC–DRG 882 (Neuroses Except Depressive); MS–LTC–DRG 883 (Disorders of Personality & Impulse Control); MS–LTC–DRG 884 (Organic Disturbances & Mental Retardation); MS–LTC–DRG 885 (Psychoses); MS–LTC–DRG 886 (Behavioral & Developmental Disorders); MS–LTC–DRG 887 (Other Mental Disorder Diagnoses); MS–LTC–DRG 894 (Alcohol/Drug Abuse or Dependence, Left Axa); MS–LTC–DRG 895 (Alcohol/Drug Abuse or Dependence, with Rehabilitation Therapy); MS–LTC–DRG 896 (Alcohol/Drug Abuse or Dependence, without Rehabilitation Therapy with MCC); MS–LTC–DRG 897 (Alcohol/Drug Abuse or Dependence, without Rehabilitation Therapy without MCC); MS–LTC–DRG 945 (Rehabilitation with CC/MCC); and MS–LTC–DRG 946 (Rehabilitation without CC/MCC). As we discussed when we implemented the dual rate LTCH PPS payment structure, LTCH discharges that are grouped to these 15 “psychiatric and rehabilitation” MS–LTC–DRGs do not meet the criteria for exclusion from the site neutral payment rate.

As such, under the criterion for a principal diagnosis relating to a psychiatric diagnosis or to rehabilitation, there are no applicable LTCH cases to use in calculating a relative weight for the “psychiatric and rehabilitation” MS–LTC–DRGs. In other words, any LTCH PPS discharges grouped to any of the 15 “psychiatric and rehabilitation” MS–LTC–DRGs would always be paid at the site neutral payment rate, and, therefore, those MS–LTC–DRGs would never include any LTCH cases that meet the criteria for exclusion from the site neutral payment rate. However, section 1886(m)(6)(B) of the Act establishes a transitional payment method for cases that would be

paid at the site neutral payment rate for LTCH discharges occurring in cost reporting periods beginning during FY 2016 or FY 2017. Under the transitional payment method for site neutral payment rate cases, for LTCH discharges occurring in cost reporting periods beginning on or after October 1, 2016, and on or before September 30, 2017, site neutral payment rate cases are paid a blended payment rate, calculated as 50 percent of the applicable site neutral payment rate amount for the discharge and 50 percent of the applicable LTCH PPS standard Federal payment rate. Because the LTCH PPS standard Federal payment rate is based on the relative weight of the MS–LTC–DRG, in order to determine the transitional blended payment for site neutral payment rate cases grouped to one of the “psychiatric or rehabilitation” MS–LTC–DRGs in FY 2018, we assigned a relative weight to these MS–LTC–DRGs for FY 2018 that is the same as the FY 2015 relative weight (which is also the same as the FY 2016 relative weight). We believe that using the respective FY 2015 relative weight for each of the “psychiatric or rehabilitation” MS–LTC–DRGs results in appropriate payments for LTCH cases that are paid at the site neutral payment rate under the transition policy provided by the statute because there are no clinically similar MS–LTC–DRGs for which we were able to determine relative weights based on applicable LTCH cases in the March 2017 update of the FY 2016 MedPAR file data using the steps described above. Furthermore, we believe that it would be administratively burdensome and introduce unnecessary complexity to the MS–LTC–DRG relative weight calculation to use the LTCH discharges in the MedPAR file data to calculate a relative weight for those 15 “psychiatric and rehabilitation” MS–LTC–DRGs to be used for the sole purpose of determining half of the transitional blended payment for site neutral payment rate cases during the transition period (80 FR 49631 through 49632).

In summary, for FY 2018, we are establishing a relative weight (and average length of stay thresholds) equal to the respective FY 2015 relative weight of the MS–LTC–DRGs for the 15 “psychiatric or rehabilitation” MS–LTC–DRGs listed previously (that is, MS–LTC–DRGs 876, 880, 881, 882, 883, 884, 885, 886, 887, 894, 895, 896, 897, 945, and 946). Table 11, which is listed in section VI. of the Addendum to this final rule and is available via the Internet on the CMS Web site, reflects this policy.

*Step 6*—Adjust the FY 2018 MS–LTC–DRG relative weights to account for

nonmonotonically increasing relative weights.

The MS–DRGs contain base DRGs that have been subdivided into one, two, or three severity of illness levels. Where there are three severity levels, the most severe level has at least one secondary diagnosis code that is referred to as an MCC (that is, major complication or comorbidity). The next lower severity level contains cases with at least one secondary diagnosis code that is a CC (that is, complication or comorbidity). Those cases without an MCC or a CC are referred to as “without CC/MCC.” When data do not support the creation of three severity levels, the base MS–DRG is subdivided into either two levels or the base MS–DRG is not subdivided. The two-level subdivisions may consist of the MS–DRG with CC/MCC and the MS–DRG without CC/MCC. Alternatively, the other type of two-level subdivision may consist of the MS–DRG with MCC and the MS–DRG without MCC.

In those base MS–LTC–DRGs that are split into either two or three severity levels, cases classified into the “without CC/MCC” MS–LTC–DRG are expected to have a lower resource use (and lower costs) than the “with CC/MCC” MS–LTC–DRG (in the case of a two-level split) or both the “with CC” and the “with MCC” MS–LTC–DRGs (in the case of a three-level split). That is, theoretically, cases that are more severe typically require greater expenditure of medical care resources and would result in higher average charges. Therefore, in the three severity levels, relative weights should increase by severity, from lowest to highest. If the relative weights decrease as severity increases (that is, if within a base MS–LTC–DRG, an MS–LTC–DRG with CC has a higher relative weight than one with MCC, or the MS–LTC–DRG “without CC/MCC” has a higher relative weight than either of the others), they are nonmonotonic. We continue to believe that utilizing nonmonotonic relative weights to adjust Medicare payments would result in inappropriate payments because the payment for the cases in the higher severity level in a base MS–LTC–DRG (which are generally expected to have higher resource use and costs) would be lower than the payment for cases in a lower severity level within the same base MS–LTC–DRG (which are generally expected to have lower resource use and costs). Therefore, in determining the FY 2018 MS–LTC–DRG relative weights, consistent with our historical methodology, we are continuing to combine MS–LTC–DRG severity levels within a base MS–LTC–DRG for the purpose of computing a relative weight

when necessary to ensure that monotonicity is maintained. For a comprehensive description of our existing methodology to adjust for nonmonotonicity, we refer readers to the FY 2010 IPPS/R Y 2010 LTCH PPS final rule (74 FR 43964 through 43966). Any adjustments for nonmonotonicity that were made in determining the FY 2018 MS-LTC-DRG relative weights in this final rule by applying this methodology are denoted in Table 11, which is listed in section VI. of the Addendum to this final rule and is available via the Internet on the CMS Web site.

*Step 7*—Calculate the FY 2018 MS-LTC-DRG reclassification and recalibration budget neutrality factor.

In accordance with the regulations at § 412.517(b) (in conjunction with § 412.503), the annual update to the MS-LTC-DRG classifications and relative weights is done in a budget neutral manner such that estimated aggregate LTCH PPS payments would be unaffected, that is, would be neither greater than nor less than the estimated aggregate LTCH PPS payments that would have been made without the MS-LTC-DRG classification and relative weight changes. (For a detailed discussion on the establishment of the budget neutrality requirement for the annual update of the MS-LTC-DRG classifications and relative weights, we refer readers to the RY 2008 LTCH PPS final rule (72 FR 26881 and 26882).)

The MS-LTC-DRG classifications and relative weights are updated annually based on the most recent available LTCH claims data to reflect changes in relative LTCH resource use (§ 412.517(a) in conjunction with § 412.503). To achieve the budget neutrality requirement at § 412.517(b), under our established methodology, for each annual update, the MS-LTC-DRG relative weights are uniformly adjusted to ensure that estimated aggregate payments under the LTCH PPS would not be affected (that is, decreased or increased). Consistent with that provision and as we proposed, we are update the MS-LTC-DRG classifications and relative weights for FY 2018 based on the most recent available LTCH data for applicable LTCH cases, and continue to apply a budget neutrality adjustment in determining the FY 2018 MS-LTC-DRG relative weights. In this FY 2018 IPPS/LTCH PPS final rule, as we proposed, to ensure budget neutrality in the update to the MS-LTC-DRG classifications and relative weights under § 412.517(b), we are continuing to use our established two-step budget neutrality methodology.

To calculate the normalization factor for FY 2018, we grouped applicable LTCH cases using the FY 2018 Version 35 GROUPER, and the recalibrated FY 2018 MS-LTC-DRG relative weights to calculate the average case-mix index (CMI); we grouped the same applicable LTCH cases using the FY 2017 GROUPER Version 34 and MS-LTC-DRG relative weights and calculated the average CMI; and computed the ratio by dividing the average CMI for FY 2017 by the average CMI for FY 2018. That ratio is the normalization factor. Because the calculation of the normalization factor involves the relative weights for the MS-LTC-DRGs that contained applicable LTCH cases to calculate the average CMIs, any low-volume MS-LTC-DRGs are included in the calculation (and the MS-LTC-DRGs with no applicable LTCH cases are not included in the calculation).

To calculate the budget neutrality adjustment factor, we simulated estimated total FY 2018 LTCH PPS standard Federal payment rate payments for applicable LTCH cases using the FY 2018 normalized relative weights and GROUPER Version 35; simulated estimated total FY 2017 LTCH PPS standard Federal payment rate payments for applicable LTCH cases using the FY 2017 MS-LTC-DRG relative weights and the FY 2017 GROUPER Version 34; and calculated the ratio of these estimated total payments by dividing the simulated estimated total LTCH PPS standard Federal payment rate payments for FY 2018. The resulting ratio is budget neutrality adjustment factor. The calculation of the budget neutrality factor involves the relative weights for the LTCH cases used in the payment simulation, which includes any cases grouped to low-volume MS-LTC-DRGs or to MS-LTC-DRGs with no applicable LTCH cases, and generally does not include payments for cases grouped to a MS-LTC-DRG with no applicable LTCH cases. (Occasionally, a few LTCH cases (that is, those with a covered length of stay of 7 days or less, which are removed from the relative weight calculation in step 2) that are grouped to a MS-LTC-DRG with no applicable LTCH cases are included in the payment simulations used to calculate the budget neutrality factor. However, the number and payment amount of such cases have a negligible impact on the budget neutrality factor calculation).

In this final rule, to ensure budget neutrality in the update to the MS-LTC-DRG classifications and relative weights

under § 412.517(b), as we proposed, we are continuing to use our established two-step budget neutrality methodology. Therefore, in this final rule, in the first step of our MS-LTC-DRG budget neutrality methodology, for FY 2018, we calculate and apply a normalization factor to the recalibrated relative weights (the result of Steps 1 through 6 discussed previously) to ensure that estimated payments are not affected by changes in the composition of case types or the changes to the classification system. That is, the normalization adjustment is intended to ensure that the recalibration of the MS-LTC-DRG relative weights (that is, the process itself) neither increases nor decreases the average case-mix index.

To calculate the normalization factor for FY 2018 (the first step of our budget neutrality methodology), we used the following three steps: (1.a.) Used the most recent available applicable LTCH cases from the most recent available data (that is, LTCH discharges from the FY 2016 MedPAR file) and grouped them using the FY 2018 GROUPER (that is, Version 35 for FY 2018) and the recalibrated FY 2018 MS-LTC-DRG relative weights (determined in Steps 1 through 6 above) to calculate the average case-mix index; (1.b.) grouped the same applicable LTCH cases (as are used in Step 1.a.) using the FY 2017 GROUPER (Version 34) and FY 2017 MS-LTC-DRG relative weights and calculated the average case-mix index; and (1.c.) computed the ratio of these average case-mix indexes by dividing the average CMI for FY 2017 (determined in Step 1.b.) by the average case-mix index for FY 2018 (determined in Step 1.a.). As a result, in determining the MS-LTC-DRG relative weights for FY 2018, each recalibrated MS-LTC-DRG relative weight is multiplied by the normalization factor of 1.28590 (determined in Step 1.c.) in the first step of the budget neutrality methodology, which produced “normalized relative weights.”

In the second step of our MS-LTC-DRG budget neutrality methodology, we calculate a second budget neutrality factor consisting of the ratio of estimated aggregate FY 2018 LTCH PPS standard Federal payment rate payments for applicable LTCH cases (the sum of all calculations under Step 1.a. mentioned previously) after reclassification and recalibration to estimated aggregate payments for FY 2018 LTCH PPS standard Federal payment rate payments for applicable LTCH cases before reclassification and recalibration (that is, the sum of all calculations under Step 1.b. mentioned previously).

That is, for this final rule, for FY 2018, under the second step of the budget neutrality methodology, as we proposed, we determine the budget neutrality adjustment factor using the following three steps: (2.a.) Simulated estimated total FY 2018 LTCH PPS standard Federal payment rate payments for applicable LTCH cases using the normalized relative weights for FY 2018 and GROUPER Version 35 (as described above); (2.b.) simulated estimated total FY 2017 LTCH PPS standard Federal payment rate payments for applicable LTCH cases using the FY 2017 GROUPER (Version 34) and the FY 2017 MS-LTC-DRG relative weights in Table 11 of the FY 2017 IPPS/LTCH PPS final rule available on the Internet, as described in section VI. of the Addendum to that final rule; and (2.c.) calculated the ratio of these estimated total payments by dividing the value determined in Step 2.b. by the value determined in Step 2.a. In determining the FY 2018 MS-LTC-DRG relative weights, each normalized relative weight is then multiplied by a budget neutrality factor of 0.9907845 (the value determined in Step 2.c.) in the second step of the budget neutrality methodology to achieve the budget neutrality requirement at § 412.517(b).

Accordingly, in determining the FY 2018 MS-LTC-DRG relative weights in this final rule, consistent with our existing methodology, we applied a normalization factor of 1.28590 and a budget neutrality factor of 0.9907845. Table 11, which is listed in section VI. of the Addendum to this final rule and is available via the Internet on the CMS Web site, lists the MS-LTC-DRGs and their respective relative weights, geometric mean length of stay, and five-sixths of the geometric mean length of stay (used to identify SSO cases under § 412.529(a)) for FY 2018.

### *C. Changes to the LTCH PPS Payment Rates and Other Changes to the LTCH PPS for FY 2018*

#### 1. Overview of Development of the LTCH PPS Standard Federal Payment Rates

The basic methodology for determining LTCH PPS standard Federal payment rates is currently set forth at 42 CFR 412.515 through 412.538. In this section, we discuss the factors that we used to update the LTCH PPS standard Federal payment rate for FY 2018, that is, effective for LTCH discharges occurring on or after October 1, 2017 through September 30, 2018. Under the dual rate LTCH PPS payment structure required by statute, beginning with discharges in cost reporting

periods beginning in FY 2016, only LTCH discharges that meet the criteria for exclusion from the site neutral payment rate are paid based on the LTCH PPS standard Federal payment rate specified at § 412.523. (For additional details on our finalized policies related to the dual rate LTCH PPS payment structure required by statute, we refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49601 through 49623).)

Prior to the implementation of the dual payment rate system in FY 2016, all LTCHs were paid similarly to those now exempt from the site neutral payment rate. That legacy payment rate was called the standard Federal rate. For details on the development of the initial standard Federal rate for FY 2003, we refer readers to the August 30, 2002 LTCH PPS final rule (67 FR 56027 through 56037). For subsequent updates to the standard Federal rate (FYs 2003 through 2015)/LTCH PPS standard Federal payment rate (FY 2016 through present) as implemented under § 412.523(c)(3), we refer readers to the following final rules: RY 2004 LTCH PPS final rule (68 FR 34134 through 34140); RY 2005 LTCH PPS final rule (68 FR 25682 through 25684); RY 2006 LTCH PPS final rule (70 FR 24179 through 24180); RY 2007 LTCH PPS final rule (71 FR 27819 through 27827); RY 2008 LTCH PPS final rule (72 FR 26870 through 27029); RY 2009 LTCH PPS final rule (73 FR 26800 through 26804); FY 2010 IPPS/RX 2010 LTCH PPS final rule (74 FR 44021 through 44030); FY 2011 IPPS/LTCH PPS final rule (75 FR 50443 through 50444); FY 2012 IPPS/LTCH PPS final rule (76 FR 51769 through 51773); FY 2013 IPPS/LTCH PPS final rule (77 FR 53479 through 53481); FY 2014 IPPS/LTCH PPS final rule (78 FR 50760 through 50765); FY 2015 IPPS/LTCH PPS final rule (79 FR 50176 through 50180); FY 2016 IPPS/LTCH PPS final rule (80 FR 49634 through 49637); and FY 2017 IPPS/LTCH PPS final rule (81 FR 57296 through 57310).

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20021 through 20022), we presented our proposals related to the proposed annual update to the LTCH PPS standard Federal payment rate for FY 2018, which include certain statutory requirements as discussed below.

The application of the update to the LTCH PPS standard Federal payment rate for FY 2018 is presented in section V.A. of the Addendum to this final rule. The components of the annual update to the LTCH PPS standard Federal payment rate for FY 2018 are discussed below, including the reduction to the

annual update for LTCHs that fail to submit quality reporting data for FY 2018 as required by the statute (as discussed in section VIII.C.2.c. of the preamble of this final rule). In addition, we are making an adjustment to the LTCH PPS standard Federal payment rate to account for the estimated effect of the changes to the area wage level adjustment for FY 2018 on estimated aggregate LTCH PPS payments, in accordance with § 412.523(d)(4) (as discussed in section V.B. of the Addendum to this final rule), and a budget neutrality adjustment stemming from our change to the SSO payment methodology (as discussed in VIII.D. of the preamble of this final rule).

#### 2. FY 2018 LTCH PPS Standard Federal Payment Rate Annual Market Basket Update

##### a. Overview

Historically, the Medicare program has used a market basket to account for input price increases in the services furnished by providers. The market basket used for the LTCH PPS includes both operating and capital related costs of LTCHs because the LTCH PPS uses a single payment rate for both operating and capital-related costs. We adopted the 2013-based LTCH-specific market basket for use under the LTCH PPS beginning in FY 2017 (81 FR 57101 through 57102). For additional details on the historical development of the market basket used under the LTCH PPS, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53467 through 53476), and for a complete discussion of the LTCH market basket and a description of the methodologies used to determine the operating and capital-related portions of the 2013-based LTCH market basket, we refer readers to section VII.D. of the preamble of the FY 2017 IPPS/LTCH PPS proposed and final rules.

Section 3401(c) of the Affordable Care Act provides for certain adjustments to any annual update to the LTCH PPS standard Federal payment rate and refers to the timeframes associated with such adjustments as a “rate year” (which are discussed in more detail in section VIII.C.2.b. of the preamble of this final rule.) We note that because the annual update to the LTCH PPS policies, rates, and factors now occurs on October 1, we adopted the term “fiscal year” (FY) rather than “rate year” (RY) under the LTCH PPS beginning October 1, 2010, to conform with the standard definition of the Federal fiscal year (October 1 through September 30) used by other PPSs, such as the IPPS (75 FR 50396 through

50397). Although the language of sections 3004(a), 3401(c), 10319, and 1105(b) of the Affordable Care Act refers to years 2010 and thereafter under the LTCH PPS as “rate year,” consistent with our change in the terminology used under the LTCH PPS from “rate year” to “fiscal year,” for purposes of clarity, when discussing the annual update for the LTCH PPS standard Federal payment rate, including the provisions of the Affordable Care Act, we use “fiscal year” rather than “rate year” for 2011 and subsequent years.

**b. Annual Update to the LTCH PPS Standard Federal Payment Rate for FY 2018**

Section 1886(m)(3)(A) of the Act provides that, beginning in FY 2010, any annual update to the LTCH PPS standard Federal payment rate is reduced by the adjustments specified in clauses (i) and (ii) of subparagraph (A). Clause (i) of section 1886(m)(3)(A) of the Act provides for a reduction, for FY 2012 and each subsequent rate year, by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act (that is, “the multifactor productivity (MFP) adjustment”). Clause (ii) of section 1886(m)(3)(A) of the Act provides for a reduction, for each of FYs 2010 through 2019, by the “other adjustment” described in section 1886(m)(4)(F) of the Act.

Section 411(e) of the Medicare Access and CHIP Reauthorization Act (MACRA) (Pub. L. 114–10), enacted on April 16, 2015, amended section 1886(m)(3) of the Act by amending subparagraph (A) to be “subject to subparagraph (C)” and by adding new subparagraph (C), which specifies an additional special rule for FY 2018. Specifically, section 1886(m)(3)(C) of the Act states for FY 2018, the annual update under subparagraph (A) for the fiscal year, after application of clauses (i) and (ii) of subparagraph (A), shall be 1 percent. That is, the annual update for FY 2018, after applications of the reductions for the MFP adjustment (under clause (i) of section 1886(m)(3)(A)) and the “other adjustment” (under clause (ii) of section 1886(m)(3)(A)) is 1 percent.

Historically, CMS has used an estimated market basket increase to update the LTCH PPS. Under the authority of section 123 of the BBRA as amended by section 307(b) of the BIPA, we adopted a newly created 2013-based LTCH-specific market basket for use under the LTCH PPS beginning in FY 2017. The 2013-based LTCH-specific market basket is based solely on the Medicare cost report data submitted by LTCHs and, therefore, specifically reflects the cost structures of only

LTCHs. For additional details on the development of the 2013-based LTCH-specific market basket, we refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 57101 through 57102). For FYs 2010 through 2017, the estimated market basket update under the LTCH PPS was reduced by the MFP adjustment and “other adjustment” as applicable. However, as described above, section 411(e) of the MACRA subsequently amended section 1886(m)(3)(A) of the Act so that, after the adjustments above, the FY 2018 annual update is set at 1 percent.

**c. Adjustment to the LTCH PPS Standard Federal Payment Rate Under the Long-Term Care Hospital Quality Reporting Program (LTCH QRP)**

In accordance with section 1886(m)(5) of the Act, as added by section 3004(a) of the Affordable Care Act, the Secretary established the Long-Term Care Hospital Quality Reporting Program (LTCH QRP). Failure to report quality data under the LTCH QRP for FY 2014 and subsequent fiscal years results in a 2.0 percentage point reduction in the annual update as codified under § 412.523(c)(4) of the regulations. (As previously noted, although the language of section 3004(a) of the Affordable Care Act refers to years 2011 and thereafter under the LTCH PPS as “rate year,” consistent with our change in the terminology used under the LTCH PPS from “rate year” to “fiscal year,” for purposes of clarity, when discussing the annual update for the LTCH PPS, including the provisions of the Affordable Care Act, we use “fiscal year” rather than “rate year” for 2011 and subsequent years.) The LTCH QRP, as required for FY 2014 and subsequent fiscal years by section 1886(m)(5)(A)(i) of the Act, applies a 2.0 percentage point reduction to any update under § 412.523(c)(3) for an LTCH that does not submit quality reporting data to the Secretary in accordance with section 1886(m)(5)(C) of the Act with respect to such a year (that is, in the form and manner and at the time specified by the Secretary under the LTCH QRP) (§ 412.523(c)(4)(i)). Section 1886(m)(5)(A)(ii) of the Act provides that the application of the 2.0 percentage points reduction may result in an annual update that is less than 0.0 for a year, and may result in LTCH PPS payment rates for a year being less than such LTCH PPS payment rates for the preceding year (§ 412.523(c)(4)(iii)). Furthermore, section 1886(m)(5)(B) of the Act specifies that the 2.0 percentage points reduction is applied in a noncumulative manner, such that any reduction made under section

1886(m)(5)(A) of the Act shall apply only with respect to the year involved, and shall not be taken into account in computing the LTCH PPS payment amount for a subsequent year (§ 412.523(c)(4)(ii)).

**d. Annual Update Under the LTCH PPS for FY 2018**

Consistent with the amendments to section 1886(m)(3)(C) of the Act provided by section 411 of the MACRA, as we proposed in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20021), we are making an update to the LTCH PPS standard Federal payment rate of 1 percent for FY 2018.

For FY 2018, section 1886(m)(5) of the Act requires that, for LTCHs that do not submit quality reporting data as required under the LTCH QRP, any annual update to an LTCH PPS standard Federal payment rate, after application of the adjustments required by section 1886(m)(3) of the Act, shall be further reduced by 2.0 percentage points. For LTCHs that fail to submit quality reporting data under the LTCH QRP, under § 412.523(c)(3)(xiv) in conjunction with § 412.523(c)(4), as we proposed, we are further reducing the annual update to the LTCH PPS standard Federal payment rate by 2.0 percentage points in accordance with section 1886(m)(5) of the Act. As such, the update to the LTCH PPS standard Federal payment rate for FY 2018 for LTCHs that fail to submit quality reporting data under the LTCH QRP is the 1-percent annual rate increase for FY 2018 reduced by 2.0 percentage points. For this final rule, we are establishing an annual update to the LTCH PPS standard Federal payment rate of –1 percent (that is, 1 percent minus 2.0 percentage points) for FY 2018 for LTCHs that fail to submit quality reporting data as required under the LTCH QRP. As provided in § 412.523(c)(4)(iii) and as noted above, the application of the 2.0 percentage points reduction may result in an annual update that is less than 0.0 for a year, and may result in LTCH PPS payment rates for a year being less than such LTCH PPS payment rates for the preceding year. (We note that, consistent with historical practice, in determining the FY 2018 LTCH PPS standard Federal payment rate, we are also applying an area wage level budget neutrality factor in accordance with § 412.523(d)(4) (as discussed in section V.B. of the Addendum to this final rule) and a budget neutrality adjustment stemming from our change to the SSO payment methodology (as discussed in VIII.D. of the preamble of this final rule).

Absent the special provisions for FY 2018 required by section 1886(m)(3)(C) of the Act, we note the annual market basket update would have been based on the FY 2018 full market basket increase of 2.7 percent (based on IGI's second quarter 2017 forecast of the 2013-based LTCH market basket) reduced by the FY 2018 MFP adjustment of 0.6 percentage point (also based on IGI's second quarter 2017 forecast). Following application of the productivity adjustment, the adjusted market basket update of 2.1 percent (2.7 percent minus 0.6 percentage point) would have then been further reduced by 0.75 percentage point, as required by sections 1886(m)(3)(A)(ii) and 1886(m)(4)(F) of the Act. This would have resulted in an annual market basket update under the LTCH PPS standard Federal payment rate for FY 2018 of 1.35 percent (that is, 2.7 percent, less the MFP adjustment of 0.6 percentage point, and less the 0.75 percentage point required under section 1886(m)(4)(F) of the Act). (For additional information on the application of the MFP adjustment and "other adjustment" in developing the annual market based update under our historical approach, refer to the FY 2017 IPPS/LTCH PPS final rule (81 FR 57296 through 57310).)

#### *D. Changes to the Short-Stay Outlier Adjustment Policy (§ 412.529)*

In the FY 2003 LTCH PPS final rule (67 FR 55954) that implemented the LTCH PPS, under § 412.529, we established a special payment policy for short-stay outlier (SSO) cases; that is, cases with a covered length of stay that is less than or equal to five-sixths of the geometric average length of stay for each LTC-DRG. When we established the SSO policy, we explained that a short-stay outlier case may occur when a beneficiary receives less than the full course of treatment at the LTCH before being discharged (67 FR 55995). Also, in the FY 2003 LTCH PPS final rule, we stated that when we first described the policy in the proposed rule, we based the proposed policy on the belief that many of these patients could have been treated more appropriately in an acute hospital subject to the acute care hospital inpatient prospective payment system (67 FR 55995).

Therefore, under the LTCH PPS, we implemented a special payment adjustment for SSO cases. Under the original SSO policy, for LTCH PPS discharges with a covered length of stay of up to and including five-sixths of the geometric average length of stay for the LTC-DRG, we adjusted the per discharge payment amount under the

LTCH PPS as the least of 120 percent of the estimated cost of the case, 120 percent of the LTC-DRG specific per diem amount multiplied by the covered length of stay of that discharge, or the full LTC-DRG payment amount (67 FR 55995 through 56000).

As noted previously, generally LTCHs are defined by statute as having an average length of stay of greater than 25 days. In the FY 2003 LTCH PPS final rule, we stated that we believed that the SSO payment adjustment results in more appropriate payments because these SSO cases most likely did not receive a full course of treatment at a LTCH level in such a short period of time, and the full LTC-DRG payment would generally not be appropriate. Payment-to-cost ratio analyses at that time indicated that if LTCHs received a full LTC-DRG payment for those cases, they would have been significantly "overpaid" for the resources they actually expended in treating those patients (67 FR 55995 through 56000). Furthermore, in establishing the SSO policy, we stated that we believed that providing a reduced payment for SSO cases would discourage hospitals from admitting these patients. We also believed that the policy did not severely penalize providers that, in good faith, had admitted a patient and provided some services before realizing that the beneficiary could receive more appropriate treatment at another site of care. As we further explained in the FY 2003 LTCH PPS final rule, establishing a SSO payment adjustment for these types of cases addresses the incentives inherent in a discharge-based PPS for LTCHs for treating patients with a short length of stay (67 FR 55995 through 56000). We have made several changes to our SSO policy since it was first introduced.

For a full discussion of those historic changes, we refer readers to the RY 2008 LTCH PPS final rule (72 FR 26904 through 26919).

During our FY 2016 and FY 2017 IPPS/LTCH PPS rulemaking cycles, we received public comments that we determined were outside the scope of the FY 2016 and FY 2017 proposed rules that expressed concern with our existing SSO policy. Commenters stated that our SSO payment adjustment appears to result in an incentive to improperly hold patients beyond the SSO threshold (five-sixths the geometric average length of stay for the MS-LTC-DRG). Specifically, as SSO cases are paid the "lesser of" various payment options, while non-SSO cases are paid the full MS-LTC-DRG payment, there is an economic incentive to hold a patient beyond the SSO threshold in order to

increase (and in some cases dramatically increase) the LTCH PPS payment for that case. In its comment in response to the FY 2016 IPPS/LTCH PPS proposed rule, MedPAC stated that its analysis of LTCH discharge patterns have shown that LTCHs respond to that incentive. Analyses of lengths-of-stay by MS-LTC-DRG have consistently shown that the frequency of discharges rises sharply immediately after the SSO threshold is met.

This pattern holds true across MS-LTC-DRGs and for every category of LTCHs. We believe that these analyses strongly suggest that LTCHs' discharge decisions are influenced at least as much by this financial incentive as by clinical considerations. Our own analysis of LTCH claims data showed similar findings.

In light of these concerns, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20023), we proposed to address this financial incentive and discourage such delay in the discharge of LTCH patients by proposing to revise our SSO policy. We note that, under the dual rate LTCH PPS payment structure, our existing SSO policy only applies to the LTCH PPS standard Federal payment rate. Accordingly, as explained in the proposed rule, the proposed changes to our SSO policy would only apply to LTCH PPS standard Federal payment rate cases (or, for cost reporting periods beginning before October 1, 2017, the LTCH PPS standard Federal payment rate portion of the blended rate payment under § 412.522(c)(3)(ii)).

Under our proposed policy, the SSO definition remained unchanged, but the current payment adjustment options would be replaced with a single graduated per diem payment adjustment calculated using a blended payment rate that, as the length of stay increases, consists of a decreasing portion of the payment amount paid at the IPPS per diem amount (referred to as the "IPPS comparable amount") and an increasing portion paid at 120 percent of the MS-LTC-DRG per diem payment amount (referred to as the "LTCH PPS per diem amount"), with a maximum payment amount set at the full LTCH PPS standard Federal payment rate. Specifically, beginning with discharges occurring on or after October 1, 2017, we proposed to pay SSO cases solely on the "blended" option in the current SSO payment adjustment formula described at § 412.529(c)(2)(iv); that is, a SSO case would be paid based on a blend of the IPPS comparable amount (determined under § 412.529(d)(4)(i)) and the MS-LTC-DRG per diem amount (determined under § 412.529(d)(1) in conjunction with § 412.503).

Under this blended payment method at existing § 412.529(c)(2)(iv), as the length of stay of a SSO case increases, the percentage of the per diem payment amounts based on the full MS-LTC-DRG standard Federal payment rate would increase, and the percentage of the payment based on the IPPS comparable amount would decrease. This blended per diem payment rate adjustment would result in paying LTCH cases with a very short length of stay more like an IPPS case, and LTCH cases with relatively longer lengths-of-stay more like a non-short-stay LTCH PPS standard Federal payment rate case.

Therefore, as the length of stay of a SSO case increases, the treatment resources and costs associated with the stay are more comparable with typical LTCH PPS standard Federal payment rate payments and less comparable to payments for the same stay at an acute care hospital under the IPPS.

We stated in the proposed rule that, if adopted, this policy would result in payment amounts becoming more commensurate with the LTCH PPS standard Federal payment rate as the case begins to resemble a more characteristic LTCH PPS standard Federal payment rate case. We stated that we believe that, by paying SSO cases on this basis, we would reduce, if not eliminate, the payment “cliffs” (or payment differentials) inherent in our current payment methodology, as well as the financial incentives that appear to have resulted in potentially improper delays in patient discharges other than solely for medical reasons. In addition, we stated that we believe that the per diem “blended” approach would provide an appropriate balance between the 1-day marginal payment and the 1-day marginal incurred cost.

Under this proposal, we proposed to codify the change to the SSO policy described above by revising § 412.529 of the regulation. Specifically, we proposed to add paragraph (c)(4) to provide that, for discharges occurring on or after October 1, 2017, SSO cases will be paid according to the blended payment option at existing § 412.529(c)(2)(iv) and corresponding changes to § 412.529(c)(3) by sunseting the previous SSO payment formula as of October 1, 2017.

*Comment:* Commenters supported the proposal to revise the SSO policy. Many commenters requested clarification on the interaction between the proposal and the so-called “very short stay outlier” policy at § 412.529(c)(3)(ii).

*Response:* We appreciate the commenters’ support. In response to those seeking clarification, we note that our proposed changes to the SSO policy

would apply to all short-stay cases, including those cases currently paid under § 412.529(c)(3)(ii) (that is, the “very short stay outlier” policy). Because the proposed blended payment method pays cases with relatively short stays more like IPPS cases, we believe this single payment option provides appropriate payments for those SSO cases that most likely did not receive a full course of treatment at an LTCH. Moreover, as stated above, in the proposed rule, we proposed to sunset the existing SSO payment formula at § 412.529(c)(3), effective October 1, 2017. Because the “very short stay outlier” payment is paragraph (ii) of § 412.529(c)(3), our proposal would eliminate that payment option, while our proposed addition of § 412.529(c)(4) provides for an adjustment to all SSO cases under a single payment formula.

After consideration of the public comments we received, we are adopting our proposed changes to § 412.529 as final without modification. Specifically, we are finalizing our proposal to add paragraph (c)(4) to provide that, for discharges occurring on or after October 1, 2017, SSO cases will be paid according to the blended payment option at existing § 412.529(c)(2)(iv) and finalizing our proposal to make corresponding changes to § 412.529(c)(3) by sunseting the previous SSO payment formula as of October 1, 2017.

The goal of revising the SSO policy is to remove the incentive to delay patient discharges for payment reasons. As explained in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20023), in assessing the potential impact of this proposed policy change, we found two different impacts on Medicare LTCH spending: One would increase spending while the other would decrease spending.

First, as we stated in the proposed rule, we expect this SSO payment adjustment methodology would result in increased payments to SSO cases. Based on data and FY 2018 payment estimates used for the proposed rule, we estimate that, under this SSO payment adjustment, Medicare payments to SSO cases will increase approximately 30 percent, or approximately \$145 million (without taking into account any assumptions on changes to LTCHs’ discharge practices). These increased payments for SSO cases will produce a somewhat substantial increase in aggregate Medicare spending for LTCH PPS standard Federal payment rate cases (that is, an approximate 4.6-percent increase to current projected LTCH PPS standard Federal payment rate case payments).

At the same time, without the economic incentive to delay discharge until the SSO threshold is met, under our proposal, we stated that we expect LTCHs would discharge some patients sooner, even while the length of stay of the patient is still within the SSO period. Therefore, in the absence of this policy, these cases would not have previously been SSO cases. We stated our belief that this policy would result in some reduction in Medicare spending due to an expected decrease in Medicare payments for LTCH PPS standard Federal payment rate cases that, under the current SSO policy, were not receiving the SSO payment adjustment (because discharges were delayed until the SSO threshold was met).

However, as also discussed in the proposed rule, while we expect this behavior change by LTCHs will reduce Medicare expenditures, we do not believe that the decrease in expenditures from fewer delayed discharge cases will offset the estimated increase in expenditures under the proposed SSO payment adjustment methodology. As such, we projected that the proposed change to the payment formula for SSOs would result in a net increase in aggregate Medicare LTCH payments compared to aggregate Medicare payments under the current methodology.

As we stated in the proposed rule, the goal of the proposed policy is to remove the incentive to delay patient discharges for payment reasons, not to increase aggregate Medicare LTCH PPS payments. Therefore, we believed the appropriate policy approach was to propose to implement this change to the SSO payment methodology on a budget neutral basis; that is, to implement the SSO payment adjustment methodology by adjusting the LTCH PPS standard Federal payment rate so that our projection of aggregate FY 2018 payments for LTCH PPS standard Federal payment rate cases made under this SSO payment adjustment methodology would be equal to our projection of aggregate FY 2018 payments paid for LTCH PPS standard Federal payment rate cases under our existing SSO payment adjustment methodology.

We further note that, based on most recent claims data, we believe the effects of a budget neutral approach would primarily occur within each LTCH and, therefore, result in minimal redistribution between different LTCHs. Specifically, FY 2015 claims data show that nearly all LTCHs treated at least one SSO case, and those that did not treat any SSO cases, on average, had very few LTCH PPS standard Federal

payment rate cases. In addition, for over 90 percent of all LTCHs, at least 20 percent of their LTCH PPS standard Federal payment rate cases were SSO cases. Therefore, in the proposed rule, we stated that we expect that, for most LTCHs, the increase in payments for their SSO cases under this proposed change to the SSO payment methodology would generally offset any SSO budget neutrality-related decrease in payment to their non-SSO LTCH PPS standard Federal payment rate cases.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20023), we proposed to implement the proposed change to the SSO payment methodology by using a budget neutrality adjustment to offset the projected net increase in Medicare spending while accounting for both the estimated decrease in Medicare payments resulting from LTCHs no longer holding patients until the SSO threshold is met and the larger estimated increase in spending to SSO cases described earlier. We stated that we believe our proposal to incorporate a projection of the expected decrease in spending resulting from a behavior change to not hold patients beyond the SSO threshold appropriately reflects the net impact of the proposed change. Further, this lessens the impact of any budget neutrality adjustment estimated without accounting for these expected behavioral changes—in other words, if the budget neutrality adjustment only adjusted for the increased payments to SSO cases.

To do so, we proposed to amend § 412.523(d) by adding a new paragraph (5), which would specify that the LTCH PPS standard Federal payment rate will be adjusted by a one-time, permanent factor that accounts for the projected change in estimated aggregate payments to LTCH PPS standard Federal payment rate cases in FY 2018 due to the change in the payment methodology for SSO cases described at § 412.529(c)(4). (As noted earlier, this budget neutrality adjustment would only affect the LTCH PPS standard Federal payment rate.) This factor would ensure that the proposed change to the SSO payment methodology in FY 2018 does not affect aggregate LTCH PPS payments; that is, this proposed policy change is budget neutral. Specifically, in the proposed rule, we set out a proposed methodology to determine the budget neutrality factor that would be applied to the FY 2018 LTCH PPS standard Federal payment rate using the 2016 LTCH standard Federal payment rate payment cases used for the proposed rule. These estimates were based upon the most recently available data (the December

2016 update of the FY 2016 MedPAR file), and consistent with historical practice, if more recent data become available, we proposed to use such data for the final rule.

*Comment:* A few commenters, including MedPAC, supported the proposal to implement changes to the SSO payment adjustment by including a budget neutrality factor to the FY 2018 LTCH PPS standard Federal payment rate. Several other commenters urged CMS to implement these changes without a budget neutrality adjustment in light of various other changes to Medicare payment policies relating to LTCHs, such as the decrease in payments to site neutral payment rate cases resulting from the end of the blended payment rate provided under the statute. Many commenters objected to making the proposed changes to the SSO payment methodology (which, if finalized, would increase payments) budget neutral on the grounds that previous revisions to the SSO payment adjustment resulted in a net decrease in aggregate LTCH PPS payments and were not made budget neutral. Other commenters urged CMS to apply this factor in FY 2018 but not make it permanent. Commenters generally supported the proposal to include behavioral impact estimates in determining the budget neutral factor.

However, some commenters addressed the actuarial assumptions used in the proposal, which we discuss in greater detail below.

*Response:* We thank MedPAC and other commenters for their support of our proposal. In regard to those comments urging us to implement these changes without the budget neutral adjustment or only a temporary budget neutral adjustment, as we stated earlier and in the proposed rule, the goal of the proposed policy is to remove the incentive to delay patient discharges for payment reasons, not to increase aggregate Medicare LTCH PPS payments. While commenters are correct that previous changes to the SSO policy were not budget neutral, the proposed change to the SSO policy is being made for considerably different policy reasons than previous ones. In the past, we made changes to the SSO policy to ensure that LTCHs were paid appropriately for cases that were notably shorter than average. The proposed change in the SSO policy in the FY 2018 proposed rule was developed in response to LTCHs' apparent inappropriate behavior in delaying discharge in order to maximize Medicare payment. We see no reason why addressing the financial incentive for such behavior should result in

increased payments to LTCHs. Therefore, we believe that it is wholly appropriate to make this change in a budget neutral manner. We further note that, under our proposed budget neutrality adjustment, the redistributive effects occur largely within individual LTCHs. As such, while individual hospitals will experience a difference in payment for individual discharges, they will not typically experience an overall reduction in aggregate payments for all of the LTCH's discharges due to this budget neutral change to the SSO policy. A temporary budget neutral adjustment would only maintain the level of aggregate payments for the period the budget neutrality adjustment is applied, thereby merely delaying the increase aggregate Medicare LTCH PPS payments until that adjustment is removed. Lastly, the purpose of the budget neutrality adjustment is not related to the statutory change in payments under the application of the site neutral payment rate and, therefore, does not provide sufficient explanation for implementing the proposed changes to the SSO policy without a budget neutrality adjustment.

After consideration of the public comments we received, we are finalizing our proposal, without modifications, to amend § 412.523(d) by adding a new paragraph (5), which will specify that the LTCH PPS standard Federal payment rate will be adjusted by a one-time, permanent factor that accounts for the projected change in estimated aggregate payments to LTCH PPS standard Federal payment rate cases in FY 2018 due to the change in the payment methodology for SSO cases described at § 412.529(c)(4). Moreover, we are finalizing our proposal to include behavioral impact estimates in determining the budget neutral factor.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20023 through 20026), we proposed to use a 3-step methodology (which contained substeps) to determine the budget neutrality factor that would be applied to the FY 2018 LTCH PPS standard Federal payment rate. The steps in our proposed methodology are summarized below.

*Step 1*—Simulate estimated aggregate FY 2018 LTCH PPS standard Federal payment rate payments using the existing SSO payment methodology at § 412.529(c)(3).

*Step 2*—Simulate estimated aggregate FY 2018 LTCH PPS standard Federal payment rate payments using the proposed SSO payment methodology at proposed § 412.529(c)(4), after accounting for expected changes in

LTCHs' discharge behavior, which is determined as follows in Step 2a through Step 2d.

*Step 2a*—Simulate estimated aggregate FY 2018 LTCH PPS standard Federal payment rate payments under the proposed SSO payment methodology without accounting for expected changes in LTCHs' discharge behavior.

*Step 2b*—Determine the estimated amount of aggregate FY 2018 LTCH PPS standard Federal payment rate payments that would reflect the projected decrease in non-SSO cases under the changes to the SSO policy.

*Step 2c*—Determine the estimated amount of aggregate FY 2018 LTCH PPS standard Federal payment rate payments that reflect the projected increase in SSO cases under the proposed changes to the SSO policy.

*Step 2d*—Adjust the original estimated unadjusted FY 2018 payments under the proposed SSO payment methodology (from Step 2a) to account for the projected decrease in non-SSO cases under the proposed changes to the SSO policy (by subtracting the amount determined in Step 2b) and for the projected increase in SSO cases under the proposed changes to the SSO policy (by adding the amount estimated in Step 2c).

*Step 3*—Calculate the ratio of the estimated aggregate FY 2018 LTCH PPS standard Federal payment rate payments under the existing and proposed SSO policies to determine the adjustment factor that would need to be applied to the proposed FY 2018 LTCH PPS standard Federal payment rate to achieve budget neutrality (that is, where the estimated aggregate payments calculated in Step 2 are estimated to be equal to the estimated aggregate payments calculated in Step 1). A discussion and supporting details for the assumptions for expected changes in LTCHs' discharge behavior used in Step 2 are provided below. (A complete discussion of our proposed budget neutrality methodology, which we are finalizing without modification as discussed more fully below, can be found in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20023 through 20026).)

Specifically, in the proposed rule (82 FR 20024 through 20025), we discussed the actuarial assumptions for shifts in cases used under Steps 2b and 2c in our proposed methodology for determining the budget neutrality factor or the proposed changes to the SSO payment methodology. As explained in the proposed rule, our actuarial assumptions for LTCHs' discharge behavior under our proposed SSO

policy were estimated based on a comparative analysis of distributions of LTCH discharges relative to the SSO thresholds in FY 2003 and FY 2015 using data from FY 2002 (the year before the LTCH PPS was implemented and the final year prior to a SSO payment adjustment) to LTCH discharges in FY 2015 (the most recent complete year of data available at the time the comparative analysis was performed in preparation for the proposed rule). (We note that, for FY 2002, because there was no applicable SSO threshold, we used the SSO thresholds from FY 2003 (LTC-DRG Version 23) based on the billed LTC-DRG (LTC-DRG Version 22) on the FY 2002 claim.)

The FY 2002 distribution shows a nearly continuous distribution of LTCH discharges relative to what would become the SSO threshold in FY 2003, and approximate symmetry before and after the SSO threshold. In other words, for FY 2002, the distribution of discharges just after what would become the FY 2003 threshold looks similar to the distribution of discharges just before that threshold, and there is a corresponding similarity between discharges well after and well before what would become the SSO threshold.

While the FY 2015 distribution of LTCH discharges relative to the SSO threshold shows the same symmetry among discharges well before and well after the threshold, there are significantly fewer discharges just before the SSO threshold and significantly more discharges just after the SSO threshold (instead of a symmetry among discharges just before and just after the SSO threshold). For FY 2015, this lack of symmetry is concentrated in the 3 days leading up to the SSO threshold. (We note that, in our analysis of LTCH discharge patterns relative to the applicable SSO threshold, we found similar patterns for FYs 2003 through 2014 as those observed for FY 2015, as well as for FY 2016 LTCH discharges.)

In particular, the FY 2015 LTCH discharges have, as a proportion of total FY 2015 LTCH discharges, approximately 20 percent more discharges occurring just after the SSO threshold when compared to FY 2002 discharges. However, due to other substantial changes in Medicare payments to LTCHs, including the introduction of the LTCH PPS in FY 2003, we stated that we do not believe the entire 20-percent shift in discharges is attributable to only the introduction and subsequent revisions to the LTCH PPS SSO payment adjustment. Moreover, this shift is not uniform across all SSO discharges because the

majority of shifting past the SSO threshold occurs within 3 days of the SSO threshold. Based on this, we stated that our actuaries estimate that the elimination of the payment cliff would result in a 10-percent reduction in non-SSO cases, so that SSO cases increase at the same level as the projected decrease in non-SSO cases. For these non-SSO cases that shift, we stated that our actuaries estimate the discharges to occur within 3 days prior to the SSO threshold based on the analysis of LTCH discharge patterns relative to the applicable SSO threshold described earlier.

*Comment:* Several commenters advocated for a smaller budget neutrality reduction, with many commenters urging CMS to reconsider the actuarial assumptions used to arrive at the 10 percent behavioral shift as they believed this shift should be higher. A few commenters considered CMS' 10 percent behavioral shift to be arbitrary, and some commenters urged CMS to consider 15 percent to 20 percent or higher. Among those urging CMS to consider 15 percent to 20 percent, a few commenters pointed to a working paper<sup>98</sup> that they believed supports a 15-percent behavioral shift, while other commenters referred to analysis by KNG Health Consulting on behalf of the National Association of Long Term Hospitals (NALTH) that shows LTCHs can shift 20 percent or more of non-SSO cases to below the SSO threshold and still meet the greater than 25-day average length of stay requirement. Other commenters, based on comparisons of historic LTCH discharge rates, suggested that CMS consider LTCH cases discharged within 6 days of the threshold, thereby increasing the expected shift beyond the 10 percent estimated by our actuaries. One commenter stated that its internal modeling suggested the budget neutrality adjustment should be 2.7 percent instead of the approximately 3.3 percent reduction in the proposed rule.

*Response:* We reviewed all the supporting material and studies submitted or referenced by commenters. We note that we do not have sufficient information to evaluate the individual commenter's claim that the budget neutrality adjustment should be 2.7 percent. However, we note that an adjustment of this magnitude is in line with what we estimate the budget neutrality adjustment would be under our proposed methodology if we were to

<sup>98</sup> Paul J. Eliason, et al. Strategic Patient Discharge: The Case of Long-Term Care Hospitals. National Bureau of Economic Research. NBER Working Paper 22958. Available at: <http://www.nber.org/papers/w22598.pdf>.

use an assumption of a behavioral shift in the 15 to 20 percent range as suggested by other commenters.

As stated in the proposed rule and earlier in this final rule, while we observed a shift of 20 percent in non-SSO cases from FY 2002 to FY 2015, the introduction of various payment policies in the intervening years does not support attributing the full 20 percent to the SSO payment policy alone, and thus, our actuarial assumption of 10 percent is based upon consideration of the impact such changes have had over the years. Similarly, we do not believe it is appropriate to further extend our analysis based on a 3-day window to a 6-day window because we do not have any rationale or evidence to attribute the FY 2002 to FY 2015 change in discharges 6 days past the threshold to the SSO policy. In this case, particularly, we do not believe cases more than 3 days past the threshold represent a response to financial incentives because each day past the threshold a patient remains in the LTCH represents a negative response to these financial incentives: each day a patient is held beyond the threshold increases the provider's costs without the opportunity to increase the full MS-LTC-DRG payment. In other words, there are diminishing returns the longer a discharge is delayed for financial reasons.

After consideration of the public comments and supporting documents we received, we believe the available data and supporting studies are consistent with our actuarial assumption of a 10-percent behavioral shift. As noted by commenters, the KNG Health Consulting study only shows that increasing the shift to 20 percent is feasible in light of the greater than 25 average length of stay requirement for LTCHs. In other words, this finding establishes a ceiling for the behavioral shift, but it does not establish a lower bound nor does it point to an appropriate or expected shift resulting from the proposed changes to the SSO policy. Therefore, this analysis is consistent with a shift of up to 20 percent, which includes our actuarial assumption of a 10-percent shift.

While commenters pointed to the working paper as evidence for increasing our assumption of the shift in LTCH cases to 15 percent, we note the working paper is not addressing the same issue. The study examines the influence of financial incentives on LTCHs' discharges in order to compare the effectiveness various SSO payment policies have on this incentive by building a model incorporating financial

incentives of a selected category of LTCH discharges. Specifically, as noted in the paper, the study assesses the impact of various SSO payment policies on nine selected MS-LTC-DRGs (177, 189, 190, 193, 207, 539, 592, 871, and 949) and among these DRGs, only those LTCH patients discharged to home or a nursing facility as "these are the discharges for which hospitals have the most discretion." (Paul J. Eliason, et al., p. 18.) The 15 percent cited by commenters represents the proportion of change in modeled non-SSO discharges, limited to these select cases, from our current SSO payment policy (their baseline) to a per diem SSO payment policy among these selected cases. As noted above, the paper presumes their selected category of cases are the LTCH cases most likely to be held, and thus, much like the average length of stay analysis discussed above, the 15 percent cited by commenters, as with the analysis by KNG Health Consulting, represents a ceiling on the behavioral shift and is not inconsistent with our actuarial assumption of 10 percent, which is representative of all MS-LTC-DRGs and cases.

After consideration of the public comments we received, for the reasons presented above, we are finalizing our proposed methodology for computing the budget neutrality factor, including the 10 percent actuarial assumption in steps 2b and 2c, without modification.

Based on the claims data used for the proposed rule, we estimated that our proposed change to the SSO payment methodology would result in an increase in payments of approximately \$102 million (that is, the \$3.177 billion as calculated in Step 1 in the proposed rule minus the \$3.279 billion as calculated in Step 2 in the proposed rule) which reflected the approximate \$43 million decrease that accounts for our actuarial assumptions for expected changes in LTCHs' discharge behavior under the proposed changes to the SSO policy. For the proposed rule, using the steps in the proposed methodology, we then determined a proposed budget neutrality factor for the proposed change to the SSO payment methodology of 0.9672. Accordingly, in section V.A. of the Addendum to the proposed rule, to determine the proposed FY 2018 LTCH PPS standard Federal payment rate, we proposed to apply a one-time, permanent budget neutrality factor of 0.9672 for the proposed change in the SSO payment methodology (82 FR 20025 through 20026).

For this final rule, as we proposed, we are using the most recent available data (that is, FY 2016 LTCH standard Federal

payment rate payment cases from the March 2017 update of the FY 2016 MedPAR file) to determine the budget neutrality factor applied to the FY 2018 LTCH PPS standard Federal payment rate to ensure that the change to the SSO payment methodology in FY 2018 does not affect aggregate LTCH PPS payments. Based upon the most recent data, and discussed in greater detail below, we are applying a one-time, permanent budget neutrality factor of 0.9651 under new § 412.523(d)(5) for the change in the SSO payment methodology at new § 412.529(c)(4).

Specifically, the methodology summarized above and outlined in the proposed rule (82 FR 20025 through 20026) applied to the best available data used for this final rule yields the following results. We estimate that our change to the SSO payment methodology results in an increase in payments of approximately \$112 million (that is, the \$3.204 billion as calculated in Step 1 using data for this final rule minus the \$3.316 billion as calculated in Step 2 using data for this final rule) which reflects the approximate \$40 million decrease that accounts for our actuarial assumptions for expected changes in LTCHs' discharge behavior under the changes to the SSO policy. Therefore, for this final rule, using the steps in the methodology outlined in the proposed rule and using the most recently updated data, we have determined a budget neutrality factor for the change to the SSO payment methodology of 0.9651. Accordingly, in section V.A. of the Addendum to this final rule, to determine the FY 2018 LTCH PPS standard Federal payment rate, we are finalizing the application of a one-time, permanent budget neutrality factor of 0.9651 for the change in the SSO payment methodology.

#### *E. Temporary Exception to the Site Neutral Payment Rate for Certain Spinal Cord Specialty Hospitals*

Section 15009 of Public Law 114-255 added new subparagraph (F) to section 1886(m)(6) of the Act, which provides for a temporary exception to the site neutral payment rate for certain spinal cord specialty hospitals. Under this provision, discharges occurring in cost reporting periods beginning during FY 2018 and FY 2019 for LTCHs that meet the specified statutory criteria are excepted from the site neutral payment rate (that is, all discharges from such LTCHs during this period would be paid at the LTCH PPS standard Federal payment rate). Clauses (i) through (iii) of section 1886(m)(6)(F) of the Act state that, in order for an LTCH to qualify for this temporary exception, the LTCH

must: (1) Have been a not-for-profit LTCH on June 1, 2014, as determined by cost report data; (2) of the discharges in calendar year 2013 from the LTCH for which payment was made under the LTCH PPS, at least 50 percent were classified under MS–LTC–DRGs 28, 29, 52, 57, 551, 573, and 963; and (3) have discharged inpatients (including both individuals entitled to, or enrolled for, Medicare Part A benefits and individuals not so entitled or enrolled) during FY 2014 who had been admitted from at least 20 of the 50 States, determined by the States of residency of such inpatients and based on such data submitted by the hospital to the Secretary as the Secretary may require. The statute further provides authority for the Secretary to implement the third criterion (set forth at section 1886(m)(6)(F)(iii) of the Act and referred to as the “significant out-of-state admissions criterion”) by program instruction or otherwise, and exempts the policy initiatives from any information collection requirements under the Paperwork Reduction Act (Chapter 35 of Title 44 of the United States Code). Given this express authority, as we stated in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20026), we plan to provide further details regarding the implementation of the significant out-of-state admissions criterion through subregulatory guidance. However, in the proposed rule, we proposed to codify the requirements of the temporary exception to the site neutral payment rate for certain spinal cord specialty hospitals specified under section 1886(m)(6)(F) of the Act, as added by section 15009 of Public Law 114–255. Specifically, we proposed to codify the requirements of this provision at new § 412.522(b)(4), by providing for an exception from the site neutral payment rate for discharges occurring in cost reporting periods beginning during FYs 2018 and 2019 for LTCHs that meet the specified statutory criteria.

We sought public comments on this proposal. Based on information currently available, we believe that two hospitals may qualify for this exception.

*Comment:* Several commenters supported CMS’ proposals to implement section 15009 of the 21st Century Cures Act.

*Response:* We thank these commenters for their support.

After consideration of the public comments we received, we are finalizing our proposals without modification.

#### *F. Temporary Exception to the Site Neutral Payment Rate for Certain Discharges With Severe Wounds From Certain LTCHs*

Section 15010 of Public Law 114–255 added a new subparagraph (G) to section 1886(m)(6) of the Act, which creates a temporary exception to the site neutral payment rate for certain severe wound discharges from certain LTCHs during such LTCHs’ cost reporting periods beginning during FY 2018 (that is, for cost reporting period beginning on or after October 1, 2017 and on or before September 30, 2018). Under the provisions of section 15010 of Public Law 114–255, in order for an LTCH’s discharge to be excluded from the site neutral payment rate under this exception during its FY 2018 cost reporting period, the discharge must be: (1) From an LTCH “identified by the last sentence of subsection (d)(1)(B)” of the Act; (2) classified under MS–LTC–DRG 602, 603, 539, or 540; and (3) with respect to an individual treated by an LTCH, for a severe wound. The statute defines a “severe wound,” for the purposes of the exception, as “a wound which is a stage 3 wound, stage 4 wound, unstageable wound, non-healing surgical wound, or fistula as identified in the claim from the long-term care hospital.” The statute further defines a “wound” as “an injury involving division of tissue or rupture of the integument or mucous membrane with exposure to the external environment.”

Much of this language is identical or substantially similar to the language for the previous temporary exception for discharges for the treatment of severe wounds provided for under the amendments made by section 231 of the Consolidated Appropriations Act, 2016 (Pub. L. 114–113), except for three key differences. First, the previous temporary exception for severe wound discharges applied to LTCHs that are grandfathered hospitals-within-hospitals (HwHs) (that is, hospitals that are described under § 412.23(e)(2)(i) that meet the criteria of § 412.22(f) and are located in a rural area or treated as rural (§ 412.522(b)(2)(ii)(B)), while the new temporary exception for severe wound discharges only requires that LTCHs are grandfathered HwHs (and does not require the LTCH to also be located in a rural area or treated as rural). Second, under this new temporary exception for severe wound discharges, the definition of a “severe wound” includes only five of the eight categories (stage 3 wound, stage 4 wound, unstageable wound, non-healing surgical wound, and fistula) included in the definition of a “severe

wound” under the original temporary exception for severe wound discharges (and does not include the categories of infected wound, osteomyelitis, and wound with morbid obesity). Finally, this new temporary exception for severe wound discharges is limited to discharges that meet the definition of a severe wound and are grouped to certain specified MS–LTC–DRGs, while the previous temporary exception for severe wound discharges only required the discharge to meet the definition of a severe wound (and did not include the requirement for the discharge to also be grouped to certain specified MS–LTC–DRGs). Additional details of the new temporary exception for payment for severe wound discharges provided by Public Law 114–255, including further discussion of the likenesses to and differences from the original temporary exception for payment for severe wound discharges provided by Public Law 114–113 are discussed below.

We implemented the original temporary exception for payment for discharges for the treatment of severe wounds that was provided by the amendments made by section 231 of Public Law 114–113 in an interim final rule with comment period (IFC) that appeared in the **Federal Register** on April 21, 2016 (81 FR 23428 through 23438) (referred to as the “April 21, 2016 IFC”) and finalized our FY 2017 proposed rule and that IFC concurrently in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57070). Therefore, to the extent applicable, we are implementing the temporary exception provision in an identical manner to our implementation of the original temporary exception under section 231 of Pub. 114–113, which is codified in the LTCH PPS regulations at § 412.522(b)(2). Specifically, § 412.522(b)(2)(ii)(B)(1) refers to LTCHs “identified by the last sentence of subsection (d)(1)(B)” of the Act as LTCHs “[d]escribed in § 412.23(e)(2)(i) and meets the criteria of § 412.22(f).” In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20026), we proposed to codify the requirements of this “new” temporary exception for severe wounds at new § 412.522(b)(3), by providing for an exception for discharges meeting the statutory criteria that occur in a cost reporting period that begins during FY 2018 for LTCHs described in § 412.23(e)(2)(i) and meet the criteria of § 412.22(f).

Clauses (ii) and (iii) of section 1886(m)(6)(G) of the Act, respectively, as added by section 15010 of Public Law 114–255, includes definitions of “severe wound” and “wound” for purposes of this “new” temporary exception for discharges for the treatment of severe

wounds. We proposed to incorporate the definitions of “wound” and “severe wound” at § 412.522(b)(3)(i) as they are defined in the statute. We note that the definition of a “wound” in section 15010 is nearly identical to CMS’ definition of “wound” at existing § 412.522(b)(2)(i). We further note that the definition of a “severe wound” is nearly identical to the definition used in section 231 of Public Law 114–113 with the exception that three categories included in the latter (that is, infected wound, osteomyelitis, and wound with morbid obesity) are not included in the definition set forth in section 15010 of Public Law 114–255. The five remaining categories of stage 3 wound, stage 4 wound, unstageable wound, non-healing surgical wound, and fistula are identified by the list of ICD–10–CM codes posted to the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/LongTermCareHospitalPPS/download.html> under the “Severe Wound Diagnosis Codes by Category for Implementation of Section 231 of Public Law 114–113” download file. For more information on our interpretation of these terms, we refer readers to the April 21, 2016 IFC (81 FR 23428 through 23438) and the FY 2017 IPPS/LTCH PPS final rule (81 FR 57070). Therefore, this information on how CMS interpreted the meanings of these categories of a “severe wound” for Public Law 114–113 was available at the time Public Law 114–255 was enacted. As such, we are implementing the “new” temporary exception for discharges for the treatment of severe wounds provided for by section 15010 using the same list of ICD–10–CM codes to identify the five categories of severe wounds enumerated in that section of Public Law 114–255. In addition, as provided by section 1886(m)(6)(G)(i)(III) of the Act as added by section 15010 of Public Law 114–255, we proposed at new § 412.522(b)(3)(ii) that the patient must be treated for a severe wound that meets the statutory definition of a “severe wound” at proposed § 412.522(b)(3)(i) in order for the LTCH discharge to meet this “new” temporary exception for discharges for the treatment of severe wounds.

As we stated in the proposed rule, we believe that the requirement under the “new” temporary exception for discharges for the treatment of severe wounds set forth under section 1886(m)(6)(G)(i)(II) of the Act as added by section 15010 of Public Law 114–255 for an LTCH discharge be classified under MS–LTC–DRG 602, 603, 539, or 540 is self-implementing. Accordingly,

we proposed to codify this requirement at new § 412.522(b)(3)(ii)(C) by listing the applicable MS–LTC–DRGs.

Section 1886(m)(6)(G)(i)(I) of the Act, as added by section 15010 of Public Law 114–255, specifies that, for purposes of this “new” temporary exception for discharges for the treatment of severe wounds, the LTCH discharge must be from an LTCH “identified by the last sentence of subsection (d)(1)(B)”. The phrase “identified by the last sentence of subsection (d)(1)(B) [of the Act]” is equivalent to the phrase “identified by the amendment made by section 4417(a) of the Balanced Budget Act of 1997” used in section 231 of Public Law 114–113, because the amendment made by section 4417(a) of the Balanced Budget Act of 1997 added the last sentence of subsection (d)(1)(B) to the Act. As discussed in the April 21, 2016 IFC (81 FR 23428), the phrase “identified by the amendment made by section 4417(a) of the Balanced Budget Act of 1997” (which as previously discussed is equivalent to “identified by the last sentence of subsection (d)(1)(B) of the Act”) has been interpreted by CMS to mean hospitals-within-hospitals (HwHs) that were participating in Medicare, but excluded from the hospital IPPS on or before September 30, 1995 (that is, hospitals which are described under § 412.23(e)(2)(i) that meet the criteria of § 412.22(f) (81 FR 23430 through 23432). As further discussed in the April 21, 2016 IFC, § 412.22(f) generally requires that, in order to have grandfathered status, an HwH must continue to operate under the same terms and conditions, including, but not limited to, the number of beds. A limited exception to this general policy allowed eligible hospitals to increase the number of beds between October 1, 1995, and September 30, 2003, without loss of their grandfathered status. A second exception allows grandfathered HwHs to increase square footage or decrease the number of beds for cost reporting periods beginning on or after October 1, 2006, while still retaining grandfathered status. Because this phrase had already been interpreted in this manner, the April 21, 2016 IFC adopted the same meaning of the phrase for purposes of implementing section 231 of Public Law 114–113. For additional information on hospitals “identified by the amendment made by section 4417(a) of the Balanced Budget Act of 1997,” we refer readers to the April 21, 2016 IFC (81 FR 23431 through 23432). Therefore, for the purposes of the new temporary exception for LTCH discharges for the treatment of severe wounds, “identified by the last sentence of subsection

(d)(1)(B) of the Act” means HwHs that were participating in Medicare, but excluded from the hospital IPPS on or before September 30, 1995 (that is, hospitals which are described under § 412.23(e)(2)(i) that meet the criteria of § 412.22(f). We finalized this policy without modification in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57069). Because we have already finalized our interpretation of this phrase, we believe that the requirement at section 1886(m)(6)(G)(i)(I) of the Act is self-implementing. Accordingly, we proposed to codify this requirement at new § 412.522(b)(3)(ii)(B). LTCHs that believe they meet the requirements to be a grandfathered HwH should contact their MACs. MACs will verify that the LTCH meets these requirements.

*Comment:* Several commenters supported CMS’ proposals to implement section 15010 of the 21st Century Cures Act.

*Response:* We thank the commenters for their support.

*Comment:* Some commenters requested that CMS expand the scope of the exception to allow additional LTCHs to benefit from the provision. Other commenters requested that CMS exclude severe wound discharges from the site neutral payment rate all together or to otherwise broaden the scope of cases excepted from the site neutral payment rate.

*Response:* As we have stated in response to substantially similar comments in the past (80 FR 49602), under the LTCH PPS we do not have the authority to pay anything other than the site neutral payment rate for any LTCH discharge that does not meet the exclusion criteria. The statute explicitly established the dual payment rate structure, which expressly provides that payment for all LTCH discharges will be calculated based on the site neutral payment rate, unless the LTCH discharge meets the statutorily defined exclusion criteria to be paid based on the LTCH PPS standard Federal payment rate.

After consideration of the public comments we received, we are finalizing our proposals without modification.

#### *G. Moratorium and Regulatory Delay of the Full Implementation of the “25-Percent Threshold Policy” Adjustment (§ 412.538)*

The “25-percent threshold policy” is a per discharge payment adjustment in the LTCH PPS that is applied to payments for Medicare patient discharges from an LTCH when the number of such patients originating from any single referring hospital is in

excess of the applicable threshold for a given cost reporting period (such threshold is generally set at 25 percent, with exceptions for rural and urban single or MSA-dominant hospitals). If an LTCH exceeds the applicable threshold during a cost reporting period, payment for the discharge that puts the LTCH over its threshold and all discharges subsequent to that discharge in the cost reporting period from the referring hospital are adjusted at cost report settlement (discharges not in excess of the threshold are unaffected by the 25-percent threshold policy). The 25-percent threshold policy was originally established in the FY 2005 IPPS final rule for LTCH HwHs and satellites (69 FR 49191 through 49214). We later expanded the 25-percent threshold policy in the RY 2008 LTCH PPS final rule to include all LTCHs and LTCH satellite facilities (72 FR 26919 through 26944). Several laws have mandated delayed implementation of the policy, including, most recently, section 1206 of the Pathway for Sustainable Growth Rate (SGR) Reform Act (Pub. L. 113–67). Section 1206(b)(1)(B) provides a permanent exemption from the application of the 25-percent threshold policy for LTCHs identified by the amendment made by section 4417(a) of the Balanced Budget Act of 1997 (Pub. L. 105–33). As explained more fully in section VIII.H. of the preamble of this final rule, LTCHs “identified by the amendment made by section 4417(a) of the Balanced Budget Act of 1997” are HwHs that were participating in Medicare, but excluded from the hospital IPPS on or before September 30, 1995 (that is, hospitals which are described under § 412.23(e)(2)(i)) that meet the criteria of § 412.22(f). LTCHs that believe they meet the requirements to be a grandfathered HwH should contact their MACs. MACs will verify that the LTCH meets these requirements. Section 1206(b)(1)(A) of Public Law 113–67 extended prior moratoria on the full implementation of the 25-percent threshold policy until cost reporting periods beginning on or after either July 1, 2016 (for LTCHs subject to 42 CFR 412.534) or October 1, 2016 (for LTCHs subject to 42 CFR 412.536). For more details on the various laws that delayed the full implementation of the 25-percent threshold policy, we refer readers to the FY 2015 IPPS/LTCH PPS final rule (79 FR 50356 through 50357). In the FY 2017 IPPS/LTCH PPS final rule, we consolidated the 25-percent threshold policy by sunseting §§ 412.534 and 412.536 and establishing provisions under new § 412.538.

Section 15006 of Public Law 114–255 further amended section 114(c)(1)(A) of the MMSEA (as amended) by striking “for a 9-year period” and inserting “through June 30, 2016, and for discharges occurring on or after October 1, 2016 and before October 1, 2017”, which provides for an extension of the moratorium on the full implementation of the 25-percent threshold policy. In addition, section 15006(b) of Public Law 114–255 further amended section 114(c)(2) of the MMSEA (as amended) by inserting “or any similar provision,” after “Regulations,” in subparagraphs (A) and (B). (We note that the functional result of the extension of the moratorium under section 15006(a) of Public Law 114–255 only extends to discharges on or after October 1, 2016 and before October 1, 2017.)

To implement the provisions of section 15006 of Public Law 114–255, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20028), we proposed to make conforming amendments to the regulations that currently govern the application of the 25-percent threshold policy. Section 114(c)(1) of the MMSEA, from its inception, precluded CMS from implementing either §§ 412.534 or 412.536 (as applicable), as well as any similar provision to hospitals described in the provision of the MMSEA. Section 15006 of Public Law 114–255 amended section 114(c)(2) of the MMSEA by adding the words “or any similar provisions” to both (A) and (B). Section 412.538 of the regulations is a similar provision to the provisions of both §§ 412.534 and 412.536 (we adopted the payment policy under § 412.538 to create a consolidated and streamlined 25-percent threshold policy to replace the policies under §§ 412.534 and 412.536, which were sunset).

Therefore, in order to implement the moratorium on the implementation of the 25-percent threshold policy provided under section 15006 of Public Law 114–255, we proposed to amend § 412.538 to account for these statutory changes. We note that, similar to the July 1, 2012 through September 30, 2012 “gap” period discussed in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53484 through 53486), this extension of the moratorium on the full application of the 25-percent threshold policy results in a “gap” period where LTCHs are required to comply with the fully-implemented 25-percent threshold policy for their cost reporting periods beginning on or after July 1, 2016, and before October 1, 2016, for any discharges occurring on or before September 30, 2016. For the same reasons discussed in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53485

through 53486), although those LTCHs with cost reporting periods beginning on or after July 1 and before October 1, 2016 are “technically” subject to the 25-percent threshold policy until October 1, 2016, we believe that very few, if any, LTCHs will actually receive a payment adjustment because these LTCHs would rarely, if ever, admit more than 25 percent of their discharges from any one referring hospital during the limited period of 1 to 3 months (depending on the LTCH’s cost reporting beginning date) that the 25-percent threshold policy was technically in effect.)

*Comment:* Several commenters supported CMS’ proposals to implement section 15006 of the 21st Century Cures Act.

*Response:* We thank these commenters for their support.

After consideration of the public comments we received, we are finalizing our proposals without modification.

In addition, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20028), we proposed to adopt a 1-year regulatory moratorium on the implementation of the 25-percent threshold policy; that is, we proposed to impose a regulatory moratorium on our implementation of § 412.538 until October 1, 2018. This proposal was made in response to the further statutory delays and our continued consideration of public comments received in response to our proposal to consolidate and streamline the 25-percent threshold policy in the FY 2017 IPPS/LTCH PPS proposed rule. In response to that proposed rule, several commenters stated that the new site neutral payment rate would alleviate the policy concerns underlying the 25-percent threshold policy. As we stated in more detail in our response to those comments in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57106), we are not convinced that this is the case.

However, given this additional statutory moratorium, we believe that it was appropriate at that time to propose to establish a regulatory moratorium on the implementation of the 25-percent threshold policy until we can examine data under the application of the site neutral payment rate to further evaluate, when more data are available, whether the policy is in fact still necessary. We stated in the proposed rule that while we are not convinced that the application of the site neutral payment rate removes the need for the 25-percent threshold policy, we believe that evaluating the impact of the application of the site neutral payment rate on LTCH admission practices would be premature at that time. The statute

provides that the site neutral payment rate be phased in, effective with LTCH cost reporting periods beginning on or after October 1, 2015 and before October 1, 2017 (that is, LTCH cost reporting periods beginning in FYs 2016 and 2017). LTCH claims data for discharges that occurred in FY 2016 is currently the best available data, and given that phase-in of the site neutral payment rate is based on LTCHs' cost reporting period start dates, many LTCH discharges that occurred during FY 2016 were not yet subject to the site neutral payment rate because they occurred in a LTCH cost reporting period that had begun prior to October 1, 2016. Consequently, at the time of the proposed rule, we only had a partial year of LTCH claims data under the period where the site neutral payment rate was in effect, which may not be fully reflective of any changes in LTCH admission practices under the new dual rate LTCH PPS. We stated in the proposed rule that proposing an additional regulatory moratorium on the 25-percent threshold policy through FY 2018 would allow CMS the opportunity to do an analysis of LTCH admission practices under the new dual payment rate LTCH PPS based on more complete data and would avoid creating any additional confusion by having the 25-percent threshold policy become effective for a period of time when future analysis of LTCH claims data may indicate the policy concerns underlying the 25-percent threshold policy have been moderated.

Therefore, in the proposed rule, we proposed to revise the effective date of § 412.538 so that the 25-percent threshold policy would apply to discharges occurring on or after October 1, 2018. Further, we proposed that if, in response to public comments, we did not finalize this proposed additional 1-year regulatory moratorium, we would revise § 412.538 so that the 25-percent threshold policy would apply to discharges occurring on or after October 1, 2017, consistent with the provisions of section 15006 of Public Law 114–255. We sought public comments on our proposals.

*Comment:* Several commenters supported CMS' proposal for an additional 1-year regulatory delay in the full application of the 25-percent threshold policy. In addition, several commenters requested that, in lieu of or in addition to the additional 1-year regulatory delay in the full application of the 25-percent threshold policy, CMS rescind the policy. Some of these commenters also requested that CMS make public its analysis about whether the policy continues to be necessary.

MedPAC opposed the proposed additional 1-year delay in the full application of the 25-percent threshold policy.

*Response:* We thank commenters for their support of the proposed additional 1-year regulatory delay of the 25-percent threshold policy for FY 2018. As we explained in both the FY 2016 and FY 2017 rulemaking cycles, and reiterated in the proposed rule, we are not convinced that recent revisions to the LTCH PPS (for example the introduction of the site-neutral payment rate) have addressed the policy concerns which caused us to adopt the policy. We believe that the 1-year delay will allow both CMS and providers to gain additional experience with the site neutral payment rate and allow us to determine whether the policy is still necessary. For this reason, although we understand MedPAC's concerns, we believe that we should have additional experience under the revised LTCH PPS prior to the policy becoming effective in order to ensure it is still necessary and appropriate. We note that if we undertake further rulemaking on this topic, we will, in accordance with the APA, publically note our reasons for any potential proposed changes.

After consideration of the public comments we received, we are finalizing the proposal for an additional 1-year regulatory delay of the 25-percent threshold policy for FY 2018 without modification.

*Comment:* Some commenters requested confirmation that the regulations at §§ 412.534 and 412.536 would not apply until October 1, 2018 and that the 25-percent threshold policy would not apply during the "gap" period between July 1, 2016 and October 1, 2016 for certain locations of certain hospitals.

*Response:* In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57102), we sunsetted both §§ 412.534 and 536 and replaced them with the unified 25-percent threshold policy at § 412.538. Under the unified policy, regardless of any statutory or regulatory moratorium on § 412.538, by the terms of § 412.534 and 536 themselves, hospitals are no longer subject to them. As discussed above, we are finalizing our proposal of an additional 1-year regulatory delay of the 25-percent threshold policy for FY 2018. As such, we confirm that, under our finalized changes to the regulations, no hospital will be subject to § 412.538 until discharges occurring on or after October 1, 2018. The commenters are incorrect that we proposed not to apply the 25-percent threshold policy during the "gap" period. However, as we stated in the proposed rule, we do not believe

that there will be any practical effect of the application of the policy. The 25-percent threshold policy (under §§ 412.434, 412.536, and 412.538) is calculated based on a hospital's entire cost reporting period, which is generally a full calendar year (12 months). In order for a hospital to have any payment reduction during the "gap" period (which would only apply to discharges occurring before October 1, 2016 in cost reporting periods beginning on or after July 1, 2016) the hospital must exceed the 25-percent threshold with respect to a referring hospital within (at most) a 3-month period.

*H. Revision To Moratorium on Increasing Beds in Existing LTCH or LTCH Satellite Locations Under the 21st Century Cures Act (Pub. L. 114–255) (§ 412.23)*

Section 1206(b)(2) of Public Law 113–67, as amended by section 112(b) of the Protecting Access to Medicare Act of 2014 (PAMA) (Pub. L. 113–93), established "new" statutory moratoria on the establishment of new LTCHs and LTCH satellite facilities and on the increase in the number of hospital beds in existing LTCHs and LTCH satellite facilities, effective April 1, 2014 through September 30, 2017, by amending section 114(d)(1) of the MMSEA (as amended). In addition, the statute also provided an exception under the "new" moratorium under section 114(d)(7) of the MMSEA (as amended) to establish a new LTCH or LTCH satellite facility during the period between April 1, 2014, and September 30, 2017, if a hospital or entity meets criteria, which mirror the expired provisions of section 114(d)(2)(A). For a discussion on our implementation of these moratoria, we refer readers to the FY 2015 IPPS/LTCH PPS final rule (79 FR 50189 through 50193).

Section 15004(a) of Public Law 114–255 further amended section 114(d)(7) of the MMSEA (as amended) by striking "The moratorium under paragraph (1)(A)" and inserting "[a]ny moratorium under paragraph (1)" and specified that such amendment shall take effect as if included in the enactment of section 112 of the PAMA. Under this amendment, all existing LTCHs or LTCH satellite locations are no longer subject to a moratorium on an increase in LTCH beds set forth in paragraph (1)(B) if they meet certain criteria. In order to implement this statutory change, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20029), we proposed to amend § 412.23(e)(7) by revising paragraph (e)(7)(iii) to specify that the moratorium on increasing the number of beds in existing LTCHs and

existing LTCH satellites does not apply if one or more of the exceptions described in § 412.23(e)(6)(ii) is met in accordance with the provisions of section 15004(a) of Public Law 114–255. (We note that section 15004(b) of Public Law 114–255 provides for a modification to LTCH high-cost outlier payments. Our proposals to implement this provision were discussed in section V.D. of the Addendum to the proposed rule.) We sought public comments on this proposal.

*Comment:* Several commenters supported CMS' proposal to implement section 15004(a) of the 21st Century Cures Act.

*Response:* We thank these commenters for their support.

After consideration of the public comments we received, we are finalizing our proposal, without modification, to amend § 412.23(e)(7) by revising paragraph (e)(7)(iii) to specify that the moratorium on increasing the number of beds in existing LTCHs and existing LTCH satellites does not apply if one or more of the exceptions described in § 412.23(e)(6)(ii) is met in accordance with the provisions of section 15004(a) of Public Law 114–255.

#### *I. Change To the Average Length of Stay Criterion Under the 21st Century Cures Act (Pub. L. 114–255)*

Under the requirements at sections 1886(d)(1)(B)(iv)(I) and 1861(ccc) of the Act, in order for a hospital to be classified as an LTCH, the hospital has to maintain an average length of stay of greater than 25 days as calculated by the Secretary. Section 1206(a)(3) of the Pathway for SGR Reform Act of 2013 (Pub. L. 113–67) excluded Medicare Advantage plans' and site neutral payment rate discharges from this calculation for hospitals that were classified as LTCHs as of December 10, 2013. We implemented this provision in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49638). Section 15007 of Public Law 114–255 amended section 1206(a)(3) of the Pathway for SGR Reform Act by extending the exclusion of Medicare Advantage plans' and site neutral payment rate discharges from the calculation of the average length of stay to all LTCHs, for discharges occurring in cost reporting periods beginning on or after October 1, 2015. In order to implement this provision, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20029), we proposed to remove the final sentence of our regulations at 42 CFR 412.23(e)(2)(vi), which included site neutral payment rate and Medicare Advantage discharges in the calculation of the average length of stay for LTCHs which were classified

as such after December 10, 2013. We sought public comments on our proposal.

*Comment:* Several commenters supported CMS' proposal to implement section 15007 of the 21st Century Cures Act.

*Response:* We thank these commenters for their support.

*Comment:* Several commenters requested that CMS remove the requirement for LTCHs to maintain a greater than 25 day average length of stay entirely, lower the requisite average length of stay, and/or make changes to the method of calculating the average length of stay.

*Response:* While we consider these comments outside the scope of this proposed rule, we note that the requirement that LTCHs maintain an average length of stay of greater than 25 days is required under section 1886(d)(1)(B)(iv) of the Act, and therefore we have no authority to either remove or reduce this requirement. We may consider the possibility of refining the method of calculating whether an LTCH has maintained the requisite average length of stay in future rulemaking.

After consideration of the public comments we received, we are finalizing our proposal, without modification, to remove the final sentence of our regulations at 42 CFR 412.23(e)(2)(vi), which included site neutral payment rate and Medicare Advantage discharges in the calculation of the average length of stay for LTCHs which were classified as such after December 10, 2013.

#### *J. Change in Medicare Classification for Certain Hospitals (§ 412.22)*

When enacted, section 1886(d)(1)(B)(iv) of the Act established a category of hospitals that experience extended average inpatient length of stays, which are known as LTCHs under the Medicare program. Clause (iv) of section 1886(d)(1)(B) consisted of two subclasses (I) and (II) (that is, section 1886(d)(1)(B)(iv)(I) and section 1886(d)(1)(B)(iv)(II) of the Act) which corresponded to two categories of hospitals that were generally referred to as "subclass (I)" and "subclass (II)" LTCHs. "Subclause (I)" LTCHs were required to have an average inpatient length of stay that is greater than 25 days. "Subclause (II)" LTCHs were only required to have an average inpatient length of stay of greater than 20 days. The "subclass (II)" LTCH definition further limited the classification of a "subclass (II)" LTCH by including the requirement that the LTCH must have been first excluded from the IPPS in CY

1986, and treated a Medicare inpatient population in which 80 percent of the discharges in the 12-month reporting period ending in Federal FY 1997 had a principal diagnosis that reflected a finding of neoplastic disease as defined in subsection (f)(1)(iv) section 1886 of the Act. This statutory requirement was implemented under 42 CFR 412.23(e)(2)(ii).

As part of our FY 2015 IPPS/LTCH PPS rulemaking cycle, under the authority provided by section 1206(d)(2) of the Pathway to SGR Reform Act (Pub. L. 113–67), we adopted an adjustment to the LTCH PPS payment for LTCHs classified under section 1886(d)(1)(B)(iv)(II) of the Act ("subclass (II)" LTCHs). Under this payment adjustment, "subclass (II)" LTCHs receive payment under the LTCH PPS that is generally equivalent to an amount determined under the reasonable cost-based payment rules for both operating and capital-related costs under 42 CFR part 413 (that is, an amount generally equivalent to an amount determined under the TEFRA payment system methodology). This payment adjustment for "subclass (II)" LTCHs is specified at § 412.526. For more information on this payment adjustment, we refer readers to the FY 2015 IPPS/LTCH PPS final rule (79 FR 50193 through 50197). As initially adopted, the "TEFRA-like" reasonable cost-based payment adjustment for "subclass (II)" LTCHs did not incorporate the limitation on charges to Medicare beneficiaries policies under the TEFRA payment system. In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57109 through 57110), we amended the regulations at § 412.507 relating to the limitation on charges to address beneficiary charges for LTCH services provided by "subclass (II)" LTCHs as part of our refinement of the payment adjustment for "subclass (II)" LTCHs under § 412.526. Under this refinement, "subclass (II)" LTCHs are treated the same as IPPS-excluded hospitals paid under the TEFRA payment system for purposes of the limitation on charges to beneficiaries and related billing requirements.

Section 15008 of Public Law 114–225 provides for a change in Medicare classification for "subclass (II)" LTCH by redesignating such hospitals from section 1886(d)(1)(B)(iv)(II) to section 1886(d)(1)(B)(vi) of the Act. In addition, subsection (b) of section 15008 specifies that, for cost reporting periods beginning on or after January 1, 2015, such hospitals classified under section 1886(d)(1)(B)(vi) of the Act are not subject to section 1886(m) of the Act, which sets forth the LTCH PPS. Section

15008 further specifies that, for cost reporting periods beginning on or after January 1, 2015, payment for inpatient operating costs is to be made as described in 42 CFR 412.526(c)(3), including any subsequent modifications, and payment for capital costs is to be made as described in 42 CFR 412.526(c)(4) as in effect on January 1, 2015. (We note that there have been no revisions to the regulations at 42 CFR 412.526, including § 412.526(c)(3) and § 412.526(c)(4), since January 1, 2015.)

In order to implement these requirements, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20029), we proposed to revise § 412.23(e)(2)(ii) so that the definition in that paragraph would apply to hospitals in cost reporting periods beginning on or after August 5, 1997 and on or before December 31, 2014. In addition, we proposed to add a new paragraph (j) to § 412.23 that would establish a new classification of IPPS-excluded hospital (formerly named “long-term care neoplastic disease hospitals” but renamed “extended neoplastic disease care hospital”) that would identify hospitals classified under new section 1886(d)(1)(B)(vi) of the Act. Proposed new paragraph (j) would further specify in paragraph (j)(2) that payment for inpatient operating costs for these hospitals is made as described in § 412.526(c)(3) and payment for capital costs for these hospitals is made as described in § 412.526(c)(4). (We note that we did not propose to make changes to Subpart O by removing references to “subclause (II) LTCHs” due to the sunset date we proposed to add to § 412.23(e)(2)(ii).) We sought public comments on our proposal.

In section VII.A of the preamble of this final rule, we summarize and respond to the public comments on these proposals. In summary, as discussed in greater detail in section VII.A of this preamble, we are finalizing our proposal, without modification, to revise § 412.23(e)(2)(ii) so that the definition in that paragraph will apply to hospitals in cost reporting periods beginning on or after August 5, 1997 and on or before December 31, 2014; and in response to public comments we are making our changes to payment regulations at new paragraph (i) under § 412.22 (which is identical, with the exception of minor technical editing for cross-references, to the language we proposed at § 412.23(j)) that establishes a new classification of IPPS-excluded hospital (formerly termed “long-term care neoplastic disease hospitals,” but renamed “extended neoplastic disease care hospitals”) that will identify

hospitals classified under new section 1886(d)(1)(B)(vi) of the Act.

### **IX. Quality Data Reporting Requirements for Specific Providers and Suppliers**

We seek to promote higher quality and more efficient healthcare for Medicare beneficiaries. This effort is supported by the adoption of widely agreed-upon quality measures. We have worked with stakeholders to define quality measures for most settings and to measure various aspects of care for most Medicare beneficiaries. These measures assess structural aspects of care, clinical processes, care coordination, and improving patient outcomes (including patient experiences with care).

We have implemented quality reporting programs for multiple care settings, including, for example:

- Hospital inpatient services under the Hospital Inpatient Quality Reporting (IQR) Program (formerly referred to as the Reporting Hospital Quality Data for Annual Payment Update (RHQDAPU) Program);
- Prospective Payment System (PPS)-exempt cancer hospitals under the PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program;
- Long-term care hospitals under the Long-Term Care Hospital Quality Reporting Program (LTCH QRP) (also referred to as the LTCHQR Program);
- Inpatient psychiatric facilities under the Inpatient Psychiatric Facilities Quality Reporting (IPFQR) Program;
- Hospital outpatient services under the Hospital Outpatient Quality Reporting (OQR) Program (formerly referred to as the Hospital Outpatient Quality Data Reporting Program (HOP QDRP));
- Ambulatory surgical centers under the Ambulatory Surgical Center Quality Reporting (ASCQR) Program;
- Inpatient rehabilitation facilities under the Inpatient Rehabilitation Facility Quality Reporting Program (IRF QRP);
- Care furnished by physicians and other eligible professionals under the Physician Quality Reporting System (PQRS). We note that beginning in CY 2019, PQRS will be replaced by the Quality Payment Program (QPP), as stated in the MIPS APM final rule with comment period (81 FR 77008);
- Skilled nursing facilities under the Skilled Nursing Facility Quality Reporting Program (SNF QRP);
- Home health agencies under the Home Health Quality Reporting Program (HH QRP); and

- Hospices under the Hospice Quality Reporting Program (HQRP).

We have also implemented programs which link payment to performance including: The Hospital Readmissions Reduction Program (HRRP); the Hospital Value-Based Purchasing (VBP) Program (described further below); the Hospital-Acquired Condition (HAC) Reduction Program; the End-Stage Renal Disease Quality Incentive Program (ESRD QIP); and the Quality Payment Program (QPP).

In implementing the Hospital IQR Program and other quality reporting programs, we have focused on measures which have high impact and support CMS and HHS priorities for improved quality and efficiency of care for Medicare beneficiaries. We have made significant progress over recent program years in reaching our goal of aligning the clinical quality measure requirements of the Hospital IQR Program with various other Medicare and Medicaid programs, including those authorized by the Health Information Technology for Economic and Clinical Health (HITECH) Act, so that the reporting burden of multiple programs on providers will be reduced. We outline the aligned policies between the Hospital IQR Program and the Medicare and Medicaid EHR Incentive Programs in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57172). Our goal for the future is to continue to align those quality measurement requirements and to adopt a more streamlined set of clinical quality measures with electronic specifications aligned to standardized data elements so that electronic collection of performance information is a seamless component of care delivery. We believe the electronic collection and reporting of quality data using health IT will greatly simplify and streamline reporting for various CMS quality reporting programs, and hospitals will experience decreased financial and administrative burden as they are able to switch primarily to health IT based data reporting for many measures that are currently manually chart-abstracted.

We also have implemented a Hospital VBP Program under section 1886(o) of the Act, described in the FY 2013 Hospital Inpatient VBP Program final rule (76 FR 26490 through 26547); the FY 2014 the FY 2014 IPPS/LTCH PPS final rule (78 FR 50676 through 50707); the FY 2015 IPPS/LTCH PPS final rule (79 FR 50048 through 50087); the FY 2016 IPPS/LTCH PPS final rule (80 FR 49544 through 49570); the FY 2017 IPPS/LTCH PPS final rule (81 FR 56979 through 57011); and the CY 2017 OPSS/ASC final rule with comment period (81

FR 79855 through 79862). Under the Hospital VBP Program, performance standards are set and applied to a performance period for the applicable FY. Hospitals receive value based incentive payments based on these performance standards. The measures under the Hospital VBP Program must be selected from current measures (other than readmission measures) specified under the Hospital IQR Program as required by section 1886(o)(2)(A) of the Act.

In selecting measures for the Hospital IQR Program, we are mindful of the conceptual framework we have developed for the Hospital VBP Program. Because measures adopted for the Hospital VBP Program must first have been adopted and publicly reported under the Hospital IQR Program, these two programs are linked. We view the Hospital VBP Program as the next step in promoting higher quality care for Medicare beneficiaries by transforming Medicare from a passive payer of claims into an active purchaser of quality healthcare for its beneficiaries. Value-based purchasing is an important step to revamping how care and services are paid for, moving increasingly toward rewarding better value, outcomes, and innovations.

We also view the HAC Reduction Program, authorized by section 1886(p) of the Act, and the Hospital VBP Program as related but separate efforts to reduce HACs. The Hospital VBP Program is an incentive program that awards payments to hospitals based on quality performance on a wide variety of measures (scoring performance on each measure on the greater of improvement or achievement), while the HAC Reduction Program creates a payment adjustment resulting in payment reductions for hospitals with scores in the lowest performing quartile based on their rates of HACs.

In the preamble of FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20030 through 20064), we proposed changes to the following Medicare quality reporting systems:

- In section IX.A., the Hospital IQR Program.
- In section IX.B., the PCHQR Program.
- In section IX.C., the LTCH QRP.
- In section IX.D., the IPFQR Program.

In addition, in section IX.E. of the preamble of the proposed rule (82 FR 20130 through 20139), we proposed changes to the Medicare and Medicaid EHR Incentive Programs for eligible hospitals and critical access hospitals (CAHs).

### *A. Hospital Inpatient Quality Reporting (IQR) Program*

#### 1. Background

##### a. History of the Hospital IQR Program

We seek to promote higher quality and more efficient health care for Medicare beneficiaries. This effort is supported by the adoption of widely-agreed upon quality measures. We have worked with relevant stakeholders to define measures of quality in almost every setting and currently measure some aspect of care for almost all Medicare beneficiaries. These measures assess structural aspects of care, clinical processes, patient experiences with care, and outcomes. We have implemented quality measure reporting programs for multiple settings of care. To measure the quality of hospital inpatient services, we implemented the Hospital Inpatient Quality Reporting (IQR) Program, previously referred to as the Reporting Hospital Quality Data for Annual Payment Update (RHQDAPU) Program. We refer readers to the FY 2010 IPPS/LTCH PPS final rule (74 FR 43860 through 43861) and the FY 2011 IPPS/LTCH PPS final rule (75 FR 50180 through 50181) for detailed discussions of the history of the Hospital IQR Program, including the statutory history, and to the FY 2015 IPPS/LTCH PPS final rule (79 FR 50217 through 50249), the FY 2016 IPPS/LTCH PPS final rule (80 FR 49660 through 49692), and the FY 2017 IPPS/LTCH PPS final rule (81 FR 57148 through 57150) for the measures we have adopted for the Hospital IQR Program measure set through the FY 2019 payment determination and subsequent years.

We strive to put patients first, ensuring they are empowered to make decisions about their own healthcare along with their clinicians using information from data-driven insights that are increasingly aligned with meaningful quality measures. We support technology that reduces burden and allows clinicians to focus on providing high-quality healthcare for their patients. We also support innovative approaches to improve quality, accessibility, and affordability of care while paying particular attention to improving clinicians' and beneficiaries' experience when interacting with our programs. In combination with other efforts across the Department of Health and Human Services, we believe the Hospital IQR Program helps to incentivize hospitals to improve healthcare quality and value, while giving patients and providers the tools and information needed to make the best decisions for them. Recognizing

that the Hospital IQR Program represents a key component of the way that we bring quality measurement and improvement together with payment, we have taken efforts to review existing policies to identify how to move the program forward in the least burdensome manner possible while continuing to incentivize improvement in the quality of care provided to patients.

##### b. Maintenance of Technical Specifications for Quality Measures

The technical specifications for chart-abstracted clinical process of care measures used in the Hospital IQR Program, or links to Web sites hosting technical specifications, are contained in the CMS/The Joint Commission (TJC) Specifications Manual for National Hospital Inpatient Quality Measures (Specifications Manual). This Specifications Manual is posted on the QualityNet Web site at: <http://www.qualitynet.org/>. We generally update the Specifications Manual on a semiannual basis and include in the updates detailed instructions and calculation algorithms for hospitals to use when collecting and submitting data on required chart-abstracted clinical process of care measures.

The technical specifications for electronic clinical quality measures (eCQMs) used in the Hospital IQR Program are contained in the CMS Annual Update for Hospital Quality Reporting Programs (Annual Update). This Annual Update is posted on the eCQI Resource Center webpage at: <https://ecqi.healthit.gov/>. We generally update the measure specifications on an annual basis through the Annual Update, which includes code updates, logic corrections, alignment with current clinical guidelines, and additional guidance for hospitals and EHR vendors to use in order to collect and submit data on eCQMs from hospital EHRs.

In addition, we believe that it is important to have in place a sub-regulatory process to incorporate non-substantive updates to the measure specifications for measures we have adopted for the Hospital IQR Program so that these measures remain up-to-date. We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53504 through 53505) and the FY 2015 IPPS/LTCH PPS final rule (79 FR 50203) for our policy for using a sub-regulatory process to make non-substantive updates to measures used for the Hospital IQR Program.

We recognize that some changes made to measures undergoing maintenance review are substantive in nature and

might not be appropriate for adoption using a sub-regulatory process. We will continue to use rulemaking to adopt substantive updates made to measures we have adopted for the Hospital IQR Program. We refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 57111) for additional discussion of the maintenance of technical specifications for quality measures for the Hospital IQR Program. We also refer readers to the FY 2015 IPPS/LTCH PPS final rule (79 FR 50202 through 50203) for additional details on the measure maintenance process.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20031), we did not propose any changes to our policies on the measures maintenance process, including the maintenance of non-substantive updates to measures used for the Hospital IQR Program.

#### c. Public Display of Quality Measures

Section 1886(b)(3)(B)(viii)(VII) of the Act was amended by the Deficit Reduction Act (DRA) of 2005. Section 5001(a) of the DRA requires that the Secretary establish procedures for making information regarding measures submitted available to the public after ensuring that a hospital has the opportunity to review its data before they are made public. Our current policy is to report data from the Hospital IQR Program as soon as it is feasible on CMS Web sites such as the *Hospital Compare* Web site, <http://www.medicare.gov/hospitalcompare> after a 30-day preview period (78 FR 50776 through 50778).

Information is available to the public on the *Hospital Compare* Web site. *Hospital Compare* is an interactive web tool that assists beneficiaries by providing information on hospital quality of care to those who need to select a hospital. The Hospital IQR Program currently includes process of care measures, risk-adjusted outcome measures, the HCAHPS patient experience-of-care survey measure, structural measures, Emergency Department throughput measures, patient safety and adverse event measures, immunization measures, hospital-acquired infection measures, and payment measures, all of which are featured on the *Hospital Compare* Web site. For more information on measures reported to *Hospital Compare*, we refer readers to the Web site at: <http://www.medicare.gov/hospitalcompare>.

Other information that may not be as relevant to or easily understood by beneficiaries and information for which there are unresolved display issues or design considerations are not reported on *Hospital Compare* and may be made

available on other CMS Web sites, such as <https://data.medicare.gov>. CMS also provides stakeholders access to archived data from *Hospital Compare*, which can be found at: <https://data.medicare.gov/data/archives/hospital-compare>.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20031 through 20032), we did not propose any changes to these policies.

#### d. Accounting for Social Risk Factors in the Hospital IQR Program

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20032 through 20033), we discussed the accounting for social risk factors in the Hospital IQR Program. We understand that social risk factors such as income, education, race and ethnicity, employment, disability, community resources, and social support (certain factors of which are also sometimes referred to as socioeconomic status (SES) factors or socio-demographic status (SDS) factors) play a major role in health. One of our core objectives is to improve beneficiary outcomes including reducing health disparities, and we want to ensure that all beneficiaries, including those with social risk factors, receive high quality care. In addition, we seek to ensure that the quality of care furnished by providers and suppliers is assessed as fairly as possible under our programs while ensuring that beneficiaries have adequate access to excellent care.

We have been reviewing reports prepared by the Office of the Assistant Secretary for Planning and Evaluation (ASPE)<sup>99</sup> and the National Academies of Sciences, Engineering, and Medicine on the issue of measuring and accounting for social risk factors in CMS' quality measurement and payment programs, and considering options on how to address the issue in these programs. On December 21, 2016, ASPE submitted a Report to Congress on a study it was required to conduct under section 2(d) of the Improving Medicare Post-Acute Care Transformation (IMPACT) Act of 2014. The study analyzed the effects of certain social risk factors of Medicare beneficiaries on quality measures and measures of resource use used in one or more of nine Medicare value-based purchasing programs.<sup>100</sup> The report also included considerations for strategies to account for social risk factors in these programs.

<sup>99</sup> <https://aspe.hhs.gov/pdf-report/report-congress-social-risk-factors-and-performance-under-medicare-value-based-purchasing-programs>.

<sup>100</sup> <https://aspe.hhs.gov/pdf-report/report-congress-social-risk-factors-and-performance-under-medicare-value-based-purchasing-programs>.

In a January 10, 2017 report released by the National Academies of Sciences, Engineering, and Medicine, that body provided various potential methods for measuring and accounting for social risk factors, including stratified public reporting.<sup>101</sup>

As noted in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57124), the NQF undertook a 2-year trial period in which new measures, measures undergoing maintenance review, and measures endorsed with the condition that they enter the trial period could be assessed to determine whether risk adjustment for selected social risk factors is appropriate for these measures. This trial entailed temporarily including social risk factors in the risk-adjustment approach for these measures. Since publication of the FY 2018 IPPS/LTCH PPS proposed rule, we have learned that the trial period ended in April 2017 and a draft report is available at: [http://www.qualityforum.org/SES\\_Trial\\_Period.aspx](http://www.qualityforum.org/SES_Trial_Period.aspx).

As we continue to consider the analyses and recommendations from these reports, we are continuing to work with stakeholders in this process. As we have previously communicated, we are concerned about holding providers to different standards for the outcomes of their patients with social risk factors because we do not want to mask potential disparities or minimize incentives to improve the outcomes for disadvantaged populations. Keeping this concern in mind, while we sought input on this topic previously, we continue to seek public comment on whether we should account for social risk factors in the Hospital IQR Program, and if so, what method or combination of methods would be most appropriate for accounting for social risk factors. Examples of methods include: Confidential reporting to providers of measure rates stratified by social risk factors; public reporting of stratified measure rates; and potential risk adjustment of a particular measure as appropriate based on data and evidence.

In addition, in the proposed rule (82 FR 20032), we sought public comment on which social risk factors might be most appropriate for reporting stratified measure scores and/or potential risk adjustment of a particular measure. Examples of social risk factors include, but are not limited to: Dual eligibility/low-income subsidy, race and ethnicity, and geographic area of residence. We also sought comments on which of these

<sup>101</sup> National Academies of Sciences, Engineering, and Medicine. 2017. Accounting for social risk factors in Medicare payment. Washington, DC: The National Academies Press.

factors, including current data sources where this information would be available, could be used alone or in combination, and whether other data should be collected to better capture the effects of social risk. We will take commenters' input into consideration as we continue to assess the appropriateness and feasibility of accounting for social risk factors in the Hospital IQR Program. We note that any such changes would be proposed through future notice-and-comment rulemaking.

We refer readers to section IX.A.13. of the preamble of this final rule, where we discuss the potential future confidential reporting of stratified measure data for the Hospital 30-day, All-Cause, Risk-Standardized Readmission Rate Following Pneumonia Hospitalization (NQF #0506) and the Hospital 30-day, All-Cause, Risk Standardized Mortality Rate (RSMR) for Pneumonia measures. Our goal is to provide examples from several domains for the same issue (pneumonia). We want the reader to understand the approaches from as many perspectives as possible. In addition, we sought comments on options for publicly displaying stratified rates using social risk factors as well as which other social risk factors besides dual eligibility should be used.

Of note, implementing any of the above methods would be taken into consideration in the context of how this and other CMS programs operate (for example, data submission methods, availability of data, statistical considerations relating to reliability of data calculations, among others), so we also welcomed comment on operational considerations.

We received extensive comments in response to our request for public comment on whether we should account for social risk factors in the Hospital IQR Program, and if so, what method or combination of methods would be most appropriate for accounting for social risk factors.

*Comment:* Several commenters were generally supportive of accounting for social risk factors in the Hospital IQR Program. The commenters expressed appreciation for CMS' interest in providing data to hospitals and to the public to inform these efforts, and urged CMS to provide data in a way that minimizes the risk of providing divergent signals to hospitals. The commenters noted that risk stratification and adjustment are equally significant components of valid quality assessment. Specifically, the commenters believed that risk-adjusting quality measures would: (1) Have a positive impact on provider performance; (2) provide

information essential to allocating resources in high-risk areas; (3) encourage equitable care delivery, while also accounting for the currently disproportionate penalties for safety net and academic medical centers; (4) reduce costs; and (5) prevent weakening of the network of providers that serve disadvantaged populations, which could have the unintended consequence of worsening health disparities. Conversely, some commenters voiced concerns such as: (1) This approach will not address the underlying disparities that are often associated with poor health outcomes and might instead, mask potential disparities or minimize incentives to improve the outcomes for disadvantaged populations; and (2) adjustments to quality measures could create a two-tier system of care where those with few economic or social resources are diminished in the calculation of quality measures. Some commenters stated that providers should not be financially penalized while caring for patients with greater needs.

Several commenters recommended that comorbidities, functional impediments, and cognitive limitations must be accounted for when assessing quality and costs. The commenters suggested that CMS conduct analyses to determine the degree to which certain variables, such as insurance, age, race, and ethnicity, impact admission rates before these factors are weighted as part of any quality scoring metrics. Where meaningful and comprehensive neighborhood level SDS-data currently exist, several commenters stated that CMS should encourage empirical tests of quality metrics adjusted for those factors to assess the impact of said adjustments on local provider performance metrics. Based on these tests, CMS and other agencies would be able to prioritize the national collection of data most essential for valid risk adjustment methodologies.

Many commenters suggested that CMS explore a variety of approaches for accounting for social risk factors, including; risk adjustment, stratification of measure rates for public reporting, and confidential stratification of measures. The commenters also encouraged CMS to work with measure developers and relevant medical societies to ensure social risk factors are considered during the measure development and update processes. Some commenters recommended that stratification or risk-adjustment decisions should be made on a measure by measure level and incorporated into the measure specifications. Some commenters recommended that CMS

require measure developers to test a range of national-level socio-demographic data elements, identified in the ASPE<sup>102</sup> and NAM<sup>103</sup> reports, into the risk adjustment methodology of accountability metrics.

Many commenters recommended providing this risk-adjusted data alongside unadjusted data so that interventions can be appropriately targeted, but discouraged the use of unadjusted data in publicly reported and pay-for-performance measures. Some commenters stated that CMS should work with stakeholders after the hospitals' review is complete to publicly report this data in an appropriate fashion. Other concerns expressed by some commenters included that data should not be publicly reported until hospitals have had sufficient time to review and understand the results and correct any errors that may stem from the initial implementation of any new methodology. Some commenters suggested that CMS provide hospitals with confidential reports of performance on accountability measures stratified by dual eligible status or other nationally available data elements within a year of this testing.

Commenters encouraged CMS to continue to work on developing more precise approaches to risk adjustment to account for social factors in the rural context. Some commenters stated that CMS should implement demonstration projects to encourage hospitals to collect SDS data through their electronic health records (EHR). Some commenters advised CMS to monitor the effects of changes to quality programs on hospitals serving beneficiaries with social risk factors so that future programmatic changes are made with these concerns in mind. Some commenters also encouraged CMS to reconsider the use of a 3-year look back period historically used to calculate readmission rates as it moves forward with changes to this program.

*Response:* We appreciate all the comments and interest in this topic. As we have previously stated, we are concerned about holding providers to different standards for the outcomes of their patients with social risk factors, because we do not want to mask potential disparities or minimize

<sup>102</sup> Office of the Assistant Secretary for Planning and Evaluation. 2016. Report to Congress: Social Risk Factors and Performance Under Medicare's Value-Based Purchasing Programs. Available at: <https://aspe.hhs.gov/pdf-report/report-congress-social-risk-factors-and-performance-under-medicare-value-based-purchasing-programs>.

<sup>103</sup> National Academies of Sciences, Engineering, and Medicine. 2017. Accounting for social risk factors in Medicare payment. Washington, DC: The National Academies Press.

incentives to improve outcomes for disadvantaged populations. We believe that the path forward should incentivize improvements in health outcomes for disadvantaged populations while ensuring that beneficiaries have access to excellent care. We appreciate that some commenters recommended risk adjustment as a strategy to account for social risk factors, while others stated a concern that risk adjustment could minimize incentives and reduce efforts to address disparities for patients with social risk factors. We will consider all suggestions as we continue to assess the issue of accounting for social risk factors within individual measures and the program as a whole, and will actively perform additional research and monitor for trends to prevent unintended consequences. We intend to explore options including, but not limited to, measure stratification by social risk factors in a consistent manner across programs when appropriate, informed by considerations described in section IX.A.13. of the preamble of this final rule, which describes options of: (1) Stratified reporting of a measure by patient factors, which highlights disparities in outcomes by patient subgroup; and (2) peer-to-peer benchmarking based on hospital's share of patient factors, which allows hospitals to compare their performance with like-peers. We also intend to conduct further analyses on the impact of different approaches such as measure-level risk adjustment and stratifying performance scoring to account for social risk factors including the options suggested by commenters. In addition, we will consider the commenters' suggestion that we conduct empirical testing of risk-adjusted quality metrics, and assess the potential impact of the findings from such testing on the

prioritization of national data collection, in relation to risk adjustment methodologies.

We appreciate commenters' recommendations regarding specific social risk factor variables and will work to determine the feasibility of collecting these patient-level variables. As we consider the feasibility of collecting patient-level data and the impact of strategies to account for social risk factors through further analysis, we will also continue to evaluate the reporting burden on providers.

We are committed to ensuring that CMS beneficiaries have access to and receive excellent care and that the quality of care furnished by providers and suppliers is assessed fairly in CMS programs. We thank the commenters, and we will consider their views as we develop further policy regarding social risk factors in the Hospital IQR Program. Any proposals would be made in future rulemaking after further research and continued stakeholder engagement.

**2. Retention of Previously Adopted Hospital IQR Program Measures for Subsequent Payment Determinations**

We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53512 through 53513) for our finalized measure retention policy. Pursuant to this policy, when we adopt measures for the Hospital IQR Program beginning with a particular payment determination, we automatically re-adopt these measures for all subsequent payment determinations unless we propose to remove, suspend, or replace the measures. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20033), we did not propose any changes to this policy.

**3. Removal and Suspension of Previously Adopted Hospital IQR Program Measures**

As discussed above, we generally retain measures from the previous year's Hospital IQR Program measure set for subsequent years' measure sets except when we specifically propose to remove, suspend, or replace a measure. We refer readers to the FY 2011 IPPS/LTCH PPS final rule (75 FR 50185) and the FY 2015 IPPS/LTCH PPS final rule (79 FR 50203 through 50204) for more information on the criteria we consider for removing quality measures. We refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49641 through 49643) for more information on the additional factors we consider in removing quality measures and the factors we consider in order to retain measures. We note in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50203 through 50204), we clarified the criteria for determining when a measure is "topped-out." In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20033), we did not propose any changes to these policies.

We refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 57112 through 57120) for the list of 15 measures finalized for removal for the FY 2019 payment determination and subsequent years. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20033), we did not propose any measures for removal.

**4. Previously Adopted Hospital IQR Program Measures for the FY 2019 Payment Determination and Subsequent Years**

The Hospital IQR Program has previously finalized 62 measures for the FY 2019 payment determination and subsequent years as outlined in the table below:

**HOSPITAL IQR PROGRAM MEASURES FOR THE FY 2019 PAYMENT DETERMINATION AND SUBSEQUENT YEARS**

Short name	Measure name	NQF #
<b>Healthcare-Associated Infection Measures</b>		
CAUTI .....	National Healthcare Safety Network (NHSN) Catheter-associated Urinary Tract Infection (CAUTI) Outcome Measure.	0138
CDI .....	National Healthcare Safety Network (NHSN) Facility-wide Inpatient Hospital-onset <i>Clostridium difficile</i> Infection (CDI) Outcome Measure.	1717
CLABSI .....	National Healthcare Safety Network (NHSN) Central Line-Associated Bloodstream Infection (CLABSI) Outcome Measure.	0139
Colon and Abdominal Hysterectomy SSI.	American College of Surgeons—Centers for Disease Control and Prevention (ACS—CDC) Harmonized Procedure Specific Surgical Site Infection (SSI) Outcome Measure.	0753
HCP .....	Influenza Vaccination Coverage Among Healthcare Personnel .....	0431
MRSA Bacteremia .....	National Healthcare Safety Network (NHSN) Facility-wide Inpatient Hospital-onset Methicillin-resistant <i>Staphylococcus aureus</i> (MRSA) Bacteremia Outcome Measure.	1716
<b>Claims-Based Patient Safety Measures</b>		
Hip/knee complications .....	Hospital-Level Risk-Standardized Complication Rate (RSCR) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA).	1550

## HOSPITAL IQR PROGRAM MEASURES FOR THE FY 2019 PAYMENT DETERMINATION AND SUBSEQUENT YEARS—Continued

Short name	Measure name	NQF #
PSI 04 .....	Death Rate among Surgical Inpatients with Serious Treatable Complications .....	0351
PSI 90 .....	Patient Safety for Selected Indicators Composite Measure, Modified PSI 90 (Updated Title: Patient Safety and Adverse Events Composite).	0531
<b>Claims-Based Mortality Outcome Measures</b>		
MORT-30-AMI .....	Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) Following Acute Myocardial Infarction (AMI) Hospitalization.	0230
MORT-30-CABG .....	Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) Following Coronary Artery Bypass Graft (CABG) Surgery.	2558
MORT-30-COPD .....	Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) Following Chronic Obstructive Pulmonary Disease (COPD) Hospitalization.	1893
MORT-30-HF .....	Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) Following Heart Failure (HF) Hospitalization.	0229
MORT-30-PN .....	Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Pneumonia Hospitalization.	0468
MORT-30-STK .....	Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Acute Ischemic Stroke.	N/A

5. Considerations in Expanding and Updating Quality Measures

We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53510 through 53512) for a discussion of the considerations we use to expand and update quality measures under the Hospital IQR Program. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20035), we did not propose any changes to these policies.

6. Refinements To Existing Measures in the Hospital IQR Program for the FY 2020 Payment Determination and Subsequent Years

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20035 through 20043), we proposed refinements to two measures. First, we proposed refinements to the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) Survey (NQF #0166) measure for the FY 2020 payment determination and subsequent years. Second, we proposed refinements to the Stroke 30-Day Mortality Rate (MORT-30-STK) measure for the FY 2023 payment determination and subsequent years. We discuss these refinements in more detail below.

a. Refining the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) Survey (NQF #0166) Measure for the FY 2020 Payment Determination and Subsequent Years

For the FY 2020 payment determination and subsequent years, we proposed to refine the existing Hospital Consumer Assessment of Healthcare

Providers and Systems (HCAHPS) Survey by refining the current Pain Management questions (HCAHPS Q12, Q13, and Q14) to focus on the hospital's communications with patients about the patients' pain during the hospital stay. In accord with this new focus, we proposed to update the name of the composite measure from "Pain Management" to "Communication About Pain."

(1) Background

The HCAHPS Survey (NQF #0166) was adopted in the Reporting Hospital Quality Data Annual Payment Update Program in the CY 2007 OPSS final rule (71 FR 68202 through 68204), beginning with the FY 2008 payment determination and for subsequent years. This Survey includes three Pain Management questions, Q12, Q13 and Q14. In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53513 through 53516), we added the Care Transition Measure (CTM-3) (NQF #0228) to the existing HCAHPS Survey, NQF #0166. The HCAHPS Survey, combining both NQF #0166 for the original survey and NQF #0228 for the Care Transition Measure adopted into the HCAHPS Survey in 2013, is the first national, standardized, publicly reported survey of patients' experience of hospital care. The HCAHPS Survey asks discharged patients 25 questions about their recent hospital stay and 7 "About You" questions. Survey results have been publicly reported on the *Hospital Compare* Web site since 2008. We refer readers to the FY 2011 IPPS/LTCH PPS

final rule (75 FR 50220), the FY 2012 IPPS/LTCH PPS final rule (76 FR 51641 through 51643), the FY 2013 IPPS/LTCH PPS final rule (77 FR 53537 through 53538), and the FY 2014 IPPS/LTCH PPS final rule (78 FR 50819 through 50820) for details on previously-adopted HCAHPS requirements. We also refer hospitals and HCAHPS Survey vendors to the official HCAHPS Web site at: <http://www.hcahpsonline.org> for new information and program updates regarding the HCAHPS Survey, its administration, oversight, and data adjustments.

The HCAHPS Survey (OMB control number 0938-0981) is administered to a random sample of adult patients who receive medical, surgical, or maternity care between 48 hours and 6 weeks (42 calendar days) after discharge and is not restricted to Medicare beneficiaries. Hospitals must survey patients throughout each month of the year. The HCAHPS Survey is available in official English, Spanish, Chinese, Russian, Vietnamese, and Portuguese versions. The HCAHPS Survey and its protocols for sampling, data collection and coding, and file submission can be found in the current HCAHPS *Quality Assurance Guidelines*, which is available on the official HCAHPS Web site at: <http://www.hcahpsonline.org/qaguidelines.aspx>. AHRQ carried out a rigorous, scientific process to develop and test the HCAHPS instrument. This process entailed multiple steps, including: A public call for measures; literature reviews; cognitive interviews, consumer focus groups; multiple

opportunities for additional stakeholder input; a 3-State pilot test; small-scale field tests; and notice-and-comment rulemaking.<sup>104</sup> We refer readers to the CY 2007 OPPI final rule (71 FR 68201)

for a more in-depth discussion about this process. The HCAHPS Survey was endorsed by the NQF on August 5, 2005 (#0166).

The Pain Management questions currently included in the HCAHPS Survey are as follows:

12. During this hospital stay, did you need medicine for pain?

<sup>1</sup>  Yes

<sup>2</sup>  No → If No, Go to Question 15

13. During this hospital stay, how often was your pain well controlled?

<sup>1</sup>  Never

<sup>2</sup>  Sometimes

<sup>3</sup>  Usually

<sup>4</sup>  Always

14. During this hospital stay, how often did the hospital staff do everything they could

to help you with your pain?

<sup>1</sup>  Never

<sup>2</sup>  Sometimes

<sup>3</sup>  Usually

<sup>4</sup>  Always

In the CY 2017 OPPI/ASC final rule with comment period in the context of the Hospital VBP Program (81 FR 79856), we stated that we received feedback that some stakeholders are concerned about the Pain Management dimension questions being used in a program where there is any link between scoring well on the questions and higher hospital payments (81 FR 79856). The Pain Management dimension used in the Hospital VBP Program is identical in composition to the Pain Management measure used in the Hospital IQR Program, questions Q12, Q13 and Q14 with one difference: The HCAHPS dimension score in the Hospital VBP program is based on the percentage of patients who chose the most positive response option (“top-

box” response). For more information about the Hospital VBP Program scoring methodology, we refer readers to the FY 2017 IPPI/LTCH PPS final rule (81 FR 57006).

Some stakeholders believed that the linkage of the Pain Management dimension questions to the Hospital VBP Program payment incentives created pressure on hospital staff to prescribe more opioids in order to achieve higher scores on this dimension (81 FR 79856). We stated that we continue to believe that pain control is an appropriate part of routine patient care that hospitals should manage and is an important concern for patients, their families, and their caregivers (81 FR 79856). Further, we stated that it is important to note that the HCAHPS

Survey does not specify any particular type of pain control method (81 FR 79856). We added that appropriate pain management includes communication with patients about pain-related issues, setting expectations about pain, shared decision-making, and proper prescription practices (81 FR 79856). Furthermore, we stated that although we were not aware of any scientific studies that support an association between scores on the Pain Management dimension questions and opioid prescribing practices, we were developing alternative questions for the Pain Management dimension in order to remove any potential ambiguity in the HCAHPS Survey. We noted that we believe that removing the Pain Management dimension from the

<sup>104</sup> “Development, Implementation, and Public Reporting of the HCAHPS Survey.” L.A. Giordano,

M.N. Elliott, E. Goldstein, W.G. Lehrman and P.A.

Spencer. Medical Care Research and Review, 67 (1): 27–37. 2010.

Hospital VBP Program scoring calculations would address potential confusion about the appropriate use of the Pain Management dimension, and provide us with an opportunity to further refine the pain management questions used in the HCAHPS Survey (81 FR 79859).

In the same final rule, we stated we would follow our standard survey development processes, which included drafting alternative questions, cognitive interviews and focus group evaluation, field testing, statistical analysis, stakeholder input, the Paperwork Reduction Act, and NQF endorsement (81 FR 79856).

In that final rule, numerous commenters supported the development of modified questions regarding pain management for the HCAHPS Survey and some commenters expressed particular support for modified pain management questions that focused on effective communication with patients about pain management-related issues (81 FR 79859 through 79860). Specifically, a number of commenters recommended modified pain management questions focused on shared decision-making, discussion of treatment options, including non-opioid pain management therapies, patient understanding of pain management options, and patient engagement in their care (81 FR 79860).

Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20035 through 20039), for the FY 2020 payment determination and subsequent years, we proposed to update and refine the existing HCAHPS Survey questions (HCAHPS Q12, Q13, and Q14) to focus more directly on communication with patients about their pain during the hospital stay.

These proposed revised questions would be used to form the composite measure “Communication About Pain.” The proposed revised Communication about Pain composite measure would be a part of the HCAHPS Survey and would be publicly reported in the Hospital IQR Program. More information about the revised questions/composite measure is included below.

In compliance with section 1890A(a)(2) of the Act, measures proposed for the Hospital IQR Program were included in a publicly available document: “List of Measures under Consideration for December 1, 2016” available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityMeasures/Downloads/Measures-under-Consideration-List-for-2016.pdf>.

The Measure Applications Partnership (MAP), a multi-stakeholder

group convened by the NQF, reviews the measures under consideration for the Hospital IQR Program, among other Federal programs, and provides input on those measures to the Secretary. The MAP’s 2017 recommendations for quality measures under consideration are captured in the following documents: “2016–2017 Process and Approach for MAP Pre Rulemaking Deliberations” available at: <http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=84455> and “2016–2017 Spreadsheet of Final Recommendations to HHS and CMS” available at: <http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=84452>.

We considered the input and recommendations provided by the MAP.

The Communication About Pain (MUC16–263) composite measure was reviewed by the MAP in December 2016. The MAP recommended that this composite measure be refined and resubmitted prior to rulemaking. The MAP emphasized the need to include non-pharmacological options used to treat pain. The MAP recommended that the testing results demonstrate reliability and validity for the Hospital IQR Program. The MAP also recommended that the measure be submitted to NQF for review and endorsement.<sup>105</sup> We plan to resubmit the proposed refined Communication About Pain composite measure to the MAP at the next opportunity. As we discuss in more detail below, the proposed refined Communication About Pain composite measure underwent field testing in 2016. Results were not yet available for the MAP’s review in December 2016, but are now complete and are posted on the official HCAHPS On-Line Web site, “Development of a New *Communication About Pain* Composite Measure for the HCAHPS Survey,” available at: <http://www.hcahponline.org/mode/adjustment.aspx>. We believe the measure is now fully developed and tested and we intend to provide feedback to the MAP Hospital Workgroup for review of testing results.

In early 2016, we empirically tested as part of the field test the reliability and validity of the proposed refined Communication About Pain composite measure in a large-scale experiment that involved patients from 51 hospitals across the nation. (We note that we are correcting a technical error here; the

<sup>105</sup> “2016–2017 Spreadsheet of Final Recommendations to HHS and CMS” available at: <http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=84452>.

proposed rule (82 FR 20037) stated “50 hospitals.”) Our analyses suggest the proposed refined Communication About Pain composite measure, which includes two substantive items regarding how often staff talked about pain and how often staff discussed how to treat pain while in the hospital (Q13 and Q14), as well as a screener item (Q12), have strong reliability (evidence that scores for hospitals are precisely measured) and validity (evidence that the measure does measure the intended construct of patient experience).<sup>106</sup> These properties of the individual questions used in the proposed refined Communication About Pain composite measure are as good as or better than the current Pain Management questions. The new questions are not subject to floor or ceiling effects (which would occur if almost all responses were in the lowest or highest response category), have excellent hospital-level reliability (here 0.88 or higher, where 0.70 or higher is the conventional standard) at recommended sample sizes, are not redundant with other current questions, are related in a predictable manner with the standard patient-mix characteristics, positively correlate with the two HCAHPS questions that assess overall patient experience (rating and recommendation) with the hospital, providing evidence of validity and do not vary systematically by survey mode, patient race/ethnicity, or hospital characteristics after adjusting for patient mix. They also have higher internal consistency as a composite measure (Cronbach’s alpha = 0.81), with 0.70 or higher being the conventional threshold, providing further evidence of reliability.<sup>107</sup>

As stated above, the MAP recommended the proposed refined Communication About Pain composite measure be submitted to the NQF for review and endorsement once testing has been completed.<sup>108</sup> The proposed refined Communication About Pain composite measure is not yet NQF endorsed; however, we intend to submit the measure to the NQF for endorsement when the Person and Family Centered Care Project has a call for measures.

Whenever feasible, we adopt measures that are NQF-endorsed, but note sometimes there are important

<sup>106</sup> Judd, C.M., & McClelland, G.H. (1998). Measurement. In D.T. Gilbert, S.T. Fiske, & G. Lindzey (Eds.), *The handbook of social psychology* (4th ed., Vol. 1, pp. 180–232). New York: McGraw-Hill.

<sup>107</sup> Cronbach, L.J. (1984). *Essentials of psychological testing* (4th ed.). New York: Harper.

<sup>108</sup> “2017 Considerations for Implementing Measures Hospitals-Final Report,” available at: <http://www.qualityforum.org/map/>.

areas of clinical concern for which NQF-endorsed measures do not exist. Section 1886(b)(3)(B)(IX)(bb) of the Act provides that in the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by the entity with a contract under section 1890(a) of the Act, the Secretary may specify a measure that is not so endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary. (The NQF currently holds this contract.) We considered other existing measures which have been endorsed by the NQF and other consensus organizations, but we were unable to identify any NQF-endorsed (or other consensus organization endorsed) measures that were feasible and practical.

While we consider MAP recommendations and NQF endorsement status as part of our decision-making process for which measures to include in the Hospital IQR Program, we believe it is important to adopt this proposed refined Communication About Pain composite measure, because communicating with patients about their pain is an integral part of delivering high quality, person-centered care.<sup>109</sup> In developing the proposed refined Communication About Pain composite measure, we followed our standard survey development processes,<sup>110</sup> which included drafting alternative questions, cognitive interviews, focus group evaluation, field testing, statistical analysis, and stakeholder input. We believe the proposed refined Communication About Pain composite measure has been sufficiently tested, demonstrating high levels of reliability and validity, as noted above.

Further, we have consistently received feedback from some

stakeholders expressing concern that the current Pain Management questions encourage overprescribing of opioids as discussed in the CY 2017 OPPI/ASC final rule with comment period (81 FR 79856). As a result, we believe it is important to refine the existing Pain Management measure. In the proposed rule (82 FR 20038), we noted that if our proposal to revise the current Pain Management measure questions with those in the proposed refined Communication About Pain composite measure is not finalized, we would continue to use the Pain Management questions as previously finalized.

The proposed refined Communication About Pain composite measure is discussed below. We proposed to revise the current Pain Management questions (Q12, Q13, and Q14) in the HCAHPS Survey for the FY 2020 payment determination and subsequent years by adopting the proposed refined Communication About Pain composite measure in the HCAHPS Survey beginning with the FY 2020 payment determination, which would be applicable to surveys administered to patients beginning with January 1, 2018 discharges and for subsequent years.

In compliance with section 1886(b)(3)(B)(viii)(VII) of the Act, we calculate and publicly report HCAHPS measures from four consecutive quarters of data. From that point and forward, the oldest quarter of data is rolled off, the newest quarter is rolled on, and the measure scores are calculated for this unique set of four quarters and are publicly reported on the *Hospital Compare* Web site and available for payment determination. Data submitted for the current Pain Management measure in CY 2017 for the FY 2019 payment determination will be publicly reported on the *Hospital Compare* Web site in October 2018. In the proposed rule (82 FR 20038), we noted that if our proposal to revise the HCAHPS Pain Management measure with the HCAHPS Communication About Pain composite measure is finalized, we would begin to use the new Pain Management questions on the HCAHPS Survey in January of 2018. Once we have collected four consecutive quarters of the HCAHPS Communication About Pain composite measure questions, we would create

scores for the Communication About Pain composite measure.

We would be unable to report or use for payment determination either the original or new Pain Management measure unless and until we have collected 4 quarters of data for the measure. The CY 2017 reporting period/FY 2019 payment determination would be the last period for which we have four quarters of the original Pain Management measure data which, as stated above, would be publicly reported on the *Hospital Compare* Web site in October 2018. We would be unable to publicly report either the original or proposed refined Communication About Pain composite measure on the *Hospital Compare* Web site in December 2018, April 2019, or July 2019 because there would be fewer than 4 quarters of data for both the original and the new measure. The CY 2018 reporting period/FY 2020 payment determination would be the first period for which we have four quarters of the proposed refined Communication About Pain composite measure. Therefore, the first opportunity to publicly report the Communication About Pain composite measure on the *Hospital Compare* Web site would be in October 2019. From this point forward, the proposed refined Communication About Pain composite measure could be used for payment determinations.

## (2) Overview of Measure

The refined questions that comprise the proposed refined Communication About Pain composite measure closely mirror the structure and style of the existing Pain Management questions. However, the new questions address how providers communicate with patients about pain while removing any ambiguities in the wording or intent of the questions. This refinement is consistent with the HCAHPS Survey's original design, development, and NQF endorsement (NQF #0166). Further, we designed the Communication About Pain composite measure to be consistent and compatible with existing HCAHPS questions and HCAHPS sampling and survey administration protocols. The three Communication About Pain composite measure questions are as follows:

<sup>109</sup> "A Special Contribution from the Centers for Medicare and Medicaid Services: Valuing Patient Experience While Addressing the Prescription Opioid Epidemic." L. Tefera, W.G. Lehrman, E.G. Goldstein and S. Agrawal. *Annals of Emergency Medicine*. 2016. Published online, 7–19–16. [http://www.annemergmed.com/article/S0196-0644\(16\)30367-5/fulltext](http://www.annemergmed.com/article/S0196-0644(16)30367-5/fulltext).

<sup>110</sup> "Development, Implementation, and Public Reporting of the HCAHPS Survey." L.A. Giordano, M.N. Elliott, E. Goldstein, W.G. Lehrman and P.A. Spencer. *Medical Care Research and Review*, 67 (1): 27–37. 2010.

- HP1: “During this hospital stay, did you have any pain?”
  - Yes
  - No → *If No, Go to Question* \_\_\_
- HP2: “During this hospital stay, how often did hospital staff talk with you about how much pain you had?”
  - Never
  - Sometimes
  - Usually
  - Always
- HP3: “During this hospital stay, how often did hospital staff talk with you about how to treat your pain?”
  - Never
  - Sometimes
  - Usually
  - Always

As stated above, in light of the ongoing opioid epidemic, we believe it is important the Communication About Pain composite measure is abundantly clear in its focus on communication about pain between providers and their patients, and it is applicable to all patients who experienced pain during their hospital stay.

### (3) Data Collection

The proposed refined Communication About Pain composite measure questions would be administered and data collected in exactly the same manner as the current Pain Management measure questions. There would be no changes to HCAHPS patient eligibility or exclusion criteria. Detailed information on HCAHPS data collection protocols can be found in the current HCAHPS Quality Assurance Guidelines, located at: <http://www.hcahpsonline.org/qaguidelines.aspx>. We reiterate that other than the revision of the HCAHPS Pain Management questions, the

HCAHPS Survey and its administration and data collection protocols would be unchanged. The survey adjustment and patient-mix adjustment for the proposed refined Communication About Pain composite measure would be made available on the official HCAHPS On-Line Web site at: <http://www.hcahpsonline.org/modeadjustment.aspx>.

### (4) Public Reporting

The scoring of the proposed refined Communication About Pain composite measure would be the same as the current Pain Management measure. Detailed information on how the measure would be scored for purposes of public reporting can be found on the HCAHPS Web site at: <http://www.hcahpsonline.org/Files/Calculation%20of%20HCAHPS%20Scores.pdf>.

We invited public comment on our proposal to revise the current Pain Management questions (Q12, Q13, and Q14) in the HCAHPS Survey for the FY

2020 payment determination and subsequent years by adopting the proposed refined Communication About Pain composite measure in the HCAHPS Survey beginning with the FY 2020 payment determination and subsequent years, which would be applicable to surveys administered to patients beginning with January 1, 2018 discharges and for subsequent years as discussed above.

*Comment:* There was a consensus among commenters that pain care is a critical matter to measure as part of HCAHPS. Many commenters supported the proposed refinement to the HCAHPS Survey measure pain management questions. The commenters noted reframing the HCAHPS pain measures as “Communication About Pain” is a positive change that would help ensure care is more patient-centered. The commenters appreciated the fact the new questions focus more directly on communication with patients about their pain during the hospital stay, as

opposed to patients' perceptions of the adequacy of pain treatment during the hospital stay. One commenter commended CMS on its responsiveness to concerns about pain and the development of new items focusing less on pharmacotherapy items. Another commenter noted that pain management measures address an important aspect of patient care. Another commenter noted that Pain Management questions are needed for improved delivery of care, proper pain management, and shared decision making. Another commenter noted that the revised pain management questions are an improvement. One commenter supported refining the pain management questions to dissuade over-prescription of opioids and remove ambiguities, and appreciated the steps taken by CMS to test for reliability and validity. One commenter noted that the new focus on pain communication is positive, ensuring that care is more patient-centered. Another commenter noted that CMS should proceed with the proposed changes to the pain management questions.

*Response:* We thank the commenters for their support. We believe that the proposed refined pain management questions as formulated shift focus from the method of pain management to patient-centered communication between provider and patient. We believe the proposed refined Communication About Pain composite measure adequately reflects shared decision making and pain management by focusing on communication between patients and providers rather than the particular course of treatment. We engaged the patient and caregiver community in evaluating and refining the questions related to pain management as part of our standard survey development process.

*Comment:* Several commenters supported complete removal of the pain management questions from the HCAHPS Survey measure, arguing that questions evaluating how pain is discussed offer no benefit to patients.

Another commenter encouraged CMS to reduce external pressure on providers to prescribe opioids inappropriately by completely removing the current Pain Management questions from the HCAHPS Survey measure beginning in CY 2018 because doing so would help ensure physicians have the ability to treat patients in the most appropriate manner. In addition, the commenter urged CMS to eliminate pain as a "fifth vital sign" from all professional standards because the current culture of pain as a fifth vital sign minimizes investigation into causes of pain and incentivizes methods of addressing pain

in a manner that may not support the patient's health in the long term.

*Response:* Pain management is an important component of the quality of care provided at a hospital, and we believe continued inclusion of the HCAHPS Survey measure in the Hospital IQR Program provides patients with critical information for use in selecting a hospital setting for their care, ensures hospitals continue to appropriately manage patients' pain, and encourages hospitals to engage in quality improvement efforts in addressing pain management and communication about pain. We continue to believe pain control is a critical part of routine patient care that hospitals should manage and is an important concern for patients, their families, and patient caregivers. Furthermore, as revised, the pain management questions focus entirely on communication about pain with patients and do not refer to, recommend, or imply that any particular type of treatment is appropriate. We believe the revised Communication About Pain composite measure questions should encourage more and better communication between hospital staff and patients about pain and should not affect patient treatment. Therefore, we believe there is continued benefit to include and publicly report the HCAHPS Survey Pain Management questions in this and other CMS quality programs that use the HCAHPS Survey.

Finally, we acknowledge the commenter's recommendation that we eliminate pain as a "fifth vital sign" from professional standards, and we note that such requests should be referred to and addressed by relevant professional societies.

*Comment:* Many commenters supported the proposed refinement of the HCAHPS Survey measure pain management questions to focus more on communication about pain, but only if first endorsed by the NQF. The commenters stated that having the NQF endorse the revised questions would allow the measure to be publicly vetted by different stakeholders, including hospitals and patient advocates and address concerns about the reliability and validity of the proposed refined Communication About Pain composite measure before they are implemented. The commenters expressed concern that CMS intends to resubmit the measure to the MAP Hospital Workgroup and to NQF for endorsement when there is a call for measures by the Person and Family Centered Care Project, after the measure is proposed to have been implemented in Hospital IQR Program

already. In addition, one commenter believed the potential unintended consequences of the current pain management questions has resulted in CMS working too quickly to develop the proposed refined Communication About Pain composite measure, and cautioned that field testing including patients from 51 hospitals does not produce strong reliability and validity that are better than the current questions.

Many commenters requested CMS release findings from the field testing of these proposed refined Communication About Pain composite measure and move the measure forward through the NQF process prior to considering adoption into the Hospital IQR Program.

*Response:* We thank the commenters for their support. We continue to believe the HCAHPS Survey measure Pain Management questions, and the HCAHPS Survey as a whole, are valid and reliable measures of hospital quality that encourage hospitals to assess and improve the patient experience.<sup>111 112</sup> The HCAHPS Survey as a whole is already NQF-endorsed (NQF #0166). We anticipate the proposed refined Communication About Pain composite measure will receive NQF-endorsement when there is a call for measures by the Person and Family Centered Care Project. We intend to resubmit the measure to the MAP and submit the measure to the NQF for endorsement after the measure refinement has already been implemented in the Hospital IQR Program. However, we have had to weigh the potential, unintended public health concerns against the necessary time to complete these reviews. Out of an abundance of caution, in the face of a nationwide epidemic of opioid over-prescription, we believe implementing the proposed refined Communication About Pain composite measure as soon as feasible is necessary to address any perceived conflict between appropriate management of opioid use and patient satisfaction by relieving any potential pressure physicians may feel to overprescribe opioids. We believe that replacing the current pain management questions in the HCAHPS Survey with revised questions that focus on the adequacy and frequency of communication about pain will remove any perceived ambiguity or confusion about the intent of the pain items and

<sup>111</sup> "Do Hospitals Rank Differently on HCAHPS for Different Patient Subgroups?" M.N. Elliott, W.G. Lehrman, E. Goldstein, K. Hambarsoomian, M.K. Beckett and L.A. Giordano. Medical Care Research and Review, 67 (1): 56-73. 2010.

<sup>112</sup> National Quality Forum. NQF-Endorsed Measures for Person- and Family-Centered Care. Phase 1 Technical Report March 4, 2015. Pp. 26-40.

enhance communication about the particular needs individual patients have with respect to pain. We hope the refined pain management questions will shift focus from the method of pain management to patient-centered communication between provider and patient.

As discussed in our proposal above, whenever feasible, we adopt measures that are NQF-endorsed, but note sometimes there are important areas of clinical concern for which NQF-endorsed measures do not exist. Section 1886(b)(3)(B)(IX)(bb) of the Act provides that in the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by the entity with a contract under section 1890(a) of the Act, the Secretary may specify a measure that is not so endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary. (The NQF currently holds this contract.) We considered other existing measures which have been endorsed by the NQF and other consensus organizations, but we were unable to identify any NQF-endorsed (or other consensus organization endorsed) measures that were feasible and practical.

In addition, while we consider MAP recommendations and NQF endorsement status as part of our decision-making process for which measures to include in the Hospital IQR Program, we believe it is important to adopt the proposed refined Communication About Pain composite measure. In addition, in response to the MAP's request to receive an update on the status of measures that received a Refine and Resubmit recommendation, we intend to update the MAP about these Communication About Pain composite measure questions.

The refined Communication About Pain composite measure was informed by input and guidance on survey content and approach from a technical expert panel, focus groups and cognitive testing to explore patient experience and interpretation of survey items, and field testing of survey items to test item properties and psychometric performance and composite measures. We disagree that field testing including patients from 51 hospitals does not produce strong reliability and validity that are better than the current questions. As described in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20037), in early 2016, we empirically tested, as part of the field testing, the reliability and validity of the proposed refined Communication About Pain

composite measure in a large-scale experiment that involved patients from 51 hospitals across the nation. The 51 hospitals were carefully selected to be nationally representative, and the sample sizes of patients and hospitals exceeded requirements for assessing reliability and validity. The statistical reliability and validity of the new proposed items meet high psychometric standards and have undergone testing that meets the standards of the field. Our analyses suggest the proposed refined Communication About Pain composite measure has strong reliability (evidence that scores for hospitals are precisely measured) and validity (evidence that the measure does measure the intended construct of patient experience).<sup>113</sup> These properties of the individual questions used in the proposed refined Communication About Pain composite measure are as good as or better than the current Pain Management questions. The new questions are not subject to floor or ceiling effects (which would occur if almost all responses were in the lowest or highest response category), have excellent hospital-level reliability (here 0.88 or higher, where 0.70 or higher is the conventional standard) at recommended sample sizes, are not redundant with other current questions, are related in a predictable manner with the standard patient-mix characteristics, positively correlate with the two HCAHPS questions that assess overall patient experience (rating and recommendation) with the hospital, providing evidence of validity and do not vary systematically by survey mode, patient race/ethnicity, or hospital characteristics after adjusting for patient mix. They also have higher internal consistency as a composite measure (Cronbach's alpha = 0.81), with 0.70 or higher being the conventional threshold, providing further evidence of reliability.<sup>114</sup> Therefore, we disagree that the field testing does not produce strong reliability and validity. With respect to commenters' request that we release findings from the field testing of the proposed refined Communication About Pain questions, a summary of the results of the field testing of the proposed refined Communication About Pain composite measure, among others, became available in early July 2017 on our HCAHPS On-Line Web site. We refer readers to "Development of a New

<sup>113</sup> Judd, C. M., & McClelland, G.H. (1998). Measurement. In D.T. Gilbert, S.T. Fiske, & G. Lindzey (Eds.), *The handbook of social psychology* (4th ed., Vol. 1, pp. 180–232). New York: McGraw-Hill.

<sup>114</sup> Cronbach, L.J. (1984). *Essentials of psychological testing* (4th ed.). New York: Harper.

*Communication About Pain Composite Measure for the HCAHPS Survey,*" available at: <http://www.hcahpsonline.org/modeadjustment.aspx>.

As discussed in the CY 2017 OPPI/ASC final rule with comment period (81 FR 79855 through 79862), and in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20035), we followed our standard survey development processes, which included drafting alternative questions, cognitive interviews and group evaluation, field testing, statistical analysis, and soliciting stakeholder input. We believe the proposed refined Communication About Pain questions represent stakeholder consensus and have been specifically designed to reduce the probability of unintended consequences and to maximize improved patient outcomes. We will monitor the proposed refined Communication About Pain composite measure for any possible unintended consequences.

*Comment:* A few commenters supported the proposed refinements to the HCAHPS pain management questions, but recommended suspending public reporting of pain management questions on the *Hospital Compare* Web site until the questions have been fully vetted by the NQF.

One commenter encouraged CMS to consider publicly reporting less than four quarters of data in the interim period in which less than four quarters of data are available so that this important measure can be brought to the public sooner.

*Response:* We believe continued public reporting of Pain Management performance rates provides the public with important quality data for use in health care decision-making and incentivizes quality improvement regarding pain management and communication. We further believe continued public reporting of the score for the composite Pain Management measure performance rates provides valuable information to patients and consumers and encourages hospitals to appropriately manage patients' pain and continue engaging in quality improvement efforts.<sup>115</sup> However, in order to be responsive to stakeholder concerns, we are finalizing a modification of our proposal, to delay public reporting of the revised Communication About Pain composite measure. Instead of publicly reporting

<sup>115</sup> L. Tefera, W.G. Lehrman, and P. Conway. "Measurement of the Patient Experience: Clarifying Facts, Myths, and Approaches." *Journal of the American Medical Association*. Published online, 3–10–16. <http://jama.jamanetwork.com/article.aspx?articleid=2503222>.

in October 2019 using data from the CY 2018 reporting period/FY 2020 payment determination, we will delay public reporting of the refined Communication About Pain composite measure on the *Hospital Compare* Web site until October of 2020, using data from the CY 2019 reporting period/FY 2021 payment determination. After this initial public reporting, public reporting will continue for subsequent years.

In the meantime, we will provide results on the refined Communication About Pain composite measure questions to hospitals in confidential preview reports upon the availability of four quarters of data based on CY 2018 data. We anticipate that the confidential preview reports will be disseminated in the summer of 2019. We note hospitals may have access to their raw HCAHPS data and to unofficial HCAHPS scores through their survey vendor prior to the submission of their HCAHPS data to CMS and prior to the dissemination of the Hospital Specific Confidential Preview Reports that contain official HCAHPS scores.

As stated above, we intend to resubmit the measure to the MAP Hospital Workgroup and to the NQF for endorsement when there is a call for measures by the Person and Family Centered Care Project and we anticipate the proposed refined Communication About Pain composite measure will receive MAP approval and NQF endorsement. Delaying public reporting of the proposed refined Communication About Pain composite measure on the *Hospital Compare* Web site until October of 2020 should provide sufficient time for NQF review prior to public display of this measure data. In addition, delaying public reporting of this measure until October of CY 2020 will give hospitals one year to review their performance data on the refined Communication About Pain composite measure questions prior to public reporting of their performance data on the *Hospital Compare* Web site.

In response to the commenter's suggestion that we consider publicly reporting less than four quarters of data in the interim period in which less than four quarters of data are available so this measure can be brought to the public sooner, while we agree the Pain Management questions convey important information about hospital quality, we believe the value of the proposed refined Communication About Pain composite measure would be enhanced by adhering to the established practice of collecting four quarters of data for public reporting. Doing so ensures that publicly reported HCAHPS measures are based on the same

discharge period and provides more time for hospitals to attain the minimum number of completed surveys required for public reporting.

*Comment:* Many commenters supported removal of the existing pain management questions from the HCAHPS Survey measure, but expressed concern with the wording of the refined Communication About Pain composite measure. The commenters believed the exact wording of the pain management questions is important because results from patient satisfaction surveys influence quality improvement initiatives since hospitals are partially reimbursed based on patient satisfaction scores. While commenters agreed it is important to remove ambiguities in the wording or intent of the questions and appreciated CMS' steps to appropriately test the measure for reliability and validity, some commenters expressed concern the proposed refined Communication About Pain composite measure may not assist with quality improvement activities to ensure that patients receive appropriate pain management. The commenters provided a variety of alternate formulations for the pain questions for CMS to consider. Several commenters provided specific suggested language with which to replace the three existing pain management questions. In addition to specific language changes, some commenters made more general recommendations with respect to the refinement of the Pain Management questions.

One commenter expressed concern with the use of the word "treat" in question HP3. The commenter believed the word "treat" implies complete pain relief should be achieved, which is not always possible. As such, the commenter suggested question HP3 be re-worded to replace the word "treat" with the words "manage or treat." The commenters asserted this wording revision would be a better way to encompass all methods of pain management, rather than just medication.

Another commenter challenged the terminology used in all three questions because the word "pain" has a negative connotation and suggested that asking a patient about their "comfort," instead of "pain" would be more appropriate.

Finally, one commenter suggested all three revised pain management questions be modified to explicitly include the type of clinical staff (that is, nurses, primary care giver, or physician) communicating with the patient at the time the pain is being assessed.

*Response:* We thank the commenters for their recommendations regarding

alternative refinements to the wording of the Pain Management questions in the HCAHPS Survey measure. We would like to reiterate that the HCAHPS Survey is a patient experience of care survey and not a patient satisfaction survey. The HCAHPS Survey asks recently discharged patients about aspects of their hospital experience that they are uniquely suited to address. The survey asks "how often" or whether patients experienced a critical aspect of hospital care, rather than whether they were "satisfied" with their care.<sup>116</sup> Furthermore, we are unaware of any empirical evidence demonstrating that failing to prescribe opioids lowers a hospital's HCAHPS Survey scores. However, we believe the potential confusion about the appropriate use and interpretation of the Pain Management questions, coupled with the public health concern about the opioid epidemic, warrants refinement to the existing Pain Management questions. As outlined above, we received multiple suggestions for alternate wording of the Pain Management questions. We appreciate the alternative survey question wording submitted by numerous commenters and will consider them for future use. In some instances, we have given consideration to similar concepts and formulations, but we note that for use in relatively short, national surveys of patient experience of care, items must be widely applicable, simple, clear, easily understood, and unambiguous.

As discussed in the CY 2017 OPPS/ASC final rule with comment period (81 FR 79855 through 79862), and in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20035), in developing the proposed refined Pain Management questions, we have followed our standard survey development processes, working with our contractors, which included drafting alternative questions, cognitive interviews and group evaluation, field testing, statistical analysis, empirical testing in a large-scale experiment, and soliciting stakeholder input. We conducted interviews with providers and patients as well as cognitive testing with patients.

We developed and submitted two measures related to the refinement of the pain management questions for consideration by the MAP and, subsequently, narrowed consideration to just one measure, "Communication about pain during the hospital stay," withdrawing the measure "Communication about pain after

<sup>116</sup> HCAHPS Fact Sheet available at: <http://www.hcahpsonline.org/Facts.aspx>.

discharge.”<sup>117</sup> The proposed refined Communication About Pain composite measure has proceeded through the pre-rulemaking process, including addition onto the “Measures Under Consideration” list and review by the MAP, as well as notice-and-comment rulemaking through this final rule. Furthermore, we intend to seek NQF endorsement for the proposed refined Pain Management questions. We believe the proposed refined pain management questions as formulated shift focus from the method of pain management to patient-centered communication between provider and patient.

Moreover, we cognitively tested with both English- and Spanish-speaking patients how the words “treat,” “manage,” and “reduce” pain were interpreted. After assessing the results, we decided we decided to use “treat” in the refined Communication About Pain composite measure.

While we appreciate the suggestion, we believe that use of the word “comfort” may lead to more misunderstanding than use of the word “pain” because the concept of “comfort” is even more subjective than the concept of the word “pain.” Finally, in response to the commenter’s suggestion that the Pain Management questions be modified to explicitly include the type of clinical staff communicating with the patient, doing so would entail adding more questions to the survey, which would result in an increase in the length and complexity of the survey, and thus, also increase the burden for both patients and hospitals, which we believe is inadvisable and unnecessary.

*Comment:* Several commenters supported the refinements to the HCAHPS Survey measure pain management questions, but lacked confidence that simply including communication questions regarding pain management would reflect the true perception the patients have of their experience relative to pain management. These commenters encouraged CMS to continue to explore other ways to ensure better measurement of patients’ experience with pain management, such as including additional questions about whether hospital staff talked about alternatives to medication for pain management and clearly communicated to the patients the addictive potential of opioid medications. The commenters also expressed concerns the questions related to pain management pertain only

to whether the caregiver discussed the patient’s pain but do not reflect the patient’s engagement in this discussion.

Several commenters recommended incorporating concepts of care quality for pain management, such as: (1) The degree to which hospital staff listened to patients and responded to their pain (including offering non-opioid or non-medication options); and (2) the degree to which patients felt the hospital staff helped them understand their options to manage their pain.

*Response:* We thank the commenters for their support. In the comments received, there was broad support for shifting the focus of the pain management questions in the HCAHPS Survey from assessment of the adequacy and effectiveness of pain control efforts among patients who needed medicine for pain, to assessment of the frequency of hospital staff’s efforts to talk about pain and its treatment among patients who experienced pain during their hospital stay. We continue to believe pain control is a critical part of routine patient care that hospitals should manage and is an important concern for patients, their families, and their caregivers.

With respect to how pain is captured and monitored, we believe that adequate pain management is an important goal for hospitals and a concern of patients and consumers. By focusing directly on communication about pain with the patient, we believe that the refined Communication About Pain composite measure will encourage and enhance hospital staff’s discussions with patients about patients’ particular circumstances while reducing the potential for misinterpretation that could lead hospital staff to using inappropriate treatment. During measure development, in the 2016 HCAHPS mode experiment, we tested a question that asked patients about various non-prescription pain treatments. However, the question did not meet statistical criteria for acceptability,<sup>118</sup> and could cause providers to infer that these treatments are appropriate for every patient. We will continue to evaluate this question for possible future inclusion as a question on the HCAHPS Survey.

In addition, regarding the comment raising concerns that the questions pertain only to whether the caregiver discussed the patient’s pain, but do not reflect the patient’s engagement in this discussion, we had tested different

words during measure development to determine which would give better responses. Through cognitive interviews with patients and interviews with providers, we have learned that “talking” with hospital staff about how much pain the patient had or how to treat pain indicated greater patient engagement than did “discussing” or “telling” patients.

Furthermore, although important, Pain Management is only one of nine aspects of patient experience explored by the HCAHPS Survey. Because parsimony and brevity are fundamental to the success of the survey, we believe there are limits on the number and specificity of the questions that can be devoted to any particular topic. Therefore, we had to balance brevity with utility in determining the ultimate version of the refined Communication About Pain composite measure questions. However, we will take into consideration commenters’ suggestions for the future and continue to investigate effective means of exploring patients’ pain management experience and ways to ensure better measurement of patients’ experiences with pain management.

*Comment:* One commenter believed these answers still would not provide much real, significant information about the patients’ experience or provide information about whether their pain was addressed. The commenter suggested formulating questions that focus on patient function and regular assessment and treatment of their overall status rather than solely on their pain. A few commenters suggested that the Communication About Pain composite measure reflect current best practice for both acute and chronic pain, which is the use of multi-modal therapy and poly-pharmacy. The commenters suggested that treating pain using different receptors and mechanisms not only allows for the reduction of opioid use and morbidity, but allows an opportunity to optimize the patient’s pain experience. One commenter recommended the HCAHPS Survey measure’s pain management questions should capture whether this multi-modal pain pathway process happened during a hospitalization.

*Response:* We note that some stakeholders have criticized the current Pain Management questions because they believed that asking patients who needed medicine for pain how often their pain was well controlled and how often hospital staff did everything they could to help with pain had the unintended consequence of creating pressure on physicians to over-prescribe opioid treatment for pain. In response to

<sup>117</sup> List of Measures Under Consideration for December 1, 2016.” Available at: [https://www.qualityforum.org/Projects/i-m/MAP/2016\\_Measures\\_Under\\_Consideration\\_List.aspx](https://www.qualityforum.org/Projects/i-m/MAP/2016_Measures_Under_Consideration_List.aspx).

<sup>118</sup> “Development of a New Communication About Pain Composite Measure for the HCAHPS Survey,” <http://www.hcahpsonline.org/modeadjustment.aspx>.

this criticism, in the face of a national epidemic of overuse of opioids, the refined Communication About Pain questions shift the focus from patient assessments of the adequacy and vigor of pain management efforts to the frequency of communication about pain and addressing the availability of treatments.

We agree that the concepts of care quality for pain management and use of multi-modal therapy and poly-pharmacy are important components in pain management for patients, as are differences in chronic and acute pain. In developing the new Communication About Pain measure, we explored these concepts in cognitive interviews and focus groups with patients. We note that the questions in the HCAHPS Survey were designed to be applicable to and easily understood by the wide spectrum of patients in American hospitals, and that its results are intended primarily for public reporting. As such, we are constrained to use questions in which the wording and intent are applicable and correctly understood by a wide spectrum of patients. However, we will consider use of multi-modal therapy and poly-pharmacy and other steps to address pain management, including additional questions about pain management in the HCAHPS Survey in the future.

*Comment:* Some commenters recommended further steps to address pain management including analysis of: (1) The complete care continuum to identify breakdowns in communication (such as insufficient medication reconciliation on admission) that lead to opioid misuse; (2) additional considerations (pre-admission pain, unclear guidance on pain management, failure of the provider to identify non-opioid approaches to pain management, etc.) that may affect the patient's pain management; and (3) enhancement of the Communication About Pain composite measure (MUC16–263) with additional questions related to pain.

*Response:* We acknowledge the commenters' recommendations that we analyze the complete care continuum to identify breakdowns in communication and additional considerations that may affect the patient's pain management, however, we note the HCAHPS Survey asks patients only about care experiences during a specific hospital stay. The HCAHPS Survey does not inquire about specific individuals, departments, or wards within the hospital. HCAHPS data submitted to us are patient de-identified. As such, it is not possible to link the patient or survey to anything that occurs pre-admission or post-discharge, or to clinical records,

thus we are prevented from following patients through the continuum of care. Furthermore, as stated above, although important, Pain Management is only one of nine aspects of patient experience explored by the HCAHPS Survey. Because parsimony and brevity are fundamental to the success of the survey, we believe there are limits on the number and specificity of items that can be devoted to any particular topic. As noted above, we had to balance brevity with utility in determining the ultimate version of pain management questions proposed.

*Comment:* Another commenter urged CMS to revisit how pain is captured and monitored because asking only about the presence of pain does not provide enough information to improve an individual's overall quality of life. For example, pain levels may never change, even when the function/ability of the patient improves. Therefore, the focus on pain should be on how the patient's pain limits their functioning and physical abilities.

A few commenters suggested the focus of the revised HCAHPS pain questions include a discussion of patient safety options, as well as the effectiveness of the provided pain treatment options, as opposed to solely focusing on pain treatment options and suggested that CMS cannot effectively evaluate the efficacy of treatment merely by including a question that asks whether or not hospital staff discussed pain treatment. One commenter supported the proposed refinements to the HCAHPS Survey measure Pain Management questions, but recommended CMS also consider the measurement of an overall analgesia strategy as part of an enhanced recovery pathway (ERP).<sup>119</sup> The commenter noted that while the need for patient reported experiences in the management and communication of pain will continue to be critical, the ERP analgesia approach through enhanced recovery after surgery (ERAS) is a more comprehensive and patient-centered approach to optimize patient pain relief.

*Response:* In response to the commenters' concern that the Communication About Pain composite measure does not effectively evaluate the efficacy of treatment, the HCAHPS Survey is not intended to evaluate the efficacy of treatment. The refined Communication About Pain composite

measure shifts the focus to communication with patients to promote more patient-centered care. As discussed earlier, in response to numerous public comments and out of an abundance of caution, we revised these pain management questions in the face of a nation-wide epidemic of opioid over-prescription. We believe that replacing the current Pain Management question in the HCAHPS Survey with revised questions that focus on the adequacy and frequency of communication about pain will remove any perceived ambiguity or confusion about the intent of the pain questions and enhance communication about the particular needs individual patients have with respect to pain. We hope the refined Communication About Pain questions will shift focus from the method of pain management to patient-centered communication between provider and patient.

We appreciate the commenter's suggestion that we consider the measurement of an overall analgesia strategy as part of an ERP, but the HCAHPS Survey was not intended or designed to ask patients about the efficacy or outcome of clinical care or treatment.

*Comment:* Some commenters supported the proposed refinements to the HCAHPS Survey measure, but expressed concern with frequency rating scale, observing that the response options do not seem to align realistically with the questions themselves. The commenters criticized the refined questions for being intangible and insufficient for the purpose of supporting beneficial initiatives tailored to promote pain management. Several commenters recommended changing from the "Never-Always" response scale to a "Yes/No" response option. One commenter expressed concerns about asking the frequency of the communications and not necessarily the quality or impact of the communication on the patient's perception of their pain control. The commenter urged CMS to shift from the physical experience of pain to focus more on communication about pain and ways to manage it, both pharmacological and non-pharmacological. Another commenter was concerned that the proposed refined Communication About Pain composite measure may inappropriately lead to scores that are not meaningful, specifically because the "Never-Always" response scale is unclear with respect to how patients or providers should assess the term "Always."

*Response:* We designed the refined Communication About Pain composite measure in conformance with CAHPS

<sup>119</sup> An "Enhanced Recovery Pathway" is a care pathway designed to achieve early recovery after surgical procedures. Definition ascertained from the American Association of Nurse Anesthetist, available at: <http://www.aana.com/resources2/professionalpractice/Pages/Enhanced-Recovery-After-Surgery.aspx>.

survey principles and the established format of the HCAHPS Survey, including asking patients about the frequency of communication rather than whether such communication had ever occurred. From its inception, HCAHPS has inquired about frequency of experiences and employed the “Never-Always” response options for most survey items. This scale and the associated structure of survey questions allows more granular responses than binary options such as “Yes-No,” and it is less susceptible to ceiling or floor effects, enhances commonality among survey questions, and maintains continuity over time. Testing of the HCAHPS Survey and other CAHPS surveys with patients and caregivers supports the understandability and utility of the “Never-Always” response scale.<sup>120</sup> Further, the development of the refined Communication About Pain composite measure was in response to stakeholder concerns that the existing survey items, which inquire about patients’ assessment of the efficacy of pain management, unintentionally created pressure on physicians to over-prescribe opioid medications. Therefore, we decided to shift away from the patient’s assessment of the efficacy of pain treatment and instead focus on whether providers communicated with patients about their pain.

*Comment:* One commenter supported the refinements to the HCAHPS Survey measure Pain Management questions, but recommended CMS also consider the measurement of an overall analgesia strategy as part of an ERP.<sup>121</sup> The commenter noted that while the need for patient reported experiences in the management and communication of pain will continue to be critical, the ERP analgesia approach through enhanced recovery after surgery (ERAS) is a more comprehensive and patient-centered approach to optimize patient pain relief.

*Response:* We appreciate the commenter’s suggestion that we consider the measurement of an overall analgesia strategy as part of an ERP (a pathway for a surgical specialty), but the HCAHPS Survey was not intended or designed to ask patients about the efficacy or outcome of clinical care or treatment.

<sup>120</sup> Development and Evaluation of the CAHPS Hospital Survey. Health Services Research. Special Issue. Volume 40, Number 6, Part II. December 2005.

<sup>121</sup> An “Enhanced Recovery Pathway” (ERP) is a care pathway designed to achieve early recovery after surgical procedures. Definition ascertained from the American Association of Nurse Anesthetist, available at: <http://www.aana.com/resources2/professionalpractice/Pages/Enhanced-Recovery-After-Surgery.aspx>.

*Comment:* Several commenters supported the refinements to the HCAHPS Survey measure, but expressed concern about potential unintended consequences associated with the proposed refined Communication About Pain composite measure, given the toll of the opioid epidemic on communities. One commenter commended CMS for previously removing the HCAHPS Survey questions related to pain management from the Hospital VBP Program because it eliminated any perceived expectation that pain management should always include the use of powerful prescription drugs such as opioids. The commenter recommended CMS focus on overall patient satisfaction, rather than the granular level of detail currently included in many of the HCAHPS questions, and encouraged CMS to leave this level of patient satisfaction data to providers to determine and measure. Another commenter believed the changes would result in doctors and hospitals denying patients their needed pain medications.

One commenter cautioned CMS that hospital payment incentives under the Hospital VBP Program should not be structured in such a manner to cause hospitals to change their opioid prescribing patterns in order to achieve higher scores on the HCAHPS pain management dimension.

Another commenter expressed concern the refined Pain Management questions may inappropriately lead to scores that are not meaningful. The commenter suggested additional testing and understanding of these measures is needed prior to implementation.

A few commenters urged CMS to conduct regular assessments to ensure no unintended or inappropriate consequences on legitimate patient access to needed medicines arise as a result of the changes. These commenters encouraged CMS to continue to evaluate the proposed refined Communication About Pain composite measure for impact on HCAHPS scoring and resulting prescribing habits, including collecting more data for the measure. In addition, commenters cautioned that the proposed refined Communication About Pain composite measure should be carefully monitored for other unexpected and unintended consequences that may arise, including altering patient expectations and negatively impacting the doctor-patient relationship.

Finally, several commenters urged CMS not to continue to use the existing pain questions if the proposed refined Communication About Pain composite

measure are not finalized, but rather remove the pain management questions from the HCAHPS Survey measure from quality programs because the existing pain management questions may pose unintended consequences.

*Response:* We thank the commenters for their support. As stated above, we are not aware of any scientific studies or empirical evidence that support an association between scores on the Pain Management questions and opioid prescribing practices. In addition, we do not believe that removing the pain questions from the HCAHPS Survey is appropriate because: (1) Many factors outside the control of our quality program requirements may contribute to the perception of a link between the Pain Management questions and opioid prescribing practices, (2) pain control is an appropriate part of routine patient care that hospitals should manage, and (3) pain control is an important concern for patients, their families, and their caregivers.<sup>122</sup> To confront the opioid epidemic in America, our agency and other divisions of HHS have launched a multi-dimensional effort.<sup>123</sup> Removing the Pain Management dimension from the HCAHPS component of the Hospital VBP Program and revising the Pain Management questions on the HCAHPS Survey are among those efforts. We believe refining the Pain Management questions in the HCAHPS Survey measure will: (1) Help remove any perceived ambiguity, and (2) shift focus from strictly considering the method of pain management to patient-centered communication between provider and patient.

With regard to the recommendation that we focus on overall patient satisfaction, rather than the granular detail featured in most HCAHPS questions, we do not agree. We always have believed the survey should cover a spectrum of patient experience, rather than focus on patient satisfaction. The HCAHPS Survey was designed to ask about specific aspects of patient experience of care (not patient satisfaction) that are important to patients and consumers and actionable by hospitals. For that reason, the survey delves into nine specific and actionable aspects of the hospitals experience,

<sup>122</sup> L. Tefera, W.G. Lehrman, and P. Conway. “Measurement of the Patient Experience: Clarifying Facts, Myths, and Approaches.” *Journal of the American Medical Association*. Published online, 3–10–16. <http://jama.jamanetwork.com/article.aspx?articleid=2503222>.

<sup>123</sup> HHS’ Opioid Initiative, available at: <https://www.hhs.gov/sites/default/files/Factsheet-opioids-061516.pdf>, focuses on improving opioid prescribing practices, expanding access to medication-assisted treatment, and increasing the use of naloxone to reverse opioid overdoses.

including pain management. We note that the survey does contain two questions about the overall experience: (1) The patient's overall rating of the hospital; and (2) whether the patient would recommend the hospital. We continue to believe that it is valuable for providers to understand patient experience of care (not satisfaction with care) in actionable areas that are important to patients. We note that providers are not prevented from gathering additional information from patients for their own purposes.

We do not believe the refined Communication About Pain composite measure will lead to scores that are not meaningful because we believe, as noted earlier, that large-scale testing of the new Communication About Pain measure questions has demonstrated that they are valid and reliable. We have thoroughly tested and evaluated the proposed refined Communication About Pain composite measure. We refer readers to a summary of this analysis which can be found on the HCAHPS On-Line Web site: "Development of a New *Communication About Pain* Composite Measure for the HCAHPS Survey," at <http://www.hcahpsonline.org/modeadjustment.aspx>. To briefly summarize the findings of that analysis, as detailed earlier, a two-item version of Communication About Pain composite measure based on how often staff talked about pain and how often staff discussed how to treat pain, preceded by a screener item asking whether the patient had any pain during the hospital stay, has strong psychometric properties. The properties of the individual items used in the proposed refined Communication About Pain composite measure themselves are as good as or better than the two Pain Management questions currently on the HCAHPS Survey. The refined Communication About Pain questions in which a preponderance of responses fall into the highest or lowest response category are not subject to floor or ceiling effects, have good (>0.80) or excellent (>0.90) hospital-level reliability at recommended sample sizes, are not redundant with the current items, are related in a predictable manner with the standard patient-mix characteristics, are predictive of the global Hospital Rating question on the HCAHPS Survey, question number 21, and do not vary systematically by survey mode after adjusting for patient mix. They also have high internal consistency as a

composite (Cronbach's alpha=0.81).<sup>124</sup> We reiterate that the HCAHPS Survey is a valid and reliable instrument for assessing patient experience of care at the hospital level, however, use of the survey to measure and compare individual practitioners is strongly discouraged.<sup>125</sup>

We acknowledge the commenters' concerns about unintended or inappropriate consequences on legitimate patient access to needed medicines, and we will actively monitor and analyze responses to the proposed refined Communication About Pain composite measure to understand performance, relationship to other survey measures, and possible unintended consequences.

With respect to the commenter who believed the changes would result in doctors and hospitals denying patients their needed pain medications, the refined Communication About Pain questions no longer reference any specific pain treatment or circumstance but rather focus on communication about pain to address the concern that the current items may have had an unintended consequence of encouraging opioid-based treatment of pain. We will monitor use of the refined Communication About Pain questions and any feedback we receive from stakeholders as they implement these questions.

With respect to the commenter who cautioned that hospital payment incentives under the Hospital VBP Program should not be structured in such a manner to cause hospitals to change their opioid prescribing patterns in order to achieve higher scores on the HCAHPS pain management dimension, we note that in the CY 2017 OPPI/ASC PPS final rule with comment period (81 FR 79862), we removed the Pain Management dimension from the Hospital VBP Program beginning with the FY 2018 program year. We are not intending to adopt the refined Communication About Pain questions as part of the HCAHPS pain management dimension in the Hospital VBP Program at this time. In addition,

<sup>124</sup> "A Special Contribution from the Centers for Medicare and Medicaid Services: Valuing Patient Experience While Addressing the Prescription Opioid Epidemic." L. Tefera, W.G. Lehrman, E.G. Goldstein and S. Agrawal. *Annals of Emergency Medicine*. 2016. Published online, 7–19–16. [http://www.annemergmed.com/article/S0196-0644\(16\)30367-5/fulltext](http://www.annemergmed.com/article/S0196-0644(16)30367-5/fulltext).

<sup>125</sup> "Measurement of the Patient Experience: Clarifying Facts, Myths, and Approaches." L. Tefera, W.G. Lehrman and P. Conway. *Journal of the American Medical Association*. 2016. 315: 2167–2168. Published online, 3–10–16. <http://jama.jamanetwork.com/article.aspx?articleid=2503222>.

we note that, as required under section 1890A of the Act, measures must be reviewed by a multi-stakeholder group (currently the MAP, convened by the NQF) before they can be proposed for adoption by a program.

*Comment:* Several commenters supported the refinements to the HCAHPS Survey measure pain management questions, but expressed concerns about the timing of implementation of the proposed refined Communication About Pain composite measure.

One commenter generally requested CMS allow pharmacists, physicians, and other members of the healthcare team sufficient time and opportunity to provide meaningful input and recommendations prior to finalizing and implementing the refinements.

Another commenter suggested transition to the revised wording begin with January 1, 2018 discharges, as proposed, would be feasible and would provide enough time for hospitals to properly prepare.

*Response:* We thank the commenters for their support. As discussed in the CY 2017 OPPI/ASC final rule with comment period (81 FR 79855 through 79862), and the FY 2018 IPPI/LTCH PPS proposed rule (82 FR 20035), in developing the proposed refined Pain Management questions, we have followed our standard survey development processes, which include drafting alternative questions, cognitive interviews and group evaluations, field testing, statistical analysis, and soliciting stakeholder input. In addition, the proposed refined Pain Management questions have proceeded through the pre-rulemaking process, including adding the measures to the "Measures Under Consideration" list and having them reviewed by the MAP, as well as including them in notice-and-comment rulemaking. In addition, we intend to seek NQF endorsement for the proposed refined Pain Management questions. We believe that all of these processes have allowed pharmacists, physicians, other members of the healthcare team, and the public at large, time and opportunity to provide meaningful input and recommendations. With respect to the suggestion that we transition to the revised wording beginning with January 1, 2018 discharges, we note that our proposal stated that the revised questions would be implemented beginning with October of 2019 using CY 2018 data, which is what we are finalizing. In addition, implementation of the proposed refined Communication About Pain composite measure beginning with patients discharged January 1, 2018 will produce a full

calendar year of data, which will provide prompt feedback to hospitals on their performance on this measure via their confidential Preview Reports. We will make information about the Pain Management questions available to HCAHPS Survey vendors and hospitals through HCAHPS training and information posted on the HCAHPS On-Line Web site, [www.HCAHPSonline.org](http://www.HCAHPSonline.org).

*Comment:* A few commenters did not support the refinements to the HCAHPS Survey Pain Management questions because there is no peer-reviewed evidence to suggest a link between opioid prescribing and the current pain management questions in this survey, nor do the existing questions even specify opioids as the treatment of choice for pain. The commenters disagreed with CMS' assessment that the HCAHPS pain management questions influence clinical decision-making in a manner that creates pressure on hospital staff to prescribe more opioids in order to achieve higher scores. The commenters suggested that rather than recreating new medication-oriented pain questions to incorporate back into HCAHPS at some future date, CMS should develop questions in collaboration with pain and palliative medicine specialists to measure a hospital's overall pain management strategies.

*Response:* We agree with the commenters' assertions that neither is there any peer-reviewed evidence to suggest a link between opioid prescribing and the existing HCAHPS questions regarding pain, nor the existing questions even specify opioids as the treatment of choice for pain. As we stated above, we are not aware of any scientific studies that support an association between scores on the Pain Management questions and opioid prescribing practices. Furthermore, we are unaware of any empirical evidence demonstrating that failing to prescribe opioids lowers a hospital's HCAHPS Survey scores. However, we believe the potential confusion about the appropriate use of the Pain Management questions, coupled with the public health concern about the opioid epidemic, warrants refinement of the Pain Management questions. We will consider the commenter's suggestion to develop questions that assess a hospital's overall pain management strategies in future rulemaking.

The current Pain Management questions in the HCAHPS Survey apply to patients who needed medicine for pain; whereas, the proposed refined Communication About Pain composite measure will apply to patients who experienced any pain during the

hospital stay. As such, when implemented, more patients will have the opportunity to answer the proposed refined Communication About Pain composite measure, providing a broader perspective on pain management in hospitals. As stated in previous responses, out of an abundance of caution, in the face of a nation-wide epidemic of opioid over-prescription, we have chosen to focus the proposed refined Communication About Pain composite measure on communication between hospital staff and patients about patients' pain. We believe this will emphasize the importance of communication about pain and its treatment while avoiding any potential inference that medication is the best or only way to treat pain.

The Communication About Pain measure questions were developed in collaboration with pain and palliative medicine specialists; we refer readers to our response earlier in this section that details the testing we undertook.

*Comment:* Some commenters noted treating pain should be the objective of physicians and should be managed exclusively within the physician's scope of practice. However, another commenter stated that patient experience and satisfaction should not be used for accountability purposes because these are often not directly under the control of the physician.

*Response:* We note that the HCAHPS Survey assesses patient experience of care at the hospital level, not the physician level. We strongly advise hospitals against using the HCAHPS Survey to measure, assess, and/or compare individual hospital staff.<sup>126</sup>

*Comment:* One commenter noted patients' experience of pain is subjective and uniform guidelines dictating pain management could contribute to patients suffering as a result. Another commenter stated that patient experience and satisfaction should not be used for accountability purposes as these are: (1) Often subjective in nature; and (2) not necessarily true indicators of quality of overall care.

*Response:* We believe the HCAHPS Survey measure is an appropriate mechanism for hospital accountability because patient experience of care is a valid and vital measure of provider quality across the healthcare spectrum and is an essential element of public reporting of provider quality and, where appropriate, a basic component of pay-

for-performance programs. Carefully constructed and thoroughly tested surveys that attain high levels of reliability and validity, such as the CAHPS family of surveys,<sup>127</sup> when implemented in a standardized manner by trained survey vendors and hospitals subject to constant oversight, such as HCAHPS, produce information that allows fair comparisons of providers. Thus, we do not agree that pain/patient experience and satisfaction is subjective. Not only do surveys such as HCAHPS produce information about the patient's perspective that is beneficial in its own right, but a growing body of empirical research finds that hospitals that perform well on the HCAHPS Survey also perform well on indicators of clinical process, outcomes, readmissions, and mortality.<sup>128</sup>

We also refer readers to our response above in which we detail the testing these questions underwent. We also disagree that the HCAHPS Survey dictates pain management or contributes to patient suffering. We continue to believe many factors outside the control of our quality program requirements may contribute to the perception of a link between the Pain Management questions and opioid prescribing practices, such as misuse of the survey, use of the survey with patients other than hospital inpatients (such as, emergency room patients, outpatients, or physician office patients), disaggregation of surveys results to assess the performance of individual hospital staff, and/or failure to recognize the HCAHPS Survey excludes certain populations from the sampling frame.

*Comment:* Several commenters did not support the refinements to the HCAHPS Pain Management questions and recommended that the pain management questions in the HCAHPS Survey measure remain unchanged. These commenters did not believe changing the questions will address the real issue—whether or not a patient's pain was controlled. This is because the questions do not rate care based on how pain was managed and the questions do not hold hospitals accountable for failing to manage patients' pain.

<sup>128</sup> P. Chatterjee, T.C. Tsai and A.K. Jha. Delivering Value by Focusing on Patient Experience. *American Journal of Managed Care*. Published Online: October 09, 2015. <http://www.ajmc.com/journals/issue/2015/2015-vol21-n10/delivering-value-by-focusing-on-patient-experience>.

<sup>126</sup> L. Tefera, W.G. Lehrman, and P. Conway. "Measurement of the Patient Experience: Clarifying Facts, Myths, and Approaches." *Journal of the American Medical Association*. Published online, 3–10–16. <http://jama.jamanetwork.com/article.aspx?articleid=2503222>.

One commenter generally referenced studies demonstrating patients get healthier faster and are less prone to secondary illness if their pain is sufficiently treated, and suggested that it is counter-intuitive that the proposed refined Communication About Pain composite measure does not assess any action taken to reduce pain. The commenter encouraged CMS to keep the existing pain questions, or modify the proposed refined Communication About Pain composite measure to focus on efforts or actions taken to reduce pain. In addition, several commenters noted discussions about pain are an inadequate substitute for effective pain treatment, arguing that attempting to reduce addiction is not a valid reason for causing patients to endure physical and psychological pain.

*Response:* As stated above, we believe pain management is an important component of the quality of care provided at a hospital, and we believe the HCAHPS Survey measure provides patients with critical information for use in selecting a hospital setting for their care, ensures hospitals continue to appropriately manage patients' pain, and encourages hospitals to engage in quality improvement efforts addressing pain management and communication about pain. We believe that replacing the current Pain Management questions in the HCAHPS Survey, which are addressed to patients who needed medicine for pain, with items addressed to patients who had any pain during their hospital stay and that are focused on the adequacy and frequency of communication about pain, will remove any ambiguity about the intent of the pain items and enhance communication about the particular needs individual patients have with respect to pain.

We disagree the current Pain Management questions should be retained because we believe refining the Pain Management questions will address any potential confusion about appropriate pain management. Moreover, we believe the proposed refined pain management questions will shift focus from the method of pain management to patient-centered communication between provider and patient.

As noted in the CY 2017 OPPS/ASC final rule with comment period (81 FR 79855 through 79862), some stakeholders believe that the current Pain Management items' focus on the vigor and efficaciousness of pain control efforts creates pressure on physicians to over-treat pain, therefore, the proposed refined Communication About Pain composite measure does not delve into these topics. The shift in focus away

from patients' assessment of treatment and outcomes and toward patient communication brings the Pain Management questions into closer alignment with the other survey items. We believe that placing greater emphasis on communication with patients about pain should encourage appropriate pain management. We reiterate the HCAHPS Survey is designed to produce valid measures of hospital-level performance, not that of individual physicians or nurses.

*Comment:* A few commenters urged CMS to move away from medication-based pain questions entirely.

*Response:* We continue to believe pain control is an appropriate part of routine patient care that hospitals should manage and is an important concern for patients, their families, and patient caregivers. We believe the proposed refined Communication About Pain questions appropriately focus more clearly on patient-focused care than on the method of pain management.

*Comment:* Many commenters did not support the refinements to the HCAHPS Survey measure pain management questions because they stated the proposed revised questions do not assure and reflect quality pain management, fail to objectively address the existence of pain, and remain ambiguous and open-ended. Several commenters recommended CMS restart the process of developing new pain management questions with additional testing and research prior to implementation of these proposed questions.

One commenter advised CMS to test a variety of questions and answer options to see which questions provide the most accurate data without negatively affecting patient care. Specifically, the commenter suggested CMS work with stakeholders to reach consensus on the intent of the pain measures to ensure there are no unintended consequences, the measures are understood by patients, and the measures lead to improved patient outcomes.

One commenter expressed concern that neither the existing nor the proposed refined pain management questions adequately reflect either shared decision making or adequate pain management. The commenter urged CMS to engage the patient and caregiver community in evaluating and refining the questions related to pain management.

Another commenter believed the proposed refined questions fail to promise resolution of all pain or suggest that pain treatment should always include any one particular mode of

therapy. The commenter urged CMS to lead the way in incentivizing evidence based multi-modal pain care through development of alternative methods for assessing pain management in quality reporting programs. Conversely, another commenter noted that "no pain" is not always a reasonable goal and decreasing pain should be the expectation for the patient.

*Response:* We disagree that the revised questions do not assure and reflect quality pain management, fail to objectively address the existence of pain, and remain ambiguous and open-ended, and that we should restart the process of developing new pain management questions with additional testing and research prior to implementation. We believe the refined Communication About Pain questions have already undergone rigorous development and testing, and we refer readers to our response earlier in this section that details the testing we undertook.

We thank the commenters for their suggestion that we lead the way in incentivizing evidence based multi-modal pain care through development of alternative methods for assessing pain management in quality reporting programs, but we believe that while potentially valuable, these activities are beyond the scope of the HCAHPS Survey. We reiterate that the primary purpose of the HCAHPS Survey is to collect and report patient experience of care in hospitals, not to collect clinical information, promote particular therapies, report patient outcomes or create standards of care. During this communication between patients and providers, reasonable pain goals should be addressed. Although "no pain" is not always an achievable outcome, the intent of the measure is to establish this frequent communication to achieve reasonable, mutually agreed upon pain goals. We will consider additional methods for assessing pain management in quality reporting programs and for incentivizing evidence-based multi-modal pain care in the Hospital IQR Program in the future.

*Comment:* One commenter recommended CMS consider proxy reporting as a subsequent change to the HCAHPS Survey measure. The commenter noted that by allowing proxy reporting, CMS would have more complete information on the experience of care for all patients, rather than just those who are healthy enough to complete the survey.

*Response:* Although we have never permitted proxy respondents, meaning permitting any person other than the patient who experienced the hospital

stay to respond to the HCAHPS Survey on behalf of the patient, we recently collected and are in the process of analyzing test data, in which proxies were permitted. These analyses will provide information about whether to proceed with potential future changes to the survey. Pending results of these analyses, we may consider allowing proxy reporting in the future.

*Comment:* One commenter urged CMS to carefully consider whether measures in general add value and improve overall patient care before including them in payment or public reporting programs.

*Response:* We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53510 through 53512) for a discussion of the considerations we use to expand and update quality measures under the Hospital IQR Program. With regard to the proposed refined Communication About Pain composite measure, and the HCAHPS Survey in general, we believe these improve overall patient care and add value to public reporting programs. Pain management is an important component of the quality of care provided at a hospital, and we believe public reporting of hospital rates on the HCAHPS Survey Pain Management questions provides patients with critical information for use in selecting a hospital setting for their care, ensures hospitals continue to appropriately manage patients' pain, and encourages hospitals to engage in quality improvement efforts addressing pain management and communication. We continue to believe pain control is a critical part of routine patient care that hospitals should manage and is an important concern for patients, their families, and their caregivers, and we continue to explore ways to ensure better measurement of patients' experiences with pain management.

*Comment:* One commenter recommended CMS distinguish between hospice care (which usually occurs in the last six months of a patient's life) and palliative care (which could occur at any time during a patient's life and could re-occur at any time as well).

*Response:* The HCAHPS Survey only asks about patient experience of care during a hospital stay. In addition, patients who are discharged to hospice care are not eligible to receive the HCAHPS Survey. We have implemented a separate survey for patient experience of care in hospices.

After consideration of the public comments we received we are finalizing our proposed refinements to the HCAHPS Survey measure pain management questions as proposed, with a modification regarding public

display. Instead of publicly reporting results beginning with October of 2019 using CY 2018 data as proposed, we are delaying public reporting, such that hospital performance data on the refined Communication About Pain composite measure questions will not be publicly reported on the *Hospital Compare* Web site until October of CY 2020, using CY 2019 data. We will provide performance results, based on CY 2018 data on the refined Communication About Pain composite measure questions to hospitals in confidential preview reports, upon the availability of four quarters of data. We anticipate that these confidential preview reports would be available as early as July 2019.

b. Refinement of the Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) Following Acute Ischemic Stroke Hospitalization Measure for the FY 2023 Payment Determination and Subsequent Years

(1) Background

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20039 through 20043), for the FY 2023 payment determination and subsequent years, we proposed a refinement of the CMS Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) following Acute Ischemic Stroke Hospitalization Measure (hereafter referred to as the Stroke 30-Day Mortality Rate measure) by changing the measure's risk adjustment to include stroke severity (Stroke 30-Day Mortality Rate with the refined risk adjustment) obtained from International Classification of Disease, Tenth Edition Clinical Modifier (ICD-10-CM) codes in the administrative claims. The current Stroke 30-Day Mortality Rate measure was finalized in the Hospital IQR Program in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50798). The previously adopted measure includes 42 risk variables, but does not include an assessment of stroke severity because, previously, it has not been available in claims data and was not routinely performed by all providers. For more details on the measure as currently adopted and implemented, we refer readers to its measure methodology report and measure risk-adjustment statistical model in the AMI, HF, PN, COPD, and Stroke Mortality Update zip file on our Web site at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57161), we considered

potential inclusion of the National Institutes of Health (NIH) Stroke Scale for the Hospital 30-Day Mortality Following Acute Ischemic Stroke Hospitalization measure beginning as early as the FY 2022 payment determination. Commenters generally supported the inclusion of the NIH Stroke Scale score in the Stroke 30-Day Mortality Rate measure for future inclusion in the Hospital IQR Program. We refer readers to FY 2017 IPPS/LTCH PPS final rule (81 FR 57161 through 57163) for a complete discussion of the considered potential measure, public comments, and our responses.

Initial assessment of stroke severity, such as the NIH Stroke Scale score, is one of the strongest predictors of mortality in ischemic stroke patients,<sup>129 130 131</sup> and is part of the national guidelines on stroke care.<sup>132</sup>

This measure refinement was developed in collaboration with the American Heart Association (AHA) and American Stroke Association (ASA). We are seeking to update the current measure to include an assessment of stroke severity, because it has become feasible to do so due to both the increased use of the NIH Stroke Scale related to the AHA/ASA guidelines that recommend administering the NIH Stroke Scale on all stroke patients, as well as due to the recent ability to obtain the scores through claims data by incorporation into ICD-10. The proposed refinement would create a more parsimonious risk model by reducing the total number of risk adjustment variables from 42 to 20 and includes the NIH Stroke Scale<sup>133</sup> in the risk-adjustment model as a measure of stroke severity. These refinements result in a modestly higher c-statistic,<sup>134</sup> a measure of the ability to discriminate between patients at low and high risk of mortality following ischemic stroke,

<sup>129</sup> Fonarow GC, Saver JL, Smith EE, et al. Relationship of national institutes of health stroke scale to 30-day mortality in medicare beneficiaries with acute ischemic stroke. *J Am Heart Assoc.* Feb 2012;1(1):42–50.

<sup>130</sup> Nedelchev K, Renz N, Karameshev A, et al. Predictors of early mortality after acute ischemic stroke. *Swiss Medical Weekly.* 2010;140(17–18):254–259.

<sup>131</sup> Smith EE, Shobha N, Dai D, et al. Risk score for in-hospital ischemic stroke mortality derived and validated within the Get With The Guidelines-Stroke Program. *Circulation.* Oct 12 2010;122(15):149615041496–1504.

<sup>132</sup> Jauch EC, Saver JL, Adams HP, Jr., et al. Guidelines for the early management of patients with acute ischemic stroke: A guideline for healthcare professionals from the American Heart Association/American Stroke Association. *Stroke.* Mar 2013;44(3):870–947.

<sup>133</sup> NIH Stroke Scale. Available at: <http://www.nihstrokescale.org/>.

<sup>134</sup> C-Statistic Definition available at: <http://www.statisticshowto.com/c-statistic/>.

compared with the risk-adjustment model in the current Stroke 30-Day Mortality Rate, which means the updated measure model differentiates the risk of mortality among patients better than the current model.

Mortality following stroke is an important adverse outcome which can be measured reliably and objectively and is influenced by both the severity of the stroke as well as the quality of care provided to patients during their initial hospitalization; therefore, mortality is an appropriate measure of quality of care following stroke hospitalization.<sup>135 136</sup>

Specifically, post-stroke mortality rates have been shown to be influenced by critical aspects of care such as response to complications, speediness of delivery of care, organization of care, and appropriate imaging.<sup>137 138 139 140</sup>

We proposed a refinement to the Stroke 30-Day Mortality Rate for several reasons. First, the proposed, refined measure would allow for more rigorous risk adjustment by incorporating the NIH Stroke Scale, discussed in more detail below, as an assessment of stroke severity.<sup>141</sup> Second, the inclusion of the NIH Stroke Scale is aligned with and supportive of clinical guidelines, as use of the NIH Stroke Scale to assess stroke severity when patients first present with acute ischemic stroke is Class I recommended in the AHA and ASA guidelines.<sup>142</sup>

<sup>141</sup> NIH Stroke Scale. Available at: <http://www.nihstrokescale.org/>.

<sup>142</sup> Jauch EC, Saver JL, Adams HP, Jr., et al. Guidelines for the early management of patients

Third, in October 2016, the ICD–10–CM codes for the NIH Stroke Scale were implemented. As of that date, hospitals can record the NIH Stroke Scale as a representation of stroke severity in Medicare claims by using ICD–10–CM codes, and we can use this information as a variable in the risk-adjustment model for the refined Stroke 30-Day Mortality Rate measure and other claims-based measures with minimal data collection burden for hospitals.<sup>143</sup>

Fourth, clinicians and stakeholders, including AHA, ASA, and other professional organizations, highlight the importance of including an assessment of stroke severity in risk-adjustment models of stroke mortality.<sup>144</sup> In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50798 through 50802), commenters emphasized that the medical literature and their own experience suggest that stroke severity is the dominant predictor of mortality in stroke patients; individuals and organizations expressed concern the measure might be misleading, limited, or inaccurate without adjustment for stroke severity, and four comments suggested risk adjusting using the NIH Stroke Scale or a similar index (78 FR 50800).

Members of the Technical Expert Panel convened by the measure developer also suggested risk-adjusting for stroke severity. In addition, during the 2012 Neurology Endorsement Maintenance Consensus Development Project, the NQF Neurology Steering Committee specifically identified the lack of the NIH Stroke Scale score in the risk-adjustment model as a concern (78 FR 50800). Therefore, the refined Stroke 30-Day Mortality Rate is responsive to public comments from a broad array of stakeholder groups, including clinical societies and clinical experts, and to feedback received from the Technical Expert Panel convened by the measure developer (81 FR 57162).

Fifth, in addition to a modestly higher c-statistic, which evaluates the measure's ability to differentiate between patients at varying risks of mortality following an acute ischemic stroke, the refined Stroke 30-Day Mortality Rate includes a more parsimonious risk model than the stroke

with acute ischemic stroke: A guideline for healthcare professionals from the American Heart Association/American Stroke Association. *Stroke*. Mar 2013;44(3):870–947.

<sup>143</sup> ICD–10–CM Official Guidelines for Coding and Reporting. Available at: [https://www.cdc.gov/nchs/data/icd/10cmguidelines\\_2017\\_final.pdf](https://www.cdc.gov/nchs/data/icd/10cmguidelines_2017_final.pdf).

<sup>144</sup> Jauch EC, Saver JL, Adams HP, Jr., et al. Guidelines for the early management of patients with acute ischemic stroke: A guideline for healthcare professionals from the American Heart Association/American Stroke Association. *Stroke*. Mar 2013;44(3):870–947.

mortality measure as previously adopted and specified, with a total of 20 risk adjustment variables including the NIH Stroke Scale, compared to the current use of 42 risk adjustment variables.

In compliance with section 1890A(a)(2) of the Act, the Stroke 30-Day Mortality Rate (MUC15–294) with the refined risk adjustment (using the NIH Stroke Scale) was included on a publicly available document entitled “List of Measures under Consideration for December 1, 2015” (available at: <http://www.qualityforum.org/ProjectMaterials.aspx?projectID=75367>. Select “2015 Measures Under Consideration List.”). The MAP reviewed and conditionally supported the Stroke 30-Day Mortality Rate (MUC15–294) with the refined risk adjustment pending NQF review and endorsement, and asked that we consider a phased approach in regards to implementation, to avoid multiple versions of the same measure.<sup>145</sup> The MAP also noted outcomes other than mortality may be more meaningful for stroke patients and to consider cognitive or functional outcomes such as impaired capacity. We considered the input and recommendations provided by the MAP and note the NIH Stroke Scale incorporates cognitive functions in assessing severity.

To avoid implementing multiple versions of the same measure, we intend for the Hospital IQR Program FY 2023 payment determination measure set either to include the 30-day stroke mortality measure as currently implemented or this modified version that includes the NIH stroke severity scale in the measures risk-adjustment model.

The Stroke 30-Day Mortality Rate with the refined risk adjustment was submitted to NQF for endorsement in the neurology project on January 15, 2016, but did not obtain endorsement. NQF endorsement was not granted primarily due to the inability to test the validity of NIH Stroke Scale data elements derived from Medicare claims prior to implementation of the new ICD–10–CM codes in October 2016.<sup>146</sup> The NQF Consensus Standards Advisory Committee (CSAC) supported the concern of the NQF committee regarding our inability to test the measure using ICD–10–CM codes since

<sup>145</sup> 2016 Spreadsheet of Final Recommendations to HHS & CMS Available at: <http://www.qualityforum.org/ProjectMaterials.aspx?projectID=75367>.

<sup>146</sup> The memo regarding the CSAC's decision is available at: <http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=83217>.

the codes were not implemented until October 2016. While we provided risk-standardized mortality rates using data from Medicare administrative claims and data from the Get With The Guidelines (GWTG)-Stroke Registry, the Committee noted we could not validate the National Institutes of Health Stroke Scale (NIH Stroke Scale) against ICD-10-CM codes at the time the measure was considered for endorsement. The CSAC also acknowledged the primary reason for upholding the Committee's decision was based on the lack of testing of the measure using ICD-10-CM codes. This measure went through the same rigorous development process as the other publicly reported outcomes measures and involved extensive input by stakeholders and clinical experts. It follows the same scientific approach to evaluate hospital performance as other Hospital IQR Program outcome measures.

When the NQF committee considered the scientific acceptability of the Stroke 30-Day Mortality Rate measure, 19 of 22 members voted the measure met the NQF's evidence criterion, 19 members voted the measure met the high or moderate standard for the Performance Gap, 18 members voted the measure met high or moderate standard for reliability, 19 members voted the measure met the high or moderate standard for feasibility, and 18 members voted the measure met the moderate standard for Use and Usability.<sup>147</sup> We tested and validated the measure using NIH Stroke Scale data derived from medical record review done by the GWTG-Stroke registry data supplied by AHA/ASA. However, the NQF committee ultimately determined the validity testing was not sufficient for endorsement.<sup>148</sup>

We believe the inclusion of the NIH Stroke Scale score in the measure's risk-adjustment model improves upon the Stroke 30-Day Mortality Rate measure which is currently publicly reported on *Hospital Compare* and has been implemented in the Hospital IQR Program since FY 2016 (78 FR 50802). This is supported by the improved risk-adjustment model performance. For example, the c-statistic, which is a measure of the ability to discriminate between patients at low and high risk of mortality following ischemic stroke,

associated with the new, modified risk-adjustment model was 0.81 in the measure development sample<sup>149</sup> and improved to a c-statistic of 0.75 in the most recent measurement period for the Stroke 30-Day Mortality Rate measure that is currently implemented in the Hospital IQR Program.<sup>150</sup>

The new refined Stroke 30-Day Mortality Rate measure also has increased face validity which is supported by the comments received from stakeholders. For example, we received comments that the more rigorous risk adjustment facilitated by the NIH Stroke Scale would help ensure the measure accurately risk adjusts for different hospital populations without unfairly penalizing high-performance providers, and the NIH Stroke Scale is well validated, highly reliable, widely used by providers caring for stroke patients, and a strong predictor of mortality and short- and long-term functional outcomes. However, we were not able to test the ICD-10 CM codes for NIH Stroke Scale score in claims during measure development because those codes were not available for hospitals to use in their claims until October 2016. Therefore, we proposed this measure now to inform hospitals they should begin to include the NIH stroke severity scale codes in the claims they submit for patients with a discharge diagnosis of ischemic stroke. Once hospitals have submitted these data, it will be possible for us to examine the completeness of these data in re-evaluation of the new refined Stroke 30-Day Mortality Rate measure before the proposed measure dry run and before the proposed implementation in the Hospital IQR Program. Once that testing is complete we will submit the retested measure to the NQF for endorsement prior to implementation.

Section 1886(b)(3)(B)(IX)(bb) of the Act provides that in the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by the entity with a contract under section 1890(a) of the Act, the Secretary may specify a measure that is not so endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus

organization identified by the Secretary. Although the proposed measure and the existing Stroke 30-Day mortality measure are not currently NQF-endorsed, we considered other available measures which have been endorsed or adopted by the NQF, and we were unable to identify any other NQF-endorsed measures that assess stroke mortality with a standard period of follow-up. We also are not aware of any other 30-day stroke mortality measures that have been endorsed or adopted by a consensus organization.

We proposed this measure now because we believe the modifications to the measure's risk-adjustment model represent a substantial improvement over the Stroke 30-Day Mortality Rate measure that is currently publicly reported and implemented in the Hospital IQR Program and which does not include an assessment of stroke severity in the risk-adjustment model. In addition, by announcing our intention to include the Refined 30-Day Stroke Mortality Rate measure in the Hospital IQR Program in advance of implementation for FY 2023 payment determination and subsequent years, and by describing the proposed additional testing, dry run, and our intent to re-submit the measure to NQF once the NIH Stroke Scale data become available in claims, we are providing information that hospitals should begin to plan and alter their clinical workflows and billing processes in order to capture the NIH Stroke Scale score and include it in Medicare claims. Further, this notice will allow hospitals to complete collecting NIH Stroke Scale data over the three-year time period needed for measure calculation and implementation prior to any payment adjustment. The measure, as refined, is described in more detail below.

## (2) Overview of Refined Measure

The measure cohort is aligned with the currently adopted Stroke 30-Day Mortality Rate measure. In addition, the data sources (Medicare fee-for-service (FFS) claims), three-year reporting period, inclusion and exclusion criteria, as well as the assessment of the outcome of mortality (assessed using Medicare enrollment data) would all align with the currently adopted measure (78 FR 50798). Only the measures' risk-adjustment models differ, as described in detail below. For the new refined Stroke 30-Day Mortality Rate measure, we proposed the first measurement period would include discharges between July 1, 2018 and June 30, 2021 for public reporting in FY 2022 and for the FY 2023 payment determination.

<sup>147</sup> The memo regarding the CSAC's decision is available at: <http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=83217>.

## (3) Risk Adjustment

The Stroke 30-Day Mortality Rate measure that is currently adopted in the Hospital IQR Program adjusts for differences in patients' level of risk for death in one hospital relative to patients receiving care in another hospital but not for stroke severity. For details about the risk-adjustment model for the currently adopted measure, we refer readers to the Technical Report (78 FR 50798).<sup>151</sup>

However, in developing the proposed, refined Stroke 30-Day Mortality Rate measure, we re-selected risk variables, resulting in a final model with 20 risk-adjustment variables, including the NIH Stroke Scale risk variable as an assessment of stroke severity. The NIH Stroke Scale is a 15-item neurologic examination stroke scale used to provide a quantitative measure of stroke-related neurologic deficit. The NIH Stroke Scale evaluates the effect of acute ischemic stroke on a patient's level of consciousness, language, neglect, visual-field loss, extra-ocular movement, motor strength, ataxia (the loss of full control of bodily movements), dysarthria (difficult or unclear articulation of speech), and sensory loss. The NIH Stroke Scale was designed to be a simple, valid, and reliable assessment tool that can be administered at the bedside consistently by neurologists, physicians, nurses, or therapists, and is Class I recommended in the AHA/ASA guidelines.<sup>152</sup> The NIH Stroke Scale is a publicly available standardized tool, the results of which should be assessed by a clinician when first examining a patient presenting to the hospital with a stroke and subsequently documented in the patient's medical record. Once this information has been documented by a clinician, it can then be recorded in the claim for that hospital admission using ICD-10-CM codes through the hospital's normal coding practices.

We sought to develop a risk-adjustment model that included the NIH Stroke Scale variable and other key variables which we believe are clinically relevant and demonstrate a strong statistical association with 30-day mortality. To select candidate variables, we considered those 42 risk-adjustment variables in the currently adopted measure, plus the NIH Stroke Scale as

candidate variables. We then performed a bootstrapping simulation method for variable selection. This bootstrapping simulation method is a means of creating multiple samples to determine which risk variables are most important to include in a model. We selected the best model using the logistic regression model with the stepwise selection method based on 1,000 bootstrapping samples for each copy of the multiple imputed (MI) data. Variable selection rate for all the variables selected into the best model was calculated for each copy of the MI data, and variables were included into the final model if the minimum variable selection rate among the 5 copies of MI was 90 percent or more. This method resulted in 20 risk-adjustment variables that were included more than 90 percent of the time for all the copies of the imputed data were retained in the final model, including the NIH Stroke Scale. For more details on the risk-adjustment variable selection process, we refer readers to the measure methodology report and measure risk-adjustment statistical model in the AMI, HF, PN, COPD, and Stroke Mortality Update zip file on our Web site at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

Refining the risk adjustment model of the Stroke 30-Day Mortality Rate created a modestly higher c-statistic with fewer risk variables, meaning the proposed, refined measure's risk-adjustment model better distinguishes among patients with a low risk and high risk of mortality following ischemic stroke compared with the Stroke 30-Day Mortality Rate measure that is currently implemented in the Hospital IQR Program. Including the NIH Stroke Scale in the risk-adjustment model allows the measure to more accurately account for patients' status upon arrival at the hospital, which is responsive to clinical guidelines and feedback from the medical community and other stakeholders, as discussed above.

In order to use the NIH Stroke Scale data in the proposed, refined Stroke 30-Day Mortality Rate measure, many hospitals that have not routinely captured these data on patients with ischemic stroke will need to implement new workflows to ensure that their clinicians measure and record stroke severity. In addition, hospital coders will need to include the appropriate ICD-10 code for the clinician's documented NIH Stroke Scale score in the Medicare claim. By proposing this measure, we are providing hospitals the information and advanced notice that they would be required to submit this

information in their Medicare claims for this proposed, refined Stroke 30-Day Mortality Rate measure.

## (4) Effect of ICD-10

New ICD-10 codes for the NIH Stroke Scale were implemented on October 1, 2016; these codes were included so that hospitals could characterize the severity of their patients' strokes using a rigorously validated and standardized approach and include that information in claims and for quality measurement purposes.<sup>153</sup> However, because there were previously no ICD-9 or ICD-10 CM codes for the NIH Stroke Scale scores, hospitals have not previously included this information on claims they submit to CMS. In order to have information on the severity of patients' ischemic stroke included in the calculation Stroke 30-Day Mortality Rate, some hospitals that do not currently capture or record the NIH Stroke Scale would have to create workflows and processes to do this. This additional work, however, is consistent with current clinical guidelines for the care of ischemic stroke patients, and are consistent with the standard of care. Implementation of the proposed, refined Stroke 30-Day Mortality Rate with the refined risk adjustment would require hospitals to document in the medical record the first NIH Stroke Scale on every eligible patient who is admitted for treatment of acute ischemic stroke and provide that information among the ICD-10-CM code recorded on the claim. The new ICD-10-CM code representing the NIH Stroke Scale will be included in the risk adjustment model for the Stroke 30-Day Mortality Rate measure.

Because many hospitals would have to create new clinical workflows to assess and document the NIH Stroke Scale in patients' medical records as well as include the appropriate ICD-10-CM code for the documented NIH Stroke Scale score in the claim they submit, we would provide hospitals with dry run results of this proposed, refined measure in their confidential hospital-specific feedback reports prior to implementation of the proposed, refined measure for the FY 2023 payment determination. For example, we anticipate using claims data, which would include ICD-10-CM codes for the NIH Stroke Scale, for discharges occurring between October 1, 2017 through June 30, 2020, to calculate measure results for the dry run

<sup>151</sup> Bernheim S WC, Want Y, et al. *Hospital 30-Day Mortality Following Acute Ischemic Stroke Hospitalization Measure Methodology Report*. 2010.

<sup>152</sup> Jauch EC, Saver JL, Adams HP, Jr., et al. Guidelines for the early management of patients with acute ischemic stroke: A guideline for healthcare professionals from the American Heart Association/American Stroke Association. *Stroke*. Mar 2013;44(3):870-947.

<sup>153</sup> ICD-10-CM Official Guidelines for Coding and Reporting. Available at: [https://www.cdc.gov/nchs/data/icd/10cmguidelines\\_2017\\_final.pdf](https://www.cdc.gov/nchs/data/icd/10cmguidelines_2017_final.pdf).

anticipated in CY 2021.<sup>154</sup> The data in the confidential hospital-specific feedback reports would not be publicly reported.

We invited public comment on our proposal to adopt a refinement of the Stroke 30-Day Mortality Rate in the Hospital IQR Program for the FY 2023 payment determination and subsequent years as discussed above.

*Comment:* Many commenters supported the proposed refinement to the Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate following Acute Ischemic Stroke Hospitalization (Stroke Mortality Measure) measure to include the NIH Stroke Scale as a measure of stroke severity beginning with the FY 2023 payment determination. One commenter believed the proposed refinements would provide an opportunity to better evaluate hospital performance and would not add additional reporting burden to providers. Another commenter believed the proposed refinements represent a significant improvement of the measure as it is currently reported because the more parsimonious and discriminating risk model would greatly enhance the accuracy of reporting and classifying the performance of hospitals.

*Response:* We thank the commenters for their support.

*Comment:* Some commenters acknowledged that while switching from ICD-9 to ICD-10 codes allowed for more robust coding, they were concerned about reliability and accuracy of ICD-10 coding, and comparability across sites. They requested CMS field test the measure using the new ICD-10 codes. Many commenters recommended that CMS fully test the refined measure using ICD-10 codes that included the NIH Stroke Scale and resubmit the measure for NQF-endorsement prior to implementation. Several commenters supported the proposed refinements to the Stroke Mortality measure, but asked that CMS not adopt this measure until it was endorsed by NQF.

*Response:* Regarding the commenters' concern about the reliability and accuracy of ICD-10 coding and the comparability across sites, the refined stroke measure which includes stroke severity was developed and tested exclusively with ICD-9-coded claims.

However, we note that we have completed extensive testing of the current stroke mortality measure specifications in ICD-10 coded claims and of measure performance in the 3-year measurement period, which includes a combination of ICD-9 and ICD-10 coded claims.<sup>155</sup> The measure cohort sizes and number of hospitals with publicly reported results are similar, and the national and hospital-level measure results as well as the performance of the risk-adjustment model are similar to the results observed when calculating the measure with only ICD-9 coded-claims in previous reporting years. Results of some of this testing are described in the publicly available 2017 Annual Updates and Specifications Report Hospital-Level 30-Day Risk-Standardized Mortality Measures.<sup>156</sup> In addition, consistent with the commenters' request, we do plan to further test the refined measure using ICD-10 codes. The ICD-10-CM codes for the NIH Stroke Scale were implemented in October 2016, so we were not able to test the ICD-10-CM codes for NIH Stroke Scale score during measure development. However, since the ICD-10-CM codes for the NIH Stroke Scale have been available since October 2016 for use in claims, it will be possible for us to examine these data under the refined Stroke 30-Day Mortality Rate measure before both the measure dry run and implementation in the Hospital IQR Program.

Similarly, because the ICD-10 code system was implemented in October 2015, there were insufficient claims coded with ICD-10 (and the NIH Stroke Scale) submitted by hospitals to provide any testing results to NQF during the endorsement process in 2016.

We will submit testing results in claims data coded using ICD-10 codes in future cycles of NQF endorsement, as discussed in our proposal above. We plan to re-submit this measure to NQF for endorsement once we have adequate NIH Stroke Scale data from hospitals, which we anticipate will be prior to the FY 2023 payment determination. In addition, we will continue to assess the measure, including risk adjustment and model performance, as part of annual re-evaluation as the three-year measurement period includes a greater

proportion of ICD-10 coded data over time. However, we did not want to delay finalization of the refined measure beginning with the FY 2023 payment determination because this provides hospitals with additional time to prepare for the implementation, which is generally perceived as an improvement in the measure by the stakeholder community.

Furthermore, as discussed above in our proposal, we note that section 1886(b)(3)(B)(IX)(bb) of the Act provides that in the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by the entity with a contract under section 1890(a) of the Act, the Secretary may specify a measure that is not so endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary. Although the proposed refined measure and the existing Stroke 30-Day mortality measure are not currently NQF-endorsed, we considered other available measures which have been endorsed or adopted by the NQF, and we were unable to identify any other NQF-endorsed measures that assess stroke mortality with a standard period of follow-up.

*Comment:* Some commenters believed delaying implementation would allow hospitals time needed to implement new workflows to ensure that clinicians measure and record stroke severity, as many hospitals have not routinely captured the NIH Stroke Scale data.

*Response:* We acknowledge hospitals need time prior to implementation of this measure since they have not previously included the NIH Stroke Scale information on claims they submit to CMS, and many hospitals will have to create new clinical workflows to assess and document the NIH Stroke Scale in patients' medical records as well as include the appropriate ICD-10-CM code in their administrative claims. In an effort to provide hospitals with more time to prepare for the use of ICD-10 stroke severity codes, in FY 2017 IPPS/LTCH PPS final rule (81 FR 57161), we included a detailed discussion of the refined Stroke 30-Day Mortality Rate measure, which included the NIH Stroke Scale as a measure of stroke severity, as a measure for future consideration. In addition, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20043), we proposed the refined measure for the FY 2023 payment determination and subsequent years, affording hospitals multiple years to prepare. We also discussed conducting a dry run prior to implementation, in

<sup>154</sup> We note that we have made a correction to the date provided here. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20043), a typographical error resulted in the date of June 1, 2020; however, we have corrected the date within the preamble of this final rule to reflect the correct time period that will be used to calculate measure results for the dry run.

<sup>155</sup> Testing results found in the "AMI, HF, PN, COPD and Stroke Mortality Update" zip file, available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

<sup>156</sup> 2017 Condition-Specific Mortality Measures Updates and Specifications Report. Available at: [www.qualitynet.org](http://www.qualitynet.org) > Hospitals—Inpatient > Claims-Based Measures > Mortality Measures > Measure Methodology.

which hospitals would receive dry run results in their confidential hospital-specific feedback reports a year prior to the measure being implemented and publicly reported in the Hospital IQR Program. For the dry run anticipated in CY 2021, we intend to calculate the measure by using discharges occurring between October 1, 2017 through June 30, 2020.

*Comment:* One commenter requested clarification on which NIH Stroke Scale assessment to use, since clinical personnel can record stroke scale scores at regular intervals on each patient should the NIH Stroke Scale be implemented.

*Response:* The intent of the risk adjustment for stroke severity is to account for patients' clinical status at the time they are admitted to the hospital. Therefore, the refined Stroke 30-Day Mortality Rate measure would utilize only the initial NIH Stroke Scale score, which is administered upon admission. We refer readers to the current clinical guidelines describing the qualifications and appropriate administration of the NIH Stroke Scale.

*Comment:* One commenter was concerned that since registry data was used as a proxy for EHR data, CMS should test whether the measure captures valid data.

*Response:* We would like to clarify that while this measure was developed using data from Medicare administrative claims and GWTC-Stroke Registry, the Stroke 30-Day Mortality Rate measure uses the NIH Stroke Scale obtained from ICD-10 codes, and not from electronically submitted EHR data. In addition, we intend to conduct at least one dry run prior to the measure being implemented in order to ensure that enough hospitals are submitting data on stroke severity to be used in measure risk adjustment given that the original measure testing was done using registry data as a surrogate source of NIH Stroke Scale.

*Comment:* One commenter encouraged CMS to recognize the value of the NIH Stroke Scale in future measures for the Hospital IQR Program, including measures that promote the use of the tool throughout the stages of care of a patient. Another commenter suggested if a measure of stroke mortality is proposed for any other CMS program, CMS require use of the NIH Stroke Scale in that measure. One commenter recommended CMS consider this refined stroke mortality measure for the Hospital VBP Program.

*Response:* We thank the commenters for their suggestions. We will take these suggestions for future measures and

other CMS programs into consideration in future rule-making.

*Comment:* Several commenters recommended that CMS consider moving up the proposed year of implementation for the refinement of the Stroke Mortality measure from the FY 2023 payment determination to the FY 2022 payment determination. The commenters believed that one year of preparation for hospitals to put the processes in place for documenting and coding for the NIH Stroke Scale is adequate. In addition, the commenters requested that CMS generate a parallel report that includes the NIH Stroke Scale for hospitals to track their progress on achieving completeness of documentation and coding beginning in FY 2018.

*Response:* We thank the commenters for their support, however, we want to allow hospitals sufficient time to adjust their clinical workflows to capture the NIH Stroke Scale and include it in their claims. We believe adopting the Stroke 30-Day Mortality Rate measure in the Hospital IQR Program beginning with the FY 2023 payment determination (using discharges occurring between July 1, 2018 through June 30, 2021) appropriately balances the need to implement this substantive improvement to the measure with allowing time for hospitals to prepare for the use of ICD-10 stroke severity codes if they are not already doing so.

With regards to a parallel report that includes the NIH Stroke Scale for hospitals to track their progress, we believe the confidential hospital-specific feedback reports will achieve this. The hospital-specific report (HSR) generally includes a hospital's results, summary results from other hospitals in the State and the nation, discharge-level data for all eligible discharges, and the prevalence of risk factors for a hospital's patients compared to State and national averages. In addition, we intend that the reports for the refined measure will include an enumeration of each hospital discharge with a principal diagnosis of ischemic stroke along with the NIH Stroke Scale code included in the Medicare claim sent to CMS, as well as each hospital discharge if no NIH Stroke Scale code is included. This will allow hospitals to explore processes and workflows involving capture and reporting of NIH Stroke Scale codes in their claims, and avoid having an additional, separate report run during the same time period specifically for the hospital's NIH Stroke Scale.

*Comment:* Several commenters requested the measure add risk adjustments for tPA (tissue plasminogen activator) administration or

thrombectomy, and for socio-demographic (SDS) factors.

*Response:* We thank the commenters for their input. The measure seeks to adjust for case mix differences among hospitals based on the clinical status of the patient at the time of the index admission. We do not generally adjust the measures for actions taken by the hospital, such as administration of tPA, as such factors may be related to the quality of care rather than patient factors.

In addition, we understand social risk factors such as income, education, race and ethnicity, employment, disability, community resources, and social support (certain factors of which are also sometimes referred to as socioeconomic status (SES) factors or socio-demographic status (SDS) factors) play a major role in overall health. As noted in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57124), the NQF has undertaken a 2-year trial period in which new measures, measures undergoing maintenance review, and measures endorsed with the condition that they enter the trial period can be assessed to determine whether risk adjustment for selected social risk factors is appropriate for these measures. This trial entailed temporarily allowing inclusion of social risk factors in the risk-adjustment approach for these measures. This measure was considered for endorsement during the trial period. The results of the analyses presented to the committee demonstrated that the SES variables that could be feasibly incorporated into this model only have a small, though statistically significant, relationship with the outcome in multivariable modeling and that adding them in the risk model did not change hospitals' mortality rates.<sup>157</sup> Although the measure was not recommended for endorsement, the exclusion of social risk factors from the risk-adjustment model was not among the concerns raised by the committee.<sup>158</sup> We also refer readers to section IX.A.1.d. of the preamble of this final rule where SDS is discussed in more detail.

*Comment:* One commenter noted this measure excludes patients under age 65, which impacts its generalizability to all stroke patients.

*Response:* The measure only includes admissions of Medicare FFS beneficiaries aged 65 years or older who were discharged from an inpatient stay

<sup>157</sup> <http://www.qualityforum.org/ProjectMaterials.aspx?projectID=80601>.

<sup>158</sup> *Ibid.*

at a short-term acute care hospital.<sup>159</sup> The measure does not include Medicare patients who are younger than 65 because these patients usually qualify for the program due to severe disability and, thus, are considered to be clinically distinct from Medicare patients 65 and over. Furthermore, this refined measure has not been tested on a population under 65. With respect to the generalizability of the measure to all stroke patients, we are unable to comment on the appropriateness of the

use of the measure in data other than the Medicare data for which it was developed.

After consideration of the public comments we received, we are finalizing our proposal to refine the Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate following Acute Ischemic Stroke Hospitalization (Stroke Mortality Measure) measure for the FY 2023 payment determination and subsequent years as proposed.

c. Summary of Previously Adopted and Finalized Hospital IQR Program Measures for the FY 2020 Payment Determination and Subsequent Years

The table below outlines the Hospital IQR Program measure set (including previously adopted measures and finalized refinements from this final rule) for the FY 2020 payment determination and subsequent years. The refined measures, as discussed above, are denoted with a superscript as defined in the legend below the table.

PREVIOUSLY ADOPTED HOSPITAL IQR PROGRAM MEASURES FOR THE FY 2020 PAYMENT DETERMINATION AND SUBSEQUENT YEARS

Short name	Measure name	NQF #
<b>Healthcare-Associated Infection Measures</b>		
CAUTI .....	National Healthcare Safety Network (NHSN) Catheter-associated Urinary Tract Infection (CAUTI) Outcome Measure.	0138
CDI .....	National Healthcare Safety Network (NHSN) Facility-wide Inpatient Hospital-onset <i>Clostridium difficile</i> Infection (CDI) Outcome Measure.	1717
CLABSI .....	National Healthcare Safety Network (NHSN) Central Line-Associated Bloodstream Infection (CLABSI) Outcome Measure.	0139
Colon and Abdominal Hysterectomy SSI.	American College of Surgeons—Centers for Disease Control and Prevention (ACS—CDC) Harmonized Procedure Specific Surgical Site Infection (SSI) Outcome Measure.	0753
HCP .....	Influenza Vaccination Coverage Among Healthcare Personnel .....	0431
MRSA Bacteremia .....	National Healthcare Safety Network (NHSN) Facility-wide Inpatient Hospital-onset Methicillin-resistant <i>Staphylococcus aureus</i> (MRSA) Bacteremia Outcome Measure.	1716
<b>Claims-Based Patient Safety Measures</b>		
Hip/knee complications .....	Hospital-Level Risk-Standardized Complication Rate (RSCR) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA).	1550
PSI 04 .....	Death Rate among Surgical Inpatients with Serious Treatable Complications .....	0351
PSI 90 .....	Patient Safety for Selected Indicators Composite Measure, Modified PSI 90 (Updated Title: Patient Safety and Adverse Events Composite).	0531
<b>Claims-Based Mortality Outcome Measures</b>		
MORT-30-AMI .....	Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) Following Acute Myocardial Infarction (AMI) Hospitalization.	0230
MORT-30-CABG .....	Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) Following Coronary Artery Bypass Graft (CABG) Surgery.	2558
MORT-30-COPD .....	Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) Following Chronic Obstructive Pulmonary Disease (COPD) Hospitalization.	1893
MORT-30-HF .....	Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) Following Heart Failure (HF) Hospitalization.	0229
MORT-30-PN .....	Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Pneumonia Hospitalization.	0468
MORT-30-STK .....	Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Acute Ischemic Stroke*.	N/A
<b>Claims-Based Coordination of Care Measures</b>		
READM-30-AMI .....	Hospital 30-Day All-Cause Risk-Standardized Readmission Rate (RSRR) Following Acute Myocardial Infarction (AMI) Hospitalization.	0505
READM-30-CABG .....	Hospital 30-Day, All-Cause, Unplanned, Risk-Standardized Readmission Rate (RSRR) Following Coronary Artery Bypass Graft (CABG) Surgery.	2515
READM-30-COPD .....	Hospital 30-Day, All-Cause, Risk-Standardized Readmission Rate (RSRR) Following Chronic Obstructive Pulmonary Disease (COPD) Hospitalization.	1891
READM-30-HF .....	Hospital 30-Day, All-Cause, Risk-Standardized Readmission Rate (RSRR) Following Heart Failure (HF) Hospitalization.	0330
READM-30-HWR .....	Hospital-Wide All-Cause Unplanned Readmission Measure (HWR) .....	1789
READM-30-PN .....	Hospital 30-Day, All-Cause, Risk-Standardized Readmission Rate (RSRR) Following Pneumonia Hospitalization.	0506
READM-30-STK .....	30-Day Risk-Standardized Readmission Rate Following Stroke Hospitalization .....	N/A

\* Measure refinement of the Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Acute Ischemic Stroke, for the FY 2023 payment determination and for subsequent years, as described in section IX.A.6.b. of the preamble of this final rule.

\*\* Measure listed twice, as both chart-abstracted and electronic clinical quality measure.

\*\*\* Measure refinement of the HCAHPS measure's Pain Management questions for the FY 2020 payment determination and for subsequent years, as described in section IX.A.6.a. of the preamble of this final rule.

(+) NQF endorsement has been removed.

7. Voluntary Hybrid Hospital-Wide Readmission Measure With Claims and Electronic Health Record Data (NQF #2879)

a. Background

In the FY 2016 IPPS/LTCH PPS final rule (80 FR 49698), we stated that we are considering the use of a set of core clinical data elements extracted from hospital EHRs for each hospitalized Medicare FFS beneficiary over the age of 65 years. The core clinical data elements are data which are routinely collected on hospitalized adults, extraction from hospital EHRs is feasible, and can be utilized as part of specific quality outcome measures. One way in which we envisioned using core clinical data elements in conjunction with other sources of data, such as administrative claims, is to calculate “hybrid” outcome measures, which are quality measures that utilize more than one source of data. For more detail about core clinical data elements, we refer readers to our discussion in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49698 through 49704). In addition, we note an important distinguishing factor about core clinical data elements and the hybrid measures: Hybrid measure results must be calculated by CMS to determine hospitals’ risk-adjusted rates relative to national rates used in public reporting. With a hybrid measure, hospitals can submit data extracted from the EHR, and we can perform the measure calculations. This was the approach that was finalized for the calculation of the Hybrid Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) Following Acute Myocardial Infarction (NQF #2473), which was incorporated into the Advancing Care Coordination Through Episode Payment Models as a voluntary measure for patients admitted for AMI in the AMI Model (82 FR 354 through 356).

In the FY 2016 IPPS/LTCH PPS final rule, we stated we developed two hybrid measures: (1) Hospital 30-Day Risk-Standardized Acute Myocardial Infarction (AMI) Mortality eMeasure (NQF #2473) (now called the Hybrid Hospital 30-Day All Cause Risk-Standardized Mortality Rate Following Acute Myocardial Infarction (AMI) (NQF #2473)); and (2) a hybrid hospital-wide 30-day readmission measure now called the Hybrid Hospital-Wide Readmission Measure with Claims and Electronic Health Record Data (NQF #2879). Although the Hybrid Hospital-Wide Readmission Measure with Claims and Electronic Health Record Data (NQF #2879) (hereinafter referred to as Hybrid HWR measure) was not originally

endorsed when the MAP considered the measure, the MAP encouraged further development (80 FR 49698),<sup>160</sup> and the measure has since been endorsed by the NQF.

In the FY 2016 IPPS/LTCH PPS final rule (80 FR 49702), commenters noted either outright or conditional support for the development of hybrid measures, and for the collection of additional administrative linkage variables to merge data from EHRs with claims. A few commenters noted collection of the core clinical data elements would not impose additional burden on hospitals (80 FR 49702). A few commenters recommended the hybrid measures should go through NQF review or be endorsed by NQF prior to inclusion in a quality reporting program, which we have done, as the Hybrid HWR measure was endorsed by NQF on December 9, 2016. Other commenters recommended that before we require the submission of the core clinical data elements, we should conduct further testing and analysis to ensure the accuracy and completeness of the data being submitted; specifically, one commenter suggested a testing period (80 FR 49703). We conducted further testing, which is further described below. We refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49702 through 49704) for a full discussion of all public comments and our responses related to core clinical data elements.

Since the FY 2016 IPPS/LTCH PPS final rule, in keeping with our goal to move toward greater use of data from EHRs for quality measurement, and in response to stakeholder feedback to include clinical data in outcome measures (80 FR 49702 through 49703), we have further developed the proposed voluntary Hybrid HWR measure. This measure would incorporate a combination of claims data and EHR data submitted by hospitals, and because of these combined data sources, it is referred to as a hybrid measure. The Hybrid HWR measure cohort and outcome are identical to those in the Hospital-Wide All-Cause Unplanned Readmission measure (NQF #1789), which was adopted into the Hospital IQR Program for the FY 2015 payment determination and subsequent years (77 FR 53521).

The Hybrid HWR measure was presented on the List of Measures under Consideration for December 1, 2014. The MAP encouraged further

development of the Hybrid HWR measure in December 2014.<sup>161</sup> The Hybrid HWR measure (NQF #2879) was endorsed by NQF on December 9, 2016. This measure aligns with the National Quality Strategy (NQS) priorities of making care safer by reducing harm caused in the delivery of care and promoting effective communication and coordination of care.

Measure development followed the same scientific approach and rigorous process as other Hospital IQR Program outcome measures. To align the core clinical data elements with other measures that utilize EHR data, we developed and tested a Measure Authoring Tool and identified value sets for extraction of the core clinical data elements. As stated in the FY 2016 IPPS/LTCH PPS final rule, the core clinical data elements use existing value sets where possible in an effort to harmonize with other measures and reporting requirements and we completed testing of the electronic specifications for the core clinical data elements used in the Hybrid HWR measure (80 FR 49703). The electronic specifications were tested in four separate health systems that used three separate EHR systems. During Hybrid HWR measure development and testing we demonstrated that the core clinical data elements were feasibly extracted from hospital EHRs for nearly all adult patients admitted. We also demonstrated that the use of the core clinical data elements to risk-adjust the Hybrid HWR measure improves the discrimination of the measure, or the ability to distinguish patients with a low risk of readmission from those at high risk of readmission, as assessed by the c-statistic.<sup>162 163 164</sup> In addition, inclusion of clinical information from patient EHRs is responsive to stakeholders who find it preferable to

use clinical information that is available to the clinical care team at the time treatment is rendered to account for patients' severity of illness rather than relying solely on data from claims (80 FR 49702). The Hybrid HWR measure is now fully developed and tested and NQF-endorsed (NQF #2879).

b. Voluntary Reporting of Electronic Health Record Data for the Hybrid HWR Measure (NQF #2879)

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20045 through 20049), in accordance with, and to the extent permitted by, the HIPAA Privacy Rule and other applicable law, we proposed the Hybrid HWR measure as a voluntary measure for the reporting of data on discharges over a 6-month period in the first two quarters of CY 2018 (January 1, 2018 through June 30, 2018). A hospital's annual payment determination would not be affected by this voluntary measure. As we stated when we adopted the Hospital-Wide All-Cause Unplanned Readmission measure (NQF #1789) that is currently used in the Hospital IQR Program, a hospital's readmission rate is affected by complex and critical aspects of care such as communication between providers or between providers and patients; prevention of, and response to, complications; patient safety; and coordinated transitions to the outpatient environment, such that a hospital-wide, all-condition readmission measure could portray a broader sense of the quality of care in hospitals and promote hospital quality improvement (77 FR 53522). We believe this would also be the case with using the Hybrid HWR measure (NQF #2879) that we proposed for voluntary data collection in the proposed rule.

Hospitals that voluntarily submit data for this measure would receive confidential hospital-specific reports that detail submission results from the performance reporting period, as well as the Hybrid HWR measure results assessed from merged files created by our merging of the EHR data elements submitted by each participating hospital with claims data from the same set of index admission. We note that in the proposed rule (82 FR 20047), we stated we are only seeking to collect data for the Hybrid HWR measure that are in accordance with the measure's electronic specifications, available on the CMS Web site at: <http://cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>. Hospitals that volunteer to submit data would also increase their familiarity with

submitting data for hybrid quality measures from their EHR systems. Participating hospitals would receive information and instruction on the use of the electronic specifications for this measure, would have an opportunity to test extraction and submission of data to CMS, and would receive reports from CMS, downloadable from QualityNet, with details on the success of their submission, such as the completeness and accuracy of the data. This would allow us to refine this measure if necessary to provide meaningful information on outcomes for hospitalizations for Medicare FFS beneficiaries with the intent to propose this as a required measure in future rulemaking. For example, we would consider feedback from hospitals when making refinements to improve the utility of the measure specifications. In addition, we would examine the completeness and accuracy of the data received to determine its adequacy for calculation of the measure's risk adjustment model and measure results.

EHR data or measure results for this proposed voluntary Hybrid HWR measure would not be publicly reported. However, if we propose to require mandatory reporting of the Hybrid HWR measure in future rulemaking, such a proposal would include public reporting of the measure results. Consistent with estimates for previous voluntary measure reporting, such as the Hospital IQR Program eCQM voluntary reporting (79 FR 50346), we believe up to approximately 100 hospitals would voluntarily submit data for the Hybrid HWR measure. Details about the measure and our proposal for voluntarily reporting certain data elements for this measure are discussed below.

c. Data Sources

We proposed to use two sources of data for the calculation of the proposed voluntary Hybrid HWR measure: Medicare Part A claims and core clinical data elements for Medicare FFS beneficiaries who are 65 years or older, comprising the measure cohort. Claims data would be used to identify index admissions included in the measure cohort, to create a risk-adjustment model, and to assess the 30-day unplanned readmission outcome. This data would be merged with core clinical data elements from each participant hospital's EHRs collected at presentation (discussed in more detail below) and used for risk-adjustment of patients' severity of illness (for Medicare FFS beneficiaries who are 65 years or older), in addition to data from claims. Medicare enrollment data, from

the Medicare Enrollment Database, are used to confirm Medicare enrollment for at least 30 days post hospital discharge for the unplanned readmission outcome assessment. For this proposed voluntary Hybrid HWR measure, in accordance with, and to the extent permitted by, the HIPAA Privacy Rule and other applicable law, the EHR data submission process would align as much as possible with existing electronic Clinical Quality Measure (eCQM) standards and data reporting procedures for hospitals, as further discussed below. We refer readers to section IX.A.10.e. of the preamble of this final rule for details on the Submission Form and Method for the Voluntary Hybrid Hospital-Wide Readmission Measure. The electronic specifications for the proposed voluntary Hybrid HWR measure, which include the electronic specifications for extraction of the core clinical data elements from hospital EHRs (the Measure Authoring Tool output and value sets) for all included data elements, are available on the CMS Web site at: <http://cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

d. Outcome

As stated above, the proposed voluntary Hybrid HWR measure outcome is aligned with the currently adopted, publicly reported, Hospital-Wide All-Cause Unplanned Readmission measure (NQF #1789), which was adopted into the Hospital IQR Program for the FY 2015 payment determination and subsequent years (77 FR 53521 through 53528). The proposed voluntary Hybrid HWR measure outcome assesses unplanned readmissions for any cause within 30 days of discharge from the index admission. It does not consider planned readmissions as part of the readmission outcome and identifies them by using the CMS Planned Readmission Algorithm, which is a set of criteria for classifying readmissions as planned using Medicare claims, and is currently used in the previously adopted, Hospital-Wide All-Cause Unplanned Readmission measure (77 FR 53521).<sup>165</sup> This algorithm identifies admissions that are typically planned and may occur within 30 days of discharge from the hospital.<sup>166</sup> The algorithm was most

<sup>165</sup> 2017 All-Cause Hospital-Wide Measure Updates and Specifications Report. Available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

<sup>166</sup> *Ibid.*

recently refined in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50211 through 50216) for the previously adopted, claims-based measure. The same algorithm is used for this proposed voluntary Hybrid HWR measure.<sup>167</sup> A complete description of the CMS Planned Readmission Algorithm, which includes lists of planned diagnoses and procedures, can be found on the CMS Web site at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

e. Cohort

As noted above, the proposed voluntary Hybrid HWR measure cohort is aligned with the currently adopted, Hospital-Wide All-Cause Unplanned Readmission measure.<sup>168</sup> The measure cohort consists of Medicare FFS beneficiaries, aged 65 years or older, discharged from non-Federal acute care hospitals. Hospitals would only submit data for this cohort, and the measure would only be calculated for this cohort. The proposed voluntary Hybrid HWR measure includes admissions for nearly all Medicare FFS beneficiaries over the age of 65 years who are discharged alive from acute care non-Federal hospitals. However, during measure calculation, a small number of these admissions are excluded under the measure specifications. Excluded admissions include those for principal discharge diagnoses indicating some psychiatric disorders. These exclusions are only a small proportion of all index admissions

and are identified during the measure calculation process.

f. Inclusion and Exclusion Criteria

The proposed voluntary Hybrid HWR measure inclusion and exclusion criteria are also aligned with the currently adopted Hospital-Wide All-Cause Unplanned Readmission measure.<sup>169</sup> For both measures, the index admission is the hospitalization to which the readmission outcome is attributed. Both the claims-based, Hospital-Wide All-Cause Unplanned Readmission measure and the proposed voluntary Hybrid HWR measure include the following index admissions for patients:

- Enrolled in Medicare FFS Part A for the 12 months prior to the date of admission and during the index admission.
  - Aged 65 or older.
  - Discharged alive from a non-Federal acute care hospital.
  - Not transferred to another acute care facility.
- This measure excludes the following index admissions for patients:
- Admitted to prospective payment system (PPS)-exempt cancer hospitals.
  - Without at least 30 days of post-discharge enrollment in Medicare FFS.
  - Discharged against medical advice.
  - Admitted for primary psychiatric diagnoses.
  - Admitted for rehabilitation.
  - Admitted for medical treatment of cancer.

For both measures, each index admission is assigned to one of five mutually exclusive specialty cohort

groups: medicine; surgery/gynecology; cardiorespiratory; cardiovascular; and neurology. The cohorts reflect how care for patients is organized within hospitals. To assign admissions to cohorts, admissions are first screened for the presence of an eligible Agency for Healthcare Research and Quality (AHRQ) Clinical Classifications Software (CCS)<sup>170</sup> surgical procedure category. Admissions with an eligible surgical procedure category are assigned to the surgical cohort, regardless of the principal discharge diagnosis code of the admission. All remaining admissions are assigned to cohorts based on the AHRQ CCS diagnosis category of the principal discharge diagnosis.

g. Risk-Adjustment

The proposed voluntary Hybrid HWR measure adjusts both for case mix differences (clinical status of the patient, accounted for by adjusting for age and comorbidities, and the core clinical data elements from patients' EHRs) and service-mix differences (the types of conditions and procedures cared for and procedures conducted by the hospital, accounted for by adjusting for the discharge condition category). Patient comorbidities are based on the index admission, the admission included in the measure cohort, and a full year of prior history. The core clinical data elements are derived from information captured in the EHR during the index admission only, and are listed below.

Data elements	Units of measurement	Time window for first captured values (hours)
Heart Rate	Beats per minute	0–24.
Systolic Blood Pressure	mmHg	0–24.
Respiratory Rate	Breath per minute	0–24.
Temperature	Degrees Fahrenheit	0–24.
Oxygen Saturation	Percent	0–24.
Weight	Pounds	0–24.
Hematocrit	% red blood cells	0–24.
White Blood Cell Count	Cells/mL	0–24.
Potassium	mEq/L	0–24.
Sodium	mEq/L	0–24.
Bicarbonate	mmol/L	0–24.
Creatinine	mg/dL	0–24.
Glucose	mg/dL	0–24.

<sup>167</sup> Hybrid Hospital-Wide Readmission Measure with Electronic Health Record Extracted Risk Factors (Version 1.1). Available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

<sup>169</sup> 2017 All-Cause Hospital-Wide Measure Updates and Specifications Report. Available at:

<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

<sup>170</sup> Clinical Classifications Software (CCS) for ICD–9–CM Fact Sheet. Accessed at: <https://www.hcup-us.ahrq.gov/toolssoftware/ccs/ccsfactsheet.jsp>.

The risk-adjustment variables included in the development and testing of the proposed voluntary Hybrid HWR measure are derived from both claims and clinical EHR data. The variables are: (1) 13 Core clinical data elements derived from hospital EHRs; (2) the Clinical Classification Software (CCS) categories for the principal discharge diagnosis associated with each index admission derived from ICD-10 codes in administrative claims data; and (3) comorbid conditions of each patient identified from inpatient claims in the 12 months prior to and including the index admission derived from ICD-10 codes and grouped into the CMS condition categories (CC).

All 13 core clinical data elements were shown to be statistically significant predictors of readmission in one or more risk-adjustment models of the five specialty cohort groups used to calculate the proposed voluntary Hybrid HWR measure.<sup>171</sup> The proposed voluntary Hybrid HWR measure specialty cohort groups are further defined in section IX.A.7.e. of the preamble of this final rule, below. The testing results demonstrate that the core clinical data elements enhanced the discrimination (assessed using the c-statistic) when used in combination with administrative claims data.<sup>172</sup> For additional details regarding the risk-adjustment model, we refer readers to the proposed voluntary Hybrid HWR Measure technical report, which is posted on the CMS Web site at: <http://cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

We note this measure was developed using claims coded in ICD-9. However, we have identified and tested ICD-10 specifications for all information used in the measure derived from Medicare claims for both the claims-based, Hospital-Wide All-Cause Unplanned Readmission measure and for the proposed voluntary Hybrid HWR Measure. The ICD-10 specifications are identical for both measures. Only the use of the core clinical data elements in the risk-adjustment models differs between the two measures. Those data elements are not affected by ICD-10

implementation. For additional details regarding the measure specifications that accommodate ICD-10-coded claims, we refer readers to the 2017 All-Cause Hospital-Wide Measure Updates and Specifications Report, which is posted on the CMS Web site at: <http://cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

#### h. Calculating the Risk-Standardized Readmission Rate (RSRR)

The methods used for calculation of the proposed voluntary Hybrid HWR measure align with the methods used to calculate the currently adopted, Hospital-Wide All-Cause Unplanned Readmission measure. Index admissions are assigned to one of five mutually exclusive specialty cohort groups consisting of related conditions or procedures. The five specialty cohort groups are: Surgery/gynecology, general medicine, cardiorespiratory, cardiovascular, and neurology. For each specialty cohort group, the standardized readmission ratio (SRR) is calculated as the ratio of the number of “predicted” readmissions to the number of “expected” readmissions at a given hospital. For each hospital, the numerator of the ratio is the number of readmissions within 30 days predicted based on the hospital’s performance with its observed case mix and service mix, and the denominator is the number of readmissions expected based on the nation’s performance with that hospital’s case mix and service mix. This approach is analogous to a ratio of “observed” to “expected” used in other types of statistical analyses.

The specialty cohort SRRs are then pooled for each hospital using a volume-weighted geometric mean to create a hospital-wide composite SRR. The composite SRR is multiplied by the national observed readmission rate to produce the RSRR. For additional details regarding the measure specifications to calculate the RSRR, we refer readers to the 2017 All-Cause Hospital-Wide Measure Updates and Specifications Report, which is posted on the CMS Web site at: <http://cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

#### i. Data Submission and Reporting Requirements

We proposed hospitals use QRDA I files for each Medicare FFS beneficiary who is 65 years and older. Submission of data using QRDA I files is the current EHR data and measure reporting

standard adopted for electronic clinical quality measures (eCQMs) implemented in the Hospital IQR Program. This same standard would be used for reporting the core clinical data elements to the CMS data receiving system. We refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49706) where we have previously discussed QRDA I standards for use in the Hospital IQR Program. We also refer readers to section IX.A.10.e. of the preamble of this final rule for discussions of additional proposals related to data submission and reporting requirements for the Hybrid HWR measure.

We also proposed to use the following criteria to determine if a hospital has successfully submitted voluntary Hybrid HWR measure data:

- Submission of only the first-captured values, which are data collected routinely on each Medicare FFS beneficiary who is 65 years or older upon presentation to the hospital, for each of the 13 core clinical data elements used in risk adjustment to assess the patient’s severity of illness.
- Hospitals would be expected to successfully submit data values from hospital EHRs for vital signs (heart rate, respiratory rate, temperature, systolic blood pressure, oxygen saturation, weight), and six linking variables required to merge with the CMS claims data (CCN, HIC Number or Medicare Beneficiary Identifier, date of birth, sex, admission date, and discharge date). When we tested the electronic specifications for extraction of the core clinical data elements in hospital systems, we also tested the use of these linking variables to merge data from claims and from hospitals’ EHRs from several health systems, and achieved match rates over 90 percent accounting for missing or erroneous data. In order to calculate results for the Hybrid HWR measure, hospitals would need to submit these data on more than 95 percent of on all Medicare FFS patients who are 65 years and older discharged from the hospital.

- Participating hospitals would be requested to submit values for laboratory test results (hematocrit, white blood cell count, sodium, potassium, bicarbonate, creatinine, and glucose) for Medicare FFS beneficiaries, 65 years or older, included in the measure cohort. In order to calculate measure results for the Hybrid HWR measure, hospitals would need to submit these data elements on more than 80 percent of these beneficiaries. However, for the proposed voluntary measure for the CY 2018 reporting period (January 1, 2018 through June 30, 2018) we would request the data elements on at least 50

<sup>171</sup> Hybrid Hospital-Wide Readmission Measure with Electronic Health Record Extracted Risk Factors (Version 1.1). Available at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

<sup>172</sup> Hybrid Hospital-Wide Readmission Measure with Electronic Health Record Extracted Risk Factors (Version 1.1). Available at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

percent of these patients discharged over the same time period. Data submission to the CMS data receiving system would occur in the fall of 2018.

- The measurement period would include discharges occurring over a 6-month period in the first two quarters of CY 2018 (January 1, 2018 through June 30, 2018). However, for hospitals that choose to report this measure, we would request submission of these data elements on at least 50 percent of these patients. As we noted above, in our proposal for voluntary data collection of the Hybrid HWR measure, we are only seeking to collect data for this measure on applicable Medicare FFS beneficiaries in accordance with the measure's electronic specifications, available on the CMS Web site at: <http://cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

#### j. Confidential Hospital-Specific Reports

Hospitals that voluntarily submit data for this measure would receive confidential hospital-specific reports that detail submission results from the reporting period, including detailed information about the completeness and accuracy of the EHR data they submit, as well as the Hybrid HWR measure results assessed from merged files created by our merging of the EHR data elements submitted by each participating hospital with claims data from the same set of index admission. We would calculate and provide each participating hospital with their risk-standardized readmission rate for the voluntary Hybrid HWR measure. This would provide each hospital with an indication of their performance relative to the other hospitals that participate in the voluntary measure. In addition, we would create a hospital-specific report for each participating hospital which would include detailed information about their Medicare FFS beneficiaries who are 65 and older who had an unplanned readmission within 30-days of hospital discharge, including the patients' clinical risk factors from claims and EHR data. This information would allow hospitals to identify the factors that increase patients' risk of readmission and would inform quality improvement strategies to reduce unplanned readmissions. In addition, the reports would include the match rate between the hospital's submitted EHR data and corresponding claims data, as well as the proportion of patient data submitted relative to all qualifying admissions for each of the 13 core clinical data elements.

We note that we are considering proposing the Hybrid HWR (NQF #2879) measure as a required measure as early as the FY 2023 payment determination and requiring hospitals to submit the core clinical data elements and linking variables used in the measure as early as CY 2020 to support a dry run of the measure during which hospitals would receive a confidential preview of their results in 2021. Any requirement for mandatory reporting on this measure would be proposed through future rulemaking. We invited public comment on our proposal to adopt the Hybrid HWR measure (NQF #2879) for the Hospital IQR Program as a voluntary measure for the CY 2018 reporting period as described above.

*Comment:* A few commenters expressed that they would support the proposed voluntary reporting of the Hybrid HWR measure should it obtain NQF endorsement.

*Response:* We thank the commenters for their support. As stated in the proposed rule (82 FR 20046) and above, the Hybrid Hospital-Wide Readmission Measure with Claims and Electronic Health Record Data (NQF #2879) was endorsed by NQF on December 9, 2016.

*Comment:* Many commenters recommended that CMS focus efforts on using data elements from EHRs to risk-adjust condition specific measures that are currently being used in the Medicare performance or penalty programs. Specifically, commenters urged CMS to take steps to test the feasibility of using non-clinical EHR-derived elements, such as education, location, and other factors, to develop appropriate socio-demographic adjustments.

*Response:* We understand the important role that socio-demographic factors play in the care of patients, however, we believe the Hybrid HWR measure's risk-adjustment methodology is appropriate and reliable. The measure already incorporates a risk-adjustment methodology that accounts for age and comorbidities, as well as vital signs and laboratory values at the start of the inpatient encounter. We will take under consideration potential future inclusion of additional non-clinical EHR-derived elements, such as education, location, and other socio-demographic factors, however, we continue to have concerns about holding hospitals to different standards for the outcomes of their patients of diverse socio-demographic factors because we do not want to mask potential disparities or minimize incentives to improve the outcomes of disadvantaged populations. In addition, as discussed in section V.J.3. of the preamble of this final rule, the Hybrid HWR measure recently underwent

successful NQF endorsement during the NQF's trial period for socio-demographic factors. We refer readers to section IX.A.1.d. of the preamble of this final rule for more details on accounting for social risk factors in the Hospital IQR Program. The NQF trial period considered the analyses and interpretations as well as performance scores with and without socio-demographic factors in the risk-adjustment model for this measure. In accordance with the NQF's trial criteria, NQF's evaluation indicated that SDS adjustment was not necessary for this measure.<sup>173</sup> We routinely monitor the impact of socio-demographic status on hospitals' results on our measures and will assess the appropriateness of further risk adjustment in the future, as well as the availability and feasibility of collecting social risk factor data elements from EHRs. We will also continue to consider using data elements from EHRs to risk-adjust condition specific measures, the claims-based versions of which are currently being used in the Medicare pay for performance programs (sometimes referred to as penalty programs).

*Comment:* Two commenters encouraged CMS to incentivize both hospitals and vendors to participate in voluntary reporting either through recognition or reduction in other requirements to offset the resources required to fully participate.

*Response:* We thank the commenter for their suggestion. We will continue to consider ways to reduce burden on hospitals as well as to incentivize participation in the voluntary reporting of this measure.

*Comment:* One commenter expressed concern about the proposed voluntary reporting of the Hybrid HWR measure, because merging clinical data derived from electronic health records (EHRs) with claims data is especially difficult and extremely complex.

*Response:* We will merge the EHR data submitted by hospitals as outlined in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20049) with the claims files and calculate the measure results. To clarify, participating hospitals or vendors are not expected to merge these data files themselves. We have successfully tested this process using EHR data and claims data submitted by three separate hospital systems during measure development. The additional experience we gain through voluntary data collection on

<sup>173</sup> NQF All-Cause Admissions and Readmissions 2015–2017 Technical Report: [http://www.qualityforum.org/Publications/2017/04/All-Cause\\_Admissions\\_and\\_Readmissions\\_2015-2017\\_Technical\\_Report.aspx](http://www.qualityforum.org/Publications/2017/04/All-Cause_Admissions_and_Readmissions_2015-2017_Technical_Report.aspx).

this measure will allow us to refine the data merging process as necessary without affecting payment or public reporting, since this voluntary measure will not be publicly reported. For hospitals that participate in the voluntary reporting of the Hybrid HWR measure, we will provide each hospital with a confidential hospital specific report that details submission results, as well as a description of the merged data set with both EHR and claims data included for the measure reporting period.

After consideration of the public comments we received, we are finalizing our proposal to adopt the Hybrid HWR measure (NQF #2879) as a voluntary measure for the CY 2018 reporting period, as proposed.

## 8. Changes to Policies on Reporting of eCQMs

### a. Background

For a discussion of our previously finalized eCQMs and policies, we refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50807 through 50810; 50811 through 50819), the FY 2015 IPPS/LTCH PPS final rule (79 FR 50241 through 50253; 50256 through 50259; and 50273 through 50276), the FY 2016 IPPS/LTCH PPS final rule (80 FR 49692 through 49698; and 49704 through 49709), and the FY 2017 IPPS/LTCH PPS final rule (81 FR 57150 through 57161; and 57169 through 57172). In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57172), we finalized that hospitals must submit eCQM data by the end of two months following the close of the calendar year for the CY 2017 reporting period/FY 2019 payment determination and subsequent years.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20049 through 20051), we proposed two modifications to our finalized eCQM reporting policies for the CY 2017 reporting period/FY 2019 payment determination and the CY 2018 reporting period/FY 2020 payment determination. Specifically, we proposed to: (1) Decrease the number of eCQMs for which hospitals must submit data; and (2) decrease the number of calendar quarters for which hospitals are required to submit data, as further detailed below. These proposals were made in conjunction with our proposals discussed in sections IX.E.2.b. of the preamble of this final rule to align requirements for the Hospital IQR Program and the Medicare and Medicaid EHR Incentive Programs for hospitals and CAHs.

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57150 through 57159), we finalized a policy to require hospitals to

submit one full calendar year of data (consisting of four quarterly data reporting periods) for 8 self-selected eCQMs out of the available eCQMs for both the CY 2017 reporting period/FY 2019 payment determination and the CY 2018 reporting period/FY 2020 payment determination.

Since the conclusion of the public comment period for the FY 2017 IPPS/LTCH PPS final rule, we have continued to receive frequent feedback (via email, webinar questions, help desk questions, and conference call discussions) from hospitals and EHR vendors about ongoing challenges of implementing eCQM reporting. A summary of the main concerns identified by these data submitters are as follows:

- The timing of the transition to a new EHR system during 2017 (or system upgrades or new EHR vendor) affects hospitals' ability to report on an increased number of measures in a timely manner;
- There is a need for at least one year between new EHR requirements due to the varying 6- to 24-month cycles needed for vendors to code new measures, test and institute measure updates, train hospital staff, and rollout other upgraded features;
- Hospitals have had difficulty identifying applicable measures that reflect their patient population, given the reduction in the number of available eCQMs (from 28 to 15) for CY 2017 reporting;
- Hospitals have had challenges with data mapping (aligning the information available in an electronic health record (EHR), particularly if the information is not located in a structured field (for example, PDF attachment, free text section) to the required fields in a QRDA Category I (QRDA I) file), and workflow (the process of extrapolating the pertinent patient data from an EHR, transferring that data to a QRDA I file, and submission of the QRDA I file to CMS) because hospitals still need to collect CY 2017 data while reporting CY 2016 data; and
- Hospitals have identified challenges in implementing annual updates and new editions of certified health IT because of significant impacts on workflow, staffing, and connected technology systems. (We note that this information was inadvertently omitted in the proposed rule at 82 FR 20050.)

In response to these issues, we proposed to modify the eCQM reporting requirements for both the CY 2017 reporting period/FY 2019 payment determination and the CY 2018 reporting period/FY 2020 payment determination as discussed in more detail below.

### b. Modifications to the eCQM Reporting Requirements for the Hospital IQR Program for the CY 2017 Reporting Period/FY 2019 Payment Determination

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20050), for the CY 2017 reporting period/FY 2019 payment determination, we proposed to modify eCQM reporting requirements, such that hospitals: (1) Report on at least 6 of the available eCQMs, instead of 8 as previously finalized; and (2) submit two, self-selected quarters of data, instead of one full calendar year of data as previously finalized.

We stated in the proposed rule that although the publication of the FY 2018 IPPS/LTCH PPS final rule will not occur until on or about August 1, 2017, the data submission deadline for the CY 2017 reporting period/FY 2019 payment determination is not until February 28, 2018 which should provide hospitals with ample time to adjust to these modified policies. Hospitals that were prepared to submit one full calendar year of data for 8 eCQMs in accordance with the previously finalized CY 2017 eCQM reporting requirements should be able to submit two, self-selected quarters of data for 6 eCQMs in accordance with the modified CY 2017 reporting requirements. Reducing the number of data reporting periods to two quarters, rather than four, and allowing hospitals to self-select which two quarters of CY 2017 to report also offers greater reporting flexibility and allows hospitals and their vendors more time to plan for reporting and to account for and schedule hospital-specific scenarios, such as EHR upgrades or system transitions.

We believe these modified reporting requirements directly address stakeholder concerns while remaining consistent with our goal to incrementally transition to electronic reporting (80 FR 49694).

We note we proposed similar policies in the EHR Incentive Program and refer readers to section IX.E.2.b. of the preamble of this final rule. Our policies to modify the CY 2017 eCQM reporting requirements in the Hospital IQR Program continue to align with the requirements of the CQM electronic reporting requirements in the Medicare and Medicaid EHR Incentive Programs for eligible hospitals and CAHs to reduce confusion and reporting burden. In addition, in the proposed rule (82 FR 20050), we did not propose any changes to the February 28, 2018 submission deadline for CY 2017 reporting (81 FR 57172) to ensure that APU determinations for FY 2019 are not affected and to maintain the established

alignment with the Medicare EHR Incentive Program's submission deadline (81 FR 57255).

We invited public comment on our proposals to modify the eCQM reporting requirements for the CY 2017 reporting period/FY 2019 payment determination for the Hospital IQR Program as described above.

*Comment:* Several commenters supported the proposed policies for the CY 2017 reporting period/FY 2019 payment determination that reduce the reporting period from one full calendar year of data to two, self-selected quarters of data and the number of eCQMs required to report from 8 to 6, but recommended that CMS further reduce the CY 2017 reporting requirements by retaining the previously finalized CY 2016 policies that required the reporting of 4 eCQMs for one quarter of data. The commenters indicated that maintaining the CY 2016 eCQM reporting requirements would provide certified health IT vendors and CMS additional time to work on measure specification and, data validation, while giving hospitals more time to focus on incorporating system upgrades, data mapping, staff training, and planning for data processing for CMS reporting. In addition, some commenters expressed concern regarding the increase in eCQM reporting requirements impacting the ability of hospitals to effectively execute current eCQM reporting requirements and prepare for potential future increases in eCQM reporting requirements, thus placing an additional burden on hospitals by limiting available time for testing prior to production file submission. These commenters indicated that recent updates to measure specifications have required labor-intensive updates to complete terminology mapping, which has reduced hospitals' ability to expand eCQM reporting to additional eCQMs. The commenters noted that implementation of eCQM reporting is a multi-year process that requires significant capital and operating expenditures and requires close collaboration with clinical and other operations staff. The commenters encouraged CMS to continue to take into account the operational implications of eCQM data submission requirements for smaller hospitals that have resource limitations. One commenter indicated that even if facilities were already collecting data on 8 eCQMs, the reduction in the number of eCQMs required to report and the decreased reporting period would give facilities that have limited resources or difficulties reporting for an entire

calendar year the opportunity to be more successful.

*Response:* We appreciate commenters expressing their concerns and providing more details regarding their challenges associated with eCQM reporting. Based on commenter feedback, we are finalizing a modification to our proposals for eCQM reporting requirements for the CY 2017 reporting period/FY 2019 payment determination. Instead of requiring submission of one calendar year of data, for 8 eCQMs, as previously finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57150 through 57159), or submission of two, self-select calendar quarters of data, for 6 eCQMs, as proposed in the FY 2018 IPPS proposed rule (82 FR 20050), we are finalizing a modification of our proposal to further reduce the eCQM reporting requirements, such that hospitals are required to submit only one, self-selected calendar quarter of data for 4 eCQMs. This retains reporting requirements similar to the CY 2016 reporting period/FY 2018 payment determination (80 FR 49698) with one change, such that hospitals will be able to submit data for any one of the 4 quarters for the CY 2017 reporting period/FY 2019 payment determination, whereas hospitals were only able to submit data for either Q3 or Q4 for the CY 2016 reporting period/FY 2018 payment determination.

In determining the modified number of eCQMs to report for the CY 2017 reporting period, we decided to continue the CY 2016 reporting period/FY 2018 payment determination requirements to give hospitals more time to gain experience reporting eCQMs. While we believe many hospitals are ready to successfully report on at least 6 eCQMs beginning with the CY 2017 reporting period/FY 2019 payment determination, as proposed, we also want to be responsive to feedback that many hospitals, especially small, rural, and IHS and tribal hospitals, as well as hospitals with fewer financial resources, need additional time and flexibility to successfully implement all of the eCQM reporting requirements. We intend to review the results of the first year of required eCQM data collection prior to increasing requirements for subsequent years.

We believe these modified, reduced reporting requirements directly address stakeholder concerns while remaining consistent with our goal to gradually transition toward more robust electronic quality measure reporting. Further, we believe reducing the number of eCQMs required to be reported and reducing the quarters of data to be reported eases the

burden on data submitters, allowing them to shift resources to support system upgrades, data mapping, and staff training related to eCQMs. Successful reporting in CY 2016 should streamline CY 2017 reporting because hospitals can re-use the same measures submitted to satisfy the CY 2016 reporting requirements. In addition, we believe that these modified, reduced reporting requirements will provide hospitals and health IT vendors more time to report quality data to CMS, including more time to submit test QRDA files before submitting production QRDA files for program credit. We also believe the reduction in the number of required eCQMs lessens the burden of identifying new measures to report; under the modified policy, hospitals are not required to identify any additional measures between CY 2016 and CY 2017. We will continue to assess the progress of hospitals in implementing eCQM reporting requirements and engage in discussions with hospitals and health IT vendors regarding their experiences as we consider eCQM policies in future rulemaking.

Although we are not finalizing our original proposal to require reporting on 6 eCQMs, we encourage hospitals to continue refining their electronic reporting implementation activities to successfully achieve electronic data capture and reporting. In addition, we encourage early testing and the use of pre-submission testing tools to reduce errors and inaccurate data submissions in eCQM reporting. Over time, we anticipate hospitals will continue to build and refine their EHR systems and gain more familiarity with reporting eCQM data, resulting in more accurate data submissions with fewer errors.

We note that we made similar proposals in the Medicare and Medicaid EHR Incentive Programs and refer readers to section IX.E.2.b. of the preamble of this final rule, where we also are finalizing a modification to our proposals. Our policies to modify and reduce the CY 2017 reporting period/FY 2019 payment determination eCQM reporting requirements in the Hospital IQR Program will continue to align with requirements in the Medicare and Medicaid EHR Incentive Programs. We also refer readers to section IX.A.10.d. of the preamble of this final rule for our eCQM submission policies.

*Comment:* A majority of commenters supported the proposed reduction from 8 required eCQMs to 6 eCQMs and the reduction from one full calendar year of data to two, self-selected quarters of data for the CY 2017 reporting/FY 2019 payment determination. The

commenters noted that as proposed, the requirements align with the CY 2017 Joint Commission reporting standards. A few commenters requested CMS finalize the proposed requirements as soon as possible in order for hospitals to prepare and educate appropriate staff.

Several commenters indicated that the modified reporting period from one full year to two quarters of data would provide hospitals with sufficient time to adequately transition their EHR systems and allow them to avoid a reporting period that overlaps with the quarter in which they transition EHR systems.

*Response:* We thank the commenters for their support. At this time, we believe that continuing the CY 2016 reporting requirements for hospitals to report one, self-selected calendar quarter of data for 4 eCQMs, as discussed above, balances stakeholder concerns while remaining consistent with our goal to gradually transition toward more robust electronic quality measure reporting. As previously stated, we believe the electronic collection and reporting of quality data using health IT will ultimately simplify and streamline reporting for various CMS quality reporting programs and hospitals will experience decreased financial and administrative burden as we continue to align program reporting requirements and adopt a more streamlined set of clinical quality measures with electronic specifications.

*Comment:* One commenter believed the current methodology of collecting information for more eCQMs, over a greater period of time, relies too heavily upon the entry of “hardcoded” documentation by physicians and nurses within certain timing constraints.

*Response:* We interpret the commenter’s concern about eCQMs relying too heavily upon entry of “hardcoded” documentation to mean that the commenter believes clinical staff may have difficulty inputting patient information in “real time” into the appropriate structured fields during the patient encounter due to competing clinical demands. The EHR may allow the clinician to update the patient information at a later time in the event that clinical staff need to provide crisis care and cannot record patient information at the time of the encounter without compromising patient care or in the case that additional information needs to be added to the medical record after the patient encounter. We recommend hospitals and their EHR vendors work together to implement EHR functionalities that will successfully support clinical activities, documentation, and quality measure reporting that are also consistent with

each hospital’s policies and procedures. We believe that recording patient information in structured fields for the purpose of reporting eCQMs is more accurate, less prone to errors because it relies less on interpretation, and ultimately reduces burden on hospitals because it does not require manual abstraction, as compared with conventional chart-abstracted data reporting.

*Comment:* One commenter did not support the proposal to reduce the eCQM submission requirements and recommended that the number of measures and the reporting window be kept the same, if not increased. The commenter indicated that capturing and exporting the data for a QRDA I file is part of the ONC EHR certification program, and if a hospital is not capturing data in such a way that a QRDA I file can be generated, then this implies that either the EHR is violating its certification or the hospital is not using its EHR appropriately. Rather than modifying the Hospital IQR Program eCQM reporting requirements to make it acceptable for EHRs to violate their certification, the commenter suggested that the existing regulations be enforced and penalties be applied to these health IT vendors.

In addition, the commenter suggested measure specifications could be published in advance to enable hospitals to view them before the reporting period begins; this does not require the total number of measures to be reduced. The commenter recognized the challenges some hospitals are having, but argued that these issues should be addressed directly with individual hospitals instead of through indirect mechanisms like changing the number of measures for all hospitals. The commenter expressed support for the creation of new eCQMs as a more appropriate approach to addressing concerns regarding the lack of measures rather than simply reducing the requirements.

*Response:* We thank the commenter for their support of the eCQM reporting requirements for the CY 2017 reporting period/FY 2019 payment determination as previously finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57150 through 57161; and 57169 through 57172). We note that hospitals have reported data electronically for several years to both the Medicare and Medicaid EHR Incentive Programs and the Hospital IQR Program (3 prior years of pilot reporting and 3 prior years of voluntary reporting), and thus we believe most hospitals are able to successfully meet our previously finalized eCQM reporting requirements

to report on additional measures for the CY 2017 reporting period/FY 2019 payment determination. However, as discussed above, we also want to be sensitive and responsive to feedback that a number of hospitals, especially small, rural, and IHS and tribal hospitals as well as hospitals with fewer financial resources, need additional time and flexibility to successfully implement all of the eCQM reporting requirements. At this time, we believe that continuing the CY 2016 reporting requirements for hospitals to report one, self-selected calendar quarter of data for 4 eCQMs, as discussed above, better balances stakeholder concerns while remaining consistent with our goal to gradually transition toward more robust electronic quality measure reporting.

We appreciate the commenter’s suggestion that measure specifications could be published further in advance to enable hospitals to view them before the reporting period begins as well as the suggestion to find and develop better measures. We will take these suggestions into consideration. We note that, generally, each year we issue a call for new measures, including eCQMs and other types of electronic measures, to be considered for adoption in the Hospital IQR Program. We also refer readers to section IX.A.9. of the preamble of this final rule for discussion of future potential eCQMs under consideration for the Hospital IQR and Medicare and Medicaid EHR Incentive Programs. Interested stewards and/or developers may submit measures for consideration by NQF. Submission guidance for eCQMs are available at: [www.qualityforum.org/Electronic\\_Quality\\_Measures.aspx](http://www.qualityforum.org/Electronic_Quality_Measures.aspx).

*Comment:* A few commenters recommended that CMS clarify the definitions used for the terms “workflow” and “data submission,” in the context of electronic measure reporting. Specifically, the commenters suggested that while “workflow” is related to technical challenges, the term is not appropriate in defining the process of data extraction and QRDA I submission.

*Response:* We thank the commenters for their suggestion. Our references to the terms “data submission” and “workflow” depend on the context in which the terms are used, which party is providing data to which party, and for what purpose. In the context of eCQM reporting, hospitals may experience challenges modifying workflow in regards to clinical care, corresponding documentation, and data capture, such that clinical staff enter patient information into the appropriate fields of the EHR at the time of the patient

encounter. Sometimes the clinician, medical assistant, scribe, or other staff member entering data into the EHR may find it easier or more expeditious to enter patient information in the “free text” section of the EHR, even though specific fields exist in the EHR where that data should be recorded so that it maps appropriately when the eCQMs pull data from the EHRs. To clarify, when we suggested that hospitals need to make changes to workflow, we meant hospitals should focus additional time and effort on training the appropriate staff to effectively capture patient data within the EHR. We further encourage hospitals to innovate and design workflows that fit their unique needs to make the best use of both clinical and non-clinical staff resources to maintain patient health information in the EHR.

In addition, when the staff enter patient information in the “free text” section of the EHR, it is also sometimes the case that staff or hospital administrators go back after the patient encounter has completed and manually enter that information into the appropriate fields. This also could be considered part of the “workflow” under the definition provided by the commenter. Data submission in the context of eCQM reporting would refer to the sending and subsequent receiving of that documented clinical data corresponding to eCQM specifications through the QualityNet Secure Portal for purposes of the Hospital IQR Program eCQM submissions.

*Comment:* One commenter urged CMS to begin allowing hospitals to select eCQMs as their official Hospital IQR Program performance metric and opt out of the manual submission of the same quality metric; the commenter noted that it would encourage organizations to begin the transition towards eCQMs by relieving the burden of dual abstraction when the organization is comfortable with the accuracy of its eCQM data.

*Response:* We thank the commenter for their suggestion to allow hospitals to elect to report eCQMs as their official Hospital IQR Program performance metric and opt out of manual submission for chart-abstracted measures, and will take the suggestion under consideration for future policies on quality measure reporting for the Hospital IQR Program. At this time, as we are planning to validate eCQM data starting with CY 2017 data and not publicly displaying the eCQM data, we believe it is important for chart-abstracted measure data to continue to be collected and publicly displayed to provide important information to consumers and providers.

*Comment:* One commenter urged CMS to suspend all regulatory requirements that mandate submission of eCQMs given that hospitals have spent significant time and resources to revise certified EHRs to meet eCQM requirements for the CY 2016 reporting period/FY 2018 payment determination, with no benefit for patient care.

*Response:* We thank the commenter for their recommendations, but disagree that eCQM reporting does not benefit patients. While we recognize the current burden associated with implementing the necessary infrastructure and EHR technology as well as training and refinement of work flows for transitioning to electronic quality reporting and understand that there are operational shortcomings that need to be further reconciled to streamline the process, we do not believe that suspending all eCQM reporting would be the best way to advance the Hospital IQR Program’s goals of improving the quality of care and transparency through quality measurement while also reducing the associated operational, administrative, and financial burdens associated with manual chart-abstractation. In addition, suspending all eCQM reporting in the Hospital IQR Program would result in misalignment with the EHR Incentive Program’s CQM reporting policies.

We believe electronic reporting furthers CMS and HHS policy goals to promote quality through performance measurement and, in the long-term, will both improve the accuracy of the data and reduce reporting burden for providers. Moreover, we believe it is appropriate to require reporting and validation of eCQM data given that measures available now and those being developed for the future are based increasingly on electronic standards (80 FR 49696).

We encourage hospitals to work closely with health IT vendors to ensure that a contract is in place that supports the hospital’s quality reporting requirements and the annual update of quality measures. We understand that hospitals have spent resources to update certified EHRs to meet eCQM requirements, but we believe eCQMs will promote better quality of care as hospitals and health IT vendors continue to refine EHR systems to appropriately structure them commensurate with the clinical work flow. Further, we believe these updates will lead to improved accuracy, reliability, and completeness of the eCQM data, which will promote higher quality outcomes and lower costs while ultimately decreasing reporting burden on hospitals as compared with chart-

abstraction of quality measure data. We will continue to monitor the progress of hospitals implementing eCQM reporting requirements and encourage hospitals to share their experiences in preparing for and meeting reporting requirements. In addition, we will evaluate the eCQMs available to report as part of routine measure maintenance as well as consider new electronic measures as they become available for potential use in the Hospital IQR and Medicare and Medicaid EHR Incentive Programs.

After consideration of the public comments we received, we are finalizing a modification of our proposal. Instead of reporting two, self-selected quarters of data for 6 eCQMs as proposed, we are further reducing requirements, such that hospitals are required to report only one, self-selected calendar quarter of data for 4 self-selected eCQMs for the CY 2017 reporting period/FY 2019 payment determination. We refer readers to section IX.E.2.b. of the preamble of this final rule where we are finalizing a similar modified policy under the Medicare and Medicaid EHR Incentive Programs.

c. Modifications to the eCQM Reporting Requirements for the Hospital IQR Program for the CY 2018 Reporting Period/FY 2020 Payment Determination

As stated above, in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57150 through 57159), we finalized a policy requiring submission of 8 self-selected eCQMs out of the available eCQMs in the Hospital IQR Program for both the CY 2017 reporting period/FY 2019 payment determination and CY 2018 reporting period/FY 2020 payment determination. In addition, for the CY 2018 reporting period/FY 2020 payment determination, hospitals are required to submit the data by February 28, 2019 (the end of two months following the close of the calendar year, as set out in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57172)). For the same reasons as discussed above, we proposed similar modifications for the CY 2018 reporting period/FY 2020 payment determination in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20050 through 20051). Specifically, we proposed to require hospitals to report on at least six of the available eCQMs for the CY 2018 reporting period/FY 2020 payment determination, instead of eight as previously finalized. These six eCQMs may be the same or a different set of six eCQMs a hospital reports for the CY 2017 reporting period. In addition, we proposed to decrease the number of required reporting periods, from four quarters as previously finalized, to the

first three quarters of the CY 2018 reporting period (that is, Q1, Q2, and Q3 of CY 2018). We noted that this differs from our proposal for the CY 2017 reporting period as discussed above, which would only require two self-selected quarters of data.

In crafting this proposal, we considered several alternatives. Specifically, we considered aligning the CY 2018 reporting period requirements with the proposed CY 2017 reporting period requirements, such that hospitals would report on at least six of the available eCQMs and submit two self-selected quarters of data for both years. We also considered retaining the reporting requirements finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57150 through 57159), such that hospitals would submit one full calendar year of data for 8 self-selected eCQMs for the CY 2018 reporting period/FY 2020 payment determination. Ultimately, we believe that our proposals as stated above balance our goal to progressively shift towards electronic reporting of quality measure data with hospitals' concerns of the burden this increase may cause. In addition, hospitals will have had several years to report data electronically for the Hospital IQR and Medicare and Medicaid EHR Incentive Programs. Therefore, we believe that hospitals will be better prepared to submit an additional quarter of data for the CY 2018 reporting period compared to the number of quarterly reporting periods we are proposing for the CY 2017 reporting period. We also believe that hospitals will be better prepared to submit additional eCQMs in the future, since hospitals will have had a sufficient number of cycles of eCQM reporting.

Our proposals for the CY 2018 reporting period/FY 2020 payment determination were made in conjunction with proposals discussed in section IX.E.3. of the preamble of the proposed rule that fully align requirements for the Hospital IQR Program with the requirements for the CQM electronic reporting option in the Medicare EHR Incentive Program for eligible hospitals and CAHs. We noted that the deadline for submission would be the same as previously finalized, two months following the end of the reporting period calendar year, specifically February 28, 2019 (81 FR 57172).

We invited public comment on our proposals to modify the CY 2018 reporting period/FY 2020 payment determination eCQM reporting requirements for the Hospital IQR Program as described above.

*Comment:* Several commenters supported the proposed policies for the CY 2018 reporting period/FY 2020 payment determination as a step in the right direction, but recommended that CMS further reduce the requirements by continuing the CY 2016 eCQM reporting requirement of one, self-selected calendar quarter of data for 4 eCQMs. The commenters indicated that maintaining the CY 2016 eCQM reporting requirements would provide certified health IT vendors and CMS additional time to work on measure specification and data validation, while giving hospitals more time to focus on incorporating system upgrades, data mapping, staff training, and planning for data processing for CMS reporting.

Some commenters remained concerned with the pace of the expansion of eCQM reporting requirements impacting the ability of hospitals to effectively execute current eCQM reporting requirements and prepare for potential future increases in eCQM reporting requirements, thus placing an additional burden on hospitals by limiting available time for testing prior to production file submission. These commenters indicated that recent updates to measure specifications have required labor-intensive updates to complete terminology mapping, which has hindered hospitals' ability to expand reporting to additional eCQMs. The commenters noted that implementation of eCQM reporting is a multi-year process that requires significant capital and operating expenditures and requires close collaboration with clinical and other operations staff.

A few commenters expressed concern about the considerable burden required to map the necessary data elements from the EHR to the appropriate QRDA file format given that some vendors are not properly equipped to collect and transmit such data through the CMS QualityNet Secure Portal. The commenters stated that until these issues are sufficiently addressed, CMS should not increase the required eCQM reporting requirements for the Hospital IQR Program.

*Response:* We appreciate commenters expressing their concerns and providing more detail regarding their challenges associated with eCQM reporting. Based on commenter feedback we are finalizing a modification to our proposals for eCQM reporting

requirements for the CY 2018 reporting period/FY 2020 payment determination. Instead of requiring submission of one calendar year (four quarters) of data, for 8 eCQMs, as previously finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57150 through 57159), or submission of two, self-selected calendar quarters of data, for 6 eCQMs, as proposed in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20050), we are modifying our proposal to further reduce the eCQM reporting requirements, such that hospitals are required to submit only one, self-selected calendar quarter of data for 4 eCQMs. This continues reporting requirements similar to the CY 2016 reporting period/FY 2018 payment determination (80 FR 49698) with one change, such that hospitals will be able to submit data for any one of the 4 quarters for the CY 2018 reporting period/FY 2020 payment determination, whereas hospitals are only able to submit data for either Q3 or Q4 for the CY 2016 reporting period/FY 2018 payment determination.

We believe reducing the number of eCQMs required to be reported and reducing the quarters of data to be reported offers greater reporting flexibility and eases the burden on data submitters, allowing them to shift resources to support system upgrades, data mapping, and staff training related to eCQM documentation and reporting. In addition, we believe that these modified reporting requirements will provide hospitals and health IT vendors more time to report quality data to CMS, including more time to submit test QRDA files before submitting production QRDA files for program credit. We note we are aligning the requirement for hospitals to submit data on one, self-selected calendar quarter of data for 4 eCQMs between the Hospital IQR Program and the Medicare and Medicaid EHR Incentive Programs in order to streamline the electronic submission of quality data for hospitals.

Further, successful reporting in CY 2016 and CY 2017 should streamline CY 2018 reporting because hospitals can reuse the same measures with which they already have gained familiarity. Once hospitals have become comfortable submitting data for 4 eCQMs in CY 2016 and CY 2017, the requirements we are finalizing will also allow greater flexibility if hospitals wish to select different eCQMs from those they submitted for CY 2016 or CY 2017 reporting. In addition, hospitals will have flexibility to select which quarter of data to report data based upon their individual quality improvement needs and electronic reporting capabilities.

Our decision to finalize the same requirements for both the CY 2017 and CY 2018 reporting periods is in an effort to be responsive to the feedback we have received about the challenges of eCQM reporting and recommendations to allow more time to become familiar with and improve upon electronic reporting capabilities. While we believe most hospitals will be ready to successfully report on at least 6 eCQMs beginning with the CY 2018 reporting period/FY 2020 payment determination, we also want to be responsive to feedback that a number of hospitals, especially small, rural, and IHS and tribal hospitals as well as hospitals with fewer financial resources, need additional time and flexibility to successfully implement all of the eCQM reporting requirements. We intend to review the results of the first year of required eCQM data collection prior to increasing requirements for subsequent years. We believe these modified, reduced reporting requirements directly address stakeholder concerns while remaining consistent with our goal to gradually transition to more robust electronic quality measure reporting. In addition, we believe that these modified, reduced reporting requirements will provide hospitals more time and flexibility to address measure specification updates, data validation, technology readiness, system issues, and future requirements generally. We will continue to assess the progress of hospitals implementing eCQM reporting requirements and engage in discussions with hospitals regarding their experiences as we consider eCQM policies in future rulemaking. We intend to determine requirements for the CY 2019 reporting period/FY 2021 payment determination and subsequent years in future rulemaking.

Although we are not finalizing our original proposal to require reporting on 6 eCQMs, we encourage hospitals to continue refining their electronic reporting implementation activities to successfully achieve electronic data capture and reporting. In addition, we encourage early testing and the use of pre-submission testing tools to reduce errors and inaccurate data submissions in eCQM reporting. Over time, we anticipate hospitals will continue to build and refine their EHR systems and gain more familiarity with reporting eCQM data, resulting in more accurate data submissions with fewer errors. We note that we made similar proposals in the Medicare and Medicaid EHR Incentive Programs and refer readers to section IX.E.2.b. of the preamble of this

final rule where we also are finalizing the same modification of our proposal and is a continuation of our policy to align the eCQM reporting requirements of the Hospital IQR Program with the CQM electronic reporting requirements in the Medicare and Medicaid EHR Incentive Programs in order to reduce confusion and reporting burden for all hospitals. We also refer readers to section IX.10.d. of the preamble of this final rule for our eCQM submission policies for the Hospital IQR Program.

In arriving at this modified finalized policy, we considered several alternatives. Specifically, we considered aligning the CY 2018 reporting period requirements with the proposed CY 2017 reporting period requirements, such that hospitals would report on at least 6 of the available eCQMs and submit two, self-selected quarters of data. We also considered retaining the reporting requirements finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57150 through 57159), such that hospitals would submit one full calendar year of data for 8 self-selected eCQMs for the CY 2018 reporting period/FY 2020 payment determination. Ultimately, based on commenter feedback and for the reasons articulated above, we have decided to modify our policy to further reduce the eCQM reporting requirements for the CY 2018 reporting period/FY 2020 payment determination, such that hospitals are required to submit one, self-selected calendar quarter of data for 4 eCQMs. Our decision to keep the same eCQM reporting requirements for the CY 2017 reporting period/FY 2019 payment determination and the CY 2018 reporting period/FY 2020 payment determination was also based on commenter feedback recommending additional time and flexibility to successfully implement electronic reporting capabilities. As previously stated, we believe the electronic collection and reporting of quality data using health IT will ultimately simplify and streamline reporting for various CMS quality reporting programs and hospitals will experience decreased financial and administrative burden as we continue to align program reporting requirements and adopt a more streamlined set of clinical quality measures with electronic specifications.

*Comment:* Many commenters supported the proposed reduction from 8 required eCQMs to 6 required eCQMs and the reduction from one full calendar year of data to the first three calendar quarters of data for the CY 2018 reporting period/FY 2020 payment determination. A few commenters suggested CMS maintain the

requirement to report 6 eCQMs beyond the CY 2018 reporting period, while increasing the performance period to one year and then gradually increasing the number of required eCQMs in future years.

The commenters believed this approach would allow hospitals to adapt to more robust eCQM requirements. Other commenters supported the proposed reduction from 8 required eCQMs to 6 for the CY 2018 reporting period/FY 2020 payment determination, but suggested that CMS retain the proposed CY 2017 reporting period/FY 2019 payment determination requirement, such that hospitals are required to report two, self-selected quarters of data for the CY 2018 reporting period/FY 2020 payment determination. Some commenters noted smaller hospitals, with fewer resources, require more time to become proficient in all of the parameters (mapping, new work flows, staff education, etc.) associated with electronic reporting.

A few commenters indicated that if hospitals were allowed to self-select two quarters of data (instead of three or four quarters of data) for the CY 2018 reporting period/FY 2020 payment determination, it would provide the necessary time for quality, health IT, and clinical teams to more effectively utilize change management processes to improve scores until such time as alternative and more advanced techniques are more commonplace and tested without significantly impairing CMS' ability to review and analyze data generated by eCQMs.

*Response:* We thank the commenters for their support. While we believe that most hospitals would be ready to successfully report on at least 6 eCQMs for the CY 2018 reporting period/FY 2020 payment determination, we also want to be responsive to feedback that a number of hospitals, especially small, rural, and IHS and tribal hospitals as well as hospitals with fewer financial resources, need additional time and flexibility to successfully implement all of the eCQM reporting requirements. Therefore, at this time, we believe finalizing the modified, reduced requirements for hospitals to report one, self-selected calendar quarter of data for 4 eCQMs, as discussed above, better balances stakeholder concerns while remaining consistent with our goal to gradually transition toward more robust electronic quality measure reporting.

Although we are not finalizing our original proposal to require reporting on the first three calendar quarters of data for 6 eCQMs, we encourage hospitals to continue refining their electronic reporting implementation activities to

successfully achieve electronic data capture and reporting. In addition, we encourage early testing and the use of pre-submission testing tools such as the PSVA to reduce errors and inaccurate data submissions in eCQM reporting. As time passes, we anticipate that hospitals will continue to build and refine their EHR systems and gain more familiarity with reporting eCQM data, resulting in more accurate data submissions with fewer errors.

*Comment:* Several commenters supported the proposed reduction from 8 required eCQMs to 6 for the CY 2018 reporting period/FY 2020 payment determination, but suggested that CMS allow hospitals to self-select the three quarters for which they provide data. The commenters noted that the comprehensive process at the start of the calendar year is still very time consuming and cumbersome with changing/updating eCQM logic definitions, vendor relations, schemas for running reports, and XML files occurring at the same time. Some commenters indicated that they would support reporting data from the first quarter performance period when this year-end process is more established and predictable.

*Response:* We refer readers to our reduced requirements as discussed above. We acknowledge the burden associated with eCQM logic definitions, implementation of report schemas and reconciliation of XML files, which is why we have further reduced the reporting requirements for both the CY 2017 and CY 2018 reporting periods. In addition, we refer readers to section IX.A.10.d.(2)(b)(ii) of the preamble of this final rule, in which we discuss our policy to require EHRs to be certified to all available eCQMs. We believe that satisfying this requirement will offset the burden associated with health IT vendor relations, as hospitals will not have to certify individual electronic measures at the time electronic reporting is increased. Furthermore, we will take these comments into consideration for future policies. We believe that with time, as hospitals continue to gain more experience with eCQM reporting, the challenges hospitals encounter at the beginning of each calendar year will be reduced.

*Comment:* One commenter supported the reduction in the number of required eCQMs from 8 to 6 for the CY 2018 reporting period/FY 2020 payment determination, but suggested that CMS retain the requirement to report one full calendar year of data. Further, the commenter suggested gradually increasing the number of required eCQMs in future years. The commenter

believed that this approach would allow hospitals to adapt to more robust eCQM requirements.

*Response:* We thank the commenter for their support. We refer readers to our modified policies as discussed above. For future years, we will consider requiring hospitals to report more quarters of data and gradually increase the electronic reporting of quality measure data in the Hospital IQR Program. In the meantime, we will continue to assess the progress of implementing eCQM reporting capabilities and engage in discussions with hospitals regarding their experiences as we consider the establishment of eCQM policies in future rulemaking.

*Comment:* One commenter sought clarification on whether or not the CY 2018 eCQM data would be publicly reported.

*Response:* In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50815 through 50818), we adopted a policy under which we would only publicly report eCQM data in the Hospital IQR Program if we deem that the data are accurate enough to be publicly reported (78 FR 50816). As described in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57176), we will not conduct the first validation of eCQM data until spring of 2018 to validate data from the CY 2017 reporting period. Validation of CY 2017 data during spring of 2018 affects the FY 2020 payment determination (81 FR 57177).

We believe it is important to confirm the validity of quality performance data before it is publicly reported on the *Hospital Compare* Web site. A number of commenters have expressed concerns about the accuracy of eCQM data or the comparability of eCQM data to non-electronic CQMs, and a full validation of the CY 2017 data will allow us to assess the merit of these concerns. Once we have analyzed the first year of eCQM data validation results, we will determine whether the data should be publicly reported the *Hospital Compare* Web site.

After consideration of the public comments we received, we are finalizing a modification of our proposal, such that instead of requiring submission of 6 eCQMs for the first three calendar quarters (Q1–Q3) of CY 2018, we are further reducing requirements, such that hospitals are required to report only one, self-selected calendar quarter of data for 4 eCQMs for the CY 2018 reporting period/FY 2020 payment determination. We also refer readers to section IX.E.2.b. of the preamble of this final rule where we are finalizing the same modified policy for

CQM electronic reporting requirements under the Medicare and Medicaid EHR Incentive Programs.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20051), we stated that the proposals related to the CY 2017 reporting period/FY 2019 payment determination and CY 2018 reporting period/FY 2020 payment determination, if finalized, would also have implications for eCQM validation in the Hospital IQR Program. Validation of eCQM data under the Hospital IQR Program is set to begin using CY 2017 reported data for the FY 2020 payment determination, as finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57153 through 57181). We refer readers to section IX.A.11. of the preamble of this final rule where we discuss our finalized validation policies.

#### 9. Possible New Quality Measures and Measure Topics for Future Years

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53510 through 53512), we outlined considerations to guide us in selecting new quality measures to adopt into the Hospital IQR Program. Specifically, we seek to adopt measures for the Hospital IQR Program that would: (1) Promote better, safer, more efficient care; (2) expand the pool of measures to include measures that aim to improve patient safety; (3) support the NQS' three-part aim of better health care for individuals, better health for populations, and lower costs for health care by creating transparency around the quality of care at inpatient hospitals to support patient decision-making and quality improvement; (4) collect data in a manner that balances the need for information related to the full spectrum of quality performance and the need to minimize the burden of data collection and reporting; (5) weigh the relevance and utility of the measures compared to the burden on hospitals in submitting data under the Hospital IQR Program; (6) to the extent practicable, consider measures that have been nationally endorsed by a multi-stakeholder organization, developed with the input of providers, purchasers/payers, and other stakeholders, and aligned with best practices among other payers and the needs of the end users of the measures; (7) in the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed, give due consideration to measures that have been endorsed or adopted by a consensus organization identified by the Secretary; (8) give priority to measures that assess performance on conditions that result in the greatest mortality and morbidity in

the Medicare population, are high volume and high cost for the Medicare program, and for which wide cost and treatment variations in the Medicare population have been reported across populations or geographic areas despite established clinical guidelines; (9) focus on selecting measures that will also meet the Hospital VBP Program measure inclusion criteria and advance the goals of the Hospital VBP Program by targeting hospitals' ability to improve patient care and patient outcomes; and (10) align with the HHS Strategic Plan and Initiatives<sup>174</sup> and the CMS Strategic Plan.<sup>175</sup>

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20051 through 20064), in keeping with these considerations, we invited public comment on the potential future inclusion of the following seven measures in the Hospital IQR Program (one measure related to the quality of informed consent documents, four measures that evaluate end-of-life processes and outcomes for cancer patients, and two measures that evaluate nursing skill mix):

- Quality of Informed Consent Documents for Hospital-Performed, Elective Procedures measure;
- Proportion of Patients Who Died from Cancer Receiving Chemotherapy in the Last 14 Days of Life measure (NQF #0210);
- Proportion of Patients Who Died from Cancer Not Admitted to Hospice measure (NQF #0215);
- Proportion of Patients Who Died from Cancer Admitted to the ICU in the Last 30 Days of Life measure (NQF #0213);
- Proportion of Patients Who Died from Cancer Admitted to Hospice for Less Than Three Days measure (NQF #0216);
- Skill Mix (Registered Nurse [RN], Licensed Vocational/Practical Nurse [LVN/LPN], Unlicensed Assistive Personnel [UAP], and contract) (Nursing Skill Mix) Measure (NQF #0204); and
- Nursing Hours per Patient Day Measure (NQF #0205).

We also are considering newly specified eQMs for possible inclusion in future years of the Hospital IQR and Medicare and Medicaid EHR Incentive Programs. These measures are listed and these topics are further discussed below.

- Safe Use of Opioids—Concurrent Prescribing;

<sup>174</sup> HHS Strategic Plan, available at: <https://www.hhs.gov/about/strategic-plan/>.

<sup>175</sup> CMS Strategy: The Road Forward 2013–2017, available at: <https://www.cms.gov/About-CMS/Agency-Information/CMS-Strategy/Downloads/CMS-Strategy.pdf>.

- Completion of a Malnutrition Screening within 24 Hours of Admission;
- Completion of a Nutrition Assessment for Patients Identified as At-Risk for Malnutrition within 24 Hours of a Malnutrition Screening;
- Nutrition Care Plan for Patients Identified as Malnourished after a Completed Nutrition Assessment;
- Appropriate Documentation of a Malnutrition Diagnosis;
- Tobacco Use Screening (TOB–1);
- Tobacco Use Treatment Provided or Offered (TOB–2)/Tobacco Use Treatment (TOB–2a);
- Tobacco Use Treatment Provided or Offered at Discharge (TOB–3)/Tobacco Use Treatment at Discharge (TOB–3a);
- Alcohol Use Screening (SUB–1);
- Alcohol Use Brief Intervention Provided or Offered (SUB–2)/Alcohol Use Brief Intervention (SUB–2a); and
- Alcohol & Other Drug Use Disorder Treatment Provided or Offered at Discharge (SUB–3)/Alcohol & Other Drug Use Disorder Treatment at Discharge (SUB–3a).

a. Potential Inclusion of the Quality of Informed Consent Documents for Hospital-Performed, Elective Procedures Measure

#### (1) Background

The process and documentation of informed consent for surgical procedures is an ethical obligation and legal mandate intended to uphold patient autonomy. It is also a standard part of clinical practice performed prior to most procedures and therapies with material risks. This process provides information to patients about the associated risks and benefits, alternative treatment options, and what to expect during and after the procedure. As described in the literature and reported by patients, comprehensive informed consent documents can improve patient comprehension and satisfaction, and support patients in making decisions that are aligned with their expectations, preferences, and goals.<sup>176 177 178 179 180 181 182</sup>

<sup>176</sup> Arnold SV, Decker C, Ahmad H, et al. Converting the informed consent from a perfunctory process to an evidence-based foundation for patient decision making. *Circ Cardiovasc Qual Outcomes*. 2008;1(1):21–28.

<sup>177</sup> Zuckerman MJ, Shen B, Harrison ME, et al. Informed consent for GI endoscopy. *Gastrointestinal endoscopy*. 2007;66(2):213–218.

<sup>178</sup> Wu HW, Nishimi RY, Page-Lopez CM, Kizer KW. Improving Patient Safety Through Informed Consent for Patients with Limited Health Literacy. An implementation report. National Quality Forum; 2005. Available at: [http://www.qualityforum.org/Publications/2005/09/Improving\\_Patient\\_Safety\\_Through\\_Informed\\_Consent\\_for\\_Patients\\_with\\_Limited\\_Health\\_Literacy.aspx](http://www.qualityforum.org/Publications/2005/09/Improving_Patient_Safety_Through_Informed_Consent_for_Patients_with_Limited_Health_Literacy.aspx). Accessed: July 5, 2016.

Despite their importance, and our regulations in the Conditions for Participation Guidelines,<sup>183</sup> informed consent documents are frequently generic, lack information that is relevant to the procedure, and include illegible, hand-written information. Moreover, patients are often given and asked to sign the informed consent document minutes before the start of a procedure when they are most vulnerable and least likely to ask questions.

Therefore, we developed the Measure of Quality of Informed Consent Documents for Hospital-Performed, Elective Procedures (hereinafter referred to as, Quality of Informed Consent Documents measure). This measure was developed in conjunction with feedback from patients and patient advocates convened by the measure developers, all of whom affirmed the measure captured the most salient elements of informed consent documents, and represented a minimum, though significant, standard all hospitals should meet. We recognize the Quality of Informed Consent Documents measure does not capture all aspects of the informed consent process or all aspects of quality related to patient engagement in shared decision making. However, we view the Quality of Informed Consent Documents measure as a critical first step to incentivize hospitals to improve the informed consent process and to ensure patients receive basic information in a written format which is understandable, legible and presented with sufficient time allowed for questions and deliberation. The members of the patient workgroup involved in measure development also agreed with this determination and supported the measure.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20052 through 20055), we stated that we are considering including the Quality of Informed Consent Documents measure in the Hospital IQR Program in future rulemaking.

## (2) Overview of Measure

Improving the quality of informed consent documents is a fundamental step for advancing patient-centered decision making.<sup>184 185 186 187 188 189</sup> The written quality of informed consent documents is a critical component of the informed consent process, and hospitals have a role in ensuring their patients have the information they need in a readable form and with time to consider their options. We expect the Quality of Informed Consent Documents measure will help to pave the way for future measures which evaluate other components of the informed consent process, including shared decision-making.

The measure focuses on the quality of informed consent documents for elective procedures. Further, with a focus on ensuring that each person and family is engaged as partners in their care, this measure addresses the NQS priority of promoting effective communication and coordination of care. Elective procedures were chosen as the focus of the measure because all elective procedures have informed consent documents as standard practice. In addition, we believe patients undergoing elective, rather than emergent surgery, will benefit from a measure aimed at optimizing communications about the risk, benefits, and purpose of the procedure because there are typically reasonable alternatives to elective procedures and

different patients may choose different options depending on their preferences, values, and goals. Further, elective procedures usually allow ample decision time and do not require expedited explanations and decisions due to life threatening situations.

The measure would require hospitals to evaluate a sample of their informed consent documents from elective procedures performed among Medicare FFS patients aged 18 years and older hospitalized at acute care hospitals. The measure uses administrative claims to select a stratified random sample of elective procedures across specialties that are performed in hospitals. The informed consent documents associated with these procedures are reviewed and abstracted by trained personnel using a validated Abstraction Tool. Abstractors are trained using standard instructions, videos, and test documents with audit review we have developed. For additional information about the training materials and procedures, see the measure methodology report on our Web site available at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>. After completing this training, we estimate the abstraction time is approximately four minutes per document and the inter-rater reliability is high. The tool captures 10 items which are fundamental to informed consent document quality. Documents are scored on a scale of 0 to 20, with 20 representing a better quality document. Document scores are then aggregated to calculate hospital-level performance on the measure. The measure is not risk adjusted because patient characteristics should not impact informed consent document quality. We invited public comment on how the measure would be reviewed and implemented.

We developed the Quality of Informed Consent Documents measure in 8 hospitals, and demonstrated the measure to be valid, reliable, feasible and of minimal hospital burden. We then tested the measure among a sample of 25 additional hospitals, which also showed feasibility and low burden on hospitals. In both the development and testing samples, we observed overall low performance on the measure, with intra-hospital and inter-hospital variation in the quality of consent documents. The Quality of Informed Consent Documents measure aligns with our goal to increase opportunities for shared decision making with patients and the NQS priorities of: (1) Ensuring person- and family-centered care; and (2) promoting effective communication

and coordination of care. For details on development and testing, we refer readers to the measure methodology report on our Web site at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

## (3) Data Sources

The measure uses two sources of data to calculate the Quality of Informed Consent Documents measure: Medicare Part A administrative claims, specified below, to generate a random sample of qualified elective procedures performed at each hospital; and a sample of each hospital's informed consent documents and the first page of the procedure/operative report for those elective procedures. Basing the sample selection on administrative data to identify medical records of elective procedures ensures a diversity of informed consent documents on a range of procedures will be reviewed, and minimizes selection bias.

## (4) Outcome

The outcome for the Quality of Informed Consent Documents measure is a quality score which is calculated by aggregating the scores for individual informed consent documents from each hospital assessed with the Abstraction Tool. The items selected for inclusion in the Abstraction Tool were important to patients, supported by evidence in the literature and published standards and guidelines, applicable to the cohort of elective procedures, easily abstracted from medical records without undue burden on patients and hospitals, and feasibly and reliably measured. These elements are also meaningful components of informed consent document quality from the patient perspective. Further, we received consistent feedback from all participating hospitals during testing of this measure that this information was useful for hospitals' efforts to improve their informed consent documents and processes by identifying important gaps in existing documentation. Quality scores on each informed consent document will be aggregated to derive a hospital-level performance score.

The measure outcome does not overlap with our current regulations holding hospitals accountable for informed consent pursuant to our Conditions of Participation or The Joint Commission 2009 Requirements Related to the Provision of Culturally Competent Patient-Centered Care Hospital

Accreditation Program (HAP),<sup>190</sup> and fully aligns with State laws within the few States which have more specified informed consent rules. Current Conditions of Participation regulations focus on whether informed consent occurred and emphasize informed consent documents should include the name of the hospital, procedure, and practitioner performing the procedure along with a statement certifying the procedure, anticipated benefits, material risks, and alternative treatment options were explained to the patient or the patient's legal representative.<sup>191</sup> The Joint Commission offers additional guidance for best practices.<sup>192</sup> However, there are no regulations to ensure hospitals provide patients with adequate written information about the procedure. We believe the use of this measure would supplement and augment existing standards by incentivizing hospitals to provide a minimum set of critical information about an elective procedure to the patient within a reasonable time before the patient undergoes the procedure and to enable the patient to receive and process the information prior to signing and providing informed consent.

#### (5) Cohort

The cohort for the Quality of Informed Consent Documents measure includes informed consent documents for a randomly selected sample of qualifying elective surgical procedures performed within non-federal acute care hospitals performed on Medicare FFS beneficiaries, aged 18 years and over who are enrolled in Part A at the time of the procedure. The list of qualifying elective procedures includes procedures for which informed consent is standard practice. The list of qualifying procedures is broad, capturing 10 specialties and various levels of invasiveness. For example, electively-performed knee replacements and coronary artery bypass surgeries are both included. For more information about the list of qualifying procedures,

we refer readers to the measure methodology report on our Web site available at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

#### (6) Inclusion and Exclusion Criteria

Qualifying electively-performed procedures were identified using the AHRQ Clinical Classification Software (CCS) codes<sup>193</sup> from the list of potentially planned procedures and the list of acute discharge diagnosis AHRQ CCS codes in the CMS Planned Readmission Algorithm. The Planned Readmission Algorithm used for existing CMS readmission measures was refined in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50211 through 50216). A complete description of the CMS Planned Readmission Algorithm, which includes lists of potentially planned procedures and acute discharge diagnoses, can be found on the CMS Web site at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

The CMS Planned Readmission Algorithm identifies a list of potentially planned procedures and a list of acute discharge diagnosis codes. Admissions that have a potentially planned procedure without an acute discharge diagnosis code are considered planned according to the CMS Planned Readmission Algorithm. The Quality of Informed Consent Documents measure does not use the Planned Readmission Algorithm to identify planned versus unplanned readmissions. The measure builds upon the established approach of the Planned Readmission Algorithm to identify only electively-performed procedures because planned procedures are also commonly electively-performed. We used clinical expert review to further narrow the list of potentially planned procedures from the Planned Readmission Algorithm to those which are consistently electively-performed and likely to have informed consent obtained prior to every procedure.

The measure excludes highly specialized procedures, such as organ transplantation because they typically use unique informed consent processes; non-invasive radiographic diagnostic tests because informed consent standards may be different than

<sup>193</sup> Clinical Classifications Software (CCS) for ICD-9-CM Fact Sheet. Accessed at: <https://www.hcup-us.ahrq.gov/toolsoftware/ccs/ccsfactsheet.jsp>.

standards for invasive procedures and surgeries; and procedures that are conducted over several encounters since informed consent is likely only conducted prior to the first procedure. For more information about the list of qualifying procedures and excluded procedures, we refer readers to the measure methodology report on our Web site available at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

#### (7) Abstraction Tool

The Abstraction Tool is an instrument used to evaluate the quality of a hospital's informed consent documents based on a score of 0–20; a higher score indicates better quality. The Abstraction Tool is a checklist evaluating the presence of the following items in the consent document: A description of the procedure; how the procedure will be performed; the rationale for why the procedure will be performed; and the risks, benefits, and alternatives to the procedure. The Abstraction Tool also includes an item to assess whether patients received the document at least one calendar day in advance of the procedure date. Inclusion of the timing item ensures informed consent documents are not shared for the first time with patients on the day of the procedure. The Abstraction Tool provides an option for hospitals to note if a patient chose to opt out of signing their informed consent document 24 or more hours before surgery, enabling full credit to be given to the hospital for this item in that scenario. In addition, the tool gives credit for sharing the document prior to the day of the procedure, even if the patient does not sign the document until the day of the procedure. These aspects were raised with the patient and patient advocate workgroup and deemed to be more flexible to a range of scenarios and contexts, and therefore more patient-sensitive. To assess the reliability of the Abstraction Tool, we examined the inter-rater reliability (the degree of agreement among abstractors) of each item on the Abstraction Tool as well as the document scores produced by the Abstraction Tool for 80 of the 800 documents tested from the pilot project hospitals. For additional information about testing refer to our Web site at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

Abstractors enter responses for each item evaluated in each informed consent document. We would provide

comprehensive standardized training materials including an instruction manual with guidance and examples of what meets criteria for each item in the Abstraction Tool, a training video, and sample test documents. This process has previously been piloted and found to be effective and efficient. For more information about the Abstraction Tool and instructions manual, we refer readers to our Web site at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

#### (8) Calculating the Measure Score

The measure will be calculated by aggregating the scores of the sample of hospitals' informed consent documents, as assessed using the Abstraction Tool. Based on input from stakeholders during the measure development stage, including the Technical Expert Panel convened by the measure developer, and feedback from patients and patient advocates, we are considering reporting the proportion of a hospital's sampled informed consent documents that achieve a pre-specified threshold score. For example, the proportion of a hospital's sampled informed consent documents which meet a minimum, patient-centered standard. We are considering setting the threshold score at 10 (out of 20 total points), and increasing the threshold over time. The stakeholders we sought input from during the measure development process agreed with incrementally increasing the threshold score over time. This would establish an initial target that hospitals could feasibly meet in a short period of time, and allow for further informed consent improvement. Ultimately, we envision this measure would either evolve to include additional components or could complement a measure of shared decision making when an appropriate measure becomes available for potential use in the Hospital IQR Program.

Using this scoring approach, performance scores among the 25 hospitals in the testing sample were poor. The median hospital level score, based on evaluation of 100 informed consent documents, ranged from 0 (95 percent CI: 0–5) to 12 (95 percent CI: 10–12) out of a total of 20 points. The proportion of documents achieving a threshold score of at least 10 (out of 20 points) per hospital, ranged from 0 percent to 70 percent, demonstrating that the quality of informed consent documents varies both within and between hospitals.

#### (9) Implementation

We are considering two implementation approaches. One approach implements the measure in a centralized fashion where hospitals send their sample of informed consent documents directly to CMS or to an entity contracted by us for central abstraction and measure score calculation. Another approach is local; hospitals abstract their own informed consent documents and transmit the abstraction results to CMS for measure calculation.

During measure development, we worked closely with hospitals to evaluate the burden associated with each approach. The greatest burden was associated with copying and electronically sending informed consent documents, making centralized abstraction a more burdensome option for hospitals. Using a brief formal training process and materials to prepare abstractors, we found hospital abstractors can reliably abstract documents at a rate of 15–20 documents per hour or 3–4 minutes per document. The final sample size required for measure reporting has not been determined but will not exceed 100 documents per hospital and may be substantially fewer than 100 documents per hospital.

Implementation would entail identifying a hospital's elective procedures which meet eligibility for the Quality of Informed Consent Documents measure using administrative claims data. We would then provide hospitals with a list of procedures and encounter dates selected from a hospital's eligible elective procedures, along with the HIC number and date of birth of the patient who had the procedure in order to identify the medical record, the qualifying procedure, and the corresponding informed consent document and operative report. Hospitals would then locally evaluate the informed consent documents for these procedures using the Abstraction Tool and transmit the results of the abstraction through a secure data file transfer or similar process, such as the QualityNet Secure Portal or the External File Online Tool. We would then calculate and report the results as the proportion of a hospital's sampled informed consent documents achieving the threshold score of 10 out of 20. Hospitals could submit data on the prior year's informed consent documents on an annual basis or more frequently, such as quarterly or every six months, allowing for more rapid cycle improvements in measure performance. If we were to pursue a

local abstraction approach, we would also consider expanding the data validation process in the Hospital IQR Program to ensure hospitals' abstraction work was accurate, requiring hospitals to submit select informed consent documents to us or an entity contracted by us via a secure mechanism for review and validation.

The Quality of Informed Consent Documents for Hospital-Performed, Elective Procedures (MUC16–262) measure is included in a publicly available document entitled “2016–2017 Spreadsheet of Final Recommendations to HHS and CMS,” which is available on the NQF Web site.<sup>194</sup> The MAP did not support this measure, indicating concern about the lack of evidence that implementation will affect hospital practices and the complexity of existing guidelines, regulations and State laws related to informed consent. Further, the MAP noted that this measure captures the quality of informed consent documents rather than the quality of communication between patients and their providers.<sup>195</sup> However, the MAP noted that this measure concept is critical for shared decision making, and recommended that future measures on informed consent be patient-centered. In addition, the MAP noted that this measure should demonstrate reliability and validity, at the facility level, in the hospital setting, prior to being suitable for inclusion in the Hospital IQR Program measure set. Lastly, the MAP recommended the measure be submitted to NQF for review and endorsement.<sup>196</sup>

We invited public comment on multiple aspects of the measure. Specifically, we sought public comment on the potential scoring approach described above, reporting the proportion of a hospital's sampled informed consent documents, and setting a threshold score of 10 out of 20. In addition, we sought input on how the measure should be implemented, either through local abstraction where hospitals provide us with the results of their own abstraction work or by transmitting informed consent documents to us for centralized abstraction. We also sought public comment on the frequency of measure reporting for this measure, whether annually, quarterly, or at some other interval. More frequent reporting updates would require hospitals to abstract documents and submit the

<sup>194</sup> “2016–2017 Spreadsheet of Final Recommendations to HHS and CMS, available at: <http://www.qualityforum.org/map/>.

<sup>195</sup> “2017 Considerations for Implementing Measures Hospitals-Final Report,” available at: <http://www.qualityforum.org/map/>.

<sup>196</sup> *Ibid.*

results more often than less frequent reporting. Finally, we sought input on a potential validation process for the Quality of Informed Consent Documents measure.

*Comment:* Many commenters supported the future inclusion of the “Quality of Informed Consent Measure.” The commenters noted that this measure is critical to patient care because it would establish standards for informed consent that would help to alleviate confusion patients have about their care (by awarding credit for the use of lay terms on the consent document) and provide opportunities for patients to ask questions (because the consent documents that are shared with patients in advance of a procedure are given credit). The commenters also stated that the more patients are empowered to be proactive and educated in their own care, the more the care provided will align with their preferences and goals. In addition, the commenters noted that measurement of informed consent documents is important because communication about care is essential to patients and their families since written information, when provided in advance, can be reviewed and shared. Further, the commenters suggested that implementing this measure would instate new standard operating procedures that could improve the patient experience. To that end, the commenters recommended that the consent forms be tailored to patient-centered care by indicating diagnosis, procedure, and alternative methods of treatment. Lastly, the commenters suggested that the document also include any/all known harmful drug and/or procedural side effects so patients are fully informed of what to expect.

*Response:* We thank the commenters for their support. The current version of the Abstraction Tool evaluates the informed consent document for the presence, readability, and legibility of the procedure name and a description of how the procedure is performed. It also assesses whether the document includes the rationale for the procedure (including the diagnosis), a quantitative and qualitative description of the risks associated with the procedure, patient-oriented benefits of the procedure (in other words, the physical impact of the procedure on patients), and alternatives to the procedure. The Tool also assesses whether the document was shared with the patient at least one calendar day prior to the procedure. These elements of informed consent documents were selected and developed for the measure in close partnership with a patient workgroup; they represent priority

quality standards that are feasible to abstract reliably. The Tool gives credit for each item, and gives a score of 0 to 20; as such, the measure would demonstrate variation in quality between informed consent documents within a single hospital, and would illuminate overall quality differences between hospitals. In addition to illuminating quality, the measure is intended to incentivize hospitals to produce more patient-centered informed consent documents that meet, at a minimum, the standards set forth in this tool.

*Comment:* Many commenters supported the future inclusion of the “Quality of Informed Consent” measure in the Hospital IQR Program measure set, but provided several recommendations for CMS to consider. Specifically, the commenters suggested being more prescriptive about the content and form of the description of alternative treatments, noting that this content should contain comparative benefits versus risks and a disclosure of any financial incentives in place. In addition, the commenters noted that the provided scoring standard is limited in the number of elements that are essential for an informed consent document. Commenters noted that facilities could develop a standardized consent form that meets the criteria of all elements that are specified in the measure.

*Response:* We thank the commenters for their support and will consider these recommendations in planning for any potential future proposal of this measure. We acknowledge that although the Abstraction Tool captures many aspects of informed consent documents which commenters noted were important, it does not currently require a description of the comparative benefits versus risks associated with different treatment options or a disclosure of any financial incentives in place. While we believe the current Abstraction Tool effectively and concisely captures key elements of informed consent document quality that represent a minimum standard for informed consent documents that are meaningful to patients, we will continue to collect and evaluate feedback from stakeholders and consider commenters’ suggestions to refine the Abstraction Tool during ongoing measure re-evaluation work. The measure is intended to evaluate quality and illuminate deficiencies in the current informed consent process. We hope this measure would lead hospitals to produce more patient-centered informed consent documents that meet, at a

minimum, the standards set forth in this measure.

*Comment:* Other commenters encouraged CMS to require shared decision making for its hospital elective procedures and for all conditions that it has identified under its *Beneficiary Engagement* models. Many commenters suggested that informed consent should be a shared process when the patient has a partner or spouse. Other commenters also recommended that the measure developer consider incorporating the American College of Surgeons (ACS) principles in the development of the informed consent document and capture the informed consent discussion, not simply the timing of when the legal document is shared. Other commenters were concerned that this measure focused on documentation rather than the actual communication process.

*Response:* This measure evaluates one aspect of the quality of informed consent and is not intended to be a comprehensive measure of the informed consent process or shared decision-making. It is intended as an initial step toward improving the informed consent process and represents a minimum requirement for optimal informed consent and shared decision-making. The measure assesses basic elements of the informed consent document and captures when the document is shared with the patient, a signal of when an informed consent discussion took place. We did not consider the elements of the *Beneficiary Engagement* models, as they pertain to shared-decision making and not specifically to the informed consent document. Additional information about *Beneficiary Engagement* models can be found on the CMS Innovation Center Web site at: <https://innovation.cms.gov/initiatives/Beneficiary-Engagement/>. Regarding commenters’ concern that the focus of the measure is on documentation rather than the actual communication process, there are significant challenges in both the methods and feasibility of assessing whether shared decision-making occurred prior to a broad range of elective procedures. While we acknowledge that this measure of informed consent does not assess all aspects of decision-making quality, we believe the informed consent document is a critical part of the informed consent process. Patients and families have observed and experienced that many informed consent documents are of poor quality and in need of improvement. They have encouraged policymakers to work towards a more patient-centered standard. We have worked closely with patients, patient advocates, and families

to develop this measure, which provides a mechanism for assessing the quality of informed consent documents and the timing in relation to the procedure in which they are shared, as two aspects of the communication needed for informed decision-making. We received broad stakeholder support for the concept of measuring the quality of informed consent documents, and we believe this measure represents an important first step forward in improving high-quality decision-making. The measure would fill a significant gap in evaluating the quality of current informed consent documents. We will consider incorporating the American College of Surgeons (ACS) principles<sup>197</sup> and other aspects of shared decision-making in future versions of the measure.

*Comment:* A few commenters urged CMS to require that patient decision aids are certified pursuant to the certification criteria adopted by the NQF.

*Response:* We recognize commenters' desire to capture the use of patient decision aids, which are tools designed for patients who have certain conditions to help them think about what is important to them when discussing with their clinician the options for health management. While standards exist for what defines a decision aid, pamphlets about a procedure and patient instructions are frequently labeled as decision aids<sup>198</sup> despite not meeting the standards. As such, without the certification of decision aids, there is a risk of incentivizing the use of low-quality tools. While certification may be feasible in the future, at the current time, no national certification program exists. The NQF has put forth criteria for certifying decision aids, though the process for doing so has yet to be defined. We refer readers to the NQF Web site for more information regarding the decision aids project at: [http://www.qualityforum.org/Decision\\_Aids.aspx](http://www.qualityforum.org/Decision_Aids.aspx). We will continue to evaluate the inclusion of decision aids as well as other elements of high-quality informed consent documents, as suggested above.

*Comment:* Several commenters expressed concerns about the Quality of Informed Consent measure's lack of NQF endorsement.

*Response:* Although the Quality of Informed Consent measure has yet to undergo NQF endorsement review, the measure was developed according to

and adhering to the guidelines and standards from NQF. NQF provides measure evaluation criteria on its Web site at: [http://www.qualityforum.org/Measuring\\_Performance/Submitting\\_Standards/Measure\\_Evaluation\\_Criteria.aspx](http://www.qualityforum.org/Measuring_Performance/Submitting_Standards/Measure_Evaluation_Criteria.aspx). We plan to submit the measure for NQF endorsement during the next appropriate call for measures.

*Comment:* Several commenters expressed concern the Quality of Informed Consent measure fails to account for patient variables, such as health literacy and additional education.

*Response:* We recognize that patients of different levels of English language proficiency and health literacy may require tailored informed consent documents. The current measure assesses lay language in English. Future measure development efforts may consider adapting the Abstraction Tool used to evaluate the quality of informed consent documents in non-English languages and the technical capacity for literacy support (for example, text readers, large print, health coaches, etc.).

*Comment:* Several commenters stated that if hospitals are not communicating information necessary to achieve informed consent, the issue should be addressed through existing processes as opposed to layering on a new quality metric.

*Response:* We believe the Quality of Informed Consent measure would fill a gap in existing processes, which may not be sufficient to ensure high quality informed consent documentation. Guidelines do not specify which details should be included in the written informed consent document, despite the documents' design to support patient- and procedure-specific information. Research has shown there is no standardization of informed consent documents and often the most important information about the procedure is missing, illegible, or incomprehensible.<sup>199</sup> The Quality of Informed Consent measure is designed to set a basic standard for the quality of informed consent documents administered by hospitals and, as such, is an important quality improvement tool.

*Comment:* Several commenters indicated they did not believe this measure would lead to improved patient engagement. The commenters encouraged CMS to work with hospitals, patient advocates, Congress, and States

to streamline the amount of paperwork that patients, patient advocates, and their families are required to sign prior to or upon admission.

*Response:* We collaborated closely with patients in developing this measure in order to identify the essential elements of informed consent documents. We designed the measure to illuminate deficiencies with informed consent and to incentivize improved, patient-centered informed consent documents that are shared with patients ahead of the procedure, which we and our patient collaborators believe would lead to improved patient engagement and more meaningful informed consent documents. The measure is a first step towards increasing the attention and effort that hospitals dedicate to providing high-quality informed consent, a critical aspect of patient-centered decision making.

We appreciate the commenters' concerns about the burden of paperwork on patients. This measure assesses a practice that is already in place; informed consent documents are signed and scanned into patients' medical charts as routine medical care making them feasible to review without the need for further data collection.

*Comment:* Some commenters expressed concern about the future inclusion of the Quality of Informed Consent measure in the Hospital IQR Program. Specifically, the commenters were concerned about the administrative burden of abstraction or transmission of informed consent documents to CMS for centralized abstraction in order to report the Quality of Informed Consent measure, especially for large academic medical hospitals. The commenters requested that CMS allow hospitals ample time to review and implement each abstracted element prior to the data collection period. Further, the commenters stated that additional testing should be performed and workable solutions identified prior to implementation. In addition, the commenters believed the collective administrative burden of reporting this measure would be immense, costly, and would not commensurately improve value for the patient. Several commenters did not support the future inclusion of the Quality of Informed Consent measure, indicating that the measure does not assess quality of care and is significantly burdensome.

*Response:* We have performed testing across a diverse spectrum of hospitals and those findings indicate the measure would not be significantly burdensome. In developing this measure, we have worked with 33 hospitals to assess the feasibility of the abstraction process and

<sup>197</sup> American College of Surgeons Principles and Practice 7th Edition, available at: <http://booksmedicos.org/acs-surgery-principles-and-practice-7th-edition/>.

<sup>198</sup> Herrin J, Harris K, K K, Hines M, Frosch D. Patient and family engagement: a survey of US hospital practices. *BMJ Qual Saf.* 2016;25:182-9.

<sup>199</sup> Shahu A, Schwartz J, Perez M, Bernheim SM, Krumholz HM, Spatz ES. Discerning quality: an analysis of informed consent documents for common cardiovascular procedures. *BMJ Qual Saf.* 2016.

have determined it presents a low burden to hospitals. While abstraction was conducted centrally for the development and testing of the measure, we would recommend local abstraction of informed consent documents by hospital personnel, eliminating the transfer of documents. We have developed training materials and a process for easily identifying the informed consent document in the medical record and for rating the quality of informed consent documents. Among our test hospitals, experienced abstractors required less than 1 hour of training to be able to abstract documents accurately, with high inter-rater reliability, at a rate of approximately 3 minutes per document. We will continue to consider this feedback and would inform stakeholders about the abstraction process if we decide to move forward with proposing to adopt the Quality of Informed Consent measure in the Hospital IQR Program through future rulemaking. With regard to the comment that the Quality of Informed Consent measure does not assess quality of care, we have received positive feedback from patients, patient advocates, and patient families, both during measure development and during this public comment period in support of this measure as a meaningful metric of quality of care.

*Comment:* Some commenters expressed concern with the scoring standard used for determining a high-quality informed consent document, noting that the current threshold score is too low, and recommended that CMS raise the threshold to ensure overall form improvement via the inclusion of information on the suggested items of alternative treatments and comparative benefits versus risks. These commenters strongly recommended that CMS raise the minimum passing score of 10 out of 20 points substantially, to 18 out of 20 points. The commenters noted that changing a singular document at multiple intervals to improve the score requires unnecessary, repeated corporate and legal review and may also confuse providers as well as patients. Setting the threshold at a higher level from the beginning better serves both patients and hospitals. Lastly, some commenters noted that all the scores are solely based on a “Yes” or “No” checklist completed by a healthcare provider, and suggested that those response options are insufficient to adequately represent the patient experience.

*Response:* The threshold approach sets an external standard for quality. The threshold score we sought comment on (that is, the percentage of documents

scoring at least 10 out of 20 points) was supported by the patient working group and TEP which was convened by a contractor during measure development. The patient working group and TEP felt that an intermediate threshold would reward hospitals in their efforts to improve documents. While this standard would need to be set by consensus, the standard could increase as hospitals gain more experience with the measure, which would also decrease the initial burden of training.

We do not believe that increasing the threshold score over time would lead to repeated corporate or legal review, or be confusing to clinicians or patients, because hospitals could work to revise the content included in their informed consent document at one time and then focus on improving their score through efforts to share the documents at least one calendar day prior at a future time. These efforts may take longer, as they require changes in process and in some cases, the use of technology, but not necessarily corporate or legal review.

While we agree the “Yes” or “No” checklist does not capture the spectrum of informed consent document quality, we developed definitions and criteria for what qualifies as “passing” based on iterative review of consent forms from 33 hospitals, considering a range of elective procedures and using feedback from the patient workgroup. Thus, we believe that the “Yes” or “No” approach is a meaningful indicator of quality. Nonetheless, we recognize that quality exists on a spectrum, and we will take into consideration the commenters’ feedback in future development of the measure. We will continue to collect and evaluate feedback from stakeholders and consider commenters’ suggestions to refine the threshold used for initial measure implementation during ongoing measure re-evaluation work. We will inform stakeholders of any changes to the Abstraction Tool and/or minimum threshold in future rulemaking, should we move forward with proposing to adopt the Quality of Informed Consent Document measure for the Hospital IQR Program.

*Comment:* Several commenters also recommended that the manual abstraction process defined in the Quality of Informed Consent measure be converted to electronic extraction. Several commenters recommended that this be a voluntary measure in at least the first year of reporting to determine feasibility of being able to electronically capture the data. Other commenters suggested that manual abstraction should remain an option for those organizations that are not early adopters. One commenter encouraged

the use of Health Information Technology (HIT) to facilitate the informed consent process and suggested the inclusion of the Advancing Care Information requirements complementary to certified HIT standards (already in the 2015 Edition) that support patient specific education and clinical decision support selection for use in the selection of patient-specific informed consent, and the patient’s response incorporated into the HIT using the existing clinical content document (CCD–CCDA) standards.

*Response:* The measure currently utilizes a manual abstraction process, but we agree electronic extraction could potentially improve efficiency and decrease reporting burden in the future. Specifically, we appreciate the suggestion that this measure might be appropriate for the Advancing Care Information performance category under the Merit-based Incentive Payment System (MIPS), which is part of the Quality Payment Program established under the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA).<sup>200</sup> We also recognize that some hospitals already have in place technology to assist with providing informed consent documents to patients. The purpose of the Quality of Informed Consent measure is to improve the quality of informed consent documents rather than assessing the methods by which hospitals choose to provide their informed consent documents to patients. We encourage innovation in informed consent development and delivery to patients. This measure captures hospital quality by assigning higher ratings to informed consent documents that are patient- and procedure-specific and that are shared with patients ahead of their procedures. We will consider additional abstraction options prior to proposing to adopt this measure for the Hospital IQR Program in the future.

We thank the commenters and we will consider their views as we develop future policy regarding the use of a Quality of Informed Consent Documents for Hospital-Performed, Elective Procedures measure in the Hospital IQR Program.

#### b. Potential Inclusion of Four End-of-Life (EOL) Measures for Cancer Patients (1) Background

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20055 through 20056), we discussed the potential use of palliative and end-of-life care measures in the Hospital IQR Program.

<sup>200</sup> <https://qpp.cms.gov/mips/advancing-care-information>.

The quality of palliative and end-of-life care has been identified as a measurement gap in the Hospital IQR Program.<sup>201</sup> End-of-life care may be defined as “comprehensive care that addresses medical, emotional, spiritual, and social needs during the last stages of a person’s terminal illness.”<sup>202</sup> While end-of-life care may include palliative care, palliative care is generally defined as multi-faceted, holistic care that anticipates, prevents, and alleviates suffering.<sup>203</sup> Both palliative and end-of-life care can be provided when a patient is receiving hospice services, but it is not necessary for a patient to be admitted to hospice to receive such care. Hospitals are encouraged to counsel patients about palliative and end-of-life care; however, the National Academy of Medicine (NAM) of the National Academies has noted that “too few patients and families receive this help [palliative and end-of-life care] in a timely manner,”<sup>204</sup> despite evidence that this care improves patient quality of life. In the same report, the NAM proposed a number of core components of quality palliative and end-of-life care. These proposals included offering a referral to hospice if a patient “has a prognosis of 6 months or less” and regular revision of a patient’s care plan to address the patient’s changing needs, as well as the changing needs of the patient’s caregivers.<sup>205</sup> The four palliative and end-of-life measures described below seek to improve the quality of care for cancer patients.

## (2) Overview of Measures

All four of these end-of-life measures seek to assess the quality of end-of-life care for patients who died of cancer in order to improve the quality of end-of-life care for future cancer patients. As such, the four palliative and end-of-life measures all address the NQS priority of communication and care coordination. The Proportion of Patients Who Died from Cancer Receiving Chemotherapy in the Last 14 Days of Life (EOL-Chemo) (NQF #0210) measure evaluates the proportion of patients who died from cancer who received chemotherapy in the last 14 days of life. This measure was finalized for CY 2017 for the MIPS

(81 FR 77672). The Proportion of Patients Who Died from Cancer Not Admitted to Hospice (EOL-Hospice) (NQF #0215) measure assesses the proportion of patients who died from cancer who were not admitted to hospice and evaluates whether or not patients were admitted to hospice. The Proportion of Patients Who Died from Cancer Admitted to Hospice for Less Than Three Days (EOL-3DH) (NQF #0216) measure evaluates whether patients who were admitted to hospice were admitted to hospice late in the course of their illness, defined as within three days of their death. The Proportion of Patients Who Died from Cancer Admitted to the ICU in the Last 30 Days of Life (EOL-ICU) (NQF #0213) measure assesses whether cancer patients were admitted to the ICU in the last 30 days of their lives.

These measures were reviewed by the MAP in December of 2016 for the PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program (MUC16–271, MUC16–273, MUC16–274, and MUC16–275).<sup>206</sup> The MAP Hospital Workgroup supported the inclusion of these measures in the PCHQR Program. Specifically, the MAP stressed the importance of end-of-life care as an area of cancer care that needs improvement and noted that these measures could help improve the patient and caregiver experience. The MAP also noted these measures could help encourage the use of hospice care and help avoid aggressive treatment in the last days of life, as unnecessary treatment at the end of life has been found to negatively impact a person’s quality of life.<sup>207</sup> We note that prior to implementation in the Hospital IQR Program, these measures would require a subsequent review from the MAP to assess appropriateness for programmatic inclusion.

With additional testing to assess the appropriateness of these measure in the acute care setting, we believe that these measures may be suitable for the Hospital IQR Program because they provide insight on the quality of end-of-life care for cancer patients provided in inpatient settings other than at PPS-exempt cancer hospitals. Currently, the Hospital IQR Program measure set does not contain any measure that assesses end-of-life care. As such, the future inclusion of these measures could promote the expansion of the Hospital IQR Program measure set to include a

more robust set of measures that evaluate end-of-life care and address the NQS priority of improving person and family engagement. In addition, because these measures are specific to cancer patients, future inclusion would promote programmatic alignment between the Hospital IQR and PCHQR Programs should these measures be finalized as discussed in section IX.B.4.b. of the preamble of the final rule for inclusion in the PCHQR Program.

Additional information on these measures is available at: [http://www.qualityforum.org/Publications/2016/12/Palliative\\_and\\_End-of-Life\\_Care\\_2015-2016.aspx](http://www.qualityforum.org/Publications/2016/12/Palliative_and_End-of-Life_Care_2015-2016.aspx).

We invited public comment on the possible future inclusion of one or more of these end-of-life measures in the Hospital IQR Program.

*Comment:* Many commenters supported the proposed future inclusion of the End of Life Cancer measure set. The commenters believed that these measures represent a good start to ensuring that patients with cancer, who are at the end of life, receive appropriate care that serves to protect quality of life. The commenters indicated that the data from these measures would be useful in evaluating the impact of the use or lack of use of hospice services, and influential in improving the care of those with advanced illness. The commenters also stated there is a pressing need to establish additional quality measures that support evidence-based care for individuals with advanced illness and recommended CMS consider expanding measures to include additional illnesses, provider types, and use in additional care settings. In addition, commenters encouraged CMS to pair these utilization measures with measures of shared care planning, such as an assessment of how closely care received aligns with patient preferences and goals. Lastly, commenters noted these measures have been thoroughly tested and are NQF-endorsed. Some commenters suggested that CMS consider adding additional measures (“Advance Care Plan” (NQF #0326) and “Patients Admitted to the ICU Who Have Care Preferences Documented” (NQF #1626)) to the Hospital IQR Program. The commenters stated these two measures would help fill a gap in the Program by ensuring that hospitals have documented patients’ care preferences and make efforts to revisit and update these preferences as conditions change and critical care is needed.

*Response:* We thank the commenters for their support. We will consider the

<sup>201</sup> National Quality Forum, Final Report. Palliative and End-of-Life Care 2015–2016, available at: [http://www.qualityforum.org/Palliative\\_and\\_End-of-Life\\_Care\\_Project\\_2015-2016.aspx](http://www.qualityforum.org/Palliative_and_End-of-Life_Care_Project_2015-2016.aspx).

<sup>202</sup> *Ibid.*

<sup>203</sup> *Ibid.*

<sup>204</sup> Committee on Approaching Death: Addressing Key End of Life Issues, Institute of Medicine: Dying in America: Improving Quality and Honoring Individual Preferences Near the End of Life. Washington, DC, National Academies Press, 2015.

<sup>205</sup> *Ibid.*

<sup>206</sup> 2016–2017 Spreadsheet of Final Recommendations to HHS and CMS, Available at: <http://www.qualityforum.org/ProjectMaterials.aspx?projectID=75367>.

<sup>207</sup> “2017 Considerations for Implementing Measures Hospitals-Final Report,” available at: <http://www.qualityforum.org/map/>.

possibility of pairing these measures with measures of shared care planning if we move forward with proposing one or more these measures for future adoption in the Hospital IQR Program. Further, we will assess the suitability of the suggested measures (“Advance Care Plan” (NQF #0326) and “Patients Admitted to the ICU Who Have Care Preferences Documented” (NQF #1626)), and any other measures that address patients with advance illness, as we consider future measures the Hospital IQR Program measure set. We recognize that in order for these measures to be considered for inclusion in the Hospital IQR Program measure set they would have to be re-specified for the inpatient setting. If the measure steward expands these end-of-life measures to include additional illnesses and provider types, we will examine how these additional variables affect their reliability and validity as we consider whether to propose to adopt these measures in the Hospital IQR Program in the future.

*Comment:* Some commenters did not support the proposed future inclusion of the End of Life cancer measures in the Hospital IQR Program. These commenters expressed concern that these measures are not adjusted to exclude patients from the numerator and denominator who have stated a desire to pursue aggressive treatment through the end of life.

*Response:* We acknowledge the commenters’ concerns that these measures are not adjusted to exclude patients from the numerator and denominator who have stated a desire to pursue aggressive treatment through the end of life. We note that prior to proposing to adopt the End of Life cancer measures in the Hospital IQR Program, these measures would require a subsequent review by the MAP to assess appropriateness for programmatic inclusion, which would include feedback on the appropriateness of numerator and denominator exclusion criteria. Should we decide to move forward with proposing to adopt these measures for the Hospital IQR Program in the future, we may consult the measure steward to determine whether patients who have undergone aggressive treatment through the end of life should be excluded from the measurement cohort.

*Comment:* Some commenters expressed concerns about the future inclusion of the End of Life cancer measure set in the Hospital IQR Program, noting that the proposed measures should remain only in the PCHQR Program, where they are more appropriate. The commenters expressed

that patient mix and cancer stage at time of diagnosis can greatly impact the measures. In addition, the commenters suggested that, although these are inpatient measures, they are highly dependent on access to ambulatory services (for example, hospice, palliative care, and supportive services), which is in limited supply in many geographic areas. Other commenters stated that because measure performance is predicated on the physician, who is responsible for the patient’s care, in instances where the hospital does not employ the oncologist (or primary care physician), the ability to drive performance improvement is limited. Further, these measures would disadvantage community hospitals that don’t employ the oncologists in their community. Some commenters recommended CMS test the measures for use in both cancer hospitals and IPPS acute hospitals and the measures be reviewed for NQF endorsement in those settings prior to proposing to implement the measures in a public quality reporting program. Other commenters suggested these measures be tested in facilities with cancer patients and that CMS should adjust the specifications as needed prior to implementation.

*Response:* We acknowledge the commenters’ concerns. We note that prior to proposing to adopt the End of Life cancer measures for the Hospital IQR Program, these measures would require testing in acute care hospitals by the measure steward, which would provide insight on the burden associated with data collection in these settings. Through testing the measure steward could be able to better assess the impact of factors such as patient mix and cancer stage at time of diagnosis, and determine if they should be a part of numerator and/or denominator exclusion criteria. Further, testing could help determine the impact of factors such as access to ambulatory services (as the commenter described) and the impact on quality of hospitals that have an oncologist on staff versus hospitals that do not. In addition, these measures would be subject to review by the MAP to assess appropriateness for Hospital IQR Program inclusion, which would include feedback on the appropriateness of risk adjustment, and the degree of specificity required in the measures’ components (for example, title, numerator description, denominator description, etc.) and to ensure no unintended consequences result, such as dis-incentivizing physicians to refer terminally ill patients to appropriate palliative care. We reiterate when the

MAP reviewed these measures for the PCHQR Program, it noted these measures could help encourage the use of hospice care and help avoid aggressive treatment in the last days of life, as unnecessary treatment at the end of life has been found to negatively impact a person’s quality of life.<sup>208</sup> Further, we believe these measures may be suitable for the Hospital IQR Program as well, because they could provide insight on the quality of end-of-life care for cancer patients provided in inpatient settings other than at PPS-exempt cancer hospitals.

*Comment:* Some commenters also expressed concerns about manual data collection for these items affecting data quality and reliability, and about unintended consequences, such as providers refraining from offering treatment of potential value in the face of prognostic uncertainty. The commenters suggested since not all cancer patients are terminal, at minimum, CMS should add the word “terminal” before the word “cancer” in each of the measures’ titles, which would avoid undesired penalties and incentivize physicians to refer terminally ill patients to appropriate palliative care. The commenters also recommended CMS consider the NQF palliative care measure for Documentation of Preferences for Patients Admitted to the ICU (NQF #1626) instead.

*Response:* We acknowledge the concerns about manual data collection for these items affecting data quality and reliability and about unintended consequences. As we noted above, prior to proposing to adopt the End of Life Cancer measures for the Hospital IQR Program in the future, these measures would require testing in the inpatient setting, which would provide insight on the burden associated with data collection in that setting. In addition, testing could provide the measure steward with data to be able to assess potential unintended consequences.

We thank the commenter for their suggested revision to the name of the measure, and will consider this, as well as the impact of terminally ill patients being a part of the measurement cohort, should we decide to move forward with proposing to adopt these measures for the Hospital IQR Program. We will consider the suggested measure (for Documentation of Preferences for Patients Admitted to the ICU (NQF #1626)) and any other measures that

<sup>208</sup> 2017 Considerations for Implementing Measures Final Report—Hospitals, available at: [http://www.qualityforum.org/Publications/2017/02/2017\\_Considerations\\_for\\_Implementing\\_Measures\\_Final\\_Report\\_-\\_Hospitals.aspx](http://www.qualityforum.org/Publications/2017/02/2017_Considerations_for_Implementing_Measures_Final_Report_-_Hospitals.aspx).

evaluate the quality of end-of-life care for cancer patients if we move forward with proposing adoption of these types of measures for the Hospital IQR Program in the future.

*Comment:* One commenter recommended CMS consider a more comprehensive approach to measurement for end of life care and advance care planning that is consistent with the Institute of Medicine's (IOM) recommendations and sensitive to patient preferences.

*Response:* We thank the commenter for their suggestion and will consider the National Academy of Medicine (NAM's) (formerly, the IOM) recommendations<sup>209</sup> and the impact of patient preferences should we move forward with proposing to adopt the End of Life cancer measures in the Hospital IQR Program in the future.

We thank the commenters and we will consider their views as we develop future policy regarding the use of one or more of these end-of-life measures in the Hospital IQR Program.

### c. Potential Inclusion of Two Nurse Staffing Measures

#### (1) Background

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20056 through 20059), we discussed the potential inclusion of two nurse staffing measures in the Hospital IQR Program. Nursing care is a core service of hospitals, and accordingly, hospital nurse staffing practices are increasingly recognized as a tool to improve the quality and value of patient care.<sup>210</sup> Studies have shown there is a link between appropriate nurse staffing and care quality and patient outcomes. For example, the AHRQ conducted a systematic review and meta-analysis examining the relationship between nurse staffing and patient outcomes. The review of 96 studies, published between 1990 and 2006, found that increased nurse staffing is associated with a reduction in hospital-related mortality and adverse patient events, such as respiratory failure, cardiac arrest, and hospital-acquired conditions.<sup>211</sup> A review of studies examining the impact of nurse staffing on hospital costs and patient

length of stay found that an increased level of registered nurse (RN) staffing may result in reduced patient length of stay and hospital costs.<sup>212</sup> Furthermore, recent literature has demonstrated appropriate nursing skill mix (including licensure level and area of training for specialty) and increased RN nursing hours are associated with decreased rates of patient falls, pressure ulcers, urinary tract infections, and bloodstream infections.<sup>213 214 215</sup>

We believe there is an opportunity for hospitals to develop nurse staffing strategies to improve quality and the value of care. The inclusion of nurse staffing measures in the Hospital IQR Program would allow hospitals to assess how their nurse staffing and skill mix compare to similar hospitals and State and national levels, as well as encourage hospitals to develop optimal nurse staffing plans that meet the needs of their patients and improve quality of care. Because of the important role of nursing in providing high value care, we sought public comment on including two nurse staffing measures in the Hospital IQR Program: (1) Skill Mix (Registered Nurse [RN], Licensed Vocational/Practical Nurse [LVN/LPN], Unlicensed Assistive Personnel [UAP], and Contract) (Nursing Skill Mix) Measure (NQF #0204); and (2) Nursing Hours per Patient Day Measure (NQF #0205).

These two measures (Skill Mix (Registered Nurse [RN], Licensed Vocational/Practical Nurse [LVN/LPN], Unlicensed Assistive Personnel [UAP], and Contract) (Nursing Skill Mix) Measure (NQF #0204) (MUCEO204) and Nursing Hours per Patient Day Measure (NQF #0205) (MUCEO205)), are included in a publicly available document entitled "Spreadsheet of MAP 2015 Final Recommendations," which

<sup>212</sup> Thungiaroenjul, P., Cummings, G.G., Embleton, A. (2007). The impact of nurse staffing on hospital costs and patient length of stay: A systematic review. *Nursing Economics*, 25(5).

Available at: <http://doi.org/10.1111/j.1741-6787.2012.00246.x>.

is available on the NQF Web site.<sup>216</sup> These measures address the NQS priority of effective prevention and treatment, and were reviewed by the MAP in 2014. The MAP noted the need for resolution of data issues, specifically that hospitals participating in the National Database of Nursing Quality Indicators® (NDNQI®) program can have their data directly shared with CMS while those that do not currently participate in that program have the opportunity to send their data directly to CMS. In addition, the MAP noted that, at the time, there was no gold standard for these measures, and thus it is difficult to access relative performance on these measures.<sup>217</sup> The final recommendation from that review was to conditionally support the inclusion of these measures, contingent upon review and endorsement by the NQF. We note these measures initially obtained NQF endorsement on August 5, 2009, and after subsequent review by the NQF for aggregation at the hospital level, the measures retained their endorsement as of December 10, 2015.<sup>218</sup> Further, we note approximately 2,000 hospitals are already reporting this information to the NDNQI®,<sup>219</sup> founded by the American Nurses Association (ANA).<sup>220</sup> NDNQI® data are not publicly reported.

We received a number of comments applicable to both measures and will respond to those first. A more detailed discussion of each of the two measures, along with comments and responses, follows further below.

*Comment:* An overwhelming number of commenters supported the proposed future inclusion of the Nurse Staffing measure set in the Hospital IQR Program. The commenters stated that nurses are critical to patient safety in hospital settings and that inadequate staffing is associated with increased mortality and adverse events. The commenters indicated that proper use of support personnel improves workflow and hospitals that invest in appropriate

<sup>210</sup> Institute of Medicine. (2011). *The future of nursing: Leading change, advancing health*. Washington, DC: National Academies Press.

<sup>211</sup> Kane, R.L., Shamliyan, T.A., Mueller, C., Duval, S., & Wilt, T.J. (2007). The association of registered nurse staffing levels and patient outcomes: systematic review and meta-analysis. *Medical Care*, 45(12), 1195–1204.

nurse staffing and skill mix to meet the needs of their patients will receive higher ratings. The commenters also noted that reporting these data is not burdensome to hospitals, nurses, or other clinicians because the information is not being newly collected but rather, newly reported. Further, the electronic data collected for these measures is already included in hospital databases, as more than 2,000 hospitals in the U.S. have already adopted these measures. Finally, the commenters indicated the measures are endorsed by the American Nurses Association and the NQF, which strengthens the argument for their implementation in the Hospital IQR Program.

*Response:* We thank the commenters for their support. We are pleased to learn that electronic data collection of these measures is already widely in effect, as increased electronic reporting is an ongoing measurement goal for CMS.

*Comment:* In addition to the support received from stakeholders who provided form letters, several additional commenters supported the proposed future inclusion of the nursing measure set. These commenters noted that these measures have been NQF-endorsed, which is a positive testament to the thoroughness of their reliability and validity. The commenters stated that skill mix is part of the formula for appropriate staffing and that proper use of support personnel improves nurses' workflow, permitting nurses to fully apply their professional knowledge and skill. The commenters also noted that better staffing results in better patient care and that patients and their families should have access to this data as tools to make educated and informed care decisions when selecting from comparable hospitals. Further, commenters noted that these measures promote transparency, which empowers patients.

*Response:* We thank the commenters for their support. We recognize the importance of transparency and nurse staffing in the inpatient setting as it relates to patient engagement and quality of care.

*Comment:* A few commenters particularly supported the provisions that establish public reporting of the two nurse staffing quality measures. Currently, patients and their families compare hospitals on several factors on the *Hospital Compare* Web site, but they are unable to access information on how many nurses are staffing the unit to which they may be admitted or the staff skill mix, both of which ultimately impact patient outcomes. The commenters noted that public reporting

would provide patients with information on how prepared comparable hospitals are to provide high quality and safe care, because there is a direct correlation between nurse staffing, patient satisfaction, readmissions, and adverse events. The commenters urged CMS to consider adding nurse staffing measures to the *Hospital Compare* Web site to provide greater transparency for patients and their families.

*Response:* We thank the commenters for their support, and share the commenters' opinion that public reporting of these measures could better equip patients to make more informed decisions when selecting from comparable hospitals. Transparency is a facet of patient care that is often overlooked and we will consider the future inclusion of these nurse staffing measures on the *Hospital Compare* Web site, should we move forward with proposing to adopt the nurse staffing measures in the Hospital IQR Program in the future.

*Comment:* One commenter supported the future inclusion of the nursing measures in the Hospital IQR Program if the definitions continue to align with National Database of Nursing Quality Indicators.<sup>221</sup> However, the commenter noted the measures fail to reflect the complexity of the patient population and any staffing challenges in the local environment (rural, labor supply, urban, etc.). The commenter recommended these measures not be linked to payment (through the Hospital VBP Program, for example) and that any publication of these measures be accompanied by explanations which clarify for the reader that these are not quality-of-care measures.

*Response:* We thank the commenter for their support, and appreciate their acknowledgement of other integral components that help in the evaluation of nursing care (that is patient population complexity and staffing challenges). These components are elements that we will consider as we continue to solicit feedback on clinical quality measures that assess nurse staffing practices. We disagree that these are not quality of care measures. We believe the potential future inclusion of nurse staffing measures in the Hospital IQR Program would allow hospitals to assess how their nurse staffing and skill mix compare to similar hospitals at the State and national level, as well as encourage hospitals to develop optimal nurse staffing plans that meet the needs

of their patients and improve quality of care. As such, there would be no need to footnote publications of these measures, as suggested by the commenter. Should we move forward with proposing to adopt these measures for the Hospital IQR Program in the future, we will consider the potential benefit of linking these quality measures to cost measures and/or linking them to payment (via the Hospital VBP Program, for example).

*Comment:* Some commenters expressed concerns regarding the nurse staffing measures. Specifically, the commenters noted that the generalist ideology expected by hospital administration for its nursing staff, when specialty care nursing is often best for patient care, could be problematic. Further, staffing should not only encompass proper numbers but should also encompass nursing proficiency, education, and work environment. The commenters suggested that CMS conduct additional testing to ensure there are not unintended consequences associated with making information on the nurse staffing measures available to consumers. The commenters also suggested that CMS should develop a simple metric that can be understood by consumers and is associated with care outcomes. Lastly, other commenters suggested CMS explore simpler metrics that are meaningful to consumers.

*Response:* We acknowledge the commenters' concerns. In our continued efforts to solicit clinical quality measures that assess nurse staffing practices, we will consider additional factors (that is nurse education and work environment) that influence an appropriate nurse staffing plan as we continue to review these measures for future use in the Hospital IQR Program. While we understand the importance of developing a metric that is easily understood by consumers, we want to ensure that such a metric would adequately convey the impact of the varying facets that contribute to the quality of patient care, in the context of nurse staffing. We believe that to provide comprehensive quality nursing care, and to avoid unintended consequences, there should be multiple metrics that assess nurse staffing in the Hospital IQR Program. Accordingly, we will continue to consider additional factors that the measure steward may determine to be appropriate to include in this measure and be vigilant about potential unintended consequences associated with sharing nursing staffing information with consumers.

*Comment:* Some commenters did not support future inclusion of the nurse staffing measures in the Hospital IQR

<sup>221</sup> National Database of Nurse Quality Indicators, available at: <http://www.pressganey.com/solutions/clinical-quality/nursing-quality>.

Program, indicating these measures are already collected and used locally for quality improvement, thus, there would be no added value to reporting these measures on a national level. In addition, commenters stated that manual web-based submission causes undue burden in the form of labor resources to enter the data, as hospitals are duplicating the effort by submitting to NDNQI and CMS. Further, the commenters suggested that the administrative burden of frequent reporting far exceeds its value, as quarterly reporting warrants susceptibility to inaccurate data. The commenters also expressed disapproval of the American Nurses Association's dismissal of LPNs and LVNs as members of the nursing staff. The commenters recommended considering inclusion of this subset of nurses as a way of using all available resources in provision and delivery of patient care.

*Response:* We appreciate the commenters sharing their concerns. We believe there is an opportunity for hospitals to develop nurse staffing strategies to improve quality and the value of care, and that future inclusion of nurse staffing measures in the Hospital IQR Program would allow hospitals to assess how their nurse staffing and skill mix compare to similar hospitals at the State and national level, as well as encourage hospitals to develop optimal nurse staffing plans that meet the needs of their patients and improve quality of care. We also note numerous studies have demonstrated that increased nurse staffing is associated with a reduction in hospital-related mortality and adverse patient events.<sup>222</sup> We recognize that adding new measures to for the Hospital IQR Program could increase administrative and reporting burden for hospitals; however, as with any potential new measure, we would weigh the benefits of the measure with the burden. We note according to the public comments received, there are already over 2,000 hospitals nationwide that are reporting these measures. We also note that the Skill Mix measure includes LPNs and LVNs as members of the nursing staff. This measure acknowledges the contributions of all members of the nursing team, but notes that differing levels of education and skill need to be considered when making staffing decisions for individual units.

We thank the commenters, and we will consider their views as we develop

future policy regarding use of the nurse staffing measures in the Hospital IQR Program.

(2) Skill Mix (Registered Nurse [RN], Licensed Vocational/Practical Nurse [LVN/LPN], Unlicensed Assistive Personnel [UAP], and Contract) (Nursing Skill Mix) Measure (NQF #0204)

(a) Overview of Measure

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20057 through 20058), we discussed the potential use of the Skill Mix (Registered Nurse [RN], Licensed Vocational/Practical Nurse [LVN/LPN], Unlicensed Assistive Personnel [UAP], and Contract) (Nursing Skill Mix) Measure (NQF #0204) in the Hospital IQR Program. The NQF-endorsed Nursing Skill Mix measure assesses the percentage of productive nursing care hours worked by nursing staff with direct patient care responsibilities for each nursing licensure category (RN, LPN/LVN, and UAP) and staff employment status (contract/agency versus hospital employee), by eligible hospital unit. The intent of this measure is to enable hospitals to track and assess their nursing skill mix, given that research demonstrates a relationship between skill mix and certain quality outcomes.<sup>223</sup>

The measure focuses on the structure of care quality and includes the skill mix for adult and pediatric medical-surgical hospital units. Medical-surgical hospital units include hospitals areas for the evaluation of patients with medical and/or surgical conditions. Eligible adult and pediatric medical-surgical units can be mapped to the CDC's National Healthcare Safety Network (NHSN) Healthcare Service locations codes as defined in the NHSN Patient Safety Component Manual.<sup>224</sup> Additional unit types, such as adult and pediatric critical-care, step-down, medical, and surgical units could be included in the future. At this time, we believe limiting the measure to adult and pediatric medical-surgical units would allow hospitals to become accustomed to collecting and reporting staffing data while also providing important staffing information to consumers. However, we sought public comment on how many inpatient units

to include and which units should be prioritized.

Productive nursing care hours are defined as the hours worked by nursing staff (RN, LPN/LVN, and UAP) with direct patient care responsibilities, including unbudgeted overtime or scheduled hours. Direct patient care responsibilities are nursing activities performed by unit-based staff in the presence of the patients and activities that occur away from the patient that are patient related, such as the following:

- Medication administration
- Nursing treatments
- Nursing rounds
- Admission, transfer, and discharge activities
- Patient education
- Patient communication
- Coordination of patient care
- Documentation time
- Treatment planning
- Patient screening and assessment

Unlicensed assistive personnel (UAP) are defined as individuals trained to function in an assistive role to nursing in the provision of patient care, as delegated by and under the supervision of a registered nurse. UAPs include nursing assistants, patient care technicians/assistants, and graduate nurses not yet licensed who have completed orientations.

The measure includes: All nursing staff employed by the hospital; temporary staff who are not employed by the hospital (contract or agency); and float staff who are hospital employees temporarily assigned to provide direct patient care on an eligible unit other than their usual unit of employment.

(b) Data Source

Data collection for this structural measure would occur quarterly for each eligible unit from January 1 through December 31 of each calendar year, with data submission occurring 4.5 months after the end of each reporting quarter. An eligible unit must be open, with patients present, at least one month during the reporting period to be included. These data would be collected via a web-based tool available on the QualityNet Web site.

(c) Measure Calculation

For staff with direct patient care responsibilities, the measure assesses the percentage of total productive nursing hours worked by either employee or contract RNs, LPN/LVNs, and UAPs, as well as at the percentage of total productive nursing hours worked for contract or agency staff. Accordingly, four rates (percentages) are determined for each eligible hospital

<sup>222</sup> Safe Staffing Literature Review from the American Nurses Association. March 2017. Available at: <http://www.nursingworld.org/SafeStaffing-LiteratureReview>.

<sup>223</sup> Kane, R.L., Shamliyan, T.A., Mueller, C., Duval, S., & Wilt, T.J. (2007). The association of registered nurse staffing levels and patient outcomes: systematic review and meta-analysis. *Medical Care*, 45(12), 1195–1204.

<sup>224</sup> NHSN Patient Safety Component Manual <https://www.cdc.gov/nhsn/about-nhsn/index.html> [under "Related Links"].

unit, one for each type of nursing staff, and one for contract and agency nursing staff. The four separate rates are as follows: (1) RN hours—Productive nursing care hours worked by RNs (employee and contract) with direct patient care responsibilities for each eligible inpatient unit/the total number of productive hours worked by employee or contract nursing staff with direct patient care responsibilities (RN, LPN/LVN, and UAP) for each eligible inpatient unit; (2) LPN/LVN hours—Productive nursing care hours worked by LPNs/LVNs (employee and contract) with direct patient care responsibilities for each eligible inpatient unit/the total number of productive hours worked by hospital employee or contract nursing staff with direct patient care responsibilities (RN, LPN/LVN, and UAP) for each eligible inpatient unit; (3) UAP hours—Productive nursing care hours worked by UAP (employee and contract) with direct patient care responsibilities for each eligible inpatient unit/the total number of productive hours worked by hospital employee or contract nursing staff with direct patient care responsibilities (RN, LPN/LVN, and UAP) for each eligible inpatient unit; and (4) Contract or agency hours—Productive nursing care hours worked by contract or agency staff nursing staff (RN, LPN/LVN, and UAP) with direct patient care responsibilities for each eligible inpatient unit/the total number of productive hours worked by employee or contract nursing staff with direct patient care responsibilities (RN, LPN/LVN, and UAP) for each eligible inpatient unit. The data collected and the rates calculated are aggregate nursing care hours worked by each licensure category, by unit type. Hospital rates are weighted for patient volume (patient days) to account for differences in unit sizes.

#### (d) Cohort

Hospital employee, contract, or agency RNs, LPN/LVNs, and UAPs with direct patient care responsibilities are included in the numerator and denominator statements. The measure numerator and denominator include nursing staff assigned to the eligible unit who have direct patient care responsibilities for greater than 50 percent of their shift who are counted in an eligible unit's staffing matrix, are replaced if they call in sick, and whose work hours are charged to the unit's cost center. The measure numerator and denominator exclude the following: Nursing staff with no direct patient care responsibilities whose primary responsibility is administrative in nature; specialty teams (for example,

wound care), patient educators, or case managers who are not assigned to a specific unit; unit clerks, monitor technicians, and secretaries with no direct patient care responsibilities; sitters not providing routine UAP activities; therapy assistants; student nurses fulfilling educational requirements; and nursing staff undergoing orientation who are not included in the eligible units staffing matrix. For more information regarding the Nursing Skill Mix measure, we refer readers to the NQF measure information page available at: <http://www.qualityforum.org/QPS/0204>.

We invited public comment on the future inclusion of the Skill Mix (Registered Nurse [RN], Licensed Vocational/Practical Nurse [LVN/LPN], Unlicensed Assistive Personnel [UAP], and Contract) (Nursing Skill Mix) measure for the Hospital IQR Program. Specifically, we sought public comments on narrowing the number of hospital units included in the measures' calculation, which units we should consider for inclusion, and the burden of data collection on hospitals.

*Comment:* One commenter requested that CMS evaluate the Nursing Skill Mix measure against the ever-increasing pressure of reimbursement reductions from CMS and other payers who follow the CMS example. The commenter noted that the metric of two events seems counterproductive and that increased skill mix and staffing ratios will increase costs to the organization at the same time reductions in reimbursements will not allow for additional funds to support this need. As such, the commenter suggested that where facilities can meet/exceed the best practice measure, an incentive be provided so that funding could continue to support this measure as opposed to negatively impacting organizations trying to meet the needs of the patients through increased skill mix and staffing levels.

*Response:* We acknowledge the commenter's concern about costs associated with increased skill mix and staffing ratios and will take that under consideration; however, existing research shows improved patient outcomes when the nursing skill mix and number of RN hours are appropriate for the level of care on the individual unit.<sup>225</sup> We appreciate the need to balance long-term and short-term considerations with respect to nurse staffing decisions. We note the potential

<sup>225</sup> Safe Staffing Literature Review from the American Nurses Association, March 2017. Available at: <http://www.nursingworld.org/SafeStaffing-LiteratureReview>.

long-term benefits of the improved outcomes and reduction in adverse events may outweigh the potential short term goal of decreasing the immediate costs of appropriate staffing ratios and skill mix.

We thank the commenter, and we will consider their views as we develop future policy regarding the future inclusion of the Skill Mix (Registered Nurse [RN], Licensed Vocational/Practical Nurse [LVN/LPN], Unlicensed Assistive Personnel [UAP], and Contract) (Nursing Skill Mix) measure in the Hospital IQR Program.

(3) Nursing Hours per Patient Day Measure (NQF #0205)

#### (a) Overview of Measure

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20058 through 20059), we discussed the potential use of the Nursing Hours per Patient Day Measure (NQF #0205) in the Hospital IQR Program. The NQF-endorsed Nursing Hours per Patient Day measure assesses the number of productive hours worked by both RNs and all nursing staff (RN, LPN/LVN, and UAP) with direct patient care responsibilities per patient day, by eligible hospital inpatient unit. The intent of this measure is to enable hospitals to track and assess the ratio of hours worked by nursing staff per patient day, given that research demonstrates a relationship between increased nursing hours and certain quality outcomes.

The measure focuses on the structure of care quality and includes Nursing Hours per Patient Day for eligible adult and pediatric medical-surgical inpatient hospital units. Medical-surgical hospital units include hospitals areas for the evaluation of patients with medical and/or surgical conditions. Eligible adult and pediatric medical-surgical units can be mapped to the CDC's National Healthcare Safety Network (NHSN) Healthcare Service locations codes as defined in the NHSN Patient Safety Component Manual. Similar to the Nursing Skill Mix Measure, additional unit types, such as adult and pediatric critical-care, step-down, medical, and surgical units could be included, but at this time, we believe limiting the measure to adult and pediatric medical-surgical units would allow hospitals to become accustomed to collecting and reporting staffing data while also providing important staffing information to consumers. However, we sought comment on how many inpatient units to include and which units should be prioritized.

Productive hours are defined as the hours worked by nursing staff (RN,

LPN/LVN, and UAP) with direct patient care responsibilities, including overtime, not budgeted, or scheduled hours. Direct patient care responsibilities are nursing activities performed by unit-based staff in the presence of the patients and activities that occur away from the patient that are patient related, such as the following:

- Medication administration
- Nursing treatments
- Nursing rounds
- Admission, transfer, and discharge activities
- Patient education
- Patient communication
- Coordination of patient care
- Documentation time
- Treatment planning
- Patient screening and assessment

UAP are individuals trained to function in an assistive role to nursing staff in the provision of patient care, as delegated by and under the supervision of a registered nurse. UAPs include nursing assistants, patient care technicians/assistants, and graduate nurses not yet licensed who have completed orientations.

The measure includes all nursing staff employed by the hospital; temporary staff who are not employed by the hospital (contract or agency); and float staff who are hospital employees temporarily assigned to provide direct patient care on an eligible unit other than their usual unit of employment.

#### (b) Data Source

Data collection for this structural measure for hospitals occurs quarterly, for each eligible unit, from January 1 through December 31 of each calendar year, with data submission occurring 4.5 months after the end of each reporting quarter. These data would be collected via a web-based tool available on the QualityNet Web site.

#### (c) Measure Calculation

For staff with direct patient care responsibilities, the measure assesses the number of productive hours per patient day worked by both RNs and by total nursing staff (RNs, LPN/LVNs, and UAPs). Accordingly, two rates are determined for each eligible hospital unit. The two separate rates are as follows: (1) RN hours per patient day—Total number of productive hours worked by RN nursing staff (contract and hospital employee) with direct patient care responsibilities for each eligible inpatient unit/total number of patient days for each eligible inpatient unit; and (2) Total nursing care hours per patient day—Total number of productive hours worked by RN, LPN/

LVN, and UAP nursing staff (contract and employee) with direct patient care responsibilities for each eligible inpatient unit/total number of patient days for each eligible inpatient unit. Patient days must be from the same unit in which nursing care hours are reported. The data collected and the rates calculated are aggregate nursing hours per patient day, by unit type. Hospital rates are weighted for patient volume (patient days) to account for differences in unit sizes.

#### (d) Cohort

RNs, LPN/LVNs, and UAPs with direct patient care responsibilities are included in the numerator and denominator statement. The measure numerator includes nursing staff assigned to the eligible inpatient unit who have direct patient care responsibilities for greater than 50 percent of their shift, who are counted in an eligible unit's staffing matrix, are replaced if they call in sick, and work hours are charted to the unit's cost center. The numerator excludes the following: Nursing staff with no direct patient care responsibilities whose primary responsibility is administrative in nature; specialty teams (for example, wound care), patient educators, or case managers who are not assigned to a specific unit; unit clerks, monitor technicians, and secretaries with no direct patient care responsibilities; sitters not providing routine UAP activities; therapy assistants; student nurses fulfilling educational requirements; and nursing staff undergoing orientation who are not included in the eligible units staffing matrix. The measure denominator excludes patient days from ineligible units. For more information regarding the Nursing Hours Per Day measure, we refer readers to the National Quality Forum measure information page available at: <http://www.qualityforum.org/QPS/0205>.

We invited public comment on the possible future inclusion of the Nursing Hours per Patient Day measure for the Hospital IQR Program. Specifically, we sought comments on narrowing the number of hospital units included in the measures' calculation, which units we should consider for inclusion, and the burden of data collection on hospitals.

*Comment:* One commenter cautioned CMS that the complexity involved in determining the hours and staffing for the Nursing Hours Per Patient Days measure could be burdensome for the organizations. Further, the commenter stated that if the intent is to evaluate the impact of increased staffing in areas with respect to quality outcomes, it

would seem more appropriate for an organization to provide the total number of patient days for a given unit (denominator) divided into the total hours (as categorized by the 4 groups noted) of staffing on that unit. The commenter suggested that this may be a simpler, less burdensome approach that would provide a better indication of the total number of hours that are dedicated to patient care in a given unit. In addition, another commenter stated that the management and oversight of the reporting has an element of burden and time commitment that is not easily supported in today's health care environment in which resources should be focused on the care of the patient.

*Response:* We appreciate the commenter's feedback, and will consider the suggested approach on how to calculate nursing hours per patient day. It is our intent to promote improved quality of care in the least burdensome manner possible. This measure is not meant to simply increase RN staffing in the areas evaluated in the measure, but also to evaluate the number of hours provided to patients by RNs as related to patient care requirements and whether the current staffing mix is appropriate. Studies have demonstrated improved outcomes especially in complex patients when the nursing provider is an RN versus an LPN/LVN or UAP.<sup>226</sup>

*Comment:* One commenter did not support the future inclusion of the Nursing Hours per Patient Day measure in the Hospital IQR Program, citing a concern that nurse staffing levels are influenced by a variety of factors that, in varying combinations, could influence patient care outcomes and may or may not be reflected in RN Hours Per Patient Day (RN HPPD). The commenter noted when nurse staffing is examined in the nursing research literature, no evidence exists that identifies a nurse staffing configuration or a process to use when making staffing decisions. The commenter believed that staffing decisions that influence RN HPPD need to be based on evidence, including patient need, the education and skill level of staff, the geography and size of units, the availability of technology and support staff, and multiple other factors. The commenter noted their belief that one of the most effective ways to attain superior patient outcomes and enhance nurse satisfaction is for nurse leaders and nursing staff to openly and continually communicate, assess, plan, execute, and evaluate strategies used in the provision of patient care.

<sup>226</sup> *Ibid.*

*Response:* We acknowledge the commenter’s concerns. We recognize the importance of having an evidence base, rooted in empirical data, to support any clinical quality measure implemented in the Hospital IQR Program. We also understand that there are numerous factors that contribute to the overall quality of nursing care. At this time, we are interested in the impact and effects of skill mix and nursing hours per patient on quality of nursing care, and we will consider additional quality metrics that examine nursing care using different factors in the future. We agree that attaining superior patient outcomes and enhanced nurse satisfaction could be achieved through enhanced communication and the execution of “best practice” strategies in the provision of patient care; however, we are also concerned about the limitations placed on nurse managers and nursing staff when the hospital administration does not provide the available resources to adjust the staffing mix as appropriate for optimal patient care and positive outcomes. We refer readers to the American Nurses Association’s literature review<sup>227</sup> of evidence to identify the proper nurse staffing configuration and/or process to use when making staffing decisions.

*Comment:* One commenter noted that publicly reported RN HPPD to the lay person or a regulating body does not facilitate comparisons that are relevant and meaningful.

*Response:* We believe that publicly reporting RN hours per patient day, coupled with the existing evidence that

shows improvement in patient and nurse outcomes, based on workplace environment<sup>228</sup> could be useful for the lay person and regulating bodies to make meaningful and relevant hospital comparisons.

We thank the commenters and we will take these comments into consideration if we propose to adopt the Nursing Hours per Patient Day Measure (NQF #0205) in the future.

**d. Potential Inclusion of Additional Electronic Clinical Quality Measures (eCQMs) in the Hospital IQR and Medicare and Medicaid EHR Incentive Programs**

As we previously indicated in the FY 2013 IPPS/LTCH PPS final rule, EHR technology continues to evolve and additional infrastructure is being put in place to afford us the capacity to accept enhanced electronic reporting of many of the clinical chart-abstracted measures that are currently part of the Hospital IQR Program (77 FR 53534). We continue to believe that electronic reporting of quality measure data derived from the EHR will, in the long run, reduce the burden on hospitals to collect and submit data for the Hospital IQR Program.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20059 through 20064), in keeping with this goal, we solicited feedback on the potential inclusion of additional eCQMs in the Hospital IQR and Medicare and Medicaid EHR Incentive Programs. These measures assess opioid prescribing practices, malnutrition, tobacco use, and substance use among

the adult, inpatient population. As we continue to advance electronic reporting, we want to ensure that we provide hospitals with a robust selection of eCQMs. As we state in section IX.A.8. of the preamble of this final rule, hospitals have expressed concerns with identifying applicable measures that reflect their patient population; thus, we believe that the addition of new eCQMs in the future will offer more clinically relevant eCQMs with meaningful data that will help drive quality improvement.

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57116 through 57120), we removed 13 eCQMs from the Hospital IQR Program measure set, beginning with the CY 2017 reporting period/FY 2019 payment determination, in order to enable hospitals to focus on a smaller, more specific subset of eCQMs. In that same rule, we indicated that we are considering behavioral health measures for inclusion in the Hospital IQR Program to address an important gap in understanding the quality of care given to inpatient psychiatric patients treated in the acute care hospital setting rather than a distinct psychiatric unit or IPF (81 FR 57166 through 57167). The future inclusion of measures assessing opioid prescribing practices, tobacco use, and substance use will help to inform how we can improve the quality of care in these clinical domains, and help to fill this identified gap area. The table below lists the eCQMs being considered for future inclusion in the Hospital IQR and Medicare and Medicaid EHR Incentive Programs and for which we sought public feedback.

**ELECTRONIC CLINICAL QUALITY MEASURES (ECQMS) FOR FUTURE CONSIDERATION IN THE HOSPITAL IQR AND MEDICARE AND MEDICAID EHR INCENTIVE PROGRAMS**

Measure name	NQF #

## (1) Safe Use of Opioids-Concurrent Prescribing Measure

### (a) Background

Unintended opioid overdose fatalities have reached epidemic proportions in the last 20 years and are a major public health concern in the United States.<sup>229</sup> Reducing the number of unintended opioid overdoses has become a priority for numerous HHS agencies. Concurrent prescriptions of opioids or opioids and benzodiazepines put patients at greater risk of unintended opioid overdose due to increased risk of respiratory depression.<sup>230 231</sup> Despite this risk, studies of multiple claims and prescription databases have shown that between 5 to 15 percent of patients receive concurrent opioid prescriptions, and 5 to 20 percent of patients receive concurrent opioid and benzodiazepine prescriptions across various settings.<sup>232 233 234</sup> In addition, an analysis of more than 1 million hospital admissions in the United States found that over 43 percent of all patients with nonsurgical admissions were exposed to multiple opioids during their hospitalization.<sup>235</sup>

### (b) Overview of Measure

The Safe Use of Opioids—Concurrent Prescribing (MUC16—167) measure assesses patients (excluding cancer

patients or patients receiving palliative care), ages 18 years and older with active, concurrent prescriptions for opioids, or opioids and benzodiazepines, at discharge.<sup>236</sup> This measure addresses the following NQS priorities: (1) Making care safer by reducing harm caused in the delivery of care; (2) promoting effective communication and coordination of care; and (3) promoting the most effective prevention and treatment practices for the leading causes of mortality, starting with cardiovascular disease.

This measure was reviewed by the MAP in December 2016 and received the recommendation to refine and resubmit for consideration for programmatic inclusion. MAP stakeholders acknowledged the significant health risks associated with concurrent prescribing of opioids, and opioids and benzodiazepines, but expressed concern with the measure specifications, indicating the need for a stronger evidence base for clinical guidelines and refinement of the measure exclusions to reduce the risk of unintended consequences.<sup>237</sup>

Additional information on this measure can be found in the 2016 Measures Under Consideration Spreadsheet, available at: <http://www.qualityforum.org/ProjectMaterials.aspx?projectID=75367>.

We invited public comment on the possible future inclusion of this opioid prescribing measure in the Hospital IQR Program.

*Comment:* Some commenters supported the future inclusion of the Safe Use of Opioids measure in the Hospital IQR Program. The commenters believed that there is a need for measures that assess opioid follow-up, prescription, and appropriate prescribing, even though there are times when concurrent prescriptions of opioids and benzodiazepines are appropriate. There are studies that demonstrate that chronic pain patients are unlikely to become addicts or abuse their medication. Further, the addition of this measure would encourage appropriate pain management practices by providers and patients. In addition, commenters noted that adopting a measure that calculates the proportion of patients prescribed two or more different opioids or opioids and benzodiazepines concurrently has the potential to reduce preventable

mortality and reduce the costs associated with adverse events. The commenters encouraged CMS to consider policies that promote alternatives to opioids for pain management, arguing that prescription opioids are often prescribed in the absence of affordable alternatives. The commenters also urged CMS to take an active role in educating prescribers about alternatives such as exercise, mindfulness, over-the-counter medications, etc. Lastly, the commenters suggested that implementation of a system that flags the surveys of frequent opioid users could be used to prevent addicts skewing hospital scores.

*Response:* We thank the commenters for their support. We understand the importance of provider education and will work towards including “best practices” for prescription protocols and opioid alternatives in our education and outreach efforts. We appreciate the commenters’ suggestion of a survey monitoring system and will consult with the appropriate technological entities to discuss the impact on existing workflows and infrastructure, and the feasibility of implementing such a system. In addition, we will consider the commenters’ suggestion to establish policies that promote alternatives to opioids for pain management in the future.

*Comment:* Many commenters indicated that they would support the future inclusion of the Safe Use of Opioids measure in the Hospital IQR Program measure set if CMS refined the measure in response to stakeholder feedback and if the measure obtained NQF endorsement. In addition, the commenter recommended that CMS prioritize the development and adoption of measures designed to improve identification of, and intervention with, patients at risk for developing a substance abuse disorder. Lastly, commenters advised CMS to consider the variation in States’ prescribing requirements, citing concern that these differences may make the measure more complex and that in some cases, as determined by the physician, it can be appropriate for a patient to have multiple prescriptions.

*Response:* We thank the commenters for their support. We agree that the development and adoption of measures designed to improve identification of, and intervention with, patients at risk for developing a substance abuse disorder is valuable. We will continue to assess our measure set in alignment with our evolving programmatic goals to ensure we prioritize certain clinical topical areas appropriately. We

<sup>237</sup> “2017 Considerations for Implementing Measures Hospitals-Final Report,” available at: <http://www.qualityforum.org/map/>.

understand that NQF-endorsement lends credibility to quality measures, and we recognize that variation in State prescribing practices could affect the data extrapolated from hospitals that report on this measure. We will consider both of these factors, as well as the provided stakeholder feedback on suggested measure refinements, should we propose to adopt this measure in the Hospital IQR Program in the future.

*Comment:* A few commenters supported the future inclusion of a measure that assesses opioid prescribing patterns, specifically for patients already using an opioid or patients using benzodiazepine. However, commenters expressed concern that the “Safe Use of Opioids” measure may introduce unintended consequences, such as under treatment of pain and placing undue accountability on acute settings for long-term pain management. Other commenters indicated that due to existing infrastructure deficiencies, the adoption of this measure would place unnecessary burden related to accountability upon acute care facilities. Some commenters stated that inclusion of this measure could encourage anti-opioid sentiments to irrational extremes. A few commenters noted that there are circumstances in which it may be appropriate for patients to be treated concurrently with opioids and recommended that the measure provides for the exclusion of cases in which polypharmacy may be warranted.

*Response:* We thank the commenters for their support. We recognize the heightened sensitivity associated with opioid prescribing. We understand that there are existing operational and technological infrastructure hurdles that should be addressed to reduce the burden associated with electronically extrapolating data for this measure. We acknowledge that concurrent prescribing is appropriate in certain situations. We also note the intent of the measure is to raise prescriber awareness, when and if the patient requires concurrent prescriptions, and to take appropriate steps to provide education regarding potential side effects and alternative pain management techniques to the patient, in an effort to reduce adverse side effects and potentially prevent dependence. Should we decide to move forward with proposing to adopt this measure in the Hospital IQR Program in the future, we will be vigilant about potential unintended consequences, such as under treatment of pain and undue accountability based on care setting. We also note that the intent of any future inclusion of this measure in the Hospital IQR Program would not be to stigmatize the use of

opioids, but to evaluate through quality measurement adherence to clinical standards that could help improve prescribing practices for these drugs and combat current misuse.

*Comment:* One commenter supported the future inclusion of all the eCQMs we sought public comment for future inclusion in the Hospital IQR Program, including the Safe Use of Opioids measure, noting that the addition of these measures would give hospitals more options in selecting eCQMs that are applicable to their patient populations.

*Response:* We thank the commenter for their support.

*Comment:* Some commenters did not support the proposed future inclusion of the Safe Use of Opioids measure in the Hospital IQR Program. The commenters stated that the measure lacks sensitivity to the needs of the specific patient (that is, adequate patient education). Specifically, the commenters also expressed that until all facilities, vendors, and pharmacies are required to implement ePrescribing of controlled substances, and given ample development, testing, and implementation time, there is a risk of prescriptions not being included in data transfer systems (that is, Sure Scripts, Dr. First, etc.). The commenters noted that these circumstances would allow for continued risks associated with overdose due to lack of information.

*Response:* We appreciate the commenters’ concerns. We recognize the heightened sensitivity associated with opioid prescribing given the current opioid epidemic in our nation. We note again that the intent of the measure is not to completely eliminate concurrent prescriptions, but rather to raise provider awareness of appropriate prescribing practices and provide both education and alternative treatments to patients. In addition, we will monitor the impact of ePrescribing on streamlining hospital workflows as a part of efforts to better assess how to reduce the risk of overdose. Should we decide to move forward with proposing to adopt this measure in the Hospital IQR Program in the future, we will consider the impact of adequate patient education on the measure results as well as potential unintended consequences, such as patient overdose.

We thank the commenters, and we will consider their views as we develop future policy regarding the use of an eCQM version of the Safe Use of Opioids—Concurrent Prescribing (MUC16–167) measure in the Hospital IQR Program.

## (2) Malnutrition Measures

### (a) Background

Malnutrition is associated with many adverse outcomes including depression of the immune system, impaired wound healing, muscle wasting, and increased mortality.<sup>238 239</sup> Patients who are malnourished during a hospital stay have an increased risk of complications, readmissions, and length of stay. In addition, evidence demonstrates an association between malnutrition risk and increased inpatient costs. One study found that patients identified with under-nutrition risk and high under-nutrition risk experience increased costs by 28.8 percent and 21.1 percent, respectively, when compared to non-malnourished patients.<sup>240</sup> Malnutrition risk screening, using a validated screening tool, can be useful in predicting certain patient outcomes including length of stay, mortality, and post-operative complications.<sup>241</sup> Nutrition assessments for patients identified as at-risk for malnutrition have been associated with improved patient outcomes including less weight loss, reduced length of stay, improved muscle function, better nutritional intake, and fewer readmissions.<sup>242</sup> Further, there is evidence of a performance gap with regard to nutrition screening and assessment. A national survey of hospital-based professionals in the United States focused on nutrition screening and assessment practices demonstrated that out of 1,777 unique respondents, only 36.7 percent reported completing nutrition screening at admission and 50.8 percent reported doing so within 24 hours.<sup>243</sup> Thus, there is an

opportunity for hospitals to improve nutrition screening and assessment.

(b) Overview of Measures

The malnutrition measure set consists of the following four measures:

- Completion of a Malnutrition Screening within 24 Hours of Admission (MUC16–294);
- Completion of a Nutrition Assessment for Patients Identified as At-Risk for Malnutrition within 24 Hours of a Malnutrition Screening (MUC16–296);
- Appropriate Documentation of a Malnutrition Diagnosis (MUC16–344); and
- Nutrition Care Plan for Patients Identified as Malnourished after a Completed Nutrition Assessment (MUC16–372).

These malnutrition measures are new eCQMs that collectively evaluate the quality of care rendered to adult patients that are identified as malnourished. These measures address the NQS priorities of: (1) Making care safer by reducing harm caused in the delivery of care; and (2) promoting effective communication and coordination of care. The Completion of a Malnutrition Screening within 24 Hours of Admission measure (MUC16–294) assesses whether patients age 18 years or older are screened for malnutrition within 24 hours of admission to the hospital. The Completion of a Nutrition Assessment for Patients Identified as At-Risk for Malnutrition measure (MUC16–296) assesses whether patients age 65 years or older, who screen positive for being at-risk for malnutrition, have a nutrition assessment documented in the medical record within 24 hours of the most recent malnutrition screening. The Appropriate Documentation of a Malnutrition Diagnosis measure (MUC16–344) assesses whether patients age 65 years and older, who are found to be malnourished on the nutrition assessment, have adequate documentation of a malnutrition diagnosis in their medical record. This measure is important because there is often a disconnect between screening for malnutrition and documentation of a diagnosis of malnutrition, which is necessary for appropriate follow-up after hospital discharge. Data analyzed from the Healthcare Cost and Utilization Project (HCUP), a nationally-representative data set describing U.S. hospital discharges, indicated that approximately 3.2 percent of hospital discharges in 2010 included malnutrition as a diagnosis. However, this same research article notes that the prevalence of a malnutrition diagnosis may be significantly higher as past

researchers, using validated screening tools, indicate a significantly higher prevalence of undiagnosed malnutrition in the hospital, ranging from 33 to 54 percent.<sup>244</sup> Lastly, the Nutrition Care Plan for Patients Identified as Malnourished after a Completed Nutrition Assessment measure (MUC16–372) assesses whether patients age 65 years and older, who are found to be malnourished on a completed nutrition assessment, have a nutrition care plan documented in their medical record.

These measures were reviewed by the MAP in December 2016 and received mixed support. The Nutrition Care Plan for Patients Identified as Malnourished after a Completed Nutrition Assessment (MUC16–372), Completion of a Malnutrition Screening within 24 Hours of Admission (MUC16–294), and Completion of a Nutrition Assessment for Patients Identified as At-Risk for Malnutrition within 24 Hours of a Malnutrition Screening (MUC16–296) measures were recommended to be refined and resubmitted for consideration for programmatic inclusion. For these three measures, the MAP encouraged providing more evidence to prove clinical importance and recommended that the exclusions continue to be tested for validity.<sup>245</sup> The Appropriate Documentation of a Malnutrition Diagnosis measure (MUC16–344) was not supported because there was concern that there was insufficient evidence to support the link between documenting a malnutrition diagnosis and improved patient outcomes.

The MAP concluded that completing a malnutrition assessment provided the most potential value to the measure set and quality of care. The MAP also encouraged the measure developer to test the individual malnutrition measures as a composite in an effort to balance the number of measures in the Hospital IQR Program with the need to fill the measure gap addressing malnutrition.<sup>246</sup> We note that we received written support (formal letters addressed to CMS) of these measures from other stakeholders who noted that addressing malnutrition among

beneficiaries is an important clinical issue.

Additional information on these measures is available at: <http://www.qualityforum.org/ProjectMeasures.aspx?projectID=80741>.

We invited public comment on the possible future inclusion of one or more of these malnutrition measures in the Hospital IQR Program. In addition, we invited public comment on the possible future inclusion of a composite measure comprised of all or a subset of these individual malnutrition measures in the Hospital IQR Program.

*Comment:* Several commenters supported the future inclusion of the malnutrition measure set as individual measures. These commenters stated malnutrition is an ongoing healthcare issue with demonstrated impacts on patient outcomes and, as such, it is imperative to have performance measures that quantify the degree to which established best practices are carried out. The commenters noted poor nutrition status is also associated with poor functional and clinical outcomes for patients and increased costs to healthcare systems, and asserted taking a systematic approach to increasing awareness of malnutrition and improving management of nutrition in hospitals would improve health outcomes and reduce the associated costs imposed on healthcare systems.

The commenters also noted that the measures are reliable and valid, and that their implementation in the Hospital IQR Program would satisfy a measure gap area and incentivize the adoption of evidence-based malnutrition care best practices, thereby improving patient outcomes. Several commenters also noted that there is a need for more validated malnutrition screening tools to promote reliability between practitioners and to reduce the number of false-positive referrals that are being made due to use of invalid tools. The commenters indicated that the malnutrition eCQMs reflect key components of the recommended malnutrition clinical workflow, and that malnutrition intervention is a low-risk, low-cost clinical strategy that would help improve care coordination and the quality of hospital care.

Commenters stated that Medicare beneficiaries would benefit from the adoption of malnutrition eCQMs that support prompt malnutrition screening, assessment, diagnosis, and development of a care plan. In addition, the commenters stated that because these eCQMs have been specifically designed and tested to be used with patient data included directly in the EHR, the burden of data collection and reporting

<sup>244</sup> Corkins, M.R., Guenter, P., DiMaria-Ghalili, R.A., Jensen, G.L., Malone, A., Miller, S., Patel, V., Plogsted, S. and Resnick, H.E., 2014. Malnutrition diagnoses in hospitalized patients: United States, 2010. *Journal of Parenteral and Enteral Nutrition*, 38(2), pp.186–195.

<sup>245</sup> “2017 Considerations for Implementing Measures Hospitals-Final Report,” available at: <http://www.qualityforum.org/map/>.

<sup>246</sup> *Ibid.*

will be minimal. Lastly, the commenters stated that the inclusion of this measure set in the Hospital IQR Program could help improve outcomes and quality of life for patients, especially seniors and the disadvantaged. The commenters therefore recommended CMS adopt these measures into the Hospital IQR Program as soon as possible to ensure quality care for older adults.

*Response:* We thank the commenters for their support. We agree that a systematic approach to quality improvement is essential and could include increasing awareness of malnutrition and improving management of nutrition in hospitals. We acknowledge the benefits and need for inclusion of malnutrition measures, as outlined by the commenters, and will consider the feasibility of implementing these measures in the Hospital IQR Program in the future.

*Comment:* Some commenters supported the future proposed inclusion of the malnutrition measure set in the Hospital IQR Program as a composite measure, stating that this measure format would optimize assessment of nutrition care for those at risk of malnutrition or who are already malnourished in the hospital setting. These commenters further recommended that CMS adopt the measures as a composite immediately, as opposed to in the future.

*Response:* We thank the commenters for their support. We note that as discussed in the proposed rule (82 FR 20061), in the preliminary review of these individual measures, both the MAP and the NQF Health and Well-Being Standing Committee advocated for the resubmission of the individual measures as a composite. Moving forward, we will weigh the benefits of adopting these measures as a composite versus as individual indicators.

However, because the measures have not yet been evaluated by the MAP as a composite, they would need to undergo MAP review as a composite measure before we could propose to adopt it for the Hospital IQR Program in the future. We also appreciate commenters' recommendation that we adopt the measures immediately; however, we are not able to adopt them at this time because: (1) We are considering the future inclusion of these measures as a composite measure, but they have not yet been submitted as a Measure Under Consideration or reviewed by the MAP as a composite; and (2) the measures were not proposed for adoption in the FY 2018 IPPS/LTCH PPS proposed rule.

*Comment:* A few commenters supported the future inclusion of the

malnutrition eCQMs in the Hospital IQR Program only if they received NQF endorsement, to demonstrate that they are clinically important or linked to improved patient outcomes. A few commenters noted that these measures are not NQF-endorsed and did not receive MAP support for inclusion in Hospital IQR Program.

*Response:* We thank the commenter for their support. We agree with commenters regarding the importance of adopting sound, evidence-based performance measures, and will work to ensure that any measure included in the Hospital IQR Program is thoroughly vetted prior to adoption. If the measure steward submits this measure for NQF endorsement review under the next applicable call for measures, we will consider the NQF's endorsement status prior to moving forward with proposing to adopt these measures in the Hospital IQR Program. However, we note that NQF endorsement is not a requirement for inclusion in the Hospital IQR Program measure set. Section 1886(s)(4)(D)(ii) of the Act provides that, in the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by, the entity with a contract under section 1890(a) of the Act, the Secretary may specify a measure that is not so endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary.

*Comment:* One commenter supported the future inclusion of the malnutrition eCQMs in the Hospital IQR Program, and recommended that "Completion of a Nutrition Assessment for Patients Identified as At-Risk for Malnutrition within 24 Hours of a Malnutrition Screening" measure be extended to all age groups.

*Response:* We thank the commenter for their support. We note that these measures are intended to operate as a group, and as such, expanding the patient population in one measure would most likely require the expansion of the patient population in all the measures. We reiterate that the focus of this set of measures as currently specified is the assessment of malnutrition care among elderly patient populations (age 65 years and older), as they have been identified as the most at-risk cohort. We offer that if future testing of these measures yields results that improve care for this designated patient population, we could potentially assess how patients in other age groups are affected by malnutrition and whether the observed improvements could be broadly applied.

*Comment:* A few commenters did not support the inclusion of the malnutrition measures in the Hospital IQR Program because nutritional screening is already a requirement under the CMS Conditions of Participation (CoP), therefore, these commenters believed these measures would provide no additional incentives for performance improvement. Further, the commenters stated that these measures would create a distracting documentation "checkbox" process which is unlikely to advance meaningful care improvement.

*Response:* We note the measure steward is performing additional testing on all four of the malnutrition measures. Malnutrition is an ongoing healthcare issue with demonstrated impacts on patient outcomes. As such, we believe there could be important benefits to patients of having malnutrition measures that quantify the degree to which established best practices are carried out, improve health outcomes, and reduce cost burdens to healthcare systems. By referring to "checkbox" practices, we interpret that commenters have concerns about implementing process measures. We will take the concerns into consideration, however, we also believe these measures could be an important first step to incentivizing hospitals to improve malnutrition awareness and care.

*Comment:* Some commenters made suggestions on how to improve the malnutrition eCQM measures set. Specifically, the commenters suggested that the timeframe associated with the "Completion of a Nutrition Assessment" measure be modified such that hospitals can define their own time-intensive guidelines for documentation of assessments, as well as determining other patient populations who may be at potential nutrition risk. Other commenters suggested that the components of each assessment should be defined by each organization, arguing that organizations should guide practice based on their unique patient populations. In addition, the commenters recommended that consideration be given to the follow-up care provided for patients afflicted with malnutrition. The commenters also noted that nutrition assessment tools should be validated via clinical trials.

*Response:* We appreciate the commenters' suggestions. If the measure steward moves forward with additional testing of these measures, both individually and as a composite, we will consider the impact of follow-up care for patients afflicted with malnutrition, should we move forward with proposing to adopt these measures

in the Hospital IQR Program in the future. We understand the importance of hospitals having the autonomy to define their own guidelines related to the timing of documentation, however, we do not believe it is appropriate to allow hospitals to establish uniquely defined components for each measure based on their specific patient population because doing so introduces an untenable degree of variability and may mask disparities in patient care. It is imperative to evaluate the patient population as defined by the measures' denominators, as opposed to an individual hospital's or organization's parameters, in order to retain measurement integrity and not to skew the observed results with information bias. We agree with the commenters about the importance of ensuring the validity of tools and should we decide to move forward with proposing to adopt these measures for the Hospital IQR Program in the future, we will consider the feasibility of conducting a clinical trial of the nutrition assessment tools.

We thank the commenters and we will consider their views as we develop future policy regarding the use of eCQM versions of one or more measures in the malnutrition measure set and the possible future inclusion of a composite measure comprised of all or a subset of these individual malnutrition measures in the Hospital IQR Program.

### (3) Tobacco Use Measures

#### (a) Background

Tobacco use is the single greatest cause of disease in the United States today and accounts for more than 480,000 deaths each year.<sup>247</sup> Tobacco use creates a heavy cost to society as well as to individuals. Smoking is a known cause of multiple cancers, heart disease, stroke, complications of pregnancy, chronic obstructive pulmonary disease, other respiratory problems, poorer wound healing, and many other diseases.<sup>248</sup>

Smoking-attributable health care expenditures are estimated to cost at least \$130 billion per year in direct medical expenses for adults and over

\$150 billion in lost productivity.<sup>249</sup> There is strong and consistent evidence that tobacco dependence interventions, if delivered in a timely and effective manner, significantly reduce the user's risk of suffering from tobacco-related disease and improve outcomes for those already suffering from a tobacco-related disease.<sup>250 251 252 253</sup> Effective, evidence-based tobacco dependence interventions have been clearly identified and include brief clinician advice, individual, group, or telephone counseling, and use of FDA-approved medications. Tobacco cessation treatments are clinically effective and extremely cost-effective relative to other commonly used disease prevention interventions and medical treatments.<sup>254</sup> Performance on the chart-abstracted versions of these measures, as reported by The Joint Commission, yields that the Tobacco Use Screening (TOB-1) measure had a screening rate of 98.15 percent, based on a reporting period of July 2015–June 2016.<sup>255</sup> TOB-1 is necessary to operationalize Tobacco Use Treatment Provided or Offered (TOB-2)/Tobacco Use Treatment (TOB-2a) and Tobacco Use Treatment Provided or Offered at Discharge (TOB-3)/Tobacco Use Treatment at Discharge (TOB-3a) measures. The goal of TOB-1 is to achieve 100 percent screening so that all tobacco users are consistently identified and offered appropriate interventions, which are evaluated by TOB-2/2a and TOB-3/3a. As noted in the table<sup>256</sup> below, the performance rates for the chart-abstracted versions of TOB-2/2a and TOB-3/3a measures suggest that there is an opportunity for hospitals to improve tobacco use treatment during the hospital stay and at discharge.

### TOBACCO USE MEASURES SCREENING RESULTS JULY 2015–JUNE 2016

Measure name	Screening rate (%)
Tobacco Use Treatment Provided or Offered (TOB-2) .....	66.41
Tobacco Use Treatment (TOB-2a) .....	32.97
Tobacco Use Treatment Provided or Offered at Discharge (TOB-3) .....	46.20
Tobacco Use Treatment at Discharge (TOB-3a) .....	10.71

#### (b) Overview of Measures

The tobacco use measure set consists of the following three measures:

- Tobacco Use Screening (TOB-1) (MUC16-50);
- Tobacco Use Treatment Provided or Offered (TOB-2)/Tobacco Use Treatment (TOB-2a) (MUC16-51); and
- Tobacco Use Treatment Provided or Offered at Discharge (TOB-3)/Tobacco Use Treatment at Discharge (TOB-3a) (MUC16-52).

The TOB measures are eCQMs that assess tobacco use screening and treatment for patients age 18 years or older during the hospital stay and at discharge. We note that these measures were derived from the chart-abstracted versions in use by The Joint Commission. The Joint Commission has been using the chart-abstracted versions of these measures for voluntary reporting since January 1, 2012.<sup>257</sup> In addition, the chart-abstracted versions of these measures (TOB-1, TOB-2/TOB-2a, and TOB-3/TOB-3a) are also part of the IPFQR Program measure set (81 FR 57246). These measures address the NQS priority of promoting the most effective prevention and treatment practices for the leading causes of mortality.

TOB-1 assesses the proportion of hospitalized patients who are screened, or refuse screening, within the three days prior to admission through 1 day after admission, for tobacco use during the 30 days prior to the screening. TOB-2 assesses the proportion of patients who are light tobacco users who received or refused practical counseling to quit within 3 days prior to or anytime during admission. TOB-2 also assesses the proportion of heavy tobacco users who received or refused practical counseling to quit and received, had a medical reason not to receive, or refused FDA-approved cessation medications within 3 days prior to or anytime during

<sup>257</sup> The Joint Commission, Substance Use Measures overview, available at: [https://www.jointcommission.org/core\\_measure\\_sets.aspx](https://www.jointcommission.org/core_measure_sets.aspx).

<sup>247</sup> Centers for Disease Control and Prevention. Current Cigarette Smoking Among Adults—United States, 2005–2013. *Morbidity and Mortality Weekly Report (MMWR)* 2014. 63(47): 1108–1112. Available at: [http://www.cdc.gov/mmwr/preview/mmwrhtml/mm6347a4.htm?s\\_cid=mm6347a4](http://www.cdc.gov/mmwr/preview/mmwrhtml/mm6347a4.htm?s_cid=mm6347a4).

<sup>248</sup> U.S. Department of Health and Human Services. The health consequences of smoking—50 years of progress: a report of the Surgeon General. Atlanta, GA: U.S. Department of Health and Human Services, CDC; 2014. Available at: <http://www.surgeongeneral.gov/library/reports/50-years-of-progress/full-report.pdf>.

admission. The subset measure TOB–2a only assesses light tobacco users who received practical counseling to quit within 3 days prior to or anytime during admission, and heavy tobacco users who received practical counseling to quit and received, or had a medical reason not to receive, FDA-approved cessation medications within 3 days prior to or anytime during admission. TOB–3 assesses the proportion of patients who are light tobacco users who were referred to or refused counseling within 3 days prior to admission through 1 day after discharge. TOB–3 also assesses the proportions of heavy tobacco users who were referred to or refused evidence-based counseling and received, had a medical reason not to receive, or refused a prescription for FDA-approved cessation medication upon discharge. The subset measure TOB–3a assesses light tobacco users who were referred to counseling within 3 days prior to admission through one day after discharge, and heavy tobacco users who were referred to evidence-based counseling and received, or had a medical reason not to receive, a prescription for FDA-approved cessation medication upon discharge.

We note that we previously solicited comments on the future inclusion of electronically-specified versions of the tobacco use measures TOB–1, TOB–2/2a and TOB–3/3a, previously referred to as TAM–1, TAM–2, and TAM–3, respectively, in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53535). Commenters equally supported and opposed the future inclusion of the tobacco use measures in the Hospital IQR Program. Commenters highlighted the importance of high validation rates such as 95 percent, across the electronic data capture method and manual chart-abstraction (77 FR 53535). We note that at the time we sought public comments on these measure concepts related to tobacco use, electronically-specified measures were not yet developed.

In the most recent MAP deliberations in December 2016, only the Tobacco Use Screening (TOB–1) eCQM (MUC16–50) was reviewed. The TOB–2/TOB–2a (MUC16–51) and TOB–3/TOB–3a (MUC16–52) eCQMs were on the December 2016 MUC List, but were not submitted for MAP review because they were still undergoing field testing. We anticipate these measures should be ready for review by the MAP in the winter of CY 2017.

The TOB–1 eCQM was recommended to be refined and resubmitted for consideration for programmatic

inclusion.<sup>258</sup> The MAP indicated that the measure should be tested to ensure that it returns accurate, reliable results. In addition, the MAP Hospital Workgroup noted that it will be important to carefully assess feasibility and burden of data collection.<sup>259</sup> As previously stated, the chart-abstracted versions of the Tobacco Use Screening measures (TOB–1, TOB–2/TOB–2a, and TOB–3/TOB–3a) are part of the IPFQR Program measure set (81 FR 57246); thus, future inclusion of the eCQM versions of these measures in the Hospital IQR Program measure set would promote programmatic alignment across these quality reporting programs.

Additional information on the chart-abstracted version of these measures is available at: <https://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier3&cid=1228775749207>.

We invited public comment on the possible future inclusion of one or more of the eCQM versions of these tobacco use measures (TOB–1, TOB–2/2a and TOB–3/3a) in the Hospital IQR Program. In addition, we invited public comment on the possible future inclusion of a composite measure comprised of all or a subset of these individual tobacco use measures in the Hospital IQR Program.

*Comment:* Many commenters supported the proposed future inclusion of the tobacco eCQM measure set. The commenters noted that hospitalizations and readmission rates are high among tobacco users, however, most hospitals have not placed high priority on systematically assessing (identifying, noting status, offering cessation methods and following-up with) smokers. As such, the inclusion of these measures would help address this lost clinical care opportunity and decrease the incidence of tobacco related illness. In addition, the commenters noted that the parameters evaluated by measures TOB–2a and TOB–3a are patient engagement activities that could help promote the adjustment of quality measures by social risk factors, as many times smoking habits are related to SES and/or SDS factors. Lastly, the commenters noted that the tobacco use measures address a gap area within the Hospital IQR Program measure set. The commenters recommended ensuring programmatic alignment with other regulatory bodies to align tobacco and smoking code sets and requirements or to provide mapping guidance because

misalignment will result in increased provider burden.

*Response:* We thank the commenters for their support. We will continue to work with other quality reporting programs and regulatory bodies as needed to align tobacco and smoking code sets and requirements. We appreciate the commenters input regarding the potential impact of the inclusion of these measures in the Hospital IQR Program on the broader CMS goal of accounting for social risk factors in clinical quality measures.

*Comment:* A few commenters supported the future inclusion of the Tobacco Use eCQMs in the Hospital IQR Program only if they receive NQF endorsement to ensure they are clinically important and linked to improved patient outcomes.

*Response:* We note that currently, the eCQM versions of the measures are undergoing beta testing. Upon completion of the testing, and the availability of a suitable project provided by the NQF, the eCQM versions of these measures will be submitted for endorsement consideration via NQF's consensus development process. However, we note that NQF endorsement is not a requirement for inclusion in the Hospital IQR measure set. Section 1886(s)(4)(D)(ii) of the Act provides that, in the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by the entity with a contract under section 1890(a) of the Act, the Secretary may specify a measure that is not so endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary.

*Comment:* Some commenters urged CMS to develop the protocols and testing environments necessary to validate eCQMs.

*Response:* We have previously finalized a validation process for eCQM data and we refer readers to section IX.A.11. of the preamble of this final rule for more details.

*Comment:* The commenters also recommended that CMS convene a TEP to identify eCQMs that are appropriate for use across care settings.

*Response:* An existing TEP has convened to assess these measures, and we will share the results of the beta testing of the eCQM versions prior to submission to NQF.

*Comment:* A few commenters expressed that the tobacco use measures should be included as individual indicators, as opposed to a composite measure because the all-or-none scoring

<sup>258</sup> "2016–2017 Spreadsheet of Final Recommendations to HHS and CMS, available at: <http://www.qualityforum.org/map/>.

<sup>259</sup> *Ibid.*

of a composite measure could potentially dilute the quality improvement aspect of the measures' respective measurement domains. In addition, the commenters noted that combining multiple metrics into a composite measure increases challenges exponentially and does not allow the level of granularity necessary to know where improvements should be made. Further, commenters suggested that it would be less burdensome for hospitals to identify where improvement is required if the measures remain separate as opposed to determining deficiencies within a composite measure. The commenters urged CMS not to consider composite eCQMs until current single measure eCQMs are proven to be reliable and accurate.

*Response:* We thank the commenters for their support. We acknowledge the commenters' concerns about the importance of retaining the integrity of the quality improvement aspect garnered by scoring each measure individually, as opposed to combining them into a composite. In addition, we recognize that there may be differences in burden associated with data collection and the level of granularity associated with observed results for the individual indicators, as opposed to a composite measure. We will take these factors into account if we move forward with proposing to adopt these measures in the Hospital IQR Program in the future.

*Comment:* Some commenters did not support the future inclusion of the Tobacco measure set in the Hospital IQR Program because these measures are redundant and capturing these data elements electronically has proven to be a challenge. The commenters suggested that these measures be combined and reported as treatment provided/offered at any time during the hospital stay. Further, the commenters noted that capturing these data elements electronically has proven to be a challenge and has required substantial, time consuming electronic medical record revisions. The commenters acknowledged that while specifying the measures as eCQMs may eliminate some of the burden on hospitals, the measures should be field tested as eCQMs in acute care hospitals prior to consideration in the Hospital IQR Program to ensure the measures are accurately assessing clinically relevant variations in care. Finally, the commenters expressed concern that it would be difficult to submit information for TOB-2/2a in an eCQM format and believed that implementation of the TOB-1 as a standalone measure outside of the psychiatric setting would be most

appropriate in the Hospital IQR Program. In addition, the commenters recommended that the tobacco use measures be tested as eCQMs, to ensure the measures are appropriately assessing clinically relevant variations in care, prior to being proposed for adoption in the Hospital IQR Program. Finally, the commenters recommended that CMS wait to implement these measures as eCQMs until the current core measures are more mature.

*Response:* We note that the eCQM versions of the measures are currently undergoing beta testing, to ensure the feasibility of electronic data abstraction and to ensure that these measures are appropriately assessing clinical variations in care. In both the alpha and beta testing phases we have not observed any significant difficulty in electronically capturing the data elements for these measures. We will continue to monitor the level of effort associated with electronic data extraction and make note of any significant challenges (for example, electronic medical record revisions) that arise. We are considering combining these measures into a composite, however, we will continue to solicit stakeholder feedback on how to implement these measures (individually or as composite) in the Hospital IQR Program should we elect to move forward with proposing to adopt them in the future.

We disagree with commenters that the measures are redundant, as there are currently no measures of behavioral health in the Hospital IQR Program. We also disagree that only the Tobacco Use Screening (TOB-1) measure is suitable for inclusion in the Hospital IQR Program. The performance rates for the chart-abstracted versions of Tobacco Use Treatment Provided or Offered (TOB-2)/Tobacco Use Treatment (TOB-2a) and Tobacco Use Treatment Provided or Offered at Discharge (TOB-3)/Tobacco Use Treatment at Discharge (TOB-3a) measures suggest that there is an opportunity for hospitals to improve tobacco use treatment during the hospital stay and at discharge. We reiterate that these measures are intended to be used as part of a linked set. Specifically, the TOB-2/2a and TOB-3/3a measures ensure hospitals are not only screening patients for tobacco use, but also offering evidence-based interventions to improve the quality of care for patients with tobacco use. Lastly, to address the commenters' statement regarding the maturity of the core measures, we note that the chart-abstracted versions of these measures (TOB-1, TOB-2/TOB-2a, and TOB-3/

TOB-3a) are also part of the IPFQR Program measure set (81 FR 57246).

*Comment:* One commenter recommended that the Tobacco Use Measures be included in ambulatory quality reporting programs rather than in the Hospital IQR Program.

*Response:* We thank the commenter for their suggestion, and acknowledge increased screening in ambulatory settings could lead to increased overall tobacco cessation success. We recognize these results could be used by researchers and health-care providers to learn of opportunities for tobacco cessation as a covered health benefit. Currently, these measures are not specified to assess care in ambulatory settings, however, this may be something we consider in future rulemaking. We thank the commenters, and we will consider their views as we develop future policy regarding the use of eCQM versions of one or more measures in the tobacco use measure set and the possible future inclusion of a composite measure comprised of all or a subset of these individual tobacco use measures in the Hospital IQR Program.

#### (4) Substance Use Measures

##### (a) Background

Excessive alcohol consumption and drug misuse or abuse have a significant impact on the health of the U.S. population.<sup>260</sup> Excessive alcohol consumption is a leading cause of preventable death and disability resulting in approximately 88,000 deaths per year with an estimated economic cost of \$249 billion, including \$28 billion (2010 dollars) in direct health care costs.<sup>261</sup> In 2015, approximately 20.8 million individuals were classified as having a substance use disorder. Of those individuals with substance use disorders, 13.1 million had an alcohol use disorder, 5.1 million had an illicit drug use disorder, and 2.7 million had an alcohol and illicit drug

<sup>260</sup> Excessive alcohol consumption includes binge drinking, heavy drinking, and any drinking by pregnant women or people younger than age 21. Definitions are available from the Centers for Disease Control and Prevention at: <https://www.cdc.gov/alcohol/fact-sheets/alcohol-use.htm>.

<sup>261</sup> Centers for Disease Control and Prevention Alcohol and Public Health: Alcohol-Related Disease Impact available at: [; Sacks JJ, Gonzales KR, Bouchery EE, Tomedi LE, Brewer RD, Zhang X. Contribution of Excessive Alcohol Consumption to Deaths and Years of Potential Life Lost in the United States. \*Prev Chronic Dis\* 2014;11:130293. DOI: <http://dx.doi.org/10.5888/pcd11.130293>.](https://nccd.cdc.gov/DPH/ARDI/Default/Report.aspx?T=AAM&P=f6d7eda7-036e-4553-9968-9b17ffad620e&R=d7a9b303-48e9-4440-bf47-070a4827e1fd&M=8E1C5233-5640-4EE8-9247-1ECA7DA325B9&F=&D=)

use disorder.<sup>262</sup> Excessive alcohol consumption and substance use disorders can increase the risk of preventable injury, worsen existing chronic diseases, such as mental illness, and lead to the development of diseases, such as heart disease, cancer, and liver disease.<sup>263</sup> Studies show the majority of individuals who consume alcohol excessively do not meet the clinical

criteria for diagnosis of a substance use disorder; yet evidence demonstrates screening and brief interventions, especially prior to the onset of a substance use disorder, can improve health and reduce costs.<sup>264</sup> Similar benefits have been observed for individuals with substance use disorders who are identified and referred to treatment.<sup>265 266</sup> The table

below provides performance rates based on the July 2015–June 2016 reporting period for the chart-abstracted versions of these measures, as reported by The Joint Commission.<sup>267</sup> The results show that there is an opportunity for hospitals to improve substance use screening, brief intervention, and treatment.

SUBSTANCE USE MEASURES SCREENING RESULTS JULY 2015–JUNE 2016

Measure name	Screening rate (%)
Alcohol Use Screening (SUB–1)	85.30
Alcohol Use Brief Intervention Provided or Offered (SUB–2)	62.68
Alcohol Use Brief Intervention (SUB–2a)	57.43
Alcohol & Other Drug Use Disorder Treatment Provided or Offered at Discharge (SUB–3)	65.46
Alcohol & Other Drug Use Disorder Treatment at Discharge (SUB–3a)	54.27

(b) Overview of Measures

The substance use measure set consists of the following three measures:

- Alcohol Use Screening (SUB–1) (MUC16–179);
- Alcohol Use Brief Intervention Provided or Offered (SUB–2)/Alcohol Use Brief Intervention (SUB–2a) (MUC16–178); and
- Alcohol & Other Drug Use Disorder Treatment Provided or Offered at Discharge (SUB–3)/Alcohol & Other Drug Use Disorder Treatment at Discharge (SUB–3a) (MUC16–180).

The SUB–1, SUB–2/2a and SUB–3/3a measures address the NQS priority of promoting the most effective prevention and treatment practices for the leading causes of mortality. These measures are intended to be used as part of a linked set. Specifically, the SUB–2/2a and SUB–3/3a measures will ensure hospitals are not only screening patients for excessive alcohol use, but also offering evidence-based interventions to improve the quality of care for patients with excessive alcohol use or other use disorders. The SUB–1 Alcohol Use Screening measure assesses whether hospital patients 18 years of age and older are screened for alcohol use using a validated screening questionnaire for

excessive drinking during their inpatient stay. A validated screening questionnaire is defined as an instrument that has been psychometrically tested for reliability (the ability of the instrument to produce consistent results), validity (the ability of the instrument to produce true results), and sensitivity (the probability of correctly identifying a patient with the condition).

As previously noted, these measures are intended to be implemented as a set. As such, it would be necessary to adopt the SUB–1 measure in order to implement the other two measures. The SUB–2/2a measure assesses whether hospital patients age 18 years of age or older who screened positive for excessive alcohol use or an alcohol use disorder receive or refuse a brief intervention during the hospital stay (SUB–2). Subset measure SUB–2a includes only those patients who receive a brief intervention. A brief intervention is defined as a single session or multiple sessions conducted by a qualified healthcare professional or trained peer support person, which includes motivational discussion focused on increasing patient insight and awareness regarding alcohol use

and motivating behavioral change. The SUB–3/3a measures assess whether hospitals patients 18 years of age or older with a substance use disorder (alcohol or drug) receive or refuse at discharge a medication prescription for treatment or receive or refuse a referral for substance use disorder treatment (SUB–3). Subset measure SUB–3a includes only those patients who receive a medication prescription or treatment referral at discharge.

The chart-abstracted versions of these three measures, not the eCQM versions, were added to the MUC List in the summer of 2016,<sup>268</sup> and reviewed by the MAP in December 2016 as discussed in the MAP Pre-Rulemaking Report and Spreadsheet entitled “2016–2017 Spreadsheet of Final Recommendations to HHS and CMS.”<sup>269</sup> The MAP recommended that the SUB–1 measure (MUC16–179) be refined and resubmitted. The MAP noted that the measure encourages hospitals to screen patients for excessive alcohol use and can prevent life-threatening alcohol withdrawal syndrome, but recommended that the measure be paired with an appropriate intervention and follow-up measure. The MAP did not support the SUB–2/2a measure

<sup>262</sup> Substance Abuse and Mental Health Services Administration (SAMHSA) Key Substance Use and Mental Health Indicators in the United States: Results from the 2015 National Survey on Drug Use and Health available at: [https://www.samhsa.gov/data/sites/default/files/NSDUH-FRR1-2015/NSDUH-FRR1-2015/NSDUH-FRR1-2015.pdf](https://www.samhsa.gov/data/sites/default/files/NSDUH-FRR1-2015/NSDUH-FRR1-2015/NSDUH-FRR1-2015/NSDUH-FRR1-2015.pdf).

<sup>263</sup> Excessive alcohol consumption includes binge drinking, heavy drinking, and any drinking by pregnant women or people younger than age 21. Definitions are available from the Centers for Disease Control and Prevention at: <https://www.cdc.gov/alcohol/fact-sheets/alcohol-use.htm>.

<sup>268</sup> 2016 Measures Under Consideration Spreadsheet, available at: <http://www.qualityforum.org/ProjectMaterials.aspx?projectID=75367>.

<sup>269</sup> “2016–2017 Spreadsheet of Final Recommendations to HHS and CMS, available at: <http://www.qualityforum.org/map/>.

(MUC16–178) for adoption into the Hospital IQR Program. Proponents of the SUB–2/2a measure supported the incorporation of behavioral health measures into the Hospital IQR Program and noted that hospitalization is a prime opportunity to discuss harmful substance use because patients may be more amenable to a brief intervention during a hospital stay. Other stakeholders acknowledged the significant health impact of screening and brief intervention for substance use, but cited the burden of chart-abstracted data collection and encouraged the continued development of an electronic measure. MAP stakeholders also expressed concern the use of the measure in the hospital inpatient setting, rather than a primary care setting, was not strongly linked to improved patient outcomes. The MAP also did not support SUB–3/3a (MUC16–180) due to similar concerns as identified with the SUB–2/2a measure regarding the measure's link to improved outcomes.<sup>270</sup>

With respect to MAP stakeholder concerns regarding the evidence supporting the use of the measures in the inpatient setting, we note such supporting evidence, including the evidence of the generalizability of studies to the acute inpatient setting, was included as part of the endorsement process and these measures received NQF endorsement. Sufficient evidence exists linking the measures to improved patient outcomes<sup>271 272</sup> in the inpatient setting.<sup>273</sup> In addition, in light of the significant health impact of harmful substance use, and its associated healthcare costs, we believe the benefits of collecting these measure data from hospitals and publicly reporting the information outweigh the burden, and address a critical topic impacting a patient's quality of care and health outcomes.

We note that The Joint Commission has been using these chart-abstracted

measures for optional reporting since January 1, 2012.<sup>274</sup> The chart-abstracted versions of the Substance Use measures (SUB–1, SUB–2/2a and SUB–3/3a) are also part of the IPFQR Program measure set (81 FR 57246); thus, future inclusion of the eCQM versions of these measures in the Hospital IQR Program measure set would promote programmatic alignment across these quality reporting programs. Lastly, we note that electronic versions of these measures are in development by SAMHSA; we anticipate that the eCQM versions will be ready for review within the next 18–24 months.

Additional information on the chart-abstracted versions of these measures is available in TJC's *Specification Manual for National Hospital Inpatient Quality Measures* at: [https://www.jointcommission.org/specifications\\_manual\\_for\\_national\\_hospital\\_inpatient\\_quality\\_measures.aspx](https://www.jointcommission.org/specifications_manual_for_national_hospital_inpatient_quality_measures.aspx).

We invited public comment on the possible future inclusion of one or more of the eCQM versions of the Substance Use measures (SUB–1, SUB–2/2a and SUB–3/3a) in the Hospital IQR Program. In addition, we invited public comment on the possible future inclusion of a composite measure comprised of all of these individual substance use measures in the Hospital IQR Program.

*Comment:* Many commenters supported the proposed future inclusion of the Substance Use eCQM measure set. The commenters stated that substance use disorders are health issues that cause a great deal of illness in our country, but are terribly under-addressed by the treatment system. The commenters also stated that inclusion of these measures would incentivize screening, assessment, and evidence-based treatment for individuals with opioid and other substance use disorders. In addition, commenters agreed that these measures fill a gap area within the Hospital IQR Program measure set.

Some commenters recommended that the substance use measures should be added as individual measures as opposed to a composite because all-or-none scoring of a composite measure could potentially dilute the quality improvement aspect of the Substance Use measures and diminish the integrity of the quality improvement process. Further, commenters suggested that it would be less burdensome for hospitals to identify where improvement is required if the measures remain separate as opposed to determining deficiencies within a composite measure.

*Response:* We thank the commenters for their support. We acknowledge the commenters' concerns about the importance of retaining the integrity of quality improvement aspect garnered by scoring each measure individually, as opposed to combining them into a composite, and we will take these factors into account if we move forward with proposing to adopt these measures in the Hospital IQR Program in the future.

*Comment:* Some commenters supported the future inclusion of the Substance Use eCQMs in the Hospital IQR Program only if they receive NQF endorsement to ensure that they are clinically important and linked to improved patient outcomes.

*Response:* We thank the commenters for their support. We note that currently the eCQM versions of the measures are undergoing beta testing. Upon completion of the testing, and the availability of a suitable project provided by the NQF, the eCQM versions of these measures will be submitted for endorsement consideration via NQF's consensus development process. However, we note that NQF endorsement is not a requirement for inclusion in the Hospital IQR Program measure set. Section 1886(s)(4)(D)(ii) of the Act provides that, in the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by the entity with a contract under section 1890(a) of the Act, the Secretary may specify a measure that is not so endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary.

*Comment:* Some commenters urged CMS to develop the protocols and testing environments necessary to validate eCQMs.

*Response:* We have previously finalized a validation process for eCQM data and we refer readers to section IX.A.11. of the preamble of this final rule for more details.

*Comment:* Some commenters also recommended that CMS convene a TEP to identify eCQMs that are appropriate for use across care settings.

*Response:* We also note that an existing TEP has convened to assess these measures and we will share the results of the beta testing of the eCQM versions prior to submission to NQF.

*Comment:* Some commenters expressed concern with the proposed future inclusion of the substance use eCQM measures. Specifically, the commenters noted that capturing these

<sup>273</sup> McQueen J, Howe TE, Allan L, Mains D, Hardy V. Brief interventions for heavy alcohol users admitted to general hospital wards. *Cochrane Database Syst Rev*. 2011 Jan 1;8(8).

<sup>274</sup> The Joint Commission, Substance Use Measures overview, available at: [https://www.jointcommission.org/core\\_measure\\_sets.aspx](https://www.jointcommission.org/core_measure_sets.aspx).

data elements electronically has proven to be a challenge and has required substantial, time consuming electronic medical record revisions. The commenters acknowledged that while specifying the measures as eQMs may eliminate some of the burden on hospitals, the measures should be field tested as eQMs in acute care hospitals prior to consideration in the Hospital IQR Program to ensure the measures are accurately assessing clinically relevant variations in care. Finally, the commenters expressed concern that it would be difficult to submit information for SUB-2/2a in an eCQM format and believed that implementation of the SUB-1 as a standalone measure outside of the psychiatric setting would be most appropriate.

*Response:* We acknowledge the commenters concerns. We note that currently, the eCQM versions of the measures are undergoing beta testing in acute care hospitals to ensure the feasibility of electronic data abstraction and to ensure that these measures are appropriately assessing clinical variations in care. We also note that in both the alpha and beta testing phases we have not observed any significant difficulty in electronically capturing the data elements for any of these measures.

We disagree that the Alcohol Use Screening (SUB-1) measure is more suitable for implementation in the Hospital IQR Program than the Alcohol Use Brief Intervention Provided or Offered (SUB-2)/Alcohol Use Brief Intervention (SUB-2a) and Alcohol & Other Drug Use Disorder Treatment Provided or Offered at Discharge (SUB-3)/Alcohol & Other Drug Use Disorder Treatment at Discharge (SUB-3a) measures. We reiterate that these measures are intended to be used as part of a linked set. Specifically, the SUB-2/2a and SUB-3/3a measures ensure hospitals are not only screening patients for excessive alcohol use, but also offering evidence-based interventions to improve the quality of care for patients with excessive alcohol use or other use disorders.

*Comment:* One commenter recommended that the Substance Use Measures be included in ambulatory quality reporting programs rather than in the Hospital IQR Program.

*Response:* We thank the commenter for their suggestion and acknowledge that preventable substance use events are common in ambulatory settings, with many resulting in hospitalization. Currently, these measures are not specified to assess care in ambulatory settings, however, this may be something we consider in future rulemaking. We note that quality

improvement programs at large could benefit from targeting substance use disorders among patients.

We thank the commenters, and we will consider their views as we develop future policy regarding the use of a one or more eCQM versions of the substance use measures and the possible future inclusion of a composite measure comprised of all of these individual substance use measures in the Hospital IQR Program.

#### 10. Form, Manner, and Timing of Quality Data Submission

##### a. Background

Sections 1886(b)(3)(B)(viii)(I) and (b)(3)(B)(viii)(II) of the Act state that the applicable percentage increase for FY 2015 and each subsequent year shall be reduced by one-quarter of such applicable percentage increase (determined without regard to sections 1886(b)(3)(B)(ix), (xi), or (xii) of the Act) for any subsection (d) hospital that does not submit data required to be submitted on measures specified by the Secretary in a form and manner, and at a time, specified by the Secretary. Previously, the applicable percentage increase for FY 2007 and each subsequent fiscal year until FY 2015 was reduced by 2.0 percentage points for subsection (d) hospitals failing to submit data in accordance with the description above. In accordance with the statute, the FY 2018 payment determination will begin the fourth year that the Hospital IQR Program will reduce the applicable percentage increase by one-quarter of such applicable percentage increase.

In order to participate in the Hospital IQR Program, hospitals must meet specific procedural, data collection, submission, and validation requirements. For each Hospital IQR Program payment determination, we require that hospitals submit data on each specified measure in accordance with the measure's specifications for a particular period of time. The data submission requirements, Specifications Manual, and submission deadlines are posted on the QualityNet Web site at: <http://www.QualityNet.org/>. The annual update of electronic clinical quality measure (eCQM) specifications and implementation guidance documents are available on the eCQI Resource Center Web site at: <https://ecqi.healthit.gov/>. Hospitals must register and submit quality data through the secure portion of the QualityNet Web site. There are safeguards in place in accordance with the HIPAA Security Rule to protect patient information submitted through this Web site.

##### b. Procedural Requirements for the FY 2020 Payment Determination and Subsequent Years

The Hospital IQR Program's procedural requirements are codified in regulation at 42 CFR 412.140. We refer readers to these codified regulations for participation requirements, as further explained by the FY 2014 IPPS/LTCH PPS final rule (78 FR 50810 through 50811) and the FY 2017 IPPS/LTCH PPS final rule (81 FR 57168). In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20064), we did not propose any changes to these procedural requirements.

##### c. Data Submission Requirements for Chart-Abstracted Measures

We refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51640 through 51641), the FY 2013 IPPS/LTCH PPS final rule (77 FR 53536 through 53537), and the FY 2014 IPPS/LTCH PPS final rule (78 FR 50811) for details on the Hospital IQR Program data submission requirements for chart abstracted measures. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20064), we did not propose any changes to the data submission requirements for chart abstracted measures.

##### d. Changes to the Reporting and Submission Requirements for eQMs

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20064 through 20066), we proposed changes to the Hospital IQR Program eCQM reporting and submission requirements to align them with the Medicare EHR Incentive Program for eligible hospitals and CAHs.

##### (1) Background

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57157 through 57159), we finalized policies to require hospitals to submit a full calendar year (four quarterly reporting periods) of data on at least 8, self-selected eQMs from the available eQMs in the Hospital IQR Program for the CY 2017 reporting period/FY 2019 payment determination and the CY 2018 reporting period/FY 2020 payment determinations. In this final rule, we are finalizing modified versions of our proposals regarding the CY 2017 reporting period/FY 2019 payment determination and the CY 2018 reporting period/FY 2020 payment determination eCQM reporting requirements such that hospitals are required to submit one, self-selected, calendar quarter of data for 4 eQMs. We refer readers to section IX.A.8. of the preamble of this final rule for more detail on these policies. Consistent with previous years, with these finalized policies we have sought to align the

Hospital IQR Program eCQM reporting requirements and the CQM electronic reporting requirements in the Medicare EHR Incentive Program to the extent feasible for the CY 2017 reporting period/FY 2019 payment determination and the CY 2018 reporting period/FY 2020 payment determination in order to reduce reporting burden and confusion for hospitals and their health IT vendors. We refer readers to the finalized policies for the Medicare and Medicaid EHR Incentive Programs for eligible hospitals and CAHs in section IX.E.2.b. of the preamble of this final rule. We are finalizing these changes for both programs in order to assist hospitals in their efforts as they transition towards more robust electronic reporting of quality measure data and to be responsive to the feedback we have received about the challenges of eCQM reporting and recommendations to allow more time to become familiar with and improve upon eCQM reporting capabilities.

(2) Changes to the Reporting and Submission Requirements for eCQMs for the FY 2019 Payment Determination and Subsequent Years

In the FY 2018 IPPS/LTCH PPS proposed rule, we did not propose any changes to our file format requirements or reporting deadlines. However, we proposed changes to our requirements related to eCQM electronic specification and certification. These are discussed in more detail below.

(a) File Format

In the FY 2016 IPPS/LTCH PPS final rule (80 FR 49705 through 49708), we finalized that hospitals must submit eCQM data via the Quality Reporting Document Architecture Category I (QRDA I) file format for the CY 2016 reporting period/FY 2018 payment determination. In addition, we finalized that for the CY 2016 reporting period/FY 2018 payment determination, hospitals may use third parties to submit QRDA I files on their behalf and can either use abstraction or pull the data from non-certified sources in order to then input these data into CEHRT for capture and reporting QRDA I (80 FR 49706). Consistent with previously finalized reporting requirements, hospitals can meet the reporting requirements by submitting data via QRDA I files, zero denominator declaration, or case threshold exemption. In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57170), we finalized our proposal to continue these eCQM reporting policies for the CY 2017 reporting period/FY 2019 payment determination and subsequent years.

These finalized requirements align with the CQM electronic reporting requirements of the Medicare EHR Incentive Program for eligible hospitals and CAHs (81 FR 57255 through 57257). In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20065), we did not propose any changes to these requirements.

(b) Changes to the Certification Requirements for eCQM Reporting

(i) Background and Changes to the CY 2018 Reporting Period/FY 2020 Payment Determination Certification Requirements

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57170 through 57171), we finalized policies that hospitals must: (1) Report eCQM data using EHR technology certified to either the 2014 or 2015 Edition certification criteria for the CY 2017 reporting period/FY 2019 payment determination; and (2) report eCQM data using EHR technology certified to the 2015 Edition beginning with the CY 2018 reporting period/FY 2020 payment determination and subsequent years. As we discuss in further detail in section IX.G.4. of the preamble of this final rule where the same considerations are discussed in detail for the Medicare and Medicaid EHR Incentive Programs, based on our past experience with the transition from the 2011 Edition to the 2014 Edition and concerns expressed by stakeholders, we understand that transitioning to technology certified to a new Edition can be complex and can require more resources and time than anticipated, including the time necessary to effectively deploy the upgraded system and make the necessary patient safety, staff training, and workflow investments. We understand and appreciate these concerns and are working in cooperation with our federal partners at ONC to monitor progress on the 2015 Edition upgrade. Nevertheless, we believe that there are many benefits of switching to EHR technology certified to the 2015 Edition. We will work with ONC to monitor the status of EHR technology certified to the 2015 Edition and the deployment and implementation of such technology. In the proposed rule (82 FR 20065), we noted that if we identify a change in the current trends and significant issues with the certification and deployment of the 2015 Edition, we will consider additional methods to offer flexibility in CY 2018 for those hospitals that are not able to implement 2015 Edition certification criteria for CEHRT, including the flexibility to use technology certified to the 2014 Edition

or the 2015 Edition in CY 2018. Another option we noted is allowing a combination of EHR technologies certified to the 2014 Edition and 2015 Edition to be used in CY 2018, for those hospitals that are not able to fully implement EHR technology certified to the 2015 Edition. We invited public comment on these options for offering flexibility in CY 2018 with regard to EHR certification requirements.

*Comment:* A few commenters supported CMS' policy that eCQMs must be submitted using the 2015 Edition certification criteria for CEHRT for the CY 2018 reporting period/FY 2020 payment determination because it offers increased interoperability which would make both the sharing and usage of data easier.

*Response:* We thank the commenters for their support. We believe using the most recent version of CEHRT, which incorporates updated standards and criteria, is important as it allows us to collect more relevant and accurate electronic data. We believe improved systems interoperability and use of the most current standards will facilitate more robust and accurate quality data reporting. One of the main tenets of the ONC 2015 Edition final rule (80 FR 62601) is to facilitate greater interoperability for several clinical health information purposes and enable health information exchange through new and enhanced certification criteria, standards, and implementation specifications. We note that we have worked closely with ONC to enhance testing and validation of certified technology's ability to capture, exchange, and report electronic patient data, such as improved testing and certification through the Cypress CQM testing and certification tool.<sup>275</sup> As another example, we note that ONC proposed a "CQM—report" certification criterion at 45 CFR 170.315(c)(3) as part of its 2015 Edition certification criteria that we would then require as described in the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24613 through 24614).

Furthermore, we believe there are many benefits associated with upgrading to EHR technology certified to the 2015 Edition. Specifically, the 2015 Edition includes updates to standards for structured data capture as well as data elements in the common clinical data set which can be captured in a structured format. The use of relevant, up-to-date, standards-based structured data capture with an EHR certified to the 2015 Edition supports

<sup>275</sup> Cypress Tool Overview, available at: <https://www.healthit.gov/cypress/>.

electronic clinical quality measurement. Further, the 2015 Edition certification criteria enables health information exchange through new and enhanced certification criteria standards, and implementation specifications for interoperability while incorporating changes that are designed to spur innovation and provide more choices to health care providers and patients for the exchange of electronic health information including new application access (API) certification criteria. For example, a new “transitions of care” certification criterion rigorously assess a product’s ability to create and receive an interoperable Consolidated-Clinical Document Architecture (C–CDA). ONC also adopted certification criteria that both support interoperability in other settings and use cases, such as the Common Clinical Data Set summary record, data segmentation for privacy, and care plan certification criteria (80 FR 62603). For additional details about the updates to the 2015 Edition, we refer readers to ONC’s Common Clinical Data Set resource, available at: [https://www.healthit.gov/sites/default/files/commonclinicaldataset\\_ml\\_11-4-15.pdf](https://www.healthit.gov/sites/default/files/commonclinicaldataset_ml_11-4-15.pdf).

The 2015 Edition certification criterion (that make up CEHRT) within the certification testing process includes features that are designed to improve the functionality and quality of eCQM data. Specifically, systems must demonstrate they can import and allow a user to export one or more QRDA files. This allows systems to share files and extract data for reporting into another system or send to another system. In addition, testing coverage is much more robust; all measures have >80 percent of test pathways tested in the test bundle with most >95 percent. The 2015 Edition certification criteria for CEHRT also includes optional certification criteria and program specific testing which can also support electronic clinical quality reporting. The filter criteria ensure a product can filter an electronic file based on demographics like sex or race, based on provider or site characteristics like TIN/NPI, and based on a diagnosis or problem. The testing for this function checks that patients are appropriately aggregated and calculated for this new function which supports flexibility, specificity and more robust analysis of eCQM data. Finally, the 2015 Edition provides optional testing to CMS requirements for reporting such as form and manner specifications and implementation guides. For these reasons, we encourage hospitals to deploy the 2015 Edition certification criteria as soon as practicable.

*Comment:* Many commenters did not support CMS’ previously finalized policy that eCQMs must be submitted using the 2015 Edition certification criteria for CEHRT for the CY 2018 reporting period/FY 2020 payment determination.

Several commenters supported the options described in the FY 2018 IPPS/LTCH PPS proposed rule, such that hospitals be permitted to use the 2014 Edition certification criteria for CEHRT or a combination of 2014 and 2015 Editions for the CY 2018 reporting period/FY 2020 payment determination.

A few commenters recommended CMS delay the requirement for eCQMs to be submitted using the 2015 Edition certification criteria for CEHRT until the CY 2019 reporting period/FY 2021 payment determination. The commenters suggested that additional time is necessary because the requirements for the 2015 Edition certification criteria for CEHRT are extensive and expensive. In addition, developers continue to struggle with completing the certification process by January 1, 2018.

One commenter mentioned that turn over in the industry has caused a backlog in the certification process. Another commenter expressed concern that the slow pace of certification, the number of upgrades still to be performed, and the number of trainings yet to be held makes it highly unlikely that health systems and medical practices will be prepared to submit eCQMs using the 2015 Edition certification criteria for CEHRT for the CY 2018 reporting period/FY 2020 payment determination. Another commenter noted that implementing the 2015 Edition certification criteria for CEHRT does not automatically create the ability to submit “appropriate” or complete quality data.

*Response:* We recognize there is burden associated with the development and deployment of each new version of CEHRT, which may be labor intensive and expensive for hospitals. We understand that ONC considers trends within the industry when projecting for 2015 Edition readiness and has continued to update this tracking as the testing and certification process continues. This tracking, as of the end of the second quarter of CY 2017, indicates that overall progress is behind the first quarter projections.<sup>276</sup> ONC has therefore updated the overall estimate to reflect an estimate of greater than 75 percent of hospitals will be ready by the end of CY 2017.<sup>277</sup> We refer readers to

<sup>276</sup> <https://dashboard.healthit.gov/dev/ticker.php>.

<sup>277</sup> *Ibid.*

section IX.G.4. of the preamble of this final rule for more discussion of ONC’s efforts on this matter.

We acknowledge commenter concerns that vendor industry turnover may delay hospitals’ ability to deploy the 2015 Edition certification criteria for CEHRT. Since the conclusion of the public comment period for the FY 2017 IPPS/LTCH PPS final rule, we have continued to receive frequent feedback (via email, webinar questions, help desk questions, and conference call discussions) from hospitals and health IT vendors about ongoing challenges of implementing eCQM reporting. A summary of the main concerns identified by these data submitters are outlined in section IX.A.8.a. of the preamble of this final rule. One significant issue that commenters specifically identified is the timing of transitioning to new EHR systems during CY 2017 (for example, transition to a new EHR vendor or system upgrades necessary to deploy the 2015 Edition certification criteria for CEHRT) affects hospitals’ ability to complete the certification process by January 1, 2018.

Although we believe that the longer-term benefits of utilizing the 2015 Edition as discussed in the above response outweigh these costs and challenges, in response to stakeholder concerns, in part about the burden associated with upgrading EHR technology certified to the 2015 Edition, we will allow flexibility for hospitals to use the 2014 Edition, the 2015 Edition, or a combination of both for the CY 2018 reporting period/FY 2020 payment determination only. This is a change to our previously finalized policy that required hospitals to use the 2015 Edition certification criteria for CEHRT for the CY 2018 reporting period/FY 2020 payment determination (81 FR 57171).

We will continue to assess the progress of hospitals implementing certification requirements and engage in discussions with hospitals regarding their experiences as we consider certification policies related to eCQM reporting in future rulemaking. We intend to determine requirements for the CY 2019 reporting period/FY 2021 payment determination and subsequent years in future rulemaking. We are finalizing similar certification policies for the Medicare and Medicaid EHR Incentive Programs for hospitals and CAHs and refer readers to sections IX.E.2.b. of the preamble of this final rule.

Furthermore, we refer readers to section IX.A.8. of the preamble of this final rule for details on our modified eCQM reporting requirements for the CY

2018 reporting period/FY 2020 payment determination, such that hospitals will be required to report on 4 eCQMs for only one, self-selected calendar quarter of data (instead of a full calendar year) to reduce burden. By allowing providers to self-select which quarter of data they want to submit, they will have more flexibility to determine implementation timelines for EHR system upgrades, such as transitioning to the 2015 Edition.

We acknowledge the commenter's concern that implementing the 2015 Edition certification criteria for CEHRT may not automatically result in the ability to submit "appropriate" or complete quality data; however, as described above, we believe the most recent Edition of certification criteria for CEHRT will help support eCQM data capture and reporting in several ways.

*Comment:* Some commenters expressed concern that their current vendors will not be certifying to the 2015 Edition certification criteria for CEHRT and worried that CMS would not grant ECE requests for hospitals experiencing vendor issues or transitions. These commenters suggested that CMS revise its eCQM ECE policy to allow for EHR vendor changes. One commenter requested clarification on the statement that a hospital is "not able to implement the 2015 Edition of CEHRT." The commenter noted the wide variety of 2015 Edition certified products that are available and suggested waivers for the requirement to use the 2015 Edition be sparingly given, if at all, since use of the updated edition is an important and significant requirement.

*Response:* While we strive to move forward in our electronic reporting efforts and aim to stay abreast of evolving infrastructure, we must balance those goals with being responsive to stakeholder concerns. We refer readers to our change in policy discussed above in order to provide greater flexibility to hospitals transitioning to 2015 Edition certification criteria for CEHRT. However, if a hospital still finds it is unable to meet the eCQM submission deadline or other submission requirements, the hospital should review our criteria for an eCQM-related Extraordinary Circumstances Extension/Exemption (ECE) (81 FR 57182) and consider submitting an ECE request by the ECE request deadline. Currently, the deadline for the CY 2017 reporting period/FY 2019 payment determination is April 1st following the applicable eCQM submission deadline (February 28, 2018) (82 FR 57172). Our current policy allows hospitals to utilize the

existing ECE form to request an exception from the Hospital IQR Program's eCQM reporting requirement for the applicable program year based on hardships preventing hospitals from electronically reporting (81 FR 57182). Such hardships could include, but are not limited to, infrastructure challenges (hospitals must demonstrate that they are in an area without sufficient internet access or face insurmountable barriers to obtaining infrastructure) or unforeseen circumstances, such as vendor issues outside of the hospital's control (including a vendor product losing certification) (80 FR 49695 and 49713). ECE requests for the Hospital IQR Program are considered on a case by case basis (81 FR 57182). We will assess the hospital's request on a case-by-case basis to determine if an exception is merited. Therefore, our decision whether or not to grant an ECE will be based on the specific circumstances of the hospital. For additional information about eCQM-related ECE requests, we refer readers to, "The ECE Policy Clarification Questions and Answers" document located online at: <https://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier3&cid=1228775554109>, link to document: *ECE Policy Clarification Questions and Answers*, question #5).

*Comment:* One commenter believed it unfair to double penalize hospitals which may have excellent quality and are able to submit the chart-abstracted versions of the measure, but do not have fully operational EHRs. The commenter noted that only 5 percent of hospitals failed meaningful use, however, feared that number may increase with the transition to 2015 Edition certification criteria for CEHRT.

*Response:* With respect to the commenter's assertion that it is unfair to double penalize hospitals that do not have fully operational EHRs, we disagree that the requirements for electronic reporting in the Hospital IQR Program duplicate penalties. In an effort to align the Hospital IQR and EHR Incentive Programs with regard to electronic quality reporting, we have specified that hospitals meeting eCQM reporting requirements for the Hospital IQR Program will be considered to have successfully electronically reported CQMs for the Medicare EHR Incentive Program as well. As noted by the commenter and as we previously stated in the FY 2016 IPPS/LTCH PPS final rule, our data show that 95 percent of hospitals already attest to successful eCQM reporting under the EHR

Incentive Program and, accordingly, we believe that the majority of hospitals will be able to successfully report eCQMs to meet the Hospital IQR Program requirements (81 FR 57156). We do not believe that transition to the 2015 Edition certification criteria for CEHRT will materially impact the percentage of hospitals able to successfully report eCQM data, particularly in light of our change to previously finalized policy, discussed above, to allow flexibility for hospitals to use the 2014 Edition, 2015 Edition, or a combination of both for the CY 2018 reporting period/FY 2020 payment determination.

*Comment:* One commenter expressed concern that allowing flexibility on the use of a combination of the 2014 and 2015 Editions of CEHRT for the CY 2018 reporting period/FY 2020 payment determination might create more problems than it could potentially solve.

*Response:* We interpret the commenter's concern to be that allowing hospitals to use of a combination of the 2014 and 2015 Editions certification criteria for CEHRT might make it more difficult for them to meet the eCQM reporting requirements. We acknowledge the commenter's concern but do not share it; we have allowed hospitals to use a combination of the 2014 and 2015 Editions of CEHRT for the CY 2016 reporting period/FY 2018 payment determination and the CY 2017 reporting period/CY 2019 payment determination, and we are not aware of any specific issues in QRDA I file creation or submission. Based on the comments received, many hospitals and health IT vendors indicated they would prefer to have greater time and flexibility to implement upgrades to the 2015 Edition and specifically suggested we allow hospitals to use a combination of the 2014 and 2015 Editions of CEHRT to satisfy the eCQM certification requirements for the CY 2018 reporting period/FY 2020 payment determination. If we interpret commenter's concern to mean that delaying full transition to the 2015 Edition might stall progress toward more robust electronic data submission, we believe that we must balance these goals with other commenters' concerns about their ability to timely meet the certification requirements in the face of vendor issues and other challenges, as discussed above. We believe our changes, as discussed above, to the previously finalized policy allowing greater flexibility for hospitals transitioning to the 2015 Edition best achieves this balance. We will continue to assess the progress of hospitals implementing certification requirements and engage in discussions with

hospitals regarding their experiences as we consider certification policies in future rulemaking.

*Comment:* Several commenters noted their support for the previously finalized policy that eCQMs could be submitted via the 2014 or 2015 Edition certification criteria for CEHRT for the CY 2017 reporting period/FY 2019 payment determination and recommended that CMS extend this option to allow use of the 2014 or 2015 Edition certification criteria for CEHRT for the CY 2018 reporting period/FY 2020 payment determination, because it allows hospitals additional flexibility and enables facilities to spend appropriate time on implementation, testing, validation, and education of EHR systems.

*Response:* We refer these commenters and readers to our discussion above, expanding these policies through the FY 2020 payment determination.

*Comment:* A few commenters expressed concern that hospitals may be penalized more than once for failing to successfully report eCQMs in both the Hospital IQR and EHR Incentive Programs and thus a significant portion of their annual payment update hinges on the maturity of health IT vendor capabilities and the ability of CMS' QualityNet Secure Portal to manage and appropriately support the volume of incoming data submissions.

Commenters noted that hospitals continue to report barriers to successfully submitting eCQM data, including health IT vendor failures during the submission of production data (which did not present during test submissions) and limitations of the QualityNet Secure Portal, such as: (1) An inability to accept QRDA I files over a certain size; (2) an inability to run reports verifying that data have been submitted to CMS; and (3) frequent periods when the system is down because it cannot accommodate more than a certain number of users at one time. Moreover, a commenter expressed serious concerns about eCQM measure specification and data validation.

*Response:* We disagree with commenters that the requirements for electronic reporting in the Hospital IQR and Medicare EHR Incentive Programs duplicate penalties. As we previously stated in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57156), in an effort to align with the Medicare and Medicaid EHR Incentive Programs, we have specified that hospitals meeting electronic reporting requirements for the Hospital IQR Program will be considered to have successfully reported the eCQM requirement to the Medicare and Medicaid EHR Incentive

Programs as well. Our data show that 95 percent of hospitals already attest to successful electronic clinical quality measure reporting under the EHR Incentive Program and, accordingly, we believe the majority of hospitals will be able to successfully report electronic clinical quality measures, meeting the Hospital IQR Program requirements (81 FR 57156). In addition, if a hospital is unable to meet the Hospital IQR Program's eCQM reporting requirements due to extraordinary circumstances, the hospital should review the Hospital IQR Program's ECE policy, available at: <https://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier3&cid=1228775554109>, and the EHR Incentive Program's hardship exception policy, available at: [https://www.cms.gov/Regulations-and-Guidance/Legislation/EHRIncentivePrograms/PaymentAdj\\_Hardship.html](https://www.cms.gov/Regulations-and-Guidance/Legislation/EHRIncentivePrograms/PaymentAdj_Hardship.html). We also refer readers to section IX.A.15. of the preamble of this final rule for more details about our ECE policy.

Regarding the limitations of the QualityNet Secure Portal and QRDA I file submission difficulties that commenters described, we acknowledge that at certain times of high submission volume leading up to the submission deadline on February 28, 2017, some data submitters reported longer file processing times and inability to timely run feedback reports. We are actively taking steps to improve the data submission experience for the CY 2017 reporting period (the next submission deadline is February 28, 2018), such as working with the infrastructure contractor to increase system throughput and increase responsiveness to issues that arise. In addition, the development contractor is working to identify efficiencies that can be gained in our Hospital Quality Reporting system source code. These efficiencies should reduce the time it takes to receive submission confirmation and run reports.

Regarding the comment that failures during the submission of production data were not identified during the test file submission process, we note the Pre-Submission Validation Application (PSVA) tool<sup>278</sup> helps submitters to assess the QRDA I file format, however, hospitals and health IT vendors should submit files for testing in the CMS data receiving system via the QualityNet Secure Portal to ensure that production files are accepted prior to the submission deadline. Hospitals and

their health IT vendors were notified via educational materials and presentations that the utilization of the PSVA tool assesses the format of the QRDA Category I file; however, the CMS data receiving system performs additional checks, such as the Clinical Document Architecture (CDA) schema, submission period dates, and authorization for a vendor to submit on a hospital's behalf. The PSVA tool is a good starting point for initial validation and will help hospitals and their vendors to work through many file format issues. Both validation methods provide value, but ultimately the hospital should aim to ensure that files are accepted through the CMS data receiving system.

Regarding the QRDA file size limitation, hospitals and vendors were notified via education and outreach efforts the file size limit of QRDA I files is 5 MB for eCQM reporting. For the CY 2016 reporting period, we received a relatively small number of files which were greater than 5 MB. These few files typically exceeded the file size limit due to lack of linearization (in other words, the files did not utilize XML tools to remove unnecessary spaces and line breaks) or contained excessive data unrelated to eCQM reporting. We were able to individually work with most data submitters to help them reduce file sizes over the 5 MB limitation. We are evaluating the feasibility of expanding the QRDA I file size for future eCQM reporting activities.

In addition, as described in section IX.A.11.b. of the preamble of this final rule, we intend to address concerns about the reliability and accuracy of electronic data through validation. In order to be able to effectively validate eCQM data, we need to continuously assess more data. Moreover, we believe it is appropriate to require reporting and validation of eCQMs given that measures available now and those being developed for the future are increasingly based on electronic standards (80 FR 49696).

As discussed above, after review of the comments received and in alignment with the Medicare and Medicaid EHR Incentive Programs, we are offering greater flexibility and finalizing a change to our previously finalized CY 2018 reporting period/FY 2020 payment determination certification requirements. Instead of requiring that all EHR technology used to report eCQM data be certified to the 2015 Edition for the CY 2018 reporting period/FY 2020 payment determination, we will allow hospitals to use: (1) Technology certified to the 2014 Edition; (2) technology certified to the 2015 Edition; or (3) a combination of

<sup>278</sup> <https://ecqi.healthit.gov/ecqm-tools-key-resources/tool-library/pre-submission-validation-application-psva>.

EHR technologies certified to the 2014 Edition and 2015 Edition for the CY 2018 reporting period/FY 2020 payment determination. We note the previously finalized certification requirements for the CY 2017 reporting period/FY 2019 payment determination will remain unchanged (81 FR 57170 through 57171). We intend to determine requirements for the CY 2019 reporting period/FY 2021 payment determination and subsequent years in future rulemaking. We refer readers to section IX.G.4. of the preamble of this final rule, where we are finalizing a similar policy for the Medicare and Medicaid EHR Incentive Programs.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20064 through 20065), we proposed two changes related to certification requirements with regard to eCQMs: (1) To require EHR technology certified to all eCQMs available to report; and (2) to note certified EHR technology does not need to be recertified each time it is updated to a more recent version of the eCQM specifications to align with the Medicare EHR Incentive Program requirements for eligible hospitals and CAHs. These proposals are discussed in more detail below.

(ii) Requirement for EHR Technology To Be Certified to all eCQMs That are Available To Report for the CY 2017 Reporting Period/FY 2019 Payment Determination and the CY 2018 Reporting Period/FY 2020 Payment Determination

We refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49705) where we noted that although we require CEHRT, eligible hospitals were not required to ensure their CEHRT products were recertified to the most recent version of the electronic specifications for the clinical quality measures. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20065 through 20066), we proposed new policies regarding the Hospital IQR Program eCQM specification requirements to align with the Medicare EHR Incentive Program's CQM electronic reporting requirements.

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57256) for the Medicare EHR Incentive Program, we finalized the continuation of a policy that electronic submission of CQMs will require the use of the most recent version of the electronic specification for each eCQM to which the EHR is certified. For the Medicare EHR Incentive Program, we previously finalized that in the event an eligible hospital or CAH has EHR technology which is certified to the 2014 Edition but not certified to all of

the eCQMs that are available to electronically report for the CY 2017 reporting period/FY 2019 payment determination, we will require the hospital to have its EHR technology certified to all such eCQMs in order to meet the reporting requirements for the CY 2017 reporting period/FY 2019 payment determination (81 FR 57256). Further, for the Medicare EHR Incentive Program, we stated that for the CY 2017 reporting period eligible hospitals and CAHs will be required to use the Spring 2016 version of the eCQM specifications available on the eCQI Resource Center Web site at: <https://ecqi.healthit.gov/>.

In order to align the Hospital IQR Program's eCQM certification requirements and the Medicare EHR Incentive Program CQM electronic submission requirements for eligible hospitals and CAHs, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20133), we proposed that for the CY 2017 reporting period/FY 2019 payment determination, a hospital using EHR technology certified to the 2014 or 2015 Edition, but for which such EHR technology is not certified to all 15 available eCQMs, would be required to have its EHR technology certified to all 15 eCQMs that are available to report under the Hospital IQR Program. We further proposed (at 82 FR 20066) that for the CY 2017 reporting period/FY 2019 payment determination, hospitals would be required to use the most recent version of the eCQM electronic specifications (in other words, the Spring 2016 version of the eCQM specifications and any applicable addenda) available on the eCQI Resource Center Web site at: <https://ecqi.healthit.gov/>.

For the CY 2018 reporting period/FY 2020 payment determination, we proposed to apply this same policy regarding the reporting of eCQMs, such that hospitals would be required to use the most recent version of the eCQM specifications for each eCQM to which the EHR is certified (82 FR 20066). For the CY 2018 reporting period/FY 2020 payment determination, this means hospitals would be required to use the most recent version of the eCQM electronic specifications (in other words, the Spring 2017 version of the CQM electronic specifications and any applicable addenda) available on the eCQI Resource Center Web site at: <https://ecqi.healthit.gov/>. In addition, we proposed requiring that hospitals need to have their EHR technology certified to all 15 available eCQMs in order to meet the reporting requirements for the CY 2018 reporting period/FY 2020 payment determination. Furthermore, we proposed that an EHR

certified for eCQMs under the 2015 Edition certification criteria would not need to be recertified each time it is updated to a more recent version of the eCQMs. We believe it is not necessary for EHRs certified for eCQMs under the 2015 Edition certification criteria to be recertified each time it is updated to the most recent version of the eCQMs. This is because the EHR technology continues to meet the 2015 Edition certification criteria and any updates to the eCQM specifications would not impact any elements regarding certification. Therefore, we proposed that recertification would not be necessary and would reduce the burden associated with recertification. For further discussion regarding EHR certification requirements, we refer readers to section IX.G.4. of the preamble of this final rule.

We invited public comment on these proposals.

*Comment:* Several commenters supported the proposal to require EHR technology to be certified to all eCQMs for the CY 2017 reporting period/FY 2019 payment determination because all 15 eCQMs should be available for submission to allow for reporting flexibility to better reflect the populations hospitals serve.

*Response:* We thank the commenters for their support.

*Comment:* Several commenters did not support the proposal to require that EHRs be certified to all 15 eCQMs for the CY 2017 reporting period/FY 2019 payment determination. A few of these commenters noted there is no requirement as a condition of ONC certification for EHRs to support all eCQM reporting options for hospitals, leaving each hospital or health system to work independently with vendors in implementing their measures. The commenters expressed concern these conditions may result in additional costs and hours of additional work for providers, and cause a tremendous waste of limited financial and personnel resources.

Some commenters urged CMS to work with ONC and health IT vendors to ensure the 2015 Edition certified EHRs are capable of supporting hospitals' eCQM reporting, including the reporting of any of the eCQMs available to report in the Hospital IQR Program.

*Response:* We appreciate the commenters' concerns about the proposal to require EHRs be certified to all available eCQMs for the CY 2017 reporting period/FY 2019 payment determination, and we recognize the challenges associated with eCQM reporting. Although there is no specific requirement as a condition of ONC

certification for EHR technology to support all available eCQMs, ONC has adopted certification criteria that both support interoperability in other settings and use cases, such as the Common Clinical Data Set summary record, data segmentation for privacy, and care plan certification criteria (80 FR 62603). Specifically, systems must demonstrate they can import and allow a user to export one or more QRDA files. For additional details about certification criteria, we refer readers to ONC's Common Clinical Data Set resource, available at: [https://www.healthit.gov/sites/default/files/commonclinicaldataset\\_ml\\_11-4-15.pdf](https://www.healthit.gov/sites/default/files/commonclinicaldataset_ml_11-4-15.pdf).

We believe requiring EHRs to be certified to all available eCQMs for the Hospital IQR Program would help to streamline the process of collecting electronic data by allowing hospitals flexibility in the particular eCQMs they want to select for data capture and reporting. Having an EHR certified to all available eCQMs would help prevent hospitals from having to go back and consult their health IT vendors and certify individual measures each time they want/need to report on a new or different eCQM. The process of individual measure certification could potentially create a bottleneck in the process, as hospitals would be reliant on vendor availability and timelines. This would inadvertently increase the overall eCQM reporting burden. If EHRs are certified to all available eCQMs, however, hospitals would have greater flexibility in selecting which eCQMs they want to report for a given reporting period up until the eCQM submission deadline, and they would not need to select which measures in advance based upon availability of certified eCQMs offered by the vendor.

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57256), we adopted policy for the Medicare EHR Incentive Program requiring that for an eligible hospital or CAH that has EHR technology certified to the 2014 Edition, the EHR technology must be certified to all CQMs that would be available for the Medicare EHR Incentive Program CY 2017 reporting period. Requiring EHRs to be certified to all available eCQMs in the Hospital IQR Program would align the Hospital IQR and EHR Incentive Programs, which would help streamline requirements across CMS programs, thereby reducing electronic reporting burden on hospitals. Because EHRs are already required to be certified to all available eCQMs for the EHR Incentive Program, most hospitals should already have EHR technology certified to all available eCQMs at least for the 2014 Edition.

With regard to commenters' suggestion that CMS work with ONC and health IT vendors to ensure technology certified to the 2015 Edition are capable of supporting hospitals' eCQM reporting, we will continue to seek stakeholder input and collaborate with colleagues at ONC to define standards for EHR organization and structure which would allow for documentation to fit into the clinical workflow and to ensure our policies are responsive to evolving electronic standards to the greatest extent possible. We will also work with ONC to monitor the status of EHR technology certified to the 2015 Edition and the deployment and implementation of such technology, including reporting of the eCQMs that are available to report in the Hospital IQR Program.

*Comment:* Some commenters expressed concern the proposal to require that EHRs be certified to all 15 eCQMs for the CY 2017 reporting period/FY 2019 payment determination inappropriately places the burden on hospitals, rather than vendors, to meet the requirement, especially for hospitals transitioning from 2014 to 2015 certified EHR technology and preparing for long-planned system upgrades.

*Response:* While we recognize that requiring EHRs to be certified to all available eCQMs initially creates some burden for both hospitals and health IT vendors, we disagree that it unduly places the burden on hospitals, rather than vendors, to meet the requirement. We believe requiring EHRs to be certified to all available eCQMs could help alleviate some reporting burden by offering hospitals greater flexibility to report eCQM data most appropriate and useful to internal quality improvement efforts rather than being limited to only those eCQMs selected and supported by their vendors. In addition, requiring EHRs to be certified to all eCQMs offers greater certainty to hospitals that their EHR systems will be capable of reporting the particular eCQMs they select and that they could decide to select different eCQMs if and when needed. Therefore, we believe the burden will be offset by the flexibility it allows hospitals to report on any eCQMs they choose and to select those most relevant for their purposes. Once the initial process of certifying the EHR to all available eCQMs has been completed, we believe the burden will be offset by the flexibility it allows hospitals to report on any eCQMs they choose, without having to potentially renegotiate with their health IT vendor for additional work to certify measures individually. Further, we note that, a certified health IT module supporting

eCQMs would not need to be recertified each time it is updated to a more recent version of the eCQMs as stated above, under this policy, EHR technology certified for reporting all available eCQMs would not need to be recertified each time it is updated to a more recent version of the eCQM specifications.

*Comment:* One commenter argued changes to certification requirements should be made in rules published by ONC, as this is the agency with authority over EHR certification standards.

*Response:* We believe changes to certification requirements related to electronic reporting of quality measure data in the Hospital IQR Program appropriately fall under the purview of the Hospital IQR Program to specify the "form and manner" of quality data. In addition, as we stated in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57111), our goal is to align electronic quality measure requirements of the Hospital IQR Program with various other Medicare and Medicaid programs, including those authorized by the Health Information Technology for Economic and Clinical Health (HITECH) Act, as much as feasible so that the reporting burden on providers will be reduced. We will continue to seek stakeholder input and collaborate with colleagues at ONC to define standards for EHR organization and structure. If we determine based upon stakeholder feedback that the benefits of requiring EHRs to be certified to all available eCQMs, as outlined above, do not outweigh the burden, we may revisit this requirement in future rulemaking.

*Comment:* One commenter expressed concern this policy eliminates the opportunity for a specialty product to focus on measures only applicable to its domain, such as a surgical suite product focusing on surgery measures. The commenter also noted its concern that this policy would reduce the availability of certified HIT for hospitals or lead to poorer workflows for capturing quality data.

*Response:* We appreciate the commenter's interest in specialty health IT products that may be even more applicable to their specialty services or patient population. We do not believe our eCQM certification requirements prevent health IT vendors from developing and offering such products or from providers asking for such products. With regard to our current eCQM measure set, adding new eCQMs that address unique and individual specialties, and incorporation of electronic products that assess specific clinical domains, is a consideration for future rules once the capabilities of

electronic reporting are more fully established. We will continue to seek stakeholder input and collaborate with colleagues at ONC to monitor the availability of certified health IT products for quality measure reporting.

After consideration of the public comments we received, for the CY 2017 reporting period/FY 2019 payment determination, we are finalizing our proposals as proposed to: (1) Require EHR technology used for eCQM reporting to be certified to all eCQMs, but that such certified EHR technology does not need to be recertified each time it is updated to a more recent version of the eCQM electronic specifications; and (2) require hospitals to use the most recent version of the eCQM electronic specifications. In addition, for the CY 2018 reporting period/FY 2020 payment determination, we are finalizing our proposals, as proposed, to: (1) Require EHR technology used for eCQM reporting to be certified to all eCQMs, but that such certified EHR technology does not need to be recertified each time it is updated to a more recent version of the eCQM electronic specifications; and (2) require hospitals to use the most recent version of the eCQM electronic specifications. We refer readers to section IX.G.4. of the preamble of this final rule where the EHR Incentive Program is finalizing similar policies.

(c) Electronic Submission Deadlines for the FY 2020 Payment Determination and Subsequent Years

We refer readers to the FY 2015 IPPS/LTCH PPS final rule (79 FR 50256 through 50259) and the FY 2016 IPPS/LTCH PPS final rule (80 FR 49705 through 49708) for our previously adopted policies to align eCQM data reporting periods and submission deadlines for both the Hospital IQR Program and the Medicare EHR Incentive Program for eligible hospitals and CAHs.

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57172), we established eCQM submission deadlines for the Hospital IQR Program. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20066), we did not propose any changes to the eCQM submission deadlines for the FY 2020 payment determination or subsequent years. Specifically, we are not making any changes to the February 28, 2018 submission deadline for CY 2017 reporting or the February 28, 2019 submission deadline for CY 2018 reporting (81 FR 57172) to ensure that APU determinations for FY 2019 and FY 2020 payment determinations are not affected and to maintain the previously established alignment with the

Medicare EHR Incentive Program's submission deadline (81 FR 57255).

While we did not propose any changes to these policies, we received a few comments related to the submission deadline and general eCQM data submission and are addressing them below.

*Comment:* One commenter recommended the submission deadline be moved to the end of the first quarter of 2019 instead of February 28, 2019 because this would allow for final ICD-10 coding and corrections potentially needed after receiving final documentation from physicians.

*Response:* We thank the commenter for the recommendation to adjust the eCQM submission deadline from February 28, 2019 to the end of the first quarter of 2019. We will take this suggestion into consideration; however, at this time, we do not plan to extend the previously finalized submission deadline.

*Comment:* One commenter recommended that the CMS testing tools, such as updates to the PSVA tool and the QualityNet Secure Portal, need to be available at least three months before the start of the reporting year, instead of halfway through the reporting year, so that health IT developers can test with the new specifications and give healthcare organizations ample time to implement before the reporting period begins on January 1, 2018, because without sufficient time for adoption and testing, many organizations would not be ready for early submission.

*Response:* We thank the commenter for their suggestion that updates to CMS testing tools, such as the PSVA tool, and availability of our data receiving system via the QualityNet Secure Portal be made available to developers before the reporting period, but due to operational constraints, earlier release of PSVA tool updates and earlier availability of the QualityNet Secure Portal is not possible. We note that we did not develop the PSVA tool specifically as a development tool, but as a tool for data submitters to test their QRDA I files before submitting the files as production files for program credit. In addition, we have designed the QualityNet Secure Portal to allow for test file submissions as well as production file submissions. QualityNet is the only CMS-approved Web site for secure communications and healthcare quality data exchange between: Quality improvement organizations (QIOs), hospitals, data vendors, and other providers. We will look further into how we may be able to release PSVA tool updates and make the QualityNet Secure Portal available sooner for

hospitals and health IT vendors. We refer readers to section IX.A.8.b. of the preamble of this final rule, where we discuss the PSVA tool in more detail.

(d) Summary

As noted in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49759) and the FY 2017 IPPS/LTCH PPS final rule (81 FR 57257), we continue to encourage health IT developers to test any updates on an annual basis, including any updates to the eCQMs and eCQM reporting requirements for the Hospital IQR and Medicare EHR Incentive Programs based on the CMS Implementation Guide for Quality Reporting Document Architecture [QRDA] Category I and Category III Eligible Professional Programs and Hospital Quality Reporting (HQR) (CMS Implementation Guide for QRDA). The CMS Implementation Guide for QRDA, program specific performance calculation guidance, and eCQM electronic specifications and guidance documents are available on the eCQI Resource Center Web site at: <https://ecqi.healthit.gov/>.

As noted in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57172), we also continue to encourage all hospitals and health IT vendors to submit QRDA I files early, and to use one of the pre-submission testing tools for electronic reporting, such as the CMS PSVA tool, to allow additional time for testing and to make sure all required data files are successfully submitted by the deadline. The PSVA tool can be downloaded from the Secure File Transfer (SFT) section of the QualityNet Secure Portal at: [https://cportal.qualitynet.org/QNet/pgm\\_select.jsp](https://cportal.qualitynet.org/QNet/pgm_select.jsp).

In summary, in section IX.A.10.d.(2)(b)(i) of the preamble of the FY 2018 IPPS/LTCH PPS proposed rule, for the CY 2017 reporting period/FY 2019 payment determination, for the Hospital IQR Program we proposed: (1) A hospital using EHR technology certified to the 2014 or 2015 Edition of CEHRT, but for which such EHR technology is not certified to all available eCQMs, would be required to have its EHR technology certified to all eCQMs that are available to report; and (2) EHR technology that is certified to all available eCQMs would not need to be recertified each time the eCQMs are updated to a more recent version of the eCQM specifications.

For the CY 2018 reporting period/FY 2020 payment determination, for the Hospital IQR Program we proposed: (1) A hospital using EHR technology certified to the 2015 Edition certification criteria for CEHRT, but for which such EHR technology is not

certified to all available eCQMs, would be required to have its EHR technology certified to all eCQMs that are available to report; and (2) EHR technology that is certified to all available eCQMs would not need to be recertified each time the eCQMs are updated to a more recent version of the eCQM specifications. Further, we proposed: (1) For the CY 2017 reporting period, hospitals would be required to use the most recent version of the eCQM electronic specifications (in other words, the Spring 2016 version of the eCQM specifications, and any applicable addenda); and (2) for the CY 2018 reporting period, hospitals would be required to use the most recent version of the eCQM electronic specifications (in other words, the Spring 2017 version of the eCQM specifications, and any applicable addenda). These eCQM specifications are available on the eCQI Resource Center Web site at: <https://ecqi.healthit.gov/>. We refer readers to section IX.E.3.c. of the preamble of this final rule, where similar policies are described for the Medicare EHR Incentive Program for eligible hospitals and CAHs.

We are reiterating our policies we are finalizing in this final rule related to the reporting and submission requirements of eCQM data for the Hospital IQR Program: (1) For the CY 2017 reporting period/FY 2019 payment determination and for the CY 2018 reporting period/FY 2020 payment determination, we will offer flexibility, such that hospitals may use: (a) EHR technology certified to the 2014 Edition; (b) EHR technology certified to the 2015 Edition; or (c) a combination of EHR technologies certified to the 2014 Edition and 2015 Edition; (2) for the CY 2017 reporting period/FY 2019 payment determination and the CY 2018 reporting/FY 2020 payment determination, EHR technology certified to the 2014 or 2015 Edition must be certified to all 15 eCQMs available to report in the Hospital IQR Program; (3) for the CY 2017 reporting period/FY 2019 payment determination, hospitals will be required to use the most recent version of the eCQM electronic specifications (in other words, the Spring 2016 version of the eCQM specifications and any applicable addenda); (4) for the CY 2018 reporting period/FY 2020 payment determination, hospitals will be required to use the most recent version of the eCQM electronic specifications (in other words, the Spring 2017 version of the eCQM specifications and any applicable addenda); and (5) an EHR certified for eCQMs under the 2014 or

2015 Edition certification criteria would not need to be recertified each time it is updated to a more recent version of the eCQM electronic specifications.

e. Submission Form and Method for the Voluntary Hybrid Hospital Wide Readmission Measure With Claims and Electronic Health Record Data (NQF #2879)

#### (1) Background

In section IX.A.7. of the preamble of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20045 through 20049), we proposed voluntary reporting of the Hybrid Hospital-Wide Measure with Claims and Electronic Health Record Data. In the FY 2016 IPPS/LTCH PPS final rule (80 FR 49701 through 49704), we signaled our intent to use core clinical data elements in the Hospital IQR Program and requested comment on the use of the QRDA Category I (QRDA I) file format for this purpose. In that rule, we noted many commenters supported submitting the core clinical data elements using an EHR technology certified by the ONC. In addition, some commenters were supportive of our suggested use of QRDA I specifically for reporting core clinical data elements and recommended aligning the standards for data transmission requirements with those used in other reporting programs.

#### (2) Certification and File Format Requirements for Core Clinical Data Element Submissions

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20067), we proposed that hospitals that voluntary report data for the Hybrid Hospital-Wide Readmission measure use EHR technology certified to the 2015 Edition. We also referred readers to our discussion of EHR certification requirements for eCQM reporting above and in section IX.G.4. of the preamble of this final rule where the same proposed requirements are discussed in detail for the Medicare EHR Incentive Program for eligible hospitals and CAHs. In addition, we proposed that the 13 core clinical data elements and six linking variables for the Hybrid Hospital-Wide Readmission measure be submitted using the QRDA I file format.

In order to ensure the data have been appropriately connected to the encounter, the core clinical data elements specified for risk adjustment need to be captured in relation to the start of an inpatient encounter. The QRDA I standard enables the creation of an individual patient-level quality report that contains quality data for one patient for one or more quality

measures. We note that as described in section IX.A.7. of the preamble of this final rule, participating hospitals are expected to successfully submit data values for vital signs and six linking variables and are required to merge with the CMS claims data on more than 95 percent of all Medicare FFS patients who are 65 years and older and are discharged from the hospital during the voluntary data collection period. In addition, participating hospitals are expected to successfully submit values for laboratory test results on more than 50 percent of these patients discharged over the same time period. For further detail on QRDA I, the most recently available QRDA I specifications can be found at: [http://www.hl7.org/implement/standards/product\\_brief.cfm?product\\_id=35](http://www.hl7.org/implement/standards/product_brief.cfm?product_id=35).

We invited public comment on our proposals related to the reporting and submission requirements of core clinical data elements and linking variables for the proposed, voluntary Hybrid Hospital-Wide Readmission measure as discussed above.

*Comment:* Several commenters supported the proposed voluntary reporting of the Hybrid Hospital-Wide Readmission (HWR) measure, noting that the inclusion of core clinical data elements and laboratory test results may provide additional clinical variables that would enhance the administrative coding data that is utilized currently in the risk model variables. Other commenters supported the measure, because it is low burden and would further efforts to harmonize core clinical data elements with other measures and reporting requirements, without impacting payment. One commenter noted it displayed good use of EHR data, and testing this approach will develop useful information that could apply to other Medicare claims-based measures. In addition, commenters noted testing a measure through voluntary collection could highlight any data collection issues, while providing hospitals time needed to redesign their EHRs to collect and validate these data prior to mandatory reporting. The commenters noted reporting hybrid measure data will add hospital burden as compared to a measure using only claims, but expressed support for use of a QRDA I file when submitting electronic clinical data for this measure. Specifically, the commenters noted that use of a QRDA I file would streamline the submission process and enable hospitals to continue to direct resources toward electronic abstraction. One commenter believed that requiring QRDA I files increased the burden on hospitals.

*Response:* We thank the commenters for their support. We refer readers to section IX.A.7. of the preamble of this final rule for more information about the voluntary Hybrid HWR measure that we are finalizing. We note that there is burden associated with the collection of the electronic data for the Hybrid HWR measure. We do not expect any additional burden on hospitals to report the claims-based portion of this measure, because these data are already reported to the Medicare program for payment purposes. We refer readers to section XIII.B.6.e. of the preamble of this final rule for more detail on these burden calculations.

*Comment:* Several commenters supported the proposed voluntary reporting of the Hybrid HWR measure, but expressed concern that hospitals need time to redesign their EHRs to collect and validate these data, and believed CMS should maintain flexibility in the reporting requirements for several years. One commenter suggested CMS change the proposed initial reporting period from January 1 through June 30, 2018, to July 1 through December 31, 2018, or to require only a single quarter of reporting for the initial reporting year.

*Response:* We thank the commenters for their support. We reiterate that reporting on the Hybrid HWR measure is voluntary; we will take into consideration the commenter's suggestion that reporting requirements should remain flexible for several years as we consider adopting the Hybrid HWR measure as mandatory for the Hospital IQR Program in future rulemaking. We do not anticipate that hospitals will need to redesign their EHR systems to accommodate reporting of the Hybrid HWR measure, because these data elements are currently recorded in EHRs for nearly all Medicare FFS beneficiaries admitted to acute care hospitals, as the Hybrid HWR measure cohort includes most hospital admissions. However, hospitals will need to map the data elements in their stored EHR data, validate that they have identified the first value captured at the start of the episode of care, and populate QRDA I templates for data reporting.

We acknowledge not all hospitals will be able to submit data for the voluntary Hybrid HWR measure as soon as July 1, 2018. We note that we proposed the first two calendar quarters of 2018 as the reporting period so as not to overlap with the submission of eCQM data, which is usually very active during the winter up through the eCQM submission deadline of February 28th. We hope this July submission deadline will increase participation in voluntary

reporting of the hybrid measure. In addition, during Hybrid HWR measure development and testing, we demonstrated the core clinical data elements were feasibly extracted from hospital EHRs for nearly all adult patients admitted. The electronic specifications were tested in four separate health systems that used three separate EHR systems, and were successfully merged with our administrative claims data.

We are encouraging hospitals to participate in the voluntary reporting of the Hybrid HWR measure to gain experience validating the extracted EHR data. Participating hospitals would receive information and instruction on the use of the electronic specifications for this measure, have an opportunity to test extraction and submission of data to the QualityNet Secure Portal, and receive confidential feedback reports, downloadable from the QualityNet Secure Portal, with details on the success of their submission, such as the completeness and accuracy of the data. We will carefully consider these suggestions and all lessons learned from hospitals participating in the voluntary reporting of the Hybrid HWR measure before proposing any timeline for future potential implementation of the measure.

*Comment:* Some commenters suggested instead of jumping from 50 percent for the voluntary Hybrid HWR measure to 90 percent for the mandatory Hybrid HWR measure, the amount of data submitted should increase more gradually over time.

*Response:* Based on our previous testing of this measure, we believe successful submission of the EHR data used in the Hybrid HWR measure on at least 90 percent of adult inpatient admissions would be necessary in order to calculate the risk-standardized readmission rates and publicly report measure results in the future. During the voluntary phase of data submission, there will be no strict requirement. However, we will request that hospitals submit the data elements on at least 50 percent and as many as 100 percent of their admitted patients. Our intent in setting this 50 percent threshold is to mimic full reporting as closely as possible while also encouraging participation. We will carefully consider the success of data submission during the voluntary reporting period before proposing a timeline and data reporting expectations for mandatory measure implementation through future rulemaking.

*Comment:* One commenter recommended that if added to the Hospital IQR Program measure set as a

mandatory measure, the measure should be considered an eCQM for reporting purposes, allowing hospitals to choose if they report this measure or other eCQMs.

*Response:* We thank the commenter for their suggestion and will take it into consideration should we propose the Hybrid HWR measure as mandatory for the Hospital IQR Program and/or the EHR Incentive Programs for electronic reporting of CQMs in the future. We strive to align the electronic quality measure reporting requirements with the EHR Incentive Programs in order to reduce administrative burden and confusion about different reporting requirements in CMS programs to the extent feasible.

*Comment:* Several commenters suggested CMS explore developing hybrid condition-specific readmission measures for the Hospital Readmissions Reduction Program.

*Response:* We thank commenters for their suggestion and will take this under consideration in crafting future policies for other CMS programs.

*Comment:* Several commenters noted they are dependent on their EHR vendor to produce the necessary code to capture and report in the QRDA I file format, and urged CMS to encourage the EHR vendor community to support this initiative. The commenters suggested CMS should solicit feedback from hospitals and vendors that choose to report the Hybrid HWR measure voluntarily before this measure is implemented as mandatory in the Hospital IQR Program. To make the reporting of this or any other hybrid measure viable in the long run, the commenters suggested that CMS would need the input from stakeholders on the feasibility of extracting the EHR data and the accuracy of measure results. The commenters also suggested CMS should release results of the voluntary collection efforts, including feedback on measure implementation and measure results from participating hospitals. The commenters noted hospitals would need to have sufficient experience prior to the measure being in mandatory reporting.

*Response:* We will engage with stakeholders, including hospitals and health IT vendors, through educational webinars and national provider calls and welcome any feedback from hospitals and vendors that participate in voluntary submission of data for the Hybrid HWR measure. One purpose for voluntary reporting of this measure is so that hospitals and health IT vendors can become familiar with data extraction and submission for hybrid quality measures prior to any mandatory reporting. We will consider feedback

received from voluntary reporting to inform the future process and the timing for any proposals related to mandatory reporting.

In addition, voluntary reporting of the Hybrid HWR measure by participating hospitals will allow us to calculate the measure results, provide participating hospitals with feedback about the extracted data (including the success of data submission and the measure results calculated using their EHR data), and to solicit input from participating hospitals about any feasibility issues with extracting the core clinical data elements. Because hospitals do not calculate the measure within the EHR and do not therefore report measure results to CMS, we will not provide information about the accuracy of measure results. Rather, we calculate the measure using a combination of data from claims and the EHR data that hospitals submit and share these results with participating hospitals. Hospitals that voluntarily submit data for this measure would receive confidential hospital-specific reports that detail submission results from the performance reporting period, as well as the Hybrid HWR measure results assessed from merged files created by us merging the EHR data elements submitted by each participating hospital with claims data from the same set of index admissions. EHR data or measure results for the voluntary reporting of the Hybrid HWR measure will not be publicly reported. However, if we propose to require mandatory reporting of the Hybrid HWR measure in future rulemaking, we intend for such a proposal to include a dry run, during which hospitals could preview their results. In addition, we will take into consideration comments suggesting that we inform stakeholders about lessons learned from hospitals that participate in the voluntary measure prior to proposing to adopt the Hybrid HWR measure as mandatory for the Hospital IQR Program.

*Comment:* Some commenters requested additional details related to the proposed voluntary reporting of the Hybrid HWR measure. Specifically, commenters sought clarification on whether QRDA I file format would be required or whether participants could submit data via QualityNet Secure File Exchange or another method.

*Response:* Hospitals electing to participate in voluntary reporting of the Hybrid HWR measure will be required to use QRDA I files for submission of electronic data, which is the current EHR data and measure reporting standard for adopted eCQMs implemented in the Hospital IQR

Program. We refer readers to the measure specifications at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>. We will not accept data via QualityNet Secure File Exchange or any other method. As discussed in our proposal above, in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49701 through 49704), we signaled our intent to use core clinical data elements in the Hospital IQR Program and requested comment on the use of the QRDA I file format for this purpose. In that rule, we noted many commenters supported submitting the core clinical data elements using an EHR technology certified by the ONC. In addition, some commenters were supportive of our suggested use of QRDA I specifically for reporting core clinical data elements and recommended aligning the standards for data transmission requirements with those used in other reporting programs.

*Comment:* Some commenters requested further guidance on whether the start “0–24” hours timing window for data capture for these data elements would be based on arrival time or admission time. Specifically, commenters asked if the 0–24 hours timeframe refers to the timeframe allotted to collect specimens for an ordered test or the timeframe to the result of the test.

*Response:* For hospitals that choose to voluntarily submit data, the Hybrid HWR measure requires submission of the first captured core clinical data element values for each Medicare FFS beneficiary who is 65 years or older and discharged from an acute care hospital during the measurement period.<sup>279</sup> This includes data values captured in any department, including outpatient or emergency department visits that end inpatient admissions.

To clarify the “0–24” hours timeframe for the core clinical data elements, they represent the result of the first collected data element (not the time of the order) after arrival at the hospital for care (not necessarily inpatient admission time). For example, if a patient receives care for several hours in the Emergency Department and is later admitted to the inpatient facility for additional treatment, the measure requires the first captured data value in the Emergency Department. Vital signs (heart rate, respiratory rate, temperature, systolic

blood pressure, oxygen saturation), should be recorded within two hours (“0–2 hours”). Laboratory results (hematocrit, white blood cell count, sodium, potassium, bicarbonate, creatinine, and glucose) and weight should be recorded within 24 hours (“0–24 hours”). These time windows were based on empirical analysis of vital signs and laboratory test results captured in EHRs for patients admitted to acute care short stay hospitals. We assessed the time to capture of an initial set of vital signs and basic laboratory test results from the time of arrival at the facility for patients who were 65 years and older and subsequently admitted during the same encounter for treatment of a variety of medical conditions. We refer readers to the measure specifications<sup>280</sup> for more details.

*Comment:* Some commenters sought clarification on whether the expectation would be that an EHR would only send data on encounters that meet the measure population requirements, since an EHR might not be able to identify an index admission.

*Response:* We understand that all or nearly all hospitals maintain electronic administrative records which identify inpatient admissions to support billing for Medicare FFS beneficiaries and patients insured through other payers. We understand that for many hospitals these administrative systems are separate from the clinical EHR and that identifying inpatient admissions and then extracting the EHR data elements for those patients might require separate queries in the two systems. However, the testing we have performed in four volunteer hospitals that developed and deployed queries within their EHR and successfully extracted the data elements used in the voluntary Hybrid HWR measure demonstrated that hospitals were able to identify inpatient admissions using stored electronic data and were able to extract the EHR data elements for those patients.

As we stated in the proposed rule (82 FR 20047), hospitals would only submit data for index admissions that meet the Hybrid HWR measure cohort inclusion criteria, and the measure would only be calculated for this cohort. The inclusion and exclusion criteria of the Hybrid HWR measure are also aligned with the currently adopted Hospital-Wide All-Cause Unplanned Readmission measure, which can be found in the 2017 All-Cause Hospital-Wide Measure Updates and Specifications Report, available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient->

<sup>279</sup> Hybrid Hospital-Wide Readmission Measure with Electronic Health Record Extracted Risk Factors (Version 1.1). Available at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

<sup>280</sup> *Ibid.*

*Assessment-Instruments/  
HospitalQualityInits/Measure-  
Methodology.html.*

Further, we developed and tested a Measure Authoring Tool<sup>281</sup> that uses existing value sets where possible, which includes identifying inpatient encounters (index admissions). As stated in the proposed rule (82 FR 20046), the electronic specifications were tested in multiple health systems, and they all were able to appropriately identify acute care hospital inpatient encounters.

*Comment:* One commenter inquired about the proposed deadline and frequency for reporting.

*Response:* We refer readers to section IX.A.7.b. of the preamble of this final rule for details on reporting and deadlines. To summarize, the voluntary reporting of the Hybrid HWR measure has a one-time measurement period for discharges occurring over a 6-month period in the first two quarters of CY 2018 (January 1, 2018 through June 30, 2018), with data being reported to CMS in the fall of 2018. For this voluntary reporting effort, we ask hospitals to submit electronic data once on applicable Medicare FFS beneficiaries, on at least 50 percent of these patients.

*Comment:* Several commenters requested that CMS not set any date for either mandatory submission or public reporting of the Hybrid HWR measure. The commenters expressed concerns the hybrid measure is incredibly challenging to implement and CMS does not have a robust infrastructure to collect these data.

Several commenters requested that CMS provide at least an eighteen-month window, and as much as 24-months, to organizations before a hybrid measure is implemented. The commenters recommended that CMS not require mandatory reporting of the Hybrid HWR measure until it has reviewed the experience of hospitals submitting the measure on a voluntary basis.

*Response:* We appreciate the suggestions on the timing of future implementation. Although, we recognize there is some burden to hospitals in identifying the data elements required for the Hybrid HWR measure, it is important to note that these data elements are currently recorded in EHRs for nearly all Medicare FFS beneficiaries admitted to acute care hospitals, as the Hybrid HWR measure cohort includes most hospital admissions. We do not anticipate hospitals will need to alter clinical workflows to capture these data.

<sup>281</sup> CMS Measure Authoring Tool. Available at: <https://www.emasuretool.cms.gov/>.

However, hospitals will need to map the data elements in their stored EHR data, validate that they have identified the first value captured at the start of the episode of care, and populate QRDA I templates for data reporting.

We note reporting on the Hybrid HWR measure is purposefully voluntary and that we have not set any date for either mandatory submission or public reporting of the Hybrid HWR measure. We intend to review the experience of hospitals submitting the Hybrid HWR measure data on a voluntary basis prior to potentially proposing to adopt this measure as mandatory in the future.

With respect to commenters' concerns that CMS does not have a robust infrastructure to collect data for the Hybrid HWR measure, we disagree. Hybrid HWR measure data are derived from both claims and clinical EHR data, via submission of QRDA I files; we already collect and utilize claims data and QRDA I file data for other measures in the Hospital IQR Program measure set.

We refer readers to section IX.A.10.d.(2)(b) of the preamble of this final rule, where we are finalizing a policy to allow hospitals greater flexibility, such that hospitals may use EHR technology that is: (1) Certified to the 2014 Edition; (2) certified to the 2015 Edition; or (3) a combination of both the 2014 Edition and 2015 Edition. As a result, we are modifying our proposal for the Hybrid HWR measure from requiring use of EHR technology certified to the 2015 Edition to giving hospitals that elect to submit data voluntarily the option to use EHR technology that is: (1) Certified to the 2014 Edition; (2) certified to the 2015 Edition; or (3) a combination of both the 2014 Edition and 2015 Edition.

We recognize that these activities require effort and collaboration with health IT vendors and we will continue to solicit feedback from stakeholders throughout voluntary reporting of this measure and carefully consider provider burden before proposing any timeline for mandatory adoption or public reporting of hybrid measures.

*Comment:* One commenter requested CMS delay implementation until further improvements have been made related to submitting data using the QRDA I file format.

*Response:* We disagree that we should delay implementation until further improvements have been made related to submitting data using the QRDA I file format. We have experienced widespread utility of the QRDA I format among hospitals, dating back to electronic reporting pilots from 2012 and 2013, which included electronic

reporting via QRDA I, as the basis for aligned reporting in 2014 for the Medicare EHR Incentive and the Hospital IQR Programs (79 FR 50905). In addition, QRDA I is the current EHR data and measure reporting standard for adopted eCQMs implemented in the Hospital IQR and Medicare EHR Incentive Programs.

*Comment:* One commenter did not support the voluntary Hybrid HWR measure as they were concerned with the standardization of values.

*Response:* We interpret this comment to mean that the commenter had concerns about how the core clinical data elements were selected for potential use in the voluntary Hybrid HWR measure. To be feasible for use in the measure, we applied a strict set of criteria that the data elements must be: (1) Consistently obtained in the target population based on current clinical practice; (2) captured with a standard definition and recorded in a standard format; and (3) entered in structured fields that are feasibly retrieved from current EHR systems. These criteria align with those proposed by the NQF for assessing the feasibility of EHR data elements in quality measurement.<sup>282</sup> We established that the data elements used in the voluntary Hybrid HWR measure meet these criteria through empirical analysis of data provided by hospitals on patients who were 65 years and older admitted for treatment of a variety of conditions. This testing confirmed that the data elements are consistently obtained, captured as structured data, and recorded in standard format across different EHRs and different hospitals.

After consideration of the public comments we received, we are finalizing our proposals related to the voluntary reporting and submission of core clinical data elements and linking variables for the Hybrid Hospital-Wide Readmission measure as proposed, with one modification. Instead of requiring use of EHR technology certified to the 2015 Edition, we are allowing greater flexibility and will accept use of EHR technology that is: (1) Certified to the 2014 Edition; (2) certified to the 2015 Edition; or (3) a combination of both the 2014 Edition and 2015 Edition.

f. Sampling and Case Thresholds for the FY 2020 Payment Determination and Subsequent Years

We refer readers to the FY 2011 IPPS/LTCH PPS final rule (75 FR 50221), the FY 2012 IPPS/LTCH PPS final rule (76

<sup>282</sup> NQF Measure Evaluation Criteria. Available at: [http://www.qualityforum.org/Masuring\\_Performance/Endorsed\\_Performance\\_Measures\\_Maintenance.aspx](http://www.qualityforum.org/Masuring_Performance/Endorsed_Performance_Measures_Maintenance.aspx).

FR 51641), the FY 2013 IPPS/LTCH PPS final rule (77 FR 53537), the FY 2014 IPPS/LTCH PPS final rule (78 FR 50819), and the FY 2016 IPPS/LTCH PPS final rule (80 FR 49709) for details on our sampling and case thresholds for the FY 2016 payment determination and subsequent years. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20067), we did not propose any changes to our sampling and case threshold policies.

g. HCAHPS Administration and Submission Requirements for the FY 2020 Payment Determination and Subsequent Years

We refer readers to the FY 2011 IPPS/LTCH PPS final rule (75 FR 50220), the FY 2012 IPPS/LTCH PPS final rule (76 FR 51641 through 51643), the FY 2013 IPPS/LTCH PPS final rule (77 FR 53537 through 53538), and the FY 2014 IPPS/LTCH PPS final rule (78 FR 50819 through 50820) for details on previously-adopted HCAHPS requirements. We also refer hospitals and HCAHPS Survey vendors to the official HCAHPS Web site at: <http://www.hcahpsonline.org> for new information and program updates regarding the HCAHPS Survey, its administration, oversight, and data adjustments. We refer readers to section IX.A.6.a. of the preamble of this final rule for details on our proposal to refine the three questions of the Pain Management measure in the HCAHPS Survey. While we proposed to refine the survey with respect to the questions about pain management in section IX.A.6.a. of the preamble of the proposed rule, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20067), we did not propose any changes to the HCAHPS administration nor the HCAHPS submission requirements.

h. Data Submission Requirements for Structural Measures for the FY 2020 Payment Determination and Subsequent Years

We refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51643 through 51644) and the FY 2013 IPPS/LTCH PPS final rule (77 FR 53538 through 53539) for details on the data submission requirements for structural measures. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20067), we did not propose any changes to data submission requirements for structural measures.

i. Data Submission and Reporting Requirements for HAI Measures Reported via NHSN

For details on the data submission and reporting requirements for HAI measures reported via the CDC's NHSN

Web site, we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51629 through 51633; 51644 through 51645), the FY 2013 IPPS/LTCH PPS final rule (77 FR 53539), the FY 2014 IPPS/LTCH PPS final rule (78 FR 50821 through 50822), and the FY 2015 IPPS/LTCH PPS final rule (79 FR 50259 through 50262). The data submission deadlines are posted on the QualityNet Web site at: <http://www.QualityNet.org/>. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20067), we did not propose any changes to data submission and reporting requirements for HAI measures reported via the NHSN.

11. Modifications to the Validation of Hospital IQR Program Data

a. Background

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53539 through 53553), we finalized the processes and procedures for validation of chart-abstracted measures in the Hospital IQR Program for the FY 2015 payment determination and subsequent years; the FY 2013 IPPS/LTCH PPS final rule also contains a comprehensive summary of all procedures finalized in previous years that are still in effect. We refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50822 through 50835), the FY 2015 IPPS/LTCH PPS final rule (79 FR 50262 through 50273), and the FY 2016 IPPS/LTCH PPS final rule (80 FR 49710 through 49712) for detailed information on the modifications to these processes finalized for the FY 2016, FY 2017, and FY 2018 payment determinations and subsequent years.

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57173 through 57181), we finalized our proposal to update the validation procedures in order to incorporate a process for validating eCQM data for the FY 2020 payment determination and subsequent years. Specifically, we finalized a policy to: (1) Validate eCQM data submitted by up to 200 hospitals selected via random sample; (2) exclude any hospital selected for chart-abstracted measure validation as well as any hospital that has been granted a Hospital IQR Program Extraordinary Circumstances Exemption for the applicable eCQM reporting period; and (3) randomly select 32 cases from the QRDA I files submitted by each hospital selected for eCQM data validation for the FY 2020 payment determination and subsequent years. As described in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57176), we will not conduct the first validation of eCQM data until spring of 2018 to validate data from the CY 2017 reporting period. Validation of CY 2017

data during spring of 2018 affects the FY 2020 payment determination (81 FR 57177). Accordingly, below we refer to the CY 2017 reporting period/FY 2020 payment determination for validation of data for encounters occurring during CY 2017 and the CY 2018 reporting period/FY 2021 payment determination for validation of data for encounters during CY 2018.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20067 through 20070), we proposed to change these previously finalized policies for eCQM data validation for the FY 2020 payment determination and subsequent years. First, for hospitals selected to participate in validation of eQMs, we proposed that we will select eight cases per quarter for the CY 2017 reporting period/FY 2020 payment determination and subsequent years. We noted this proposal was contingent upon whether or not our proposed modifications to eCQM reporting requirements for the CY 2017 reporting period/FY 2019 payment determination and CY 2018 reporting period/FY 2020 payment determination, as described in section IX.A.8. of the preamble of this final rule, were finalized as proposed. Second, we proposed to add additional exclusion criteria to our hospital and case selection process for eCQM data validation for the CY 2017 reporting period/FY 2020 payment determination and subsequent years. Third, we proposed to continue our previously finalized medical record submission requirements for the FY 2021 payment determination and subsequent years as well as to provide clarification of our previously finalized policy.

For validation of chart-abstracted measures data, we proposed to update our educational review process for the FY 2020 payment determination and subsequent years. These proposals are discussed in more detail below.

b. Changes to the Existing Processes for Validation of Hospital IQR Program eCQM Data for the FY 2020 Payment Determination and Subsequent Years

(1) Number of Cases

We finalized in the FY 2017 IPPS/LTCH PPS final rule that we would select eight cases per quarter, for four quarters, for a total of 32 cases (individual patient-level reports), from the QRDA I files submitted by each hospital selected for eCQM data validation (81 FR 57178). In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20068), we proposed to update that requirement, such that we would select eight cases per quarter, (the number of quarters required would vary by specific

FY payment determination) to complete eCQM data validation for the FY 2020 payment determination and subsequent years, instead of 32 cases, over all four quarters, as previously finalized. This proposal was made in conjunction with our proposals to modify the number of quarters required for eCQM data submission from: (1) Four quarters to two, self-selected quarters for CY 2017 (with validation of these data affecting the FY 2020 payment determination); and (2) four quarters to the first three quarters for CY 2018 (with validation of these data affecting the FY 2021 payment determination). If all of these proposals were finalized as proposed, hospitals selected for eCQM data validation would be required to submit: (1) 16 cases over two calendar quarters (eight cases  $\times$  two quarters) for the CY 2017 reporting period/FY 2020 payment determination; and (2) 24 cases over three quarters (eight cases  $\times$  three quarters) for the CY 2018 reporting period/FY 2021 payment determination. We invited public comment on the proposals we made in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20068) as discussed above.

*Comment:* Several commenters supported the reduction to the number of eCQM cases to be validated from 32 to 16 cases for the CY 2017 reporting period, which would impact the FY 2020 payment determination, and to 24 cases for the CY 2018 reporting period, which would impact the FY 2021 payment determination.

*Response:* We thank the commenters for their support.

*Comment:* One commenter urged CMS to consider reducing the number of cases selected for validation each quarter from 8 to a lower number in order to minimize reporting burden for hospitals.

*Response:* We consider a sample of eight cases for each quarter to be the minimum sample size needed to accurately ascertain the quality of the reported data by measure. We believe using a sample size of eight cases per quarter balances the burden on hospitals of providing medical records for eCQM data validation with our need for a sufficient minimum number of cases to be able to properly evaluate the data. However, we refer readers to section IX.A.8. of the preamble of this final rule, where we are finalizing a modified policy to further reduce the eCQM reporting requirements, such that hospitals are only required to submit one, self-selected calendar quarter of data for 4 eCQMs for both the CY 2017 reporting period/FY 2019 payment determination and the CY 2018 reporting period/FY 2020 payment

determination. This does not directly change our proposal to select eight cases per quarter for eCQM data validation for the FY 2020 payment determination and subsequent years (for validation of eCQM data reported in CY 2017 data and subsequent years). However, in effect, due to these finalized modifications to the eCQM reporting requirements, hospitals selected for validation will be required to submit only 8 cases in total for each of the CY 2017 reporting period/FY 2020 payment determination (8 cases  $\times$  1 quarter) and CY 2018 reporting period/FY 2021 payment determination (8 cases  $\times$  1 quarter), instead of: (1) 16 cases over two calendar quarters (8 cases  $\times$  2 quarters) for the CY 2017 reporting period/FY 2020 payment determination; and (2) 24 cases over 3 quarters (8 cases  $\times$  3 quarters) for the CY 2018 reporting period/FY 2021 payment determination as discussed in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20068).

After consideration of the public comments we received, we are finalizing our proposal, as proposed, to reduce the number of cases selected for eCQM data validation to eight cases per quarter for the FY 2020 payment determination and subsequent years.

#### (2) Selection of Hospitals and Cases

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20068 through 20069), for the CY 2017 reporting period/FY 2020 payment determination and subsequent years, we proposed changes to our policies related to the selection of hospitals and cases for eCQM data validation to: (1) Expand the types of hospitals that could be excluded; and (2) expand the types of cases excluded from selection. These proposals are discussed in more detail below.

##### (a) Selection of Hospitals

As previously finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57174 through 57178), we will validate eCQM data submitted by up to 200 hospitals selected via random sample. Further, we finalized that the following hospitals may be excluded from this random sample of 200 hospitals selected for eCQM data validation (81 FR 57178):

- Any hospital selected for chart-abstracted measure validation; and
- Any hospital that has been granted a Hospital IQR Program Extraordinary Circumstances Exemption for the applicable eCQM reporting period.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20068), we proposed to expand the types of hospitals that could be excluded. For the FY 2020 payment determination and

subsequent years, we proposed to also exclude any hospital that does not have at least five discharges for at least one reported eCQM included among their QRDA I file submissions. In addition, we proposed that the three exclusions described above would be applied before the random selection of 200 hospitals for eCQM data validation, so that hospitals meeting any of these exclusions would not be eligible for selection. We believe that these proposals improve the likelihood that there would be sufficient data for validation obtained from the hospitals selected for eCQM data validation.

We invited public comment on our proposals to: (1) Exclude any hospital that does not have at least five discharges for at least one reported eCQM included among their QRDA I file submissions in eCQM data validation; and (2) to exclude from selection hospitals meeting either of the two exclusion criteria finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57178) as discussed above. We note that the proposed rule (at 82 FR 20068) included a technical error stating “and/or (2) to exclude from selection hospitals meeting either of the two exclusion criteria finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57178).” We have corrected the language in this final rule to state “and,” instead of “and/or.”

*Comment:* A few commenters supported the exclusion of hospitals from eCQM data validation selection that have already been selected for chart-abstracted measure validation or that have been granted a Hospital IQR Program Extraordinary Circumstances Exemption because it provides relief of undue burden on facilities and increases the chance that selected hospitals will have an adequate sample size for validation.

*Response:* We thank the commenters for their support.

After consideration of the public comments we received, we are finalizing our proposals, as proposed, for the FY 2020 payment determination and subsequent years: (1) To exclude any hospital that does not have at least five discharges for at least one reported eCQM included among their QRDA I file submissions; and (2) to exclude from selection hospitals meeting either of the two exclusion criteria finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57178). This means that the three exclusion criteria described would be applied before random selection of 200 hospitals for eCQM data validation, such that hospitals meeting one or more of these exclusion criteria would not be eligible for selection.

## (b) Selection of Cases

We have not previously specified processes for the selection of cases for eCQM data validation. For the FY 2020 payment determination and subsequent years, we proposed to exclude the following cases from validation for those hospitals selected to participate in eCQM data validation:

- Episodes of care that are longer than 120 days; and
- Cases with a zero denominator for each measure.

We believe excluding episodes of care that are longer than 120 days will reduce the reporting burden on hospitals selected for eCQM data validation, as the volume of data reported for longer cases is greater. Further, we believe excluding cases with zero denominators for each measure would ensure we perform validation only on cases with applicable measure data. We note this proposed exclusion applies to cases, rather than measures. However, a measure would not be validated if a hospital did not have any applicable cases for the measure.

We invited public comments on our proposal to exclude: (1) Episodes of care that are longer than 120 days; and (2) cases with a zero denominator for each measure from eCQM data validation for the FY 2020 payment determination and subsequent years as discussed above.

*Comment:* A few commenters supported the proposed policy of adding additional exclusion criteria to the hospital and case selection process for eCQM data validation to include: (1) Episodes of care that are longer than 120 days; and (2) cases with a zero denominator for each measure, because these exclusions would decrease hospital reporting burden.

*Response:* We thank the commenters for their support.

After consideration of the public comments we received, we are finalizing our proposal, as proposed, for the FY 2020 payment determination and subsequent years, to add exclusion criteria to the hospital and case selection process for eCQM data validation to include: (1) Episodes of care that are longer than 120 days; and (2) cases with a zero denominator for each measure.

## (3) Medical Record Submission Requirements and Scoring

## (a) Medical Record Submission Requirements

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57179), we finalized that hospitals participating in eCQM data validation for the FY 2020 payment

determination and subsequent years are required to: (1) Submit data by 30 calendar days following the medical records request date listed on the CDAC request form; (2) provide sufficient patient level information necessary to match the requested medical record to the original Hospital IQR Program submitted eCQM measure data record; and (3) submit records in PDF file format through QualityNet using the Secure File Transfer (SFT). We also finalized for hospitals selected for eCQM data validation (for the FY 2020 payment determination only): (1) We require submission of at least 75 percent of sampled eCQM measure medical records in a timely and complete manner; and (2) the accuracy of eCQM data submitted for validation would not affect a hospital's validation score (81 FR 57180). In the FY 2018 IPPS/LTCH PPS proposed rule, we did not propose to make any changes related to these operational procedures. However, we proposed to continue these policies for the FY 2021 payment determination and subsequent years. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20068 through 20069), we proposed to extend to the FY 2021 payment determination and subsequent years our previously finalized medical record submission policy for eCQM data validation, as finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57181), requiring submission of at least 75 percent of sampled eCQM measure medical records in a timely and complete manner. We also proposed to extend to the FY 2021 payment determination our previously finalized medical record submission policy for eCQM data validation, as finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57181), that the accuracy of eCQM data submitted for validation would not affect a hospital's validation score. (We note that this policy is discussed in more detail in the next section and refer readers below.) We noted that if our proposals in section IX.A.8 of the preamble of the FY 2018 IPPS/LTCH PPS proposed rule, which proposed two quarters of data for CY 2017 eCQM data submission and eight cases per quarter for hospitals selected for validation (16 total cases for the entire data collection period), were finalized as proposed, and hospitals selected for eCQM data validation are required to submit complete information for 75 percent of requested cases as previously finalized, then those hospitals would be required to submit information for at least 12 records, or 75 percent of the requested 16 records for the FY 2020 payment determination. Similarly, if our

proposals: (1) To continue our medical record submission policies for the FY 2021 payment determination and subsequent years; (2) to require three quarters of data for CY 2018 eCQM data submission and eight cases per quarter for hospitals selected for validation (24 total cases for the entire data collection period) as detailed in section IX.A.8 of the preamble of the FY 2018 IPPS/LTCH PPS proposed rule; and (3) hospitals selected for eCQM data validation are required to submit complete information for 75 percent of requested cases, were all finalized as proposed, then those hospitals would be required to submit complete information for at least 18 records, or 75 percent of the requested 24 records for the FY 2021 payment determination.

Furthermore, as finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57180) for the FY 2020 payment determination, in the proposed rule (82 FR 20069), we proposed, for the FY 2021 payment determination and subsequent years, that any hospital that fails any validation requirement, such as submission of records in PDF file format within 30 days of the date listed on the CDAC medical records request, and/or submission of complete information for at least 75 percent of the requested records, would be considered not to have met the eCQM validation requirements and would be subject to a one-quarter reduction of the applicable percentage increase for not meeting all Hospital IQR Program requirements.

We invited public comment on the proposals we made in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20068 through 20069) as discussed above.

*Comment:* One commenter recommended CMS reconsider the process of submitting PDF copies of the medical records for validation, suggesting that a more accurate method would be for CMS to send an auditor onsite to validate the data directly from the EHR.

*Response:* We thank the commenters for the input. At this time, we believe the most feasible and less burdensome approach to hospitals is to continue the current process for medical record submission for validation via PDF file submission. In particular, we recognize the significant time and resources that hospitals would be required to address CMS onsite validator needs and access to onsite information. We strongly believe that hospital resources would be better devoted to caring for and communicating with patients and their caregivers. We also note that hospitals are familiar with this method of

reporting medical records for chart-abstracted measure validation.

*Comment:* One commenter requested clarification on which format (complete medical record, including free text or printout of the QRDA I file) CMS will use to validate eCQM data.

*Response:* Per the FY 2017 IPPS/LTCH PPS final rule (81 FR 57179), the format will be a portable document format (PDF) of the entire medical record.

After consideration of the public comments we received, we are finalizing our proposals, as proposed, for the FY 2021 payment determination and subsequent years, that: (1) Hospitals selected for eCQM data validation are required to submit at least 75 percent of sampled eCQM measure medical records in a timely and complete manner; and (2) any hospital that fails any validation requirement would be considered not to have met the eCQM validation requirements and would be subject to a one-quarter reduction of the applicable percentage increase for not meeting all Hospital IQR Program requirements. As discussed in section IX.A.8 of the preamble of this final rule, we are finalizing a modification to the eCQM reporting requirements such that hospitals are required to submit one, self-selected calendar quarter of data for 4 eCQMs for both the CY 2017 reporting period/FY 2019 payment determination and the CY 2018 reporting period/FY 2020 payment determination. Furthermore, we refer readers to section IX.A.11.b.(1) of the preamble of this final rule where we are finalizing our proposals to require hospitals selected for eCQM data validation to submit eight cases for the selected calendar quarter. As applied to our finalized policies here for the FY 2021 payment determination, selected hospitals would be required to submit complete information for at least 6 records, or 75 percent of the requested 8 records.

#### (b) Scoring

As finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57178) for the FY 2020 payment determination only, the accuracy of eCQM data (the extent to which eCQM data reported for validation matches the data previously reported in the QRDA I files for eCQM reporting) submitted for validation will not affect a hospital's validation score. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20069), we proposed the continuation of this policy for the FY 2021 payment determination, such that the accuracy of eCQM data submitted for validation would not affect a hospital's validation score. We intend for the accuracy of eCQM data

validation to affect validation scores in the future and would propose any changes related to this in future rulemaking. The data submission deadlines and additional details about the eCQM data validation procedures will be posted on the QualityNet Web site at: <http://www.QualityNet.org/>. We invited public comment on this proposal as discussed above.

We did not receive any public comments on our proposal. We are finalizing our proposal, as proposed, that the accuracy of eCQM data submitted for validation will not affect a hospital's validation score for the FY 2021 payment determination. We also received general comments about the eCQM data validation process in the Hospital IQR Program; these are discussed below.

*Comment:* A few commenters did not support the proposed modifications to the eCQM data validation process in the Hospital IQR Program. The commenters noted that validation of eCQMs should not be done until additional measures are accepted and built by vendors to allow hospitals the opportunity to submit data which aligns with their population and workflow rather than those currently available from the vendor. In addition, commenters stated that small hospitals without pediatrics, perinatal care, or stroke centers are very limited in their ability to submit eCQMs.

*Response:* We understand eCQM data validation imposes some burden on hospitals, but as we seek to evaluate the established validation procedures and expand electronic data reporting and validation, we believe validating data starting with the CY 2017 reporting period is necessary. Furthermore, because the accuracy of eCQM data submitted for validation will not affect a hospital's validation score for the FY 2021 payment determination, as finalized above, we believe this will balance any hospital burden or need for additional time to update their systems with our need to evaluate the quality of reported eCQM data. We disagree that validation of eCQM data should be delayed until additional measures are built by health IT vendors to allow hospitals the opportunity to submit data which aligns with their population and workflow because eCQM data submission is already a requirement in the Hospital IQR Program. Moreover, we believe validation is a critical component in the overall process of electronic reporting, as it informs hospitals about potential workflow refinements to ensure efficient extrapolation and enables us to ensure the accuracy of eCQM data prior to

future public reporting of the data. We encourage small hospitals that may be experiencing difficulty meeting the Hospital IQR Program's eCQM reporting requirements to review the Hospital IQR Program's ECE policy. We refer readers to section IX.A.15 of the preamble of this final rule for more information.

Finally, we note that hospitals are able to select which eCQMs best align with their population and workflow. We also refer readers to section IX.A.10.d.(2)(b)(ii) of the preamble of this final rule, in which we are finalizing a policy that requires EHRs to be certified to all available eCQMs, which will offer hospitals greater flexibility to report eCQM data most appropriate for their population and workflow, rather than being limited to those eCQMs selected and supported by their vendors.

*Comment:* Some commenters requested that CMS consider delaying mandatory validation of eCQM data for selected hospitals until the spring of 2020, using CY 2019 performance year for the FY 2021 payment determination, noting that this delay would allow hospitals sufficient time to install the 2015 Edition certification criteria for CEHRT, make necessary refinements and workflow process improvements, and complete internal validation to ensure the data output from the certified EHR technology's eCQM calculation is accurate.

*Response:* We do not believe that delaying validation of eCQM data is necessary at this time, because we are finalizing several policies in this final rule to help reduce the burden associated with eCQM reporting requirements. We refer readers to section IX.A.10.d.(2)(b)(i) of the preamble of this final rule, in which we are finalizing greater flexibility to our previously finalized certification policy for the CY 2018 reporting period/FY 2020 payment determination, and section IX.A.8. of the preamble of this final rule, where we are finalizing modified, reduced eCQM reporting requirements. We believe validation is a critical component in the overall process of electronic reporting, as it informs hospitals about potential workflow refinements to ensure efficient extrapolation and enables us to ensure the accuracy of eCQM data prior to future public reporting of the data.

*Comment:* One commenter suggested that CMS develop a detailed plan for how validation will be performed, including which fields of structured data will be used for validation and how that will compare with medical record review. The commenter stated that the hospital and vendor communities

should have an opportunity to comment on this detailed plan, and then CMS should undertake a second expanded pilot to test and further refine the plan in collaboration with stakeholders prior to implementation.

*Response:* We thank the commenters for their suggestion. More details on eCQM data validation will be provided at a later date, similar to the specifications that are posted on the QualityNet Web site for the validation of chart-abstracted measures. In addition, we encourage stakeholders to continue sharing feedback with us, to provide more information on their experience with the eCQM data validation process. This feedback will help us refine the process moving forward.

### c. Modifications to the Educational Review Process for Chart-Abstracted Measures Validation

#### (1) Background

In the FY 2015 IPPS/LTCH PPS final rule, we stated that we rely on hospitals to request an educational review or appeal cases to identify any potential CDAC or CMS errors (79 FR 50260). We also noted that a hospital may request from CMS at any time an educational review to better understand whether or not we reached a correct conclusion during validation; hospitals that fail to meet Hospital IQR Program validation requirements have 30 days to appeal after this determination (79 FR 50260). We have described our processes for educational review on the QualityNet Web site.<sup>283</sup> We note that historically this process functioned as an outreach opportunity we provided hospitals, but based on our experience, and more robust validation requirements, we believe that it would be beneficial to hospitals to propose formalizing this process.

Under the current process, if the results of an educational review indicate that CDAC or CMS has incorrectly scored a hospital, those scores are not changed unless and until the hospital submits a reconsideration request. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20069 through 20070), we proposed: (1) To formalize this process; and (2) to update the process to specify that if the results of an educational review indicate that we incorrectly scored a hospital, the corrected score would be used to compute the hospital's final validation score whether or not the hospital submits a reconsideration request.

These proposals are discussed in more detail below. Stakeholder feedback, provided via email, has indicated that while the educational review process is helpful to participating hospitals, it is limited in its impact, given that a hospital's score is not corrected even after an educational review determines that CMS reached an incorrect conclusion regarding a hospital's validation score for a given quarter. Based on this feedback, we proposed to change the Hospital IQR Program's chart-abstracted measure validation educational review process. Our goal is to reduce the number of reconsideration requests by identifying and correcting errors before the final yearly validation score is derived. By identifying and correcting any mistakes early on, this process could help decrease the burden during the annual reconsideration process, both for hospitals and CMS.

#### (2) Educational Review Process Modifications for the FY 2020 Payment Determination and Subsequent Years

##### (a) Request for Educational Review

Under this proposal, the educational review request process, as well as our procedures for responding to requests, remain the same. Specifically, under the current process, hospitals may request an educational review if they believe they have been scored incorrectly or if they have questions about their score. We would provide the results of the educational review, outlining the findings of whether the scores were correct or incorrect, to the requesting hospital through secure file transfer.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20069), we proposed to formalize this process. In formalizing our current procedures, the educational review request process, as well as our procedures for responding to requests, would remain the same. First, we proposed that, for the FY 2020 payment determination and subsequent years, a hospital may request from CMS an educational review to better understand whether or not CDAC or CMS reached a correct conclusion during validation for the first three quarters of validation. Specifically, upon receipt of an unsatisfactory score, a hospital would have 30 calendar days to contact the Validation Support Contractor (VSC) to solicit a written explanation of the provided score. We note that currently hospitals receive validation results on a quarterly basis, and that would not change under this proposed process. Accordingly, under this proposal, an educational review could be requested on a quarterly basis for the first three quarters of validation.

Results of the educational review would be provided to hospitals via secure file transfer.

Second, we proposed that the process used to evaluate whether or not validation results are correct would be the same in both an educational review and a reconsideration request. Specifically, as finalized in the FY 2012 IPPS/LTCH PPS final rule for the Hospital IQR Program's reconsideration request process, we proposed that upon receipt of an educational review request, we would review the data elements that were labeled as mismatched, as well as the written justifications provided by the hospitals, and make a decision on the educational review request.

##### (b) Scoring Update

For the FY 2020 payment determination and subsequent years, we proposed that if an educational review, that is requested for any of the first 3 quarters of validation, yields incorrect CMS validation results for chart-abstracted measures, we would use the corrected quarterly score, as recalculated during the educational review process, to compute the final confidence interval (CI). These corrected scores would be applicable to the corresponding quarter, within the first 3 quarters of validation, for which a request was submitted. We note that under this proposal, the quarterly validation reports issued to hospitals would not be changed to reflect the updated score due to the burden associated with reissuing corrected reports. Beginning with the FY 2020 payment determination, we proposed to use the revised score identified through an educational review when determining whether or not a hospital failed validation. Further, under this proposal, as with the current educational review process, corrected scores identified through the educational review would only be used if they indicate that the hospital performed more favorably than previously determined.

Under this proposal, the educational review request process, as well as our procedures for responding to requests, remain the same. We also note that, in accordance with our previously established policies, a hospital may still request reconsideration even if an educational review determined that a hospital was scored correctly. Hospitals that fail Hospital IQR Program requirements, which include validation, can request reconsideration at the end of the year after the annual payment update has been made. We refer readers to section IX.A.14. of the preamble of this final rule for a discussion about our

<sup>283</sup> QualityNet: Validation—Educational Review. <https://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier3&cid=1228775419006>.

reconsideration and appeals process. We note that under this proposal, corrected scores identified through the educational review would only be used if they indicate that the hospital performed more favorably than previously determined. In addition, we note that for the last quarter of validation, because of the need to calculate the confidence interval in a timely manner and the insufficient time available to conduct educational reviews, the existing reconsideration process would be used to dispute an unsatisfactory validation result. If a hospital does not fail validation they still would have the opportunity to request an educational review within 30 days of receiving the results.

We invited public comment on our proposals to formalize the educational review process and use this process to correct scores for the first three quarters of chart-abstracted measure validation as discussed above.

*Comment:* A few commenters supported the proposal to formalize the educational review process so that incorrect validation scores may be corrected for the first three quarters of validation for chart-abstracted measures. One commenter believed that this change would make the process more meaningful and valuable to hospitals across the nation.

*Response:* We thank the commenters for their support.

*Comment:* One commenter expressed concern about the scoring metrics used to validate the educational review process of hospitals and emphasized the need to do more than just obtain a “passing” score.

*Response:* We thank the commenters for their input. We do not apply scoring metrics to validate the educational review process. If an error is found during an educational review, then the case reliability would be updated prior to computing the overall confidence interval. For example, if the provider has 1 mismatch out of 10 total cases for the quarter, therefore having a quarterly case reliability of 9/10, and upon educational review it is determined that the mismatch should *not* have occurred, we would update the quarterly case reliability to 10/10 prior to computing the overall confidence interval.

After consideration of the public comments we received, we are finalizing our proposals, as proposed, for the FY 2020 payment determination and subsequent years, to: (1) Formalize the educational review process for chart-abstracted measures; and (2) use this process to correct quarterly scores for any of the first 3 quarters of

validation in order to compute the final confidence interval (CI).

#### 12. Data Accuracy and Completeness Acknowledgement (DACA) Requirements for the FY 2020 Payment Determination and Subsequent Years

We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53554) for previously-adopted details on DACA requirements. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20070), we did not propose any changes to the DACA requirements.

#### 13. Public Display Requirements for the FY 2020 Payment Determination and Subsequent Years

##### a. Background

We refer readers to the FY 2008 IPPS/LTCH PPS final rule (72 FR 47364), the FY 2011 IPPS/LTCH PPS final rule (75 FR 50230), the FY 2012 IPPS/LTCH PPS final rule (76 FR 51650), the FY 2013 IPPS/LTCH PPS final rule (77 FR 53554), the FY 2014 IPPS/LTCH PPS final rule (78 FR 50836), the FY 2015 IPPS/LTCH PPS final rule (79 FR 50277), and the FY 2016 final rule (80 FR 49712 through 49713) for details on public display requirements. The Hospital IQR Program quality measures are typically reported on the *Hospital Compare* Web site at: <http://www.medicare.gov/hospitalcompare>, but on occasion are reported on other CMS Web sites such as: <https://data.medicare.gov>.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20070 through 20074), we did not propose any changes to public display requirements; however, we solicited public comment on potential options for confidential and public reporting of measures stratified by patient dual eligibility status as early as the summer of 2018 using data from the FY 2019 reporting period (July 1, 2014 through June 30, 2017). We previously sought public comment on the potential public reporting of quality measures data stratified by SES factors and future hospital quality measures that incorporate health equity in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57167 through 57168). In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20071), we sought additional public comment on the potential confidential and public reporting of Hospital 30-day, All-Cause, Risk-Standardized Readmission Rate Following Pneumonia Hospitalization (NQF #0506), (the Pneumonia Readmission measure), and the Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Pneumonia Hospitalization (NQF #0468), (the Pneumonia Mortality

measure), data stratified specifically by patient dual eligibility status. These are discussed in more detail below.

#### b. Potential Options for Confidential and Public Reporting of Hospital IQR Measures Stratified by Patient Dual Eligibility Status

##### (1) Background

In section IX.A.1.d. of the preamble of the proposed rule, we discussed the importance of improving beneficiary outcomes including reducing health disparities, and our commitment to ensuring that medically complex patients, as well as those with social risk factors, receive excellent care. As we noted in section IX.A.1.d. of the preamble of the proposed rule, studies show that social risk factors, such as earning a low-income, belonging to a racial or ethnic minority group, or living with a disability, are associated with poor health outcomes, some of which are related to the quality of health care.<sup>284</sup> One of our core objectives is to improve health outcomes for all beneficiaries, and to ensure that complex patients as well as those with social risk factors receive excellent care. Within this context, recent reports by the Office of the Assistant Secretary for Planning and Evaluation (ASPE) and the National Academies of Sciences, Engineering, and Medicine have examined the influence of social risk factors in CMS value-based purchasing programs.<sup>285</sup> In addition, as noted in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57185), the NQF has undertaken a 2-year trial period in which certain new measures and measures undergoing maintenance review have been assessed to determine if risk adjustment for social risk factors is appropriate for these measures.<sup>286</sup> Since publishing the proposed rule, we have verified that the NQF trial period ended in April 2017 and a draft report is available at: [http://www.qualityforum.org/SES\\_Trial\\_Period.aspx](http://www.qualityforum.org/SES_Trial_Period.aspx).

<sup>284</sup> See, for example, United States Department of Health and Human Services. “Healthy People 2020: Disparities. 2014.” <http://www.healthypeople.gov/2020/about/foundation-health-measures/Disparities> or National Academies of Sciences, Engineering, and Medicine. Accounting for Social Risk Factors in Medicare Payment: Identifying Social Risk Factors. Washington, DC: National Academies of Sciences, Engineering, and Medicine 2016.

<sup>285</sup> Department of Health and Human Services Office of the Assistant Secretary for Planning and Evaluation (ASPE), “Report to Congress: Social Risk Factors and Performance Under Medicare’s Value-Based Purchasing Programs.” December 2016. <https://aspe.hhs.gov/pdf-report/report-congress-social-risk-factors-and-performance-under-medicare-value-based-purchasing-programs>.

<sup>286</sup> [http://www.qualityforum.org/SES\\_Trial\\_Period.aspx](http://www.qualityforum.org/SES_Trial_Period.aspx).

Also as part of this effort, we solicited feedback on which social risk factors provide information that is most valuable to stakeholders. We also sought public comment on confidential reporting and future public reporting of some of our measures, specifically the Pneumonia Readmission measure (NQF #0506) and the Pneumonia Mortality measure (NQF #0468), stratified by patient dual eligibility. There are two potential purposes for providing information on hospital results stratified by dual eligibility. The approach we are considering would illuminate differences in outcome rates among patient groups within a hospital and would also allow for a comparison of those differences, or disparities, across hospitals. We also considered an alternative approach that would measure outcome rates for subgroups of patients, such as the dual eligible patients, across hospitals; however, this alternative would not allow for an examination of the difference in rates between groups (for example dual eligible patients compared to non-dual eligible patients).

The goals of measuring and monitoring disparities in patient outcomes for specific sub-groups of patients within hospitals is to reduce health inequities, improve health care quality for vulnerable populations, and promote greater transparency for health care consumers. This is in alignment with the CMS Quality Strategy<sup>287</sup> and the ASPE report<sup>288</sup> to Congress, which stated performance rates, including readmission rates, stratified by social risk should be developed and considered for hospital specific confidential preview reports and public reporting in places such as the *Hospital Compare* Web site, so hospitals, health systems, policymakers, and consumers can see and address important disparities in care.

Many levers exist for addressing and improving disparities in care and outcomes. The 21st Century Cures Act (Pub. L. 114–255) addresses payment penalty scoring in the Hospital Readmissions Reduction Program by identifying hospitals based on their proportion of dual eligible patients and supporting improvement efforts for

hospitals caring for patients with social risk factors by setting penalty thresholds among similar peer hospitals.<sup>289</sup> As discussed in sections V.I.7. through V.I.10. of the preamble of this final rule, the Hospital Readmissions Reduction Program, as required by the statute, proposed to use dual eligibility as a marker of poverty, one key patient social risk factor, and we would like to move in that direction for the Hospital IQR Program as well in the future. In the Hospital IQR Program, we are exploring methods to distinguish vulnerable patients with social risk factors, such as poverty. As such, we intend to use dual eligible status among the over 65 year old patients included in the measures as a marker of poverty.

Dual eligible status describes whether Medicare beneficiaries are also enrolled in Medicaid. We use dual enrollment in Medicare and Medicaid as a marker for a beneficiary having low income and/or few assets. The recent report to Congress by ASPE has shown that dual eligibility was the most powerful predictor of poor health care outcomes among the social risk factors they tested.<sup>290</sup>

The *Hospital Compare* Web site currently displays readmission rates for each hospital, but does not specifically highlight a hospital's quality of care for vulnerable populations. We believe stratifying data by social risk factors would supplement the current reporting of the Pneumonia Readmission measure (NQF #0506) and the Pneumonia Mortality measure (NQF #0468) by highlighting disparities, that is, differences in outcomes, within hospitals that are not simply due to differences in illness severity, to the extent that such disparities exist for any given hospital. To do so, we developed a method to quantify the disparities of readmission and mortality between these groups within each hospital after accounting for patient case mix. The disparities indicator used in the hospital specific confidential preview reports would provide information assessing the increased odds, or rates, of readmission for dual eligible patients admitted to the same hospital, after accounting for differences in age and comorbidities.

For the Hospital IQR Program, we are considering options to improve health disparities among patient groups within hospitals by increasing the transparency of disparities among patients within hospitals and the ability to compare these disparities across hospitals. This would be accomplished by the methods described below. Our alternative

approach, also described below, to measure outcome rates for subgroups of patients, such as the dual eligible patients, across hospitals, would examine the performance of hospitals on the subgroup of dual eligible patients.

We previously sought public comment on the potential public reporting of quality measure data stratified by race, ethnicity, sex, and disability and future hospital quality measures that incorporate health equity in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57167 through 57168). In general, commenters supported the development of health equity measures and their inclusion in the Hospital IQR Program (81 FR 57167). In particular, stakeholders noted that stratified measures could serve as tools for hospitals to identify gaps in outcomes for different groups of patients, improve the quality of health care for all patients and empower consumers to make informed decisions about health care. The stakeholders encouraged us to stratify measures by other social risk factors such as age, income, and educational attainment (81 FR 57167); however, commenters raised concerns about the small denominator sample size associated with measure stratification by social risk factors, which would skew the reliability of stratified quality measures. Commenters also expressed concern that it may not be a simple task to stratify measures by race, ethnicity, sex, and disability because specific considerations are required for every measure and each reporting mechanism to implement such a requirement (81 FR 57168). For more details on the public comments, we refer the readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 57167 through 57168).

We acknowledge the complexity of interpreting stratified outcome measures. Due to this complexity, prior to publicly reporting stratified outcome measure data, as early as the summer of 2018 using data from the FY 2019 reporting period (July 1, 2014 through June 30, 2017), we are considering first providing hospitals with confidential results showing outcomes stratified by patient dual eligibility within the hospital, or more specifically, differences in outcome rates for the dual eligible and non-dual eligible patients in the measures. This would allow us to obtain feedback on reporting options and to ensure the information is reliable, valid, and understandable prior to any future public display on the *Hospital Compare* Web site. Our goal in producing stratified results is to provide information about disparities in patient

<sup>287</sup> <https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/qualityinitiativesgeninfo/cms-quality-strategy.html>.

<sup>288</sup> Department of Health and Human Services Office of the Assistant Secretary for Planning and Evaluation (ASPE), "Report to Congress: Social Risk Factors and Performance Under Medicare's Value-Based Purchasing Programs." December 2016. Available at: <https://aspe.hhs.gov/pdf-report/report-congress-social-risk-factors-and-performance-under-medicare-value-based-purchasing-programs>.

<sup>289</sup> *Ibid.*

<sup>290</sup> *Ibid.*

outcomes within hospitals to the extent that they exist for a given hospital. This information would supplement the assessment of overall hospital quality provided through the current measures of readmission and mortality rates; these measures would remain unchanged. We discuss below the methods and results of stratification for the current Hospital 30-day, All-Cause, Risk-Standardized Readmission Rate Following Pneumonia Hospitalization (NQF #0506) (the READM-30-PN or Pneumonia Readmission measure).

The stratified results would provide hospitals with confidential reporting with information that could illuminate any disparities in care and outcome that can be targeted through quality improvement efforts. Then for the future, we are considering publicly posting both of these results on *Hospital Compare* to allow consumers and other stakeholders to view critical information about the care and outcomes of subgroups of patients, particularly those with social risk factors. This information could drive consumer choice and spark improvement efforts targeting dual eligible patients. In the future, we would also consider expanding this approach to other social risk factors and other measures.

We invited public comment on: (1) Which social risk factors provide information that is most valuable to stakeholders; (2) providing hospitals with confidential preview reports containing stratified results for certain Hospital IQR Program measures, specifically the Pneumonia Readmission measure (NQF #0506) and the Pneumonia Mortality (MORT-30-PN) measure (NQF #0468); (3) a potential methodology for illuminating differences in outcomes rates among patient groups within a hospital that would also allow for a comparison of those differences, or disparities, across hospitals; (4) an alternative methodology that compares performance for patient subgroups across hospitals but does not provide information on hospital disparities and any additional suggested methodologies for calculating stratified results by patient dual eligible status; and (5) future public reporting of these same measures stratified by patient dual eligibility status on the *Hospital Compare* Web site. These are discussed in more detail below.

## (2) Confidential Hospital Specific Preview Reports Prior to Publicly Reporting Stratified Data

We sought public comment on the possibility of providing confidential hospital specific preview reports

containing the results of the Pneumonia Readmission (NQF #0506) and Pneumonia Mortality (NQF #0468) measures stratified by patient dual eligibility, as early as the summer of 2018 using data from the FY 2019 reporting period (July 1, 2014 through June 30, 2017), prior to any future potential public reporting of this data. The current publicly reported measures used in the Hospital IQR Program and reported on the *Hospital Compare* Web site would remain unchanged. Following the time period during which hospitals received confidential preview reports, we may display stratified results on the *Hospital Compare* Web site solely for the purpose of “stratification,” that is, producing results to describe differences between subgroups within the hospital.

### (3) Potential Methodology for Calculating Stratified Results by Patient Dual Eligibility Status

#### (a) Background

Under any future option to stratify measure results by patient dual eligibility status, we intend to focus on disparities between dual eligible patients and non-dual eligible patients, because dual eligibility is an important social risk factor among the Medicare FFS population and is feasible to measure.<sup>291</sup> In order to provide information about differences in readmission outcomes for dual eligible patients and non-dual eligible patients within a hospital that may be due to quality differences, we need a methodology that accounts for any differences in comorbidities, age, and other risk factors between these groups of patients. Such a methodology ensures that differences in outcomes are not simply due to differences in clinical severity and comorbid conditions among the patient groups. Therefore, any approach to identifying within-hospital disparities for readmission measures by patients’ dual eligibility status would build on the methodology used to calculate the currently implemented RSRRs.<sup>292</sup> As the Pneumonia Readmission measure (NQF #0506) is currently specified, risk-adjusted rates are estimated using a hierarchical logistic regression to

<sup>291</sup> Department of Health and Human Services Office of the Assistant Secretary for Planning and Evaluation (ASPE), “Report to Congress: Social Risk Factors and Performance Under Medicare’s Value-Based Purchasing Programs.” December 2016, <https://aspe.hhs.gov/pdf-report/report-congress-social-risk-factors-and-performance-under-medicare-value-based-purchasing-programs>.

<sup>292</sup> <http://www.qualitynet.org/dcs/ContentServer?cid=1219069855841&pagename=QnetPublic%2FPage%2FQnetTier4&c=Page>.

account for the clustering of observations within hospitals and differences in the number of admissions across hospitals.<sup>293</sup>

### (b) Option To Measure Difference in Outcomes By Adding Three Additional Factors to Current Statistical Models

There is both a hospital and patient-level effect of dual eligibility on readmission risk. We have considered the hospital fixed effect in our approaches to stratifications (described in section IX.A.13.b.(3)(a) of the preamble of this final rule), because without it, we will introduce bias in the patient-level dual eligibility, which would produce misleading results. The statistical approach we may employ in the future would use current statistical models and add three additional factors to the statistical model for the purposes of measuring differences in outcomes: (1) An indicator for patient-level dual eligibility; (2) a hospital-level dual eligible factor<sup>294</sup> (for example, percentage of dual eligible patients in each hospital); and (3) a hospital-specific indicator (random coefficient) for dual eligibility. This third factor, the hospital-specific random coefficient for dual eligibility, assesses the disparity or difference in readmissions for dual eligible patients within a specific hospital after accounting for other factors, such as differences in clinical disease or comorbid conditions. The first two factors, (the patient-level dual eligibility coefficient, which represents the overall difference between dual and non-dual groups in the entire country, and the hospital-level dual eligible factor, which reflects the difference in readmission rate between hospitals with different proportions of dual eligible patients) are only included in order to be able to interpret the third factor random coefficient and ensure it is specific to a particular hospital. It is the third factor, the hospital-specific indicator, which would be used to calculate the differences in readmission rates between the dual and non-dual eligible patients within the hospital. Using this method, within-hospital disparities in readmissions between

<sup>293</sup> Krumholz H, Normand SL, Keenan P, et al. Hospital 30-Day Pneumonia Readmission Measure Methodology: Report prepared for the Centers for Medicare & Medicaid Services, 2008, <http://www.qualitynet.org/dcs/ContentServer?cid=1219069855841&pagename=QnetPublic%2FPage%2FQnetTier4&c=Page>.

<sup>294</sup> We note that although hospital-level dual eligible effect was not of interest, it often mixed with patient-level effect. Therefore, by breaking down the dual eligible effect into patient-level and hospital-level components, we were able to better assess of relationship between readmission and patient-level dual eligibility.

dual eligible patients and non-dual eligible patients would be included in confidential hospital specific preview reports in addition to the currently calculated and displayed Pneumonia Readmission (NQF #0506) and Pneumonia Mortality (NQF #0468) measures. We would provide information in the form of odds ratios (that is, the increased odds of readmission for dual eligible patients at a given hospital) or, alternatively, the average difference in readmission rates between dual and non-dual patients after accounting for differences in other risk-factors.

To calculate odds ratios, we would convert hospital-specific coefficients for dual eligibility into odds ratios. Odds ratios compare dual eligible patients relative to non-dual eligible patients in terms of their risk of readmission, assuming that the two groups have the same case mix (that is, comorbidities). If the readmission rate is the same in both groups, the odds ratio is 1. If the odds ratio is greater than 1, it would mean that dual eligible patients have worse readmission rates, and vice versa. To estimate the average difference of readmission rates between dual and non-dual beneficiaries for each hospital, we would first calculate the predicted probabilities of being readmitted by assuming all patients are dual eligible or all patients are non-dual eligible in a hospital. The difference between the two predicted probabilities is the average difference in the readmission rates between the two groups of patients at each hospital.

Rather than assuming a uniform impact of dual eligible and non-dual eligible status across hospitals, this approach would assess the impact of dual eligibility across all hospitals separately, recognizing that socioeconomic disparities of patients may be greater or lesser at some hospitals as compared with others. This approach would allow quantification of the difference in readmissions between dual eligible patients and non-dual eligible patients within each hospital, as long as a hospital has a sufficient number of cases to produce a reliable estimate for both groups.

In summary, this statistical model would uniquely identify disparities in readmission rates for dual eligible beneficiaries compared to non-dual eligible beneficiaries, after controlling for patients' prior medical history and age for each hospital. This random coefficient for dual eligibility within the statistical model would indicate how readmission rates at the same hospital would differ between two patients at that hospital with exactly the same age

and underlying risk factors (those comorbid clinical conditions included in the statistical model), but differ with respect to dual eligibility.

#### (c) Option To Measure Difference in Outcomes Using Current Statistical Models

Depending on the information that is most useful to stakeholders, an alternative approach to examining readmission rates among dual eligible patients could be considered. To examine the relative performance of hospitals on readmission rates for their dual eligible patients, rather than to compare hospitals on within-hospital disparities, we could calculate the current measures' statistical model (without the additional factors mentioned above) and include only dual eligible patients. Similarly, this could be done for non-dual eligible patients. This approach of using two separate models for the separate patient subgroups would produce information on readmission rates for dual eligible patients at one hospital compared to another (or non-dual eligible patients across hospitals). Because of the use of two separate statistical models, this approach would not ensure consistent treatment of risk factors across patient groups and could not be used to compare readmission rates for two groups within a hospital.

#### (d) Summary of Statistical Method Options

We intend to provide information on the difference in readmission rates of dual eligible and non-dual eligible beneficiaries within hospitals and also provide information for hospitals and consumers on the relative disparities across hospitals. We solicited public comment on the information that stakeholders would find most useful and any additional suggested methodologies for calculating stratified results by patient dual eligible status. The confidential hospital specific preview reports containing data stratified by patient dual eligibility status would be modeled after current confidential hospital specific preview reports and include patient-level data for hospitalizations included in the measure. The current confidential hospital specific preview reports would be supplemented by information for each patient on their dual eligible status and a summary of the difference in readmission rates for dual eligible patients in the hospital as compared to other hospitals in the State and nation.

We invited public comment on both methodologies, as described above, to produce stratified results by

determining the differences in readmission and mortality by dual eligible status within a hospital, and a comparison of those disparities across hospitals, accounting for differences in comorbidities, age, and other risk factors between dual eligible and non-dual eligible patients.

All comments received are summarized under section IX.A.13.b.(6) of the preamble of this final rule, below.

#### (4) Data Sources

To provide an example of the statistical approach we could apply, we describe stratified results by patient dual eligibility for the Pneumonia Readmission measure (NQF #0506), using the first calculation method described in section IX.A.13.b.(3)(b) of the preamble of this final rule. To calculate the example rate, we used the CMS administrative claims data from each index pneumonia hospitalization, as well as from inpatient and outpatient Medicare claims from the 12 months prior to the hospitalization from July 2012 to June 2015 to calculate the publicly reported RSRRs following pneumonia hospitalization (NQF #0506) in the July 2016 *Hospital Compare* update. Both the cohort and the risk-adjustment approach remain unchanged. For more details on the publicly reported RSRRs following pneumonia as currently implemented, we refer readers to its measure methodology report and measure update zip file on our Web site at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>. The data was then linked to CMS denominator files<sup>295</sup> (2012 to 2015) to derive the indicator of dual eligibility for each patient admission (1.3 percent index admissions were excluded because there is no information available in the denominator files).

We conducted preliminary analyses on the Pneumonia Readmission measure (NQF #0506)<sup>296</sup> and determined that there is a total of 3,851 hospitals that have at least 25 included index hospitalizations overall, and at least 10 dual eligible and 10 non-dual eligible index hospitalizations for which we could report outcome disparity (82 percent of hospitals). The minimum sample size for 25 hospitalizations is consistent with the current publicly

<sup>295</sup> <https://www.cms.gov/research-statistics-data-and-systems/files-for-order/limiteddatasets/denominatorlds.html>.

<sup>296</sup> 1,456,289 hospitalizations (98.7 percent) were linked to the denominator data and 24.4 percent of those hospitalizations are from dual eligible patients.

reported outcomes measures. We imposed an additional requirement of at least 10 dual eligible and 10 non-dual eligible index hospitalizations for this example to ensure we had adequate numbers to observe any meaningful differences in outcome. We used this requirement because if a hospital has fewer than 10 patients in one subgroup of patients, it is neither clear that readmission rates for that group as compared to others would be reliable, nor that it is meaningful or has face validity to measure stratified rates for hospitals with very few of one of the categories of patients. We welcomed public comment on this sample size determination.

The observed readmission rate within 30-days of index discharge for all patients was 17.1 percent when we did not adjust for patients' prior medical history, and dual eligible beneficiaries had an approximately 3 percent higher readmission rate. Results from the hierarchical model<sup>297</sup> indicate that there is a statistically significant association between dual eligibility and pneumonia readmission (adjusted odds ratio, 1.07; 95 percent CI, 1.06–1.08). In addition, there is substantial variation in the relationship between dual eligibility and readmission across hospitals (Median odd ratio, 1.06; Min., 0.95; Max., 1.22). Findings also revealed that dual eligible patients are more likely to get readmitted in 95 percent of hospitals.

#### (5) Future Potential Public Display

We invited public comment on the potential future public reporting of certain outcomes measures, such as the Pneumonia Readmission measure (NQF #0506) and the Pneumonia Mortality measure (NQF #0468), stratified by social risk factors, specifically dual eligible status, to illuminate within-hospital disparities. If we decide to display measure data stratified by dual eligible status on the *Hospital Compare* Web site, we would clearly differentiate between the measure information we currently display and the measure information that is stratified by patients' dual eligible status. In addition, as discussed above, if we decide to display measure data stratified by dual eligible status on the *Hospital Compare* Web site, hospitals would receive

information about their stratified readmission rates for a certain period of time through confidential hospital specific preview reports prior to the public reporting of any information.

We invited public comment on this future consideration to display the stratified measure results, in addition to the current measure results, for certain Hospital IQR Program measures in future reporting years. We note that public display of measure data stratified by social risk factors such as dual eligible status would not occur until after a period of confidential reporting.

All comments received are summarized under section IX.A.13.b.(6) of the preamble of this final rule below.

#### (6) Summary

To summarize, we invited public comment on: (1) Which social risk factors provide the most valuable information to stakeholders; (2) providing hospitals with confidential preview reports containing stratified results for certain Hospital IQR Program measures, specifically the Pneumonia Readmission measure (NQF #0506) and the Pneumonia Mortality measure (NQF #0468); (3) a potential methodology for illuminating differences in outcomes rates among patient groups within a hospital and would also allow for a comparison of those differences, or disparities, across hospitals; (4) an alternative methodology that compares performance for patient subgroups across hospitals but does not provide information on within hospital disparities and any additional suggested methodologies for calculating stratified results by patient dual eligible status; and (5) future public reporting of these same measures stratified by patient dual eligible status on the *Hospital Compare* Web site as discussed above.

*Comment:* Several commenters supported providing confidential reports to hospitals for the Pneumonia Readmission measure (NQF #0506) and the Pneumonia Mortality measure (NQF #0468) stratified by patient dual eligible status and publicly reporting stratified measure data in the future. The commenters believed this information would be informative to hospitals and would drive improvement.

One commenter stated that this would be a positive direction for CMS when proposing new methodologies for quality metrics whether it be population stratification, risk adjustment, or any other significant changes in reporting.

*Response:* We thank the commenters for their support on stratifying outcome measures. We believe that highlighting disparities in outcomes between sub-

groups of patients could contribute to improved care for vulnerable patients.

*Comment:* A few commenters urged CMS to explore if additional factors should be used to stratify or risk adjust the measures beyond dual eligibility as a marker of poverty and consider the full range of differences in patients' backgrounds that might affect outcomes (such as readmission rates).

*Response:* We appreciate the commenters' suggestion to stratify outcome measures by additional social risk factors. Consistent with the findings of the ASPE and National Academies of Sciences, Engineering, and Medicine reports, we will consider stratifying outcome measures by appropriate additional social risk factors in the future as we continue to engage stakeholders and determine the availability of appropriate social risk factors that might influence outcomes such as readmission. Measure stratification is intended to identify disparities or differences by patient subgroup to support hospitals' efforts to improve care. Stratified reporting would allow us to provide measure data stratified by patient subgroup or the disparity between patient subgroups for each measure, via confidential hospital specific preview reports or public display on the *Hospital Compare* Web site.

We note that there are several methods for stratification of patients by dual eligible status, two of which are: (1) Calculating the differences in outcomes between dual and non-dual eligible patients within hospitals, and (2) stratifying by groups of patients so that a given provider would receive a score for each group (one for dual eligible patients, one for non-dual eligible patients, etc.). We will continue to explore which of the two methodologies is most appropriate and how best to provide confidential reports to hospitals for the Pneumonia Readmission measure (NQF #0506), the Pneumonia Mortality measure (NQF #0468), or other outcome measures in the Hospital IQR Program stratified by patient dual eligible status in the future. We will also continue to evaluate what may be the best method or methods of publicly displaying stratified outcome measure information to ensure the public's understanding of the data.

*Comment:* Most commenters expressed concern that CMS allow hospitals sufficient time to review and analyze stratified rates prior to publicly reporting.

*Response:* We acknowledge the commenters' concern that hospitals have sufficient time to review and analyze stratified measure data prior to

<sup>297</sup> Our hierarchical model is described in our measure methodology reports. See, for example, Krumholz H, Normand SL, Keenan P, et al. Hospital 30-Day Pneumonia Readmission Measure Methodology: Report prepared for the Centers for Medicare & Medicaid Services, 2008. <http://www.qualitynet.org/dcs/ContentServer?cid=1219069855841&pagename=QnetPublic%2FPage%2FQnetTier4&c=Page>.

public reporting. We believe confidential hospital specific preview reports of stratified measure data will allow us to obtain feedback on reporting options and to ensure the information is reliable, valid, and understandable prior to any future public display on the *Hospital Compare* Web site. We intend to continue to engage with hospitals about their experience with and recommendations for stratified measure data as we begin to provide confidential hospital specific preview reports prior to potentially proposing to publicly display stratified measure data in the future. Any display of stratified quality measures on the *Hospital Compare* Web site would be proposed through future rulemaking.

*Comment:* One commenter agreed that public reporting on the *Hospital Compare* Web site should be considered in the future, but urged CMS to devote careful consideration to what type of display would be most useful to the public. The commenter suggested CMS conduct focus groups to test messaging and understanding of the data.

*Response:* We recognize the importance of eventual public reporting of stratified outcome measures information. We will continue to evaluate what may be the best method or methods of publicly displaying stratified outcome measure information to ensure the public accurately understands the data. We will consider conducting focus groups or other outreach efforts to collect public feedback as part of this effort.

*Comment:* Another commenter suggested that stratification and risk adjustment be a measure-by-measure consideration that is incorporated into the measure specifications.

*Response:* We agree with the commenter that stratification and risk adjustment should be a measure-by-measure consideration. During the NQF SDS two-year trial period that ended in April 2017, we assessed measures individually to determine whether risk adjustment for social risk factors was warranted. Similarly, we are adopting a measure-by-measure approach when considering stratification of quality measures. We plan to engage stakeholders through future rulemaking prior to any public reporting of stratified quality measures.

*Comment:* One commenter did not support providing confidential reports to hospitals for the Pneumonia Readmission measure (NQF #0506) and the Pneumonia Mortality measure (NQF #0468) stratified by patient dual eligible status and publicly reporting stratified measure data in the future, raising concerns about the small sample size

associated with measure stratification by social risk factors, which would skew the reliability of stratified quality measures. The commenter believed the proposed statistical approach using a hospital-specific indicator (random coefficient) for dual eligibility would allow quantification of the difference in readmissions between dual and non-dual eligible patients within each hospital only if a hospital has a sufficient number of cases to produce a reliable estimate for both groups. In other words, this approach may not be effective for hospitals with a small sample size of cases, and results reported for such hospitals may be skewed and inaccurate. The commenter suggested CMS study this issue further to determine the appropriate size of the patient pool to produce reliable results and should consider not reporting results for hospitals with an insufficient number of cases.

*Response:* We agree with the commenter that some hospitals may have few dual eligible patients and that small samples sizes can skew the reliability of stratified quality measure results. Small sample sizes could be especially challenging for measure stratification because some hospitals might have few patients with social risk factors. One of our described stratification approaches (by patient group) would report disparities only for hospitals with at least 25 patients and 10 patients for each sub-group. The same cut-off could be used for the second stratification methodology described in the proposed rule (specifically, measuring differences in outcomes for dual and non-dual beneficiaries separately). We note the overall sample size of 25 patients is consistent with the quality outcome measures currently implemented. This sample size ensures our measure is reliable and includes as many hospitals as possible. This particular methodology further adjusts for small sample sizes by partially pooling the data so that hospitals with a small sample size and, therefore, less reliable estimates are pulled to the overall mean. Using this cut-off in sample size, preliminary analysis using the first proposed methodology (that is, measuring disparities in outcomes between dual and non-dual beneficiaries) suggests we could report disparities for 3,851 hospitals (82.1 percent) for the Pneumonia Readmission measure (NQF #0506) and 3,844 hospitals (82.0 percent) for the Pneumonia Mortality measure stratified by dual eligibility status.

We note that these results would be used under the first described

stratification methodology (adding three additional factors), as described in section IX.A.13.b.(3)(b) of the preamble of this final rule, above. We also note that if we used the second described methodology of calculating the difference in current statistical models, as described in section IX.A.13.b.(3)(c) of the preamble of this final rule, above, we anticipate the results would not be as effective. We will continue to explore alternative approaches to determine the appropriate sample size to produce reliable results. We note that we would not provide disparities results or differences in outcomes for different patient groups if a given hospital has fewer than the minimum number of patients within a sub-group in the measure.

*Comment:* One commenter requested that CMS publicly release the analytic file, model results, and research findings related to the pneumonia readmissions model with the added dual-eligible variables and recommended changes to the model should be vetted during the MAP pre-rulemaking recommendation process. The commenter stated that during the NQF socio-demographic (SDS) trial period, the measure steward for the pneumonia readmission and mortality models, Yale Center for Outcomes Research and Evaluation (Yale CORE), presented their results for accounting for various SDS variables in the condition-specific readmissions models and the conclusion was that while there was a statistically significant relationship between dual-eligibility and readmissions, the addition of dual-eligible status did not improve the model or meaningfully change hospital results. Since this conflicts with the ASPE findings, the commenter would like to better understand the Yale CORE model.

*Response:* Risk adjustment and stratification are two distinct ways of accounting for the importance of social risk factors on health outcomes. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20072 through 20074), we detailed the findings of our modeling for the Pneumonia Readmission measure (NQF #0506) to share one example of stratified results. We note, however, that the approach presented for the Pneumonia Readmission measure (NQF #0506) stratification differs from the approach presented in the condition-specific readmission models described in the NQF two-year SDS trial by the measure steward. The analytical model and results for the NQF SDS Trial of these measures are publicly available on the NQF Web site at: [http://www.qualityforum.org/Project\\_Pages/](http://www.qualityforum.org/Project_Pages/)

*All-Cause Admissions and Readmissions 2015–2017.aspx.*

As part of the SDS two-year trial, we assessed the impact of the addition of socioeconomic status, such as dual eligibility, in the risk adjustment model on readmissions on a case-by-case basis. The measure steward's results are largely consistent with the findings of the ASPE report. Both the ASPE report and the measure steward's findings show a relationship between socioeconomic factors and health outcomes when there is no other risk-adjustment. In the multi-variate, or fully adjusted model, results indicate that the effect of SES variables on readmission rates was significant but small. However, the measure steward has shown that adjusting for patient dual-eligible status in the overall measure changes hospital performance on the measure very little. Similarly, when ASPE simulated the effect of risk adjustment for patient dual eligible status on Hospital Readmissions Reduction Program penalties, they found that it would have a small overall impact on hospitals' performance and their ranking.

*Comment:* One commenter discussed the two methodological approaches for SES stratification presented in the FY 2018 IPPS/LTCH PPS proposed rule. The commenter expressed a preference for reporting two rates, one rate for dual eligible patients and one rate for non-dual eligible patients, for the pneumonia readmission and mortality measures (Approach 2). The commenter encouraged CMS to adopt Approach 2 for now, because the commenter believed it minimizes the risk of mixed signals on measure performance. The commenter noted that Approach 2 is easier to understand for providers, because it uses the same risk adjustment model as our overall quality measures.

The commenter continued and stated that on the other hand, Approach 1 calculates differences in outcomes by adding three additional factors to the statistical model currently used in our outcome measures, including: (1) An indicator for patient-level dual eligibility; (2) a hospital-level dual eligible factor (that is, percentage of dual eligible patients in each hospital); and (3) a hospital-specific indicator (random coefficient) for dual eligibility. The commenter stated it would support Approach 1 if CMS decided to directly risk adjust measures included in the Hospital Readmissions Reduction Program for patient level SES.

*Response:* We thank the commenter for their recommendation. As noted in the proposed rule and our responses above, there are potential merits and

limitations to each approach. We will continue to explore multiple options and will solicit further feedback from stakeholders before deciding on a specific method or approach for providing confidential feedback reports or potential future public reporting of stratified measure data.

One example of these methods could be noted in the efforts currently underway in the Hospital Readmissions Reduction Program under the 21st Century Cures Act, as described in section V.I.8. of the preamble of this final rule. We distinguish stratified reporting for the purposes of identifying disparities from the approach in the Hospital Readmissions Reduction Program under the 21st Century Cures Act that compares peers with peers based on hospital's share of patients with risk factors for benchmarking and/or calculation of payment adjustment. Further, we distinguish that the Hospital Readmissions Reduction Program is using this method for payment calculations and the Hospital IQR Program would not be using the data in this manner, but rather is considering these approaches as options for deriving confidential reports to hospitals and potential public reporting in the future.

To summarize, we invited public comment on: (1) Which social risk factors provide the most valuable information to stakeholders; (2) providing hospitals with confidential preview reports containing stratified results for certain Hospital IQR Program measures, specifically the Pneumonia Readmission measure (NQF #0506) and the Pneumonia Mortality measure (NQF #0468); (3) a potential methodology for illuminating differences in outcomes rates among patient groups within a hospital and would also allow for a comparison of those differences, or disparities, across hospitals; (4) an alternative methodology that compares performance for patient subgroups across hospitals but does not provide information on within hospital disparities and any additional suggested methodologies for calculating stratified results by patient dual eligibility status; and (5) future public reporting of these same measures stratified by patient dual eligibility status on the *Hospital Compare* Web site, as discussed above.

We thank the commenters, and we will consider all of the comments received as we develop policy regarding potential options for confidential and public reporting of Hospital IQR Program measures stratified by patient social risk factors, such as dual eligibility status and, specifically, as we develop policy regarding potential

options on the future confidential and public reporting of the Pneumonia Readmission measure (NQF #0506) data and the Pneumonia Mortality measure (NQF #0468) data stratified specifically by patient dual eligibility status.

After considering the public comments we received, we will continue to evaluate: (1) Which social risk factors provide the most valuable information to stakeholders; (2) which Hospital IQR Program outcome measures to provide stratified measure data; (3) how best to display information in the confidential hospital specific preview reports; (4) when to begin providing the confidential hospital specific preview reports; (5) potential methodologies for illuminating differences in outcomes; and (6) ways to most effectively publicly display this data. We will continue to consider beginning to provide confidential hospital specific preview reports as early as summer of 2018, using data from the FY 2019 reporting period (July 1, 2014 through June 30, 2017), however, it may take us longer in light of our plans for continued evaluation as described above and operational considerations. If we make such a determination to begin providing confidential hospital specific preview reports of measure data for the Pneumonia Readmission measure, the Pneumonia Mortality measure, or other outcome measures in the Hospital IQR Program stratified by patient dual eligibility status to hospitals, we will convey this decision through routine communication channels to hospitals, vendors, and QIOs, including, but not limited to, issuing memos, emails, and notices on the QualityNet Web site.

#### 14. Reconsideration and Appeal Procedures for the FY 2020 Payment Determination and Subsequent Years

We refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51650 through 51651), the FY 2014 IPPS/LTCH PPS final rule (78 FR 50836), and 42 CFR 412.140(e) for details on reconsideration and appeal procedures for the FY 2017 payment determination and subsequent years. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20074), we did not propose any changes to the reconsideration and appeals procedures.

#### 15. Change to the Hospital IQR Program Extraordinary Circumstances Exceptions (ECE) Policy

##### a. Background

We refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51651 through 51652), the FY 2014 IPPS/LTCH

PPS final rule (78 FR 50836 through 50837), the FY 2015 IPPS/LTCH PPS final rule (79 FR 50277), the FY 2016 IPPS/LTCH PPS final rule (80 FR 49713), the FY 2017 IPPS/LTCH PPS final rule (81 FR 57181 through 57182), and 42 CFR 412.140(c)(2) for details on the current Hospital IQR Program ECE policy.

We also refer readers to the QualityNet Web site at: <http://www.QualityNet.org/> for our current requirements for submission of a request for an extension or exemption. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20075), we made one proposal and a clarification in order to align the ECE policy across CMS quality programs. We also proposed updates to 42 CFR 412.140(c)(2) to reflect our ECE policy.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20074 through 20075), we stated that many of our quality reporting and value-based purchasing programs share common processes for requesting an exception from program reporting due to an extraordinary circumstance not within a provider's control. The Hospital IQR Program, Hospital OQR Program, IPFQR Program, ASCQR Program, and PCHQR Program, as well as the Hospital VBP Program, HAC Reduction Program, and the Hospital Readmissions Reduction Program, share common processes for ECE requests. We refer readers to the Hospital IQR Program (76 FR 51651 through 51652, 78 FR 50836 through 50837, 79 FR 50277, 81 FR 57181 through 57182, and 42 CFR 412.140(c)(2)), Hospital OQR Program (77 FR 68489, 78 FR 75119 through 75120, 79 FR 66966, and 80 FR 70524), and ASCQR Program (77 FR 53642 through 53643 and 78 FR 75140 through 75141) along with the HAC Program (80 FR 49579 through 49581), Hospital Readmissions Reduction Program (80 FR 49542 through 49543), IPFQR (77 FR 53659 through 53660 and 79 FR 45978), and PCHQR Program (78 FR 50848) for program specific information about extraordinary circumstances exceptions requests.

In reviewing the policies for these programs, we recognized there are five areas in which these programs have variance regarding ECE requests. These are: (1) Allowing the facilities or hospitals to submit a form signed by the facility's or hospital's CEO versus CEO or designated personnel; (2) requiring the form be submitted within 30 days following the date the extraordinary circumstance occurred versus within 90 days following the date the extraordinary circumstance occurred; (3) inconsistency regarding specification of a timeline for us to provide our

formal response notifying the facility or hospital of our decision; (4) inconsistency regarding specification of our authority to grant ECEs due to CMS data system issues; and (5) referring to the program as "extraordinary extensions/exemptions" versus as "extraordinary circumstances exceptions." We believe addressing these five areas across programs, can improve administrative efficiencies for affected facilities or hospitals.

#### b. Proposals To Align the Hospital IQR Program ECE Policy With Other CMS Quality Programs

With the exception of the timeline for us to provide our formal response (item 3 above) and the nomenclature used to refer to the ECE process (item 5 above), the Hospital IQR Program is aligned with the ECE policies across the other CMS quality programs described above. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20075), we proposed to: (1) Update the nomenclature to align with the ECE policies across the other CMS quality programs and update the regulatory text to reflect this change; and (2) update our regulatory text to reflect other existing ECE policies. Also, we are clarifying the timing of our response to ECE requests. These proposals are discussed in more detail below.

##### (1) ECE Policy Nomenclature

We have observed that while all quality programs listed above have developed similar policies to provide exceptions from program requirements to facilities that have experienced extraordinary circumstances, such as natural disasters, these programs refer to these policies using inconsistent terminology. Some programs refer to these policies as "extraordinary circumstances extensions/exemptions" while others refer to the set of policies as "extraordinary circumstances exceptions." Several programs (specifically, the Hospital VBP Program, HAC Reduction Program, and the Hospital Readmissions Reduction Program) are not able to grant extensions to required data reporting timelines due to their reliance on data external to their program, and thus the term, "extraordinary circumstances extensions/exemptions" is not applicable to all programs. However, all of the described programs are able to offer exceptions from their reporting requirements. Therefore, we proposed to change the name of this policy from "extraordinary circumstances extensions/exemptions" to "extraordinary circumstances exceptions" for the Hospital IQR

Program, beginning October 1, 2017, and to revise section 412.140(c)(2) of our regulations to reflect this change. We note that changing the name of this policy does not change the availability for a hospital to request an extension under the Hospital IQR Program.

We invited public comment on this proposal as discussed above.

*Comment:* Several commenters supported the proposed alignment of the extraordinary circumstances exceptions (ECE) policies in the Hospital Readmissions Reduction Program, the HAC Reduction, and the Hospital IQR Programs.

*Response:* We thank the commenters for their support.

*Comment:* A few commenters supported the proposed alignment of the extraordinary circumstances exceptions (ECE) policies in the Hospital Readmissions Reduction Program, the HAC Reduction, and the Hospital IQR Programs, but requested an ECE specifically for Indian Health Services (IHS) and tribal healthcare programs.

*Response:* We thank the commenters for their support. We note that ECE requests for the Hospital IQR Program are considered on a case by case basis (81 FR 57182). We will assess the hospital's request on a case-by-case basis to determine if an exception is merited. Therefore, our decision whether or not to grant an ECE will be based on the specific circumstances of the hospital. For additional information about eCQM-related ECE requests, we refer readers to section IX.A.15. of the preamble of this final rule.

We will explore the feasibility of creating a specific exemption policy for IHS and tribal health programs as a part of our future strategic initiatives.

After consideration of the public comments we received, we are finalizing our proposals to change the name of this policy from "extraordinary circumstances extensions/exemptions" to "extraordinary circumstances exceptions" for the Hospital IQR Program, beginning October 1, 2017, and to revise section 412.140(c)(2) of our regulations to reflect this change as proposed.

##### (2) Timeline for CMS Response to ECE Requests

We strive to provide our formal response notifying the facility of our decision within 90 days of receipt of the facility's ECE request. We believe that it is important for facilities to receive timely feedback regarding the status of ECE requests. We strive to complete our review of each ECE request as quickly as possible. However, we recognize the

number of requests we receive and the complexity of the information provided impacts the actual timeframe to make ECE determinations. To improve transparency of our process, we believe it is appropriate to clarify that we will strive to complete our review of each request within 90 days of receipt.

### (3) Updates to CFR

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20075), we proposed to make conforming changes to the regulations at 42 CFR 412.140(c)(2) to reflect our previously finalized policy that the ECE request form be submitted within 90 days following the date the extraordinary circumstance occurred (81 FR 57181 through 57182). In addition, we proposed to make conforming changes to the regulations to codify our other existing policies in the Hospital IQR Program: (1) At 42 CFR 412.140(c)(2)(i), that a separate submission deadline of April 1 following the end of the reporting calendar year in which the extraordinary circumstance occurred and applies to a hospital that wishes to request an extraordinary circumstances exception with respect to the reporting of electronic clinical quality measure data (81 FR 57182); (2) at 42 CFR 412.140(c)(2)(ii), that at the discretion of CMS, an exception may be granted to a hospital if a systemic problem arises with CMS data collection systems which directly affected the ability of a hospital to submit data (78 FR 50837), and that CMS may also grant exceptions to hospitals that have not requested them if an extraordinary circumstance affects an entire region or locale (76 FR 51651).

We invited public comments on these proposals as discussed above.

We received no public comments on our proposals to make conforming changes to the regulations to codify certain existing policies in the Hospital IQR Program. Therefore, we are finalizing our proposals to make conforming changes to the regulations to codify certain existing policies in the Hospital IQR Program as proposed.

## *B. PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program*

### 1. Background

Section 3005 of the Affordable Care Act added new sections 1866(a)(1)(W) and (k) to the Act. Section 1866(k) of the Act establishes a quality reporting program for hospitals described in section 1886(d)(1)(B)(v) of the Act (referred to as “PPS-Exempt Cancer Hospitals” or “PCHs”) that specifically applies to PCHs that meet the

requirements under 42 CFR 412.23(f). Section 1866(k)(1) of the Act states that, for FY 2014 and each subsequent fiscal year, a PCH must submit data to the Secretary in accordance with section 1866(k)(2) of the Act with respect to such fiscal year.

The PCHQR Program strives to put patients first by ensuring they are empowered to make decisions about their own healthcare along with their clinicians using information from data-driven insights that are increasingly aligned with meaningful quality measures. We support technology that reduces burden and allows clinicians to focus on providing high quality health care for their patients. We also support innovative approaches to improve quality, accessibility, and affordability of care while paying particular attention to improving clinicians’ and beneficiaries’ experience when interacting with CMS programs. In combination with other efforts across the Department of Health and Human Services, we believe the PCHQR Program helps to incentivize hospitals to improve healthcare quality and value, while giving patients the tools and information needed to make the best decisions for them. We recognize that the PCHQR Program represents a key component of the way that we provide patients with quality measurement data for use in healthcare decision-making, and we have made efforts to review existing policies to identify how to move the program forward in the least burdensome manner possible while continuing to incentivize improvement in the quality of care provided to patients. For additional background information, including previously finalized measures and other policies for the PCHQR Program, we refer readers to the following final rules: FY 2013 IPPS/LTCH PPS final rule (77 FR 53556 through 53561); the FY 2014 IPPS/LTCH PPS final rule (78 FR 50838 through 50846); the FY 2015 IPPS/LTCH PPS final rule (79 FR 50277 through 50288); the FY 2016 IPPS/LTCH PPS final rule (80 FR 49713 through 49723); and the FY 2017 IPPS/LTCH PPS final rule (81 FR 57182 through 57193).

### 2. Criteria for Removal and Retention of PCHQR Program Measures

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57182 through 57183), we adopted policies for measure retention and removal. We generally retain measures from the previous year’s PCHQR Program measure set for subsequent years’ measure sets, except when we specifically propose to remove or replace a measure. We adopted the following measure removal criteria for

the PCHQR Program, which are based on criteria established in the Hospital IQR Program (80 FR 49641 through 49642):

- Measure performance among PCHs is so high and unvarying that meaningful distinctions and improvements in performance can no longer be made (“topped-out” measures);
- A measure does not align with current clinical guidelines or practice;
- The availability of a more broadly applicable measure (across settings or populations) or the availability of a measure that is more proximal in time to desired patient outcomes for the particular topic;
- Performance or improvement on a measure does not result in better patient outcomes;
- The availability of a measure that is more strongly associated with desired patient outcomes for the particular topic;
- Collection or public reporting of a measure leads to negative unintended consequences other than patient harm; and
- It is not feasible to implement the measure specifications.

For the purposes of considering measures for removal from the program, we consider a measure to be “topped-out” if there is statistically indistinguishable performance at the 75th and 90th percentiles and the truncated coefficient of variation is less than or equal to 0.10.

However, we recognized that there are times when measures may meet some of the outlined criteria for removal from the program, but continue to bring value to the program. Therefore, we adopted the following criteria for consideration in determining whether to retain a measure in the PCHQR Program, which also are based on criteria established in the Hospital IQR Program (80 FR 49641 through 49642):

- Measure aligns with other CMS and HHS policy goals;
- Measure aligns with other CMS programs, including other quality reporting programs; and
- Measure supports efforts to move PCHs towards reporting electronic measures.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20076), we did not propose any changes to these policies.

### 3. Retention and Removal of Previously Finalized Quality Measures for PCHs Beginning With the FY 2020 Program Year

#### a. Background

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53556 through 53561), we

finalized five quality measures for the FY 2014 program year and subsequent years. In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50837 through 50847), we finalized one new quality measure for the FY 2015 program year and subsequent years and 12 new quality measures for the FY 2016 program year and subsequent years. In the FY 2015 IPPS/LTCH PPS final rule (79 FR 50278 through 50280), we finalized one new quality measure for the FY 2017 program year and subsequent years. In the FY 2016 IPPS/LTCH PPS final rule (80 FR 49713 through 49719), we finalized three new CDC NHSN measures for the FY 2018 program year and subsequent years, and finalized the removal of six previously finalized measures for fourth quarter (Q4) 2015 discharges and subsequent years. In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57183 through 57184), for the FY 2019 program year and subsequent years, we finalized one additional quality measure and updated the Oncology: Radiation Dose Limits to Normal Tissues (NQF #0382) measure.

We refer readers to the final rules referenced in section IX.B.1. of the preamble of this final rule for more information regarding these previously finalized measures.

**b. Removal of Measures From the PCHQR Program Beginning With the FY 2020 Program Year**

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20076 through 20077), based on a review of the above criteria, we proposed to remove the

following clinical process/cancer specific treatment measures from the PCHQR Program beginning with the FY 2020 program year because they are topped-out:

- Adjuvant Chemotherapy is Considered or Administered Within 4 Months (120 Days) of Diagnosis to Patients Under the Age of 80 with AJCC III (Lymph Node Positive) Colon Cancer (PCH-01/NQF #0223);
- Combination Chemotherapy is Considered or Administered Within 4 Months (120 Days) of Diagnosis for Women Under 70 with AJCC T1c, or Stage II or III Hormone Receptor Negative Breast Cancer (PCH-02/NQF #0559); and
- Adjuvant Hormonal Therapy (PCH-03/NQF #0220).

We first adopted these three Clinical Process/Cancer Specific Treatment measures for the FY 2014 program year in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53556 through 53561). We refer readers to that rule for a detailed discussion of the measures. However, based on an analysis of data from January 1, 2014 through September 30, 2015, we have determined that these three measures meet our topped-out criteria. This analysis, performed by the HCQIS Reports and Analytics Team, evaluated data sets provided from Program Data Management and calculated the 5th, 10th, 25th, 50th, 75th, 90th, and 95th percentiles of national facility performance for each measure. For measures where higher values indicate better performance, the percent relative difference (PRD)

between the 75th and 90th percentiles were obtained by taking their absolute difference divided by the average of their values and result multiplied by 100. To calculate the truncated coefficient of variation (TCV), the lowest 5 percent and the highest 5 percent of hospital rates were discarded before calculating the mean and standard deviation for reach measure.

The following criteria were applied to the results:

- For measures ranging from 0–100 percent, with 100 percent being best, national measure data for the 75th and 90th percentiles have a relative difference of <=5 percent, or for measures ranging from 0–100 percent, with 100 percent being the best, performance achieved by the median hospital is >=95 percent, and national measure data have a truncated coefficient of variation <=0.10.
- For measures ranging from 0–100 percent, with 0 percent being best, national measure data for the complement of the 10th and 25th percentiles have a relative difference of <=5 percent, or for measures ranging from 0–100 percent, with 0% being best, national measure data for the median hospital is <=5 percent, or for other measures with a low number indicating good performance, national measure data for the 10th and 25th percentiles have a relative difference of <=5 percent, and national measure data have a truncated coefficient of variation <=0.10.

The results for 2014 and 2015 are set out in the tables below.

**TOPPED-OUT ANALYSIS RESULTS FOR PCHQR MEASURES [2014]**

Measure	Mean	Median	75th Percentile	90th Percentile	Relative difference (%)	TCV	Topped-out
PCH-01 .....	.9680	.9800	1.0000	1.0000	0.0000	.0313	Yes
PCH-02 .....	.9501	.9595	.9821	1.0000	1.8018	.0358	Yes
PCH-03 .....	.9714	.9682	.9823	.9930	1.0807	.0149	Yes

**TOPPED-OUT ANALYSIS RESULTS FOR PCHQR MEASURES [2015]**

Measure	Mean	Median	75th Percentile	90th Percentile	Relative difference (%)	TCV	Topped-out
PCH-01 .....	.9824	1.0000	1.0000	1.0000	0.0000	.0169	Yes
PCH-02 .....	.9389	.9434	.9750	1.0000	2.532	.0431	Yes
PCH-03 .....	.9383	.9449	.9556	.9703	1.535	.0232	Yes

Based on this analysis, we have concluded that these three measures are topped-out and, as discussed below, we believe that collecting PCH data on

these measures does not further program goals.

We believe that continuing to collect PCH data on these measures does not

further program goals of improving quality, given that measure performance is so high and unvarying that meaningful distinctions and

improvements in performance can no longer be made. We believe that these measures also do not meet the criteria for retention of an otherwise topped-out measure, as they do not align with other HHS and CMS policy goals, such as moving toward outcome measures; do not align with other CMS programs; and do not support the movement to electronic clinical quality measures due to the chart abstraction required to collect the data for these measures. If we determine at a subsequent point in the future that hospital adherence to these practices has unacceptably declined, we may propose to readopt these measures in future rulemaking.

We invited public comment on our proposal to remove these three measures from the PCHQR Program beginning with the FY 2020 program year.

*Comment:* Several commenters agreed with the proposal to remove the three cancer-specific measures from the PCHQR Program because they meet topped-out criteria. Commenters agreed that, once topped-out, the measures no longer add value to the program, and removing them will remove the burden of collecting and submitting the performance data.

*Response:* We thank the commenters for their support.

*Comment:* One commenter recommended that the measures be removed as quickly as possible, and to cease public reporting of the data once the last quarter of data is publicly posted. The commenter stated that waiting until the FY 2020 program year would continue to impose an unwarranted data burden on providers to collect data for measures that are known to be topped-out.

*Response:* We thank the commenter for the recommendation. We understand that continuing to submit performance data on measures that meet topped-out criteria while the measures are in the process of being discontinued is burdensome. At this time, we expect to begin removing the measures beginning with diagnoses occurring as of January 1, 2018 which will result in the last reporting of the three measures in February 2019.

*Comment:* One commenter expressed concern that the removal of three cancer-specific measures at once would leave a gap in the measure set's clinical process domain.

*Response:* We appreciate the commenter's concern. As the PCHQR Program evolves, it is necessary for us to evaluate whether existing measures continue to meet Program goals and advance the Program. We have concluded that these measures are topped-out pursuant to our topped-out

criteria and no longer advance the goals of the program because measure performance is so high and unvarying that meaningful distinctions and improvements in performance can no longer be made; therefore, continued data collection and public reporting does not further program goals of improving quality. In addition, these measures do not meet our criteria for retention because they do not align with other HHS and CMS policy goals, such as moving toward outcome measures; do not align with other CMS programs; and do not support the movement to electronic clinical quality measures due to the chart abstraction required to collect the data for these measures. For these reasons, we believe that their removal is appropriate. We will continue to evaluate the measure set on an annual basis to ensure that we are addressing gaps in the measure set.

*Comment:* One commenter stated that the removal of the three measures would result in the measure set no longer addressing care provided to two very common cancer types in the elderly population: breast and colon cancer.

*Response:* We appreciate the commenter's concern. We recognize that breast and colon cancer are both common cancer types, and we note that our measure set also contains measures specific to prostate cancer and to a broader set of cancers. As we maintain and evolve the PCHQR Program measure cohort, we take into consideration not just the specific cancer types addressed under a measure, but also whether the measures meet program and CMS goals. In this instance, we believe it is in the interest of program goals to remove these three topped-out clinical process measures despite the cancers they address as they do not meet the goal of moving toward outcomes measures, do not align with other CMS programs, and do not support the movement to electronic clinical quality measures due to the chart abstraction required to collect the data for these measures. We also do not believe it is in the best interest of the program to continue to require PCHs to report on measures for which the performance level is so high and unvarying that meaningful distinctions and improvements in performance can no longer be made and therefore does not further program goals of improving quality.

*Comment:* One commenter disagreed with the conclusion that the measures are topped-out, citing data that it gathered from its own clinical data registry of over 1,300 reporting

programs that indicate disparities in measure performance.

*Response:* We appreciate the commenter's views. We have proposed to remove the measures from the PCHQR Program because our analysis shows that the measures are topped-out for the cancer hospitals that participate in the PCHQR Program. Measure performance for the small group of providers that make up the PCHs is, unsurprisingly, different than that gathered from a broader range of providers in a much larger population of 1,300. As we stated, we will continue to monitor performance in this area and reserve the option to propose to reintroduce these measures if we feel that performance merits such reintroduction.

*Comment:* One commenter recommended retaining the three measures as a composite measure to continue to measure compliance, particularly in sub-populations that demonstrate disparities in care.

*Response:* We thank the commenter for the suggestion. We have proposed to remove the three measures from the PCHQR Program because our analysis of measure performance indicates that they meet the program's topped-out criteria, and that measure performance is so high or unvarying that no meaningful distinctions can be drawn from continued performance reporting. Given the burden of the chart abstraction required to collect these three measures, it is not practicable to retain these topped-out measures in the program as a composite measure when performance has been shown to be consistently high over more than one performance period. We also do not believe a composite measure would address the issue of the measures' topped-out status, which is an issue of lack of variation in performance. We will continue to evaluate the measure set in each rulemaking cycle, and should we determine that these measures should be reintroduced in future rulemaking, we will take commenter's suggestion under consideration.

After consideration of the public comments we received, we are finalizing our proposal to remove the following clinical process/cancer specific treatment measures from the PCHQR Program beginning with the FY 2020 program year because they are topped-out:

- Adjuvant Chemotherapy is Considered or Administered Within 4 Months (120 Days) of Diagnosis to Patients Under the Age of 80 with AJCC III (Lymph Node Positive) Colon Cancer (PCH-01/NQF #0223);

- Combination Chemotherapy is Considered or Administered Within 4 Months (120 Days) of Diagnosis for Women Under 70 with AJCC T1c, or Stage II or III Hormone Receptor Negative Breast Cancer (PCH–02/NQF #0559); and

- Adjuvant Hormonal Therapy (PCH–03/NQF #0220).

#### 4. New Quality Measures Beginning With the FY 2020 Program Year

##### a. Considerations in the Selection of Quality Measures

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53556), the FY 2014 IPPS/LTCH PPS final rule (78 FR 50837 through 50838), and the FY 2015 IPPS/LTCH PPS final rule (79 FR 50278), we indicated that we take a number of principles into consideration when developing and selecting measures for the PCHQR Program, and that many of these principles are modeled on those we use for measure development and selection under the Hospital IQR Program. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20077), we did not propose any changes to the principles we consider when developing and selecting measures for the PCHQR Program.

Section 1866(k)(3)(A) of the Act requires that any measure specified by the Secretary must have been endorsed by the entity with a contract under section 1890(a) of the Act (the NQF is the entity that currently holds this contract). Section 1866(k)(3)(B) of the Act provides an exception under which, in the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by the entity with a contract under section 1890(a) of the Act, the Secretary may specify a measure that is not so endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization. Using the principles for measure selection in the PCHQR Program, we proposed four new measures, described below.

##### b. New Quality Measures Beginning With the FY 2020 Program Year

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20077 through 20081), beginning with the FY 2020 PCHQR program year, we proposed to adopt two clinical process measures and two intermediate clinical outcome quality measures. These measures meet the requirement under section 1866(k)(3)(A) of the Act that measures specified for the PCHQR Program be endorsed by the entity with a contract

under section 1890(a) of the Act (currently the NQF). Although there is no financial incentive or penalty associated with the PCHQR Program, we encourage participation to further the goal of improving the quality of care for the PCH patient population. The proposed measures are:

- Proportion of Patients Who Died from Cancer Receiving Chemotherapy in the Last 14 Days of Life (NQF #0210);

- Proportion of Patients Who Died from Cancer Admitted to the ICU in the Last 30 Days of Life (NQF #0213);

- Proportion of Patients Who Died from Cancer Not Admitted to Hospice (NQF #0215); and

- Proportion of Patients Who Died from Cancer Admitted to Hospice for Less Than Three Days (NQF #0216).

In compliance with section 1890A(a)(2) of the Act, the proposed measures were included on a publicly available document entitled “List of Measures under Consideration for December 1, 2016,”<sup>298</sup> a list of quality and efficiency measures under consideration for use in various Medicare programs, and were reviewed by the MAP Hospital Workgroup. The MAP Hospital Workgroup supported the inclusion of these measures in the PCHQR Program in final recommendations it made in its February 2017 report to HHS and CMS for 2016 to 2017.<sup>299</sup> Additional details on MAP discussions of these measures may be found in the “MAP Pre-Rulemaking Report: 2016 Recommendations on Measures Under Consideration by HHS,” with additional discussion in the “MAP 2017 Considerations for Implementing Measures in Federal Programs: Hospitals (Draft Report).”<sup>300</sup> The sections below outline our rationale for proposing these measures.

##### (1) Background

The quality of end-of-life care has been identified by the NQF as an area of care that continues to need improvement.<sup>301</sup> End-of-life care may be defined as “comprehensive care that addresses medical, emotional, spiritual, and social needs during the last stages of a person’s terminal illness,”<sup>302</sup> and may include palliative care. Palliative care is generally defined as multi-faceted, holistic care that anticipates, prevents, and alleviates suffering.<sup>303</sup> Both palliative and end-of-life care can be provided when a patient is receiving hospice services, but it is not necessary to be admitted to hospice to receive such care. The NQF notes that hospice is both a type of care team and a care philosophy, and is intended to enable patients to prepare for death while living as fully as possible.<sup>304</sup> The Institute of Medicine of the National Academies (IOM) has noted that while clinicians are encouraged to counsel patients about palliative care, which better chances of maintaining a high quality of life when dying, “too few patients and families receive this help in a timely manner.”<sup>305</sup> In the same report, the IOM proposed a number of core components of quality end-of-life care. These proposals included offering a referral to hospice if a patient “has a prognosis of 6 months or less” and regular revision of a patient’s care plan to address the patient’s changing needs, as well as the changing needs of the family.<sup>306</sup>

In addition to all of the quality of care benefits of end-of-life care to patients and caregivers, there are financial cost benefits as well. In its Technical Report on palliative and end-of-life care, the NQF cited research indicating that the use of palliative care, including end-of-life care, results in various positive outcomes, including a reduction of

<sup>304</sup> National Quality Forum, Technical Report. Palliative and End-of-Life Care 2015–2016. (December 23, 2016).

<sup>305</sup> Committee on Approaching Death: Addressing Key End of Life Issues, Institute of Medicine: Dying in America: Improving Quality and Honoring Individual Preferences Near the End of Life. Washington DC, National Academies Press, 2015.

<sup>306</sup> Committee on Approaching Death: Addressing Key End of Life Issues, Institute of Medicine: Dying in America: Improving Quality and Honoring Individual Preferences Near the End of Life. Washington DC, National Academies Press, 2015.

costs.<sup>307</sup> For example, one study evaluated the impact of hospice enrollment at different time periods on Medicare expenditures, and found that regardless of when a patient was enrolled in hospice, such patients' subsequent Medicare costs were significantly lowered.<sup>308</sup>

Despite the benefits attributed to the use of palliative and end-of-life services and the increase in their availability, the NQF and others have noted that such services remain underutilized. By proposing to include two process measures and two intermediate clinical outcome measures related to end-of-life care in the PCHQR Program, our intent is to assess the quality of end-of-life care provided to patients in the PCH setting. We recognize that these measures may be used in the broader population of all hospitals providing cancer care; therefore, as discussed in section IX.A.9.b. of the preamble of this final rule, we invited public comment on the future inclusion of these measures in the Hospital IQR Program. These four measures are described in more detail below.

*Comment:* Several commenters generally addressed all four measures. Several commenters supported the introduction of the end-of-life measures into the PCHQR measure set, but recommended that we also adopt measures that focus on care planning to ensure that patients are given opportunity to engage in meaningful end-of-life care discussions. Some commenters expressed concern that measuring end-of-life care processes and outcomes could result in unintended consequences and incentives to stint on necessary care, and believed that patient and family engagement is necessary to ensure that patient preferences are considered. Some commenters recommended that we update the measure specifications for all of the proposed measures to incorporate updates to the ICD-10 and CPT code lists. Finally, several commenters agreed that risk adjustment and risk stratification are not necessary for the end-of-life measures proposed.

*Response:* We appreciate the commenters' suggestions and concerns. We believe that the inclusion of the proposed measures in the program will lead to more, not less, patient and family engagement, because the measures draw attention to the need to

understand and clarify patient wishes regarding end-of-life care. Evidence cited by the measure developers and in other research indicates that when death is imminent, providing less aggressive care can improve quality of life for patients. We believe that end-of-life care that adapts to patient experience and need does not result in stunted care, but instead reshapes that care pursuant to changing patient needs and incorporation of patient wishes. We note that these measures are a first step that seeks to broadly assess what is happening in PCHs at the end of life, and will provide a baseline picture of existing end-of-life care at those hospitals. We will continue to consider other measures for future introduction into the program that can complement the proposed measures, and we welcome input from stakeholders as we do so.

#### (2) Proportion of Patients Who Died From Cancer Receiving Chemotherapy in the Last 14 Days of Life (EOL-Chemo) Measure (NQF #0210)

Chemotherapy is typically used to treat cancer, but in patients with incurable cancer it may also be used with the goal of easing symptoms and improving survival.<sup>309</sup> One study estimated that 6.2 percent of cancer patients continue receiving chemotherapy close to the end of their lives (defined as within 2 weeks of death).<sup>310</sup> However, studies have shown that administering palliative chemotherapy to terminally ill cancer patients may not be beneficial, as it may be associated with higher rates of interventions such as cardiopulmonary resuscitation in the last week of life without any difference in survival.<sup>311</sup> Such patients may also be more likely to die in the intensive care unit (ICU), and less likely to die either at home or in the place where they had expressed preference to die.<sup>312</sup> In addition, research has shown that some patients may receive chemotherapy for treatment instead of palliative care at the end of life, even when treatment has been

determined to be unnecessary.<sup>313</sup> While the impetus for continuing treatment may vary from case to case,<sup>314</sup> the available evidence indicates continuing to receive chemotherapy—for palliation or treatment—toward the end of a patient's illness is associated with increased hospitalization and may be associated decreased experience of care.

Researchers have also observed that patients receiving chemotherapy late into the course of a terminal illness tended to be referred to hospice later, resulting in lower quality of life, distress for caregivers, and increased cost.<sup>315</sup> They noted that their results could suggest that either less use chemotherapy at the end of life or more frequent end-of-life discussions could improve the quality of those patients' end-of-life care.<sup>316</sup> Another study of early engagement in palliative care in patients diagnosed with metastatic lung cancer found that patients who received palliative care and less chemotherapy survived longer, in addition to experiencing improvement in quality of life.<sup>317</sup> In this study, palliative care was integrated into standard oncologic care, and included an assessment of physical and psychosocial symptoms as well as care decision assistance.<sup>318</sup> Results from this study showed significantly higher quality of life in the patient cohort receiving palliative care compared to those receiving only the standard oncologic care.<sup>319</sup> In particular,

clinically meaningful improvements in quality of life and mood were noted.<sup>320</sup>

The proposed EOL-Chemo measure addresses the NQS Communication and Care Coordination and Affordable Care domains, and aligns with the CMS Quality Strategy goals of strengthening person and family engagement as partners in their care, and promoting effective communication and coordination of care. The proposed measure is a process measure that evaluates the proportion of patients who died from cancer who received chemotherapy in the last 14 days of life. Similar to the other three end-of-life measures we proposed, this proposed measure seeks to assess the use of chemotherapy at the end-of-life, a practice advanced with the intent to alleviate disease symptoms but which has been shown to also be associated with reduced quality of life and increased costs. This measure was finalized for use in the Merit-based Incentive Payment System (MIPS) in the FY 2017 MIPS final rule with comment period (81 FR 77672). By introducing this measure here, we are seeking to evaluate how often chemotherapy is administered near the end of life in PCHs.

The proposed EOL-Chemo measure cohort includes all Medicare beneficiaries who died of cancer and who received chemotherapy at a PCH within the last 14 days of their lives. The proposed measure uses Medicare administrative claims data to derive the numerator and denominator. The numerator for this measure is defined as cancer patients who received chemotherapy (regardless of whether for treatment or palliative purposes) in the last fourteen days of life. The denominator is defined as patients who died from cancer. Patients for whom numerator or denominator data cannot be identified will not be included in the calculation. The measure specifications contain no exclusions, risk adjustments or risk stratifications because the measure is intended to evaluate the quality of care provided to all cancer patients at the end of life. The measure will be calculated as the numerator divided by the denominator. Measure specifications for the proposed EOL-Chemo measure can be accessed on the NQF's Web site at: [http://www.qualityforum.org/Publications/2016/12/Palliative\\_and\\_End-of-Life\\_Care\\_2015-2016.aspx](http://www.qualityforum.org/Publications/2016/12/Palliative_and_End-of-Life_Care_2015-2016.aspx).

We invited public comment on our proposal to adopt the Proportion of

Patients Who Died from Cancer Receiving Chemotherapy in the Last 14 Days of Life (NQF #0210) measure for the FY 2020 program year and subsequent years.

*Comment:* Many commenters supported the introduction of the EOL-Chemo measure into the PCHQR Program. Commenters stated that the measure will improve care for cancer patients by encouraging providers to have difficult but necessary conversations with their patients; that it addresses treatment that could lead to unnecessary and futile care; that in concert with the other end-of-life measures proposed, this measure will promote accountability and drive improvement; and because it addresses a measurement gap. Commenters also noted that the measure was recently re-endorsed by the NQF.

*Response:* We thank the commenters for their support.

*Comment:* Several commenters recommended modification of the measure specifications to incorporate exclusions for patient preference, patients in clinical trials, and palliative chemotherapy, and urged recognition in reporting that a performance rate of zero is not the goal.

*Response:* The measure is intended to gather information on the proportion of patients who receive chemotherapy close to the end of life regardless of the purpose of that chemotherapy and, to that end, does not distinguish between curative and palliative chemotherapy, or patients receiving chemotherapy as part of a clinical trial. We appreciate that commenters find it important to distinguish between chemotherapy used for palliative purposes as opposed to curatively, as well as the fact that some patients may choose to continue to receive curative or experimental chemotherapy until the end of life, perhaps despite medical advice. We do not believe, however, that it would be appropriate to modify measure specifications during the rule process without sufficient data analysis and clinical review to assess appropriateness for the measures. As with all measures adopted for the PCHQR Program, we will monitor the measure and continue to assess its use in the program as specified over time. We agree that a performance rate of zero is not a reasonable goal, and note this is not the intent of the measure. We will evaluate ways to address this as part of publicly reporting measure data in the future. After consideration of the public comments we received, we are finalizing our proposal to adopt the Proportion of Patients Who Died from Cancer Receiving Chemotherapy in the

Last 14 Days of Life (NQF #0210) measure for the FY 2020 program year and subsequent years.

(3) Proportion of Patients Who Died From Cancer Admitted to the ICU in the Last 30 Days of Life (EOL-ICU) Measure (NQF #0213)

A number of research studies have determined that cancer care can become more aggressive at the end of life, which can result in a lower quality of care and lower quality of life.<sup>321</sup> Care defined as “aggressive” may include the “possible misuse of treatment resulting in high rates of emergency room visits, hospitalization, or ICU stays for terminal patients” in addition to overuse of chemotherapy close to death and the underuse of hospice.<sup>322</sup> In a retrospective study of patients with advanced lung cancer, researchers found that between 1993 and 2002, the number of patients being admitted to the ICU near death increased, and while in the ICU, one in four of those patients received mechanical ventilation, despite the likelihood that neither intervention would necessarily have effect on the advanced cancer.<sup>323</sup> In this study, two-thirds of the patients died within a month of their admission to the ICU, which the authors interpreted as demonstrating that ICU admission in the context of advanced lung cancer was potentially ineffective.<sup>324</sup> The authors noted other studies that showed that in-hospital mortality during ICU admissions exact a toll on patients and families in terms of “financial cost, emotional burden, and failed expectations.”<sup>325</sup> The impact of ICU admission at the end of life is also observed amongst caregivers, who report excellent end-of-life care less often for patients admitted to the ICU within 30 days of death compared to those who are not.<sup>326</sup>

<sup>324</sup> Sharma G et al., Trends in End-of-Life ICU Use Among Older Adults with Advanced Lung Cancer, *Chest* (January 2008)133:1;72–78.

<sup>325</sup> Sharma G et al., Trends in End-of-Life ICU Use Among Older Adults with Advanced Lung Cancer, *Chest* (January 2008)133:1;72–78.

<sup>326</sup> Wright AA et al., Family Perspectives on Aggressive Cancer Care Near the End of Life, *JAMA* (2016)315:3;284–292.

<sup>320</sup> Temel JC et al. Early Palliative Care for Patients with Metastatic Non-Small-Cell Lung Cancer. *NEJM*. 2010; 363:733–742.

Patients who are not admitted to the ICU or involved in other aggressive mechanisms of care in their final week of life have been shown to experience a higher quality of life via less physical and emotional distress.<sup>327</sup> Researchers have theorized that while patients who die at home are able to have care that focuses on symptom management and comfort; hospitals and ICUs focus instead on keeping the patient alive.<sup>328</sup>

ICU admission at the end of life is also costly,<sup>329</sup> with ICU admissions identified as one of the “key drivers of resource use and expenditures.”<sup>330</sup> Studies of claims data indicate that aggressiveness of care given to Medicare beneficiaries with cancer at the end of life continues to increase, with nearly 25 percent of Medicare expenditures in the last month of such beneficiaries’ lives, despite limited evidence that such an intervention improves patient outcomes.<sup>331</sup>

The proposed EOL–ICU measure addresses the NQS Communication and Care Coordination and Affordable Care domains, and addresses several CMS Quality Strategy goals: making care safer by reducing harm caused in the delivery of care; strengthening person and family engagement as partners in their care; and promoting effective communication and coordination of care. The proposed EOL–ICU measure is an intermediate clinical outcome measure that assesses whether cancer patients were admitted to the ICU in the last 30 days of their lives. As with the other three proposed end-of-life measures discussed in section IX.B.4.b. of the preamble of this final rule, this proposed measure seeks to evaluate the end-of-life care provided to patients at PCHs. In particular, we seek to assess the frequency of end-of-life admissions to the ICU in this setting, as the research has shown that interventions provided in the ICU to

patients with irreversible disease can be futile and may negatively impact patients’ quality of life. We recognize, however, that in some cases ICU admissions may be appropriate, and note that this measure broadly assesses how many patients are admitted to the ICU close to death, without excluding admissions for specific reasons.

The proposed EOL–ICU measure cohort includes Medicare beneficiaries who are PCH patients who died of cancer and who were admitted to the ICU within the last thirty days of their lives. This proposed measure uses Medicare administrative claims data to derive the numerator and denominator. The numerator for this measure is defined as the number of patients who died from cancer and who were admitted to the ICU in the last 30 days of life. The denominator is defined as patients who died from cancer. The measure specifications do not contain exclusions from the denominator and do not provide for risk adjustment or risk stratification in order to assess the quality of care provided to all cancer patients at the end of life. The rate of ICU admissions in the last 30 days of life will be calculated from the numerator divided by the denominator. Measure specifications for the proposed EOL–ICU measure can be accessed on the NQF’s Web site at: [http://www.qualityforum.org/Publications/2016/12/Palliative\\_and\\_End-of-Life\\_Care\\_2015-2016.aspx](http://www.qualityforum.org/Publications/2016/12/Palliative_and_End-of-Life_Care_2015-2016.aspx).

We invited public comment on our proposal to adopt the Proportion of Patients Who Died from Cancer Admitted to the ICU in the Last 30 Days of Life (NQF #0213) measure for the FY 2020 program year and subsequent years.

*Comment:* Many commenters supported the introduction of the EOL–ICU measure into the PCHQR Program. Commenters expressed that the measure will improve care for cancer patients by encouraging providers to have difficult but necessary conversations with their patients as well as allowing PCHs to identify where patients need additional supportive care; that it addresses treatment that could lead to unnecessary and futile care; that in concert with the other end-of-life measures proposed, this measure will promote accountability and drive improvement; and because it addresses a measurement gap. Commenters also noted that the measure was recently re-endorsed by the NQF and that the measure aligns with NQF’s goal to improve end-of-life care.

*Response:* We thank the commenters for their support.

*Comment:* Several commenters recommended modification of the measure specifications to incorporate exclusions for bone marrow transplants with curative intent as well as exclusions for other patient characteristics. One commenter recommended against public reporting of the EOL–ICU measure or introducing the measure into quality programs tied to payment until adjustments to the specifications are made to account for patient characteristics.

*Response:* We thank the commenters for these recommendations. The measure is intended to gather information on the proportion of patients admitted to the ICU close to the end of life and, to that end, does not distinguish between reasons for admission because the measure’s goal is to assess such admissions overall for the cancer population regardless of reason for admission to the ICU. As the data is reported, we can determine whether there is a need to further evolve the program and measure specifications to account or exclude for specific reasons for admission. We do not believe, however, that it would be appropriate to modify measure specifications during the rule process without sufficient data analysis and clinical review to assess appropriateness for the measures. Finally, we note that the PCHQR Program is not tied to payment.

*Comment:* One commenter recommended that PCHs be provided with confidential performance data that stratifies rates between ICU admission at a PCH as compared to that at non-PCH providers.

*Response:* We continue to evaluate ways to report performance data that is meaningful not only to providers for their own quality improvement but also to patients, so that they can make informed choices about their healthcare providers. At the present time, we are unable to provide reports such as the one recommended above due to the operational concerns associated with collecting and reporting this data to PCHs. However, we welcome suggestions from providers as to ways to provide meaningful data to help them improve their performance.

After consideration of the public comments we received, we are finalizing our proposal to adopt the Proportion of Patients Who Died from Cancer Admitted to the ICU in the Last 30 Days of Life (NQF #0213) measure for the FY 2020 program year and subsequent years.

(4) Proportion of Patients Who Died from Cancer Not Admitted to Hospice (EOL-Hospice) Measure (NQF #0215)

A number of research studies have determined that cancer care can become more aggressive at the end of life, which can result in a lower quality of care and lower quality of life.<sup>332</sup> Such aggressive care has been identified to include the underutilization of hospice,<sup>333</sup> which is either lack of referral or late referral to hospice services.<sup>334</sup> Patients with advanced cancer who die while admitted to the hospital have been shown to have lower quality of life than those who die at home with hospice services.<sup>335</sup>

By contrast, studies have shown that cancer patients enrolled in hospice were hospitalized less frequently and received fewer procedures than those who were not receiving hospice care.<sup>336</sup> In addition, cancer patients who were enrolled in hospice 5 to 8 weeks prior to their deaths demonstrated significant cost savings, with savings decreasing as the time period enrolled shortens.<sup>337</sup> Researchers theorize that one reason aggressive or “injurious” treatment occurs at the end of life is that end-of-life discussions are not being held with patients, and note that it is “the physician’s responsibility to counsel patients and their families and . . . focus on the need for effective palliative care as patients approach the end of life.”<sup>338</sup>

The proposed EOL-Hospice measure addresses the NQS Communication and Care Coordination and Affordable Care domains, as well as the CMS Quality Strategy goals of strengthening person

and family engagement as partners in their care and promoting effective communication and coordination of care. The proposed measure is a process measure that assesses the proportion of patients who died from cancer who were not admitted to hospice. This measure evaluates whether or not patients were admitted to hospice, and then ties in to the following measure (EOL-3DH), which evaluates whether patients who were admitted to hospice were admitted to hospice late in the course of their illness, defined as within 3 days of their death. We discuss this proposed follow-on measure, EOL-3DH, in more detail below in section IX.B.4.b.(5) of the preamble of this final rule. In summary, EOL-Hospice seeks to evaluate, simply, whether patients were admitted to hospice or not; the proposed follow-on measure EOL-3DH will then assess whether those patients admitted to hospice were admitted in a timely fashion to derive maximum benefit from hospice services. We do not expect PCHs to achieve perfect rates on the EOL-Hospice measure because we understand that some patients may refuse hospice, or that there may be additional intervening events or circumstances that impact whether or not a patient is admitted to hospice.

The proposed EOL-Hospice measure cohort includes Medicare beneficiaries who are PCH patients who died of cancer. The proposed measure uses Medicare administrative claims data to derive the numerator and denominator. The numerator in this proposed measure is defined as the proportion of PCH patients not enrolled in hospice. The denominator is defined as patients who died from cancer. The measure specifications contain no denominator exclusions nor any risk adjustment or risk stratification. The proposed measure is calculated by dividing the numerator by the denominator. Measure specifications for the proposed EOL-Hospice measure can be accessed on the NQF’s Web site at: [http://www.qualityforum.org/Publications/2016/12/Palliative\\_and\\_End-of-Life\\_Care\\_2015-2016.aspx](http://www.qualityforum.org/Publications/2016/12/Palliative_and_End-of-Life_Care_2015-2016.aspx).

We invited public comment on our proposal to adopt the Proportion of Patients Who Died from Cancer Not Admitted to Hospice (NQF #0215) measure for the FY 2020 program year and subsequent years.

*Comment:* Many commenters supported the introduction of the EOL-Hospice measure into the PCHQR Program. Commenters stated that the measure will improve care for cancer patients by encouraging providers to have difficult but necessary conversations with their patients as well

as allowing earlier referrals to hospice care. Commenters noted that hospice referrals often come too late to be of benefit to patients, and that the measure may help PCHs identify opportunities to ensure appropriate care transitions and planning. Commenters also expressed that the measure addresses treatment that could lead to unnecessary and futile care; that in concert with the other end-of-life measures proposed, this measure will promote accountability and drive improvement; and because it addresses a measurement gap. Commenters also noted that the measure was recently re-endorsed by the NQF and that the measure aligns with NQF’s goal to improve end-of-life care.

*Response:* We thank the commenters for their support.

*Comment:* One commenter recommended adoption of the EOL-Hospice measure with modification of the measure specifications to include hospital-based palliative care services into the measure numerator. Another commenter recommended expansion of the measure to include such services because the ability of palliative care services to provide symptom management.

*Response:* We appreciate commenters’ recommendations. At this point, we are interested in assessing whether or not patients in PCHs are admitted to hospice prior to death because patient admission to hospice has been shown to be an indicator of the aggressiveness of care at the end of life and whether discussions are being held with patients to discuss choice and preference regarding care at the end of life. We believe that pairing this measure with the EOL-3DH outcome measure, discussed below, provides additional insight into hospice admission at PCHs. We recognize the importance of palliative care services in alleviating symptoms during the disease process, and welcome recommendations as to additional measures related to palliative care for possible incorporation into the PCHQR Program in the future.

*Comment:* One commenter did not support the introduction of the EOL-Hospice measure. The commenter instead recommended the adoption of a process measure that evaluates if and when terminally ill patients are timely given the opportunity to consider hospice.

*Response:* We appreciate the commenter’s concern, and agree that it is important to gauge whether and when patients are alerted to their prognosis and given an opportunity to make decisions regarding their end-of-life care. We intend to take under advisement the commenter’s suggestion

to adopt a process measure assessing if and when a terminally ill cancer patient is given an opportunity to consider hospice; however, we would not view such a measure as an alternative to the proposed EOL-Hospice measure. We believe that the proportion of patients admitted to hospice is an important metric, and is particularly valuable when considered alongside the proposed EOL-3DH measure, which assesses the proportion of cancer patients who died after being admitted to hospice for less than three days.

After consideration of the public comments we received, we are finalizing our proposal to adopt the Proportion of Patients Who Died From Cancer Not Admitted to Hospice (NQF #0215) measure for the FY 2020 program year and subsequent years.

(5) Proportion of Patients Who Died From Cancer Admitted to Hospice for Less Than 3 Days (EOL-3DH) Measure (NQF #0216)

Older studies of patient cohorts from the mid-1990s have shown that, though there was an increasing trend to admit cancer patients to hospice, the number of patients admitted close to death was also increasing, about which the authors surmised that hospice care was not being used to mitigate symptoms but only to manage death.<sup>339</sup> Patients with cancer have been identified as the largest users of hospice, but are also the cohort with the highest rates of hospice stays of less than 3 days.<sup>340</sup>

In one study involving cancer patients' family members, patients' loved ones were more likely to report that the patients received excellent end-of-life care when hospice was initiated earlier than three days prior to death.<sup>341</sup> The researchers indicated that enhancing counseling of patients and families and early referral to palliative care services could result in more "preference-sensitive care for patients" and overall improvement in the quality of care cancer patients receive at the end of life.<sup>342</sup> Because this and other research indicates that earlier

discussion with patients about palliative care can positively impact the care received at the end of life, including timely admission to hospice, we believe including the proposed EOL-3DH measure in the measure set will incentivize timely discussions and admissions to hospice within the PCH setting. We believe that the emphasis on timely admission to hospice may lead to improved quality of care for cancer patients at PCHs.

The proposed EOL-3DH measure addresses the NQS Communication and Care Coordination domain. It also addresses two CMS Quality Strategy goals: Strengthening person and family engagement as partners in their care and promoting effective communication and coordination of care. The proposed EOL-3DH measure is an intermediate clinical outcome measure that assesses the proportion of patients who died from cancer who were admitted to hospice late in the course of their illness, within 3 days of their death. The measure ties in to the proposed process measure (EOL-Hospice) we discuss in section IX.B.4.b.(4) of the preamble of this final rule, above, and assesses whether, if patients were admitted to hospice, they were admitted prior to or when death was immediately imminent. As discussed, research has shown that the longer patients receive hospice services before the end of life, the more improvements in their quality of life and mood are observed.

The proposed EOL-3DH measure cohort includes Medicare beneficiaries who are PCH patients that died of cancer and were admitted to hospice within the last 3 days of their lives. The proposed measure uses Medicare administrative claims data to derive the numerator and denominator. The numerator is defined as the number of patients who died from cancer and spent fewer than 3 days in hospice. The denominator is defined as the number of patients who died from cancer and were admitted to hospice. There are no exclusions from the denominator in the measure specifications, nor risk adjustment or risk stratification, because the goal of the measure is to assess the quality of care provided to all cancer patients at the end of life. Measure specifications for the proposed EOL-3DH measure can be accessed on the NQF's Web site at: [http://www.qualityforum.org/Publications/2016/12/Palliative\\_and\\_End-of-Life\\_Care\\_2015-2016.aspx](http://www.qualityforum.org/Publications/2016/12/Palliative_and_End-of-Life_Care_2015-2016.aspx).

We invited public comment on our proposal to adopt the Proportion of Patients Who Died From Cancer Admitted to Hospice for Less Than 3 Days (NQF #0216) measure for the FY

2020 program year and subsequent years.

*Comment:* Many commenters supported the introduction of the EOL-3DH measure into the PCHQR Program. Commenters stated that the measure will improve care for cancer patients by encouraging providers to have difficult but necessary conversations with their patients, promoting patient and family engagement in decision-making, as well as allowing earlier referrals to hospice care. Commenters noted that hospice referrals often come too late to be of benefit to patients, and that the measure may help PCHs identify opportunities to ensure appropriate care transitions and planning. Commenters also expressed that the measure addresses treatment that could lead to unnecessary and futile care; that in concert with the other proposed end-of-life measures, this measure will promote accountability and drive improvement; and because it addresses a measurement gap. Commenters also noted that the measure was recently re-endorsed by the NQF and that the measure aligns with NQF's goal to improve end-of-life care.

*Response:* We thank the commenters for their support.

*Comment:* One commenter recommended expansion of the measure to include palliative care services because of the ability of such services to provide symptom management. Another commenter recommended risk adjustment of the measure for social risk factors and comorbidities, such as dementia, that could impact timely admission to hospice.

*Response:* We appreciate commenters' recommendations. At this time, we are interested in adopting the EOL-3DH outcome measure because it will enable us to assess current hospice admitting practices at PCHs. We recognize the importance of palliative care services in alleviating symptoms during the disease process, and we welcome recommendations as to additional measures related to palliative care for possible incorporation into the PCHQR Program in the future. We also welcome recommendations as to other aspects of the measure specifications that could be revised in the future, such as consideration of comorbidities that could delay timely admission, or additional measures that address issues related to timely admission to hospice, for future rulemaking.

After consideration of the public comments we received we are finalizing our proposal to adopt the Proportion of Patients Who Died From Cancer Admitted to Hospice for Less Than 3 Days (NQF #0216) measure for the FY

2020 program year and subsequent years. c. Summary of Previously Finalized and Newly Finalized PCHQR Program Measures for the FY 2020 Program Year and Subsequent Years PCHQR Program for the FY 2020 program year and subsequent years are listed in the table below.

In summary, the previously finalized and newly finalized measures for the

PREVIOUSLY FINALIZED AND NEWLY FINALIZED PCHQR MEASURES FOR THE FY 2020 PROGRAM YEAR AND SUBSEQUENT YEARS

Short name	NQF number	Measure name
<b>Safety and Healthcare-Associated Infection (HAI)</b>		
CLABSI .....	0139	National Healthcare Safety Network (NHSN) Central Line-Associated Bloodstream Infection Outcome Measure
CAUTI .....	0138	National Healthcare Safety Network (NHSN) Catheter-Associated Urinary Tract Infections Outcome Measure
SSI .....	0753	American College of Surgeons—Centers for Disease Control and Prevention (ACS—CDC) Harmonized Procedure Specific Surgical Site Infection (SSI) Outcome Measure [currently includes SSIs following Colon Surgery and Abdominal Hysterectomy Surgery]
CDI .....	1717	National Healthcare Safety Network (NHSN) Facility-wide Inpatient Hospital-onset <i>Clostridium difficile</i> Infection (CDI) Outcome Measure
MRSA .....	1716	National Healthcare Safety Network (NHSN) Facility-wide Inpatient Hospital-onset Methicillin-resistant <i>Staphylococcus aureus</i> Bacteremia Outcome Measure
HCP .....	0431	Influenza Vaccination Coverage Among Healthcare Personnel
<b>Clinical Process/Oncology Care Measures</b>		
N/A .....	0382	Oncology: Radiation Dose Limits to Normal Tissues
N/A .....	0383	Oncology: Plan of Care for Pain—Medical Oncology and Radiation Oncology
N/A .....	0384	Oncology: Medical and Radiation—Pain Intensity Quantified
N/A .....	0390	Prostate Cancer: Adjuvant Hormonal Therapy for High Risk Prostate Cancer Patients
N/A .....	0389	Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low Risk Prostate Cancer Patients
EOL-Chemo .....	0210	Proportion of Patients Who Died From Cancer Receiving Chemotherapy in the Last 14 Days of Life*
EOL-Hospice .....	0215	Proportion of Patients Who Died From Cancer Not Admitted to Hospice*
<b>Intermediate Clinical Outcome Measures</b>		
EOL-ICU .....	0213	Proportion of Patients Who Died From Cancer Admitted to the ICU in the Last 30 Days of Life*
EOL-3DH .....	0216	Proportion of Patients Who Died From Cancer Admitted to Hospice for Less Than Three Days*
<b>Patient Engagement/Experience of Care</b>		
HCAHPS .....	0166	HCAHPS
<b>Clinical Effectiveness Measure</b>		
EBRT .....	1822	External Beam Radiotherapy for Bone Metastases
<b>Claims Based Outcome Measure</b>		
N/A .....	N/A	Admissions and Emergency Department (ED) Visits for Patients Receiving Outpatient Chemotherapy

±We note that the previously finalized measures finalized for removal in this final rule are not included in this table. These measures are: (1) Adjuvant Chemotherapy is Considered or Administered Within 4 Months (120 Days) of Diagnosis to Patients Under the Age of 80 with AJCC II (Lymph Node Positive) Colon Cancer; (2) Combination Chemotherapy is Considered or Administered Within 4 Months (120 Days) of Diagnosis for Women Under 70 with AJCC T1c, or Stage II or III Hormone Receptor Negative Breast Cancer; and (3) Adjuvant Hormonal Therapy.

\* This measure is finalized for adoption for the FY 2020 program year in section IX.B.4.b of the preamble of this final rule.

5. Accounting for Social Risk Factors in the PCHQR Program

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20082 through 20083), we discussed the issue of accounting for social risk factors in the PCHQR Program. We understand that social risk factors such as income,

education, race and ethnicity, employment, disability, community resources, and social support (certain factors of which are also sometimes referred to as socioeconomic status (SES) factors or socio-demographic status (SDS) factors) play a major role in health. One of our core objectives is to improve beneficiary outcomes including

reducing health disparities, and we want to ensure that all beneficiaries, including those with social risk factors, receive high quality care. In addition, we seek to ensure that the quality of care furnished by providers and suppliers is assessed as fairly as possible under our programs while

ensuring that beneficiaries have adequate access to excellent care.

We have been reviewing reports prepared by the Office of the Assistant Secretary for Planning and Evaluation (ASPE)<sup>343</sup> and the National Academies of Sciences, Engineering, and Medicine on the issue of measuring and accounting for social risk factors in CMS' quality measurement and payment programs, and considering options on how to address the issue in these programs. On December 21, 2016, ASPE submitted a Report to Congress on a study it was required to conduct under section 2(d) of the Improving Medicare Post-Acute Care Transformation (IMPACT) Act of 2014. The study analyzed the effects of certain social risk factors of Medicare beneficiaries on quality measures and measures of resource use used in one or more of nine Medicare value-based purchasing programs.<sup>344</sup> The report also included considerations for strategies to account for social risk factors in these programs. In a January 10, 2017 report released by the National Academies of Sciences, Engineering, and Medicine, that body provided various potential methods for measuring and accounting for social risk factors, including stratified public reporting.<sup>345</sup>

As noted in the FY 2017 IPPS/LTCH PPS final rule, the NQF undertook a 2-year trial period in which certain new measures, measures undergoing maintenance review, and measures endorsed with the condition that they enter the trial period were assessed to determine whether risk adjustment for selected social risk factors is appropriate for these measures. This trial entailed temporarily allowing inclusion of social risk factors in the risk-adjustment approach for these measures. We await the recommendations of the NQF trial on risk adjustment for quality measures.

As we continue to consider the analyses and recommendations from these reports and await the results of the NQF pilot on risk adjustment for quality measures, we are continuing to work with stakeholders in this process. As we have previously communicated, we are concerned about holding providers to different standards for the outcomes of their patients with social risk factors

because we do not want to mask potential disparities or minimize incentives to improve the outcomes for disadvantaged populations. Keeping this concern in mind, while we sought input on this topic previously, we continue to seek public comment on whether we should account for social risk factors in the PCHQR Program, and if so, what method or combination of methods would be most appropriate for accounting for social risk factors. Examples of methods include: Confidential reporting to providers of measure rates stratified by social risk factors; public reporting of stratified measure rates; and potential risk adjustment of a particular measure as appropriate based on data and evidence.

In addition, in the proposed rule, we sought public comment on which social risk factors might be most appropriate for reporting stratified measure scores and/or potential risk adjustment of a particular measure. Examples of social risk factors include, but are not limited to, dual eligibility/low-income subsidy, race and ethnicity, and geographic area of residence. We also sought comments on which of these factors, including current data sources where this information would be available, could be used alone or in combination, and whether other data should be collected to better capture the effects of social risk. We also welcomed comment on operational considerations. Of note, implementing any of the above methods would be taken into consideration in the context of how this and other CMS programs operate (for example, data submission methods, availability of data, statistical considerations relating to reliability of data calculations, among others).

We received several comments in response to our request for public comment on whether we should account for social risk factors in the PCHQR Program and if so, what method or combination of methods would be most appropriate for accounting for social risk factors.

*Comment:* Commenters were generally supportive of implementing an approach to account for social risk factors in the PCHQR Program. Commenters encouraged evaluation of each measure for applicability of adjustment for social risk factors, with considerations given to type and purpose of measure and whether or not a measure is reported publicly. Commenters also urged careful balancing of the need to risk adjust for social risk factors with the potential burden of collecting more data to perform such risk adjustment.

*Response:* We appreciate the comments and interest in this topic. As we have previously stated, we are concerned about holding providers to different standards for the outcomes of their patients with social risk factors, because we do not want to mask potential disparities or minimize incentives to improve outcomes for disadvantaged populations. We believe that the path forward should incentivize improvements in health outcomes for disadvantaged populations while ensuring that beneficiaries have access to excellent care. We intend to consider all suggestions as we continue to assess each measure and the overall program. We appreciate that some commenters recommended risk adjustment as a strategy to account for social risk factors, while others noted the potential increased burden of collecting additional data for risk adjustment purposes.

We will consider all suggestions as we continue to assess each measure and the overall program. We intend to conduct further analyses on the impact of strategies such as measure-level risk adjustment and measure stratification by social risk factors, including the options suggested by commenters. As we consider the feasibility of collecting patient-level data and the impact of strategies to account for social risk factors through further analysis, we will continue to evaluate the reporting burden on providers. Future proposals would be made after further research and continued stakeholder engagement.

## 6. Possible New Quality Measure Topics for Future Years

### a. Background

We discussed future quality measure topics and quality measure domain areas in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50280), the FY 2016 IPPS/LTCH PPS final rule (80 FR 4979), and the FY 2017 IPPS/LTCH PPS final rule (81 FR 25211). Specifically, we discussed public comment and suggestions for measure topics addressing the following CMS Quality Strategy domains: (1) Making care affordable; (2) communication and care coordination; and (3) working with communities to promote best practices of healthy living. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20083), we welcomed public comment and specific suggestions for measure topics that we should consider for future rulemaking, including considerations related to risk adjustment and the inclusion of social risk factors in risk adjustment for any individual performance measures.

<sup>343</sup> <https://aspe.hhs.gov/pdf-report/report-congress-social-risk-factors-and-performance-under-medicare-value-based-purchasing-programs>.

<sup>344</sup> <https://aspe.hhs.gov/pdf-report/report-congress-social-risk-factors-and-performance-under-medicare-value-based-purchasing-programs>.

<sup>345</sup> National Academies of Sciences, Engineering, and Medicine. 2017. Accounting for social risk factors in Medicare payment. Washington, DC: The National Academies Press.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20083 through 20084), we also sought public comment on six measures for potential future inclusion in the PCHQR Program:

- Localized Prostate Cancer: Vitality;
- Localized Prostate Cancer: Urinary Incontinence;
- Localized Prostate Cancer: Urinary Frequency, Obstruction, and/or Irritation;
- Localized Prostate Cancer: Sexual Function;
- Localized Prostate Cancer: Bowel Function; and
- 30 Day Unplanned Readmissions for Cancer Patients.

These measures are discussed in more detail below.

b. Localized Prostate Cancer: Vitality; Localized Prostate Cancer: Urinary Incontinence; Localized Prostate Cancer: Urinary Frequency, Obstruction, and/or Irritation; Localized Prostate Cancer: Sexual Function; and Localized Prostate Cancer: Bowel Function

The Localized Prostate Cancer measures are five related, patient-reported outcome measures drawn from the Expanded Prostate Inventory Composite (EPIC), which is a survey intended to gather input from patients on their experience. The survey questions are intended to be administered to all non-metastatic prostate cancer patients undergoing radiation or surgical treatment for prostate cancer at the reporting facility (denominator); the numerator is patients with clinically significant changes in each of the listed areas from baseline to follow-up. The goal of the measurement is to identify issues of variation, suboptimal performance, and disparities in care. This measurement aligns with recent initiatives to include patient-reported outcomes and experience of care into quality reporting programs, as well as to incorporate more outcome measures generally. Patient-centered experience measures are also a component of the 2016 CMS Quality Strategy, which emphasizes patient-centered care by rating patient experience as a means for empowering patients and improving the quality of their care and care experience.<sup>346</sup>

These measures were included on the publicly available document entitled “List of Measures under Consideration for December 1, 2016”<sup>347</sup> but were not

<sup>346</sup> CMS Quality Strategy 2016. Available at: <https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/qualityinitiativesgeninfo/downloads/cms-quality-strategy.pdf>.

<sup>347</sup> Centers for Medicare and Medicaid Services, List of Measures under Consideration for December 1, 2016. Available at: <https://www.cms.gov/>

reviewed by the MAP. We anticipate that they will be included on a future list of measures under consideration for MAP review. For further information on these measures, we refer readers to the discussion from the Measures Application Partnership’s Hospital Workgroup Discussion at: [http://public.qualityforum.org/MAP/MAP%20Hospital%20Workgroup/2016-2017%20Hospital%20MAP/MAP\\_Hospital\\_Workgroup\\_Discussion\\_Guide.html#MUC16-375PCHQ](http://public.qualityforum.org/MAP/MAP%20Hospital%20Workgroup/2016-2017%20Hospital%20MAP/MAP_Hospital_Workgroup_Discussion_Guide.html#MUC16-375PCHQ). We requested public comment on the possible inclusion of these measures in future years of the program.

*Comment:* A number of commenters expressed support for the future introduction of the five Localized Prostate Cancer measures. Commenters noted the importance to patients of measures that assess quality of life as well as the ability of the measures to support meaningful comparisons between providers. Commenters stated that such measures will enable patients to make informed decisions as they will have available quality of care information. A commenter also stated that the measures would improve communications between hospitals and patients.

*Response:* We appreciate the commenters’ support and views on these potential measures.

*Comment:* One commenter supported the future introduction of the measures and asked whether the tool mentioned as the means for collection, the Expanded Prostate Inventory Composite, would be the only mechanism for documenting patient-reported outcomes.

*Response:* We thank the commenter for its support. We welcome recommendations and stakeholder input into different mechanisms for collection of patient-reported outcomes and will take such suggestions into consideration for future rulemaking. These measures are being developed based on a single data collection tool, although we understand that there may be several other tools that could potentially collect this information. We will continue to monitor the measures’ development and testing to determine the best means of data collection for these measures.

*Comment:* One commenter asked whether the tool mentioned as the means for collection, the Expanded Prostate Inventory Composite, would support the move to electronic quality reporting.

[Measures-under-Consideration-List-for-2016.pdf](https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/QualityMeasures/Downloads/Measures-under-Consideration-List-for-2016.pdf).

*Response:* At this time, we cannot say with certainty whether the particular tool described in the measure specifications would support the move to electronic quality reporting. We thank the commenter for the inquiry and will take this under consideration as we continue to consider these and other measures for possible inclusion in the PCHQR Program in the future.

We thank the commenters and we will consider their views as we develop further measures for use in the PCHQR Program.

c. 30-Day Unplanned Readmissions for Cancer Patients

The 30-Day Unplanned Readmissions for Cancer Patients measure would measure the number of hospital-specific 30-day unscheduled and potentially avoidable readmissions following hospitalization among diagnosed malignant cancer patients. The measure numerator is the total number of unscheduled readmissions within 30 days of index admission. The measure denominator is total PCH admissions within the reporting year for patients, aged 18 years or older, who were discharged alive from the facility with an active malignant cancer diagnosis.

For further information on this measure, we refer readers to the AHRQ National Quality Measure Clearinghouse at: <https://www.qualitymeasures.ahrq.gov/summaries/summary/50490/cancer-30day-unplanned-readmission-rate-for-cancer-patients>. We requested public comment on the possible inclusion of this measure in future years of the program.

*Comment:* Several commenters generally supported the future inclusion of a 30-day, unplanned readmissions measure for cancer patients, noting that until recently no such measure existed and that the potential measure would take steps toward addressing a gap in the measurement of cancer care. One commenter supported the introduction of a measure even without NQF endorsement, stating that it believed the measure meets the criteria for introduction into the PCHQR Program without endorsement. Another commenter noted that the measure has been shown to demonstrate reliability and validity, and that the measure is currently in use in several of the PCHs for hospital-specific, non-Medicare performance improvement or payment programs. Finally, a commenter noted that the measure incorporates risk adjustment in a way that carefully distinguishes preventable from non-preventable readmissions in cancer patients.

*Response:* We thank the commenters for their support.

*Comment:* One commenter supported the future adoption of the measure and encouraged additional consideration and evaluation of a measure that would report a five-year survival rate for cancer.

*Response:* We appreciate the support for the potential readmissions measure, and we will take the suggestion to adopt a survival rate measure into consideration for future rulemaking.

We thank the commenters and we will consider their views as we develop further measures for use in the PCHQR Program.

7. Maintenance of Technical Specifications for Quality Measures

We maintain technical specifications for the PCHQR Program measures, and

we periodically update those specifications. The specifications may be found on the QualityNet Web site at: <https://qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier2&cid=1228774479863>.

In the FY 2015 IPPS/LTCH PPS final rule (79 FR 50281), we adopted a policy under which we use a subregulatory process to make nonsubstantive updates to measures used for the PCHQR Program. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20084), we did not propose any changes to this policy.

8. Public Display Requirements

a. Background

Under section 1866(k)(4) of the Act, we are required to establish procedures

for making the data submitted under the PCHQR Program available to the public. Such procedures must ensure that a PCH has the opportunity to review the data that are to be made public with respect to the PCH prior to such data being made public. Section 1866(k)(4) of the Act also provides that the Secretary must report quality measures of process, structure, outcome, patients' perspective on care, efficiency, and costs of care that relate to services furnished in such hospitals on the CMS Web site. In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57191 through 57192), we listed our finalized public display requirements. The measures we have finalized for public display are shown in the table below.

PREVIOUSLY FINALIZED PUBLIC DISPLAY REQUIREMENTS

Summary of previously finalized public display requirements

Measures	Public reporting
<ul style="list-style-type: none"> <li>• Adjuvant Chemotherapy is Considered or Administered Within 4 Months (120 days) of Diagnosis to Patients Under the Age of 80 with AJCC III (lymph node positive) Colon Cancer (NQF #0223) *.</li> <li>• Combination Chemotherapy is Considered or Administered Within 4 Months (120 days) of Diagnosis for Women Under 70 with AJCC T1cN0M0, or Stage IB—III Hormone Receptor Negative Breast Cancer (NQF #0559) *.</li> <li>• Adjuvant Hormonal Therapy (NQF #0220) * .....</li> <li>• Oncology: Radiation Dose Limits to Normal Tissues (NQF #0382) * .....</li> <li>• Oncology: Plan of Care for Pain—Medical Oncology and Radiation Oncology (NQF #0383).</li> <li>• Oncology: Medical and Radiation—Pain Intensity Quantified (NQF #0384).</li> <li>• Prostate Cancer: Adjuvant Hormonal Therapy for High Risk Prostate Cancer Patients (NQF #0390).</li> <li>• Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low Risk Prostate Cancer Patients (NQF #0389).</li> <li>• HCAHPS (NQF #0166).</li> <li>• CLABSI (NQF #0139) ** .....</li> <li>• CAUTI (NQF #0138) ** .....</li> <li>• External Beam Radiotherapy for Bone Metastases (NQF #1822) *** .....</li> </ul>	<p>2014 and subsequent years.</p> <p>2015 and subsequent years. 2016 and subsequent years.</p> <p>Deferred.</p> <p>Beginning at the first opportunity in 2017 and for subsequent years.</p>

\* Update newly finalized for display for the FY 2019 program year and subsequent years in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57192)—expanded cohort will be displayed as soon as feasible.

\*\* Deferral finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57192).

\*\*\* Measure newly finalized for public display in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57192).

\* Measure finalized for removal beginning the FY 2020 program year in section IX.B.3.b of the preamble of this final rule.

As we strive to publicly display data as soon as possible on a CMS Web site, in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57191 through 57192), we finalized an update to our public display policies. We believe it is best to not specify in rulemaking the exact timeframe during the year for publication as doing so may prevent earlier publication. Therefore, we finalized our policy to make these data available as soon as it is feasible during the year, starting with the first year for which we are publishing data for each measure. We will continue to propose in rulemaking the first year for which we intend to publish data for each measure.

We intend to make the data available on at least a yearly basis.

As stated above, we are required to give PCHs an opportunity to review their data before the data are made public. Because we will make the data for this program available as soon as possible, and the timeframe for this publication may change year to year, we will not propose to specify in rulemaking the exact dates for review. However, in that final rule, we stated that the time period for review would be approximately 30 days in length. We will announce the exact timeframes on a CMS Web site and/or on our applicable listservs. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR

20084), we did not propose any changes to this policy.

b. Deferral of Public Display of Two Measures

In the FY 2015 IPPS/LTCH PPS final rule (79 FR 50281 through 50282), we finalized public display of the CLABSI and CAUTI measures beginning no later than 2017 and subsequent years. However, in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57192), we finalized a proposal to continue to defer public reporting of the CLABSI and CAUTI measures pending ongoing collaboration with the CDC to identify an appropriate timeframe for public reporting and the analytic methods that

will be used to summarize the CLABSI and CAUTI data for public reporting purposes. We continue to collaborate with the CDC on these issues and continue to defer the public reporting of these two measures accordingly.

#### 9. Form, Manner, and Timing of Data Submission

##### a. Background

Section 1866(k)(2) of the Act requires that, beginning with the FY 2014 PCHQR program year, each PCH must submit to the Secretary data on quality measures specified under section 1866(k)(3) of the Act in a form and manner, and at a time, as specified by the Secretary. There are no financial incentives or penalties associated with the PCHQR Program.

Data submission requirements and deadlines for the PCHQR Program are generally posted on the QualityNet Web site at: <http://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier3&cid=1228772864228>.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20085), we did not propose any changes to previously finalized data submission requirements.

##### b. Reporting Requirements for the Newly Finalized Measures

As further described above, we are finalizing the adoption of four new measures beginning with the FY 2020 program year: Proportion of Patients Who Died From Cancer Receiving Chemotherapy in the Last 14 Days of Life (NQF #0210); Proportion of Patients Who Died From Cancer Admitted to the ICU in the Last 30 Days of Life (NQF #0213); Proportion of Patients Who Died From Cancer Not Admitted to Hospice (NQF #0215); and Proportion of Patients Who Died From Cancer Admitted to Hospice for Less Than Three Days (NQF #0216). All four measures are claims-based measures. Therefore, there will be no separate data submission requirements for PCHs related to these measures as CMS will calculate the measures from data submitted for reimbursement purposes. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20085), we proposed to calculate these measures on a yearly basis because we will be calculating them using Medicare administrative claims data. Specifically, we proposed that the data collection period would be from July 1 of the year 3 years prior to the program year to June 30 of the year 2 years prior to the program year. Thus, for the FY 2020 program year, we would collect data from July 1, 2017 through June 30, 2018.

We invited public comment on this proposal.

*Comment:* One commenter supported the proposed time period for the reporting of the EOL-ICU measure data specifically, while another commenter recommended against public reporting of the EOL-ICU measure until adjustments are made to the measure specifications to account for patient characteristics.

*Response:* We thank the commenters for their thoughts. However, we do not plan on altering the measure specifications to account for patient characteristics because the measure is intended to assess the overall proportion of patients receiving chemotherapy within fourteen days of the end of life and provide a broad picture of end-of-life care.

*Comment:* One commenter sought further direction on the plans for the public reporting of the new end-of-life measures.

*Response:* We thank the commenter for expressing the request for additional direction, and note that further information will be available on QualityNet in the future. We strive to make data available as soon as it is feasible during the year, starting with the first year for which we are publishing data for each measure, and therefore believe it is best to not specify in rulemaking the exact timeframe during the year for publication as doing so may prevent earlier publication.

After consideration of the public comments we received we are finalizing the data collection period, as proposed, from July 1 of the year 3 years prior to the program year to June 30 of the year 2 years prior to the program year. Thus, for the FY 2020 program year, we will collect data for the four new measures from July 1, 2017 through June 30, 2018.

#### 10. Extraordinary Circumstances Exceptions (ECE) Policy Under the PCHQR Program

##### a. Background

In our experience with other quality reporting and performance programs, we have noted occasions when providers have been unable to submit required quality data due to extraordinary circumstances that are not within their control (for example, natural disasters). We do not wish to increase their burden unduly during these times. Therefore, in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50848), we finalized our policy that, for the FY 2014 program year and subsequent years, PCHs may request and we may grant exceptions (formerly

referred to as waivers)<sup>348</sup> with respect to the reporting of required quality data when extraordinary circumstances beyond the control of the PCH warrant. The PCH may request a reporting extension or a complete exception from the requirement to submit quality data for one or more quarters. Under our current policy, PCHs can submit a request form to CMS with the following information:

- The PCH's CCN;
- The PCH's name;
- Contact information for the PCH's CEO and any other designated personnel, including name, email address, telephone number, and mailing address (the address must be a physical address, not a post office box);
- The PCH's reason for requesting an extension or exception;
- Evidence of the impact of extraordinary circumstances, including but not limited to photographs, newspaper and other media articles; and
- A date when the PCH will again be able to submit PCHQR Program data, and a justification for the proposed date.

In addition, we finalized that the form must be signed by the PCH's CEO or designee and submitted within 30 days of the date that the extraordinary circumstances occurred. Lastly, we finalized that following the receipt of the request form, we would: (1) Provide a written acknowledgement; and (2) provide a formal response notifying the PCH of our decision.

We also clarified that the above policy does not preclude us from granting exceptions (including extensions) to PCHs that have not requested them when we determine that an extraordinary circumstance has affected an entire region or locale. We stated that if we make the determination to grant such an exception, we would communicate this decision through routine communication channels.

##### b. Modifications to the ECE Policy

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20085 through 20086), we proposed to modify the ECE policy for the PCHQR Program by: (1) Extending the deadline for a PCH to submit a request for an extension or exception from 30 days following the date that the extraordinary circumstance occurred to 90 days following the date that the extraordinary circumstance occurred; and (2) allowing CMS to grant an exception or extension due to CMS data system issues which affect data submission. These proposed

<sup>348</sup> ECEs were originally referred to as "waivers." This term was changed to "exceptions" in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50286).

modifications will better align our ECE policy with that adopted for the Hospital IQR Program (76 FR 51651 through 51652, 78 FR 50836 through 50837, and 81 FR 57181 through 57182), the Hospital OQR Program (77 FR 68489 and 81 FR 79795), as well as other quality reporting programs that already have such policies in place or have proposed to modify their policies to achieve alignment. We proposed that these modifications would apply beginning in FY 2018 as related to extraordinary circumstances that occur on or after October 1, 2017.

We also believe that it is important for facilities to receive timely feedback regarding the status of ECE requests. We strive to complete our review of each ECE request as quickly as possible. However, we recognize that the number of requests we receive, and the complexity of the information provided impacts the actual timeframe to make ECE determinations. Therefore, to ensure transparency and understanding of our process, we are also taking this opportunity to clarify that we will strive to provide our response to an ECE request within 90 days of receipt.

#### (1) ECE Request Submission Deadline

In the past, we have allowed facilities to submit an ECE request form within 30 calendar days following the occurrence of an extraordinary circumstance that causes hardship and prevents them from providing data. In certain circumstances, however, it may be difficult for facilities to timely evaluate the impact of a certain extraordinary circumstance within 30 calendar days. We believe that extending the deadline to 90 calendar days would allow PCHs more time to determine whether it is necessary and appropriate to submit an ECE request and to provide a more comprehensive account of the extraordinary circumstance in their ECE request form to CMS. For example, if a PCH has suffered damage due to a hurricane on June 1, it would have until August 30 to submit an ECE form via the QualityNet Secure Portal, mail, email, or secure fax as instructed on the ECE form.

We invited public comments on this proposal.

*Comment:* Commenters generally supported the proposed amendments to the ECE policy to align with other quality reporting programs. One commenter specifically noted that providing additional time to request an extension or exception after an extraordinary event will enable PCHs to focus on patient needs and service recovery.

*Response:* We thank the commenters for their support.

After consideration of the public comments we received, we are finalizing our proposal to extend the deadline for a PCH to submit a request for an extension or exception from 30 days following the date that the extraordinary circumstance occurred to 90 days following the date that the extraordinary circumstance occurred.

#### (2) Exceptions or Extensions Due to CMS Data System Issues

Although we do not anticipate this situation will happen often, there may be times where CMS experiences issues with its data systems that directly affect facilities' abilities to submit data. In these circumstances, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20086), we proposed to grant exceptions or extensions to one or more data reporting requirements. If we make the determination to grant exceptions or extensions to PCHs on this basis, we proposed to communicate this decision through routine communication channels.

We invited public comment on this proposal.

*Comment:* Commenters generally supported the proposed amendments to the ECE policy to align with other quality reporting programs. One comment specifically noted that modifying the policy to allow an exception for CMS data system issues will avoid unfairly penalizing PCHs for circumstances outside of their control.

*Response:* We thank the commenters for their responses and comments. Regarding our proposal to modify the ECE policy to allow an exception for CMS data system issues, we wish to clarify that if CMS does not proactively notify PCHs that it plans to provide an exception to the policy after a data system issue, PCHs may still submit a request for an exception for CMS consideration.

After consideration of the public comments we received, we are finalizing our proposal to allow CMS to grant an exception or extension due to CMS data system issues which affect data submission.

#### C. Long-Term Care Hospital Quality Reporting Program (LTCH QRP)

##### 1. Background and Statutory Authority

Section 3004(a) of the Affordable Care Act amended section 1886(m) of the Act by adding paragraph (5), requiring the Secretary to establish the Long-Term Care Hospital Quality Reporting Program (LTCH QRP). This program applies to all hospitals certified by

Medicare as LTCHs. Beginning with the FY 2014 LTCH QRP, the Secretary is required to reduce any annual update to the LTCH PPS standard Federal rate for discharges occurring during such fiscal year by 2 percentage points for any LTCH that does not comply with the requirements established by the Secretary. Specifically, section 1886(m)(5) of the Act requires that beginning with the FY 2014 LTCH QRP, each LTCH submit data on quality measures specified by the Secretary in a form and manner, and at a time, specified by the Secretary. For more information on the statutory history of the LTCH QRP, we refer readers to the FY 2015 IPPS/LTCH PPS final rule (79 FR 50286).

When we use the term "FY [year] LTCH QRP," we are referring to the fiscal year for which the LTCH QRP requirements applicable to that fiscal year must be met for an LTCH to receive the full annual update when calculating the payment rates applicable to it for that fiscal year.

The Improving Medicare Post-Acute Care Transformation Act of 2014 (IMPACT Act) (Pub. L. 113-185) amended Title XVIII of the Act, in part, by adding a new section 1899B of the Act that requires the Secretary to establish new data reporting requirements for certain post-acute care (PAC) providers, including LTCHs. Specifically, sections 1899B(a)(1)(A)(ii) and (iii) of the Act require LTCHs, inpatient rehabilitation facilities (IRFs), skilled nursing facilities (SNFs), and home health agencies (HHAs), under the provider-type's respective quality reporting program (which, for LTCHs, is found at section 1886(m)(5) of the Act), to report data on quality measures specified under section 1899B(c)(1), with respect to at least five domains, and data on resource use and other measures specified under section 1899B(d)(1) of the Act with respect to at least three domains. Section 1899B(a)(1)(A)(i) of the Act further requires each of these PAC provider-types to report under its respective quality reporting program standardized patient assessment data in accordance with subsection (b) for at least the quality measures specified under subsection (c)(1) and that is with respect to five specific categories: functional status; cognitive function and mental status; special services, treatments, and interventions; medical conditions and co-morbidities; and impairments. Section 1899B(a)(1)(B) requires that all of the data that must be reported in accordance with section 1899B(a)(1)(A) of the Act be standardized and interoperable to allow for the exchange

of the information among PAC providers and other providers and the use of such data in order to enable access to longitudinal information and to facilitate coordinated care. We refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49723 through 49724) for additional information on the IMPACT Act and its applicability to LTCHs.

## 2. General Considerations Used for Selection of Quality Measures for the LTCH QRP

### a. Background

We refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49728) for a detailed discussion of the considerations we apply in measure selection for the LTCH QRP, such as alignment with the CMS Quality Strategy,<sup>349</sup> which incorporates the three broad aims of the National Quality Strategy.<sup>350</sup>

As part of our consideration for measures for use in the LTCH QRP, we review and evaluate measures that have been implemented in other programs and take into account measures that have been endorsed by NQF for provider settings other than the LTCH setting. We have previously adopted measures with the term “Application of” in the names of those measures. We have received questions pertaining to the term “application” and want to clarify that when we refer to a measure as an “application of” the measure, we mean that the measure will be used in the LTCH setting, rather than the setting for which it was endorsed by the NQF. For example, in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49736 through 49739) we adopted a measure entitled, an Application of Percent of Residents Experiencing One or More Falls With Major Injury (Long Stay) (NQF #0674), which is currently endorsed for the nursing home setting but not for the LTCH setting. For such measures, we intend to seek NQF endorsement for the LTCH setting, and if the NQF endorses one or more of them, we will update the title of the measure to remove the reference to “application.”

We received several comments generally related to the proposed measures, the IMPACT Act, NQF endorsement, the NQF MAP review process, and the use of technical expert panels (TEPs), which are summarized and discussed below.

*Comment:* Several commenters expressed support for the goals and objectives of the IMPACT Act. One commenter supported the continued additions and modifications to the LTCH QRP as mandated by the IMPACT Act, stating that regulatory changes from the LTCH QRP have not only required LTCHs to focus more on care processes and data collection, but have also promoted a shift in provider focus toward improved care quality, increased transparency, and enhanced provider accountability. Another commenter stated that, even though it supports CMS’ effort under the IMPACT Act, additional time may be necessary to fully implement all changes as outlined in the final rule.

*Response:* We appreciate the commenters’ support for the continued additions and modifications to the LTCH QRP, particularly the support for modifications required by the IMPACT Act. We strive to put patients first, ensuring that they can make decisions about their own healthcare along with their clinicians. We want to ensure innovative approaches to improve quality, accessibility, and affordability while paying particular attention to improving clinicians’ and beneficiaries’ experience when interacting with CMS programs. To that end, we believe that a focus on data collection and quality measurement leads to improved care processes, facilitation of care coordination, and, ultimately, improved patient outcomes. However, we are also sensitive to LTCHs’ needs for sufficient time to implement the requirements pertaining to the LTCH QRP, and we aim to be responsive to these needs to the extent feasible and appropriate.

*Comment:* Several commenters expressed concern that quality measures proposed for the LTCH QRP lack NQF endorsement for the LTCH setting. One commenter noted that NQF endorsement for the LTCH setting reflects that the NQF has determined the measure to be appropriately modified for the LTCH setting, which is unique from other PAC settings due to the complexity of LTCH patient needs. A few commenters recommended that CMS obtain NQF endorsement for the LTCH setting through NQF review using the Consensus Development Process, a formal peer-review process providing input on performance measures, before proposing quality measures for the LTCH QRP. Commenters further recommended that CMS refrain from implementing measures in the LTCH QRP until the measures receive NQF endorsement for the LTCH setting.

*Response:* We acknowledge the commenters’ recommendation that

proposed measures receive NQF endorsement in the LTCH setting prior to implementation. We would like to note that we consider and propose measures that have been endorsed by the NQF whenever possible. However, when this is not feasible because there is not an NQF endorsed measure that addresses quality gaps identified in the program, we believe it is appropriate to specify a measure for the LTCH QRP that is not NQF-endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization, as is the case for the proposed measures, and we have considered but have not been able to identify other feasible measures that are endorsed or adopted by a consensus organization. We plan to submit measures within our program for endorsement as soon as feasible.

*Comment:* Several commenters expressed concern that quality measures proposed for the LTCH QRP may not be fully supported by the MAP. Commenters recommended that CMS obtain full support by the MAP before proposing quality measures for the LTCH QRP.

*Response:* We acknowledge that the NQF-convened MAP serves a critical function in evaluating measures under consideration and providing recommendations for measure implementation prior to rulemaking though MAP support is not a requirement for a measure to be proposed or finalized. However, as the MAP’s role is to maintain transparency for the public and encourage public engagement throughout the measure development process, we value the MAP’s input and take into consideration all input received.

We would like to clarify that the MAP recommended “conditional support for rulemaking” and “encouraged continued development” for the proposed measures for the LTCH QRP. According to the MAP, the term “conditional support for rulemaking” is applied when a measure is fully developed and tested and meets MAP assessment criteria; however should meet a condition specified by MAP before it can be supported for implementation. Measures that are conditionally supported are not expected to be resubmitted to MAP. The term “encourage continued development” is applied when a measure addresses a critical program objective or promotes alignment. In contrast, the MAP uses the phrase “do not support” when it does not support the measure at all.

For the proposed measure, Changes in Skin Integrity Post-Acute Care: Pressure

<sup>349</sup> <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/CMS-Quality-Strategy.html>.

<sup>350</sup> <https://www.ahrq.gov/workingforquality/reports/2011-annual-report.html>.

Ulcer/Injury, the MAP Post-Acute Care/Long-Term Care (PAC/LTC) Workgroup met on December 14 and 15, 2016, and provided CMS a recommendation of “support for rulemaking” for use of the measure in the LTCH QRP. The MAP Coordinating Committee met on January 24 and 25, 2017, and provided a recommendation of “conditional support for rulemaking” for use of the proposed measure in the LTCH QRP. The MAP’s conditions of support include as a part of measure implementation, that CMS provide guidance on the correct collection and calculation of the measure result. CMS intends to comply with all conditions recommended by the MAP and will engage in intensive training and guidance efforts to ensure appropriate calculation of the measure.

For the LTCH QRP ventilator weaning measures, Compliance with Spontaneous Breathing Trial (SBT) by Day 2 of the LTCH Stay and Ventilator Liberation Rate, the MAP met on December 12, 2014 and again on December 14 and 15, 2015. For the Compliance with SBT by Day 2 of the LTCH Stay measure, the MAP encouraged continued development, acknowledging that there is evidence for interventions that improve ventilator care, that variation in quality of care exists among LTCHs, and that ventilator care is an important safety priority for LTCHs. Pursuant to MAP review and recommendations, we have continued to refine this proposed measure and these activities are described more fully below. For the Ventilator Liberation Rate measure, the MAP encouraged continued development, stating that this measure has high value potential for the LTCH QRP because successful weaning is important for improving quality of life and decreasing morbidity, mortality, and resource use among patients. We have continued to refine these measures and these activities are described more fully below. CMS has consistently used the MAP process to improve measures prior to rulemaking and implementation and to ensure continued enhancement of the LTCH QRP. We believe that the measures have been fully and robustly developed, and believe they are appropriate for implementation and should not be delayed.

*Comment:* Several commenters expressed concern that quality measures proposed for the LTCH QRP may not be fully supported by a TEP. Commenters recommended that CMS obtain full support by a TEP before proposing measures for the LTCH QRP. In addition, commenters requested that the TEPs that evaluate measures under

consideration for the LTCH QRP include members who work in the LTCH setting.

*Response:* TEP members are a valuable part of the measure development process, and we would like to note that we take all TEP input into consideration as we develop and refine all quality measure work. When our measurement development contractors convene TEPs, they ensure we have a group of individuals that represents a wide range of clinical, consumer, and academic expertise in order to balance discipline and experience. Further, individuals are selected for TEPs because they are relevant subject matter experts who have knowledge of measure development and clinical expertise. For the LTCH QRP, selected TEP members typically include experts who work in the LTCH setting. We would like to note that the overarching purpose of a TEP is to obtain technical input on CMS work that is under development so that stakeholders can add input early in the development process.

*Comment:* A few commenters expressed concern regarding the intent of the IMPACT Act to facilitate care coordination and interoperability, stating there is currently a lack of comparability across PAC settings. One commenter expressed concern that data for assessment-based quality measures are collected on all patients in the LTCH setting, but collected only on Medicare Part A and Medicare Advantage patients/residents in the IRF and SNF settings, inhibiting cross-setting quality comparison. Another commenter noted that LTCHs are highly specialized acute care facilities that differ from other PAC settings in several key areas, including patient acuity levels, average length of patient stay, and regulatory requirements, making cross-setting comparison difficult. The commenter requested that CMS exercise care in the development of methods for and interpretation of findings related to differences across PAC settings. Another commenter noted some measures proposed for the LTCH QRP were not proposed in other PAC settings. The commenter suggested CMS implement all proposed LTCH QRP measures in every PAC setting and implement future PAC QRP measures in every PAC setting.

*Response:* Our intent is to develop standardized measures that can be collected across the LTCH, IRF, SNF, and HHA settings. However, we also recognize that each of these PAC settings is different in terms of patient mix, including complexity of care needed, therapies required, and length of stay. For this reason, we believe that

in addition to adopting cross-setting measures that apply to all four settings, it is appropriate to adopt measures specific to each individual PAC setting that address a quality issue unique to that setting.

*Comment:* Several commenters expressed concern regarding the increasing burden of reporting data under the current LTCH QRP. One commenter noted that reporting the proposed new data elements and related sub-elements will require additional facility clinical staff time, which may take time away from patient care. One commenter expressed concern that the value of data collection under the LTCH QRP is unsubstantiated. Another commenter stated that the reported data goes unused. One commenter encouraged CMS to reconsider the necessity of the new data elements and requested additional clarification regarding these elements and reporting requirements.

*Response:* We appreciate commenters’ concerns regarding burden due to the LTCH QRP data collection requirements. We also appreciate the importance of avoiding undue burden on providers and will continue to evaluate and avoid any unnecessary burden associated with the implementation of the LTCH QRP. We will also continue to work with stakeholders to explore ways to decrease burden as our shared goal is to focus on improving patient care. In response to these concerns regarding burden, and as we discuss further below, we have decided not to finalize a number of the proposed standardized patient assessment data elements.

*Comment:* A commenter thanked CMS for the opportunity to comment on measures proposed for the LTCH QRP but expressed concern that complete measure specifications were not available for all proposed measures. The commenter requested that CMS provide an additional opportunity for public comment when complete measure specifications are available for all proposed measures. Another commenter expressed concern that complete specifications and appropriate crosswalks were not provided for all proposed measures, noting that these materials assist staff to appropriately implement measures and utilize data to improve patient care. The commenter requested that CMS make crosswalks available prior to measure implementation, within the final rule or in a separate publication.

*Response:* We posted complete measure specifications for each proposed measure at the same time that we issued the proposed rule, and those

specifications can be viewed at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html>. With the final rule, in accordance with our usual posting process, we will post all final measure specifications and associated measure documentation at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html>.

We interpret the commenter's concern about crosswalks to be related to crosswalks from ICD-10 codes to LTCH CARE Data Set items. We refer readers to section IX.C.11.d. of the preamble of this final rule where we respond to similar issues.

#### b. Accounting for Social Risk Factors in the LTCH QRP

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20086 through 20087), we discussed accounting for social risk factors in the LTCH QRP. We stated that we consider related factors that may affect measures in the LTCH QRP. We understand that social risk factors such as income, education, race and ethnicity, employment, disability, community resources, and social support (certain factors of which are also sometimes referred to as socioeconomic status (SES) factors or socio-demographic status (SDS) factors) play a major role in health. One of our core objectives is to improve beneficiary outcomes including reducing health disparities, and we want to ensure that all beneficiaries, including those with social risk factors, receive high quality care. In addition, we seek to ensure that the quality of care furnished by providers and suppliers is assessed as fairly as possible under our programs while ensuring that beneficiaries have adequate access to excellent care.

We have been reviewing reports prepared by the Office of the Assistant Secretary for Planning and Evaluation (ASPE)<sup>351</sup> and the National Academies of Sciences, Engineering, and Medicine on the issue of measuring and accounting for social risk factors in CMS' quality measurement and payment programs, and considering options on how to address the issue in these programs. On December 21, 2016, ASPE submitted a Report to Congress on a study it was required to conduct under section 2(d) of the IMPACT Act. The

<sup>351</sup> <https://aspe.hhs.gov/pdf-report/report-congress-social-risk-factors-and-performance-under-medicare-value-based-purchasing-programs>.

study analyzed the effects of certain social risk factors of Medicare beneficiaries on quality measures and measures of resource use used in one or more of nine Medicare value-based purchasing programs.<sup>352</sup> The report also included considerations for strategies to account for social risk factors in these programs. In a January 10, 2017 report released by The National Academies of Sciences, Engineering, and Medicine, that body provided various potential methods for measuring and accounting for social risk factors, including stratified public reporting.<sup>353</sup>

In addition, the NQF undertook a 2-year trial period in which new measures, measures undergoing maintenance review, and measures endorsed with the condition that they enter the trial period were assessed to determine whether risk adjustment for selected social risk factors was appropriate for these measures. A measure from the LTCH QRP was addressed in this trial (All-Cause Unplanned Readmission Measure for 30-Days Post-Discharge from LTCHs (NQF #2512)). This trial entailed temporarily allowing inclusion of social risk factors in the risk-adjustment approach for these measures. The trial has concluded, and NQF will issue recommendations on the future inclusion of social risk factors in risk adjustment for quality measures.

As we continue to consider the analyses and recommendations from these reports and await the recommendations of the NQF trial on risk adjustment for quality measures, we are continuing to work with stakeholders in this process. As we have previously communicated, we are concerned about holding providers to different standards for the outcomes of their patients with social risk factors because we do not want to mask potential disparities or minimize incentives to improve the outcomes for disadvantaged populations. Keeping this concern in mind, while we sought input on this topic previously, we continue to seek public comment on whether we should account for social risk factors in measures in the LTCH QRP, and if so, what method or combination of methods would be most appropriate for accounting for social risk factors. Examples of methods include: Confidential reporting to

<sup>352</sup> <https://aspe.hhs.gov/pdf-report/report-congress-social-risk-factors-and-performance-under-medicare-value-based-purchasing-programs>.

<sup>353</sup> National Academies of Sciences, Engineering, and Medicine. 2017. Accounting for social risk factors in Medicare payment. Washington, DC: The National Academies Press.

providers of measure rates stratified by social risk factors; public reporting of stratified measure rates; and potential risk adjustment of a particular measure as appropriate based on data and evidence.

In addition, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20086 through 20087), we sought public comment on which social risk factors might be most appropriate for reporting stratified measure scores and/or potential risk adjustment of a particular measure. Examples of social risk factors include, but are not limited to, dual eligibility/low-income subsidy, race and ethnicity, and geographic area of residence. We also sought comments on which of these factors, including current data sources where this information would be available, could be used alone or in combination, and whether other data should be collected to better capture the effects of social risk. We will take commenters' input into consideration as we continue to assess the appropriateness and feasibility of accounting for social risk factors in the LTCH QRP. We note that any such changes would be proposed through future notice and comment rulemaking.

We look forward to working with stakeholders as we consider the issue of accounting for social risk factors and reducing health disparities in CMS programs. Of note, implementing any of the above methods would be taken into consideration in the context of how this and other CMS programs operate (for example, data submission methods, availability of data, statistical considerations relating to reliability of data calculations, among others), so we also sought comment on operational considerations. CMS is committed to ensuring that its beneficiaries have access to and receive excellent care, and that the quality of care furnished by providers and suppliers is assessed fairly in CMS programs.

*Comment:* We received several comments in response to our request for public comment on whether we should account for social risk factors in the LTCH QRP. Some commenters expressed appreciation for the agency's efforts and ongoing consideration of this issue. Commenters were generally supportive of accounting for social risk factors for LTCH QRP quality measures. Many commenters expressed concerns that not adjusting for social risk factors may lead to the appearance of low quality of care for LTCHs that treat more underserved patients. Some commenters noted that lack of adjustment for social risk factors may impact beneficiaries' access to care. A few commenters encouraged CMS to consider the results

of NQF's SES trial period and closely monitor recommendations from the NQF Disparities Standing Committee.

A few commenters expressed concerns with accounting for social risk factors. One commenter noted that adjusting for social risk factors may mask potential disparities and create disincentives to improve outcomes for vulnerable populations. Similarly, another commenter cautioned that the misapplication of social risk factors in the calculation of measures may create unintended consequences for disadvantaged groups.

Regarding the methodology for risk adjustment, some commenters made specific recommendations regarding the type of risk adjustment to be used. Commenters suggested approaches for CMS to consider, such as reporting of performance stratified by certain social risk factors. A few commenters drew attention to how adjustment should be conducted on a measure-specific basis, as different social risk factors affect different outcomes. One commenter recommended that quality measures reflecting processes within the control of a provider, such as pressure ulcer incidence, not be stratified by SES factors. Other commenters recommended adjusting for social risk factors, specifically for resource use measures assessing potentially preventable readmissions, discharge to community, and Medicare spending per beneficiary. Several commenters recommended conducting additional testing and evaluating this on a measure by measure basis.

In addition to support for CMS' suggested categories of race/ethnicity, dual eligibility status, and geographical location, specific, commenters suggested social risk factors for consideration, including patient-level factors like caregiver availability, disability, income, education, presence of pre-morbid assistance, and health care literacy. Commenters also suggested community resources and other factors such as access to adequate housing, medications, food, transportation, and availability of primary care. Some commenters also recommended specific data sources, such as administrative data for dual eligibility or US census data to derive SES or SDS data. A few commenters supported data collection of SES or SDS elements by LTCHs or patient-reported information. One commenter suggested formal assessment of caregiver capacity to facilitate discharge planning. Another commenter suggested the use of confidential patient-reported data to determine social risk.

There were a few comments discussing confidential and public reporting of data adjusted for social risk factors. Some commenters supported either statistical risk-adjustment or stratifying performance for public reporting. One commenter suggested that confidential feedback reports could include unadjusted performance.

*Response:* As we have previously stated, we are concerned about holding providers to different standards for the outcomes of their patients with social risk factors, because we do not want to mask potential disparities. We believe that the path forward should incentivize improvements in health outcomes for disadvantaged populations while ensuring that beneficiaries have adequate access to excellent care. We will consider all suggestions as we continue to assess each measure and the overall program. We intend to explore options including but not limited to measure stratification by social risk factors in a consistent manner across programs, informed by considerations of stratification methods described in section IX.A.13. of the preamble of this final rule. We thank commenters for this important feedback and will continue to consider options to account for social risk factors that would allow us to view disparities and potentially incentivize improvement in care for patients and beneficiaries. We are considering providing feedback to providers on outcomes for individuals with social risk factors in confidential reports.

### 3. Collection of Standardized Patient Assessment Data Under the LTCH QRP

#### a. Definition of Standardized Patient Assessment Data

Section 1886(m)(5)(F)(ii) of the Act requires that, for fiscal year 2019 (beginning October 1, 2018) and each subsequent year, LTCHs report standardized patient assessment data required under section 1899B(b)(1) of the Act. For purposes of meeting this requirement, section 1886(m)(5)(F)(iii) of the Act requires an LTCH to submit the standardized patient assessment data required under section 1899B(b)(1) of the Act using the standard instrument in a time, form, and manner specified by the Secretary.

Section 1899B(b)(1)(B) of the Act describes standardized patient assessment data as data required for at least the quality measures described in section 1899B(c)(1) of the Act and that is with respect to the following categories:

- Functional status, such as mobility and self-care at admission to a PAC

provider and before discharge from a PAC provider;

- Cognitive function, such as ability to express ideas and to understand and mental status, such as depression and dementia;

- Special services, treatments and interventions such as the need for ventilator use, dialysis, chemotherapy, central line placement and total parenteral nutrition;

- Medical conditions and comorbidities such as diabetes, congestive heart failure and pressure ulcers;

- Impairments, such as incontinence and an impaired ability to hear, see or swallow; and

- Other categories deemed necessary and appropriate.

As required under section 1899B(b)(1)(A) of the Act, the standardized patient assessment data must be reported at least with respect to LTCH admissions and discharges, but the Secretary may require the data to be reported more frequently. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20087 through 20088), we proposed to define the standardized patient assessment data that LTCHs must report to comply with section 1886(m)(5)(F)(ii) of the Act, as well as the requirements for the reporting of these data. The collection of standardized patient assessment data is critical to our efforts to drive improvement in health care quality across the four PAC settings to which the IMPACT Act applies. We intend to use these data for a number of purposes, including facilitating their exchange and longitudinal use among health care providers to enable high quality care and outcomes through care coordination, as well as for quality measure calculation and identifying comorbidities that might increase the medical complexity of a particular admission.

LTCHs are currently required to report patient assessment data through the Long-Term Care Hospital Continuity Assessment Record and Evaluation Data Set (LTCH CARE Data Set or LCDS) by responding to an identical set of assessment questions using an identical set of response options (we refer to each solitary question/response option as a data element and we refer to a group of questions/responses as data elements), both of which incorporate an identical set of definitions and standards. The primary purpose of the identical questions and response options is to ensure that we collect a set of standardized data elements across LTCHs which can then be used for a number of purposes, including LTCH

payment and measure calculation for the LTCH QRP.

SNFs, IRFs, and HHAs are also required to report patient assessment data through their applicable PAC assessment instruments, and they do so by responding to identical assessment questions developed for their respective settings using an identical set of response options (which incorporate an identical set of definitions and standards). Like the LCDS, the questions and response options for each of these other PAC assessment instruments are standardized across the PAC provider type to which the PAC assessment instrument applies. However, the assessment questions and response options in the four PAC assessment instruments are not currently standardized with each other. As a result, questions and response options that appear on the LCDS cannot be readily compared with questions and response options that appear, for example, on the Inpatient Rehabilitation Facility-Patient Assessment Instrument (IRF-PAI), the PAC assessment instrument used by IRFs. This is true even when the questions and response options are similar. This lack of standardization across the four PAC providers has limited our ability to compare one PAC provider type with another for purposes such as care coordination and quality improvement.

To achieve a level of standardization across SNFs, LTCHs, IRFs, and HHAs that enables us to make comparisons between them, we proposed to define “standardized patient assessment data” as patient assessment questions and response options that are identical in all four PAC assessment instruments, and to which identical standards and definitions apply.

Standardizing the questions and response options across the four PAC assessment instruments will also enable the data to be interoperable, allowing it to be shared electronically, or otherwise, between PAC provider types. It will enable the data to be comparable for various purposes, including the development of cross-setting quality measures, which may enhance provider and patient choice when selecting a post-acute care setting that will deliver the best outcome possible, and to inform payment models that take into account patient characteristics rather than setting, as described in the IMPACT Act.

We invited public comment on this proposed definition.

*Comment:* A commenter expressed support for the proposed definition of standardized patient assessment data.

*Response:* We thank the commenter for its support.

After consideration of the public comments we received, we are finalizing, as proposed, the definition of standardized patient assessment data for the LTCH QRP.

#### b. General Considerations Used for the Selection of Standardized Patient Assessment Data

As part of our effort to identify appropriate standardized patient assessment data for purposes of collecting under the LTCH QRP, we sought input from the general public, stakeholder community, and subject matter experts on items that would enable person-centered, high quality health care, as well as access to longitudinal information to facilitate coordinated care and improved beneficiary outcomes.

To identify optimal data elements for standardization, our data element contractor organized teams of researchers for each category, and each team worked with a group of advisors made up of clinicians and academic researchers with expertise in PAC. Information-gathering activities were used to identify data elements, as well as key themes related to the categories described in section 1899B(b)(1)(B) of the Act. In January and February 2016, our data element contractor also conducted provider focus groups for each of the four PAC provider types, and a focus group for consumers that included current or former PAC patients and residents, caregivers, ombudsmen, and patient advocacy group representatives. The Development and Maintenance of Post-Acute Care Cross-Setting Standardized Patient Assessment Data Focus Group Summary Report is available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Post-Acute-Care-Quality-Initiatives/IMPACT-Act-of-2014/IMPACT-Act-Downloads-and-Videos.html>.

Our data element contractor also assembled a 16-member TEP that met on April 7 and 8, 2016, and January 5 and 6, 2017, in Baltimore, Maryland, to provide expert input on data elements that are currently in each PAC assessment instrument, as well as data elements that could be standardized. The Development and Maintenance of Post-Acute Care Cross-Setting Standardized Patient Assessment Data TEP Summary Reports are available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Post-Acute-Care-Quality-Initiatives/IMPACT-Act-of-2014/IMPACT-Act-Downloads-and-Videos.html>.

As part of the environmental scan, data elements currently in the four existing PAC assessment instruments were examined to see if any could be considered for proposal as standardized patient assessment data. Specifically, this evaluation included consideration of data elements in OASIS-C2 (effective January 2017); IRF-PAI, v1.4 (effective October 2016); LCDS, v3.00 (effective April 2016); and MDS 3.0, v1.14 (effective October 2016). Data elements in the standardized assessment instrument that we tested in the Post-Acute Care Payment Reform Demonstration (PAC PRD)—the Continuity Assessment Record and Evaluation (CARE)—were also considered. A literature search was also conducted to determine whether additional data elements to propose as standardized patient assessment data could be identified.

We also held four Special Open Door Forums (SODFs) on October 27, 2015; May 12, 2016; September 15, 2016; and December 8, 2016, to present data elements we were considering and solicit input. At each SODF, some stakeholders provided immediate input, and all were invited to submit additional comments via the CMS IMPACT Mailbox at: [PACQualityInitiative@cms.hhs.gov](mailto:PACQualityInitiative@cms.hhs.gov).

We also convened a meeting with federal agency subject matter experts (SMEs) on May 13, 2016. In addition, a public comment period was open from August 12 to September 12, 2016, to solicit comments on detailed candidate data element descriptions, data collection methods, and coding methods. The IMPACT Act Public Comment Summary Report containing the public comments (summarized and verbatim) and our responses is available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Post-Acute-Care-Quality-Initiatives/IMPACT-Act-of-2014/IMPACT-Act-Downloads-and-Videos.html>.

We specifically sought to identify standardized patient assessment data that we could feasibly incorporate into the LTCH, IRF, SNF, and HHA assessment instruments and that have the following attributes: (1) Being supported by current science; (2) testing well in terms of their reliability and validity, consistent with findings from the PAC PRD; (3) the potential to be shared (for example, through interoperable means) among PAC and other provider types to facilitate efficient care coordination and improved beneficiary outcomes; (4) the potential to inform the development of quality, resource use and other

measures, as well as future payment methodologies that could more directly take into account individual beneficiary health characteristics; and (5) the ability to be used by practitioners to inform their clinical decision and care planning activities. We also applied the same considerations that we apply with quality measures, including the CMS Quality Strategy which is framed using the three broad aims of the National Quality Strategy.

**4. Policy for Retaining LTCH QRP Measures and Application of That Policy to Standardized Patient Assessment Data**

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53614 through 53615), we adopted a policy that would allow any quality measure adopted for use in the LTCH QRP to remain in effect until the measure is removed, suspended, or replaced. For further information on how measures are considered for removal, suspension, or replacement, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53614 through 53615). In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20089), we proposed to apply this policy to the standardized patient assessment data that we adopt for the LTCH QRP.

We invited public comment on our proposal.

*Comment:* Some commenters expressed support for applying the CMS policy for retaining LTCH QRP measures to the standardized patient assessment data. Another commenter disagreed with applying the existing policy to standardized patient assessment data, and encouraged CMS to remove items with unsubstantiated

value as soon as possible. The commenter also stated that CMS should alleviate the data collection burden on providers as soon as it is practicable.

*Response:* Standardized patient assessment data elements are used to collect data for quality measures. Therefore, standardized patient assessment elements that support such data collection follow the policy for quality measures that, once adopted, are retained until CMS determines that the quality measure should be removed. This determination is based on specific criteria for removal, suspension, or replacement. For any such removal, the public will be given a chance to comment through the notice-and-comment rulemaking process.

We understand the concerns raised by commenters to alleviate the data collection burden on providers resulting from the finalization of our standardized patient assessment data proposals. We strive to balance implementing the reporting requirements of standardized patient assessment data and responding to burden concerns.

After consideration of the public comments we received, we are finalizing our proposal, as proposed, to apply the policy for retaining LTCH QRP measures to the standardized patient assessment data that we adopt for the LTCH QRP.

**5. Policy for Adopting Changes to LTCH QRP Measures and Application of That Policy for Adopting Changes to Standardized Patient Assessment Data**

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53615 through 53616), we adopted a subregulatory process to incorporate updates to LTCH quality

measure specifications that do not substantively change the nature of the measure. Under that policy, substantive changes to quality measures are proposed and finalized through rulemaking. For further information on what constitutes a substantive versus a nonsubstantive change and the subregulatory process we use to make nonsubstantive changes to measures, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53615 through 53616). In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20089), we proposed to apply this policy to the standardized patient assessment data that we adopt for the LTCH QRP.

We invited public comment on our proposal.

*Comment:* Several commenters supported CMS' subregulatory process for adopting nonsubstantive changes to LTCH QRP measures. One commenter expressed support for applying this approach to the standardized patient assessment data proposed for the LTCH QRP.

*Response:* We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal, as proposed, to apply our policy for adopting changes to LTCH QRP measures to the standardized patient assessment data that we adopt for the LTCH QRP.

**6. Quality Measures Currently Adopted for the LTCH QRP**

The LTCH QRP currently has 17 adopted measures as outlined in the table below:

**QUALITY MEASURES CURRENTLY ADOPTED FOR THE LTCH QRP**

Short name	Measure name & data source
<b>LTCH CARE Data Set</b>	
Pressure Ulcers .....	Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678).
Patient Influenza Vaccine .....	Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short Stay) (NQF #0680).
Application of Falls .....	Application of Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674).*
Functional Assessment .....	Percent of Long-Term Care Hospital (LTCH) Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631).
Application of Functional Assessment	Application of Percent of Long-Term Care Hospital (LTCH) Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631).
Change in Mobility .....	Functional Outcome Measure: Change in Mobility Among Long-Term Care Hospital (LTCH) Patients Requiring Ventilator Support (NQF #2632).
DRR .....	Drug Regimen Review Conducted With Follow-Up for Identified Issues—Post Acute Care (PAC) Long-Term Care Hospital (LTCH) Quality Reporting Program (QRP).*
<b>NHSN</b>	
CAUTI .....	National Healthcare Safety Network (NHSN) Catheter-Associated Urinary Tract Infection Outcome Measure (NQF #0138).
CLABSI .....	National Healthcare Safety Network (NHSN) Central Line-Associated Bloodstream Infection Outcome Measure (NQF #0139).

QUALITY MEASURES CURRENTLY ADOPTED FOR THE LTCH QRP—Continued

Short name	Measure name & data source
MRSA .....	National Healthcare Safety Network (NHSN) Facility-wide Inpatient Hospital-onset Methicillin-resistant Staphylococcus aureus (MRSA) Bacteremia Outcome Measure (NQF #1716).
CDI .....	National Healthcare Safety Network (NHSN) Facility-wide Inpatient Hospital-onset Clostridium difficile Infection (CDI) Outcome Measure (NQF #1717).
HCP Influenza Vaccine .....	Influenza Vaccination Coverage among Healthcare Personnel (NQF #0431).
VAE .....	National Healthcare Safety Network (NHSN) Ventilator-Associated Event (VAE) Outcome Measure.*
<b>Claims-based</b>	
All-Cause Readmissions .....	All-Cause Unplanned Readmission Measure for 30-Days Post-Discharge from Long-Term Care Hospitals (LTCHs) (NQF #2512).
MSPB .....	Medicare Spending Per Beneficiary (MSPB)—Post Acute Care (PAC) Long-Term Care Hospital (LTCH) Quality Reporting Program (QRP).*
DTC .....	Discharge to Community—Post Acute Care (PAC) Long-Term Care Hospital (LTCH) Quality Reporting Program (QRP).*
PPR .....	Potentially Preventable 30-Day Post-Discharge Readmission Measure for Long-Term Care Hospital (LTCH) Quality Reporting Program (QRP).*

\* Not currently NQF-endorsed for the LTCH setting.

We received comments about quality measures currently adopted for the LTCH QRP. The comments are summarized and discussed below.

*Comment:* A few commenters expressed views regarding Medicare Spending per Beneficiary—PAC LTCH QRP, a measure previously finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57199 through 57207). Commenters addressed the risk-adjustment approach, episode length, accounting for social risk factors, and potential for unintended consequences related to implementation of the measure. Some commenters encouraged CMS to utilize claims and patient assessment data to incorporate functional status into the risk-adjustment. One commenter recommended expanding the associated services period from 30 days to 180 days post-PAC discharge in order to enhance the measure’s capacity to identify improvements in medically complex populations. Another commenter expressed concern that PAC providers’ performance on this measure would focus on costs per patient, without fully accounting for patient outcomes, and that efficiency should not be based solely on the MSPB—PAC measures. This commenter also noted that this measure may result in limiting access to certain patients.

*Response:* Since no changes were proposed to the previously finalized measure, Medicare Spending per Beneficiary—PAC LTCH QRP, the comments received are outside the scope of the current rule. We addressed these issues in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57199 through 57207), and we refer the reader to that detailed discussion. We continue to believe that the measure specifications,

including the risk-adjustment and episode length, are appropriate for this measure. With regard to comments related to accounting for social risk factors, we refer readers to section IX.C.2.b. of the preamble of this final rule.

*Comment:* A few commenters expressed views related to Discharge to Community—PAC LTCH QRP, a measure previously finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57207 through 57215). Commenters suggested excluding patients who died in the observation window following return to a community setting, distinguishing between a patient’s return to home in the community versus home in a custodial nursing facility, assessing reliability and validity of the claims discharge status code used to calculate the measure, and accounting for social risk factors.

*Response:* Since no changes were proposed to the previously finalized Discharge to Community—PAC LTCH QRP measure, the comments received are outside the scope of the current rule. We addressed these issues in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57207 through 57215), and we refer readers to that rule for a detailed discussion of these issues. We also note that in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20098), we sought comment on the exclusion of baseline nursing facility residents as a potential future modification of the Discharge to Community—PAC LTCH QRP measure. We refer readers to section IX.C.9.a. of the preamble of this final rule for a discussion of this issue. With regard to comments related to social risk factors, we refer readers to section IX.C.2.b. of the preamble of this final rule.

*Comment:* A few commenters expressed views regarding the Potentially Preventable 30-Day Post-Discharge Readmission Measure for LTCH QRP, a measure previously finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57215 through 57219). Commenters expressed support for this measure, but encouraged further measure testing. They also suggested some modifications to the measure, such as excluding readmissions for conditions unrelated to the initial reason for LTCH admission and risk adjusting for certain patient characteristics, such as “hospital dependent” patients. Commenters also expressed views related to accounting for social risk factors.

*Response:* Since no changes were proposed to the previously finalized measure, Potentially Preventable 30-Day Post-Discharge Readmission Measure for LTCH QRP, comments received are outside the scope of the current rule. We addressed these issues in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57215 through 57219), and we refer the reader to that detailed discussion. We continue to believe that the measure specifications are appropriate for this measure. We also refer readers to section IX.C.2.b. of the preamble of this final rule for responses to comments received related to social risk factors for this measure.

*Comment:* We received a comment regarding the Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short Stay) (NQF #0680) and Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431) measures. The commenter supported the continued inclusion of the previously adopted measure,

Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431), in the LTCH QRP. The commenter also supported CMS' proposal to extend the data collection period for the Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short Stay) (NQF #0680) measure to allow for accurate calculation of the measure outcome.

*Response:* Since no changes were proposed to the previously finalized measures, Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short Stay) (NQF #0680) and Influenza Vaccination Coverage among Healthcare Personnel (NQF #0431), the comments received are outside the scope of the current rule. We addressed these issues in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57227 through 57229) for the Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short Stay) (NQF #0680) measure and in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53630 through 53631) for the Influenza Vaccination Coverage among Healthcare Personnel (NQF #0431) measure. We refer readers to those rules for a detailed discussion. We continue to believe the inclusion of these influenza measures are important for the LTCH setting.

*Comment:* A commenter requested additional information regarding the Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and A Care Plan That Addresses Function (NQF #2631) and the Application of Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and A Care Plan That Addresses Function (NQF #2631), measures previously finalized in the FY 2015 IPPS/LTCH PPS final rule and FY 2016 IPPS/LTCH PPS final rule, respectively. The commenter requested that CMS provide detailed examples for coding a patient's discharge functional goals, and suggested removing the gateway mobility item for both measures that have been previously finalized.

*Response:* Since no changes were proposed to the previously finalized measures, Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and A Care Plan That Addresses Function (NQF #2631) and Application of Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and A Care Plan That Addresses Function (NQF #2631), the comments received

are outside the scope of the current rule. We addressed these issues in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50291 through 50298) and the FY 2016 IPPS/LTCH PPS final rule (80 FR 49739 through 49747), respectively. We refer readers to those rules for a detailed discussion.

We also provide examples of coding goals in Section GG of the LTCH QRP Manual, which is available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-CARE-Data-Set-and-LTCH-QRP-Manual.html>.

#### 7. LTCH QRP Quality Measures Beginning With the FY 2020 LTCH QRP

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20090 through 20097), beginning with the FY 2020 LTCH QRP, in addition to the quality measures we are retaining under our policy described in section IX.C.4. of the preamble of this final rule, we proposed to remove the current pressure ulcer measure entitled Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678) and replace it with a modified version of the measure entitled Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury and adopt two new measures (one process and one outcome) related to ventilator weaning. We also proposed to characterize the data elements described below as standardized patient assessment data under section 1899B(b)(1)(B) of the Act that must be reported by LTCHs under the LTCH QRP through the LTCH CARE Data Set.

The proposed measures are as follows:

- Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury
- Compliance with Spontaneous Breathing Trial (SBT) by Day 2 of the LTCH Stay
- Ventilator Liberation Rate

The measures are described in more detail below.

a. Finalized Policy To Replace the Current Pressure Ulcer Quality Measure, Percent of Residents or Patients With Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), With a Modified Pressure Ulcer Measure, Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury

##### (1) Measure Background

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20090 through 20092), we proposed to remove the current pressure ulcer measure, Percent of Residents or Patients with Pressure

Ulcers That Are New or Worsened (Short Stay) (NQF #0678), from the LTCH QRP measure set and to replace it with a modified version of that measure, Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury, beginning with the FY 2020 LTCH QRP. The change in the measure name is to reduce confusion about the new modified measure. The modified version differs from the current version of the measure because it includes new or worsened unstageable pressure ulcers, including deep tissue injuries (DTIs), in the measure numerator. The proposed modified version of the measure also contains updated specifications intended to eliminate redundancies in the assessment items needed for its calculation and to reduce the potential for underestimating the frequency of pressure ulcers. The modified version of the measure would satisfy the IMPACT Act domain of skin integrity and changes in skin integrity.

##### (2) Measure Importance

As described in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51754 through 51756), pressure ulcers are high-cost adverse events and an important measure of quality. For information on the history and rationale for the relevance, importance, and applicability of having a pressure ulcer measure in the LTCH QRP, we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51748 through 51750) and the FY 2014 IPPS/LTCH PPS final rule (78 FR 50861 through 50863).

We proposed to adopt a modified version of the current pressure ulcer measure because unstageable pressure ulcers, including DTIs, are similar to Stage 2, Stage 3, and Stage 4 pressure ulcers in that they represent poor outcomes, are a serious medical condition that can result in death and disability, are debilitating and painful, and are often an avoidable outcome of medical care.<sup>354 355 356 357 358 359</sup> Studies

<sup>354</sup> Casey, G. (2013). "Pressure ulcers reflect quality of nursing care." *Nurs N Z* 19(10): 20–24.

show that most pressure ulcers can be avoided and can also be healed in acute, post-acute, and long-term care settings with appropriate medical care.<sup>360</sup> Furthermore, some studies indicate that DTIs, if managed using appropriate care, can be resolved without deteriorating into a worsened pressure ulcer.<sup>361 362</sup>

While there are few studies that provide information regarding the incidence of unstageable pressure ulcers in PAC settings, an analysis conducted by a contractor suggests the incidence of unstageable pressure ulcers varies according to the type of unstageable pressure ulcer and setting.<sup>363</sup> This analysis examined the national incidence of new unstageable pressure ulcers in LTCHs at discharge compared with admission using LTCH discharges from January through December 2015. The contractor found a national incidence of 1.15 percent of new unstageable pressure ulcers due to slough and/or eschar, 0.05 percent of new unstageable pressure ulcers due to non-removable dressing/device, and 1.01 percent of new DTIs. In addition, an international study spanning the time period 2006 to 2009 provides some evidence to suggest that the proportion of pressure ulcers identified as DTI has increased over time.<sup>364</sup> The study found DTIs increased by three fold, to nine percent of all observed ulcers in 2009, and that DTIs were more prevalent than either Stage 3 or 4 ulcers. During the same time period, the proportion of Stage 1 and 2 ulcers decreased, and the proportion of Stage 3 and 4 ulcers remained constant.

The inclusion of unstageable pressure ulcers, including DTIs, in the numerator

of this measure is expected to increase measure scores and variability in measure scores, thereby improving the ability to discriminate among poor- and high-performing LTCHs. In the currently implemented pressure ulcer measure, Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), analysis using data from Quarter 1 through Quarter 4 2015 data reveals that the LTCH mean score is 1.95 percent; the 25th and 75th percentiles are 0.53 percent and 2.49 percent, respectively; and 12.11 percent of facilities have perfect scores. In the proposed measure, Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury, during the same time frame, the LTCH mean score is 3.73 percent; the 25th and 75th percentiles are 1.53 percent and 4.89 percent, respectively; and 5.46 percent of facilities have perfect scores.

### (3) Stakeholder Feedback

Our measure development contractor sought input from subject matter experts, including Technical Expert Panels (TEPs), over the course of several years on various skin integrity topics and specifically those associated with the inclusion of unstageable pressure ulcers, including DTIs. Most recently, on July 18, 2016, a TEP convened by our measure development contractor provided input on the technical specifications of this quality measure, including the feasibility of implementing the proposed measure's updates across PAC settings. The TEP supported the updates to the measure across PAC settings, including the inclusion in the numerator of unstageable pressure ulcers due to slough and/or eschar that are new or worsened, new unstageable pressure ulcers due to a non-removable dressing or device, and new DTIs. The TEP also supported the use of different data elements for measure calculation. The TEP recommended supplying additional guidance to providers regarding each type of unstageable pressure ulcer. This support was in agreement with earlier TEP meetings, held on June 13 and November 15, 2013, which had recommended that CMS update the specifications for the pressure ulcer measure to include unstageable pressure ulcers in the numerator.<sup>365 366</sup>

<sup>365</sup> Schwartz, M., Nguyen, K.H., Swinson Evans, T.M., Ignaczak, M.K., Thaker, S., and Bernard, S.L.: Development of a Cross-Setting Quality Measure for Pressure Ulcers: OY2 Information Gathering, Final Report. Centers for Medicare & Medicaid Services, November 2013. Available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Post-Acute-Care-Quality-Initiatives/Downloads/Development-of-a-Cross-Setting->

Exploratory data analysis conducted by our measure development contractor suggests that the addition of unstageable pressure ulcers, including DTIs, will increase the observed incidence and variation in the rate of new or worsened pressure ulcers at the facility level, which may improve the ability of the proposed quality measure to discriminate between poor- and high-performing facilities.

We solicited stakeholder feedback on this proposed measure by means of a public comment period held from October 17 through November 17, 2016. In general, we received considerable support for the proposed measure. A few commenters supported all of the changes to the current pressure ulcer measure that resulted in the proposed measure, with one commenter noting the significance of the work to align the pressure ulcer quality measure specifications across the PAC settings.

Many commenters supported the inclusion of unstageable pressure ulcers due to slough/eschar, due to non-removable dressing/device, and DTIs in the quality measure. Other commenters did not support the inclusion of DTIs in the quality measure because they stated that there is no universally accepted definition for this type of skin injury.

Some commenters provided feedback on the data elements used to calculate the proposed quality measure. We believe that these data elements will promote facilitation of cross-setting quality comparison as mandated by the IMPACT Act, alignment between quality measures and payment, reduction in redundancies in assessment items, and prevention of inappropriate underestimation of pressure ulcers. The currently implemented pressure ulcer measure is calculated using retrospective data elements that assess the number of new or worsened pressure ulcers at each stage, while the proposed measure is calculated using the number of unhealed pressure ulcers at each stage after subtracting the number that were present upon admission. Some commenters did not support the data elements that would be used to calculate the proposed measure,

*Quality-Measure-for-Pressure-Ulcers-Information-Gathering-Final-Report.pdf*.

<sup>366</sup> Schwartz, M., Ignaczak, M.K., Swinson Evans, T.M., Thaker, S., and Smith, L.: The Development of a Cross-Setting Pressure Ulcer Quality Measure: Summary Report on November 15, 2013, Technical Expert Panel Follow-Up Webinar. Centers for Medicare & Medicaid Services, January 2014. Available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Post-Acute-Care-Quality-Initiatives/Downloads/Development-of-a-Cross-Setting-Pressure-Ulcer-Quality-Measure-Summary-Report-on-November-15-2013-Technical-Expert-Pa.pdf>.

and requested further testing of these data elements. Other commenters supported the use of these data elements stating that these data elements simplified the measure calculation process.

The public comment summary report for the proposed measure is available on the CMS Web site at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Post-Acute-Care-Quality-Initiatives/IMPACT-Act-of-2014/IMPACT-Act-Downloads-and-Videos.html>. This summary includes further detail about our responses to various concerns and ideas stakeholders raised.

The NQF-convened Measures Application Partnership (MAP) Post-Acute Care/Long-Term Care (PAC/LTC) Workgroup met on December 14 and 15, 2016, and provided input to CMS about this measure. The Workgroup provided a recommendation of “support for rulemaking” for use of the proposed measure in the LTCH QRP. The MAP Coordinating Committee met on January 24 and 25, 2017, and provided a recommendation of “conditional support for rulemaking” for use of the proposed measure in the LTCH QRP. The MAP’s conditions of support include that, as a part of measure implementation, CMS provide guidance on the correct collection and calculation of the measure result, as well as guidance on public reporting Web sites explaining the impact of the specification changes on the measure result. The MAP’s conditions also specify that CMS continue analyzing the proposed measure in order to investigate unexpected results reported in public comment. We intend to fulfill these conditions by offering additional training opportunities and educational materials in advance of public reporting, and by continuing to monitor and analyze the proposed measure. More information about the MAP’s recommendations for this measure is available at: <http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=84452>.

We reviewed the NQF’s consensus endorsed measures and were unable to identify any NQF-endorsed pressure ulcer quality measures for PAC settings that are inclusive of unstageable pressure ulcers. There are related measures, but after careful review, we determined these measures are not applicable for use in LTCHs based on the populations addressed or other aspects of the specifications. We are unaware of any other such quality measures that have been endorsed or adopted by another consensus

organization for the LTCH setting. Therefore, based on the evidence discussed above, we proposed to adopt the quality measure entitled, Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury, for the LTCH QRP beginning with the FY 2020 LTCH QRP. We plan to submit the proposed measure to the NQF for endorsement consideration as soon as feasible.

#### (4) Data Collection

The data for this quality measure would be collected using the LTCH CARE Data Set, which is currently submitted by LTCHs through the QIES ASAP System. The proposed standardized patient assessment data applicable to this measure that must be reported by LTCHs for admissions as well as discharges occurring on or after April 1, 2018 is described in section IX.C.11. of the preamble of this final rule. While the inclusion of unstageable wounds in the proposed measure results in a measure calculation methodology that is different from the methodology used to calculate the current pressure ulcer measure, the data elements needed to calculate the proposed measure are already included on the LTCH CARE Data Set. In addition, our proposal to eliminate duplicative data elements that were used in calculation of the current pressure ulcer measure will result in an overall reduced reporting burden for LTCHs with respect to the proposed measure. To view the updated LTCH CARE Data Set, with the proposed changes, we refer readers to: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-CARE-Data-Set-and-LTCH-QRP-Manual.html>. For more information on LTCH CARE Data Set submission using the QIES ASAP System, we refer readers to: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Technical-Information.html>.

For technical information about this measure, including information about the measure calculation and the standardized patient assessment data elements used to calculate this measure, we refer readers to the document titled, *Final Specifications for LTCH QRP Quality Measures and Standardized Patient Assessment Data Elements*, available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html>.

We proposed that LTCHs would begin reporting the proposed pressure ulcer measure, Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury,

which will replace the current pressure ulcer measure, with data collection beginning April 1, 2018.

We invited public comment on our proposal to replace the current pressure ulcer measure, Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), with a modified version of that measure, entitled Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury, for the LTCH QRP beginning with the FY 2020 LTCH QRP.

*Comment:* Many commenters supported the proposed replacement of the current pressure ulcer measure, the Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), with a modified version of that measure, entitled Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury. Commenters appreciated that the implementation of this modified measure will reduce regulatory burden for providers while continuing to maintain a high standard for measuring the quality of care. Commenters also encouraged the expansion of this measure into other settings.

*Response:* We appreciate the commenters’ support, and also agree that this measure may be suitable to adapt for other settings.

*Comment:* Several commenters requested that additional testing analyses be conducted prior to the implementation of this measure. These commenters indicated that the purpose of this additional testing should be to verify that the specifications of this measure reflect actual differences in the care practices and the quality of care provided by LTCHs, rather than differences in compliance. Specifically, some commenters expressed concerns that the variation in measure scores between facilities could reflect differences in the interpretation of definitions for unstageable pressure ulcers or DTIs, rather than actual differences in quality or care practices. These commenters noted that a measure should not be changed to create performance variation, but rather to be consistent with current science or to provide clarity and consistent data collection. Commenters requested that additional guidance be provided to promote consistency in the way the new measure is interpreted among providers.

*Response:* We have performed testing to compare the performance of the proposed measure with the existing pressure ulcer/injury measure. Current findings indicate that the measure is both valid and reliable in the SNF, LTCH, and IRF settings. One of the differences between the current and

proposed pressure ulcer measure is that the proposed measure is calculated using the M0300 data element. Reliability and validity of the data elements used to calculate this quality measure have been tested in several ways.

Rigorous testing on both reliability and validity of the data elements in the MDS 3.0 provides evidence for the data elements used in the SNF, LTCH, and IRF settings.<sup>367</sup> The MDS 3.0 pilot test showed good reliability, and the results are applicable to the IRF-PAI as well as the LTCH CARE Data Set because the data elements tested are the same as those used in the IRF-PAI and LTCH CARE Data Set. Across pressure ulcer data elements, average gold-standard to gold-standard kappa statistic was 0.905. The average gold-standard to facility-nurse kappa statistic was 0.937. These kappa scores indicate “almost perfect” agreement using the Landis and Koch standard for strength of agreement.<sup>368</sup> Analyses conducted by the measure development contractor indicate that there is a high level of alignment between the M0300 data element and the M0800 data element, suggesting that the data elements assess an equivalent concept. Using the M0300 data elements improves accuracy by establishing a standardized calculation method.

A second main difference between the current and proposed pressure ulcer measures is that the proposed measure includes unstageable pressure ulcers, including DTIs, in the numerator of the quality measure, resulting in increased scores in all settings compared with the previously implemented pressure ulcer measure. An analysis conducted by the measure development contractor, using data from October through December 2016, showed mean scores increasing by 2.03 percentage points in LTCH. This is due to the fact that the proposed measure includes unstageable pressure ulcers, including DTIs, while the current measure does not, as well as the fact some pressure ulcers captured as new or worsened in the M0300 data element were not reported in the M0800 data element.

To assess the construct validity of this measure, or the degree to which the measure construct measures what it claims or purports to be measuring, our

<sup>367</sup> Saliba, D., & Buchanan, J. (2008, April). Development and validation of a revised nursing home assessment tool: MDS 3.0. Contract No. 500-00-0027/Task Order #2. Santa Monica, CA: Rand Corporation. Retrieved from: <http://www.cms.hhs.gov/NursingHomeQualityInits/Downloads/MDS30FinalReport.pdf>.

<sup>368</sup> Landis, R., & Koch, G. (1977, March). The measurement of observer agreement for categorical data. *Biometrics* 33(1), 159–174.

measure contractor sought input from TEPs over the course of several years. Most recently, on July 18, 2016, a TEP supported the inclusion in the numerator of unstageable pressure ulcers due to slough and/or eschar that are new or worsened, new unstageable pressure ulcers/injuries due to a non-removable dressing or device, and new DTIs. The measure testing activities were presented to TEP members for their input on the reliability, validity, and feasibility of this measure change. The TEP members supported the measure construct.

The proposed measure also increased the variability of measures scores between providers, as noted by some commenters. In the currently implemented pressure ulcer measure, analysis using 2015 data from Quarter 1 through Quarter 4 reveals that the LTCH mean score is 1.95 percent; the 25th and 75th percentiles are 0.53 percent and 2.49 percent, respectively; and 12.11 percent of facilities have perfect scores. In the proposed measure, during the same timeframe, the LTCH mean score is 3.73 percent; the 25th and 75th percentiles are 1.53 percent and 4.89 percent, respectively; and 5.46 percent of facilities have perfect scores. We would like to clarify that the goal of the proposed measure is not to create performance variation where none exists, but rather to better measure existing performance variation. This increased variability of scores between facilities will improve the ability of the measure to distinguish between high- and low-performing facilities. As described above, the proposed measure has been shown to be reliable and valid through testing of the measure and data elements, and input from stakeholders.

We will continue to perform reliability and validity testing in compliance with NQF guidelines and the Blueprint for the CMS Measures Management System to ensure that the measure demonstrates scientific acceptability (including reliability and validity) and meets the goals of the QRP. Finally, as with all measure development and implementation, we will provide training and guidance prior to implementation of the measure to promote consistency in the interpretation of the measure.

*Comment:* A few commenters stated that the M0300 data element assesses the total number of unhealed pressure ulcers at the time of admission and of those, the total number of unhealed pressure ulcers at the time of discharge, for each stage. One commenter expressed concern that the proposed measure may disfavor LTCHs that admit patients with pressure ulcers because

those pressure ulcers might not heal by the time the patients are discharged from the LTCH.

*Response:* We do not believe that this measure will disfavor LTCHs that admit patients who already have pressure ulcers. We wish to clarify that the proposed measure, Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury, is calculated using a subtraction method. The M0300 data element collects the number of unhealed pressure ulcers present at the time of the assessment (that is, discharge) for each stage, and the number of those pressure ulcers that were present upon admission. The pressure ulcers that were present upon admission are subtracted from the number of pressure ulcers at the same stage that are present at discharge and, as a result, are not included in the measure.

*Comment:* Commenters requested further training and guidance in completing the M0300 data element that will be used to calculate the proposed quality measure. Some commenters requested comprehensive guidance on completing the “present on admission” data element. Some commenters questioned how specific scenarios involving unstageable pressure ulcers should be coded. These commenters had questions about how to code a pressure ulcer that is unstageable at admission, and becomes numerically stageable during the patient’s stay, remaining at that stage at discharge. One commenter supported the proposed measure calculation approach, which will not count pressure ulcers that were present at the time of admission at the same stage, but stated that this would add complexity in coding and would require further training. One commenter stated that the use of these data elements would require LTCHs to calculate the number of new or worsened pressure ulcers by subtracting those present on admission. Some commenters stated that the modified measure may be difficult for providers to capture because they are being asked to report on a different data element.

*Response:* The measure will be calculated using data reported on the M0300 data element collected at discharge, which only requires LTCHs to report the number of pressure ulcers for each stage (including stages 2, 3 and 4, unstageable due to slough and/or eschar, unstageable due to non-removable dressing/device, and DTIs) and of those, the number that were present on admission. The M0300 data element currently exists on the LTCH CARE Data Set, and the current LTCH QRP Manual, as well as prior versions

of the Manual, include guidance about how to complete the M0300 data element in the scenarios described by the commenters, including unstageable pressure ulcers that become numerically stageable. The LTCH QRP Manual can be found at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-CARE-Data-Set-and-LTCH-QRP-Manual.html>.

We will provide further training, education, and guidance prior to implementation of the proposed measure. The LTCH QRP Manual will be updated with additional examples to further address the coding of unstageable pressure ulcers, and to provide further clarification on the coding of pressure ulcers/injuries that are “present on admission.”

*Comment:* Several comments expressed general support for the inclusion of all unstageable pressure ulcers in the proposed measure. One commenter stated that the measure will provide a more accurate picture of pressure ulcers and the quality of their prevention and treatment in PAC settings. This commenter stated that unstageable pressure ulcers may be prevented, accurately diagnosed, and effectively treated when they occur, that this measure will result in a more accurate picture of quality in post-acute care, and that the 2016 NPUAP staging definitions will help to improve diagnostic accuracy.

Some commenters did not support the inclusion of unstageable pressure ulcers in the quality measure as proposed. Some commenters stated that there is a lack of clear definitions for some types of unstageable pressure ulcers, and that those definitions may be too subjective to collect reliable data on unstageable pressure ulcers. One commenter requested that CMS clarify the criteria that would enable a LTCH to report that an unstageable pressure ulcer present on admission has improved by the time of discharge. One commenter stated that it was unclear whether mucosal pressure injuries are included in the measure, and what the definition of “worsened” is in the context of unstageable pressure ulcers. The commenter stated that it may not be possible to prevent unstageable pressure ulcers/injuries due to non-removable devices and dressings, or DTIs, and they questioned how this measure would inform improvement or inform the public. Commenters requested that CMS conduct additional testing to examine the inclusion of unstageable pressure ulcers.

*Response:* We appreciate the support we have received regarding the inclusion of unstageable pressure ulcers,

including DTIs, in the proposed quality measure. We believe that the inclusion of unstageable pressure ulcers in the measure will result in a fuller picture of quality to patients and families, and lead to further quality improvement efforts that will advance patient safety by reducing the rate of facility acquired pressure ulcers at any stage.

To provide greater clarity about the definitions of different types of unstageable pressure ulcers and how to code them on the LTCH CARE Data Set, we are currently engaged in multiple educational efforts. These include training events, updates to the manuals and training materials, and responses to Help Desk questions to promote understanding and proper coding of these data elements. We will continue to engage in these training activities prior to implementation of the proposed measure.

With regard to provider concerns regarding the inclusion of mucosal pressure ulcers, we wish to clarify that mucosal pressure ulcers are not included in this measure. Further instruction about these types of pressure ulcers is provided in the LTCH QRP Manual, which can be found at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-CARE-Data-Set-and-LTCH-QRP-Manual.html>. We would like to clarify that the data elements used to collect information about unstageable pressure ulcers do not reflect whether a pressure ulcer is improved at discharge compared to admission. Rather, the data element collects the number of pressure ulcers present at each stage (at discharge), and the number of those there were present at the same stage at admission.

*Comment:* One commenter specifically supported the inclusion of DTIs. This commenter stated that the currently implemented pressure ulcer measure is biased because it does not include DTIs, and that the inclusion of DTIs in the measure has value and directly impacts the patient. The commenter stated that prompt assessment for a DTI at early onset is optimal to initial treatment protocols, and that a well-trained clinician is able to discern DTIs during an assessment. Another commenter stated that these types of injuries may be prevented, accurately diagnosed and effectively treated when they occur, and that the 2016 NPUAP staging definitions may help to improve diagnostic accuracy.

Other commenters did not support the inclusion of DTIs in the measure. Some commenters stated that there is not a universally accepted definition of DTIs,

and one stated that DTIs are commonly misdiagnosed, which could lead to surveillance bias. One commenter stated that the category of DTI is not sufficiently mature enough to include in the measure, and that it may not be possible to prevent DTIs.

*Response:* We appreciate the comments regarding the specific inclusion of DTIs in the proposed quality measure. DTIs, often an avoidable outcome of medical care, are debilitating and painful, and can result in death and/or disability, similar to Stage 2, Stage 3 and Stage 4 pressure ulcers. While some DTIs may worsen, studies indicate that many DTIs, if managed using appropriate care, can be resolved without deteriorating into a worsened pressure ulcer. Therefore, we believe that the inclusion of DTIs in the proposed quality measure is essential to be able to accurately reflect the number of these types of pressure injuries and to provide the appropriate patient care. Further, we believe that it is important to do a thorough assessment on every patient in each PAC setting, including a thorough skin assessment documenting the presence of any pressure ulcers or injuries of any kind, including DTIs. We agree that it is important to conduct thorough and consistent assessments to avoid the possibility of surveillance bias.

When considering the addition of DTIs to the measure numerator, we convened cross-setting TEPs in June and November 2013, and obtained input from clinicians, experts, and other stakeholders. An additional cross-setting TEP convened by our measure development contractor in July 2016 also supported the recommendation to include unstageable pressure ulcers, including DTIs, in the numerator of the quality measure. Given DTIs’ potential impact on mortality, morbidity, and quality of life, it may be detrimental to the quality of care to exclude DTIs from a pressure ulcer quality measure.

*Comment:* A few commenters recommended that CMS attain NQF endorsement of the Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury measure prior to implementation.

*Response:* While this measure is not currently NQF-endorsed, we recognize that the NQF endorsement process is an important part of measure development and plan to submit this measure for NQF endorsement consideration as soon as feasible.

*Comment:* Some commenters supported adopting the NPUAP terminology regarding the use of the term “pressure injury.” These commenters believed that use of NPUAP

language will help facilitate the use of consistent definitions across PAC settings. One commenter expressed support for the term “injury” to describe “deep tissue injury,” but not other types of pressure ulcers. This commenter requested further clarification on the term “pressure ulcer/injury” used in the proposed rule for this measure.

Other commenters opposed the use of the new NPUAP terminology. Commenters stated that the term “injury” is not universally supported by wound care organizations, does not differentiate closed versus open wounds, is clinically inaccurate, and does not align with ICD-10 codes in use for pressure ulcers. These commenters indicated that, while the term “ulcer” is related to underlying medical conditions, the term “wound” is related to the results of operations and accidents, which may imply intentionality.

*Response:* We are aware of the array of terms used to describe alterations in skin integrity due to pressure. Some of these terms include: Pressure ulcer, pressure injury, pressure sore, decubitus ulcer, and bed sore. However, for purposes of the proposed measure, a skin condition should be coded on the LTCH CARE Data Set as a pressure ulcer if the primary cause of the skin condition is related to pressure. For example, if the medical record reflects the presence of a Stage 2 pressure injury, it should be coded on the assessment as a Stage 2 pressure ulcer.

A TEP held by our measure development contractor on July 15, 2016 was very supportive of adopting the NPUAP terminology of “pressure injury.” Some members of the TEP stated that the term “injury” may be a more inclusive term than “ulcer,” and that the term “pressure injury” may be more easily and positively understood by patients, residents, and family members than “pressure ulcer.” The TEP recommended training for providers and consumers regarding any change in terminology. We concur with the TEP’s recommendations. The purpose and intent of the measure is to provide increased surveillance of an important patient safety and quality of care issue, and language revisions are intended to ensure that patient wounds are captured in a comprehensive and systematic manner.

Regarding concerns about changes to ICD codes, we would like to clarify that the Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury measure is calculated using data elements from the LTCH CARE Data Set, and does not use ICD codes.

*Comment:* Several commenters expressed concern regarding the proposal to adopt a modified pressure ulcer measure. One commenter supported CMS’ efforts to implement this measure as it may reduce the burden of collecting assessment data. Other commenters believed that the implementation of the modified pressure ulcer measure will create additional administrative and financial burdens for LTCHs. One commenter urged CMS to postpone the implementation of this measure, stating that this would allow LTCHs additional time to improve their performance on the existing pressure ulcer quality measure.

*Response:* We do not believe that the reporting of the proposed measure will impose a new burden on LTCHs because the measure is calculated using data elements that are currently included in the LTCH CARE Data Set. Further, our proposal to remove duplicative data elements that we are finalizing in this final rule will result in an overall reduced reporting burden for providers for the proposed measure.

*Comment:* Several commenters recommended using both the M0300 and M0800 data elements to calculate the pressure ulcer measure, and recommended that CMS maintain the M0800 data elements on the LTCH CARE Data Set. These commenters stated that M0800 data elements are used by PAC providers to verify the number of patients with pressure ulcers that are new or worsened since admission, and believed that the use of M0300 data elements might require PAC staff to review both admission and discharge assessments when verifying the accuracy of measure calculation. One commenter found the M0800 data elements to be clear and concise.

*Response:* We proposed to collect the proposed measure using the M0300 data element, and to remove the M0800 from the LTCH CARE Data Set, because we have found that use of the M0800 data element could result in the underreporting of pressure ulcers. Using the M0300 data element improves the reporting accuracy by establishing a standardized calculation. Further, the use of the M0300 data element facilitates standardization of the measure across settings.

During a TEP meeting held on July 18, 2016, to discuss this measure, multiple TEP members preferred the wording of the M0300 data element, compared with the M0800 data element. TEP members stated that this data element may be clearer and reduce opportunities for error. We agree with these views, and we plan to provide additional training

opportunities to improve understanding of the data elements.

*Comment:* A few commenters noted that LTCH performance scores on the proposed measure are likely to differ from performance scores on the currently implemented pressure ulcer measure, Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678). They recommended development of educational materials for the public to explain the perceived shifts in performance.

*Response:* We appreciate commenters’ concerns about differences in performance scores between the two measures and the possibility of misinterpretation. While the proposed measure will not be directly comparable to the existing measure, it is expected to provide an improved measure of quality moving forward since it will more accurately capture the number of new and worsened pressure ulcers and include unstageable pressure ulcers. Further information and training will be provided to providers as well as consumers regarding how to interpret scores on the proposed measure, to avoid any possible confusion between the proposed measure and the existing measure.

*Comment:* One commenter suggested that we include additional risk factors in the proposed measure, including age, mechanical ventilation status of the patient, and incontinence associated dermatitis. The commenter also recommended that we revise the terminology to be more specific (that is, “diabetes mellitus” instead of “diabetes” and “impaired independent mobility” instead of “mobility”).

*Response:* We would like to note that this proposed quality measure will be risk adjusted for functional mobility admission performance, bowel continence, diabetes mellitus or peripheral vascular disease/peripheral arterial disease, and low body mass index in each of the four settings. In response to the commenters request for the use of more specific terminology of risk adjusters, we note that all terms are described in greater detail in the Specifications for LTCH QRP Quality Measures and Standardized Data Elements, available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html>. As with our measure modification and evaluation processes, we will continue to analyze this measure, specifically assessing the addition of variables to the risk adjustment model, and testing the

inclusion of other risk factors as additional risk adjusters. This continued refinement of the risk adjustment models will ensure that the measure remains valid and reliable to inform quality improvement within and across each PAC setting, and to fulfill the public reporting goals of quality reporting programs.

*Comment:* One commenter requested clarification on measure specification differences between LTCHs and other PAC settings. One commenter stated that there is an IMPACT Act mandate to implement “interoperable measures” across PAC settings.

*Response:* The Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury measure is harmonized across all PAC settings and uses standardized patient assessment data as required by the IMPACT Act. Further, we would like to clarify that the M0300 data element used to calculate this measure is standardized across all PAC settings, enabling interoperability. This standardization and interoperability of data elements allows for the exchange of information among PAC providers and other providers to whom this data is applicable. We refer readers to the measure specifications, which describe the specifications for the measure in PAC settings, *Final Specifications for LTCH QRP Quality Measures and Standardized Patient Assessment Data Elements*, available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html>.

After consideration of the public comments we received, we are finalizing our proposal to remove the current pressure ulcer measure, Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), from the LTCH QRP measure set and replace it with a modified version of that measure, entitled Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury, for the LTCH QRP with an implementation date of July 1, 2018.

b. Mechanical Ventilation Process Quality Measure: Compliance with Spontaneous Breathing Trial (SBT) by Day 2 of the LTCH Stay

Invasive mechanical ventilation care was identified through technical expert panels convened by our measure development contractor and public comment periods as a gap in the LTCH QRP measure set and aligns with the National Quality Strategy priority and the CMS Quality Strategy goal of “promoting the most effective

prevention and treatment practices” by reducing the risk of complications from unnecessarily prolonged mechanical ventilation. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20092 through 20095), we proposed to adopt the quality measure, Compliance with Spontaneous Breathing Trial (SBT) by Day 2 of the LTCH Stay, beginning with the FY 2020 LTCH QRP. The data applicable to this measure that must be reported by LTCHs for admissions as well as discharges occurring on or after April 1, 2018 is described in section IX.C.11. of the preamble of this final rule.

The Compliance with SBT by Day 2 of the LTCH Stay measure is a process quality measure. For patients on invasive mechanical ventilation support upon admission to the LTCH, except those who meet measure exclusion criteria, this measure assesses facility-level compliance with SBT, including Tracheostomy Collar Trial (TCT) or Continuous Positive Airway Pressure (CPAP) breathing trial, by Day 2 of the LTCH stay, where Day 1 is the day of admission to the LTCH and Day 2 is the subsequent calendar day. This measure is calculated and reported for the following two components: (1) The percentage of patients admitted on invasive mechanical ventilation who were assessed for readiness for SBT by Day 2 of the LTCH Stay, and (2) the percentage of patients deemed medically ready for SBT who received SBT by Day 2 of the LTCH stay. Higher percentages indicate better compliance. Patients are included in this quality measure if they are on invasive mechanical ventilation support upon admission to the LTCH, unless they meet measure exclusion criteria.

Patients on invasive mechanical ventilation support present a critical focus for assessment of high quality care because they comprise a substantial proportion of LTCH patient admissions. Mechanically ventilated patients are increasingly common in both acute care hospital intensive care units (ICUs), where up to 40 percent of patients require some duration of mechanical ventilation,<sup>369</sup> and LTCHs, where patients are frequently transferred for weaning following treatment in ICUs.<sup>370 371 372</sup> Patients who require

invasive mechanical ventilation of longer than 14 or 21 days are undergoing prolonged mechanical ventilation (PMV). In 2012, about 22,000 or 15.8 percent of all LTCH discharges received PMV services during the LTCH stay.<sup>373</sup>

This ventilator weaning-related process quality measure is important for encouraging implementation of evidence-based weaning guidelines as early during the LTCH patient stay as is beneficial to the patient. Although often necessary for life support, invasive mechanical ventilation is not without risk of harm to patients, and these risks increase as duration of ventilation continues.<sup>374 375 376</sup> In both ICUs and LTCHs, unsuccessful weaning and delayed weaning increase patient exposure to a number of ventilator-associated negative health outcomes, including ventilator-associated pneumonia,<sup>377 378 379 380</sup> ventilator-associated lung injury,<sup>381 382 383</sup> ventilator induced diaphragm

dysfunction,<sup>384</sup> psychological distress<sup>385 386 387</sup> and post-traumatic stress disorder,<sup>388</sup> disability<sup>389</sup> and decreased functional status,<sup>390 391</sup> and chronic critical illness syndrome.<sup>392</sup> Furthermore, these ventilator-associated negative health outcomes particularly affect the LTCH population since a significant number of its patients are on PMV. The majority of mechanically ventilated patients who are transferred to an LTCH have received mechanical ventilation for at least 21 days.<sup>393</sup> PMV increases the risk of patient morbidity and short-term and long-term mortality. According to a recent systematic review, the pooled mortality of patients with PMV (defined here as invasive mechanical ventilation for  $\geq 14$  days) undergoing weaning attempts in LTCHs was 31 percent (18 studies); however, the pooled mortality at one year significantly increased to 73 percent (8 studies).<sup>394</sup>

In addition to increased morbidity and mortality, mechanical ventilation is also associated with higher costs. While the literature on costs of mechanical ventilation are limited for the LTCH setting, studies in the acute care

hospital ICU setting indicate that patients who require mechanical ventilation can have up to 50 percent higher costs than patients who do not receive mechanical ventilation.<sup>395</sup> ICU patients who develop VAP incur at least \$40,000 more in hospital costs than ventilated patients without VAP, and costs increase with increasing duration of mechanical ventilation.<sup>396 397 398</sup>

Although there is evidence regarding the benefit of daily assessments of patient readiness for weaning from invasive mechanical ventilation,<sup>399</sup> as well as for the importance of adherence to weaning protocols,<sup>400</sup> we are not aware of any studies in LTCHs that evaluate timing of assessment for readiness to wean with respect to the admission date. However, an international task force, convened in 2005, developed guideline recommendations to address the entire weaning process. Despite the limited evidence, this task force recommended that weaning be considered as soon as possible,<sup>401</sup> because failure to assess the patient for readiness to wean may lead to undue prolonged mechanical ventilation,<sup>402</sup> thus exposing patients unnecessarily to adverse ventilator-associated morbidity and mortality.<sup>403</sup> Based on studies and observations of implementation of regular assessment for SBTs and weaning protocols in ICUs, adherence to the recommended weaning

processes, including prompt assessment of weaning readiness and initiation of SBTs, appears quite variable, likely due to differences in clinicians' intuitive thresholds for determination of patients' readiness to wean.<sup>404 405</sup> Clinician delays in recognizing that weaning may be possible and beginning assessment of weaning readiness are two common causes of weaning delays.<sup>406</sup> In one study, 50 percent of the patients considered to be incapable of sustaining spontaneous ventilation by clinicians later were able to tolerate a weaning trial. The authors concluded that tests used to validate clinician intuition on a patient's readiness for weaning are often inaccurate and that clinicians should follow explicit protocols to consistently test patients on their readiness to wean.<sup>407</sup> Because prompt identification of patients' readiness for SBTs has been shown to reduce weaning duration without harm to patients,<sup>408</sup> such delays indicate less than optimal performance<sup>409</sup> and opportunities for improvement.

Indirect evidence for the need for prompt recognition of patients' readiness to wean in LTCHs comes from a recent study of patients newly admitted to LTCHs on invasive mechanical ventilation, which reported that 32 percent of invasively mechanically ventilated patients admitted to an LTCH passed a 5-day TCT following admission.<sup>410</sup> That nearly one third of newly admitted LTCH patients were able to be completely weaned within five days underscores the need to assess patients' ability to breathe without assistance soon after admission to an LTCH, and also indicates that this quality measure

has potential to positively impact the health and quality of care received by a considerable proportion of the LTCH patient population.

Because invasive mechanical ventilation should be discontinued as soon as patients are capable of breathing independently,<sup>411</sup> <sup>412</sup> unnecessarily prolonged mechanical ventilation can be an indicator of poor care quality or of persistent illness.<sup>413</sup> This quality measure is designed to encourage adherence to evidence-based and consensus-based guidelines through implementation of timely assessment of patient readiness to wean and trials of unassisted breathing. To increase timeliness of weaning and reduce patient risk of complications, it is important to assess a patient's need for continued mechanical ventilation at the time of admission. Measuring and comparing assessment of readiness to wean and compliance with SBT by Day 2 is expected to help differentiate among facilities with varying performance in this important domain. The anticipated improvement in quality is an improvement in timeliness of weaning and ventilator liberation for patients admitted to LTCHs on invasive mechanical ventilation. In addition, facilities can use results of this measure to improve timely compliance with evidence-based weaning guidelines and develop ventilator weaning quality improvement programs.

A TEP assembled by our measure development contractor convened nine meetings (two in-person meetings and seven webinars) between April 2014 and August 2016 in order to refine the quality measure's technical specifications, including the measure target population, inclusion and exclusion criteria, and key definitions (for example, "non-weaning"). The TEP also offered feedback on the individual LTCH CARE Data Set ventilator weaning items and supported the feasibility of implementing this measure in the LTCH setting. The measure developer recruited two former patients successfully weaned from mechanical ventilation as well as the primary caregiver of one of the patients to solicit their views on the measures. *Hospital (LTCH) Ventilator Weaning Quality Measures Technical Expert Panel Summary Report* is available on the CMS Web site at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html>.

We also solicited stakeholder feedback on the development of this measure through a public comment period held from May 19, 2016, through June 9, 2016. Several stakeholders and organizations supported this measure for implementation, including hospitals and professional organizations. The public comment summary report for the proposed measure is available on the CMS Web site at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html>.

Our measure development contractor conducted a pilot test on the data elements used to calculate this quality measure. The pilot test was conducted in 10 LTCHs among approximately 150 LTCH patients and used a mixed methods research design to collect data. Quantitative data on the ventilator weaning items was collected from May 27, 2016 through September 10, 2016, and qualitative data on these items was collected from June 6, 2016 through October 4, 2016. The LTCHs who participated in the pilot test were selected to represent variation across several key facility-level characteristics: geographic location, size, and profit status.

The qualitative data from the pilot test of the ventilator weaning process measure supported the importance of the measure. Results from qualitative and quantitative analysis further support the feasibility of data collection for this quality measure. Data collection for this quality measure was not seen as burdensome by pilot sites. The pilot test summary report for this measure is available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html>.

The NQF-convened MAP PAC/LTC Workgroup met on December 12, 2014 and again on December 14 and 15, 2015. During these meetings, the MAP encouraged continued development of this proposed measure, acknowledging that there is evidence for interventions that improve ventilator care,<sup>414</sup> that

<sup>414</sup> "Spreadsheet of MAP 2015 Final Recommendations (XLSX)." Measure Applications Partnership Post Acute Care/Long-Term Care

variation in quality of care exists among LTCHs,<sup>415</sup> and that ventilator care is an important safety priority for LTCHs.<sup>416</sup>

Since the MAP's review and recommendation of continued development in 2015, we have continued to refine this proposed measure in accordance with the MAP's recommendations. Results of continued development activities, including stakeholder feedback from the 2016 public comment period and 2016 pilot test findings, were presented to the MAP during the MAP feedback loop meeting in October 2016. The proposed measure is consistent with the information submitted to the MAP, and the original MAP submission and our continued refinements support its scientific acceptability for use in quality reporting programs. As discussed with the MAP, we fully anticipate that additional analyses will continue once data collection for the measure begins. More information about the MAP's recommendations for this proposed measure is available at: [http://www.qualityforum.org/Publications/2016/02/MAP\\_2016\\_Considerations\\_for\\_Implementing\\_Measures\\_in\\_Federal\\_Programs\\_-\\_PAC-LTC.aspx](http://www.qualityforum.org/Publications/2016/02/MAP_2016_Considerations_for_Implementing_Measures_in_Federal_Programs_-_PAC-LTC.aspx).

We reviewed the NQF's consensus endorsed measures and were unable to identify any NQF-endorsed ventilator weaning quality measures focused on assessment of readiness to wean for patients admitted on invasive mechanical ventilation in the LTCH setting. We are unaware of any other quality measures for weaning from invasive mechanical ventilation that have been endorsed or adopted by another consensus organization for the LTCH setting. Therefore, based on the evidence discussed above, we proposed to adopt the quality measure entitled, Compliance with SBT by Day 2 of the LTCH Stay, for the LTCH QRP beginning with the FY 2020 LTCH QRP. We plan to submit the quality measure to the NQF for consideration for endorsement.

We proposed that data for this ventilator weaning quality measure be collected through the LTCH CARE Data

Workgroup. Available at: <http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdIdentifier=id&ItemID=78711>.

<sup>415</sup> "Spreadsheet of MAP 2016 Final Recommendations (XLSX)." Measure Applications Partnership Post Acute Care/Long-Term Care Workgroup. Available at: <http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdIdentifier=id&ItemID=81593>.

<sup>416</sup> MAP 2015 Considerations for Implementing Measures in Federal Programs: Draft for Public Comment. Measure Applications Partnership Post Acute Care/Long-Term Care Workgroup. Available at: <http://www.qualityforum.org/ProjectMaterials.aspx?projectID=75370>.

Set, with submission through the QIES ASAP System. For more information on LTCH QRP reporting using the QIES ASAP System, we refer readers to our Web site at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Technical-Information.html>. We stated that we intended to revise the LTCH CARE Data Set to include new items that assess processes for weaning from invasive mechanical ventilation, should this proposed measure be adopted.

This measure is calculated and reported for two components. The proposed measure denominator for Component 1, Percentage of Patients Assessed for Readiness for SBT by Day 2 of LTCH Stay, is the total number of patients admitted during the reporting period who were on invasive mechanical ventilation upon admission to an LTCH and expected or anticipated by the provider to undergo weaning attempts at admission. The proposed measure numerator for Component 1 is the number of patients admitted on invasive mechanical ventilation during the reporting period who were assessed for readiness for SBT (including TCT or CPAP breathing trial) by Day 2 of the LTCH stay.

The proposed measure denominator for Component 2, Percentage of Patients Ready for SBT Who Received SBT by Day 2 of LTCH Stay, is the subset of patients in the denominator of the Component 1, who were assessed and deemed medically ready for SBT by Day 2 of the LTCH stay. The proposed measure numerator for Component 2, Percentage of Patients Ready for SBT Who Received SBT by Day 2 of LTCH Stay, is the number of patients admitted on invasive mechanical ventilation during the reporting period who were ready for SBT and who received an SBT (including TCT or CPAP breathing trial) by Day 2 of the LTCH stay.

For technical information about this proposed measure, including information about the measure calculation and proposed measure denominator exclusions, we refer readers to the document titled, *Final Specifications for LTCH QRP Quality Measures and Standardized Patient Assessment Data Elements*, available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html>.

We invited public comments on our proposal to adopt the quality measure, Compliance with SBT by Day 2 of the LTCH Stay, beginning with the FY 2020 LTCH QRP.

*Comment:* Some commenters expressed support for the adoption of Compliance with SBT by Day 2 of the LTCH Stay for the LTCH QRP. Commenters noted that reducing risks of complications associated with prolonged mechanical ventilation, such as VAEs, and improving ventilator weaning rates are important areas for quality measurement in LTCHs. Another commenter expressed support that this measure will provide data necessary to reduce the risk of complications from unnecessarily prolonged mechanical ventilation and reduce variations in practice that do not benefit patients.

*Response:* We appreciate the commenters' support of the Compliance with SBT by Day 2 of the LTCH Stay measure and support for this topic for the LTCH QRP. We agree that the objective of this measure aligns with guidelines on reducing time spent on mechanical ventilation to decrease risk of complications and to improve ventilator weaning rates.

*Comment:* Some commenters recommended that CMS further test the Compliance with SBT by Day 2 of the LTCH Stay measure prior to finalization and implementation for the LTCH QRP.

*Response:* Determination of measure readiness for implementation and data collection was informed by feedback and results from the pilot test and TEP discussions. Pilot sites were able to test the items related to the measure and provided feedback via a series of check-ins that further informed measure development. The TEPs further supported measure development by providing critical insight and feedback from clinicians, researchers, and experienced LTCH administrators. In addition, patient advocates provided insight into ventilated patient experiences in the LTCH and the utility of the ventilator weaning measures. Additional testing will be conducted as data collection ensues, and we will continue to test these measures on a quarterly basis if feasible and conduct maintenance and evaluation of the measure for reliability and validity.

*Comment:* One commenter appreciated that the measure has significantly evolved from conception and recommended that we submit the measure to NQF for consideration of endorsement.

*Response:* We appreciate the commenter for their comment about the extensive work that went into the measure development process. With regard to NQF endorsement, as noted in the proposed rule, we intend to submit the measure to NQF for consideration of endorsement. We further note that we consider and propose appropriate

measures that have been endorsed by the NQF whenever possible. However, section 1886(m)(5)(D)(ii) of the Act allows the Secretary to specify a measure for the LTCH QRP that that is not NQF endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization. In the case of the proposed measure, we have not been able to identify other measures that are endorsed or adopted by a consensus organization. While we appreciate the importance of consensus endorsement and intend to seek such endorsement, we believe the need to address the measure gap in invasive mechanical ventilation care in the LTCH QRP outweighs the general rule of adopting an NQF endorsed measure at this time.

*Comment:* With respect to the addition of the two ventilator weaning measures for FY 2020, one commenter expressed concern that the expanded patient assessment data reporting requirements would impose a significant burden on providers.

*Response:* We appreciate the commenter's concern about the burden associated with the measure proposals; however, we believe that these measures are important to assess measure gaps for LTCH patients. We intend to provide guidance and training for providers to address their concerns regarding the expanded patient assessment data reporting requirements.

*Comment:* A commenter expressed concern that the small size of the pilot test used to inform the development of this measure may not be adequate to conclude that the measure is reliable and accurate.

*Response:* The focus of the pilot test was to inform measure development as well as to evaluate the feasibility of patient-level data collection and submission. To obtain a balanced sample of participants, pilot sites were chosen based on criteria including LTCH size, geographic region, and ownership type. Based on the size and projected number of ventilated patients, the number of sites recruited was deemed to provide a sufficient number of patients for analysis of the feasibility of data collection and validity of the mechanical ventilation quality measures. Pilot sites received in-depth trainings and provided feedback via a series of check-ins that further informed measure development during the course of the pilot study. We concluded that the pilot test was adequate to proceed with proposal of the measure for adoption under the LTCH QRP. We will continue to test these measures on a quarterly basis and conduct

maintenance and evaluation of the measure for reliability and validity.

*Comment:* Some commenters were concerned with the 2-day time frame to assess an admitted patient for readiness to perform SBT because it would be burdensome to providers especially for patients admitted during evenings or weekends. Some commenters recommended extending the time frame to complete the assessment to 5 days as used in a recent study led by Jubran et al., 2013.<sup>417</sup>

*Response:* We wish to clarify that the 5-day time frame used by a recent study led by Jubran et al., 2013 to assess LTCH patients on invasive mechanical ventilation is not an established protocol. A task force in 2005 on the subject of weaning from mechanical ventilation, which included international scientific experts and advisors, recommended that liberation be considered as soon as possible for patients to reduce risk of complications and mortality.<sup>418</sup> Accordingly, TEP members agreed that the 5-day time frame was too long compared to best practices and that assessment for ventilator liberation should be prior to 5 days. After extensive discussion, TEP members recommended the 2-day time frame to set a high standard to encourage high quality of care and increase the chance that patients are determined to be capable of liberation from mechanical ventilation earlier.

*Comment:* One commenter was concerned that the proposed measure conflicts with the site neutral payment policy.

*Response:* We appreciate the opportunity to clarify that the proposed measure is intended to ensure that patients on invasive mechanical ventilation support upon LTCH admission are assessed for readiness for SBT as recommended. In addition, if a patient on invasive mechanical ventilation is found ready for SBT, then a provider should perform an SBT. This measure does not conflict with the site neutral payment policy because providers are not assessed on the time to liberation (completion of an SBT and liberation from mechanical ventilation), but assessed on initiating the process (completing an assessment of the patient) to determine whether the

patient is medically ready to be liberated from mechanical ventilation.

*Comment:* One commenter expressed concern about whether the proposed measure is a safe and feasible practice for patients. Another commenter noted that the short time frame may have unintended negative consequences for patient care and forces clinical judgment on weaning status.

*Response:* We appreciate the commenters' concerns pertaining to patient safety, and would like to emphasize that patient safety is a top priority in all measurement development efforts. We encourage providers to use best patient care practices when assessing patients for readiness for liberation. In addition, we note that while the measure assesses providers on completing an assessment of the patient to determine whether the patient is medically ready to be liberated from mechanical ventilation, it does not "force" providers to make any particular assessment, and we encourage providers to classify patients as "weaning" or "non-weaning" as clinically appropriate. Of note, evidence-based guidelines recommend that liberation be considered as soon as possible for patients to reduce risk of complications and mortality. If a clinician deemed a patient medically unready to perform SBT, then the decision should be documented and providers should code this item appropriately.

*Comment:* One commenter was concerned that the multi-component structure of the measure may be confusing to providers and that definitions embedded in the calculation of the two components (specifically, "documentation," "weaning," and "non-weaning") are too subjective.

*Response:* We would like to clarify that "documentation" that the patient was not deemed medically ready for SBT can be any medical record that a provider uses to document patient information. In regard to weaning status, we encourage providers to classify patients as "weaning" or "non-weaning" as clinically appropriate. We wish to further clarify that patients with specific conditions such as amyotrophic lateral sclerosis that may negate any expectation or anticipation of weaning attempts on admission may be considered "non-weaning" by the provider. We intend to provide training and guidance prior to the implementation of the quality measure to ensure that providers are prepared to properly collect the data and fully understand the measure specifications.

After consideration of the public comments we received, we are

finalizing our proposal to adopt the measure, Compliance with SBT by Day 2 of the LTCH Stay, beginning with the FY 2020 LTCH QRP with an implementation date of July 1, 2018, as discussed in section IX.C.11. of the preamble of this final rule.

#### c. Mechanical Ventilation Outcome Quality Measure: Ventilator Liberation Rate

Invasive mechanical ventilation care was identified as an important gap in the LTCH QRP measure set,<sup>419</sup> and aligns with the National Quality Strategy priority and the CMS Quality Strategy goal of "promoting the most effective prevention and treatment practices" by reducing the risk of complications from unnecessarily prolonged mechanical ventilation. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20095 through 20097), we proposed to adopt the quality measure, Ventilator Liberation Rate, for the LTCH QRP beginning with the FY 2020 LTCH QRP. The data applicable to this measure that must be reported by LTCHs for admissions as well as discharges occurring on or after April 1, 2018 is described in section IX.C.11. of the preamble of this final rule.

The Ventilator Liberation Rate measure is an outcome quality measure. This quality measure is a facility-level measure that reports the percentage of LTCH patients admitted on invasive mechanical ventilation, for whom weaning attempts were expected or anticipated, and are fully weaned by the end of their LTCH stay. Patients who are considered fully weaned at discharge are those who did not require any invasive mechanical ventilation support for at least 2 consecutive calendar days immediately prior to discharge. While the first ventilator weaning measure we proposed captures the weaning process, this measure captures the key outcome of successful liberation from invasive mechanical ventilation.

We refer readers to section IX.C.7.b. of the preamble of this final rule for information regarding the literature review in support of proposing the mechanical ventilation process quality measure, Compliance with SBT by Day 2 of the LTCH Stay.

Discontinuation of invasive mechanical ventilation, known as weaning or liberation, is feasible for many ventilated patients, and is associated with improved health outcomes. In LTCHs, higher weaning rates have been associated with lower

<sup>417</sup> Jubran, A., et al. (2013). "Effect of pressure support vs unassisted breathing through a tracheostomy collar on weaning duration in patients requiring prolonged mechanical ventilation: a randomized trial." *JAMA* 309(7): 671-677.

<sup>418</sup> Boles, J.M., et al. (2007). "Weaning from mechanical ventilation." *Eur Respir J* 29(5): 1033-1056.

<sup>419</sup> Technical Expert Panel Report: Quality Measures for Long-Term Care Hospitals. Thaker, S., Gage, B., Bernard, S., and Nguyen, K. March 2011.

post-discharge mortality, even among the elderly,<sup>420 421 422 423 424</sup> and fewer days of mechanical ventilation may lead to decreased risk of ventilator-associated complications/events, enhanced rehabilitation opportunities, and a shorter length of stay.<sup>425</sup> Based on the evidence, increasing weaning rates is expected to reduce the risk of harm associated with invasive mechanical ventilation, thus contributing to more favorable clinical outcomes for patients<sup>426 427</sup> and decreased costs.

Numerous studies from 1991 through 2015 have reported a range of ventilator liberation rates among LTCHs. A review of nine single-center studies conducted between 1991 and 2001 reported that, among more than 3,000 patients with PMV >21 days, facility-level liberation rates ranged from 34 percent to 60 percent, with an overall weaning rate of 52 percent.<sup>428</sup> A recent systematic review identified nine studies (4,769 patients) reporting the proportion of patients successfully liberated from ventilation in LTCHs, and found a pooled weaning rate of 47 percent (95 percent CI 42–51); rates reported by individual studies conducted in the United States varied from 13 percent to

56 percent.<sup>429</sup> Lower liberation rates may indicate less-than-optimal performance.

Ventilator liberation rate is an actionable health care outcome. Multiple interventions have been shown to increase ventilator liberation rates, including selection and implementation of weaning protocols, ventilator modes, and type of pressure support strategies. Multiple studies in LTCHs<sup>430 431 432</sup> and ICUs<sup>433 434</sup> provide evidence to support the relationship between weaning processes and the successful weaning of mechanically ventilated LTCH patients. The effectiveness of these interventions suggests that improvement in liberation rates among LTCH patients is possible through modifying provider-led processes and interventions.

Expectations of successful ventilator liberation are high for many LTCH patients.<sup>435 436 437</sup> Unnecessarily prolonged mechanical ventilation increases the risk of negative patient outcomes and can be an indicator of poor quality care or of persistent illness.<sup>438</sup> Based on the evidence,

improving weaning processes and increasing weaning rates are expected to mitigate the risk of harm associated with invasive mechanical ventilation, thus contributing to more favorable clinical outcomes for patients<sup>439 440</sup> and decreased costs.<sup>441</sup> This quality measure, Ventilator Liberation Rate, will assess the proportion of patients discharged alive from an LTCH who are fully weaned, thereby promoting weaning efforts and encouraging quality management of LTCH patients on invasive mechanical ventilation. Kahn et al. (2013) noted that inclusion of a liberation outcome measure is key to providing a truly patient-centered measure related to invasive mechanical ventilation weaning among LTCH patients.<sup>442</sup>

A TEP assembled by our measure development contractor convened nine meetings (two in-person meetings and seven webinars) between April 2014 and August 2016. TEP members provided input to guide the development of the quality measures, including feedback on the individual LTCH CARE Data Set ventilator weaning items, the target population, inclusion and exclusion criteria, and patient demographic and clinical factors that could affect ventilator weaning outcomes (risk adjustors). TEP members also supported the feasibility of implementing this measure in the LTCH setting. The measure developer recruited two former patients successfully weaned from mechanical ventilation as well as the primary caregiver of one of the patients to solicit their views on the measures. The *2014–2016 Development of Long-Term Care Hospital (LTCH) Ventilator Weaning Quality Measures Technical Expert Panel Summary Report* is available on the CMS Web site at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html>.

We also solicited stakeholder feedback on the development of this measure through a public comment period held from May 19, 2016, through June 9, 2016. Several stakeholders and organizations supported this measure for implementation, including hospitals and professional organizations. The public comment summary report for the proposed measure is available on the CMS Web site at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html>.

Our measure development contractor conducted a pilot test on the proposed data elements used to calculate this quality measure. The pilot test was conducted in ten LTCHs which included approximately 150 LTCH patients and used a mixed methods research design to collect data. Quantitative data on the ventilator weaning items was collected from May 27, 2016 through September 10, 2016, and qualitative data on these items was collected from June 6, 2016 through October 4, 2016. The LTCHs who participated in the pilot test were selected to represent variation across several key facility-level characteristics: Geographic location, size, and profit status.

The qualitative data from the pilot test of the ventilator liberation quality measure supported the importance of the measure; results from qualitative and quantitative analysis also supported the feasibility of data collection. Data collection for this quality measure was not seen as burdensome by pilot sites. The pilot test summary report for this measure is available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html>.

The NQF-convened MAP PAC/LTC Workgroup met on December 12, 2014, and on December 14 and 15, 2015. During these meetings, the MAP provided input on the importance and specifications of this measure. The MAP encouraged continued development of the measure, stating that this measure has high value potential for the LTCH QRP<sup>443</sup> because successful weaning is important for improving quality of life

<sup>443</sup> "Spreadsheet of MAP 2016 Final Recommendations (XLSX)." Measure Applications Partnership Post Acute Care/Long-Term Care Workgroup. Available at: <http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdIdentifier=id&ItemID=81593>.

and decreasing morbidity, mortality, and resource use among patients.<sup>444 445</sup>

Since the MAP's review and recommendation of continued development in 2015, we have continued to refine this proposed measure in accordance with the MAP's recommendations. Results of continued development activities, including stakeholder feedback from the 2016 public comment period and 2016 pilot test findings, were presented to the MAP during the MAP feedback loop meeting in October 2016. The proposed measure is consistent with the information submitted to the MAP, and the original MAP submission and our continued refinements support its scientific acceptability for use in quality reporting programs. As discussed with the MAP, we fully anticipate that additional analyses will continue once data collection for the measure begins. More information about the MAP's recommendations for this measure is available at: [http://www.qualityforum.org/Publications/2016/02/MAP\\_2016\\_Considerations\\_for\\_Implementing\\_Measures\\_in\\_Federal\\_Programs\\_-\\_PAC-LTC.aspx](http://www.qualityforum.org/Publications/2016/02/MAP_2016_Considerations_for_Implementing_Measures_in_Federal_Programs_-_PAC-LTC.aspx).

We reviewed the NQF's consensus endorsed measures and were unable to identify any NQF-endorsed ventilator weaning quality measures focused on the liberation status at discharge for patients admitted on invasive mechanical ventilation in the LTCH setting. We are unaware of any other quality measures for liberation from invasive mechanical ventilation that have been endorsed or adopted by another consensus organization for the LTCH setting. Therefore, based on the evidence discussed above, we proposed to adopt the quality measure entitled, Ventilator Liberation Rate, for the LTCH QRP beginning with the FY 2020 LTCH QRP. We plan to submit the quality measure to the NQF for consideration for endorsement.

We proposed that data for this quality measure be collected through the LTCH CARE Data Set, with the submission through the QIES ASAP System. For more information on LTCH QRP reporting using the QIES ASAP system, we refer readers to our Web site at: <https://www.cms.gov/Medicare/Quality->

<sup>444</sup> MAP 2015 Considerations for Implementing Measures in Federal Programs: Draft for Public Comment. Measure Applications Partnership Post Acute Care/Long-Term Care Workgroup. Available at: <http://www.qualityforum.org/ProjectMaterials.aspx?projectID=75370>.

<sup>445</sup> "Spreadsheet of MAP 2016 Final Recommendations (XLSX)." Measure Applications Partnership Post Acute Care/Long-Term Care Workgroup. Available at: <http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdIdentifier=id&ItemID=81593>.

*Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Technical-Information.html*. We stated that we intended to revise the LTCH CARE Data Set to include new items that assess invasive mechanical ventilation liberation at discharge, should this proposed measure be adopted.

This measure reports facility-level Ventilator Liberation Rate for patients admitted to an LTCH on invasive mechanical ventilation, and for whom weaning attempts were expected or anticipated as reported on the Admission Assessment. The Ventilator Liberation Rate is defined as the percentage of patients on invasive mechanical ventilation upon admission who are alive and fully liberated at discharge. The proposed measure denominator is the number of patients requiring invasive mechanical ventilation support upon admission to an LTCH, except those who meet exclusion criteria. The proposed measure numerator is the number of patients who are discharged alive and fully liberated. This measure is risk-adjusted for variables such as age, neurological injury or disease, dialysis, and other comorbidities and treatments. If a patient has more than one LTCH stay during the reporting period, then each LTCH stay will be included in the measure calculation and reporting. For technical information about this measure, including information about the measure calculation, risk adjustment, and proposed measure denominator exclusions, we refer readers to the document titled, *Final Specifications for LTCH QRP Quality Measures and Standardized Patient Assessment Data Elements*, available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html>.

We invited public comments on our proposal to adopt the quality measure, Ventilator Liberation Rate, beginning with the FY 2020 LTCH QRP.

*Comment:* Some commenters expressed support for the adoption of Ventilator Liberation Rate into the LTCH QRP.

*Response:* We appreciate commenters' support for the adoption of Ventilator Liberation Rate.

*Comment:* Some commenters recommended that CMS further test the Ventilator Liberation Rate measure prior to finalization and implementation for the LTCH QRP.

*Response:* Determination of measure readiness for implementation and data collection was informed by feedback

and results from the pilot test and TEP discussions. Pilot sites were able to test the items related to the measure and provided feedback via a series of check-ins that further informed measure development. The TEPs further supported measure development by providing critical insight and feedback from clinicians, researchers, and experienced LTCH administrators. In addition, patient advocates provided insight into ventilated patient experiences in the LTCH and the utility of the ventilator weaning measures. Additional testing will be conducted as data collection ensues and we will continue to test these measures on a quarterly basis if feasible and conduct maintenance and evaluation of the measure for reliability and validity.

*Comment:* One commenter appreciated that the measure has significantly evolved from conception. This commenter recommended that we submit the measure to NQF for consideration of endorsement.

*Response:* We appreciate the commenter for their comment about the extensive work that went into the measure development process. With regard to NQF endorsement, as noted in the proposed rule, we intend to submit the measure to NQF for consideration of endorsement. We further note that we consider and propose appropriate measures that have been endorsed by the NQF whenever possible. However, section 1886(m)(5)(D)(ii) of the Act allows the Secretary to specify a measure for the LTCH QRP that is not NQF endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization. In the case of the proposed measure, we have not been able to identify other measures that are endorsed or adopted by a consensus organization. While we appreciate the importance of consensus endorsement and intend to seek such endorsement, we believe the need to address the measure gap in invasive mechanical ventilation care in the LTCH QRP outweighs the general rule of adopting an NQF endorsed measure at this time.

*Comment:* With respect to the addition of the two ventilator weaning measures beginning with the FY 2020 LTCH QRP, one commenter expressed concern that the expanded patient assessment data reporting requirements would impose a significant burden on providers.

*Response:* We appreciate the commenter's concern about the burden associated with the measure proposals; however, we believe that these measures are important to assess measure gaps for LTCH patients. We intend to provide

guidance and training for providers to address their concerns regarding the expanded patient assessment data reporting requirements.

*Comment:* A commenter expressed concern that the small size of the pilot test used to inform the development of this measure may not be adequate to conclude that the measure is reliable and accurate.

*Response:* The focus of the pilot test was to inform measure development as well as to evaluate the feasibility of patient-level data collection and submission. To obtain a balanced sample of participants, pilot sites were chosen based on criteria including LTCH size, geographic region, and ownership type. Based on the size and projected number of ventilated patients, the number of sites recruited was deemed to provide a sufficient number of patients for analysis of the feasibility of data collection and validity of the mechanical ventilation quality measures. Pilot sites received in-depth trainings and provided feedback via a series of check-ins that further informed measure development during the course of the pilot study. We concluded that the pilot test was adequate to proceed with proposal of the measure for adoption under the LTCH QRP. We will continue to test these measures on a quarterly basis and conduct maintenance and evaluation of the measure for reliability and validity.

*Comment:* With respect to data coding restrictions for item O0200, Ventilator Liberation Rate, one commenter requested clarification on the appropriate coding for the item for patients admitted on mechanical ventilation who were not expected to wean but are liberated at discharge and for patients ventilated during the LTCH stay who were liberated at discharge.

*Response:* We would like to clarify that all patients who were liberated from mechanical ventilation should be coded as indicated regardless of admission status of the patient to ensure accurate data. The measure calculations for item O0200, Ventilator Liberation Rate, exclude the two sets of patients described by the commenter from the denominator. Therefore, data coding restrictions are not needed for item O0200, Ventilator Liberation Rate.

*Comment:* A few commenters supported that the measure was risk-adjusted and noted the importance of adequate risk adjustment to ensure that providers who care for more complex patients do not fare worse because of insufficient risk adjustment. Some commenters questioned whether the current risk-adjustment model for the measure was adequate. Specifically, one

commenter suggested that cases with progressive neuromuscular disease and severe neuromuscular injury, disease or dysfunction be excluded from the measure numerator and denominator, and another commenter recommended to combine and risk-adjust these cases together, as the conditions are captured under one category in the LTCH CARE Data Set. Another commenter recommended that ventilated patients undergoing dialysis also be considered as a measure exclusion and that special adjustments be made for larger ventilator weaning programs where most ventilated patients are accepted, unlike LTCHs that only admit patients identified for weaning.

*Response:* We appreciate the importance of adequate risk adjustment for this measure and appreciate the commenters' recommendations. The TEP identified several risk factors that affect ventilator liberation outcome, and these factors were included in the risk-adjustment model for initial measure testing. In addition, pilot sites have provided CMS feedback on these risk-adjustment variables. We will continue to test and refine the risk-adjustment model by further evaluating conditions such as progressive neuromuscular disease, severe neuromuscular injury, disease or dysfunction, and dialysis to ensure sufficient risk adjustment. We note that the LTCH CARE Data Set V4.00 contains two separate items that indicate either "Other Progressive Neuromuscular Disease" and "Other Severe Neurological Injury, Disease, or Dysfunction." We would like to clarify that patients who were deemed non-weaning on admission are excluded from the denominator for Ventilator Liberation Rate. As a result of this exclusion, performance on the measure would not be impacted by the proportion of patients admitted that are undergoing mechanical ventilation and identified as weaning.

After consideration of the public comments we received, we are finalizing our proposal to adopt the measure, Ventilator Liberation Rate, beginning with the FY 2020 LTCH QRP with an implementation date of July 1, 2018, as discussed in section IX.C.11. of the preamble of this final rule.

#### 8. Removal of the All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge From LTCHs From the LTCH QRP

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20097 through 20098), we proposed to remove the All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs

(NQF #2512) beginning with the FY 2019 LTCH QRP.

In the FY 2016 IPPS/LTCH PPS final rule (80 FR 49730 through 49731), we adopted the All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs (NQF #2512) for the LTCH QRP. This measure assesses all-cause unplanned hospital readmissions from LTCHs. In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57215 through 57219), we adopted the Potentially Preventable 30-Day Post-Discharge Readmission Measure for LTCH QRP to fulfill IMPACT Act requirements. In response to the FY 2017 IPPS/LTCH PPS proposed rule, we received public comments expressing concern over the multiplicity of readmission measures and the overlap between the All-Cause Readmission and Potentially Preventable Readmission (PPR) 30-Day Post-Discharge measures (see 81 FR 57217 through 57218). Commenters also stated that more than one readmission measure would create confusion and require additional effort by providers to track and improve performance.

We retained the All-Cause Readmission measure because it would allow us to monitor trends in both all-cause and PPR rates. In particular, we could compare facility performance on the All-Cause Readmission and PPR 30-Day Post-Discharge measures. However, upon further consideration of the public comments, we believe that removing the All-Cause Readmission measure and retaining the PPR 30-Day Post-Discharge measure in the LTCH QRP would prevent duplication, because potentially preventable readmissions are a subset of all-cause readmissions. Although there is no data collection burden associated with these claims-based measures, we recognize that having two hospital readmission measures in the LTCH QRP may create confusion. We agree with commenters that there is overlap between the All-Cause Readmission measure and the PPR 30-Day Post-Discharge measure, which identifies a

subset of all-cause readmissions, and believe the PPR measure will be more actionable for quality improvement.

Accordingly, we proposed to remove the All-Cause Unplanned Readmission measure beginning with the FY 2019 LTCH QRP. We proposed that public reporting of this measure would end by October 2018 when public reporting of the PPR 30-Day Post-Discharge measure begins by October 2018. We refer readers to section IX.C.17. of the preamble of this final rule for more information regarding our proposal to publicly report the PPR 30-Day Post-Discharge measure. We refer readers to the PPR 30-Day Post-Discharge measure specifications available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/Downloads/Measure-Specifications-for-FY17-LTCH-QRP-Final-Rule.pdf>.

We invited public comment on our proposal to remove the All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs (NQF #2512) from the LTCH QRP, beginning with the FY 2019 LTCH QRP.

*Comment:* Commenters supported the proposed removal of the All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs from the LTCH QRP. The commenters stated that the lack of patient level data makes it difficult to track and improve performance on this measure. Several commenters supported the removal of this measure because they consider it confusing and duplicative of the PPR 30-Day Post-Discharge Measure for LTCH QRP. Some commenters urged CMS to evaluate PAC readmission measures adopted for quality reporting to ensure that they create consistent incentives across the system. One commenter requested additional detail on the components of the all-cause readmission measure that are not represented in the PPR measure, as well as details on the components of the PPR measure.

*Response:* We appreciate the support for the proposed removal of the All-

Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs from the LTCH QRP. We note the commenters' concerns regarding the availability of patient level data for tracking and improving performance, and we are exploring the feasibility of making additional data available to LTCHs. We thank the commenters for their concern over consistent incentives and will continue to monitor PAC readmission measures to ensure they align incentives across the system.

We appreciate the request for additional detail on the components of the all-cause and PPR measures. We wish to clarify that the PPR measure captures readmissions for conditions considered potentially preventable and unplanned, whereas the all-cause measure captured the broader set of all unplanned readmissions. For additional details on the components of the PPR measure, we refer readers to the measure specifications and Appendix 2 for the list of conditions used to define PPRs, available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/Downloads/Measure-Specifications-for-FY17-LTCH-QRP-Final-Rule.pdf>.

After consideration of the public comments we received, we are finalizing our proposal to remove the All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs (NQF #2512) from the LTCH QRP, beginning with the FY 2019 LTCH QRP.

9. LTCH QRP Quality Measures Under Consideration for Future Years

a. LTCH QRP Quality Measures Under Consideration for Future Years

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20098), we invited public comment on the importance, relevance, appropriateness, and applicability of each of the quality measures listed in the table below for future years in the LTCH QRP.

LTCH QRP QUALITY MEASURES UNDER CONSIDERATION FOR FUTURE YEARS

NQS Priority: Patient- and Caregiver-Centered Care

Measures .....	<ul style="list-style-type: none"> <li>• Experience of Care.</li> <li>• Application of Percent of Residents Who Self-Report Moderate to Severe Pain (Short Stay) (NQF #0676).</li> <li>• Advance Care Plan.</li> </ul>
----------------	--

NQS Priority: Patient Safety

Measure .....	<ul style="list-style-type: none"> <li>• Patients Who Received an Antipsychotic Medication.</li> </ul>
---------------	--

LTCH QRP QUALITY MEASURES UNDER CONSIDERATION FOR FUTURE YEARS—Continued

NQS Priority: Communication and Care Coordination

Measure .....	• Modification of the Discharge to Community-PAC LTCH QRP measure.
---------------	--

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20098), we also solicited public comments on the use of survey-based experience of care measures for the LTCH QRP. We are currently developing an experience of care survey for LTCHs and survey-based measures will be developed from this survey. These survey-based measures may be considered for inclusion in the LTCH QRP through future notice-and-comment rulemaking. This survey was developed using a rigorous survey development methodology that included a public request for measures titled Request for Information To Aid in the Design and Development of a Survey Regarding Patient and Family Member Experiences With Care Received in Long-Term Care Hospitals (80 FR 72722 through 72725); focus groups and interviews with patients, family members, and caregivers; input from a TEP of LTCHs, researchers, and patient advocates; and cognitive interviewing. The survey has also been field tested. The survey explores experience of care across five main areas: (1) Beginning stay at the hospital; (2) interactions with staff; (3) experience during the hospital stay; (4) preparing for leaving hospital; and (5) overall hospital rating. We are specifically interested in comments regarding survey implementation and logistics, use of the survey-based measures in the LTCH QRP, and general feedback.

Also, we are considering a measure focused on pain that relies on the collection of patient-reported pain data, and another measure that documents whether a patient has an Advance Care Plan. Finally, we are considering a measure related to patient safety, specifically, Patients Who Received an Antipsychotic Medication.

We invited public comment on the possible inclusion of such measures in future years of the LTCH QRP.

*Comment:* Several commenters provided feedback on the use of an experience of care survey in the LTCH setting.

*Response:* We thank the commenters who submitted comments about the experience of care survey. We will take those comments into consideration as we finish developing the measure and related survey-based measures.

*Comment:* A number of commenters supported the inclusion of an Advance Care Plan measure in the LTCH QRP.

Several commenters expressed concern regarding the ability of the LTCH population to engage in advance care planning given their severity of illness. One commenter emphasized the importance of ensuring access to advance care plans from the short-term acute care hospital. One commenter recommended inclusion of a more detailed measure that specifies the contents of an advanced care plan. Several commenters supported adoption of the NQF-endorsed measure, Advance Care Plan (NQF #0326). One commenter supported a revision of the current NQF-endorsed measure into two separate measures to capture the distinction between advance care plans and surrogate decision makers. One commenter also discussed the need to define what is considered an advance care plan, and the ability of the measure to account for the patient’s willingness to engage in such planning. The commenter also emphasized the important role a patient’s goals, values, and preferences play in the care planning process.

*Response:* We appreciate the commenters’ thoughtful comments and agree with the importance of advanced care plans as they relate to the critically, chronically ill and vulnerable patient population in LTCHs. As with all measures, we work to fulfill the aims of the NQS. Improving care through the provision of patient-centered care is one of the NQS’s aims that we seek to fulfill. We acknowledge the importance of including patient preferences in advance care planning. We will take these comments into consideration as we develop future measures pertaining to advance care plans for the LTCH QRP.

*Comment:* A commenter stated that, regarding the Application of Percent of Residents Who Self-Report Moderate to Severe Pain (Short Stay) (NQF #0676) measure for future consideration in the LTCH QRP, the pain experience alone should not be a quality measure and suggested that CMS revisit how pain is captured and monitored, as the presence of pain, its frequency, and severity do not provide enough information to help an individual’s overall quality of life. The commenter expressed support for use of a pain measure that does not encourage unnecessary opioid prescribing, and recommended modification of the existing measure to

one that relates pain to important daily functional tasks. The commenter suggested that such a measure would better capture the functional abilities of patients, as pain levels do not frequently change. Another commenter expressed caution in expanding the existing measure to the LTCH setting due to concerns with reliability, based on their experience, noting variable and inconsistent findings related to how the MDS is used to capture the data for this measure.

*Response:* We appreciate the comments pertaining to the Application of Percent of Residents Who Self-Report Moderate to Severe Pain (Short Stay) (NQF #0676) measure under consideration for future implementation in the LTCH QRP. We note that appropriately assessing pain as an outcome is important, acknowledge the importance of avoiding unintended consequences that may arise from such assessments, and will take into consideration the commenters’ recommendations.

*Comment:* A commenter supported appropriate use of antipsychotic medications. Specifically, the commenter noted that measures implemented for this purpose should account for informed consent, preference, and potential improvements in the quality of life in order to accurately measure appropriate use of such medications. Another commenter suggested further development of the measure, as there is no existing baseline measurement to provide it with meaning as a measure of quality of care. A commenter noted the distinction between appropriate and inappropriate use of antipsychotic medications, and the lack of sensitivity of the proposed measure. Another commenter expressed opposition against adoption of the measure until CMS provides additional information regarding measure utilization, rationale, and specification.

*Response:* We appreciate the comments received pertaining to the development of this potential quality measure construct. We note the support for the inclusion of an antipsychotic measure in the LTCH QRP, but recognize the potential limitations to the inclusion of this type of measure, as stated by the commenters. As we continue to explore the development of this future measure construct, we will take the commenters’ recommendations

into consideration in our measure development and testing efforts, as well as in our ongoing efforts to identify and propose appropriate measures for the LTCH QRP in the future.

*Comment:* A commenter supported the use of a cross-setting malnutrition measure. Another commenter also encouraged the use of malnutrition measures in post-acute care settings, and recommended the use of a nationally recognized “blueprint” that was developed to prevent and reduce malnutrition among older adults.

*Response:* We agree with the commenters’ rationale for consideration of adopting malnutrition quality measures, including a malnutrition care composite measure, to prevent and reduce malnutrition among older adults across the care continuum as they are important components of care for LTCH patients. We will take the suggestions into consideration as we develop future measures for the LTCH QRP.

*Comment:* A commenter suggested the use of pain related questions in an HCAHPS survey in the LTCH setting instead of implementing the Application of Percent of Residents Who Self-Report Moderate to Severe Pain (Short Stay) (NQF #0676) measure.

*Response:* We thank the commenter for the suggestion. We will continue to take these and future stakeholder inputs under advisement to inform our ongoing quality measure development.

*Comment:* One commenter emphasized the importance of establishing quality measures for individuals with advanced illness which address symptom management, social and spiritual support, care coordination, and identification of goals and preferences and whether those goals are met, given unique care needs and the aging of the population as CMS considers future measure topics for consideration in the LTCH QRP.

*Response:* We appreciate the commenter’s suggestions regarding future measures, and will take them into consideration.

#### b. IMPACT Act Measure—Possible Future Update To Measure Specifications

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57207 through 57215), we finalized the Discharge to Community-PAC LTCH QRP measure, which assesses successful discharge to the community from an LTCH setting, with successful discharge to the community including no unplanned rehospitalizations and no death in the 31 days following discharge from the LTCH. We received public comments (see 81 FR 57211) recommending

exclusion of baseline nursing facility residents from the measure, as these residents did not live in the community prior to their LTCH stay. At that time, we highlighted that, using Medicare FFS claims alone, we were unable to accurately identify baseline nursing facility residents. We stated that potential future modifications of the measure could include assessment of the feasibility and impact of excluding baseline nursing facility residents from the measure through the addition of patient assessment-based data. In response to these public comments, we are considering a future modification of the Discharge to Community-PAC LTCH QRP measure, which would exclude baseline nursing facility residents from the measure.

We invited public comment on the possibility of excluding baseline nursing facility residents from the Discharge to Community-PAC LTCH QRP measure in future years of the LTCH QRP.

*Comment:* Several commenters expressed support for excluding baseline nursing facility residents from the discharge to community measure as a potential future measure modification. Commenters stated that this exclusion would result in the measure more accurately portraying quality of care provided by LTCHs, while controlling for factors outside of LTCH control.

*Response:* We thank commenters for their support for exclusion of baseline nursing facility residents as a potential future measure modification. We will consider their views and determine whether to propose to exclude baseline nursing facility residents from the Discharge to Community-PAC LTCH QRP measure in future years of the LTCH QRP.

#### c. IMPACT Act Implementation Update

As a result of the input and suggestions provided by technical experts at the TEPs held by our measure developer, and through public comment, we are engaging in additional development work, including performing additional testing, with respect to two measures that would satisfy the domain of accurately communicating the existence of and providing for the transfer of health information and care preferences when the individual transitions, in section 1899B(c)(1)(E) of the Act. The measures under development are: *Transfer of Information at Post-Acute Care Admission, Start or Resumption of Care from other Providers/Settings*; and *Transfer of Information at Post-Acute Care Discharge, and End of Care to other Providers/Settings*. We intend to specify these measures under section

1899B(c)(1)(E) of the Act no later than October 1, 2018, and we intend to propose to adopt them for the FY 2021 LTCH QRP, with data collection beginning on or about April 1, 2019.

*Comment:* Commenters suggested that CMS be cautious in its development of the Transfer of Health Information measure set and only proceed to propose and adopt measures that receive NQF endorsement. One commenter cited concerns about the measure development, citing the 2016 MAP PAC/LTC meeting. One commenter noted that the unique goals, preferences, and needs of the patient should be considered in transferring patient information, and that care transitions can be a confusing time for the patient and family/caregiver. The commenter recommended that the measures require PAC facilities to communicate their capabilities and limitations to ensure that they can provide the level of care that meets a patient’s clinically assessed needs, as determined by the relevant decision-makers.

*Response:* We appreciate the comments and feedback on the Transfer of Health Information measures that are currently under development. As we continue to develop these measures, we will take into account the feedback pertaining to modes of information transfer, prescreening requirements for LTCHs, and patient goals and preferences. We intend to re-submit these measures for review to the MAP PAC/LTC Workgroup. Further, we plan to submit the measures to the NQF for consideration for endorsement when we believe that they are ready for NQF review.

#### 10. Standardized Patient Assessment Data Reporting for the LTCH QRP

##### a. Standardized Patient Assessment Data Reporting for the FY 2019 LTCH QRP

Section 1886(m)(5)(F)(ii) of the Act requires that for fiscal year 2019 and each subsequent year, LTCHs report standardized patient assessment data required under section 1899B(b)(1) of the Act. As we describe in more detail above, we are finalizing that the current pressure ulcer measure, Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), will be removed and replaced with the proposed pressure ulcer measure, Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury, beginning with the FY 2020 LTCH QRP. The current pressure ulcer measure will remain in the LTCH QRP until that time. Accordingly, in the FY 2018 IPPS/LTCH

PPS proposed rule (82 FR 20099), with respect to the requirement that LTCHs report standardized patient assessment data for the FY 2019 LTCH QRP, we proposed that the data elements used to calculate the current pressure ulcer measure, Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), meet the definition of standardized patient assessment data with respect to medical conditions and co-morbidities under section 1899B(b)(1)(B)(iv) of the Act, and that the successful reporting of that data under section 1886(m)(5)(F)(i) of the Act with respect to admissions as well as discharges occurring during last three quarters of CY 2017 would also satisfy the requirement to report standardized patient assessment data for the FY 2019 LTCH QRP.

The collection of assessment data pertaining to skin integrity, specifically pressure related wounds, is important for multiple reasons. Clinical decision support, care planning, and quality improvement all depend on reliable assessment data collection. Pressure related wounds represent poor outcomes, are a serious medical condition that can result in death and disability, are debilitating, painful and are often an avoidable outcome of medical care.<sup>446 447 448 449 450 451</sup> Pressure related wounds are considered healthcare acquired conditions.

As we note above, the data elements needed to calculate the current pressure ulcer measure are already included on the LTCH CARE Data Set and reported by LTCHs, and exhibit validity and reliability for use across PAC providers. Item reliability for these data elements was also tested for the nursing home setting during implementation of MDS 3.0. Testing results are from the RAND Development and Validation of MDS 3.0 project.<sup>452</sup> The RAND pilot test of the

MDS 3.0 data elements showed good reliability and is also applicable to both the IRF-PAI and the LTCH CARE Data Set because the data elements tested are the same. Across the pressure ulcer data elements, the average gold-standard nurse to gold-standard nurse kappa statistic was 0.905. The average gold-standard nurse to facility-nurse kappa statistic was 0.937. Data elements used to risk adjust this quality measure were also tested under this same pilot test, and the gold-standard to gold-standard kappa statistic, or percent agreement (where kappa statistic not available), ranged from 0.91 to 0.99 for these data elements. These kappa scores indicate “almost perfect” agreement using the Landis and Koch standard for strength of agreement.<sup>453</sup>

The data elements used to calculate the current pressure ulcer measure received public comment on several occasions, including when that measure was proposed in the FY 2012 IRF PPS (76 FR 47876) and IPPS/LTCH PPS proposed rules (76 FR 51754). Further, they were discussed in the past by TEPs held by our measure development contractor on June 13 and November 15, 2013, and recently by a TEP on July 18, 2016. TEP members supported the measure and its cross-setting use in PAC. The report, *Technical Expert Panel Summary Report: Refinement of the Percent of Patients or Residents with Pressure Ulcers that are New or Worsened (Short Stay) (NQF #0678) Quality Measure for Skilled Nursing Facilities (SNFs), Inpatient Rehabilitation Facilities (IRFs), Long-Term Care Hospitals (LTCHs), and Home Health Agencies (HHAs)*, is available at: [https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Post-Acute-Care-Quality-Initiatives/Downloads/July-2016-Pressure-Ulcer-TEP-Report\\_revised.pdf](https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Post-Acute-Care-Quality-Initiatives/Downloads/July-2016-Pressure-Ulcer-TEP-Report_revised.pdf).

We invited public comment on this proposal.

*Comment:* Several comments supported reporting the data elements already implemented in the LTCH QRP to fulfill the requirement to report standardized patient assessment data for the FY 2019 LTCH QRP.

*Response:* We appreciate the commenters' support of the proposal and agree that these data elements currently reported by LTCHs meet the definition of standardized patient

assessment data and satisfy the requirement to report standardized patient assessment data.

*Comment:* One commenter expressed concern regarding the proposed reporting schedule for new standardized patient assessment data elements given the volume of data that will need to be reported by LTCHs. The commenter emphasized the reporting requirements for the current pressure ulcer measure, which fulfills the standardized patient assessment data element requirements beginning with the FY 2019 LTCH QRP.

*Response:* We acknowledge the concerns raised by the commenter. Upon further consideration of the appropriate timeline for LTCHs to report this data for the FY 2019 LTCH QRP, we are finalizing that LTCHs would be required to report the current pressure ulcer measure for the last quarter of CY 2017 to meet the requirements for reporting standardized patient assessment data. We do not believe that the continued reporting of the current pressure ulcer measure is too burdensome on the LTCH industry since LTCHs will not need to change their reporting practices with respect to reporting the standardized pressure ulcer data, nor will they be reporting additional data as of October 1, 2017. The submission of the current pressure ulcer measure data will act to meet the requirement of submitting standardized patient assessment data beginning October 1, 2017. Further, in response to similar comments expressing concern with increased burden, CMS has decided to move the release date of the LTCH CARE Data Set Version 4.00 from April 1, 2018 to July 1, 2018 which gives LTCHs an additional 3 months to prepare. We refer readers to section IX.C.11.d which describes the effect of the delayed release date of the LTCH CARE Data Set Version 4.00 on the currently adopted LTCH QRP measures.

After consideration of the public comments received, we are finalizing our proposal, as proposed, that the data elements currently reported by LTCHs to calculate the current measure, Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), meet the definition of standardized patient assessment data with respect to medical conditions and co-morbidities under section 1899B(b)(1)(B)(iv) of the Act, and that the successful reporting of that data under section 1886(m)(5)(F)(i) of the Act would also satisfy the requirement to report standardized patient assessment data under section 1886(m)(5)(F)(ii) of the Act beginning October 1, 2017 for the FY 2019 LTCH QRP. We are also finalizing the change

in the release date of the LTCH CARE Data Set Version 4.00 from April 1, 2018 to July 1, 2018. We refer readers to section IX.C.11.c. of the preamble of this final rule for discussion on this issue.

**b. Standardized Patient Assessment Data Reporting Beginning With the FY 2020 LTCH QRP**

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20099 through 20116) we described our proposals for the reporting of standardized patient assessment data by LTCHs beginning with the FY 2020 LTCH QRP. LTCHs would be required to report these data with respect to LTCH admissions and discharges that occur between April 1, 2018 and December 31, 2018, with the exception of three data elements (Brief Interview of Mental Status (BIMS), Hearing, and Vision), which would be required with respect to LTCH admissions only that occur between April 1, 2018 and December 31, 2018. Following the initial reporting year for the FY 2020 LTCH QRP, subsequent years for the LTCH QRP would be based on a full calendar year of such data reporting.

In selecting the data elements proposed in the FY 2018 IPPS/LTCH PPS proposed rule, we carefully weighed the balance of burden in assessment-based data collection and aimed to minimize additional burden through the utilization of existing data in the assessment instruments. We also took into consideration the following factors with respect to each data element: Overall clinical relevance; ability to support clinical decisions, care planning and interoperable exchange to facilitate care coordination during transitions in care; and the ability to capture medical complexity and risk factors that can inform both payment and quality. In addition, the data elements had to have strong scientific reliability and validity; be meaningful enough to inform longitudinal analysis by providers; had to have received general consensus agreement for its usability; and had to have the ability to collect such data once but support multiple uses. Further, to inform the final set of data elements for proposal, we took into account technical and clinical subject matter expert review, public comment, and consensus input in which such principles were applied. We also took into account the consensus work and empirical findings from the PAC PRD.

*Comment:* Many commenters expressed significant concerns with respect to our standardized patient assessment data proposals. Several commenters stated that the new

standardized patient assessment data reporting requirements will impose significant burden on providers, given the volume of new standardized patient assessment data elements that were proposed to be added to the LCDS. A few commenters noted that the addition of the proposed standardized patient assessment data elements would require hiring more staff, retraining staff on revised questions or coding guidance, and reconfiguring internal databases and EHRs. Other commenters expressed concerns about the gradual but significant past and future expansion of the LCDS through the addition of standardized patient assessment data elements and quality measures, noting the challenge of coping with ongoing additions and changes.

Several commenters expressed concern related to the implementation timeline in the proposed rule, which would require LTCHs to begin collecting the proposed standardized patient assessment data elements in the timeframe stated in the proposed rule. One commenter stated that there would not be sufficient time to be ready by April 1, 2018. Another commenter noted that CMS had not yet provided sufficient specifications or educational materials to support implementation of the new patient assessments in the proposed timeline.

Several commenters urged CMS to delay the reporting of new standardized patient assessment data elements by at least one year, and to carefully assess whether all of the proposed standardized patient assessment data elements are necessary under the IMPACT Act. Commenters suggested ways to delay the proposals for standardized patient assessment data elements in the categories of Cognitive Function and Mental Status; Special Services, Treatments, and Interventions; and Impairments, including allowing voluntary or limited reporting for a period of time before making comprehensive reporting mandatory, and delaying the beginning of mandatory data collection for a period of time. Some commenters recommended that during the delay, CMS re-evaluate whether it can require the reporting of standardized patient assessment data in a less burdensome manner.

*Response:* We understand the concerns raised by commenters that the finalization of our standardized patient assessment data proposals would require LTCHs to spend a significant amount of resources preparing to report the data, including updating relevant protocols and systems and training appropriate staff. We also recognize that

we can meet our obligation to require the reporting of standardized patient assessment data with respect to the categories described in section 1899B(b)(1)(B) of the Act while simultaneously being responsive to these concerns. Therefore, after consideration of the public comments we received on these issues, we have decided that at this time, we will not finalize the standardized patient assessment data elements we proposed for three of the five categories under section 1899B(b)(1)(B) of the Act: Cognitive Function and Mental Status; Special Services, Treatments, and Interventions; and Impairments. Although we believe that the proposed standardized patient assessment data elements would promote transparency around quality of care and price as we continue to explore reforms to the PAC payment system, the data elements that we proposed for each of these categories would have imposed a new reporting burden on LTCHs. We agree that it would be useful to evaluate further how to best identify the standardized patient assessment data that would satisfy each of these categories; would be most appropriate for our intended purposes including payment and measure standardization; and can be reported by LTCHs in the least burdensome manner. As part of this effort, we intend to conduct a national field test that allows for stakeholder feedback and to consider how to maximize the time LTCHs have to prepare for the reporting of standardized patient assessment data in these categories. We intend to make new proposals with respect to the categories described in sections 1899B(b)(1)(B)(ii), (iii) and (v) of the Act no later than in the FY 2020 IPPS/LTCH PPS proposed rule.

In this final rule, we are finalizing the standardized patient assessment data elements that we proposed to adopt for the IMPACT Act categories of Functional Status and Medical Conditions and Co-Morbidities. Unlike the standardized patient assessment data that we are not finalizing, the standardized patient assessment data that we proposed for these categories are already required to calculate the Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (NQF #0678) quality measure, Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury quality measure (which we are finalizing in this final rule), and the Application of Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631)

quality measure (which we finalized in the FY 2016 IPPS/LTCH PPS final rule). As a result, we do not believe that finalizing these proposals creates a new reporting burden for LTCHs or otherwise necessitates a delay.

*Comment:* Several commenters expressed support for the adoption of standardized patient assessment data elements. One commenter expressed support for standardizing the definitions as well as the implementation of the data collection effort. The commenter also supported CMS' goal of standardizing the questions and responses across all PAC settings to help "enable the data to be interoperable, allowing it to be shared electronically, or otherwise between PAC provider types." One commenter stated that streamlining requirements across Medicare's quality reporting programs will reduce the administrative burden of quality reporting for these facilities as well as the physicians and other clinicians who contribute to that reporting. Another commenter noted full support of the IMPACT Act's goals and objectives and appreciated CMS' efforts to regularly communicate with stakeholders through various national provider calls, convening of stakeholders, and meetings with individual organizations. Another commenter recognized the value of a unified patient assessment system for PAC as part of a potential unified payment system for PAC, but encouraged CMS to look carefully at opportunities to streamline the assessment and avoid duplication.

*Response:* We appreciate the support of these proposals, but note that for the reasons explained above, we have decided at this time to not finalize the proposals for three of the five categories under section 1899B(b)(1)(B) of the Act: Cognitive Function and Mental Status; Special Services, Treatments, and Interventions; and Impairments.

*Comment:* Several commenters addressed the variation in the look-back period associated with the standardized patient assessment data elements. In general, commenters were concerned about the variation in look-back periods across items and how differences in look-back periods would affect the validity of the item responses and assessor burden. One commenter stated that the many and varied look-back periods associated with the proposed standardized patient assessment data elements would cause confusion for the assessors and patients.

*Response:* We appreciate the commenters' review of the proposed standardized patient assessment data elements and concerns about

implementation. We acknowledge that the look-back periods would vary for different standardized patient assessment data elements within a setting, but we wish to clarify that the look-back periods for each standardized patient assessment data element would be the same across PAC settings. In our ongoing work to identify candidate data elements for standardization, we will continue to carefully consider the impact of different look-back periods for different standardized patient assessment data elements on the validity of the data and assessor burden. We believe that it is important to collect the same information across settings, including over the same look-back period, and we will work to identify the best options for achieving this aspect of standardized assessment in the future.

*Comment:* Several commenters stated that there is insufficient evidence demonstrating the reliability and validity of the proposed standardized patient assessment data elements. Some commenters stated that the expanded standardized patient assessment data reporting requirements have not yet been adequately tested to ensure they collect accurate and useful data in this setting. A few commenters stated that only five of the proposed 23 standardized patient assessment data elements are currently reported in the CARE Data Set and the other 18 are currently used in other post-acute setting patient assessment instruments, mainly the Minimum Data Set (MDS) 3.0 used in skilled nursing facilities (SNFs). Other commenters stated that CMS' conclusion that the collection of these standardized patient assessment data elements in the LTCH setting would be feasible and the standardized patient assessment data elements would result in valid and reliable data was based on the current use of these data elements in the MDS and the testing of these data elements in the PAC PRD.

A few commenters stated that several of the proposed standardized patient assessment data elements that had not been adequately tested were deemed close enough to an item that had been tested in the PAC PRD or in other PAC settings and thus appropriate for implementation.

*Response:* Our standardized patient assessment data elements were selected based on a rigorous multi-stage process that was described in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20088 through 20089). In addition, we believe that the PAC PRD testing of many of these data elements provides good evidence from a large, national sample of patients and residents in PAC settings to support the use of these standardized

patient assessment data elements in and across PAC settings. However, as noted above, we have decided at this time to not finalize the proposals for three of the five categories under section 1899B(b)(1)(B) of the Act: Cognitive Function and Mental Status; Special Services, Treatments, and Interventions; and Impairments. Prior to making new proposals for these categories, we intend to conduct extensive testing to ensure that the standardized patient assessment data elements we select are reliable, valid and appropriate for their intended use.

A full discussion of the standardized patient assessment data elements that we proposed to adopt for the categories described in sections 1899B(b)(1)(B)(ii), (iii) and (v) of the Act can be found in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20100 through 20116). In light of our decision to not finalize our proposals with respect to these categories, we are not going to address in this final rule the specific technical comments that we received on these proposed data elements. However, we appreciate the many technical comments we did receive specific to each of these data elements, and we will take them into consideration as we develop new proposals for these categories. Below we discuss the comments we received specific to the standardized patient assessment data we proposed to adopt, and are finalizing in this final rule, for the categories of Functional Status and Medical Conditions and Co-Morbidities.

#### (1) Functional Status Data

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20100), we proposed that the data elements currently reported by LTCHs to calculate the measure, Application of Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631), would also meet the definition of standardized patient assessment data with respect to functional status under section 1899B(b)(1)(B)(i) of the Act, and that the successful reporting of that data under section 1886(m)(5)(F)(i) of the Act would also satisfy the requirement to report standardized patient assessment data under section 1886(m)(5)(F)(ii) of the Act.

These patient assessment data for functional status are from the CARE Item Set. The development of the CARE Item Set and a description and rationale for each item is described in a report entitled "The Development and Testing of the Continuity Assessment Record

and Evaluation (CARE) Item Set: Final Report on the Development of the CARE Item Set: Volume 1 of 3.”<sup>454</sup> Reliability and validity testing were conducted as part of CMS’ Post-Acute Care Payment Reform Demonstration, and we concluded that the functional status items have acceptable reliability and validity. A description of the testing methodology and results are available in several reports, including the report entitled “The Development and Testing of the Continuity Assessment Record And Evaluation (CARE) Item Set: Final Report On Reliability Testing: Volume 2 of 3”<sup>455</sup> and the report entitled “The Development and Testing of The Continuity Assessment Record And Evaluation (CARE) Item Set: Final Report on Care Item Set and Current Assessment Comparisons: Volume 3 of 3.”<sup>456</sup> The reports are available on CMS’ Post-Acute Care Quality Initiatives Web page at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Post-Acute-Care-Quality-Initiatives/CARE-Item-Set-and-B-CARE.html>.

For more information about this quality measure and the data elements used to calculate it, we refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49739 through 49747).

We invited public comment on this proposal.

*Comment:* One commenter requested that the following self-care and cognitive items be added to the Percent of Long-Term Care Hospital (LTCH) Patients With an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631) measure in order to meet the definition of standardized patient assessment data with respect to functional status: upper body dressing, lower body dressing, and putting on/taking off footwear.

*Response:* We will take these suggestions into consideration. We believe we should seek additional stakeholder input before considering proposing adding these data elements to the LTCH CARE Data Set, because we are mindful of burden associated with adding any new data elements. We refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49739 through 49747) for a detailed discussion of the Application of Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional

Assessment and a Care Plan That Addresses Function (NQF #2631) measure.

After consideration of the public comments we received, we are finalizing as proposed that the data elements currently reported by LTCHs to calculate the measure, Application of Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631), also meet the definition of standardized patient assessment data with respect to functional status under section 1899B(b)(1)(B)(i) of the Act, and that the successful reporting of that data under section 1886(m)(5)(F)(i) of the Act will also satisfy the requirement to report standardized patient assessment data under section 1886(m)(5)(F)(ii) of the Act.

#### (2) Medical Condition and Comorbidity Data

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20113 through 20114), we proposed that the data elements needed to calculate the current measure, Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), and the proposed measure, Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury, meet the definition of standardized patient assessment data with respect to medical conditions and co-morbidities under section 1899B(b)(1)(B)(iv) of the Act, and that the successful reporting of that data under section 1886(m)(5)(F)(i) of the Act would also satisfy the requirement to report standardized patient assessment data under section 1886(m)(5)(F)(ii) of the Act.

“Medical conditions and comorbidities” and the conditions addressed in the standardized data elements used in the calculation and risk adjustment of these measures, that is, the presence of pressure ulcers, diabetes, incontinence, peripheral vascular disease or peripheral arterial disease, mobility, as well as low body mass index, are all health-related conditions that indicate medical complexity that can be indicative of underlying disease severity and other comorbidities.

Specifically, the data elements used in the measure are important for care planning and provide information pertaining to medical complexity. Pressure ulcers are serious wounds representing poor healthcare outcomes, and can result in sepsis and death. Assessing skin condition, care planning for pressure ulcer prevention and healing, and informing providers about

their presence in patient transitions of care is a customary and best practice. Venous and arterial disease and diabetes are associated with low blood flow which may increase the risk of tissue damage. These diseases are indicators of factors that may place individuals at risk for pressure ulcer development and are therefore important for care planning. Low BMI, which may be an indicator of underlying disease severity, may be associated with loss of fat and muscle, resulting in potential risk for pressure ulcers. Bowel incontinence, and the possible maceration to the skin associated, can lead to higher risk for pressure ulcers. In addition, the bacteria associated with bowel incontinence can complicate current wounds and cause local infection. Mobility is an indicator of impairment or reduction in mobility and movement which is a major risk factor for the development of pressure ulcers. Taken separately and together, these data elements are important for care planning, transitions in services and identifying medical complexities.

In sections IX.C.7.a. and IX.C.10.a. of the preamble of this final rule, we discuss our rationale for proposing that the data elements used in the measures meet the definition of standardized patient assessment data. In summary, we believe that the collection of such assessment data is important for multiple reasons, including clinical decision support, care planning, and quality improvement, and that the data elements assessing pressure ulcers and the data elements used to risk adjust showed good reliability. We solicited stakeholder feedback on the quality measure, and the data elements from which it is derived, by means of a public comment period and TEPs, as described in section IX.C.7.a. of the preamble of this final rule.

We invited public comment on this proposal.

*Comment:* Some commenters supported the reporting of data elements already implemented in the LTCH QRP to satisfy the requirement to report standardized patient assessment data.

*Response:* We appreciate the commenters’ support.

After consideration of the public comments we received, we are finalizing as proposed that the data elements currently reported by LTCHs to calculate the current measure, Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), and the proposed measure, Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury, meet the definition of standardized patient assessment data with respect to medical conditions and

<sup>454</sup> Barbara Gage et al., “The Development and Testing of the Continuity Assessment Record and Evaluation (CARE) Item Set: Final Report on the Development of the CARE Item Set” (RTI International, 2012).

<sup>455</sup> *Ibid.*

<sup>456</sup> *Ibid.*

co-morbidities under section 1899B(b)(1)(B)(iv) of the Act, and that the successful reporting of that data under section 1886(m)(5)(F)(i) of the Act would also satisfy the requirement to report standardized patient assessment data under section 1886(m)(5)(F)(ii) of the Act.

For comments related to the pressure ulcer quality measure, we refer readers to section IX.C.7.a of the preamble of this final rule.

11. Form, Manner, and Timing of Data Submission Under the LTCH QRP

a. Start Date for Standardized Patient Assessment Data Reporting by New LTCHs

In the FY 2016 IPPS/LTCH PPS final rule (80 FR 49749 through 49752), we adopted timing for new LTCHs to begin reporting quality data under the LTCH QRP beginning with the FY 2017 LTCH QRP. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20116), we proposed that new LTCHs will be required to begin reporting standardized patient assessment data on the same schedule.

We invited public comment on this proposal. We did not receive any public comments on this proposal; therefore, we are finalizing as proposed the start date for standardized patient assessment data reporting by new LTCHs.

b. Mechanism for Reporting Standardized Patient Assessment Data Beginning With the FY 2019 LTCH QRP

Under our current policy, LTCHs report data by completing applicable sections of the LCDS, and submitting the LCDS to CMS through the QIES ASAP system. For more information on LTCH QRP reporting through the QIES ASAP system, refer to the “Related Links” section at the bottom of: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment->

*Instruments/LTCH-Quality-Reporting/LTCH-Technical-Information.html*.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20116), we stated that the proposed standardized patient assessment data elements are already included on, or would be added to, the LCDS. Details regarding the LCDS with respect to the proposed standardized patient assessment data are available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html>.

We invited public comments on this proposal. We did not receive any comments on this proposal; therefore, we are finalizing as proposed the mechanism for reporting standardized patient assessment data beginning with the FY 2019 LTCH QRP.

c. Schedule for Reporting Standardized Patient Assessment Data Beginning With the FY 2019 LTCH QRP

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20116 through 20117), we proposed that the standardized patient assessment data necessary to calculate the quality measure “Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678)” would be used for the FY 2019 LTCH QRP. We also proposed that for purposes of the FY 2019 LTCH QRP program year such data would only include the last three quarters of calendar year 2017 (April 1, 2017 through December 31, 2017). In section IX.C.7.a of the preamble of the proposed rule, we discussed our proposal to adopt the measure, “Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury” to replace the current measure, “Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678)” with data collection beginning on April 1, 2018. We also stated that should the proposed

measure be finalized, the FY 2020 LTCH QRP will be determined using the data from the first quarter of CY 2018 using the current measure, “Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678)” and last three quarters of CY 2018 using the data from the proposed measure, “Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury.”

In section IX.C.10.b of the preamble of the proposed rule, we discussed the additional standardized patient assessment data proposed beginning with the FY 2020 LTCH QRP. Unless otherwise indicated, under our current policy, except for the first program year for which a measure is adopted, LTCHs must report data on measures with respect to LTCH admissions and discharges that occur during the 12 month calendar year period that applies to the program year. For the first program year for which a measure is adopted, LTCHs are usually required to report data for LTCH admissions and discharges that occur during the last three quarters of the calendar year that applies to that program year, as the version of the LTCH CARE Data Set that will contain the new items for LTCHs to report a new measure, is routinely released on April 1st of any given year.

For example, for the FY 2018 LTCH QRP, data on measures adopted for earlier program years must be reported with respect to all CY 2016 LTCH admissions and discharges. However, data on new measures adopted for the first time for the FY 2018 LTCH QRP must only be reported with respect to LTCH admissions and discharges that occur during the last three calendar quarters of 2016.

The tables below illustrate the data collection timeframes and data submission deadlines related to the April 1st standard release of the LTCH CARE Data Set:

SUMMARY ILLUSTRATION OF INITIAL REPORTING CYCLE FOR MEASURES AND STANDARDIZED PATIENT ASSESSMENT DATA REPORTING USING CY QUARTERS 2, 3, AND 4 DATA \*

Data collection/submission quarterly reporting period *	Data submission quarterly deadlines for the FY [year] LTCH QRP * ^
Q2: April 1–June 30 .....	Q2 Deadline: November 15.
Q3: July 1–September 30 .....	Q3 Deadline: February 15.
Q4: October 1–December 30 .....	Q4 Deadline: May 15.

\* Applies to data reporting using the LTCH CARE Data Set and data reporting using the National Healthcare Safety Network.

^ The term “FY [year] LTCH QRP” means the fiscal year for which the LTCH QRP requirements applicable to that fiscal year must be met in order for an LTCH to receive the full annual update when calculating the payment rates applicable to it for that fiscal year.

SUMMARY ILLUSTRATION OF CALENDAR YEAR QUARTERLY REPORTING CYCLE FOR MEASURES AND STANDARDIZED PATIENT ASSESSMENT DATA REPORTING \*

Data collection/submission quarterly reporting period *	Data submission quarterly deadlines for the FY [year] LTCH QRP * ^
Q1: January 1–March 31 .....	Q1 Deadline: August 15.
Q2: April 1–June 30 .....	Q2 Deadline: November 15.
Q3: July 1–September 30 .....	Q3 Deadline: February 15.
Q4: October 1–December 31 .....	Q4 Deadline: May 15.

\*Applies to data reporting using the LTCH CARE Data Set and data reporting using the National Healthcare Safety Network.

^The term “FY [year] LTCH QRP” means the fiscal year for which the LTCH QRP requirements applicable to that fiscal year must be met in order for an LTCH to receive the full annual update when calculating the payment rates applicable to it for that fiscal year.

We invited public comment on our proposal for standardized patient assessment data reporting beginning with the FY 2019 LTCH QRP and to extend our current policy governing the schedule for reporting quality measure data to the reporting of standardized patient assessment data beginning with the FY 2020 LTCH QRP.

The FY 2019 LTCH QRP will be determined using standardized patient assessment data collected from October 1, 2017 through December 31, 2017 using the current measure, Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), as described in section IX.C.10.a. of the preamble of this final rule.

As described in section IX.C.10.b of the preamble of this final rule, commenters expressed concern related to the implementation timeline in the proposed rule and stated that there would not be sufficient time to be ready by April 1, 2018. In response to those comments, we are moving the implementation of the LTCH CARE Data Set Version 4.00 from April 1, 2018 to July 1, 2018.

As a result of the delayed implementation of the LTCH CARE Data Set Version 4.00, the FY 2020 LTCH QRP will be determined using the standardized patient assessment data from the first two quarters of CY 2018 using the current measure, Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), and last two quarters of CY 2018 using the standardized patient assessment data from the finalized measures, Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury and Application of Percent of Long-Term Care Hospital (LTCH) Patients With an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631), as described in IX.C.10.b. of the preamble of this final rule.

For the FY 2020 LTCH QRP, and with this final rule, LTCHs will be required to report measures and standardized patient assessment data for LTCH admissions and discharges during the last two quarters of CY 2018 as the version of the LTCH CARE Data Set that will contain the new items for LTCHs to report new measures and standardized patient assessment data will be released

July 1, 2018. This exception to our standard policy is relevant only to LTCH CARE Data Set data to be reported to CMS for new measures and standardized patient assessment data that is finalized in this FY 2018 IPPS/LTCH PPS final rule, and for which LTCHs will begin reporting data on July 1, 2018, with the release of the LTCH CARE Data Set Version 4.00, as all subsequent releases of LTCH CARE Data Set versions will revert back to their standard release date of April 1 of any given year.

The FY 2021 LTCH QRP will be determined using standardized patient assessment data from CY 2019 from the finalized measures, Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury and Application of Percent of Long-Term Care Hospital (LTCH) Patients With an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631).

The tables below illustrate the data collection timeframes and submission deadlines for measures and standardized patient assessment data finalized for the FY 2020 and FY 2021 LTCH QRP.

SUMMARY ILLUSTRATION OF INITIAL REPORTING CYCLE FOR NEWLY ADOPTED MEASURES AND STANDARDIZED PATIENT ASSESSMENT DATA REPORTING FOR CY 2018 QUARTERS 3 AND 4 DATA \*

Finalized data collection/submission quarterly reporting period *	Finalized data submission quarterly deadlines beginning with the FY 2020 LTCH QRP * ^
Q3: CY 2018—7/1/2018–9/30/2018 .....	CY 2018 Q3 Deadline: February 15, 2019.
Q4: CY 2018—10/1/2018–12/31/2018 .....	CY 2018 Q4 Deadline: May 15, 2019.

\*Applies to data reporting using the LTCH CARE Data Set and data reporting using the National Healthcare Safety Network.

^The term “FY 2020 LTCH QRP” means the fiscal year for which the LTCH QRP requirements applicable to that fiscal year must be met in order for an LTCH to receive the full annual update when calculating the payment rates applicable to it for that fiscal year.

SUMMARY ILLUSTRATION OF CALENDAR YEAR QUARTERLY REPORTING CYCLE FOR MEASURES AND STANDARDIZED PATIENT ASSESSMENT DATA REPORTING \*

Finalized data collection/submission quarterly reporting period *	Finalized data submission quarterly deadlines beginning with the FY 2021 LTCH QRP * ^
Q1: CY 2019—1/1/2019–3/31/2019 .....	CY 2019 Q1 Deadline: August 15, 2019.
Q2: CY 2019—4/1/2019–6/30/2019 .....	CY 2019 Q2 Deadline: November 15, 2019.
Q3: CY 2019—7/1/2019–9/30/2019 .....	CY 2019 Q3 Deadline: February 15, 2020.
Q4: CY 2019—10/1/2019–12/31/2019 .....	CY 2019 Q4 Deadline: May 15, 2020.

\*Applies to data reporting using the LTCH CARE Data Set and data reporting using the National Healthcare Safety Network.

<sup>^</sup>The term "FY 2021 LTCH QRP" means the fiscal year for which the LTCH QRP requirements applicable to that fiscal year must be met in order for an LTCH to receive the full annual update when calculating the payment rates applicable to it for that fiscal year.

We are finalizing our proposal for reporting standardized patient assessment data beginning with the FY 2019 LTCH QRP. We are also finalizing the exception to the standard policy related to the timing of reporting standardized patient assessment data for the FY 2020 LTCH QRP and subsequent releases of the LTCH CARE Data Set will revert back to their standard release date of April 1 of any given year.

**d. Schedule for Reporting the Newly Finalized Quality Measures Beginning With the FY 2020 LTCH QRP**

As discussed in section IX.C.7. of the preamble of this final rule, we adopted three quality measures beginning with the FY 2020 LTCH QRP: Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury; Compliance with SBT by Day 2 of the LTCH Stay; and Ventilator Liberation Rate. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20117), we proposed that LTCHs would report data on these measures using the LTCH CARE Data Set that is submitted through the QIES ASAP system and LTCHs would be required to report these data beginning with LTCH admissions and discharges that occur between April 1, 2018 and December 31, 2018. More information on LTCH reporting using the QIES ASAP system is located at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Technical-Information.html>.

Under our current policy, LTCHs would only be required to submit data on the proposed measures for the last three quarters of CY 2018 for purposes of the FY 2020 LTCH QRP. Starting in CY 2019, LTCHs would be required to submit data for the entire calendar year beginning with the FY 2021 LTCH QRP.

We invited public comment on this proposal.

*Comment:* A commenter requested that CMS reduce the unnecessary burden of the LTCH CARE Data Set, including revising the response timing requirements of the LTCH CARE Data Set, and suggested extending the response time beyond three days. The commenter also stated that CMS should provide clear assessment guidelines and guidance for reporting data.

*Response:* We appreciate the comment, and we are working on ways to minimize the overall burden associated with the LTCH CARE Data Set, while keeping in mind our goal to collect valid, reliable and appropriate data for the LTCH QRP.

The three-day assessment period is in place to standardize responses from all LTCHs in order to ensure that the data are comparable across LTCHs. In addition, when choosing the appropriate length of time in which to require that the assessment take place, we weighed the need for providers to have sufficient time to accurately assess the patient's clinical status at the time of admission. Due to the high acuity of LTCH patients, we believe extending the 3-day assessment period would not allow a true picture of the patient's clinical status at the time of admission. Moreover, LTCHs have approximately 135 days following the end of each calendar year quarter, during which to submit, review, and correct their quality data for that CY quarter, with exception of the Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431) measure, in which data is submitted annually and not quarterly. These timeframes are aligned with those of other quality reporting programs and allow an appropriate amount of time for LTCHs to review and correct quality data prior to the public display of that data.

We provide comprehensive training to assist LTCHs with completing the LCDS, including through training manuals, webinars, open door forums, help desk support, and a Web site that hosts training information (<http://www.youtube.com/user/CMSHHSgov>). We also provide guidance on completing and submitting the LTCH CARE Data Set in Chapter 2 of the LTCH QRP Manual, which is available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-CARE-Data-Set-and-LTCH-QRP-Manual.html>.

*Comment:* Some commenters requested crosswalks from ICD-10 codes to LTCH CARE Data Set items. One commenter requested that these crosswalks be kept up-to-date contemporaneously with ICD-10 changes.

*Response:* A list of ICD-10 codes for the 2018 LTCH CARE Data Set items will be available no sooner than July 2018. We also intend to provide and update this information in LTCH manuals, training events, and on Web site postings.

As described in section IX.C.10.c. of the preamble of this final rule, we are finalizing the schedule for reporting the newly finalized measures beginning July

1, 2018 for the FY 2020 LTCH QRP in response to public comments.

As a result of the delayed implementation of the LTCH CARE Data Set Version 4.00, as described in section IX.C.10.c of the preamble of this final rule, in addition to the currently adopted measures in the LTCH QRP, LTCHs will be required to submit data on the finalized measures, Change in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury, Compliance with SBT by Day 2 of the LTCH Stay, and Ventilator Liberation Rate, beginning with the last two quarters of CY 2018 for the FY 2020 LTCH QRP. LTCHs will also submit data on the previously finalized measure, Drug Regimen Review Conducted with Follow-Up for Identified Issues-PAC LTCH QRP, beginning with the last two quarters of CY 2018 for the FY 2020 LTCH QRP. Starting in CY 2019, LTCHs will be required to submit data for the entire calendar year beginning with the FY 2021 LTCH QRP. The finalized LTCH CARE Data Set Version 4.00 is available for review at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-CARE-Data-Set-and-LTCH-QRP-Manual.html>.

In summary, we are finalizing our proposal for reporting the standardized patient assessment data necessary to calculate quality measures beginning with the FY 2019 LTCH QRP. We are also finalizing our proposal to extend our current policy governing the schedule for reporting quality measure data to the reporting of standardized patient assessment data, including the schedule for reporting newly finalized measures beginning July 1, 2018 for the FY 2020 LTCH QRP.

**e. Removal of Interrupted Stay Items From the LTCH CARE Data Set**

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20117), we proposed to remove the program interruption items from the LTCH CARE Data Set. Specifically, we proposed to remove the following items: (1) A2500, Program Interruption(s); (2) A2510, Number of Program Interruptions During This Stay in This Facility; and (3) A2525, Program Interruption Dates, because we do not currently utilize this information nor do we have plans to utilize this information for the LTCH QRP. For a detailed discussion of burden related to LTCH CARE Data Set, we refer readers to section XIV.B.9. of the preamble of this final rule.

We invited public comment on this proposal.

*Comment:* Several commenters supported the removal of the interrupted stay items from the LTCH CARE Data Set, and commended CMS' efforts to reduce burden with the removal of these items.

*Response:* We thank the commenters for their support of our efforts to reduce burden.

After consideration of the public comments we received, we are finalizing our proposal to remove the program interruption items (A2500, A2510, and A2525) from the LTCH CARE Data Set Version 4.00, effective July 1, 2018.

#### 12. Application of the LTCH QRP Participation Requirements to the Submission of Standardized Patient Assessment Data

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20117), we proposed to revise the regulatory text at § 412.560(a) to state that an LTCH must begin submitting quality data, including standardized patient assessment data, under the LTCH QRP by no later than the first day of the calendar quarter subsequent to 30 days after the date on its CMS Certification Number (CCN) notification letter.

We invited public comments on this proposal. We did not receive any public comments on this proposal. Therefore, we are finalizing our proposal as proposed to revise the regulatory text at § 412.560(a) to state that an LTCH must begin submitting quality data, including standardized patient assessment data, under the LTCH QRP by no later than the first day of the calendar quarter subsequent to 30 days after the date on its CMS Certification Number (CCN) notification letter.

#### 13. Application of the LTCH QRP Data Submission Requirements to the Submission of Standardized Patient Assessment Data

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20117), we proposed to revise the regulatory text at § 412.560(b)(1) to require LTCHs to report both data on measures and standardized patient assessment data under the LTCH QRP in a form and manner, and at a time, specified by CMS.

We invited public comments on this proposal. We did not receive any public comments on this proposal. Therefore, we are finalizing our proposal as proposed to revise the regulatory text at § 412.560(b)(1) to require LTCHs to report both data on measures and standardized patient assessment data

under the LTCH QRP in a form and manner, and at a time, specified by CMS.

#### 14. Application of the LTCH QRP Exception and Extension Requirements to the Submission of Standardized Patient Assessment Data

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20117 through 20118), we proposed to revise the regulatory text at § 412.560(c) to extend the Exception and Extension requirement policies to the submission of standardized patient assessment data beginning with the FY 2019 LTCH QRP.

We invited public comments on this proposal. We did not receive any public comments on this proposal. Therefore, we are finalizing our proposal as proposed to revise the regulatory text at § 412.560(c) to extend these policies to the submission of standardized patient assessment data beginning with the FY 2019 LTCH QRP.

#### 15. Application of the LTCH QRP Reconsideration Policy to the Submission of Standardized Patient Assessment Data

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20118), we proposed to revise the regulatory text at § 412.560(d) to extend the reconsideration policies to the submission of standardized patient assessment data beginning with the FY 2019 LTCH QRP.

We invited public comments on this proposal. We did not receive any comments on this proposal. Therefore, we are finalizing our proposal to revise the regulatory text at § 412.560(d) to extend these policies to the submission of standardized patient assessment data beginning with the FY 2019 LTCH QRP.

#### 16. Application of the LTCH QRP Data Completion Thresholds to the Submission of Standardized Patient Assessment Data Beginning With the FY 2019 LTCH QRP

In the FY 2015 IPPS/LTCH PPS final rule (79 FR 50311 through 50314), we finalized LTCH QRP thresholds for completeness of LTCH data submissions. To ensure that LTCHs are meeting an acceptable standard for completeness of submitted data, we finalized the policy that, beginning with the FY 2016 LTCH QRP, LTCHs must meet or exceed two separate data completeness thresholds: One threshold set at 80 percent for completion of measures data collected using the LTCH CARE Data Set submitted through the QIES ASAP system, and a second threshold set at 100 percent for measures data collected and submitted

using the CDC NHSN. The term "measures" refers to quality measures, resource use, and other measures.

Under our finalized policy, some assessment data will not invoke a response and, in those circumstances, are not "missing" nor is the data incomplete. For example, in the case of a patient who does not have any of the medical conditions in a "check all that apply" listing, the absence of a response of a health condition indicates that the condition is not present, and it would be incorrect to consider the *absence* of such data as missing in a threshold determination. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20118), we proposed to extend our current LTCH QRP data completion requirements to the reporting of standardized patient assessment data. We invited public comment on this proposal.

We also proposed to codify these LTCH QRP data completion thresholds at a new § 412.560(f) for measures data collected using the LTCH CARE Data Set, beginning with the FY 2016 LTCH QRP, and standardized patient assessment data elements collected using the LTCH CARE Data Set, beginning with the FY 2019 LTCH QRP. Under this section, we proposed to codify that LTCHs must meet or exceed two separate data completeness thresholds: 80 Percent for completion of measures data and standardized patient assessment data collected using the LTCH CARE Data Set submitted through the QIES; and 100 percent for measures data collected and submitted using the CDC NHSN. These thresholds would apply to all measures and data elements adopted into LTCH QRP. A LTCH must meet or exceed both thresholds to avoid receiving a 2 percentage point reduction to its annual payment update for a given fiscal year, beginning with the FY 2016 LTCH QRP for measures data and beginning with the FY 2019 LTCH QRP for standardized patient assessment data elements.

We invited public comment on our proposal to extend our current LTCH QRP data completion requirements to the reporting of standardized patient assessment data. We also invited public comment on our proposal to codify the LTCH QRP data completion thresholds at § 412.560(f) for measures and standardized patient assessment data elements collected using the LTCH CARE Data Set.

*Comment:* A commenter raised concerns regarding the addition of standardized patient assessment data that would be applied to the data completion threshold policy. The commenter suggested waiting a year to

impose the data completion threshold policy to the standardized patient assessment data so that providers have the opportunity to receive confidential feedback on their data from CMS.

*Response:* We appreciate the commenter's suggestions pertaining to the application of the data completion threshold policy to the standardized patient assessment data elements. Providers generally have 135 days following the end of each CY quarter to review and submit corrections to their data. Therefore, we believe that providers have the sufficient tools and time to manage the addition of the standardized patient assessment data to the data completion threshold policy.

After consideration of the public comments we received, we are finalizing our proposal as proposed to extend our current LTCH QRP data completion requirements to the reporting of standardized patient assessment data. We are also finalizing our proposal as proposed to codify the LTCH QRP data completion thresholds at § 412.560(f) for measures and standardized patient assessment data elements collected using the LTCH CARE Data Set.

#### 17. Policies Regarding Public Display of Measure Data for the LTCH QRP

Section 1886(m)(5)(E) of the Act requires the Secretary to establish procedures for making the LTCH QRP data available to the public after ensuring that an LTCH has the opportunity to review its data prior to public display. Measure data is currently displayed on the Long-Term Care Hospital Compare Web site, which is an interactive web tool that assists individuals by providing information on LTCH quality of care including those who need to select an LTCH. For more information on *LTCH Compare*, we refer readers to: <https://www.medicare.gov/longtermcarehospitalcompare/>. In addition, for a more detailed discussion about the provider's confidential review process prior to public display of quality measures we refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 57231 through 57236).

We also finalized the process we use to publish a list of LTCHs that successfully meet the reporting requirements for the applicable LTCH QRP year on the LTCH QRP Web site in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57231). The list of compliant LTCHs is available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Data-Submission-Deadlines.html>.

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57231 through 57236), we finalized the public display of measure data on the *LTCH Compare* Web site in CY 2017 for the following 4 quality measures pending the availability of data: (1) NHSN Facility-wide Inpatient Hospital-onset MRSA Bacteremia Outcome Measure (NQF #1716); (2) NHSN Facility-wide Inpatient Hospital-onset CDI Outcome Measure (NQF #1717); (3) Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431); and (4) Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (NQF #0680).

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57232), we stated that "pending the availability of data," the public display of NHSN Facility-wide Inpatient Hospital-onset MRSA Bacteremia Outcome Measure (NQF #1716) and NHSN Facility-wide Inpatient Hospital-onset CDI Outcome Measure (NQF #1717) would initially be based on data collected from January 1, 2015 through December 31, 2015 and would be displayed based on 4 rolling quarters. We would like to clarify that the initial public display of data for these two quality measures (MRSA and CDI) will be based on data collected from January 1, 2016 through December 31, 2016 (CY 2016), as the CY 2015 data is not available for display using the Standardized Infection Ratio (SIR) metric. Rather, this data (CY 2015) was used by the CDC to calculate the "predicted" number of infections (the number of infections that would be expected to occur based on previously reported data) for each LTCH, so that subsequent data could be used to calculate the SIR for each of these quality measures.

The SIR is a summary statistic that compares the "predicted" number of infections to the "observed" or actual number of infections for a given LTCH. This process or "rebaselining" of data occurs periodically when the CDC determines that referent period of data or "baseline" is no longer meaningful due to changes in the quality measure protocols or changes in provider populations. When the CDC uses a specific year's data to inform newly calculated "predicted" number of infections, CMS is unable to use that specific year of data to calculate the SIR, and for this reason, we are unable to display the MRSA and CDI performance data using the CY 2015 LTCH NHSN data, and will use the CY 2016 data to inform the SIR calculations when we publicly display the SIRs for these measures in fall 2017.

The Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431) and Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (NQF #0680) will be based on the influenza vaccination season from October 1, 2015 through March 31, 2016 and will be updated annually. We refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 57231 through 57233) for details on the calculations and display of these quality measures.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20118 through 20120), pending the availability of data, we proposed to publicly report data in CY 2018 for the following 3 assessment-based measures: (1) Percent of LTCH Patients With an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631); (2) Application of Percent of LTCH Patients With an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631); and (3) Application of Percent of Residents Experiencing One or More Falls with Major Injury (NQF #0674). In addition, pending the availability of data, we proposed to publicly report data in CY 2020 for the assessment-based measure Functional Outcome Measure: Change in Mobility Among Patients Requiring Ventilator Support (NQF #2632). Data collection for these 4 new assessment-based measures began on April 1, 2016. We proposed to display data for the assessment-based measures based on four rolling quarters of data and would initially use discharges from January 1, 2017 through December 31, 2017, with the exception of Functional Outcome Measure: Change in Mobility Among Patients Requiring Ventilator Support (NQF #2632) which would be based on eight rolling quarters of data and would initially use discharges from January 1, 2017 through December 31, 2018.

In addition, we proposed to publicly report 3 claims-based measures: (1) Medicare Spending Per Beneficiary-PAC LTCH QRP; (2) Discharge to Community-PAC LTCH QRP; and (3) Potentially Preventable 30-Day Post-Discharge Readmission Measure for LTCH QRP.

These measures were adopted for the LTCH QRP in the FY 2017 IPPS/LTCH PPS final rule to be based on data from 2 consecutive calendar years. As previously adopted in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57233 through 57236), confidential feedback reports for these 3 claims-based measures will be based on calendar years 2015 and 2016 and data collected

for discharges beginning January 1, 2015 through December 31, 2016. However, our current proposal revises the dates for public reporting, and we proposed to transition from calendar year to fiscal year to make these measure data publicly available by October 2018.

Thus, we proposed public reporting beginning in CY 2018 for these claims-based measures based on fiscal years 2016 and 2017 and data collected from discharges beginning October 1, 2015 through September 30, 2017.

We proposed to remove the following claims-based measure “All-Cause Unplanned Readmission Measure for 30 Days Post Discharge from LTCHs” from the LTCH QRP and public reporting by October 2018. We refer readers to section IX.C.8. of the preamble of this final rule for additional information regarding the proposed removal of this measure from quality reporting and public display. We also proposed to remove the following assessment-based measure “Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678)” and to replace it with a

modified version of the measure entitled “Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury” from the LTCH QRP and public reporting by October 2020. We refer readers to section IX.C.7.a. of the preamble of this final rule for additional information regarding the proposed replacement of this measure from quality reporting and public display.

For the assessment-based measures: Percent of LTCH Patients With an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631); Application of Percent of LTCH Patients With an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631); and Application of Percent of Residents Experiencing One or More Falls with Major Injury (NQF #0674), to ensure the statistical reliability of the measures, we proposed to assign LTCHs with fewer than 20 eligible cases during a performance period to a separate category: “The number of cases/patient stays is too small to report.” If an LTCH had fewer than 20 eligible cases, the

LTCH’s performance would not be publicly reported for the measure for that performance period.

For the claims-based measures: Discharge to Community-PAC LTCH QRP and Potentially Preventable 30-Day Post-Discharge Readmission Measure for LTCH QRP, to ensure the statistical reliability of the measures, we proposed to assign LTCHs with fewer than 25 eligible cases during a performance period to a separate category: “The number of cases/patient stays is too small to report.” If an LTCH had fewer than 25 eligible cases, the LTCH’s performance would not be publicly reported for the measure for that performance period. For Medicare Spending Per Beneficiary-PAC LTCH QRP, to ensure the statistical reliability of the measure, we proposed to assign LTCHs with fewer than 20 eligible cases during a performance period to a separate category: “The number of cases/patient stays is too small to report.” If an LTCH had fewer than 20 eligible cases, the LTCH’s performance would not be publicly reported for the measure for that performance period.

#### PREVIOUSLY FINALIZED AND PROPOSED MEASURES FOR CY 2018 PUBLIC DISPLAY AND CONFIDENTIAL FEEDBACK REPORTS

##### Previously Finalized Measures:

Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678).  
National Healthcare Safety Network (NHSN) Catheter-Associated Urinary Tract Infection (CAUTI) Outcome Measure (NQF #0138).  
National Healthcare Safety Network (NHSN) Central Line-Associated Bloodstream Infection (CLABSI) Measure (NQF #0139).  
NHSN Facility-wide Inpatient Hospital-onset Methicillin-resistant *Staphylococcus aureus* (MRSA) Bacteremia Outcome Measure (NQF #1716).  
NHSN Facility-wide Inpatient Hospital-onset *Clostridium difficile* Infection (CDI) Outcome Measure (NQF #1717).  
Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431).  
Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (NQF #0680).

##### Proposed Measures:

Percent of Long-Term Care Hospital (LTCH) Patients With an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631).  
Application of Percent of Long-Term Care Hospital (LTCH) Patients With an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631).  
Application of Percent of Residents Experiencing One or More Falls with Major Injury (NQF #0674).  
Medicare Spending Per Beneficiary-PAC LTCH QRP.  
Discharge to Community-PAC LTCH QRP.  
Potentially Preventable 30-Day Post-Discharge Readmission Measure for LTCH QRP.

#### PROPOSED ADDITIONAL MEASURE FOR CY 2020 PUBLIC DISPLAY AND CONFIDENTIAL FEEDBACK REPORTS

Functional Outcome Measure: Change in Mobility Among Long-Term Care Hospital (LTCH) Patients Requiring Ventilator Support (NQF #2632).

We invited public comment on the proposal for the public display of the four assessment-based measures and three claims-based measures, the removal of the All-Cause Unplanned Readmission Measure for 30 Days Post Discharge from LTCHs from the LTCH QRP and public display, and the

replacement of “Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678)” with a modified version of the measure entitled “Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury” as described above.

*Comment:* A commenter supported CMS’ efforts to display regional comparison rates. The commenter also requested state comparison data in addition to regional comparison data for the LTCH quality measures.

*Response:* We appreciate the commenter’s support. We also note that we addressed this issue in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57233), and we refer the reader to that

final rule for a detailed response regarding the display of regional and state comparison rates.

*Comment:* A commenter supported CASPER monthly updates to the data and the provision of detailed instructions on how to obtain their confidential feedback reports.

*Response:* We acknowledge the commenter’s support for the current process of providing monthly updates to the confidential feedback reports. We will continue to provide detailed instructions on how to obtain CASPER reports on the LTCH QRP Web site and will continue to offer trainings to help providers understand how to utilize the reports available to them.

*Comment:* A commenter suggested that CMS provide consultative opportunities to assist LTCHs in their measure improvements.

*Response:* We note that providers can use their confidential feedback and other CASPER reports to address their internal processes to improve quality outcomes. Further, there are established help desks for our public reporting and quality reporting programs that providers can submit questions about the measures and performance results that CMS reviews and responds to. Additional information about the help desks can be found on the LTCH QRP Web site: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Help.html>. Finally, we also provide training opportunities and updated guidance which can be accessed by means of the LTCH QRP Web pages.

*Comment:* A few commenters expressed concern that similar or overlapping quality measures would be publicly reported at the same time on the *LTCH Compare* Web site (for example, both pressure ulcer measures, both readmission measures).

*Response:* We plan to remove the Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678) and All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from Long-Term Care Hospitals from the *LTCH Compare* Web site prior to when we begin to publicly display the Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury and Potentially Preventable 30-Day Post-Discharge Readmission Measure for Long-Term Care Hospital Quality Reporting Program, respectively.

*Comment:* A few commenters recommended enhancements to the *LTCH Compare* Web site to further explain quality measure data and results in a way that is interpretable to patients, their families, and providers. One of these commenters also suggested convening a multi-stakeholder panel to review and provide guidance on the various Compare Web sites including *LTCH Compare*.

*Response:* We appreciate the commenters' suggestions and will take these suggestions into consideration as we continue to enhance the *LTCH Compare* Web site, including making quality measure information interpretable for LTCH patients, families, and providers. Of note, when developing the *LTCH Compare* Web site, consumer testing of the Web site did occur during the development

stages with members of the public including Medicare beneficiaries.

*Comment:* A commenter expressed concerns about the ability of providers to review and correct the accuracy of measure data generated by the CDC NHSN and claims-based models prior to their display on the *LTCH Compare* Web site as mandated by the IMPACT Act. The commenter further stated that results for two of the four required measures, CLABSI and CAUTI, were not posted on the *Compare* Web site due to calculation issues while the unplanned readmission rate cannot be reviewed for accuracy by providers because they are not provided the raw source data or the model.

*Response:* We recognize the commenter's concerns regarding the CDC NHSN CAUTI and CLABSI and claims-based All-Cause Unplanned Readmission Measure for 30 Days Post Discharge from Long-Term Care Hospitals. Providers are required to submit accurate HAI data to CDC and are given the opportunity to review and correct any data submitted. Providers have approximately 4.5 months after the reporting quarter to correct their assessment-based and NHSN data used to calculate the measures as detailed in FY 2017 IPPS/LTCH PPS final rule (81 FR 57234 through 57236). Also, as stated in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57234), CMS can suppress data on *LTCH Compare* if it is determined that the measure performance on the Provider Preview reports contains a calculation error. We intend to display data on the CDC NHSN CAUTI and CLABSI measures for the most recent quarter when the data is corrected. We will continue to work with the CDC to ensure the accuracy of measure results. CDC measure specifications can be found on the CDC NHSN Web site (<http://www.cdc.gov/nhsn/index.html>).

Regarding the claims-based All-Cause Unplanned Readmission Measure for 30 Days Post Discharge from Long-Term Care Hospitals measure, CMS appreciates commenter's concern regarding the accuracy of the measure because they are not provided the raw source data or the model. CMS is exploring the feasibility of making additional patient level data available to providers as well as posting updated information on the risk model results used for measure calculation. We intend to continue to display results for The All-Cause Unplanned Readmission Measure for 30 Days Post Discharge from Long-Term Care Hospitals (NQF #2512) until the removal of the measure from public display by October 2018.

*Comment:* A commenter expressed concerns regarding the ability of CDC NHSN HAI and claims-based All-Cause Unplanned Readmission Measure for 30 Days Post Discharge from Long-Term Care Hospitals measures to accurately reflect changing patient populations.

*Response:* We appreciate the commenter's concerns about the CDC NHSN HAI CAUTI and CLABSI measures and the claims-based All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from Long-Term Care Hospitals. We will continue to update and refine measure specifications based on ongoing analysis of the data and patient populations. National averages are not stagnant but are calculated on an ongoing basis to reflect results based on the data from the time period reported.

After consideration of the public comments we received, we are finalizing our proposal as proposed to begin publicly reporting in CY 2018 the following assessment-based measures pending the availability of the data: "Percent of Long-Term Care Hospital (LTCH) Patients With an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function" (NQF #2631), "Application of Percent of Long-Term Care Hospital (LTCH) Patients With an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function" (NQF #2631), "Application of Percent of Residents Experiencing One or More Falls with Major Injury" (NQF #0674), as well as the following claims-based measures: "Medicare Spending Per Beneficiary-PAC LTCH QRP," "Discharge to Community-PAC LTCH QRP," and "Potentially Preventable 30-Day Post-Discharge Readmission Measure for LTCH QRP." In addition, we will publicly report data in CY 2020 the assessment-based measure: "Functional Outcome Measure: Change in Mobility Among Long-Term Care Hospital (LTCH) Patients Requiring Ventilator Support" (NQF #2632) pending availability of data.

We are finalizing our proposal to remove the claims-based measure "All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from Long-Term Care Hospitals" from the LTCH QRP and public reporting by October 2018. We are also finalizing our proposals to remove the following assessment-based measure "Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678)" and to replace it with a modified version of the measure entitled "Changes in Skin Integrity Post-Acute Care: Pressure

Ulcer/Injury” from the LTCH QRP and public reporting by October 2020.

#### 18. Mechanism for Providing Feedback Reports to LTCHs

Section 1899B(f) of the Act requires the Secretary to provide confidential feedback reports to PAC providers on their performance on the measures specified under sections 1899B(c)(1) and (d)(1) of the Act, beginning one year after the specified application date that applies to such measures and PAC providers. In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57233 through 57236), we finalized processes to provide LTCHs the opportunity to review their data and information using confidential feedback reports that will enable LTCHs to review their performance on the measures required under the LTCH QRP. Information on how to obtain these and other reports available to the LTCH can be found at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Public-Reporting.html>.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20120), we did not propose any changes to this policy.

#### D. Inpatient Psychiatric Facility Quality Reporting (IPFQR) Program

##### 1. Background

###### a. Statutory Authority

Section 1886(s)(4) of the Act, as added and amended by sections 3401(f) and 10322(a) of the Patient Protection and Affordable Care Act, requires the Secretary to implement a quality reporting program for inpatient psychiatric hospitals and psychiatric units. Section 1886(s)(4)(A)(i) of the Act requires that, for fiscal year (FY) 2014<sup>457</sup> and each subsequent fiscal year, the Secretary must reduce any annual update to a standard Federal rate

<sup>457</sup> The statute uses the term “rate year” (RY). However, beginning with the annual update of the inpatient psychiatric facility prospective payment system (IPF PPS) that took effect on July 1, 2011 (RY 2012), we aligned the IPF PPS update with the annual update of the ICD codes, effective on October 1 of each year. This change allowed for annual payment updates and the ICD coding update to occur on the same schedule and appear in the same **Federal Register** document, promoting administrative efficiency. To reflect the change to the annual payment rate update cycle, we revised the regulations at 42 CFR 412.402 to specify that, beginning October 1, 2012, the RY update period would be the 12-month period from October 1 through September 30, which we refer to as a “fiscal year” (FY) (76 FR 26435). Therefore, with respect to the IPFQR Program, the terms “rate year,” as used in the statute, and “fiscal year” as used in the regulation, both refer to the period from October 1 through September 30. For more information regarding this terminology change, we refer readers to section III of the RY 2012 IPF PPS final rule (76 FR 26434 through 26435).

for discharges occurring during the fiscal year by 2.0 percentage points for any inpatient psychiatric hospital or psychiatric unit that does not comply with quality data submission requirements with respect to an applicable fiscal year.

As provided in section 1886(s)(4)(A)(ii) of the Act, the application of the reduction for failure to report under section 1886(s)(4)(A)(i) of the Act may result in an annual update of less than 0.0 percent for a fiscal year, and may result in payment rates under section 1886(s)(1) of the Act being less than the payment rates for the preceding year. In addition, section 1886(s)(4)(B) of the Act requires that the application of the reduction to a standard Federal rate update be noncumulative across fiscal years. Thus, any reduction applied under section 1886(s)(4)(A) of the Act will apply only with respect to the fiscal year rate involved and the Secretary may not take into account the reduction in computing the payment amount under the system described in section 1886(s)(1) of the Act for subsequent years.

Section 1886(s)(4)(C) of the Act requires that, for FY 2014 (October 1, 2013 through September 30, 2014) and each subsequent year, each psychiatric hospital and psychiatric unit must submit to the Secretary data on quality measures as specified by the Secretary. The data must be submitted in a form and manner and at a time specified by the Secretary. Under section 1886(s)(4)(D)(i) of the Act, unless the exception of subclause (ii) applies, measures selected for the quality reporting program must have been endorsed by the entity with a contract under section 1890(a) of the Act. The National Quality Forum (NQF) currently holds this contract.

Section 1886(s)(4)(D)(ii) of the Act provides an exception to the requirement for NQF endorsement of measures: In the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by the entity with a contract under section 1890(a) of the Act, the Secretary may specify a measure that is not so endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary.

Section 1886(s)(4)(E) of the Act requires the Secretary to establish procedures for making public the data submitted by inpatient psychiatric hospitals and psychiatric units under the IPFQR Program. These procedures must ensure that a facility has the opportunity to review its data prior to

the data being made public. The Secretary must report quality measures that relate to services furnished by the psychiatric hospitals and units on the CMS Web site.

###### b. Covered Entities

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53645), we established that the IPFQR Program’s quality reporting requirements cover those psychiatric hospitals and psychiatric units paid under Medicare’s Inpatient Psychiatric Facility Prospective Payment System (IPF PPS) (42 CFR 412.404(b)). Generally, psychiatric hospitals and psychiatric units within acute care and critical access hospitals that treat Medicare patients are paid under the IPF PPS. Consistent with prior rules, we continue to use the term “inpatient psychiatric facility” (IPF) to refer to both inpatient psychiatric hospitals and psychiatric units. This usage follows the terminology in our IPF PPS regulations at 42 CFR 412.402. For more information on covered entities, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53645).

###### c. Considerations in Selecting Quality Measures

We strive to put patients first, ensuring they are empowered to make decisions about their own healthcare along with their clinicians using information from data-driven insights that are increasingly aligned with meaningful quality measures. We support technology that reduces burden and allows clinicians to focus on providing high-quality healthcare for their patients. We also support innovative approaches to improve quality, accessibility, and affordability of care while paying particular attention to improving clinicians’ and beneficiaries’ experience when interacting with our programs. In combination with other efforts across the Department of Health and Human Services, we believe the IPFQR program helps to incentivize facilities to improve healthcare quality and value while giving patients and providers the tools and information needed to make the best decisions for them. Consistent with these goals, our objective in selecting quality measures is to balance the need for information on the full spectrum of care delivery and the need to minimize the burden of data collection and reporting. We have primarily focused on measures that evaluate critical processes of care that have significant impact on patient outcomes and support CMS and HHS priorities for improved quality and efficiency of care provided by IPFs. When possible, we also seek to

incorporate measures that directly evaluate patient outcomes. We refer readers to section VIII.F.4.a of the FY 2013 IPPS/LTCH PPS final rule (77 FR 53645 through 53646) for a detailed discussion of the considerations taken into account in selecting quality measures.

#### (1) Measure Selection Process

Before being proposed for inclusion in the IPFQR Program, measures are placed on a list of measures under consideration, which is published annually by December 1 on behalf of CMS by the NQF. In compliance with section 1890A(a)(2) of the Act, measures proposed for the IPFQR Program were included in a publicly available document: “List of Measures under Consideration for December 1, 2016” available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Quality-Measures/Downloads/Measures-under-Consideration-List-for-2016.pdf>. The Measure Applications Partnership (MAP), a multi-stakeholder group convened by the NQF, reviews the measures under consideration for the IPFQR Program, among other Federal programs, and provides input on those measures to the Secretary. The MAP’s 2017 recommendations for quality measures under consideration are captured in the following documents: “Process and Approach for MAP Pre-Rulemaking Deliberations, 2016–2017,” available at: <http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=84455> and “2016–2017 Spreadsheet of Final Recommendations to HHS and CMS” available at: <http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=84452>. We considered the input and recommendations provided by the MAP in selecting all measures for the IPFQR Program, including those discussed below.

#### (2) Accounting for Social Risk Factors in the IPFQR Program

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20121), we discussed accounting for social risk factors in the IPFQR Program. We understand that social risk factors such as income, education, race and ethnicity, employment, disability, community resources, and social support (certain factors of which are also sometimes referred to as socioeconomic status (SES) factors or socio-demographic status (SDS) factors) play a major role in health. One of our core objectives is to improve beneficiary outcomes including reducing health

disparities, and we want to ensure that all beneficiaries, including those with social risk factors, receive high quality care. In addition, we seek to ensure that the quality of care furnished by providers and suppliers is assessed as fairly as possible under our programs while ensuring that beneficiaries have adequate access to excellent care.

We have been reviewing reports prepared by the Office of the Assistant Secretary for Planning and Evaluation (ASPE)<sup>458</sup> and the National Academies of Sciences, Engineering, and Medicine on the issue of measuring and accounting for social risk factors in CMS’ value-based purchasing and quality reporting programs, and considering options on how to address the issue in these programs. On December 21, 2016, ASPE submitted a Report to Congress on a study it was required to conduct under section 2(d) of the Improving Medicare Post-Acute Care Transformation (IMPACT) Act of 2014. The study analyzed the effects of certain social risk factors in Medicare beneficiaries on quality measures and measures of resource use used in one or more of nine Medicare value-based purchasing programs.<sup>459</sup> The report also included considerations for strategies to account for social risk factors in these programs. In a January 10, 2017 report released by the National Academies of Sciences, Engineering, and Medicine, that body provided various potential methods for measuring and accounting for social risk factors, including stratified public reporting.<sup>460</sup>

As noted in the FY 2017 IPPS/LTCH PPS final rule, the NQF undertook a 2-year trial period in which new measures, measures undergoing maintenance review, and measures endorsed with the condition that they enter the trial period could be assessed to determine whether risk adjustment for selected social risk factors is appropriate for these measures. This trial entailed temporarily allowing inclusion of social risk factors in the

risk-adjustment approach for these measures. The trial period ended in April 2017 and a draft report is available at: [http://www.qualityforum.org/SES\\_Trial\\_Period.aspx](http://www.qualityforum.org/SES_Trial_Period.aspx).

As we continue to consider the analyses and recommendations from these reports and await the results of the NQF trial on risk adjustment for quality measures, we are continuing to work with stakeholders in this process. As we have previously communicated, we are concerned about holding providers to different standards for the outcomes of their patients with social risk factors because we do not want to mask potential disparities or minimize incentives to improve the outcomes for disadvantaged populations. Keeping this concern in mind, while we sought input on this topic previously, we continue to seek public comment on whether we should account for social risk factors in the IPFQR Program, and if so, what method or combination of methods would be most appropriate for accounting for social risk factors.

Examples of methods include: Confidential reporting to providers of measure rates stratified by social risk factors; public reporting of stratified measure rates; and potential risk adjustment of a particular measure as appropriate based on data and evidence.

In addition, in the proposed rule, we sought public comment on which social risk factors might be most appropriate for reporting stratified measure scores and/or potential risk adjustment of a particular measure. Examples of social risk factors include, but are not limited to, dual eligibility/low-income subsidy, race and ethnicity, and geographic area of residence. We also sought comments on which of these factors, including current data sources where this information would be available, could be used alone or in combination, and whether other data should be collected to better capture the effects of social risk. We will take commenters’ input into consideration as we continue to assess the appropriateness and feasibility of accounting for social risk factors in the IPFQR Program. We note that any such changes would be proposed through future notice-and-comment rulemaking.

We look forward to working with stakeholders as we consider the issue of accounting for social risk factors and reducing health disparities in CMS programs. Of note, implementing any of the above methods would be taken into consideration in the context of how this and other CMS programs operate (for example, data submission methods, availability of data, statistical considerations relating to reliability of

<sup>458</sup> Office of the Assistant Secretary for Planning and Evaluation. 2016. Report to Congress: Social Risk Factors and Performance Under Medicare’s Value-Based Purchasing Programs. <sup>460</sup> National Academies of Sciences, Engineering, and Medicine. 2017. Accounting for social risk factors in Medicare payment. Washington, DC: The National Academies Press.

data calculations, among others), so we also welcomed comment on operational considerations. CMS is committed to ensuring that its beneficiaries have access to and receive excellent care, and that the quality of care furnished by providers and suppliers is assessed fairly in CMS programs.

*Comment:* Many commenters expressed support for the concept of accounting for social risk factors in the IPFQR Program; however, these commenters expressed concern that chart-abstracted process measures, with data submitted in aggregate, are inappropriate for risk adjustment or stratified reporting. These commenters observed that to properly risk-adjust or stratify data for the IPFQR Program, the program would benefit from collection of patient-level outcome measures data. One commenter cautioned that collecting information to stratify measures could increase burden on IPFs and reduce the amount of data publicly reported due to small sample sizes. Several commenters encouraged CMS to ensure that providers can confidentially view reports of measures data stratified by social risk factors.

One commenter expressed appreciation that CMS is dedicating time and attention to this issue, but requested that CMS improve transparency of the process by developing a work plan and timeline. One commenter encouraged CMS to collaborate with Medicare Advantage and Medicaid health plans in understanding the impact of social risk factors.

Many commenters expressed concern that incentives for reducing disparities could lead to a reduction in quality for patients who are not at risk, and recommended that CMS consider this or other unintended consequences in any program design.

Several commenters urged CMS to ensure that data are publicized in a way that is meaningful to consumers, with some commenters specifically recommending that CMS convene consumer focus groups to provide input on the data presentation.

*Response:* We will consider all suggestions as we continue to assess the feasibility of accounting for social risk factors and will actively perform additional research and monitor for trends to prevent unintended consequences. We intend to explore options including but not limited to measure stratification by social risk factors in a consistent manner across our quality reporting and value-based purchasing programs when appropriate. Future proposals would be made after

further research and continued stakeholder engagement.

We are committed to ensuring that CMS beneficiaries have access to and receive excellent care and the quality of care furnished by providers and suppliers is assessed fairly in CMS quality reporting and value-based purchasing programs. We thank the commenters, and we will consider their views as we develop further policy regarding social risk factors in the IPFQR Program.

### (3) IPFQR Program Measures Adopted in Previous Payment Determinations

The current IPFQR Program includes 18 mandatory measures. For more information on these measures, we refer readers to the following final rules:

- The FY 2013 IPPS/LTCH PPS final rule (77 FR 53646 through 53652);
- The FY 2014 IPPS/LTCH PPS final rule (78 FR 50889 through 50895);
- The FY 2015 IPF PPS final rule (79 FR 45963 through 45974);
- The FY 2016 IPF PPS final rule (80 FR 46694 through 46714); and
- The FY 2017 IPPS/LTCH PPS final rule (81 FR 57236 through 57249).

### 2. Factors for Removal or Retention of IPFQR Program Measures

#### a. Background

The Hospital IQR Program adopted formal policies regarding measure retention and removal in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50185). We believe that it is important to be consistent between programs to the extent possible. Therefore, to align with the policies adopted in this and other quality reporting programs, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20122), we proposed to adopt similar policies within the IPFQR Program. In the past, we have retained measures from each previous year's IPFQR Program measure set for subsequent years' measure sets, except when we specifically proposed to remove or replace a measure. For example, we removed HBIPS-6 and HBIPS-7 and replaced these measures with Transition Record with Specified Elements Received by Discharged Patients (NQF #0647) and Timely Transmission of Transition Record (NQF #0648) respectively in the FY 2016 IPF PPS final rule (80 FR 46701 through 46709). In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20122), we proposed factors to consider in removing or retaining measures effective upon finalization of the proposed rule, anticipated to be effective October 1, 2017 and for subsequent years.

We will continue to use the notice-and-comment rulemaking process to

propose measures for removal or replacement.

#### b. Considerations in Removing or Retaining Measures

With respect to measure removal, we believe it is important to be transparent in identifying factors that we would take into consideration on a case-by-case basis as guidelines to evaluate a measure for potential removal from the IPFQR Program. We believe that these factors should be aligned between our programs whenever possible. Therefore, we refer readers to the Hospital IQR Program (80 FR 49641 through 49642) factors we consider in removing or retaining measures. We intend to align our policies in the IPFQR Program with those in the Hospital IQR Program. Thus, in the proposed rule, we proposed: (1) Measure removal factors; (2) criteria for determining when a measure is "topped-out;" and (3) measure retention factors. These proposals are discussed in more detail below.

We proposed the following measure removal factors for the IPFQR Program:

- Measure performance among IPFs is so high and unvarying that meaningful distinctions and improvements in performance can no longer be made ("topped-out" measures);
- Measure does not align with current clinical guidelines or practice;
- Measure can be replaced by a more broadly applicable measure (across settings or populations) or a measure that is more proximal in time to desired patient outcomes for the particular topic;
- Measure performance or improvement does not result in better patient outcomes;
- Measure can be replaced by a measure that is more strongly associated with desired patient outcomes for the particular topic;
- Measure collection or public reporting leads to negative unintended consequences other than patient harm; and
- Measure is not feasible to implement as specified.

For the purposes of considering measures for removal from the program, we also proposed to align our criteria for determining that a measure is "topped-out" with the Hospital IQR Program's criteria (80 FR 49642), which states that a measure is "topped-out" if there is statistically indistinguishable performance at the 75th and 90th percentiles and the truncated coefficient of variation is less than or equal to 0.10.

Furthermore, we recognize that there may be times when measures may meet some of the outlined factors for removal,

but continue to bring value to the program. Therefore, we also proposed the following factors for consideration in determining whether to retain a measure in the IPFQR Program, which also are based on factors established in the Hospital IQR Program (80 FR 49641 through 49642):

- Measure aligns with other CMS and HHS policy goals, such as those delineated in the National Quality Strategy or CMS Quality Strategy;
- Measure aligns with other CMS programs, including other quality reporting programs; and
- Measure supports efforts to move IPFs towards reporting electronic measures.

We reiterate that these removal and retention factors are considerations that we take into account in balancing the benefits and drawbacks of whether or not to remove measures on a case-by-case basis.

We invited public comment on our proposals to adopt: (1) Measure removal factors; (2) criteria for determining when a measure is “topped out;” and (3) measure retention factors as discussed above. These factors and criteria will become effective upon finalization of this rule, anticipated to be effective October 1, 2017 and for subsequent years; measures identified as appropriate for removal would be proposed through notice-and-comment rulemaking subsequent to that date.

*Comment:* Many commenters supported CMS’ proposal to adopt measure removal factors. Many of these commenters also expressed a desire to see measure performance data and for CMS to define and report on the outcomes that CMS believes are impacted by each process measure. One commenter supported the criteria for determining that a measure is “topped out.”

*Response:* We thank the commenters for their support of our proposed measure removal factors. We publish data collected through the IPFQR Program on a publicly available CMS Web site (specifically, *Hospital Compare*—<https://www.medicare.gov/hospitalcompare/psych-measures.html>) to allow the public to make informed healthcare decisions; these data can also be used to assess national performance levels on specific measures. We also note that when we propose measures for the IPFQR Program, we provide explanations of how we believe these measures impact patient outcomes, we report these data to the extent possible (through our reporting on *Hospital Compare*), and we continue to be committed to adopting applicable

outcomes measures into the IPFQR Program.

*Comment:* One commenter requested that CMS add “implementation puts patients at greater risk of harm” and “measure has not been specified or tested in the IPF setting” to this list of removal factors.

*Response:* While we agree with the commenter that the potential for increased patient harm requires removing a measure from the IPFQR Program, this was not included on the list because the list is for routine measure maintenance, and an increase in patient harm would most likely require immediate action. To clarify, if evidence suggests that a measure results in an increase in patient harm, we would take immediate action, as opposed to waiting for the notice and comment rulemaking cycle.

We disagree with the commenter’s assertion that measures must have been specified or tested in the IPF setting for adoption in the IPFQR Program. We believe that measures should address the overall care provided to patients while they are inpatients and that to accomplish this, for example, some measures which have been tested in general acute care facilities are appropriate for the IPF setting.

*Comment:* Many commenters did not support CMS’ proposed measure retention factors. These commenters believed that only measures specific to psychiatric care should be retained in the IPFQR Program. One commenter expressed that the measure retention factors do not appear to outweigh the benefit of removing measures that meet at least one removal factor.

*Response:* We disagree with the commenters’ assertion that only measures specific to psychiatric care should be included in the IPFQR Program. We believe IPFs should consider the overall health of the patient throughout the length of his/her episode of care, in addition to the patient’s psychiatric condition. We also disagree with the assertion that the measure retention factors do not outweigh the measure removal factors. We believe that selecting measures for this or any of the CMS quality reporting program requires multiple considerations, which is why we have aligned these measure removal and retention factors with those in use in other programs which must also balance multiple considerations. We refer readers to the Hospital IQR Program (80 FR 49641 through 49642), the PCHQR Program (81 FR 57182 through 57183), the Hospital OQR Program (79 FR 66942), and the ASCQR Program (79 FR 66968 through 66969) as examples of programs with similar

needs to balance multiple considerations.

*Comment:* Several commenters expressed concern that if CMS adopts measures that “support efforts to move IPFs towards reporting electronic measures,” it may require IPFs to make extensive infrastructure investments to participate in the IPFQR Program. Some commenters stated that measures should not be retained to support efforts to move IPFs toward reporting electronic measures.

*Response:* We understand the commenters’ concern regarding the adoption of infrastructure to support electronic measure reporting. We do believe that EHRs have a role in quality reporting programs, including the IPFQR Program and, as discussed in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53660) and the 2014 IPPS/LTCH PPS final rule (78 FR 50903) we are interested in increasing the use of EHRs for data collection in the future.

However, we note that the only measure currently in the IPFQR Program that addresses the adoption of Electronic Health Records is the attestation measure “Use of an Electronic Health Record,” which does not require any infrastructure investment. We originally adopted this measure to assess the state of adoption of EHRs among IPFs because the use of EHRs for the collection, use, and transmission of medical information has been demonstrated to impact the quality of care. However, data collected from this measure also provides insight into the operational barriers to adopting future electronic clinical quality measures (eCQMs) as well as the potential burden posed by individual eCQMs. We would propose any future measures that address adoption of EHRs through the notice and comment rulemaking process which allows us to seek public comment on these measures.

*Comment:* Several commenters requested that CMS evaluate the current measures using the proposed removal and retention factors. One commenter further encouraged CMS to evaluate the measures individually and as a set.

*Response:* We will evaluate the effectiveness of the measures currently in the IPFQR Program, individually and as a set, using these factors for this evaluation upon finalization of this rule.

*Comment:* One commenter recommended that CMS also identify a set of principles to use in selecting measures for inclusion in the IPFQR Program. The commenter recommended the following principles for selecting measures: (1) Measures improve the effectiveness and efficiency of patient care; (2) measures focus on indicators

that provide the most useful clinical and operational data possible; (3) measures focus on indicators that support actionable steps that fall within the scope of responsibility and accountability of the organization being measured; (4) measures provide value in the data generated that is in proportion to the intensity of the data-collection effort; and (5) measures have the potential for being used to measurably improve the processes, outcomes, efficiency, and patient experiences of the care being delivered.

*Response:* We have previously described our considerations in the development and selection of measures, which include addressing the six priorities of the National Quality Strategy (NQS) while minimizing burden, publicly reporting on measures that are close to the patient centered outcome of interest, focusing on gaps of quality, reflecting important areas of service, weighing the importance of the measure versus the burden of collection, seeking measures which are endorsed by multistakeholder organizations, and supporting the HHS Strategic Plan. For a detailed discussion, we refer readers to section VIII.F.4.a. of the FY 2013 IPPS/LTCH PPS final rule (77 FR 53645 through 53646). However, we will take into consideration commenter's suggestions for the future.

*Comment:* One commenter expressed concern that the definition of "topped out" is not standardized across private and public payers. This commenter also expressed concern that removing "topped out" measures may worsen performance on the processes that these measures evaluate.

*Response:* We seek to align definitions and criteria with other programs wherever possible. However, as the commenter noted there are multiple definitions of "topped out" across private and public payers. We wish to align definitions and criteria with other programs to the extent possible, however because of the non-standardization of the definition, it is not possible to align with all payers. We proposed "topped out" criteria that align with those in use in other CMS quality reporting programs to ensure our ability to continue to be in alignment with these programs. Such quality reporting programs include the Hospital IQR Program (80 FR 49641 through 49642), the PCHQR Program (81 FR 57182 through 57183), the Hospital OQR Program (79 FR 66942), and the ASCQR Program (79 FR 66968 through 66969).

We agree with the commenter that there may be times that retaining a "topped out" measure is beneficial, as

the measure continues to encourage high levels of performance and we intend to evaluate each measure on a case-by-case basis in accordance with our removal and retention policy to address this concern.

After consideration of the public comments we received, we are adopting the measure removal factors, "topped-out" criteria, and measure retention factors as proposed.

### 3. Proposal for New Quality Measure for the FY 2020 Payment Determination and Subsequent Years—Medication Continuation Following Inpatient Psychiatric Discharge (NQF #3205)

#### a. Background

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20122 through 20126), we proposed one new measure, Medication Continuation Following Inpatient Psychiatric Discharge (NQF #3205), for the FY 2020 payment determination and subsequent years. The measure uses Medicare fee-for-service (FFS) claims to identify whether patients admitted to IPFs with diagnoses of major depressive disorder (MDD), schizophrenia, or bipolar disorder had filled at least one evidence-based medication within 2 days prior to discharge through 30 days post-discharge. We believe that medication continuation is important for patients discharged from the inpatient psychiatric setting with MDD, schizophrenia, or bipolar disorder because of significant negative outcomes associated with non-adherence to medication regimens. For example, patients with MDD who do not remain on prescribed medications are more likely to have negative health outcomes such as relapse and readmission, decreased quality of life, and increased healthcare costs.<sup>461 462</sup> Patients with schizophrenia who do not adhere to their medication regimen are more likely to be hospitalized, use emergency psychiatric services, be arrested, be victims of crimes, and consume alcohol or drugs compared to those who adhere to their medication regimen.<sup>463</sup> Patients with bipolar disorder who do not adhere to their medications have increased

suicide risk.<sup>464</sup> For these reasons, guidelines from the American Psychiatric Association (APA) and the Department of Veterans Affairs/Department of Defense (VA/DoD), which are based on extensive literature, recommend pharmacotherapy as the primary form of treatment for patients with these conditions.<sup>465 466 467 468 469</sup>

Interventions that can be applied in the inpatient setting that increase medication compliance and prevent the negative outcomes associated with nonadherence have been identified. These interventions include patient education, enhanced therapeutic relationships, shared decision-making, and text-message reminders, with multidimensional approaches resulting in the best outcomes.<sup>470 471 472 473 474 475</sup> Furthermore, patients and caregivers interviewed during the development of this measure indicated the importance of the facility's role in communicating

<sup>464</sup> Gonzalez-Pinto A, Mosquera F, Alonso M, et al. Suicidal risk in bipolar I disorder patients and adherence to long-term lithium treatment. *Bipolar disorders*. 2006;8(5 Pt 2):618–624.

information about medications to the patient, pharmacy, and outpatient providers.<sup>476</sup>

b. Appropriateness for the IPFQR Program

In compliance with section 1890A(a)(2) of the Act, this measure was included in a publicly available document: “List of Measures under Consideration for December 1, 2016” available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityMeasures/Downloads/Measures-under-Consideration-List-for-2016.pdf>. The MAP Hospital Workgroup concluded that the measure addressed a critical quality objective, was evidence-based, and would contribute to efficient use of resources.<sup>477</sup> One Workgroup member commented that it was appropriate to hold IPFs accountable for patients filling a prescription for an evidence-based medication post-discharge, further remarking that the measure was moving in the right direction.<sup>478</sup>

The MAP Hospital Workgroup classified the measure as “Refine and Resubmit Prior to Rulemaking.”<sup>479</sup> The measure received this classification because the MAP recommended that measure testing be completed to demonstrate reliability and validity at the facility level in the hospital setting and that the measure be submitted to NQF for review and endorsement.<sup>480</sup> The MAP also requested additional details on the measure, such as: (1) The definition of medication dispensation; (2) how the facility would know whether the medication was dispensed; and (3) how the measure would be impacted if Medicare Part D coverage is optional. The MAP also recommended that this measure be submitted to NQF for review and endorsement. The final methodology report includes the results of reliability and validity testing, and additional measure updates that occurred between the MAP review and NQF submission in December 2016.<sup>481</sup>

<sup>481</sup> Health Services Advisory Group. Final Methodology Report: Medication Continuation Following Inpatient Discharge. Tampa, FL; 2016. <https://www.cms.gov/medicare/Quality-Initiatives->

This methodology report also provides the additional details requested by MAP at the December meeting.

Reliability and validity testing completed in 2016 using the final measure specifications demonstrates that the measure, as specified, provides reliable and valid facility-level scores of medication continuation.<sup>482</sup>

Reliability was established using a method of mean denominator and volume categories. Using that approach, a minimum denominator size of 75 discharges was established to attain an overall reliability score of at least 0.7; this reliability score is within acceptable norms and indicates sufficient signal strength to discriminate performance between facilities.<sup>483</sup> This means that it is possible to distinguish good performance from poor performance based on measure scores among facilities with at least 75 cases in the denominator.

Validity was established by evaluating the correlations of medication continuation scores with the conceptually related IPFQR Program measures. The medication continuation scores were moderately correlated with the scores for 7- and 30-day follow-up after hospitalization for mental illness scores as expected ( $\rho = 0.35$  and  $0.45$ , where  $\rho$  is the Spearman's rank correlation coefficient). In other words, the positive correlation between scores of these two types of measures is expected because high follow-up rates with mental health providers and high follow-up rates of medication continuation both indicate a high-quality transition from the inpatient to the outpatient setting. The medication continuation scores were negatively correlated with readmission scores as expected ( $\rho = -0.27$ ). This negative correlation is expected because patients that do not continue their medications are more likely to relapse and be readmitted.<sup>484</sup> <sup>485</sup> <sup>486</sup> All correlations are

<sup>486</sup> Gilmer TP, Dolder CR, Lacro JP, et al. Adherence to treatment with antipsychotic medication and health care costs among Medicaid

statistically significant at p-value  $<0.0001$ . After reviewing these results and the proposed measure specifications, all of the 10 TEP members who were present for the face validity vote agreed that the measure score had face validity.

This measure was submitted to NQF for endorsement on December 16, 2016, and the measure received endorsement from the NQF Consensus Standards Approval Committee (CSAC) following the June 21 CSAC meeting, pending a 30 day appeals process that closes on August 2, 2017.<sup>487</sup> The new version of the specifications referenced on the NQF Web site is consistent with the version reviewed and approved by the CSAC. Under section 1886(s)(4)(D)(i) of the Act, measures selected for the IPFQR Program must have been endorsed by the entity with a contract under section 1890(a) of the Act. The NQF currently holds this contract. However, section 1886(s)(4)(D)(ii) of the Act provides that, in the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by the entity with a contract under section 1890(a) of the Act, the Secretary may specify a measure that is not so endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary. We have reviewed NQF-endorsed measures related to medication continuation in this patient population and did not identify any equivalent measures. We believe this measure is consensus-based because of the extensive measure development process, including the solicitation of expert and patient opinion and public comments (discussed in more detail below).

In addition, this measure addresses several aspects of the CMS Quality Strategy goals and objectives. The measure supports the CMS Quality Strategy Goal to “promote effective prevention and treatment of chronic disease,” which includes an objective to improve behavioral health access and quality of care by using evidence-based practices.<sup>488</sup> The measure also supports the CMS Quality Strategy Goal to

beneficiaries with schizophrenia. The American journal of psychiatry. 2004;161(4):692–699.

<sup>487</sup> <http://www.qualityforum.org/QPS/3205>.

<sup>488</sup> Centers for Medicare & Medicaid Services. CMS Quality Strategy 2016. Baltimore, MD: U.S. Department of Health and Human Services; 2015. <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/Downloads/CMS-Quality-Strategy.pdf>.

“promote effective communication and coordination of care.”<sup>489</sup> Specifically, the measure addresses three objectives within the goal of “promoting effective communication and coordination of care:” (1) “to reduce admissions and readmissions”<sup>490</sup> as patients with these conditions who do not adhere to their medication regimens are at an increased risk of relapse and readmission;<sup>491 492 493</sup> (2) “to embed best practices to enable successful transitions between all settings of care,”<sup>494</sup> because ensuring medication continuation following discharge is a critical component of transitioning from the IPF to the home or home health care; and (3) “to enable effective healthcare system navigation,”<sup>495</sup> as we believe that this measure will encourage IPFs to provide information to patients regarding the importance of medication continuation and guidance on how to fill prescriptions following discharge.

The measure would complement the portfolio of facility-level measures in the IPFQR Program that assess the transition from the inpatient to outpatient setting: Follow-Up After Hospitalization for Mental Illness; Thirty-day All Cause Unplanned Readmission Following Psychiatric Hospitalization in an Inpatient Psychiatric Facility; Transition Record with Specified Elements Received by Discharged Patients; and Timely Transmission of Transition Record.

#### c. Measure Calculation

The measure is calculated by dividing the number of admissions that meet the numerator criteria (described below) by the number of admissions that meet the denominator criteria (also described below).

##### (1) Numerator

The numerator for the measure includes discharges for patients with a principal diagnosis of MDD, schizophrenia, or bipolar disorder in the denominator who were dispensed at least one evidence-based outpatient medication within 2 days prior to discharge through 30 days post-discharge. The evidence-based medications that define the numerator are based on the practice guidelines for each condition from the APA and VA/DoD.<sup>496 497 498 499 500</sup> Furthermore, we sought to align the medications with evidence-based medications from existing quality measures including the Antidepressant Medication Management measure from the Healthcare Effectiveness Data and Information Set (HEDIS) 2015 for MDD, the Adherence to Antipsychotic Medications for Individuals with Schizophrenia measure (NQF #1879) for schizophrenia, and the Adherence to Mood Stabilizers for Individuals with Bipolar I Disorder measure (NQF #1880) for bipolar

disorder. Staff pharmacists reviewed these lists of medications for completeness and appropriateness in the IPF setting. The finalized lists of evidence-based medications are available in the measure methodology report at: <https://www.cms.gov/medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>. To access the report, click on the zip file titled “Inpatient Psychiatric Facility Medication Continuation Measure.”

We considered the appropriate number of days prior to discharge and post-discharge to include in the follow-up period for the numerator. Clinical experts noted that discharge planning may start as early as 2 days prior to discharge and that some facilities may help patients fill their outpatient prescriptions prior to discharge. Therefore, the numerator includes outpatient medications filled up to 2 days prior to discharge (Day – 2 through Day – 1). The follow-up period extends 30 days post-discharge (Day 0 through Day 30) to align with other care coordination measures, such as the 30 day follow-up period in Follow-Up After Hospitalization for Mental Illness (FUH) (NQF #0576) which we finalized for the IPFQR Program in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50893 through 50895). To further support a 30-day follow-up period, we confirmed that over 93 percent of the evidence-based prescriptions filled prior to the admission were for a 30-day supply, which indicates that most patients would need to fill a medication within 30 days of discharge to avoid gaps in treatment even if they had some medications at home.

##### (2) Denominator

The denominator for the measure includes Medicare FFS beneficiaries aged 18 years and older who were discharged from an IPF to home or home health care<sup>501</sup> with a principal diagnosis of MDD, schizophrenia, or bipolar disorder. The denominator excludes discharges for patients who:

- Received Electroconvulsive Therapy (ECT) during the inpatient stay or follow-up period because some patients who receive ECT during the inpatient stay or follow-up period may

<sup>501</sup> The measure specifications, as submitted to the MAP, did not include home health care. For details of this addition, please see the measure methodology report: <https://www.cms.gov/medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>. To access the report, click on the zip file titled “Inpatient Psychiatric Facility Medication Continuation Measure.”

have failed pharmacotherapy and would not fill an evidence-based prescription post-discharge;

- Received Transcranial Magnetic Stimulation (TMS) during the inpatient stay or follow-up period because some patients who receive TMS during the inpatient stay or follow-up period may have failed pharmacotherapy and would not fill an evidence-based prescription post-discharge;

- Were pregnant during the inpatient stay because some of the evidence-based medications for the treatment of MDD, schizophrenia, and bipolar disorder are contraindicated during pregnancy;

- Had a secondary diagnosis of delirium because some of the evidence-based medications for the treatment of MDD, schizophrenia, and bipolar disorder are contraindicated for patients with delirium; or

- Had a principal diagnosis of schizophrenia and secondary diagnosis of dementia because many FDA-approved medications for the treatment of schizophrenia have a Boxed Warning due to an increased risk of mortality in elderly patients with dementia-related psychosis treated with antipsychotic drugs.<sup>502</sup>

All patients in the measure denominator are enrolled in Medicare Parts A, B, and D during the measurement and follow-up periods. Therefore, these patients have prescription drug coverage for evidence-based medications in the measure. While patients are responsible for some out-of-pocket medication costs after Part D has been applied, low income patients qualify for additional support through both Medicare and Medicaid to help mitigate the cost of prescriptions and ensure that patients do not face

financial barriers to filling necessary medications.

We refer readers to the measure specifications for more details about measure inclusions and exclusions at: <https://www.cms.gov/medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>. To access the report, click on the zip file titled “Inpatient Psychiatric Facility Medication Continuation Measure.”

d. Data Sources

The measure will be implemented using Medicare FFS Parts A, B, and D claims and enrollment data to calculate the measure results. Valid prescription drug claims from Medicare Parts B and D provide the data necessary to calculate this measure. Therefore, no data collection will be required from IPFs. The measure will be reported as a combined facility-level rate across all three conditions. The measurement period is 2 years to maximize the number of facilities with a minimum of 75 discharges, which is necessary for calculation of reliable facility-level scores.<sup>503</sup> We will inform stakeholders of the claims data collection period through a subregulatory process, such as on a CMS Web site and/or on our applicable listservs.

e. Public Comment

During the measure development process, we solicited public comments on the measure via the CMS Quality Measures Public Comment Page.<sup>504</sup> We provided the draft measure information form<sup>505</sup> and draft measure justification form<sup>506</sup> to the public for review. We accepted public comments from August 25, 2016 through September 15, 2016. Numerous commenters expressed

support for the Medication Continuation Following Inpatient Psychiatric Discharge (NQF #3205) measure (with only 6 of 53 commenters expressing reluctance to support the measure) and commented on the importance of measuring medication continuation as this is an important component of care transitions and reduces the risk of readmissions. We received public comments about denominator specifications, numerator specifications, data collection, attribution of the measure to the IPF, and the relevance of the proposed measure. After review and evaluation of all the public comments received, we expanded the follow-up period from day of discharge (Day 0) through 30 days post discharge to include outpatient prescriptions filled up to 2 days prior to discharge as described above. For specific information regarding the comments we received, we refer readers to the public comment summary at: <https://www.cms.gov/medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>. To access the report, click on the zip file titled “Inpatient Psychiatric Facility Medication Continuation Measure.”

We believe this measure evaluates a process with a demonstrated quality gap and has the potential to benefit patients. For these reasons and the reasons stated above, we proposed the Medication Continuation Following Inpatient Psychiatric Discharge (NQF #3205) measure described in this section for the FY 2020 payment determination and subsequent years.

In summary, we proposed one measure for the FY 2020 payment determination and subsequent years, as shown in the table below.

NEWLY PROPOSED IPFQR PROGRAM MEASURE FOR THE FY 2020 PAYMENT DETERMINATION AND SUBSEQUENT YEARS

National quality strategy priority	NQF #	Measure ID	Measure
Communication/Care Coordination .....	3205	N/A	Medication Continuation Following Inpatient Psychiatric Discharge.

We welcomed public comment on our proposal to adopt the Medication Continuation Following Inpatient Psychiatric Discharge (NQF #3205) measure.

*Comment:* Several commenters supported adoption of the Medication Continuation Following Inpatient Psychiatric Discharge (NQF #3205) measure. Other commenters expressed appreciation for CMS developing

claims-based measures to limit the burden on IPFs.

*Response:* We thank these commenters for their input and appreciate this support.

<sup>502</sup> U.S. Food and Drug Administration. Public Health Advisory: Deaths with Antipsychotics in Elderly Patients with Behavioral Disturbances. 2005. Accessed at: <https://www.fda.gov/Drugs/DrugSafety/PostmarketDrugSafety/InformationforPatientsandProviders/ucm053171.htm>.

<sup>503</sup> Health Services Advisory Group. Final Methodology Report: Medication Continuation Following Inpatient Discharge. Tampa, FL; 2016.

“Recently Archived Call for Public Comments Files.” The information regarding the Medication Continuation following Inpatient Psychiatric Discharge information is available in the “Inpatient-Psychiatric-Facility-IPF-Outcome-and-Process-Measure-Development-and-Maintenance” zip file.

<sup>505</sup> *Ibid.*  
<sup>506</sup> *Ibid.*

*Comment:* Many commenters expressed concerns that the Medication Continuation Following Inpatient Psychiatric Discharge (NQF #3205) measure will pose undue burden on facilities, which are still updating processes to account for previously adopted measures. Several commenters expressed the concern that IPFs have limited control of medication continuation once their patients are discharged. These commenters observed that patients may experience social or geographical barriers to filling medication prescriptions that are beyond the control of IPFs.

*Response:* We recognize that there are factors external to the IPF that influence filling prescriptions post-discharge in the psychiatric population. While it may not be possible to achieve complete post-discharge compliance with pharmacotherapy, there is evidence that improvements to the quality of care for patients in the IPF setting, including the discharge processes, can help to increase medication continuation rates. We discussed this evidence in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20123). However, depending on a facility's current state of performance and the implicit requirements of this measure, process changes (such as updates to clinical procedures or adoption of new workflows) to achieve higher performance may be significant and sometimes require a considerable period after initial implementation to realize measurable improvement. This may particularly be true for a measure such as the Medication Continuation Following Inpatient Psychiatric Discharge (NQF #3205) measure, which assesses the degree to which facilities address a critical element of successful care transition following discharge, a component of quality care that some facilities have not traditionally attended to. We agree with commenters that updating processes to achieve high performance, which likely requires multiple and innovative efforts related to patient communication, and coordination and communication with outpatient providers, creates burden on IPFs. While we believe this is an important measure because of the clinical benefits of appropriate pharmacotherapy post discharge and the current performance gap on the measure, we would like to be sensitive to facilities, especially small, rural facilities, that may not have sufficient resources to meet the burden this measure could bring.

To accommodate the need for facilities to develop and implement innovative efforts for this measure, we are not adopting it at this time.

However, we will consider re-proposing this measure in future rulemaking.

*Comment:* Many commenters expressed concerns that the NQF has not completed the endorsement review of the measure.

*Response:* This measure was submitted to NQF for endorsement on December 16, 2016, and the measure received endorsement from the NQF Consensus Standards Approval Committee (CSAC) following the June 21 CSAC meeting, pending a 30 day appeals process that closes on August 2, 2017.

*Comment:* Many commenters expressed concerns that limitation of the measure to patients enrolled in Medicare Parts A, B, and D may result in an impacted population that is both too small to be meaningful for public reporting and one that does not experience the same access to medications barriers as other inpatient psychiatric patients.

*Response:* We thank the commenters for expressing their concerns, but we disagree with the commenters that limiting the measure to patients with Medicare Parts A, B, and D for use in the IFPQR program limits the utility of the measure. While we agree that the patients included in the measure may not experience the same barriers to access to medications that some other patients encounter because low income Medicare patients qualify for additional support to help pay for medications, we note that the evidence based interventions to improve medication adherence would apply to all patients. Further, considering that the Medicare population may have lower barriers to access, we would expect to see higher medication continuation rates and less variation in performance across facilities. As described in the measure technical report,<sup>507</sup> the claims data from 1,694 IPFs demonstrated ample opportunity for improvement. The mean medication continuation rate was 79 percent across all facilities, with variation of 22 percent between the 10th and 90th percentile.

*Comment:* Many commenters expressed concerns that IPFs may not receive feedback with sufficient time to improve processes prior to public reporting of the data since they will not be able to independently calculate measure results (as they do not have access to Part D claims).

*Response:* We thank the commenters for providing these comments, and we

will consider their views if we decide to propose this measure in the future.

*Comment:* Some commenters believed that the link between measure performance and patient outcomes has not been adequately demonstrated. Commenters further expressed the belief that the measure may not generate information that is meaningful to consumers in making healthcare choices.

*Response:* We thank the commenters for their comments, but disagree with them. We believe that information on medication continuation is important for patients discharged from the inpatient psychiatric setting with MDD, schizophrenia, or bipolar disorder because of significant negative outcomes associated with patients not adhering to recommended medication. We note that the MAP Hospital Workgroup concluded that the measure addressed a critical quality objective, was evidence-based, and would contribute to efficient use of resources. Further, performance on this measure in testing showed that improved performance on this measure was associated with reduced unplanned readmissions, indicating that performance on this measure is linked with patient outcomes.

*Comment:* Many commenters expressed the concern that filling a prescription does not always indicate compliance to treatment. They suggested that patient compliance, not claims for prescriptions, should be the target of quality measurement.

*Response:* We acknowledge that increasing patient compliance is the ultimate goal of quality improvement informed by the measure but disagree with the comment that a medication continuation measure assessed from prescription claims does not indicate gaps in compliance. The filling of a prescription is a critical step in improving compliance. We observed ample opportunity for improvement based on a mean medication continuation rate of 79 percent across 1,694 IPFs, with variation of 22 percent between the 10th and 90th percentile. Therefore, we know that at a minimum, approximately 20 percent of patients are not compliant because they are not in possession of their outpatient psychiatric medications following discharge. Measuring actual compliance would be burdensome for both facilities and patients and therefore is not feasible to measure.

*Comment:* Some commenters expressed the belief that technical questions regarding denominator inclusion and exclusion criteria and measure calculation methods have not been sufficiently answered. Commenters

<sup>507</sup> Health Services Advisory Group. Final Methodology Report: Medication Continuation Following Inpatient Discharge. Tampa, FL; 2016.

were specifically concerned regarding how prescriptions filled for patients without Part D would be identified, how free samples provided at or before discharge would be identified, and whether facilities without inpatient pharmacies would be at a disadvantage for this measure.

*Response:* Patients who do not have Medicare Part D coverage are excluded from the denominator of this measure. We anticipate that few patients in the population for this measure would be eligible for samples because low income Medicare patients qualify for additional support to help pay for medication copays. Finally, this measure does not

include medications filled at inpatient pharmacies in the measure numerator. This measure gives facilities the flexibility to determine which interventions are most appropriate for their patient populations, including filling prescriptions for patients prior to discharge through outpatient pharmacies. However, the measure does not encourage any particular intervention over another because interventions to improve medication continuation should be tailored to meet each patient’s needs and circumstances.

After consideration of the public comments we received, we are not finalizing adoption of the Medication

Continuation Following Inpatient Psychiatric Discharge (NQF #3205) measure for the reasons discussed above. If we decide to propose this measure in the future, we will consider information and recommendations provided by commenters at that time.

4. Summary of Previously Finalized Measures for the FY 2020 Payment Determination and Subsequent Years

The number of measures for the FY 2020 payment determination and subsequent years totals 18 as set forth in the table below.

PREVIOUSLY FINALIZED MEASURES FOR THE FY 2020 PAYMENT DETERMINATION AND SUBSEQUENT YEARS

NQF #	Measure ID	Measure
640	HBIPS–2	Hours of Physical Restraint Use.
641	HBIPS–3	Hours of Seclusion Use.
560	HBIPS–5	Patients Discharged on Multiple Antipsychotic Medications with Appropriate Justification.
576	FUH	Follow-up After Hospitalization for Mental Illness.
1661	SUB–1	Alcohol Use Screening.
1663	SUB–2 and SUB–2a	Alcohol Use Brief Intervention Provided or Offered and SUB–2a Alcohol Use Brief Intervention.
1664	SUB–3 and SUB–3a	Alcohol and Other Drug Use Disorder Treatment Provided or Offered at Discharge and SUB–3a Alcohol and Other Drug Use Disorder Treatment at Discharge.
1651	TOB–1	Tobacco Use Screening.
1654	TOB–2 and TOB–2a	Tobacco Use Treatment Provided or Offered and TOB–2a Tobacco Use Treatment.
1656	TOB–3 and TOB–3a	Tobacco Use Treatment Provided or Offered at Discharge and Tob–3a Tobacco Use Treatment at Discharge.
1659	IMM–2	Influenza Immunization.
647	N/A	Transition Record with Specified Elements Received by Discharged Patients (Discharges from an Inpatient Facility to Home/Self Care or Any Other Site of Care).
648	N/A	Timely Transmission of Transition Record (Discharges from an Inpatient Facility to Home/Self Care or Any Other Site of Care).
N/A	N/A	Screening for Metabolic Disorders.
431	N/A	Influenza Vaccination Coverage Among Healthcare Personnel.
N/A	N/A	Assessment of Patient Experience of Care.
N/A	N/A	Use of an Electronic Health Record.
2860*	N/A	Thirty-Day All-Cause Unplanned Readmission Following Psychiatric Hospitalization in an Inpatient Psychiatric Facility.

\* Since this measure was finalized in the FY 2017 IPPS/LTCH PPS final rule (57239 through 57246), NQF endorsement has been received.

5. Possible IPFQR Program Measures and Topics for Future Consideration

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20126 through 20127), we discussed possible IPFQR Program measures and topics for future consideration. As we have previously indicated (79 FR 45974 through 45975), we seek to develop a comprehensive set of quality measures to be available for widespread use for informed decision-making and quality improvement in the IPF setting. Therefore, through future rulemaking, we intend to propose new measures for development or adoption that will help further our goals of achieving better healthcare and improved health for individuals who obtain inpatient psychiatric services through the widespread dissemination

and use of quality information. As noted on the “List of Measures under Consideration for December 1, 2016”<sup>508</sup> published by the NQF on behalf of CMS, we are considering a measure of Medication Reconciliation on Admission and a measure of Identification of Opioid Use Disorder among Patients Admitted to Inpatient Psychiatric Facilities. We welcomed comments on these measure concepts for future inclusion in the IPFQR Program. In addition, we have identified several areas which we believe are important to stakeholders, but which are not currently sufficiently covered by

<sup>508</sup> <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityMeasures/Downloads/Measures-under-Consideration-List-for-2016.pdf>.

IPFQR Program measures. These areas are:

- Family and caregiver engagement;
- Patient experience of care;
- Opioid use and treatment;
- Access to care; and
- Inpatient assaults and violence.

We welcomed public comments on possible new measures in these or other areas.

*Comment:* Many commenters expressed support for measures in the areas of: (1) Family and caregiver engagement; (2) patient experience of care; (3) access to care; and (4) inpatient assaults and violence. These commenters further encouraged CMS to consider clinical outcomes measures. Finally, the commenters urged CMS to engage with stakeholders during

measure development and implementation.

*Response:* We thank these commenters for their support of these measure topic areas and will continue to engage with stakeholders in measure development and implementation.

*Comment:* Many commenters urged CMS to develop and implement a patient experience of care survey and measure specific to the inpatient psychiatric setting. One commenter further recommended that this survey include questions regarding the patient's understanding of diagnoses, treatment plans, and follow-up care.

*Response:* We believe that patient experience of care is an important measure gap in the IPFQR Program and are actively evaluating ways to address this topic. We will take commenters' suggestions into consideration as we develop future program policy.

*Comment:* Several commenters urged CMS to develop and implement measures that address suicide. Some of these commenters specifically recommended a measure to address hospital processes to help patients manage suicidal ideation in the hospital and post discharge.

*Response:* We will consider this input as we develop and select measures for the IPFQR Program.

*Comment:* Many commenters recommended that CMS develop and implement claims-based measures that evaluate clinical outcomes.

*Response:* We believe that clinical outcomes measures are an important part of quality reporting, and that claims-based measures are effective for reducing reporting burden on facilities. We will take commenters' suggestions into consideration as we develop and select measures for the IPFQR Program.

*Comment:* One commenter recommended that CMS adopt measures related to opioid treatment to determine if there are access issues associated with this treatment.

*Response:* We believe that the current opioid epidemic is a significant public health issue, and we are striving to address it in the IPFQR Program to the extent possible, including adoption of the SUB-3 & 3a Measure (Alcohol and Other Drug Use Disorder Treatment Provided or Offered at Discharge and SUB-3a Alcohol and Other Drug Use Disorder Treatment at Discharge) in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57239 through 57241) and inclusion of Identification of Opioid Use Disorder among Patients Admitted to Inpatient Psychiatric Facilities on the List of Measures Under Consideration for December 1, 2016. We will continue to consider ways to address this issue as

we develop and select measures for the IPFQR Program.

*Comment:* Many commenters recommended that CMS identify a method for data validation as part of the measure development and adoption process.

*Response:* We will consider this input as we develop and select measures for the IPFQR Program. We are currently seeking to identify a means to implement data validation in the IPFQR Program.

We thank the commenters and we will consider their views as we develop further measures for use in the IPFQR Program.

#### 6. Public Display and Review Requirements

We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53653 through 53654), in which we finalized that we would publicly display the submitted data on the CMS Web site beginning in the first quarter of the calendar year following the respective payment determination year. We also finalized that IPFs would have the opportunity to preview their data between September 20 and October 19 of the respective payment determination year. In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50897 through 50898), we finalized policies on public display and review of data stating that we would publicly display the data in April of the calendar year following the start of the payment determination year and that the preview period would be 30 days approximately twelve weeks prior to the public display of the data. In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57248 through 57249), we finalized changes to how we specify the timeframes for the IPFQR Program, including that we would: (1) No longer specify the exact dates of the preview period or data publication in rulemaking; (2) make the data for the IPFQR Program available as soon as possible; (3) announce the exact timeframes through subregulatory guidance; and (4) continue our policy that the time period for review will be approximately 30 days. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20127), we did not propose any changes to the public display and review policies.

7. Form, Manner, and Timing of Quality Data Submission for the FY 2019 Payment Determination and Subsequent Years

a. Procedural Requirements for FY 2019 Payment Determination and Subsequent Years

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53654 through 77 FR 53655), we finalized procedural requirements for the IPFQR Program, including the requirements that facilities must do the following to participate in the IPFQR Program:

- Register with QualityNet before the IPF begins reporting;
- Identify a QualityNet Administrator who follows the registration process listed on the QualityNet Web site;
- Complete a Notice of Participation (NOP) within a specified time period; and,
- Submit aggregate numerator and denominator data for all age groups, for all measures.

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50901), we clarified that the policy we adopted for the FY 2016 payment determination also applies to the FY 2017 payment determination and subsequent years, unless we change it through future rulemaking. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20127), we proposed to make changes related to the Notice of Participation (NOP) and withdrawals for the FY 2019 payment determination and subsequent years.

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53654 through 53655), we finalized our policies that IPFs participating in the IPFQR Program must comply with several procedural requirements. In that rule, one of the policies we finalized was that the time frame for completing an online NOP form is between January 1 and August 15 before each respective payment determination year (for example, for the FY 2017 payment determination year, IPFs would be required to submit an NOP between January 1, 2016 and August 15, 2016). Similarly, in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53654), we also finalized that withdrawals from the IPFQR Program will be accepted no later than August 15 before the beginning of each respective payment determination year.

As described in section IX.D.7.b. of the preamble of this final rule, there have been times that we have updated the data submission period through subregulatory means; this has led to a data submission period that is not aligned with the submission period for the NOP or program withdrawal. To ensure these dates align, in the

proposed rule, we proposed to change the submission timeframes for both NOPs and withdrawals from between January 1 and August 15 before each respective payment determination year to prior to the end of the data submission period before each respective payment determination year. This means that we proposed to accept NOPs and withdrawals any time prior to the end of the data submission period before the payment determination year. For example, for the FY 2019 payment determination year, the end of the data submission period would be a date on or after June 15, 2018 (which we would announce via subregulatory means). This date will coincide with the deadline to submit an NOP or withdraw from the program. In addition, we proposed to provide precise dates that define the end of the data submission period/NOP/withdrawal submission deadline through subregulatory means, such as on a CMS Web site and/or on our applicable listservs, beginning with the FY 2019 payment determination.

We invited public comment on our proposals to: (1) Change the submission timeframes for both NOPs and withdrawals to the end of the data submission period before each respective payment determination year; and (2) provide precise dates that define the end of the data submission period/NOP/withdrawal submission deadline through subregulatory means for the FY 2019 payment determination and subsequent years.

*Comment:* Several commenters supported CMS' proposal to align the submission period for NOPs and withdrawals with the end of the data submission period, which will be provided through subregulatory means.

*Response:* We thank the commenters for this support.

After consideration of the public comments we received, we are finalizing our proposals to: (1) Change the submission timeframes for both NOPs and withdrawals to the end of the data submission period before each respective payment determination year; and (2) provide precise dates that define the end of the data submission period/NOP/withdrawal submission deadline through subregulatory means for the FY 2019 payment determination and subsequent years as proposed.

#### b. Data Submission Requirements for the FY 2019 Payment Determination and Subsequent Years

We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53655 through 53656) and the FY 2014 IPPS/LTCH PPS final rule (78 FR 50901) for our previously finalized policies

regarding quality data submission requirements. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20127 through 20128), we proposed to make changes related to the data submission period for the FY 2019 payment determination and subsequent years.

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53655 through 53657) we finalized our policies related to reporting periods and submission timelines for data required by the IPFQR Program. IPFs are required to submit their aggregated data on the measures on an annual basis, beginning in FY 2014 (77 FR 53655). In that rule, we specified that data must be submitted between July 1 and August 15 of the calendar year preceding a given payment determination year (for example, between July 1, 2015 and August 15, 2015 for the FY 2016 payment determination (77 FR 53655 through 53657)). In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50899), we clarified that this policy applies to all future years of data submission for the IPFQR Program unless we change the policy through future rulemaking.

Because there have been times that the submission period has been updated through the subregulatory process (for example, due to systems issues impacting data collection in the specified timeframe), in order to avoid contradictory guidance between dates established in the **Federal Register** and dates established through subregulatory guidance, in the proposed rule, we proposed to no longer specify the exact dates of the submission period through rulemaking. We proposed to provide these exact dates through a subregulatory process instead, beginning with the FY 2019 payment determination. We proposed to shift to a 45-day submission period beginning at least 30 calendar days following the end of the data collection period. For example, for the FY 2019 payment determination, the latest reporting period for a measure for which IPFs must submit data through the QualityNet Secure Portal ends on March 31, 2018 for the IMM-2 measure. In this example, the submission period would begin at least 30 days after March 31, 2018 (that is, no earlier than May 1, 2018). IPFs then would have 45 days from May 1 to submit their data, which would result in a June 15, 2018 submission deadline for this example. Because the exact dates could vary from year to year, for the FY 2019 payment determination and subsequent years, we also proposed to provide notification of the exact dates of the 45-day submission period through subregulatory means,

such as on a CMS Web site and/or on our applicable listservs.

We welcomed public comments on our proposals to: (1) Change the specification of the submission deadline from exact dates (that is, July 1–August 15) to a 45-day submission period beginning at least 30 days following the end of the data collection period; and (2) provide notification of the exact dates of the 45-day submission period through subregulatory means for the FY 2019 payment determination and subsequent years.

*Comment:* Several commenters supported CMS' proposal to change the specification of the submission deadline and provide notification of the exact dates through subregulatory means.

*Response:* We thank these commenters for this support.

*Comment:* One commenter asked for clarification whether this proposal pertains only to data submitted via the QualityNet Secure Portal, as opposed to through the NHSN Web site.

*Response:* This proposal only applies to data submitted via the QualityNet Secure Portal.

*Comment:* Many commenters expressed concerns that the data submission period, as proposed, may not allow adequate time to abstract and audit the data prior to submission. These commenters were also concerned that IPFs may have insufficient warning regarding the data submission timeframe for appropriate resource planning.

*Response:* We recognize that IPFs must plan for appropriate resources for data collection and submission. We will strive to give as much notice as possible. It is our intent to continue the July 1 to August 15 data reporting period. However, because there are instances where adherence to these dates would not be possible, we wish to provide more flexibility and communicate the dates of reporting periods (or confirmation of the July 1 through August 15 timeframe) through subregulatory means. We expect that in most, if not all, cases, changes in the July 1 to August 15 reporting period will be to delay and/or extend the reporting period, rather than to move it forward.

After consideration of the public comments we received, we are finalizing our proposals as proposed to: (1) change the specification of the submission deadline from exact dates (that is, July 1–August 15) to a 45-day submission period beginning at least 30 days following the end of the data collection period; and (2) provide notification of the exact dates of the 45-day submission period through subregulatory means for the FY 2019

payment determination and subsequent years

c. Reporting Requirements for the FY 2019 Payment Determination and Subsequent Years

We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53655 through 53657), the FY 2014 IPPS/LTCH PPS final rule (78 FR 50901 through 50902), and the FY 2016 IPF PPS final rule (80 FR 46715 and 46716), for information about data reporting periods. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20128) we did not propose any changes to these policies.

d. Population and Sampling

We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53657 through 53658), the FY 2014 IPPS/LTCH PPS final rule (78 FR 50902), FY 2015 IPF PPS final rule (79 FR 45973), the FY 2016 IPF PPS final rule (80 FR 46717 through 46719), for information about population, sampling, and minimum case thresholds. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20128), we did not propose any changes to the population and sampling methodology or to the minimum case thresholds.

e. Data Accuracy and Completeness Acknowledgement (DACA) Requirements

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20128), we did not propose any changes to the DACA requirements and refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53658) for more information on these requirements.

8. Reconsideration and Appeals Procedures

We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53658 through 53660), FY 2014 IPPS/LTCH PPS final rule (78 FR 50953), and 42 CFR 412.434 for details on our reconsideration and appeals procedures. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20128), we did not propose any changes to these policies.

9. Extraordinary Circumstances Exceptions (ECE) Policy for the IPFQR Program

a. Background

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53659 through 53660), we finalized policies for facilities to request waivers, now called “exceptions” (79 FR 45978), from quality reporting requirements for the FY 2014 payment determination and subsequent years. We stated that in the event of extraordinary circumstances not within the control of IPFs, such as a natural disaster, IPFs

may request a reporting extension or a complete waiver of the requirement to submit quality data for one or more quarters for the FY 2014 payment determination and subsequent years. In that rule, we also finalized that facilities would be required to submit a request form with the following information:

- The IPF’s CMS Certification Number (CCN);
- The IPF’s name;
- Contact information for the IPF’s Chief Executive Officer (CEO) and any other designated personnel, including name, email address, telephone number, and mailing address (the address must be a physical address, not a post office box);
- The IPF’s reason for requesting an extension or waiver;
- Evidence of the impact of extraordinary circumstances, including but not limited to photographs, newspaper and other media articles; and
- A date when the IPF will again be able to submit IPFQR Program data, and a justification for the proposed date.

In addition, we finalized that the form must be signed by the IPF’s CEO and submitted within 30 days of the date that the extraordinary circumstance occurred. We also finalized that following the receipt of the request form, we would: (1) Provide a written acknowledgement, using the contact information provided in the request, to the CEO and any additional designated IPF personnel, notifying them that the IPF’s request has been received; and (2) provide a formal response to the CEO and any designated IPF personnel, using the contact information provided in the request, notifying the IPF of our decision. Furthermore, in that rule, we discussed that the above policy does not preclude us from granting waivers or extensions to IPFs that have not requested them when we determine that an extraordinary circumstance has affected an entire region or locale. We stated that if we make the determination to grant such a waiver or extension, we would communicate this decision through routine communication channels (77 FR 53659). In the FY 2014 IPPS/LTCH PPS final rule, we did not make any changes to this policy (78 FR 50903).

In the FY 2015 IPF PPS final rule (79 FR 45978), we clarified that the term “exception” is synonymous with the term “waiver” used in previous rules and renamed our policy to “Extraordinary Circumstances Exception” in order to align with similar exceptions in other CMS quality reporting programs. In that rule, we also finalized that that we may grant a waiver or extension to IPFs if we

determine that a systemic problem with one of our data collection systems directly affects the ability of the IPFs to submit data. We stated that because we do not anticipate that these types of systemic errors will occur often, we do not anticipate granting a waiver or extension on this basis frequently (79 FR 45978). We noted that if we make the determination to grant a waiver or extension, we would communicate this decision through routine communication channels to IPFs, vendors, and quality improvement organizations (QIOs) by means of, for example, memoranda, emails, and notices on the QualityNet Web site (79 FR 45978).

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20128 through 20130), we proposed to modify aspects of our current ECE policy to align with those of other CMS quality reporting programs. Many of our quality reporting and value-based purchasing programs share common processes for requesting an exception from program reporting due to an extraordinary circumstance not within a provider’s control. We refer readers to the Hospital IQR Program (76 FR 51651 through 51652, 78 FR 50836 through 50837, 79 FR 50277, 81 FR 57181 through 57182, and 42 CFR 412.140(c)(2)), Hospital OQR Program (77 FR 68489, 78 FR 75119 through 75120, 79 FR 66966, and 80 FR 70524), and ASCQR Program (77 FR 53642 through 53643 and 78 FR 75140 through 75141) as well as the HAC Reduction Program (80 FR 49579 through 49581), Hospital Readmissions Reduction Program (80 FR 49542 through 49543), and PCHQR Program (78 FR 50848) for program specific information about extraordinary circumstances exceptions requests. In reviewing the policies for these programs, however, we found five areas in which these programs have variance: (1) Contact Information and Signature on ECE Form—there is inconsistency regarding whether the program requires contact information and a signature on the ECE form from the facility’s or hospital’s CEO versus CEO or designated personnel; (2) Submission deadline—there is inconsistency in requiring the form be submitted within 90 days following the date that the extraordinary circumstance occurred versus within 30 days following the date the extraordinary circumstance occurred; (3) CMS’ response following an ECE request—there is inconsistency regarding specification of a timeline for us to provide our formal response notifying the facility or hospital of our decision; (4) CMS system issues—there is

inconsistency regarding whether programs make explicit the ability to grant ECEs specific for systemic issues with CMS data collection systems that directly affect the ability of hospitals/facilities to submit data; and (5) Policy name—there is inconsistency in the names used to refer to the policy, with some programs using “extraordinary circumstances extensions/exemptions” and some using “extraordinary circumstances exceptions.”

We believe aligning these five areas across the programs will improve administrative efficiencies for affected facilities or hospitals. We note that, in the FY 2018 IPPS/LTCH PPS proposed rule, we also proposed to update ECE policies in the Hospital Readmissions Reduction Program (in section V.I.12. of the preamble of the proposed rule); the HAC Reduction Program (in section V.K.8. of the preamble of the proposed rule), Hospital IQR Program (in section IX.A.15. of the preamble of the proposed rule), and the PCHQR Program (in section IX.B.10. of the preamble of the proposed rule) in order to align policies. We refer readers to these sections for more details.

#### b. ECE Policy Modifications

The IPFQR Program currently includes policies to: (1) Make explicit the ability to grant ECEs specific for systemic issues with CMS data collection systems that directly affect the ability of hospitals/facilities to submit data; and (2) refer to the ECE policy as “extraordinary circumstances exceptions.” Therefore did not make proposals related to these two items. However, to improve cross-program alignment, in the proposed rule, we proposed to update the IPFQR Program’s ECE policy by: (1) Allowing designated personnel to sign the ECE request form that IPFs currently submit with contact information for the CEO and designated personnel and the signature from the CEO; (2) extending the deadline from 30 days following the date that the extraordinary circumstance occurred to 90 days following the date the extraordinary circumstance occurred; and (3) specifying that we will strive to provide our formal response to an ECE request notifying the IPF of our decision within 90 days of receipt of the IPF’s request. We proposed that these policies would apply beginning with extraordinary circumstances that occur on or after the effective date of the 2018 IPPS/LTCH PPS final rule, anticipated to be October 1, 2017. These proposals are discussed in more detail below.

#### (1) Signature of Either Designated Personnel or CEO

As discussed above, in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53659 through 53660) we finalized ECE requests for the IPFQR Program must be submitted with contact information for the CEO and any designated personnel, and be signed by the IPF’s CEO. However, we now believe that there may be circumstances in which it is not feasible for an IPF’s CEO to sign the ECE request form, such as in cases where the CEO has become disabled or is deceased. Also, in the event that the CEO of a facility affected by an extraordinary circumstance, such as a natural disaster, is unavailable to sign the ECE request form, we believe that the affected facility should be able to submit ECE form despite the CEO’s inability to sign. Therefore, we proposed that ECE forms may be signed by either the CEO or the designated personnel as listed on the ECE form.

#### (2) ECE Request Submission Deadline

As discussed above, in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53659 through 53660) we finalized that ECE requests for the IPFQR Program must be submitted within 30 days of the date that the extraordinary circumstance occurred. However, we believe that it may be difficult for some IPFs to timely evaluate the impact of a certain extraordinary circumstance within 30 calendar days. Therefore, we proposed to change the ECE request form submission deadline from within 30 days of the date that the extraordinary circumstance occurred to within 90 days of the date that the extraordinary circumstance occurred.

We believe that extending the deadline to 90 calendar days would allow IPFs more time to determine whether it is necessary and appropriate to submit an ECE request and to provide a more comprehensive account of the extraordinary circumstance in their ECE request form to CMS. As an example, if an IPF suffers damage due to a hurricane on October 1, 2017, it would have until December 30, 2017, 90 calendar days after the hurricane, to submit an ECE form via the QualityNet Secure Portal, mail, email, or secure fax as instructed on the ECE form.

#### (3) Clarification of CMS Response Timeframe

As stated above, in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53659 through 53660), we finalized that following the receipt of the request form, we would provide: (1) A written acknowledgement, using the contact

information provided in the request, to the CEO and any additional designated IPF personnel, notifying them that the IPF’s ECE request has been received; and (2) a formal response to the CEO and any designated IPF personnel, using the contact information provided in the request, notifying the IPF of our decision. We believe that it is important for IPFs to receive timely feedback in a predictable time frame regarding the status of ECE requests. We strive to complete our review of each ECE request as quickly as possible. However, the number of requests we receive and the complexity of the information provided affect the timeframe that we need to make ECE determinations. Therefore, in an effort to provide facilities with a predictable timeframe, we are clarifying that we will strive to complete our review of ECE requests within 90 days of receipt, depending on the number of requests and the complexity of the information provided by facilities.

We welcomed public comments on our proposals to: (1) Specify that ECE forms can be signed by either the CEO or the designated personnel as listed on the ECE form; and (2) change the ECE request form submission deadline to within 90 days of the date that the extraordinary circumstance occurred. We also invited public comments on our intent to clarify that we will strive to complete our review of ECE requests within 90 days of receipt.

*Comment:* Several commenters supported CMS’ proposals to update the ECE policies to align with other programs.

*Response:* We thank these commenters for their support.

After consideration of the public comments we received, we are finalizing our proposals as proposed to: (1) Specify that ECE forms can be signed by either the CEO or the designated personnel as listed on the ECE form; and (2) change the ECE request form submission deadline to within 90 days of the date that the extraordinary circumstance occurred.

### E. Clinical Quality Measurement for Eligible Hospitals and Critical Access Hospitals (CAHs) Participating in the EHR Incentive Programs

#### 1. Background

The HITECH Act (Title IV of Division B of the ARRA, together with Title XIII of Division A of the ARRA) authorizes incentive payments under Medicare and Medicaid for the adoption and meaningful use of certified electronic health record (EHR) technology (CEHRT). Incentive payments under

Medicare were available to eligible hospitals and CAHs for certain payment years (as authorized under sections 1886(n) and 1814(l) of the Act, respectively) if they successfully demonstrated meaningful use of CEHRT, which includes reporting on clinical quality measures (CQMs or eCQMs) using CEHRT.

Sections 1886(b)(3)(B)(ix) and 1814(l)(4) of the Act also establish downward payment adjustments under Medicare, beginning with FY 2015, for eligible hospitals and CAHs that do not successfully demonstrate meaningful use of CEHRT for certain associated reporting periods. Section 1903(a)(3)(F)(i) of the Act establishes 100 percent Federal financial participation (FFP) to States for providing incentive payments to eligible Medicaid providers (described in section 1903(t)(2) of the Act) to adopt, implement, upgrade and meaningfully use CEHRT.

Under sections 1814(l)(3)(A), 1886(n)(3)(A), and 1903(t)(6)(C)(i)(II) of the Act and the definition of “meaningful EHR user” under 42 CFR 495.4, eligible hospitals and CAHs must report on CQMs selected by CMS using CEHRT, as part of being a meaningful EHR user under the Medicare and Medicaid EHR Incentive Programs.

2. Modifications to the CQM Reporting Requirements for the Medicare and Medicaid EHR Incentive Programs for CY 2017

#### a. Background

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57255), we stated the CQM reporting periods in CY 2017 for the Medicare and Medicaid EHR Incentive Programs as outlined below. For the Medicare EHR Incentive Program, we finalized the following submission periods for eligible hospitals and CAHs reporting CQMs by attestation and eligible hospitals and CAHs electronically reporting CQMs (81 FR 57255). In regard to the Medicaid EHR Incentive Program, we provided States with the flexibility to determine the submission periods for reporting CQMs.

##### • *Eligible Hospitals and CAHs Reporting CQMs by Attestation:*

++ For eligible hospitals and CAHs demonstrating meaningful use for the first time in 2017, the reporting period is any continuous 90-day period within CY 2017. The submission period for attestation is the 2 months following the close of the calendar year, ending February 28, 2018.

++ For eligible hospitals and CAHs that demonstrated meaningful use in any year prior to 2017, the reporting

period is the full CY 2017 (consisting of four quarterly data reporting periods). The submission period for attestation is the 2 months following the close of the calendar year, ending February 28, 2018.

• *Eligible Hospitals and CAHs Reporting CQMs Electronically:* For eligible hospitals and CAHs demonstrating meaningful use for the first time in 2017 or that have demonstrated meaningful use in any year prior to 2017, the reporting period is the full CY 2017 (consisting of four quarterly data reporting periods). The submission period for reporting CQMs electronically begins in late spring 2017 and continues through the 2 months following the close of the calendar year, ending February 28, 2018.

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57251 through 57255), we finalized the following reporting criteria regarding the number of CQMs eligible hospitals and CAHs are required to report for the reporting periods in CY 2017:

• *For Attestation:* If only participating in the EHR Incentive Program, report on all 16 available CQMs.

• *For Electronic Reporting:* If only participating in the EHR Incentive Program, or participating in both the EHR Incentive Program and the Hospital IQR Program (81 FR 57150 through 57159), report on 8 of the available CQMs.

For further information on the policies applicable for CQM reporting for the EHR Incentive Program in 2017, we refer readers to the discussion in the FY 2017 IPPS/LTCH PPS final rule at 81 FR 57249 through 57257.

Since the publication of the FY 2017 IPPS/LTCH PPS final rule, we have continued to receive frequent feedback from hospitals and health IT vendors about the ongoing challenges of implementing CQM reporting capabilities. A summary of the main concerns identified by these data submitters is as follows:

• The timing of the transition to a new EHR system during 2017 (system upgrades or new health IT vendor) may influence hospitals’ ability to report in a timely manner;

• The current timeframe for the implementation of new EHR requirements presents challenges due to the varying 6 to 24-month cycles needed for vendors to code new measures, test and institute measure updates, train hospital staff, and rollout other upgraded features;

• Hospitals have had difficulty identifying applicable measures that reflect their patient population, given

the reduction in the number of available CQMs (from 29 to 16) for CY 2017;

• Hospitals have had challenges with data mapping and workflow because of the need to collect CY 2017 data while still reporting CY 2016 data; and

• Hospitals have identified challenges in implementing annual updates and new editions of certified health IT because of significant impacts on workflow, staffing, and connected technology systems. (We note that this information was inadvertently omitted in the proposed rule at 82 FR 20130.)

In addition, there have been other recent issues related to the CMS data receiving system not being able to process QRDA Category I files, and as a result, the system is not generating notifications confirming for providers that their files have been received and processed by the system. The aforementioned issues and challenges being experienced by hospitals and health IT vendors are impacting the capability of hospitals to meet the requirements for CY 2017. As a result, we proposed modifications to the CY 2017 final policies in the proposed rule, which would reduce CQM reporting requirements in order for hospitals and health IT vendors to address these issues.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20130 through 20131), we proposed two modifications to our CY 2017 electronic CQM reporting policies for the Medicare and Medicaid EHR Incentive Programs. For eligible hospitals and CAHs reporting CQMs electronically in CY 2017, we proposed to: (1) Decrease the number of calendar quarters for which such hospitals are required to submit data; and (2) decrease the number of CQMs for which such hospitals must submit data (further discussion below). These proposals are made in conjunction with our proposals discussed in sections IX.A.8. and IX.A.10.d. of the preamble of this final rule to align requirements for the Medicare and Medicaid EHR Incentive Programs and the Hospital IQR Program. In making these proposals, we believe that eligible hospitals and CAHs would have additional time to upgrade their systems and processes in preparation for the transition to electronic reporting on additional CQMs for additional quarters in future years.

As we continue to make strides with electronic reporting, we want to ensure we provide eligible hospitals and CAHs with a robust selection of CQMs. As noted above, hospitals have expressed concerns with identifying applicable measures that reflect their patient population; thus, we believe that the

addition of new CQMs in the future will offer more clinically relevant CQMs that facilitate reporting and help drive quality improvement. In section IX.A.9.d. of the preamble of the proposed rule, we discussed and sought feedback on future potential CQMs for the Hospital IQR Program and the Medicare and Medicaid EHR Incentive Programs for eligible hospitals and CAHs.

**b. Changes to Policies Regarding Electronic Reporting of CQMs for CY 2017**

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20131), in response to concerns from stakeholders, we proposed to modify the CQM reporting period for eligible hospitals and CAHs reporting CQMs electronically for the Medicare and Medicaid EHR Incentive Programs in CY 2017—for eligible hospitals and CAHs demonstrating meaningful use for the first time in 2017 or that have demonstrated meaningful use in any year prior to 2017, the reporting period would be two self-selected quarters of CQM data in CY 2017.

In addition, we proposed to modify the reporting criteria regarding the required number of CQMs for eligible hospitals and CAHs that are reporting electronically for the reporting periods in CY 2017 under the Medicare and Medicaid EHR Incentive Programs—if only participating in the EHR Incentive Program, or participating in both the EHR Incentive Program and the Hospital IQR Program, eligible hospitals and CAHs would report on at least 6 (self-selected) of the available CQMs. For a list of the available CQMs for reporting periods in CY 2017, we refer readers to the table in the FY 2017 IPPS/LTCH PPS final rule at 81 FR 57255.

It should be noted that we did not propose to modify any other aspects of the policies for reporting CQMs electronically for CY 2017, including the submission periods, nor did we propose any changes to our policies for reporting CQMs by attestation.

Through our proposals for CY 2017, we intend to continue to maintain alignment between the Medicare and Medicaid EHR Incentive Programs and the Hospital IQR Program to reduce confusion and reporting burden among participants in the Medicare and Medicaid EHR Incentive Programs that also participate in the Hospital IQR Program. As noted above, we are retaining the submission period for reporting CQMs electronically under the Medicare EHR Incentive Program, in which such submission period begins in late spring 2017 and continues through

the 2 months following the close of the calendar year, ending February 28, 2018. In addition, we are continuing to provide States with the flexibility to determine the submission periods for reporting CQMs under the Medicaid EHR Incentive Program. For more details on the aligned reporting requirements for the Hospital IQR and Medicare and Medicaid EHR Incentive Programs, we refer readers to section IX.A.10.d. of the preamble of this final rule.

We believed that reducing the number of CQMs required to be electronically reported from 8 to 6 would ease the burden on data submitters, allowing them to shift resources to support system upgrades, map data, and train staff on CQMs. Similarly, we proposed reducing the number of data reporting periods to 2 quarters, rather than 4 quarters, and allowing eligible hospitals and CAHs to select which two quarters of CY 2017 to electronically report would offer greater reporting flexibility and allow eligible hospitals, CAHs, and health IT vendors more time to plan for reporting. We recognized that eligible hospitals and CAHs were concerned about their ability to meet the CY 2017 requirements established in the FY 2017 IPPS/LTCH PPS final rule and believed that the proposed modified reporting requirements for CY 2017 would account for the challenges stakeholders are experiencing while requiring the electronic reporting on a portion of CQMs, which is consistent with our goal to transition to electronic reporting (81 FR 57254).

We invited public comment on our proposals to modify the CY 2017 CQM reporting requirements for the Medicare and Medicaid EHR Incentive Programs as described above.

*Comment:* A majority of commenters supported CMS' proposals to reduce the number of CQMs required to be electronically reported from 8 to 6 available CQMs and reduce the reporting period from one full calendar year of data to two, self-selected quarters of data for CY 2017 electronic reporting. The commenters encouraged CMS to continue to take into account the operational implications of the electronic CQM submission requirements for smaller hospitals that have resource limitations. The commenters noted that as currently proposed, the requirements align with the CY 2017 Joint Commission reporting standards. A few commenters requested CMS to finalize requirements as proposed as soon as possible in order for hospitals to prepare and educate appropriate staff.

Several commenters indicated that the modified reporting period from one full calendar year of data to two, self-selected quarters of data would provide eligible hospitals and CAHs with sufficient time to adequately transition their EHR systems and allow them to avoid a reporting period that overlaps with the quarter in which they transition EHR systems. One commenter indicated that even if facilities were already collecting data on 8 CQMs, the reduction in the number of CQMs required to electronically report and the reporting period would give facilities that have limited resources or difficulties reporting for an entire calendar year the opportunity to be more successful.

*Response:* We thank the commenters for their support regarding our proposal to reduce the number of CQMs required to be electronically reported from 8 to 6 available CQMs and reduce the reporting period from one full calendar year of data to two, self-selected quarters of data for CY 2017 electronic reporting. CMS remains committed to engaging with stakeholders to address their concerns, including hospitals of varying sizes.

*Comment:* Several commenters supported the proposed policies for CY 2017 that reduce the reporting period from one full calendar year of data to two, self-selected quarters of data and the number of CQMs required to electronically report from 8 to 6, but recommended that CMS further reduce the CY 2017 requirements by retaining the CY 2016 established policies that required the electronic reporting of 4 CQMs for one quarter of data. The commenters indicated that maintaining the CY 2016 CQM reporting requirements for electronic submission would provide certified health IT vendors and CMS with additional time to work on measure specification and data validation, while giving hospitals more time to focus on incorporating system upgrades, data mapping, staff training, planning for data processing for CMS reporting and other issues.

In addition, some commenters expressed concern that the incremental increase in CQM electronic reporting requirements would impact the ability of eligible hospitals and CAHs to effectively meet current CQM reporting requirements and concurrently prepare for increased CQM electronic reporting requirements in the following program year. As a result, additional burden would be placed on hospitals by limiting available time for testing prior to production file submission. These commenters indicated that recent updates to measure specifications have

required labor-intensive updates to complete terminology mapping, which has limited the ability of hospitals to expand reporting on additional CQMs. The commenters noted that implementation of electronic CQM reporting is a multi-year, incremental process that requires significant capital and operating expenditure, and a significant investment of time and energy by staff.

*Response:* We appreciate commenters' feedback regarding the challenges associated with the electronic reporting of CQMs. As previously noted, in response to hospital and health IT vendor concerns, we proposed to modify previously finalized policies by reducing CQM reporting requirements. Based upon continued feedback from commenters, we are finalizing a modification to our proposal which reduces the CQM reporting requirements for the CY 2017 reporting period further than initially proposed. For the CY 2017 reporting period, we are requiring eligible hospitals and CAHs to report one, self-selected calendar quarter of data for 4 self-selected, available CQMs, instead of reporting two, self-selected calendar quarters of data for 6 available CQMs. We believe that these modified reporting requirements will provide eligible hospitals, CAHs, and health IT vendors with additional time to plan for data processing, report quality data to CMS, and focus on system upgrades, data mapping, staff training, and other issues, while also providing CMS with more time to address data validation. We will continue to monitor the progress of hospitals implementing the CQM reporting requirements and to engage hospitals regarding their experiences as we develop future CQM policy.

In regard to the impact of the incremental increase in CQM electronic reporting requirements and recent updates to measure specifications on the ability of eligible hospitals and CAHs to meet current CQM reporting requirements and concurrently prepare for increased CQM reporting requirements in the following program year, we believe that the modified policies that we are finalizing will address these commenters' concerns. Specifically, we decided to finalize for CY 2017 the same CQM reporting requirements established for CY 2016 (80 FR 49757 and 49758) (eligible hospitals and CAHs will be required to report one, self-selected quarter of data (for CY 2016, either Q3 or Q4) for 4 self-selected, available CQMs), which we believe will provide eligible hospitals and CAHs additional experience

reporting CQMs electronically, incorporating annual measure specification updates, and reviewing the results of CQM data collection efforts prior to an incremental increase in the CQM reporting requirements.

For the CY 2017 reporting period, eligible hospitals and CAHs will be able to self-select 4 CQMs from the available 16 CQMs in the EHR Incentive Program measure set and meet the reporting requirements by submitting data via QRDA I files, zero denominator declaration, or case threshold exemption. In addition, we are continuing to allow manual aggregation of data for those eligible hospitals and CAHs experiencing issues with data aggregation in the process of upgrading EHR systems or changing health IT vendors. In order to provide eligible hospitals and CAHs with maximum flexibility, they may self-select which calendar quarter of data to report for the CY 2017 reporting period.

We note that hospitals have reported data electronically for several years to both the Medicare EHR Incentive Program and the Hospital IQR Program (3 prior years of pilot reporting and 3 prior years of voluntary reporting) and believe that the majority of hospitals should be ready to successfully report on at least 4 electronic CQMs beginning with the CY 2017 reporting period. However, we believe that the modification to our proposal regarding the CQM reporting requirements for CY 2017 that we are finalizing is responsive to stakeholder feedback, including feedback from small, rural, tribal, and Indian Health Service hospitals that have expressed the need for additional time and flexibility to successfully implement all of the CQM reporting requirements. Lastly, CMS is aligning the requirement for the reporting of one, self-selected calendar quarter of data for 4 CQMs between the Hospital IQR Program and the Medicare and Medicaid EHR Incentive Programs in order to streamline the electronic submission of quality data for hospitals.

Although we are not finalizing our proposal to require the electronic reporting of 6 CQMs for two, self-selected calendar quarters of data in CY 2017, we encourage eligible hospitals and CAHs to continue refining their electronic reporting implementation activities in order to successfully achieve electronic data capture and reporting. In addition, we encourage early testing and the use of pre-submission testing tools to reduce errors and inaccurate data submissions in electronic CQM reporting. As time progresses, we expect that eligible hospitals and CAHs will continue to

build and refine their EHR systems and gain more familiarity with electronic reporting of more CQM data, resulting in more accurate data submissions with fewer errors. It is critical that we maintain a balance between the pace of evolving electronic standards and the timing cycle for the regulatory adoption of standards when adopting policies for the Medicare and Medicaid EHR Incentive Programs.

*Comment:* One commenter believed that clinical staff may have difficulty inputting patient information into the appropriate structured fields during a patient encounter due to competing clinical demands.

*Response:* An EHR may allow clinicians or administrative staff to update patient information at a later time if clinical staff cannot record patient information at the time of the encounter without compromising patient care, or if additional information needs to be added to the medical record. We recommend that eligible hospitals and CAHs and their health IT vendors work together to implement EHR functionalities that will successfully support clinical activities, documentation, and quality measure reporting and that are consistent with the policies and procedures of the eligible hospital or CAH. We believe that recording patient information in structured fields for the purpose of reporting CQMs electronically is more accurate and less prone to errors than using unstructured fields since it relies less on interpretation, and ultimately reduces burden on eligible hospitals and CAHs.

*Comment:* A few commenters expressed concern that hospitals may be penalized more than once for failing to successfully report CQMs electronically in both the Hospital IQR and EHR Incentive Programs and as a result, a significant portion of their annual payment update hinges on the maturity of health IT vendor capabilities and the ability of the CMS QualityNet Secure Portal to manage and appropriately support the volume of incoming data submissions. Commenters noted that hospitals continue to report barriers to successfully submitting CQM data electronically, including health IT vendor failures during the submission of production data (which were not present during test submissions) and limitations of the QualityNet Secure Portal, such as: (1) An inability to accept QRDA I files over a certain size; (2) an inability to run reports verifying that data have been submitted to CMS; and (3) frequent periods when the system is down due to it not being able to accommodate more than a certain

number of users at one time. The commenters also expressed concern regarding CQM measure specification.

*Response:* We disagree with commenters that failing to successfully report CQMs electronically in both the Hospital IQR and EHR Incentive Programs may result in duplicate payment adjustments for hospitals. Section 1886(n)(3)(B)(iii) of the Act encourages the coordination of reporting of information across CMS programs and specifically directs the Secretary to seek to avoid redundant or duplicative reporting with reporting otherwise required, including reporting under the Hospital IQR Program, in selecting measures and in establishing the form and manner for reporting measures for the EHR Incentive Program. Therefore, we have established policies that have enabled hospitals to satisfy the CQM reporting requirements of both the Medicare EHR Incentive Program and the Hospital IQR Program without duplicative reporting. In the event an eligible hospital or CAH is unable to meet the electronic CQM reporting requirements, for CY 2017, it would be able to report CQMs by attestation for purposes of the EHR Incentive Program, and if it satisfies all other program requirements, it would avoid the EHR Incentive Program downward payment adjustment under sections 1886(b)(3)(B)(ix) and 1814(l)(4) of the Act. Also, we encourage eligible hospitals or CAHs that are unable to meet the electronic CQM reporting requirements under the EHR Incentive Program to review the EHR Incentive Program's hardship exception policy.

Regarding the limitations of the QualityNet Secure Portal and QRDA I file submission difficulties that commenters described, we acknowledge that at certain times of high submission volume, some data submitters reported longer file processing times and an inability to timely run feedback reports. We are actively taking steps to improve the data submission experience for the CY 2017 reporting period, including working to increase system throughput and increase responsiveness should further issues arise. In addition, we are working to identify potential efficiencies in our EHR Incentive Program system source code which could reduce the time it takes to receive submission confirmation and run reports.

We are finalizing a modified version of our proposals regarding the previously finalized CQM reporting requirements for the CY 2017 reporting period, such that eligible hospitals and CAHs are required to electronically report on 4 self-selected available CQMs

(instead of 8 available CQMs) for one, self-selected calendar quarter of data (instead of a full calendar year (consisting of four quarterly data reporting periods)), whether reporting only for the EHR Incentive Program or reporting for both the Hospital IQR Program and the EHR Incentive Program.

*Comment:* One commenter did not support CMS' proposal to reduce the number of CQMs required to be electronically reported from 8 to 6 and reduce the reporting period from one full calendar year of data to two, self-selected quarters of CY 2017, and recommended that the number of CQMs and the reporting period reflect the previously finalized CY 2017 CQM reporting requirements for electronic reporting. The commenter indicated that capturing and exporting the data for a QRDA Category I file is part of the ONC EHR certification program and if a hospital is not capturing data in such a way that a QRDA I file can be generated, then this implies that either the EHR is violating its certification or the hospital is not using its EHR appropriately. Rather than modifying the CQM reporting requirements, the commenter suggested that the existing regulations be enforced and penalties be applied to health IT vendors with EHRs violating their certification. In addition, the commenter suggested that measure specifications could be published in advance to enable hospitals to view them before the reporting period begins. The commenter recognized the challenges some hospitals face, but indicated that these issues should be addressed directly rather than by changing the CQM reporting requirements.

*Response:* We thank the commenter for their support regarding our previously finalized CY 2017 CQM reporting requirements. We have found that many hospitals are able to successfully meet the CQM electronic reporting requirements and would be capable of successfully reporting additional measures. However, we seek to be responsive to the concerns and challenges expressed by hospitals, particularly smaller hospitals with fewer resources. In the present case we are seeking balance between hospitals' requests for more time to improve their CQM electronic reporting capabilities and furthering our goal to expand electronic data reporting. We appreciate the commenter's suggestion that measure specifications could be published further in advance to enable hospitals to view them before the reporting period begins and note that measure specifications are typically

published in the spring of the year prior to the start of the applicable reporting period.

*Comment:* A few commenters recommended that CMS clarify the definitions used for the terms "workflow" and "data submission," in the context of electronic measure reporting. Specifically, the commenters suggested that while "workflow" is related to technical challenges, the term is not appropriate in defining the process of data extraction and QRDA I submission.

*Response:* We thank the commenters for their suggestions. Our references of the terms "data submission" and "workflow" depend on the context in which the terms are used, the parties exchanging data, and the purpose for which data is exchanged. In the context of the electronic reporting of CQMs, hospitals may experience challenges modifying their internal workflow for clinical care, corresponding documentation and data capture, such that clinical staff enter patient information into the appropriate fields of an EHR at the time of the patient encounter. A clinician, medical assistant, scribe, or other staff member entering data into an EHR may find it simpler to enter patient information in the "free text" section of the EHR, even though specific fields exist in the EHR to record data so it maps appropriately for CQM reporting purposes. In suggesting that hospitals may need to make changes to their internal workflow, we expected that hospitals would train the appropriate staff to effectively capture patient data correctly in the EHR and make such efforts a priority. We further encourage hospitals to innovate and design workflows that fit their unique needs to make the best use of both clinical and non-clinical staff resources to maintain patient health information in the EHR. In addition, if clinical staff enter patient information in the "free text" sections of an EHR, clinical or administrative staff could go back after a patient encounter has completed and enter that information into the appropriate fields. This could be considered part of the hospital's "workflow" under the definition provided by the commenter. Data submission in the context of eCQM reporting would refer to the sending and subsequent receiving of clinical data corresponding to eCQM specifications through the QualityNet Secure Portal for purposes of the Hospital IQR Program and EHR Incentive Program eCQM submissions.

*Comment:* One commenter urged CMS to suspend all regulatory requirements regarding the electronic

reporting of CQMs, citing a lack of improvement in patient care despite the expenditure of significant time and resources to meet the CQM reporting requirements for the CY 2016 reporting period.

*Response:* We disagree with the commenter that the electronic reporting of CQMs does not benefit patients. We do not believe that suspending all electronic reporting of CQMs would be an appropriate approach. We recognize the need to continue to improve the electronic reporting of CQMs and establish a more seamless process to minimize burden on eligible hospitals and CAHs in meeting CQM reporting requirements. We understand that eligible hospitals and CAHs have spent resources to refine certified EHR technology to meet the electronic CQM reporting requirements. However, we also believe that CQMs will promote better quality of care as eligible hospitals and CAHs and their health IT vendors continue to refine EHR systems and integrate them into the clinical work flow. This will lead to improved accuracy, reliability, and completeness of the CQM data and promote higher quality, improved health outcomes for patients, and lower costs, while ultimately decreasing reporting burden on hospitals, and the associated operational, administrative, and financial burdens.

We will continue to monitor the progress of eligible hospitals and CAHs implementing CQM reporting requirements and encourage eligible hospitals and CAHs to continue sharing their experiences in meeting reporting requirements. In addition, we will routinely evaluate the CQMs available to report and consider new electronic measures as they become available for potential use in the Medicare and Medicaid EHR Incentive Programs and the Hospital IQR Program.

After consideration of the public comments we received, we are finalizing modifications to our proposals regarding the previously finalized CY 2017 CQM reporting requirements for electronic reporting. For the CY 2017 reporting period, eligible hospitals and CAHs that choose to report CQMs electronically are required to report one, self-selected calendar quarter of data for 4 self-selected CQMs of the available CQMs.

3. CQM Reporting for the Medicare and Medicaid EHR Incentive Programs in 2018

a. Background

In the 2015 EHR Incentive Programs Final Rule (80 FR 62892 through 62893), beginning in CY 2017 and for subsequent years, we established a CQM reporting period of one full calendar year (consisting of four quarterly data reporting periods) for the reporting of

CQMs by eligible hospitals and CAHs participating in the Medicare and Medicaid EHR Incentive Programs, with an exception for providers demonstrating meaningful use for the first time under the Medicaid EHR Incentive Program, for whom the CQM reporting period is any continuous 90-day period within the calendar year. In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57250), we noted that one full calendar year of data will result in more complete and accurate data, and hospitals will be able to submit one full calendar year of data for both the Medicare and Medicaid EHR Incentive Programs and the Hospital IQR Program, thereby reducing the reporting burden.

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57250 through 57255), we removed 13 CQMs from the set of CQMs available for eligible hospitals and CAHs to report under the Medicare and Medicaid EHR Incentive Programs, beginning with the reporting periods in CY 2017. All 16 of the remaining measures listed in Table 10 of the EHR Incentive Program Stage 2 final rule (77 FR 54083 through 54087) are available for eligible hospitals and CAHs to report for the Medicare and Medicaid EHR Incentive Programs. The following table lists the 16 CQMs available for eligible hospitals and CAHs to report for the Medicare and Medicaid EHR Incentive Programs beginning in CY 2017 (81 FR 57255).

CQMS FOR ELIGIBLE HOSPITALS AND CAHS BEGINNING WITH CY 2017

Short name	Measure name	NQF #
<b>Electronic Clinical Quality Measures (eCQMs)</b>		
AMI-8a	Primary PCI Received Within 90 Minutes of Hospital Arrival	0163
ED-3	Median Time from ED Arrival to ED Departure for Discharged ED Patients	0496
CAC-3	Home Management Plan of Care Document Given to Patient/Caregiver	+
ED-1	Median Time from ED Arrival to ED Departure for Admitted ED Patients	0495
ED-2	Admit Decision Time to ED Departure Time for Admitted Patients	0497
EHDI-1a	Hearing Screening Prior to Hospital Discharge	1354
PC-01	Elective Delivery (Collected in aggregate, submitted via web-based tool or electronic clinical quality measure).	0469
PC-05	Exclusive Breast Milk Feeding*	0480
STK-02	Discharged on Antithrombotic Therapy	0435
STK-03	Anticoagulation Therapy for Atrial Fibrillation/Flutter	0436
STK-05	Antithrombotic Therapy by the End of Hospital Day Two	0438
STK-06	Discharged on Statin Medication	0439
STK-08	Stroke Education	+
STK-10	Assessed for Rehabilitation	0441
VTE-1	Venous Thromboembolism Prophylaxis	0371
VTE-2	Intensive Care Unit Venous Thromboembolism Prophylaxis	0372

+ NQF endorsement has been removed.

\* Measure name has been shortened. We refer readers to annually updated measure specifications on the CMS eCQI Resource Center Web page for further information: <https://www.healthit.gov/newsroom/ecqi-resource-center>.

For CY 2018 and future calendar years, we plan to continue to align the CQM reporting requirements for the Medicare and Medicaid EHR Incentive

Programs and the Hospital IQR Program. As we expect to expand the current measures to align with the National Quality Strategy, the CMS Quality

Strategy<sup>509</sup> and incorporate updated

<sup>509</sup> Available at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/>  
Continued

standards and terminology in current CQMs, including updating the electronic specifications for these CQMs, and creating de novo CQMs, we also plan to expand the set of CQMs available for reporting under the EHR Incentive Programs in future years. We will continue to engage stakeholders to provide input on future proposals for CQMs as well as request comment on future electronic specifications for new and updated CQMs.

b. CQM Reporting Period for the Medicare and Medicaid EHR Incentive Programs in CY 2018

(1) Background

Our goal is to continue to move toward increased electronic reporting while also addressing stakeholder concerns. With the CY 2017 final policies reducing electronic reporting requirements and providing additional time for eligible hospitals, CAHs, and health IT vendors to make EHR upgrades and system transitions in CY 2017, we believe that stakeholders will be able to address some of the issues and challenges they face prior to CY 2018, but recognize that certain challenges and issues (for example, EHR upgrade and system transition challenges associated with the development cycle of technology and the timeframe to develop and execute work flows and processes and train staff based on EHR upgrades and system transitions) may not be fully resolved and as a result, may persist in CY 2018. As established in the 2015 EHR Incentive Programs Final Rule (80 FR 62894), reporting CQMs by attestation will no longer be an option for eligible hospitals and CAHs starting with the reporting periods in CY 2018, except in circumstances in which electronic reporting is not feasible.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20132 and 20133), for CY 2018, we proposed the following CQM reporting period for the Medicare and Medicaid EHR Incentive Programs and the following submission period for the Medicare EHR Incentive Program—for eligible hospitals and CAHs reporting CQMs electronically that demonstrate meaningful use for the first time in 2018 or that have demonstrated meaningful use in any year prior to 2018, the reporting period would be the first 3 quarters of CY 2018, and the submission period would be the 2 months following the close of the calendar year, ending February 28, 2019.

For eligible hospitals and CAHs that report CQMs by attestation under the Medicare EHR Incentive Program as a result of electronic reporting not being feasible, and for eligible hospitals and CAHs that report CQMs by attestation under their State's Medicaid EHR Incentive Program, we established a CQM reporting period of the full CY 2018 (consisting of 4 quarterly data reporting periods) (80 FR 62893). We also established an exception to this full-year reporting period for eligible hospitals and CAHs demonstrating meaningful use for the first time under their State's Medicaid EHR Incentive Program; under this exception, the CQM reporting period is any continuous 90-day period within CY 2018 (80 FR 62893).

In the FY 2018 IPPS/LTCH PPS proposed rule, we proposed the submission period for eligible hospitals and CAHs reporting CQMs by attestation under the Medicare EHR Incentive Program would be the 2 months following the close of the CY 2018 CQM reporting period, ending February 28, 2019.

In regard to the Medicaid EHR Incentive Program, we provide States with the flexibility to determine the method of reporting CQMs (attestation or electronic reporting) and the submission periods for reporting CQMs, subject to prior approval by CMS.

(2) CQM Reporting Criteria for the Medicare and Medicaid EHR Incentive Programs in CY 2018

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20132 through 20133), we proposed the following reporting criteria under the Medicare and Medicaid EHR Incentive Program for eligible hospitals and CAHs reporting CQMs electronically for the reporting period in CY 2018—for eligible hospitals and CAHs participating only in the EHR Incentive Program, or participating in both the EHR Incentive Program and the Hospital IQR Program, report on at least six (self-selected) of the available CQMs from the table in the FY 2017 IPPS/LTCH PPS final rule at 81 FR 57255.

We proposed the following reporting criteria for eligible hospitals and CAHs that report CQMs by attestation under the Medicare EHR Incentive Program because electronic reporting is not feasible, and for eligible hospitals and CAHs that report CQMs by attestation under their State's Medicaid EHR Incentive Program, for the reporting period in CY 2018—report on all 16 available CQMs from the table in the FY 2017 IPPS/LTCH PPS final rule at 81 FR 57255.

In developing these proposals, we considered several alternatives. Specifically, we considered aligning the requirements for CY 2018 with the proposed requirements for CY 2017 outlined in the proposed rule, such that eligible hospitals and CAHs would report on 6 (self-selected) available CQMs for two self-selected quarters of data in both CY 2017 and CY 2018. We also considered the final policy in the FY 2017 IPPS/LTCH PPS final rule for the Hospital IQR Program (81 FR 57150 through 57159), which would require hospitals to report one full calendar year of data for at least 8 (self-selected) CQMs out of the available CQMs for both the CY 2017 reporting period/FY 2019 payment determination and the CY 2018 reporting period/FY 2020 payment determination. However, we proposed changes to this previously adopted policy in the Hospital IQR Program and refer readers to section IX.A.8. of the preamble of this final rule for more details. Ultimately, we believed that our proposal balanced our goal to transition to more robust electronic reporting of quality measure data with concerns from stakeholders regarding an increased burden to meet CQM reporting requirements. We believe the electronic collection and reporting of quality data using health IT will ultimately simplify and streamline reporting for various CMS quality reporting programs, and hospitals will experience decreased financial and administrative burden as we continue to align program reporting requirements and adopt a more streamlined set of clinical quality measures with electronic specifications.

In addition, the proposal provided eligible hospitals and CAHs the opportunity to have several years of experience reporting data electronically for the Hospital IQR and Medicare and Medicaid EHR Incentive Programs. Therefore, we believed that eligible hospitals and CAHs will be better prepared to submit an additional quarter of data for the CY 2018 reporting period compared to the number of quarters we proposed for the CY 2017 reporting period. This proposal was made in conjunction with our proposals discussed in section IX.A.10.d. of the preamble of the proposed rule to align requirements for the Medicare and Medicaid EHR Incentive Programs and the Hospital IQR Program.

We invited public comment on our proposals regarding the CY 2018 reporting requirements for eligible hospitals and CAHs reporting CQMs under the Medicare and Medicaid EHR Incentive Programs.

*Comment:* A majority of commenters supported CMS' proposal to require eligible hospitals and CAHs to electronically report 6 CQMs for the first three calendar quarters of data for the CY 2018 reporting period. A few commenters requested CMS maintain the requirement to electronically report 6 CQMs beyond the CY 2018 reporting period while increasing the reporting period to one full calendar year and then gradually increasing the number of required CQMs to electronically report in future years. The commenters believed such approach would allow hospitals to adapt to the increased CQM reporting requirements.

*Response:* We thank the commenters for their support, and will consider their comments in future policymaking.

*Comment:* Many commenters supported requiring eligible hospitals and CAHs to electronically report 6 CQMs, but requested that CMS retain the proposed modified CY 2017 CQM reporting period for electronic reporting, which would require eligible hospitals and CAHs to report two, self-selected quarters of data for the CY 2018 reporting period instead of the first three calendar quarters of data for the CY 2018 reporting period. Some commenters noted that smaller hospitals with fewer resources require more time to become proficient in all of the parameters (mapping, new work flows, staff education, etc.) associated with electronic reporting.

A few commenters indicated that if hospitals would be able to continue to self-select two quarters of data for the CY 2018 reporting period, it would provide the necessary time for quality, health IT, and clinical teams to improve performance without significantly impairing CMS' ability to review and analyze data generated through CQM reporting.

*Response:* We appreciate the support from commenters regarding our proposal to require eligible hospitals and CAHs to electronically report 6 available CQMs for the CY 2018 reporting period and their suggestion that we retain the proposed CY 2017 reporting period (two, self-selected quarters of data) for CY 2018.

In response to stakeholder concerns regarding the burden associated with meeting the CQM reporting requirements (including updating EHR systems, data mapping, refining work flows, and staff education and training), we recognize that eligible hospitals and CAHs may require more time and flexibility to meet the electronic reporting requirements. Therefore, we are finalizing modifications to our proposals regarding the CQM reporting

requirements for the CY 2018 reporting period. Under the modified version of our proposals which we are finalizing for CY 2018, eligible hospitals and CAHs will be required to electronically report 4 self-selected CQMs of the available 16 CQMs under the Medicare and Medicaid EHR Incentive Programs. In addition, under the modified version of our proposals which we are finalizing, for the CY 2018 reporting period, eligible hospitals and CAHs are required to report one, self-selected calendar quarter of data for the 4 self-selected available CQMs.

By finalizing these modifications to our proposal, the CQM reporting requirements for electronic reporting for the CY 2018 reporting period will be the same as the CQM reporting requirements finalized for the CY 2017 reporting period, as discussed above. We believe that having the same reporting requirements for three reporting years will offer the consistency requested by stakeholders and allow hospitals and their health IT vendors to improve CQM reporting capabilities. We intend to establish requirements for the CY 2019 reporting period/FY 2021 payment determination and future years in future rulemaking.

We will continue to monitor the progress of eligible hospitals and CAHs implementing CQM reporting requirements and encourage hospitals to continue sharing their experiences. In addition, we encourage early testing and the use of pre-submission testing tools to reduce errors and inaccurate data submissions in electronic CQM reporting. As time progresses, we expect that eligible hospitals and CAHs will continue to build and refine their EHR systems and gain more familiarity with electronic reporting of more CQM data, resulting in more accurate data submissions with fewer errors.

*Comment:* Several commenters supported CMS' proposal to require eligible hospitals and CAHs to electronically report 6 CQMs for the CY 2018 reporting period, but requested that CMS allow eligible hospitals and CAHs to self-select the three quarters of data for which they would report. The commenters noted implementing requirements that differ from one calendar year to the next is time consuming and cumbersome, which includes changes and updates to CQM logic definitions, vendor relations, schemas for running reports, and XML files. Some commenters indicated that they would support reporting data from the first quarter reporting period when the year-end process is more established and predictable.

*Response:* We thank the commenters for their support of our proposal to require eligible hospitals and CAHs to electronically report 6 CQMs for the CY 2018 reporting period and suggestion to allow eligible hospitals and CAHs to self-select the three quarters of data for which they would report.

However, with stakeholders expressing concerns regarding eligible hospitals and CAHs experiencing an increased burden in meeting CQM reporting requirements, we are finalizing modifications to our proposals regarding the CQM reporting requirements for the CY 2018 reporting period. For CY 2018, eligible hospitals and CAHs are required to electronically report one, self-selected calendar quarter of data for 4 self-selected CQMs of the available 16 CQM under the Medicare and Medicaid EHR Incentive Programs. The CQM reporting requirements for CY 2017 and CY 2018 are the same.

*Comment:* Several commenters supported the proposed policies for CY 2018 reporting period that would require eligible hospitals and CAHs to electronically report the first three quarters of data for 6 self-selected available CQMs, but recommended that CMS further reduce the CY 2018 requirements by retaining the CY 2016 established policies that required the electronic reporting of 4 CQMs for one quarter of data.

In addition, some commenters expressed concern that the incremental increase in CQM electronic reporting requirements would impact the ability of eligible hospitals and CAHs to effectively meet current CQM electronic reporting requirements and concurrently prepare for increased CQM reporting requirements in the following program year. As a result, additional burden would be placed on hospitals by limiting available time for testing prior to production file submission. A few commenters expressed concern about the considerable burden required to map the necessary data elements from the EHR to the appropriate QRDA file format and noted that some health IT vendors are not properly equipped to collect and transmit such data through the CMS QualityNet Secure Portal. The commenters stated that until these issues are sufficiently addressed, CMS should not increase the required CQM reporting requirements for electronic reporting.

*Response:* We appreciate commenters expressing their concerns regarding the challenges associated with the electronic reporting of CQMs. As previously noted, in response to hospital and health IT vendor feedback,

we are modifying our proposed CY 2018 reporting requirements by reducing CQM reporting requirements. For the CY 2018 reporting period, we are requiring eligible hospitals and CAHs to report one, self-selected calendar quarter of data for 4 available CQMs. We believe that the modified, reduced reporting requirements will provide eligible hospitals, CAHs, and health IT vendors with additional time to plan for data processing, report quality data to CMS, and focus on system upgrades, data mapping, staff training, and other issues. We will continue to monitor the progress of hospitals in implementing CQM reporting requirements and engage in discussions with hospitals and health IT vendors regarding their experiences as we consider the establishment of CQM policies in future rulemaking.

In response to concerns from commenters that the incremental increase in CQM electronic reporting requirements would impact the ability of eligible hospitals and CAHs to both effectively execute current CQM electronic reporting requirements and concurrently prepare for increased CQM reporting requirements in the following program year, we believe that the modifications to our proposals requiring eligible hospitals and CAHs to report one, self-selected calendar quarter of data for 4 available CQMs reduce reporting requirements and provide eligible hospitals and CAHs with additional time to prepare to meet CQM reporting requirements. We believe that modestly increasing the requirements for eligible hospitals and CAHs to report CQMs electronically is consistent with our goal to make progress toward more robust electronic reporting of CQMs in the EHR Incentive Program, but recognize that some eligible hospitals and CAHs may benefit from additional time to become proficient in all of the aspects associated with electronic reporting and improving upon CQM reporting capabilities prior to increasing the number of quarters of data and number of CQMs eligible hospitals and CAHs are required to report electronically. We believe the electronic collection and reporting of quality data using health IT will ultimately simplify and streamline reporting for various CMS quality reporting programs, and hospitals will experience decreased financial and administrative burden as we continue to align program reporting requirements and adopt a more streamlined set of clinical quality measures with electronic specifications.

For the CY 2018 reporting period, eligible hospitals and CAHs will be able to self-select 4 CQMs from the available 16 CQMs in the EHR Incentive Program

measure set and meet the reporting requirements by submitting data via QRDA I files, zero denominator declaration, or case threshold exemption. In addition, we are continuing to allow abstraction of data into structured fields since some eligible hospitals and CAHs are still in the process of upgrading EHR systems and changing health IT vendors. In an effort to provide eligible hospitals and CAHs with maximum flexibility, we are finalizing a policy which permits them to self-select the one calendar quarter of data they report for the CY 2018 reporting period.

In considering what the reporting period and number of CQMs to report electronically should be, we decided to implement for CY 2018 the same CQM reporting requirements established for CY 2016 (80 FR 49757 and 49758) and finalized in this final rule for CY 2017 (eligible hospitals and CAHs will be required to report one, self-selected quarter of data (for CY 2016, either Q3 or Q4) for 4 available CQMs), which we believe will provide eligible hospitals and CAHs with additional time gaining experience reporting CQMs electronically and reviewing the results of CY 2016 CQM data collection prior to increasing the number of quarters of data and number of CQMs eligible hospitals and CAHs are required to report electronically. We note that hospitals have reported data electronically for several years to both the Medicare EHR Incentive Program and the Hospital IQR Program (3 prior years of pilot reporting and 3 prior years of voluntary reporting) and believe that the majority of hospitals should be ready to successfully report on at least 4 electronic CQMs beginning with the CY 2018 reporting period. However, we believe that the finalized modification to our proposal regarding the CQM reporting requirements for CY 2018 is responsive to stakeholder feedback, including feedback from small, rural, tribal, and Indian Health Service hospitals that have expressed the need for additional time and flexibility to successfully implement all of the CQM reporting requirements.

*Comment:* One commenter supported CMS' proposal that would require eligible hospitals and CAHs to electronically report 6 CQMs for the CY 2018 reporting period, but suggested that CMS retain the requirement to report one full calendar year of data. Further, the commenter suggested gradually increasing the number of required CQMs in future years. The commenter believed that such approach would allow hospitals to adapt to the increased CQM requirements.

*Response:* We thank the commenter for their support. For future years, we will consider requiring hospitals to report more quarters of data and to gradually increase the electronic reporting of quality measure data in the Medicare and Medicaid EHR Incentive Programs.

*Comment:* One commenter recommended the submission deadline be moved to the end of the first quarter of 2019 instead of February 28, 2019, which would allow for final ICD-10 coding and corrections potentially needed after receiving final documentation from physicians.

*Response:* We thank the commenter for the recommendation to adjust the CQM submission deadline for the Medicare EHR Incentive Program from February 28, 2019 to the end of the first quarter of 2019. We will take this suggestion into consideration; however, at this juncture, we are finalizing the submission deadline for the 2018 reporting period as proposed.

After consideration of the public comments we received, we are finalizing the CY 2018 reporting requirements as proposed, except for our proposals pertaining to the electronic reporting of CQM reporting period and reporting criteria, which we are finalizing with modifications. For CY 2018, the CQM reporting period for the Medicare and Medicaid EHR Incentive Programs and the submission period for the Medicare EHR Incentive Program are as follows—for eligible hospitals and CAHs reporting CQMs electronically that demonstrate meaningful use for the first time in 2018 or that have demonstrated meaningful use in any year prior to 2018, the reporting period is one, self-selected calendar quarter of CY 2018 data, and the submission period is the 2 months following the close of the calendar year, ending February 28, 2019.

For eligible hospitals and CAHs that report CQMs by attestation under the Medicare EHR Incentive Program as a result of electronic reporting not being feasible, and for eligible hospitals and CAHs that report CQMs by attestation under their State's Medicaid EHR Incentive Program, we established a CQM reporting period of the full CY 2018 (consisting of 4 quarterly data reporting periods) (80 FR 62893). We also established an exception to this full-year reporting period for eligible hospitals and CAHs demonstrating meaningful use for the first time under their State's Medicaid EHR Incentive Program. Under this exception, the CQM reporting period is any continuous 90-day period within CY 2018 (80 FR 62893). The submission period for

eligible hospitals and CAHs reporting CQMs by attestation under the Medicare EHR Incentive Program is the 2 months following the close of the CY 2018 CQM reporting period, ending February 28, 2019. In regard to the Medicaid EHR Incentive Program, we provide States with the flexibility to determine the method of reporting CQMs (attestation or electronic reporting) and the submission periods for reporting CQMs, subject to prior approval by CMS.

For the CY 2018 reporting period, the reporting criteria under the Medicare and Medicaid EHR Incentive Program for eligible hospitals and CAHs reporting CQMs electronically is as follows—for eligible hospitals and CAHs participating only in the EHR Incentive Program, or participating in both the EHR Incentive Program and the Hospital IQR Program, report on at least 4 self-selected CQMs of the available CQMs from the table in the FY 2017 IPPS/LTCH PPS final rule at 81 FR 57255, which is also in section IX.E.3.a. of the preamble to this final rule.

The reporting criteria for eligible hospitals and CAHs that report CQMs by attestation under the Medicare EHR Incentive Program as a result of electronic reporting not being feasible, and for eligible hospitals and CAHs that report CQMs by attestation under their State's Medicaid EHR Incentive Program, for the reporting period in CY 2018—report on all 16 available CQMs from the table in the FY 2017 IPPS/LTCH PPS final rule at 81 FR 57255.

#### c. CQM Reporting Form and Method for the Medicare EHR Incentive Program in 2018

In the FY 2016 IPPS/LTCH PPS final rule (80 FR 49759 through 49760), we removed the QRDA-III as an option for reporting under the Medicare EHR Incentive Program for eligible hospitals and CAHs. For the reporting periods in 2016 and future years, we are requiring QRDA-I for CQM electronic submissions for the Medicare EHR Incentive Program. As noted in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49760), States would continue to have the option, subject to our prior approval, to allow or require QRDA-III for CQM reporting.

As noted in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49759), we encourage health IT developers to test any updates, including any updates to the CQMs and CMS reporting requirements based on the CMS Implementation Guide for Quality Reporting Document Architecture (QRDA) Category I and Category III (CMS Implementation Guide for QRDA)

for Hospital Quality Reporting (HQR), on an annual basis.

The form and method of electronic submission are further explained in subregulatory guidance and the certification process. For example, the following documents are updated annually to reflect the most recent CQM electronic specifications: The CMS Implementation Guide for QRDA; program specific performance calculation guidance; and CQM electronic specifications and guidance documents. These documents are located on the eCQI Resource Center Web page at: <https://ecqi.healthit.gov/>. For further information on CQM reporting, we refer readers to the EHR Incentive Program Web site where guides and tip sheets are located at: <http://www.cms.gov/ehrincentiveprograms>. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20133), for the CY 2018 reporting period, we proposed the following for CQM submission under the Medicare EHR Incentive Program:

- Eligible hospital and CAH participating in the Medicare EHR Incentive Program (single program participation)—electronically report CQMs through QualityNet Portal.
- Eligible hospital and CAH options for electronic reporting for multiple programs (that is, EHR Incentive Program and Hospital IQR Program participation)—electronically report through QualityNet Portal.

As noted in the 2015 EHR Incentive Programs Final Rule (80 FR 62894), starting in 2018, eligible hospitals and CAHs participating in the Medicare EHR Incentive Program must electronically report CQMs where feasible; and attestation to CQMs will no longer be an option except in certain circumstances where electronic reporting is not feasible.

For the Medicaid EHR Incentive Program, States continue to be responsible for determining whether and how electronic reporting of CQMs would occur, or if they wish to allow reporting through attestation. Any changes that States make to their CQM reporting methods must be submitted through the State Medicaid Health IT Plan (SMHP) process for CMS review and approval prior to being implemented.

For CY 2018, we proposed to continue our policy regarding the electronic submission of CQMs, which would require the use of the most recent version of the CQM electronic specification for each CQM to which the EHR is certified. For the CY 2018 electronic reporting of CQMs, this means eligible hospitals and CAHs

would be required to use the Spring 2017 version of the CQM electronic specifications and any applicable addenda available on the eCQI Resource Center Web page at: <https://ecqi.healthit.gov/>. In addition, we proposed to require that an eligible hospital or CAH would need to have its EHR technology certified to all 16 available CQMs from the table in the FY 2017 IPPS/LTCH PPS final rule at 81 FR 57255 in order to meet the reporting requirements for CY 2018. In the 2015 EHR Incentive Programs Final Rule (80 FR 62767), we established that starting in CY 2018, eligible hospitals and CAHs are required to have EHR technology certified to the 2015 Edition, although as discussed in section IX.G.4 of the preamble of this final rule, we are changing that requirement for the EHR reporting period in CY 2018.

Starting in CY 2018, we proposed to require the use of EHR technology certified to the 2015 Edition for CQM reporting. Furthermore, we proposed that an EHR certified for CQMs under the 2015 Edition certification criteria would not need to be recertified each time it is updated to a more recent version of the CQMs. We believe it is not necessary for an EHR certified for CQMs under the 2015 Edition certification criteria to be recertified each time it is updated to the most recent version of the CQMs because the EHR technology continues to meet the 2015 Edition certification criteria and any updates to the CQM specifications do not impact or change any elements regarding certification and thus, we proposed that recertification is not necessary. For further discussion regarding EHR certification requirements for 2018, we refer readers to section IX.G.4. of the preamble of this final rule. We invited public comment on these proposals.

*Comment:* Many commenters did not support the proposal requiring EHR technology to be certified to the 2015 Edition for the CY 2018 reporting period. Several commenters supported the options described in the FY 2018 IPPS/LTCH PPS proposed rule that would allow hospitals to use 2014 Edition CEHRT or a combination of 2014 and 2015 Edition CEHRT for the CY 2018 CQM reporting period.

A few commenters recommended CMS delay the requirement for EHR technology to be certified to the 2015 Edition until the CY 2019 reporting period. The commenters indicated that additional time is necessary since the certification requirements for the 2015 Edition are extensive and expensive, and noted that health IT vendors will continue to struggle with completing the

certification process by January 1, 2018. One commenter mentioned that turn over in the industry has caused a backlog in the certification process. Another commenter expressed concern that the slow pace of certification, the number of upgrades that need to be performed, and the number of trainings yet to be held makes it highly unlikely that health systems and medical practices will be prepared to submit CQMs using EHR technology certified to the 2015 Edition for the CY 2018 reporting period. Another commenter noted that implementing the 2015 Edition of CEHRT does not automatically create the ability to submit appropriate or complete quality data.

*Response:* We recognize that there is burden associated with the development and deployment of each new edition of CEHRT, but we believe it is important to continue to encourage the use of the most recent edition of CEHRT, which incorporates updated standards and criteria, as it allows the collection of more relevant and accurate electronic data. We believe there are many benefits associated with upgrading to EHR technology certified to the 2015 Edition. Specifically, the 2015 Edition health IT certification criteria enables health information exchange through new and enhanced certification criteria standards, and implementation specifications for interoperability while incorporating changes that are designed to spur innovation and provide more choices to health care providers and patients for the exchange of electronic health information including new application access (API) certification criteria.

However, based on the comments we received that did not support our proposal, we are also finalizing a modified version of our proposal to require the use of EHR technology certified to the 2015 Edition for the CQM reporting period in CY 2018. For the CY 2018 CQM reporting period, eligible hospitals and CAHs will have the flexibility to use EHR technology certified to the 2014 Edition or 2015 Edition, or a combination of both Editions. We believe this provides sufficient time for eligible hospitals and CAHs to test and deploy the 2015 Edition of CEHRT in subsequent years. The utilization of the most recent version of CEHRT will provide the most relevant data, which is critical for eligible hospitals and CAHs to collect, use, and share data. We believe improved systems interoperability and use of the most current standards will facilitate more robust and accurate quality data reporting. One of the main

purposes of the ONC 2015 Edition final rule (80 FR 62603) is to facilitate greater interoperability for several clinical health information purposes and enable health information exchange through new and enhanced certification criteria, standards, and implementation specifications. We note that we have worked closely with ONC to enhance testing and validation of certified technology's ability to capture, exchange, and report electronic patient data, such as improved testing and certification through the Cypress CQM testing and certification tool.

In addition, in response to the concern regarding the burden associated with upgrading EHR technology certified to the 2015 Edition for the CY 2018 CQM reporting period, as discussed in this section of the preamble of this final rule, we are finalizing a modified version of our proposal regarding CQM reporting requirements for the CY 2018 reporting period that require reporting on 4 self-selected CQMs for one, self-selected calendar quarter of data to reduce burden. By allowing eligible hospitals and CAHs to self-select the quarters of data they report, eligible hospitals and CAHs will have more flexibility to meet certification and EHR system upgrades, such as transitioning to the 2015 Edition.

We are also finalizing a modified version of our proposal to require the use of EHR technology certified to the 2015 Edition for the CQM reporting period in CY 2018. For the CY 2018 CQM reporting period, eligible hospitals and CAHs will have the flexibility to use EHR technology certified to the 2014 Edition or 2015 Edition, or a combination of both Editions. We believe this provides sufficient time for eligible hospitals and CAHs to test and deploy the 2015 Edition of CEHRT in subsequent years.

*Comment:* One commenter expressed concern that allowing the flexibility to use a combination of the 2014 and 2015 Editions of CEHRT for the CY 2018 reporting period may create more problems than it could potentially solve.

*Response:* We acknowledge the concern from the commenter and note that we do not believe allowing hospitals to use a combination of EHR technology certified to the 2014 and 2015 Editions would make it more difficult for them to meet the CQM reporting requirements in CY 2018. We have allowed this flexibility for the CY 2016 and CY 2017 reporting periods and we are not aware of any specific issues in QRDA I file creation or submission. Based on the comments received, many eligible hospitals, CAHs, and health IT

vendors would prefer to have greater time and flexibility to implement upgrades to the 2015 Edition.

*Comment:* Several commenters supported the proposal to require EHR technology to be certified to all 16 CQMs for the CY 2018 reporting period since all 16 CQMs should be available for submission to allow for reporting flexibility to better reflect the populations served by hospitals.

*Response:* We thank the commenters for their support regarding our proposal to require EHR technology to be certified to all 16 CQMs for the CY 2018 reporting period.

*Comment:* Several commenters did not support the proposal to require that EHR technology be certified to all 16 CQMs for the CY 2018 reporting period. A few of these commenters noted that there is not a requirement as a condition of ONC certification for EHR technology to support all CQM reporting options for hospitals, leaving each hospital or health system to work independently with health IT vendors in implementing their measures. The commenters expressed concern that these conditions may result in additional costs and hours of additional work for hospitals, and cause a tremendous waste of limited financial and personnel resources.

In addition, some commenters expressed concern that the proposal to require EHR technology to be certified to all 16 CQMs for the CY 2018 reporting period inappropriately places the burden on hospitals, rather than health IT vendors, to meet the requirement, especially for hospitals transitioning to EHR technology certified to the 2015 Edition and preparing for long-planned system upgrades. These commenters urged CMS to work with ONC and health IT vendors to ensure that the 2015 Edition CEHRT is capable of supporting hospital CQM reporting, including the reporting of any of the CQMs available to report in the Medicare and Medicaid EHR Incentive Programs.

One commenter expressed concern that this policy eliminates the opportunity for a specialty product to focus on measures only applicable to its domain, such as a surgical suite product focusing on surgery measures. The commenter also noted its concern that this policy would reduce the availability of CEHRT for hospitals or lead to poorer workflows for capturing quality data.

*Response:* We appreciate commenters expressing their concerns regarding the proposal to require EHR technology to be certified to all available CQMs for the CY 2018 reporting period. We recognize the challenges associated with the electronic reporting of CQMs. We

believe that requiring EHR technology to be certified to all available CQMs is important in allowing us to collect the most relevant electronic data. Further, we believe that requiring EHR technology to be certified to all available CQMs would help streamline the electronic data extrapolation component of hospital workflow in the future. In addition, having EHR technology certified to all available CQMs will prevent hospitals from having to go back and consult their health IT vendors each time they want/need to report on a new or different CQM.

We do not agree that the proposal places the burden on hospitals, rather than health IT vendors, to meet the requirement. We will continue to seek stakeholder input and collaborate with ONC to define standards for EHR organization and structure, which would allow for documentation to fit into the clinical workflow and to ensure our policies are responsive to evolving electronic standards to the greatest extent possible. We also seek to ensure that EHR technology certified to the 2015 Edition is capable of supporting hospital CQM reporting requirements, including the electronic reporting of any of the CQMs that are available to report under the Medicare and Medicaid EHR Incentive Programs. We encourage eligible hospitals and CAHs to work with their health IT vendors to continue refining their electronic reporting implementation activities to successfully achieve electronic data capture and reporting despite mapping and integration issues.

With respect to the concern indicating that this policy eliminates the opportunity for a specialty product to focus on measures only applicable to its domain, such as a surgical suite product focusing on surgery measures and that it would reduce the availability of CEHRT for hospitals or lead to poorer workflows for capturing quality data, we believe focusing first on consistency and alignment across all measures and EHR systems will provide an opportunity for all specialties to report equally within the EHR technology. Focusing on unique and individual specialties is a consideration for future rules once the concept of electronic reporting is fully established. Therefore, requiring EHR technology to be certified to all available CQMs at this time outweighs the potential limitations on specialty products and any impact this might have on their workflow.

After consideration of the public comments we received, we are finalizing the following policies regarding CQM reporting form and method as proposed. For CY 2018, we

will continue our policy regarding the electronic submission of CQMs, which requires the use of the most recent version of the CQM electronic specification for each CQM to which the EHR is certified. For the CY 2018 electronic reporting of CQMs, this means eligible hospitals and CAHs are required to use the Spring 2017 version of the CQM electronic specifications and any applicable addenda available on the eCQI Resource Center Web page at: <https://ecqi.healthit.gov/>. In addition, we are requiring that an eligible hospital or CAH will need to have its EHR technology certified to all 16 available CQMs from the table in the FY 2017 IPPS/LTCH PPS final rule at 81 FR 57255 in order to meet the reporting requirements for CY 2018.

In regard to the proposal requiring eligible hospitals and CAHs to utilize EHR technology certified to the 2015 Edition for CQM reporting in CY 2018, we are finalizing a modification to our proposal. As discussed above and in section IX.G.4 of the preamble of this final rule, for the CY 2018 CQM reporting period, eligible hospitals and CAHs will have the flexibility to use EHR technology certified to either the 2014 Edition or 2015 Edition, or a combination of both Editions. We note that an EHR technology certified for CQMs under the 2014 or 2015 Edition certification criteria will not need to be recertified each time it is updated to a more recent version of the CQMs.

#### *F. Clinical Quality Measurement for Eligible Professionals (EPs) Participating in the Medicaid EHR Incentive Program in 2017*

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20134 through 20135), we discussed clinical quality measurement for eligible professionals (EPs) participating in the Medicaid EHR Incentive Program in 2017. We explained that the proposals in this section would apply only to EPs participating in the Medicaid EHR Incentive Program. They would not apply to eligible hospitals or CAHs, or to the Medicare EHR Incentive Program.

##### **1. Modifications to the CQM Reporting Period for EPs in 2017**

In the 2015 EHR Incentive Programs Final Rule (80 FR 62762), we established for the Medicare and Medicaid EHR Incentive Programs a CQM reporting period of the full CY 2017 for EPs who have demonstrated meaningful use in a prior year and a CQM reporting period of any continuous 90 days within CY 2017 for EPs who are demonstrating meaningful use for the first time (80 FR 62891

through 62892). We also noted that we would continue to allow the States to determine the form and manner in which Medicaid EPs should report CQMs, subject to CMS approval (80 FR 62891, 62894).

In the final rule with comment period titled Medicare Program; Merit-Based Incentive Payment System (MIPS) and Alternative Payment Model (APM) Incentive Under the Physician Fee Schedule, and Criteria for Physician-Focused Payment Models (81 FR 77008) (referred to as the "CY 2017 Quality Payment Program final rule with comment period"), we established at § 414.1320(a), for the 2019 MIPS payment year, a minimum of a continuous 90-day performance period within CY 2017, up to and including the full CY 2017, for the quality performance category of the MIPS. We established at § 414.1320(b), for the 2020 MIPS payment year, a performance period of the full CY 2018.

Following the publication of that final rule with comment period, we received feedback from EPs observing that having CQM reporting or performance periods for Medicare professionals under MIPS that are different from the CQM reporting period for EPs under the Medicaid EHR Incentive Program would create administrative burdens for EPs who wish to participate in both programs and to report CQMs electronically. Our goal has always been to align Medicare and Medicaid reporting and quality improvement programs to the extent possible. In addition, while participation in MIPS is required for professionals who are considered "MIPS eligible clinicians," participation in the Medicaid EHR Incentive Program is not required. If the CQM reporting periods and MIPS performance periods are not aligned, we believe it is less likely that MIPS eligible clinicians will also participate as EPs in the remaining years of the Medicaid EHR Incentive Program.

Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20134), we proposed to change the CQM reporting period for EPs who report CQMs electronically in the Medicaid EHR Incentive Program to match the performance period established under MIPS in the quality performance category for MIPS eligible clinicians. We proposed a minimum of a continuous 90-day period during CY 2017 for EPs electronically reporting CQMs for the Medicaid EHR Incentive Program. We note that we consider the reporting periods established through rulemaking to be minimums and would encourage States to accept data from longer reporting periods. We proposed that the

reporting period for CQMs for EPs who choose to attest rather than report electronically, and who have demonstrated meaningful use in a previous program year under the EHR Incentive Program, would remain one full year (CY 2017), which is in alignment with the requirements for eligible hospitals and CAHs for the Medicare and Medicaid EHR Incentive Programs for 2017 (80 FR 62892 through 62893). We noted that reporting CQMs by attestation is not an option for eligible clinicians under MIPS, so the reason for proposing a shortened reporting period for EPs reporting CQMs electronically, which is to align this reporting period with the MIPS performance period, would not exist for EPs who choose not to report electronically. We explained that nothing in this proposal would change the CQM reporting period for EPs demonstrating meaningful use for the first time, which was established in the 2015 EHR Incentive Programs Final Rule to be any continuous 90 day period regardless of the method of CQM submission (80 FR 62892).

We further explained that the CQM reporting period for the Medicaid EHR Incentive Program in 2018 for EPs that have demonstrated meaningful use in a previous program year would remain 1 full year (CY 2018) to align with the corresponding performance period in MIPS for MIPS eligible clinicians. If changes are made to the MIPS performance period through future rulemaking, we will revisit the Medicaid EHR Incentive Program policies to continue our alignment goals.

We explained that we intend to reduce EP burden and simplify the program through this proposal, which is intended to better align CQM reporting periods and CQM reporting for the Medicaid EHR Incentive Program with policies under MIPS. Overall, we believe the proposed alignment at the State attestation system and EP levels would both reduce burden associated with reporting on multiple CMS programs and enhance State and CMS operational efficiency.

We invited public comment on this proposal, including on whether making the proposed change would create burdens for EPs or States.

*Comment:* The majority of commenters supported our proposal to change the CQM reporting period to any continuous 90-day period during CY 2017 for EPs electronically reporting CQMs for the Medicaid EHR Incentive Program, which would align with the MIPS performance period. Commenters supported aligning the Medicaid EHR

Incentive Program with MIPS when possible to reduce EP burden.

*Response:* We appreciate these comments and will continue to look for ways to align the Medicaid EHR Incentive Program with MIPS when possible. Therefore, we are finalizing the proposal to change the CQM reporting period to any continuous 90-day period during CY 2017 for Medicaid EPs electronically reporting CQMs.

*Comment:* Several commenters, including representatives of state Medicaid agencies, requested that CMS also change the CQM reporting period for Medicaid EPs who attest to CQMs rather than report electronically in CY 2017. These commenters noted that establishing a 90-day reporting period for all CQM reporting, regardless of submission method, would further reduce EP burden and streamline the Medicaid EHR Incentive Program requirements.

*Response:* We thank these commenters and agree that establishing a 90-day CQM reporting period during CY 2017 for all Medicaid EPs, regardless of submission method, would reduce burden and streamline the program requirements. Due to the comments we received, the majority of which encouraged us to make this change to the proposed rule, we reconsidered the benefits to all EPs of a 90-day CQM reporting period in CY 2017. Therefore, we are establishing a CQM reporting period of any continuous 90-day period during CY 2017 for all Medicaid EPs, regardless of reporting method.

After consideration of the public comments we received, we are finalizing a CQM reporting period for 2017 of any continuous 90-day period during CY 2017 for all Medicaid EPs, regardless of submission method.

## 2. Modifications to CQM Reporting Requirements for Medicaid EPs Under the Medicaid EHR Incentive Program

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20134 through 20135), we also proposed to align the specific CQMs available to EPs participating in the Medicaid EHR Incentive Program with those available to clinicians participating in MIPS who submit CQMs through their EHR. In the final rule titled "Medicare and Medicaid Programs; Electronic Health Record Incentive Program—Stage 2," we established (77 FR 54058) that EPs are required to report 9 CQMs covering at least 3 of the National Quality Strategy (NQS) domains from a list of 64 CQMs (77 FR 54069, Table 8). Subsequently and in the following years, in general, there has been alignment between the CQMs selected for the Medicaid and

Medicare EHR Incentive Programs for EPs and the electronic measures selected for the PQRS Program. Updates to the PQRS measure set were proposed and finalized in the annual Physician Fee Schedule (PFS) rule for purposes such as keeping specifications in line with industry standards and clinical guidelines.

In the CY 2017 Quality Payment Program final rule with comment period (81 FR 77144), we revised the list of CQMs for the 2019 MIPS payment year, based on performance periods within CY 2017, to better reflect updated clinical standards and guidelines. Specifically, we removed a number of CQMs that had not been updated and were no longer clinically relevant (81 FR 77773, Appendix, Table F). In order to keep CQM specifications current, we proposed to align the CQMs for Medicaid EPs with those applicable for MIPS. Specifically, we proposed that the CQMs available for Medicaid EPs in 2017 would consist of the list of available CQMs for reporting from an EHR for MIPS in 2017, available in the Appendix of the CY 2017 Quality Payment Program final rule with comment period under Table A, which are denoted with a CMS e-Measure ID number.

In the CY 2017 Quality Payment Program final rule with comment period (81 FR 77145), we noted that one commenter requested that we engage State Medicaid leaders to maximize measure alignment across Medicare and Medicaid. We responded that we intend to align quality measures among all CMS quality programs where possible, including Medicaid, and would take this comment into account in the future. In addition, States have requested alignment between the CQM set for MIPS and the CQM set for EPs in the Medicaid EHR Incentive Program for consistency and convenience, to reduce burden, and to avoid confusion. In addition, we believe it is more likely that professionals would participate in both programs if the CQM sets are aligned. While participation in MIPS is required for professionals who are considered "MIPS eligible clinicians," participation in the Medicaid EHR Incentive Program is not required. If the CQMs are not aligned across both programs, we believe it is less likely that MIPS eligible clinicians would also participate as EPs in the remaining years of the Medicaid EHR Incentive Program. Finally, as noted above, the CQMs that were removed from MIPS (81 FR 77773, Appendix, Table F) had not been updated and were no longer clinically relevant, and we believe that the revised list of CQMs would better reflect

updated clinical standards and guidelines (81 FR 77144).

We noted in the proposed rule that we anticipate that this proposal would reduce burden for Medicaid EPs, and that the systems changes that would be needed to implement it would not be significant for either States or EPs. The set of 53 CQMs available to MIPS participants is a subset of the 64 CQMs currently available under the Medicaid EHR Incentive Program. In addition, we believe that if EPs also plan to participate in MIPS, they should already be prepared to report on the 53 CQMs. However, we welcomed comments on whether any EPs might be negatively affected by the proposal; for example, on whether any EPs might have EHRs that do not measure enough of the 53 remaining CQMs because they were relying on some of the 11 CQMs that would be removed. We do not anticipate that this would be a common situation because these 11 CQMs are outdated, and the industry is moving away from them as EHRs are upgraded to meet the MIPS requirements.

We also noted in the proposed rule that we anticipate that the proposal to reduce the number of available CQMs would have only a minimal impact on States, which would have to make minor adjustments to State systems to reduce the available measures from 64 to 53. It is our understanding that State systems can turn off or easily exclude CQMs from user visibility on the front end and still easily manage on the back end.

The data submission criteria for the MIPS quality performance category at § 414.1335(a)(1)(i) provide that individual MIPS eligible clinicians and groups who elect to submit data via claims, qualified registry, EHR or qualified clinical data registry must submit data on at least six quality measures, including at least one outcome measure (or, if an applicable outcome measure is not available, one other high priority measure). We refer readers to § 414.1335(a)(2) and (3) for the data submission criteria that apply to individual MIPS eligible clinicians and groups who elect to submit data via other data submission mechanisms.

Instead of requiring MIPS eligible clinicians to report on CQMs across a certain number of NQS domains, MIPS provides individual MIPS eligible clinicians and groups with a variety of alternatives for participating in MIPS, including a variety of data submission mechanisms and scoring criteria. We noted in the proposed rule that we believe that the burden on EPs and States of adopting all of these MIPS alternatives for the Medicaid EHR

Incentive Program would outweigh any benefits gained. The alternative reporting options for MIPS are calibrated as part of an overall quality improvement program beyond what the Medicare and Medicaid EHR Incentive Programs are designed to be. We believe it would be inappropriate to apply all of these new requirements to the Medicaid EHR Incentive Program.

We proposed to eliminate the requirement to report on CQMs across 3 of the 6 NQS domains that existed in previous years of the Medicaid EHR Incentive Program, for improved alignment with the data submission criteria for the MIPS quality performance category. The removal of this requirement would provide EPs greater flexibility in selecting CQMs to report and would assure that they could report on the same CQMs from their EHR to both MIPS and the Medicaid EHR Incentive Program.

We proposed that for 2017 Medicaid EPs would be required to report on any six measures that are relevant to the EP's scope of practice. This proposal would better align with the data submission criteria for the MIPS quality performance category in 2017.

We noted that we would continue our policy on allowing zero denominators to be reported to allow EPs to meet the CQM reporting requirements of the EHR Incentive Programs (80 FR 62889). Future years' requirements for reporting CQMs in the Medicaid EHR Incentive Program will be established in future rulemaking, as the policies for MIPS are developed for 2018 and beyond. We will continue to align the quality reporting requirements, as logical and feasible, to reduce EP burden.

We invited public comment on these proposals, specifically on whether making these proposed changes to CQM measures and measure reporting effective for 2017 would create burdens on EPs or States. If so, we stated we would consider making these proposed changes to the CQM reporting requirements effective beginning with the reporting period in 2018.

*Comment:* The vast majority of commenters supported CMS' proposals to change the CQM reporting requirements for EPs participating in the Medicaid EHR Incentive Program to align with the MIPS requirements for eligible clinicians and groups reporting CQMs through their EHRs. Our proposal to reduce and simplify the reporting requirement, from nine CQMs across 3 NQS domains, to any six CQMs relevant to an EP's scope of practice, received significant support from commenters.

*Response:* We appreciate the comments and are finalizing the

proposals as proposed. In 2017, Medicaid EPs will report any six CQMs relevant to their scope of practice, regardless of whether they report via attestation or electronically.

*Comment:* One provider group commented that removing CQMs from the list of available CQMs could be an issue for EPs who were expecting to report on the removed measures in 2017.

*Response:* We did not receive any comments from providers affirmatively stating that this would be an issue. The majority of provider comments were very supportive of aligning the Medicaid EHR Incentive Program CQM reporting requirements with MIPS, stating that it would reduce reporting burden and allow providers to participate in both programs. Reducing the number of required CQMs from 9 to 6, and removing the domain requirements gives EPs greater flexibility to meet program requirements. We believe that all Medicaid EPs will be able to find six CQMs that are relevant to their scope of practice within the updated list of available CQMs. Also, we note our continued policy to allow "zero denominator" CQM submissions, which allows EPs to report on a CQM even if they have no data on that CQM in their EHR from the reporting period.

After consideration of the public comments we received, we are finalizing the proposals without modification. For 2017, the CQMs available for Medicaid EPs will consist of the list of 53 available CQMs for reporting from an EHR for MIPS for 2017 performance periods. Also, for 2017, Medicaid EPs are required to report on any six measures that are relevant to the EP's scope of practice.

#### *G. Changes to the Medicare and Medicaid EHR Incentive Programs*

##### 1. Summaries of Final Policies Included in This Final Rule

In this final rule, we are adopting final policies based on proposals in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20135–20139) to continue advancement of certified EHR technology utilization, focusing on interoperability and data sharing. For the reasons discussed in section IX.G.2. of the preamble of this final rule, we are finalizing an EHR reporting period of a minimum of any continuous 90-day period in CY 2018 for new and returning participants attesting to CMS or their State Medicaid agency.

As mandated by the 21st Century Cures Act (Pub. L. 114–255, enacted on December 13, 2016), we proposed an

exception from the Medicare payment adjustments for EPs, eligible hospitals, and CAHs who are unable to comply with the requirements for being a meaningful EHR user because their CEHRT has been decertified under ONC's Health IT certification program (82 FR 20136 through 20138). For the reasons discussed in section IX.G.3. of the preamble of this final rule, we are finalizing the exception and application process for EPs, eligible hospitals and CAHs as proposed.

As mandated by the 21st Century Cures Act, in the FY 2018 IPPS/LTCH PPS proposed rule (81 FR 20138 through 20139), we proposed to implement a policy in which no payment adjustments will be made in 2017 and 2018 for eligible professionals who furnish "substantially all" of their covered professional services in an Ambulatory Surgical Center (ASC). We proposed to define an ASC-based EP under § 495.4 as an EP who furnishes 75 percent or more (or alternatively, 90 percent or more) of his or her covered professional services in sites of service identified by the codes used in the HIPAA standard transaction as an ASC setting in the calendar year that is two years before the payment adjustment year. In addition, we proposed to use Place of Service (POS) Code 24 to identify services furnished in an ASC and requested public comment on whether other POS codes or mechanisms should be used to identify sites of service in addition to or in lieu of POS code 24. For the reasons discussed in section IX.G.4. of the preamble of this final rule, we are finalizing the definition of an ASC-based EP as an EP who furnishes 75 percent or more of his or her covered professional services in sites of service identified by POS 24.

In the proposed rule, we stated we were working in cooperation with our Federal partners at the ONC to monitor progress on the 2015 Edition upgrade. For the reasons discussed in section IX.G.5. of the preamble of this final rule, we are finalizing a policy to allow EPs, eligible hospitals, and CAHs the flexibility to use EHR technology certified to the 2014 Edition, 2015 Edition, or a combination of the 2014 and 2015 Editions for an EHR reporting period in 2018.

We also note that we received comments specific to the EHR Incentive Programs objectives and measures, audits for meaningful use, Merit-Based Incentive Payment System (MIPS) and allocation of grant funding for CEHRT which are out of scope for this rule.

## 2. Revisions to the EHR Reporting Period in 2018

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20136), we proposed to change the EHR reporting period in 2018 for new and returning participants attesting to CMS or their State Medicaid agency from the full year (CY 2018) to a minimum of any continuous 90-day period within CY 2018.

Therefore, EPs, eligible hospitals and CAHs would attest to meaningful use for an EHR reporting period of a minimum of any continuous 90-day period from January 1, 2018 through December 31, 2018. The applicable incentive payment year and payment adjustment years for the EHR reporting period in 2018, as well as the deadlines for attestation and other related program requirements, would remain the same as established in prior rulemaking. We proposed corresponding changes to the definition of "EHR reporting period" and "EHR reporting period for a payment adjustment year" at 42 CFR 495.4.

We invited public comment on our proposal.

*Comment:* Commenters overwhelmingly supported CMS' proposal to change the EHR reporting period to a minimum of any continuous 90-day period in CY 2018. Some commenters requested an extension of the 90-day EHR reporting period beyond CY 2018. Another commenter stated for the first year of any new "Stage" a reduced reporting period should be used. A few commenters stated CMS should adopt a 90-day reporting period for all programs, all submission methods, and all years.

*Response:* We thank commenters for their support on this proposed policy. We disagree that a 90-day EHR reporting period should be established indefinitely for new and returning participants in the EHR Incentive Programs. We are finalizing a 90-day EHR reporting period in CY 2018 to allow participants additional time for testing and implementation of the 2015 Edition, including the new application programming interface (API) functionality requirement for Stage 3. We previously stated that we believe a full year EHR reporting period is the most effective way to ensure that all actions related to patient safety which leverage CEHRT are fully enabled for the duration of the year. This is one of the primary considerations of our continued push for a full year EHR reporting period. We will take commenters' suggestions under advisement for purposes of future rulemaking.

*Comment:* A commenter requested CMS clearly define the EHR reporting period. A few commenters requested clarity on whether CMS intends to have a minimum of any continuous 90 days for reporting the meaningful use objectives and measures and the clinical quality measures.

*Response:* The EHR reporting period is a minimum of any continuous 90-day period within the 2018 calendar year for new and returning participants attesting to CMS or their State Medicaid agency. The EHR reporting period must occur between January 1, 2018 and December 31, 2018. For information regarding the reporting period for clinical quality measures (CQMs) for 2018, we refer readers to section IX.E.3.b. of the preamble of this final rule.

*Comment:* Several commenters requested clarification on when CEHRT needs to be implemented for the applicable EHR reporting period.

*Response:* An EP, eligible hospital, or CAH may begin the EHR reporting period and implement their EHR technology before it is certified. Certification need only be obtained prior to the end of the EHR reporting period. We caution that if an EP, eligible hospital or CAH starts the EHR reporting period without the certification complete, it runs the risk of not being a meaningful EHR user for that EHR reporting period. See FAQ2893 (available at: <https://questions.cms.gov/faq.php?isDept=0&search=FAQ2893&searchType=faqId&submitSearch=1&id=5005>).

After consideration of the public comments we received, we are finalizing for new and returning EPs, eligible hospitals, and CAHs attesting to CMS or their State Medicaid agency, an EHR reporting period in CY 2018 as a minimum of any continuous 90 days between January 1, 2018 through December 31, 2018, as proposed. The applicable incentive payment year and payment adjustment years for the EHR reporting period in 2018, as well as the deadlines for attestation and other related program requirements, will remain the same as established in prior rulemaking.

We are finalizing corresponding changes to the definitions of "EHR reporting period" and "EHR reporting period for a payment adjustment year" in the regulations under 495.4.

## 3. Exception to Decertified EHR Technology for EPs, Eligible Hospitals, and CAHs Seeking To Avoid the Medicare Payment Adjustment

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20136 through 20138), as mandated by sections

4002(b)(1)(A) and (b)(2) of the 21st Century Cures Act, we proposed to add a new exception for EPs, eligible hospitals and CAHs from the Medicare payment adjustments under sections 1848(a)(7)(A), 1886(b)(3)(B)(ix)(I), and 1814(l)(4) of the Act, respectively, who demonstrate through an application process that compliance with the requirement for being a meaningful EHR user is not possible because the certified EHR technology used has been decertified under ONC's Health IT Certification Program.

We proposed that to be considered for this exception, an EP, eligible hospital and CAH must submit an application in a form and manner specified by CMS and must demonstrate in its application and through supporting documentation if available that they intended to attest to meaningful use for a certain EHR reporting period and made a good faith effort to adopt and implement another CEHRT in advance of that EHR reporting period.

We proposed an EP may qualify for this exception for the CY 2018 payment adjustment year, which is the final year of the payment adjustment for EPs under section 1848(a)(7)(A) of the Act, if their certified EHR technology was decertified at any time during the 12-month period preceding the applicable EHR reporting period for the CY 2018 payment adjustment year or during the applicable EHR reporting period for the CY 2018 payment adjustment year, which under § 495.4 is any continuous 90-day period in CY 2016 or 2017, depending on whether the EP has successfully demonstrated meaningful use in a prior year.

We proposed an EP seeking to qualify for this exception would submit an application in the form and manner specified by us by October 1, 2017, or a later date specified by us. We proposed an eligible hospital may qualify for this exception beginning with the FY 2019 payment adjustment year, if their certified EHR technology was decertified at any time during the 12-month period preceding the applicable EHR reporting period for the payment adjustment year, or during the applicable EHR reporting period for the payment adjustment year.

We proposed an eligible hospital seeking to qualify for this exception would submit an application in the form and manner specified by us by July 1 of the year before the payment adjustment year (for example, for the FY 2019 payment adjustment year, by July 1, 2018), or a later date specified by us.

We proposed a CAH may qualify for this exception beginning with the FY 2018 payment adjustment year if their

certified EHR technology was decertified at any time during the 12-month period preceding the applicable EHR reporting period for the payment adjustment year, or during the applicable EHR reporting period for the payment adjustment year. We proposed a CAH seeking to qualify for this exception would submit an application in the form and manner specified by us by November 30 after the end of the applicable payment adjustment year (for example, for the FY 2018 payment adjustment year, by November 30, 2018), or a later date specified by us.

We noted in the proposed rule that sections 1848(a)(7)(B) and 1886(b)(3)(B)(ix)(II) of the Act provide that in no case may an EP, eligible hospital, or CAH be granted an exemption from the payment adjustment based on significant hardship or decertified EHR technology for more than five years.

We proposed to revise § 495.102(d) for EPs, § 412.64(d)(4) for eligible hospitals and § 413.70(a)(6) for CAHs to codify this proposed new exception.

We invited public comment on these proposals.

*Comment:* Many commenters supported the proposed exception for CEHRT that have been decertified by the ONC Health IT Certification Program stating it would help to mitigate potential financial loss to participants.

*Response:* We thank the commenters for their support. As we stated in the proposed rule (82 FR 20137), we believe participants in the Medicare EHR Incentive Program will benefit from this additional exception because there is a 6-step process that usually occurs with implementation of a certified EHR technology system. Health care providers would likely have to go through some phases of this cycle again, and we understand that it would be time consuming and may take up to a year to implement. In addition, we note that the decertification of a CEHRT by the ONC Health IT Certification Program would be outside of a health care provider's control, and we agree that additional burden would likely result from decertification. In implementing this new exception, we are attempting to reduce any potential burden while also continuing to further the goal of interoperability.

*Comment:* To account for the CEHRT requests for proposals (RFP) and selection process, implementation, and a 90-day EHR reporting period, several commenters requested a period of two years rather than 12 months, and one commenter suggested that CMS provide an additional 18-month grace period.

Another commenter believed there should be no requirements in moving to a new CEHRT product and that they should have at least three years to switch to a new EHR system.

A commenter indicated that the use of a 12-month period preceding the applicable EHR reporting period is confusing, stating that CMS should consider applying the exception for decertification that occurred at any time within the full calendar year prior to the EHR reporting period for the payment adjustment year and during the EHR reporting period for the payment adjustment year.

*Response:* We disagree that the exception should be extended beyond the 12-month period preceding the applicable EHR reporting period as suggested by the commenters. As we stated in the proposed rule at 82 FR 20137, we believe a 12-month period preceding the applicable EHR reporting period for the payment adjustment year is reasonable because it should allow ample time for health care providers to procure and deploy new certified EHR technology. We believe this provides additional flexibilities and may partially alleviate any financial burden placed upon a health care provider for having to procure a new EHR system.

*Comment:* Several commenters suggested that certain situations where a provider's CEHRT is decertified during the EHR reporting period would prevent them from being able to make a good faith effort to adopt and implement another CEHRT in advance of or during the remainder of the EHR reporting period, and requested clarification.

*Response:* We agree that acquiring another CEHRT during the applicable EHR reporting period would be difficult. We disagree, however, that a health care provider necessarily would be unable to adopt and implement a new CEHRT during the remainder of the EHR reporting period. We believe a good faith effort is necessary in order to ensure the health care provider is diligently working towards adopting and implementing new CEHRT under the circumstances presented. Health care providers may apply for this exception before or during the applicable EHR reporting period, by the deadlines we establish.

*Comment:* A commenter requested an extension of the application deadline to December 31st of the year of the EHR reporting period.

*Response:* At this time it is not feasible to extend the application until December 31st. There are time constraints we must adhere to for system updates and changes, therefore

we are unable to modify the proposed deadlines for application submission as outlined in 82 FR 20137 through 20138.

*Comment:* A commenter stated the application process was unclear and encouraged CMS to release timely guidance on the application.

*Response:* We will provide additional guidance regarding the application process after the final rule is published.

After consideration of the public comments we received, we are finalizing the policy as proposed.

We are also finalizing as proposed the corresponding changes to § 495.102(d) for EPs, § 412.64(d)(4) for eligible hospitals and § 413.70(a)(6) for CAHs.

#### 4. Ambulatory Surgical Center (ASC)-Based Eligible Professionals (EPs)

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20138 through 20139), as mandated by section 16003 of the 21st Century Cures Act, we proposed to implement a policy in which no payment adjustments would be made under section 1848(a)(7)(A) of the Act for 2017 and 2018 for eligible professionals who furnish “substantially all” of their covered professional services in an ambulatory surgical center (ASC). We proposed to define an ASC-based EP under § 495.4 as an EP who furnishes 75 percent or more (or alternatively, 90 percent or more) of his or her covered professional services in sites of service identified by the codes used in the HIPAA standard transaction as an ASC setting in the calendar year that is two years before the payment adjustment year. The percentages of covered professional services in the primary and alternative proposals were based, respectively, on the percentages used in the definitions of a hospital-based MIPS eligible clinician under the Quality Payment Program (§ 414.1305 and 81 FR 77238 through 77240) and the definition of a hospital-based EP under the EHR Incentive Programs (§ 495.4 and 75 FR 44439 through 44442). In addition, we proposed to use Place of Service (POS) code 24 to identify services furnished in an ASC and requested public comment on whether other POS codes or mechanisms to identify sites of service should be used in addition to or in lieu of POS code 24.

We invited public comment on these proposals.

*Comment:* The majority of commenters supported the proposal for an ASC-based EP using 75 percent or more to define eligible professionals who furnish “substantially all” of their covered professional services in an ambulatory surgical center. The commenters believe the exception from

the payment adjustments for ASC-based EPs will significantly reduce burden and promote consistency between the EHR Incentive Program and MIPS, but also ensures EPs who have little control over EHR decisions in their practice are not subject to payment adjustments.

One commenter stated that the definition of ASC-based EP should be as broad as possible.

*Response:* We thank commenters for their support. We are finalizing the definition of ASC-based EP as proposed using 75 percent or more to define eligible professionals who furnish “substantially all” of their covered professional services in an ASC, which aligns with the hospital-based MIPS eligible clinician definition under the Quality Payment Program (§ 414.1305 and 81 FR 77238 through 77240). We also agree that this policy will result in a reduction in burden for ASC-based EPs who have little control over the EHR decisions in the practice.

*Comment:* A few commenters suggested using 50 percent as the threshold to define “substantially all” as some EPs provide more than 50 percent, but less than 75 percent or 90 percent, of their services in an ASC.

*Response:* The statutory definition of an ambulatory surgical center-based EP provides that to be considered an ambulatory surgical center-based EP, the EP must provide “substantially all” of his or her covered professional services in an ambulatory surgical center. Therefore, we must identify the minimum percentage of an EP’s covered professional services that must be provided in an ambulatory surgical center in order for the EP to be considered as providing “substantially all” of his or her covered professional services in an ASC setting. We do not believe that an EP who furnishes only slightly more than half of his or her covered professional services in an ASC setting is furnishing substantially all of such services in that setting. Based on the hospital-based MIPS eligible clinician definition we previously established under the Quality Payment Program, we believe that 75 percent is an appropriate minimum percentage of an EP’s covered professional services.

*Comment:* One commenter suggested that CMS should change “substantially all covered professional services” to “substantially all ASC covered services.” The commenter believed that CMS should combine ASC services with all other Medicare Part B services when determining whether the professional is a meaningful user of CEHRT.

*Response:* We are unable to adopt the commenter’s suggestion because the statute refers to “covered professional

services” furnished by the EP. When determining if an EP qualifies as an ASC-based EP, we would look at all of their Medicare services billed using POS 24, and from that we would be able to determine the percentage of covered professional services that were furnished in an ASC. In addition, we requested comments on whether additional place of service codes or mechanisms should be utilized in addition to or in lieu of POS 24, but did not receive any specific comments on this issue. We are finalizing the use of Place of Service (POS) code 24 to identify services furnished in an ASC.

*Comment:* One commenter suggested a change in the proposed methodology of using claims for services furnished in the year that is two years before the payment adjustment year to be consistent with methodology used to determine a hospital-based EP.

*Response:* We disagree with using the same methodology for hospital-based and ASC-based determinations. We determine hospital-based status using claims data from the fiscal year before the year that is 1 year prior to the payment adjustment year and the fiscal year before the year that is 2 years prior to the payment adjustment year (77 FR 54102). We adopted this methodology to ensure EPs are made aware of their hospital-based status in advance of the applicable EHR reporting period for the payment adjustment year, so they would have time to adopt and implement CEHRT and begin their EHR reporting period. In contrast, for ASC-based determinations, the applicable EHR reporting periods under § 495.4 for the 2017 and 2018 payment adjustments years have already occurred or are currently underway in 2017, and thus it is not feasible to notify EPs of their ASC-based status in advance of the EHR reporting period. In addition, we believe our proposed methodology is clear and easy for EPs to understand.

After consideration of the public comments we received, we are finalizing as proposed the definition of ASC-based EP using 75 percent or more to define eligible professionals who furnish “substantially all” of their covered professional services in an ASC. In addition, we are finalizing Place of Service (POS) code 24 to identify services furnished in an ASC. We are also finalizing the definition of “ASC-based EP” in the regulations under § 495.4.

#### 5. Certification Requirements for 2018

In the 2015 EHR Incentive Program final rule (80 FR 62871 through 62875), we adopted a final policy regarding which Edition of CEHRT must be used

by EPs, eligible hospitals, and CAHs for the EHR Incentive Program, which is reflected in the definition of CEHRT § 495.4.

Starting with 2018, all EPs, eligible hospitals, and CAHs would be required to use technology certified to the 2015 Edition to demonstrate meaningful use for an EHR reporting period in 2018 and subsequent years (80 FR 62873 through 62875).

We received feedback from EPs, eligible hospitals and hospital associations after the 2015 EHR Incentive Program final rule was published expressing concerns regarding the burden that will likely occur as a result of the new functionalities required in the implementation of the Stage 3 requirements.

Based on our past experience with the transition from the 2011 Edition to the 2014 Edition and concerns expressed by stakeholders, we understand that transitioning to technology certified to a new Edition can be complex and can require more resources and time than anticipated, including the time necessary to effectively deploy the upgraded system and make the necessary patient safety, staff training and workflow investments. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20139), we stated that we understood and appreciated these concerns, and were working in cooperation with our Federal partners at ONC to monitor progress on the deployment and implementation status of EHR technology certified to the 2015 Edition. We further stated if we identified a change in the current trends and significant issues with the certification and deployment of the 2015 Edition, we would consider flexibility in 2018, for those EPs that attest directly to a State for the State's Medicaid EHR Incentive Program and eligible hospitals and CAHs attesting to CMS or the State's Medicaid EHR Incentive Program that are not able to implement 2015 Edition CEHRT to attest for an EHR reporting period in 2018. We indicated one possibility was the flexibility to use EHR technology certified to the 2014 Edition or 2015 Edition, or a combination of EHR technologies certified to the 2014 and 2015 Editions, for an EHR reporting period in 2018.

In efforts to track certification readiness for the 2015 Edition, ONC considers the number of health care providers likely to be covered by the individual developers seeking certification under the ONC Health IT Certification Program in real time as the testing and certification process

progresses. The ONC considers trends within the industry when projecting for 2015 Edition readiness. The market trend of consolidation was considered as part of the projection model and as of the close of the first quarter this analysis supported an estimate of greater than 85 percent of hospitals will be ready by the end of CY 2017. However, ONC has continued to update this tracking as the testing and certification process continues and this tracking as of the end of the second quarter of 2017 indicates that overall progress is behind the first quarter projections. ONC has therefore updated the overall estimate to reflect an estimate of greater than 75 percent of hospitals will be ready by the end of CY 2017.

This necessitates further consideration, both for adoption of a 90 day reporting period as discussed in IX.G.2 of this final rule and for the adoption of flexibility for the 2018 calendar year in the requirement for eligible hospitals and CAHs to use only the 2015 Edition in CY 2018. While the ONC estimates note that the majority of eligible hospitals and CAHs will be ready at the beginning of January 2018, the tracking indicates that additional flexibility should be allowed for all hospitals to ensure that those hospitals with limited resources to implement upgrades and those hospitals that may face challenges in implementing appropriate and necessary workflows are provided adequate time to successfully implement the upgrade to 2015 Edition.

We invited public comment on options for offering flexibility in CY 2018 with regard to EHR certification requirements.

*Comment:* A majority of commenters supported the flexibility to use 2014 Edition or 2015 Edition CEHRT in 2018 and stated the cost and administrative burden of upgrading the EHR technology is significant and delaying the requirement to use the 2015 Edition would reduce burden and improve patient-physician interactions.

A commenter requested CMS not to move forward with Stage 3 until further progress is made toward achieving interoperability and health information exchange.

*Response:* We thank commenters for their feedback and support of CEHRT flexibility in 2018. In an effort to grant more flexibility to health care providers who are experiencing 2015 Edition CEHRT product issues that impact the ability to be a meaningful EHR user in 2018, we are adopting a final policy to allow health care providers to use either 2014 Edition or 2015 Edition CEHRT, or

a combination of 2014 Edition and 2015 Edition CEHRT, for their EHR reporting period in 2018. We want to ensure that health care providers have adequate time to effectively deploy the 2015 Edition and make the updates necessary to improve patient safety, staff training, and workflow investments to be a meaningful user. We note that the Stage 3 objectives and measures are designed to promote interoperability with a focus on the advanced use of EHR technology and electronic standards, as well as the interoperable exchange of health information between systems. Therefore, we believe implementing Stage 3 is essential in achieving those goals.

*Comment:* A few commenters requested CMS finalize a policy allowing for CEHRT flexibility by the end of calendar year 2017, in order to ensure that States have adequate time to update their systems without any delay.

*Response:* We believe the final policy established in this final rule will provide flexibility with regard to which Edition of CEHRT may be used in 2018.

*Comment:* Some commenters requested clarification on how CMS would implement flexibility in 2018 and whether providers would have the option to attest to Modified Stage 2 or Stage 3.

Several commenters were confused on how to use a combination of the 2014 and 2015 Editions for an EHR reporting period in 2018.

*Response:* Under the final policy we are adopting, for an EHR reporting period in CY 2018, health care providers will have the option to attest to the Modified Stage 2 objectives and measures using 2014 Edition CEHRT, 2015 Edition CEHRT, or a combination of 2014 and 2015 Edition CEHRT, as long as the EHR technology they possess can support the objectives and measures to which they plan to attest. Similarly, health care providers will have the option to attest to the Stage 3 objectives and measures using 2015 Edition CEHRT or a combination of 2014 and 2015 Edition CEHRT, as long as their EHR technology can support the functionalities, objectives and measures for Stage 3.

Upon attestation for an EHR reporting period in CY 2018, health care providers may select one of these options and attest to the applicable objectives and measures based on their Edition of CEHRT. The requirements for reporting of CQMs are found in section IX.E.3.b. of the preamble of this final rule.

A health care provider utilizing 2015 Edition CEHRT in CY 2018 could attest to the Stage 3 or the Modified Stage 2 objectives and measures depending on

their ability to fully implement all of the functionalities required of 2015 Edition CEHRT, which may be limited by the timing of product installation, deployment of new processes and workflows, and employee training. A health care provider using a combination of 2014 and 2015 Edition CEHRT could attest to the Stage 3 or the Modified Stage 2 objectives and measures. Health care providers who choose to attest to Modified Stage 2 will attest to only the Modified Stage 2 objectives and measures at § 495.22. Health care providers who choose to attest to Stage 3 will attest to only the Stage 3 objectives and measures at § 495.24. Health care providers who are seeking to attest to Stage 3 in 2018 using a combination of 2014 and 2015 Editions of CEHRT cannot do so without the support of certain functions that are only available for certification as part of the 2015 Edition certification criteria.

*Comment:* Several commenters requested that CMS not delay the 2015 Edition CEHRT and believed that health IT vendors should be held accountable for upgrading to the 2015 Edition so there is no delay in getting certification from ONC. These commenters believed that the possible delay further hinders the health care providers' ability to adopt and demonstrate meaningful use. In addition the commenters stated they believed the 2015 Edition eases data sharing and offers increased interoperability.

*Response:* We appreciate those stakeholders who were able to fully implement the 2015 Edition CEHRT. Moreover, we understand the challenges faced in accomplishing the upgrade and wish to recognize the tremendous amount of work from health care providers and health IT vendors in helping to move health IT forward. However, because Stage 3 was optional for CY 2017 and individual circumstances may have prolonged the certification process, we believe that health IT vendors and providers should be given additional time to implement a product that functions as intended utilizing the standards and criteria set forth by the ONC. We received numerous comments that implementation of the 2015 Edition was met with delays related to functionality implementation (including APIs), was administratively burdensome and required more time and resources than anticipated. Our intent in considering these options to provide flexibility in 2018 was not to further complicate the program, or hinder the advancement of health information exchange or interoperability. Rather, we sought to be responsive to stakeholder concerns by

considering options for health care providers who were unable to fully implement the 2015 Edition CEHRT for an EHR reporting period in 2018 because of issues related to time constraints, implementation of new functionalities and testing new workflows to support the technology, implementation and training challenges related to new functions and standards, and potential unforeseen delays or updates required throughout the process. For those reasons we considered introducing flexibility in the use of certified EHR technology.

*Comment:* One commenter believed that CMS should eliminate the requirement for providers to upgrade to 2015 Edition CEHRT.

*Response:* We disagree that CMS should eliminate this requirement entirely, and we will require use of 2015 Edition CEHRT beginning with the EHR reporting period in 2019. Vendors and health care providers have already invested time and energy in the 2015 Edition, and we believe it will lend to an interoperable nationwide health information infrastructure focusing on the advanced use of EHR technology and electronic standards. In addition, the 2015 Edition facilitates the accessibility and exchange of data and establishes a framework that makes the Health IT Certification Program open and accessible to more types of health IT that can support a variety of care and practice settings, various HHS programs, and public and private interests. We have also heard from many health care providers that they are prepared to move to Stage 3. While this is not the case for all health care providers, we want to give those who are able to successfully attest to the Stage 3 objectives and measures the opportunity to do so.

*Comment:* One commenter believed that CEHRT requirements should be aligned across all programs where use of CEHRT is required, including the Quality Payment Program. Another commenter suggested that CMS should eliminate all certified EHR technology requirements.

*Response:* We may not be able to align CEHRT requirements across all programs as each program has different statutory authority and requirements. However, in an effort to reduce burden and promote interoperability, we will continue to align the CEHRT requirements where feasible. We cannot eliminate all requirements of CEHRT as suggested by the commenter because the statute includes certain baseline requirements (see, for example, section 1848(o)(4) of the Act).

*Comment:* One commenter requested more information on what CMS meant by a health care provider not being able to implement the 2015 Edition of CEHRT as they believed a wide variety of the 2015 Edition CEHRT products already exist.

Another commenter requested clarification on how to implement the 2015 Edition CEHRT and update to all new standards and functionalities for meeting the objectives and measures in Stage 3.

*Response:* We do acknowledge that some health care providers have successfully updated to the 2015 Edition of CEHRT but this is not the case in every situation. We also note that ONC has advised us that there are some vendors that are delayed in receiving their certification for every EHR module. In addition, as stated above, we received comments indicating a lack of preparedness for the 2015 Edition CEHRT in 2018. For these reasons, we believe that delaying the 2015 Edition of CEHRT is necessary in order to provide additional time to implement those certain elements, such as the API function, that we believe are central to increasing interoperability. For more information about the implementation of the 2015 Edition of CEHRT we refer readers to the 2015 Edition Health Information Technology (Health IT) Certification Criteria, 2015 Edition Base Electronic Health Record (EHR) Definition, and ONC Health IT Program Modifications, Final Rule. 80 FR 62602 through 62759.

*Comment:* A commenter stated that CMS is too focused on modifying functional requirements and does not emphasize outcomes or interoperability. The commenter indicated that better infrastructure is needed to support interoperability for data management, and to exchange content in a more effective way. The commenter expressed concerns around the expensive workarounds necessary for certified products that do not always function accurately and expressed concern that burden has shifted to staff having to identify codes which they believe is more time consuming and mundane.

*Response:* We disagree that we are too focused on modifying functional requirements and not enough on outcomes or interoperability. We believe the changes we are finalizing in this rule focus on increasing interoperability and ensure that we are reducing administrative burden in hopes of giving health care providers more time with their patients. In addition, we believe that as we move forward in increasing interoperability by focusing on certain objectives and measures we

will improve the delivery of services and improve patient outcomes. We understand the cost burden that some of the changes have on certain providers, but we believe there is greater benefit in having a truly integrated and interoperable health care system. We will continue to work with stakeholders.

After consideration of the public comments we received, we are finalizing a policy to allow health care providers to use either 2014 Edition or 2015 Edition CEHRT, or a combination of 2014 Edition and 2015 Edition CEHRT, for an EHR reporting period in CY 2018. As discussed above and in section IX.E.3.c. of the preamble of this final rule, for the CY 2018 CQM reporting period, eligible hospitals and CAHs will have the flexibility to use EHR technology certified to either the 2014 Edition or 2015 Edition, or a combination of both Editions.

All new and returning participants attesting to CMS or their State Medicaid agency have the option to attest to the Modified Stage 2 objectives and measures under § 495.22 for the EHR reporting period in 2018 using 2014 Edition CEHRT, 2015 Edition CEHRT, or a combination of 2014 and 2015 Edition CEHRT, as long as the EHR technology they possess can support the objectives and measures to which they plan to attest.

Similarly, all new and returning participants attesting to CMS or their State Medicaid agency have the option to attest to the Stage 3 objectives and measures under § 495.24 for the EHR reporting period in 2018 using 2015 Edition CEHRT or a combination of 2014 and 2015 Edition CEHRT, as long as their EHR technology can support the functionalities, objectives and measures for Stage 3.

Accordingly, we are revising the definition of “Certified electronic health record technology (CEHRT)” at § 495.4, the meaningful use criteria at § 495.22 and § 495.24, and the requirements for demonstrating meaningful use under § 495.40 to specify the flexible options for using CEHRT in 2018 and the objectives and associated measures to which health care providers using these options would attest.

## **X. Revisions of Medicare Cost Reporting and Provider Requirements**

### *A. Electronic Signature and Submission of the Certification and Settlement Summary Page of the Medicare Cost Report*

#### **1. Background**

Sections 1815(a) and 1833(e) of the Act provide that no payments will be made to a provider unless it has

furnished such information, as may be requested by the Secretary, to determine the amount of payments due the provider under the Medicare program. In general, providers submit this information through annual cost reports that cover a 12-month period of time. Under the provisions of 42 CFR 413.20(b) and 413.24(f), providers are required to submit cost reports annually, with the reporting period based on the provider’s accounting year. For cost reporting periods beginning on or after October 1, 1989, section 1886(f)(1) of the Act and § 413.24(f)(4) of the regulations require hospitals to submit cost reports in a standardized electronic format, and the same requirement was later imposed for other types of providers.

Currently, under § 413.24(f)(4)(ii), hospitals, skilled nursing facilities, home health agencies, hospices, end-stage renal disease facilities, organ procurement organizations, histocompatibility laboratories, rural health clinics, Federally qualified health centers, and community mental health centers are required to file Medicare cost reports in a standardized electronic format. When preparing the cost report, the provider’s electronic program must produce the CMS standardized output file in a form that can be read by the contractor’s automated system. This electronic file, also known as the electronic cost report, is forwarded to the contractor for processing through its system. (42 CFR 413.24(f)(4)(ii) and (iii))

Although the Medicare cost report is forwarded to the contractor in electronic format, certain hard copy portions must be separately submitted by the provider to its contractor. Specifically, under § 413.24(f)(4)(iv), the provider is required to submit a hard copy of the settlement summary, if applicable, which is a statement of certain worksheet totals, and a certification statement containing a signature by the provider’s administrator or chief financial officer certifying the accuracy of the electronic file. The certification statement and the settlement summary both appear together on the “Certification and Settlement Summary” page of the Medicare cost report for all providers that are required to file a Medicare cost report. By signing the certification statement, the provider is certifying, among other things, to the accuracy of the electronic file, and also that it has read the statement that misrepresentation or falsification of information contained in the cost report may be punishable by criminal, civil or administrative action.

This certification statement signed by the provider’s administrator or chief

financial officer was incorporated into § 413.24(f)(4) of the regulations in a final rule with comment period (59 FR 26964 through 26965) issued in response to public comments received following the Uniform Electronic Cost Reporting System for Hospitals proposed rule (56 FR 41110). Currently, this certification statement is required to have an original signature. This original signature requirement is also set forth in Chapter 1 of the Provider Reimbursement Manual (CMS Pub. 15–2), which explains that a facsimile or stamped copy of the signature is unacceptable.

Due to the original signature requirement, the Certification and Settlement Summary page containing the original signature is required to be mailed by the provider to the contractor. As set forth in § 413.24(f)(4)(iv) and (5)(i) and (ii), an acceptable cost report submission must include the electronic cost report, along with a hard copy of the Certification and Settlement Summary page with an original signature, the Provider Cost Reimbursement Questionnaire, if applicable, and the supporting documentation required from teaching hospitals (the Intern and Resident Information System diskette).

#### **2. Changes Relating to Electronic Signature on the Certification and Settlement Summary Page of the Medicare Cost Report**

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20139 through 20142), in lieu of requiring the provider to sign the certification statement with an original signature on a hard copy of the Medicare cost report’s Certification and Settlement Summary page, we proposed to revise § 413.24(f)(4)(iv) to allow providers to use an electronic signature. For Medicare cost reporting purposes, we proposed that this electronic signature be placed on the signature line of the certification statement and may be (1) any format of the original signature that contains the first and last name of the provider’s administrator or chief financial officer (for example, photocopy or stamp) or (2) an electronic signature that must be the first and last name of the provider’s administrator or chief financial officer entered in the provider’s electronic program. An electronic signature for this purpose cannot be a symbol, numerical characters, or codes. We stated in the proposed rule that we believe allowing providers to utilize an electronic signature would afford providers greater flexibility in signing the certification statement and allow a faster and more efficient submission of the Medicare cost report.

To indicate the provider's election to sign the certification statement with an electronic signature, we proposed to add an electronic signature checkbox placed immediately after the certification statement and above the signature line on the Certification and Settlement Summary page of the Medicare cost report. We stated that the checkbox electing the electronic signature would read: "I have read and agree with the above certification statement. I certify that I intend my electronic signature on this certification statement to be the legally binding equivalent of my original signature." We proposed that the checkbox must be checked to signify that the certification statement has been read and that an electronic signature will be placed on the signature line by the provider.

We proposed that only when the checkbox is checked would the signature line be accepted with an electronic signature. We stated in the proposed rule that completion of both the electronic signature checkbox and the electronic signature, placed on the signature line by the provider's administrator or chief financial officer under the certification statement, would together constitute an accepted electronic signature of the provider's administrator or chief financial officer on the certification statement. By signing the certification statement with an electronic signature on the Certification and Settlement Summary page, the signatory would be attesting that its electronic signature was executed with the intent to sign the certification statement, that the electronic signature is being submitted in lieu of an original signature, and additionally that the electronic signature has the same legal effect as an original signature. Because we proposed that it would be optional for providers to utilize an electronic signature on the certification statement, providers would continue to be able to sign the certification statement with an original signature on a hard copy of the Certification and Settlement Summary page.

We invited public comments on our proposals.

*Comment:* Many commenters supported the utilization of technology to allow for the electronic signature of the Certification and Settlement Summary page of the Medicare cost report and further stated that this has been long awaited in the industry. The commenters stated that allowing providers the option to electronically sign the Certification and Settlement Summary page will make the process easier, more efficient, and allow for

fewer errors than the current paper process. Commenters also supported allowing facilities an option to continue using the current paper process to manually sign the Certification and Settlement Summary page.

*Response:* We appreciate the commenters' support.

*Comment:* One commenter suggested that CMS' proposal was to change the title of the signatory to the certification statement from the provider's administrator or "officer" to the provider's administrator or "chief financial officer" and disagreed with this alleged change, noting that many smaller providers do not have a chief financial officer.

*Response:* We disagree with this commenter's characterization of our proposal. Our proposal to allow providers the option to electronically sign the certification statement on the Certification and Settlement Summary page of the Medicare cost report, did not include a proposal to change the title of the person required to sign the certification statement. Section 413.24(f)(4)(iv) of the regulations requires that the certification statement be signed by the "provider's administrator or chief financial officer." We did not propose to change the title of the person required to sign the certification statement. The requirements pertaining to the title of the person required to sign the certification statement remain the same.

*Comment:* One commenter suggested that CMS change the title of the person required to sign the certification statement on the Certification and Settlement Summary page of the Medicare cost report, citing that often the signor is someone other than the provider's administrator or chief financial officer.

*Response:* We consider this comment to be outside the scope of the policies we proposed in the proposed rule. We note that § 413.24(f)(4)(iv) of the regulations requires that the certification statement be signed by the "provider's administrator or chief financial officer."

After consideration of the public comments we received, for the reasons discussed above, we are finalizing our proposals discussed above without modification. As proposed, we are revising § 413.24(f)(4)(iv) to allow providers the option to use an electronic signature to sign the certification statement on the Certification and Settlement Summary page of the Medicare cost report. Under § 413.24(f)(4)(iv)(C)(1) as finalized in this rule, providers that are required to file an electronic cost report may elect

to sign the certification statement with an electronic signature. As we proposed, this electronic signature must be placed on the signature line of the certification statement and may be (1) any format of the original signature that contains the first and last name of the provider's administrator or chief financial officer (for example, photocopy or stamp) or (2) an electronic signature that must be the first and last name of the provider's administrator or chief financial officer entered in the provider's electronic program. An electronic signature for this purpose cannot be a symbol, numerical characters, or codes. Furthermore, as we proposed, an electronic signature checkbox will be placed immediately after the certification statement and above the signature line on the Certification and Settlement Summary page of the Medicare cost report. The checkbox electing the electronic signature will read: "I have read and agree with the above certification statement. I certify that I intend my electronic signature on this certification statement to be the legally binding equivalent of my original signature." The checkbox must be checked to signify that the certification statement has been read and that an electronic signature will be placed on the signature line by the provider. Completion of both the electronic signature checkbox and the electronic signature, placed on the signature line by the provider's administrator or chief financial officer under the certification statement, will together constitute an accepted electronic signature of the provider's administrator or chief financial officer on the certification statement. By signing the certification statement with an electronic signature on the Certification and Settlement Summary page, the signatory is attesting that its electronic signature was executed with the intent to sign the certification statement, that the electronic signature is being submitted in lieu of an original signature, and additionally that the electronic signature has the same legal effect as an original signature. Providers that are required to file an electronic cost report will still have the option under § 413.24(f)(4)(iv)(C)(2), as finalized in this rule, to sign the certification statement with an original signature and to submit a hard copy of the settlement summary, if applicable, and certification statement. In the proposed rule, we also proposed that these revisions would apply on a prospective only basis, to provider cost reporting periods that begin on or after October 1, 2017, the effective date of this final rule. However, after

consideration of the proposed effective date that would have delayed the period of time for the providers to electronically sign and submit the Certification and Settlement Summary page by almost one year and our desire to ease cost and burden upon providers, we have decided to allow providers the option to use an electronic signature to sign the certification statement on the Certification and Settlement Summary page of the Medicare cost report effective for cost reporting periods that end on or after December 31, 2017. This will allow providers to electronically sign and submit the Certification and Settlement Summary page much sooner, with their next cost reporting submission in 2018. Accordingly, these final revisions will apply, on a prospective only basis, to provider cost reporting periods ending on or after December 31, 2017.

### 3. Changes Relating to Electronic Submission of the Certification and Settlement Summary Page of the Medicare Cost Report

In section X.A.2. of the preamble of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20140), we proposed to allow providers to use an electronic signature on the certification statement of the Certification and Settlement Summary page of the Medicare cost report. We further proposed that if the provider signs the certification statement with an electronic signature in the manner proposed in section X.A.2. of the preamble of the proposed rule and checks the electronic signature checkbox, the provider also may submit the Certification and Settlement Summary page electronically to the contractor at the same time and in the same manner in which the Medicare cost report is submitted. For example, if the provider submits the electronic cost report file via electronic mail to the contractor, the provider may also include the Certification and Settlement Summary page signed with an electronic signature.

Under our proposal, a provider could still choose to sign the certification statement with an original signature on a hard copy of the Certification and Settlement Summary page without checking the electronic signature box. However, if the provider chooses to do so, this page would have to be mailed to its contractor. We stated in the proposed rule that we believe this proposal to allow the electronic submission of the Certification and Settlement Summary page would reduce the need for and storage of paper documents. We stated that, under our proposal, providers would have the

option to submit the entire cost report electronically, in lieu of the previous requirement to mail a hard copy of the Certification and Settlement Summary page of the Medicare cost report to the contractor. We stated that we believe this proposed option would improve the capability of providers to efficiently transmit the Medicare cost report and save providers an appreciable amount of time as well as the cost of separately mailing a hard copy of the Certification and Settlement Summary page of the Medicare cost report to the contractor.

We invited public comments on this proposal.

*Comment:* One commenter asked whether a provider's option to use an electronic signature on the certification statement of the Certification and Settlement Summary page of the Medicare cost report and submit this form electronically applied to outpatient facilities and to low or no utilization cost reports where the MAC is currently requiring a signed certification statement.

*Response:* As set forth in the preamble of the proposed rule, (82 FR 20141) and at § 413.24(f)(4)(iv)(C) (as finalized in this rule), the option to use an electronic signature on the certification statement of the Certification and Settlement Summary page and to submit this form electronically applies to providers that are required to file an electronic Medicare cost report. These providers are specified in § 413.24(f)(4)(ii). This includes providers with low or no utilization that submit a Certification with a Settlement Summary, if applicable.

*Comment:* One commenter asked whether the cost report file and the electronically signed certification statement on the Certification and Settlement Summary page would be filed together and sent to the contractor or sent separately but using the same process.

*Response:* This final rule allows the provider great flexibility to choose how it wishes to electronically sign the certification statement on the Certification and Settlement Summary page of the Medicare cost report and electronically submit this page. As set forth in section X.A.2. of the preamble of the proposed rule (82 FR 20140), if the provider chooses to sign the certification statement with an electronic signature, this signature must be placed on the signature line of the certification statement and may be (1) any format of the original signature that contains the first and last name of the provider's administrator or chief financial officer (for example, photocopy or stamp) or (2) an electronic

signature that must be the first and last name of the provider's administrator or chief financial officer entered in the provider's electronic program. Regardless of which electronic signature method is selected by the provider, to indicate the provider's election to sign the certification statement with an electronic signature, the electronic signature checkbox placed immediately after the certification statement and above the signature line on the Certification and Settlement Summary page of the Medicare cost report must be checked to signify that the certification statement has been read and that an electronic signature will be placed on the signature line by the provider. As we stated earlier and in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20140), a provider may submit the Certification and Settlement Summary page electronically to the contractor at the same time and in the same manner in which the Medicare cost report is submitted. If the electronic signature is in the format specified "(1)" or "(2)" above (and in section X.A.2. of the preamble of the proposed rule), this electronic signature on the Certification and Settlement Summary page of the Medicare cost report can be submitted electronically with the electronic cost report to the provider's contractor. If the provider submits the Medicare cost report file to the contractor via email, the provider may elect to also send the electronically signed certification statement on the Certification and Settlement Summary page to the contractor via the same email or separately in a separate email. In addition, if the certification statement is signed with an electronic signature as in "(1)" or "(2)" above (and in section X.A.2. of the preamble of the proposed rule), the Certification and Settlement Summary page of the Medicare cost report can also be submitted on paper to the contractor via regular mailing and would still be considered to have an electronic signature. We will provide further instructions through manual provisions and provider educational materials.

After consideration of the public comments we received, for the reasons discussed above, we are finalizing our proposals without modification. As proposed, if the provider signs the certification statement with an electronic signature in the manner described in this final rule and checks the electronic signature checkbox, the provider also may submit the Certification and Settlement Summary page electronically to the contractor at the same time and in the same manner

in which the Medicare cost report is submitted. For example, if the provider submits the electronic cost report file via electronic mail to the contractor, the provider may also include the Certification and Settlement Summary page signed with an electronic signature. Thus, providers would have the option to submit the entire cost report electronically, in lieu of the previous requirement to mail a hard copy of the Certification and Settlement Summary page of the Medicare cost report to the contractor. We note that a provider could still choose to sign the certification statement with an original signature on the Certification and Settlement Summary page. However, if the provider chooses to do so, this page would have to be mailed to its contractor.

#### 4. Clarifications Relating to the Items Required To Be Submitted by Providers With the Medicare Cost Report

##### a. Settlement Summary and Certification Statement

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20141), we clarified the portion of the language in § 413.24(f)(4)(iv) that describes the items a provider is required to submit along with the electronically filed cost report. We stated that § 413.24(f)(4)(iv) currently sets forth that a provider is required to submit a hard copy of a settlement summary, a statement of certain worksheet totals found within the electronic file, and a statement signed by its administrator or chief financial officer certifying the accuracy of the electronic file or the manually prepared cost report. These items are contained on the Certification and Settlement Summary page of the Medicare cost report. As we stated in the proposed rule, we believe that the structure of the sentence in the regulation text describing these items may give rise to the impression that these are three separate items: (1) A “settlement summary”; (2) a “statement of certain worksheet totals found within the electronic file”; and (3) a “statement signed by its administrator or chief financial officer certifying the accuracy of the electronic file or the manually prepared cost report,” also known as the certification statement. In the proposed rule, we clarified that “a statement of certain worksheet totals found within the electronic file” is not a separate item but rather is intended as a descriptor of the “settlement summary.” The settlement summary is actually the list of “certain worksheet totals found within the electronic file.” Therefore, in the FY 2018 IPPS/LTCH PPS proposed

rule (82 FR 20141), we proposed to revise § 413.24(f)(4)(iv) to clarify this.

We did not receive any public comments on this proposal. Thus, for the reasons discussed above, we are finalizing, without modification, our proposed revisions to § 413.24(f)(4)(iv) (as further discussed in section X.A.5. of this final rule).

##### b. Removal of the Transition Period Language

Following the effective dates for which certain providers were required to submit cost reports in a standardized electronic format under § 413.24(f)(4)(ii), a transition period was implemented when certain providers were required to submit a hard copy of the completed cost report forms in addition to the electronic file. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20141), we proposed to remove the language in § 413.24(f)(4)(iv) which sets forth this expired transition period. Specifically, we proposed to remove the language that specifies that, during a transition period (first two cost-reporting periods on or after December 31, 2004 for hospices and end-stage renal disease facilities, and the first two cost-reporting periods on or after March 31, 2005 for organ procurement organizations, histocompatibility laboratories, rural health clinics, federally qualified health centers, and community mental health centers), providers must submit a hard copy of the completed cost report forms in addition to the electronic file. We stated that because the transition period has expired and these providers are no longer required to submit a hard copy of the completed cost report forms in addition to the electronic file, this language in § 413.24(f)(4)(iv) is no longer necessary. We did not receive any public comments on this proposal, and thus, for the reasons discussed above, we are finalizing without modification our proposal to remove this language (as further discussed below in section X.A.5. of the preamble of this final rule).

##### 5. Revisions to 42 CFR 413.24(f)(4)(iv)

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20139 through 20142), to reflect our proposals discussed earlier, we proposed to revise § 413.24(f)(4)(iv) to specify that, effective for cost reporting periods beginning on or after October 1, 2017, providers that are required to file an electronic Medicare cost report may elect to electronically submit the settlement summary, if applicable, and the cost report’s certification statement, found on the Certification and

Settlement Summary page of the Medicare cost report, with an electronic signature of the provider’s administrator or chief financial officer. We stated that a provider that elects to electronically sign and submit the Certification and Settlement Summary page would no longer be required to send this page in hard copy to its contractor with an original signature. We further proposed to revise § 413.24(f)(4)(iv) to specify that the provider must check the electronic signature checkbox that would be placed immediately after the certification statement and directly above the signature line of the certification statement. We proposed that this electronic signature checkbox would specify that the provider’s administrator or chief financial officer has read and agrees with the certification statement, and certifies that he or she intends the electronic signature to be the legally binding equivalent of his or her original signature. We stated that the provider must check the electronic signature checkbox in order for the provider to sign the certification statement with an electronic signature and in order for the electronic signature to be accepted. We invited public comments on this proposal.

After consideration of the public comments we received (as summarized in sections X.A.2. and in X.A.3. of the preamble of this final rule), we are finalizing our proposed revisions to § 413.24(f)(4)(iv) as discussed above with the following modification. As discussed in section X.A.2. of the preamble of this final rule, after consideration of the proposed effective date that would have delayed the period of time for the providers to electronically sign and submit the Certification and Settlement Summary page by almost a year and our desire to ease cost and burden upon providers sooner, we have decided to allow providers the option to use an electronic signature to sign the certification statement on the Certification and Settlement Summary page of the Medicare cost report and to electronically submit this page effective for cost reporting periods ending on or after December 31, 2017. As such, effective for cost reporting periods ending on or after December 31, 2017, providers that are required to file an electronic Medicare cost report may elect to electronically submit the settlement summary, if applicable, and the cost report’s certification statement, found on the Certification and Settlement Summary page of the Medicare cost report, with an electronic

signature of the provider's administrator or chief financial officer. A provider that elects to electronically sign and submit the Certification and Settlement Summary page is no longer required to send this page in hard copy to its contractor with an original signature. We are further revising § 413.24(f)(4)(iv), as proposed, to specify that the provider must check the electronic signature checkbox that would be placed immediately after the certification statement and directly above the signature line of the certification statement. This electronic signature checkbox specifies that the provider's administrator or chief financial officer has read and agrees with the certification statement, and certifies that he or she intends the electronic signature to be the legally binding equivalent of his or her original signature. The provider must check the electronic signature checkbox in order for the provider to sign the certification statement with an electronic signature and in order for the electronic signature to be accepted.

In addition, we proposed to revise the regulatory language under § 413.24(f)(4)(iv) to reflect our clarification that the phrase "a statement of certain worksheet totals found within the electronic file" describes the settlement summary and does not denote a separate item. Specifically, we proposed to revise § 413.24(f)(4)(iv) to state that a provider must submit a settlement summary, if applicable, which is a statement of certain worksheet totals found within the electronic file, and a certification statement signed by its administrator or chief financial officer certifying the accuracy of the electronic file or manually prepared cost report. We invited public comments on this proposal. We did not receive any public comments on our proposal. Therefore, for the reasons discussed above, we are finalizing, without modification, our proposal to revise the regulatory language under § 413.24(f)(4)(iv) to reflect our clarification that the phrase "a statement of certain worksheet totals found within the electronic file" describes the settlement summary and does not denote a separate item.

In addition, as indicated earlier, because the transition period during which certain providers were required to submit a hard copy of the completed cost report forms in addition to the electronic file has expired, we proposed to remove the transition period language in § 413.24(f)(4)(iv). We invited public comments on this proposal. We did not receive any public comments on this proposal, and therefore, for the reasons

discussed above, we are finalizing, without modification, our proposal to remove the language in § 413.24(f)(4)(iv) that describes this expired transition period.

Finally, we proposed to revise the regulation text at § 413.24(f)(4)(iv) by adding the certification statement from the Certification and Settlement Summary page of the Medicare cost report. This certification statement appeared in all caps in the proposed regulation text and stated as follows: "Misrepresentation or falsification of any information contained in this cost report may be punishable by criminal, civil and administrative action, fine and/or imprisonment under Federal law. Furthermore if services identified in this report were provided or procured through the payment directly or indirectly of a kickback or were otherwise illegal, criminal, civil and administrative action, fines, and/or imprisonment may result." This language has appeared on the Certification and Settlement Summary page for many years. We stated in the proposed rule that because the certification section of the Medicare cost report refers to it as having been read by the provider, incorporation of it into the regulation text would provide completeness and clarification of the certification statement.

We invited public comments on this proposal. We did not receive any public comments on our proposal. Therefore, for the reasons discussed above, we are finalizing our proposal, without modification, to revise the regulation text at § 413.24(f)(4)(iv) by adding the certification statement from the certification section of the Certification and Settlement Summary page of the Medicare cost report. This certification statement appears in all caps and informs the provider that "Misrepresentation or falsification of any information contained in this cost report may be punishable by criminal, civil and administrative action, fine and/or imprisonment under Federal law. Furthermore if services identified in this report were provided or procured through the payment directly or indirectly of a kickback or were otherwise illegal, criminal, civil and administrative action, fines, and/or imprisonment may result."

*B. Clarification of Limitations on the Valuation of Depreciable Assets Disposed of on or After December 1, 1997*

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20142 through 20143), we proposed revisions to the

Medicare provider reimbursement regulations to clarify our longstanding policy pertaining to allowable costs and the limits on the valuation of a depreciable asset that may be recognized in establishing an appropriate allowance for depreciation for assets disposed of on or after December 1, 1997. Questions have arisen with regard to whether this limitation on the valuation of depreciable assets depends on the manner in which a provider disposes of an asset. In the proposed rule, we clarified that the elimination of the gain or loss for depreciable assets applies to assets a provider disposes of by sale or scrapping on or after December 1, 1997, regardless of whether the asset is scrapped, sold as an individual asset of a Medicare participating provider, or sold incident to a provider's change of ownership.

Reasonable cost is defined at section 1861(v)(1)(A) of the Act and in the implementing regulations at 42 CFR part 413. Since the inception of the Medicare program, allowable costs under Medicare have included a provider's direct and indirect costs necessary for the provision of patient care, including the cost of using assets in patient care. Depreciation of these assets is an allowable cost under Medicare and the allowance is computed using the depreciable basis and estimated useful life of the assets (§ 413.134). Under Medicare's reasonable cost reimbursement system, the appropriate allowance for depreciation and for interest on capital indebtedness on buildings and equipment used in the provision of patient care is based in part on the historical cost of the asset (§ 413.134(a) and (b)). When an asset is disposed of, no further depreciation may be taken on it. Gains and losses on the disposition of depreciable assets may be includable, as applicable, either in computing allowable cost or in computing the adjustment to Medicare reimbursable cost, depending upon the manner of disposition of the asset, the date of the disposal, and the amount of the depreciation adjustment (§ 413.134 and Part 1, Chapter 1 of the Provider Reimbursement Manual (CMS Pub. 15-1)).

Prior to the enactment of the Balanced Budget Act (BBA) of 1997 (Pub. L. 105-33), when a Medicare certified provider's capital asset was disposed of through sale or scrapping, Medicare shared in any gain or loss from the transaction. In this regard, if a provider realized a gain or loss from the sale or scrapping of an asset, an adjustment to the provider's allowable costs was necessary so that Medicare paid its

share of the actual cost the provider incurred in using the asset for patient care. Generally, when a provider sold its depreciable assets at more than the net book value, Medicare shared in the gain. If the provider sold its depreciable assets at less than the net book value, Medicare shared in the loss. The amount of a gain was limited to the amount of depreciation previously included in Medicare allowable costs. The amount of a loss was limited to the undepreciated basis of the asset permitted under the program.

In the BBA of 1997, Congress eliminated Medicare's recognition of gains or losses on a provider's disposition of assets on or after December 1, 1997. Section 4404 of the BBA of 1997 amended section 1861(v)(1)(O)(i) of the Act to state that, in establishing an appropriate allowance for depreciation and for interest on capital indebtedness with respect to an asset of a provider of services which has undergone a change of ownership, such regulations shall provide, except as provided in clause (iii), that the valuation of the asset after such change of ownership shall be the historical cost of the asset, as recognized under the Medicare program, less depreciation allowed, to the owner of record as of August 5, 1997 (or, in the case of an asset not in existence as of August 5, 1997, the first owner of record of the asset after August 5, 1997).

In enacting section 4404 of the BBA of 1997, Congress was concerned with providers that may have been "creating specious 'losses'" on the disposition of assets "in order to be eligible for additional Medicare payments" (H. Rep. No. 105-149 (1997)). In addition, Congress cited the June 1997 OIG report, Medicare Losses on Hospital Sales (OEI-03-96-00170), which indicated that there were substantial Medicare losses due to depreciation adjustments for hospitals that underwent changes of ownership. In a January 1998 final rule with comment period (63 FR 1379), we conformed the regulations at § 413.134 to section 1861(v)(1)(O) of the Act, as amended by section 4404 of the BBA of 1997. In that rule, we stated that, under the provisions of section 4404 of the BBA of 1997, "when a depreciable asset of a provider undergoes a change of ownership, the valuation of the asset, for purposes of establishing a Medicare allowance for depreciation and interest, will be the historical cost of the asset to the owner of record, less depreciation allowed. Thus, when a depreciable asset is sold, the value of the asset to the seller will be the historical cost (as recognized under Medicare) to the owner of record as of August 5, 1997,

less depreciation allowed. In this case, there will be no adjustment for gain or loss on the sale. For the buyer, the value of the asset will also be the historical cost (as recognized under Medicare) to the owner of record as of August 5, 1997, less depreciation allowed. Accordingly, the new owner's allowance for depreciation and interest will be based on this value. Stated simply, the asset moves from the hands of the seller to the hands of the buyer at the asset's net book value defined in § 413.134(b)(9)" (63 FR 1381).

Our policy referenced the asset of a provider undergoing a change of ownership, meaning the asset itself changing owners, regardless of whether the provider changes ownership. In conforming the regulations to the new statutory provision, we revised the regulations at § 413.134(f)(1) to specify that "[d]epreciable assets may be disposed of through sale, scrapping, trade-in, exchange, demolition, abandonment, condemnation, fire, theft, or other casualty. If disposal of a depreciable asset, including the sale or scrapping of an asset before December 1, 1997, results in a gain or loss, an adjustment is necessary in the provider's allowable cost. (No gain or loss is recognized on either the sale or the scrapping of an asset that occurs on or after December 1, 1997.) The amount of a gain included in the determination of allowable cost is limited to the amount of depreciation previously included in Medicare allowable costs. The amount of a loss to be included is limited to the undepreciated basis of the asset permitted under the program. The treatment of the gain or loss depends upon the manner of disposition of the asset, as specified in paragraphs (f)(2) through (6) of [§ 413.134]. The gain or loss on the disposition of depreciable assets has no retroactive effect on a proprietary provider's equity capital for years prior to the year of disposition."

In the January 1998 final rule with comment period, we added the parenthetical "(No gain or loss is recognized on either the sale or the scrapping of an asset that occurs on or after December 1, 1997)" to § 413.134(f)(1). This parenthetical was intended to implement section 4404 of the BBA of 1997 by disallowing the gain or loss when a provider sells or scraps an asset.

We believe that, under section 4404 of the BBA of 1997, Medicare's nonrecognition of a loss or gain with respect to an asset a provider disposes of by sale or scrapping applies, regardless of whether the sale of the asset occurs incident to a provider's change of ownership or whether the

asset is otherwise sold or scrapped by a currently participating Medicare provider.

We note that following the enactment of the Deficit Reduction Act of 1984 (Pub. L. 98-369, section 2314), in which Congress amended section 1861(v)(1) of the Act by adding new subparagraph (O) concerning the valuation and determination of historical costs of assets after July 18, 1984, we stated that the new provisions applied "not only to the sale or purchase of groups of assets, but also to the sale or purchase of individual assets" (57 FR 43913). Similarly, we believe section 4404 of the BBA of 1997 applies to a provider's disposition of assets through sale or scrapping, including the sale or scrapping of individual provider assets and assets sold or scrapped incident to a provider's change of ownership. Accordingly, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20142 through 20143), we proposed to revise the regulation text at § 413.134(f)(1) to clarify our longstanding policy that Medicare does not recognize a provider's gain or loss on the sale or scrapping of an asset that occurs on or after December 1, 1997, regardless of whether the asset is sold incident to a provider's change of ownership or is otherwise sold or scrapped as an asset of a Medicare participating provider.

We did not receive any public comments on our proposal. We are finalizing our proposal to revise the Medicare provider reimbursement regulations at § 413.134(f)(1) to clarify our longstanding policy that Medicare does not recognize a provider's gain or loss on the sale or scrapping of an asset that occurs on or after December 1, 1997, regardless of whether the asset is sold incident to a provider's change of ownership or is otherwise sold or scrapped as an asset of a Medicare participating provider.

## **XI. Changes Relating to Survey and Certification Requirements**

### *A. Revisions to the Application and Re-application Procedures for National Accrediting Organizations (AOs), and Posting of Survey Reports and Acceptable Plans of Corrections (PoCs)*

In an effort to increase transparency, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20143), we proposed to require AOs with CMS-approved accreditation programs to post final accreditation survey reports and PoCs on public facing Web site designated by the AO. All current AOs with CMS-approved accreditation programs have Web sites that inform the general public about their organization.

We stated in the proposed rule that establishing the standard for posting both accredited and non-accredited provider and supplier survey reports, which would include initial and recertification surveys, and PoCs, would expand transparency even further. Disclosure of survey findings protects both patient health and safety, in which public disclosure of findings currently only shows the subset of complaint activity. Expanding these requirements through the posting of all survey reports and PoCs would allow for a more comprehensive way to show a provider's or supplier's compliance with all health and safety requirements.

In the proposed rule, we proposed to revise § 488.5 of the regulations to incorporate this proposed requirement. We further proposed to add a new standard at § 488.5(a)(21) to require that each national AO applying or reapplying for CMS-approval of its Medicare provider or supplier accreditation program provide a statement acknowledging that it agreed to make all Medicare provider or supplier final accreditation survey reports (including statements of deficiency findings), as well as acceptable PoCs publicly available on its Web site within 90 days after such information is made available to those facilities for the most recent 3 years. This provision would include all triennial, full, follow-up, focused, and complaint surveys, whether they were performed onsite or offsite. We invited public comments on these proposals.

After consideration of the public comments received, we are not finalizing our proposed changes to 42 CFR 488.5. Section 1865(b) of the Act prohibits CMS from disclosing survey reports or compelling the AOs to disclose their reports themselves. The suggestion by CMS to have the AOs post their survey reports may appear as if CMS was attempting to circumvent the provision of section 1865(b) of the Act. Therefore, this provision is effectively being withdrawn.

### *B. Changes to Termination Public Notice Requirements for Certain Providers and Suppliers*

#### 1. Background

Under the provisions of sections 1866(b)(2) of the Act and implementing regulations at 42 CFR 489.53, the Secretary may terminate an agreement with a provider of services if it is determined that the provider is not in substantial compliance with applicable requirements governing provider agreements. For instance, CMS must determine that the provider:

- Is not complying substantially with the terms of the agreement, the provisions of title XVIII, or regulations promulgated thereunder;
- Has failed to supply information necessary to determine whether payments are or were due and the amounts of such payments;
- Refuses to permit examination of fiscal and other records (including medical records) necessary for the verification of information furnished as a basis for claiming payment under the Medicare program; or
- Refuses to permit photocopying of any records or other information necessary to determine or verify compliance with participation requirements.

Sections 1866(b)(1) and (2) of the Act require reasonable public notice, as prescribed in regulations, of both voluntary and involuntary terminations of Medicare and Medicaid participating providers and suppliers. Various existing regulations specify the requirements of public notice for voluntary and involuntary terminations prior to termination of a provider or supplier agreement. Specifically, for voluntary terminations, providers at 42 CFR 489.52(c)(2), RHCs at 42 CFR 405.2404(d), FQHCs at 42 CFR 405.2442, ASCs at 42 CFR 416.35(d), and OPOs at 42 CFR 486.312(e) are required to publish termination notices in the local public newspaper.

#### 2. Basis for Changes

The existing regulations requiring termination notices to be published in local newspapers have become outdated over time as the public and beneficiaries increasingly turn to the Internet and other electronic forums for information. Currently, rural health centers (RHCs), federally qualified health centers (FQHCs), ambulatory surgical centers (ASCs), and organ procurement organizations (OPOs) are required to publish public notices of voluntary and involuntary termination of participation in the Medicare and Medicaid programs in one or more local newspapers. Providers and suppliers that voluntarily terminate their participation agreement must give notice to the public at least 15 days before the effective date of termination and the notice must be published in one or more local newspapers. The use of hard copy local newspaper through time has become less effective, as a large majority of the public uses alternate sources such as Web sites or other online news and resources.

According to national studies, approximately 23 percent of the general public continues to read print

newspapers.<sup>510</sup> Many individuals have turned to digital platforms to read news rather than print news, which continues to decline on an annual basis, therefore, limiting the effectiveness of publishing termination notices in local newspapers. In light of the public's increased access to the Internet and other electronic forums for information and the decline of print newspaper readership, in this proposed rule, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20145 and 20146), we proposed changes in the existing regulations noted earlier regarding newspaper publication of termination notices to allow CMS Regional Offices and providers and suppliers more media platforms in which to publish termination notices, both voluntary and involuntary, with the intent of making these notices more visible and effective.

#### 3. Changes to Regulations

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20145 and 20146), we proposed to remove the regulatory language specifying public notice of terminations for FQHCs, RHCs, ASCs, and OPOs to be exclusively in newspapers to allow for more flexibility for both the CMS Regional Offices and providers and suppliers. Specifically, we proposed changes to the regulations for RHCs at 42 CFR 405.2404(d), for FQHCs at 42 CFR 405.2442(a) and (b), for ASCs at 42 CFR 416.35(d), and for OPOs at 42 CFR 486.312(e) to remove the reference to publication in newspapers as the means for notifying the community of involuntary and voluntary terminations from participation in Medicare and Medicaid programs. This proposal for termination notices to the public for RHCs, FQHCs, ASCs, and OPOs would align with the termination notices CMS currently has set forth for all other providers and suppliers. For example, under 42 CFR 488.456(c) (enforcement procedures for long-term care facilities), CMS must notify the public of a termination of a nursing home's provider agreement, but the regulation does not specify through which public forum this notice is to be given. Similarly, 42 CFR 489.53(d)(5) also does not specify the method of public notification required for terminations. Through this proposed change, RHCs, FQHCs, ASCs, and OPOs would have the same requirement for the notice to the public as under 42 CFR 489.53(d)(5), where there is a termination by CMS in which public

<sup>510</sup> PewResearchCenter (2012) *Number of Americans Who Read Print Newspapers Continues Decline*. Available at: <http://www.pewresearch.org/daily-number/number-of-americans-who-read-print-newspapers-continues-decline/>.

notice is required but the method for these providers or suppliers for providing public notice is not specified, to allow for flexibility.

In addition, we proposed to revise 42 CFR 489.52(c)(2) to remove the requirement to publish notice in one or more local newspapers in circumstances of the termination of a provider agreement by a provider and instead to allow providers to inform the community via public notice, without specifying the method used for public notice. We stated in the proposed rule that we believe that these proposed changes will ensure that the community continues to be aware of terminations of Medicare and Medicaid participating providers and suppliers.

The method for delivering the required public notice is no longer being specified by removing the word “newspaper” from the regulations for RHCs, FQHCs, ASCs, and OPOs. Instead, we proposed to allow for flexibility for the CMS Regional Offices and the providers or suppliers to post public notices through a manner in which the maximum number of community individuals and beneficiaries would be informed. This may include, but is not limited to State Web site postings, facility Web sites, or local news and social media channels. It also would not preclude publication in local newspapers. Through the proposed rule, we will continue to fulfill the regulatory requirement to publically post involuntary termination notices. We are also operationally considering allowing voluntarily terminating providers and suppliers the same public notice platform used for involuntary notices in order to meet their regulatory public notice requirements. This could include media venues such as Web site postings and press releases through the use of CMS Regional press officers.

We invited public comments on our proposals. In addition, we sought suggestions from the public on sufficient mechanisms to provide public information, other than local newspapers, for posting Medicare and Medicaid participating provider and supplier termination notices.

*Comment:* Several commenters supported the proposal to eliminate the use of newspapers to provide public notice and agreed that the use of newspapers has become outdated. One commenter agreed with the proposal to allow CMS Regional Offices to use media platforms in which to publish termination notices, both voluntary and involuntary, in a more visible and effective manner.

*Response:* We thank the commenter for its support.

We are finalizing our proposal to remove the word “newspaper” from the regulations for RHCs, FQHCs, ASCs, and OPOs under the requirements for public notices for terminations of the provider agreement.

## XII. MedPAC Recommendations

Under section 1886(e)(4)(B) of the Act, the Secretary must consider MedPAC’s recommendations regarding hospital inpatient payments. Under section 1886(e)(5) of the Act, the Secretary must publish in the annual proposed and final IPPS rules the Secretary’s recommendations regarding MedPAC’s recommendations. We have reviewed MedPAC’s March 2017 “Report to the Congress: Medicare Payment Policy” and have given the recommendations in the report consideration in conjunction with the policies set forth in this final rule. MedPAC recommendations for the IPPS for FY 2018 are addressed in Appendix B to this final rule.

For further information relating specifically to the MedPAC reports or to obtain a copy of the reports, contact MedPAC at (202) 653-7226, or visit MedPAC’s Web site at: <http://www.medpac.gov>.

## XIII. Other Required Information

### A. Requests for Data From the Public

IPPS-related data are available on the Internet for public use. The data can be found on the CMS Web site at: <http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>. We listed the IPPS-related data files that are available in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20146 through 20147).

Commenters interested in discussing any data files used in construction of this final rule should contact Michael Treitel at (410) 786-4552.

### B. Collection of Information Requirements

#### 1. Statutory Requirement for Solicitation of Comments

Under the Paperwork Reduction Act of 1995, we are required to provide 60-day notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the Paperwork

Reduction Act of 1995 requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20147 through 20158), we solicited public comment on each of these issues for the following sections of this document that contain information collection requirements (ICRs).

#### 2. ICRs for Temporary Exception to the LTCH PPS Site Neutral Payment Rate for Certain Spinal Cord Specialty Hospitals

In section VIII.E. of the preamble of the proposed rule and this final rule, we discuss the proposed implementation of section 15009 of Public law 114-255, which provides for a temporary exception to the site neutral payment rate for certain spinal cord specialty hospitals under section 1886(m)(6)(F) of the Act. Under this provision, discharges occurring in cost reporting periods beginning during FY 2018 and FY 2019 for LTCHs that meet the specified statutory criteria are excepted from the site neutral payment rate (that is, all discharges from such LTCHs during this period would be paid at the LTCH PPS standard Federal payment rate). In order for an LTCH to qualify for this temporary exception, the LTCH must, among other things, meet the “significant out-of-state admissions criterion” at section 1886(m)(6)(F)(iii) of the Act. To meet the significant out-of-state admissions criterion, an LTCH must have discharged inpatients (including both individuals entitled to, or enrolled for, Medicare Part A benefits and individuals not so entitled or enrolled) during FY 2014 who had been admitted from at least 20 of the 50 States, determined by the States of residency of such inpatients and based on such data submitted by the hospital to the Secretary as the Secretary may require. The statute further provides authority for the Secretary to implement the significant out-of-state admissions criterion at section 1886(m)(6)(F)(iii) of the Act by program instruction or otherwise, and exempts the policy initiatives from any information collection requirements under the Paperwork Reduction Act. As such, the burden associated with the data

submitted by the hospital to meet the significant out-of-State admissions criteria is not subject to the PRA. However, our estimate of the burden associated with this data submission is discussed in section I.J. of Appendix A of this final rule.

We did not receive any public comments on this information collection.

### 3. ICRs for the Hospital Inpatient Quality Reporting (IQR) Program

#### a. Background

OMB has currently approved 3,681,023 hours of burden and approximately \$121 million under OMB control number 0938–1022, accounting for burden experienced by 3,300 IPPS hospitals and 1,100 non-IPPS hospitals for the FY 2019 payment determination. In section IX.A. of the preambles of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20031 through 20075) and this final rule, we discuss the policies that we expect to affect our burden estimates. We refer readers to section I.A.2.h. of the preamble of this final rule, where we summarize our finalized policies. The details about our finalized policies that impact information collection requirements for IPPS-hospitals are described below.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20149) and prior rules (81 FR 57260) and (80 FR 49763), we have estimated that reporting eCQMs for the Hospital IQR Program could be accomplished by staff with a median hourly wage of \$16.42 per hour.<sup>511</sup> We note that since the publication of the FY 2018 IPPS/LTCH PPS proposed rule, more recent wage data have become available, and we are updating the wage rate used in these calculations in this FY 2018 IPPS/LTCH PPS final rule. The most recent data from the Bureau of Labor Statistics reflects a median hourly wage of \$18.29 per hour for a Medical Records and Health Information Technician professional.<sup>512</sup> We calculated the cost of overhead, including fringe benefits, at 100 percent of the median hourly wage, consistent with previous years (81 FR 57260). This is necessarily a rough adjustment, both because fringe benefits and overhead costs vary significantly from employer-to-employer and because methods of estimating these costs vary widely from study-to-study. Nonetheless, we believe that doubling the hourly wage rate ( $\$18.29 \times 2 = \$36.58$ ) to estimate total

cost is a reasonably accurate estimation method. Accordingly, we calculate cost burden to hospitals using a wage plus benefits estimate of \$36.58 per hour throughout the discussion below for the Hospital IQR Program.

#### b. Burden Estimates for the Modifications to the eCQM Reporting Requirements for the CY 2017 Reporting Period/FY 2019 Payment Determination and CY 2018 Reporting Period/FY 2020 Payment Determination

In the FY 2017 IPPS/LTCH PPS final rule, we finalized policies to require hospitals to submit a full year (four quarters) of data (81 FR 57159) for at least eight of the available eCQMs in the Hospital IQR Program measure set (81 FR 57157) for both the FY 2019 and FY 2020 payment determinations. In section IX.A.8. of the preamble of this final rule, we are finalizing modified, reduced eCQM reporting requirements. For both the CY 2017 reporting period/FY 2019 payment determination and the CY 2018 reporting period/FY 2020 payment determination, hospitals will be required to report four eCQMs and to submit one, self-selected calendar quarter of data.

As in previous years, we believe the total burden associated with eCQM reporting will be similar to that previously outlined in the Medicare EHR Incentive Program Stage 2 final rule (77 FR 54126 through 54133). Under that program, the burden estimate for a hospital to report one eCQM is 10 minutes per record per quarter. We believe this estimate is accurate and appropriate to apply to the Hospital IQR Program because we align the eCQM reporting requirements between both programs. Therefore, using the estimate of 10 minutes per record per quarter, we anticipate our finalized policies to require: (1) Reporting on at least four of the available eCQMs; and (2) submission of one, self-selected quarter of eCQM data, will result in a burden reduction of 4.67 hours (280 minutes) per hospital for each of the FY 2019 and FY 2020 payment determinations. This estimate was calculated by considering the burden difference between the updated eCQM reporting requirements finalized in section IX.A.8. of the preamble of this final rule for each of the FY 2019 and FY 2020 payment determinations, which are the same (10 minutes per record  $\times$  4 eCQMs  $\times$  1 quarter = 40 minutes for 1 quarter of reporting), and the eCQM reporting requirements previously finalized in the FY 2017 IPPS/LTCH PPS final rule for each of the CY 2017 and CY 2018 reporting periods (81 FR 57157 through 57159)

(10 minutes per record  $\times$  8 eCQMs  $\times$  4 quarters = 320 minutes for 4 quarters of reporting). Through these calculations (40 minutes – 320 minutes), we arrived at a reduction of 280 minutes per hospital per year, or 4.67 hours per hospital per year, for each of the FY 2019 and FY 2020 payment determinations.

In total, for each of the FY 2019 and FY 2020 payment determinations, we expect our finalized proposal to require hospitals to report one, self-selected calendar quarter of data for 4 eCQMs (as compared to our previously finalized requirements to report four quarters of data for 8 eCQMs) to represent an annual burden reduction of 15,400 hours across all 3,300 IPPS hospitals participating in the Hospital IQR Program ( $-280$  minutes per hospital/60 minutes per hour  $\times$  3,300 hospitals =  $-15,400$  hours). Using the updated wage estimate described above, we expect this to represent a cost reduction of \$563,332 ( $\$36.58$  hourly wage  $\times$  15,400 annual hours reduction) across all 3,300 IPPS hospitals participating in the Hospital IQR Program for each of the FY 2019 and FY 2020 payment determinations. In summary, we estimate a revised total burden of 2,200 hours (40 minutes per hospital/60 minutes per hour  $\times$  3,300 hospitals) and \$80,476 (2,200 hours across 3,300 hospitals  $\times$  \$36.58 per hour) across all hospitals associated with this finalized policy.

#### c. Burden Estimate for the Modifications to eCQM Certification Requirements for the FY 2019 and FY 2020 Payment Determinations

In section IX.10.d. of the preamble of this final rule, we discuss changes we are finalizing to the Hospital IQR Program eCQM submission requirements to align them with the Medicare EHR Incentive Program for eligible hospitals and CAHs. Specifically, for both the CY 2017 reporting period/FY 2019 payment determination and the CY 2018 reporting period/FY 2020 payment determination, we are finalizing that: (1) A hospital using EHR technology certified to the 2014 Edition, 2015 Edition, or a combination of both, but such EHR technology is not certified to all available eCQMs, will be required to have its EHR technology certified to all eCQMs that are available to report; and (2) EHR technology that is certified to all available eCQMs will not need to be recertified each time it is updated to a more recent version of the eCQM specifications. Further, we are finalizing that: (1) For the CY 2017 reporting period, hospitals will be required to use

<sup>511</sup> Occupational Outlook Handbook. Available at: <http://www.bls.gov/oes/2012/may/oes292071.htm>.

<sup>512</sup> Occupational Employment and Wages, May 2016. Available at: <https://www.bls.gov/oes/current/oes292071.htm>.

the most recent version of the CQM electronic specifications (namely, the Spring 2016 version of the eCQM specifications and any applicable addenda); and (2) for the CY 2018 reporting period, hospitals be required to use the most recent version of the CQM electronic specifications (namely, the Spring 2017 version of the eCQM specifications and any applicable addenda). Because the use of certified EHR technology is already required for the Medicare EHR Incentive Program, we believe that harmonizing these finalized policies will create no additional burden for hospitals under the Hospital IQR Program. We refer readers to OMB control number 0938–1158 for a discussion of the burden associated with the requirements for the Medicare EHR Incentive Program.

d. Burden Estimates for the Modifications to the Existing Data Validation Processes

(1) Calculations for Modifications to the Validation of eCQM Data for the FY 2020 and FY 2021 Payment Determinations and Subsequent Years

In section IX.A.11. of the preamble of this final rule, we discuss our finalized policies for the eCQM data validation process for the Hospital IQR Program data beginning with validation for the FY 2020 payment determination. First, we are finalizing our proposal to require hospitals selected for eCQM data validation to submit 8 cases per quarter for eCQM validation for the FY 2020 payment determination and subsequent years. As applied with our finalized modified, reduced policy to require one, self-selected calendar quarter of data for each of the CY 2017 and CY 2018 eCQM reporting periods, hospitals will be required to submit 8 records (eight cases per quarter over one quarter) for each of the FY 2020 and FY 2021 payment determinations. Second, we are finalizing our proposal to add additional exclusion criteria to our hospital and case selection process for eCQM data validation for the FY 2020 payment determination and subsequent years. Third, we are finalizing our proposal to continue our previously finalized medical record submission requirements (81 FR 57181), for the FY 2021 payment determination and subsequent years. We believe these additional exclusions and maintaining previously finalized medical record submission requirements will have no effect on burden for hospitals, because, while they influence which hospitals and cases will be selected, they will not change the number of hospitals that must participate in eCQM validation,

the number of records that will be collected for validation, or the validation reporting requirements for the hospitals selected. We discuss the burden associated with the finalized eCQM data validation process in more detail below.

In previous years (79 FR 50347), we estimated a burden of 16 hours (960 minutes) for the submission of 12 records, which will equal 1 hour and 20 minutes (or 80 minutes) per record (960 minutes / 12 records) for validation of eCQM data. Applying the time per individual submission of 1 hour and 20 minutes (or 80 minutes) per record for the 8 records we are requiring hospitals selected for eCQM data validation to submit for each of the FY 2020 and FY 2021 payment determinations, we estimate a total burden of approximately 10.67 hours (80 minutes  $\times$  8 records/60 minutes per hour) for each hospital selected for participation in eCQM data validation for the FY 2020 and FY 2021 payment determinations. We estimate that the total burden will be approximately 2,133 hours across the 200 hospitals selected for eCQM validation (10.67 hours per hospital  $\times$  200 hospitals = 2,133 hours). As compared to our total burden estimate of 8,533 hours previously estimated in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57261), this represents a burden reduction of approximately 6,400 hours across up to 200 hospitals selected for eCQM validation (2,133 hours estimated in this final rule—8,533 hours estimated in the FY 2017 IPPS/LTCH PPS final rule = –6,400 hours). Using the estimated hourly labor cost of \$36.58, we estimate an annual cost reduction of \$234,112 (6,400 hours  $\times$  \$36.58 per hour) across the 200 hospitals selected for eCQM validation due to our finalized policy to decrease the number of records collected for validation from 32 records to 8 records for each of the FY 2020 and FY 2021 payment determinations. In summary, we estimate a revised total burden of 2,133 hours (10.67 hours  $\times$  200 hospitals) and \$78,025 (2,133 hours across 200 hospitals  $\times$  \$36.58 per hour) associated with this finalized policy.

(2) Calculations for Modifications to the eCQM Data Validation Exclusions for the FY 2020 Payment Determination and Subsequent Years

In section IX.A.11.b. of the preamble of this final rule, we are finalizing our additional eCQM data validation exclusion criterion. Specifically, hospitals that do not have at least five discharges for at least one reported eCQM (among the 4 required eCQMs finalized for each of the CY 2017 and

CY 2018 eCQM reporting periods) included in their QRDA I file submissions will be excluded from the random sample of up to 200 hospitals selected for eCQM validation for the FY 2020 payment determination and subsequent years. For the FY 2020 payment determination and subsequent years, hospitals meeting this newly finalized exclusion criterion discussed above and/or either of the two additional exclusion criteria previously finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57178) will be excluded from the random sample of up to 200 hospitals selected for eCQM data validation. Lastly, we are finalizing our proposal that the three exclusion criteria will be applied before the random selection of 200 hospitals for eCQM validation, such that hospitals meeting any one of these exclusions will not be eligible for selection.

In section IX.A.11.b. of the preamble of this final rule, we are finalizing our proposal to exclude the following cases from validation for those hospitals selected to participate in eCQM data validation: (1) Episodes of care that are longer than 120 days; and (2) cases with a zero denominator for each measure, for the FY 2020 payment determination and subsequent years. We do not believe that these finalized policies will affect the burden experienced by hospitals because, while they influence which hospitals and cases will be selected, they will not change the number of hospitals that must participate in eCQM validation, the number of records that will be collected for validation, or the validation reporting requirements for the hospitals selected.

e. Burden Estimate for Voluntary Reporting on the Hybrid Hospital-Wide 30-Day Readmission Measure for the CY 2018 Reporting Period

In section IX.A.7. of the preamble of this final rule, we are finalizing our proposal to begin voluntary reporting on the Hybrid Hospital-Wide 30-Day Readmission (HWR) measure for CY 2018 reporting period. This measure uses both claims-based data as well as a set of 13 core clinical data elements from patient electronic health records (EHRs) and 6 linking variables. We do not expect any additional burden to hospitals to report the claims-based portion of this measure because these data are already reported to the Medicare program for payment purposes.

As described in section IX.A.7.b. of the preamble of this final rule, we are finalizing our proposal that hospitals may voluntarily submit the 13 core clinical data elements and the six data

elements required for linking with claims data for this measure using the same submission process required for eCQM reporting, specifically, that these data be reported using QRDA I files submitted to the CMS data receiving system. Accordingly, we expect the burden associated with voluntary reporting of this measure to be similar to our estimates for eCQM reporting (that is 10 minutes per measure, per quarter). Consistent with estimates for previous voluntary reporting of quality measures, such as the eCQM reporting pilot, we anticipate that approximately 100 hospitals will voluntarily report the Hybrid HWR measure. Therefore, using the estimate of 10 minutes per measure per quarter, we estimate that our proposal will result in a burden increase of 0.67 hours (40 minutes) per participating hospital for the one year (4 quarters) during which this voluntary measure will take place (10 minutes per record × 1 measure × 4 quarters / 60 minutes per hour = 0.67 hours). In total, for the one year duration of voluntary reporting the Hybrid HWR measure, we estimate an annual burden increase of 67 hours across up to 100 hospitals voluntarily participating (40 minutes per hospital / 60 minutes per hour × 100 hospitals = 67 hours). Using the updated wage estimate described above, we estimate this to represent a cost increase of \$2,451 (\$36.58 hourly wage × 67 annual hours) across up to 100 hospitals voluntarily participating in reporting for the Hybrid HWR measure. We note that the claims-based version of the Hospital-Wide All-Cause Unplanned Readmission measure is currently a part of the Hospital IQR Program measure set, as adopted in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53530).

f. Burden Estimate for the Refinement of the HCAHPS Survey Measure for the FY 2020 Payment Determination and Subsequent Years

In section IX.A.6.a. of the preamble of this final rule, we are finalizing our

proposal to update the HCAHPS survey measure (OMB control number 0938–0981) by replacing the current set of three Pain Management questions (HCAHPS Q12, Q13, and Q14) with new questions referred to collectively as the “Communication About Pain” composite measure beginning with the FY 2020 payment determination. There is no additional information collection burden associated with the refinement of these questions because we are rewording the existing questions and not changing the total number of questions.

g. Burden Estimate for the Refinement of the Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Acute Ischemic Stroke Measure for the FY 2023 Payment Determination and Subsequent Years

In section IX.A.6.b. of the preamble of this final rule, we are finalizing our proposal to refine the Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Acute Ischemic Stroke measure to include the use of NIH stroke scale claims data for risk adjustment beginning with the FY 2023 payment determination. Because this refinement will result only in the inclusion of additional claims-based data that are already reported to the Medicare program for payment purposes, we believe no additional burden on hospitals will result from the update to the stroke mortality measure.

h. Burden Estimate for the Changes to the Hospital IQR Program Extraordinary Circumstances Exceptions (ECE) Policy for the FY 2020 Payment Determination and Subsequent Years

In section IX.A.15.b. of the preamble of this final rule we discuss our alignment of the naming of this exception policy and update to 42 CFR 412.140 to reflect our current ECE policies. We also are clarifying the timing of CMS’ response to ECE requests. Because we are not seeking

any new or additional information in our ECE finalized proposals, we believe the updates will have no effect on burden for hospitals.

i. Summary of Burden Estimates for the Hospital IQR Program

In summary, under OMB control number 0938–1022, we estimate: (1) A burden reduction of 15,400 hours (– 15,400 hours due to the finalized modifications to the CY 2017 reporting period/FY 2019 payment determination eCQM reporting requirements) and a total cost reduction of \$563,332 (– 15,400 hours × \$36.58 per hour) for the FY 2019 payment determination; (2) a burden reduction of 21,733 hours (– 15,400 hours due to the finalized modifications to the CY 2018 eCQM reporting requirements for the CY 2018 reporting period/FY 2020 payment determination – 6,400 hours due to the finalized modifications to the eCQM data validation process for the FY 2020 payment determination + 67 hours for the voluntary reporting of the Hybrid HWR measure) and a total cost reduction of \$794,993 (– 21,733 hours × \$36.58 per hour) for the FY 2020 payment determination; and (3) a burden reduction of 6,400 hours (– 6,400 hours due to the finalized modifications to eCQM validation process for the FY 2021 payment determination) and a total cost reduction of \$234,112 (– 6,400 hours × \$36.58 per hour) for the FY 2021 payment determination. We therefore estimate a total burden reduction of 43,533 hours and \$1,592,437 across all hospitals as a result of the finalized proposals in this final rule. These are the burden estimate updates for which we are requesting OMB approval under OMB number 0938–1022.

HOSPITAL IQR PROGRAM CY 2017 REPORTING PERIOD/FY 2019 PAYMENT DETERMINATION BURDEN ESTIMATES

Activity	Annual recordkeeping and reporting requirements under OMB control number 0938–1022 for CY 2017 reporting period/FY 2019 payment determination							
	Estimated time per record (minutes)	Number reporting quarters per year	Number of IPPS hospitals reporting	Average number records per hospital per quarter	Annual burden (hours) per hospital	Newly finalized annual burden (hours) across IPPS hospitals	Previously finalized annual burden (hours) across IPPS hospitals	Net difference in annual burden hours
Reporting on 4 eCQMs for 1 Quarter.	40 (10 minutes × 4 measures).	1	3,300	1	0.67	2,200	17,600	– 15,400
Total Change in Burden Hours: – 15,400 Total Cost Estimate: Updated Hourly Wage (\$36.58) × Change in Burden Hours (– 15,400) = – \$563,332								

HOSPITAL IQR PROGRAM CY 2018 REPORTING PERIOD/FY 2020 PAYMENT DETERMINATION BURDEN ESTIMATES

Activity	Annual recordkeeping and reporting requirements under OMB control number 0938-1022 for CY 2018 reporting period/FY 2020 payment determination								
	Estimated time per record (minutes)	Number reporting quarters per year	Number of IPPS hospitals reporting	Average number records per hospital per quarter	Annual burden (hours) per hospital	Newly finalized annual burden (hours) across IPPS hospitals	Previously finalized annual burden (hours) across IPPS hospitals	Net difference in annual burden hours	
Reporting on 4 eCQMs for 1 Quarter.	40 (10 minutes × 4 measures).	1	3,300	1	0.67	2,200	17,600	-15,400	
FY 2020 eCQM Data Validation.	80	1	200	8	10.67	2,133	8,533	-6,400	
Hybrid Hospital-Wide 30-Day Readmission Measure Voluntary Reporting.	10	4	100	1	0.67	67	0	67	
Total Change in Burden Hours: -21,733 Total Cost Estimate: Updated Hourly Wage (\$36.58) × Change in Burden Hours (-21,733) = -\$794,993									

HOSPITAL IQR PROGRAM CY 2019 REPORTING PERIOD/FY 2021 PAYMENT DETERMINATION BURDEN ESTIMATES

Activity	Annual recordkeeping and reporting requirements under OMB control number 0938-1022 for CY 2019 reporting period/FY 2021 payment determination								
	Estimated time per record (minutes)	Number reporting quarters per year	Number of IPPS hospitals reporting	Average number records per hospital per quarter	Annual burden (hours) per hospital	Newly finalized annual burden (hours) across IPPS hospitals	Previously finalized annual burden (hours) across IPPS hospitals	Net difference in annual burden hours	
FY 2021 eCQM Data Validation.	80	1	200	8	10.67	2,133	8,533	-6,400	
Total Change in Burden Hours: -6,400 Total Cost Estimate: Updated Hourly Wage (\$36.58) × Change in Burden Hours (-6,400) = -\$234,112									

We received the following public comment regarding our burden estimates.

*Comment:* One commenter objected to the notion that reporting eCQMs for the Hospital IQR Program measures could be accomplished by staff with a mean hourly wage of \$16.42 per hour. The commenter encouraged CMS to reevaluate this calculation and utilize the salary surveys by professional organizations like the Health Information Management System Society (HIMSS).

*Response:* As we noted in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20149), we acknowledge that more recent wage data have become available from the Bureau of Labor and Statistics (BLS),<sup>513</sup> and we have updated the Hospital IQR Program wage estimate above using these updated data in this final rule. We believe the BLS is the most appropriate source of these data, because the BLS collects a far greater volume of employment and wage data through its surveys than other sources such as the HIMSS Compensation

Survey.<sup>514</sup> In addition, the HIMSS Compensation Survey is a proprietary tool intended to assist health information technology professionals compare salaries and compensation packages, whereas the BLS is intended to provide a large-scale survey of national employment statistics. HIMSS does not suggest what level employee would likely be doing this work; we note that while the HIMSS Compensation Survey 2015 provides overall salary data, it does not explicitly state, or provide granular enough employee groupings to be able to determine which level of employee would likely be doing this work. We utilized data from the BLS since we could ascertain a specific wage rate for the associated position of a person doing this work. We will continue to evaluate the appropriateness of using the BLS wage rate in future years.

4. ICRs for PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program

As discussed in sections IX.B. of the preambles of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20075 through 20086) and this final rule,

section 1866(k)(1) of the Act requires, for purposes of FY 2014 and each subsequent fiscal year, that a hospital described in section 1886(d)(1)(B)(v) of the Act (a PPS-exempt cancer hospital, or a PCH) submit data in accordance with section 1866(k)(2) of the Act with respect to such fiscal year. There is no financial impact to PCH Medicare reimbursement if a PCH does not participate.

We refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50957 through 50959), the FY 2015 IPPS/LTCH PPS final rule (79 FR 50347 through 50348), the FY 2016 IPPS/LTCH PPS final rule (80 FR 49764), and the FY 2017 IPPS/LTCH PPS final rule (81 FR 57182), as well as to OMB Control Number 0938-1175, for a detailed discussion of the burden related to the program requirements that we have previously adopted. Below we discuss only changes in burden that will result from the policies we are finalizing in this final rule.

a. Estimated Hourly Labor Cost

Previously, we used \$66 as our hourly labor cost in calculating the burden associated with chart-abstraction activities in the PCHQR Program. However, our experience working with our data analysis contractors and those

<sup>513</sup> Occupational Employment and Wages, May 2016. Available at: <https://www.bls.gov/oes/current/oes292071.htm>.

<sup>514</sup> 2015 HIMSS Salary Calculator & Compensation Survey. Available at: <http://www.himss.org/compensationSurvey>.

performing chart abstraction indicates that this work is performed by a different labor category than we previously thought. In addition, our previous labor costs are different from those used in other quality reporting and value-based purchasing programs, and we do not believe there is a justification for these different values given the similarity in quality measures and required staff. Therefore, to align the estimated hourly labor costs (hourly wage plus fringe and overhead, as discussed below) used to calculate burden in the PCHQR Program with those used in other CMS quality reporting programs, including the Hospital IQR Program, we are finalizing our proposal to revise our hourly labor cost estimate to \$36.58 (\$32.84<sup>515</sup> with a modification) which incorporates hourly wage plus fringe benefits and overhead costs.

This labor cost is based on the May 2016 BLS wage for a Medical Records and Health Information Technician. The BLS is “the principal Federal agency responsible for measuring labor market activity, working conditions, and price changes in the economy.”<sup>516</sup> The BLS describes Medical Records and Health Information Technicians as those responsible for organizing and managing health information data; therefore, we believe it is reasonable to assume that these individuals will be tasked with abstracting clinical data for submission for the PCHQR Program. According to the BLS, the median pay for Medical Records and Health Information Technicians which we used in the proposed rule was \$16.42 per hour, before inclusion of overhead and fringe benefits. However, we have learned that the BLS has updated the median pay for Medical Records and Health Information Technicians to \$18.29 per hour, before inclusion of overhead and fringe benefits. We used this updated estimate for this final rule.

Obtaining data on overhead costs is challenging because overhead costs vary across PCHs, and cost elements assigned as “indirect” or “overhead” costs, as opposed to direct costs or employee wages, are subject to interpretation at the facility level. Therefore, we are finalizing our proposal to calculate the cost of overhead, including fringe benefits, at 100 percent of the median hourly wage, as is currently done in other CMS quality reporting programs.<sup>517</sup> This is necessarily a rough

adjustment, both because fringe benefits and overhead costs vary significantly from employer to employer and because methods of estimating these costs vary widely from study to study. Nonetheless, we believe that doubling the updated hourly wage rate ( $\$18.29 \times 2 = \$36.58$ ) to estimate total cost is a reasonably accurate estimation method. Accordingly, we are finalizing, with a modification to update the hourly labor cost, our proposal to use an hourly labor cost estimate of \$36.58 (\$18.29 base salary + \$18.29 fringe and overhead) for calculation of burden forthwith. We again note that because more recent wage data has become available, we are updating the wage rate used in these calculations in this FY 2018 IPPS/LTCH PPS final rule.

We did not receive any public comments on this proposal.

#### b. Estimated Burden of PCHQR Program Finalized Proposals for the FY 2020 Program Year

In section IX.B.4. of the preamble of this final rule, we are finalizing our proposals to adopt four claims-based measures beginning with the FY 2020 program: (1) Proportion of Patients Who Died from Cancer Receiving Chemotherapy in the Last 14 Days of Life (NQF #0210); (2) Proportion of Patients Who Died from Cancer Admitted to the ICU in the Last 30 Days of Life (NQF #0213); (3) Proportion of Patients Who Died from Cancer Not Admitted to Hospice (NQF #0215); and (4) Proportion of Patients Who Died from Cancer Admitted to Hospice for Less Than Three Days (NQF #0216).

In conjunction with these finalized policies, in section IX.B.3.b. of the preamble of this final rule, we are finalizing the removal of three existing chart-abstracted measures beginning with the FY 2020 program—(1) Adjuvant Chemotherapy is Considered or Administered Within 4 Months (120 Days) of Diagnosis to Patients Under the Age of 80 with AJCC III (Lymph Node Positive) Colon Cancer (PCH-01/NQF #0223); (2) Combination Chemotherapy is Considered or Administered Within 4 Months (120 Days) of Diagnosis for Women Under 70 with AJCC T1c, or Stage II or III Hormone Receptor Negative Breast Cancer (PCH-02/NQF #0559); and (3) Adjuvant Hormonal Therapy (PCH-03/NQF #0220)). Therefore, the PCHQR Program measure set will consist of 18 measures for the FY 2020 program.

Our finalized policy to remove the three chart-abstracted measures will reduce the burden associated with quality data reporting on PCHs. We relied on the estimates finalized in the

FY 2013 IPPS/LTCH PPS final rule to estimate the reduction in burden because the measures we proposed to remove were adopted in the FY 2013 IPPS/LTCH PPS final rule, and the burden estimates for these chart-abstracted measures have not been amended since their introduction. The burden associated with these reporting requirements is currently under OMB Control Number 0938-1175. Therefore, based on the FY 2013 IPPS/LTCH PPS final rule (77 FR 53667) finalized estimates of the burden of collecting measure information, submitting measure information, and training personnel, we estimate the reduction in burden for collecting measure information, submitting measure information, and training personnel provided by the removal of the three measures to be approximately 3,776 hours per year for each PCH, or an average reduction in burden of 315 hours per month per PCH. Therefore, we estimate a reduction in hourly burden of chart abstraction and data submission of approximately 41,537 hours per year across the 11 PCHs.<sup>518</sup>

We do not anticipate any increase in burden on the PCHs corresponding to our finalized policy to adopt four claims-based measures into the PCHQR Program beginning with the FY 2020 program year. The four measures are claims-based and therefore do not require facilities to report any additional data. Because these measures do not require facilities to submit any additional data, we do not believe that there is any increase in burden associated with this proposal.

In summary, as a result of our finalized policies, we estimate a reduction of 41,537 hours of burden per year associated with the proposals above for all 11 PCHs beginning with the FY 2020 program. Coupled with our updated estimated salary costs, we estimate that these proposed changes will result in a reduction in annual labor costs of \$1,519,427 (41,537.1 hours  $\times$  \$36.58 hourly labor cost) across the 11 PCHs beginning with the FY 2020 PCHQR Program. The burden associated with these reporting requirements is currently under OMB Control Number

<sup>518</sup> In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53667), we originally calculated the burden for reporting the three chart-abstracted cancer measures and two NHSN CDC measures (CLABSI and CAUTI) at approximately 6,293.5 hours annually for each PCH, or 69,228.5 burden hours annually for all 11 PCHs. To calculate the reduction in burden achieved by removing three of these five measures, we multiplied the annual burden by 11 (the number of PCHs), divided by 5 (the total number of measures making up the burden estimate), and multiplied the result by 3 (the total number of measures being removed).

<sup>515</sup> <https://www.bls.gov/oes/2012/may/oes292071.htm>.

<sup>516</sup> <http://www.bls.gov/bls/infhome.htm>.

<sup>517</sup> See, for example, FY 2016 IPPS/LTCH PPS final rule (80 FR 49764 FN 153).

0938–1175. The information collection will be revised and submitted to OMB.

#### 5. ICRs for the Hospital Value-Based Purchasing (VBP) Program

In section V.J. of the preambles of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19968 through 19986) and this final rule, we discuss proposed and newly finalized requirements for the Hospital VBP Program. Specifically, in this final rule, with respect to quality measures, we are finalizing our proposals to: (1) Remove the current Patient Safety for Selected Indicators (PSI 90) measure beginning with the FY 2019 program year; (2) adopt the Hospital-Level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Pneumonia (PN Payment) measure beginning with the FY 2022 program year; and (3) adopt the Patient Safety and Adverse Events (Composite) (NQF #0531) (modified PSI 90) beginning with the FY 2023 program year.

As required under section 1886(o)(2)(A) of the Act, Hospital VBP Program measures, including the finalized additional and updated measures, are used in the Hospital IQR Program. Therefore, their inclusion in the Hospital VBP Program does not result in any additional burden because the Hospital VBP Program uses data that are required for and collected under the Hospital IQR Program. Therefore, the burden associated with these reporting requirements is currently approved under OMB Control Number 0938–1022.

#### 6. ICRs for the Long-Term Care Hospital Quality Reporting Program (LTCH QRP)

As discussed in section IX.C.7.a. of the preamble of this final rule, we are finalizing our proposals to replace the current pressure ulcer measure beginning with the FY 2020 LTCH QRP and adopt two new measures also beginning with the FY 2020 LTCH QRP.

#### LTCH QRP QUALITY MEASURES NEWLY FINALIZED IN THIS FY 2018 IPPS/LTCH PPS FINAL RULE BE- GINNING WITH THE FY 2020 LTCH QRP

---

##### Measure title

---

Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury.  
Compliance with Spontaneous Breathing Trial (SBT) by Day 2 of the LTCH Stay.  
Ventilator Liberation Rate.

---

The LTCH QRP measure set also currently includes claims-based measures that are calculated based on data that LTCHs are already required to

report to the Medicare program for payment purposes. In this final rule, we are finalizing our proposal to remove the All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs (NQF #2512) from the LTCH QRP measure set, beginning with the FY 2019 LTCH QRP. However, because LTCHs will still be required to report data on this measure for payment purposes, we believe that the removal of this measure will not affect the burden estimate for the LTCH QRP.

The LTCH CARE Data Set Version 3.00 was implemented April 1, 2016 and is approved under OMB control number 0938–1163. The LTCH CARE Data Set Version 3.00 is available on the LTCH QRP Web site at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-CARE-Data-Set-and-LTCH-QRP-Manual.html>. For a discussion of burden related to LTCH CARE Data Set Version 3.00, we refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 57339 through 57341).

The LTCH CARE Data Set Version 4.00 will be effective July 1, 2018, as discussed in section IX.C.11.d. of the preamble of the proposed rule. The associated burden for the Drug Regimen Review Conducted with Follow-Up for Identified Issues-PAC LTCH QRP quality measure was finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57219 through 57223).

In this final rule, we are finalizing our proposals to adopt three measures: Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury; and two new measures related to ventilator weaning, Compliance with SBT by Day 2 of the LTCH Stay and Ventilator Liberation Rate.

Adoption of the proposed pressure ulcer measure, Change in Skin Integrity Post-Acute Care: Pressure Ulcer Injury, to replace the current pressure ulcer measure, Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), will result in the removal of some data elements related to pressure ulcer assessment that we believe are duplicative or no longer necessary. As a result, the estimated burden and cost for LTCHs to report the measure we are finalizing in this final rule will be reduced from the burden and cost to report the current measure. Specifically, we believe that there will be a 3-minute reduction in clinical staff time to report data. We estimate 146,592 discharges from 426 LTCHs annually. This equates to a decrease of 7,330 hours in burden for all LTCHs (0.05 hours × 146,592 discharges). Given 3 minutes of RN time

at \$69.40 per hour completing an average of 344 sets of LTCH CARE Data Set assessments per provider per year, we estimated the total cost will be reduced by \$1,194.07 per LTCH annually, or \$508,674 for all LTCHs annually. This decrease in burden will be accounted for in the information collection under OMB control number (0938–1163).

We estimate the additional data elements for the newly finalized Compliance with SBT by Day 2 of the LTCH Stay quality measure will take 1.5 minutes of clinical staff time to report data on admission. We believe that the additional LTCH CARE Data Set items we are finalizing will be completed by registered nurses and respiratory therapists (RT). Individual LTCHs determine the staffing resources necessary. We estimate 146,592 discharges from 426 LTCHs annually. This equates to an increase of 3,665 hours in burden for all LTCHs (0.025 hours × 146,592 discharges). Given 0.75 minutes of RN time at \$69.40 per hour and 0.75 minutes of RT time at \$58.30 per hour completing an average of 344 sets of LTCH CARE Data Set assessments per provider per year, we estimated the total cost will be increased by \$549.29 per LTCH annually, or \$233,997 for all LTCHs annually. This increase in burden will be accounted for in the information collection under OMB control number (0938–1163).

We estimate the additional elements for the newly finalized Ventilator Liberation Rate quality measure will take 2.7 minutes of clinical staff time to report data on admission and 0.3 minutes of clinical staff time to report data on discharge, for a total of 3 minutes. We believe that the additional LTCH CARE Data Set items we are finalizing will be completed by registered nurses and respiratory therapists. Individual LTCHs determine the staffing resources necessary. We estimate 146,592 discharges from 426 LTCHs annually. This equates to an increase of 7,330 hours in burden for all LTCHs (0.05 hours × 146,592 discharges). Given 2.85 minutes of RN time at \$69.40 per hour and 0.15 minutes of respiratory therapist (RT) time at \$58.30 per hour completing an average of 344 sets of LTCH CARE Data Set assessments per provider per year, we estimated the total cost will be increased by \$1,184.52 per LTCH annually, or \$504,606 for all LTCHs annually. This increase in burden will be accounted for in the information collection under OMB control number (0938–1163).

We are finalizing our proposal to remove the program interruption items from the LTCH CARE Data Set. Specifically, we are finalizing our proposal to remove the following items: (1) A2500, Program Interruption(s); (2) A2510, Number of Program Interruptions During This Stay in This Facility; and (3) A2525, Program Interruption Dates, because we do not currently utilize this information nor do we have plans to utilize this information for the LTCH QRP. As a result, the estimated burden and cost for LTCHs will be reduced. Specifically, we believe that there will be a 3.6 minute reduction in clinical staff time to report data. We estimate 146,592 discharges from 426 LTCHs annually. This equates to a decrease of 8,796 hours in burden for all LTCHs (0.06 hours  $\times$  146,592 discharges). Given 3.6 minutes of RN time at \$69.40 per hour completing an average of 344 sets of LTCH CARE Data Set assessments per provider per year, we estimated the total cost will be reduced by \$1,432.89 per LTCH annually, or \$610,409 for all LTCHs annually. This decrease in burden will be accounted for in the information collection under OMB control number (0938–1163).

Also, in section IX.C.10. of the preamble of this final rule, we are finalizing standardized patient assessment data proposals with respect to the Functional Status and Medical Condition and Comorbidity categories. All of the data elements are already included on the LTCH CARE Data Set, and therefore our finalized proposal to characterize those data elements as standardized patient assessment data will not result in an additional reporting burden for LTCHs.

We are not finalizing our proposals to adopt 25 new standardized patient assessment data elements with respect to LTCH admissions and 17 new standardized patient assessment data elements with respect to LTCH discharges. In the FY 2018 IPPS/LTCH PPS proposed rule (81 FR 20225 through 20226), we discussed that our burden estimates for these proposals were estimated at an additional \$4,080.30 per LTCH annually, or \$1,738,206 for all LTCHs annually. Because we are not finalizing the proposals, this results in a burden reduction from what was proposed.

In summary, the 4.5-minute increase in burden for the two finalized ventilator weaning quality measures is offset by the 3 minute reduction in burden for the finalized pressure ulcer quality measure and the 3.6 minute reduction in burden for the program interruption items. This results in a net

reduction in burden of 2.1 minutes. Overall, this results in a net decrease in cost associated with the finalized changes to the LTCH QRP, which we estimate to be reduced by \$893.14 per LTCH annually, or \$380,480 for all LTCHs annually.

The finalized LTCH CARE Data Set Version 4.00 is available on the LTCH QRP Web site at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-CARE-Data-Set-and-LTCH-QRP-Manual.html>.

Under section 1899B(m) of the Act, the Paperwork Reduction Act does not apply to the specific changes to the collections of information described in this final rule. While the reporting of data on quality measures is an information collection, we believe that the burden associated with modifications to the LTCH CARE Data Set discussed in this final rule fall under the PRA exceptions provided in 1899B(m) of the Act because they are required to achieve the standardization of patient assessment data. Section 1899B(m) of the Act provides that the PRA does not apply to section 1899B and the sections referenced in section 1899B(a)(2)(B) of the Act that require modification to achieve the standardization of patient assessment data. We are, however, setting out the burden as a courtesy to advise interested parties of the proposed actions' time and costs and we also refer readers to section I.M. of Appendix A of the preamble of this final rule. The requirement and burden will be submitted to OMB for review and approval when the modifications to the LTCH CARE Data Set are not used to achieve standardization and are not exempt from the requirements under section 1899B(m) of the Act.

For a discussion of the revised burden calculations related to LTCH CARE Data Set Version 4.00, and our discussion and response to public comments we received on these information collection requirements, we refer readers to section I.M. of Appendix A of the preamble of this final rule.

#### 7. ICRs for the Inpatient Psychiatric Facility Quality Reporting (IPFQR) Program

We refer readers to the FY 2015 IPF PPS final rule (79 FR 45978 through 45980), the FY 2016 IPF PPS final rule (80 FR 46720 through 46721), and the FY 2017 IPPS/LTCH PPS final rule (81 FR 57265 through 57266) for a detailed discussion of the burden for the program requirements that we have previously adopted. Additional information on the full burden of

existing requirements can also be found in the information collection approved under OMB Control number 0938–1171. In section IX.D. of the preambles of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20120 through 20130) and this final rule, we discuss and finalize provisions that affect the FY 2019 payment determination (through procedural requirements that occur in FY 2018). We are not finalizing the adoption of the Medication Continuation following Inpatient Psychiatric Discharge measure for the FY 2020 payment determination and subsequent years. ICRs associated with finalized proposals for each period are discussed in more detail below.

#### a. Burden Associated With Finalized Procedural Proposals for the FY 2019 Payment Determination and Subsequent Years

In this final rule, we are finalizing: (1) Proposed updates to the Extraordinary Circumstances Exception (ECE) process (affecting submission of ECE requests in FY 2018, which will impact payment determination year FY 2019 and subsequent years); (2) proposals to adopt measure removal factors, including criteria for determining when a measure is “topped-out,” and measure retention factors (which will take effect immediately following the finalization of this rule for updates to be proposed through future rulemaking); and (3) changes associated with procedural deadlines (which affect the FY 2019 payment determination and subsequent years).

First, for the ECE proposals, we are specifically finalizing our proposals to: (1) Specify that ECE forms may be signed by either the CEO or the designated personnel as listed in the contact information section of the form; (2) change the ECE request form submission deadline to within 90 days of the date that the extraordinary circumstance occurred; and (3) state that we will strive to complete our review of ECE requests within 90 days of receipt. These changes to the ECE process will not change data submission requirements for facilities requesting ECEs, but update procedural requirements related to ECE requests instead. Therefore, we do not expect any changes to burden associated with these proposals.

Second, the finalized proposal to adopt measures removal and retention factors does not affect the data submission requirements. These factors are intended to improve transparency of our measure review and evaluation process.

Third, for the procedural deadlines, we are finalizing our proposals to: (1) Change the submission deadline such that facilities have a 45-day submission period beginning at least 30 days following the end of the data collection period for a measure; (2) change the submission timeframes for both NOPs and withdrawals to the end of the data submission period before each respective payment determination year; and (3) provide exact dates that define the end of the data submission period/ NOP/withdrawal submission deadline through subregulatory means. These finalized proposals do not affect the data that a facility must submit; instead, these proposals affect the specification of timeframes.

Because none of the policies that we are finalizing for FY 2018 and subsequent years affects the data that IPFs are required to submit, we do not believe there will be any change in burden as compared to the burden finalized in prior rulemakings, which is described in more detail in the FY 2015 IPF PPS final rule (79 FR 45978 through 45980), the FY 2016 IPF PPS final rule (80 FR 46720 through 46721), and the FY 2017 IPPS/LTCH PPS final rule (81 FR 57265 through 57266) and in the information collection previously approved under OMB Control number 0938-1171.

#### b. Burden Associated With the FY 2020 Payment Determination and Subsequent Years

For FY 2020 and subsequent years, we are not finalizing our proposal to adopt one measure, Medication Continuation following Inpatient Psychiatric Discharge.

#### 8. ICRs for the Electronic Health Record (EHR) Incentive Programs and Meaningful Use

In section IX.E. of the preambles of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20130 through 20133) and this final rule, we discuss proposed and newly finalized policies for eligible hospitals and CAHs reporting CQMs electronically under the Medicare and Medicaid EHR Incentive Programs in 2017 and 2018. As outlined in this final rule, we are finalizing modifications to our proposals and making the following modifications to the CY 2017 final CQM policies: (1) Revise the CY 2017 reporting period for eligible hospitals and CAHs reporting CQMs electronically to require the submission of one self-selected quarter of data; and (2) revise the number of CQMs eligible hospitals and CAHs are required to report electronically for CY 2017 to 4 (self-selected) available CQMs.

In addition, we are finalizing modifications to our proposals that adopt the following CQM reporting requirements for CY 2018: (1) For eligible hospitals and CAHs reporting CQMs electronically that demonstrate meaningful use for the first time in 2018 or that have demonstrated meaningful use in any year prior to 2018, the reporting period will be one, self-selected quarter of data from CY 2018 with a submission period (Medicare EHR Incentive Program only) consisting of the 2 months following the close of the calendar year, ending on February 28, 2019; (2) eligible hospitals and CAHs reporting CQMs electronically are required to report at least 4 (self-selected) of the available CQMs; (3) eligible hospitals and CAHs that report CQMs by attestation under the Medicare EHR Incentive Program because electronic reporting is not feasible, and eligible hospitals and CAHs that report CQMs by attestation under their State's Medicaid EHR Incentive Program, will be required to report on all 16 available CQMs; and (4) eligible hospitals and CAHs reporting CQMs by attestation under the Medicare EHR Incentive Program will have a submission period that will be the 2 months following the close of the CY 2018 CQM reporting period, ending February 28, 2019.

Because the finalized reporting requirements for data collection regarding the reporting of CQMs electronically under the Medicare and Medicaid EHR Incentive Programs will align with the reporting requirements under the Hospital IQR Program, we do not believe that there is any additional burden for the collection of such information. We did not propose modifications for the CQMs reporting requirements by attestation in this section. Therefore, no change in burden associated with attestation of CQMs will result from this section.

In section IX.F. of the preamble of this final rule, we discuss newly finalized policies regarding clinical quality measurement for EPs participating in the Medicaid EHR Incentive Program. We note that there may be costs incurred by States associated with systems development as a result of the newly finalized policies. State attestation systems will likely require minor updates, which may be eligible for support through enhanced Federal funding, subject to CMS prior approval, if outlined in an updated Implementation Advance Planning Document (IAPD). We anticipate that EPs may also face minor burden and incremental capital cost for updating clinical quality measures and reporting capabilities in the EHR. We intend to

reduce EP burden and simplify the program through these newly finalized policies, which are intended to better align CQM reporting periods and CQM reporting for the Medicaid EHR Incentive Program with policies under MIPS. Overall, we believe the newly finalized CQM alignment at the State attestation system and EP levels will both reduce burden associated with reporting on multiple CMS programs and enhance state and CMS operational efficiency.

In section IX.G.1. of the preamble of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20135 through 20136) and IX.G.2. of the preamble of this final rule, we discuss our proposed and newly finalized policy which changes the EHR reporting period in 2018 from the full CY 2018 to any continuous 90-day period within CY 2018 for all new and returning EPs, eligible hospitals and CAHs attesting to meaningful use in the Medicare and Medicaid EHR Incentive Programs. We do not believe that modifying the EHR reporting period for attestation will cause an increase in burden as the reporting requirements for a 90-day EHR reporting period are virtually the same as for a full calendar year EHR reporting period and the same objectives and measures will be used for attestation for a full calendar year EHR reporting period or a 90-day EHR reporting period.

In section IX.G.2. of the preamble of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20136 through 20138) and IX.G.3. of the preamble of this final rule, as required by the 21st Century Cures Act (Pub. L. 114-255), we discuss and finalize our proposal for an exemption from the payment adjustments under sections 1848(a)(7)(A), 1886(b)(3)(B)(ix)(I), and 1814(l)(4) of the Act for EPs, eligible hospitals and CAHs, respectively, that demonstrate through an application process that compliance with the requirement for being a meaningful EHR user is not possible because their certified EHR technology has been decertified under ONC's Health IT Certification Program. The application process involves participants completing an application form for an exception. While the form is standardized, we believe it is exempt from the PRA. The form is structured as an attestation. Therefore, we believe it is exempt under 5 CFR 1320.3(h)(1) of the implementing regulations of the PRA. The form is an attestation that imposes no burden beyond what is required to provide identifying information and to attest to the applicable information.

In section IX.G.3. of the preamble of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20138 through 20139) and

IX.G.4. of the preamble of this final rule, as required by the 21st Century Cures Act, we discuss and finalize our proposal to exempt ambulatory surgical center-based EPs from the 2017 and 2018 payment adjustments under section 1848(a)(7)(A) of the Act if they furnish substantially all of their covered professional services in an ambulatory surgical center. We do not believe this requirement will cause an increase in burden as CMS will identify the EPs who might meet this requirement. We did not receive any public comments regarding this information collection. For the expected effects relating to the above proposals, we refer readers to section I.O. of Appendix A of this final rule.

#### 9. ICRs Relating to Electronic Signature and Electronic Submission of the Certification and Settlement Summary Page of Medicare Cost Reports

In section X.A. of the preambles of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20139 through 20142) and this final rule, we discuss and finalize our proposal to allow providers to use an electronic signature on the certification statement of the Certification and Settlement Summary page of the Medicare cost report and submit it electronically. The Certification and Settlement Summary page, which contains the required provider signature line, currently exists in the Medicare cost report and is mailed to the contractor from the provider. We are finalizing our proposal to allow providers the option to sign and submit this page electronically. The signature from the provider's administrator or chief financial officer is an existing data collection requirement. There will be no new data collection from providers resulting from our new policy. The policy, which allows providers to sign this page electronically, is not a substantive change to the existing data collection instrument and would have a minimal impact on providers to complete. As discussed in section I.P. of Appendix A of this final rule, we estimate that this finalized proposal will collectively save these providers approximately \$362,000 in postage costs.

#### 10. ICRs Relating to Changes in Public Notices of Terminations

In section XI.B. of the preambles of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20145 through 20146) and this final rule, we discuss and finalize our proposal to no longer require the posting of voluntary and involuntary termination public notice in newspapers for RHCs, FQHCs, ASCs, and OPOs.

These providers and suppliers will be permitted to use other methods of notification in light of the expanded use of information technology. In this final rule, we also are finalizing our proposal to change the regulations regarding termination of provider agreements by CMS (that is, involuntary termination) or providers or suppliers to remove the provision for public notice through "newspapers" to allow flexibility in the method of public notice.

We believe none of the provisions would have a financial burden as we are only eliminating the specification which requires newspaper hard print to be the notice source. We refer readers to the economic impact provisions of section I.Q. of Appendix A of this final rule for additional information.

#### List of Subjects

##### 42 CFR Part 405

Administrative practice and procedure, Health facilities, Health professions, Kidney diseases, Medicare, Reporting and recordkeeping, Rural areas, X-rays.

##### 42 CFR Part 412

Administrative practice and procedure, Health facilities, Medicare, Puerto Rico, Reporting and recordkeeping requirements.

##### 42 CFR Part 413

Health facilities, Kidney diseases, Medicare, Puerto Rico, Reporting and recordkeeping requirements.

##### 42 CFR Part 416

Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

##### 42 CFR Part 486

Grant programs—health, Health facilities, Medicare, Reporting and recordkeeping requirements, X-ray.

##### 42 CFR Part 488

Administrative practice and procedure, Health facilities, Medicare, Reporting and recordkeeping requirements.

##### 42 CFR Part 489

Health facilities, Medicare, Reporting and recordkeeping requirements.

##### 42 CFR Part 495

Administrative practice and procedure, Electronic health records, Health facilities, Health professions, Health maintenance organizations (HMO), Medicaid, Medicare, Penalties, Privacy, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble of this final rule, the Centers for Medicare and Medicaid Services is amending 42 CFR Chapter IV as set forth below:

#### PART 405—FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED

- 1. The authority citation for part 405 is revised to read as follows:

**Authority:** Secs. 205(a), 1102, 1142, 1861, 1862(a), 1869, 1871, 1874, 1881, and 1886(k) of the Social Security Act (42 U.S.C. 405(a), 1302, 1320b–12, 1395x, 1395y(a), 1395ff, 1395hh, 1395kk, 1395rr, and 1395ww(k)), and sec. 353 of the Public Health Service Act (42 U.S.C. 263a).

- 2. Section 405.2404 is amended by revising paragraph (d) introductory text to read as follows:

##### § 405.2404 Termination of rural health clinic agreements.

\* \* \* \* \*

(d) *Notice to the public.* Prompt notice of the date and effect of termination must be given to the public by either of the following:

\* \* \* \* \*

- 3. Section 405.2442 is amended by revising paragraph (a) introductory text and paragraph (b) to read as follows:

##### § 405.2442 Notice to the public.

(a) When the FQHC voluntarily terminates the agreement and an effective date is set for the termination, the FQHC must notify the public in the area serviced by the FQHC prior to a prospective effective date or on the actual day that business ceases, if no prospective date of termination has been set. The notice must include—

\* \* \* \* \*

(b) When CMS terminates the agreement, CMS will notify the public in the area serviced by the FQHC.

#### PART 412—PROSPECTIVE PAYMENT SYSTEMS FOR INPATIENT HOSPITAL SERVICES

- 4. The authority citation for part 412 is revised to read as follows:

**Authority:** Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh); sec. 124 of Pub. L. 106–113 (113 Stat. 1501A–332); sec. 1206 of Pub. L. 113–67; sec. 112 of Pub. L. 113–93; sec. 231 of Pub. L. 114–113; and secs. 15004, 15006, 15007, 15008, 15009, and 15010 of Pub. L. 114–255.

- 5. Section 412.22 is amended by revising paragraph (e) introductory text and paragraph (e)(1)(v) introductory text and adding paragraph (i) to read as follows:

**§ 412.22 Excluded hospitals and hospital units: General rules.**

\* \* \* \* \*

(e) *Hospitals-within-hospitals.* A hospital-within-a-hospital is a hospital that occupies space in a building also used by another hospital, or in one or more separate buildings located on the same campus as buildings used by another hospital. Prior to October 1, 2017, except as provided in paragraphs (e)(1)(vi) and (f) of this section, a hospital-within-a-hospital must meet the following criteria in order to be excluded from the prospective payment systems specified in § 412.1(a)(1). On or after October 1, 2017, except as provided in paragraphs (e)(1)(vi) and (f) of this section, a hospital-within-hospital that is excluded from the prospective payment systems specified in § 412.1(a)(1) that occupies space in a building also used by a hospital which is not excluded from the prospective payment systems specified in § 412.1(a)(1), or in one or more separate buildings located on the same campus as buildings used by a hospital not excluded from the prospective payment systems specified in § 412.1(a)(1) must meet the following criteria in order to be excluded from the prospective payment systems specified in § 412.1(a)(1).

(1) \* \* \*

(v) *Performance of basic hospital functions.* Prior to October 1, 2017, the hospital meets one of the following criteria:

\* \* \* \* \*

(i)(1) *Requirements for extended neoplastic disease care hospitals.* For cost reporting periods beginning on or after January 1, 2015, an extended neoplastic disease care hospital is a hospital that was first excluded from the prospective payment system under this section in 1986 which has an average inpatient length of stay for all patients, including both Medicare and non-Medicare inpatients, of greater than 20 days and demonstrates that at least 80 percent of its annual Medicare inpatient discharges in the 12-month cost reporting period ending in fiscal year 1997 have a principal diagnosis that reflects a finding of neoplastic disease as defined in paragraph (f)(1)(iv) of this section.

(2) *Payment to extended neoplastic disease care hospitals.* Payment for inpatient operating costs for hospitals classified under paragraph (i)(1) of this section is made as set forth in § 412.526(c)(3). Payment for capital costs for hospitals classified under paragraph (i)(1) of this section is made as set forth in § 412.526(c)(4).

■ 6. Section 412.23 is amended by revising paragraphs (e)(2)(ii), (e)(3)(vi), and (e)(7)(iii) to read as follows:

**§ 412.23 Excluded hospitals: Classifications.**

\* \* \* \* \*

(e) \* \* \*  
(2) \* \* \*

(ii) For cost reporting periods beginning on or after August 5, 1997 and on or before December 31, 2014, a hospital that was first excluded from the prospective payment system under this section in 1986 meets the length-of-stay criterion if it has an average inpatient length of stay for all patients, including both Medicare and non-Medicare inpatients, of greater than 20 days and demonstrates that at least 80 percent of its annual Medicare inpatient discharges in the 12-month cost reporting period ending in fiscal year 1997 have a principal diagnosis that reflects a finding of neoplastic disease as defined in paragraph (f)(1)(iv) of this section.

(3) \* \* \*

(vi) For cost reporting periods beginning on or after October 1, 2015, the Medicare inpatient days and discharges that are paid at the site neutral payment rate specified at § 412.522(c)(1) or paid under a Medicare Advantage plan (Medicare Part C) will not be included in the calculation of the Medicare inpatient average length of stay specified under paragraph (e)(2)(i) of this section.

\* \* \* \* \*

(7) \* \* \*

(iii) April 1, 2014 through September 30, 2017—The number of Medicare-certified beds in an existing long-term care hospital or an existing long-term care hospital satellite facility must not be increased beyond the number of Medicare-certified beds prior to April 1, 2014, unless one of the exceptions specified in paragraph (e)(6)(ii) of this section is met.

\* \* \* \* \*

■ 7. Section 412.64 is amended by—

- a. Revising paragraph (d)(1)(vii);
- b. Adding paragraph (d)(4)(iii);
- c. Revising paragraph (h)(4) introductory text and paragraph (h)(4)(vi) introductory text; and
- c. Revising paragraph (i)(3)(iii).

The revisions and addition read as follows:

**§ 412.64 Federal rates for inpatient operating costs for Federal fiscal year 2005 and subsequent fiscal years.**

\* \* \* \* \*

(d) \* \* \*  
(1) \* \* \*

(vii) For fiscal years 2017 and 2018, the percentage increase in the market

basket index (as defined in § 413.40(a)(3) of this chapter) for prospective payment hospitals, subject to the provisions of paragraphs (d)(2) and (3) of this section, less a multifactor productivity adjustment (as determined by CMS) and less 0.75 percentage point.

\* \* \* \* \*

(4) \* \* \*

(iii) *Exception for decertified EHR technology.* Beginning with the fiscal year 2019 payment adjustment year, the Secretary shall exempt an eligible hospital that is not a qualifying eligible hospital from the application of the reduction under paragraph (d)(3) of this section if the Secretary determines that compliance with the requirement for being a meaningful EHR user is not possible because the certified EHR technology used by the eligible hospital has been decertified under ONC's Health IT Certification Program. To be considered for an exception, an eligible hospital must submit an application, in the manner specified by CMS, demonstrating that the certified EHR technology was decertified during the 12-month period preceding the applicable EHR reporting period for the payment adjustment year, or during the applicable EHR reporting period for the payment adjustment year, and that the eligible hospital made a good faith effort to obtain another certified EHR technology for that EHR reporting period. (See § 495.4 of this chapter for definitions of payment adjustment year, EHR reporting period, and meaningful EHR user.) Applications requesting this exception must be submitted by July 1 of the year before the applicable payment adjustment year, or a later date specified by CMS. This exception is subject to annual renewal, but in no case may an eligible hospital be granted an exception under paragraph (d)(4) of this section for more than 5 years.

\* \* \* \* \*

(h) \* \* \*

(4) For discharges on or after October 1, 2004 and before October 1, 2018, CMS establishes a minimum wage index for each all-urban State, as defined in paragraph (h)(5) of this section. This minimum wage index value is computed using the following methodology:

\* \* \* \* \*

(vi) For discharges on or after October 1, 2012 and before October 1, 2018, the minimum wage index value for the State is the higher of the value determined under paragraph (h)(4)(iv) of this section or the value computed using the following alternative methodology:

\* \* \* \* \*

(i) \* \* \*

(3) \* \* \*

(iii) Any wage index adjustment made under this paragraph (i) is effective for a period of 3 fiscal years, except that hospitals in a qualifying county may elect to waive the application of the wage index adjustment. A hospital may waive the application of the wage index adjustment by notifying CMS in writing within 45 days of the date of public display of the annual notice of proposed rulemaking for the hospital inpatient prospective payment system at the Office of the Federal Register.

\* \* \* \* \*

■ 8. Section 412.87 is amended by revising paragraph (b)(2) to read as follows:

**§ 412.87 Additional payment for new medical services and technologies: General provisions.**

\* \* \* \* \*

(b) \* \* \*

(2) A medical service or technology may be considered new within 2 or 3 years after the point at which data begin to become available reflecting the inpatient hospital code (as defined in section 1886(d)(5)(K)(iii) of the Social Security Act) assigned to the new service or technology (depending on when a new code is assigned and data on the new service or technology become available for DRG recalibration). After CMS has recalibrated the DRGs, based on available data, to reflect the costs of an otherwise new medical service or technology, the medical service or technology will no longer be considered “new” under the criterion of this section.

\* \* \* \* \*

■ 9. Section 412.90 is amended by revising paragraph (j) to read as follows:

**§ 412.90 General rules.**

\* \* \* \* \*

(j) *Medicare-dependent, small rural hospitals.* For cost reporting periods beginning on or after April 1, 1990, and before October 1, 1994, and for discharges occurring on or after October 1, 1997 and before October 1, 2017, CMS adjusts the prospective payment rates for inpatient operating costs determined under subparts D and E of this part if a hospital is classified as a Medicare-dependent, small rural hospital.

\* \* \* \* \*

■ 10. Section 412.92 is amended by revising paragraph (e)(3) introductory text to read as follows:

**§ 412.92 Special Treatment: Sole community hospitals.**

\* \* \* \* \*

(e) \* \* \*

(3) Effective for cost reporting periods beginning before October 1, 2017, the intermediary determines a lump sum adjustment amount not to exceed the difference between the hospital’s Medicare inpatient operating costs and the hospital’s total DRG revenue for inpatient operating costs based on DRG-adjusted prospective payment rates for inpatient operating costs (including outlier payments for inpatient operating costs determined under subpart F of this part and additional payments made for inpatient operating costs for hospitals that serve a disproportionate share of low-income patients as determined under § 412.106 and for indirect medical education costs as determined under § 412.105). Effective for cost reporting periods beginning on or after October 1, 2017, the MAC determines a lump sum adjustment amount equal to the difference between the hospital’s fixed Medicare inpatient operating costs and the hospital’s total MS–DRG revenue based on MS–DRG-adjusted prospective payment rates for inpatient operating costs (including outlier payments for inpatient operating costs determined under subpart F of this part and additional payments made for inpatient operating costs for hospitals that serve a disproportionate share of low-income patients as determined under § 412.106 and for indirect medical education costs as determined under § 412.105) multiplied by the ratio of the hospital’s fixed inpatient operating costs to its total inpatient operating costs.

\* \* \* \* \*

■ 11. Section 412.101 is amended by revising paragraph (b)(2) introductory text and adding paragraph (e) to read as follows:

**§ 412.101 Special treatment: Inpatient hospital payment adjustment for low-volume hospitals.**

\* \* \* \* \*

(b) \* \* \*

(2) In order to qualify for this adjustment, a hospital must meet the following criteria, subject to the provisions of paragraph (e) of this section:

\* \* \* \* \*

(e) *Special treatment regarding hospitals operated by the Indian Health Service (IHS) or a Tribe.* For discharges occurring in FY 2018 and subsequent fiscal years—

(1) A hospital operated by the IHS or a Tribe will be considered to meet the applicable mileage criterion specified under paragraph (b)(2) of this section if it is located more than the specified

number of road miles from the nearest subsection (d) hospital operated by the IHS or a Tribe.

(2) A hospital, other than a hospital operated by the IHS or a Tribe, will be considered to meet the applicable mileage criterion specified under paragraph (b)(2) of this section if it is located more than the specified number of road miles from the nearest subsection (d) hospital other than a subsection (d) hospital operated by the IHS or a Tribe.

■ 12. Section 412.106 is amended by adding paragraph (g)(1)(iii)(C)(4) to read as follows:

**§ 412.106 Special treatment: Hospitals that serve a disproportionate share of low-income patients.**

\* \* \* \* \*

(g) \* \* \*

(1) \* \* \*

(iii) \* \* \*

(C) \* \* \*

(4) For fiscal year 2018, CMS will base its estimates of the amount of hospital uncompensated care on utilization data for Medicaid and Medicare SSI patients, as determined by CMS in accordance with paragraphs (b)(2)(i) and (b)(4) of this section, using data on Medicaid utilization from 2012 and 2013 cost reports from the most recent HCRIS database extract and 2012 cost report data submitted to CMS by IHS or Tribal hospitals and the most recent available 2 years of data on Medicare SSI utilization (or, for Puerto Rico hospitals, a proxy for Medicare SSI utilization data), and for hospitals other than Puerto Rico hospitals, IHS or Tribal hospitals, and all-inclusive rate providers, data on uncompensated care costs, defined as charity care costs plus non-Medicare bad debt costs from 2014 cost reports from the most recent HCRIS database extract.

\* \* \* \* \*

■ 13. Section 412.108 is amended by revising paragraph (d)(3) introductory text to read as follows:

**§ 412.108 Special treatment: Medicare-dependent, small rural hospitals.**

\* \* \* \* \*

(d) \* \* \*

(3) The intermediary determines a lump sum adjustment amount in accordance with the methodology set forth in § 412.92(e)(3).

\* \* \* \* \*

■ 14. Section 412.140 is amended by revising paragraphs (c)(2) and (d)(2) to read as follows:

**§ 412.140 Participation, data submission, and validation requirements under the Hospital Inpatient Quality Reporting (IQR) Program.**

\* \* \* \* \*

(c) \* \* \*

(2) *Extraordinary circumstances exceptions.* CMS may grant an exception with respect to quality data reporting requirements in the event of extraordinary circumstances beyond the control of the hospital. CMS may grant an exception as follows:

(i) For circumstances not relating to the reporting of electronic clinical quality measure data, a hospital participating in the Hospital IQR Program that wishes to request an exception with respect to quality data reporting requirements must submit its request to CMS within 90 days of the date that the extraordinary circumstances occurred. For circumstances relating to the reporting of electronic clinical quality measures, a hospital participating in the Hospital IQR Program that wishes to request an exception must submit its request to CMS by April 1 following the end of the reporting calendar year in which the extraordinary circumstances occurred. Specific requirements for submission of a request for an exception are available on QualityNet.org.

(ii) CMS may grant an exception to one or more hospitals that have not requested an exception if: CMS determines that a systemic problem with CMS data collection systems directly affected the ability of the hospital to submit data; or if CMS determines that an extraordinary circumstance has affected an entire region or locale.

(d) \* \* \*

(2)(i) A hospital meets the chart-abstracted validation requirement with respect to a fiscal year if it achieves a 75-percent score, as determined by CMS.

(ii) A hospital meets the eCQM validation requirement with respect to a fiscal year if it submits at least 75 percent of sampled eCQM measure medical records in a timely and complete manner, as determined by CMS.

\* \* \* \* \*

■ 15. Section 412.211 is amended by revising paragraph (f)(3)(iii) to read as follows:

**§ 412.211 Puerto Rico rates for Federal fiscal year 2004 and subsequent fiscal years.**

\* \* \* \* \*

(f) \* \* \*

(3) \* \* \*

(iii) Any wage index adjustment made under this paragraph (f) is effective for a period of 3 fiscal years, except that hospitals in a qualifying county may elect to waive the application of the wage index adjustment. A hospital may waive the application of the wage index adjustment by notifying CMS in writing within 45 days of the date of public display of the annual notice of proposed rulemaking for the hospital inpatient prospective payment system at the Office of the **FEDERAL REGISTER**.

\* \* \* \* \*

■ 16. Section 412.230 is amended by revising paragraphs (a)(3) introductory text, (a)(3)(i) and (ii), and (d)(3) to read as follows:

**§ 412.230 Criteria for an individual hospital seeking redesignation to another rural area or an urban area.**

(a) \* \* \*

(3) *Special rules for sole community hospitals and rural referral centers.* To be redesignated under the special rules in this paragraph, a hospital must be approved as a sole community hospital or a rural referral center as of the date of the MGCRB's review.

(i) A hospital that is approved as a rural referral center or a sole community hospital, or both, does not have to demonstrate a close proximity to the area to which it seeks redesignation.

(ii) If a hospital that is approved as a rural referral center or a sole community hospital, or both, qualifies for urban redesignation, it is redesignated to the urban area that is closest to the hospital or to the hospital's geographic home area. If the hospital is closer to another rural area than to any urban area, it may seek redesignation to either the closest rural area or the closest urban area.

\* \* \* \* \*

(d) \* \* \*

(3) *Rural referral center exceptions.* (i) If a hospital was ever approved as a rural referral center, it does not have to demonstrate that it meets the average hourly wage criterion set forth in paragraph (d)(1)(iii) of this section.

(ii) If a hospital was ever approved as a rural referral center, it is required to meet only the criterion that applies to rural hospitals under paragraph (d)(1)(iv) of this section, regardless of its actual location in an urban or rural area.

\* \* \* \* \*

■ 17. Section 412.273 is amended by revising paragraphs (c)(1)(ii) and (c)(2) to read as follows:

**§ 412.273 Withdrawing an application, terminating an approved 3-year reclassification, or cancelling a previous withdrawal or termination.**

\* \* \* \* \*

(c) \* \* \*

(1) \* \* \*

(ii) After the MGCRB issues a decision, provided that the request for withdrawal is received by the MGCRB within 45 days of the date that CMS' annual notice of proposed rulemaking is issued in the **Federal Register** concerning changes to the inpatient hospital prospective payment system and proposed payment rates for the fiscal year for which the application has been filed.

(2) A request for termination must be received by the MGCRB within 45 days of the date that CMS' annual notice of proposed rulemaking is issued in the **Federal Register** concerning changes to the inpatient hospital prospective payment system and proposed payment rates for the fiscal year for which the termination is to apply.

\* \* \* \* \*

■ 18. Section 412.500 is amended by adding paragraphs (a)(7) and (8) to read as follows:

**§ 412.500 Basis and scope of subpart.**

(a) \* \* \*

(7) Section 411 of Public Law 114–10 which revises the annual update to the LTCH PPS standard Federal payment rate in FY 2018.

(8) Public Law 114–255 which at—

(i) Section 15004 amended the moratorium on increasing beds in existing LTCHs and LTCH satellite facilities and amended high cost outlier payment requirements;

(ii) Section 15006 amended moratoria on certain payment policies;

(iii) Section 15007 amended the average length of stay requirements;

(iv) Section 15009 temporarily excepted certain spinal cord specialty hospitals from the site neutral payment rate; and

(v) Section 15010 temporarily excepted certain wound care discharges from certain LTCHs from the site neutral payment rate.

\* \* \* \* \*

■ 19. Section 412.522 is amended by adding paragraphs (b)(3) and (4) to read as follows:

**§ 412.522 Application of site neutral payment rate.**

\* \* \* \* \*

(b) \* \* \*

(3) *Temporary exception for certain severe wound discharges.*—(i) *Definitions.* For purposes of this paragraph (b)(3) the following definitions are applicable:

*Severe wound* means a wound which is a stage 3 wound, stage 4 wound, unstageable wound, non-healing

surgical wound, fistula, as identified by the applicable code on the claim from the long-term care hospital.

*Wound* means an injury, usually involving division of tissue or rupture of the integument or mucous membrane with exposure to the external environment.

(ii) *Discharges for severe wounds.* A discharge that occurs in a cost reporting period beginning during fiscal year 2018 for a patient who was treated for a severe wound that meets all of the following criteria is excluded from the site neutral payment rate specified under this section:

(A) The severe wound meets the definition specified in paragraph (b)(3)(i) of this section.

(B) The discharge is from a long-term care hospital that is described in § 412.23(e)(2)(i) and meets the criteria of § 412.22(f); and

(C) The discharge is classified under MS-LTC-DRG 539, 540, 602, or 603.

(4) *Temporary exception for certain spinal cord specialty hospitals.* For discharges in cost reporting periods beginning in fiscal years 2018 and 2019, the site neutral payment rate specified under this section does not apply if such discharge is from a long-term care hospital that meets each of the following requirements:

(i) The hospital was a not-for-profit long-term care hospital on June 1, 2014, as determined by cost report data;

(ii) Of the discharges in calendar year 2013 from the long-term care hospital for which payment was made under subpart O, at least 50 percent were classified under MS-LTC-DRGs 28, 29, 52, 57, 551, 573, and 963; and

(iii) The long-term care hospital discharged inpatients (including both individuals entitled to, or enrolled for, benefits under Medicare Part A and individuals not so entitled or enrolled) during fiscal year 2014 who had been admitted from at least 20 of the 50 States determined by the States of residency of such inpatients.

\* \* \* \* \*

■ 20. Section 412.523 is amended by—

■ a. Adding paragraph (c)(3)(xiv);

■ b. Revising paragraph (d)(1); and

■ c. Adding paragraph (d)(5).

The additions and revision read as follows:

**§ 412.523 Methodology for calculating the Federal prospective payment rates.**

\* \* \* \* \*

(c) \* \* \*

(3) \* \* \*

(xiv) *For long-term care hospital prospective payment system fiscal year beginning October 1, 2017, and ending September 30, 2018.* The LTCH PPS

standard Federal payment rate for the long-term care hospital prospective payment system beginning October 1, 2017, and ending September 30, 2018, is the standard Federal payment rate for the previous long-term care hospital prospective payment system fiscal year updated by 1.0 percent and further adjusted, as appropriate, as described in paragraph (d) of this section.

\* \* \* \* \*

(d) \* \* \*

(1) *Outlier payments.* CMS adjusts the LTCH PPS standard Federal payment rate by a reduction factor of 8 percent, the estimated proportion of outlier payments under § 412.525(a) payable for discharges described in § 412.522(a)(2) (notwithstanding the provisions of § 412.525(a)(2)(ii) for FY 2018 and subsequent years.

\* \* \* \* \*

(5) *Adjustment for changes to the short-stay outlier policy.* The standard Federal rate determined under paragraph (c)(3) of this section is permanently adjusted by a one-time factor so that estimated aggregate payments to LTCH PPS standard Federal rate cases in FY 2018 are projected to equal estimated aggregate payments that would have been paid for such cases without regard to the change in the short-stay outlier policy for FY 2018 under § 412.529(c)(4).

\* \* \* \* \*

■ 21. Section 412.525 is amended by revising paragraph (a)(2) to read as follows:

**§ 412.525 Adjustments to the Federal prospective payment.**

(a) \* \* \*

(2)(i) The fixed loss-amount for discharges from a long-term care hospital described under § 412.522(a)(2) is determined for the long-term care hospital prospective payment system payment year, using the LTC-DRG relative weights that are in effect at the start of the applicable long-term care hospital prospective payment system payment year.

(ii) For FY 2018 and subsequent years, the fixed-loss amount for long-term care hospital discharges described under § 412.522(a)(2) is determined such that the estimated proportion of outlier payments under paragraph (a) of this section payable for such discharges is projected to be equal to 99.6875 of 8 percent.

\* \* \* \* \*

■ 22. Section 412.529 is amended by—

■ a. Revising paragraph (c)(3) introductory text;

■ b. Adding paragraph (c)(4); and

■ c. Revising paragraph (f) introductory text.

The revisions and addition read as follows:

**§ 412.529 Special payment provision for short-stay outliers.**

\* \* \* \* \*

(c) \* \* \*

(3) *Discharges occurring on or after July 1, 2007 and before December 29, 2007 and discharges occurring on or after December 29, 2012 and on or before September 30, 2017.* For discharges from long-term care hospitals described under § 412.23(e)(2)(i) occurring on or after July 1, 2007, and on or before December 29, 2007 and discharges occurring on or after December 29, 2012, and on or before September 30, 2017, the LTCH prospective payment system adjusted payment amount for a short-stay outlier case is adjusted by either of the following:

\* \* \* \* \*

(4) *Discharges occurring on or after October 1, 2017.* For discharges occurring on or after October 1, 2017, short-stay outlier payments are determined according to paragraph (c)(2)(iv) of this section.

\* \* \* \* \*

(f) *Reconciliation of short-stay payments.* Payments for discharges occurring before October 1, 2017 are reconciled in accordance with one of the following:

\* \* \* \* \*

■ 23. Section 412.538 is amended by revising paragraph (a)(1) to read as follows:

**§ 412.538 Limitation on long-term care hospital admissions from referring hospitals.**

(a) \* \* \*

(1) The provisions of this section apply to all long-term care hospitals excluded from the hospital inpatient prospective payment system under § 412.23(e), except as specified in paragraph (a)(2) of this section, effective for discharges occurring on or after October 1, 2018.

\* \* \* \* \*

■ 24. Section 412.560 is amended by revising the section heading, paragraph (a), the paragraph (b) heading, paragraphs (b)(1), (c) introductory text, (c)(1), (c)(3)(vii), (c)(4)(ii), (d)(1), and (d)(2)(vii), and adding paragraph (f) to read as follows:

**§ 412.560 Requirements under the Long-Term Care Hospital Quality Reporting Program (LTCH QRP).**

(a) *Participation in the LTCH QRP.* A long-term-care hospital must begin

submitting data on measures specified under sections 1886(m)(5)(D), 1899B(c)(1), and 1899B(d)(1) of the Act, and standardized patient assessment data required under section 1899B(b)(1) of the Act, under the LTCH QRP by no later than the first day of the calendar quarter subsequent to 30 days after the date on its CMS Certification Number (CCN) notification letter.

(b) *Data submission requirements and payment impact.* (1) Except as provided in paragraph (c) of this section, a long-term care hospital must submit to CMS data on measures specified under sections 1886(m)(5)(D), 1899B(c)(1) and 1899B(d)(1) of the Act, and standardized patient assessment data required under section 1899B(b)(1) of the Act. Such data must be submitted in a form and manner, and at a time, specified by CMS.

\* \* \* \* \*

(c) *Exception and extension request requirements.* Upon request by a long-term care hospital, CMS may grant an exception or extension with respect to the measures data and standardized patient assessment data reporting requirements, for one or more quarters, in the event of certain extraordinary circumstances beyond the control of the long-term care hospital, subject to the following:

(1) A long-term care hospital that wishes to request an exception or extension with respect to measures data and standardized patient assessment data reporting requirements must submit its request to CMS within 90 days of the date that the extraordinary circumstances occurred.

\* \* \* \* \*

(3) \* \* \*

(vii) The date on which the long-term care hospital will be able to again submit measures data and standardized patient assessment data under the LTCH QRP and a justification for the proposed date.

(4) \* \* \*

(ii) A systemic problem with one of CMS' data collection systems directly affected the ability of the long-term care hospital to submit measures data and standardized patient assessment data.

\* \* \* \* \*

(d) \* \* \*

(1) *Written notification of noncompliance decision.* CMS will send a long-term care hospital written notification of a decision of noncompliance with the measures data and standardized patient assessment data reporting requirements for a particular fiscal year. CMS also will use the Quality Improvement and Evaluation system (QIES) Assessment

Submission and Processing (ASAP) System to provide notification of noncompliance to the long-term care hospital.

(2) \* \* \*

(vii) Accompanying documentation that demonstrates compliance of the long-term care hospital with the LTCH QRP requirements. This documentation must be submitted electronically at the same time as the reconsideration request as an attachment to the email.

\* \* \* \* \*

(f) *Data completion thresholds.* (1) Long-term care hospitals must meet or exceed two separate data completeness thresholds: One threshold set at 80 percent for completion of measures data and standardized patient assessment data collected using the LTCH CARE Data Set submitted through the QIES ASAP System; and a second threshold set at 100 percent for measures data collected and submitted using the CDC NHSN.

(2) The thresholds in paragraph (f)(1) of this section apply to all data that must be submitted under paragraph (b) of this section.

(3) A long-term care hospital must meet or exceed both thresholds in paragraph (f)(1) of this section to avoid receiving a 2 percentage point reduction to its annual payment update for a given fiscal year, beginning with the FY 2019 LTCH QRP.

**PART 413—PRINCIPLES OF REASONABLE COST REIMBURSEMENT; PAYMENT FOR END-STAGE RENAL DISEASE SERVICES; OPTIONAL PROSPECTIVELY DETERMINED PAYMENT RATES FOR SKILLED NURSING FACILITIES**

■ 25. The authority for part 413 is revised to read as follows:

**Authority:** Secs. 1102, 1812(d), 1814(b), 1815, 1833(a), (i), and (n), 1861(v), 1871, 1881, 1883 and 1886 of the Social Security Act (42 U.S.C. 1302, 1395d(d), 1395f(b), 1395g, 1395l(a), (i), and (n), 1395x(v), 1395hh, 1395rr, 1395tt, and 1395ww); and sec. 124 of Public Law 106–113, 113 Stat. 1501A–332; sec. 3201 of Public Law 112–96, 126 Stat. 156; sec. 632 of Public Law 112–240, 126 Stat. 2354; sec. 217 of Public Law 113–93, 129 Stat. 1040; and sec. 204 of Public Law 113–295, 128 Stat. 4010; and sec. 808 of Public Law 114–27, 129 Stat. 362.

■ 26. Section 413.24 is amended by revising paragraph (f)(4)(iv) to read as follows:

**§ 413.24 Adequate cost data and cost finding.**

\* \* \* \* \*

(f) \* \* \*

(4) \* \* \*

(iv)(A) Effective as specified in paragraphs (f)(4)(iv)(A)(1) through (4) and except as provided in paragraph (f)(4)(iv)(C) of this section, a provider must submit a hard copy of a settlement summary, if applicable, which is a statement of certain worksheet totals found within the electronic file, and the certification statement described in paragraph (f)(4)(iv)(B) of this section signed by its administrator or chief financial officer certifying the accuracy of the electronic file or the manually prepared cost report.

(1) For hospitals, effective for cost reporting periods ending on or after September 30, 1994;

(2) For skilled nursing facilities and home health agencies, effective for cost reporting periods ending on or after February 1, 1997;

(3) For hospices and end-stage renal disease facilities, effective for cost reporting periods ending on or after December 31, 2004; and

(4) For organ procurement organizations, histocompatibility laboratories, rural health clinics, Federally qualified health centers, and community mental health centers, effective for cost reporting periods ending on or after March 31, 2005.

(B) The following certification statement must immediately precede the dated original signature, or electronic signature as set forth in paragraph (f)(4)(iv)(C)(1) of this section, of the provider's administrator or chief financial officer:

MISREPRESENTATION OR FALSIFICATION OF ANY INFORMATION CONTAINED IN THIS COST REPORT MAY BE PUNISHABLE BY CRIMINAL, CIVIL AND ADMINISTRATIVE ACTION, FINE AND/OR IMPRISONMENT UNDER FEDERAL LAW. FURTHERMORE, IF SERVICES IDENTIFIED IN THIS REPORT WERE PROVIDED OR PROCURED THROUGH THE PAYMENT DIRECTLY OR INDIRECTLY OF A KICKBACK OR WERE OTHERWISE ILLEGAL, CRIMINAL, CIVIL AND ADMINISTRATIVE ACTION, FINES AND/OR IMPRISONMENT MAY RESULT.

I hereby certify that I have read the above certification statement and that I have examined the accompanying electronically filed or manually submitted cost report and the Balance Sheet and Statement of Revenue and Expenses prepared by \_\_\_\_\_ (Provider Name(s) and Number(s)) for the cost reporting period beginning \_\_\_\_\_ a and ending \_\_\_\_\_ a and that to the best of my knowledge and belief, this report and statement are true, correct, complete and prepared from the books

and records of the provider in accordance with applicable instructions, except as noted. I further certify that I am familiar with the laws and regulations regarding the provision of health care services, and that the services identified in this cost report were provided in compliance with such laws and regulations.

(C) Effective for cost reporting periods ending on or after December 31, 2017—  
 (1) A provider that is required to file an electronic cost report may elect to electronically submit the settlement summary, if applicable, and the certification statement with an electronic signature of the provider's administrator or chief financial officer. The following checkbox for electronic signature and submission will immediately follow the certification statement as set forth in paragraph (f)(4)(iv)(B) of this section and must be checked if electronic signature and submission is elected.

I have read and agree with the above certification statement. I certify that I intend my electronic signature on this certification statement to be the legally binding equivalent of my original signature.

(2) A provider that is required to file an electronic cost report but does not elect to electronically submit the certification statement with an electronic signature, must submit a hard copy of the settlement summary, if applicable, and a certification statement with an original signature of the provider's administrator or chief financial officer as set forth in paragraphs (f)(4)(iv)(A) and (B) of this section.

\* \* \* \* \*

■ 27. Section 413.65 is amended by revising paragraph (m) introductory text to read as follows:

**§ 413.65 Requirements for a determination that a facility or an organization has provider-based status.**

\* \* \* \* \*

(m) *Status of Indian Health Service and Tribal facilities and organizations.* Facilities and organizations operated by the Indian Health Services and Tribes will be considered to be departments of hospitals operated by the Indian Health Service or Tribes if they furnish only services that are billed, using the CGN of the main provider and with the consent of the main provider, as if they had been furnished by a department of a hospital operated by the Indian Health Service or a Tribe and they are:

\* \* \* \* \*

■ 28. Section 413.70 is amended by—  
 ■ a. Redesignating paragraph (a)(6)(iii) as paragraph (a)(6)(iv);

- b. Adding a new paragraph (a)(6)(iii); and
- c. Revising newly redesignated paragraph (a)(6)(iv).

The addition and revision to read as follows:

**§ 413.70 Payment for services of a CAH.**

- (a) \* \* \*
- (6) \* \* \*

(iii) *Exception for decertified EHR technology.* Beginning with the fiscal year 2018 payment adjustment year, the Secretary shall exempt a CAH that is not a qualifying CAH from the application of the payment adjustment under paragraph (a)(6)(i) of this section if the Secretary determines that compliance with the requirement for being a meaningful EHR user is not possible because the certified EHR technology used by the CAH has been decertified under ONC's Health IT Certification Program. In order to be considered for an exception, a CAH must submit an application, in the manner specified by CMS, demonstrating that the certified EHR technology was decertified during the 12-month period preceding the applicable EHR reporting period for the payment adjustment year, or during the applicable EHR reporting period for the payment adjustment year, and that the CAH made a good faith effort to obtain another certified EHR technology for that EHR reporting period. Applications requesting this exception must be submitted by November 30 after the end of the applicable payment adjustment year, or a later date specified by CMS.

(iv) Exceptions granted under paragraphs (a)(6)(ii) and (iii) of this section are subject to annual renewal, but in no case may a CAH be granted such an exception for more than 5 years.

\* \* \* \* \*

■ 29. Section 413.134 is amended by revising paragraph (f)(1) to read as follows:

**§ 413.134 Depreciation: Allowance for depreciation based on asset costs.**

\* \* \* \* \*

- (f) \* \* \*

(1) *General.* Depreciable assets may be disposed of through sale, scrapping, trade-in, exchange, demolition, abandonment, condemnation, fire, theft, or other casualty.

(i) *Disposal of an asset before December 1, 1997.* If disposal of a depreciable asset, including the sale or scrapping of an asset before December 1, 1997, results in a gain or loss, an adjustment is necessary in the provider's allowable cost.

(A) The amount of a gain included in the determination of allowable cost is limited to the amount of depreciation

previously included in Medicare allowable costs.

(B) The amount of a loss to be included is limited to the undepreciated basis of the asset permitted under the program.

(C) The treatment of the gain or loss depends upon the manner of disposition of the asset, as specified in paragraphs (f)(2) through (6) of this section.

(D) The gain or loss on the disposition of depreciable assets has no retroactive effect on a proprietary provider's equity capital for years prior to the year of disposition.

(ii) *Disposal of an asset on or after December 1, 1997.* No gain or loss is recognized on either the sale or scrapping of an asset that occurs on or after December 1, 1997, regardless of whether the asset is sold incident to a provider's change of ownership, or otherwise sold or scrapped as an asset of a Medicare participating provider. Gains or losses on dispositions other than sales or scrapping are recognized to the same extent as prior to December 1, 1997.

\* \* \* \* \*

**PART 416—AMBULATORY SURGICAL SERVICES**

■ 30. The authority citation for part 416 is revised to read as follows:

**Authority:** Secs. 1102, 1138, and 1871 of the Social Security Act (42 U.S.C. 1302, 1320b-8, and 1395hh) and section 371 of the Public Health Service Act (42 U.S.C. 273).

■ 31. Section 416.35 is amended by revising paragraph (d) introductory text to read as follows:

**§ 416.35 Termination of agreement.**

\* \* \* \* \*

(d) *Notice to the public.* Prompt notice of the date and effect of termination is given to the public by—

\* \* \* \* \*

**PART 486—CONDITIONS FOR COVERAGE OF SPECIALIZED SERVICES FURNISHED BY SUPPLIERS**

■ 32. The authority citation for part 486 continues to read as follows:

**Authority:** Secs. 1102, 1138, and 1871 of the Social Security Act (42 U.S.C. 1302, 1320b-8, and 1395hh) and section 371 of the Public Health Service Act (42 U.S.C. 273).

■ 33. Section 486.312 is amended by revising paragraph (e) to read as follows:

**§ 486.312 De-certification.**

\* \* \* \* \*

(e) *Public notice.* Once CMS approves the date for a voluntary termination, the OPO must provide prompt public notice

in the service area of the date of de-certification and such other information as CMS may require. In the case of involuntary termination or nonrenewal of an agreement, CMS also provides notice to the public in the service area of the date of de-certification. No payment under titles XVIII or XIX of the Act will be made with respect to organ procurement costs attributable to the OPO on or after the effective date of de-certification.

**PART 488—SURVEY, CERTIFICATION, AND ENFORCEMENT PROCEDURES**

■ 34. The authority citation for part 488 is revised to read as follows:

**Authority:** Secs. 1102, 1128l, 1864, 1865, 1871, and 1875 of the Social Security Act, unless otherwise noted (42 U.S.C. 1302, 1320a-7, 1395aa, 1395bb, 1395hh, and 1395ll).

■ 35. Section 488.5 is amended by adding paragraph (a)(21) to read as follows:

**§ 488.5 Application and re-application procedures for national accrediting organizations.**

(a) \* \* \*

(21) A statement acknowledging that the organization agrees to make all Medicare cited deficiencies, both standard and condition level, immediate jeopardy situations, and dates of correction, for final accreditation survey reports publicly available on the organization’s Web site within 90 days after the survey report is made available to those facilities for the most recent 3 years, on an ongoing basis in a manner specified by CMS. This acknowledgement includes all initial, triennial, full, follow-up, focused, and complaint surveys.

\* \* \* \* \*

**PART 489—PROVIDER AGREEMENTS AND SUPPLIER APPROVAL**

■ 36. The authority citation for part 489 continues to read as follows:

**Authority:** Secs. 1102 1819, 1820(E), 1861, 1864(M), 1866, 1869, and 1871 of the Social Security Act (42 U.S.C. 1302, 1395i-3, 1395x, 1395aa(m), 1395cc, 1395ff, and 1395(hh)).

■ 37. Section 489.52 is amended by revising paragraph (c)(2) introductory text to read as follows:

**§ 489.52 Termination by the provider.**

\* \* \* \* \*

(c) \* \* \*

(2) The notice must—

\* \* \* \* \*

**PART 495—STANDARDS FOR THE ELECTRONIC HEALTH RECORD TECHNOLOGY INCENTIVE PROGRAM**

■ 38. The authority citation for part 495 continues to read as follows:

**Authority:** Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

■ 39. Section 495.4 is amended by—  
■ a. Adding in alphabetical order a definition of “Ambulatory surgical center-based EP”;

■ b. In the definition of “EHR reporting period,” revising paragraph (1)(ii) introductory text, adding paragraph (1)(ii)(D), revising paragraph (1)(iii) introductory text, revising paragraph (2)(ii) introductory text, adding paragraph (2)(ii)(D) and revising paragraph (2)(iii) introductory text; and  
■ c. In the definition of “EHR reporting period for a payment adjustment year”, revising paragraph (2)(ii) introductory text, adding paragraph (2)(ii)(D), revising paragraph (2)(iii) introductory text, revising paragraph (3)(ii) introductory text, adding paragraph (3)(ii)(D), and revising paragraph (3)(iii) introductory text.

The additions and revisions read as follows:

**§ 495.4 Definitions.**

\* \* \* \* \*

*Ambulatory surgical center-based EP* means an EP who furnishes 75 percent or more of his or her covered professional services in sites of service identified by the codes used in the HIPAA standard transaction as an ASC setting in the calendar year that is 2 years before the payment adjustment year.

\* \* \* \* \*

*EHR reporting period.* \* \* \*

(1) \* \* \*

(ii) The following are applicable for 2015, 2016, 2017, and 2018:

\* \* \* \* \*

(D) For the CY 2018 payment year under the Medicaid EHR Incentive Program:

(1) For the EP first demonstrating he or she is a meaningful EHR user, any continuous 90-day period within CY 2018.

(2) For the EP who has successfully demonstrated he or she is a meaningful EHR user in any prior year, any continuous 90-day period within CY 2018.

(iii) The following are applicable beginning with the CY 2019 payment year under the Medicaid EHR Incentive Program:

\* \* \* \* \*

(2) \* \* \*

(ii) The following are applicable for 2015, 2016, 2017, and 2018:

\* \* \* \* \*

(D) For the FY 2018 payment year under the Medicaid EHR Incentive Program:

(1) For the eligible hospital or CAH first demonstrating it is a meaningful EHR user, any continuous 90-day period within CY 2018.

(2) For the eligible hospital or CAH that has successfully demonstrated it is a meaningful EHR user in any prior year, any continuous 90-day period within CY 2018.

(iii) The following are applicable beginning with the FY 2019 payment year under the Medicaid EHR Incentive Program:

\* \* \* \* \*

*EHR reporting period for a payment adjustment year.* \* \* \*

(2) \* \* \*

(ii) The following are applicable for 2015, 2016, 2017, and 2018:

\* \* \* \* \*

(D) In 2018 as follows:

(1) If an eligible hospital has not successfully demonstrated it is a meaningful EHR user in a prior year, the EHR reporting period is any continuous 90-day period within CY 2018 and applies for the FY 2019 and 2020 payment adjustment years. For the FY 2019 payment adjustment year, the EHR reporting period must end before and the eligible hospital must successfully register for and attest to meaningful use no later than October 1, 2018.

(2) If in a prior year an eligible hospital has successfully demonstrated it is a meaningful EHR user, the EHR reporting period is any continuous 90-day period within CY 2018 and applies for the FY 2020 payment adjustment year.

(iii) The following are applicable beginning in 2019:

\* \* \* \* \*

(3) \* \* \*

(ii) The following are applicable for 2015, 2016, 2017, and 2018:

\* \* \* \* \*

(D) In 2018 as follows:

(1) If a CAH has not successfully demonstrated it is a meaningful EHR user in a prior year, the EHR reporting period is any continuous 90-day period within CY 2018 and applies for the FY 2018 payment adjustment year.

(2) If in a prior year a CAH has successfully demonstrated it is a meaningful EHR user, the EHR reporting period is any continuous 90-day period within CY 2018 and applies for the FY 2018 payment adjustment year.

(iii) The following are applicable beginning in 2019:

\* \* \* \* \*

- 40. Section 495.22 is amended by—
  - a. Revising the section heading;
  - b. Revising paragraph (a);
  - c. Revising the paragraph (b) heading and the paragraph (b)(1) heading;
  - d. Revising the paragraph (c) heading and paragraph (c)(1);
  - e. Revising the paragraph (e) heading and paragraphs (e)(8)(i)(A)(2)(ii), (e)(8)(ii)(A)(2)(ii), and (e)(9)(ii)(A)(3); and
  - f. Revising the paragraph (f) heading.
- The revisions read as follows:

**§ 495.22 Meaningful use objectives and measures for EPs, eligible hospitals, and CAHs for 2015 through 2018.**

(a) *General rules.* (1) Subject to the provisions of paragraph (a)(2) of this section, the criteria specified in this section are applicable for EPs, eligible hospitals, and CAHs for 2015 through 2018.

(2) For 2017 and 2018, EPs, eligible hospitals, and CAHs that have successfully demonstrated meaningful use in a prior year have the option to use the criteria specified for 2019 in § 495.24 instead of the criteria specified for 2017 and 2018 under paragraphs (e) and (f) of this section.

(b) *Criteria for EPs for 2015 through 2018—(1) General rule regarding criteria for meaningful use for 2015 through 2018 for EPs.* \* \* \*

(c) *Criteria for eligible hospitals and CAHs for 2015 through 2018.—(1) General rule regarding criteria for meaningful use for 2015 through 2018 for eligible hospitals and CAHs.* Except as specified in paragraph (c)(2) of this section, eligible hospitals and CAHs attesting to CMS must meet all objectives and associated measures of the meaningful use criteria specified under paragraph (e) of this section to meet the definition of a meaningful EHR user in 2015 and 2016 and must meet all objectives and associated measures of the meaningful use criteria specified under paragraph (f) of this section to meet the definition of a meaningful EHR user in 2017 and 2018. Except as specified in paragraph (c)(2) of this section, eligible hospitals and CAHs attesting to a State for the Medicaid EHR Incentive Program must meet all objectives and associated measures of the meaningful use criteria specified under paragraph (e) of this section to meet the definition of a meaningful EHR user in 2015 through 2018.

\* \* \* \* \*

(e) *Meaningful use objectives and measures for EPs for 2015 through 2018,*

*for eligible hospitals and CAHs attesting to CMS for 2015 and 2016, and for eligible hospitals and CAHs attesting to a State for the Medicaid EHR Incentive Program for 2015 through 2018.* \* \* \*

- (8) \* \* \*
- (i) \* \* \*
- (A) \* \* \*
- (2) \* \* \*

(ii) In 2017 and 2018, more than 5 percent of unique patients seen by the EP during the EHR reporting period (or their authorized representatives) views, downloads or transmits their health information to a third party during the EHR reporting period.

\* \* \* \* \*

- (ii) \* \* \*
- (A) \* \* \*
- (2) \* \* \*

(ii) In 2017 and 2018, more than 5 percent of unique patients (or patient-authorized representatives) discharged from the inpatient or emergency department (POS 21 or POS 23) of an eligible hospital or CAH during the EHR reporting period view, download or transmit to a third party their health information during the EHR reporting period.

\* \* \* \* \*

- (9) \* \* \*
- (ii) \* \* \*
- (A) \* \* \*

(3) In 2017 and 2018, for more than 5 percent of unique patients seen by the EP during the EHR reporting period, a secure message was sent using the electronic messaging function of CEHRT to the patient (or the patient-authorized representative), or in response to a secure message sent by the patient (or the patient-authorized representative) during the EHR reporting period.

\* \* \* \* \*

(f) *Meaningful use objectives and measures for eligible hospitals and CAHs attesting to CMS for 2017 and 2018—*\* \* \*

\* \* \* \* \*

- 41. Section 495.24 is amended by—
- a. Revising the section heading;
- b. Revising the introductory text;
- c. Revising the paragraph (c) heading and
- d. Revising the paragraph (d) heading and paragraphs (d)(6)(i)(B)(2)(i) and (ii), (d)(6)(ii)(B)(1)(iv), and (d)(6)(ii)(B)(2)(i) and (ii).

The revisions read as follows:

**§ 495.24 Stage 3 meaningful use objectives and measures for EPs, eligible hospitals and CAHs for 2019 and subsequent years.**

The criteria specified in paragraphs (c) and (d) of this section are optional for 2017 and 2018 for EPs, eligible

hospitals, and CAHs that have successfully demonstrated meaningful use in a prior year. The criteria specified in paragraph (c) of this section are applicable for eligible hospitals and CAHs attesting to CMS for 2019. The criteria specified in paragraph (d) of this section are applicable for all EPs for 2019 and subsequent years, and for eligible hospitals and CAHs attesting to a State for the Medicaid EHR Incentive Program for 2019.

\* \* \* \* \*

(c) *Stage 3 objectives and measures for eligible hospitals and CAHs attesting to CMS for 2019—*\* \* \*

(d) *Stage 3 objectives and measures for all EPs for 2019 and subsequent years, and for eligible hospitals and CAHs attesting to a State for the Medicaid EHR Incentive Program for 2019—*\* \* \*

- (6) \* \* \*
- (i) \* \* \*
- (B) \* \* \*
- (2) \* \* \*

(i) For an EHR reporting period in 2017 and 2018, for more than 5 percent of all unique patients seen by the EP during the EHR reporting period, a secure message was sent using the electronic messaging function of CEHRT to the patient (or their authorized representatives), or in response to a secure message sent by the patient; or

(ii) For an EHR reporting period other than 2017 and 2018, for more than 25 percent of all unique patients seen by the EP during the EHR reporting period, a secure message was sent using the electronic messaging function of CEHRT to the patient (or their authorized representatives), or in response to a secure message sent by the patient.

\* \* \* \* \*

- (ii) \* \* \*
- (B) \* \* \*
- (1) \* \* \*

(iv) For an EHR reporting period in 2017 and 2018, an eligible hospital or CAH may meet a threshold of 5 percent instead of 10 percent for the measure at paragraph (d)(6)(ii)(B)(1) of this section.

- (2) \* \* \*

(i) For an EHR reporting period in 2017 and 2018, for more than 5 percent of all unique patients discharged from the eligible hospital or CAH inpatient or emergency department (POS 21 or 23) during the EHR reporting period, a secure message was sent using the electronic messaging function of CEHRT to the patient (or their authorized representatives), or in response to a secure message sent by the patient (or their authorized representatives).

(ii) For an EHR reporting period other than 2017 and 2018, for more than 25

percent of all unique patients discharged from the eligible hospital or CAH inpatient or emergency department (POS 21 or 23) during the EHR reporting period, a secure message was sent using the electronic messaging function of CEHRT to the patient (or their authorized representatives), or in response to a secure message sent by the patient (or their authorized representatives).

\* \* \* \* \*

- 42. Section 495.40 is amended by—
- a. Amending paragraph (a)(2)(i)(F) by adding “and CY 2018” after “For CY 2017”;
- b. Revising paragraph (a)(2)(i)(G); and
- c. Revising paragraphs (b)(2)(i)(F) introductory text and (b)(2)(i)(G) introductory text.

The revisions read as follows:

**§ 495.40 Demonstration of meaningful use criteria.**

- (a) \* \* \*
- (2) \* \* \*
- (i) \* \* \*

(G) For CY 2019 and subsequent years, satisfied the required objectives and associated measures under § 495.24(d) for meaningful use.

\* \* \* \* \*

- (b) \* \* \*
- (2) \* \* \*
- (i) \* \* \*

(F) For CY 2017 and CY 2018:

\* \* \* \* \*

(G) For CY 2019:

\* \* \* \* \*

- 43. Section 495.102 is amended by redesignating paragraph (d)(5) as paragraph (d)(6) and adding new paragraphs (d)(5) and (7) to read as follows:

**§ 495.102 Incentive payments to EPs.**

\* \* \* \* \*

- (d) \* \* \*

(5) *Exception for decertified EHR technology.* The Secretary shall exempt an EP from the application of the payment adjustment for CY 2018 under paragraph (d)(1) of this section if the Secretary determines that compliance with the requirement for being a meaningful EHR user is not possible because the certified EHR technology used by the EP has been decertified under ONC’s Health IT Certification Program. To be considered for an exception, an EP must submit, in the manner specified by CMS, an application demonstrating that the certified EHR technology was decertified during the 12-month period preceding the applicable EHR reporting period for the CY 2018 payment adjustment year, or during the

applicable EHR reporting period for the CY 2018 payment adjustment year, and that the EP made a good faith effort to obtain another certified EHR technology for that EHR reporting period. Applications requesting this exception must be submitted no later than October 1, 2017, or a later date specified by CMS.

\* \* \* \* \*

(7) *Payment adjustments not applicable to ambulatory surgical center-based EPs.* For the CY 2017 and CY 2018 payment adjustment years, no payment adjustment under paragraphs (d)(1) through (3) of this section may be made in the case of an ambulatory surgical center-based eligible professional, as defined in § 495.4.

Dated: July 26, 2017.

**Seema Verma,**

*Administrator, Centers for Medicare & Medicaid Services.*

Dated: July 27, 2017.

**Thomas E. Price,**

*Secretary, Department of Health and Human Services.*

**Note:** The following Addendum and Appendixes will not appear in the Code of Federal Regulations.

**Addendum—Schedule of Standardized Amounts, Update Factors, Rate-of-Increase Percentages Effective with Cost Reporting Periods Beginning on or after October 1, 2017, and Payment Rates for LTCHs Effective for Discharges Occurring on or after October 1, 2017**

**I. Summary and Background**

In this Addendum, we are setting forth a description of the methods and data we used to determine the prospective payment rates for Medicare hospital inpatient operating costs and Medicare hospital inpatient capital-related costs for FY 2018 for acute care hospitals. We also are setting forth the rate-of-increase percentage for updating the target amounts for certain hospitals excluded from the IPPS for FY 2018. We note that, because certain hospitals excluded from the IPPS are paid on a reasonable cost basis subject to a rate-of-increase ceiling (and not by the IPPS), these hospitals are not affected by the figures for the standardized amounts, offsets, and budget neutrality factors. Therefore, in this final rule, we are setting forth the rate-of-increase percentage for updating the target amounts for certain hospitals excluded from the IPPS that will be effective for cost reporting periods beginning on or after October 1, 2017.

In addition, we are setting forth a description of the methods and data we used to determine the standard Federal payment rate that will be applicable to Medicare LTCHs for FY 2018.

In general, except for SCHs, for FY 2018, each hospital’s payment per discharge under the IPPS is based on 100 percent of the Federal national rate, also known as the

national adjusted standardized amount. This amount reflects the national average hospital cost per case from a base year, updated for inflation. We note that, under section 205 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10, enacted on April 16, 2015), the MDH program is set to expire at the end of FY 2017. SCHs are paid based on whichever of the following rates yields the greatest aggregate payment: the Federal national rate (including, as discussed in section V.G. of the preamble of this final rule, uncompensated care payments under section 1886(r)(2) of the Act); the updated hospital-specific rate based on FY 1982 costs per discharge; the updated hospital-specific rate based on FY 1987 costs per discharge; the updated hospital-specific rate based on FY 1996 costs per discharge; or the updated hospital-specific rate based on FY 2006 costs per discharge. As noted, under current law, the MDH program is set to expire at the end of FY 2017.

As discussed in section V.B. of the preamble of this final rule, in accordance with section 1886(d)(9)(E) of the Act as amended by section 601 of the Consolidated Appropriations Act, 2016 (Pub. L. 114–113), for FY 2018, subsection (d) Puerto Rico hospitals will continue to be paid based on 100 percent of the national standardized amount. Because Puerto Rico hospitals are paid 100 percent of the national standardized amount and are subject to the same national standardized amount as subsection (d) hospitals that receive the full update, our discussion below does not include references to the Puerto Rico standardized amount or the Puerto Rico-specific wage index.

As discussed in section II. of this Addendum, we are making changes in the determination of the prospective payment rates for Medicare inpatient operating costs for acute care hospitals for FY 2018. In section III. of this Addendum, we discuss our policy changes for determining the prospective payment rates for Medicare inpatient capital-related costs for FY 2018. In section IV. of this Addendum, we are setting forth the rate-of-increase percentage for determining the rate-of-increase limits for certain hospitals excluded from the IPPS for FY 2018. In section V. of this Addendum, we discuss policy changes for determining the standard Federal rate for LTCHs paid under the LTCH PPS for FY 2018. The tables to which we refer in the preamble of this final rule are listed in section VI. of this Addendum and are available via the Internet on the CMS Web site.

**II. Changes to Prospective Payment Rates for Hospital Inpatient Operating Costs for Acute Care Hospitals for FY 2018**

The basic methodology for determining prospective payment rates for hospital inpatient operating costs for acute care hospitals for FY 2005 and subsequent fiscal years is set forth under § 412.64. The basic methodology for determining the prospective payment rates for hospital inpatient operating costs for hospitals located in Puerto Rico for FY 2005 and subsequent fiscal years is set forth under §§ 412.211 and 412.212. Below we discuss the factors we used for determining the prospective payment rates for FY 2018.

In summary, the standardized amounts set forth in Tables 1A, 1B, and 1C that are listed and published in section VI. of this Addendum (and available via the Internet on the CMS Web site) reflect—

- Equalization of the standardized amounts for urban and other areas at the level computed for large urban hospitals during FY 2004 and onward, as provided for under section 1886(d)(3)(A)(iv)(II) of the Act.

- The labor-related share that is applied to the standardized amounts to give the hospital the highest payment, as provided for under sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act. For FY 2018, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act (hereafter referred to as a hospital that submits quality data) and is a meaningful

EHR user under section 1886(b)(3)(B)(ix) of the Act (hereafter referred to as a hospital that is a meaningful EHR user), there are four possible applicable percentage increases that can be applied to the national standardized amount. We refer readers to section V.B. of the preamble of this final rule for a complete discussion on the FY 2018 inpatient hospital update. Below is a table with these four options:

FY 2018	Hospital submitted quality data and is a meaningful EHR user	Hospital submitted quality data and is NOT a meaningful EHR user	Hospital did NOT submit quality data and is a meaningful EHR user	Hospital did NOT submit quality data and is NOT a meaningful EHR user
Market Basket Rate-of-Increase .....	2.7	2.7	2.7	2.7
Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act .....	0.0	0.0	-0.675	-0.675
Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act .....	0.0	-2.025	0.0	-2.025
MFP Adjustment under Section 1886(b)(3)(B)(xi) of the Act .....	-0.6	-0.6	-0.6	-0.6
Statutory Adjustment under Section 1886(b)(3)(B)(xii) of the Act .....	-0.75	-0.75	-0.75	-0.75
Applicable Percentage Increase Applied to Standardized Amount .....	1.35	-0.675	0.675	-1.35

We note that section 1886(b)(3)(B)(viii) of the Act, which specifies the adjustment to the applicable percentage increase for “subsection (d)” hospitals that do not submit quality data under the rules established by the Secretary, is not applicable to hospitals located in Puerto Rico.

In addition, section 602 of Public Law 114–113 amended section 1886(n)(6)(B) of the Act to specify that Puerto Rico hospitals are eligible for incentive payments for the meaningful use of certified EHR technology, effective beginning FY 2016, and also to apply the adjustments to the applicable percentage increase under section 1886(b)(3)(B)(ix) of the Act to Puerto Rico hospitals that are not meaningful EHR users, effective FY 2022. Accordingly, because the provisions of section 1886(b)(3)(B)(ix) of the Act are not applicable to hospitals located in Puerto Rico until FY 2022, the adjustments under this provision are not applicable for FY 2018.

- An adjustment to the standardized amount to ensure budget neutrality for DRG recalibration and reclassification, as provided for under section 1886(d)(4)(C)(iii) of the Act.

- An adjustment to ensure the wage index and labor-related share changes are budget neutral, as provided for under section 1886(d)(3)(E)(i) of the Act (as discussed in the FY 2006 IPPS final rule (70 FR 47395) and the FY 2010 IPPS final rule (74 FR 44005)). We note that section 1886(d)(3)(E)(i) of the Act requires that when we compute such budget neutrality, we assume that the provisions of section 1886(d)(3)(E)(ii) of the Act (requiring a 62-percent labor-related share in certain circumstances) had not been enacted.

- An adjustment to ensure the effects of geographic reclassification are budget neutral, as provided for under section 1886(d)(8)(D) of the Act, by removing the FY 2017 budget neutrality factor and applying a revised factor.

- Removal of the adjustment in FY 2017 to offset the cost of the 3-year hold harmless

transitional wage index provisions provided by CMS as a result of the implementation of the new OMB labor market area delineations (beginning with FY 2015).

- A single positive adjustment of 0.4588 in FY 2018 as required under section 15005 of the 21st Century Cures Act (Pub. L. 114–255), which amended section 7(b)(1)(B) of the TMA, as amended by section 631 of the ATRA and section 414 of the MACRA, to reduce the adjustment for FY 2018 from 0.5 percentage point to 0.4588 percentage point.

- An adjustment to remove the FY 2017 outlier offset and apply an offset for FY 2018, as provided for in section 1886(d)(3)(B) of the Act.

- As discussed in section V.M. of the preamble of this final rule, a factor of (1/1.006) in the calculation of the FY 2018 standardized amount. Specifically, in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57058 through 57060), using our authority under section 1886(d)(5)(I)(i) of the Act, we finalized a policy to include a permanent factor of (1/0.998) and a temporary one-time factor of (1.006) in the calculation of the FY 2017 standardized amount and to include a factor of (1/1.006) in the calculation of the FY 2018 standardized amount to remove the temporary one-time factor of 1.006 applied in FY 2017 to address the effects of the 0.2 percent reduction to the rate for the 2-midnight policy in effect for FY 2014, FY 2015, and FY 2016. Therefore, in this final rule, for FY 2018, we are removing the temporary one-time prospective increase to the FY 2017 standardized amount of 0.6 percent or a factor of 1.006.

For FY 2018, consistent with current law, we are applying the rural floor budget neutrality adjustment to hospital wage indexes. Also, consistent with section 3141 of the Affordable Care Act, instead of applying a State-level rural floor budget neutrality adjustment to the wage index, we are applying a uniform, national budget neutrality adjustment to the FY 2018 wage index for the rural floor. We note that, in

section III.H.2.b. of the preamble to this final rule, we are extending the imputed floor policy (both the original methodology and alternative methodology) for FY 2018.

Therefore, for FY 2018, in this final rule, we are continuing to include the imputed floor (calculated under the original methodology and alternative methodology) in calculating the uniform, national rural floor budget neutrality adjustment, which is reflected in the FY 2018 wage index.

In prior fiscal years, CMS made an adjustment to ensure the effects of the Rural Community Hospital Demonstration Program required under section 410A of Public Law 108–173, as amended by sections 3123 and 10313 of Public Law 111–148, which extended the demonstration program for an additional 5 years, were budget neutral as required under section 410A(c)(2) of Public Law 108–173. As discussed in section V.L.3. of the preamble to this final rule, section 15003 of Public Law 114–255 amended section 410A of Public Law 108–173 to provide for a 10-year extension of the demonstration (in place of the 5-year extension required by the Affordable Care Act) beginning on the date immediately following the last day of the initial 5-year period under section 410A(a)(5) of Public Law 108–173. Therefore, section 15003 of Public Law 114–255 requires an additional 5-year extension of the demonstration.

Regarding the costs of the demonstration specifically for FY 2018, as described in section V.L.3. of the preamble to this final rule, we proposed in the FY 2018 IPS/LTCH PPS proposed rule (82 FR 19994) that if the selection of additional hospitals pursuant to section 410A(g)(6) of Public Law 108–173 (as added by section 15003 of Pub. L. 114–255) was announced by June 2017, we would include in the FY 2018 IPPS/LTCH PPS final rule an estimate of the costs of the demonstration for FY 2018 and the resulting budget neutrality offset amount for the newly selected hospitals (Cohort 3 hospitals) and for the previously participating hospitals

(Cohorts 1 and 2 hospitals). We stated that if the final selection of the additional hospitals is not announced by June 2017, we would not be able to include an estimate of the costs of the demonstration for any participating hospitals or an estimated budget neutrality adjustment for FY 2018 in the FY 2018 IPPS/LTCH PPS final rule. As of June 2017, we did not announce the final selection of the additional hospitals. Therefore, for this final rule, we are not able to include an estimate of the costs of the demonstration for any participating hospitals or an estimated budget neutrality adjustment for FY 2018. We refer readers to section V.L.3. of the preamble of this final rule for complete details on the Rural Community Hospital Demonstration Program and our methodology for calculating budget neutrality for this demonstration.

#### A. Calculation of the Adjusted Standardized Amount

##### 1. Standardization of Base-Year Costs or Target Amounts

In general, the national standardized amount is based on per discharge averages of adjusted hospital costs from a base period (section 1886(d)(2)(A) of the Act), updated and otherwise adjusted in accordance with the provisions of section 1886(d) of the Act. The September 1, 1983 interim final rule (48 FR 39763) contained a detailed explanation of how base-year cost data (from cost reporting periods ending during FY 1981) were established for urban and rural hospitals in the initial development of standardized amounts for the IPPS.

Sections 1886(d)(2)(B) and 1886(d)(2)(C) of the Act require us to update base-year per discharge costs for FY 1984 and then standardize the cost data in order to remove the effects of certain sources of cost variations among hospitals. These effects include case-mix, differences in area wage levels, cost-of-living adjustments for Alaska and Hawaii, IME costs, and costs to hospitals serving a disproportionate share of low-income patients.

For FY 2018, we are rebasing and revising the national labor-related and nonlabor-related shares (based on the 2014-based hospital market basket discussed in section IV. of the preamble of this final rule). Specifically, under section 1886(d)(3)(E) of the Act, the Secretary estimates, from time to time, the proportion of payments that are labor-related and adjusts the proportion (as estimated by the Secretary from time to time) of hospitals' costs which are attributable to wages and wage-related costs of the DRG prospective payment rates. We refer to the proportion of hospitals' costs that are attributable to wages and wage-related costs as the "labor-related share." For FY 2018, as discussed in section IV.B.3. of the preamble of this final rule, we are applying a labor-related share of 68.3 percent for the national standardized amounts for all IPPS hospitals (including hospitals in Puerto Rico) that have a wage index value that is greater than 1.0000. Consistent with section 1886(d)(3)(E) of the Act, we are applying the wage index to a labor-related share of 62 percent of the national standardized amount for all IPPS hospitals (including hospitals in Puerto Rico) whose wage index values are less than or equal to 1.0000.

The standardized amounts for operating costs appear in Tables 1A, 1B, and 1C that are listed and published in section VI. of the Addendum to this final rule and are available via the Internet on the CMS Web site.

##### 2. Computing the National Average Standardized Amount

Section 1886(d)(3)(A)(iv)(II) of the Act requires that, beginning with FY 2004 and thereafter, an equal standardized amount be computed for all hospitals at the level computed for large urban hospitals during FY 2003, updated by the applicable percentage update. Accordingly, we calculated the FY 2018 national average standardized amount irrespective of whether a hospital is located in an urban or rural location.

##### 3. Updating the National Average Standardized Amount

Section 1886(b)(3)(B) of the Act specifies the applicable percentage increase used to update the standardized amount for payment for inpatient hospital operating costs. We note that, in compliance with section 404 of the MMA, in this final rule, we used the rebased and revised 2014-based IPPS operating and capital market baskets for FY 2018. As discussed in section V.B. of the preamble of this final rule, in accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, we reduced the FY 2018 applicable percentage increase (which is based on IGI's second quarter 2017 forecast of the 2014-based IPPS market basket) by the MFP adjustment (the 10-year moving average of MFP for the period ending FY 2018) of 0.6 percentage point, which is also calculated based on IGI's second quarter 2017 forecast.

In addition, in accordance with section 1886(b)(3)(B)(i) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act, we further updated the standardized amount for FY 2018 by the estimated market basket percentage increase less 0.75 percentage point for hospitals in all areas. Sections 1886(b)(3)(B)(xi) and (xii) of the Act, as added and amended by sections 3401(a) and 10319(a) of the Affordable Care Act, further state that these adjustments may result in the applicable percentage increase being less than zero. The percentage increase in the market basket reflects the average change in the price of goods and services required as inputs to provide hospital inpatient services.

Based on IGI's 2017 second quarter forecast of the hospital market basket increase (as discussed in Appendix B of this final rule), the forecast of the hospital market basket increase for FY 2018 for this final rule is 2.7 percent. As discussed earlier, for FY 2018, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act, there are four possible applicable percentage increases that can be applied to the standardized amount. We refer readers to section V.B. of the preamble of this final rule for a complete discussion on the FY 2018 inpatient hospital update to the standardized amount. We also refer readers to the table above for the four possible applicable percentage increases that

will be applied to update the national standardized amount. The standardized amounts shown in Tables 1A through 1C that are published in section VI. of this Addendum and that are available via the Internet on the CMS Web site reflect these differential amounts.

Although the update factors for FY 2018 are set by law, we are required by section 1886(e)(4) of the Act to recommend, taking into account MedPAC's recommendations, appropriate update factors for FY 2018 for both IPPS hospitals and hospitals and hospital units excluded from the IPPS. Section 1886(e)(5)(A) of the Act requires that we publish our recommendations in the **Federal Register** for public comment. Our recommendation on the update factors is set forth in Appendix B of this final rule.

##### 4. Methodology for Calculation of the Average Standardized Amount

The methodology we used to calculate the FY 2018 standardized amount is as follows:

- To ensure we are only including hospitals paid under the IPPS in the calculation of the standardized amount, we apply the following inclusion and exclusion criteria: Include hospitals whose last four digits fall between 0001 and 0879 (section 2779A1 of Chapter 2 of the State Operations Manual on the CMS Web site at: <https://www.cms.gov/Regulations-and-Guidance/Manuals/Downloads/som107c02.pdf>); exclude CAHs at the time of this final rule; exclude hospitals in Maryland (because these hospitals are paid under an all payer model under section 1115A of the Act); and remove PPS-excluded cancer hospitals that have a "V" in the fifth position of their provider number or a "E" or "F" in the sixth position.

- As in the past, we adjusted the FY 2018 standardized amount to remove the effects of the FY 2017 geographic reclassifications and outlier payments before applying the FY 2018 updates. We then applied budget neutrality offsets for outliers and geographic reclassifications to the standardized amount based on FY 2018 payment policies.

- We do not remove the prior year's budget neutrality adjustments for reclassification and recalibration of the DRG relative weights and for updated wage data because, in accordance with sections 1886(d)(4)(C)(iii) and 1886(d)(3)(E) of the Act, estimated aggregate payments after updates in the DRG relative weights and wage index should equal estimated aggregate payments prior to the changes. If we removed the prior year's adjustment, we would not satisfy these conditions.

Budget neutrality is determined by comparing aggregate IPPS payments before and after making changes that are required to be budget neutral (for example, changes to MS-DRG classifications, recalibration of the MS-DRG relative weights, updates to the wage index, and different geographic reclassifications). We include outlier payments in the simulations because they may be affected by changes in these parameters.

- Consistent with our methodology established in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50422 through 50433), because IME Medicare Advantage payments

are made to IPPS hospitals under section 1886(d) of the Act, we believe these payments must be part of these budget neutrality calculations. However, we note that it is not necessary to include Medicare Advantage IME payments in the outlier threshold calculation or the outlier offset to the standardized amount because the statute requires that outlier payments be not less than 5 percent nor more than 6 percent of total "operating DRG payments," which does not include IME and DSH payments. We refer readers to the FY 2011 IPPS/LTCH PPS final rule for a complete discussion on our methodology of identifying and adding the total Medicare Advantage IME payment amount to the budget neutrality adjustments.

- Consistent with the methodology in the FY 2012 IPPS/LTCH PPS final rule, in order to ensure that we capture only fee-for-service claims, we are only including claims with a "Claim Type" of 60 (which is a field on the MedPAR file that indicates a claim is an FFS claim).

- Consistent with our methodology established in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57277), in order to further ensure that we capture only FFS claims, we are excluding claims with a "GHOPAID" indicator of 1 (which is a field on the MedPAR file that indicates a claim is not an FFS claim and is paid by a Group Health Organization).

- Consistent with our methodology established in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50422 through 50423), we examine the MedPAR file and remove pharmacy charges for anti-hemophilic blood factor (which are paid separately under the IPPS) with an indicator of "3" for blood clotting with a revenue code of "0636" from the covered charge field for the budget neutrality adjustments. We also remove organ acquisition charges from the covered charge field for the budget neutrality adjustments because organ acquisition is a pass-through payment not paid under the IPPS.

- The Bundled Payments for Care Improvement (BPCI) initiative, developed under the authority of section 3021 of the Affordable Care Act (codified at section 1115A of the Act), is comprised of four broadly defined models of care, which link payments for multiple services beneficiaries receive during an episode of care. Under the BPCI initiative, organizations enter into payment arrangements that include financial and performance accountability for episodes of care. On January 31, 2013, CMS announced the first set of health care organizations selected to participate in the BPCI initiative. Additional organizations were selected in 2014. For additional information on the BPCI initiative, we refer readers to the CMS Center for Medicare and Medicaid Innovation's Web site at: <http://innovation.cms.gov/initiatives/Bundled-Payments/index.html>.

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53341 through 53343), for FY 2013 and subsequent fiscal years, we finalized a methodology to treat hospitals that participate in the BPCI initiative the same as prior fiscal years for the IPPS payment modeling and ratesetting process (which includes recalibration of the MS-DRG

relative weights, ratesetting, calculation of the budget neutrality factors, and the impact analysis) without regard to a hospital's participation within these bundled payment models (that is, as if they are not participating in those models under the BPCI initiative). For FY 2018, as we proposed, we are continuing to include all applicable data from subsection (d) hospitals participating in BPCI Models 1, 2, and 4 in our IPPS payment modeling and ratesetting calculations.

- Consistent with our methodology established in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53687 through 53688), we believe that it is appropriate to include adjustments for the Hospital Readmissions Reduction Program and the Hospital VBP Program (established under the Affordable Care Act) within our budget neutrality calculations.

Both the hospital readmissions payment adjustment (reduction) and the hospital VBP payment adjustment (redistribution) are applied on a claim-by-claim basis by adjusting, as applicable, the base-operating DRG payment amount for individual subsection (d) hospitals, which affects the overall sum of aggregate payments on each side of the comparison within the budget neutrality calculations.

In order to properly determine aggregate payments on each side of the comparison, as we have done for the last 4 fiscal years, for FY 2018 and subsequent years, we are continuing to apply the hospital readmissions payment adjustment and the hospital VBP payment adjustment on each side of the comparison, consistent with the methodology that we adopted in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53687 through 53688). That is, we applied the readmissions payment adjustment factor and the hospital VBP payment adjustment factor on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum.

For the proposed rule, for the purpose of calculating the FY 2018 readmissions payment adjustment factors, we used excess readmission ratios and aggregate payments for excess readmissions based on admissions from the prior fiscal year's applicable period because, at that time, hospitals not yet had the opportunity to review and correct the data before the data were made public under the policy we adopted regarding the reporting of hospital-specific readmission rates, consistent with section 1886(q)(6) of the Act. For FY 2018, in this final rule, we calculated the readmissions payment adjustment factors using excess readmission ratios and aggregate payments for excess readmissions based on admissions from the finalized applicable period for FY 2018 as hospitals have had the opportunity to review and correct these data under our policy regarding the reporting of hospital-specific readmission rates consistent with section 1886(q)(6) of the Act. We discuss our final policy regarding the reporting of hospital-specific readmission rates for FY 2018 in section V.I.5. of the preamble of this final rule. (For additional information on our general policy for the reporting of hospital-specific readmission rates, consistent with

section 1886(q)(6) of the Act, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53399 through 53400).)

In addition, for FY 2018, in this final rule, for the purpose of modeling aggregate payments when determining all budget neutrality factors, we used proxy hospital VBP payment adjustment factors for FY 2018 that are based on data from a historical period because hospitals have not yet had an opportunity to review and submit corrections for their data from the FY 2018 performance period. (For additional information on our policy regarding the review and correction of hospital-specific measure rates under the Hospital VBP Program, consistent with section 1886(o)(10)(A)(ii) of the Act, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53578 through 53581), the CY 2012 OPPS/ASC final rule with comment period (76 FR 74544 through 74547), and the Hospital Inpatient VBP final rule (76 FR 26534 through 26536).)

- The Affordable Care Act also established section 1886(r) of the Act, which modifies the methodology for computing the Medicare DSH payment adjustment beginning in FY 2014. Beginning in FY 2014, IPPS hospitals receiving Medicare DSH payment adjustments receive an empirically justified Medicare DSH payment equal to 25 percent of the amount that would previously have been received under the statutory formula set forth under section 1886(d)(5)(F) of the Act governing the Medicare DSH payment adjustment. In accordance with section 1886(r)(2) of the Act, the remaining amount, equal to an estimate of 75 percent of what otherwise would have been paid as Medicare DSH payments, reduced to reflect changes in the percentage of individuals under age 65 who are uninsured and an additional statutory adjustment, will be available to make additional payments to Medicare DSH hospitals based on their share of the total amount of uncompensated care reported by Medicare DSH hospitals for a given time period. In order to properly determine aggregate payments on each side of the comparison for budget neutrality, prior to FY 2014, we included estimated Medicare DSH payments on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum.

To do this for FY 2018 (as we did for the last 4 fiscal years), we included estimated empirically justified Medicare DSH payments that will be paid in accordance with section 1886(r)(1) of the Act and estimates of the additional uncompensated care payments made to hospitals receiving Medicare DSH payment adjustments as described by section 1886(r)(2) of the Act. That is, we considered estimated empirically justified Medicare DSH payments at 25 percent of what would otherwise have been paid, and also the estimated additional uncompensated care payments for hospitals receiving Medicare DSH payment adjustments on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum.

- When calculating total payments for budget neutrality, to determine total

payments for SCHs, we model total hospital-specific rate payments and total Federal rate payments and then include whichever one of the total payments is greater. As discussed in section V.G. of the preamble to this final rule and below, we are continuing the FY 2014 finalized methodology under which we take into consideration uncompensated care payments in the comparison of payments under the Federal rate and the hospital-specific rate for SCHs. Therefore, we included estimated uncompensated care payments in this comparison.

- We are including an adjustment to the standardized amount for those hospitals that are not meaningful EHR users in our modeling of aggregate payments for budget neutrality for FY 2018. Similar to FY 2017, we included this adjustment based on data on the prior year's performance. Payments for hospitals will be estimated based on the applicable standardized amount in Tables 1A and 1B for discharges occurring in FY 2018.

#### a. Recalibration of MS-DRG Relative Weights

Section 1886(d)(4)(C)(iii) of the Act specifies that, beginning in FY 1991, the annual DRG reclassification and recalibration of the relative weights must be made in a manner that ensures that aggregate payments to hospitals are not affected. As discussed in section II.G. of the preamble of this final rule, we normalized the recalibrated MS-DRG relative weights by an adjustment factor so that the average case relative weight after recalibration is equal to the average case relative weight prior to recalibration. However, equating the average case relative weight after recalibration to the average case relative weight before recalibration does not necessarily achieve budget neutrality with respect to aggregate payments to hospitals because payments to hospitals are affected by factors other than average case relative weight. Therefore, as we have done in past years, we are making a budget neutrality adjustment to ensure that the requirement of section 1886(d)(4)(C)(iii) of the Act is met.

For FY 2018, to comply with the requirement that MS-DRG reclassification and recalibration of the relative weights be budget neutral for the standardized amount and the hospital-specific rates, we used FY 2016 discharge data to simulate payments and compared the following:

- Aggregate payments using the FY 2017 labor-related share percentages, the FY 2017 relative weights, and the FY 2017 pre-reclassified wage data, and applied the FY 2018 hospital readmissions payment adjustments and estimated FY 2018 hospital VBP payment adjustments; and
- Aggregate payments using the FY 2017 labor-related share percentages, the FY 2018 relative weights, and the FY 2017 pre-reclassified wage data, and applied the same FY 2018 hospital readmissions payment adjustments and estimated FY 2018 hospital VBP payment adjustments applied above. (As discussed in section II.G. of the preamble of this final rule, in response to public comments, we are adopting a temporary measure for FY 2018 for MS-DRGs where the relative weight would have declined by more than 20 percent. Specifically, for these MS DRGs, the FY 2018 relative weight is set at 80 percent of the FY 2017 final relative

weight, and it is these FY 2018 relative weights that are used to determine the MS-DRG reclassification and recalibration budget neutrality factor in this final rule.)

Based on this comparison, we computed a budget neutrality adjustment factor equal to 0.997432 and applied this factor to the standardized amount. As discussed in section IV. of this Addendum, we also applied the MS-DRG reclassification and recalibration budget neutrality factor of 0.997432 to the hospital-specific rates that are effective for cost reporting periods beginning on or after October 1, 2017.

#### b. Updated Wage Index—Budget Neutrality Adjustment

Section 1886(d)(3)(E)(i) of the Act requires us to update the hospital wage index on an annual basis beginning October 1, 1993. This provision also requires us to make any updates or adjustments to the wage index in a manner that ensures that aggregate payments to hospitals are not affected by the change in the wage index. Section 1886(d)(3)(E)(i) of the Act requires that we implement the wage index adjustment in a budget neutral manner. However, section 1886(d)(3)(E)(ii) of the Act sets the labor-related share at 62 percent for hospitals with a wage index less than or equal to 1.0000, and section 1886(d)(3)(E)(i) of the Act provides that the Secretary shall calculate the budget neutrality adjustment for the adjustments or updates made under that provision as if section 1886(d)(3)(E)(ii) of the Act had not been enacted. In other words, this section of the statute requires that we implement the updates to the wage index in a budget neutral manner, but that our budget neutrality adjustment should not take into account the requirement that we set the labor-related share for hospitals with wage indexes less than or equal to 1.0000 at the more advantageous level of 62 percent. Therefore, for purposes of this budget neutrality adjustment, section 1886(d)(3)(E)(i) of the Act prohibits us from taking into account the fact that hospitals with a wage index less than or equal to 1.0000 are paid using a labor-related share of 62 percent. Consistent with current policy, for FY 2018, we adjusted 100 percent of the wage index factor for occupational mix. We describe the occupational mix adjustment in section III.E. of the preamble of this final rule.

To compute a budget neutrality adjustment factor for wage index and labor-related share percentage changes, we used FY 2016 discharge data to simulate payments and compared the following:

- Aggregate payments using the FY 2018 relative weights and the FY 2017 pre-reclassified wage indexes, applied the FY 2017 labor-related share of 69.6 percent to all hospitals (regardless of whether the hospital's wage index was above or below 1.0000), and applied the FY 2018 hospital readmissions payment adjustment and the estimated FY 2018 hospital VBP payment adjustment; and
- Aggregate payments using the FY 2018 relative weights and the FY 2018 pre-reclassified wage indexes, applied the labor-related share for FY 2018 of 68.3 percent to all hospitals (regardless of whether the hospital's wage index was above or below

1.0000), and applied the same FY 2018 hospital readmissions payment adjustments and estimated FY 2018 hospital VBP payment adjustments applied above.

In addition, we applied the MS-DRG reclassification and recalibration budget neutrality adjustment factor (derived in the first step) to the payment rates that were used to simulate payments for this comparison of aggregate payments from FY 2017 to FY 2018. By applying this methodology, we determined a budget neutrality adjustment factor of 1.001148 for changes to the wage index.

#### c. Reclassified Hospitals—Budget Neutrality Adjustment

Section 1886(d)(8)(B) of the Act provides that certain rural hospitals are deemed urban. In addition, section 1886(d)(10) of the Act provides for the reclassification of hospitals based on determinations by the MGRB. Under section 1886(d)(10) of the Act, a hospital may be reclassified for purposes of the wage index.

Under section 1886(d)(8)(D) of the Act, the Secretary is required to adjust the standardized amount to ensure that aggregate payments under the IPPS after implementation of the provisions of sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act are equal to the aggregate prospective payments that would have been made absent these provisions. We note that the wage index adjustments provided for under section 1886(d)(13) of the Act are not budget neutral. Section 1886(d)(13)(H) of the Act provides that any increase in a wage index under section 1886(d)(13) shall not be taken into account in applying any budget neutrality adjustment with respect to such index under section 1886(d)(8)(D) of the Act. To calculate the budget neutrality adjustment factor for FY 2018, we used FY 2016 discharge data to simulate payments and compared the following:

- Aggregate payments using the FY 2018 labor-related share percentages, the FY 2018 relative weights, and the FY 2018 wage data prior to any reclassifications under sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act, and applied the FY 2018 hospital readmissions payment adjustments and the estimated FY 2018 hospital VBP payment adjustments; and
- Aggregate payments using the FY 2018 labor-related share percentages, the FY 2018 relative weights, and the FY 2018 wage data after such reclassifications, and applied the same FY 2018 hospital readmissions payment adjustments and the estimated FY 2018 hospital VBP payment adjustments applied above.

We note that the reclassifications applied under the second simulation and comparison are those listed in Table 2 associated with this final rule, which is available via the Internet on the CMS Web site. This table reflects reclassification crosswalks for FY 2018, and apply the policies explained in section III. of the preamble to this final rule. Based on these simulations, we calculated a budget neutrality adjustment factor of 0.988008 to ensure that the effects of these provisions are budget neutral, consistent with the statute. The FY 2018 budget neutrality adjustment factor was applied to

the standardized amount after removing the effects of the FY 2017 budget neutrality adjustment factor. We note that the FY 2018 budget neutrality adjustment reflects FY 2018 wage index reclassifications approved by the MGCRB or the Administrator at the time of development of this final rule.

#### d. Rural Floor Budget Neutrality Adjustment

Under § 412.64(e)(4), we make an adjustment to the wage index to ensure that aggregate payments after implementation of the rural floor under section 4410 of the BBA (Pub. L. 105–33) and the imputed floor under § 412.64(h)(4) are equal to the aggregate prospective payments that would have been made in the absence of such provisions. Consistent with section 3141 of the Affordable Care Act and as discussed in section III.H. of the preamble of this final rule and codified at § 412.64(e)(4)(ii), the budget neutrality adjustment for the rural floor and imputed floor is a national adjustment to the wage index.

As noted above and as discussed in section III.H.2. of the preamble of this final rule, we are extending the imputed floor policy (both the original policy and alternative methodology) for FY 2018. Therefore, in order to ensure that aggregate payments to hospitals are not affected, similar to prior years, for FY 2018 we follow our policy of including the imputed floor (calculated under the original and alternative methodologies) in the national rural floor budget neutrality adjustment to the wage index.

Similar to our calculation in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50369 through 50370), for FY 2018, we calculated a national rural Puerto Rico wage index. Because there are no rural Puerto Rico hospitals with established wage data, our calculation of the FY 2018 rural Puerto Rico wage index is based on the policy adopted in the FY 2008 IPPS final rule with comment period (72 FR 47323). That is, we use the unweighted average of the wage indexes from all CBSAs (urban areas) that are contiguous (share a border with) to the rural counties to compute the rural floor (72 FR 47323; 76 FR 51594). Under the OMB labor market area delineations, except for Arecibo, Puerto Rico (CBSA 11640), all other Puerto Rico urban areas are contiguous to a rural area. Therefore, based on our existing policy, the FY 2018 rural Puerto Rico wage index is calculated based on the average of the FY 2018 wage indexes for the following urban areas: Aguadilla-Isabela, PR (CBSA 10380); Guayama, PR (CBSA 25020); Mayaguez, PR (CBSA 32420); Ponce, PR (CBSA 38660); San German, PR (CBSA 41900); and San Juan-Carolina-Caguas, PR (CBSA 41980).

To calculate the national rural floor and imputed floor budget neutrality adjustment factor, we used FY 2016 discharge data to simulate payments and the post-reclassified national wage indexes and compared the following:

- National simulated payments without the national rural floor and imputed floor; and
- National simulated payments with the national rural floor and imputed floor.

Based on this comparison, we determined a national rural floor and imputed floor

budget neutrality adjustment factor of 0.993348. The national adjustment was applied to the national wage indexes to produce a national rural floor and imputed floor budget neutral wage index.

e. Adjustment for FY 2018 Required Under Section 414 of Public Law 114–10 (MACRA) and Section 15005 of Public Law 114–255

As stated in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56785), once the recoupment required under section 631 of the ATRA was complete, we had anticipated making a single positive adjustment in FY 2018 to offset the reductions required to recoup the \$11 billion under section 631 of the ATRA. However, section 414 of the MACRA (which was enacted on April 16, 2015) replaced the single positive adjustment we intended to make in FY 2018 with a 0.5 percent positive adjustment for each of FYs 2018 through 2023. In the FY 2017 rulemaking, we indicated that we would address the adjustments for FY 2018 and later fiscal years in future rulemaking. As noted previously, section 15005 of the 21st Century Cures Act (Public Law 114–255), which was enacted December 13, 2016, amended section 7(b)(1)(B) of the TMA, as amended by section 631 of the ATRA and section 414 of the MACRA, to reduce the adjustment for FY 2018 from 0.5 percentage points to 0.4588 percentage points.

Therefore, for FY 2018, we are implementing the required +0.4588 percent adjustment to the standardized amount. This is a permanent adjustment to payment rates. In the FY 2018 IPPS/LTCH PPS proposed rule, we noted, that while we are not proposing future adjustments required under section 414 of the MACRA and section 15005 of Public Law 114–255 at this time, we expect to propose positive 0.5 percent adjustments to the standardized amounts for FYs 2019 through 2023.

#### f. Outlier Payments

Section 1886(d)(5)(A) of the Act provides for payments in addition to the basic prospective payments for “outlier” cases involving extraordinarily high costs. To qualify for outlier payments, a case must have costs greater than the sum of the prospective payment rate for the MS–DRG, any IME and DSH payments, uncompensated care payments, any new technology add-on payments, and the “outlier threshold” or “fixed-loss” amount (a dollar amount by which the costs of a case must exceed payments in order to qualify for an outlier payment). We refer to the sum of the prospective payment rate for the MS–DRG, any IME and DSH payments, uncompensated care payments, any new technology add-on payments, and the outlier threshold as the outlier “fixed-loss cost threshold.” To determine whether the costs of a case exceed the fixed-loss cost threshold, a hospital’s CCR is applied to the total covered charges for the case to convert the charges to estimated costs. Payments for eligible cases are then made based on a marginal cost factor, which is a percentage of the estimated costs above the fixed-loss cost threshold. The marginal cost factor for FY 2018 is 80 percent, or 90 percent for burn MS–DRGs 927, 928, 929, 933, 934 and 935. We have used a marginal

cost factor of 90 percent since FY 1989 (54 FR 36479 through 36480) for designated burn DRGs as well as a marginal cost factor of 80 percent for all other DRGs since FY 1995 (59 FR 45367).

In accordance with section 1886(d)(5)(A)(iv) of the Act, outlier payments for any year are projected to be not less than 5 percent nor more than 6 percent of total operating DRG payments (which does not include IME and DSH payments) plus outlier payments. When setting the outlier threshold, we compute the 5.1 percent target by dividing the total operating outlier payments by the total operating DRG payments plus outlier payments. We do not include any other payments such as IME and DSH within the outlier target amount. Therefore, it is not necessary to include Medicare Advantage IME payments in the outlier threshold calculation. Section 1886(d)(3)(B) of the Act requires the Secretary to reduce the average standardized amount by a factor to account for the estimated proportion of total DRG payments made to outlier cases. More information on outlier payments may be found on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/outlier.htm>.

#### (1) FY 2018 Outlier Fixed-Loss Cost Threshold

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50977 through 50983), in response to public comments on the FY 2013 IPPS/LTCH PPS proposed rule, we made changes to our methodology for projecting the outlier fixed-loss cost threshold for FY 2014. We refer readers to the FY 2014 IPPS/LTCH PPS final rule for detailed discussion of the changes.

As we have done in the past, to calculate the FY 2018 outlier threshold, we simulated payments by applying FY 2018 payment rates and policies using cases from the FY 2016 MedPAR file. Therefore, in order to determine the FY 2018 outlier threshold, we inflated the charges on the MedPAR claims by 2 years, from FY 2016 to FY 2018. As discussed in the FY 2015 IPPS/LTCH PPS final rule, we believe a methodology that is based on 1-year of charge data will provide a more stable measure to project the average charge per case because our prior methodology used a 6-month measure, which inherently uses fewer claims than a 1-year measure and makes it more susceptible to fluctuations in the average charge per case as a result of any significant charge increases or decreases by hospitals. As finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57282), we used the following methodology to calculate the charge inflation factor for FY 2018:

- To produce the most stable measure of charge inflation, we applied the following inclusion and exclusion criteria of hospitals claims in our measure of charge inflation: Include hospitals whose last four digits fall between 0001 and 0899 (section 2779A1 of Chapter 2 of the State Operations Manual on the CMS Web site at <https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/som107c02.pdf>); include CAHs that were IPPS hospitals for the time period of the MedPAR data being used to calculate the charge inflation factor;

include hospitals in Maryland; and remove PPS-excluded cancer hospitals who have a “V” in the fifth position of their provider number or a “E” or “F” in the sixth position.

- We excluded Medicare Advantage IME claims for the reasons described in section I.A.4. of this Addendum. We refer readers to the FY 2011 IPPS/LTCH PPS final rule for a complete discussion on our methodology of identifying and adding the total Medicare Advantage IME payment amount to the budget neutrality adjustments.

- In order to ensure that we capture only FFS claims, we included claims with a “Claim Type” of 60 (which is a field on the MedPAR file that indicates a claim is an FFS claim).

- In order to further ensure that we capture only FFS claims, we excluded claims with a “GHOPAID” indicator of 1 (which is a field on the MedPAR file that indicates a claim is not an FFS claim and is paid by a Group Health Organization).

- We examined the MedPAR file and removed pharmacy charges for anti-hemophilic blood factor (which are paid separately under the IPPS) with an indicator of “3” for blood clotting with a revenue code of “0636” from the covered charge field. We also removed organ acquisition charges from the covered charge field because organ acquisition is a pass-through payment not paid under the IPPS.

In the FY 2016 IPPS/LTCH PPS final rule (80 FR 49779 through 49780), we stated that commenters were concerned that they were unable to replicate the calculation of the charge inflation factor that CMS used in the proposed rule. In response to those comments, we stated that we continue to believe that it is optimal to use the most recent period of charge data available to measure charge inflation. In response to those comments, similar to FY 2016 and 2017, for FY 2018 we grouped claims data by quarter in the table below in order that the

public would be able to replicate the claims summary for the claims with discharge dates through September 30, 2016, that are available under the current LDS structure. In order to provide even more information in response to the commenters’ request, similar to FY 2016 and FY 2017, for FY 2018 we have made available on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html> (click on the link on the left titled “FY 2018 IPPS Proposed Rule Home Page” and then click the link “FY 2018 Proposed Rule Data Files”) a more detailed summary table by provider with the monthly charges that were used to compute the charge inflation factor. In the proposed rule, we stated that we would continue to work with our systems teams and privacy office to explore expanding the information available in the current LDS, perhaps through the provision of a supplemental data file for future rulemaking.

Quarter	Covered charges (January 1, 2015, through December 31, 2015)	Cases January 1, 2015, through December 31, 2015)	Covered Charges (January 1, 2016, through December 31, 2016)	Cases (January 1, 2016, through December 31, 2016)
1	\$134,654,491,108	2,550,009	\$140,324,387,852	2,503,723
2	128,043,608,047	2,432,111	134,274,423,481	2,401,159
3	125,070,725,661	2,352,162	129,395,535,792	2,318,480
4	130,224,314,081	2,386,486	104,063,409,952	1,850,535
Total	517,93,138,897	9,720,768	508,057,757,077	9,073,897

Under this methodology, to compute the 1-year average annualized rate-of-change in charges per case for FY 2018, we compared the average covered charge per case of \$53,287 (\$517,993,138,897/9,720,768) from the second quarter of FY 2015 through the first quarter of FY 2016 (January 1, 2015, through December 31, 2015) to the average covered charge per case of \$55,991 (\$508,057,757,077/9,073,897) from the second quarter of FY 2016 through the first quarter of FY 2017 (January 1, 2016, through December 31, 2016). This rate-of-change was 5.1 percent (1.05074) or 10.4 percent (1.104055) over 2 years. The billed charges are obtained from the claim from the MedPAR file and inflated by the inflation factor specified above.

*Comment:* Several commenters were concerned with what they stated was a lack of transparency with respect to the charge inflation component of the fixed-loss threshold calculation. One commenter requested that CMS not implement the increase in the outlier threshold from FY 2017 to FY 2018 until the agency provides data that can be independently validated to demonstrate the need for an increase in the outlier threshold.

Another commenter stated that it was unable to match the figures in the table from the proposed rule with publicly available data sources and that CMS did not disclose the source of the data. The commenter further stated that CMS has not made the necessary data available, or any guidance that describes whether and how CMS edited such data to arrive at the total of quarterly charges

and charges per case used to measure charge inflation. Consequently, the commenter stated that the table provided in the proposed rule was not useful in assessing the accuracy of the charge inflation figure that CMS used in the proposed rule to calculate the outlier threshold. The commenter noted that CMS provided a detailed summary table by provider with the monthly charges that were used to compute the charge inflation factor. The commenters appreciated the additional data, but still believed that CMS has not provided enough specific information and data to allow the underlying numbers used in CMS’ calculation of the charge inflation factor to be replicated and/or tested for accuracy. The commenter concluded that, in the absence of more specific data and information about how the data were edited by CMS to arrive at the totals used in the charge inflation calculation, CMS has not provided adequate notice to allow for meaningful comment.

*Response:* We responded to a similar comment in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50375), FY 2016 IPPS/LTCH PPS final rule (80 FR 49779 through 49780) and FY 2017 IPPS/LTCH PPS final rule (81 FR 57283) and refer readers to those final rules for our complete response. As previously noted in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50375), we did not have sufficient time to restructure the files (such as ensuring that personal identification information is compliant with privacy regulations) prior to the publication of the proposed and this final rule. As we stated in last year’s final rule, while the charge data

may not be immediately available after the issuance of this final rule, we believe the data and supporting files we have provided will provide the commenters with additional information that can be verified once the charge data are available. We have produced the actual figures we used and disclosed our formula. We intend to post the actual charge data as soon as possible so that the public can verify the raw data with the figures we used in the calculation. As stated earlier and in the proposed rule, the charge data used to calculate the charge inflation factor are sourced from our MedPAR database.

In addition, as stated in last year’s final rule, for this final rule we continue to believe that it is optimal to use the most recent period of charge data available to measure charge inflation. Similar to last year, the commenters did not propose to use charge data from a different period to compute the charge inflation factor. If we computed the charge inflation factor using the latest data available to the public at the time of issuance of this final rule, we would need to compare charge data from FY 2015 (October 2014—September 2015) to FY 2016 (October 2015—September 2016), data which would be at least 10 months old compared to the charge data we currently use that are 4 months old.

*Comment:* One commenter requested that CMS add the claims data used to compute the charge inflation factor to the list of limited data set (LDS) files that can be ordered through the usual LDS data request process.

*Response:* As we stated in response to a similar comment in last year’s final rule,

there are limitations on how expeditiously we can add the charge data to the LDS. After consulting with our systems teams and privacy office, we do not anticipate being able to provide the charge data we currently use to calculate the charge inflation factor within the commenter's requested timeframe. We prefer using the latest data available at the time of the proposed and final rules to compute the charge inflation factor because we believe it leads to greater accuracy in the calculation of the fixed-loss cost outlier threshold. As noted earlier and in last year's final rule, we believe that using older data may not provide the same accuracy as the current data we use. We invite commenters to inform us if they believe their need to have complete access to the data we use in our methodology outweighs the greater accuracy provided by the use of more up-to-date data. As noted above, the data we currently use will eventually be publicly available for replication but not in the timeframe the commenter has requested. To summarize, we are confronted with a dilemma—either we use older data that commenters can access earlier, or we use the most up-to-date data which will be more accurate, but will not be available to the public until after publication of the proposed and final rules. For this final rule, we continue to believe the latter approach, using the best available data to produce a more accurate charge inflation factor, is preferable. However, for the FY 2019 IPPS/LTCH PPS proposed rule, we are considering using data that commenters can access earlier. As we have done in the past, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20173), we proposed to establish the FY 2018 outlier threshold using hospital CCRs from the December 2016 update to the Provider-Specific File (PSF)—the most recent available data at the time of the development of the proposed rule. We proposed to apply the following edits to providers' CCRs in the PSF. We believe these edits are appropriate in order to accurately model the outlier threshold. We first search for Indian Health Service providers and those providers assigned the statewide average CCR from the current fiscal year. We then replace these CCRs with the statewide average CCR for the upcoming fiscal year. We also assign the statewide average CCR (for the upcoming fiscal year) to those providers that have no value in the CCR field in the PSF or whose CCRs exceed the ceilings described later in this section (3.0 standard deviations from the mean of the log distribution of CCRs for all hospitals). We do not apply the adjustment factors described below to hospitals assigned the statewide average CCR.

For FY 2018, we proposed to continue to apply an adjustment factor to the CCRs to account for cost and charge inflation (as explained below). We proposed that, if more recent data became available, we would use that data to calculate the final FY 2018 outlier threshold.

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50979), we adopted a new methodology to adjust the CCRs. Specifically, we finalized a policy to compare the national average case-weighted operating and capital CCR from the most recent update of the PSF to the national average case-weighted

operating and capital CCR from the same period of the prior year.

Therefore, as we have done since FY 2014, we proposed to adjust the CCRs from the December 2016 update of the PSF by comparing the percentage change in the national average case-weighted operating CCR and capital CCR from the December 2015 update of the PSF to the national average case-weighted operating CCR and capital CCR from the December 2016 update of the PSF. We note that, in the proposed rule, we used total transfer-adjusted cases from FY 2016 to determine the national average case-weighted CCRs for both sides of the comparison. As stated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50979), we believe that it is appropriate to use the same case count on both sides of the comparison because this will produce the true percentage change in the average case-weighted operating and capital CCR from one year to the next without any effect from a change in case count on different sides of the comparison.

Using the proposed methodology above, for the proposed rule, we calculated a December 2015 operating national average case-weighted CCR of 0.274139 and a December 2016 operating national average case-weighted CCR of 0.26579. We then calculated the percentage change between the two national operating case-weighted CCRs by subtracting the December 2015 operating national average case-weighted CCR from the December 2016 operating national average case-weighted CCR and then dividing the result by the December 2015 national operating average case-weighted CCR. This resulted in a proposed national operating CCR adjustment factor of 0.979187.

We used the same methodology proposed above to adjust the capital CCRs. Specifically, for the proposed rule, we calculated a December 2015 capital national average case-weighted CCR of 0.024047 and a December 2016 capital national average case-weighted CCR of 0.022967. We then calculated the percentage change between the two national capital case-weighted CCRs by subtracting the December 2015 capital national average case-weighted CCR from the December 2016 capital national average case-weighted CCR and then dividing the result by the December 2015 capital national average case-weighted CCR. This resulted in a proposed national capital CCR adjustment factor of 0.955068.

As discussed in section III.B.3. of the preamble to the FY 2011 IPPS/LTCH PPS final rule (75 FR 50160 and 50161) and in section III.H.3. of the preamble of the proposed rule and this final rule, in accordance with section 10324(a) of the Affordable Care Act, we created a wage index floor of 1.0000 for all hospitals located in States determined to be frontier States. We note that the frontier State floor adjustments were calculated and applied after rural floor budget neutrality adjustments were calculated for all labor market areas, in order to ensure that no hospital in a frontier State will receive a wage index less than 1.0000 due to the rural floor adjustment. In accordance with section 10324(a) of the Affordable Care Act, the frontier State adjustment will not be subject to budget

neutrality, and will only be extended to hospitals geographically located within a frontier State. However, for purposes of estimating the outlier threshold for FY 2018, it was necessary to adjust the wage index of those eligible hospitals in a frontier State when calculating the outlier threshold that results in outlier payments being 5.1 percent of total payments for FY 2018. If we did not take the above into account, our estimate of total FY 2018 payments would be too low, and, as a result, our outlier threshold would be too high, such that estimated outlier payments would be less than our projected 5.1 percent of total payments.

As we did in establishing the FY 2009 outlier threshold (73 FR 57891), in our projection of FY 2018 outlier payments, we proposed not to make any adjustments for the possibility that hospitals' CCRs and outlier payments may be reconciled upon cost report settlement. We stated that we continue to believe that, due to the policy implemented in the June 9, 2003 Outlier Final Rule (68 FR 34494), CCRs will no longer fluctuate significantly and, therefore, few hospitals will actually have these ratios reconciled upon cost report settlement. In addition, it is difficult to predict the specific hospitals that will have CCRs and outlier payments reconciled in any given year. We note that we have instructed MACs to identify for CMS any instances where (1) a hospital's actual CCR for the cost reporting period fluctuates plus or minus 10 percentage points compared to the interim CCR used to calculate outlier payments when a bill is processed; and (2) the total outlier payments for the hospital exceeded \$500,000.00 for that period. Our simulations assume that CCRs accurately measure hospital costs based on information available to us at the time we set the outlier threshold. For these reasons, we proposed not to make any assumptions regarding the effects of reconciliation on the outlier threshold calculation.

*Comment:* Commenters were concerned with CMS' decision not to consider outlier reconciliation in developing the outlier threshold and stated that CMS did not provide objective data concerning the number of hospitals that have been subjected to reconciliation and the amounts recovered during this process.

*Response:* The commenters' views were similar to comments received and responded to in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50376 through 50377), and we refer readers to that rule for our response.

As described in sections V.I. and V.J., respectively, of the preamble of this final rule, sections 1886(q) and 1886(o) of the Act establish the Hospital Readmissions Reduction Program and the Hospital VBP Program, respectively. We do not believe that it is appropriate to include the hospital VBP payment adjustments and the hospital readmissions payment adjustments in the outlier threshold calculation or the outlier offset to the standardized amount. Specifically, consistent with our definition of the base operating DRG payment amount for the Hospital Readmissions Reduction Program under § 412.152 and the Hospital VBP Program under § 412.160, outlier payments under section 1886(d)(5)(A) of the

Act are not affected by these payment adjustments. Therefore, outlier payments will continue to be calculated based on the unadjusted base DRG payment amount (as opposed to using the base-operating DRG payment amount adjusted by the hospital readmissions payment adjustment and the hospital VBP payment adjustment). Consequently, we proposed to exclude the hospital VBP payment adjustments and the hospital readmissions payment adjustments from the calculation of the outlier fixed-loss cost threshold.

We note that, to the extent section 1886(r) of the Act modifies the DSH payment methodology under section 1886(d)(5)(F) of the Act, the uncompensated care payment under section 1886(r)(2) of the Act, like the empirically justified Medicare DSH payment under section 1886(r)(1) of the Act, may be considered an amount payable under section 1886(d)(5)(F) of the Act such that it would be reasonable to include the payment in the outlier determination under section 1886(d)(5)(A) of the Act. As we have done since the implementation of uncompensated care payments in FY 2014, for FY 2018 we proposed allocating an estimated per-discharge uncompensated care payment amount to all cases for the hospitals eligible to receive the uncompensated care payment amount in the calculation of the outlier fixed-loss cost threshold methodology. We continue to believe that allocating an eligible hospital's estimated uncompensated care payment to all cases equally in the calculation of the outlier fixed-loss cost threshold would best approximate the amount we would pay in uncompensated care payments during the year because, when we make claim payments to a hospital eligible for such payments, we would be making estimated per-discharge uncompensated care payments to all cases equally. Furthermore, we continue to believe that using the estimated per-claim uncompensated care payment amount to determine outlier estimates provides predictability as to the amount of uncompensated care payments included in the calculation of outlier payments. Therefore, consistent with the methodology used since FY 2014 to calculate the outlier fixed-loss cost threshold, for FY 2018, we proposed to include estimated FY 2018 uncompensated care payments in the computation of the outlier fixed-loss cost threshold. Specifically, we proposed to use the estimated per-discharge uncompensated care payments to hospitals eligible for the uncompensated care payment for all cases in the calculation of the proposed outlier fixed-loss cost threshold methodology.

Using this methodology, we used the formula described in section I.C.1 of this Addendum to simulate and calculate the Federal payment rate and outlier payments for all claims. We proposed a threshold of \$26,713 and calculated total operating Federal payments of \$89,955,398,001 and total outlier payments of \$4,587,838,750. We then divided total outlier payments by total operating Federal payments plus total outlier payments and determined that this threshold met the 5.1 percent target. As a result, we proposed an outlier fixed-loss cost threshold

for FY 2018 equal to the prospective payment rate for the MS-DRG, plus any IME, empirically justified Medicare DSH payments, estimated uncompensated care payment, and any add-on payments for new technology, plus \$26,713.

*Comment:* One commenter noted that dividing the total outlier payments of \$4,587,838,750 by total operating Federal payments of \$89,955,398,001 plus total outlier payments of \$4,587,838,750 yields 4.85 percent instead of 5.1 percent.

*Response:* The commenter is correct. We inadvertently summed total operating Federal payments with total outlier payments in the number of \$89,955,398,001 above. The corrected total operating Federal payments for the proposed rule is \$85,367,559,251. Dividing the proposed total outlier payments of \$4,587,838,750 by the corrected proposed total operating Federal payments of \$85,367,559,251 plus proposed total outlier payments of \$4,587,838,750 yields the 5.1 percent target. We thank the commenter for noting this error.

*Comment:* One commenter believed that it is important that CMS accurately calculate prior year actual payment comparisons to the 5.1 percent target. The commenter asserted that it is not possible for CMS to appropriately modify the methodology to achieve an accurate result if CMS is not aware of, or misinformed about, inaccuracies resulting from the prior year's methodology. The commenter cited the FY 2017 IPPS/LTCH PPS proposed rule as an example where CMS indicated that actual outlier payments for FY 2015 were approximately 4.68 percent of overall payments. The commenter stated that it was concerned that CMS believed the agency would reach the 5.1 percent target for FY 2015 only to learn that the original estimate was overestimated and still raise the threshold for the subsequent year.

The same commenter noted that the final outlier threshold established by CMS is always significantly lower than the threshold set forth in the proposed rule. The commenter believed the decline is most likely due to the use of updated CCRs or other data in calculating the final threshold. The commenter stated this emphasizes that CMS must use the most recent data available when the agency calculates the outlier threshold. The commenter cited as an example that, in the proposed rule, CMS used data from the December 2016 PSF file, but at the time the proposed rule was issued, the March 2017 PSF file was available.

*Response:* We responded to similar comments in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50378 through 50379) and refer the reader to that rule for our response.

*Comment:* One commenter asked if CMS used more updated data for the FY 2017 proposed rule than in prior years because the variance in the outlier fixed-loss cost threshold from the FY 2017 proposed rule (\$23,681) to the FY 2017 final rule (\$23,573) was much smaller than prior fiscal years (approximately \$100 versus a variance of approximately \$1,000 to \$2,000 from FY 2009 through FY 2016).

*Response:* Regarding the data used for the FY 2017 proposed and final rule, we used the

same update of the MedPAR data as in prior fiscal years. Specifically, we use the December update of the MedPAR for the proposed rule and the March update of the MedPAR for the final rule.

*Comment:* Some commenters believed that the outlier threshold should be further reduced because outlier payments this year are on target to fall below the 5.1 percent target. The commenter suggested that CMS consider calculating the threshold at the midpoint of the target (approximately 5.5 percent) in order to ensure that the final total of outlier payments is between the statutory requirements of 5 to 6 percent of total payments.

Some commenters recommended that the threshold be maintained at the FY 2017 outlier threshold because CMS has underpaid outlier payments in prior fiscal years with no adjustment to make up for the shortfalls. One commenter noted that CMS' estimate of FY 2016 outlier payments in the proposed rule was 5.37 percent, which is above the 5.1 percent target. The commenter favored a simplified methodology and believed that by applying a 2-year charge inflation factor and a 1-year CCR factor that CMS is inadvertently compounding its charge increase with lower costs and overstating the outlier threshold. The commenter suggested that CMS apply the following formula to compute the FY 2018 outlier threshold: Step 1—FY 2016 Difference = (FY 2016 estimate of 5.37 percent – 5.1 percent target = 0.27 percent) / 5.1 percent target = 5.29 percent; Step 2—Suggested FY 2018 Threshold = Threshold from FY 2017 of \$23,570 \* (100 + 5.29 from Step 1 = 105.29 percent) = \$24,817. The commenter concluded that the FY 2018 fixed-loss cost threshold should not exceed \$24,817.

*Response:* We responded to similar comments in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50379) and the FY 2016 IPPS/LTCH PPS final rule (80 FR 49783) and refer readers to those final rules for our complete responses.

*Comment:* One commenter asked that CMS consider whether it is appropriate to include extreme cases when calculating the threshold. The commenter explained that high charge cases have a significant impact on the threshold. The commenter observed that the amount of cases with over \$1.5 million in charges has increased significantly from FY 2011 (926 cases) to FY 2016 (1,733 cases). The commenter believed that the impact of these cases will cause the threshold to rise and recommended that CMS consider the removal of high charge cases from the calculation of the threshold.

*Response:* We thank the commenter for its analysis. The methodology used to calculate the outlier threshold includes all claims in order to account for all different types of cases, including high charge cases, to ensure that CMS meets the 5.1 percent target. As the commenter pointed out, the volume of these cases continues to rise, making their impact on the threshold significant. We believe excluding these cases would artificially lower the threshold. We believe it is important to include all cases in the calculation of the threshold no matter how high or low the charges. Including these

cases with high charges lends more accuracy to the threshold, as these cases have an impact on the threshold and continue to rise in volume. Therefore, we disagree with the commenter.

After consideration of the public comments we received, we are not making any changes

to our methodology in this final rule for FY 2018. Therefore, we are using the same methodology we proposed to calculate the final outlier threshold. We note that, as stated above, we will consider for FY 2019 using data that commenters can access earlier to validate the charge inflation factor.

Similar to the table provided in the proposed rule, for this final rule, we are providing the following table that displays covered charges and cases by quarter in the periods used to calculate the charge inflation factor based on the latest claims data from the MedPAR file.

Quarter	Covered charges (April 1, 2015, through March 31, 2016)	Cases (April 1, 2015, through March 31, 2016)	Covered charges (April 1, 2016, through March 31, 2017)	Cases (April 1, 2016, through March 31, 2017)
1 .....	\$141,152,765,310	2,511,643	\$117,678,018,441	2,041,566
2 .....	128,006,070,168	2,429,952	135,162,474,098	2,412,323
3 .....	125,050,723,246	2,350,572	131,355,245,078	2,344,249
4 .....	130,279,257,188	2,385,573	135,647,775,015	2,374,373
Total .....	524,488,815,912	9,677,740	519,843,512,632	9,172,511

Under our current methodology, to compute the 1-year average annualized rate-of-change in charges per case for FY 2018, we compared the average covered charge per case of \$54,195 (\$524,488,815,912/9,677,740) from the third quarter of FY 2015 through the second quarter of FY 2016 (April 1, 2015, through March 31, 2016) to the average covered charge per case of \$56,674 (\$519,843,512,632/9,172,511) from the third quarter of FY 2016 through the second quarter of FY 2017 (April 1, 2016, through March 31, 2017). This rate-of-change is 4.6 percent (1.04574) or 9.4 percent (1.09357) over 2 years. The billed charges are obtained from the claim from the MedPAR file and inflated by the inflation factor specified above.

Similar to the proposed rule, for this final rule, we have made available a more detailed summary table by provider with the monthly charges that were used to compute the charge inflation factor on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html> (click on the link on the left titled "FY 2018 IPPS Final Rule Home Page" and then click the link "FY 2018 Final Rule Data Files").

As we have done in the past, we are establishing the FY 2018 outlier threshold using hospital CCRs from the March 2017 update to the Provider-Specific File (PSF)—the most recent available data at the time of the development of this final rule. For FY 2018, we also are continuing to apply an adjustment factor to the CCRs to account for cost and charge inflation (as explained below).

Therefore, as we did for the last 4 fiscal years, we are adjusting the CCRs from the March 2017 update of the PSF by comparing the percentage change in the national average case-weighted operating CCR and capital CCR from the March 2016 update of the PSF to the national average case-weighted operating CCR and capital CCR from the March 2017 update of the PSF. We note that we used total transfer-adjusted cases from FY 2016 to determine the national average case-weighted CCRs for both sides of the comparison.

Using the methodology above, for this final rule, we calculated a March 2016 operating national average case-weighted CCR of 0.269558 and a March 2017 operating

national average case-weighted CCR of 0.265668. We then calculated the percentage change between the two national operating case-weighted CCRs by subtracting the March 2016 operating national average case-weighted CCR from the March 2017 operating national average case-weighted CCR and then dividing the result by the March 2016 national operating average case-weighted CCR. This resulted in a national operating CCR adjustment factor of 0.985569 (the factors used to determine this result were based on unrounded numbers).

We used the same methodology above to adjust the capital CCRs. Specifically, for this final rule, we calculated a March 2016 capital national average case-weighted CCR of 0.023751 and a March 2017 capital national average case-weighted CCR of 0.22615. We then calculated the percentage change between the two national capital case-weighted CCRs by subtracting the March 2016 capital national average case-weighted CCR from the March 2017 capital national average case-weighted CCR and then dividing the result by the March 2016 capital national average case-weighted CCR. This resulted in a national capital CCR adjustment factor of 0.952173 (the factors used to determine this result were based on unrounded numbers).

As discussed above, similar to the proposed rule, for FY 2018 we applied the following policies (see discussion above for more details):

- In accordance with section 10324(a) of the Affordable Care Act, we created a wage index floor of 1.0000 for all hospitals located in States determined to be frontier States.
- As we did in establishing the FY 2009 outlier threshold (73 FR 57891), in our projection of FY 2018 outlier payments, we did not make any adjustments for the possibility that hospitals' CCRs and outlier payments may be reconciled upon cost report settlement.
- We excluded the hospital VBP payment adjustments and the hospital readmissions payment adjustments from the calculation of the outlier fixed-loss cost threshold.
- We used the estimated per-discharge uncompensated care payments to hospitals eligible for the uncompensated care payment for all cases in the calculation of the outlier fixed-loss cost threshold methodology.

Using this methodology, we used the formula described in section I.C.1. of this

Addendum to simulate and calculate the Federal payment rate and outlier payments for all claims. We calculated a threshold of \$26,601 and calculated total operating Federal payments of \$85,942,484,975 and total outlier payments of \$4,618,707,285. We then divided total outlier payments by total operating Federal payments plus total outlier payments and determined that this threshold met the 5.1 percent target. As a result, we are finalizing an outlier fixed-loss cost threshold for FY 2018 equal to the prospective payment rate for the MS-DRG, plus any IME, empirically justified Medicare DSH payments, estimated uncompensated care payment, and any add-on payments for new technology, plus \$26,601.

(2) Other Changes Concerning Outliers

As stated in the FY 1994 IPPS final rule (58 FR 46348), we establish an outlier threshold that is applicable to both hospital inpatient operating costs and hospital inpatient capital-related costs. When we modeled the combined operating and capital outlier payments, we found that using a common threshold resulted in a lower percentage of outlier payments for capital-related costs than for operating costs. We project that the thresholds for FY 2018 will result in outlier payments that will equal 5.1 percent of operating DRG payments and 5.16 percent of capital payments based on the Federal rate.

In accordance with section 1886(d)(3)(B) of the Act, we reduced the FY 2018 standardized amount by the same percentage to account for the projected proportion of payments paid as outliers.

The outlier adjustment factors that were applied to the standardized amount based on the FY 2018 outlier threshold are as follows:

	Operating standardized amounts	Capital federal rate
National .....	0.948999	0.948400

We applied the outlier adjustment factors to the FY 2018 payment rates after removing the effects of the FY 2017 outlier adjustment factors on the standardized amount.

To determine whether a case qualifies for outlier payments, we apply hospital-specific CCRs to the total covered charges for the case. Estimated operating and capital costs

for the case are calculated separately by applying separate operating and capital CCRs. These costs are then combined and compared with the outlier fixed-loss cost threshold.

Under our current policy at § 412.84, we calculate operating and capital CCR ceilings and assign a statewide average CCR for hospitals whose CCRs exceed 3.0 standard deviations from the mean of the log distribution of CCRs for all hospitals. Based on this calculation, for hospitals for which the MAC computes operating CCRs greater than 1.16 or capital CCRs greater than 0.155, or hospitals for which the MAC is unable to calculate a CCR (as described under § 412.84(i)(3) of our regulations), statewide average CCRs are used to determine whether a hospital qualifies for outlier payments. Table 8A listed in section VI. of this Addendum (and available only via the Internet on the CMS Web site) contains the statewide average operating CCRs for urban hospitals and for rural hospitals for which the MAC is unable to compute a hospital-specific CCR within the above range. These statewide average ratios will be effective for discharges occurring on or after October 1, 2017 and will replace the statewide average ratios from the prior fiscal year. Table 8B listed in section VI. of this Addendum (and available via the Internet on the CMS Web site) contains the comparable statewide average capital CCRs. As previously stated, the CCRs in Tables 8A and 8B will be used during FY 2018 when hospital-specific CCRs based on the latest settled cost report either are not available or are outside the range noted above. Table 8C listed in section VI. of this Addendum (and available via the Internet on the CMS Web site) contains the statewide average total CCRs used under the LTCH PPS as discussed in section V. of this Addendum.

We finally note that we published a manual update (Change Request 3966) to our outlier policy on October 12, 2005, which updated Chapter 3, Section 20.1.2 of the Medicare Claims Processing Manual. The manual update covered an array of topics, including CCRs, reconciliation, and the time value of money. We encourage hospitals that are assigned the statewide average operating and/or capital CCRs to work with their MAC on a possible alternative operating and/or capital CCR as explained in Change Request 3966. Use of an alternative CCR developed by the hospital in conjunction with the MAC can avoid possible overpayments or underpayments at cost report settlement, thereby ensuring better accuracy when making outlier payments and negating the need for outlier reconciliation. We also note that a hospital may request an alternative operating or capital CCR at any time as long as the guidelines of Change Request 3966 are followed. In addition, as mentioned above, we published an additional manual update (Change Request 7192) to our outlier policy on December 3, 2010, which also updated Chapter 3, Section 20.1.2 of the Medicare Claims Processing Manual. The manual update outlines the outlier reconciliation process for hospitals and Medicare contractors. To download and view the manual instructions on outlier reconciliation,

we refer readers to the CMS Web site: <http://www.cms.hhs.gov/manuals/downloads/clm104c03.pdf>.

### (3) FY 2016 Outlier Payments

Our current estimate, using available FY 2016 claims data, is that actual outlier payments for FY 2016 were approximately 5.41 percent of actual total MS-DRG payments. Therefore, the data indicate that, for FY 2016, the percentage of actual outlier payments relative to actual total payments is higher than we projected for FY 2016. Consistent with the policy and statutory interpretation we have maintained since the inception of the IPPS, we do not make retroactive adjustments to outlier payments to ensure that total outlier payments for FY 2016 are equal to 5.1 percent of total MS-DRG payments. As explained in the FY 2003 Outlier Final Rule (68 FR 34502), if we were to make retroactive adjustments to all outlier payments to ensure total payments are 5.1 percent of MS-DRG payments (by retroactively adjusting outlier payments), we would be removing the important aspect of the prospective nature of the IPPS. Because such an across-the-board adjustment would either lead to more or less outlier payments for all hospitals, hospitals would no longer be able to reliably approximate their payment for a patient while the patient is still hospitalized. We believe it would be neither necessary nor appropriate to make such an aggregate retroactive adjustment. Furthermore, we believe it is consistent with the statutory language at section 1886(d)(5)(A)(iv) of the Act not to make retroactive adjustments to outlier payments. This section calls for the Secretary to ensure that outlier payments are equal to or greater than 5 percent and less than or equal to 6 percent of projected or estimated (not actual) MS-DRG payments. We believe that an important goal of a PPS is predictability. Therefore, we believe that the fixed-loss outlier threshold should be projected based on the best available historical data and should not be adjusted retroactively. A retroactive change to the fixed-loss outlier threshold would affect all hospitals subject to the IPPS, thereby undercutting the predictability of the system as a whole.

We note that because the MedPAR claims data for the entire FY 2017 will not be available until after September 30, 2017, we are unable to provide an estimate of actual outlier payments for FY 2017 based on FY 2017 claims data in this final rule. We will provide an estimate of actual FY 2017 outlier payments in the FY 2019 IPPS/LTCH PPS proposed rule.

*Comment:* One commenter noted that, in the proposed rule, CMS stated that actual outlier payments for FY 2016 were approximately 5.37 percent of total MS-DRG payments. The commenter performed its own analysis and concluded that outlier payments for FY 2016 are approximately 5.27 percent of total MS-DRG payments. The commenter was concerned that CMS' estimate was overstated.

*Response:* We thank the commenter for the comments. We reviewed our data to ensure the estimate provided is accurate. Therefore, we believe we have provided a reliable

estimate of the outlier percentage for FY 2016. The commenter did not provide details regarding the discrepancy. We welcome additional suggestions from the public, including the commenter, to improve the accuracy of our estimate of actual outlier payments.

### 5. FY 2018 Standardized Amount

The adjusted standardized amount is divided into labor-related and nonlabor-related portions. Tables 1A and 1B listed and published in section VI. of this Addendum (and available via the Internet on the CMS Web site) contain the national standardized amounts that we are applying to all hospitals, except hospitals located in Puerto Rico, for FY 2018. The standardized amount for hospitals in Puerto Rico is shown in Table 1C listed and published in section VI. of this Addendum (and available via the Internet on the CMS Web site). The amounts shown in Tables 1A and 1B differ only in that the labor-related share applied to the standardized amounts in Table 1A is 68.3 percent, and the labor-related share applied to the standardized amounts in Table 1B is 62 percent. In accordance with sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act, we are applying a labor-related share of 62 percent, unless application of that percentage would result in lower payments to a hospital than would otherwise be made. In effect, the statutory provision means that we will apply a labor-related share of 62 percent for all hospitals whose wage indexes are less than or equal to 1.0000.

In addition, Tables 1A and 1B include the standardized amounts reflecting the applicable percentage increases for FY 2018.

The labor-related and nonlabor-related portions of the national average standardized amounts for Puerto Rico hospitals for FY 2018 are set forth in Table 1C listed and published in section VI. of this Addendum (and available via the Internet on the CMS Web site). Similar to above, section 1886(d)(9)(C)(iv) of the Act, as amended by section 403(b) of Public Law 108-173, provides that the labor-related share for hospitals located in Puerto Rico be 62 percent, unless the application of that percentage would result in lower payments to the hospital.

The following table illustrates the changes from the FY 2017 national standardized amount to the FY 2018 national standardized amount. The second through fifth columns display the changes from the FY 2017 standardized amounts for each applicable FY 2018 standardized amount. The first row of the table shows the updated (through FY 2017) average standardized amount after restoring the FY 2017 offsets for outlier payments, geographic reclassification budget neutrality, new labor market delineation wage index transition budget neutrality and removing the FY 2017 2-midnight rule one-time prospective increase. The MS-DRG reclassification and recalibration and wage index budget neutrality adjustment factors are cumulative. Therefore, those FY 2017 adjustment factors are not removed from this table.

CHANGES FROM FY 2017 STANDARDIZED AMOUNTS TO THE FY 2018 STANDARDIZED AMOUNTS

	Hospital submitted quality data and is a meaningful EHR user	Hospital submitted quality data and is NOT a meaningful EHR user	Hospital did NOT submit quality data and is a meaningful EHR user	Hospital did NOT submit quality data and is NOT a meaningful EHR user
FY 2018 Base Rate after removing: 1. FY 2017 Geographic Reclassification Budget Neutrality (0.988136). 2. FY 2017 Operating Outlier Offset (0.948998). 3. FY 2017 2-Midnight Rule One-Time Prospective Increase (1.006). 4. FY 2017 Labor Market Delineation Wage Index Transition Budget Neutrality Factor (0.999997).	If Wage Index is Greater Than 1.0000:  Labor (68.3%): \$3,993.72.  Nonlabor (30.4%): \$1,853.60.  If Wage Index is less Than or Equal to 1.0000:  Labor (62%): \$3,625.34 .... Nonlabor (38%): \$2,221.98	If Wage Index is Greater Than 1.0000:  Labor (68.3%): \$3,993.72.  Nonlabor (30.4%): \$1,853.60.  If Wage Index is less Than or Equal to 1.0000:  Labor (62%): \$3,625.34 .... Nonlabor (38%): \$2,221.98	If Wage Index is Greater Than 1.0000:  Labor (68.3%): \$3,993.72. National Standardized Amount for FY 2018 if Wage Index is less Than or Equal to 1.0000; Labor/Non-Labor Share Percentage (62/38).	Labor: \$3,455.95 ..... Nonlabor: \$2,118.16 .....	Labor: \$3,386.90 ..... Nonlabor: \$2,075.84 .....	Labor: \$3,432.93 ..... Nonlabor: \$2,104.05 .....	Labor: \$3,363.88 ..... Nonlabor: \$2,061.74 .....

We note that, in recent years, we have estimated the MS-DRG recalibration budget neutrality factor, wage index budget neutrality factor, reclassification budget neutrality factor and operating outlier factor to six decimal places. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20176), we stated that while we are not proposing to make any changes at this time, we were interested in receiving comments from the public as to the continued necessity of six decimal places for these four estimates or if fewer decimal places would be sufficient. We did not receive any public comments regarding the necessity of six decimals. We will consider the use of fewer decimals in future rulemaking.

*B. Adjustments for Area Wage Levels and Cost-of-Living*

Tables 1A through 1C, as published in section VI. of this Addendum (and available via the Internet on the CMS Web site), contain the labor-related and nonlabor-related shares that we used to calculate the prospective payment rates for hospitals located in the 50 States, the District of Columbia, and Puerto Rico for FY 2018. This section addresses two types of adjustments to the standardized amounts that are made in determining the prospective payment rates as described in this Addendum.

1. Adjustment for Area Wage Levels

Sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act require that we make an adjustment to the labor-related portion of the national prospective payment rate to account for area differences in hospital wage levels. This adjustment is made by multiplying the labor-related portion of the adjusted standardized amounts by the appropriate wage index for the area in which the hospital is located. For FY 2018, as discussed in section IV.B.3. of the preamble of this final rule, we will apply a labor-related share of 68.3 percent for the national standardized amounts for all IPPS hospitals (including hospitals in Puerto Rico) that have a wage index value that is greater

than 1.0000. Consistent with section 1886(d)(3)(E) of the Act, we will apply the wage index to a labor-related share of 62 percent of the national standardized amount for all IPPS hospitals (including hospitals in Puerto Rico) whose wage index values are less than or equal to 1.0000. In section III. of the preamble of this final rule, we discuss the data and methodology for the FY 2018 wage index.

2. Adjustment for Cost-of-Living in Alaska and Hawaii

Section 1886(d)(5)(H) of the Act provides discretionary authority to the Secretary to make adjustments as the Secretary deems appropriate to take into account the unique circumstances of hospitals located in Alaska and Hawaii. Higher labor-related costs for these two States are taken into account in the adjustment for area wages described above. To account for higher nonlabor-related costs for these two States, we multiply the nonlabor-related portion of the standardized amount for hospitals in Alaska and Hawaii by an adjustment factor. For FY 2011 and in prior fiscal years, we used the most recent cost-of-living adjustment (COLA) factors obtained from the U.S. Office of Personnel Management (OPM) Web site at <http://www.opm.gov/oca/cola/rates.asp> to update this nonlabor portion.

In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51797), we explained that sections 1911 through 1919 of the Nonforeign Area Retirement Equity Assurance Act, as contained in subtitle B of title XIX of the National Defense Authorization Act (NDAA) for Fiscal Year 2010 (Pub. L. 111–84, October 28, 2009), transitions the Alaska and Hawaii COLAs to locality pay. We finalized that, for FY 2012, as OPM transitioned away from COLAs, we would continue to use the same “frozen” COLA factors (published by OPM) that we used to adjust payments in FY 2011 (which were based on OPM’s 2009 COLA factors) to adjust the nonlabor-related portion of the standardized amount for hospitals located in Alaska and Hawaii. We refer readers to the FY 2012 IPPS/LTCH PPS final rule for a more detailed discussion of our rationale for continuing to use the frozen COLAs in FY 2012.

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53700 and 53701), for FY 2013, we continued to use the same COLA factors that were used to adjust payments in FY 2012 (as originally used to adjust payments in FY

2011, which were based on OPM’s 2009 COLA factors). We also established a methodology to update the COLA factors published by OPM every 4 years (at the same time as the update of the labor-related share of the IPPS market basket), beginning in FY 2014. We refer readers to the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 28145 and 28146) for a detailed description of this methodology. For FY 2014, we updated the COLA factors for Alaska and Hawaii published by OPM for 2009 using the methodology finalized in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53700 and 53701).

For FY 2018, we proposed to continue to update the COLA factors published by OPM for 2009 (as these are the last COLA factors OPM published prior to transitioning from COLAs to locality pay) using the methodology that we finalized in the FY 2013 IPPS/LTCH PPS final rule and implemented for the FY 2014 IPPS update. Specifically, we proposed to update the 2009 OPM COLA factors by a comparison of the growth in the Consumer Price Indices (CPIs) for Anchorage, AK, and Honolulu, HI, relative to the growth in the CPI for the average U.S. city as published by the Bureau of Labor Statistics (BLS). Because BLS publishes CPI data for only Anchorage and Honolulu, using the methodology we finalized in the FY 2013 IPPS/LTCH PPS final rule, we used the comparison of the growth in the overall CPI relative to the growth in the CPI for those cities to update the COLA factors for all areas in Alaska and Hawaii, respectively. We believe that the relative price differences between these cities and the United States (as measured by the CPIs mentioned above) are appropriate proxies for the relative price differences between the “other areas” of Alaska and Hawaii and the United States.

BLS publishes the CPI for All Items for Anchorage, Honolulu, and for the average U.S. city. However, consistent with our methodology finalized in the FY 2013 IPPS/LTCH PPS final rule, we created reweighted CPIs for each of the respective areas to reflect the underlying composition of the IPPS market basket nonlabor-related share. The current composition of the CPI for All Items for all of the respective areas is approximately 40 percent commodities and 60 percent services. However, the IPPS nonlabor-related share is comprised of a different mix of commodities and services.

Therefore, we created reweighted indexes for Anchorage, Honolulu, and the average U.S. city using the respective CPI commodities index and CPI services index and using the approximate 55 percent commodities/45 percent services shares obtained from the proposed 2014-based IPPS market basket, which is being finalized without modification as discussed in section IV. of the preamble of this final rule. We created reweighted indexes using BLS data for 2009 through 2016—the most recent data available at the time of this final rulemaking. In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50985 through 50987), we created reweighted indexes based on the FY 2010-based IPPS market basket (which was adopted for the FY 2014 IPPS update) and BLS data for 2009 through 2012 (the most recent BLS data at the time of the FY 2014 IPPS/LTCH PPS rulemaking).

We continue to believe this methodology is appropriate because we continue to make a COLA for hospitals located in Alaska and Hawaii by multiplying the nonlabor-related portion of the standardized amount by a COLA factor. We note that OPM’s COLA factors were calculated with a statutorily mandated cap of 25 percent. As stated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50985 through 50987), under the COLA update methodology we finalized in the FY 2013 IPPS/LTCH PPS final rule, we exercised our discretionary authority to adjust payments to hospitals in Alaska and Hawaii by incorporating this cap. In applying this finalized methodology for updating the COLA factors, for FY 2018, we proposed to continue to use such a cap, as our policy is based on OPM’s COLA factors (updated by the methodology described above).

Applying this methodology, the COLA factors that we proposed to establish for FY 2018 to adjust the nonlabor-related portion of the standardized amount for hospitals located in Alaska and Hawaii are shown in the table below. For comparison purposes, we also are showing the FY 2013 COLA factors (which were based on OPM’s published COLA factors for 2009) and the FY 2014 COLA factors.

Lastly, as we finalized in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53700 and 53701), we are updating the COLA factors based on our methodology every 4 years, at the same time as the update to the labor-related share of the IPPS market basket.

COST-OF-LIVING ADJUSTMENT FACTORS: ALASKA AND HAWAII HOSPITALS

Area	FY 2013	FY 2014 through FY 2017	Proposed FY 2018
<b>Alaska:</b>			
City of Anchorage and 80-kilometer (50-mile) radius by road .....	1.23	1.23	1.25
City of Fairbanks and 80-kilometer (50-mile) radius by road .....	1.23	1.23	1.25
City of Juneau and 80-kilometer (50-mile) radius by road .....	1.23	1.23	1.25
Rest of Alaska .....	1.25	1.25	1.25
<b>Hawaii:</b>			
City and County of Honolulu .....	1.25	1.25	1.25
County of Hawaii .....	1.18	1.19	1.21
County of Kauai .....	1.25	1.25	1.25
County of Maui and County of Kalawao .....	1.25	1.25	1.25

We note that the reweighted CPI for Honolulu, HI grew faster than the reweighted CPI for the average U.S. city over the 2009 to 2016 time period, at 13.7 percent and 10.5 percent, respectively. As a result, for FY 2018, we calculated proposed COLA factors for the City and County of Honolulu, County of Kauai, County of Maui, and County of Kalawao to be 1.29 compared to the FY 2013 COLA factor of 1.25 (which was based on OPM's published COLA factors for 2009, as described above). However, as stated above, we are applying our methodology as finalized in the FY 2013 IPPS/LTCH PPS final rule to incorporate a cap of 1.25 for these areas. In addition, the proposed COLA factor we calculated for the County of Hawaii for FY 2018 is 1.21 compared to the FY 2013 COLA factor of 1.18. The COLA factors adopted in FY 2014 using this same methodology can be found in the table above.

Similarly, the reweighted CPI for Anchorage, AK grew faster than the reweighted CPI for the average U.S. city over the 2009 to 2016 time period, at 12.4 percent and 10.5 percent, respectively. As a result, for FY 2018, we calculated proposed COLA factors for the City of Anchorage, City of Fairbanks, and City of Juneau to be 1.25 compared to the FY 2013 COLA factor of 1.23. For FY 2018, we calculated a proposed COLA factor of 1.27 for the rest of Alaska compared to the FY 2013 COLA factor of 1.25. However, as stated above, we are applying our methodology as finalized in the FY 2013 IPPS/LTCH PPS final rule to incorporate a cap of 1.25 for the Rest of Alaska.

As stated above, the COLA factors adopted in the FY 2014 IPPS/LTCH PPS final rule were based on the same methodology we proposed to use to determine the FY 2018 COLA factors but utilizing BLS data from 2009 through 2012 (the most recent data available at the time of FY 2014 rulemaking) rather than through 2016 (the most recent data available at the time of this rulemaking). As we noted in the proposed rule, compared to the FY 2014 COLA factors, the proposed FY 2018 COLA factors are higher—with all areas either reaching or exceeding the cap of 1.25 except the County of Hawaii.

We did not receive any public comments on our proposal to continue to update the COLA factors published by OPM for 2009 using the methodology that we finalized in the FY 2013 IPPS/LTCH PPS final rule and implemented for the FY 2014 IPPS update. In this final rule, we are finalizing the COLA factors as proposed effective for FY 2018.

### C. Calculation of the Prospective Payment Rates

#### General Formula for Calculation of the Prospective Payment Rates for FY 2018

In general, the operating prospective payment rate for all hospitals (including hospitals in Puerto Rico) paid under the IPPS, except SCHs, for FY 2018 equals the Federal rate (which includes uncompensated care payments).

SCHs are paid based on whichever of the following rates yields the greatest aggregate payment: The Federal national rate (which, as discussed in section V.G. of the preamble of this final rule, includes uncompensated

care payments); the updated hospital-specific rate based on FY 1982 costs per discharge; the updated hospital-specific rate based on FY 1987 costs per discharge; the updated hospital-specific rate based on FY 1996 costs per discharge; or the updated hospital-specific rate based on FY 2006 costs per discharge to determine the rate that yields the greatest aggregate payment.

The prospective payment rate for SCHs for FY 2018 equals the higher of the applicable Federal rate, or the hospital-specific rate as described below.

#### 1. Operating and Capital Federal Payment Rate and Outlier Payment Calculation

**Note:** The formula below is used for actual claim payment and is also used by CMS to project the outlier threshold for the upcoming fiscal year. The difference is the source of some of the variables in the formula. For example, operating and capital CCRs for actual claim payment are from the PSF while CMS uses an adjusted CCR (as described above) to project the threshold for the upcoming fiscal year. In addition, charges for a claim payment are from the bill while charges to project the threshold are from the MedPAR data with an inflation factor applied to the charges (as described earlier).

Step 1—Determine the MS-DRG and MS-DRG relative weight for each claim based on the ICD-10-CM procedure and diagnosis codes on the claim.

Step 2—Select the applicable average standardized amount depending on whether the hospital submitted qualifying quality data and is a meaningful EHR user, as described above.

Step 3—Compute the operating and capital Federal payment rate:

—Federal Payment Rate for Operating Costs = MS-DRG Relative Weight × [(Labor-Related Applicable Standardized Amount × Applicable CBSA Wage Index) + (Nonlabor-Related Applicable Standardized Amount × Cost-of-Living Adjustment)] × (1 + IME + (DSH \* 0.25))  
 —Federal Payment for Capital Costs = MS-DRG Relative Weight × Federal Capital Rate × Geographic Adjustment Factor × (1 + IME + DSH)

Step 4—Determine operating and capital costs:

—Operating Costs = (Billed Charges × Operating CCR)  
 —Capital Costs = (Billed Charges × Capital CCR).

Step 5—Compute operating and capital outlier threshold (CMS applies a geographic adjustment to the operating and capital outlier threshold to account for local cost variation):

—Operating CCR to Total CCR = (Operating CCR)/(Operating CCR + Capital CCR)  
 —Operating Outlier Threshold = [Fixed Loss Threshold × ((Labor-Related Portion × CBSA Wage Index) + Nonlabor-Related portion)] × Operating CCR to Total CCR + Federal Payment with IME, DSH + Uncompensated Care Payment + New Technology Add-On Payment Amount  
 —Capital CCR to Total CCR = (Capital CCR)/(Operating CCR + Capital CCR)  
 —Capital Outlier Threshold = (Fixed Loss Threshold × Geographic Adjustment Factor

× Capital CCR to Total CCR) + Federal Payment with IME and DSH

Step 6—Compute operating and capital outlier payments:

—Marginal Cost Factor = 0.80 or 0.90 (depending on the MS-DRG)  
 —Operating Outlier Payment = (Operating Costs—Operating Outlier Threshold) × Marginal Cost Factor  
 —Capital Outlier Payment = (Capital Costs—Capital Outlier Threshold) × Marginal Cost Factor

The payment rate may then be further adjusted for hospitals that qualify for a low-volume payment adjustment under section 1886(d)(12) of the Act and 42 CFR 412.101(b). The base-operating DRG payment amount may be further adjusted by the hospital readmissions payment adjustment and the hospital VBP payment adjustment as described under sections 1886(q) and 1886(o) of the Act, respectively. Payments also may be reduced by the 1-percent adjustment under the HAC Reduction Program as described in section 1886(p) of the Act. We also make new technology add-on payments in accordance with section 1886(d)(5)(K) and (L) of the Act. Finally, we add the uncompensated care payment to the total claim payment amount. As noted in the formula above, we take uncompensated care payments and new technology add-on payments into consideration when calculating outlier payments.

#### 2. Hospital-Specific Rate (Applicable Only to SCHs)

##### a. Calculation of Hospital-Specific Rate

Section 1886(b)(3)(C) of the Act provides that SCHs are paid based on whichever of the following rates yields the greatest aggregate payment: The Federal rate; the updated hospital-specific rate based on FY 1982 costs per discharge; the updated hospital-specific rate based on FY 1987 costs per discharge; the updated hospital-specific rate based on FY 1996 costs per discharge to determine the rate that yields the greatest aggregate payment. As noted above, under section 205 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114-10, enacted on April 16, 2015), the MDH program is set to expire at the end of FY 2017.

For a more detailed discussion of the calculation of the hospital-specific rates, we refer readers to the FY 1984 IPPS interim final rule (48 FR 39772); the April 20, 1990 final rule with comment period (55 FR 15150); the FY 1991 IPPS final rule (55 FR 35994); and the FY 2001 IPPS final rule (65 FR 47082).

##### b. Updating the FY 1982, FY 1987, FY 1996, FY 2002 and FY 2006 Hospital-Specific Rate for FY 2018

Section 1886(b)(3)(B)(iv) of the Act provides that the applicable percentage increase applicable to the hospital-specific rates for SCHs equals the applicable percentage increase set forth in section 1886(b)(3)(B)(i) of the Act (that is, the same update factor as for all other hospitals subject

to the IPPS). Because the Act sets the update factor for SCHs equal to the update factor for all other IPPS hospitals, the update to the hospital-specific rates for SCHs is subject to

the amendments to section 1886(b)(3)(B) of the Act made by sections 3401(a) and 10319(a) of the Affordable Care Act. Accordingly, the applicable percentage

increases to the hospital-specific rates applicable to SCHs are the following:

FY 2018	Hospital submitted quality data and is a meaningful EHR user	Hospital submitted quality data and is NOT a meaningful EHR user	Hospital did NOT submit quality data and is a meaningful EHR user	Hospital did NOT submit quality data and is NOT a meaningful EHR user
Market Basket Rate-of-Increase .....	2.7	2.7	2.7	2.7
Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act .....	0.0	0.0	-0.675	-0.675
Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act .....	0.0	-2.025	0.0	-2.025
MFP Adjustment under Section 1886(b)(3)(B)(xi) of the Act .....	-0.6	-0.6	-0.6	-0.6
Statutory Adjustment under Section 1886(b)(3)(B)(xii) of the Act .....	-0.75	-0.75	-0.75	-0.75
Applicable Percentage Increase Applied to Hospital-Specific Rate .....	1.35	-0.675	0.675	-1.35

For a complete discussion of the applicable percentage increase applied to the hospital-specific rates for SCHs, we refer readers to section V.B. of the preamble of this final rule.

In addition, because SCHs use the same MS-DRGs as other hospitals when they are paid based in whole or in part on the hospital-specific rate, the hospital-specific rate is adjusted by a budget neutrality factor to ensure that changes to the MS-DRG classifications and the recalibration of the MS-DRG relative weights are made in a manner so that aggregate IPPS payments are unaffected. Therefore, the hospital-specific rate for an SCH is adjusted by the MS-DRG reclassification and recalibration budget neutrality factor of 0.997432, as discussed in section III. of this Addendum. The resulting rate is used in determining the payment rate that an SCH will receive for its discharges beginning on or after October 1, 2017. We note that, in this final rule, for FY 2018, we are not making a documentation and coding adjustment to the hospital-specific rate. We refer readers to section II.D. of the preamble of this final rule for a complete discussion regarding our policies and previously finalized policies (including our historical adjustments to the payment rates) relating to the effect of changes in documentation and coding that do not reflect real changes in case-mix.

Also, as discussed in section V.M. of the preamble of this final rule, we are including a factor of (1/1.006) in the calculation of the FY 2018 hospital-specific rates. Specifically, in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57058 through 57060), using our authority under section 1886(d)(5)(I)(i) of the Act, we finalized a policy to include a permanent factor of (1/0.998) and a temporary one-time factor of (1.006) in the calculation of the FY 2017 hospital-specific rates and to include a factor of (1/1.006) in the calculation of the FY 2018 hospital-specific rates to remove the temporary one-time factor of 1.006 applied in FY 2017 to address the effects of the 0.2 percent reduction to the rates for the 2-midnight policy in effect for FY 2014, FY 2015, and FY 2016. Therefore, in this final rule, for FY 2018, we are removing the temporary one-time prospective increase to the FY 2017 hospital-specific rates of 0.6 percent or a factor of 1.006.

**III. Changes to Payment Rates for Acute Care Hospital Inpatient Capital-Related Costs for FY 2018**

The PPS for acute care hospital inpatient capital-related costs was implemented for cost reporting periods beginning on or after October 1, 1991. Effective with that cost reporting period, over a 10-year transition period (which extended through FY 2001) the payment methodology for Medicare acute care hospital inpatient capital-related costs changed from a reasonable cost-based methodology to a prospective methodology (based fully on the Federal rate).

The basic methodology for determining Federal capital prospective rates is set forth in the regulations at 42 CFR 412.308 through 412.352. Below we discuss the factors that we used to determine the capital Federal rate for FY 2018, which will be effective for discharges occurring on or after October 1, 2017.

The 10-year transition period ended with hospital cost reporting periods beginning on or after October 1, 2001 (FY 2002). Therefore, for cost reporting periods beginning in FY 2002, all hospitals (except “new” hospitals under § 412.304(c)(2)) are paid based on the capital Federal rate. For FY 1992, we computed the standard Federal payment rate for capital-related costs under the IPPS by updating the FY 1989 Medicare inpatient capital cost per case by an actuarial estimate of the increase in Medicare inpatient capital costs per case. Each year after FY 1992, we update the capital standard Federal rate, as provided at § 412.308(c)(1), to account for capital input price increases and other factors. The regulations at § 412.308(c)(2) also provide that the capital Federal rate be adjusted annually by a factor equal to the estimated proportion of outlier payments under the capital Federal rate to total capital payments under the capital Federal rate. In addition, § 412.308(c)(3) requires that the capital Federal rate be reduced by an adjustment factor equal to the estimated proportion of payments for exceptions under § 412.348. (We note that, as discussed in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53705), there is generally no longer a need for an exceptions payment adjustment factor.) However, in limited circumstances, an additional payment exception for

extraordinary circumstances is provided for under § 412.348(f) for qualifying hospitals. Therefore, in accordance with § 412.308(c)(3), an exceptions payment adjustment factor may need to be applied if such payments are made. Section 412.308(c)(4)(ii) requires that the capital standard Federal rate be adjusted so that the effects of the annual DRG reclassification and the recalibration of DRG weights and changes in the geographic adjustment factor (GAF) are budget neutral.

Section 412.374 provides for payments to hospitals located in Puerto Rico under the IPPS for acute care hospital inpatient capital-related costs. In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57061 through 57062), we revised § 412.374 to add paragraph (e) to provide that, effective with discharges on or after October 1, 2016, capital IPPS payments to hospitals located in Puerto Rico are based on 100 percent of the Federal rate.

*A. Determination of the Federal Hospital Inpatient Capital-Related Prospective Payment Rate Update for FY 2018*

In the discussion that follows, we explain the factors that we used to determine the capital Federal rate for FY 2018. In particular, we explain why the FY 2018 capital Federal rate will increase approximately 1.61 percent, compared to the FY 2017 capital Federal rate. As discussed in the impact analysis in Appendix A to this final rule, we estimate that capital payments per discharge will increase approximately 2.5 percent during that same period. Because capital payments constitute approximately 10 percent of hospital payments, a 1-percent change in the capital Federal rate yields only approximately a 0.1 percent change in actual payments to hospitals.

**1. Projected Capital Standard Federal Rate Update**

**a. Description of the Update Framework**

Under § 412.308(c)(1), the capital standard Federal rate is updated on the basis of an analytical framework that takes into account changes in a capital input price index (CIPI) and several other policy adjustment factors. Specifically, we adjust the projected CIPI rate of change as appropriate each year for case-mix index-related changes, for intensity, and

for errors in previous CIPI forecasts. The update factor for FY 2018 under that framework is 1.3 percent based on a projected 1.3 percent increase in the 2014-based CIPI, a 0.0 percentage point adjustment for intensity, a 0.0 percentage point adjustment for case-mix, a 0.0 percentage point adjustment for the DRG reclassification and recalibration, and a forecast error correction of 0.0 percentage point. As discussed in section III.C. of this Addendum, we continue to believe that the CIPI is the most appropriate input price index for capital costs to measure capital price changes in a given year. We also explain the basis for the FY 2018 CIPI projection in that same section of this Addendum. Below we describe the policy adjustments that we are applying in the update framework for FY 2018.

The case-mix index is the measure of the average DRG weight for cases paid under the IPPS. Because the DRG weight determines the prospective payment for each case, any percentage increase in the case-mix index corresponds to an equal percentage increase in hospital payments.

The case-mix index can change for any of several reasons:

- The average resource use of Medicare patient changes (“real” case-mix change);
- Changes in hospital documentation and coding of patient records result in higher-weighted DRG assignments (“coding effects”); and
- The annual DRG reclassification and recalibration changes may not be budget neutral (“reclassification effect”).

We define real case-mix change as actual changes in the mix (and resource requirements) of Medicare patients as opposed to changes in documentation and coding behavior that result in assignment of cases to higher-weighted DRGs, but do not reflect higher resource requirements. The capital update framework includes the same case-mix index adjustment used in the former operating IPPS update framework (as discussed in the May 18, 2004 IPPS proposed rule for FY 2005 (69 FR 28816)). (We no longer use an update framework to make a recommendation for updating the operating IPPS standardized amounts as discussed in section II. of Appendix B to the FY 2006 IPPS final rule (70 FR 47707).)

For FY 2018, we are projecting a 0.5 percent total increase in the case-mix index. We estimated that the real case-mix increase will equal 0.5 percent for FY 2018. The net adjustment for change in case-mix is the difference between the projected real increase in case-mix and the projected total increase in case-mix. Therefore, the net adjustment for case-mix change in FY 2018 is 0.0 percentage point.

The capital update framework also contains an adjustment for the effects of DRG reclassification and recalibration. This adjustment is intended to remove the effect on total payments of prior year’s changes to the DRG classifications and relative weights, in order to retain budget neutrality for all case-mix index-related changes other than those due to patient severity of illness. Due to the lag time in the availability of data, there is a 2-year lag in data used to determine

the adjustment for the effects of DRG reclassification and recalibration. For example, we have data available to evaluate the effects of the FY 2016 DRG reclassification and recalibration as part of our update for FY 2018. We assume, for purposes of this adjustment, that the estimate of FY 2016 DRG reclassification and recalibration resulted in no change in the case-mix when compared with the case-mix index that would have resulted if we had not made the reclassification and recalibration changes to the DRGs. Therefore, we are making a 0.0 percentage point adjustment for reclassification and recalibration in the update framework for FY 2018.

The capital update framework also contains an adjustment for forecast error. The input price index forecast is based on historical trends and relationships ascertainable at the time the update factor is established for the upcoming year. In any given year, there may be unanticipated price fluctuations that may result in differences between the actual increase in prices and the forecast used in calculating the update factors. In setting a prospective payment rate under the framework, we make an adjustment for forecast error only if our estimate of the change in the capital input price index for any year is off by 0.25 percentage point or more. There is a 2-year lag between the forecast and the availability of data to develop a measurement of the forecast error. Historically, when a forecast error of the CIPI is greater than 0.25 percentage point in absolute terms, it is reflected in the update recommended under this framework. A forecast error of 0.2 percentage point was calculated for the FY 2016 update, for which there are historical data. That is, current historical data indicate that the forecasted FY 2016 CIPI (1.3 percent) used in calculating the FY 2016 update factor was 0.2 percentage points higher than actual realized price increases (1.1 percent). However, as this does not exceed the 0.25 percentage point threshold, we are not making an adjustment for forecast error in the update for FY 2018.

Under the capital IPPS update framework, we also make an adjustment for changes in intensity. Historically, we calculated this adjustment using the same methodology and data that were used in the past under the framework for operating IPPS. The intensity factor for the operating update framework reflected how hospital services are utilized to produce the final product, that is, the discharge. This component accounts for changes in the use of quality-enhancing services, for changes within DRG severity, and for expected modification of practice patterns to remove noncost-effective services. Our intensity measure is based on a 5-year average.

We calculate case-mix constant intensity as the change in total cost per discharge, adjusted for price level changes (the CPI for hospital and related services) and changes in real case-mix. Without reliable estimates of the proportions of the overall annual intensity changes that are due, respectively, to ineffective practice patterns and the combination of quality-enhancing new technologies and complexity within the DRG

system, we assume that one-half of the annual change is due to each of these factors. The capital update framework thus provides an add-on to the input price index rate of increase of one-half of the estimated annual increase in intensity, to allow for increases within DRG severity and the adoption of quality-enhancing technology.

In this final rule, we are continuing to use a Medicare-specific intensity measure that is based on a 5-year adjusted average of cost per discharge for FY 2018 (we refer readers to the FY 2011 IPPS/LTCH PPS final rule (75 FR 50436) for a full description of our Medicare-specific intensity measure). Specifically, for FY 2018, we are using an intensity measure that is based on an average of cost per discharge data from the 5-year period beginning with FY 2011 and extending through FY 2015. Based on these data, we estimated that case-mix constant intensity declined during FYs 2011 through 2015. In the past, when we found intensity to be declining, we believed a zero (rather than a negative) intensity adjustment was appropriate. Consistent with this approach, because we estimate that intensity will decline during that 5-year period, we believe it is appropriate to continue to apply a zero intensity adjustment for FY 2018. Therefore, we are making a 0.0 percentage point adjustment for intensity in the update for FY 2018.

Above, we described the basis of the components we used to develop the 1.3 percent capital update factor under the capital update framework for FY 2018 as shown in the following table.

**CMS FY 2018 UPDATE FACTOR TO THE CAPITAL FEDERAL RATE**

Capital Input Price Index * .....	1.3
Intensity: .....	0.0
<b>Case-Mix Adjustment Factors:</b>	
Real Across DRG Change .....	0.5
Projected Case-Mix Change .....	0.5
<b>Subtotal .....</b>	<b>1.3</b>
Effect of FY 2016 Reclassification and Recalibration .....	0.0
Forecast Error Correction .....	0.0
<b>Total Update .....</b>	<b>1.3</b>

\* The capital input price index represents the 2014-based CIPI.

**b. Comparison of CMS and MedPAC Update Recommendation**

In its March 2017 Report to Congress, MedPAC did not make a specific update recommendation for capital IPPS payments for FY 2018. (We refer readers to MedPAC’s Report to the Congress: Medicare Payment Policy, March 2017, Chapter 3, available on the Web site at: <http://www.medpac.gov>.)

**2. Outlier Payment Adjustment Factor**

Section 412.312(c) establishes a unified outlier payment methodology for inpatient operating and inpatient capital-related costs. A single set of thresholds is used to identify outlier cases for both inpatient operating and inpatient capital-related payments. Section 412.308(c)(2) provides that the standard Federal rate for inpatient capital-related costs be reduced by an adjustment factor equal to

the estimated proportion of capital-related outlier payments to total inpatient capital-related PPS payments. The outlier thresholds are set so that operating outlier payments are projected to be 5.1 percent of total operating IPPS DRG payments.

For FY 2017, we estimated that outlier payments for capital would equal 6.14 percent of inpatient capital-related payments based on the capital Federal rate in FY 2017. Based on the thresholds as set forth in section II.A. of this Addendum, we estimate that outlier payments for capital-related costs will equal 5.16 percent for inpatient capital-related payments based on the capital Federal rate in FY 2018. Therefore, we are applying an outlier adjustment factor of 0.9484 in determining the capital Federal rate for FY 2018. Thus, we estimate that the percentage of capital outlier payments to total capital Federal rate payments for FY 2018 will be lower than the percentage for FY 2017.

The outlier reduction factors are not built permanently into the capital rates; that is, they are not applied cumulatively in determining the capital Federal rate. The FY 2018 outlier adjustment of 0.9484 is a 1.04 percent change from the FY 2017 outlier adjustment of 0.9386. Therefore, the net change in the outlier adjustment to the capital Federal rate for FY 2018 is 1.0104(0.9484/0.9386). Thus, the outlier adjustment will increase the FY 2018 capital Federal rate by 1.04 percent compared to the FY 2017 outlier adjustment.

### 3. Budget Neutrality Adjustment Factor for Changes in DRG Classifications and Weights and the GAF

Section 412.308(c)(4)(ii) requires that the capital Federal rate be adjusted so that aggregate payments for the fiscal year based on the capital Federal rate after any changes resulting from the annual DRG reclassification and recalibration and changes in the GAF are projected to equal aggregate payments that would have been made on the basis of the capital Federal rate without such changes. The budget neutrality factor for DRG reclassifications and recalibration nationally is applied in determining the capital IPPS Federal rate, and is applicable for all hospitals, including those hospitals located in Puerto Rico.

To determine the national capital rate factors for FY 2018, we compared estimated aggregate capital Federal rate payments based on the FY 2017 MS-DRG classifications and relative weights and the FY 2017 GAF to estimated aggregate capital Federal rate payments based on the FY 2017 MS-DRG classifications and relative weights and the FY 2018 GAFs. To achieve budget neutrality for the changes in the national GAFs, based on calculations using updated data, we applied an incremental budget neutrality adjustment factor of 0.9994 for FY 2018 to the previous cumulative FY 2017 adjustment factor of 0.9850, yielding an adjustment factor of 0.9844 through FY 2018.

We then compared estimated aggregate capital Federal rate payments based on the FY 2017 MS-DRG relative weights and the FY 2018 GAFs to estimated aggregate capital Federal rate payments based on the cumulative effects of the FY 2018 MS-DRG

classifications and relative weights and the FY 2018 GAFs. The incremental adjustment factor for DRG classifications and changes in relative weights is 0.9993. The cumulative adjustment factor for MS-DRG classifications and changes in relative weights and for changes in the GAFs through FY 2018 is 0.9837. (We note that all the values are calculated with unrounded numbers.)

The GAF/DRG budget neutrality adjustment factors are built permanently into the capital rates; that is, they are applied cumulatively in determining the capital Federal rate. This follows the requirement under § 412.308(c)(4)(ii) that estimated aggregate payments each year be no more or less than they would have been in the absence of the annual DRG reclassification and recalibration and changes in the GAFs.

The methodology used to determine the recalibration and geographic adjustment factor (GAF/DRG) budget neutrality adjustment is similar to the methodology used in establishing budget neutrality adjustments under the IPPS for operating costs. One difference is that, under the operating IPPS, the budget neutrality adjustments for the effect of geographic reclassifications are determined separately from the effects of other changes in the hospital wage index and the MS-DRG relative weights. Under the capital IPPS, there is a single GAF/DRG budget neutrality adjustment factor for changes in the GAF (including geographic reclassification) and the MS-DRG relative weights. In addition, there is no adjustment for the effects that geographic reclassification has on the other payment parameters, such as the payments for DSH or IME.

The cumulative adjustment factor of 0.9986 (the product of the incremental national GAF budget neutrality adjustment factor of 0.9994 and the incremental DRG budget neutrality adjustment factor of 0.9993) accounts for the MS-DRG reclassifications and recalibration and for changes in the GAFs. It also incorporates the effects on the GAFs of FY 2018 geographic reclassification decisions made by the MGRB compared to FY 2017 decisions. However, it does not account for changes in payments due to changes in the DSH and IME adjustment factors.

As discussed in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57062), we made an adjustment of (1/0.998) to the national capital Federal rate to remove the 0.2 percent reduction (an adjustment factor of 0.998) to the national capital Federal rate to offset the estimated increase in capital IPPS expenditures associated with the 2-midnight policy. This was consistent with the adjustment to the operating IPPS standardized amount and the hospital-specific payment rates. In addition, consistent with the approach for the operating IPPS standardized amount and hospital-specific payment rates and for the reasons discussed in the FY 2017 IPPS/LTCH PPS final rule, we made a one-time prospective adjustment of 1.006 in FY 2017 to the national capital Federal rate to address the effect of the 0.2 percent reduction to the national capital Federal rates in effect for FY 2014, FY 2015, and FY 2016. Furthermore, as provided for in the FY 2017 IPPS/LTCH PPS

final rule (81 FR 57294) we are removing this one-time prospective adjustment through an adjustment of (1/1.006) to the national capital Federal rate in FY 2018, consistent with the approach for the operating IPPS standardized amount and hospital-specific payment rates (as discussed in section V.M. of the preamble of this final rule). We refer readers to sections V.M. and VI.C. of the preamble of this final rule for a complete discussion of these issues.

### 4. Capital Federal Rate for FY 2018

For FY 2017, we established a capital Federal rate of \$446.79 (81 FR 68947 through 68949 (Correction Notice)). We are establishing an update of 1.61 percent in determining the FY 2018 capital Federal rate for all hospitals. As a result of this update, the budget neutrality factors discussed earlier, and the adjustment to remove the one-time 0.6 percent adjustment made in FY 2017 to address the effect of the 0.2 percent reduction to the national capital Federal rates in effect for FY 2014, FY 2015, and FY 2016, as finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57294), we are establishing a national capital Federal rate of \$453.97 for FY 2018. The national capital Federal rate for FY 2018 was calculated as follows:

- The FY 2018 update factor is 1.0130; that is, the update is 1.3 percent.
- The FY 2018 budget neutrality adjustment factor that is applied to the capital Federal rate for changes in the MS-DRG classifications and relative weights and changes in the GAFs is 0.9986.
- The FY 2018 outlier adjustment factor is 0.9484.
- The 2-midnight policy adjustment to remove the one-time 0.6 percent adjustment is 1/1.006.

(We note that, as discussed in section VI.C. of the preamble of this final rule, we are not making an additional MS-DRG documentation and coding adjustment to the capital IPPS Federal rate for FY 2018.)

Because the FY 2018 capital Federal rate has already been adjusted for differences in case-mix, wages, cost-of-living, indirect medical education costs, and payments to hospitals serving a disproportionate share of low-income patients, we are not making additional adjustments in the capital Federal rate for these factors, other than the budget neutrality factor for changes in the MS-DRG classifications and relative weights and for changes in the GAFs.

We are providing the following chart that shows how each of the factors and adjustments for FY 2018 affects the computation of the FY 2018 national capital Federal rate in comparison to the FY 2017 national capital Federal rate as presented in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57291 through 57295) as corrected in the Correction Notice published October 5, 2016 (81 FR 68954). The FY 2018 update factor has the effect of increasing the capital Federal rate by 1.3 percent compared to the FY 2017 capital Federal rate. The GAF/DRG budget neutrality adjustment factor has the effect of decreasing the capital Federal rate by 0.14 percent. The FY 2018 outlier adjustment factor has the effect of increasing the capital Federal rate by 1.04 percent compared to the FY 2017 capital Federal rate. The removal of

the one-time 0.6 percent adjustment for FY 2017 relating to the 2-midnight policy has the effect of decreasing the capital Federal rate by 0.60 percent. The combined effect of all the changes will increase the national capital Federal rate by approximately 1.61 percent compared to the FY 2017 national capital Federal rate.

COMPARISON OF FACTORS AND ADJUSTMENTS: FY 2017 CAPITAL FEDERAL RATE AND FY 2018 CAPITAL FEDERAL RATE

	FY 2017	FY 2018	Change	Percent change
Update Factor <sup>1</sup> .....	1.0090	1.0130	1.0130	1.30
GAF/DRG Adjustment Factor <sup>1</sup> .....	0.9990	0.9986	0.9986	-0.14
Outlier Adjustment Factor <sup>2</sup> .....	0.9386	0.9484	1.0104	1.04
Removal of One-Time 2-Midnight Policy Adjustment Factor .....	1.0060	1/1.006	0.9940	-0.60
Capital Federal Rate .....	\$446.79	\$453.97	1.0161	<sup>3</sup> 1.61

<sup>1</sup> The update factor and the GAF/DRG budget neutrality adjustment factors are built permanently into the capital Federal rates. Thus, for example, the incremental change from FY 2017 to FY 2018 resulting from the application of the 0.9986 GAF/DRG budget neutrality adjustment factor for FY 2018 is a net change of 0.9986 (or -0.14 percent).

<sup>2</sup> The outlier reduction factor is not built permanently into the capital Federal rate; that is, the factor is not applied cumulatively in determining the capital Federal rate. Thus, for example, the net change resulting from the application of the FY 2018 outlier adjustment factor is 0.9484/0.9386 or 1.0104 (or 1.04 percent).

<sup>3</sup> Percent change may not sum due to rounding.

In this final rule, we also are providing the following chart that shows how the final FY 2018 capital Federal rate differs from the proposed FY 2018 capital Federal rate as presented in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20179 through 20182).

COMPARISON OF FACTORS AND ADJUSTMENTS: PROPOSED FY 2018 CAPITAL FEDERAL RATE AND FINAL FY 2018 CAPITAL FEDERAL RATE

	Proposed FY 2018	Final FY 2018	Change	Percent change
Update Factor <sup>1</sup> .....	1.0120	1.0130	1.0010	0.10
GAF/DRG Adjustment Factor <sup>1</sup> .....	0.9992	0.9986	0.9994	-0.06
Outlier Adjustment Factor <sup>2</sup> .....	0.9434	0.9484	1.0053	0.53
Removal of One-Time 2-Midnight Policy Adjustment Factor .....	1/1.006	1/1.006	0.0000	-0.00
Capital Federal Rate .....	\$451.37	\$453.97	1.0458	0.58

*B. Calculation of the Inpatient Capital-Related Prospective Payments for FY 2018*

For purposes of calculating payments for each discharge during FY 2018, the capital Federal rate is adjusted as follows: (Standard Federal Rate) × (DRG weight) × (GAF) × (COLA for hospitals located in Alaska and Hawaii) × (1 + DSH Adjustment Factor + IME Adjustment Factor, if applicable). The result is the adjusted capital Federal rate.

Hospitals also may receive outlier payments for those cases that qualify under the thresholds established for each fiscal year. Section 412.312(c) provides for a single set of thresholds to identify outlier cases for both inpatient operating and inpatient capital-related payments. The outlier thresholds for FY 2018 are in section II.A. of this Addendum. For FY 2018, a case would qualify as a cost outlier if the cost for the case plus the (operating) IME and DSH payments (including both the empirically justified Medicare DSH payment and the estimated uncompensated care payment, as discussed in section II.A.4.g.(1) of this Addendum) is greater than the prospective payment rate for the MS-DRG plus the fixed-loss amount of \$26,601.

Currently, as provided under § 412.304(c)(2), we pay a new hospital 85 percent of its reasonable costs during the first 2 years of operation unless it elects to receive payment based on 100 percent of the capital Federal rate. Effective with the third year of operation, we pay the hospital based on 100 percent of the capital Federal rate (that is, the

same methodology used to pay all other hospitals subject to the capital PPS).

*C. Capital Input Price Index*

1. Background

Like the operating input price index, the capital input price index (CIPI) is a fixed-weight price index that measures the price changes associated with capital costs during a given year. The CIPI differs from the operating input price index in one important aspect—the CIPI reflects the vintage nature of capital, which is the acquisition and use of capital over time. Capital expenses in any given year are determined by the stock of capital in that year (that is, capital that remains on hand from all current and prior capital acquisitions). An index measuring capital price changes needs to reflect this vintage nature of capital. Therefore, the CIPI was developed to capture the vintage nature of capital by using a weighted-average of past capital purchase prices up to and including the current year.

We periodically update the base year for the operating and capital input price indexes to reflect the changing composition of inputs for operating and capital expenses. For this FY 2018 IPPS/LTCH PPS final rule, we are rebasing and revising the IPPS operating and capital market baskets to reflect a 2014 base year. For a complete discussion of this rebasing, we refer readers to section IV. of the preamble of this final rule.

2. Forecast of the CIPI for FY 2018

Based on IGI, Inc.'s second quarter 2017 forecast, for this final rule, we are forecasting the 2014-based CIPI to increase 1.3 percent in FY 2018. This reflects a projected 1.6 percent increase in vintage-weighted depreciation prices (building and fixed equipment, and movable equipment), and a projected 3.5 percent increase in other capital expense prices in FY 2018, partially offset by a projected 1.3 percent decline in vintage-weighted interest expense prices in FY 2018. The weighted average of these three factors produces the forecasted 1.3 percent increase for the 2014-based CIPI in FY 2018.

**IV. Changes to Payment Rates for Excluded Hospitals: Rate-of-Increase Percentages for FY 2018**

Payments for services furnished in children's hospitals, 11 cancer hospitals, and hospitals located outside the 50 States, the District of Columbia and Puerto Rico (that is, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa) that are excluded from the IPPS are made on the basis of reasonable costs based on the hospital's own historical cost experience, subject to a rate-of-increase ceiling. A per discharge limit (the target amount as defined in § 413.40(a) of the regulations) is set for each hospital based on the hospital's own cost experience in its base year, and updated annually by a rate-of-increase percentage specified in § 413.40(c)(3). In addition, in the

FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20029), we proposed that, for cost reporting periods beginning during FY 2018, the annual update to the target amount for long-term care neoplastic disease hospitals (hospitals described under § 412.23(j); now § 412.22(i) in this final rule) also would be the rate-of-increase percentage specified in § 413.0(c)(3). (We note that, in accordance with § 403.752(a), religious nonmedical health care institutions (RNHCIs) are also subject to the rate-of-increase limits established under § 413.40 of the regulations.)

As discussed in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20003 and 20004), the proposed FY 2018 rate-of-increase percentage for updating the target amounts for the 11 cancer hospitals, children's hospitals, the short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, and RNHCIs is the estimated percentage increase in the IPPS operating market basket for FY 2018, in accordance with applicable regulations at § 413.40. Based on IGI's 2016 fourth quarter forecast, we estimated that the proposed 2014-based IPPS operating market basket update for FY 2018 was 2.9 percent (that is, the estimate of the market basket rate-of-increase). However, we proposed that if more recent data became available for the final rule, we would use them to calculate the IPPS operating market basket update for FY 2018. For this final rule, based on IGI's 2017 second quarter forecast (which is the most recent available data), we estimated that the 2014-based IPPS operating market basket update for FY 2018 is 2.7 percent (that is, the estimate of the market basket rate-of-increase). Therefore, for children's hospitals, the 11 cancer hospitals, hospitals located outside the 50 States, the District of Columbia and Puerto Rico (that is, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa), as well as long-term care neoplastic disease hospitals, which will now be called extended neoplastic disease care hospitals as discussed in section VII. of the preamble to this final rule, and RNHCIs, the FY 2018 rate-of-increase percentage that will be applied to the FY 2017 target amounts in order to determine the FY 2018 target amounts is 2.7 percent.

The IRF PPS, the IPF PPS, and the LTCH PPS are updated annually. We refer readers to section VIII. of the preamble of this final rule and section V. of the Addendum to this final rule for the update changes to the Federal payment rates for LTCHs under the LTCH PPS for FY 2018. The annual updates for the IRF PPS and the IPF PPS are issued by the agency in separate **Federal Register** documents.

## V. Changes to the Payment Rates for the LTCH PPS for FY 2018

### A. LTCH PPS Standard Federal Payment Rate for 2018

#### 1. Overview

In section VIII. of the preamble of this final rule, we discuss our annual updates to the payment rates, factors, and specific policies under the LTCH PPS for FY 2018.

Under § 412.523(c)(3)(ii) of the regulations, for LTCH PPS rate years beginning with RY 2004 through RY 2006, we updated the standard Federal payment rate annually by a factor to adjust for the most recent estimate of the increases in prices of an appropriate market basket of goods and services for LTCHs. We established this policy of annually updating the standard Federal payment rate because, at that time, we believed that was the most appropriate method for updating the rate for years after the initial implementation of the LTCH PPS in FY 2003. Therefore, under § 412.523(c)(3)(ii), for RYs 2004 through 2006, the annual update to the LTCH PPS standard Federal payment rate was equal to the previous rate year's Federal rate updated by the most recent estimate of increases in the appropriate market basket of goods and services included in covered inpatient LTCH services.

In determining the annual update to the standard Federal payment rate for RY 2007, based on our ongoing monitoring activity, we believed that, rather than solely using the most recent estimate of the LTCH PPS market basket update as the basis of the annual update factor, it was appropriate to adjust the standard Federal payment rate to account for the effect of documentation and coding in a prior period that was unrelated to patients' severity of illness (71 FR 27818). Accordingly, we established under § 412.523(c)(3)(iii) that the annual update to the standard Federal payment rate for RY 2007 was zero percent based on the most recent estimate of the LTCH PPS market basket at that time, offset by an adjustment to account for changes in case-mix in prior periods due to the effect of documentation and coding that were unrelated to patients' severity of illness. For RY 2008 through FY 2011, we also made an adjustment to account for the effect of documentation and coding that was unrelated to patients' severity of illness in establishing the annual update to the standard Federal payment rate as set forth in the regulations at §§ 412.523(c)(3)(iv) through (c)(3)(vii). For FYs 2012 through 2017, we updated the standard Federal payment rate by the most recent estimate of the LTCH PPS market basket at that time, including additional statutory adjustments required by sections 1886(m)(3)(A)(i) (citing sections 1886(b)(3)(B)(xi)(II), 1886(m)(3)(A)(ii), and 1886(m)(4) of the Act as set forth in the regulations at §§ 412.523(c)(3)(viii) through (c)(3)(xiii)).

Section 1886(m)(3)(A) of the Act, as added by section 3401(c) of the Affordable Care Act, specifies that, for rate year 2010 and each subsequent rate year, any annual update to the standard Federal payment rate shall be reduced:

- For rate year 2010 through 2019, by the other adjustment specified in section 1886(m)(3)(A)(ii) and (m)(4) of the Act; and
- For rate year 2012 and each subsequent year, by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act (which we refer to as "the multifactor productivity (MFP) adjustment") as discussed in section VIII.E.2. of the preamble of this final rule.

Section 1886(m)(3)(B) of the Act provides that the application of paragraph (3) of

section 1886(m) of the Act may result in the annual update being less than zero for a rate year, and may result in payment rates for a rate year being less than such payment rates for the preceding rate year. (As noted in section VIII.C.2.b. of the preamble of this final rule, the annual update to the LTCH PPS occurs on October 1 and we have adopted the term "fiscal year" (FY) rather than "rate year" (RY) under the LTCH PPS beginning October 1, 2010. Therefore, for purposes of clarity, when discussing the annual update for the LTCH PPS, including the provisions of the Affordable Care Act, we use the term "fiscal year" rather than "rate year" for 2011 and subsequent years.) Notwithstanding those provisions, however, section 411(e) of Public Law 114–10 (the MACRA) requires a 1 percent update in FY 2018.

For FY 2017, consistent with our historical practice, we established an update to the LTCH PPS standard Federal payment rate based on the full estimated LTCH PPS market basket increase of 2.8 percent and the 1.05 percentage point reductions required by sections 1886(m)(3)(A)(i) and 1886(m)(3)(A)(ii) with 1886(m)(4)(F) of the Act. Accordingly, at § 412.523(c)(3)(xiii) of the regulations, we established an annual update of 1.75 percent to the standard Federal payment rate for FY 2017 (81 FR 57296 through 57297). In addition, as discussed in that same final rule, the annual update for FY 2017 was further reduced by 2.0 percentage points for LTCHs that failed to submit quality reporting data in accordance with the requirements of the LTCH QRP under section 1886(m)(5) of the Act.

Section 411(e) of the MACRA amended section 1886(m)(3) of the Act by providing an additional special rule for FY 2018. Specifically, as amended, section 1886(m)(3)(C) of the Act requires that the annual update for FY 2018, after applications of the reductions for the MFP adjustment and the "other adjustment" (under section 1886(m)(3)(A)) is 1 percent. (For additional details, refer to section VIII.C.2. of the preamble of this final rule.) Accordingly, in this final rule, we are providing an annual update to the LTCH PPS standard Federal payment rate of 1 percent for FY 2018 as required by section 411(e)(2) of the MACRA. For LTCHs that fail to submit the required quality reporting data for FY 2017 in accordance with the LTCH QRP, the annual update is reduced by 2.0 percentage points as required by section 1886(m)(5) of the Act. Accordingly, we are providing an annual update to the LTCH PPS standard Federal payment rate of – 1.0 percent for LTCHs that fail to submit the required quality reporting data for FY 2018 (that is, the full update of 1 percent and less 2.0 percentage points for failure to submit quality reporting data as required by section 1886(m)(5) of the Act).

#### 2. Development of the FY 2018 LTCH PPS Standard Federal Payment Rate

Consistent with our historical practice, for FY 2018, we are applying the annual update to the LTCH PPS standard Federal payment rate from the previous year. Furthermore, in determining the LTCH PPS standard Federal payment rate for FY 2018, we also are making

certain regulatory adjustments, consistent with past practices. Specifically, in determining the FY 2018 LTCH PPS standard Federal payment rate, we applied a budget neutrality adjustment factor for the changes related to the area wage adjustment (that is, changes to the wage data and labor-related share) in accordance with § 412.523(d)(4) and a budget neutrality adjustment factor for the change to the SSO payment methodology (discussed in VIII.D. of the preamble of this final rule).

For FY 2017, we established an annual update to the LTCH PPS standard Federal payment rate of 1.75 percent based on the full estimated LTCH PPS market basket increase of 2.8 percent, less the MFP adjustment of 0.3 percentage point consistent with section 1886(m)(3)(A)(i) of the Act and less the 0.75 percentage point required by sections 1886(m)(3)(A)(ii) and (m)(4)(F) of the Act. Accordingly, at § 412.523(c)(3)(xiii), we established an annual update to the LTCH PPS standard Federal payment rate for FY 2017 of 1.75 percent. That is, we applied an update factor of 1.0175 to the FY 2016 Federal rate of \$41,762.85 to determine the FY 2017 LTCH PPS standard Federal payment rate. We also applied an area wage level budget neutrality factor for FY 2017 of 0.999593 to the LTCH PPS standard Federal payment rate to ensure that any changes to the area wage level adjustment would not result in any change in estimated aggregate LTCH PPS payments. Consequently, we established an LTCH PPS standard Federal payment rate for FY 2017 of \$42,476.41 (calculated as  $\$41,762.85 \times 1.0175 \times 0.999593$ ) (81 FR 57297).

In this final rule, as required by statute, we are establishing an annual update to the LTCH PPS standard Federal payment rate of 1 percent for FY 2018 (as described above). Accordingly, under § 412.523(c)(3)(xiii), we are applying a factor of 1.01 to the FY 2017 LTCH PPS standard Federal payment rate of \$42,476.41 to determine the FY 2018 LTCH PPS standard Federal payment rate. Also, under finalized § 412.523(c)(3)(iv), in conjunction with the provisions of § 412.523(c)(4), we are applying an annual update to the LTCH PPS standard Federal payment rate of -1.0 percent (that is, a update factor of 0.99) for FY 2018 for LTCHs that fail to submit the required quality reporting data for FY 2018 as required under the LTCH QRP. Consistent with § 412.523(d)(4), we also are applying an area wage level budget neutrality factor to the FY 2018 LTCH PPS standard Federal payment rate of 1.0006434, based on the best available data at this time, to ensure that any changes to the area wage level adjustment (that is, the annual update of the wage index values and labor-related share) would not result in any change (increase or decrease) in estimated aggregate LTCH PPS standard Federal rate payments. Finally, we are applying a budget neutrality adjustment of 0.9651 for our changes to the SSO payment methodology (discussed in VIII.D. of the preamble of this final rule). Accordingly, we are establishing an LTCH PPS standard Federal payment rate of \$41,430.56 (calculated as  $\$42,476.41 \times 1.01 \times 1.0006434 \times 0.9651$ ) for FY 2018. For LTCHs that fail to submit quality reporting

data for FY 2018, in accordance with the requirements of the LTCHQRP under section 1886(m)(5) of the Act, we are establishing an LTCH PPS standard Federal payment rate of \$40,610.16 (calculated as  $\$42,476.41 \times 0.99 \times 1.0006434 \times 0.9651$ ) for FY 2018.

#### *B. Adjustment for Area Wage Levels Under the LTCH PPS for FY 2018*

##### 1. Background

Under the authority of section 123 of the BBRA, as amended by section 307(b) of the BIPA, we established an adjustment to the LTCH PPS standard Federal payment rate to account for differences in LTCH area wage levels under § 412.525(c). The labor-related share of the LTCH PPS standard Federal payment rate is adjusted to account for geographic differences in area wage levels by applying the applicable LTCH PPS wage index. The applicable LTCH PPS wage index is computed using wage data from inpatient acute care hospitals without regard to reclassification under section 1886(d)(8) or section 1886(d)(10) of the Act.

When we implemented the LTCH PPS, we established a 5-year transition to the full area wage level adjustment. The area wage level adjustment was completely phased-in for cost reporting periods beginning in FY 2007. Therefore, for cost reporting periods beginning on or after October 1, 2006, the applicable LTCH area wage index values are the full LTCH PPS area wage index values calculated based on acute care hospital inpatient wage index data without taking into account geographic reclassification under section 1886(d)(8) and section 1886(d)(10) of the Act. For additional information on the phase-in of the area wage level adjustment under the LTCH PPS, we refer readers to the August 30, 2002 LTCH PPS final rule (67 FR 56015 through 56019) and the RY 2008 LTCH PPS final rule (72 FR 26891).

##### 2. Geographic Classifications (Labor Market Areas) for the LTCH PPS Standard Federal Payment Rate

In adjusting for the differences in area wage levels under the LTCH PPS, the labor-related portion of an LTCH's Federal prospective payment is adjusted by using an appropriate area wage index based on the geographic classification (labor market area) in which the LTCH is located. Specifically, the application of the LTCH PPS area wage level adjustment under existing § 412.525(c) is made based on the location of the LTCH—either in an “urban area,” or a “rural area,” as defined in § 412.503. Under § 412.503, an “urban area” is defined as a Metropolitan Statistical Area (MSA) (which includes a Metropolitan division, where applicable), as defined by the Executive OMB and a “rural area” is defined as any area outside of an urban area. (Information on OMB's MSA delineations based on the 2010 standards can be found at: [https://obamawhitehouse.archives.gov/sites/default/files/omb/assets/fedreg\\_2010/06282010\\_metro\\_standards-Complete.pdf](https://obamawhitehouse.archives.gov/sites/default/files/omb/assets/fedreg_2010/06282010_metro_standards-Complete.pdf).)

The CBSA-based geographic classifications (labor market area definitions) currently used under the LTCH PPS, effective for discharges occurring on or after October 1, 2014, are based on the OMB labor market area

delineations based on the 2010 Decennial Census data. The current statistical areas (which were implemented beginning with FY 2015) are based on revised OMB delineations issued on February 28, 2013, in OMB Bulletin No. 13–01. We adopted these labor market area delineations because they are based on the best available data that reflect the local economies and area wage levels of the hospitals that are currently located in these geographic areas. We also believe that these OMB delineations will ensure that the LTCH PPS area wage level adjustment most appropriately accounts for and reflects the relative hospital wage levels in the geographic area of the hospital as compared to the national average hospital wage level. We noted that this policy was consistent with the IPPS policy adopted in FY 2015 under § 412.64(b)(1)(ii)(D) of the regulations (79 FR 49951 through 49963). (For additional information on the CBSA-based labor market area (geographic classification) delineations currently used under the LTCH PPS and the history of the labor market area definitions used under the LTCH PPS, we refer readers to the FY 2015 IPPS/LTCH PPS final rule (79 FR 50180 through 50185).)

In general, it is our historical practice to update the CBSA-based labor market area delineations annually based on the most recent updates issued by OMB. Generally, OMB issues major revisions to statistical areas every 10 years, based on the results of the decennial census. However, OMB occasionally issues minor updates and revisions to statistical areas in the years between the decennial censuses. As discussed in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56913 through 56914), OMB issued OMB Bulletin No. 15–01 on July 15, 2015 to update and supersede Bulletin No. 13–10. Bulletin No. 15–01 and its attachment provide detailed information on the update to statistical areas since the February 28, 2013 release of Bulletin No. 13–10 and are based on the application of the 2010 Standards for Delineating Metropolitan and Micropolitan Statistical Areas to Census Bureau population estimates for July 1, 2012, and July 1, 2013. A copy of this bulletin may be obtained on the Web site at: <https://obamawhitehouse.archives.gov/sites/default/files/omb/bulletins/2015/15-01.pdf>.

We believe that these revisions to the CBSA-based labor market area delineations will ensure that the LTCH PPS area wage level adjustment most appropriately accounts for and reflects the relative hospital wage levels in the geographic area of the hospital as compared to the national average hospital wage level based on the best available data that reflect the local economies and area wage levels of the hospitals that are currently located in these geographic areas (81 FR 57298). Therefore, we are continuing to use the CSBA-based labor market area delineations adopted under the LTCH PPS, effective October 1, 2017 (as adopted in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57298)). Moreover, the FY 2018 LTCH PPS wage index values in Tables 12A and 12B listed in section VI. of the Addendum of this final rule (which are available via the Internet on the CMS Web site) reflect the revisions to the CBSA-based labor market

area delineations described above. We note that, as discussed in section III.A.2. of the preamble of this final rule, the revisions to the CBSA-based delineations also were adopted under the IPPS, effective beginning October 1, 2016.

### 3. Labor-Related Share for the LTCH PPS Standard Federal Payment Rate

Under the payment adjustment for the differences in area wage levels under § 412.525(c), the labor-related share of an LTCH's standard Federal payment rate payment is adjusted by the applicable wage index for the labor market area in which the LTCH is located. The LTCH PPS labor-related share currently represents the sum of the labor-related portion of operating costs and a labor-related portion of capital costs using the applicable LTCH PPS market basket. Additional background information on the historical development of the labor-related share under the LTCH PPS can be found in the RY 2007 LTCH PPS final rule (71 FR 27810 through 27817 and 27829 through 27830) and the FY 2012 IPPS/LTCH PPS final rule (76 FR 51766 through 51769 and 51808).

For FY 2013, we rebased and revised the market basket used under the LTCH PPS by adopting the newly created FY 2009-based LTCH-specific market basket. In addition, beginning in FY 2013, we determined the labor-related share annually as the sum of the relative importance of each labor-related cost category of the 2009-based LTCH-specific market basket for the respective fiscal year based on the best available data. (For more details, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53477 through 53479).) As noted previously, we rebased and revised the 2009-based LTCH-specific market basket to reflect a 2013 base year. In conjunction with that policy, as discussed in section VIII.C. of the preamble of this final rule, we are establishing that the LTCH PPS labor-related share for FY 2018 is the sum of the FY 2018 relative importance of each labor-related cost category in the 2013-based LTCH market basket using the most recent available data. Specifically, we are establishing that the labor-related share for FY 2018 includes the sum of the labor-related portion of operating costs from the 2013-based LTCH market basket (that is, the sum of the FY 2018 relative importance share of Wages and Salaries; Employee Benefits; Professional Fees: Labor-Related; Administrative and Facilities Support Services; Installation, Maintenance, and Repair Services; All Other: Labor-related Services) and a portion of the Capital-Related cost weight from the 2013-based LTCH PPS market basket. Based on IGI's second quarter 2017 forecast of the 2013-based LTCH market basket, we are establishing a labor-related share under the LTCH PPS for FY 2018 of 66.2 percent. This labor-related share is determined using the same methodology as employed in calculating all previous LTCH PPS labor-related shares. Consistent with our historical practice, as we proposed, we used more recent data available to determine the final FY 2018 labor-related share in this final rule.

The labor-related share for FY 2018 is the sum of the FY 2018 relative importance of each labor-related cost category, and reflects

the different rates of price change for these cost categories between the base year (2013) and FY 2018. The sum of the relative importance for FY 2018 for operating costs (Wages and Salaries; Employee Benefits; Professional Fees: Labor-Related; Administrative and Facilities Support Services; Installation, Maintenance, and Repair Services; All Other: Labor-Related Services) is 62.0 percent. The portion of capital-related costs that is influenced by the local labor market is estimated to be 46 percent (the same percentage applied to the 2009-based LTCH-specific market basket). Because the relative importance for capital-related costs under our policies is 9.2 percent of the 2013-based LTCH market basket in FY 2018, we are taking 46 percent of 9.2 percent to determine the labor-related share of capital-related costs for FY 2018 ( $0.46 \times 9.2$ ). The result is 4.2 percent, which we added to 62.0 percent for the operating cost amount to determine the total labor-related share for FY 2018. Therefore, the labor-related share under the LTCH PPS for FY 2018 is 66.2 percent.

### 4. Wage Index for FY 2018 for the LTCH PPS Standard Federal Payment Rate

Historically, we have established LTCH PPS area wage index values calculated from acute care IPPS hospital wage data without taking into account geographic reclassification under sections 1886(d)(8) and 1886(d)(10) of the Act (67 FR 56019). The area wage level adjustment established under the LTCH PPS is based on an LTCH's actual location without regard to the "urban" or "rural" designation of any related or affiliated provider.

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57299 through 57301), we calculated the FY 2017 LTCH PPS area wage index values using the same data used for the FY 2017 acute care hospital IPPS (that is, data from cost reporting periods beginning during FY 2013), without taking into account geographic reclassification under sections 1886(d)(8) and 1886(d)(10) of the Act, as these were the most recent complete data available at that time. In that same final rule, we indicated that we computed the FY 2017 LTCH PPS area wage index values, consistent with the urban and rural geographic classifications (labor market areas) that were in place at that time and consistent with the pre-reclassified IPPS wage index policy (that is, our historical policy of not taking into account IPPS geographic reclassifications in determining payments under the LTCH PPS). As with the IPPS wage index, wage data for multicampus hospitals with campuses located in different labor market areas (CBSAs) are apportioned to each CBSA where the campus (or campuses) are located. We also continued to use our existing policy for determining area wage index values for areas where there are no IPPS wage data.

Consistent with our historical methodology, as discussed in the FY 2018 IPPS/LTCH PPS proposed rule, to determine the applicable area wage index values for the FY 2018 LTCH PPS standard Federal payment rate, under the broad authority of section 123 of the BBRA, as amended by section 307(b) of the BIPA, as we proposed, we used wage data collected from cost

reports submitted by IPPS hospitals for cost reporting periods beginning during FY 2014, without taking into account geographic reclassification under sections 1886(d)(8) and 1886(d)(10) of the Act because these data are the most recent complete data available. We also note that these are the same data we are using to compute the FY 2018 acute care hospital inpatient wage index, as discussed in section III. of the preamble of this final rule. We computed the FY 2018 LTCH PPS standard Federal payment rate area wage index values consistent with the "urban" and "rural" geographic classifications (that is, labor market area delineations, including the updates, as previously discussed in section V.B. of this Addendum) and our historical policy of not taking into account IPPS geographic reclassifications under sections 1886(d)(8) and 1886(d)(10) of the Act in determining payments under the LTCH PPS. As we also proposed, we are continuing to apportion wage data for multicampus hospitals with campuses located in different labor market areas to each CBSA where the campus or campuses are located, consistent with the IPPS policy. Lastly, consistent with our existing methodology for determining the LTCH PPS wage index values, for FY 2018, we are continuing to use our existing policy for determining area wage index values for areas where there are no IPPS wage data. Under our existing methodology, the LTCH PPS wage index value for urban CBSAs with no IPPS wage data will be determined by using an average of all of the urban areas within the State, and the LTCH PPS wage index value for rural areas with no IPPS wage data will be determined by using the unweighted average of the wage indices from all of the CBSAs that are contiguous to the rural counties of the State.

Based on the FY 2014 IPPS wage data that we used to determine the FY 2018 LTCH PPS standard Federal payment rate area wage index values in this final rule, there are no IPPS wage data for the urban area of Hinesville, GA (CBSA 25980). Consistent with the methodology discussed above, we calculated the FY 2018 wage index value for CBSA 25980 as the average of the wage index values for all of the other urban areas within the State of Georgia (that is, CBSAs 10500, 12020, 12060, 12260, 15260, 16860, 17980, 19140, 23580, 31420, 40660, 42340, 46660 and 47580), as shown in Table 12A, which is listed in section VI. of the Addendum to this final rule and available via the Internet on the CMS Web site). We note that, as IPPS wage data are dynamic, it is possible that urban areas without IPPS wage data will vary in the future.

Based on the FY 2014 IPPS wage data that we used to determine the FY 2018 LTCH PPS standard Federal payment rate area wage index values in this final rule, there are no rural areas without IPPS hospital wage data. Therefore, it is not necessary to use our established methodology to calculate a LTCH PPS standard Federal payment rate wage index value for proposed rural areas with no IPPS wage data for FY 2018. We note that, as IPPS wage data are dynamic, it is possible that the number of rural areas without IPPS wage data will vary in the future. The FY 2018 LTCH PPS standard Federal payment

rate wage index values that will be applicable for LTCH PPS standard Federal payment rate discharges occurring on or after October 1, 2017, through September 30, 2018, are presented in Table 12A (for urban areas) and Table 12B (for rural areas), which are listed in section VI. of the Addendum of this final rule and available via the Internet on the CMS Web site.

#### 5. Budget Neutrality Adjustment for Changes to the LTCH PPS Standard Federal Payment Rate Area Wage Level Adjustment

Historically, the LTCH PPS wage index and labor-related share are updated annually based on the latest available data. Under § 412.525(c)(2), any changes to the area wage index values or labor-related share are to be made in a budget neutral manner such that estimated aggregate LTCH PPS payments are unaffected; that is, will be neither greater than nor less than estimated aggregate LTCH PPS payments without such changes to the area wage level adjustment. Under this policy, we determine an area wage-level adjustment budget neutrality factor that will be applied to the standard Federal payment rate to ensure that any changes to the area wage level adjustments are budget neutral such that any changes to the area wage index values or labor-related share would not result in any change (increase or decrease) in estimated aggregate LTCH PPS payments. Accordingly, under § 412.523(d)(4), we apply an area wage level adjustment budget neutrality factor in determining the standard Federal payment rate, and we also established a methodology for calculating an area wage level adjustment budget neutrality factor. (For additional information on the establishment of our budget neutrality policy for changes to the area wage level adjustment, we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51771 through 51773 and 51809).)

In this final rule, for FY 2018 LTCH PPS standard Federal payment rate cases, in accordance with § 412.523(d)(4), as we proposed, we applied an area wage level adjustment budget neutrality factor to adjust the LTCH PPS standard Federal payment rate to account for the estimated effect of the adjustments or updates to the area wage level adjustment under § 412.525(c)(1) on estimated aggregate LTCH PPS payments using a methodology that is consistent with the methodology we established in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51773). Specifically, as we proposed in the FY 2018 IPPS/LTCH PPS proposed rule, we determined an area wage level adjustment budget neutrality factor that will be applied to the LTCH PPS standard Federal payment rate under § 412.523(d)(4) for FY 2018 using the following methodology:

*Step 1*—We simulated estimated aggregate LTCH PPS standard Federal payment rate payments using the FY 2017 wage index values and the FY 2017 labor-related share of 66.5 percent (as established in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57099 and 57100)).

*Step 2*—We simulated estimated aggregate LTCH PPS standard Federal payment rate payments using the FY 2018 wage index values (as shown in Tables 12A and 12B listed in the Addendum to this final rule and

available via the Internet on the CMS Web site) and the FY 2018 labor-related share of 66.2 percent (based on the latest available data as previously discussed in this Addendum).

*Step 3*—We calculated the ratio of these estimated total LTCH PPS standard Federal payment rate payments by dividing the estimated total LTCH PPS standard Federal payment rate payments using the FY 2017 area wage level adjustments (calculated in Step 1) by the estimated total LTCH PPS standard Federal payment rate payments using the FY 2018 area wage level adjustments (calculated in Step 2) to determine the area wage level adjustment budget neutrality factor for FY 2018 LTCH PPS standard Federal payment rate payments.

*Step 4*—We then applied the FY 2018 area wage level adjustment budget neutrality factor from Step 3 to determine the FY 2018 LTCH PPS standard Federal payment rate after the application of the FY 2018 annual update (discussed previously in section V.A. of this Addendum).

We note that, with the exception of cases subject to the transitional blend payment rate provisions in the first 2 years and certain temporary exemptions for certain spinal cord specialty hospitals and certain severe wound cases, under the dual rate LTCH PPS payment structure, only LTCH PPS cases that meet the statutory criteria to be excluded from the site neutral payment rate (that is, LTCH PPS standard Federal payment rate cases) are paid based on the LTCH PPS standard Federal payment rate. Because the area wage level adjustment under § 412.525(c) is an adjustment to the LTCH PPS standard Federal payment rate, we only used data from claims that would have qualified for payment at the LTCH PPS standard Federal payment rate if such rate had been in effect at the time of discharge to calculate the FY 2017 LTCH PPS standard Federal payment rate area wage level adjustment budget neutrality factor described above.

For this final rule, using the steps in the methodology previously described, we determined a FY 2018 LTCH PPS standard Federal payment rate area wage level adjustment budget neutrality factor of 1.0006434. Accordingly, in section V.A. of the Addendum to this final rule, to determine the FY 2018 LTCH PPS standard Federal payment rate, we applied an area wage level adjustment budget neutrality factor of 1.0006434, in accordance with § 412.523(d)(4). The FY 2018 LTCH PPS standard Federal payment rate shown in Table 1E of the Addendum to this final rule reflects this adjustment factor.

#### C. Cost-of-Living Adjustment (COLA) for LTCHs Located in Alaska and Hawaii

Under § 412.525(b), a cost-of-living adjustment (COLA) is provided for LTCHs located in Alaska and Hawaii to account for the higher costs incurred in those States. Specifically, we apply a COLA to payments to LTCHs located in Alaska and Hawaii by multiplying the nonlabor-related portion of the standard Federal payment rate by the applicable COLA factors established annually

by CMS. Higher labor-related costs for LTCHs located in Alaska and Hawaii are taken into account in the adjustment for area wage levels previously described.

Under our current methodology, we update the COLA factors for Alaska and Hawaii every 4 years (at the same time as the update to the labor-related share of the IPPS market basket) (77 FR 53712 through 53713). This methodology is based on a comparison of the growth in the Consumer Price Indexes (CPIs) for Anchorage, Alaska, and Honolulu, Hawaii, relative to the growth in the CPI for the average U.S. city as published by the Bureau of Labor Statistics (BLS). It also includes a 25-percent cap on the CPI-updated COLA factors. Under our current policy, we update the COLA factors using the methodology described above every 4 years; the first year began in FY 2014. For FY 2014, we updated the COLA factors for Alaska and Hawaii published by OPM for 2009 using the methodology finalized in FY 2013. (For additional details on our current methodology for updating the COLA factors for Alaska and Hawaii, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53481 through 53482).) As discussed in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20186 through 20187) and this final rule, we continue to believe that determining updated COLA factors using this methodology would appropriately adjust the nonlabor-related portion of the LTCH PPS standard Federal payment rate for LTCHs located in Alaska and Hawaii.

For FY 2018, we are continuing to update the COLA factors published by OPM for 2009 (as these are the last COLA factors OPM published prior to transitioning from COLAs to locality pay) using the methodology that we finalized in the FY 2013 IPPS/LTCH PPS final rule and implemented for the FY 2014 IPPS update. Specifically, we are updating the 2009 OPM COLA factors by a comparison of the growth in the Consumer Price Indexes (CPIs) for Anchorage, Alaska, and Honolulu, Hawaii, relative to the growth in the CPI for the average U.S. city as published by the Bureau of Labor Statistics (BLS). Because BLS publishes CPI data for only Anchorage and Honolulu, using the methodology we finalized in the FY 2013 IPPS/LTCH PPS final rule, we use the comparison of the growth in the overall CPI relative to the growth in the CPI for those cities to update the COLA factors for all areas in Alaska and Hawaii, respectively. We believe that the relative price differences between these cities and the U.S. (as measured by the CPIs mentioned above) are appropriate proxies for the relative price differences between the “other areas” of Alaska and Hawaii and the United States.

BLS publishes the CPI for All Items for Anchorage, Honolulu, and for the average U.S. city. However, consistent with our methodology finalized in the FY 2013 IPPS/LTCH PPS final rule, we are creating reweighted CPIs for each of the respective areas to reflect the underlying composition of the IPPS market basket nonlabor-related share. The current composition of the CPI for All Items for all of the respective areas is approximately 40 percent commodities and 60 percent services. However, the IPPS

nonlabor-related share is comprised of a different mix of commodities and services. Therefore, we create reweighted indexes for Anchorage, Honolulu, and the average U.S. city using the respective CPI commodities index and CPI services index using the approximate 55 percent commodities/45 percent services shares obtained from the proposed 2014-based IPPS market basket. We create reweighted indexes using BLS data for 2009 through 2016—the most recent data available at the time of this rulemaking. In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50985 through 50987), we created reweighted indexes based on the FY 2010-based IPPS market basket (which was adopted for the FY 2014 update) and BLS data for 2009 through 2012 (the most recent BLS data at the time of the FY 2014 IPPS/LTCH PPS rulemaking).

We continue to believe this methodology is appropriate because we continue to make a COLA for LTCHs located in Alaska and Hawaii by multiplying the nonlabor-related portion of the LTCH PPS standard Federal rate by a COLA factor. We note that OPM’s COLA factors were calculated with a statutorily mandated cap of 25 percent. As stated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50987), when developing the COLA update methodology we finalized in the FY 2013 IPPS/LTCH PPS final rule, we exercised our discretionary authority to adjust payments to LTCHs in Alaska and Hawaii by incorporating this cap. In applying this finalized methodology for updating the COLA factors, our policy for FY 2018 continues to use a 25-percent cap, as our policy is based on OPM’s COLA factors

(updated by the methodology described earlier).

Applying this methodology, the COLA factors that we are establishing for FY 2018 to adjust the nonlabor related portion of the LTCH PPS standard Federal rate for LTCHs located in Alaska and Hawaii are shown in the table below. For comparison purposes, we also are showing the FY 2013 COLA factors (which were based on OPM’s published COLA factors for 2009) and the COLA factors for FYs 2014 through 2017.

Lastly, as we finalized in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53700 and 53701), we are updating the COLA factors based on our methodology every 4 years, at the same time as the update to the labor-related share of the IPPS market basket.

**COST-OF-LIVING ADJUSTMENT FACTORS FOR ALASKA AND HAWAII UNDER THE LTCH PPS FOR FY 2018**

Area	FY 2013	FY 2014 through FY 2017	FY 2018
<b>Alaska:</b>			
City of Anchorage and 80-kilometer (50-mile) radius by road .....	1.23	1.23	1.25
City of Fairbanks and 80-kilometer (50-mile) radius by road .....	1.23	1.23	1.25
City of Juneau and 80-kilometer (50-mile) radius by road .....	1.23	1.23	1.25
Rest of Alaska .....	1.25	1.25	1.25
<b>Hawaii:</b>			
City and County of Honolulu .....	1.25	1.25	1.25
County of Hawaii .....	1.18	1.19	1.21
County of Kauai .....	1.25	1.25	1.25
County of Maui and County of Kalawao .....	1.25	1.25	1.25

We note that the reweighted CPI for Honolulu, HI grew faster than the reweighted CPI for the average U.S. city over the 2009 to 2016 time period at 13.7 percent and 10.5 percent, respectively. As a result, for FY 2018, we calculated a COLA factor of 1.29 for the City and County of Honolulu, County of Kauai, and County of Maui and County of Kalawao. However, as stated earlier, we are applying our methodology as finalized in the FY 2013 IPPS/LTCH PPS final rule to incorporate a cap of 1.25 for these areas and thus proposed a COLA factor of 1.25 for the City and County of Honolulu, the County of Kauai, and the County of Maui and County of Kalawao. In addition, the proposed COLA factor we calculated for the County of Hawaii for FY 2018 is 1.21 compared to the FY 2013 COLA factor of 1.18. The COLA factors adopted in FY 2014 using this same methodology can be found in the table above.

Similarly, the reweighted CPI for Anchorage, AK grew faster than the reweighted CPI for the average U.S. city over the 2009 to 2016 time period, at 12.4 percent and 10.5 percent, respectively. As a result, for FY 2018, we calculated COLA factors for the City of Anchorage, City of Fairbanks, and City of Juneau to be 1.25 compared to the FY 2013 COLA factor of 1.23. For FY 2018, we calculated a COLA factor of 1.27 for the Rest of Alaska compared to the FY 2013 COLA factor of 1.25. However, as stated above, we are applying our methodology as finalized in the FY 2013 IPPS/LTCH PPS final rule to incorporate a cap of 1.25 for the rest of Alaska.

As stated above, the COLA factors adopted in the FY 2014 IPPS/LTCH PPS final rule

were based on the same methodology used to determine the FY 2018 COLA factors but utilizing BLS data from 2009 through 2012 (the most recent data available at the time of the FY 2014 rulemaking) rather than through 2016 (the most recent data available at the time of this rulemaking). As we noted in the proposed rule, compared to the FY 2014 COLA factors, the proposed FY 2018 COLA factors are higher—with all areas either reaching or exceeding the cap of 1.25 except the County of Hawaii.

We did not receive any public comments in response to our discussion of the proposed FY 2018 COLA factors in the FY 2018 IPPS/LTCH PPS proposed rule. In this final rule, we are finalizing the COLA factors as proposed, effective for FY 2018.

*D. Adjustment for LTCH PPS High-Cost Outlier (HCO) Cases*

**1. HCO Background**

From the beginning of the LTCH PPS, we have included an adjustment to account for cases in which there are extraordinarily high costs relative to the costs of most discharges. Under this policy, additional payments are made based on the degree to which the estimated cost of a case (which is calculated by multiplying the Medicare allowable covered charge by the hospital’s overall hospital CCR) exceeds a fixed-loss amount. This policy results in greater payment accuracy under the LTCH PPS and the Medicare program, and the LTCH sharing the financial risk for the treatment of extraordinarily high-cost cases.

We retained the basic tenets of our HCO policy in FY 2016 when we implemented the

dual rate LTCH PPS payment structure under section 1206 of Public Law 113–67. LTCH discharges that meet the criteria for exclusion from the site neutral payment rate (that is, LTCH PPS standard Federal payment rate cases) are paid at the LTCH PPS standard Federal payment rate, which includes, as applicable, HCO payments under § 412.523(e). LTCH discharges that do not meet the criteria for exclusion are paid at the site neutral payment rate, which includes, as applicable, HCO payments under § 412.522(c)(2)(i). In the same rule, we established separate fixed-loss amounts and targets for the two different LTCH PPS payment rates. Under this bifurcated policy, the historic 8 percent HCO target was retained for LTCH PPS standard Federal payment rate cases, with the fixed-loss amount calculated using only data from LTCH cases that would have been paid at the LTCH PPS standard Federal payment rate if that rate had been in effect at the time of those discharges. For site neutral payment rate cases, we adopted the operating IPPS HCO target (currently 5.1 percent) and set the fixed-loss amount for site neutral payment rate cases at the value of the IPPS fixed-loss amount. Under the HCO policy for both payment rates, an LTCH receives 80 percent of the difference between the estimated cost of the case and the applicable HCO threshold, which is the sum of the LTCH PPS payment for the case and the applicable fixed-loss amount for such case.

In order to maintain budget neutrality, consistent with the budget neutrality requirement for HCO payments to LTCH PPS standard Federal rate payment cases, we also

adopted a budget neutrality requirement for HCO payments to site neutral payment rate cases by applying a budget neutrality factor to the LTCH PPS payment for those site neutral payment rate cases. (We refer readers to § 412.522(c)(2)(i) of the regulations for further details.) We note that, during the 2-year transitional period, the site neutral payment rate HCO budget neutrality factor did not apply to the LTCH PPS standard Federal payment rate portion of the blended rate at § 412.522(c)(3) payable to site neutral payment rate cases. (For additional details on the HCO policy adopted for site neutral payment rate cases under the dual rate LTCH PPS payment structure, including the budget neutrality adjustment for HCO payments to site neutral payment rate cases, we refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49617 through 49623).)

## 2. Determining LTCH CCRs Under the LTCH PPS

### a. Background

As noted above, CCRs are used to determine payments for HCO adjustments for both payment rates under the LTCH PPS, and also are currently used to determine payments for SSO cases under § 412.529 as well as payments for site neutral payment rate cases. (We note that the provisions of § 412.529 are only applicable to LTCH PPS standard Federal payment rate cases). However, we stated in the FY 2018 IPPS/LTCH PPS proposed rule that if our proposed SSO payment method is finalized, CCRs would no longer be used to determine the payment adjustment for SSO cases. Therefore, as we are finalizing our proposed SSO payment methodology, this discussion will only apply to HCO and site neutral payment rate calculations in FY 2018.

As noted earlier, in determining HCO, SSO payments prior to FY 2018, and the site neutral payment rate (regardless of whether the case is also an HCO) payments, we generally calculate the estimated cost of the case by multiplying the LTCH's overall CCR by the Medicare allowable charges for the case. An overall CCR is used because the LTCH PPS uses a single prospective payment per discharge that covers both inpatient operating and capital-related costs. The LTCH's overall CCR is generally computed based on the sum of LTCH operating and capital costs (as described in Section 150.24, Chapter 3, of the Medicare Claims Processing Manual (Pub. 100-4)) as compared to total Medicare charges (that is, the sum of its operating and capital inpatient routine and ancillary charges), with those values determined from either the most recently settled cost report or the most recent tentatively settled cost report, whichever is from the latest cost reporting period. However, in certain instances, we use an alternative CCR, such as the statewide average CCR, a CCR that is specified by CMS, or one that is requested by the hospital. (We refer readers to § 412.525(a)(4)(iv) of the regulations for further details regarding HCO adjustments for either LTCH PPS payment rate, § 412.529(f)(4) for SSO adjustments under the current policy, and § 412.522(c)(1)(ii) for the site neutral payment rate, respectively.)

The LTCH's calculated CCR is then compared to the LTCH total CCR ceiling. Under our established policy, an LTCH with a calculated CCR in excess of the applicable maximum CCR threshold (that is, the LTCH total CCR ceiling, which is calculated as 3 standard deviations from the national geometric average CCR) is generally assigned the applicable statewide CCR. This policy is premised on a belief that calculated CCRs above the LTCH total CCR ceiling are most likely due to faulty data reporting or entry, and CCRs based on erroneous data should not be used to identify and make payments for outlier cases.

### b. LTCH Total CCR Ceiling

Consistent with our historical practice, we used the most recent data to determine the LTCH total CCR ceiling for FY 2018 in this final rule. Specifically, in this final rule, using our established methodology for determining the LTCH total CCR ceiling based on IPPS total CCR data from the March 2017 update of the Provider Specific File (PSF), which is the most recent data available, we are establishing an LTCH total CCR ceiling of 1.280 under the LTCH PPS for FY 2018 in accordance with § 412.525(a)(4)(iv)(C)(2) for HCO cases under either payment rate and § 412.522(c)(1)(ii) for the site neutral payment rate. (For additional information on our methodology for determining the LTCH total CCR ceiling, we refer readers to the FY 2007 IPPS final rule (71 FR 48118 through 48119).)

### c. LTCH Statewide Average CCRs

Our general methodology for determining the statewide average CCRs used under the LTCH PPS is similar to our established methodology for determining the LTCH total CCR ceiling because it is based on "total" IPPS CCR data. (For additional information on our methodology for determining statewide average CCRs under the LTCH PPS, we refer readers to the FY 2007 IPPS final rule (71 FR 48119 through 48120).) Under the LTCH PPS HCO policy for cases paid under either payment rate at § 412.525(a)(4)(iv)(C)(2), the current SSO policy at § 412.529(f)(4)(iii)(B), and the site neutral payment rate at § 412.522(c)(1)(ii), the MAC may use a statewide average CCR, which is established annually by CMS, if it is unable to determine an accurate CCR for an LTCH in one of the following circumstances: (1) New LTCHs that have not yet submitted their first Medicare cost report (a new LTCH is defined as an entity that has not accepted assignment of an existing hospital's provider agreement in accordance with § 489.18); (2) LTCHs whose calculated CCR is in excess of the LTCH total CCR ceiling; and (3) other LTCHs for whom data with which to calculate a CCR are not available (for example, missing or faulty data). (Other sources of data that the MAC may consider in determining an LTCH's CCR include data from a different cost reporting period for the LTCH, data from the cost reporting period preceding the period in which the hospital began to be paid as an LTCH (that is, the period of at least 6 months that it was paid as a short-term, acute care hospital), or data from other comparable LTCHs, such as LTCHs in the same chain or in the same region.)

Consistent with our historical practice of using the best available data, in this final rule, using our established methodology for determining the LTCH statewide average CCRs, based on the most recent complete IPPS "total CCR" data from the March 2017 update of the PSF, we are establishing LTCH PPS statewide average total CCRs for urban and rural hospitals that will be effective for discharges occurring on or after October 1, 2017, through September 30, 2018, in Table 8C listed in section VI. of the Addendum to this final rule (and available via the Internet on the CMS Web site). Consistent with our historical practice, as we proposed, we used more recent data to determine the LTCH PPS statewide average total CCRs for FY 2018 in this final rule.

Under the current LTCH PPS labor market areas, all areas in Delaware, the District of Columbia, New Jersey, and Rhode Island are classified as urban. Therefore, there are no rural statewide average total CCRs listed for those jurisdictions in Table 8C. This policy is consistent with the policy that we established when we revised our methodology for determining the applicable LTCH statewide average CCRs in the FY 2007 IPPS final rule (71 FR 48119 through 48121) and is the same as the policy applied under the IPPS. In addition, although Connecticut has areas that are designated as rural, in our calculation of the LTCH statewide average CCRs, there was no data available from short-term, acute care IPPS hospitals to compute a rural statewide average CCR or there were no short-term, acute care IPPS hospitals or LTCHs located in that area as of March 2017.

Therefore, consistent with our existing methodology, we used the national average total CCR for rural IPPS hospitals for rural Connecticut in Table 8C. While Massachusetts also has rural areas, the statewide average CCR for rural areas in Massachusetts is based on one provider whose CCR is an atypical 1.222. Because this is much higher than the statewide urban average and furthermore implies costs exceeded charges, as with Connecticut, we used the national average total CCR for rural hospitals for hospitals located in rural Massachusetts. Furthermore, consistent with our existing methodology, in determining the urban and rural statewide average total CCRs for Maryland LTCHs paid under the LTCH PPS, we continued to use, as a proxy, the national average total CCR for urban IPPS hospitals and the national average total CCR for rural IPPS hospitals, respectively. We used this proxy because we believe that the CCR data in the PSF for Maryland hospitals may not be entirely accurate (as discussed in greater detail in the FY 2007 IPPS final rule (71 FR 48120)).

### d. Reconciliation of HCO and SSO Payments

Under the HCO policy for cases paid under either payment rate at § 412.525(a)(4)(iv)(D) and SSO cases prior to FY 2018 at § 412.529(f)(4)(iv), the payments for HCO and SSO cases are subject to reconciliation. Specifically, any such payments are reconciled at settlement based on the CCR that is calculated based on the cost report coinciding with the discharge. However, under our changes to the SSO payment methodology discussed in section VIII.D. of

the preamble of this final rule, we removed estimated cost as a consideration for payment to SSO cases. As such, consistent with our changes to the SSO payment methodology, SSO payments are no longer be subject to reconciliation. Specifically, as we proposed, we are revising paragraph (f) of § 412.529 to specify that SSO payments will be reconciled only for discharges occurring before October 1, 2017.

For additional information on the reconciliation policy, we refer readers to Sections 150.26 through 150.28 of the Medicare Claims Processing Manual (Pub. 100-4), as added by Change Request 7192 (Transmittal 2111; December 3, 2010), and the RY 2009 LTCH PPS final rule (73 FR 26820 through 26821).

### 3. High-Cost Outlier Payments for LTCH PPS Standard Federal Payment Rate Cases

#### a. Changes to High-Cost Outlier Payments for LTCH PPS Standard Federal Payment Rate Cases

When we implemented the LTCH PPS, we established a fixed-loss amount so that total estimated outlier payments are projected to equal 8 percent of total estimated payments under the LTCH PPS (67 FR 56022 through 56026). Furthermore, § 412.523(d)(1) requires the LTCH PPS standard Federal payment rate be adjusted by a reduction factor of 8 percent, the estimated proportion of outlier payments under § 412.525(a) payable to LTCH PPS standard Federal payment rate cases. Section 15004(b) of the 21st Century Cures Act (Pub. L. 114-255) amended section 1886(m) of the Act by adding new paragraph (7), which specifies certain treatment of HCO payments for fiscal years beginning on or after October 1, 2017 (FY 2018). Specifically, section 1886(m)(7)(A) of the Act requires, beginning in FY 2018, that the LTCH PPS standard Federal payment rate be reduced as if estimated HCO payments for standard Federal payment rate cases would be equal to 8 percent of estimated aggregate payments for standard Federal payment rate cases for a given year. In other words, section 1886(m)(7)(A) of the Act makes our existing regulatory budget neutrality requirement at § 412.523(d)(1) for the 8 percent HCO target for standard Federal payment rate cases a statutory requirement beginning in FY 2018. In addition, section 1886(m)(7)(B) of the Act requires, beginning in FY 2018, that the fixed-loss amount for HCO payments for LTCH PPS standard Federal payment rate cases be determined so that the estimated aggregate amount of HCO payments for such cases in a given year are equal to 99.6875 percent of the 8 percent estimated aggregate payments for standard Federal payment rate cases (that is, 7.975 percent). In other words, sections 1886(m)(7)(A) and (7)(B) require that we adjust the standard Federal payment rate each year to ensure budget neutrality for HCO payments as if estimated aggregate HCO payments made for standard Federal payment rate discharges remain at 8 percent, while the fixed-loss amount for the HCO payments is set each year so that the estimated aggregate HCO payments for standard Federal payment rate cases are 7.975 percent of estimated aggregate payments for standard Federal payment rate cases.

More specifically, section 1886(m)(7)(A) of the Act stipulates that, for fiscal years beginning on or after October 1, 2017, the Secretary shall reduce the standard Federal payment rate as if the estimated aggregate amount of HCO payments for standard Federal payment rate discharges for each such fiscal year would be equal to 8 percent of estimated aggregate payments for standard Federal payment rate discharges for each such fiscal year; while section 1886(m)(7)(B) of the Act states that the Secretary shall set the fixed loss amount for HCO payments such that the estimated aggregate amount of HCO payments made for standard Federal payment rate discharges for fiscal years beginning on or after October 1, 2017, shall be equal to 99.6875 percent of 8 percent of estimated aggregate payments for standard Federal payment rate discharges for each such fiscal year. Furthermore, section 1886(m)(7)(C) of the Act requires that any reduction in payments resulting from the application of paragraph (B) shall not be taken into account in applying any budget neutrality provision. Finally, section 1886(m)(7)(D) of the Act provides there will be no effect on HCO payments to site neutral payment rate cases by this certain treatment of HCO payments by requiring that this paragraph shall not apply with respect to the computation of the applicable site neutral payment rate under section 1886(m)(6) of the Act.

To codify the treatment of HCO payments provided by section 15004(b) of the 21st Century Cures Act (discussed earlier), as we proposed, we are revising § 412.525(a) by redesignating paragraph (2) as paragraph (2)(i) and adding paragraph (2)(ii) which would specify that, for FY 2018 and subsequent years, the fixed-loss amount for LTCH discharges described under § 412.522(a)(2) is determined such that the estimated proportion of outlier payments under § 412.522(a) that are payable for such discharges is projected to be equal to 99.6875 percent of 8 percent. We also are making conforming changes to § 412.523(d)(1) to specify that the provisions under § 412.525(a)(2)(ii) will not affect the reduction factor of 8 percent that is applied to the LTCH PPS standard Federal payment rate under § 412.523(d)(1).

#### b. Establishment of the Fixed-Loss Amount for LTCH PPS Standard Federal Payment Rate Cases for FY 2018

When we implemented the LTCH PPS, we established a fixed loss amount so that total estimated outlier payments are projected to equal 8 percent of total estimated payments under the LTCH PPS (67 FR 56022 through 56026). When we implemented the dual rate LTCH PPS payment structure beginning in FY 2016, we established that, in general, the historical LTCH PPS HCO policy will continue to apply to LTCH PPS standard Federal payment rate cases. That is, the fixed-loss amount and target for LTCH PPS standard Federal payment rate cases is determined using the LTCH PPS HCO policy adopted when the LTCH PPS was first implemented, but we limited the data used under that policy to LTCH cases that would have been LTCH PPS standard Federal payment rate cases if the statutory changes

had been in effect at the time of those discharges.

To determine the applicable fixed-loss amount for LTCH PPS standard Federal payment rate cases, we estimate outlier payments and total LTCH PPS payments for each LTCH PPS standard Federal payment rate case (or for each case that would have been a LTCH PPS standard Federal payment rate case if the statutory changes had been in effect at the time of the discharge) using claims data from the MedPAR files. Historically, the applicable fixed-loss amount for LTCH PPS standard Federal payment rate cases results in estimated total outlier payments being projected to be equal to 8 percent of projected total LTCH PPS payments for LTCH PPS standard Federal payment rate cases. We use MedPAR claims data and CCRs based on data from the most recent PSF (or from the applicable statewide average CCR if an LTCH's CCR data are faulty or unavailable) to establish an applicable fixed-loss threshold amount for LTCH PPS standard Federal payment rate cases. For FY 2018 and subsequent fiscal years, as we proposed, we are continuing to use the same general approach as in previous years, but the applicable fixed-loss amount for LTCH PPS standard Federal payment rate cases will be estimated so that total HCO payments are 7.975 percent (that is, 99.6875 percent of 8 percent) of projected total LTCH PPS payments for LTCH PPS standard Federal payment rate cases, consistent with section 1886(m)(7)(B) of the Act (as discussed above).

In the FY 2018 IPS/LTCH PPS proposed rule (82 FR 20189), we proposed to continue to use our current methodology to calculate an applicable fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2018 using the best available data that would maintain estimated HCO payments at the projected 7.975 percent of total estimated LTCH PPS payments for LTCH PPS standard Federal payment rate cases (based on the rates and policies for these cases presented in that proposed rule).

Specifically, based on the most recent complete LTCH data available at that time (that is, LTCH claims data from the December 2016 update of the FY 2016 MedPAR file and CCRs from the December 2016 update of the PSF), we determined that a proposed fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2018 of \$30,081 would result in estimated outlier payments projected to be equal to 7.975 percent of estimated FY 2018 payments for such cases. Under this proposal, we would continue to make an additional HCO payment for the cost of an LTCH PPS standard Federal payment rate case that exceeds the HCO threshold amount that is equal to 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of the adjusted LTCH PPS standard Federal payment rate payment and the fixed-loss amount for LTCH PPS standard Federal payment rate cases of \$30,081). We also noted that the proposed fixed-loss amount for HCO cases paid under the LTCH PPS standard Federal payment rate in FY 2018 of \$30,081 is notably higher than the FY 2017 fixed-loss amount for LTCH PPS standard Federal payment rate cases of \$21,943, and

explained that the increase is largely attributable to rate-of-change in the Medicare allowable charges on the claims data in the MedPAR file.

Based on the most recent available data at the time of the proposed rule, we found that the current FY 2017 HCO threshold of \$21,943 results in estimated HCO payments for LTCH PPS standard Federal payment rate cases of approximately 8.6 percent of the estimated total LTCH PPS payments in FY 2016, which exceeds the 8 percent target by 0.6 percentage points. We also noted that fluctuations in the fixed-loss amount occurred in the first few years after the implementation of the LTCH PPS, due, in part, to the changes in LTCH behavior (such as Medicare beneficiary treatment patterns) in response to the new payment system and the lack of data and information available to predict how those changes would affect the estimate costs of LTCH cases. As we gained more experience with the effects and implementation of the LTCH PPS, the annual changes on the fixed-loss amount generally stabilized relative to the fluctuations that occurred in the early years of the LTCH PPS. Therefore, we did not propose any changes to our method for the inflation factor applied to update the costs of each case (that is, an inflation factor based on the most recent estimate of the 2013-based LTCH market basket as determined by the Office of the Actuary) in determining the proposed fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2018. We stated our continued belief that it is appropriate to continue to use our historical approach until we gain experience with the effects and implementation of the dual rate LTCH PPS payment structure that began with discharges occurring in cost reporting periods beginning on or after October 1, 2015, and the types of cases paid at the LTCH PPS standard Federal payment rate under this dual rate payment structure. We stated that we may revisit this issue in the future if data demonstrate such a change is warranted, and would propose any changes in the future through the notice-and-comment rulemaking process. Furthermore, we invited public comments on potential improvements to the determination of the fixed-loss amount for LTCH PPS standard Federal payment rate cases, including the most appropriate method of determining an inflation factor for projecting the costs of each case when determining the fixed-loss threshold.

*Comment:* A few commenters expressed concern with the increase in the proposed FY 2018 fixed-loss amount for LTCH PPS standard Federal payment rate cases as compared to the current fixed-loss amount for such cases. Some of these commenters expressed general support for using the required target amount of 7.975 percent for HCO payments for LTCH PPS standard Federal payment rate cases. Some commenters stated that they are concerned about the potential instability in the fixed-loss amount from year to year and requested that CMS continue to be transparent about the possible causes for such large year-to-year changes in the fixed-loss amount and how much of this variability may be attributable to the new dual rate LTCH PPS payment. In

addition to using the most recent LTCH claims data and CCRs, some commenters suggested we consider whether the new dual rate LTCH PPS payment structure warrants the use of other relevant data or a change in the inflation factor for projecting the costs of each case when determining the fixed-loss amount, but did not make any specific recommendations for other data or factors.

*Response:* We understand the commenters' concern with the proposed increase to the fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2018, and we appreciate the commenters' support for our proposed use of a HCO target amount of 7.975 percent for LTCH PPS standard Federal payment rate cases. As we discussed in the proposed rule, based on the best available data at that time and using our historical methodology, we estimate that the current FY 2017 HCO fixed-loss amount of \$21,943 results in estimated HCO payments for LTCH PPS standard Federal payment rate cases in excess of the FY 2017 target of 8 percent by 0.6 percentage points. Additionally, we note that we invited public comment on potential improvements to the determination of the fixed-loss amount for LTCH PPS standard Federal payment rate cases, including the most appropriate method of determining an inflation factor for projecting the costs of each case when determining the fixed-loss threshold but received no specific suggestions from comments.

As discussed in the proposed rule, fluctuations in the fixed-loss amount have occurred previously under LTCH PPS, due, in part, to the changes in LTCH behavior in response to the changes in Medicare payments and the lack of data and information available to predict how those changes affect the estimate costs of LTCH cases. As was the case when there were fluctuations in the fixed-loss amount in the early years of the LTCH PPS, we expect annual changes to the fixed-loss amount to generally stabilize as experience is gained under the new dual rate LTCH PPS payment structure. We intend to continue to monitor annual changes in the HCO fixed-loss amount, including factors that drive any such changes. We appreciate the general feedback commenters' noted for potential improvements to the determination of the fixed-loss amount for LTCH PPS standard Federal payment rate cases, including the use of other relevant data or a change in the inflation factor for projecting the costs of each case when determining the fixed-loss amount. As we indicated in the proposed rule, we may revisit this issue in the future if data demonstrate such a change is warranted, and would propose any changes in the future through the notice-and-comment rulemaking process. For these reasons we continue to maintain our historical methodology and thus believe it is necessary and appropriate to increase to the fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2017 to maintain estimated HCO payments would equal 8 percent of estimated total LTCH PPS payments for such cases as required under § 412.525(a). We note, as in greater detail discussed below, the fixed-loss amount for FY 2018 for LTCH PPS standard Federal

payment rate cases we are establishing in this final rule, after consideration of public comments and based on the most recent LTCH claims data from the MedPAR file and the latest CCRs from the PSF, does result in a fixed-loss amount for such cases that is lower than the proposed fixed-loss amount. We also note that based on the most recent available data for this final rule (discussed below), the current FY 2017 HCO threshold of \$21,943 results in estimated HCO payments for LTCH PPS standard Federal payment rate cases which exceeds the FY 2017 target of 8 percent target by 0.1 percentage points. (We also note the change in our estimate of FY 2017 HCO payments between the proposed and final rule decreased from 8.6 percent to 8.1 percent, and this change is largely attributable to updates to CCRs from the December 2016 update of the PSF to the March 2017 update of the PSF.)

After consideration of the public comments we received, for the reasons discussed above, we are finalizing our proposal to continue to use the current LTCH PPS HCO payment methodology for LTCH PPS standard Federal payment rate cases for FY 2018 without modification, as we proposed. Therefore, in this final rule, for FY 2018, we determined an applicable fixed-loss amount for LTCH PPS standard Federal payment rate cases using data from LTCH PPS standard Federal payment rate cases (or cases that would have been LTCH PPS standard Federal payment rate cases had the dual rate LTCH PPS payment structure been in effect at the time of those discharges). The fixed-loss amount for LTCH PPS standard Federal payment rate cases will continue to be determined so that estimated HCO payments will be projected to equal 7.975 percent of estimated total LTCH PPS standard Federal payment rate cases. Furthermore, in accordance with § 412.523(d)(1), a budget neutrality factor will continue to be applied to LTCH PPS standard Federal payment rate cases to offset that 8 percent so that HCO payments for LTCH PPS standard Federal payment rate cases will be budget neutral. Below we present our calculation of the fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2018, which, except for the statutory changes to the HCO target from 8 percent to 7.975 percent, is consistent with the methodology used to establish the FY 2017 LTCH PPS fixed-loss amount, as we proposed.

In this final rule, we are continuing to use our current methodology to calculate an applicable fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2018 using the best available data that will maintain estimated HCO payments at the projected 7.975 percent of total estimated LTCH PPS payments for LTCH PPS standard Federal payment rate cases (based on the payment rates and policies for these cases presented in this final rule). Specifically, based on the most recent available data available (that is, LTCH claims data from the March 2017 update of the FY 2016 MedPAR file and CCRs from the March 2017 update of the PSF), we determined a fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2018 results that

will result in estimated outlier payments of 7.975 percent of estimated FY 2018 payments for such cases. Under the broad authority of section 123(a)(1) of the BBRA and section 307(b)(1) of the BIPA, we are establishing a fixed-loss amount of \$27,382 for LTCH PPS standard Federal payment rate cases for FY 2018. Under our policy, we will continue to make an additional HCO payment for the cost of an LTCH PPS standard Federal payment rate case that exceeds the HCO threshold amount that is equal to 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of the adjusted LTCH PPS standard Federal payment rate payment and the fixed-loss amount for LTCH PPS standard Federal payment rate cases of \$27,382).

We note that the fixed-loss amount for HCO cases paid under the LTCH PPS standard Federal payment rate in FY 2018 of \$27,382 is somewhat lower than proposed FY 2018 fixed-loss amount of \$30,081 but notably higher than the FY 2017 fixed-loss amount for LTCH PPS standard Federal payment rate cases of \$21,943. However, based on the most recent available data at the time of this final rule, we found that the current FY 2017 HCO threshold of \$21,943 results in estimated HCO payments for LTCH PPS standard Federal payment rate cases of approximately 8.1 percent of the estimated total LTCH PPS payments in FY 2017, which exceeds the 8 percent target by 0.1 percentage points. We continue to believe, as discussed in detail in the FY 2017 IPPS/LTCH PPS proposed rule (81 FR 25287), this increase is largely attributable to rate-of-change (that is, increase) in the Medicare allowable charges on the claims data in the MedPAR file. In addition, using the historic 8-percent target for projected aggregate outlier payments (absent the required changes under the 21st Century Cures Act for comparison purposes), the HCO threshold would be \$27,240, which represents a 24-percent increase from the final FY 2017 HCO threshold of \$21,943. This increase is in line with the 34 percent increase in the HCO threshold between FY 2016 and FY 2017, and is consistent with our expectation that annual changes to the fixed-loss amount to generally stabilize as experience is gained under the new dual rate LTCH PPS payment structure. For these reasons, we continue to believe it is necessary and appropriate to increase the fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2018 to maintain estimated HCO payments that would equal to 7.975 percent of estimated total LTCH PPS payments for such cases as required under § 412.525(a)(2)(ii).

#### c. Application of the High-Cost Outlier Policy to Short Stay Outlier (SSO) Cases

Under our implementation of the dual rate LTCH PPS payment structure required by statute, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20190), we proposed that LTCH PPS standard Federal payment rate cases (that is, LTCH discharges that meet the criteria for exclusion from the site neutral payment rate) would continue to be paid based on the LTCH PPS standard Federal payment rate, and would include all of the existing payment adjustments under § 412.525(d), such as the adjustments for SSO

cases under § 412.529. Under some rare circumstances, an LTCH discharge can qualify as an SSO case (as defined in the regulations at § 412.529 in conjunction with § 412.503) and also as an HCO case, as discussed in the August 30, 2002 final rule (67 FR 56026). In this scenario, a patient could be hospitalized for less than five-sixths of the geometric average length of stay for the specific MS-LTC-DRG, and yet incur extraordinarily high treatment costs. If the estimated costs exceeded the HCO threshold (that is, the SSO payment plus the applicable fixed-loss amount), the discharge is eligible for payment as an HCO. (We noted that, under our change to the SSO policy discussed in section VIII.D. of this final rule, SSO cases would still be eligible to qualify for an HCO payment.) Therefore, for an SSO case in FY 2018, as proposed, we are establishing that the HCO payment will be 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of the fixed-loss amount of \$27,382 and the amount paid under the SSO policy as specified in § 412.529).

#### 4. High-Cost Outlier Payments for Site Neutral Payment Rate Cases

Under § 412.525(a), site neutral payment rate cases receive an additional HCO payment for costs that exceed the HCO threshold that is equal to 80 percent of the difference between the estimated cost of the case and the applicable HCO threshold (80 FR 49618 through 49629). In the following discussion, we note that the statutory transitional payment method for cases that are paid the site neutral payment rate for LTCH discharges occurring in cost reporting periods beginning during FY 2016 or FY 2017 uses a blended payment rate, which is determined as 50 percent of the site neutral payment rate amount for the discharge and 50 percent of the standard Federal prospective payment rate amount for the discharge (§ 412.522(c)(3)). The transitional blended payment rate uses the same blend percentages (that is, 50 percent) for both years of the 2-year transition period. For FY 2018, the site neutral payment rate effective date for a given LTCH is determined based on the date on which that LTCH's cost reporting period begins during FY 2018. Specifically, for a given LTCH, those site neutral payment rate cases discharged in FY 2018 and in a cost reporting period that begins *before* October 1, 2017 continue to be paid under the blended payment rate. However, site neutral payment rate cases discharged in FY 2018 during the LTCH's cost reporting period beginning on or *after* October 1, 2017 will no longer be paid under the blended payment rate and instead will be paid the site neutral payment rate amount as determined under § 412.522(c)(1). As such, for FY 2018 discharges paid under the transitional payment method, the discussion below pertains only to the site neutral rate portion in § 412.522(c)(3)(i) of the blended payment rate (as well as to FY 2018 discharges paid the site neutral payment rate amount determined under § 412.522(c)(1)).

When we implemented the application of the site neutral payment rate in FY 2016, in examining the appropriate fixed-loss amount for site neutral payment rate cases issue, we

considered how LTCH discharges based on historical claims data would have been classified under the dual rate LTCH PPS payment structure and the CMS' Office of the Actuary projections regarding how LTCHs will likely respond to our implementation of policies resulting from the statutory payment changes. We again relied on these considerations and actuarial projections in FY 2017 because the historical claims data available in FY 2017 predated the LTCH PPS dual rate payment system. Similarly, for FY 2018, we continue to rely on these considerations and actuarial projections because, due to the rolling effective date of the site neutral payment policy, not all claims in FY 2016 were subject to the site neutral payment system.

For both FY 2016 and FY 2017, at that time our actuaries projected that the proportion of cases that would qualify as LTCH PPS standard Federal payment rate cases versus site neutral payment rate cases under the statutory provisions would remain consistent with what is reflected in the historical LTCH PPS claims data. Although our actuaries did not project an immediate change in the proportions found in the historical data, they did project cost and resource changes to account for the lower payment rates. Our actuaries also projected that the costs and resource use for cases paid at the site neutral payment rate would likely be lower, on average, than the costs and resource use for cases paid at the LTCH PPS standard Federal payment rate and would likely mirror the costs and resource use for IPPS cases assigned to the same MS-DRG, regardless of whether the proportion of site neutral payment rate cases in the future remains similar to what is found based on the historical data. As discussed in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49619), this actuarial assumption is based on our expectation that site neutral payment rate cases would generally be paid based on an IPPS comparable per diem amount under the statutory LTCH PPS payment changes that began in FY 2016, which, in the majority of cases, is much lower than the payment that would have been paid if these statutory changes were not enacted. (We note, in section I.J.1 of the Regulatory Impact in Appendix A of this final rule, we summarize and respond to a comment that references to this actuarial assumption.) In light of these projections and expectations, we discussed that we believed that the use of a single fixed-loss amount and HCO target for all LTCH PPS cases would be problematic. In addition, we discussed that we did not believe that it would be appropriate for comparable LTCH PPS site neutral payment rate cases to receive dramatically different HCO payments from those cases that would be paid under the IPPS (80 FR 49617 through 49619 and 81 FR 57305 through 57307). For those reasons, we stated that we believed that the most appropriate fixed-loss amount for site neutral payment rate cases for both FY 2016 and FY 2017 would be equal to the IPPS fixed-loss amount for that year. Therefore, we established the fixed-loss amount for site neutral payment rate cases as the FY 2016 and FY 2017 IPPS fixed-loss amounts, in FY 2016 and FY 2017 respectively. In particular,

in FY 2017, we established that the fixed-loss amount for site neutral payment rate cases is the FY 2017 IPPS fixed-loss amount of \$23,570.

As noted earlier, because not all claims in the data used for this final rule were subject to the site neutral payment rate system, we continue to rely on the same considerations and actuarial projections used in FY 2016 and FY 2017 when developing a fixed-loss amount for site neutral payment rate cases for FY 2018. Because our actuaries continue to project that site neutral payment rate cases in FY 2018 will continue to mirror an IPPS case paid under the same MS-DRG, we continue to believe that it would be inappropriate for comparable LTCH PPS site neutral payment rate cases to receive dramatically different HCO payments from those cases that would be paid under the IPPS. More specifically, as with FY 2016 and FY 2017, our actuaries project that the costs and resource use for FY 2018 cases paid at the site neutral payment rate would likely be lower, on average, than the costs and resource use for cases paid at the LTCH PPS standard Federal payment rate and will likely mirror the costs and resource use for IPPS cases assigned to the same MS-DRG, regardless of whether the proportion of site neutral payment rate cases in the future remains similar to what is found based on the historical data. (Based on the most recent FY 2016 LTCH claims data, approximately 58 percent of LTCH cases would have been paid the LTCH PPS standard Federal payment rate and approximately 42 percent of LTCH cases would have been paid the site neutral payment rate if those rates had been in effect at that time for all LTCH discharges occurring in FY 2016, regardless of LTCHs' cost reporting period beginning dates.)

For these reasons, we continue to believe that the most appropriate fixed-loss amount for site neutral payment rate cases for FY 2018 is the IPPS fixed-loss amount for FY 2018. Therefore, consistent with past practice, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20191), for FY 2018, we proposed that the applicable HCO threshold for site neutral payment rate cases is the sum of the site neutral payment rate for the case and the IPPS fixed-loss amount. That is, we proposed a fixed-loss amount for site neutral payment rate cases of \$26,713, which was the same proposed FY 2018 IPPS fixed-loss amount discussed in section II.A.4.g.(1) of the Addendum to the proposed rule. We continue to believe that this policy would reduce differences between HCO payments for similar cases under the IPPS and site neutral payment rate cases under the LTCH PPS and promote fairness between the two systems. Accordingly, for FY 2018, we proposed to calculate a HCO payment for site neutral payment rate cases with costs that exceed the HCO threshold amount, which is equal to 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of proposed site neutral payment rate payment and the proposed fixed-loss amount for site neutral payment rate cases of \$26,713).

*Comment:* Some commenters expressed support for our proposal to continue to use the FY 2017 IPPS fixed-loss amount and 5.1 percent HCO target for LTCH discharges paid at the site neutral payment rate in FY 2018.

*Response:* We appreciate the commenters support for our proposal to continue to use the FY 2018 IPPS fixed-loss amount and 5.1 percent HCO target for LTCH discharges paid at the site neutral payment rate in FY 2018. Given the current expectation that cases paid at the site neutral payment rate would likely be similar to IPPS cases assigned to the same MS-DRG, we continue to believe the most appropriate fixed-loss amount for site neutral payment rate cases is the IPPS fixed-loss amount for that fiscal year. As we indicated in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49619), to the extent experience under the revised LTCH PPS indicates site neutral payment rate cases differ sufficiently from these expectations, we agree it would be appropriate to revisit in future rulemaking the most appropriate fixed-loss amount used to determine HCO payments for site neutral payment rate cases. As we discuss in greater detail in section I.J.1., the Regulatory Impact Analysis, in Appendix A of this final rule, given the rolling nature of the start of the transition to the site neutral payment rate, many LTCH claims from FY 2016 were not subject to the site neutral payment rate at all as many LTCHs did not begin their FY 2016 cost reporting period until the fourth quarter of that fiscal year. In addition, all claims which were subject to the site neutral payment rate in FY 2016 were paid under the blended payment rate which included a payment based on 50 percent of the LTCH PPS standard Federal payment rate. As such, FY 2016 claims may not yet reflect the expected change in cost and resources once the payment for site neutral payment rate cases is fully based on the site neutral payment rate.

After consideration of public comments we received, we are finalizing without modification, our proposals to use the FY 2018 IPPS fixed-loss amount and 5.1 percent HCO target for LTCH discharges paid at the site neutral payment rate in FY 2018. Therefore, for FY 2018, as we proposed, we are establishing that the applicable HCO threshold for site neutral payment rate cases is the sum of the site neutral payment rate for the case and the IPPS fixed loss amount. That is, we are establishing a fixed-loss amount for site neutral payment rate cases of \$26,601, which is the same FY 2018 IPPS fixed-loss amount discussed in section II.A.4.g.(1) of the Addendum to this final rule. We continue to believe that this policy will reduce differences between HCO payments for similar cases under the IPPS and site neutral payment rate cases under the LTCH PPS and promote fairness between the two systems. Accordingly, under this policy, for FY 2018, we will calculate a HCO payment for site neutral payment rate cases with costs that exceed the HCO threshold amount, which is equal to 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of site neutral payment rate payment and the fixed loss amount for site neutral payment rate cases of \$26,601).

In establishing a HCO policy for site neutral payment rate cases, we established a budget neutrality adjustment under § 412.522(c)(2)(i). We established this requirement because we believed, and

continue to believe, that the HCO policy for site neutral payment rate cases should be budget neutral, just as the HCO policy for LTCH PPS standard Federal payment rate cases are budget neutral, meaning that estimated site neutral payment rate HCO payments should not result in any change in estimated aggregate LTCH PPS payments.

To ensure that estimated HCO payments payable to site neutral payment rate cases in FY 2018 would not result in any increase in estimated aggregate FY 2018 LTCH PPS payments, under the budget neutrality requirement at § 412.522(c)(2)(i), it is necessary to reduce site neutral payment rate payments (or the portion of the blended payment rate payment for FY 2018 discharges occurring in LTCH cost reporting periods beginning before October 1, 2017) by 5.1 percent to account for the estimated additional HCO payments payable to those cases in FY 2018. In order to achieve this, for FY 2018, in general, as we proposed, we are continuing to use the policy adopted for FY 2017.

As discussed earlier, consistent with the IPPS HCO payment threshold, we expect a fixed-loss threshold of \$26,601 results in HCO payments for site neutral payment rate cases equal to 5.1 percent of the site neutral payment rate payments that are based on the IPPS comparable per diem amount. As such, to ensure estimated HCO payments payable for site neutral payment rate cases in FY 2018 would not result in any increase in estimated aggregate FY 2018 LTCH PPS payments, under the budget neutrality requirement at § 412.522(c)(2)(i), it is necessary to reduce the site neutral payment rate amount paid under § 412.522(c)(1)(i) by 5.1 percent to account for the estimated additional HCO payments payable for site neutral payment rate cases in FY 2018. In order to achieve this, for FY 2018, we proposed to apply a budget neutrality factor of 0.949 (that is, the decimal equivalent of a 5.1 percent reduction, determined as  $1.0 - 5.1/100 = 0.949$ ) to the site neutral payment rate for those site neutral payment rate cases paid under § 412.522(c)(1)(i). We noted that, consistent with the policy adopted for FY 2017, under this proposed policy the HCO budget neutrality adjustment would not be applied to the HCO portion of the site neutral payment rate amount (80 FR 57309).

*Comment:* As was the case in the FY 2016 and FY 2017 rulemaking cycle, commenters again objected to the proposed site neutral payment rate HCO budget neutrality adjustment, claiming that it results in savings to the Medicare program instead of being budget neutral. The commenters' primary objection was again based on their belief that, because the IPPS base rates used in the IPPS comparable per diem amount calculation of the site neutral payment rate include a budget neutrality adjustment for IPPS HCO payments (that is, a 5.1 percent adjustment on the operating IPPS standardized amount), an "additional" budget neutrality factor is not necessary and is, in fact, duplicative.

*Response:* We continue to disagree with the commenters that a budget neutrality adjustment for site neutral payment rate HCO payments is inappropriate, unnecessary, or duplicative. As we discussed in response to

similar comments (81 FR 57308 through 57309 and 80 FR 49621 through 49622), we have the authority to adopt the site neutral payment rate HCO policy in a budget neutral manner. More importantly, we continue to believe this budget neutrality adjustment is appropriate for reasons outlined in our response to the nearly identical comments in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57308 through 57309) and our response to similar comments in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49621 through 49622).

After consideration of the public comments we received, we are finalizing our proposal to apply a budget neutrality adjustment for HCO payments made to site neutral payment rate cases. Therefore, to ensure that estimated HCO payments payable to site neutral payment rate cases in FY 2018 will not result any increase in estimated aggregate FY 2018 LTCH PPS payments, under the budget neutrality requirement at § 412.522(c)(2)(i), it is necessary to reduce the site neutral payment rate portion of the blended rate payment by 5.1 percent to account for the estimated additional HCO payments payable to those cases in FY 2018. In order to achieve this, for FY 2018, in this final rule, to, as proposed, we are applying a budget neutrality factor of 0.949 (that is, the decimal equivalent of a 5.1 percent reduction, determined as  $1.0 - 5.1/100 = 0.949$ ) to the site neutral payment rate (without any applicable HCO payment).

*E. Update to the IPPS Comparable/ Equivalent Amounts To Reflect the Statutory Changes to the IPPS DSH Payment Adjustment Methodology*

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50766), we established a policy to reflect the changes to the Medicare IPPS DSH payment adjustment methodology made by section 3133 of the Affordable Care Act in the calculation of the “IPPS comparable amount” under the SSO policy at § 412.529 and the “IPPS equivalent amount” under the 25-percent threshold payment adjustment policy at § 412.534 and § 412.536. Historically, the determination of both the “IPPS comparable amount” and the “IPPS equivalent amount” includes an amount for inpatient operating costs “for the costs of serving a disproportionate share of low-income patients.” Under the statutory changes to the Medicare DSH payment adjustment methodology that began in FY 2014, in general, eligible IPPS hospitals receive an empirically justified Medicare DSH payment equal to 25 percent of the amount they otherwise would have received under the statutory formula for Medicare DSH payments prior to the amendments made by the Affordable Care Act. The remaining amount, equal to an estimate of 75 percent of the amount that otherwise would have been paid as Medicare DSH payments, reduced to reflect changes in the percentage of individuals who are uninsured, is made available to make additional payments to each hospital that qualifies for Medicare DSH payments and that has uncompensated care. The additional uncompensated care payments are based on the hospital’s amount of uncompensated care for a given time period relative to the total amount of

uncompensated care for that same time period reported by all IPPS hospitals that receive Medicare DSH payments.

To reflect the statutory changes to the Medicare DSH payment adjustment methodology in the calculation of the “IPPS comparable amount” and the “IPPS equivalent amount” under the LTCH PPS, we stated that we will include a reduced Medicare DSH payment amount that reflects the projected percentage of the payment amount calculated based on the statutory Medicare DSH payment formula prior to the amendments made by the Affordable Care Act that will be paid to eligible IPPS hospitals as empirically justified Medicare DSH payments and uncompensated care payments in that year (that is, a percentage of the operating Medicare DSH payment amount that has historically been reflected in the LTCH PPS payments that is based on IPPS rates). We also stated that the projected percentage will be updated annually, consistent with the annual determination of the amount of uncompensated care payments that will be made to eligible IPPS hospitals. We believe that this approach results in appropriate payments under the LTCH PPS and is consistent with our intention that the “IPPS comparable amount” and the “IPPS equivalent amount” under the LTCH PPS closely resemble what an IPPS payment would have been for the same episode of care, while recognizing that some features of the IPPS cannot be translated directly into the LTCH PPS (79 FR 50766 through 50767).

For FY 2018, as discussed in greater detail in section V.G.3. of the preamble of this final rule, based on the most recent data available, our estimate of 75 percent of the amount that would otherwise have been paid as Medicare DSH payments (under the methodology outlined in section 1886(r)(2) of the Act) is adjusted to 58.01 percent of that amount to reflect the change in the percentage of individuals who are uninsured. The resulting amount is then used to determine the amount available to make uncompensated care payments to eligible IPPS hospitals in FY 2018. In other words, the amount of the Medicare DSH payments that would have been made prior to the amendments made by the Affordable Care Act will be adjusted to 43.51 percent (the product of 75 percent and 58.01 percent) and the resulting amount will be used to calculate the uncompensated care payments to eligible hospitals. As a result, for FY 2018, we project that the reduction in the amount of Medicare DSH payments pursuant to section 1886(r)(1) of the Act, along with the payments for uncompensated care under section 1886(r)(2) of the Act, will result in overall Medicare DSH payments of 68.51 percent of the amount of Medicare DSH payments that would otherwise have been made in the absence of the amendments made by the Affordable Care Act (that is, 25 percent + 43.51 percent = 68.51 percent).

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20192), for FY 2018, we proposed to establish that the calculation of the “IPPS comparable amount” under § 412.529 and the “IPPS equivalent amount” under § 412.538 would include an applicable operating Medicare DSH payment amount that is equal to 68.51 percent of the operating Medicare

DSH payment amount that would have been paid based on the statutory Medicare DSH payment formula but for the amendments made by the Affordable Care Act. Furthermore, consistent with our historical practice, we proposed that if more recent data became available, if appropriate, we would use that data to determine this factor in the final rule.

We did not receive any public comments on our proposal. In addition, there is no more recent data available that would affect the calculations in the proposed rule. Therefore, we are finalizing our proposal that the calculation of the “IPPS comparable amount” under § 412.529 and the “IPPS equivalent amount” under § 412.538 would include an applicable operating Medicare DSH payment amount that is equal to 68.51 percent of the operating Medicare DSH payment amount that would have been paid based on the statutory Medicare DSH payment formula but for the amendments made by the Affordable Care Act.

*F. Computing the Adjusted LTCH PPS Federal Prospective Payments for FY 2018*

Section 412.525 sets forth the adjustments to the LTCH PPS standard Federal payment rate. Under the dual rate LTCH PPS payment structure, only LTCH PPS cases that meet the statutory criteria to be excluded from the site neutral payment rate are paid based on the LTCH PPS standard Federal payment rate. Under § 412.525(c), the proposed LTCH PPS standard Federal payment rate is adjusted to account for differences in area wages by multiplying the proposed labor-related share of the LTCH PPS standard Federal payment rate for a case by the applicable LTCH PPS wage index (the FY 2018 values are shown in Tables 12A through 12B listed in section VI. of the Addendum of this final rule and are available via the Internet on the CMS Web site). The LTCH PPS standard Federal payment rate is also adjusted to account for the higher costs of LTCHs located in Alaska and Hawaii by the applicable COLA factors (the FY 2018 factors are shown in the chart in section V.C. of this Addendum) in accordance with § 412.525(b). In this final rule, we are establishing an LTCH PPS standard Federal payment rate for FY 2018 of \$41,430.56, as discussed in section V.A. of the Addendum to this final rule. We illustrate the methodology to adjust the LTCH PPS standard Federal payment rate for FY 2018 in the following example:

*Example*

During FY 2018, a Medicare discharge that meets the criteria to be excluded from the site neutral payment rate, that is, an LTCH PPS standard Federal payment rate case, is from an LTCH that is located in Chicago, Illinois (CBSA 16974). The FY 2018 LTCH PPS wage index value for CBSA 16974 is 1.0547 (obtained from Table 12A listed in section VI. of the Addendum of this final rule and available via the Internet on the CMS Web site). The Medicare patient case is classified into MS–LTC–DRG 189 (Pulmonary Edema & Respiratory Failure), which has a relative weight for FY 2018 of 0.9655 (obtained from Table 11 listed in section VI. of the Addendum of this final rule and available via the Internet on the CMS Web site). The LTCH

submitted quality reporting data for FY 2018 in accordance with the LTCHQRP under section 1886(m)(5) of the Act.

To calculate the LTCH's total adjusted Federal prospective payment for this Medicare patient case in FY 2018, we computed the wage-adjusted proposed Federal prospective payment amount by multiplying the unadjusted FY 2018 LTCH

PPS standard Federal payment rate (\$41,430.56) by the labor-related share (66.2 percent) and the wage index value (1.0547). This wage-adjusted amount was then added to the nonlabor-related portion of the unadjusted LTCH PPS standard Federal payment rate (33.8 percent; adjusted for cost of living, if applicable) to determine the adjusted LTCH PPS standard Federal

payment rate, which is then multiplied by the MS-LTC-DRG relative weight (0.9655) to calculate the total adjusted LTCH PPS standard Federal prospective payment for FY 2018 (\$41,449.71). The table below illustrates the components of the calculations in this example.

Unadjusted LTCH PPS Standard Federal Prospective Payment Rate .....	\$41,430.56
Labor-Related Share .....	× 0.662
Labor-Related Portion of the LTCH PPS Standard Federal Payment Rate .....	= \$27,427.03
Wage Index (CBSA 16974) .....	× 1.0547
Wage-Adjusted Labor Share of LTCH PPS Standard Federal Payment Rate .....	= \$28,927.29
Nonlabor-Related Portion of the LTCH PPS Standard Federal Payment Rate (\$41,430.56 × 0.338) .....	+ \$14,003.53
Adjusted LTCH PPS Standard Federal Payment Amount .....	= \$42,930.82
MS-LTC-DRG 189 Relative Weight .....	× 0.9655
Total Adjusted LTCH PPS Standard Federal Prospective Payment .....	= \$41,449.71

## VI. Tables Referenced in This Final Rule and Available Only Through the Internet on the CMS Web site

This section lists the tables referred to throughout the preamble of this final rule and in this Addendum. In the past, a majority of these tables were published in the **Federal Register** as part of the annual proposed and final rules. However, similar to FYs 2012 through 2017, for the FY 2018 rulemaking cycle, the IPPS and LTCH tables will not be published in the **Federal Register** in the annual IPPS/LTCH PPS proposed and final rules and will be available only through the Internet. Specifically, all IPPS tables listed below, with the exception of IPPS Tables 1A, 1B, 1C, and 1D, and LTCH PPS Table 1E will be available only through the Internet. IPPS Tables 1A, 1B, 1C, and 1D, and LTCH PPS Table 1E are displayed at the end of this section and will continue to be published in the **Federal Register** as part of the annual proposed and final rules.

As discussed in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49807), we streamlined and consolidated the wage index tables for FY 2016 and subsequent fiscal years.

As discussed in sections II.F.14., II.F.15.b., II.F.16., II.F.17.a., and II.F.19.a.1., a.3., and c.1. of the preamble of this final rule, we developed the following ICD-10-CM and ICD-10-PCS code tables for FY 2018: Table 6A.—New Diagnosis Codes; Table 6B.—New Procedure Codes; Table 6C.—Invalid Diagnosis Codes; Table 6D.—Invalid Procedure Codes; Table 6E.—Revised Diagnosis Code Titles; Table 6F.—Revised Procedure Code Titles; Table 6G.1.—Secondary Diagnosis Order Additions to the CC Exclusion List; Table 6G.2.—Principal Diagnosis Order Additions to the CC Exclusion List; Table 6H.1.—Secondary Diagnosis Order Deletions to the CC Exclusion List; Table 6H.2.—Principal Diagnosis Order Deletions to the CC Exclusion List; Table 6I.—Complete MCC List; Table 6I.1.—Additions to the MCC List; Table 6I.2.—Deletions to the MCC List; Table 6J.1.—Additions to the CC List; Table 6J.2.—Deletions to the CC List; Table 6K.—Complete List of CC Exclusions; Table 6L.—Principal Diagnosis Is Its Own MCC List—FY 2018; Table 6M.—Principal Diagnosis Is Its

Own CC List—FY 2018; and Table 6P.—ICD-10-CM and ICD-10-PCS Code Designations, MCE and MS-DRG Changes. Table 6P contains multiple tables, 6P.1a through 6P.4p, that include the ICD-10-CM and ICD-10-PCS code lists relating to specific MCE and MS-DRG changes. In addition, under the HAC Reduction Program established by section 3008 of the Affordable Care Act, a hospital's total payment may be reduced by 1 percent if it is in the lowest HAC performance quartile. However, as discussed in section V.I. of the preamble of this final rule, we are not providing the hospital-level data as a table associated with this final rule. The hospital-level data for the FY 2018 HAC Reduction Program will be made publicly available once it has undergone the review and corrections process.

Finally, Table 18 associated with this final rule contains the Factor 3 for purposes of determining the FY 2018 uncompensated care payment for all hospitals and identifies whether or not a hospital is projected to receive Medicare DSH payments and, therefore, eligible to receive the additional payment for uncompensated care for FY 2018. A hospital's Factor 3 determines the proportion of the aggregate amount available for uncompensated care payments that a Medicare DSH eligible hospital will receive under section 3133 of the Affordable Care Act.

Readers who experience any problems accessing any of the tables that are posted on the CMS Web sites identified below should contact Michael Treitel at (410) 786-4552.

The following IPPS tables for this FY 2018 final rule are available only through the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>. Click on the link on the left side of the screen titled, "FY 2018 IPPS Final Rule Home Page" or "Acute Inpatient—Files for Download."

\* For LTCHs that fail to submit quality reporting data for FY 2018 in accordance with the LTCH Quality Reporting Program (LTCH QRP), the annual update is reduced by 2.0 percentage points as required by section 1886(m)(5) of the Act.

**Appendix A: Economic Analyses**

**I. Regulatory Impact Analysis**

*A. Introduction*

We have examined the impacts of this final rule as required by Executive Order 12866 on

Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (January 18, 2011), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96-354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104-4), Executive Order 13132 on Federalism (August 4, 1999), the Congressional Review Act (5 U.S.C. 804(2)), and Executive Order 13771 on Reducing Regulation and Controlling Regulatory Costs (January 30, 2017).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Section 3(f) of Executive Order 12866 defines a “significant regulatory action” as an action that is likely to result in a rule: (1) (Having

an annual effect on the economy of \$100 million or more in any 1 year, or adversely and materially affecting a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local or tribal governments or communities (also referred to as “economically significant”); (2) creating a serious inconsistency or otherwise interfering with an action taken or planned by another agency; (3) materially altering the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raising novel legal or policy issues arising out of legal mandates, the President’s priorities, or the principles set forth in the Executive Order.

We have determined that this final rule is a major rule as defined in 5 U.S.C. 804(2). We estimate that the changes for FY 2018 acute care hospital operating and capital payments will redistribute amounts in excess of \$100 million to acute care hospitals. The applicable percentage increase to the IPPS rates required by the statute, in conjunction with other payment changes in this final rule, will result in an estimated \$2.4 billion increase in FY 2018 payments, including a \$1.7 billion increase in FY 2018 operating payments, a \$0.8 billion increase in uncompensated care payments, a \$0.2 billion increase in FY 2018 capital payments, and a \$0.3 billion decrease in low volume payments. These changes are relative to payments made in FY 2017. The impact analysis of the capital payments can be found in section I.I. of this Appendix. In addition, as described in section I.J. of this Appendix, LTCHs are expected to experience a decrease in payments by \$110 million in FY 2018 relative to FY 2017.

Our operating impact estimate includes the 0.4588 percent adjustment required under section 15005 of the 21st Century Cures Act (Pub. L. 114–255) applied to the IPPS standardized amount, as discussed in section II.D. of the preamble of this final rule. In addition, our operating payment impact estimate includes the 1.35 percent hospital update to the standardized amount (which includes the estimated 2.7 percent market basket update less 0.6 percentage point for the multifactor productivity adjustment and less 0.75 percentage point required under the Affordable Care Act). Our operating payment impact estimate also includes an adjustment factor of (1/1.006) to the FY 2018 rates to remove the 1.006 temporary one-time adjustment made in FY 2017 to address the effects of the 0.2 percent reduction in effect for FYs 2014 through 2016 as a result of the 2-midnight policy (we refer readers to section V.M. of the preamble of this final rule for an explanation of this adjustment). The estimates of IPPS operating payments to acute care hospitals do not reflect any changes in hospital admissions or real case-mix intensity, which will also affect overall payment changes.

The analysis in this Appendix, in conjunction with the remainder of this document, demonstrates that this final rule is consistent with the regulatory philosophy and principles identified in Executive Orders 12866 and 13563, the RFA, and section 1102(b) of the Act. This final rule will affect

payments to a substantial number of small rural hospitals, as well as other classes of hospitals, and the effects on some hospitals may be significant. Finally, in accordance with the provisions of Executive Order 12866, the Executive Office of Management and Budget has reviewed this final rule.

#### *B. Statement of Need*

This final rule is necessary in order to make payment and policy changes under the Medicare IPPS for Medicare acute care hospital inpatient services for operating and capital-related costs as well as for certain hospitals and hospital units excluded from the IPPS. This final rule also is necessary to make payment and policy changes for Medicare hospitals under the LTCH PPS.

#### *C. Objectives of the IPPS and the LTCH PPS*

The primary objective of the IPPS and the LTCH PPS is to create incentives for hospitals to operate efficiently and minimize unnecessary costs while at the same time ensuring that payments are sufficient to adequately compensate hospitals for their legitimate costs in delivering necessary care to Medicare beneficiaries. In addition, we share national goals of preserving the Medicare Hospital Insurance Trust Fund.

We believe that the changes in this final rule will further each of these goals while maintaining the financial viability of the hospital industry and ensuring access to high quality health care for Medicare beneficiaries. We expect that these changes will ensure that the outcomes of the prospective payment systems are reasonable and equitable while avoiding or minimizing unintended adverse consequences.

Because this final rule contains a range of policies, we refer readers to the section of the final rule where each policy is discussed. These sections include the rationale for our decisions, including the need for the policy.

#### *D. Limitations of Our Analysis*

The following quantitative analysis presents the projected effects of our policy changes, as well as statutory changes effective for FY 2018, on various hospital groups. We estimate the effects of individual policy changes by estimating payments per case while holding all other payment policies constant. We use the best data available, but, generally, we do not attempt to make adjustments for future changes in such variables as admissions, lengths of stay, or case-mix. In addition, we discuss limitations of our analysis for specific policies in the discussion of those policies as needed.

#### *E. Hospitals Included in and Excluded From the IPPS*

The prospective payment systems for hospital inpatient operating and capital-related costs of acute care hospitals encompass most general short-term, acute care hospitals that participate in the Medicare program. There were 31 Indian Health Service hospitals in our database, which we excluded from the analysis due to the special characteristics of the prospective payment methodology for these hospitals. Among other short-term, acute care hospitals, hospitals in Maryland are paid in accordance with the Maryland All-Payer Model, and

hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, 5 short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa) receive payment for inpatient hospital services they furnish on the basis of reasonable costs, subject to a rate-of-increase ceiling.

As of July 2017, there were 3,292 IPPS acute care hospitals included in our analysis. This represents approximately 55 percent of all Medicare-participating hospitals. The majority of this impact analysis focuses on this set of hospitals. There also are approximately 1,387 CAHs. These small, limited service hospitals are paid on the basis of reasonable costs rather than under the IPPS. IPPS-excluded hospitals and units, which are paid under separate payment systems, include IPFs, IRFs, LTCHs, RNHCIs, children’s hospitals, 11 cancer hospitals, extended neoplastic disease care hospitals, and 5 short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa. With the exception of the IPFQR provisions presented in section IX.D. of the preamble of this final rule, changes in the prospective payment systems for IPFs and IRFs are made through separate rulemaking. Payment impacts of changes to the prospective payment systems for these IPPS-excluded hospitals and units are not included in this final rule. The impact of the update and policy changes to the LTCH PPS for FY 2018 is discussed in section I.J. of this Appendix.

#### *F. Effects on Hospitals and Hospital Units Excluded From the IPPS*

As of July 2017, there were 98 children’s hospitals, 11 cancer hospitals, 5 short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands and American Samoa, 1 extended neoplastic disease care hospital, and 18 RNHCIs being paid on a reasonable cost basis subject to the rate-of-increase ceiling under § 413.40. (In accordance with § 403.752(a) of the regulation, RNHCIs are paid under § 413.40.) Among the remaining providers, 276 rehabilitation hospitals and 864 rehabilitation units, and approximately 419 LTCHs, are paid the Federal prospective per discharge rate under the IRF PPS and the LTCH PPS, respectively, and 517 psychiatric hospitals and 1,104 psychiatric units are paid the Federal per diem amount under the IPF PPS. As stated previously, IRFs and IPFs are not affected by the rate updates discussed in this final rule. The impacts of the changes on LTCHs are discussed in section I.J. of this Appendix. For children’s hospitals, the 11 cancer hospitals, the 5 short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, extended neoplastic disease care hospitals, and RNHCIs, the update of the rate-of-increase limit (or target amount) is the estimated FY 2018 percentage increase in the 2014-based IPPS operating market basket, consistent with section 1886(b)(3)(B)(ii) of the Act, and §§ 403.752(a) and 413.40 of the regulations. As discussed in section IV. of the preamble of this final rule, we are rebasing and revising the IPPS operating market

basket to a 2014 base year. Therefore, we used the percentage increase in the 2014-based IPPS operating market basket to update the target amounts for FY 2018 and subsequent years for children's hospitals, the 11 cancer hospitals, the 5 short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, extended neoplastic disease care hospitals, and RNHCs that are paid based on reasonable costs subjects to the rate-of-increase limits. Consistent with current law, based on IGI's 2017 second quarter forecast of the 2014-based IPPS market basket increase, we are estimating the FY 2018 update to be 2.7 percent (that is, the estimate of the market basket rate-of-increase). We used the most recent data available for this final rule to calculate the IPPS operating market basket update for FY 2018. However, the Affordable Care Act requires an adjustment for multifactor productivity (currently 0.6 percentage point for FY 2018) and a 0.75 percentage point reduction to the market basket update, resulting in a 1.35 percent applicable percentage increase for IPPS hospitals that submit quality data and are meaningful EHR users, as discussed in section V.B. of the preamble of this final rule. Children's hospitals, the 11 cancer hospitals, the 5 short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, extended neoplastic disease care hospitals, and RNHCs that continue to be paid based on reasonable costs subject to rate-of-increase limits under § 413.40 of the regulations are not subject to the reductions in the applicable percentage increase required under the Affordable Care Act. Therefore, for those hospitals paid under § 413.40 of the regulations, the update is the percentage increase in the 2014-based IPPS operating market basket for FY 2018, estimated at 2.7 percent, without the reductions described previously under the Affordable Care Act.

The impact of the update in the rate-of-increase limit on those excluded hospitals depends on the cumulative cost increases experienced by each excluded hospital since its applicable base period. For excluded hospitals that have maintained their cost increases at a level below the rate-of-increase limits since their base period, the major effect is on the level of incentive payments these excluded hospitals receive. Conversely, for excluded hospitals with cost increases above the cumulative update in their rate-of-increase limits, the major effect is the amount of excess costs that would not be paid.

We note that, under § 413.40(d)(3), an excluded hospital that continues to be paid under the TEFRA system and whose costs exceed 110 percent of its rate-of-increase limit receives its rate-of-increase limit plus the lesser of: (1) 50 percent of its reasonable costs in excess of 110 percent of the limit; or (2) 10 percent of its limit. In addition, under the various provisions set forth in § 413.40, hospitals can obtain payment adjustments for justifiable increases in operating costs that exceed the limit.

### *G. Quantitative Effects of the Policy Changes Under the IPPS for Operating Costs*

#### 1. Basis and Methodology of Estimates

In this final rule, we are announcing policy changes and payment rate updates for the IPPS for FY 2018 for operating costs of acute care hospitals. The FY 2018 updates to the capital payments to acute care hospitals are discussed in section I.I. of this Appendix.

Based on the overall percentage change in payments per case estimated using our payment simulation model, we estimate that total FY 2018 operating payments will increase by 1.3 percent compared to FY 2017. In addition to the applicable percentage increase, this amount reflects the FY 2018 adjustment required under section 15005 of the 21st Century Cures Act described in section II.D. of the preamble of this final rule of 0.4588 percent to the IPPS national standardized amounts. This amount also reflects the adjustment factor of (1/1.006) to remove the 1.006 temporary one-time adjustment made in FY 2017 to address the effects of the 0.2 percent reduction in effect for FYs 2014 through 2016 related to the 2-midnight policy, which is discussed in section V.M. of the preamble of this final rule. The impacts do not reflect changes in the number of hospital admissions or real case-mix intensity, which will also affect overall payment changes. We have prepared separate impact analyses of the changes to each system. This section deals with the changes to the operating inpatient prospective payment system for acute care hospitals. Our payment simulation model relies on the most recent available data to enable us to estimate the impacts on payments per case of certain changes in this final rule. However, there are other changes for which we do not have data available that would allow us to estimate the payment impacts using this model. For those changes, we have attempted to predict the payment impacts based upon our experience and other more limited data.

The data used in developing the quantitative analyses of changes in payments per case presented in this section are taken from the FY 2016 MedPAR file and the most current Provider-Specific File (PSF) that is used for payment purposes. Although the analyses of the changes to the operating PPS do not incorporate cost data, data from the most recently available hospital cost reports were used to categorize hospitals. Our analysis has several qualifications. First, in this analysis, we do not make adjustments for future changes in such variables as admissions, lengths of stay, or underlying growth in real case-mix. Second, due to the interdependent nature of the IPPS payment components, it is very difficult to precisely quantify the impact associated with each change. Third, we use various data sources to categorize hospitals in the tables. In some cases, particularly the number of beds, there is a fair degree of variation in the data from the different sources. We have attempted to construct these variables with the best available source overall. However, for individual hospitals, some miscategorizations are possible.

Using cases from the FY 2016 MedPAR file, we simulate payments under the

operating IPPS given various combinations of payment parameters. As described previously, Indian Health Service hospitals and hospitals in Maryland were excluded from the simulations. The impact of payments under the capital IPPS, and the impact of payments for costs other than inpatient operating costs, are not analyzed in this section. Estimated payment impacts of the capital IPPS for FY 2018 are discussed in section I.I. of this Appendix.

We discuss the following changes:

- The effects of the application of the adjustment required under section 15005 of the 21st Century Cures Act and the applicable percentage increase (including the market basket update, the multifactor productivity adjustment, and the applicable percentage reduction in accordance with the Affordable Care Act) to the standardized amount and hospital-specific rates.
- The effects of the adjustment of (1/1.006) to remove the 1.006 temporary one-time adjustment made in FY 2017 to address the effects of the 0.2 percent reduction in effect for FYs 2014 through 2016 related to the 2-midnight policy, as discussed in section V.M. of the preamble of this final rule.
- The effects of the changes to the relative weights and MS-DRG GROUPER.
- The effects of the changes in hospitals' wage index values reflecting updated wage data from hospitals' cost reporting periods beginning during FY 2014, compared to the FY 2013 wage data, to calculate the FY 2018 wage index.
- The effects of the geographic reclassifications by the MGRB (as of publication of this final rule) that will be effective for FY 2018.
- The effects of the rural floor and imputed floor with the application of the national budget neutrality factor to the wage index.
- The effects of the frontier State wage index adjustment under the statutory provision that requires hospitals located in States that qualify as frontier States to not have a wage index less than 1.0. This provision is not budget neutral.
- The effects of the implementation of section 1886(d)(13) of the Act, as added by section 505 of Public Law 108-173, which provides for an increase in a hospital's wage index if a threshold percentage of residents of the county where the hospital is located commute to work at hospitals in counties with higher wage indexes. This provision is not budget neutral.
- The effects of the expiration of the special payment status for MDHs at the end of FY 2017 under current law as a result of which MDHs that currently receive the higher of payments made based on the Federal rate or the payments made based on the Federal rate plus 75 percent of the difference between payments based on the Federal rate and the hospital-specific rate will be paid based on the Federal rate starting in FY 2018.
- The total estimated change in payments based on the FY 2018 policies relative to payments based on FY 2017 policies that include the applicable percentage increase of 1.35 percent (or 2.7 percent market basket update with a reduction of 0.6 percentage point for the multifactor productivity

adjustment, and a 0.75 percentage point reduction, as required under the Affordable Care Act).

To illustrate the impact of the FY 2018 changes, our analysis begins with a FY 2017 baseline simulation model using: The FY 2017 applicable percentage increase of 1.65 percent and the documentation and coding adjustment of -1.5 percent to the Federal standardized amount; the adjustment of (1/0.998) to permanently remove the -0.2 percent reduction to the rate put in place in FY 2014 to offset the estimated increase in IPPS expenditures as a result of the 2-midnight policy; the 1.006 temporary adjustment to address the effects of the 0.2 percent reduction in effect for FYs 2014 through 2016 related to the 2-midnight policy; the FY 2017 MS-DRG GROUPER (Version 34); the FY 2017 CBSA designations for hospitals based on the OMB definitions from the 2010 Census; the FY 2017 wage index; and no MGCRB reclassifications. Outlier payments are set at 5.1 percent of total operating MS-DRG and outlier payments for modeling purposes.

Section 1886(b)(3)(B)(viii) of the Act, as added by section 5001(a) of Public Law 109-171, as amended by section 4102(b)(1)(A) of the ARRA (Pub. L. 111-5) and by section 3401(a)(2) of the Affordable Care Act (Pub. L. 111-148), provides that, for FY 2007 and each subsequent year through FY 2014, the update factor will include a reduction of 2.0 percentage points for any subsection (d) hospital that does not submit data on measures in a form and manner and at a time specified by the Secretary. Beginning in FY 2015, the reduction is one-quarter of such applicable percentage increase determined without regard to section 1886(b)(3)(B)(ix), (xi), or (xii) of the Act, or one-quarter of the market basket update. Therefore, for FY 2018, hospitals that do not submit quality information under rules established by the Secretary and that are meaningful EHR users under section 1886(b)(3)(B)(ix) of the Act will receive an applicable percentage increase of 0.675 percent. At the time that this impact was prepared, 82 hospitals are estimated to not receive the full market basket rate-of-increase for FY 2018 because they failed the quality data submission process or did not choose to participate but are meaningful EHR users. For purposes of the simulations shown later in this section, we modeled the payment changes for FY 2018 using a reduced update for these hospitals.

For FY 2018, in accordance with section 1886(b)(3)(B)(ix) of the Act, a hospital that has been identified as not a meaningful EHR user will be subject to a reduction of three-quarters of such applicable percentage increase determined without regard to section 1886(b)(3)(B)(ix), (xi), or (xii) of the Act. Therefore, for FY 2018, hospitals that are identified as not meaningful EHR users and do submit quality information under section 1886(b)(3)(B)(viii) of the Act will receive an applicable percentage increase of -0.675 percent. At the time that this impact analysis was prepared, 103 hospitals are estimated to not receive the full market basket rate-of-increase for FY 2018 because they are identified as not meaningful EHR users that do submit quality information under section

1886(b)(3)(B)(viii) of the Act. For purposes of the simulations shown in this section, we modeled the payment changes for FY 2018 using a reduced update for these hospitals.

Hospitals that are identified as not meaningful EHR users under section 1886(b)(3)(B)(ix) of the Act and also do not submit quality data under section 1886(b)(3)(B)(viii) of the Act will receive an applicable percentage increase of -1.35 percent, which reflects a one-quarter reduction of the market basket update for failure to submit quality data and a three-quarter reduction of the market basket update for being identified as not a meaningful EHR user. At the time that this impact was prepared, 21 hospitals are estimated to not receive the full market basket rate-of-increase for FY 2018 because they are identified as not meaningful EHR users that do not submit quality data under section 1886(b)(3)(B)(viii) of the Act.

Each policy change, statutory or otherwise, is then added incrementally to this baseline, finally arriving at an FY 2018 model incorporating all of the changes. This simulation allows us to isolate the effects of each change.

Our final comparison illustrates the percent change in payments per case from FY 2017 to FY 2018. Two factors not discussed separately have significant impacts here. The first factor is the update to the standardized amount. In accordance with section 1886(b)(3)(B)(i) of the Act, we are updating the standardized amounts for FY 2018 using an applicable percentage increase of 1.35 percent. This includes our forecasted IPPS operating hospital market basket increase of 2.7 percent with a 0.6 percentage point reduction for the multifactor productivity adjustment and a 0.75 percentage point reduction as required under the Affordable Care Act. Hospitals that fail to comply with the quality data submission requirements and are meaningful EHR users will receive an update of 0.675 percent. This update includes a reduction of one-quarter of the market basket update for failure to submit these data. Hospitals that do comply with the quality data submission requirements but are not meaningful EHR users will receive an update of -0.675 percent, which includes a reduction of three-quarters of the market basket update. Furthermore, hospitals that do not comply with the quality data submission requirements and also are not meaningful EHR users will receive an update of -1.35 percent. Under section 1886(b)(3)(B)(iv) of the Act, the update to the hospital-specific amounts for SCHs is also equal to the applicable percentage increase, or 1.35 percent if the hospital submits quality data and is a meaningful EHR user.

A second significant factor that affects the changes in hospitals' payments per case from FY 2017 to FY 2018 is the change in hospitals' geographic reclassification status from one year to the next. That is, payments may be reduced for hospitals reclassified in FY 2017 that are no longer reclassified in FY 2018. Conversely, payments may increase for hospitals not reclassified in FY 2017 that are reclassified in FY 2018.

## 2. Analysis of Table I

Table I displays the results of our analysis of the changes for FY 2018. The table categorizes hospitals by various geographic and special payment consideration groups to illustrate the varying impacts on different types of hospitals. The top row of the table shows the overall impact on the 3,292 acute care hospitals included in the analysis.

The next four rows of Table I contain hospitals categorized according to their geographic location: All urban, which is further divided into large urban and other urban; and rural. There are 2,492 hospitals located in urban areas included in our analysis. Among these, there are 1,340 hospitals located in large urban areas (populations over 1 million), and 1,152 hospitals in other urban areas (populations of 1 million or fewer). In addition, there are 800 hospitals in rural areas. The next two groupings are by bed-size categories, shown separately for urban and rural hospitals. The final groupings by geographic location are by census divisions, also shown separately for urban and rural hospitals.

The second part of Table I shows hospital groups based on hospitals' FY 2018 payment classifications, including any reclassifications under section 1886(d)(10) of the Act. For example, the rows labeled urban, large urban, other urban, and rural show that the numbers of hospitals paid based on these categorizations after consideration of geographic reclassifications (including reclassifications under sections 1886(d)(8)(B) and 1886(d)(8)(E) of the Act that have implications for capital payments) are 2,373, 1,354, 1,019, and 919, respectively.

The next three groupings examine the impacts of the changes on hospitals grouped by whether or not they have GME residency programs (teaching hospitals that receive an IME adjustment) or receive Medicare DSH payments, or some combination of these two adjustments. There are 2,204 nonteaching hospitals in our analysis, 839 teaching hospitals with fewer than 100 residents, and 249 teaching hospitals with 100 or more residents.

In the DSH categories, hospitals are grouped according to their DSH payment status, and whether they are considered urban or rural for DSH purposes. The next category groups together hospitals considered urban or rural, in terms of whether they receive the IME adjustment, the DSH adjustment, both, or neither.

The next three rows examine the impacts of the changes on rural hospitals by special payment groups (SCHs, and RRCs). There were 263 RRCs, 316 SCHs, and 131 hospitals that are both SCHs and RRCs.

The next series of groupings are based on the type of ownership and the hospital's Medicare utilization expressed as a percent of total patient days. These data were taken from the FY 2015 or FY 2014 Medicare cost reports.

The next two groupings concern the geographic reclassification status of hospitals. The first grouping displays all urban hospitals that were reclassified by the MGCRB for FY 2018. The second grouping shows the MGCRB rural reclassifications.

Other Reclassified Hospitals (Section 1886(d)(8)(B))	47	1.1	0.5	0.3	3.4	-0.3	0	-1.2	0.6

<sup>1</sup> Because data necessary to classify some hospitals by category were missing, the total number of hospitals in each category may not equal the national total. Discharge data are from FY 2016, and hospital cost report data are from reporting periods beginning in FY 2014 and FY 2015.

<sup>2</sup> This column displays the payment impact of the hospital rate update and other adjustments, including the 1.35 percent adjustment to the national standardized amount and the hospital-specific rate (the estimated 2.7 percent market basket update reduced by 0.6 percentage point for the multifactor productivity adjustment and the 0.75 percentage point reduction under the Affordable Care Act), the 0.4588 percent adjustment to the national standardized amount required under section 15005 of the 21st Century Cures Act and a factor of (1/1.006) to remove the 1.006 temporary one-time adjustment made in FY 2017 to address the effects of the 0.2 percent reduction in effect for FYs 2014 through 2016 related to the 2-midnight policy.

<sup>3</sup> This column displays the payment impact of the changes to the Version 35 GROUPEr, the changes to the relative weights and the recalibration of the MS-DRG weights based on FY 2016 MedPAR data in accordance with section 1886(d)(4)(C)(iii) of the Act. This column displays the application of the recalibration budget neutrality factor of 0.997432 in accordance with section 1886(d)(4)(C)(iii) of the Act.

<sup>4</sup> This column displays the payment impact of the update to wage index data using FY 2014 and 2013 cost report data and the OMB labor market area delineations based on 2010 Decennial Census data. This column displays the payment impact of the application of the wage budget neutrality factor, which is calculated separately from the recalibration budget neutrality factor, and is calculated in accordance with section 1886(d)(3)(E)(i) of the Act. The wage budget neutrality factor is 1.001148.

<sup>5</sup> Shown here are the effects of geographic reclassifications by the Medicare Geographic Classification Review Board (MGCRB). The effects demonstrate the FY 2018 payment impact of going from no reclassifications to the reclassifications scheduled to be in effect for FY 2018. Reclassification for prior years has no bearing on the payment impacts shown here. This column reflects the geographic budget neutrality factor of 0.988008.

<sup>6</sup> This column displays the effects of the rural floor and imputed floor. The Affordable Care Act requires the rural floor budget neutrality adjustment to be 100 percent national level adjustment. The rural floor budget neutrality factor (which includes the imputed floor) applied to the wage index is 0.993348.

<sup>7</sup> This column shows the combined impact of the policy required under section 10324 of the Affordable Care Act that hospitals located in frontier States have a wage index no less than 1.0 and of section 1886(d)(13) of the Act, as added by section 505 of Pub. L. 108-173, which provides for an increase in a hospital's wage index if a threshold percentage of residents of the county where the hospital is located commute to work at hospitals in counties with higher wage indexes. These are not budget neutral policies.

<sup>8</sup> This column displays the impact of the expiration of MDH status for FY 2018, a non-budget neutral payment provision.

<sup>9</sup> This column shows the estimated change in payments from FY 2017 to FY 2018.

**BILLING CODE 4120-01-C**

a. Effects of the Hospital Update, Adjustment Required Under Section 15005 of the 21st Century Cures Act, and Other Adjustments (Column 1)

As discussed in section V.B. of the preamble of this final rule, this column includes the hospital update, including the 2.7 percent market basket update, the reduction of 0.6 percentage point for the multifactor productivity adjustment, and the 0.75 percentage point reduction in accordance with the Affordable Care Act. In addition, as discussed in section II.D. of the preamble of this final rule, this column includes the FY 2018 adjustment of 0.4588 percent on the national standardized amount required under section 15005 of the 21st Century Cures Act and, as discussed in section V.M. of the preamble of this final rule, the adjustment factor of (1/1.006) to remove the 1.006 temporary one-time adjustment made in FY 2017 to address the effects of the 0.2 percent reduction in effect for FYs 2014 through 2016 related to the 2-midnight policy. As a result, we are making a 1.2 percent update to the national standardized amount. This column also includes the update to the hospital-specific rates which includes the 2.7 percent market basket update, the reduction of 0.6 percentage point for the multifactor productivity adjustment, and the 0.75 percentage point reduction in accordance with the Affordable Care Act and, as discussed in section V.M. of the preamble of this final rule, the adjustment factor of (1/1.006) to remove the 1.006 temporary one-time adjustment made in FY 2017 to address the effects of the 0.2 percent reduction in effect for FYs 2014 through 2016 related to the 2-midnight policy. As a result, we are making a 0.75 percent update to the hospital-specific rates.

Overall, hospitals will experience a 1.2 percent increase in payments primarily due to the combined effects of the hospital update and the 0.4588 percent adjustment on the national standardized amount and the hospital update to the hospital-specific rate as well as the adjustment factor of (1/1.006) to remove the 1.006 temporary one-time adjustment made in FY 2017 to address the effects of the 0.2 percent reduction in effect for FYs 2014 through 2016 related to the 2-midnight policy to both the national standardized amount and the hospital-specific rate. Hospitals that are paid under the hospital-specific rate will experience a 0.75 percent increase in payments; therefore, hospital categories containing hospitals paid under the hospital-specific rate will experience a lower than average increase in payments.

b. Effects of the Changes to the MS-DRG Reclassifications and Relative Cost-Based Weights With Recalibration Budget Neutrality (Column 2)

Column 2 shows the effects of the changes to the MS-DRGs and relative weights with the application of the recalibration budget neutrality factor to the standardized amounts. Section 1886(d)(4)(C)(i) of the Act requires us annually to make appropriate classification changes in order to reflect changes in

treatment patterns, technology, and any other factors that may change the relative use of hospital resources. Consistent with section 1886(d)(4)(C)(iii) of the Act, we calculated a recalibration budget neutrality factor to account for the changes in MS-DRGs and relative weights to ensure that the overall payment impact is budget neutral.

As discussed in section II.E. of the preamble of this final rule, the FY 2018 MS-DRG relative weights will be 100 percent cost-based and 100 percent MS-DRGs. For FY 2018, the MS-DRGs are calculated using the FY 2016 MedPAR data grouped to the Version 35 (FY 2018) MS-DRGs. The methodology to calculate the relative weights and the reclassification changes to the GROUPEER are described in more detail in section II.G. of the preamble of this final rule.

The "All Hospitals" line in Column 2 indicates that changes due to the MS-DRGs and relative weights will result in a 0.0 percent change in payments with the application of the recalibration budget neutrality factor of 0.997432 to the standardized amount. Hospital categories that generally treat more surgical cases than medical cases will experience a decrease in their payments under the relative weights for reasons that include the policies regarding operating room procedures described in section II.G. of the preamble of this final rule. Rural hospitals will experience a 0.2 percent increase in payments in part because rural hospitals tend to treat fewer surgical cases than medical cases, while teaching hospitals with more than 100 residents will experience a -0.2 percent decrease in payments in part because those hospitals treat more surgical cases than medical cases.

c. Effects of the Wage Index Changes (Column 3)

Column 3 shows the impact of updated wage data using FY 2014 cost report data, with the application of the wage budget neutrality factor. The wage index is calculated and assigned to hospitals on the basis of the labor market area in which the hospital is located. Under section 1886(d)(3)(E) of the Act, beginning with FY 2005, we delineate hospital labor market areas based on the Core Based Statistical Areas (CBSAs) established by OMB. The current statistical standards used in FY 2018 are based on OMB standards published on February 28, 2013 (75 FR 37246 and 37252), and 2010 Decennial Census data (OMB Bulletin No. 13-01), as updated in OMB Bulletin No. 15-01. (We refer readers to the FY 2015 IPPS/LTCH PPS final rule (79 FR 49951 through 49963) for a full discussion on our adoption of the OMB labor market area delineations based on the 2010 Decennial Census data, effective beginning with the FY 2015 IPPS wage index, and to section III.A.2. of the preamble of the FY 2017 IPPS/LTCH PPS final rule (81 FR 56913) for a discussion of our adoption of the CBSA updates in OMB Bulletin No. 15-01, which were effective beginning with the FY 2017 wage index.)

Section 1886(d)(3)(E) of the Act requires that, beginning October 1, 1993, we annually update the wage data used to calculate the wage index. In accordance with this requirement, the wage index for acute care hospitals for FY 2018 is based on data

submitted for hospital cost reporting periods beginning on or after October 1, 2013 and before October 1, 2014. The estimated impact of the updated wage data using the FY 2014 cost report data and the OMB labor market area delineations on hospital payments is isolated in Column 3 by holding the other payment parameters constant in this simulation. That is, Column 3 shows the percentage change in payments when going from a model using the FY 2017 wage index, based on FY 2013 wage data, the labor-related share of 69.6 percent, under the OMB delineations and having a 100-percent occupational mix adjustment applied, to a model using the FY 2018 pre-reclassification wage index based on FY 2014 wage data with the labor-related share of 68.3 percent, under the OMB delineations, also having a 100-percent occupational mix adjustment applied, while holding other payment parameters such as use of the Version 35 MS-DRG GROUPEER constant. The FY 2018 occupational mix adjustment is based on the CY 2013 occupational mix survey.

In addition, the column shows the impact of the application of the wage budget neutrality to the national standardized amount. In FY 2010, we began calculating separate wage budget neutrality and recalibration budget neutrality factors, in accordance with section 1886(d)(3)(E) of the Act, which specifies that budget neutrality to account for wage index changes or updates made under that subparagraph must be made without regard to the 62 percent labor-related share guaranteed under section 1886(d)(3)(E)(ii) of the Act. Therefore, for FY 2018, we calculated the wage budget neutrality factor to ensure that payments under updated wage data and the labor-related share of 68.3 percent are budget neutral without regard to the lower labor-related share of 62 percent applied to hospitals with a wage index less than or equal to 1.0. In other words, the wage budget neutrality is calculated under the assumption that all hospitals receive the higher labor-related share of the standardized amount. The FY 2018 wage budget neutrality factor is 1.001148, and the overall payment change is 0.0 percent.

Column 3 shows the impacts of updating the wage data using FY 2014 cost reports. Overall, the new wage data and the labor-related share, combined with the wage budget neutrality adjustment, will lead to no change for all hospitals as shown in Column 3.

In looking at the wage data itself, the national average hourly wage will increase 1.02 percent compared to FY 2017. Therefore, the only manner in which to maintain or exceed the previous year's wage index was to match or exceed the 1.02 percent increase in the national average hourly wage. Of the 3,298 hospitals with wage data for both FYs 2017 and 2018, 1,612 or 51.1 percent will experience an average hourly wage increase of 1.02 percent or more.

The following chart compares the shifts in wage index values for hospitals due to changes in the average hourly wage data for FY 2018 relative to FY 2017. Among urban hospitals, 4 will experience a decrease of 10 percent or more, and 4 urban hospitals will

experience an increase of 10 percent or more. Ninety-nine urban hospitals will experience an increase or decrease of at least 5 percent or more but less than 10 percent. Among rural hospitals, none will experience an increase of at least 5 percent or more, but 2 rural hospitals will experience a decrease of greater than or equal to 5 percent but less than 10 percent. Three rural hospitals will experience decreases of 10 percent or more. However, 787 rural hospitals will experience increases or decreases of less than 5 percent, while 2,390 urban hospitals will experience increases or decreases of less than 5 percent. Nine urban hospitals and no rural hospitals experience no change to their wage index.

These figures reflect changes in the “pre-reclassified, occupational mix-adjusted wage index,” that is, the wage index before the application of geographic reclassification, the rural and imputed floors, the out-migration adjustment, and other wage index exceptions and adjustments. (We refer readers to sections III.G. through III.L. of the preamble of this final rule for a complete discussion of the exceptions and adjustments to the wage index.) We note that the “post-reclassified wage index” or “payment wage index,” which is the wage index that includes all such exceptions and adjustments (as reflected in Tables 2 and 3 associated with this final rule, which are available via the

Internet on the CMS Web site) is used to adjust the labor-related share of a hospital’s standardized amount, either 68.3 percent or 62 percent, depending upon whether a hospital’s wage index is greater than 1.0 or less than or equal to 1.0. Therefore, the pre-reclassified wage index figures in the following chart may illustrate a somewhat larger or smaller change than will occur in a hospital’s payment wage index and total payment.

The following chart shows the projected impact of changes in the area wage index values for urban and rural hospitals.

FY 2018 percentage change in area wage index values	Number of hospitals	
	Urban	Rural
Increase 10 percent or more .....	4	0
Increase greater than or equal to 5 percent and less than 10 percent .....	50	0
Increase or decrease less than 5 percent .....	2,390	787
Decrease greater than or equal to 5 percent and less than 10 percent .....	49	2
Decrease 10 percent or more .....	4	3
Unchanged .....	9	0

d. Effects of MGCRB Reclassifications (Column 4)

Our impact analysis to this point has assumed acute care hospitals are paid on the basis of their actual geographic location (with the exception of ongoing policies that provide that certain hospitals receive payments on bases other than where they are geographically located). The changes in Column 4 reflect the per case payment impact of moving from this baseline to a simulation incorporating the MGCRB decisions for FY 2018.

By spring of each year, the MGCRB makes reclassification determinations that will be effective for the next fiscal year, which begins on October 1. The MGCRB may approve a hospital’s reclassification request for the purpose of using another area’s wage index value. Hospitals may appeal denials of MGCRB decisions to the CMS Administrator. Further, hospitals have 45 days from the date the IPPS proposed rule is issued in the **Federal Register** to decide whether to withdraw or terminate an approved geographic reclassification for the following year (we refer readers to the discussion of our clarification of this policy in section III.I.2. of the preamble to this final rule).

The overall effect of geographic reclassification is required by section 1886(d)(8)(D) of the Act to be budget neutral. Therefore, for purposes of this impact analysis, we are applying an adjustment of 0.988008 to ensure that the effects of the reclassifications under section 1886(d)(10) of the Act are budget neutral (section II.A. of the Addendum to this final rule). Geographic reclassification generally benefits hospitals in rural areas. We estimate that the geographic reclassification will increase payments to rural hospitals by an average of 1.4 percent. By region, all the rural hospital categories will experience increases in payments due to MGCRB reclassifications.

Table 2 listed in section VI. of the Addendum to this final rule and available via

the Internet on the CMS Web site reflects the reclassifications for FY 2018.

e. Effects of the Rural Floor and Imputed Floor, Including Application of National Budget Neutrality (Column 5)

As discussed in section III.B. of the preamble of the FY 2009 IPPS final rule, the FY 2010 IPPS/RV 2010 LTCH PPS final rule, the FYs 2011, 2012, 2013, 2014, 2015, 2016, and 2017 IPPS/LTCH PPS final rules, and this FY 2018 final rule, section 4410 of Pub. L. 105–33 established the rural floor by requiring that the wage index for a hospital in any urban area cannot be less than the wage index received by rural hospitals in the same State. We would apply a uniform budget neutrality adjustment to the wage index.

The imputed floor, which is also included in the calculation of the budget neutrality adjustment to the wage index, was extended in FY 2012 for 2 additional years and in FY 2014 and FY 2015 for 1 additional year. Prior to FY 2013, only urban hospitals in New Jersey received the imputed floor. As discussed in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53369), we established an alternative temporary methodology for the imputed floor, which resulted in an imputed floor for Rhode Island for FY 2013. For FY 2014 and FY 2015, we extended the imputed rural floor, as calculated under the original methodology and the alternative methodology. Due to the adoption of the new OMB labor market area delineations in FY 2015, the State of Delaware also became an all-urban State and thus eligible for an imputed floor. For FY 2016 and FY 2017, we extended the imputed floor for 1 year, as calculated under the original methodology and the alternative methodology, through September 30, 2016 and September 30, 2017, respectively. For FY 2018, we are extending the imputed rural floor for 1 year, as calculated under the original methodology and the alternative methodology, through September 30, 2018. As a result, New Jersey,

Rhode Island, and Delaware will be able to receive an imputed floor through September 30, 2018. In New Jersey, 17 out of 64 hospitals will receive the imputed floor for FY 2018, 10 out of 11 hospitals in Rhode Island, and 6 out of 6 hospitals in Delaware.

The Affordable Care Act requires that we apply one rural floor budget neutrality factor to the wage index nationally, and we include the imputed floor in the calculation of this budget neutrality factor. We have calculated an FY 2018 rural floor and imputed floor budget neutrality factor to be applied to the wage index of 0.993348, which reduces wage indexes by 0.67 percent.

Column 5 shows the projected impact of the rural floor and imputed floor with the national rural floor and imputed floor budget neutrality factor applied to the wage index based on the OMB labor market area delineations. The column compares the post-reclassification FY 2018 wage index of providers before the rural floor and imputed floor adjustment and the post-reclassification FY 2018 wage index of providers with the rural floor and imputed floor adjustment based on the OMB labor market area delineations. Only urban hospitals can benefit from the rural and imputed floors. Because the provision is budget neutral, all other hospitals (that is, all rural hospitals and those urban hospitals to which the adjustment is not made) will experience a decrease in payments due to the budget neutrality adjustment that is applied nationally to their wage index.

We estimate that 400 hospitals will receive the rural and imputed floors in FY 2018. All IPPS hospitals in our model will have their wage index reduced by the rural floor budget neutrality adjustment of 0.993348. We project that, in aggregate, rural hospitals will experience a 0.67 percent decrease in payments as a result of the application of the rural floor budget neutrality because the rural hospitals do not benefit from the rural floor, but have their wage indexes downwardly

adjusted to ensure that the application of the rural floor is budget neutral overall. We project hospitals located in urban areas will experience no change in payments because increases in payments by hospitals benefitting from the rural floor offset decreases in payments by nonrural floor urban hospitals whose wage index is downwardly adjusted by the rural floor budget neutrality factor. Urban hospitals in the New England region will experience a 1.4 percent increase in payments primarily due to the application of the rural floor in Massachusetts and the imputed floor in Rhode Island. Thirty-six urban providers in Massachusetts are expected to receive the rural floor wage index value, including the rural floor budget neutrality adjustment, increasing payments overall to Massachusetts by an estimated \$44 million. We estimate that Massachusetts hospitals will receive approximately a 1.3 percent increase in IPPS payments due to the application of the rural floor in FY 2018.

Urban Puerto Rico hospitals are expected to experience a 0.2 percent increase in payments as a result of the application of the rural floor.

There are 17 hospitals out of the 64 hospitals in New Jersey that will benefit from the extension of the imputed floor and will receive the imputed floor wage index value under the OMB labor market area delineations. Overall, New Jersey will receive a net decrease of \$4 million in payments (to the nearest million) taking into account the 17 hospitals that will benefit from the imputed floor and the application of the national rural floor and imputed floor budget neutrality adjustment to all hospitals in the state. There are 10 hospitals out of the 11 hospitals in Rhode Island that will benefit from the extension of the imputed floor and will receive the imputed floor wage index value. Overall, Rhode Island will receive a net increase of \$19 million in payments (to the nearest million) taking into account the 10 hospitals that will benefit from the imputed floor and the application of the national rural floor and imputed floor budget neutrality adjustment to all hospitals in the State. All 6 hospitals in Delaware will benefit from the extension of the imputed floor and will receive the imputed floor wage index value. Overall, Delaware will receive a net increase of \$8 million in payments (to the nearest million) taking into account the 6

hospitals that will benefit from the imputed floor and the application of the national rural floor and imputed floor budget neutrality adjustment to all hospitals in the State.

In response to a public comment addressed in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51593), we are providing the payment impact of the rural floor and imputed floor with budget neutrality at the State level. Column 1 of the following table displays the number of IPPS hospitals located in each State. Column 2 displays the number of hospitals in each State that will receive the rural or imputed floor wage index for FY 2018. Column 3 displays the percentage of total payments each State will receive or contribute to fund the rural floor and imputed floor with national budget neutrality. The column compares the post-reclassification FY 2018 wage index of providers before the rural floor and imputed floor adjustment and the post-reclassification FY 2018 wage index of providers with the rural and imputed floor adjustment. Column 4 displays the estimated payment amount that each State will gain or lose due to the application of the rural floor and imputed floor with national budget neutrality.

#### FY 2018 IPPS ESTIMATED PAYMENTS DUE TO RURAL AND IMPUTED FLOOR WITH NATIONAL BUDGET NEUTRALITY

State	Number of hospitals	Number of hospitals that will receive the rural or imputed floor	Percent change in payments due to application of rural floor and imputed floor with budget neutrality	Difference (in \$ millions)

f. Effects of the Application of the Frontier State Wage Index and Out-Migration Adjustment (Column 6)

This column shows the combined effects of the application of section 10324(a) of the Affordable Care Act, which requires that we establish a minimum post-reclassified wage-index of 1.00 for all hospitals located in "frontier States," and the effects of section 1886(d)(13) of the Act, as added by section 505 of Public Law 108-173, which provides for an increase in the wage index for hospitals located in certain counties that have a relatively high percentage of hospital employees who reside in the county, but work in a different area with a higher wage index. These two wage index provisions are not budget neutral and increase payments overall by 0.1 percent compared to the provisions not being in effect.

The term "frontier States" is defined in the statute as States in which at least 50 percent of counties have a population density less than 6 persons per square mile. Based on these criteria, 5 States (Montana, Nevada, North Dakota, South Dakota, and Wyoming) are considered frontier States and 49 hospitals located in those States will receive a frontier wage index of 1.0000. Overall, this provision is not budget neutral and is estimated to increase IPPS operating payments by approximately \$65 million. Rural and urban hospitals located in the West North Central region will experience an increase in payments by 0.3 and 0.7 percent, respectively, because many of the hospitals located in this region are frontier State hospitals.

In addition, section 1886(d)(13) of the Act, as added by section 505 of Public Law 108-173, provides for an increase in the wage index for hospitals located in certain

counties that have a relatively high percentage of hospital employees who reside in the county, but work in a different area with a higher wage index. Hospitals located in counties that qualify for the payment adjustment are to receive an increase in the wage index that is equal to a weighted average of the difference between the wage index of the resident county, post-reclassification and the higher wage index work area(s), weighted by the overall percentage of workers who are employed in an area with a higher wage index. There are an estimated 267 providers that will receive the out-migration wage adjustment in FY 2018. Rural hospitals generally qualify for the adjustment, resulting in a 0.2 percent increase in payments. This provision appears to benefit section 401 hospitals and RRCs in that they will each experience a 0.3 percent increase in payments. This out-migration wage adjustment also is not budget neutral, and we estimate the impact of these providers receiving the out-migration increase will be approximately \$42 million.

g. Effects of the Expiration of MDH Special Payment Status (Column 7)

Column 7 shows our estimate of the changes in payments due to the expiration of MDH status, a nonbudget neutral payment provision. Section 205 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114-10, enacted on April 16, 2015) extended the MDH program (which, under previous law, was to be in effect for discharges on or before March 31, 2015 only) for discharges occurring on or after April 1, 2015, through FY 2017 (that is, for discharges occurring on or before September 30, 2017). Therefore, under current law, the MDH program will expire at

the end of FY 2017. Hospitals that qualified to be MDHs receive the higher of payments made based on the Federal rate or the payments made based on the Federal rate amount plus 75 percent of the difference between payments based the Federal rate and payments based the hospital-specific rate (a hospital-specific cost-based rate). Because this provision was not budget neutral, the expiration of this payment provision results in a 0.1 percent decrease in payments overall. There are currently 159 MDHs, of which we estimate 96 would have been paid under the blended payment based on the Federal rate and hospital-specific rate if the MDH program had not expired. Because those 96 MDHs will no longer receive the blended payment and will be paid only under the Federal rate in FY 2018, it is estimated that those hospitals will experience an overall decrease in payments of approximately \$119 million.

MDHs were generally rural hospitals, so the expiration of the MDH program will result in an overall decrease in payments to rural hospitals of 0.9 percent. Rural New England hospitals can expect a decrease in payments of 2.2 percent because 6 out of the 23 rural New England hospitals are MDHs that will lose this special payment status under the expiration of the program at the end of FY 2017. MDHs that would have been paid under the blended payment based on the Federal rate and hospital-specific rate can expect a decrease in payments of 12 percent.

h. Effects of All FY 2018 Changes (Column 8)

Column 8 shows our estimate of the changes in payments per discharge from FY 2017 and FY 2018, resulting from all changes reflected in this final rule for FY 2018. It

includes combined effects of the year to year change of the previous columns in the table.

The average increase in payments under the IPPS for all hospitals is approximately 1.3 percent for FY 2018 relative to FY 2017 and for this row is primarily driven by the changes reflected in Column 1. Column 8 includes the annual hospital update of 1.35 percent to the national standardized amount. This annual hospital update includes the 2.7 percent market basket update, the 0.6 percentage point reduction for the multifactor productivity adjustment, and the 0.75 percentage point reduction under section 3401 of the Affordable Care Act. As discussed in section II.D. of the preamble of this final rule, this column also includes the FY 2018 adjustment of 0.4588 percent on the national standardized amount. In addition, this column includes the adjustment factor of (1/1.006) to remove the 1.006 temporary one-time adjustment made in FY 2017 to address the effects of the 0.2 percent reduction in effect for FYs 2014 through 2016 related to the 2-midnight policy, which is discussed in section V.M. of the preamble of this final

rule. Hospitals paid under the hospital-specific rate will receive a 0.75 percent hospital update. As described in Column 1, the annual hospital update with the adjustment of 0.4588 percent for hospitals paid under the national standardized amount, the adjustment of (1/1.006) to remove the 1.006 temporary one-time adjustment made in FY 2017 to address the effects of the 0.2 percent reduction in effect for FYs 2014 through 2016, which is discussed in section V.M. of the preamble of this final rule, combined with the annual hospital update for hospitals paid under the hospital-specific rates will result in a 1.3 percent increase in payments in FY 2018 relative to FY 2017. There are also interactive effects among the various factors comprising the payment system that we are not able to isolate which contribute to our estimate of the changes in payments per discharge from FY 2017 and FY 2018 in Column 8.

Overall payments to hospitals paid under the IPPS due to the applicable percentage increase and changes to policies related to MS-DRGs, geographic adjustments, and

outliers are estimated to increase by 1.3 percent for FY 2018. Hospitals in urban areas will experience a 1.4 percent increase in payments per discharge in FY 2018 compared to FY 2017. Hospital payments per discharge in rural areas are estimated to increase by 0.2 percent in FY 2018.

3. Impact Analysis of Table II

Table II presents the projected impact of the changes for FY 2018 for urban and rural hospitals and for the different categories of hospitals shown in Table I. It compares the estimated average payments per discharge for FY 2017 with the estimated average payments per discharge for FY 2018, as calculated under our models. Therefore, this table presents, in terms of the average dollar amounts paid per discharge, the combined effects of the changes presented in Table I. The estimated percentage changes shown in the last column of Table II equal the estimated percentage changes in average payments per discharge from Column 8 of Table I.

TABLE II—IMPACT ANALYSIS OF CHANGES FOR FY 2018 ACUTE CARE HOSPITAL OPERATING PROSPECTIVE PAYMENT SYSTEM  
[Payments per Discharge]

	Number of hospitals	Estimated average FY 2017 payment per discharge	Estimated average FY 2018 payment per discharge	FY 2018 changes
	(1)	(2)	(3)	(4)
All Hospitals .....	3,292	11,867	12,024	1.3
By Geographic Location:

H. Effects of Other Policy Changes

In addition to those policy changes discussed previously that we are able to model using our IPPS payment simulation model, we are making various other changes in this final rule. Generally, we have limited or no specific data available with which to estimate the impacts of these changes. Our estimates of the likely impacts associated with these other changes are discussed in this section.

1. Effects of Policy Relating to New Medical Service and Technology Add-On Payments

In section II.H. of the preamble to this final rule, we discuss three technologies for which we received applications for add-on payments for new medical services and technologies for FY 2018. We note that three applicants withdrew their applications prior to the issuance of the proposed rule, one applicant withdrew its application prior to the issuance of this final rule, and two applicants did not receive FDA approval for their technologies by the July 1 deadline. We

also discuss the status of the new technologies that were approved to receive new technology add-on payments in FY 2017. As explained in the preamble to this final rule, add-on payments for new medical services and technologies under section 1886(d)(5)(K) of the Act are not required to be budget neutral.

As discussed in section II.H.6. of the preamble to this final rule, we are approving three applications (Bezlotoxumab (Zinplava™), EDWARDS INTUITY Elite™ Valve System (INTUITY) and Liva Nova Perceval Valve (Perceval), and Ustekinumab

(Stelara®) for new technology add on payments for FY 2018. In addition, as we proposed, in this final rule, we are continuing to make new technology add-on payments for Defitelio® (Defibrotide), GORE® EXCLUDER® Iliac Branch Endoprosthesis (IBE), Idarucizumab and Vistogard™ (Uridine Triacetate) in FY 2018 because these four technologies are still considered new.

We note that new technology add-on payments for each case are limited to the lesser of (1) 50 percent of the costs of the new technology or (2) 50 percent of the amount by which the costs of the case exceed the standard MS-DRG payment for the case. Because it is difficult to predict the actual new technology add-on payment for each case, our estimates below are based on the increase in new technology add-on payments for FY 2018 as if every claim that would qualify for a new technology add-on payment would receive the maximum add-on payment. The following are estimates for FY 2018 for the four technologies that we are continuing to make new technology add-on payments in FY 2018.

- Based on the applicant's estimate from FY 2017, we currently estimate that new technology add-on payments for the Defitelio® will increase overall FY 2018 payments by \$5,161,200 (maximum add-on payment of \$75,900 \* 68 patients).

- Based on the applicant's estimate for FY 2017, we currently estimate that new technology add-on payments for the GORE® EXCLUDER® IBE will increase overall FY 2018 payments by \$5,685,750 (maximum add-on payment of \$5,250 \* 1,083 patients).

- Based on the applicant's estimate for FY 2017, we currently estimate that new technology add-on payments for Idarucizumab will increase overall FY 2018 payments by \$14,766,500 (maximum add-on payment of \$1,750 \* 8,438 patients).

- Based on the applicant's estimate for FY 2017, we currently estimate that new technology add-on payments for Vistogard™ will increase overall FY 2018 payments by \$3,009,750 (maximum add-on payment of \$40,130 \* 75 patients).

The following are estimates for FY 2018 for the three technologies that we are approving for new technology add-on payments beginning with FY 2018.

- Based on the applicant's estimate for FY 2018, we currently estimate that new technology add-on payments for Zinplava™ will increase overall FY 2018 payments by \$2,857,600 (maximum add-on payment of \$1,900 \* 1,504 patients).

- Based on the estimates for INTUITY and Perceval for FY 2018 and using a weighted average, we currently estimate that new technology add-on payments for INTUITY and Perceval will increase overall FY 2018 payments by \$14,841,749 (maximum add-on payment of \$6,110.23 \* 2,429 patients).

- Based on the applicant's estimate for FY 2018, we currently estimate that new technology add-on payments for Stelara® will increase overall FY 2018 payments by \$400,800 (maximum add-on payment of \$2,400 \* 167 patients).

## 2. Effects of Changes to MS-DRGs Subject to the Postacute Care Transfer Policy and the MS-DRG Special Payment Policy

In section V.A. of the preamble of this final rule, we discuss our changes to the list of MS-DRGs subject to the postacute care transfer policy and the MS-DRG special payment policy. As reflected in Table 5 listed in section VI. of the Addendum to this final rule (which is available via the Internet on the CMS Web site), using criteria set forth in regulations at 42 CFR 412.4, we evaluated MS-DRG charge, discharge, and transfer data to determine which MS-DRGs qualify for the postacute care transfer and MS-DRG special payment policies. We note that we did not propose to make any changes in these payment policies in the FY 2018 IPPS/LTCH PPS proposed rule. As a result of finalization of our proposals to revise the MS-DRG classifications for FY 2018, which are discussed in section II.F. of the preamble of this final rule, we are adding three MS-DRGs to the list of MS-DRGs subject to the MS-DRG special payment policy. Column 4 of Table I in this Appendix A shows the effects of the changes to the MS-DRGs and the relative payment weights and the application of the recalibration budget neutrality factor to the standardized amounts. Section 1886(d)(4)(C)(i) of the Act requires us annually to make appropriate DRG classification changes in order to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources. The analysis and methods for determining the changes due to the MS-DRGs and relative payment weights account for and include changes as a result of the changes to the MS-DRGs subject to the MS-DRG postacute care transfer and MS-DRG special payment policies. We refer readers to section I.G. of this Appendix A for a detailed discussion of payment impacts due to the MS-DRG reclassification policies for FY 2018.

## 3. Effects of the Changes to the Volume Decrease Adjustment for Sole Community Hospitals (SCHs)

In section V.C. of the preamble of this final rule, we discuss our proposed and finalized policies to modify the methodology used to calculate volume decrease adjustments for SCHs. We are prospectively requiring that the MACs compare Medicare revenue allocable to fixed costs from the cost reporting period when the hospital experienced the volume decrease to the hospital's fixed costs from that same cost reporting period when calculating a volume decrease adjustment. We also are providing that the cap will no longer be applied to the volume decrease adjustment calculation methodology in future periods. In addition, we are prospectively modifying the volume decrease adjustment process to no longer require that a hospital explicitly demonstrate that it appropriately adjusted the number of staff in inpatient areas of the hospital based on the decrease in the number of inpatient days and to no longer require the MACs to adjust the volume decrease adjustment payment amount for excess staffing. We estimate that these changes to the volume decrease adjustment will increase aggregate volume

decrease adjustment payments by a total of approximately \$15 million for cost reporting periods beginning in FY 2018. Given that the volume decrease adjustment is only available to SCHs and is predicated on the unanticipated nature of the volume decrease, it is difficult to predict how many hospitals will qualify for the adjustment in FY 2018. We assumed 20 hospitals will qualify for the adjustment in FY 2018 and that the additional amount of the volume decrease adjustment payment based on our methodology will be \$750,000 per hospital.

## 4. Effects of Changes to Low-Volume Hospital Payment Adjustment Policy

In section V.E. of the preamble of this final rule, we discuss the expiration of the temporary changes to the low-volume hospital payment policy originally provided for by the Affordable Care Act and extended through FY 2017 by subsequent legislation. Effective for FY 2018 and subsequent years, qualifying hospitals must have less than 200 combined Medicare and non-Medicare discharges (instead of 1,600 Medicare discharges) and must be located more than 25 road miles from another subsection (d) hospital (instead of 15 road miles from another subsection (d) hospital). In this same section, we discuss our proposed and finalized parallel low-volume hospital payment adjustment regarding hospitals operated by the IHS or a Tribe. Under this finalized policy, an IHS hospital will be able to qualify for a low-volume hospital adjustment based on its distance to the nearest IHS hospital, and a non-IHS hospital will be able to qualify to receive a low-volume hospital adjustment based on its distance to the nearest non-IHS hospital. Based upon the best available data at this time, we estimate the expiration of the temporary changes to the low-volume hospital payment and the change to the low-volume payment adjustments will decrease aggregate low-volume payment adjustments from \$316 million in FY 2017 to \$4 million in FY 2018. This \$312 million decrease in FY 2018 is based on an estimated \$315 million decrease in payments from the expiration of the temporary changes to the low-volume hospital definition and payment adjustment methodology together with an estimated increase of \$3 million in payments made to hospitals that are expected to qualify under our parallel low-volume hospital payment adjustment. These payment estimates were determined by identifying providers that, based on the best available data, are expected to qualify under the criteria that will apply in FY 2018 (that is, are located at least 25 miles from the nearest subsection (d) hospital and have less than 200 total discharges), and were determined from the same data used in developing the quantitative analyses of changes in payments per case discussed previously in section I.G. of this Appendix A.

5. Effects of the Changes to Medicare DSH and Uncompensated Care Payments for FY 2018

As discussed in section V.G. of the preamble of this final rule, under section 3133 of the Affordable Care Act, hospitals that are eligible to receive Medicare DSH payments will receive 25 percent of the

amount they previously would have received under the statutory formula for Medicare DSH payments under section 1886(d)(5)(F) of the Act. The remainder, equal to an estimate of 75 percent of what formerly would have been paid as Medicare DSH payments (Factor 1), reduced to reflect changes in the percentage of uninsured individuals and additional statutory adjustments (Factor 2), is available to make additional payments to each hospital that qualifies for Medicare DSH payments and that has uncompensated care. Each hospital eligible for Medicare DSH payments will receive an additional payment based on its estimated share of the total amount of uncompensated care for all hospitals eligible for Medicare DSH payments. The uncompensated care payment methodology has redistributive effects based on the proportion of a hospital's uncompensated care relative to the uncompensated care for all hospitals eligible for Medicare DSH payments (Factor 3).

For FY 2018, we are establishing a Factor 2 of 58.01 percent determined using the uninsured estimates produced by CMS' Office of the Actuary (OACT) as part of the development of the National Health Expenditure Accounts (NHEA). Although we are continuing to use low-income insured patient days as a proxy for uncompensated care, for the first time, we are using these data in combination with data on uncompensated care costs from Worksheet S-10 in the calculation of Factor 3. The uncompensated care payment methodology has redistributive effects based on the proportion of a hospital's uncompensated care relative to the total uncompensated care for all hospitals eligible for Medicare DSH payments. The change to Medicare DSH payments under section 3133 of the Affordable Care Act is not budget neutral.

In this final rule, we are establishing the amount to be distributed as uncompensated care payments to DSH eligible hospitals, which for FY 2018 is \$6,766,695,163.56. This figure represents 75 percent of the amount that otherwise would have been paid for Medicare DSH payment adjustments adjusted by a Factor 2 of 58.01 percent. For FY 2017, the amount available to be distributed for uncompensated care was \$5,977,483,146.86, or 75 percent of the amount that otherwise would have been paid for Medicare DSH payment adjustments adjusted by a Factor 2 of 55.36 percent. To calculate Factor 3 for FY 2018, we used an average of data computed using Medicaid days from hospitals' 2012 and 2013 cost reports from the March 2017 update of the HCRIS database, uncompensated care costs from hospitals' 2014 cost reports from the same extract of HCRIS, Medicaid days from 2012 cost report data submitted to CMS by IHS hospitals, and SSI days from the FY 2014 and FY 2015 SSI ratios. For each eligible hospital, we

calculated an individual Factor 3 for cost reporting years FYs 2012, 2013, and 2014. We then added the individual amounts and divided the sum by the number of cost reporting periods with data to calculate an average Factor 3 for FY 2018. For purposes of this final rule, as we proposed, we used the most recent data from the March 2017 update of the HCRIS database for the Medicaid days component of the Factor 3 calculation as well as for the Worksheet S-10 uncompensated care cost component.

The FY 2018 policy of using data from hospitals' FY 2012, FY 2013, and FY 2014 cost reporting years to determine Factor 3 is based on our FY 2017 final policy (81 FR 56943 through 56973), which is in contrast to the methodology used in FY 2016, when we used Medicaid days from the more recent of a hospital's full year 2012 or 2011 cost report from the March 2015 update of the HCRIS database, Medicaid days from 2012 cost report data submitted to CMS by IHS hospitals, and SSI days from the FY 2013 SSI ratios to calculate Factor 3. In addition, as explained in section V.G.4.c. of the preamble of this final rule, we are making several additional modifications to the Factor 3 methodology: (1) To annualize Medicaid data and uncompensated care data if a hospital's cost report does not equal 12 months of data; (2) to apply a scaling factor to the uncompensated care payment amount calculated for each DSH eligible hospital so that total uncompensated care payments are consistent with the estimated amount available to make uncompensated care payments for FY 2018; (3) to apply statistical trims to the CCRs on Worksheet S-10 that are considered anomalies to ensure reasonable CCRs are used to convert charges to costs for purposes of determining uncompensated care costs; (4) to calculate Factor 3 for Puerto Rico hospitals, all-inclusive rate providers, and Indian Health Service and Tribal hospitals by substituting data regarding low-income insured days for FY 2013 for the Worksheet S-10 data on uncompensated care costs from FY 2014 cost reports, and (5) to determine the ratio of uncompensated care costs relative to total operating costs on the hospital's 2014 cost report (as of March 2017), and in cases where the ratio of uncompensated care costs relative to total operating costs exceeds 50 percent, to determine the ratio of uncompensated care costs to total operating costs from the hospital's 2015 cost report (as of March 2017) and apply that ratio to the hospital's total operating costs from its 2014 cost report to determine uncompensated care costs for FY 2014.

We also are continuing the policies that were finalized in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50020 through 50022) to address several specific issues concerning the process and data to be employed in determining Factor 3 in the case of hospital

mergers for FY 2018 and subsequent years, as well as continuing the policies finalized in the FY 2017 IPPS/LTCH PPS final rule concerning the methodology for calculating each hospital's relative share of uncompensated care, such as combining data from multiple cost reports beginning in the same fiscal year and calculating Factor 3 based on an average of the three individual Factor 3s for FYs 2012, 2013, and 2014, determined by adding the Factor 3 values for these years, and dividing by the number of cost reporting periods with data.

To estimate the impact of the combined effect of changes in Factors 1 and 2, as well as the changes to the data used in determining Factor 3, on the calculation of Medicare DSH payments, including both empirically justified Medicare DSH payments and uncompensated care payments, we compared total DSH payments estimated in the FY 2017 IPPS/LTCH PPS final rule to total DSH payments estimated in this FY 2018 IPPS/LTCH PPS final rule. For FY 2017, for each hospital, we calculated the sum of: (1) 25 percent of the estimated amount of what would have been paid as Medicare DSH in FY 2017 in the absence of section 3133 of the Affordable Care Act; and (2) 75 percent of the estimated amount of what would have been paid as Medicare DSH payments in the absence of section 3133 of the Affordable Care Act, adjusted by a Factor 2 of 55.36 percent and multiplied by a Factor 3 calculated as described in the FY 2017 IPPS/LTCH PPS final rule. For FY 2018, we calculated the sum of: (1) 25 percent of the estimated amount of what would be paid as Medicare DSH payments in FY 2018 absent section 3133 of the Affordable Care Act; and (2) 75 percent of the estimated amount of what would be paid as Medicare DSH payments absent section 3133 of the Affordable Care Act, adjusted by a Factor 2 of 58.01 percent and multiplied by a Factor 3 calculated using the methodology described above.

Our analysis included 2,427 hospitals that are projected to be eligible for DSH in FY 2018. It did not include hospitals that had terminated their participation in the Medicare program as of July 1, 2017, Maryland hospitals, and SCHs that are expected to be paid based on their hospital-specific rates. In addition, data from merged or acquired hospitals were combined under the surviving hospital's CCN, and the nonsurviving CCN was excluded from the analysis. The estimated impact of the changes to Factors 1, 2, and 3 across all hospitals projected to be eligible for DSH payments in FY 2018, by hospital characteristic, is presented in the following table.

MODELED DISPROPORTIONATE SHARE HOSPITAL PAYMENTS FOR ESTIMATED FY 2018 DSHs BY HOSPITAL TYPE:  
MODEL DSH \$ (IN MILLIONS) FROM FY 2017 TO FY 2018

**Source:** Dobson|DaVanzo analysis of 2012–2014 Hospital Cost Reports.

\* Dollar DSH calculated by  $[0.25 * \text{estimated section 1886(d)(5)(F) payments}] + [0.75 * \text{estimated section 1886(d)(5)(F) payments} * \text{Factor 2} * \text{Factor 3}]$ . When summed across all hospitals projected to receive DSH payments, DSH payments are estimated to be \$9,553 million in FY 2017 and \$10,626 million in FY 2018.

\*\* Percentage change is determined as the difference between Medicare DSH payments modeled for the FY 2018 IPPS/LTCH PPS final rule (column 3) and Medicare DSH payments modeled for the FY 2017 IPPS/LTCH PPS final rule (column 2) divided by Medicare DSH payments modeled for the FY 2017 final rule (column 2) 1 times 100 percent.

Changes in projected FY 2018 DSH payments from DSH payments in FY 2017 are primarily driven by (1) changes to Factor 1, which increased from \$10.797 billion to \$11.665 billion; (2) changes to Factor 2, which increased from 55.36 percent to 58.01

percent; (3) changes to the data used to determine Factor 3; and (4) changes to the number of DSH-eligible hospitals within a given hospital type. The impact analysis found that, across all projected DSH eligible hospitals, FY 2018 DSH payments are estimated at approximately \$10.626 billion, or an increase of approximately 11.2 percent from FY 2017 DSH payments (approximately \$9.553 billion). While these changes result in a net increase in the amount available to be distributed in uncompensated care payments, DSH payments to select hospital types are expected to decrease. This redistribution of DSH payments is caused by changes in the data used to determine Factor 3 and changes in the number of DSH-eligible hospitals within a given hospital type.

As seen in the above table, percent changes in DSH payments of less than 11.2 percent indicate that hospitals within the specified category are projected to experience a smaller increase in DSH payments, on average, compared to the universe of projected FY 2018 DSH hospitals. Conversely, percent changes in DSH payments that are greater than 11.2 percent indicate a hospital type is projected to have a larger increase than the overall percent change on average. The variation in the distribution of DSH payments by hospital characteristic is largely dependent on the change in a given hospital's number of Medicaid days and SSI days for purposes of the low-income insured days proxy between FY 2017 and FY 2018, as well as on its uncompensated care costs as reported on its FY 2014 Worksheet S-10.

Many rural hospitals, grouped by geographic location, payment classification, and bed size, are projected to experience a larger increase in DSH payments than their urban counterparts. Overall, urban hospitals are projected to receive a 10.9 percent increase in DSH payments, and rural hospitals are projected to receive a 17.3 percent increase in DSH payments. However, only smaller and medium-sized rural hospitals are projected to receive increases in DSH payments that are, on average, higher than the 11.2 percent change across all hospitals that are projected to be eligible for DSH in FY 2018, with rural hospitals that have 0-99 beds projected to experience a 23.3 percent payment increase, those with 100-249 beds projected to receive a 14.1 percent increase, and larger rural hospitals with 250+ beds projected to experience an 8.4 percent payment increase. This trend is somewhat consistent with urban hospitals, in which the smallest urban hospitals (0-99 beds) are projected to receive an increase in DSH payments of 27.7 percent. Medium-sized hospitals (100-250 beds) and larger hospitals (250+ beds) are projected to receive increases of 10.8 and 10.5 percent in DSH payments, respectively, which are relatively consistent with the overall average.

By region, projected DSH payment increases for urban hospitals are smallest in

the New England, Middle Atlantic, East North Central, and East South Central, and Pacific regions. The South Atlantic, West North Central, and West South Central region hospitals are projected to receive increases in DSH payments that are, on average, larger than the 11.2 percent change across all hospitals projected to be eligible for DSH in FY 2018. Increases in remaining urban hospital regions are generally consistent with the overall average percent increase of 11.2 percent. Regionally, rural hospitals are projected to receive a wider range of increases. Rural hospitals in the Middle Atlantic and Pacific regions are expected to receive a decrease in DSH payments, while increases that are, on average, smaller than the 11.2 overall percent change are projected for the East South Central region. Increases are projected to be substantially larger than the overall average in many regions, including New England, South Atlantic, East North Central, West North Central, West South Central, and Mountain.

Teaching hospitals with 100 or more residents are projected to receive, on average, larger increases than the overall percent change of 11.2 percent, with a projected increase of 14.1 percent. Conversely, smaller teaching hospitals with fewer than 100 residents are projected to receive a smaller increase than the overall average, at 8.8 percent. Government hospitals are projected to receive a larger than average 25.8 percent increase, while voluntary hospitals are expected to receive increases somewhat smaller than the overall average (9.6 percent). Proprietary hospitals are expected to receive almost no change in DSH payments. Hospitals with 25 to 50 percent Medicare utilization are projected to receive increases in DSH payments slightly below the overall average at 9.9 percent, while all other hospitals are projected to receive larger increases.

#### 6. Effects of Reduction Under the Hospital Readmissions Reduction Program

In section V.I. of the preamble of this final rule, we discuss our finalized proposals for the FY 2018 Hospital Readmissions Reduction Program (established under section 3025 of the Affordable Care Act), which requires a reduction to a hospital's base operating MS-DRG payments to account for excess readmissions. In this final rule, we estimate that 2,577 hospitals would have their base operating MS-DRG payments reduced by their proposed proxy FY 2018 hospital-specific readmissions adjustment. As a result, we estimate that the Hospital Readmissions Reduction Program would save approximately \$556 million in FY 2018, an increase of \$24 million over the estimated FY 2017 savings. This estimate is based on the same data used in developing the quantitative analyses of proposed changes in payments per case discussed previously in section I.G. of this Regulatory Impact

Analysis, in conjunction with the FY 2017 hospital-specific readmissions adjustment factors and the proxy FY 2018 hospital-specific readmissions adjustment factors found in Table 15 of this final rule (available only through the Internet as described in section VI. of the Addendum to this final rule).

The table and analysis below illustrate the estimate of the financial impact of the implementation methodology for the provisions of the 21st Century Cures Act, as outlined in this final rule. We are presenting the estimated impact of the finalized methodology on hospitals by hospital characteristic.

The table presents results of hospitals stratified into quintiles based on the proportion of dual-eligible beneficiaries among Medicare FFS and managed care patients discharged between July 1, 2016 and June 30, 2016. Hospital excess readmission ratios (ERRs) are assessed relative to their peer group median and a neutrality modifier is applied to the payment reduction to maintain budget neutrality. The table includes three penalty metrics: Average payment reduction, total Medicare savings, and share of payment adjustments as a percentage of total payments. The average payment reduction is the average reduction in Medicare DRG payments of hospitals with a specified characteristic. The total Medicare savings column shows the total estimated penalties borne by hospitals with that characteristic. The share of payment adjustments is total Medicare savings for all hospitals with that characteristic as a percentage of all DRG payments for FY 2016 (October 1, 2015 to September 30, 2016). Because the payment reduction is applied to hospitals' base DRG payments, hospitals with more discharges will contribute a larger amount of Medicare savings to the group total of Medicare savings. For example, under the finalized methodology, the share of payment adjustments as a percentage of all DRG payments for urban hospitals is 0.63 percent. This means that total penalties for all urban hospitals are 0.63 percent of total payments for urban hospitals (that is, the ratio of total penalties to total DRG payments is 0.63 percent). The metric allows us to compare the financial impact of the method for assessing penalties between hospitals with different numbers of beds even though larger hospitals tend to generate higher total Medicare savings since their payment reduction is applied to more DRG payments. Measuring the financial impact on hospitals as a proportion of total DRG payments allows us to account for differences in the amount of DRG payments for hospitals within the group when comparing the financial impact of the program on different groups of hospitals.

THE IMPACT OF THE FINALIZED CHANGES TO THE HOSPITAL READMISSIONS REDUCTION PROGRAM PAYMENT ADJUSTMENT  
FORMULA BY HOSPITAL CHARACTERISTIC

Hospital characteristic	Number of hospitals	Penalty reduction (%)	Total medicare savings	Share of payment adjustments as a percentage of all base operating DRG payments (%)
All Hospitals .....	3,074	0.60	\$565,847,690	0.63

Mountain .....	219	0.47	22,147,627	0.44
Pacific .....	364	0.35	43,082,119	0.36

**Notes:** Results based on July 1, 2013 through June 30, 2016 discharges among subsection (d) and Maryland hospitals only. Although data from all subsection (d) and Maryland hospitals are used in calculations of each hospital's ERR, this table does not include results for Maryland hospitals. This table only includes results for hospitals who are eligible for a penalty under the program on the basis of having at least 25 eligible discharges for at least one measure. Hospitals are stratified into quintiles based on the proportion of dual-eligible beneficiaries for the 3-year FY 2018 performance period. Hospital penalties are scaled by a neutrality modifier of 0.9481 to maintain budget neutrality. To calculate the payment adjustment as a proportion of total base operating DRG payments this analysis used MedPAR data to calculate the total base operating DRG payments from October 1, 2015 through September 30, 2016 (FY 2016). The group average share of payment adjustments as a percentage of all DRG payments is calculated as the sum of all Medicare savings for the group of hospitals divided by total FY 2016 base operating DRG payments for all hospitals in that group. Hospital characteristics from the FY 2018 Hospital Inpatient Prospective Payment System (IPPS) proposed rule impact file. Data on SSI ratio comes from FY 2014 SSI data file. The total number of hospitals with hospital characteristics data do not add up to the total number of hospitals included in the FY 2018 Hospital Readmissions Reduction Program because not all hospitals have data for all characteristics. A hospital is considered a teaching hospital if it has an IME adjustment factor for Operation PPS (TCHOP) greater than zero and is considered a DSH hospital if it has a DSH patient percentage greater than zero. A hospital is a safety-net hospital if they are in the top DSH quintile. MCR percent is the percentage of total inpatient stays from Medicare patients.

The estimated impact of the finalized stratified methodology for the FY 2019

Hospital Readmissions Reduction Program compared to the current methodology

according to this metric is shown in the table below. The table is based on results when

hospitals are stratified into quintiles based on the proportion of dual-eligible beneficiaries among Medicare fee-for-service and managed care patients discharged between July 1, 2013 through June 30, 2016. The table shows the share of payment adjustments as a percentage of all DRG payments for each group of hospitals. The group share is calculated as the sum of penalties for all hospitals with that characteristic over the sum of all DRG payments for those hospitals between October 1, 2015 and September 30, 2016 (FY 2016).

Pacific .....	0.41	0.36

**Notes:** Results based on July 1, 2013 through June 30, 2016 discharges among subsection (d) and Maryland hospitals only. Although data from all subsection (d) and Maryland hospitals are used in calculations of each hospital's ERR, this table does not include results for Maryland hospitals. This table only includes results for hospitals who are eligible for a penalty under the program on the basis of having at least 25 eligible discharges for at least one measure. Under the finalized methodology, hospitals are stratified into quintiles based on the proportion of FFS and managed care dual-eligible beneficiaries for the 3-year FY 2018 performance period. To calculate the payment adjustment as a proportion of total FY 2016 base operating DRG payments this analysis used MedPAR data to calculate the total base operating DRG payments from October 1, 2015 through September 30, 2016 (FY 2016). The group average share of payment adjustments as a percentage of all DRG payments is calculated as the sum of all Medicare savings for the group of hospitals divided by total base operating DRG payments for all hospitals in that group. Hospital characteristics from the FY 2018 Hospital Inpatient Prospective Payment System (IPPS) proposed rule impact file. Data on SSI ratio comes from FY 2014 SSI data file. The total number of hospitals with hospital characteristics data do not add up to the total number of hospitals included in the FY 2018 Hospital Readmissions Reduction Program because not all hospitals have data for all characteristics. A hospital is considered a teaching hospital if it has an IME adjustment factor for Operation PPS (TCHOP) greater than zero and is considered a DSH hospital if it has a DSH patient percentage greater than zero. A hospital is a safety-net hospitals if they are in the top DSH quintile. MCR percent is the percentage of total inpatient stays from Medicare patients.

**7. Effects of Changes Under the FY 2018 Hospital Value-Based Purchasing (VBP) Program**

In section V.J. of the preamble of this final rule, we discuss the Hospital VBP Program under which the Secretary makes value-based incentive payments to hospitals based on their performance on measures during the performance period with respect to a fiscal year. These incentive payments will be funded for FY 2018 through a reduction to the FY 2018 base operating DRG payment amounts for all discharges for participating hospitals for such fiscal year, as required by section 1886(o)(7)(B) of the Act. The applicable percentage for FY 2018 and subsequent years is 2 percent. The total amount available for value-based incentive payments must be equal to the total amount of reduced payments for all hospitals for the fiscal year, as estimated by the Secretary.

In section V.J.1.b. of the preamble of this final rule, we estimate the available pool of funds for value-based incentive payments in the FY 2018 program year, which, in accordance with section 1886(o)(7)(C)(v) of the Act, will be 2.00 percent of base operating DRG payments, or a total of

approximately \$1.9 billion. This estimated available pool for FY 2018 is based on the historical pool of hospitals that were eligible to participate in the FY 2017 program year and the payment information from the March 2017 update of the FY 2016 MedPAR file.

The estimated impacts of the FY 2018 program year by hospital characteristic, found in the table below, are based on historical TPSs. We used the FY 2017 program year's TPSs to calculate the proxy adjustment factors used for this impact analysis. These are the most recently available scores that hospitals were given an opportunity to review and correct. The proxy adjustment factors use estimated annual base operating DRG payment amounts derived from the March 2017 update to the FY 2016 MedPAR file. The proxy adjustment factors can be found in Table 16A associated with this final rule (available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-For-Service-Payment/AcuteInpatientPPS/index.html>).

The impact analysis shows that, for the FY 2018 program year, the number of hospitals that would receive an increase in their base operating DRG payment amounts is higher

than the number of hospitals that would receive a decrease. Among urban hospitals, those in the New England, South Atlantic, East North Central, East South Central, West North Central, West South Central, Mountain, and Pacific regions would have an increase, on average, in their base operating DRG payment amounts. Urban hospitals in the Middle Atlantic region would receive an average decrease in their base operating DRG payment amounts. Among rural hospitals, those in all geographic regions would have an increase, on average, in their base operating DRG payment amounts.

On average, hospitals that receive a higher (over 65) percent of DSH payments would receive decreases in base operating DRG payment amounts. With respect to hospitals' Medicare utilization as a percent of inpatient days (MCR), those hospitals with an MCR above 65 percent would have the largest average increase in base operating DRG payment amounts.

Non-teaching hospitals would have an average increase, and teaching hospitals would experience an average decrease in base operating DRG payment amounts.

**IMPACT ANALYSIS OF BASE OPERATING DRG PAYMENT AMOUNT CHANGES RESULTING FROM THE FY 2018 HOSPITAL VBP PROGRAM**

	Number of hospitals	Average percentage change

Actual FY 2018 program year’s TPSs will not be reviewed and corrected by hospitals until after the FY 2018 IPPS/LTCH PPS final rule has been published. Therefore, the same historical universe of eligible hospitals and corresponding TPSs from the FY 2017 program year are used for the updated impact analysis in this final rule.

8. Effects of Proposed Changes to the HAC Reduction Program for FY 2018

The table and analysis below illustrate the estimated cumulative effect of the measures and scoring system for the Hospital-Acquired Condition (HAC) Reduction Program, as outlined in section V.K. of the preamble of this FY 2018 IPPS/LTCH PPS final rule. We are presenting the estimated impact of the FY 2018 HAC Reduction Program on hospitals by hospital characteristic.

These FY 2018 HAC Reduction Program results were calculated using the Winsorized z-score methodology finalized in the FY 2017 IPPS/LTCH PPS final rule (80 FR 57022 through 57025). Each hospital’s Total HAC

Score was calculated as the weighted average of the hospital’s Domain 1 score (15 percent) and Domain 2 score (85 percent). Non-Maryland hospitals with a Total HAC Score above the 75th percentile Total HAC Score were identified as being in the worst-performing quartile. The table below presents the estimated proportion of hospitals in the worst-performing quartile of the Total HAC Scores by hospital characteristic. We are not providing hospital-level data or payment impact in conjunction with this final rule because scores will undergo a 30-day review and correction period that will not conclude until after the publication of this final rule.

We used the modified Recalibrated Patient Safety Indicator (PSI) 90 Composite measure results based on Medicare fee-for-service (FFS) discharges from July 1, 2014 through September 30, 2015 and recalibrated version 6.0.2 of the PSI software to estimate the impact of the FY 2018 HAC Reduction Program. For the CDC Central Line-Associated Bloodstream Infection (CLABSI), Catheter-Associated Urinary Tract Infection

(CAUTI), Colon and Abdominal Hysterectomy Surgical Site Infection (SSI), Methicillin-resistant *Staphylococcus aureus* (MRSA) bacteremia, and *Clostridium difficile* Infection (CDI) measure results, we used standardized infection ratios (SIRs) calculated with hospital surveillance data reported to the National Healthcare Safety Network (NHSN) for infections occurring between January 1, 2015 and December 31, 2016.

To analyze the results by hospital characteristic, we used the FY 2018 Proposed Rule Impact File. This table includes 3,233 non-Maryland hospitals with a FY 2018 Total HAC Score. Of these, 3,215 hospitals had information for geographic location, region, bed size, disproportionate share hospital (DSH) percent, and teaching status; 3,184 had information for ownership; and 3,190 had information for Medicare utilization as a percent of inpatient days, which is also known as the Medicare Cost Report (MCR) percent. Maryland hospitals and hospitals

without a Total HAC Score are not included in the table below.

The second column in the table indicates the total number of non-Maryland hospitals with available data for each characteristic that have a Total HAC Score for the FY 2018 HAC Reduction Program. For example, with regard to teaching status, 2,151 hospitals are characterized as non-teaching hospitals, 815 are characterized as teaching hospitals with fewer than 100 residents, and 249 are characterized as teaching hospitals with at least 100 residents. This only represents a total of 3,215 hospitals because the other 18

hospitals have missing data for teaching status.

The third column in the table indicates the number of hospitals for each characteristic that would be in the worst-performing quartile of Total HAC Scores. These hospitals would receive a payment reduction under the FY 2018 HAC Reduction Program. For example, with regard to teaching status, 500 hospitals out of 2,151 hospitals characterized as non-teaching hospitals would be subject to a payment reduction. Among teaching hospitals, 189 out of 815 hospitals with fewer than 100 residents and 103 out of 249

hospitals with 100 or more residents would be subject to a payment reduction.

The fourth column in the table indicates the proportion of hospitals for each characteristic that would be in the worst-performing quartile of Total HAC Scores and would receive a payment reduction under the FY 2018 HAC Reduction Program. For example, 23.2 percent of the 2,151 hospitals characterized as non-teaching hospitals, 23.2 percent of the 815 teaching hospitals with fewer than 100 residents, and 41.4 percent of the 249 teaching hospitals with 100 or more residents would be subject to a payment reduction.

**ESTIMATED PROPORTION OF HOSPITALS IN THE WORST-PERFORMING QUARTILE (>75TH PERCENTILE) OF THE TOTAL HAC SCORES FOR THE FY 2018 HAC REDUCTION PROGRAM (BY HOSPITAL CHARACTERISTIC)**

**Source:** FY 2018 HAC Reduction Program Final Rule Results are based on Recalibrated PSI 90 Composite data from July 2014 through September 2015 and CDC CLABSI, CAUTI, SSI, CDI, and MRSA results from January 2015 through December 2016. Hospital Characteristics are based on the FY 2018 Proposed Rule Impact File.

<sup>a</sup> This column is the number of non-Maryland hospitals with a Total HAC Score within the corresponding characteristic that are estimated to be in the worst-performing quartile.

<sup>b</sup> This column is the percent of non-Maryland hospitals within each characteristic that are estimated to be in the worst-performing quartile. The percentages are calculated by dividing the number of non-Maryland hospitals with a Total HAC Score in the worst-performing quartile by the total number of non-Maryland hospitals with a Total HAC Score within that characteristic.

<sup>c</sup> The number of non-Maryland hospitals with a FY 2018 Total HAC Score (N = 3,233). Note that not all hospitals have data for all hospital characteristics.

<sup>d</sup> The number of hospitals that had information for: geographic location including urban/rural, bed size, and region; Disproportionate Share Hospital (DSH); and teaching status (n = 3,215).

<sup>e</sup> A hospital is considered a DSH hospital if it has a DSH patient percentage greater than zero.

<sup>f</sup> A hospital is considered a teaching hospital if it has an IME adjustment factor for Operation PPS (TCHOP) greater than zero.

<sup>g</sup> Not all hospitals had data for type of ownership (n = 3,184).

<sup>h</sup> Not all hospitals had data for MCR percent (n = 3,190).

#### 9. Effects of Implementation of the Additional 5-Year Extension of the Rural Community Hospital Demonstration Program

In section V.L. of the preamble of this final rule, we discuss our implementation of section 410A of Public Law 108–173, as amended by sections 3123 and 10313 of Public Law 111–148, and more recently, by section 15003 of Public Law 114–255, which requires the Secretary to conduct a demonstration that tests the feasibility and advisability of establishing “rural community” hospitals to furnish covered inpatient hospital services to Medicare beneficiaries. The demonstration makes payments under a reasonable cost methodology for covered inpatient hospital services furnished to Medicare beneficiaries by up to 30 rural hospitals. Section 15003 of Public Law 114–255, enacted December 13, 2016, requires a 10-year extension period (in place of the 5-year extension required by Public Law 111–148) for the demonstration. Therefore, the Secretary is required to conduct the demonstration for an additional 5-year period. Section 15003 of Public Law 114–255 also requires that, no later than 120 days after enactment of Public Law 114–255, the Secretary issue a solicitation for applications to select additional hospitals to participate in the demonstration program for the second 5 years of the 10-year extension period so long as the maximum number of 30 hospitals stipulated by Public Law 111–148 is not exceeded. Section 410A(c)(2) of Public Law 108–173 requires that, in conducting the demonstration program under this section, the Secretary shall ensure that the aggregate payments made by the Secretary do not exceed the amount which the Secretary would have paid if the demonstration program under this section was not implemented (budget neutrality).

In this FY 2018 IPPS/LTCH PPS final rule, we describe our proposed and finalized policies for implementation of the extension under section 15003 of Public Law 114–255, the budget neutrality methodology for the extension period authorized by the legislation, and the reconciliation of actual and estimated costs of the demonstration for previous years (2011, 2012, and 2013). Our proposal and final policy for budget neutrality adopted the general methodology used in previous years for the demonstration. As discussed in section V.L. of the preamble of the proposed rule, in the IPPS final rules from FYs 2005 through 2016, we estimated the additional payments made by the program for each of the participating hospitals as a result of the demonstration. In order to achieve budget neutrality, we adjusted the national IPPS rates by an amount sufficient to account for the added costs of this demonstration. In other words, we have applied budget neutrality across the payment system as a whole rather than across

the participants of this demonstration. The language of the statutory budget neutrality requirement permits the agency to implement the budget neutrality provision in this manner. The statutory language requires that aggregate payments made by the Secretary do not exceed the amount which the Secretary would have paid if the demonstration was not implemented, but does not identify the range across which aggregate payments must be held equal.

Section 15003 of Public Law 114–255 requires the Secretary to conduct the Rural Community Hospital Demonstration for a 10-year extension period (in place of the 5-year extension period required by the Affordable Care Act), beginning on the date immediately following the last day of the initial 5-year period under section 410A(a)(5) of Public Law 108–173. Specifically, section 15003 of Public Law 114–255 amended section 410A(g)(4) of Public Law 108–173 to require that, for hospitals participating in the demonstration as of the last day of the initial 5-year period, the Secretary shall provide for continued participation of such rural community hospitals in the demonstration during the 10-year extension period, unless the hospital makes an election to discontinue participation. Furthermore, section 15003 of Public Law 114–255 requires that, during the second 5 years of the 10-year extension period, the Secretary shall provide for participation under the demonstration during the second 5 years of the 10 year extension period for hospitals that are not described in subsection 410A(g)(4).

In the FY 2018 IPPS/LTCH PPS proposed rule, we proposed to implement the second 5 years of the 10-year extension period in a way that recognizes a gap in participation for the previously participating hospitals between the end of the first 5 years and the start of the second 5 years of the extension period, and that provides for alignment of the periods of performance under the extension among all participating hospitals. Thus, for each previously participating hospital that decides to participate in the second 5 years of the 10-year extension period, we proposed that the start date for the period of performance under the second 5-year extension period would be the start of the first cost reporting period on or after October 1, 2017 following upon the announcement of the selection of the additional hospitals for the demonstration. Our goal was to finalize this selection by June 2017, in time to include in the FY 2018 IPPS final rule an estimate of the costs of the demonstration during FY 2018 and the resulting budget neutrality offset amount for these newly participating hospitals, as well as for those hospitals among the previously participating hospitals that decide to participate in the extension period.

In the proposed rule, we proposed that if the selection of the additional hospitals

under the solicitation were not to be announced by June 2017, we would include the estimated costs of the demonstration for all participating hospitals for FY 2018 in the budget neutrality offset amount to be calculated in the FY 2019 IPPS/LTCH PPS proposed and final rules.

In the preamble in section V.L. of the proposed rule, we also described an alternative implementation approach, according to which each previously participating hospital would begin the second 5 years of the 10-year extension period on the date immediately after the date the period of performance under the first 5-year extension period ended. We also described the methodology that we considered for calculating the budget neutrality offset amount under this alternative approach.

In response to public comments that indicated that our proposed implementation approach would cause financial hardship for some of the previously participating hospitals, we are adopting this alternative implementation approach in this FY 2018 IPPS/LTCH PPS final rule. We describe the method for calculating budget neutrality under this approach. Because we were unable to announce the selections of additional hospitals by June 2017, in time for including the estimates of the cost of the demonstration for both previously and newly participated hospitals in FY 2018 in this FY 2018 final rule, we will include this estimate in the FY 2019 IPPS/LTCH PPS proposed and final rules. In addition, we will determine the costs of the demonstration for the previously participating hospitals for the period from when their period of performance ended for the first 5-year extension period and the start of the cost report year in FY 2018 when finalized cost reports for this period are available. We will include these costs for the demonstration in future rulemaking.

In previous years, we have incorporated a second component into the budget neutrality offset amounts identified in the final IPPS rules. As finalized cost reports became available, we determined the amount by which the actual costs of the demonstration for an earlier, given year differed from the estimated costs for the demonstration set forth in the final IPPS rule for the corresponding fiscal year, and we incorporated that amount into the budget neutrality offset amount for the upcoming fiscal year. We have calculated this difference for FYs 2005 through 2010 between the actual costs of the demonstration as determined from finalized cost reports once available, and estimated costs of the demonstration as identified in the applicable IPPS final rules for these years.

With the extension of the demonstration for another 5-year period, as authorized by section 15003 of Public Law 114–255, we

will continue this general procedure. Specifically, when finalized cost reports for FYs 2011, 2012, and 2013 are available, we will include this difference for these years in the budget neutrality offset adjustment to be applied to the national IPPS rates in a future final rule. We expect that this will occur in FY 2019. Also, when finalized cost reports for FYs 2014 through 2016 are available, we will include the difference between the actual costs as reflected on these cost reports and the amounts included in the budget neutrality offset amounts for these fiscal years in a future final rule.

#### 10. Effects of Changes Relating to Provider-Based Status of Indian Health Service and Tribal Facilities and Organizations

In section V.N. of the preamble of this final rule, we discuss our proposals and finalized policies relating to provider-based status of Indian Health Service (IHS) and tribal facilities and organizations. Regulations at § 413.65(m) currently grandfather facilities from provider-based regulations if they meet certain criteria, including on or before April 7, 2000, having furnished only services that were billed as if they had been furnished by a department of a hospital operated by the IHS or a Tribe. We have also issued subregulatory guidance on circumstances that would or would not result in a facility or organization losing its grandfathered status. After consideration of the special and legally recognized relationship between Indian Tribes and the U.S. Government, as well as current IHS policies and procedures, as we proposed, we remove the date limitation in § 413.65(m) that restricted the grandfathering provision to IHS or Tribal facilities and organizations furnishing services on or before April 7, 2000. We also made a technical change to make the regulation text more consistent with our current rules that require these facilities to comply with all applicable Medicare conditions of participation that apply to the main provider. We do not expect any significant payment impact because these finalized policies are in line with current guidance, and we believe that IHS policies and procedures regarding the planning, operation, and funding of such facilities are resulting in appropriate Medicare payments.

#### 11. Effects of Changes Relating to Hospital-within-Hospital (HwH) Policy

In section VII.B. of the preamble of this final rule, we discuss our proposal and finalized policy to revise the regulations applicable to HwHs so that the separateness and control requirements would only apply to IPPS-excluded HwHs that are co-located with IPPS hospitals beginning in FY 2018. This policy change is premised on the belief that the policy concerns that underlie our existing HwH regulations (that is, inappropriate patient shifting and hospitals acting as illegal de facto units) are sufficiently moderated in situations where IPPS-excluded hospitals are co-located with each other but not IPPS hospitals, in large part due to the payment system changes that have occurred over the intervening years for IPPS-excluded hospitals. In addition, we are revising the HwH requirements to no longer require the provisions that outline

performance of basic hospital functions in order to maintain IPPS-exclusion beginning in FY 2018. This revision will not result in a practical change to how HwHs are currently operated because the performance of basic hospital functions that are required under the HwH regulations are currently addressed under CMS' interpretative guidelines for the hospital conditions of participation. We do not expect any significant payment impact because these policies are primarily administrative in nature or in line with current guidance.

#### 12. Effects of Continued Implementation of the Frontier Community Health Integration Project (FCHIP) Demonstration

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57064 through 57065) we finalized, and in section VII.D.2. of the preamble of this final rule we discuss, the implementation of the FCHIP demonstration, which allows eligible entities to develop and test new models for the delivery of health care services in eligible counties in order to improve access to and better integrate the delivery of acute care, extended care, and other health care services to Medicare beneficiaries in no more than four States. Budget neutrality estimates for CAHs selected for the demonstration will be based on the demonstration period, August 1, 2016 through July 31, 2019. The demonstration includes three intervention prongs, under which specific waivers of Medicare payment rules will allow for enhanced payment: telehealth, skilled nursing facility/nursing facility, and ambulance services. These waivers are being implemented with the goal of increasing access to care with no net increase in costs.

We have specified the payment enhancements for the demonstration with the goal of maintaining the budget neutrality of the demonstration on its own terms (that is, the demonstration will produce savings from reduced transfers and admissions to other health care providers, thus offsetting any increase in payments resulting from the demonstration). However, because of the small size of this demonstration program and uncertainty associated with projected Medicare utilization and costs, we adopted a contingency plan (81 FR 57064 through 57065) to ensure that the budget neutrality requirement in section 123 of Public Law 110–275 is met. Accordingly, if analysis of claims data for the Medicare beneficiaries receiving services at each of the participating CAHs, as well as of other data sources, including cost reports, show that increases in Medicare payments under the demonstration during the 3-year period are not sufficiently offset by reductions elsewhere, we will recoup the additional expenditures attributable to the demonstration through a reduction in payments to all CAHs nationwide. The demonstration is projected to impact payments to participating CAHs under both Medicare Part A and Part B. Thus, in the event that we determine that aggregate payments under the demonstration exceed the payments that would otherwise have been made, CMS will recoup payments through reductions of Medicare payments to all CAHs under both Medicare Part A and Part B. Because of the small scale of the

demonstration, it would not be feasible to implement budget neutrality by reducing payments only to the participating CAH providers. Therefore we will make the reduction to payments to all CAHs, not just those participating in the demonstration, because the FCHIP program is specifically designed to test innovations that affect delivery of services by this provider category. We explained our belief that the language of the statutory budget neutrality requirement at section 123(g)(1)(B) of the Act permits the agency to implement the budget neutrality provision in this manner. The statutory language merely refers to ensuring that aggregate payments made by the Secretary do not exceed the amount which the Secretary estimates would have been paid if the demonstration project was not implemented, and does not identify the range across which aggregate payments must be held equal.

Given the 3-year period of performance of the FCHIP demonstration and the time needed to conduct the budget neutrality analysis, in the event the demonstration is found not to have been budget neutral, any excess costs will be recouped over a period of three cost reporting periods, beginning in CY 2020. Therefore, this policy will have no impact for any national payment system for FY 2018.

#### I. Effects of Changes in the Capital IPPS

##### 1. General Considerations

For the impact analysis presented below, we used data from the March 2017 update of the FY 2016 MedPAR file and the March 2017 update of the Provider-Specific File (PSF) that is used for payment purposes. Although the analyses of the changes to the capital prospective payment system do not incorporate cost data, we used the March 2017 update of the most recently available hospital cost report data (FYs 2014 and 2015) to categorize hospitals. Our analysis has several qualifications. We use the best data available and make assumptions about case-mix and beneficiary enrollment as described later in this section.

Due to the interdependent nature of the IPPS, it is very difficult to precisely quantify the impact associated with each change. In addition, we draw upon various sources for the data used to categorize hospitals in the tables. In some cases (for instance, the number of beds), there is a fair degree of variation in the data from different sources. We have attempted to construct these variables with the best available sources overall. However, it is possible that some individual hospitals are placed in the wrong category.

Using cases from the March 2017 update of the FY 2016 MedPAR file, we simulated payments under the capital IPPS for FY 2017 and payments for FY 2018 for a comparison of total payments per case. Any short-term, acute care hospitals not paid under the general IPPS (for example, hospitals in Maryland) are excluded from the simulations.

The methodology for determining a capital IPPS payment is set forth at § 412.312. The basic methodology for calculating the capital IPPS payments in FY 2018 is as follows:

$$(\text{Standard Federal Rate}) \times (\text{DRG weight}) \times (\text{GAF}) \times (\text{COLA for hospitals located in})$$

Alaska and Hawaii) × (1 + DSH Adjustment Factor + IME adjustment factor, if applicable).

In addition to the other adjustments, hospitals may receive outlier payments for those cases that qualify under the threshold established for each fiscal year. We modeled payments for each hospital by multiplying the capital Federal rate by the GAF and the hospital's case-mix. We then added estimated payments for indirect medical education, disproportionate share, and outliers, if applicable. For purposes of this impact analysis, the model includes the following assumptions:

- We estimate that the Medicare case-mix index will increase by 0.5 percent in both FYs 2017 and 2018.
- We estimate that Medicare discharges will be approximately 11.0 million in FY 2017 and 11.1 million in FY 2018.
- The capital Federal rate was updated beginning in FY 1996 by an analytical framework that considers changes in the prices associated with capital-related costs and adjustments to account for forecast error, changes in the case-mix index, allowable changes in intensity, and other factors. As discussed in section III.A.1.a. of the Addendum to this rule, the update is 1.3 percent for FY 2018.
- In addition to the FY 2018 update factor, the FY 2018 capital Federal rate was calculated based on a GAF/DRG budget neutrality adjustment factor of 0.9986, an outlier adjustment factor of 0.9484, and an adjustment to remove the one-time prospective adjustment of 1.006 made in FY 2017 to address the effect of the 0.2 percent reduction to the national capital Federal rate in effect for FY 2014, FY 2015, and FY 2016 relating to the 2-midnight policy. The 2-midnight adjustment that was finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57294) is discussed in section V.C. of the preamble of this final rule as it relates to the capital Federal rate. As also discussed in section V.C. of the preamble of this final rule, we are not making an additional MS-DRG documentation and coding adjustment to the capital IPPS Federal rate for FY 2018.

2. Results

We used the actuarial model previously described in section I.I. of Appendix A of this final rule to estimate the potential impact of our changes for FY 2018 on total capital payments per case, using a universe of 3,292 hospitals. As previously described, the

individual hospital payment parameters are taken from the best available data, including the March 2017 update of the FY 2016 MedPAR file, the March 2017 update to the PSF, and the most recent cost report data from the March 2017 update of HCRIS. In Table III, we present a comparison of estimated total payments per case for FY 2017 and estimated total payments per case for FY 2018 based on the FY 2018 payment policies. Column 2 shows estimates of payments per case under our model for FY 2017. Column 3 shows estimates of payments per case under our model for FY 2018. Column 4 shows the total percentage change in payments from FY 2017 to FY 2018. The change represented in Column 4 includes the 1.3 percent update to the capital Federal rate and other changes in the adjustments to the capital Federal rate. The comparisons are provided by: (1) Geographic location; (2) region; and (3) payment classification.

The simulation results show that, on average, capital payments per case in FY 2018 are expected to increase as compared to capital payments per case in FY 2017. This expected increase overall is due to the approximately 1.3 percent update to the capital Federal rate for FY 2018, as well as the outlier adjustment of 0.9484 which is a 1.04 percent change from the FY 2017 outlier adjustment of 0.9386. The change in the outlier adjustment is expected to increase capital payments per case for most hospitals to a lesser or greater extent. (For a discussion of the determination of the capital Federal rate and adjustments, we refer readers to section III.A. of the Addendum to this final rule.) Hospitals within both rural and urban regions may experience an increase or a decrease in capital payments per case due to changes in the GAFs. These regional effects of the changes to the GAFs on capital payments are consistent with the projected changes in payments due to changes in the wage index (and policies affecting the wage index) as shown in Table I in section I.G. of this Appendix A.

The net impact of these changes is an estimated 2.5 percent change in capital payments per case from FY 2017 to FY 2018 for all hospitals (as shown in Table III).

The geographic comparison shows that, on average, most hospitals in all classifications (urban and rural) will experience an increase in capital IPPS payments per case in FY 2018 as compared to FY 2017. Capital IPPS payments per case for hospitals in large urban areas as well as hospitals in rural

areas, would increase by an estimated 2.9 percent, from FY 2017 to FY 2018. Capital IPPS payments per case for other urban hospitals are estimated to increase 2.0 percent.

The comparisons by region show that the estimated increases in capital payments per case from FY 2017 to FY 2018 in urban areas range from a 3.7 percent increase for the West South Central urban region to a 0.8 percent increase for the Mountain urban region. For rural regions, the New England rural region is projected to experience the largest increase in capital IPPS payments per case of 5.2 percent, while the South Atlantic rural region is projected to experience an increase in capital IPPS payments per case of 1.9 percent.

Hospitals of all types of ownership (that is, voluntary hospitals, government hospitals, and proprietary hospitals) are expected to experience an increase in capital payments per case from FY 2017 to FY 2018. The increase in capital payments for voluntary hospitals is estimated to be 2.3 percent. Government hospitals and proprietary hospitals, are expected to experience an increase in capital IPPS payments of 3.2 percent.

Section 1886(d)(10) of the Act established the MGCRB. Hospitals may apply for reclassification for purposes of the wage index for FY 2018. Reclassification for wage index purposes also affects the GAFs because that factor is constructed from the hospital wage index. To present the effects of the hospitals being reclassified as of the publication of this rule for FY 2018, we show the average capital payments per case for reclassified hospitals for FY 2018. Urban reclassified hospitals are expected to experience an increase in capital payments of 1.6 percent; urban nonreclassified hospitals are expected to experience an increase in capital payments of 2.9 percent. The estimated percentage increase for rural reclassified hospitals as well as for rural nonreclassified hospitals is 2.8 percent. Hospitals reclassified under section 401 are among the few groups of hospitals not expected to experience an increase in capital payments—it is expected that these hospitals would experience a decrease in capital payments of 1.6 percent, while capital payments for other reclassified hospitals are expected to increase an estimated 6.6 percent.

TABLE III—COMPARISON OF TOTAL PAYMENTS PER CASE  
[FY 2017 payments compared to FY 2018 payments]

	Number of hospitals	Average FY 2017 payments/case	Average FY 2018 payments/case	Change
By Geographic Location:				
All hospitals	3,292	920	943	2.5
Large urban areas (populations over 1 million)	1,340	1,007	1,036	2.9
Other urban areas (populations of 1 million or fewer)	1,152	896	913	2.0
Rural areas	800	625	644	2.9
Urban hospitals	2,492	953	977	2.5
0–99 beds	648	768	798	3.9
100–199 beds	763	825	850	3.0
200–299 beds	441	877	897	2.2

TABLE III—COMPARISON OF TOTAL PAYMENTS PER CASE—Continued

J. Effects of Payment Rate Changes and Policy Changes Under the LTCH PPS

1. Introduction and General Considerations

In section VIII. of the preamble of this final rule and section V. of the Addendum to this final rule, we set forth the annual update to the payment rates for the LTCH PPS for FY 2018. In the preamble of this final rule, we specify the statutory authority for the provisions that are presented, identify the proposed and finalized policies, and present rationales for our decisions as well as alternatives that were considered. In this section of Appendix A to this final rule, we discuss the impact of the changes to the payment rate, factors, and other payment rate policies related to the LTCH PPS that are presented in the preamble of this final rule in terms of their estimated fiscal impact on the Medicare budget and on LTCHs.

There are 415 LTCHs included in this impacts analysis. We note that, although there are currently approximately 428 LTCHs, for purposes of this impact analysis, we excluded the data of all-inclusive rate providers consistent with the development of the FY 2018 MS–LTC–DRG relative weights (discussed in section VIII.B.3.c. of the preamble of this final rule. Moreover, in the claims data use for this final rule, two of these 415 LTCHs only have claims for site neutral payment rate cases and are thus not included in our impact analysis for LTCH PPS standard Federal payment rate cases.) In the impact analysis, we used the payment rate, factors, and policies presented in this final rule, which include the rolling end to transition to the site neutral payment rate required by section 1886(m)(6)(A) of the Act (as described below), the 1.0 percent annual update to the LTCH PPS standard Federal payment rate required by section 411 of Pub. L. 114–10, the update to the MS–LTC–DRG classifications and relative weights, the update to the wage index values and labor-related share, the change to the SSO payment methodology (discussed in VIII.E. of the preamble of this final rule), our finalized policy to adopt a 1-year regulatory delay of the full implementation of the 25-percent threshold policy for FY 2018, and our finalized policies to implement certain provisions of the 21st Century Cures Act, and the best available claims and CCR data to estimate the change in payments for FY 2018.

Under the dual rate LTCH PPS payment structure, payment for LTCH discharges that meet the criteria for exclusion from the site neutral payment rate (that is, LTCH PPS

standard Federal payment rate cases) is based on the LTCH PPS standard Federal payment rate. Consistent with the statute, the site neutral payment rate is the lower of the IPPS comparable per diem amount as determined under § 412.529(d)(4), including any applicable outlier payments as specified in § 412.525(a); or 100 percent of the estimated cost of the case as determined under existing § 412.529(d)(2). In addition, there are two separate HCO targets—one for LTCH PPS standard Federal payment rate cases and one for site neutral payment rate cases. The statute also establishes a transitional payment method for cases that are paid the site neutral payment rate for LTCH discharges occurring in cost reporting periods beginning during FY 2016 and FY 2017. For FY 2018, the applicability of this transitional payment method for site neutral payment rate cases is dependent upon both the discharge date and the start date of the LTCH's FY 2018 cost reporting period. Specifically, the transitional payment method only applies to those site neutral payment rate cases that occur in cost reporting periods that begin before October 1, 2017. The transitional payment amount for site neutral payment rate cases is a blended payment rate, which is calculated as 50 percent of the applicable site neutral payment rate amount for the discharge as determined under § 412.522(c)(1) and 50 percent of the applicable LTCH PPS standard Federal payment rate for the discharge determined under § 412.523, while site neutral payment rate cases in cost reporting periods beginning on or after October 1, 2017 are paid the site neutral payment rate amount determined under § 412.522(c)(1).

*Comment:* Several commenters requested that we extend the transition period to the site neutral payment rate under the LTCH PPS' dual payment rate structure.

*Response:* Under Section 1886(m)(6)(B)(i)(II) of the Act, we are required to pay for discharges that do not meet the statutory criteria for exclusion from the site neutral payment rate at the site neutral payment rate for discharges in cost reporting periods beginning in FY 2018 or later. The statute only provides for payments at the blended payment rate for discharges that do not meet the statutory criteria for exclusion from the site neutral payment rate for those discharges that occur in cost reporting periods beginning during FY 2016 or FY 2017. Therefore, under Section 1886(m)(6)(B)(i)(II) of the Act, we lack the

statutory authority to do as these commenters request.

*Comment:* Several commenters objected to our expectation that the site neutral payment rate would not affect access to or quality of care for patients based on what they assert are incorrect actuarial assumptions. In support of this objection, some commenters analyzed FY 2016 claims data which they believe shows that site neutral payment rate cases have not matched our actuarial assumptions that the costs and resource use for cases paid at the site neutral payment rate will likely mirror the costs and resource use for IPPS cases assigned to the same MS–DRG. These commenters believe CMS' statements could mislead LTCHs and Medicare beneficiaries about the projected impact of the site neutral payment rate on access to or quality of care.

*Response:* While we understand and share commenters' concerns about access to and quality of care for Medicare beneficiaries, we disagree that our stated expectation that the site neutral payment rate will not affect these is incorrect or misleading. To the extent that the data from FY 2016 appears to rebut our actuarial assumptions on the costs and resource of site neutral payment rate cases, we remind commenters that given the rolling nature of the start of the transition to the site neutral payment rate (discharges in cost reporting periods beginning on or after October 1, 2015), many LTCH claims from FY 2016 were not subject to the site neutral payment rate at all as many LTCHs did not begin their FY 2016 cost reporting period until the fourth quarter of that fiscal year. In addition, no LTCH is fully subject to the site neutral payment rate until its cost reporting period beginning in FY 2018 due to the 2-year transition period provided by the statute (meaning that all claims which were subject to the site neutral payment rate in FY 2016 were paid under the blended payment rate which included a payment based on 50 percent of the LTCH PPS standard Federal payment rate). Therefore, the analysis presented by commenters, based on FY 2016 data, does not invalidate our assumptions about the costs and resource use for site neutral payment rate cases as the FY 2016 claims appear to not yet reflect the expected change in cost and resources once the payment for site neutral payment rate cases is fully based on the site neutral payment rate. We will continue to monitor the data and review the assumptions as appropriate. However, we continue to believe that the

assumptions underlying our conclusion that the site neutral payment system will not negatively impact access to or quality of care are valid, as is the conclusion. As demonstrated in areas where there is little or no LTCH presence, general short-term acute care hospitals are effectively providing treatment for the same types of patients that are treated in LTCHs in areas where there is one or more LTCH present.

Based on the best available data for the 415 LTCHs in our database that were considered in the analyses used for this final rule, we estimate that overall LTCH PPS payments in FY 2018 will decrease by approximately 4.2 percent (or approximately \$195 million) based on the rates and factors presented in section VIII. of the preamble and section V. of the Addendum to this final rule. (We note that this estimate does not reflect our finalized policy to adopt a 1-year regulatory delay of the full implementation of the 25-percent threshold policy for FY 2018 and, with the exception of changes to the HCO payment policy, does not reflect our finalized policies regarding the implementation of certain provisions of the 21st Century Cures Act. As discussed in greater detail below, our actuaries estimate these finalized policies will increase spending by approximately \$85 million in FY 2018.) This projection takes into account estimated payments for LTCH cases in our database that met or would have met the patient-level criteria and been paid the LTCH PPS standard Federal payment rate if those criteria had been in effect at the time of the discharge, and estimated payments for LTCH cases that did not meet or would not have met the patient-level criteria and been paid under the site neutral payment rate if that rate had been in effect at the time of the discharge, as described in the following paragraph.

The statutory transitional payment method for cases that are paid the site neutral payment rate for LTCH discharges occurring in cost reporting periods beginning during FY 2016 or FY 2017 uses a blended payment rate, which is determined as 50 percent of the site neutral payment rate amount for the discharge and 50 percent of the standard Federal prospective payment rate amount for the discharge (§ 412.522(c)(3)). The transitional blended payment rate uses the same blend percentages (that is, 50 percent) for both years of the 2-year transition period. Therefore, when estimating FY 2017 LTCH PPS payments for site neutral payment rate cases for this impact analysis, the transitional blended payment rate was applied to all such cases because all discharges in FY 2017 are either in the hospital's cost reporting period that began during FY 2016 or in the hospital's cost reporting period that will begin during FY 2017. However, when estimating FY 2018 LTCH PPS payments for site neutral payment rate cases for this impact analysis, because the statute specifies that the site neutral payment rate effective date (and 2-year transitional period) for a given LTCH is based on the date that LTCH's cost reporting period begins during FY 2018, we included an adjustment to account for this rolling effective date, consistent with the general approach used for the LTCH PPS impact analysis presented in the FY 2016

IPPS/LTCH PPS final rule (80 FR 49831). This approach accounts for the fact that site neutral payment rate cases in FY 2018 that are in a LTCH's cost reporting period that begin *before* October 1, 2017 continue to be paid under the transitional payment method until the start of the LTCH's first cost reporting period beginning on or *after* October 1, 2017. Site neutral payment rate cases in a LTCH's cost reporting period beginning on or after October 1, 2017 will no longer be paid under the transitional payment method and will instead be paid the site neutral payment rate amount as determined by § 412.522(c)(1).

For purposes of this impact analysis, to estimate total FY 2018 LTCH PPS payments for site neutral payment rate cases, we used the same general approach as was used in the FY 2016 IPPS/LTCH PPS final rule with modifications to account for the rolling end date to the transitional site neutral payment rate in FY 2018 instead of the rolling effective date for implementation of the transitional site neutral payment rate in FY 2016. In summary, under this approach, we grouped LTCHs based on the quarter their cost reporting periods will begin during FY 2018. For example, LTCHs with cost reporting periods that begin during October through December 2017 begin during the first quarter of FY 2018. For LTCHs grouped in each quarter of FY 2018, we modeled those LTCHs' estimated FY 2018 site neutral payment rate payments under the transitional blended payment rate based on the quarter in which the LTCHs in each group would continue to be paid the transitional payment method for the site neutral payment rate cases.

For purposes of this estimate, then, we assume the cost reporting period is the same for all LTCHs in each of the quarterly groups and that this cost reporting period begins on the first day of that quarter. (For example, our first group consists of 42 LTCHs whose cost reporting period will begin in the first quarter of FY 2018 so that, for purposes of this estimate, we assume all 42 LTCHs will begin their FY 2018 cost reporting period on October 1, 2017.) Second, we estimated the proportion of FY 2018 site neutral payment rate cases in each of the quarterly groups, and we then assume this proportion is applicable for all four quarters of FY 2018. (For example, as discussed in more detail below, we estimate the first quarter group will discharge 6.6 percent of all FY 2018 site neutral payment rate cases and therefore, we estimate that group of LTCHs will discharge 6.6 percent of all FY 2018 site neutral payment rate cases in each quarter of FY 2018.) Then, we modeled estimated FY 2018 payments on a quarterly basis under the LTCH PPS standard Federal payment rate based on the assumptions described above. We continue to believe that this approach is a reasonable means of taking the rolling effective date into account when estimating FY 2018 payments.

Based on the fiscal year begin date information in the March 2017 update of the PSF and the LTCH claims from the March 2017 update of the FY 2016 MedPAR files for the 415 LTCHs in our database used for this final rule, we found the following: 6.6

percent of site neutral payment rate cases are from 42 LTCHs whose cost reporting periods will begin during the first quarter of FY 2018; 21.2 percent of site neutral payment rate cases are from 97 LTCHs whose cost reporting periods will begin in the second quarter of FY 2018; 10.2 percent of site neutral payment rate cases are from 57 LTCHs whose cost reporting periods will begin in the third quarter of FY 2018; and 62.1 percent of site neutral payment rate cases are from 219 LTCHs whose cost reporting periods will begin in the fourth quarter of FY 2018. Therefore, the following percentages apply in the approach described above:

- First Quarter FY 2018: 6.6 percent of site neutral payment rate cases (that is, the percentage of discharges from LTCHs whose FY 2018 cost reporting will begin in the first quarter of FY 2018) are no longer eligible for the transitional payment method, while the remaining 93.4 percent of site neutral payment rate discharges are eligible to be paid under the transitional payment method.

- Second Quarter FY 2018: 27.7 percent of site neutral payment rate second quarter discharges (that is, the percentage of discharges from LTCHs whose FY 2018 cost reporting will begin in the first or second quarter of FY 2018) are no longer eligible for the transitional payment method while the remaining 72.3 percent of site neutral payment rate second quarter discharges are eligible to be paid under the transitional payment method.

- Third Quarter FY 2018: 37.9 percent of site neutral payment rate third quarter discharges (that is, the percentage of discharges from LTCHs whose FY 2018 cost reporting will begin in the first, second, or third quarter of FY 2018) are no longer eligible for the transitional payment method while the remaining 62.1 percent of site neutral payment rate third quarter discharges are eligible to be paid under the transitional payment method.

- Fourth Quarter FY 2018: 100.0 percent of site neutral payment rate fourth quarter discharges (that is, the percentage of discharges from LTCHs whose FY 2018 cost reporting will begin in the first, second, third, or fourth quarter of FY 2018) are no longer eligible for the transitional payment method so that no site neutral payment rate case discharges are eligible to be paid under the transitional payment method.

Based on the FY 2016 LTCH cases that were used for the analyses in this final rule, approximately 42 percent of those cases were or would have been classified as site neutral payment rate cases if the site neutral payment rate had been in effect at the time of the discharge (that is, 42 percent of LTCH cases did not or would not have met the patient-level criteria for exclusion from the site neutral payment rate). Our Office of the Actuary estimates that the percent of LTCH PPS cases that will be paid at the site neutral payment rate in FY 2018 will not change significantly from the historical data. Taking into account the transitional blended payment rate and other changes that will apply to the site neutral payment rate cases in FY 2018, we estimate that aggregate LTCH PPS payments for these site neutral payment

rate cases will decrease by approximately 20 percent (or approximately \$230 million).

Approximately 58 percent of LTCH cases are expected to meet the patient-level criteria for exclusion from the site neutral payment rate in FY 2018, and will be paid based on the LTCH PPS standard Federal payment rate for the full year. We estimate that total LTCH PPS payments for these LTCH PPS standard Federal payment rate cases in FY 2018 will increase approximately 1.0 percent (or approximately \$35 million). This estimated increase in LTCH PPS payments for LTCH PPS standard Federal payment rate cases in FY 2018 is primarily due to the 1.0 percent annual update to the LTCH PPS standard Federal payment rate for FY 2018 required by section 411 of Public Law 114–10 (discussed in section V.A. of the Addendum to this final rule). (We note that because our SSO payment methodology discussed in VIII.E. of the preamble of this final rule incorporates a budget neutrality adjustment, this policy does not increase or decrease aggregate payments, and therefore does not factor into the 1.0 percent increase in aggregate payments.)

Based on the 415 LTCHs that were represented in the FY 2016 LTCH cases that were used for the analyses in this final rule presented in this Appendix, we estimate that aggregate FY 2018 LTCH PPS payments will be approximately \$4.418 billion, as compared to estimated aggregate FY 2017 LTCH PPS payments of approximately \$4.612 billion, resulting in an estimated overall decrease in LTCH PPS payments of approximately \$195 million. Furthermore, as discussed in more detail below, our Office of the Actuary is estimating an additional increase in aggregate FY 2018 LTCH PPS payments of approximately \$85 million with \$70 million resulting from our finalized policy to delay full implementation of the 25-percent threshold policy for FY 2018 and another \$15 million coming from our implementation of certain provisions of the 21st Century Cures Act. Therefore, in total, we project an overall decrease in LTCH PPS payments of approximately \$110 million (–\$195 million + \$85 million) or approximately a 2.4 percent decrease in LTCH PPS payments in FY 2018 as compared to FY 2017. Because the combined distributional effects and estimated payment changes exceed \$100 million, this final rule is a major economic rule. We note that the estimated \$195 million decrease in LTCH PPS payments in FY 2018 (which includes estimated payments for LTCH PPS standard Federal payment rate cases and site neutral payment rate cases, but does not include estimated payments for our finalized policy to delay full implementation of the 25-percent threshold policy for FY 2018 or the certain provisions of the 21st Century Cures Act) does not reflect changes in LTCH admissions or case-mix intensity, which will also affect the overall payment effects of the policies in this final rule.

The LTCH PPS standard Federal payment rate for FY 2017 is \$42,476.41. For FY 2018, we are establishing an LTCH PPS standard Federal payment rate of \$41,430.56 which reflects the 1.0 percent annual update to the LTCH PPS standard Federal payment rate, the area wage budget neutrality factor of

1.0006434 to ensure that the changes in the wage indexes and labor-related share do not influence aggregate payments, and the budget neutrality adjustment of 0.9651 to ensure that our changes to the SSO payment methodology (discussed in VIII.E. of the preamble of this final rule) do not influence aggregate payments. For LTCHs that fail to submit data for the LTCH QRP, in accordance with section 1886(m)(5)(C) of the Act, we are establishing an LTCH PPS standard Federal payment rate of \$40,610.16. This reduced LTCH PPS standard Federal payment rate reflects the updates and factors previously described as well as the required 2.0 percentage point reduction to the annual update for failure to submit data under the LTCH QRP. We note that the factors previously described to determine the FY 2018 LTCH PPS standard Federal payment rate are applied to the FY 2017 LTCH PPS standard Federal rate set forth under § 412.523(c)(3)(xiv) (that is, \$42,476.41).

Table IV shows the estimated impact for LTCH PPS standard Federal payment rate cases. The estimated change attributable solely to the annual update of 1.0 percent to the LTCH PPS standard Federal payment rate is projected to result in an increase of 0.9 percent in payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2017 to FY 2018, on average, for all LTCHs (Column 6). In addition to the annual update to the LTCH PPS standard Federal payment rate for FY 2018, the estimated increase of 0.9 percent shown in Column 6 of Table IV also includes estimated payments for SSO cases that will be paid using special methodologies that are not affected by the annual update to the LTCH PPS standard Federal payment rate (without incorporating our SSO payment methodology as discussed in VIII.E. of the preamble of this final rule), as well as the reduction that is applied to the annual update of LTCHs that do not submit the required LTCH QRP data. Therefore, for all hospital categories, the projected increase in payments based on the proposed LTCH PPS standard Federal payment rate to LTCH PPS standard Federal payment rate cases is somewhat less than the 1.0 percent annual update for FY 2018 required under section 411 of Pub. L. 114–10.

For FY 2018, we are updating the wage index values based on the most recent available data, and we are continuing to use labor market areas based on the OMB CBSA delineations (as discussed in section V.B. of the Addendum to this final rule). In addition, we reduced the labor-related share from 66.5 percent to 66.2 percent under the LTCH PPS for FY 2018, based on the most recent available data on the relative importance of the labor-related share of operating and capital costs of the 2013-based LTCH market basket. We also applied an area wage level budget neutrality factor of 1.0006434 to ensure that the changes to the wage data and labor-related share do not result in a change in estimated aggregate LTCH PPS payments to LTCH PPS standard Federal payment rate cases.

As we discuss in VIII.E. of the preamble of this final rule, we are simplifying our SSO payment methodology in order to alleviate

potential incentives to improperly hold patients beyond the SSO threshold. We also note we do not believe aggregate payments to LTCHs should increase or decrease as a result of our policy, and thus, we applied a budget neutrality factor of 0.9651 to ensure the changes to the SSO payment methodology does not result in a change in estimated aggregate LTCH PPS payments to LTCH PPS standard Federal payment rate cases.

We currently estimate total HCO payments for LTCH PPS standard Federal payment rate cases will decrease from FY 2017 to FY 2018. Based on the FY 2016 LTCH cases that were used for the analyses in this final rule, we estimate that the FY 2017 HCO threshold of \$21,943 (as established in the FY 2017 IPPS/LTCH PPS final rule) will result in estimated HCO payments for LTCH PPS standard Federal payment rate cases in FY 2017 that are above the estimated 8 percent target. Specifically, we currently estimate that HCO payments for LTCH PPS standard Federal payment rate cases will be approximately 8.1 percent of the estimated total LTCH PPS standard Federal payment rate payments in FY 2017. Combined with our estimate that FY 2018 HCO payments for LTCH PPS standard Federal payment rate cases will be 7.975 percent of estimated total LTCH PPS standard Federal payment rate payments in FY 2018 as required by section 15004 of the 21st Century Cures Act, this will result in the estimated decrease in HCO payments of approximately 0.1 percent between FY 2017 and FY 2018.

In calculating these estimated HCO payments, we increased estimated costs by our actuaries' projected market basket percentage increase factor. Without the change to our SSO payment methodology, this increase in estimated costs will result in a projected increase in SSO payments in FY 2018 (because 100 percent of the estimated cost of the case is an option in the SSO payment formula (§ 412.529)). We estimate that those increased SSO payments in FY 2018 will increase total payments for LTCH PPS standard Federal payment rate cases by approximately 0.2 percent.

Table IV shows the estimated impact of the payment rate and policy changes on LTCH PPS payments for LTCH PPS standard Federal payment rate cases for FY 2018 by comparing estimated FY 2017 LTCH PPS payments to estimated FY 2018 LTCH PPS payments. (As noted earlier, our analysis does not reflect changes in LTCH admissions or case-mix intensity.) The projected increase in payments from FY 2017 to FY 2018 for LTCH PPS standard Federal payment rate cases of 1.0 percent is attributable to the impacts of the change to the LTCH PPS standard Federal payment rate (0.9 percent in Column 6) and the effect of the estimated decrease in HCO payments for LTCH PPS standard Federal payment cases (0.1 percent), and the estimated increase in payments for SSO cases (0.2 percent) prior to incorporation of our SSO payment methodology. We note that these impacts do not include LTCH PPS site neutral payment rate cases for the reasons discussed in section I.J.4. of this Appendix.

As we discuss in detail throughout this final rule, based on the most recent available

data, we believe that the provisions of this final rule relating to the LTCH PPS, which are projected to result in an overall decrease in estimated aggregate LTCH PPS payments, and the resulting LTCH PPS payment amounts will result in appropriate Medicare payments that are consistent with the statute.

## 2. Impact on Rural Hospitals

For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of an urban area and has fewer than 100 beds. As shown in Table IV, we are projecting a 0.1 percent decrease in estimated payments for LTCH PPS standard Federal payment rate cases. This estimated impact is based on the FY 2016 data for the 21 rural LTCHs (out of 415 LTCHs) that were used for the impact analyses shown in Table IV.

## 3. Impact of Other Changes Under the LTCH PPS for FY 2018

Overall, our actuaries estimate the provisions of the 21st Century Cures Act that affect LTCH PPS payments will increase aggregate spending to LTCHs by approximately \$15 million in FY 2018. Specifically, they estimate the provisions in section 15004, which provide for certain exceptions to the moratorium on an increase in beds in LTCH or LTCH satellite locations (discussed in section VIII.H of the preamble of this final rule) and a change in the treatment of HCO payments to LTCH PPS standard rate cases (discussed in section V.D. of the Addendum of this final rule) to result in an aggregate increase in Medicare spending of \$10 million. The remaining estimated increase of \$5 million in Medicare spending comes from the temporary exception to the site neutral payment rate for certain spinal cord hospitals provided for under section 15009 (as discussed in section VIII.E. of the preamble of this final rule). Our actuaries estimate the remaining provisions of the 21st Century Cures Act applicable to LTCHs (that is, sections 15007, 15008, and 15010, discussed in sections VIII.I., VIII.J., and VIII.F., respectively, of the preamble of this final rule) will have negligible impact on aggregate Medicare spending in FY 2018. (We note that section 15006, which provides for an additional delay in the full implementation of the 25-percent threshold policy (discussed in VIII.G. of the preamble of this final rule), does not impact FY 2018 LTCH PPS payments.) In addition, our actuaries estimate that our implementation of a further delay the full implementation of the 25-percent threshold policy for FY 2018 will increase aggregate Medicare spending by \$70 million, up from our estimate of \$50 million in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20218). This increase is due to updating the estimate for consistency with the assumptions used to develop the Midsession Review of the President's Budget, in addition to refinements in modeling LTCH PPS payments under the new dual rate payment system.

As discussed in section VIII.E. of the preamble of this final rule, section 15009 of the 21st Century Cures Act provides for a temporary exception to the site neutral payment rate for certain spinal cord specialty hospitals for discharges occurring in cost

reporting periods beginning during FY 2018 and FY 2019. To qualify for this temporary exception, an LTCH must, among other things, meet the "significant out-of-state admissions criterion" at section 1886(m)(6)(F)(iii) of the Act. The statute further provides authority for the Secretary to implement the significant out-of-state admissions criterion at section 1886(m)(6)(F)(iii) of the Act by program instruction or otherwise, and exempts the policy initiatives from any information collection requirements under the Paperwork Reduction Act. Although exempt from these information collection requirements, we estimate that each application will require 2.5 hours of work from each LTCH (to review the billing addresses of the hospital's Medicare and non-Medicare inpatients). This information will be collected on a one-time basis. Based on the best information available to CMS, we estimate that only two hospitals meet the other requirements for this exception. Therefore, we estimate that the total number of hours associated with this request will be 5 (2.5 hours per hospital for 2 hospitals). We estimate a current, average salary of \$29 per hour plus 100 percent for fringe benefits (\$58 per hour). Therefore, we estimate the total costs associated with this information collection will be \$290 (5 hours at \$58 per hour).

## 4. Anticipated Effects of LTCH PPS Payment Rate Changes and Policy Changes

### a. Budgetary Impact

Section 123(a)(1) of the BBRA requires that the PPS developed for LTCHs "maintain budget neutrality." We believe that the statute's mandate for budget neutrality applies only to the first year of the implementation of the LTCH PPS (that is, FY 2003). Therefore, in calculating the FY 2003 standard Federal payment rate under § 412.523(d)(2), we set total estimated payments for FY 2003 under the LTCH PPS so that estimated aggregate payments under the LTCH PPS were estimated to equal the amount that would have been paid if the LTCH PPS had not been implemented.

Section 1886(m)(6)(A) of the Act establishes a dual rate LTCH PPS payment structure with two distinct payment rates for LTCH discharges beginning in FY 2016. Under this statutory change, LTCH discharges that meet the patient-level criteria for exclusion from the site neutral payment rate (that is, LTCH PPS standard Federal payment rate cases) are paid based on the LTCH PPS standard Federal payment rate. LTCH discharges paid at the site neutral payment rate are generally paid the lower of the IPPS comparable per diem amount, including any applicable HCO payments, or 100 percent of the estimated cost of the case. The statute also establishes a transitional payment method for cases that are paid at the site neutral payment rate for LTCH discharges occurring in cost reporting periods beginning during FY 2016 or FY 2017, under which the site neutral payment rate cases are paid based on a blended payment rate calculated as 50 percent of the applicable site neutral payment rate amount for the discharge and 50 percent of the applicable LTCH PPS standard Federal

payment rate for the discharge. As discussed in more detail in section I.J. of this Appendix, some LTCH discharges in FY 2018 will still be eligible to be paid based on the blended payment rate.

As discussed in section I.J. of this Appendix, we project a decrease in aggregate LTCH PPS payments in FY 2018 of approximately \$195 million. This estimated decrease in payments reflects the projected increase in payments to LTCH PPS standard Federal payment rate cases of approximately \$35 million and the projected decrease in payments to site neutral payment rate cases of approximately \$230 million under the dual rate LTCH PPS payment rate structure required by the statute beginning in FY 2016. (As stated previously, this estimate does not include the estimated increase in aggregate FY 2018 LTCH PPS payments for our finalized policy to delay full implementation of the 25-percent threshold policy or certain provisions of the 21st Century Cures Act, which are discussed in section I.J.3. of this Appendix.)

As discussed in section V.D. of the Addendum of this final rule, our actuaries project cost and resource changes for site neutral payment rate cases due to the site neutral payment rates required under the statute. Specifically, our actuaries project that the costs and resource use for cases paid at the site neutral payment rate will likely be lower, on average, than the costs and resource use for cases paid at the LTCH PPS standard Federal payment rate, and will likely mirror the costs and resource use for IPPS cases assigned to the same MS-DRG. While we are able to incorporate this projection at an aggregate level into our payment modeling, because the historical claims data that we are using in this final rule to project estimated FY 2018 LTCH PPS payments (that is, FY 2016 LTCH claims data) do not reflect this actuarial projection, we are unable to model the impact of the change in LTCH PPS payments for site neutral payment rate cases at the same level of detail with which we are able to model the impacts of the proposed changes to LTCH PPS payments for LTCH PPS standard Federal payment rate cases. Therefore, Table IV only reflects changes in LTCH PPS payments for LTCH PPS standard Federal payment rate cases and, unless otherwise noted, the remaining discussion in section I.J.4. of this Appendix refers only to the impact on LTCH PPS payments for LTCH PPS standard Federal payment rate cases. In the following section, we present our provider impact analysis for the changes that affect LTCH PPS payments for LTCH PPS standard Federal payment rate cases.

### b. Impact on Providers

Under the dual rate LTCH PPS payment structure, there are two distinct payment rates for LTCH discharges occurring in cost reporting periods beginning on or after October 1, 2016. Under that statute, any discharges that occur on or after October 1, 2015, but prior to the start of the LTCH's FY 2016 cost reporting period, will be paid at the LTCH PPS standard Federal payment rate. On or after the start of an LTCH's FY 2017 cost reporting period, discharges are paid based on whether or not the discharge meets

the patient-level criteria to be excluded from the site neutral payment rate. That is, LTCH PPS standard Federal payment rate cases are defined as LTCH discharges that meet the patient-level criteria to be excluded from the typically lower site neutral payment rate, and site neutral payment rate cases are defined as LTCH discharges that do not meet the patient-level criteria and generally will be paid the lower site neutral payment rate. However, for discharges occurring in cost reporting periods beginning in FY 2016 or 2017, the statute specifies that site neutral payment rate cases are paid based on a transitional payment method that is calculated as 50 percent of the applicable site neutral payment rate amount and 50 percent of the applicable LTCH PPS standard Federal payment rate (which, as discussed earlier, will continue to apply to certain discharges occurring during FY 2018).

The basic methodology for determining a per discharge payment for LTCH PPS standard Federal payment rate cases is currently set forth under §§ 412.515 through 412.538. In addition to adjusting the LTCH PPS standard Federal payment rate by the MS-LTC-DRG relative weight, we make adjustments to account for area wage levels and SSOs (including our proposed SSO payment methodology). LTCHs located in Alaska and Hawaii also have their payments adjusted by a COLA. Under our application of the dual rate LTCH PPS payment structure, the LTCH PPS standard Federal payment rate is generally only used to determine payments for LTCH PPS standard Federal payment rate cases (that is, those LTCH PPS cases that meet the statutory criteria to be excluded from the site neutral payment rate). LTCH discharges that do not meet the patient-level criteria for exclusion are paid the site neutral payment rate, which we are calculating as the lower of the IPPS comparable per diem amount as determined under § 412.529(d)(4), including any applicable outlier payments, or 100 percent of the estimated cost of the case as determined under existing § 412.529(d)(2). In addition, when certain thresholds are met, LTCHs also receive HCO payments for both LTCH PPS standard Federal payment rate cases and site neutral payment rate cases that are paid at the IPPS comparable per diem amount.

To understand the impact of the changes to the LTCH PPS payments for LTCH PPS standard Federal payment rate cases presented in this final rule on different categories of LTCHs for FY 2018, it is necessary to estimate payments per discharge for FY 2017 using the rates, factors, and the policies established in the FY 2017 IPPS/LTCH PPS final rule and estimate payments per discharge for FY 2018 using the rates, factors, and the policies in this FY 2018 IPPS/LTCH PPS final rule (as discussed in section VIII. of the preamble of this final rule and section V. of the Addendum to this final rule). As discussed elsewhere in this final rule, these estimates are based on the best available LTCH claims data and other factors, such as the application of inflation factors to estimate costs for HCO cases in each year. The resulting analyses can then be used to compare how our policies applicable to LTCH PPS standard Federal payment rate cases affect different groups of LTCHs.

For the following analysis, we group hospitals based on characteristics provided in the OSCAR data, cost report data in HCRIS, and PSF data. Hospital groups included the following:

- Location: large urban/other urban/rural.
- Participation date.
- Ownership control.
- Census region.
- Bed size.

#### c. Calculation of LTCH PPS Payments for LTCH PPS Standard Federal Payment Rate Cases

For purposes of this impact analysis, to estimate the per discharge payment effects of our finalized policies on payments for LTCH PPS standard Federal payment rate cases, we simulated FY 2017 and FY 2018 payments on a case-by-case basis using historical LTCH claims from the FY 2016 MedPAR files that met or would have met the criteria to be paid at the LTCH PPS standard Federal payment rate if the statutory patient-level criteria had been in effect at the time of discharge for all cases in the FY 2016 MedPAR files. For modeling FY 2017 LTCH PPS payments, we used the FY 2017 standard Federal payment rate of \$42,476.41 (or \$41,641.49 for LTCHs that failed to submit quality data as required under the requirements of the LTCH QRP). Similarly, for modeling payments based on the FY 2018 LTCH PPS standard Federal payment rate, we used the FY 2018 standard Federal payment rate of \$41,430.56 (or \$40,610.16 for LTCHs that failed to submit quality data as required under the requirements of the LTCH QRP). In each case, we applied the applicable adjustments for area wage levels and the COLA for LTCHs located in Alaska and Hawaii. Specifically, for modeling FY 2017 LTCH PPS payments, we used the current FY 2017 labor-related share (66.5 percent); the wage index values established in the Tables 12A and 12B listed in the Addendum to the FY 2017 IPPS/LTCH PPS final rule (which are available via the Internet on the CMS Web site); the FY 2017 HCO fixed-loss amount for LTCH PPS standard Federal payment rate cases of \$21,943 (as discussed in section V.D. of the Addendum to that final rule) and the FY 2017 COLA factors (shown in the table in section V.C. of the Addendum to that final rule) to adjust the FY 2017 nonlabor-related share (33.5 percent) for LTCHs located in Alaska and Hawaii. Similarly, for modeling FY 2018 LTCH PPS payments, we used the FY 2018 LTCH PPS labor-related share (66.2 percent), the FY 2018 wage index values from Tables 12A and 12B listed in section VI. of the Addendum to this final rule (which are available via the Internet on the CMS Web site), the FY 2018 fixed-loss amount for LTCH PPS standard Federal payment rate cases of \$27,382 (as discussed in section V.D.3. of the Addendum to this final rule), and the FY 2018 COLA factors (shown in the table in section V.C. of the Addendum to this final rule) to adjust the FY 2018 nonlabor-related share (33.8 percent) for LTCHs located in Alaska and Hawaii.

As previously discussed, our impact analysis reflects an estimated change in payments for SSO cases (including our changes to the SSO payment methodology),

as well as an estimated decrease in HCO payments for LTCH PPS standard Federal payment rate cases (as described previously in section I.J.1. of this Appendix). In modeling payments for SSO cases prior to accounting for our SSO payment methodology and for HCO cases for LTCH PPS standard Federal payment rate cases, we applied an inflation factor of 5.5 percent (determined by the Office of the Actuary) to update the 2016 costs of each case.

The impacts that follow reflect the estimated “losses” or “gains” among the various classifications of LTCHs from FY 2017 to FY 2018 based on the payment rates and policy changes applicable to LTCH PPS standard Federal payment rate cases presented in this final rule. Table IV illustrates the estimated aggregate impact of the change in LTCH PPS payments for LTCH PPS standard Federal payment rate cases among various classifications of LTCHs. (As discussed previously, these impacts do not include LTCH PPS site neutral payment rate cases.)

- The first column, LTCH Classification, identifies the type of LTCH.
- The second column lists the number of LTCHs of each classification type.
- The third column identifies the number of LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria.
- The fourth column shows the estimated FY 2017 payment per discharge for LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria (as described previously).
- The fifth column shows the estimated FY 2018 payment per discharge for LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria (as described previously).
- The sixth column shows the percentage change in estimated payments per discharge for LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria from FY 2017 to FY 2018 due to the annual update to the standard Federal rate (as discussed in section V.A.2. of the Addendum to this final rule).
- The seventh column shows the percentage change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2017 to FY 2018 for changes to the area wage level adjustment (that is, the wage indexes and the labor-related share), including the application of the area wage level budget neutrality factor (as discussed in section V.B. of the Addendum to this final rule).
- The eighth column shows the percentage change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases for changes resulting from our SSO payment methodology and associated budget neutral adjustment to the LTCH PPS standard Federal payment rate (column 7).
- The ninth column shows the percentage change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2017 (Column 4) to FY 2018 (Column 5) for all changes (and includes the effect of estimated changes to HCO and SSO payments).

TABLE IV—IMPACT OF PAYMENT RATE AND POLICY CHANGES TO LTCH PPS PAYMENTS FOR STANDARD PAYMENT RATE CASES FOR FY 2018

[Estimated FY 2017 payments compared to estimated FY 2018 payments]

LTCH classification	Number of LTCHS	Number of LTCH PPS standard payment rate cases	Average FY 2017 LTCH PPS payment per standard payment rate	Average FY 2018 LTCH PPS payment per standard payment rate <sup>1</sup>	Percent change due to change to the annual update to the standard federal rate <sup>2</sup>	Percent change due to changes to area wage adjustment with wage budget neutrality <sup>3</sup>	Proposed percent change due to change to the short stay outlier payment methodology change <sup>4</sup>	Percent change due to all standard payment rate changes <sup>5</sup>

<sup>1</sup> Estimated FY 2018 LTCH PPS payments for LTCH PPS standard Federal payment rate criteria based on the payment rate and factor changes applicable to such cases presented in the preamble of and the Addendum to this final rule.

<sup>2</sup> Percent change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2017 to FY 2018 for the annual update to the LTCH PPS standard Federal payment rate.

<sup>3</sup> Percent change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2017 to FY 2018 for changes to the area wage level adjustment under § 412.525(c) (as discussed in section V.B. of the Addendum to this final rule).

<sup>4</sup> Percent change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2017 to FY 2018 for change to the SSO payment methodology.

<sup>5</sup> Percent change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2017 (shown in Column 4) to FY 2018 (shown in Column 5), including all of the changes to the rates and factors applicable to such cases presented in the preamble and the Addendum to this final rule. We note that this column, which shows the percent change in estimated payments per discharge for all changes, does not equal the sum of the percent changes in estimated payments per discharge for the annual update to the LTCH PPS standard Federal payment rate (Column 6) and the changes to the area wage level adjustment with budget neutrality (Column 7) due to the effect of estimated changes in both estimated payments to SSO cases (prior to accounting for the change to the SSO payment methodology) and aggregate HCO payments for LTCH PPS standard Federal payment rate cases (as discussed in this impact analysis), as well as other interactive effects that cannot be isolated.

d. Results

Based on the FY 2016 LTCH cases (from 415 LTCHs) that were used for the analyses in this final rule, we have prepared the following summary of the impact (as shown in Table IV) of the LTCH PPS payment rate and policy changes for LTCH PPS standard Federal payment rate cases presented in this final rule. The impact analysis in Table IV shows that estimated payments per discharge for LTCH PPS standard Federal payment rate cases are projected to increase 1.0 percent, on average, for all LTCHs from FY 2017 to FY 2018 as a result of the payment rate and policy changes applicable to LTCH PPS standard Federal payment rate cases presented in this final rule. This estimated 1.0 percent increase in LTCH PPS payments

per discharge was determined by comparing estimated FY 2018 LTCH PPS payments (using the payment rates and factors discussed in this final rule) to estimated FY 2017 LTCH PPS payments for LTCH discharges which will be LTCH PPS standard Federal payment rate cases if the dual rate LTCH PPS payment structure was or had been in effect at the time of the discharge (as described in section I.J.4. of this Appendix).

As stated previously, we are updating the LTCH PPS standard Federal payment rate for FY 2018 by 1.0 percent as required by statute. For LTCHs that fail to submit quality data under the requirements of the LTCH QRP, as required by section 1886(m)(5)(C) of the Act, a 2.0 percentage point reduction is applied to the annual update to the LTCH PPS standard

Federal payment rate. Consistent with § 412.523(d)(4), we also are applying an area wage level budget neutrality factor to the FY 2018 LTCH PPS standard Federal payment rate of 1.0006434, based on the best available data at this time, to ensure that any changes to the area wage level adjustment (that is, the annual update of the wage index values and labor-related share) will not result in any change (increase or decrease) in estimated aggregate LTCH PPS standard Federal payment rate payments. Finally, we are making a budget neutrality adjustment of 0.9651 for our changes to the SSO payment methodology (discussed in VIII.E.2.d. of the preamble of this final rule). As we also explained earlier in this section, for most categories of LTCHs (as shown in Table IV,

Column 6), the estimated payment increase due to the 1.0 percent annual update to the LTCH PPS standard Federal payment rate is projected to result in approximately a 0.9 percent increase in estimated payments per discharge for LTCH PPS standard Federal payment rate cases for all LTCHs from FY 2017 to FY 2018. This is because our estimate of the changes in payments due to the update to the LTCH PPS standard Federal payment rate also reflects estimated payments for SSO cases that are paid using special methodologies that are not affected by the update to the LTCH PPS standard Federal payment rate (prior to accounting for the change to the SSO payment methodology). Consequently, for certain hospital categories, we estimate that payments to LTCH PPS standard Federal payment rate cases may increase by less than 1.0 percent due to the annual update to the LTCH PPS standard Federal payment rate for FY 2018.

#### (1) Location

Based on the most recent available data, the vast majority of LTCHs are located in urban areas. Only approximately 5 percent of the LTCHs are identified as being located in a rural area, and approximately 3 percent of all LTCH PPS standard Federal payment rate cases are expected to be treated in these rural hospitals. The impact analysis presented in Table IV shows that the overall average percent increase in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2017 to FY 2018 for all hospitals is 1.0 percent. However, for rural LTCHs, the overall percent change for LTCH PPS standard Federal payment rate cases is estimated to be a 0.1 percent decrease. This projected decrease is primarily driven by a projected decrease resulting from changes to the changes to the area wage index adjustment. For urban LTCHs, we estimate an increase of 1.0 percent from FY 2017 to FY 2018. Among the urban LTCHs, large urban LTCHs are projected to experience an increase of 1.2 percent in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2017 to FY 2018, and the remaining urban LTCHs are projected to experience an increase of 0.9 percent in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2017 to FY 2018, as shown in Table IV.

#### (2) Participation Date

LTCHs are grouped by participation date into four categories: (1) Before October 1983; (2) between October 1983 and September 1993; (3) between October 1993 and September 2002; and (4) October 2002 and after. Based on the most recent available data, the categories of LTCHs with the largest expected percentage of LTCH PPS standard Federal payment rate cases (approximately 48 percent) are in LTCHs that began participating in the Medicare program after October 2002, and they are projected to experience a 1.0 percent increase in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2017 to FY 2018, as shown in Table IV.

Approximately 2.7 percent of LTCHs began participating in the Medicare program before

October 1983, and these LTCHs are projected to experience an average percent increase of 1.9 percent in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2017 to FY 2018, as shown in Table IV with a large portion of this increase among this small group of LTCHs to be a projected 0.7 percent increase resulting from our SSO payment methodology. Approximately 10 percent of LTCHs began participating in the Medicare program between October 1983 and September 1993, and these LTCHs are projected to experience an increase of 0.7 percent in estimated payments for LTCH PPS standard Federal payment rate cases from FY 2017 to FY 2018. LTCHs that began participating in the Medicare program between October 1993 and October 1, 2002, which treat approximately 37 percent of all LTCH PPS standard Federal payment rate cases, are projected to experience a 1.0 percent increase in estimated payments from FY 2017 to FY 2018.

#### (3) Ownership Control

LTCHs are grouped into four categories based on ownership control type: voluntary, proprietary, government and unknown. Based on the most recent available data, approximately 17 percent of LTCHs are identified as voluntary (Table IV). The majority (approximately 80 percent) of LTCHs are identified as proprietary, while government owned and operated LTCHs represent approximately 3 percent of LTCHs. Based on ownership type, voluntary LTCHs are expected to experience a 0.6 percent increase in payments to LTCH PPS standard Federal payment rate cases, while proprietary LTCHs are expected to experience an average increase of 1.1 percent in payments to LTCH PPS standard Federal payment rate cases. Government owned and operated LTCHs, meanwhile, are expected to experience a 0.5 percent decrease in payments to LTCH PPS standard Federal payment rate cases from FY 2017 to FY 2018.

#### (4) Census Region

Estimated payments per discharge for LTCH PPS standard Federal payment rate cases for FY 2017 are projected to increase across 8 of the 9 census regions. LTCHs located in the West North Central region are projected to experience a slight decrease of 0.1 percent, while LTCHs located in all other regions are projected to experience an increase in estimated payments per discharge in comparison to FY 2017. Of the 9 census regions, we project that the increase in estimated payments per discharge to LTCH PPS standard Federal payment rate cases will have the largest positive impact on LTCHs in the New England regions (2.5 percent, as shown in Table IV), which is largely attributable to changes to the SSO payment methodology. In contrast, LTCHs located in the Middle Atlantic region are projected to experience the smallest increase in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2017 to FY 2018 (0.6 percent).

#### (5) Bed Size

LTCHs are grouped into six categories based on bed size: 0–24 beds; 25–49 beds;

50–74 beds; 75–124 beds; 125–199 beds; and greater than 200 beds. We project that LTCHs with 0–24 beds will experience an increase in payments for LTCH PPS standard Federal payment rate cases of 0.3 percent, and LTCHs with 25–49 beds will experience an increase in payments for LTCH PPS standard Federal payment rate cases of 0.8 percent. LTCHs with 50–74 beds will experience an increase in payments for LTCH PPS standard Federal payment rate cases of 0.6 percent. We project the largest increases in payments to occur in LTCHs with at least 75 beds. In particular, we project LTCHs with 75–124 beds will experience an increase in payments for LTCH PPS standard Federal payment rate cases of 1.3 percent while LTCHs with 125–199 beds will experience an increase in payments for LTCH PPS standard Federal payment rate cases of 1.2 percent. Finally, LTCHs with 200 or more beds will experience the largest increase in payments for LTCH PPS standard Federal payment rate cases of 2.4 percent mostly due to estimated increase in payments from changes to our SSO payment methodology.

#### 4. Effect on the Medicare Program

As stated previously, we project that the provisions of this final rule will result in an increase in estimated aggregate LTCH PPS payments to LTCH PPS standard Federal payment rate cases in FY 2018 relative to FY 2017 of approximately 35 million (or approximately 1.0 percent) for the 415 LTCHs in our database. Although, as stated previously, the hospital-level impacts do not include LTCH PPS site neutral payment rate cases, we estimate that the provisions of this final rule will result in a decrease in estimated aggregate LTCH PPS payments to site neutral payment rate cases in FY 2018 relative to FY 2017 of approximately \$230 million (or approximately 20 percent) for the 415 LTCHs in our database. Therefore, we project that the provisions of this final rule will result in a decrease in estimated aggregate LTCH PPS payments to all LTCH cases in FY 2018 relative to FY 2017 of approximately \$195 million (or approximately 4.2 percent) for the 415 LTCHs in our database. Furthermore, as stated previously, our Office of the Actuary estimates an additional estimated increase in aggregate FY 2018 LTCH PPS payments of approximately \$85 million for our finalized policy to delay full implementation of the 25-percent threshold policy for FY 2018 and our implementation of certain provisions of the 21st Century Cures Act. Therefore, in total, we project an overall decrease in LTCH PPS payments of approximately \$110 million (\$195 million decrease + \$85 million increase) or approximately a 2.4 percent decrease in LTCH PPS payments in FY 2018 as compared to FY 2017.

#### 5. Effect on Medicare Beneficiaries

Under the LTCH PPS, hospitals receive payment based on the average resources consumed by patients for each diagnosis. We do not expect any changes in the quality of care or access to services for Medicare beneficiaries as a result of this final rule, but we continue to expect that paying prospectively for LTCH services will enhance the efficiency of the Medicare program. As

discussed above, we do not expect the continued implementation of the site neutral payment system to have a negative impact access to or quality of care, as demonstrated in areas where there is little or no LTCH presence, general short-term acute care hospitals are effectively providing treatment for the same types of patients that are treated in LTCHs.

#### *K. Effects of Requirements for the Hospital Inpatient Quality Reporting (IQR) Program*

##### 1. Background

In section IX.A. of the preambles of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20031 through 20075) and this final rule, we discuss our requirements for hospitals to report quality data under the Hospital IQR Program in order to receive the full annual percentage increase for the FY 2020 payment determination.

In this final rule, we are finalizing our policies to: (1) modify the previously finalized the electronic clinical quality measure (eCQM) reporting requirements for the FY 2019 and FY 2020 payment determinations, such that hospitals submit one, self-selected calendar quarter of data for 4 eCQMs; (2) update the eCQM certification requirements for the FY 2019 and FY 2020 payment determinations; (3) modify the previously finalized eCQM data validation process, whereby hospitals selected for eCQM data validation will be required to submit a reduced number of cases for eCQM data validation for the FY 2020 and FY 2021 payment determinations; (4) allow hospitals to use an educational review process to correct incorrect validation results for the first three quarters of validation for chart-abstracted measures beginning with the FY 2020 payment determination and for subsequent years; (5) begin voluntary reporting on the Hybrid Hospital-Wide 30-Day Readmission (HWR) measure for the CY 2018 reporting period; (6) refine the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey measure to replace the questions on Pain Management for the FY 2020 payment determination and subsequent years; (7) refine the Hospital 30-Day Mortality Following Acute Ischemic Stroke Hospitalization measure to include the use of NIH Stroke Scale claims data for the FY 2023 payment determination and subsequent years; and (8) update the terminology used to refer to the Extraordinary Circumstances Exceptions (ECE) policy for the FY 2020 payment determination and subsequent years.

As further explained in section XIII.B.3. of the preamble of this final rule, we believe that there will be an overall decrease in burden for hospitals due to the finalized policies discussed above. We refer readers to section XIII.B.3. of the preamble of this final rule for a summary of our burden estimates.

##### 2. Impact of the Updates to the eCQM Reporting Requirements for the CY 2017 Reporting Period/FY 2019 and CY 2018 Reporting Period/FY 2020 Payment Determinations

In the FY 2017 IPPS/LTCH PPS final rule, we finalized policies to require hospitals to

submit a full year (four quarters) of data (81 FR 57159) for at least eight eCQMs (81 FR 57157) for both the FY 2019 and FY 2020 payment determinations. In section IX.A.8. of the preamble of this final rule, we are finalizing modifications to the eCQM reporting requirements we proposed in the FY 2018 IPPS/LTCH PPS proposed rule, such that, for the CY 2017 reporting period/FY 2019 payment determination and CY 2018 reporting period/FY 2020 payment determination, hospitals must submit one, self-selected, calendar quarter of data for 4 eCQMs. As discussed in section XIII.B.3.b. of the preamble of this final rule, we believe the reduced number of eCQMs required for the CY 2017 and CY 2018 reporting periods will result in a reduction of 15,400 hours (– 280 minutes per hospital per year/60 minutes per hour × 3,300 hospitals) and \$563,332 (15,400 hours × \$36.58 per hour) for each of the FY 2019 and FY 2020 payment determinations.

##### 3. Impact of the Modifications to the Existing Data Validation Processes for the FY 2020 Payment Determination and Subsequent Years

In section IX.A.11. of the preamble of this final rule, we discuss our finalized policy to modify the existing eCQM data validation process for the Hospital IQR Program data beginning with validation for the FY 2020 payment determination. First, we are finalizing with modifications our proposal to require hospitals selected for eCQM data validation to submit eight cases per quarter for the FY 2020 payment determination and subsequent years.<sup>519</sup> We are also finalizing our proposals to: (1) Add additional exclusion criteria to our hospital and case selection process for eCQM data validation for the FY 2020 payment determination and subsequent years; and (2) extend our previously finalized medical record submission requirements the accuracy of eCQM data submitted for validation will not affect a hospital's validation score for the FY 2021 payment determination and subsequent years. As discussed in section XIII.B.3.d.(1) of the preamble of this final rule, we estimate our proposal to reduce the number of cases submitted by hospitals submitted by hospitals selected for eCQM data validation will result in an annual burden reduction of approximately 6,400 hours (8,533 hours estimated in the FY 2017 IPPS/LTCH PPS final rule – 2,133 hours estimated in this final rule) and \$234,112 (6,400 hours × \$36.58 per hour) across the 200 hospitals selected for eCQM validation.

##### 4. Impact of the Voluntary Reporting on the Hybrid Hospital-Wide 30-Day Readmission Measure for the CY 2018 Reporting Period

In section IX.A.7.b. of the preamble of this final rule, we are finalizing our proposal that

<sup>519</sup> We are finalizing this requirement in conjunction with our finalized policy to require hospitals to report one, self-selected quarter of data for 4 eCQMs for each of the CY 2017 and CY 2018 eCQM reporting periods, as described above. Accordingly, we are finalizing our modified policy and will require the number of required case files for validation will be 8 records (eight cases for one quarter) for each of the FY 2020 and FY 2021 payment determinations.

hospitals may voluntarily submit the 13 core clinical data elements and the 6 data elements required for linking with claims data for this measure using the same submission process required for eCQM reporting, specifically, that these data be reported using QRDA I files submitted to the CMS data receiving system. As discussed in section XIII.B.3.e., we expect the burden associated with voluntary reporting of this measure to be approximately 67 hours (40 minutes per hospital/60 minutes per hour × 100 hospitals = 67 hours) and \$2,451 (\$36.58 per hour × 67 hours annually) across up to 100 hospitals voluntarily participating in reporting for the Hybrid HWR measure.

##### 5. Summary of Effects

Historically, 100 hospitals, on average, that participate in the Hospital IQR Program do not receive the full annual percentage increase in any fiscal year due to the requirements of this program. We anticipate that, because of the modified, reduced requirements for eCQM reporting that we are finalizing for the FY 2019 and FY 2020 payment determinations, the number of hospitals not receiving the full annual percentage increase will not substantially increase due to this requirement of the program. If the number of hospitals failing to receive the full annual percentage increase does increase because of our modified requirements, we anticipate that, over the long run, this number will decline as hospitals gain more experience with these requirements.

In implementing the Hospital IQR Program and other quality reporting programs, we have focused on measures that have high impact and support CMS and HHS priorities for improving the quality of care and value for Medicare beneficiaries.

#### *L. Effects of Requirements for the PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program*

In section IX.B. of the preambles of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20075 through 20086) and this final rule, we discuss our policies for the quality data reporting program for PPS-exempt cancer hospitals (PCHs), which we refer to as the PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program. The PCHQR Program is authorized under section 1866(k) of the Act, which was added by section 3005 of the Affordable Care Act. There is no financial impact to PCH Medicare reimbursement if a PCH does not submit data.

In section IX.B.4. of the preamble of this final rule, we are finalizing our proposals to adopt four claims-based measures beginning with the FY 2020 program: (1) Proportion of Patients Who Died from Cancer Receiving Chemotherapy in the Last 14 Days of Life (NQF #0210); (2) Proportion of Patients Who Died from Cancer Admitted to the ICU in the Last 30 Days of Life (NQF #0213); (3) Proportion of Patients Who Died from Cancer Not Admitted to Hospice (NQF #0215); and (4) Proportion of Patients Who Died from Cancer Admitted to Hospice for Less Than Three Days (NQF #0216)). In conjunction with our finalized proposal in section IX.B.3.b. of the preamble of this final rule to

remove three existing chart-abstracted measures beginning with the FY 2020 program—(1) Adjuvant Chemotherapy is Considered or Administered Within 4 Months (120 Days) of Diagnosis to Patients Under the Age of 80 with AJCC III (Lymph Node Positive) Colon Cancer (PCH–01/NQF #0223); (2) Combination Chemotherapy is Considered or Administered Within 4 Months (120 Days) of Diagnosis for Women Under 70 with AJCC T1c, or Stage II or III Hormone Receptor Negative Breast Cancer (PCH–02/NQF #0559); and (3) Adjuvant Hormonal Therapy (PCH–03/NQF #0220)—the PCHQR Program measure set will consist of 18 measures for the FY 2020 program.

As further explained in section XIII.B.4. of the preamble of this final rule, we anticipate that these new requirements will reduce overall burden on participating PCHs. In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53667), we estimated a burden of 30 minutes for a PCH to perform chart abstraction of a single patient record and submit it to CMS. Using estimates from the FY 2013 IPPS/LTCH PPS final rule (77 FR 53667), we estimate the total annual hourly burden for each PCH for the collection and submission of measure information and the training of personnel for submitting quality measure data applicable to one (1) chart-abstracted measure is approximately 1,258.7 hours per year, or 104.9 hours per month (1,258.7 hours per year/12 months). We multiply this number by three (3) to obtain our estimated reduction in burden for collecting measure information, submitting measure information, and training personnel provided by the finalized removal of the three measures, which is approximately 3,776 hours per year for each PCH, or an average reduction in burden of 315 hours per month per PCH and a total of 41,536 hours across all 11 PCHs. Our finalized removal of three chart-abstracted measures will reduce the burden associated with quality data reporting on PCHs by reducing quality measure chart abstraction by approximately 16,364 cases across all 11 PCHs.

We do not anticipate any increase in burden on the PCHs corresponding to our finalized adoption of four claims-based measures into the PCHQR Program beginning with the FY 2020 program year. These measures are claims-based and therefore do not require facilities to report any additional data. Because these measures do not require facilities to submit any additional data, we do not believe that there is any associated burden with this finalized policy.

#### *M. Effects of Requirements for the Long-Term Care Hospital Quality Reporting Program (LTCH QRP)*

In section IX.C.1. of the preambles of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20086 through 20121) and this final rule, we discuss the implementation of the LTCH QRP. At the time that this analysis was prepared, 41, or approximately 9.7 percent, of 424 eligible LTCHs were determined to be noncompliant and therefore received a 2 percentage point reduction to their FY 2017 annual payment update. We anticipate that fewer LTCHs will receive the reduction for FY 2018 as LTCHs become more familiar

with the requirements as we believe that continued trainings, as well as utilization of new reports for LTCHs, will help LTCHs comply with the LTCH QRP requirements. Thus, we estimate that the proposals that we are finalizing in this final rule will have a negligible impact on overall LTCH payments for FY 2018.

In section IX.C.7. of the preamble of this final rule, we are finalizing our proposal to replace the current pressure ulcer measure, Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), with a new modified version of the measure, Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury, beginning with the FY 2020 LTCH QRP. We are also finalizing our proposals to adopt two additional measures: Compliance with Spontaneous Breathing Trial (SBT) by Day 2 of the LTCH Stay; and Ventilator Liberation Rate, beginning with the FY 2020 LTCH QRP. In addition, we are finalizing our proposals that data for these measures will be collected and reported using the LTCH CARE Data Set (LTCH CARE Data Set Version 4.00, which will be effective July 1, 2018). For more information regarding the LTCH CARE Data Set Version 4.00 implementation date, we refer readers to section IX.C.11. of the preamble of this final rule.

We also are finalizing our proposal to remove the All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs (NQF #2512). Because LTCHs will still be required to report data on this measure for payment purposes, we believe that the removal of this measure will not affect the burden estimate for the LTCH QRP.

In addition, adoption of the pressure ulcer measure, Change in Skin Integrity Post-Acute Care: Pressure Ulcer Injury which will replace the current pressure ulcer measure, Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), will result in the removal of some data elements related to pressure ulcer assessment that we believe are duplicative or no longer necessary. As a result, the estimated burden and cost for LTCHs to report the newly finalized measure will be reduced from the burden and cost to report the current measure.

We also are finalizing our proposals to remove the program interruption items from the LTCH CARE Data Set. Specifically, we are finalizing our proposals to remove the following items: A2500, Program Interruption(s); A2510, Number of Program Interruptions During This Stay in This Facility; and A2525, Program Interruption Dates, because we do not currently utilize this information and do not have plans to utilize this information for the LTCH QRP. As a result, the estimated burden and cost for LTCHs will be reduced.

In section IX.C.10. of the preamble of this final rule, we are finalizing standardized patient assessment data proposals with respect to the Functional Status and Medical Condition and Comorbidity categories. All of the data elements are already included on the LTCH CARE Data Set and therefore our finalized policy to characterize those data

elements as standardized patient assessment data will not result in an additional reporting burden for LTCHs.

We are not finalizing our proposals to require LTCHs to report 25 new standardized patient assessment data elements with respect to LTCH admissions and 17 new standardized patient assessment data elements with respect to LTCH discharges. This results in a burden reduction from what we proposed. We refer readers to the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20225 through 20226), for a discussion of our burden estimates for these proposals.

As described in section XIII.B.6. of the preamble of this final rule, the 4.5-minute increase in burden for the two finalized ventilator weaning quality measures is offset by the 3 minute reduction in burden for the finalized pressure ulcer quality measure and the 3.6 minute reduction in burden for the program interruption items. This results in a net reduction in burden of 2.1 minutes. Overall, this results in a net decrease in cost associated with the finalized changes to the LTCH QRP, which we estimate to be reduced by estimated at a reduction of \$893.14 per LTCH annually, or \$380,480 for all LTCHs annually.

For additional discussion of information collection requirements related to our finalized proposals, we refer readers to section XIII.B.6 of the preamble of this final rule. We received public comments about the effects of requirements for the LTCH QRP, which we summarize and respond to below.

*Comment:* Several commenters expressed views regarding the burden imposed by the proposed LTCH CARE Data Set Version 4.00. One commenter commended CMS for ensuring robust and accurate quality reporting, but noted that the absence of EHRs in the LTCH setting contributes to this burden and requires extra staff to collect, process, and transmit the necessary data. Another commenter noted the importance of assessing the value of new quality measures, and ensuring that they are not prematurely implemented.

*Response:* We always considers provider burden, and we take this into account when developing quality measures or standardized patient assessment data elements for inclusion into our quality reporting programs. We assess the value of adopting new quality measures into the LTCH QRP and we consider overall clinical relevance and usability to support clinical decision-making, care transitions, and resource utilization.

In response to the commenter's concern regarding EHRs, while we support the use of EHRs, we do not require that providers use EHRs to populate assessment data in the LCDS. We also disagree with the commenter's suggestion that we do not provide a mechanism for collecting, processing, and transmitting data, and we note that with each assessment release, we offer free software for LTCHs (LASER), allowing LTCHs to record and transmit the required LTCH CARE Data Set assessment based data. This free software, including instructions for installing and using the software, is located at: <https://www.qtso.com/laser.html>.

We intend to continue to closely monitor the effects of the LTCH QRP on LTCHs and help facilitate successful reporting outcomes through ongoing stakeholder education, national trainings, LTCH announcements, Web site postings, CMS Open Door Forums, and general and technical help desks.

As discussed in section IX.C.11.d. of the preamble of this final rule, after consideration of the public comments we received, we are moving the release date for the LTCH CARE Data Set Version 4.00 from April 1, 2018 to July 1, 2018. The LTCH CARE Data Set Version 4.00, which will be effective July 1, 2018, will contain additional data elements needed to calculate the Drug Regimen Review Conducted with Follow-Up for Identified Issues-PAC LTCH QRP quality measure, which was finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57219 through 57223), as well as the data elements needed to calculate the measures we are adopting in this final rule.

*Comment:* A few commenters stated that CMS' burden estimates were inaccurate, pointing out the need for additional staff, training, and expenses when items are added to the LTCH CARE Data Set.

*Response:* Our burden estimates only capture the time needed to complete LTCH CARE Data Set data elements and do not include clinical time spent assessing the patient as this activity is already part of the healthcare providers standard of care.

#### *N. Effects of Updates to the Inpatient Psychiatric Facility Quality Reporting (IPFQR) Program*

As discussed in section IX.D. of the preambles of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20120 through 20130) and this final rule, and in accordance with section 1886(s)(4)(A) of the Act, we will implement a 2 percentage point reduction in the FY 2020 market basket update for IPFs that have failed to comply with the IPFQR Program requirements for the FY 2020 payment determination. In section IX.D. of the preamble of this final rule, we discuss how the 2 percentage point reduction will be applied. For the FY 2017, payment determination (that is, data collected during CY 2015 and submitted in CY 2016) of the 1,647 IPFs eligible for the IPFQR Program, 49 did not receive the full market basket update due to reasons specific to the IPFQR Program; 22 of these IPFs chose not to participate and 27 did not meet the requirements of the Program. We anticipate that even fewer IPFs will receive the reduction for FY 2018 as IPFs become more familiar with the requirements. Thus, we estimate that the IPFQR Program will have a negligible impact on overall IPF payments for FY 2018.

We intend to closely monitor the effects of this quality reporting program on IPFs and to help facilitate successful reporting outcomes through ongoing stakeholder education, national trainings, and a technical help desk.

We are finalizing our proposals, without change, that impact the FY 2018 procedural requirements and subsequent years. We are not finalizing our proposal to adopt one claims-based measure for the FY 2020 payment determinations and subsequent years. We refer readers to section XIII.B.7. of

the preamble of this final rule for details discussing information collection requirements for the IPFQR Program.

#### *O. Effects of Requirements Regarding the Electronic Health Record (EHR) Incentive Programs and Meaningful Use*

In section IX.E of the preambles of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20130 through 20133) and this final rule, we discuss proposed and newly finalized policies for eligible hospitals and CAHs reporting CQMs electronically under the Medicare and Medicaid EHR Incentive Programs in 2017 and 2018. As outlined in this final rule, we are finalizing modifications to our proposals and making the following modifications to the CY 2017 final CQM policies: (1) Revising the CY 2017 reporting period for eligible hospitals and CAHs reporting CQMs electronically to require the submission of one, self-selected calendar quarter of data; and (2) revising the number of CQMs eligible hospitals and CAHs are required to report electronically for CY 2017 to 4 (self-selected) available CQMs.

In addition, we are finalizing modifications to our proposals that adopt the following CQM reporting requirements for CY 2018: (1) For eligible hospitals and CAHs reporting CQMs electronically that demonstrate meaningful use for the first time in 2018 or that have demonstrated meaningful use in any year prior to 2018, the reporting period will be one, self-selected quarter of data from CY 2018 with a submission period (Medicare EHR Incentive Program only) consisting of the 2 months following the close of the calendar year, ending on February 28, 2019; (2) eligible hospitals and CAHs reporting CQMs electronically will be required to report at least 4 (self-selected) of the available CQMs; (3) eligible hospitals and CAHs that report CQMs by attestation under the Medicare EHR Incentive Program because electronic reporting is not feasible, and eligible hospitals and CAHs that report CQMs by attestation under their State's Medicaid EHR Incentive Program, will be required to report on all 16 available CQMs; and (4) eligible hospitals and CAHs reporting CQMs by attestation under the Medicare EHR Incentive Program will have a submission period that will be the 2 months following the close of the CY 2018 CQM reporting period, ending February 28, 2019.

Because the finalized reporting requirements for data collection regarding the reporting of CQMs electronically under the Medicare and Medicaid EHR Incentive Programs will align with the reporting requirements under the Hospital IQR Program, we do not believe that there is any additional burden for the collection of such information. We did not propose modifications to the CQMs reporting requirements by attestation in this section. Therefore, no change in burden associated with attestation of CQMs will result from this section.

In section IX.F of the preambles of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20134 through 20135) and this final rule, we discuss proposed and newly finalized policies regarding clinical quality measurement for EPs participating in the

Medicaid EHR Incentive Program. We note that there may be costs incurred by States associated with systems development as a result of the newly finalized policies. State attestation systems will likely require minor updates, which may be eligible for support through enhanced Federal funding, subject to CMS prior approval, if outlined in an updated Implementation Advance Planning Document (IAPD). We anticipate that eligible professionals (EPs) may also face minor burden and incremental capital cost for updating clinical quality measures and reporting capabilities in the EHR. However, we intend to reduce EP burden and simplify the program through these newly finalized policies, which are intended to better align CQM reporting periods and CQM reporting for the Medicaid EHR Incentive Program with policies under MIPS. Overall, we believe the finalized CQM alignment at the State attestation system and EP levels will both reduce burden associated with reporting on multiple CMS programs and enhance State and CMS operational efficiency.

In section IX.G.1. of the preamble of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20135 through 20136) and section IX.G.2. of the preamble of this final rule, we discuss our proposed and newly finalized policies to change the EHR reporting period in 2018 from the full CY 2018 to any continuous 90-day period within CY 2018 for all new and returning EPs, eligible hospitals and CAHs attesting to meaningful use in the Medicare and Medicaid EHR Incentive Programs. We do not believe that modifying the EHR reporting period for attestation will cause an increase in cost because the reporting requirements for a 90-day EHR reporting period are virtually the same as for a full calendar year EHR reporting period because the requirements for a full calendar year EHR reporting period and 90-day EHR reporting period require the same number of objectives and measures to be met.

In section IX.G.2. of the preamble of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20136 through 20138) and section IX.G.3. of the preamble of this final rule, as required by the 21st Century Cures Act (Pub. L. 114–255), we discuss and finalize our proposal for an exemption from the payment adjustments under sections 1848(a)(7)(A), 1886(b)(3)(B)(ix)(I), and 1814(l)(4) of the Act for EPs, eligible hospitals and CAHs, respectively, that demonstrate through an application process that compliance with the requirements for being a meaningful EHR user is not possible because their certified EHR technology has been decertified under ONC's Health IT Certification Program. The application process involves participants completing an application form for an exception. While the form is standardized, we believe it is exempt from the PRA. The form is structured as an attestation. Therefore, we believe it is exempt under 5 CFR 1320.3(h)(1) of the implementing regulations of the PRA. The form is an attestation that imposes no burden beyond what is required to provide identifying information and to attest to the applicable information.

In section IX.G.3. of the preamble of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR

20138 through 20139) and IX.G.4. of the preamble of this final rule, as required by the 21st Century Cures Act, we discuss and finalize our proposal to exempt ambulatory surgical center-based EPs from the 2017 and 2018 payment adjustments under section 1848(a)(7)(A) of the Act if they furnish substantially all of their covered professional services in an ambulatory surgical center. We do not believe this requirement will cause an increase in burden as CMS will identify the EPs who might meet this requirement.

For the information collection requirements relating to the above finalized proposals, we refer readers to section XIII.B.8. of the preamble of this final rule.

*P. Effects of Electronic Signature and Electronic Submission of the Certification and Settlement Summary Page of Medicare Cost Reports*

In section X.A. of the preambles of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20139 through 20142) and this final rule, we discuss and finalize our proposal to allow providers to use an electronic signature on the certification statement of the Certification and Settlement Summary page of the Medicare cost report and submit it electronically. This final policy will result in savings to providers.

Using the most current data from Medicare’s System for Tracking Audit and Reimbursement, approximately 51,000 providers file a Medicare cost report and, therefore, must currently mail the Certification and Settlement Summary page. Because most providers mail the Certification and Settlement Summary page via certified mail with return receipt (which includes delivery confirmation), at the current U.S. Postal Service price of \$7.10, if all of these providers elect to electronically submit the Certification and Settlement Summary page with an electronic signature, this final policy will collectively save these providers approximately \$362,000 in postage costs. This is an underestimate as it does not include mailing costs when providers choose to mail the Certification and Settlement Summary page to their contractors via overnight mail at a significantly higher expense.

*Q. Effects of Changes Relating to Survey and Certification Requirements*

In section XI.B. of the preambles of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20145 through 20146) and this final rule, we discuss and finalize our proposal to eliminate the term “newspaper” from the requirement to publish public notice upon a provider’s involuntary termination for RHCs, FQHCs, ASCs, and OPOs. Eliminating the term

“newspaper” will allow greater flexibility for the CMS Regional Offices in publishing public notices and will also reduce burden on the CMS Regional Offices.

The print newspaper advertisements for an involuntary termination are required to be purchased by the CMS Regional Office assigned to that provider or supplier. The advertisement is placed under the legal advertisement section of the local newspaper outlet. A single CMS Regional Office may incur an average annual cost of approximately \$3,000 to \$5,000 for the purchase of involuntary termination notices for the providers or suppliers assigned to its region. For example, from 2014 to 2016, the Dallas Regional Office spent \$14,331.89 on the publication of termination notices in local newspapers, with costs of \$3,949.45 in 2014, costs of \$5,386.67 in 2015, and costs of \$4,998.77 in 2016. In same timeframe of 2014 to 2016, the Philadelphia Regional Office spent a total of \$7,114.75 and the Kansas Regional Office spent a total of \$11,121.40. The table below depicts the actual FY 2016 costs for all 10 CMS Regional Offices.

Regional office	2016 costs
Boston .....	\$4,766
New York .....	645
Philadelphia .....	3,570
Atlanta .....	6,712
Chicago .....	10,853
Dallas .....	4,252
Kansas City .....	3,098
Denver .....	910
San Francisco .....	1,507
Seattle .....	707
<b>Total Cost .....</b>	<b>37,020.00</b>

If one CMS Regional Office spends approximately \$5,000 annually, and there are 10 CMS Regional Offices, the average cost nationwide per annum for termination notices could be as high as \$50,000.

The cost associated with the involuntary termination notice is assessed only to the CMS Regional Offices. The provider or supplier is not required to post a notice for an involuntary termination. Therefore, there will be no associated costs for the provider or supplier.

All CMS Regional Offices have Web sites available to the public, which are regularly maintained and updated. Creation of a subsite to reflect termination notices for providers will be at no cost to CMS. In addition, the use of Regional Press Officers to convey termination of a provider will be a minimal cost to CMS and absorbed through the Survey & Certification budget.

*R. Effects of Clarification of Limitations on the Valuation of Depreciable Assets Disposed of on or after December 1, 1997*

In section X.B. of the preambles of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20142 through 20143) and this final rule, we discuss and finalize our proposal to revise the Medicare provider reimbursement regulations to clarify our longstanding policy pertaining to allowable costs and the limits on the valuation of a depreciable asset that may be recognized in establishing an appropriate allowance for depreciation for assets disposed of on or after December 1, 1997. Specifically, we are clarifying that the elimination of the gain or loss for depreciable assets applies to assets a provider disposes of by sale or scrapping on or after December 1, 1997, regardless of whether the asset is scrapped, sold as an individual asset of a Medicare participating provider, or sold incident to a provider change of ownership. Because we are not making any change in policy, but rather are restating longstanding Medicare policy, there is no economic impact on providers resulting from this policy clarification.

*S. Alternatives Considered*

This final rule contains a range of policies. It also provides descriptions of the statutory provisions that are addressed, identifies the finalized policies, and presents rationales for our decisions and, where relevant, alternatives that were considered.

As discussed in section III.H. of the preamble of this final rule, we are extending the imputed floor policy for developing the hospital wage index for 1 additional year. We note that if the imputed floor policy had expired at the end of FY 2017, we estimate that IPPS payments would have decreased by approximately \$12 million in New Jersey, \$22 million in Rhode Island, and \$12 million in Delaware. Because the imputed floor policy is budget neutral nationally, had the policy expired, these payments would have been redistributed to all IPPS hospitals nationally.

*T. Reducing Regulation and Controlling Regulatory Costs*

Executive Order 13771, titled “Reducing Regulation and Controlling Regulatory Costs,” was issued on January 30, 2017. This final rule is considered an Executive Order 13771 regulatory action. In the table below, we provide a summation of the savings/costs delineated in the sections XIII.B of the preamble and section I. of Appendix A of this final rule. Additional details on the estimated costs of this rule can be found in the preceding and subsequent analyses.

Section of the final rule	Description	Amount of costs or savings
Section XII.B.3. of the preamble .....	ICRs for the Hospital IQR Programs .....	(\$1,592,437)
Section XII.B.4. of the preamble .....	ICRs for the PCHQR Program .....	(1,519,427)
Section I.M.of Appendix A .....	Effects of Requirements for the LTCH QRP .....	(380,480)

Section of the final rule	Description	Amount of costs or savings
Section I.P.of Appendix A .....	Effects of Electronic Signature and Electronic Submission of the Certification and Settlement Summary Page of Medicare Cost Reports for FY 2018.	(362,000)
Total .....	.....	(3,854,344)

*U. Overall Conclusion*

1. Acute Care Hospitals

Table I of section I.G. of this Appendix demonstrates the estimated distributional impact of the IPPS budget neutrality requirements for the MS-DRG and wage index changes, and for the wage index reclassifications under the MGCRB. Table I also shows a projected overall increase of 1.3 percent in operating payments before accounting for the impact of the changes in Medicare DSH payments and uncompensated care payments. When combined with the impact of those changes, consistent with our policy discussed in section V.G. of the preamble of this final rule, we estimate that operating payments will increase by approximately 2.3 percent in FY 2018, or approximately \$2.5 billion. We also currently estimate that the changes in new technology add-on payments for FY 2018 will decrease spending by approximately \$34 million and the changes to the volume decrease adjustment will increase spending by approximately \$15 million. In addition, we estimate the change in low-volume hospital payments, including the statutory expiration of the temporary increase in the low-volume hospital payment adjustment in FY 2018 will decrease spending by approximately \$312 million in FY 2018. These estimates, combined with our estimated increase in FY 2018 operating payment of \$2.5 billion, will result in an estimated increase of approximately \$2.2 billion for FY 2018. We estimate that hospitals will experience a 2.7 percent increase in capital payments per case, as shown in Table III of section I.I. of this Appendix. We project that there will be a \$226 million increase in capital payments in FY 2018 compared to FY 2017. The cumulative operating and capital payments will result in a net increase of approximately \$2.4 billion to IPPS providers. The discussions presented in the previous pages, in combination with the rest of this final rule, constitute a regulatory impact analysis.

2. LTCHs

Overall, LTCHs are projected to experience a decrease in estimated payments per

discharge in FY 2018. In the impact analysis, we are using the rates, factors, and policies presented in this final rule based on the best available claims and CCR data to estimate the change in payments under the LTCH PPS for FY 2018. Accordingly, based on the best available data for the 415 LTCHs in our database, we estimate that FY 2018 LTCH PPS payments will decrease approximately \$110 million relative to FY 2017 as a result of the payment rates and factors presented in this final rule.

*V. Regulatory Review Costs*

If regulations impose administrative costs on private entities, such as the time needed to read and interpret a rule, we should estimate the cost associated with regulatory review. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20228), due to the uncertainty involved with accurately quantifying the number of entities that would review the proposed rule, we assumed that the total number of timely pieces of correspondence on last year's proposed rule would be the number of reviewers of the proposed rule. We acknowledged that this assumption may overstate or overstate the costs of reviewing the rule. It is possible that not all commenters reviewed last year's rule in detail, and it is also possible that some reviewers chose not to comment on the proposed rule. For those reasons, we decided that the number of past commenters would be a fair estimate of the number of reviewers of the proposed rule. We welcomed any public comments on the approach in estimating the number of entities that would review the proposed rule. We did not receive any public comments specific to our solicitation.

We also recognized that different types of entities are in many cases affected by mutually exclusive sections of the proposed rule. Therefore, for the purposes of our estimate, we assumed that each reviewer read approximately 50 percent of the proposed rule. We sought public comments on this assumption. We did not receive any public comments specific to our solicitation.

We have used the number of timely pieces of correspondence on the FY 2018 proposed rule as our estimate for the number of reviewers of this final rule. We continue to acknowledge the uncertainty involved with using this number, but we believe it is a fair estimate due to the variety of entities affected and the likelihood that some of them choose to rely (in full or in part) on press releases, newsletters, fact sheets, or other sources rather than the comprehensive review of preamble and regulatory text. Using the wage information from the BLS for medical and health service managers (Code 11-9111), we estimate that the cost of reviewing the final rule is \$105.16 per hour, including overhead and fringe benefits ([https://www.bls.gov/oes/current/oes\\_nat.htm](https://www.bls.gov/oes/current/oes_nat.htm)). Assuming an average reading speed, we estimate that it will take approximately 21 hours for the staff to review half of the final rule. For each IPPS hospital or LTCH that reviews the final rule, the estimated cost is \$2,208.36 (21 hours x \$105.16). Therefore, we estimate that the total cost of reviewing the final rule is \$9,707,951 (\$2,208.36 x 4,396 reviewers).

**II. Accounting Statements and Tables**

*A. Acute Care Hospitals*

As required by OMB Circular A-4 (available at [https://obamawhitehouse.archives.gov/omb/circulars\\_a-004\\_a-4/](https://obamawhitehouse.archives.gov/omb/circulars_a-004_a-4/) and <https://georgewbush-whitehouse.archives.gov/omb/circulars/a004/a-4.html>), in the following Table V., we have prepared an accounting statement showing the classification of the expenditures associated with the provisions of this final rule as they relate to acute care hospitals. This table provides our best estimate of the change in Medicare payments to providers as a result of the changes to the IPPS presented in this final rule. All expenditures are classified as transfers to Medicare providers.

As shown below in Table V., the net costs to the Federal Government associated with the policies in this final rule are estimated at \$2.4 billion.

TABLE V—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES UNDER THE IPPS FROM FY 2017 TO FY 2018

Category	Transfers
Annualized Monetized Transfers .....	\$2.4 billion.
From Whom to Whom .....	Federal Government to IPPS Medicare Providers.

*B. LTCHs*

As discussed in section I.J. of this Appendix, the impact analysis of the payment rates and factors presented in this final rule under the LTCH PPS is projected to result in a decrease in estimated aggregate LTCH PPS payments in FY 2018 relative to FY 2017 of approximately \$110 million based on the data for 415 LTCHs in our database that are subject to payment under the LTCH

PPS. Therefore, as required by OMB Circular A-4 (available at [https://obama.whitehouse.archives.gov/omb/circulars\\_a004\\_a-4/](https://obama.whitehouse.archives.gov/omb/circulars_a004_a-4/) and <https://georgewbush-whitehouse.archives.gov/omb/circulars/a004/a-4.html>), in Table VI., we have prepared an accounting statement showing the classification of the expenditures associated with the provisions of this final rule as they relate to the changes to the LTCH PPS. Table VI. provides our best estimate of

the estimated change in Medicare payments under the LTCH PPS as a result of the payment rates and factors and other provisions presented in this final rule based on the data for the 415 LTCHs in our database.

As shown in Table VI. below, the net savings to the Federal Government associated with the policies for LTCHs in this final rule are estimated at \$110 million.

**TABLE VI—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES FROM THE FY 2017 LTCH PPS TO THE FY 2018 LTCH PPS**

Category	Transfers
Annualized Monetized Transfers .....	– \$110 million
From Whom to Whom .....	Federal Government to LTCH Medicare Providers

*C. Information Collection Requirements, Regulatory Impact Analyses, and Regulatory Familiarization Costs*

As noted in section I.T. of Appendix A of this final rule, the savings and costs reflected

in the information collection requirements and regulatory impact analyses of this final rule is a savings of \$3,854,344. Also, as noted in section I.V. of Appendix A of this final

rule, the regulatory review cost for this final rule is \$9,707,951.

**TABLE VII—ACCOUNTING STATEMENT: SAVINGS FROM THE HOSPITAL IQR PROGRAM AND COST OF REGULATION FAMILIARIZATION**

Category	Cost *
Cost (in millions) .....	\$5.853607

\*Familiarization cost is one time and some of the savings associated with the Hospital IQR Program are annually.

**III. Regulatory Flexibility Act (RFA) Analysis**

The RFA requires agencies to analyze options for regulatory relief of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small government jurisdictions. We estimate that most hospitals and most other providers and suppliers are small entities as that term is used in the RFA. The great majority of hospitals and most other health care providers and suppliers are small entities, either by being nonprofit organizations or by meeting the SBA definition of a small business (having revenues of less than \$7.5 million to \$38.5 million in any 1 year). (For details on the latest standards for health care providers, we refer readers to page 36 of the Table of Small Business Size Standards for NAIC 622 found on the SBA Web site at: [http://www.sba.gov/sites/default/files/files/Size\\_Standards\\_Table.pdf](http://www.sba.gov/sites/default/files/files/Size_Standards_Table.pdf).)

For purposes of the RFA, all hospitals and other providers and suppliers are considered to be small entities. Individuals and States are not included in the definition of a small entity. We believe that the provisions of this final rule relating to acute care hospitals will have a significant impact on small entities as explained in this Appendix. For example, because all hospitals are considered to be small entities for purposes of the RFA, the hospital impacts described in this final rule are impacts on small entities. For example, we refer readers to “Table I—Impact Analysis of Changes to the IPPS for Operating Costs for FY 2018.” Because we lack data on

individual hospital receipts, we cannot determine the number of small proprietary LTCHs. Therefore, we are assuming that all LTCHs are considered small entities for the purpose of the analysis in section I.J. of this Appendix. MACs are not considered to be small entities because they do not meet the SBA definition of a small business. Because we acknowledge that many of the affected entities are small entities, the analysis discussed throughout the preamble of this final rule constitutes our regulatory flexibility analysis. This final rule contains a range of policies. It provides descriptions of the statutory provisions that are addressed, identifies the finalized policies, and presents rationales for our decisions and, where relevant, alternatives that were considered.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20229), we solicited public comments on our estimates and analysis of the impact of our proposals on those small entities. Any public comments that we received and our responses are presented throughout this final rule.

**IV. Impact on Small Rural Hospitals**

Section 1102(b) of the Social Security Act requires us to prepare a regulatory impact analysis for any proposed or final rule that may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. With the exception of hospitals located in certain New England counties, for purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is

located outside of an urban area and has fewer than 100 beds. Section 601(g) of the Social Security Amendments of 1983 (Pub. L. 98–21) designated hospitals in certain New England counties as belonging to the adjacent urban area. Thus, for purposes of the IPPS and the LTCH PPS, we continue to classify these hospitals as urban hospitals. (We refer readers to Table I in section I.G. of this Appendix for the quantitative effects of the policy changes under the IPPS for operating costs.)

**V. Unfunded Mandates Reform Act Analysis**

Section 202 of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of \$100 million in 1995 dollars, updated annually for inflation. In 2017, that threshold level is approximately \$146 million. This final rule will not mandate any requirements for State, local, or tribal governments, nor will it affect private sector costs.

**VI. Executive Order 13175**

Executive Order 13175 directs agencies to consult with Tribal officials prior to the formal promulgation of regulations having tribal implications. This final rule contains provisions applicable to hospitals and facilities operated by the Indian Health Service or Tribes or Tribal organizations under the Indian Self-Determination and Education Assistance Act and, thus, has tribal implications. Therefore, in accordance with Executive Order 13175 and the CMS Tribal Consultation Policy (December 2015),

CMS has consulted with Tribal officials on these Indian-specific provisions of the proposed rule prior to the formal promulgation of this final rule.

**VII. Executive Order 12866**

In accordance with the provisions of Executive Order 12866, the Executive Office of Management and Budget reviewed this final rule.

**Appendix B: Recommendation of Update Factors for Operating Cost Rates of Payment for Inpatient Hospital Services**

**I. Background**

Section 1886(e)(4)(A) of the Act requires that the Secretary, taking into consideration the recommendations of MedPAC, recommend update factors for inpatient hospital services for each fiscal year that take into account the amounts necessary for the efficient and effective delivery of medically appropriate and necessary care of high quality. Under section 1886(e)(5) of the Act, we are required to publish update factors recommended by the Secretary in the proposed and final IPPS rules, respectively. Accordingly, this Appendix provides the recommendations for the update factors for the IPPS national standardized amount, the hospital-specific rate for SCHs, and the rate-of-increase limits for certain hospitals excluded from the IPPS, as well as LTCHs. In prior years, we have made a recommendation in the IPPS proposed rule and final rule for the update factors for the payment rates for IRFs and IPFs. However, for FY 2018, consistent with approach for FY 2017, we are including the Secretary’s recommendation for the update factors for IRFs and IPFs in separate **Federal Register** documents at the time that we announce the annual updates for IRFs and IPFs. We also discuss our response to MedPAC’s recommended update factors for inpatient hospital services.

**II. Inpatient Hospital Update for FY 2018**

*A. FY 2018 Inpatient Hospital Update*

As discussed in section V.B. of the preamble to this final rule, for FY 2018, consistent with section 1886(b)(3)(B) of the

Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act, we are setting the applicable percentage increase by applying the following adjustments in the following sequence. Specifically, the applicable percentage increase under the IPPS is equal to the rate-of-increase in the hospital market basket for IPPS hospitals in all areas, subject to a reduction of one-quarter of the applicable percentage increase (prior to the application of other statutory adjustments; also referred to as the market basket update or rate-of-increase (with no adjustments)) for hospitals that fail to submit quality information under rules established by the Secretary in accordance with section 1886(b)(3)(B)(viii) of the Act and a reduction of three-quarters of the applicable percentage increase (prior to the application of other statutory adjustments; also referred to as the market basket update or rate-of-increase (with no adjustments)) for hospitals not considered to be meaningful electronic health record (EHR) users in accordance with section 1886(b)(3)(B)(ix) of the Act, and then subject to an adjustment based on changes in economy-wide productivity (the multifactor productivity (MFP) adjustment), and an additional reduction of 0.75 percentage point as required by section 1886(b)(3)(B)(xii) of the Act. Sections 1886(b)(3)(B)(xi) and (b)(3)(B)(xii) of the Act, as added by section 3401(a) of the Affordable Care Act, state that application of the MFP adjustment and the additional FY 2018 adjustment of 0.75 percentage point may result in the applicable percentage increase being less than zero.

We note that, in compliance with section 404 of the MMA, in this final rule, we are replacing the FY 2010-based IPPS operating and capital market baskets with the rebased and revised 2014-based IPPS operating and capital market baskets for FY 2018.

In the FY 2018 IPPS/LTCH PPS proposed rule, based on the most recent data available at that time, in accordance with section 1886(b)(3)(B) of the Act, we proposed to establish the FY 2018 market basket update used to determine the applicable percentage increase for the IPPS on the IGI’s fourth quarter 2016 forecast of the proposed 2014-based IPPS market basket rate-of-increase with historical data through third quarter 2016, which was estimated to be 2.9 percent. Based on the most recent data available for

this FY 2018 IPPS/LTCH PPS final rule, in accordance with section 1886(b)(3)(B) of the Act, we are establishing the FY 2018 market basket update used to determine the applicable percentage increase for the IPPS on IGI’s second quarter 2017 forecast of the 2014-based IPPS market basket rate-of-increase with historical data through first quarter 2017, which is estimated to be 2.7 percent.

In accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, in section V.B. of the preamble of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19932), we proposed an MFP adjustment of 0.4 percent for FY 2018. Therefore, based on IGI’s fourth quarter 2016 forecast of the proposed 2014-based IPPS market basket, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act (hereafter referred to as a hospital that submits quality data) and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act (hereafter referred to as a hospital that is a meaningful EHR user), we presented in the proposed rule four possible applicable percentage increases that could be applied to the standardized amount. Based on the most recent data available for this FY 2018 IPPS/LTCH PPS final rule, in accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, in section V.B. of the preamble of this final rule, we are establishing a MFP adjustment (the 10-year moving average percent change of MFP for the period ending FY 2018) of 0.6 percent.

In accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, in section V.B. of the preamble of this final rule, we are establishing the applicable percentages increases for the FY 2018 updates based on IGI’s second quarter 2017 forecast of the 2014-based IPPS market basket, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act as outlined in the table below.

FY 2018	Hospital submitted quality data and is a meaningful EHR user	Hospital submitted quality data and is NOT a meaningful EHR user	Hospital did NOT submit quality data and is a meaningful EHR user	Hospital did NOT submit quality data and is NOT a meaningful EHR user
Market Basket Rate-of-Increase .....	2.7	2.7	2.7	2.7
Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act .....	0.0	0.0	-0.675	-0.675
Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act .....	0.0	-2.025	0.0	-2.025
MFP Adjustment under Section 1886(b)(3)(B)(xi) of the Act .....	-0.6	-0.6	-0.6	-0.6
Statutory Adjustment under Section 1886(b)(3)(B)(xii) of the Act .....	-0.75	-0.75	-0.75	-0.75
Applicable Percentage Increase Applied to Standardized Amount .....	1.35	-0.675	0.675	-1.35

### B. Update for SCHs for FY 2018

Section 1886(b)(3)(B)(iv) of the Act provides that the FY 2018 applicable percentage increase in the hospital-specific rate for SCHs equals the applicable percentage increase set forth in section 1886(b)(3)(B)(i) of the Act (that is, the same update factor as for all other hospitals subject to the IPPS).

(We note that, as discussed in section V.H. of the preamble of this final rule, section 205 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10, enacted on April 16, 2015) extended the MDH program (which, under previous law, was to be in effect for discharges on or before March 31, 2015 only) for discharges occurring on or after April 1, 2015, through FY 2017 (that is, for discharges occurring on or before September 30, 2017). Therefore, under current law, the MDH program will expire at the end of FY 2017. However, as discussed in section V.H. of the preamble of this final rule, MDHs have the opportunity to apply for SCH status in advance of the expiration of the MDH program and be paid as such under certain conditions, as specified in the regulations at 42 CFR 412.92(b)(2)(i) and (b)(2)(v).)

As previously mentioned, the update to the hospital specific rate for SCHs is subject to section 1886(b)(3)(B)(i) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act. Accordingly, depending on whether a hospital submits quality data and is a meaningful EHR user, we are establishing the same four possible applicable percentage increases in the table above for the hospital-specific rate applicable to SCHs.

### C. FY 2018 Puerto Rico Hospital Update

As discussed in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56939), prior to January 1, 2016, Puerto Rico hospitals were paid based on 75 percent of the national standardized amount and 25 percent of the Puerto Rico-specific standardized amount. Section 601 of Public Law 114–113 amended section 1886(d)(9)(E) of the Act to specify that the payment calculation with respect to operating costs of inpatient hospital services of a subsection (d) Puerto Rico hospital for inpatient hospital discharges on or after January 1, 2016, shall use 100 percent of the national standardized amount. Because Puerto Rico hospitals are no longer paid with a Puerto Rico-specific standardized amount under the amendments to section 1886(d)(9)(E) of the Act, there is no longer a need for us to make an update to the Puerto Rico standardized amount. Hospitals in Puerto Rico are now paid 100 percent of the national standardized amount and, therefore, are subject to the same update to the national standardized amount discussed under section V.B.1. of the preamble of this final rule. Accordingly, for FY 2018, we are establishing an applicable percentage increase of 1.35 percent to the standardized amount for hospitals located in Puerto Rico.

### D. Update for Hospitals Excluded from the IPPS for FY 2018

Section 1886(b)(3)(B)(ii) of the Act is used for purposes of determining the percentage

increase in the rate-of-increase limits for children's hospitals, cancer hospitals, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and America Samoa). Section 1886(b)(3)(B)(ii) of the Act sets the percentage increase in the rate-of-increase limits equal to the market basket percentage increase. In accordance with § 403.752(a) of the regulations, RNHCIs are paid under the provisions of § 413.40, which also use section 1886(b)(3)(B)(ii) of the Act to update the percentage increase in the rate-of-increase limits.

Currently, children's hospitals, PPS-excluded cancer hospitals, RNHCIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa are among the remaining types of hospitals still paid under the reasonable cost methodology, subject to the rate-of-increase limits. As discussed in section VII. of the preamble of this final rule, we are using the percentage increase in the 2014-based IPPS operating market basket to update the target amounts for children's hospitals, PPS-excluded cancer hospitals, RNHCIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa for FY 2018 and subsequent fiscal years. Accordingly, for FY 2018, the rate-of-increase percentage to be applied to the target amount for these children's hospitals, cancer hospitals, RNHCIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa would be the FY 2018 percentage increase in the 2014-based IPPS operating market basket. For this final rule, the current estimate of the IPPS operating market basket percentage increase for FY 2018 is 2.7 percent.

### E. Update for LTCHs for FY 2018

Section 123 of Public Law 106–113, as amended by section 307(b) of Public Law 106–554 (and codified at section 1886(m)(1) of the Act), provides the statutory authority for updating payment rates under the LTCH PPS.

As discussed in section V.A. of the Addendum to this final rule, we are establishing an update the LTCH PPS standard Federal payment rate by 1.0 percent for FY 2018, consistent with the amendments to section 1886(m)(3) of the Act provided by section 411 of MACRA. In accordance with the LTCHQR Program under section 1886(m)(5) of the Act, we are reducing the annual update to the LTCH PPS standard Federal rate by 2.0 percentage points for failure of a LTCH to submit the required quality data. Accordingly, we are establishing an update factor of 1.01 in determining the LTCH PPS standard Federal rate for FY 2018. For LTCHs that fail to submit quality data for FY 2018, we are establishing an annual update to the LTCH PPS standard Federal rate of –1.0 percent (that is, the annual update for FY 2018 of 1.0 percent less 2.0 percentage points for failure to submit the required quality data in accordance with section 1886(m)(5)(C) of the Act and our

rules) by applying an update factor of 0.99 in determining the LTCH PPS standard Federal rate for FY 2018.

For FY 2018, consistent with the amendments to section 1886(m)(3) of the Act provided by section 411 of MACRA, for LTCHs that submit quality data, we are recommending an update of 1.0 percent to the LTCH PPS standard Federal rate. For LTCHs that fail to submit quality data for FY 2018, we are recommending an annual update to the LTCH PPS standard Federal rate of –1.0 percent.

### III. Secretary's Recommendations

MedPAC is recommending an inpatient hospital update in the amount specified in current law for FY 2018. MedPAC's rationale for this update recommendation is described in more detail below. As mentioned above, section 1886(e)(4)(A) of the Act requires that the Secretary, taking into consideration the recommendations of MedPAC, recommend update factors for inpatient hospital services for each fiscal year that take into account the amounts necessary for the efficient and effective delivery of medically appropriate and necessary care of high quality. Consistent with current law, depending on whether a hospital submits quality data and is a meaningful EHR user, we are recommending the four applicable percentage increases to the standardized amount listed in the table under section II. of this Appendix B. We are recommending that the same applicable percentage increases apply to SCHs.

In addition to making a recommendation for IPPS hospitals, in accordance with section 1886(e)(4)(A) of the Act, we are recommending update factors for certain other types of hospitals excluded from the IPPS. Consistent with our policies for these facilities, we are recommending an update to the target amounts for children's hospitals, cancer hospitals, RNHCIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa of 2.7 percent.

For FY 2018, consistent with the amendments to section 1886(m)(3) of the Act provided by section 411 of MACRA, for LTCHs that submit quality data, we are recommending an update of 1.0 percent to the LTCH PPS standard Federal rate. For LTCHs that fail to submit quality data for FY 2018, we are recommending an annual update to the LTCH PPS standard Federal rate of -1.0 percent.

### IV. MedPAC Recommendation for Assessing Payment Adequacy and Updating Payments in Traditional Medicare

In its March 2017 Report to Congress, MedPAC assessed the adequacy of current payments and costs, and the relationship between payments and an appropriate cost base. MedPAC recommended an update to the hospital inpatient rates in the amount specified in current law. We refer the reader to the March 2017 MedPAC report, which is available for download at [www.medpac.gov](http://www.medpac.gov) for a complete discussion on this recommendation. MedPAC expects Medicare margins to decline from 2015 to 2017.

*Response:* We agree with MedPAC, and consistent with current law, we are applying

an applicable percentage increase for FY 2018 of 1.35 percent, provided the hospital submits quality data and is a meaningful EHR user, consistent with statutory requirements.

We note that, because the operating and capital prospective payment systems remain separate, we are continuing to use separate updates for operating and capital payments. The update to the capital rate is discussed in

section III. of the Addendum to this final rule.
