We invited public comment on our proposals to: (1) Exclude any hospital that does not have at least five discharges for at least one reported eCQM included among their QRDA I file submissions in eCQM data validation; and (2) to exclude from selection hospitals meeting either of the two exclusion criteria finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57178) as discussed above. We note that the proposed rule (at 82 FR 20068) included a technical error stating “and/or (2) to exclude from selection hospitals meeting either of the two exclusion criteria finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57178).” We have corrected the language in this final rule to state “and,” instead of “and/or.”

Comment: A few commenters supported the exclusion of hospitals from eCQM data validation selection that have already been selected for chart-abstracted measure validation or that have been granted a Hospital IQR Program Extraordinary Circumstances Exemption because it provides relief of undue burden on facilities and increases the chance that selected hospitals will have an adequate sample size for validation.

Response: We thank the commenters for their support.

After consideration of the public comments we received, we are finalizing our proposals, as proposed, for the FY 2020 payment determination and subsequent years: (1) To exclude any hospital that does not have at least five discharges for at least one reported eCQM included among their QRDA I file submissions; and (2) to exclude from selection hospitals meeting either of the two exclusion criteria finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57178). This means that the three exclusion criteria described would be applied before random selection of 200 hospitals for eCQM data validation, such that hospitals meeting one or more of these exclusion criteria would not be eligible for selection.

(b) Selection of Cases

We have not previously specified processes for the selection of cases for eCQM data validation. For the FY 2020 payment determination and subsequent years, we proposed to exclude the following cases from validation for those hospitals selected to participate in eCQM data validation:

- Episodes of care that are longer than 120 days; and
- Cases with a zero denominator for each measure.

We believe excluding episodes of care that are longer than 120 days will reduce the reporting burden on hospitals selected for eCQM data validation, as the volume of data reported for longer cases is greater. Further, we believe excluding cases with zero denominators for each measure would ensure we perform validation only on cases with applicable measure data. We note this proposed exclusion applies to cases, rather than measures. However, a measure would not be validated if a hospital did not have any applicable cases for the measure.

We invited public comments on our proposal to exclude: (1) Episodes of care that are longer than 120 days; and (2) cases with a zero denominator for each measure from eCQM data validation for the FY 2020 payment determination and subsequent years as discussed above.

Comment: A few commenters supported the proposed policy of adding additional exclusion criteria to the hospital and case selection process for eCQM data validation to include: (1) Episodes of care that are longer than 120 days; and (2) cases with a zero denominator for each measure, because these exclusions would decrease hospital reporting burden.

Response: We thank the commenters for their support.

After consideration of the public comments we received, we are finalizing our proposal, as proposed, for the FY 2020 payment determination and subsequent years, to add exclusion criteria to the hospital and case selection process for eCQM data validation to include: (1) Episodes of care that are longer than 120 days; and (2) cases with a zero denominator for each measure.

(3) Medical Record Submission Requirements and Scoring

(a) Medical Record Submission Requirements

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57179), we finalized that hospitals participating in eCQM data validation for the FY 2020 payment

determination and subsequent years are required to: (1) Submit data by 30 calendar days following the medical records request date listed on the CDAC request form; (2) provide sufficient patient level information necessary to match the requested medical record to the original Hospital IQR Program submitted eCQM measure data record; and (3) submit records in PDF file format through QualityNet using the Secure File Transfer (SFT). We also finalized for hospitals selected for eCQM data validation (for the FY 2020 payment determination only): (1) We require submission of at least 75 percent of sampled eCQM measure medical records in a timely and complete manner; and (2) the accuracy of eCQM data submitted for validation would not affect a hospital's validation score (81 FR 57180). In the FY 2018 IPPS/LTCH PPS proposed rule, we did not propose to make any changes related to these operational procedures. However, we proposed to continue these policies for the FY 2021 payment determination and subsequent years. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20068 through 20069), we proposed to extend to the FY 2021 payment determination and subsequent years our previously finalized medical record submission policy for eCQM data validation, as finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57181), requiring submission of at least 75 percent of sampled eCQM measure medical records in a timely and complete manner. We also proposed to extend to the FY 2021 payment determination our previously finalized medical record submission policy for eCQM data validation, as finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57181), that the accuracy of eCQM data submitted for validation would not affect a hospital's validation score. (We note that this policy is discussed in more detail in the next section and refer readers below.) We noted that if our proposals in section IX.A.8 of the preamble of the FY 2018 IPPS/LTCH PPS proposed rule, which proposed two quarters of data for CY 2017 eCQM data submission and eight cases per quarter for hospitals selected for validation (16 total cases for the entire data collection period), were finalized as proposed, and hospitals selected for eCQM data validation are required to submit complete information for 75 percent of requested cases as previously finalized, then those hospitals would be required to submit information for at least 12 records, or 75 percent of the requested 16 records for the FY 2020 payment determination. Similarly, if our

proposals: (1) To continue our medical record submission policies for the FY 2021 payment determination and subsequent years; (2) to require three quarters of data for CY 2018 eCQM data submission and eight cases per quarter for hospitals selected for validation (24 total cases for the entire data collection period) as detailed in section IX.A.8 of the preamble of the FY 2018 IPPS/LTCH PPS proposed rule; and (3) hospitals selected for eCQM data validation are required to submit complete information for 75 percent of requested cases, were all finalized as proposed, then those hospitals would be required to submit complete information for at least 18 records, or 75 percent of the requested 24 records for the FY 2021 payment determination.

Furthermore, as finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57180) for the FY 2020 payment determination, in the proposed rule (82 FR 20069), we proposed, for the FY 2021 payment determination and subsequent years, that any hospital that fails any validation requirement, such as submission of records in PDF file format within 30 days of the date listed on the CDAC medical records request, and/or submission of complete information for at least 75 percent of the requested records, would be considered not to have met the eCQM validation requirements and would be subject to a one-quarter reduction of the applicable percentage increase for not meeting all Hospital IQR Program requirements.

We invited public comment on the proposals we made in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20068 through 20069) as discussed above.

Comment: One commenter recommended CMS reconsider the process of submitting PDF copies of the medical records for validation, suggesting that a more accurate method would be for CMS to send an auditor onsite to validate the data directly from the EHR.

Response: We thank the commenters for the input. At this time, we believe the most feasible and less burdensome approach to hospitals is to continue the current process for medical record submission for validation via PDF file submission. In particular, we recognize the significant time and resources that hospitals would be required to address CMS onsite validator needs and access to onsite information. We strongly believe that hospital resources would be better devoted to caring for and communicating with patients and their caregivers. We also note that hospitals are familiar with this method of

reporting medical records for chart-abstracted measure validation.

Comment: One commenter requested clarification on which format (complete medical record, including free text or printout of the QRDA I file) CMS will use to validate eCQM data.

Response: Per the FY 2017 IPPS/LTCH PPS final rule (81 FR 57179), the format will be a portable document format (PDF) of the entire medical record.

After consideration of the public comments we received, we are finalizing our proposals, as proposed, for the FY 2021 payment determination and subsequent years, that: (1) Hospitals selected for eCQM data validation are required to submit at least 75 percent of sampled eCQM measure medical records in a timely and complete manner; and (2) any hospital that fails any validation requirement would be considered not to have met the eCQM validation requirements and would be subject to a one-quarter reduction of the applicable percentage increase for not meeting all Hospital IQR Program requirements. As discussed in section IX.A.8 of the preamble of this final rule, we are finalizing a modification to the eCQM reporting requirements such that hospitals are required to submit one, self-selected calendar quarter of data for 4 eCQMs for both the CY 2017 reporting period/FY 2019 payment determination and the CY 2018 reporting period/FY 2020 payment determination. Furthermore, we refer readers to section IX.A.11.b.(1) of the preamble of this final rule where we are finalizing our proposals to require hospitals selected for eCQM data validation to submit eight cases for the selected calendar quarter. As applied to our finalized policies here for the FY 2021 payment determination, selected hospitals would be required to submit complete information for at least 6 records, or 75 percent of the requested 8 records.

(b) Scoring

As finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57178) for the FY 2020 payment determination only, the accuracy of eCQM data (the extent to which eCQM data reported for validation matches the data previously reported in the QRDA I files for eCQM reporting) submitted for validation will not affect a hospital's validation score. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20069), we proposed the continuation of this policy for the FY 2021 payment determination, such that the accuracy of eCQM data submitted for validation would not affect a hospital's validation score. We intend for the accuracy of eCQM data

validation to affect validation scores in the future and would propose any changes related to this in future rulemaking. The data submission deadlines and additional details about the eCQM data validation procedures will be posted on the QualityNet Web site at: <http://www.QualityNet.org/>. We invited public comment on this proposal as discussed above.

We did not receive any public comments on our proposal. We are finalizing our proposal, as proposed, that the accuracy of eCQM data submitted for validation will not affect a hospital's validation score for the FY 2021 payment determination. We also received general comments about the eCQM data validation process in the Hospital IQR Program; these are discussed below.

Comment: A few commenters did not support the proposed modifications to the eCQM data validation process in the Hospital IQR Program. The commenters noted that validation of eCQMs should not be done until additional measures are accepted and built by vendors to allow hospitals the opportunity to submit data which aligns with their population and workflow rather than those currently available from the vendor. In addition, commenters stated that small hospitals without pediatrics, perinatal care, or stroke centers are very limited in their ability to submit eCQMs.

Response: We understand eCQM data validation imposes some burden on hospitals, but as we seek to evaluate the established validation procedures and expand electronic data reporting and validation, we believe validating data starting with the CY 2017 reporting period is necessary. Furthermore, because the accuracy of eCQM data submitted for validation will not affect a hospital's validation score for the FY 2021 payment determination, as finalized above, we believe this will balance any hospital burden or need for additional time to update their systems with our need to evaluate the quality of reported eCQM data. We disagree that validation of eCQM data should be delayed until additional measures are built by health IT vendors to allow hospitals the opportunity to submit data which aligns with their population and workflow because eCQM data submission is already a requirement in the Hospital IQR Program. Moreover, we believe validation is a critical component in the overall process of electronic reporting, as it informs hospitals about potential workflow refinements to ensure efficient extrapolation and enables us to ensure the accuracy of eCQM data prior to

future public reporting of the data. We encourage small hospitals that may be experiencing difficulty meeting the Hospital IQR Program's eCQM reporting requirements to review the Hospital IQR Program's ECE policy. We refer readers to section IX.A.15 of the preamble of this final rule for more information.

Finally, we note that hospitals are able to select which eCQMs best align with their population and workflow. We also refer readers to section IX.A.10.d.(2)(b)(ii) of the preamble of this final rule, in which we are finalizing a policy that requires EHRs to be certified to all available eCQMs, which will offer hospitals greater flexibility to report eCQM data most appropriate for their population and workflow, rather than being limited to those eCQMs selected and supported by their vendors.

Comment: Some commenters requested that CMS consider delaying mandatory validation of eCQM data for selected hospitals until the spring of 2020, using CY 2019 performance year for the FY 2021 payment determination, noting that this delay would allow hospitals sufficient time to install the 2015 Edition certification criteria for CEHRT, make necessary refinements and workflow process improvements, and complete internal validation to ensure the data output from the certified EHR technology's eCQM calculation is accurate.

Response: We do not believe that delaying validation of eCQM data is necessary at this time, because we are finalizing several policies in this final rule to help reduce the burden associated with eCQM reporting requirements. We refer readers to section IX.A.10.d.(2)(b)(i) of the preamble of this final rule, in which we are finalizing greater flexibility to our previously finalized certification policy for the CY 2018 reporting period/FY 2020 payment determination, and section IX.A.8. of the preamble of this final rule, where we are finalizing modified, reduced eCQM reporting requirements. We believe validation is a critical component in the overall process of electronic reporting, as it informs hospitals about potential workflow refinements to ensure efficient extrapolation and enables us to ensure the accuracy of eCQM data prior to future public reporting of the data.

Comment: One commenter suggested that CMS develop a detailed plan for how validation will be performed, including which fields of structured data will be used for validation and how that will compare with medical record review. The commenter stated that the hospital and vendor communities

should have an opportunity to comment on this detailed plan, and then CMS should undertake a second expanded pilot to test and further refine the plan in collaboration with stakeholders prior to implementation.

Response: We thank the commenters for their suggestion. More details on eCQM data validation will be provided at a later date, similar to the specifications that are posted on the QualityNet Web site for the validation of chart-abstracted measures. In addition, we encourage stakeholders to continue sharing feedback with us, to provide more information on their experience with the eCQM data validation process. This feedback will help us refine the process moving forward.

c. Modifications to the Educational Review Process for Chart-Abstracted Measures Validation

(1) Background

In the FY 2015 IPPS/LTCH PPS final rule, we stated that we rely on hospitals to request an educational review or appeal cases to identify any potential CDAC or CMS errors (79 FR 50260). We also noted that a hospital may request from CMS at any time an educational review to better understand whether or not we reached a correct conclusion during validation; hospitals that fail to meet Hospital IQR Program validation requirements have 30 days to appeal after this determination (79 FR 50260). We have described our processes for educational review on the QualityNet Web site.²⁸³ We note that historically this process functioned as an outreach opportunity we provided hospitals, but based on our experience, and more robust validation requirements, we believe that it would be beneficial to hospitals to propose formalizing this process.

Under the current process, if the results of an educational review indicate that CDAC or CMS has incorrectly scored a hospital, those scores are not changed unless and until the hospital submits a reconsideration request. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20069 through 20070), we proposed: (1) To formalize this process; and (2) to update the process to specify that if the results of an educational review indicate that we incorrectly scored a hospital, the corrected score would be used to compute the hospital's final validation score whether or not the hospital submits a reconsideration request.

These proposals are discussed in more detail below. Stakeholder feedback, provided via email, has indicated that while the educational review process is helpful to participating hospitals, it is limited in its impact, given that a hospital's score is not corrected even after an educational review determines that CMS reached an incorrect conclusion regarding a hospital's validation score for a given quarter. Based on this feedback, we proposed to change the Hospital IQR Program's chart-abstracted measure validation educational review process. Our goal is to reduce the number of reconsideration requests by identifying and correcting errors before the final yearly validation score is derived. By identifying and correcting any mistakes early on, this process could help decrease the burden during the annual reconsideration process, both for hospitals and CMS.

(2) Educational Review Process Modifications for the FY 2020 Payment Determination and Subsequent Years

(a) Request for Educational Review

Under this proposal, the educational review request process, as well as our procedures for responding to requests, remain the same. Specifically, under the current process, hospitals may request an educational review if they believe they have been scored incorrectly or if they have questions about their score. We would provide the results of the educational review, outlining the findings of whether the scores were correct or incorrect, to the requesting hospital through secure file transfer.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20069), we proposed to formalize this process. In formalizing our current procedures, the educational review request process, as well as our procedures for responding to requests, would remain the same. First, we proposed that, for the FY 2020 payment determination and subsequent years, a hospital may request from CMS an educational review to better understand whether or not CDAC or CMS reached a correct conclusion during validation for the first three quarters of validation. Specifically, upon receipt of an unsatisfactory score, a hospital would have 30 calendar days to contact the Validation Support Contractor (VSC) to solicit a written explanation of the provided score. We note that currently hospitals receive validation results on a quarterly basis, and that would not change under this proposed process. Accordingly, under this proposal, an educational review could be requested on a quarterly basis for the first three quarters of validation.

Results of the educational review would be provided to hospitals via secure file transfer.

Second, we proposed that the process used to evaluate whether or not validation results are correct would be the same in both an educational review and a reconsideration request. Specifically, as finalized in the FY 2012 IPPS/LTCH PPS final rule for the Hospital IQR Program's reconsideration request process, we proposed that upon receipt of an educational review request, we would review the data elements that were labeled as mismatched, as well as the written justifications provided by the hospitals, and make a decision on the educational review request.

(b) Scoring Update

For the FY 2020 payment determination and subsequent years, we proposed that if an educational review, that is requested for any of the first 3 quarters of validation, yields incorrect CMS validation results for chart-abstracted measures, we would use the corrected quarterly score, as recalculated during the educational review process, to compute the final confidence interval (CI). These corrected scores would be applicable to the corresponding quarter, within the first 3 quarters of validation, for which a request was submitted. We note that under this proposal, the quarterly validation reports issued to hospitals would not be changed to reflect the updated score due to the burden associated with reissuing corrected reports. Beginning with the FY 2020 payment determination, we proposed to use the revised score identified through an educational review when determining whether or not a hospital failed validation. Further, under this proposal, as with the current educational review process, corrected scores identified through the educational review would only be used if they indicate that the hospital performed more favorably than previously determined.

Under this proposal, the educational review request process, as well as our procedures for responding to requests, remain the same. We also note that, in accordance with our previously established policies, a hospital may still request reconsideration even if an educational review determined that a hospital was scored correctly. Hospitals that fail Hospital IQR Program requirements, which include validation, can request reconsideration at the end of the year after the annual payment update has been made. We refer readers to section IX.A.14. of the preamble of this final rule for a discussion about our

²⁸³ QualityNet: Validation—Educational Review. <https://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier3&cid=1228775419006>.

reconsideration and appeals process. We note that under this proposal, corrected scores identified through the educational review would only be used if they indicate that the hospital performed more favorably than previously determined. In addition, we note that for the last quarter of validation, because of the need to calculate the confidence interval in a timely manner and the insufficient time available to conduct educational reviews, the existing reconsideration process would be used to dispute an unsatisfactory validation result. If a hospital does not fail validation they still would have the opportunity to request an educational review within 30 days of receiving the results.

We invited public comment on our proposals to formalize the educational review process and use this process to correct scores for the first three quarters of chart-abstracted measure validation as discussed above.

Comment: A few commenters supported the proposal to formalize the educational review process so that incorrect validation scores may be corrected for the first three quarters of validation for chart-abstracted measures. One commenter believed that this change would make the process more meaningful and valuable to hospitals across the nation.

Response: We thank the commenters for their support.

Comment: One commenter expressed concern about the scoring metrics used to validate the educational review process of hospitals and emphasized the need to do more than just obtain a “passing” score.

Response: We thank the commenters for their input. We do not apply scoring metrics to validate the educational review process. If an error is found during an educational review, then the case reliability would be updated prior to computing the overall confidence interval. For example, if the provider has 1 mismatch out of 10 total cases for the quarter, therefore having a quarterly case reliability of 9/10, and upon educational review it is determined that the mismatch should *not* have occurred, we would update the quarterly case reliability to 10/10 prior to computing the overall confidence interval.

After consideration of the public comments we received, we are finalizing our proposals, as proposed, for the FY 2020 payment determination and subsequent years, to: (1) Formalize the educational review process for chart-abstracted measures; and (2) use this process to correct quarterly scores for any of the first 3 quarters of

validation in order to compute the final confidence interval (CI).

12. Data Accuracy and Completeness Acknowledgement (DACA) Requirements for the FY 2020 Payment Determination and Subsequent Years

We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53554) for previously-adopted details on DACA requirements. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20070), we did not propose any changes to the DACA requirements.

13. Public Display Requirements for the FY 2020 Payment Determination and Subsequent Years

a. Background

We refer readers to the FY 2008 IPPS/LTCH PPS final rule (72 FR 47364), the FY 2011 IPPS/LTCH PPS final rule (75 FR 50230), the FY 2012 IPPS/LTCH PPS final rule (76 FR 51650), the FY 2013 IPPS/LTCH PPS final rule (77 FR 53554), the FY 2014 IPPS/LTCH PPS final rule (78 FR 50836), the FY 2015 IPPS/LTCH PPS final rule (79 FR 50277), and the FY 2016 final rule (80 FR 49712 through 49713) for details on public display requirements. The Hospital IQR Program quality measures are typically reported on the *Hospital Compare* Web site at: <http://www.medicare.gov/hospitalcompare>, but on occasion are reported on other CMS Web sites such as: <https://data.medicare.gov>.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20070 through 20074), we did not propose any changes to public display requirements; however, we solicited public comment on potential options for confidential and public reporting of measures stratified by patient dual eligibility status as early as the summer of 2018 using data from the FY 2019 reporting period (July 1, 2014 through June 30, 2017). We previously sought public comment on the potential public reporting of quality measures data stratified by SES factors and future hospital quality measures that incorporate health equity in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57167 through 57168). In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20071), we sought additional public comment on the potential confidential and public reporting of Hospital 30-day, All-Cause, Risk-Standardized Readmission Rate Following Pneumonia Hospitalization (NQF #0506), (the Pneumonia Readmission measure), and the Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Pneumonia Hospitalization (NQF #0468), (the Pneumonia Mortality

measure), data stratified specifically by patient dual eligibility status. These are discussed in more detail below.

b. Potential Options for Confidential and Public Reporting of Hospital IQR Measures Stratified by Patient Dual Eligibility Status

(1) Background

In section IX.A.1.d. of the preamble of the proposed rule, we discussed the importance of improving beneficiary outcomes including reducing health disparities, and our commitment to ensuring that medically complex patients, as well as those with social risk factors, receive excellent care. As we noted in section IX.A.1.d. of the preamble of the proposed rule, studies show that social risk factors, such as earning a low-income, belonging to a racial or ethnic minority group, or living with a disability, are associated with poor health outcomes, some of which are related to the quality of health care.²⁸⁴ One of our core objectives is to improve health outcomes for all beneficiaries, and to ensure that complex patients as well as those with social risk factors receive excellent care. Within this context, recent reports by the Office of the Assistant Secretary for Planning and Evaluation (ASPE) and the National Academies of Sciences, Engineering, and Medicine have examined the influence of social risk factors in CMS value-based purchasing programs.²⁸⁵ In addition, as noted in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57185), the NQF has undertaken a 2-year trial period in which certain new measures and measures undergoing maintenance review have been assessed to determine if risk adjustment for social risk factors is appropriate for these measures.²⁸⁶ Since publishing the proposed rule, we have verified that the NQF trial period ended in April 2017 and a draft report is available at: http://www.qualityforum.org/SES_Trial_Period.aspx.

²⁸⁴ See, for example, United States Department of Health and Human Services. “Healthy People 2020: Disparities. 2014,” <http://www.healthypeople.gov/2020/about/foundation-health-measures/Disparities> or National Academies of Sciences, Engineering, and Medicine. Accounting for Social Risk Factors in Medicare Payment: Identifying Social Risk Factors. Washington, DC: National Academies of Sciences, Engineering, and Medicine 2016.

²⁸⁵ Department of Health and Human Services Office of the Assistant Secretary for Planning and Evaluation (ASPE), “Report to Congress: Social Risk Factors and Performance Under Medicare’s Value-Based Purchasing Programs.” December 2016, <https://aspe.hhs.gov/pdf-report/report-congress-social-risk-factors-and-performance-under-medicare-value-based-purchasing-programs>.

²⁸⁶ http://www.qualityforum.org/SES_Trial_Period.aspx.

Also as part of this effort, we solicited feedback on which social risk factors provide information that is most valuable to stakeholders. We also sought public comment on confidential reporting and future public reporting of some of our measures, specifically the Pneumonia Readmission measure (NQF #0506) and the Pneumonia Mortality measure (NQF #0468), stratified by patient dual eligibility. There are two potential purposes for providing information on hospital results stratified by dual eligibility. The approach we are considering would illuminate differences in outcome rates among patient groups within a hospital and would also allow for a comparison of those differences, or disparities, across hospitals. We also considered an alternative approach that would measure outcome rates for subgroups of patients, such as the dual eligible patients, across hospitals; however, this alternative would not allow for an examination of the difference in rates between groups (for example dual eligible patients compared to non-dual eligible patients).

The goals of measuring and monitoring disparities in patient outcomes for specific sub-groups of patients within hospitals is to reduce health inequities, improve health care quality for vulnerable populations, and promote greater transparency for health care consumers. This is in alignment with the CMS Quality Strategy²⁸⁷ and the ASPE report²⁸⁸ to Congress, which stated performance rates, including readmission rates, stratified by social risk should be developed and considered for hospital specific confidential preview reports and public reporting in places such as the *Hospital Compare* Web site, so hospitals, health systems, policymakers, and consumers can see and address important disparities in care.

Many levers exist for addressing and improving disparities in care and outcomes. The 21st Century Cures Act (Pub. L. 114–255) addresses payment penalty scoring in the Hospital Readmissions Reduction Program by identifying hospitals based on their proportion of dual eligible patients and supporting improvement efforts for

hospitals caring for patients with social risk factors by setting penalty thresholds among similar peer hospitals.²⁸⁹ As discussed in sections V.I.7. through V.I.10. of the preamble of this final rule, the Hospital Readmissions Reduction Program, as required by the statute, proposed to use dual eligibility as a marker of poverty, one key patient social risk factor, and we would like to move in that direction for the Hospital IQR Program as well in the future. In the Hospital IQR Program, we are exploring methods to distinguish vulnerable patients with social risk factors, such as poverty. As such, we intend to use dual eligible status among the over 65 year old patients included in the measures as a marker of poverty.

Dual eligible status describes whether Medicare beneficiaries are also enrolled in Medicaid. We use dual enrollment in Medicare and Medicaid as a marker for a beneficiary having low income and/or few assets. The recent report to Congress by ASPE has shown that dual eligibility was the most powerful predictor of poor health care outcomes among the social risk factors they tested.²⁹⁰

The *Hospital Compare* Web site currently displays readmission rates for each hospital, but does not specifically highlight a hospital's quality of care for vulnerable populations. We believe stratifying data by social risk factors would supplement the current reporting of the Pneumonia Readmission measure (NQF #0506) and the Pneumonia Mortality measure (NQF #0468) by highlighting disparities, that is, differences in outcomes, within hospitals that are not simply due to differences in illness severity, to the extent that such disparities exist for any given hospital. To do so, we developed a method to quantify the disparities of readmission and mortality between these groups within each hospital after accounting for patient case mix. The disparities indicator used in the hospital specific confidential preview reports would provide information assessing the increased odds, or rates, of readmission for dual eligible patients admitted to the same hospital, after accounting for differences in age and comorbidities.

For the Hospital IQR Program, we are considering options to improve health disparities among patient groups within hospitals by increasing the transparency of disparities among patients within hospitals and the ability to compare these disparities across hospitals. This would be accomplished by the methods described below. Our alternative

approach, also described below, to measure outcome rates for subgroups of patients, such as the dual eligible patients, across hospitals, would examine the performance of hospitals on the subgroup of dual eligible patients.

We previously sought public comment on the potential public reporting of quality measure data stratified by race, ethnicity, sex, and disability and future hospital quality measures that incorporate health equity in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57167 through 57168). In general, commenters supported the development of health equity measures and their inclusion in the Hospital IQR Program (81 FR 57167). In particular, stakeholders noted that stratified measures could serve as tools for hospitals to identify gaps in outcomes for different groups of patients, improve the quality of health care for all patients and empower consumers to make informed decisions about health care. The stakeholders encouraged us to stratify measures by other social risk factors such as age, income, and educational attainment (81 FR 57167); however, commenters raised concerns about the small denominator sample size associated with measure stratification by social risk factors, which would skew the reliability of stratified quality measures. Commenters also expressed concern that it may not be a simple task to stratify measures by race, ethnicity, sex, and disability because specific considerations are required for every measure and each reporting mechanism to implement such a requirement (81 FR 57168). For more details on the public comments, we refer the readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 57167 through 57168).

We acknowledge the complexity of interpreting stratified outcome measures. Due to this complexity, prior to publicly reporting stratified outcome measure data, as early as the summer of 2018 using data from the FY 2019 reporting period (July 1, 2014 through June 30, 2017), we are considering first providing hospitals with confidential results showing outcomes stratified by patient dual eligibility within the hospital, or more specifically, differences in outcome rates for the dual eligible and non-dual eligible patients in the measures. This would allow us to obtain feedback on reporting options and to ensure the information is reliable, valid, and understandable prior to any future public display on the *Hospital Compare* Web site. Our goal in producing stratified results is to provide information about disparities in patient

²⁸⁹ *Ibid.*

²⁹⁰ *Ibid.*

outcomes within hospitals to the extent that they exist for a given hospital. This information would supplement the assessment of overall hospital quality provided through the current measures of readmission and mortality rates; these measures would remain unchanged. We discuss below the methods and results of stratification for the current Hospital 30-day, All-Cause, Risk-Standardized Readmission Rate Following Pneumonia Hospitalization (NQF #0506) (the READM-30-PN or Pneumonia Readmission measure).

The stratified results would provide hospitals with confidential reporting with information that could illuminate any disparities in care and outcome that can be targeted through quality improvement efforts. Then for the future, we are considering publicly posting both of these results on *Hospital Compare* to allow consumers and other stakeholders to view critical information about the care and outcomes of subgroups of patients, particularly those with social risk factors. This information could drive consumer choice and spark improvement efforts targeting dual eligible patients. In the future, we would also consider expanding this approach to other social risk factors and other measures.

We invited public comment on: (1) Which social risk factors provide information that is most valuable to stakeholders; (2) providing hospitals with confidential preview reports containing stratified results for certain Hospital IQR Program measures, specifically the Pneumonia Readmission measure (NQF #0506) and the Pneumonia Mortality (MORT-30-PN) measure (NQF #0468); (3) a potential methodology for illuminating differences in outcomes rates among patient groups within a hospital that would also allow for a comparison of those differences, or disparities, across hospitals; (4) an alternative methodology that compares performance for patient subgroups across hospitals but does not provide information on hospital disparities and any additional suggested methodologies for calculating stratified results by patient dual eligible status; and (5) future public reporting of these same measures stratified by patient dual eligibility status on the *Hospital Compare* Web site. These are discussed in more detail below.

(2) Confidential Hospital Specific Preview Reports Prior to Publicly Reporting Stratified Data

We sought public comment on the possibility of providing confidential hospital specific preview reports

containing the results of the Pneumonia Readmission (NQF #0506) and Pneumonia Mortality (NQF #0468) measures stratified by patient dual eligibility, as early as the summer of 2018 using data from the FY 2019 reporting period (July 1, 2014 through June 30, 2017), prior to any future potential public reporting of this data. The current publicly reported measures used in the Hospital IQR Program and reported on the *Hospital Compare* Web site would remain unchanged. Following the time period during which hospitals received confidential preview reports, we may display stratified results on the *Hospital Compare* Web site solely for the purpose of “stratification,” that is, producing results to describe differences between subgroups within the hospital.

(3) Potential Methodology for Calculating Stratified Results by Patient Dual Eligibility Status

(a) Background

Under any future option to stratify measure results by patient dual eligibility status, we intend to focus on disparities between dual eligible patients and non-dual eligible patients, because dual eligibility is an important social risk factor among the Medicare FFS population and is feasible to measure.²⁹¹ In order to provide information about differences in readmission outcomes for dual eligible patients and non-dual eligible patients within a hospital that may be due to quality differences, we need a methodology that accounts for any differences in comorbidities, age, and other risk factors between these groups of patients. Such a methodology ensures that differences in outcomes are not simply due to differences in clinical severity and comorbid conditions among the patient groups. Therefore, any approach to identifying within-hospital disparities for readmission measures by patients’ dual eligibility status would build on the methodology used to calculate the currently implemented RSRRs.²⁹² As the Pneumonia Readmission measure (NQF #0506) is currently specified, risk-adjusted rates are estimated using a hierarchical logistic regression to

account for the clustering of observations within hospitals and differences in the number of admissions across hospitals.²⁹³

(b) Option To Measure Difference in Outcomes By Adding Three Additional Factors to Current Statistical Models

There is both a hospital and patient-level effect of dual eligibility on readmission risk. We have considered the hospital fixed effect in our approaches to stratifications (described in section IX.A.13.b.(3)(a) of the preamble of this final rule), because without it, we will introduce bias in the patient-level dual eligibility, which would produce misleading results. The statistical approach we may employ in the future would use current statistical models and add three additional factors to the statistical model for the purposes of measuring differences in outcomes: (1) An indicator for patient-level dual eligibility; (2) a hospital-level dual eligible factor²⁹⁴ (for example, percentage of dual eligible patients in each hospital); and (3) a hospital-specific indicator (random coefficient) for dual eligibility. This third factor, the hospital-specific random coefficient for dual eligibility, assesses the disparity or difference in readmissions for dual eligible patients within a specific hospital after accounting for other factors, such as differences in clinical disease or comorbid conditions. The first two factors, (the patient-level dual eligibility coefficient, which represents the overall difference between dual and non-dual groups in the entire country, and the hospital-level dual eligible factor, which reflects the difference in readmission rate between hospitals with different proportions of dual eligible patients) are only included in order to be able to interpret the third factor random coefficient and ensure it is specific to a particular hospital. It is the third factor, the hospital-specific indicator, which would be used to calculate the differences in readmission rates between the dual and non-dual eligible patients within the hospital. Using this method, within-hospital disparities in readmissions between

²⁹³ Krumholz H, Normand SL, Keenan P, et al. Hospital 30-Day Pneumonia Readmission Measure Methodology: Report prepared for the Centers for Medicare & Medicaid Services, 2008, <http://www.qualitynet.org/dcs/ContentServer?cid=1219069855841&pagename=QnetPublic%2FPPage%2FQnetTier4&c=Page>.

²⁹⁴ We note that although hospital-level dual eligible effect was not of interest, it often mixed with patient-level effect. Therefore, by breaking down the dual eligible effect into patient-level and hospital-level components, we were able to better assess of relationship between readmission and patient-level dual eligibility.

²⁹¹ Department of Health and Human Services Office of the Assistant Secretary for Planning and Evaluation (ASPE), “Report to Congress: Social Risk Factors and Performance Under Medicare’s Value-Based Purchasing Programs.” December 2016, <https://aspe.hhs.gov/pdf-report/report-congress-social-risk-factors-and-performance-under-medicare-value-based-purchasing-programs>.

²⁹² <http://www.qualitynet.org/dcs/ContentServer?cid=1219069855841&pagename=QnetPublic%2FPPage%2FQnetTier4&c=Page>.

dual eligible patients and non-dual eligible patients would be included in confidential hospital specific preview reports in addition to the currently calculated and displayed Pneumonia Readmission (NQF #0506) and Pneumonia Mortality (NQF #0468) measures. We would provide information in the form of odds ratios (that is, the increased odds of readmission for dual eligible patients at a given hospital) or, alternatively, the average difference in readmission rates between dual and non-dual patients after accounting for differences in other risk-factors.

To calculate odds ratios, we would convert hospital-specific coefficients for dual eligibility into odds ratios. Odds ratios compare dual eligible patients relative to non-dual eligible patients in terms of their risk of readmission, assuming that the two groups have the same case mix (that is, comorbidities). If the readmission rate is the same in both groups, the odds ratio is 1. If the odds ratio is greater than 1, it would mean that dual eligible patients have worse readmission rates, and vice versa. To estimate the average difference of readmission rates between dual and non-dual beneficiaries for each hospital, we would first calculate the predicted probabilities of being readmitted by assuming all patients are dual eligible or all patients are non-dual eligible in a hospital. The difference between the two predicted probabilities is the average difference in the readmission rates between the two groups of patients at each hospital.

Rather than assuming a uniform impact of dual eligible and non-dual eligible status across hospitals, this approach would assess the impact of dual eligibility across all hospitals separately, recognizing that socioeconomic disparities of patients may be greater or lesser at some hospitals as compared with others. This approach would allow quantification of the difference in readmissions between dual eligible patients and non-dual eligible patients within each hospital, as long as a hospital has a sufficient number of cases to produce a reliable estimate for both groups.

In summary, this statistical model would uniquely identify disparities in readmission rates for dual eligible beneficiaries compared to non-dual eligible beneficiaries, after controlling for patients' prior medical history and age for each hospital. This random coefficient for dual eligibility within the statistical model would indicate how readmission rates at the same hospital would differ between two patients at that hospital with exactly the same age

and underlying risk factors (those comorbid clinical conditions included in the statistical model), but differ with respect to dual eligibility.

(c) Option To Measure Difference in Outcomes Using Current Statistical Models

Depending on the information that is most useful to stakeholders, an alternative approach to examining readmission rates among dual eligible patients could be considered. To examine the relative performance of hospitals on readmission rates for their dual eligible patients, rather than to compare hospitals on within-hospital disparities, we could calculate the current measures' statistical model (without the additional factors mentioned above) and include only dual eligible patients. Similarly, this could be done for non-dual eligible patients. This approach of using two separate models for the separate patient subgroups would produce information on readmission rates for dual eligible patients at one hospital compared to another (or non-dual eligible patients across hospitals). Because of the use of two separate statistical models, this approach would not ensure consistent treatment of risk factors across patient groups and could not be used to compare readmission rates for two groups within a hospital.

(d) Summary of Statistical Method Options

We intend to provide information on the difference in readmission rates of dual eligible and non-dual eligible beneficiaries within hospitals and also provide information for hospitals and consumers on the relative disparities across hospitals. We solicited public comment on the information that stakeholders would find most useful and any additional suggested methodologies for calculating stratified results by patient dual eligible status. The confidential hospital specific preview reports containing data stratified by patient dual eligibility status would be modeled after current confidential hospital specific preview reports and include patient-level data for hospitalizations included in the measure. The current confidential hospital specific preview reports would be supplemented by information for each patient on their dual eligible status and a summary of the difference in readmission rates for dual eligible patients in the hospital as compared to other hospitals in the State and nation.

We invited public comment on both methodologies, as described above, to produce stratified results by

determining the differences in readmission and mortality by dual eligible status within a hospital, and a comparison of those disparities across hospitals, accounting for differences in comorbidities, age, and other risk factors between dual eligible and non-dual eligible patients.

All comments received are summarized under section IX.A.13.b.(6) of the preamble of this final rule, below.

(4) Data Sources

To provide an example of the statistical approach we could apply, we describe stratified results by patient dual eligibility for the Pneumonia Readmission measure (NQF #0506), using the first calculation method described in section IX.A.13.b.(3)(b) of the preamble of this final rule. To calculate the example rate, we used the CMS administrative claims data from each index pneumonia hospitalization, as well as from inpatient and outpatient Medicare claims from the 12 months prior to the hospitalization from July 2012 to June 2015 to calculate the publicly reported RSRRs following pneumonia hospitalization (NQF #0506) in the July 2016 *Hospital Compare* update. Both the cohort and the risk-adjustment approach remain unchanged. For more details on the publicly reported RSRRs following pneumonia as currently implemented, we refer readers to its measure methodology report and measure update zip file on our Web site at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>. The data was then linked to CMS denominator files²⁹⁵ (2012 to 2015) to derive the indicator of dual eligibility for each patient admission (1.3 percent index admissions were excluded because there is no information available in the denominator files).

We conducted preliminary analyses on the Pneumonia Readmission measure (NQF #0506)²⁹⁶ and determined that there is a total of 3,851 hospitals that have at least 25 included index hospitalizations overall, and at least 10 dual eligible and 10 non-dual eligible index hospitalizations for which we could report outcome disparity (82 percent of hospitals). The minimum sample size for 25 hospitalizations is consistent with the current publicly

²⁹⁵ <https://www.cms.gov/research-statistics-data-and-systems/files-for-order/limiteddatasets/denominatorlds.html>.

²⁹⁶ 1,456,289 hospitalizations (98.7 percent) were linked to the denominator data and 24.4 percent of those hospitalizations are from dual eligible patients.

reported outcomes measures. We imposed an additional requirement of at least 10 dual eligible and 10 non-dual eligible index hospitalizations for this example to ensure we had adequate numbers to observe any meaningful differences in outcome. We used this requirement because if a hospital has fewer than 10 patients in one subgroup of patients, it is neither clear that readmission rates for that group as compared to others would be reliable, nor that it is meaningful or has face validity to measure stratified rates for hospitals with very few of one of the categories of patients. We welcomed public comment on this sample size determination.

The observed readmission rate within 30-days of index discharge for all patients was 17.1 percent when we did not adjust for patients' prior medical history, and dual eligible beneficiaries had an approximately 3 percent higher readmission rate. Results from the hierarchical model²⁹⁷ indicate that there is a statistically significant association between dual eligibility and pneumonia readmission (adjusted odds ratio, 1.07; 95 percent CI, 1.06–1.08). In addition, there is substantial variation in the relationship between dual eligibility and readmission across hospitals (Median odd ratio, 1.06; Min., 0.95; Max., 1.22). Findings also revealed that dual eligible patients are more likely to get readmitted in 95 percent of hospitals.

(5) Future Potential Public Display

We invited public comment on the potential future public reporting of certain outcomes measures, such as the Pneumonia Readmission measure (NQF #0506) and the Pneumonia Mortality measure (NQF #0468), stratified by social risk factors, specifically dual eligible status, to illuminate within-hospital disparities. If we decide to display measure data stratified by dual eligible status on the *Hospital Compare* Web site, we would clearly differentiate between the measure information we currently display and the measure information that is stratified by patients' dual eligible status. In addition, as discussed above, if we decide to display measure data stratified by dual eligible status on the *Hospital Compare* Web site, hospitals would receive

information about their stratified readmission rates for a certain period of time through confidential hospital specific preview reports prior to the public reporting of any information.

We invited public comment on this future consideration to display the stratified measure results, in addition to the current measure results, for certain Hospital IQR Program measures in future reporting years. We note that public display of measure data stratified by social risk factors such as dual eligible status would not occur until after a period of confidential reporting.

All comments received are summarized under section IX.A.13.b.(6) of the preamble of this final rule below.

(6) Summary

To summarize, we invited public comment on: (1) Which social risk factors provide the most valuable information to stakeholders; (2) providing hospitals with confidential preview reports containing stratified results for certain Hospital IQR Program measures, specifically the Pneumonia Readmission measure (NQF #0506) and the Pneumonia Mortality measure (NQF #0468); (3) a potential methodology for illuminating differences in outcomes rates among patient groups within a hospital and would also allow for a comparison of those differences, or disparities, across hospitals; (4) an alternative methodology that compares performance for patient subgroups across hospitals but does not provide information on within hospital disparities and any additional suggested methodologies for calculating stratified results by patient dual eligible status; and (5) future public reporting of these same measures stratified by patient dual eligible status on the *Hospital Compare* Web site as discussed above.

Comment: Several commenters supported providing confidential reports to hospitals for the Pneumonia Readmission measure (NQF #0506) and the Pneumonia Mortality measure (NQF #0468) stratified by patient dual eligible status and publicly reporting stratified measure data in the future. The commenters believed this information would be informative to hospitals and would drive improvement.

One commenter stated that this would be a positive direction for CMS when proposing new methodologies for quality metrics whether it be population stratification, risk adjustment, or any other significant changes in reporting.

Response: We thank the commenters for their support on stratifying outcome measures. We believe that highlighting disparities in outcomes between sub-

groups of patients could contribute to improved care for vulnerable patients.

Comment: A few commenters urged CMS to explore if additional factors should be used to stratify or risk adjust the measures beyond dual eligibility as a marker of poverty and consider the full range of differences in patients' backgrounds that might affect outcomes (such as readmission rates).

Response: We appreciate the commenters' suggestion to stratify outcome measures by additional social risk factors. Consistent with the findings of the ASPE and National Academies of Sciences, Engineering, and Medicine reports, we will consider stratifying outcome measures by appropriate additional social risk factors in the future as we continue to engage stakeholders and determine the availability of appropriate social risk factors that might influence outcomes such as readmission. Measure stratification is intended to identify disparities or differences by patient subgroup to support hospitals' efforts to improve care. Stratified reporting would allow us to provide measure data stratified by patient subgroup or the disparity between patient subgroups for each measure, via confidential hospital specific preview reports or public display on the *Hospital Compare* Web site.

We note that there are several methods for stratification of patients by dual eligible status, two of which are: (1) Calculating the differences in outcomes between dual and non-dual eligible patients within hospitals, and (2) stratifying by groups of patients so that a given provider would receive a score for each group (one for dual eligible patients, one for non-dual eligible patients, etc.). We will continue to explore which of the two methodologies is most appropriate and how best to provide confidential reports to hospitals for the Pneumonia Readmission measure (NQF #0506), the Pneumonia Mortality measure (NQF #0468), or other outcome measures in the Hospital IQR Program stratified by patient dual eligible status in the future. We will also continue to evaluate what may be the best method or methods of publicly displaying stratified outcome measure information to ensure the public's understanding of the data.

Comment: Most commenters expressed concern that CMS allow hospitals sufficient time to review and analyze stratified rates prior to publicly reporting.

Response: We acknowledge the commenters' concern that hospitals have sufficient time to review and analyze stratified measure data prior to

²⁹⁷ Our hierarchical model is described in our measure methodology reports. See, for example, Krumholz H, Normand SL, Keenan P, et al. Hospital 30-Day Pneumonia Readmission Measure Methodology: Report prepared for the Centers for Medicare & Medicaid Services, 2008, <http://www.qualitynet.org/dcs/ContentServer?cid=1219069855841&pagename=QnetPublic%2FPage%2FQnetTier4&c=Page>.

public reporting. We believe confidential hospital specific preview reports of stratified measure data will allow us to obtain feedback on reporting options and to ensure the information is reliable, valid, and understandable prior to any future public display on the *Hospital Compare* Web site. We intend to continue to engage with hospitals about their experience with and recommendations for stratified measure data as we begin to provide confidential hospital specific preview reports prior to potentially proposing to publicly display stratified measure data in the future. Any display of stratified quality measures on the *Hospital Compare* Web site would be proposed through future rulemaking.

Comment: One commenter agreed that public reporting on the *Hospital Compare* Web site should be considered in the future, but urged CMS to devote careful consideration to what type of display would be most useful to the public. The commenter suggested CMS conduct focus groups to test messaging and understanding of the data.

Response: We recognize the importance of eventual public reporting of stratified outcome measures information. We will continue to evaluate what may be the best method or methods of publicly displaying stratified outcome measure information to ensure the public accurately understands the data. We will consider conducting focus groups or other outreach efforts to collect public feedback as part of this effort.

Comment: Another commenter suggested that stratification and risk adjustment be a measure-by-measure consideration that is incorporated into the measure specifications.

Response: We agree with the commenter that stratification and risk adjustment should be a measure-by-measure consideration. During the NQF SDS two-year trial period that ended in April 2017, we assessed measures individually to determine whether risk adjustment for social risk factors was warranted. Similarly, we are adopting a measure-by-measure approach when considering stratification of quality measures. We plan to engage stakeholders through future rulemaking prior to any public reporting of stratified quality measures.

Comment: One commenter did not support providing confidential reports to hospitals for the Pneumonia Readmission measure (NQF #0506) and the Pneumonia Mortality measure (NQF #0468) stratified by patient dual eligible status and publicly reporting stratified measure data in the future, raising concerns about the small sample size

associated with measure stratification by social risk factors, which would skew the reliability of stratified quality measures. The commenter believed the proposed statistical approach using a hospital-specific indicator (random coefficient) for dual eligibility would allow quantification of the difference in readmissions between dual and non-dual eligible patients within each hospital only if a hospital has a sufficient number of cases to produce a reliable estimate for both groups. In other words, this approach may not be effective for hospitals with a small sample size of cases, and results reported for such hospitals may be skewed and inaccurate. The commenter suggested CMS study this issue further to determine the appropriate size of the patient pool to produce reliable results and should consider not reporting results for hospitals with an insufficient number of cases.

Response: We agree with the commenter that some hospitals may have few dual eligible patients and that small sample sizes can skew the reliability of stratified quality measure results. Small sample sizes could be especially challenging for measure stratification because some hospitals might have few patients with social risk factors. One of our described stratification approaches (by patient group) would report disparities only for hospitals with at least 25 patients and 10 patients for each sub-group. The same cut-off could be used for the second stratification methodology described in the proposed rule (specifically, measuring differences in outcomes for dual and non-dual beneficiaries separately). We note the overall sample size of 25 patients is consistent with the quality outcome measures currently implemented. This sample size ensures our measure is reliable and includes as many hospitals as possible. This particular methodology further adjusts for small sample sizes by partially pooling the data so that hospitals with a small sample size and, therefore, less reliable estimates are pulled to the overall mean. Using this cut-off in sample size, preliminary analysis using the first proposed methodology (that is, measuring disparities in outcomes between dual and non-dual beneficiaries) suggests we could report disparities for 3,851 hospitals (82.1 percent) for the Pneumonia Readmission measure (NQF #0506) and 3,844 hospitals (82.0 percent) for the Pneumonia Mortality measure stratified by dual eligibility status.

We note that these results would be used under the first described

stratification methodology (adding three additional factors), as described in section IX.A.13.b.(3)(b) of the preamble of this final rule, above. We also note that if we used the second described methodology of calculating the difference in current statistical models, as described in section IX.A.13.b.(3)(c) of the preamble of this final rule, above, we anticipate the results would not be as effective. We will continue to explore alternative approaches to determine the appropriate sample size to produce reliable results. We note that we would not provide disparities results or differences in outcomes for different patient groups if a given hospital has fewer than the minimum number of patients within a sub-group in the measure.

Comment: One commenter requested that CMS publicly release the analytic file, model results, and research findings related to the pneumonia readmissions model with the added dual-eligible variables and recommended changes to the model should be vetted during the MAP pre-rulemaking recommendation process. The commenter stated that during the NQF socio-demographic (SDS) trial period, the measure steward for the pneumonia readmission and mortality models, Yale Center for Outcomes Research and Evaluation (Yale CORE), presented their results for accounting for various SDS variables in the condition-specific readmissions models and the conclusion was that while there was a statistically significant relationship between dual-eligibility and readmissions, the addition of dual-eligible status did not improve the model or meaningfully change hospital results. Since this conflicts with the ASPE findings, the commenter would like to better understand the Yale CORE model.

Response: Risk adjustment and stratification are two distinct ways of accounting for the importance of social risk factors on health outcomes. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20072 through 20074), we detailed the findings of our modeling for the Pneumonia Readmission measure (NQF #0506) to share one example of stratified results. We note, however, that the approach presented for the Pneumonia Readmission measure (NQF #0506) stratification differs from the approach presented in the condition-specific readmission models described in the NQF two-year SDS trial by the measure steward. The analytical model and results for the NQF SDS Trial of these measures are publicly available on the NQF Web site at: http://www.qualityforum.org/Project_Pages/

All-Cause Admissions and Readmissions 2015–2017.aspx.

As part of the SDS two-year trial, we assessed the impact of the addition of socioeconomic status, such as dual eligibility, in the risk adjustment model on readmissions on a case-by-case basis. The measure steward's results are largely consistent with the findings of the ASPE report. Both the ASPE report and the measure steward's findings show a relationship between socioeconomic factors and health outcomes when there is no other risk-adjustment. In the multi-variate, or fully adjusted model, results indicate that the effect of SES variables on readmission rates was significant but small. However, the measure steward has shown that adjusting for patient dual-eligible status in the overall measure changes hospital performance on the measure very little. Similarly, when ASPE simulated the effect of risk adjustment for patient dual eligible status on Hospital Readmissions Reduction Program penalties, they found that it would have a small overall impact on hospitals' performance and their ranking.

Comment: One commenter discussed the two methodological approaches for SES stratification presented in the FY 2018 IPPS/LTCH PPS proposed rule. The commenter expressed a preference for reporting two rates, one rate for dual eligible patients and one rate for non-dual eligible patients, for the pneumonia readmission and mortality measures (Approach 2). The commenter encouraged CMS to adopt Approach 2 for now, because the commenter believed it minimizes the risk of mixed signals on measure performance. The commenter noted that Approach 2 is easier to understand for providers, because it uses the same risk adjustment model as our overall quality measures.

The commenter continued and stated that on the other hand, Approach 1 calculates differences in outcomes by adding three additional factors to the statistical model currently used in our outcome measures, including: (1) An indicator for patient-level dual eligibility; (2) a hospital-level dual eligible factor (that is, percentage of dual eligible patients in each hospital); and (3) a hospital-specific indicator (random coefficient) for dual eligibility. The commenter stated it would support Approach 1 if CMS decided to directly risk adjust measures included in the Hospital Readmissions Reduction Program for patient level SES.

Response: We thank the commenter for their recommendation. As noted in the proposed rule and our responses above, there are potential merits and

limitations to each approach. We will continue to explore multiple options and will solicit further feedback from stakeholders before deciding on a specific method or approach for providing confidential feedback reports or potential future public reporting of stratified measure data.

One example of these methods could be noted in the efforts currently underway in the Hospital Readmissions Reduction Program under the 21st Century Cures Act, as described in section V.I.8. of the preamble of this final rule. We distinguish stratified reporting for the purposes of identifying disparities from the approach in the Hospital Readmissions Reduction Program under the 21st Century Cures Act that compares peers with peers based on hospital's share of patients with risk factors for benchmarking and/or calculation of payment adjustment. Further, we distinguish that the Hospital Readmissions Reduction Program is using this method for payment calculations and the Hospital IQR Program would not be using the data in this manner, but rather is considering these approaches as options for deriving confidential reports to hospitals and potential public reporting in the future.

To summarize, we invited public comment on: (1) Which social risk factors provide the most valuable information to stakeholders; (2) providing hospitals with confidential preview reports containing stratified results for certain Hospital IQR Program measures, specifically the Pneumonia Readmission measure (NQF #0506) and the Pneumonia Mortality measure (NQF #0468); (3) a potential methodology for illuminating differences in outcomes rates among patient groups within a hospital and would also allow for a comparison of those differences, or disparities, across hospitals; (4) an alternative methodology that compares performance for patient subgroups across hospitals but does not provide information on within hospital disparities and any additional suggested methodologies for calculating stratified results by patient dual eligibility status; and (5) future public reporting of these same measures stratified by patient dual eligibility status on the *Hospital Compare* Web site, as discussed above.

We thank the commenters, and we will consider all of the comments received as we develop policy regarding potential options for confidential and public reporting of Hospital IQR Program measures stratified by patient social risk factors, such as dual eligibility status and, specifically, as we develop policy regarding potential

options on the future confidential and public reporting of the Pneumonia Readmission measure (NQF #0506) data and the Pneumonia Mortality measure (NQF #0468) data stratified specifically by patient dual eligibility status.

After considering the public comments we received, we will continue to evaluate: (1) Which social risk factors provide the most valuable information to stakeholders; (2) which Hospital IQR Program outcome measures to provide stratified measure data; (3) how best to display information in the confidential hospital specific preview reports; (4) when to begin providing the confidential hospital specific preview reports; (5) potential methodologies for illuminating differences in outcomes; and (6) ways to most effectively publicly display this data. We will continue to consider beginning to provide confidential hospital specific preview reports as early as summer of 2018, using data from the FY 2019 reporting period (July 1, 2014 through June 30, 2017), however, it may take us longer in light of our plans for continued evaluation as described above and operational considerations. If we make such a determination to begin providing confidential hospital specific preview reports of measure data for the Pneumonia Readmission measure, the Pneumonia Mortality measure, or other outcome measures in the Hospital IQR Program stratified by patient dual eligibility status to hospitals, we will convey this decision through routine communication channels to hospitals, vendors, and QIOs, including, but not limited to, issuing memos, emails, and notices on the QualityNet Web site.

14. Reconsideration and Appeal Procedures for the FY 2020 Payment Determination and Subsequent Years

We refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51650 through 51651), the FY 2014 IPPS/LTCH PPS final rule (78 FR 50836), and 42 CFR 412.140(e) for details on reconsideration and appeal procedures for the FY 2017 payment determination and subsequent years. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20074), we did not propose any changes to the reconsideration and appeals procedures.

15. Change to the Hospital IQR Program Extraordinary Circumstances Exceptions (ECE) Policy

a. Background

We refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51651 through 51652), the FY 2014 IPPS/LTCH

PPS final rule (78 FR 50836 through 50837), the FY 2015 IPPS/LTCH PPS final rule (79 FR 50277), the FY 2016 IPPS/LTCH PPS final rule (80 FR 49713), the FY 2017 IPPS/LTCH PPS final rule (81 FR 57181 through 57182), and 42 CFR 412.140(c)(2) for details on the current Hospital IQR Program ECE policy.

We also refer readers to the QualityNet Web site at: <http://www.QualityNet.org/> for our current requirements for submission of a request for an extension or exemption. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20075), we made one proposal and a clarification in order to align the ECE policy across CMS quality programs. We also proposed updates to 42 CFR 412.140(c)(2) to reflect our ECE policy.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20074 through 20075), we stated that many of our quality reporting and value-based purchasing programs share common processes for requesting an exception from program reporting due to an extraordinary circumstance not within a provider's control. The Hospital IQR Program, Hospital OQR Program, IPFQR Program, ASCQR Program, and PCHQR Program, as well as the Hospital VBP Program, HAC Reduction Program, and the Hospital Readmissions Reduction Program, share common processes for ECE requests. We refer readers to the Hospital IQR Program (76 FR 51651 through 51652, 78 FR 50836 through 50837, 79 FR 50277, 81 FR 57181 through 57182, and 42 CFR 412.140(c)(2)), Hospital OQR Program (77 FR 68489, 78 FR 75119 through 75120, 79 FR 66966, and 80 FR 70524), and ASCQR Program (77 FR 53642 through 53643 and 78 FR 75140 through 75141) along with the HAC Program (80 FR 49579 through 49581), Hospital Readmissions Reduction Program (80 FR 49542 through 49543), IPFQR (77 FR 53659 through 53660 and 79 FR 45978), and PCHQR Program (78 FR 50848) for program specific information about extraordinary circumstances exceptions requests.

In reviewing the policies for these programs, we recognized there are five areas in which these programs have variance regarding ECE requests. These are: (1) Allowing the facilities or hospitals to submit a form signed by the facility's or hospital's CEO versus CEO or designated personnel; (2) requiring the form be submitted within 30 days following the date the extraordinary circumstance occurred versus within 90 days following the date the extraordinary circumstance occurred; (3) inconsistency regarding specification of a timeline for us to provide our

formal response notifying the facility or hospital of our decision; (4) inconsistency regarding specification of our authority to grant ECEs due to CMS data system issues; and (5) referring to the program as "extraordinary extensions/exemptions" versus as "extraordinary circumstances exceptions." We believe addressing these five areas across programs, can improve administrative efficiencies for affected facilities or hospitals.

b. Proposals To Align the Hospital IQR Program ECE Policy With Other CMS Quality Programs

With the exception of the timeline for us to provide our formal response (item 3 above) and the nomenclature used to refer to the ECE process (item 5 above), the Hospital IQR Program is aligned with the ECE policies across the other CMS quality programs described above. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20075), we proposed to: (1) Update the nomenclature to align with the ECE policies across the other CMS quality programs and update the regulatory text to reflect this change; and (2) update our regulatory text to reflect other existing ECE policies. Also, we are clarifying the timing of our response to ECE requests. These proposals are discussed in more detail below.

(1) ECE Policy Nomenclature

We have observed that while all quality programs listed above have developed similar policies to provide exceptions from program requirements to facilities that have experienced extraordinary circumstances, such as natural disasters, these programs refer to these policies using inconsistent terminology. Some programs refer to these policies as "extraordinary circumstances extensions/exemptions" while others refer to the set of policies as "extraordinary circumstances exceptions." Several programs (specifically, the Hospital VBP Program, HAC Reduction Program, and the Hospital Readmissions Reduction Program) are not able to grant extensions to required data reporting timelines due to their reliance on data external to their program, and thus the term, "extraordinary circumstances extensions/exemptions" is not applicable to all programs. However, all of the described programs are able to offer exceptions from their reporting requirements. Therefore, we proposed to change the name of this policy from "extraordinary circumstances extensions/exemptions" to "extraordinary circumstances exceptions" for the Hospital IQR

Program, beginning October 1, 2017, and to revise section 412.140(c)(2) of our regulations to reflect this change. We note that changing the name of this policy does not change the availability for a hospital to request an extension under the Hospital IQR Program.

We invited public comment on this proposal as discussed above.

Comment: Several commenters supported the proposed alignment of the extraordinary circumstances exceptions (ECE) policies in the Hospital Readmissions Reduction Program, the HAC Reduction, and the Hospital IQR Programs.

Response: We thank the commenters for their support.

Comment: A few commenters supported the proposed alignment of the extraordinary circumstances exceptions (ECE) policies in the Hospital Readmissions Reduction Program, the HAC Reduction, and the Hospital IQR Programs, but requested an ECE specifically for Indian Health Services (IHS) and tribal healthcare programs.

Response: We thank the commenters for their support. We note that ECE requests for the Hospital IQR Program are considered on a case by case basis (81 FR 57182). We will assess the hospital's request on a case-by-case basis to determine if an exception is merited. Therefore, our decision whether or not to grant an ECE will be based on the specific circumstances of the hospital. For additional information about eCQM-related ECE requests, we refer readers to section IX.A.15. of the preamble of this final rule.

We will explore the feasibility of creating a specific exemption policy for IHS and tribal health programs as a part of our future strategic initiatives.

After consideration of the public comments we received, we are finalizing our proposals to change the name of this policy from "extraordinary circumstances extensions/exemptions" to "extraordinary circumstances exceptions" for the Hospital IQR Program, beginning October 1, 2017, and to revise section 412.140(c)(2) of our regulations to reflect this change as proposed.

(2) Timeline for CMS Response to ECE Requests

We strive to provide our formal response notifying the facility of our decision within 90 days of receipt of the facility's ECE request. We believe that it is important for facilities to receive timely feedback regarding the status of ECE requests. We strive to complete our review of each ECE request as quickly as possible. However, we recognize the

number of requests we receive and the complexity of the information provided impacts the actual timeframe to make ECE determinations. To improve transparency of our process, we believe it is appropriate to clarify that we will strive to complete our review of each request within 90 days of receipt.

(3) Updates to CFR

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20075), we proposed to make conforming changes to the regulations at 42 CFR 412.140(c)(2) to reflect our previously finalized policy that the ECE request form be submitted within 90 days following the date the extraordinary circumstance occurred (81 FR 57181 through 57182). In addition, we proposed to make conforming changes to the regulations to codify our other existing policies in the Hospital IQR Program: (1) At 42 CFR 412.140(c)(2)(i), that a separate submission deadline of April 1 following the end of the reporting calendar year in which the extraordinary circumstance occurred and applies to a hospital that wishes to request an extraordinary circumstances exception with respect to the reporting of electronic clinical quality measure data (81 FR 57182); (2) at 42 CFR 412.140(c)(2)(ii), that at the discretion of CMS, an exception may be granted to a hospital if a systemic problem arises with CMS data collection systems which directly affected the ability of a hospital to submit data (78 FR 50837), and that CMS may also grant exceptions to hospitals that have not requested them if an extraordinary circumstance affects an entire region or locale (76 FR 51651).

We invited public comments on these proposals as discussed above.

We received no public comments on our proposals to make conforming changes to the regulations to codify certain existing policies in the Hospital IQR Program. Therefore, we are finalizing our proposals to make conforming changes to the regulations to codify certain existing policies in the Hospital IQR Program as proposed.

B. PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program

1. Background

Section 3005 of the Affordable Care Act added new sections 1866(a)(1)(W) and (k) to the Act. Section 1866(k) of the Act establishes a quality reporting program for hospitals described in section 1886(d)(1)(B)(v) of the Act (referred to as “PPS-Exempt Cancer Hospitals” or “PCHs”) that specifically applies to PCHs that meet the

requirements under 42 CFR 412.23(f). Section 1866(k)(1) of the Act states that, for FY 2014 and each subsequent fiscal year, a PCH must submit data to the Secretary in accordance with section 1866(k)(2) of the Act with respect to such fiscal year.

The PCHQR Program strives to put patients first by ensuring they are empowered to make decisions about their own healthcare along with their clinicians using information from data-driven insights that are increasingly aligned with meaningful quality measures. We support technology that reduces burden and allows clinicians to focus on providing high quality health care for their patients. We also support innovative approaches to improve quality, accessibility, and affordability of care while paying particular attention to improving clinicians’ and beneficiaries’ experience when interacting with CMS programs. In combination with other efforts across the Department of Health and Human Services, we believe the PCHQR Program helps to incentivize hospitals to improve healthcare quality and value, while giving patients the tools and information needed to make the best decisions for them. We recognize that the PCHQR Program represents a key component of the way that we provide patients with quality measurement data for use in healthcare decision-making, and we have made efforts to review existing policies to identify how to move the program forward in the least burdensome manner possible while continuing to incentivize improvement in the quality of care provided to patients. For additional background information, including previously finalized measures and other policies for the PCHQR Program, we refer readers to the following final rules: FY 2013 IPPS/LTCH PPS final rule (77 FR 53556 through 53561); the FY 2014 IPPS/LTCH PPS final rule (78 FR 50838 through 50846); the FY 2015 IPPS/LTCH PPS final rule (79 FR 50277 through 50288); the FY 2016 IPPS/LTCH PPS final rule (80 FR 49713 through 49723); and the FY 2017 IPPS/LTCH PPS final rule (81 FR 57182 through 57193).

2. Criteria for Removal and Retention of PCHQR Program Measures

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57182 through 57183), we adopted policies for measure retention and removal. We generally retain measures from the previous year’s PCHQR Program measure set for subsequent years’ measure sets, except when we specifically propose to remove or replace a measure. We adopted the following measure removal criteria for

the PCHQR Program, which are based on criteria established in the Hospital IQR Program (80 FR 49641 through 49642):

- Measure performance among PCHs is so high and unvarying that meaningful distinctions and improvements in performance can no longer be made (“topped-out” measures);
- A measure does not align with current clinical guidelines or practice;
- The availability of a more broadly applicable measure (across settings or populations) or the availability of a measure that is more proximal in time to desired patient outcomes for the particular topic;
- Performance or improvement on a measure does not result in better patient outcomes;
- The availability of a measure that is more strongly associated with desired patient outcomes for the particular topic;
- Collection or public reporting of a measure leads to negative unintended consequences other than patient harm; and
- It is not feasible to implement the measure specifications.

For the purposes of considering measures for removal from the program, we consider a measure to be “topped-out” if there is statistically indistinguishable performance at the 75th and 90th percentiles and the truncated coefficient of variation is less than or equal to 0.10.

However, we recognized that there are times when measures may meet some of the outlined criteria for removal from the program, but continue to bring value to the program. Therefore, we adopted the following criteria for consideration in determining whether to retain a measure in the PCHQR Program, which also are based on criteria established in the Hospital IQR Program (80 FR 49641 through 49642):

- Measure aligns with other CMS and HHS policy goals;
- Measure aligns with other CMS programs, including other quality reporting programs; and
- Measure supports efforts to move PCHs towards reporting electronic measures.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20076), we did not propose any changes to these policies.

3. Retention and Removal of Previously Finalized Quality Measures for PCHs Beginning With the FY 2020 Program Year

a. Background

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53556 through 53561), we

finalized five quality measures for the FY 2014 program year and subsequent years. In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50837 through 50847), we finalized one new quality measure for the FY 2015 program year and subsequent years and 12 new quality measures for the FY 2016 program year and subsequent years. In the FY 2015 IPPS/LTCH PPS final rule (79 FR 50278 through 50280), we finalized one new quality measure for the FY 2017 program year and subsequent years. In the FY 2016 IPPS/LTCH PPS final rule (80 FR 49713 through 49719), we finalized three new CDC NHSN measures for the FY 2018 program year and subsequent years, and finalized the removal of six previously finalized measures for fourth quarter (Q4) 2015 discharges and subsequent years. In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57183 through 57184), for the FY 2019 program year and subsequent years, we finalized one additional quality measure and updated the Oncology: Radiation Dose Limits to Normal Tissues (NQF #0382) measure.

We refer readers to the final rules referenced in section IX.B.1. of the preamble of this final rule for more information regarding these previously finalized measures.

b. Removal of Measures From the PCHQR Program Beginning With the FY 2020 Program Year

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20076 through 20077), based on a review of the above criteria, we proposed to remove the

following clinical process/cancer specific treatment measures from the PCHQR Program beginning with the FY 2020 program year because they are topped-out:

- Adjuvant Chemotherapy is Considered or Administered Within 4 Months (120 Days) of Diagnosis to Patients Under the Age of 80 with AJCC III (Lymph Node Positive) Colon Cancer (PCH-01/NQF #0223);
- Combination Chemotherapy is Considered or Administered Within 4 Months (120 Days) of Diagnosis for Women Under 70 with AJCC T1c, or Stage II or III Hormone Receptor Negative Breast Cancer (PCH-02/NQF #0559); and
- Adjuvant Hormonal Therapy (PCH-03/NQF #0220).

We first adopted these three Clinical Process/Cancer Specific Treatment measures for the FY 2014 program year in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53556 through 53561). We refer readers to that rule for a detailed discussion of the measures. However, based on an analysis of data from January 1, 2014 through September 30, 2015, we have determined that these three measures meet our topped-out criteria. This analysis, performed by the HCQIS Reports and Analytics Team, evaluated data sets provided from Program Data Management and calculated the 5th, 10th, 25th, 50th, 75th, 90th, and 95th percentiles of national facility performance for each measure. For measures where higher values indicate better performance, the percent relative difference (PRD)

between the 75th and 90th percentiles were obtained by taking their absolute difference divided by the average of their values and result multiplied by 100. To calculate the truncated coefficient of variation (TCV), the lowest 5 percent and the highest 5 percent of hospital rates were discarded before calculating the mean and standard deviation for reach measure.

The following criteria were applied to the results:

- For measures ranging from 0–100 percent, with 100 percent being best, national measure data for the 75th and 90th percentiles have a relative difference of ≤ 5 percent, or for measures ranging from 0–100 percent, with 100 percent being the best, performance achieved by the median hospital is ≥ 95 percent, and national measure data have a truncated coefficient of variation ≤ 0.10 .

- For measures ranging from 0–100 percent, with 0 percent being best, national measure data for the complement of the 10th and 25th percentiles have a relative difference of ≤ 5 percent, or for measures ranging from 0–100 percent, with 0% being best, national measure data for the median hospital is ≤ 5 percent, or for other measures with a low number indicating good performance, national measure data for the 10th and 25th percentiles have a relative difference of ≤ 5 percent, and national measure data have a truncated coefficient of variation ≤ 0.10 .

The results for 2014 and 2015 are set out in the tables below.

TOPPED-OUT ANALYSIS RESULTS FOR PCHQR MEASURES

[2014]

Measure	Mean	Median	75th Percentile	90th Percentile	Relative difference (%)	TCV	Topped-out
PCH-01	.9680	.9800	1.0000	1.0000	0.0000	.0313	Yes
PCH-02	.9501	.9595	.9821	1.0000	1.8018	.0358	Yes
PCH-03	.9714	.9682	.9823	.9930	1.0807	.0149	Yes

TOPPED-OUT ANALYSIS RESULTS FOR PCHQR MEASURES

[2015]

Measure	Mean	Median	75th Percentile	90th Percentile	Relative difference (%)	TCV	Topped-out
PCH-01	.9824	1.0000	1.0000	1.0000	0.0000	.0169	Yes
PCH-02	.9389	.9434	.9750	1.0000	2.532	.0431	Yes
PCH-03	.9383	.9449	.9556	.9703	1.535	.0232	Yes

Based on this analysis, we have concluded that these three measures are topped-out and, as discussed below, we believe that collecting PCH data on

these measures does not further program goals.

We believe that continuing to collect PCH data on these measures does not

further program goals of improving quality, given that measure performance is so high and unvarying that meaningful distinctions and

improvements in performance can no longer be made. We believe that these measures also do not meet the criteria for retention of an otherwise topped-out measure, as they do not align with other HHS and CMS policy goals, such as moving toward outcome measures; do not align with other CMS programs; and do not support the movement to electronic clinical quality measures due to the chart abstraction required to collect the data for these measures. If we determine at a subsequent point in the future that hospital adherence to these practices has unacceptably declined, we may propose to readopt these measures in future rulemaking.

We invited public comment on our proposal to remove these three measures from the PCHQR Program beginning with the FY 2020 program year.

Comment: Several commenters agreed with the proposal to remove the three cancer-specific measures from the PCHQR Program because they meet topped-out criteria. Commenters agreed that, once topped-out, the measures no longer add value to the program, and removing them will remove the burden of collecting and submitting the performance data.

Response: We thank the commenters for their support.

Comment: One commenter recommended that the measures be removed as quickly as possible, and to cease public reporting of the data once the last quarter of data is publicly posted. The commenter stated that waiting until the FY 2020 program year would continue to impose an unwarranted data burden on providers to collect data for measures that are known to be topped-out.

Response: We thank the commenter for the recommendation. We understand that continuing to submit performance data on measures that meet topped-out criteria while the measures are in the process of being discontinued is burdensome. At this time, we expect to begin removing the measures beginning with diagnoses occurring as of January 1, 2018 which will result in the last reporting of the three measures in February 2019.

Comment: One commenter expressed concern that the removal of three cancer-specific measures at once would leave a gap in the measure set's clinical process domain.

Response: We appreciate the commenter's concern. As the PCHQR Program evolves, it is necessary for us to evaluate whether existing measures continue to meet Program goals and advance the Program. We have concluded that these measures are topped-out pursuant to our topped-out

criteria and no longer advance the goals of the program because measure performance is so high and unvarying that meaningful distinctions and improvements in performance can no longer be made; therefore, continued data collection and public reporting does not further program goals of improving quality. In addition, these measures do not meet our criteria for retention because they do not align with other HHS and CMS policy goals, such as moving toward outcome measures; do not align with other CMS programs; and do not support the movement to electronic clinical quality measures due to the chart abstraction required to collect the data for these measures. For these reasons, we believe that their removal is appropriate. We will continue to evaluate the measure set on an annual basis to ensure that we are addressing gaps in the measure set.

Comment: One commenter stated that the removal of the three measures would result in the measure set no longer addressing care provided to two very common cancer types in the elderly population: breast and colon cancer.

Response: We appreciate the commenter's concern. We recognize that breast and colon cancer are both common cancer types, and we note that our measure set also contains measures specific to prostate cancer and to a broader set of cancers. As we maintain and evolve the PCHQR Program measure cohort, we take into consideration not just the specific cancer types addressed under a measure, but also whether the measures meet program and CMS goals. In this instance, we believe it is in the interest of program goals to remove these three topped-out clinical process measures despite the cancers they address as they do not meet the goal of moving toward outcomes measures, do not align with other CMS programs, and do not support the movement to electronic clinical quality measures due to the chart abstraction required to collect the data for these measures. We also do not believe it is in the best interest of the program to continue to require PCHs to report on measures for which the performance level is so high and unvarying that meaningful distinctions and improvements in performance can no longer be made and therefore does not further program goals of improving quality.

Comment: One commenter disagreed with the conclusion that the measures are topped-out, citing data that it gathered from its own clinical data registry of over 1,300 reporting

programs that indicate disparities in measure performance.

Response: We appreciate the commenter's views. We have proposed to remove the measures from the PCHQR Program because our analysis shows that the measures are topped-out for the cancer hospitals that participate in the PCHQR Program. Measure performance for the small group of providers that make up the PCHs is, unsurprisingly, different than that gathered from a broader range of providers in a much larger population of 1,300. As we stated, we will continue to monitor performance in this area and reserve the option to propose to reintroduce these measures if we feel that performance merits such reintroduction.

Comment: One commenter recommended retaining the three measures as a composite measure to continue to measure compliance, particularly in sub-populations that demonstrate disparities in care.

Response: We thank the commenter for the suggestion. We have proposed to remove the three measures from the PCHQR Program because our analysis of measure performance indicates that they meet the program's topped-out criteria, and that measure performance is so high or unvarying that no meaningful distinctions can be drawn from continued performance reporting. Given the burden of the chart abstraction required to collect these three measures, it is not practicable to retain these topped-out measures in the program as a composite measure when performance has been shown to be consistently high over more than one performance period. We also do not believe a composite measure would address the issue of the measures' topped-out status, which is an issue of lack of variation in performance. We will continue to evaluate the measure set in each rulemaking cycle, and should we determine that these measures should be reintroduced in future rulemaking, we will take commenter's suggestion under consideration.

After consideration of the public comments we received, we are finalizing our proposal to remove the following clinical process/cancer specific treatment measures from the PCHQR Program beginning with the FY 2020 program year because they are topped-out:

- Adjuvant Chemotherapy is Considered or Administered Within 4 Months (120 Days) of Diagnosis to Patients Under the Age of 80 with AJCC III (Lymph Node Positive) Colon Cancer (PCH-01/NQF #0223);

- Combination Chemotherapy is Considered or Administered Within 4 Months (120 Days) of Diagnosis for Women Under 70 with AJCC T1c, or Stage II or III Hormone Receptor Negative Breast Cancer (PCH–02/NQF #0559); and
- Adjuvant Hormonal Therapy (PCH–03/NQF #0220).

4. New Quality Measures Beginning With the FY 2020 Program Year

a. Considerations in the Selection of Quality Measures

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53556), the FY 2014 IPPS/LTCH PPS final rule (78 FR 50837 through 50838), and the FY 2015 IPPS/LTCH PPS final rule (79 FR 50278), we indicated that we take a number of principles into consideration when developing and selecting measures for the PCHQR Program, and that many of these principles are modeled on those we use for measure development and selection under the Hospital IQR Program. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20077), we did not propose any changes to the principles we consider when developing and selecting measures for the PCHQR Program.

Section 1866(k)(3)(A) of the Act requires that any measure specified by the Secretary must have been endorsed by the entity with a contract under section 1890(a) of the Act (the NQF is the entity that currently holds this contract). Section 1866(k)(3)(B) of the Act provides an exception under which, in the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by the entity with a contract under section 1890(a) of the Act, the Secretary may specify a measure that is not so endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization. Using the principles for measure selection in the PCHQR Program, we proposed four new measures, described below.

b. New Quality Measures Beginning With the FY 2020 Program Year

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20077 through 20081), beginning with the FY 2020 PCHQR program year, we proposed to adopt two clinical process measures and two intermediate clinical outcome quality measures. These measures meet the requirement under section 1866(k)(3)(A) of the Act that measures specified for the PCHQR Program be endorsed by the entity with a contract

under section 1890(a) of the Act (currently the NQF). Although there is no financial incentive or penalty associated with the PCHQR Program, we encourage participation to further the goal of improving the quality of care for the PCH patient population. The proposed measures are:

- Proportion of Patients Who Died from Cancer Receiving Chemotherapy in the Last 14 Days of Life (NQF #0210);
- Proportion of Patients Who Died from Cancer Admitted to the ICU in the Last 30 Days of Life (NQF #0213);
- Proportion of Patients Who Died from Cancer Not Admitted to Hospice (NQF #0215); and
- Proportion of Patients Who Died from Cancer Admitted to Hospice for Less Than Three Days (NQF #0216).

In compliance with section 1890A(a)(2) of the Act, the proposed measures were included on a publicly available document entitled “List of Measures under Consideration for December 1, 2016,”²⁹⁸ a list of quality and efficiency measures under consideration for use in various Medicare programs, and were reviewed by the MAP Hospital Workgroup. The MAP Hospital Workgroup supported the inclusion of these measures in the PCHQR Program in final recommendations it made in its February 2017 report to HHS and CMS for 2016 to 2017.²⁹⁹ Additional details on MAP discussions of these measures may be found in the “MAP Pre-Rulemaking Report: 2016 Recommendations on Measures Under Consideration by HHS,” with additional discussion in the “MAP 2017 Considerations for Implementing Measures in Federal Programs: Hospitals (Draft Report).”³⁰⁰ The sections below outline our rationale for proposing these measures.

(1) Background

The quality of end-of-life care has been identified by the NQF as an area of care that continues to need improvement.³⁰¹ End-of-life care may be defined as “comprehensive care that addresses medical, emotional, spiritual, and social needs during the last stages of a person’s terminal illness,”³⁰² and may include palliative care. Palliative care is generally defined as multi-faceted, holistic care that anticipates, prevents, and alleviates suffering.³⁰³ Both palliative and end-of-life care can be provided when a patient is receiving hospice services, but it is not necessary to be admitted to hospice to receive such care. The NQF notes that hospice is both a type of care team and a care philosophy, and is intended to enable patients to prepare for death while living as fully as possible.³⁰⁴ The Institute of Medicine of the National Academies (IOM) has noted that while clinicians are encouraged to counsel patients about palliative care, which betters chances of maintaining a high quality of life when dying, “too few patients and families receive this help in a timely manner.”³⁰⁵ In the same report, the IOM proposed a number of core components of quality end-of-life care. These proposals included offering a referral to hospice if a patient “has a prognosis of 6 months or less” and regular revision of a patient’s care plan to address the patient’s changing needs, as well as the changing needs of the family.³⁰⁶

In addition to all of the quality of care benefits of end-of-life care to patients and caregivers, there are financial cost benefits as well. In its Technical Report on palliative and end-of-life care, the NQF cited research indicating that the use of palliative care, including end-of-life care, results in various positive outcomes, including a reduction of

costs.³⁰⁷ For example, one study evaluated the impact of hospice enrollment at different time periods on Medicare expenditures, and found that regardless of when a patient was enrolled in hospice, such patients' subsequent Medicare costs were significantly lowered.³⁰⁸

Despite the benefits attributed to the use of palliative and end-of-life services and the increase in their availability, the NQF and others have noted that such services remain underutilized. By proposing to include two process measures and two intermediate clinical outcome measures related to end-of-life care in the PCHQR Program, our intent is to assess the quality of end-of-life care provided to patients in the PCH setting. We recognize that these measures may also be used in the broader population of all hospitals providing cancer care; therefore, as discussed in section IX.A.9.b. of the preamble of this final rule, we invited public comment on the future inclusion of these measures in the Hospital IQR Program. These four measures are described in more detail below.

Comment: Several commenters generally addressed all four measures. Several commenters supported the introduction of the end-of-life measures into the PCHQR measure set, but recommended that we also adopt measures that focus on care planning to ensure that patients are given opportunity to engage in meaningful end-of-life care discussions. Some commenters expressed concern that measuring end-of-life care processes and outcomes could result in unintended consequences and incentives to stint on necessary care, and believed that patient and family engagement is necessary to ensure that patient preferences are considered. Some commenters recommended that we update the measure specifications for all of the proposed measures to incorporate updates to the ICD-10 and CPT code lists. Finally, several commenters agreed that risk adjustment and risk stratification are not necessary for the end-of-life measures proposed.

Response: We appreciate the commenters' suggestions and concerns. We believe that the inclusion of the proposed measures in the program will lead to more, not less, patient and family engagement, because the measures draw attention to the need to

understand and clarify patient wishes regarding end-of-life care. Evidence cited by the measure developers and in other research indicates that when death is imminent, providing less aggressive care can improve quality of life for patients. We believe that end-of-life care that adapts to patient experience and need does not result in stinted care, but instead reshapes that care pursuant to changing patient needs and incorporation of patient wishes. We note that these measures are a first step that seeks to broadly assess what is happening in PCHs at the end of life, and will provide a baseline picture of existing end-of-life care at those hospitals. We will continue to consider other measures for future introduction into the program that can complement the proposed measures, and we welcome input from stakeholders as we do so.

(2) Proportion of Patients Who Died From Cancer Receiving Chemotherapy in the Last 14 Days of Life (EOL-Chemo) Measure (NQF #0210)

Chemotherapy is typically used to treat cancer, but in patients with incurable cancer it may also be used with the goal of easing symptoms and improving survival.³⁰⁹ One study estimated that 6.2 percent of cancer patients continue receiving chemotherapy close to the end of their lives (defined as within 2 weeks of death).³¹⁰ However, studies have shown that administering palliative chemotherapy to terminally ill cancer patients may not be beneficial, as it may be associated with higher rates of interventions such as cardiopulmonary resuscitation in the last week of life without any difference in survival.³¹¹ Such patients may also be more likely to die in the intensive care unit (ICU), and less likely to die either at home or in the place where they had expressed preference to die.³¹² In addition, research has shown that some patients may receive chemotherapy for treatment instead of palliative care at the end of life, even when treatment has been

determined to be unnecessary.³¹³ While the impetus for continuing treatment may vary from case to case,³¹⁴ the available evidence indicates continuing to receive chemotherapy—for palliation or treatment—toward the end of a patient's illness is associated with increased hospitalization and may be associated decreased experience of care.

Researchers have also observed that patients receiving chemotherapy late into the course of a terminal illness tended to be referred to hospice later, resulting in lower quality of life, distress for caregivers, and increased cost.³¹⁵ They noted that their results could suggest that either less use chemotherapy at the end of life or more frequent end-of-life discussions could improve the quality of those patients' end-of-life care.³¹⁶ Another study of early engagement in palliative care in patients diagnosed with metastatic lung cancer found that patients who received palliative care and less chemotherapy survived longer, in addition to experiencing improvement in quality of life.³¹⁷ In this study, palliative care was integrated into standard oncologic care, and included an assessment of physical and psychosocial symptoms as well as care decision assistance.³¹⁸ Results from this study showed significantly higher quality of life in the patient cohort receiving palliative care compared to those receiving only the standard oncologic care.³¹⁹ In particular,

clinically meaningful improvements in quality of life and mood were noted.³²⁰

The proposed EOL-Chemo measure addresses the NQS Communication and Care Coordination and Affordable Care domains, and aligns with the CMS Quality Strategy goals of strengthening person and family engagement as partners in their care, and promoting effective communication and coordination of care. The proposed measure is a process measure that evaluates the proportion of patients who died from cancer who received chemotherapy in the last 14 days of life. Similar to the other three end-of-life measures we proposed, this proposed measure seeks to assess the use of chemotherapy at the end-of-life, a practice advanced with the intent to alleviate disease symptoms but which has been shown to also be associated with reduced quality of life and increased costs. This measure was finalized for use in the Merit-based Incentive Payment System (MIPS) in the FY 2017 MIPS final rule with comment period (81 FR 77672). By introducing this measure here, we are seeking to evaluate how often chemotherapy is administered near the end of life in PCHs.

The proposed EOL-Chemo measure cohort includes all Medicare beneficiaries who died of cancer and who received chemotherapy at a PCH within the last 14 days of their lives. The proposed measure uses Medicare administrative claims data to derive the numerator and denominator. The numerator for this measure is defined as cancer patients who received chemotherapy (regardless of whether for treatment or palliative purposes) in the last fourteen days of life. The denominator is defined as patients who died from cancer. Patients for whom numerator or denominator data cannot be identified will not be included in the calculation. The measure specifications contain no exclusions, risk adjustments or risk stratifications because the measure is intended to evaluate the quality of care provided to all cancer patients at the end of life. The measure will be calculated as the numerator divided by the denominator. Measure specifications for the proposed EOL-Chemo measure can be accessed on the NQF's Web site at: http://www.qualityforum.org/Publications/2016/12/Palliative_and_End-of-Life_Care_2015-2016.aspx.

We invited public comment on our proposal to adopt the Proportion of

Patients Who Died from Cancer Receiving Chemotherapy in the Last 14 Days of Life (NQF #0210) measure for the FY 2020 program year and subsequent years.

Comment: Many commenters supported the introduction of the EOL-Chemo measure into the PCHQR Program. Commenters stated that the measure will improve care for cancer patients by encouraging providers to have difficult but necessary conversations with their patients; that it addresses treatment that could lead to unnecessary and futile care; that in concert with the other end-of-life measures proposed, this measure will promote accountability and drive improvement; and because it addresses a measurement gap. Commenters also noted that the measure was recently re-endorsed by the NQF.

Response: We thank the commenters for their support.

Comment: Several commenters recommended modification of the measure specifications to incorporate exclusions for patient preference, patients in clinical trials, and palliative chemotherapy, and urged recognition in reporting that a performance rate of zero is not the goal.

Response: The measure is intended to gather information on the proportion of patients who receive chemotherapy close to the end of life regardless of the purpose of that chemotherapy and, to that end, does not distinguish between curative and palliative chemotherapy, or patients receiving chemotherapy as part of a clinical trial. We appreciate that commenters find it important to distinguish between chemotherapy used for palliative purposes as opposed to curatively, as well as the fact that some patients may choose to continue to receive curative or experimental chemotherapy until the end of life, perhaps despite medical advice. We do not believe, however, that it would be appropriate to modify measure specifications during the rule process without sufficient data analysis and clinical review to assess appropriateness for the measures. As with all measures adopted for the PCHQR Program, we will monitor the measure and continue to assess its use in the program as specified over time. We agree that a performance rate of zero is not a reasonable goal, and note this is not the intent of the measure. We will evaluate ways to address this as part of publicly reporting measure data in the future. After consideration of the public comments we received, we are finalizing our proposal to adopt the Proportion of Patients Who Died from Cancer Receiving Chemotherapy in the

Last 14 Days of Life (NQF #0210) measure for the FY 2020 program year and subsequent years.

(3) Proportion of Patients Who Died From Cancer Admitted to the ICU in the Last 30 Days of Life (EOL-ICU) Measure (NQF #0213)

A number of research studies have determined that cancer care can become more aggressive at the end of life, which can result in a lower quality of care and lower quality of life.³²¹ Care defined as “aggressive” may include the “possible misuse of treatment resulting in high rates of emergency room visits, hospitalization, or ICU stays for terminal patients” in addition to overuse of chemotherapy close to death and the underuse of hospice.³²² In a retrospective study of patients with advanced lung cancer, researchers found that between 1993 and 2002, the number of patients being admitted to the ICU near death increased, and while in the ICU, one in four of those patients received mechanical ventilation, despite the likelihood that neither intervention would necessarily have effect on the advanced cancer.³²³ In this study, two-thirds of the patients died within a month of their admission to the ICU, which the authors interpreted as demonstrating that ICU admission in the context of advanced lung cancer was potentially ineffective.³²⁴ The authors noted other studies that showed that in-hospital mortality during ICU admissions exact a toll on patients and families in terms of “financial cost, emotional burden, and failed expectations.”³²⁵ The impact of ICU admission at the end of life is also observed amongst caregivers, who report excellent end-of-life care less often for patients admitted to the ICU within 30 days of death compared to those who are not.³²⁶

³²⁵ Sharma G et al., Trends in End-of-Life ICU Use Among Older Adults with Advanced Lung Cancer, *Chest* (January 2008)133:1;72–78.

³²⁶ Wright AA et al., Family Perspectives on Aggressive Cancer Care Near the End of Life, *JAMA* (2016)315:3;284–292.

³²⁰ Temel JC et al. Early Palliative Care for Patients with Metastatic Non-Small-Cell Lung Cancer. *NEJM*. 2010; 363:733–742.

Patients who are not admitted to the ICU or involved in other aggressive mechanisms of care in their final week of life have been shown to experience a higher quality of life via less physical and emotional distress.³²⁷ Researchers have theorized that while patients who die at home are able to have care that focuses on symptom management and comfort; hospitals and ICUs focus instead on keeping the patient alive.³²⁸

ICU admission at the end of life is also costly,³²⁹ with ICU admissions identified as one of the “key drivers of resource use and expenditures.”³³⁰ Studies of claims data indicate that aggressiveness of care given to Medicare beneficiaries with cancer at the end of life continues to increase, with nearly 25 percent of Medicare expenditures in the last month of such beneficiaries’ lives, despite limited evidence that such an intervention improves patient outcomes.³³¹

The proposed EOL-ICU measure addresses the NQS Communication and Care Coordination and Affordable Care domains, and addresses several CMS Quality Strategy goals: making care safer by reducing harm caused in the delivery of care; strengthening person and family engagement as partners in their care; and promoting effective communication and coordination of care. The proposed EOL-ICU measure is an intermediate clinical outcome measure that assesses whether cancer patients were admitted to the ICU in the last 30 days of their lives. As with the other three proposed end-of-life measures discussed in section IX.B.4.b. of the preamble of this final rule, this proposed measure seeks to evaluate the end-of-life care provided to patients at PCHs. In particular, we seek to assess the frequency of end-of-life admissions to the ICU in this setting, as the research has shown that interventions provided in the ICU to

patients with irreversible disease can be futile and may negatively impact patients’ quality of life. We recognize, however, that in some cases ICU admissions may be appropriate, and note that this measure broadly assesses how many patients are admitted to the ICU close to death, without excluding admissions for specific reasons.

The proposed EOL-ICU measure cohort includes Medicare beneficiaries who are PCH patients who died of cancer and who were admitted to the ICU within the last thirty days of their lives. This proposed measure uses Medicare administrative claims data to derive the numerator and denominator. The numerator for this measure is defined as the number of patients who died from cancer and who were admitted to the ICU in the last 30 days of life. The denominator is defined as patients who died from cancer. The measure specifications do not contain exclusions from the denominator and do not provide for risk adjustment or risk stratification in order to assess the quality of care provided to all cancer patients at the end of life. The rate of ICU admissions in the last 30 days of life will be calculated from the numerator divided by the denominator. Measure specifications for the proposed EOL-ICU measure can be accessed on the NQF’s Web site at: http://www.qualityforum.org/Publications/2016/12/Palliative_and_End-of-Life_Care_2015-2016.aspx.

We invited public comment on our proposal to adopt the Proportion of Patients Who Died from Cancer Admitted to the ICU in the Last 30 Days of Life (NQF #0213) measure for the FY 2020 program year and subsequent years.

Comment: Many commenters supported the introduction of the EOL-ICU measure into the PCHQR Program. Commenters expressed that the measure will improve care for cancer patients by encouraging providers to have difficult but necessary conversations with their patients as well as allowing PCHs to identify where patients need additional supportive care; that it addresses treatment that could lead to unnecessary and futile care; that in concert with the other end-of-life measures proposed, this measure will promote accountability and drive improvement; and because it addresses a measurement gap. Commenters also noted that the measure was recently re-endorsed by the NQF and that the measure aligns with NQF’s goal to improve end-of-life care.

Response: We thank the commenters for their support.

Comment: Several commenters recommended modification of the measure specifications to incorporate exclusions for bone marrow transplants with curative intent as well as exclusions for other patient characteristics. One commenter recommended against public reporting of the EOL-ICU measure or introducing the measure into quality programs tied to payment until adjustments to the specifications are made to account for patient characteristics.

Response: We thank the commenters for these recommendations. The measure is intended to gather information on the proportion of patients admitted to the ICU close to the end of life and, to that end, does not distinguish between reasons for admission because the measure’s goal is to assess such admissions overall for the cancer population regardless of reason for admission to the ICU. As the data is reported, we can determine whether there is a need to further evolve the program and measure specifications to account or exclude for specific reasons for admission. We do not believe, however, that it would be appropriate to modify measure specifications during the rule process without sufficient data analysis and clinical review to assess appropriateness for the measures. Finally, we note that the PCHQR Program is not tied to payment.

Comment: One commenter recommended that PCHs be provided with confidential performance data that stratifies rates between ICU admission at a PCH as compared to that at non-PCH providers.

Response: We continue to evaluate ways to report performance data that is meaningful not only to providers for their own quality improvement but also to patients, so that they can make informed choices about their healthcare providers. At the present time, we are unable to provide reports such as the one recommended above due to the operational concerns associated with collecting and reporting this data to PCHs. However, we welcome suggestions from providers as to ways to provide meaningful data to help them improve their performance.

After consideration of the public comments we received, we are finalizing our proposal to adopt the Proportion of Patients Who Died from Cancer Admitted to the ICU in the Last 30 Days of Life (NQF #0213) measure for the FY 2020 program year and subsequent years.

(4) Proportion of Patients Who Died from Cancer Not Admitted to Hospice (EOL-Hospice) Measure (NQF #0215)

A number of research studies have determined that cancer care can become more aggressive at the end of life, which can result in a lower quality of care and lower quality of life.³³² Such aggressive care has been identified to include the underutilization of hospice,³³³ which is either lack of referral or late referral to hospice services.³³⁴ Patients with advanced cancer who die while admitted to the hospital have been shown to have lower quality of life than those who die at home with hospice services.³³⁵

By contrast, studies have shown that cancer patients enrolled in hospice were hospitalized less frequently and received fewer procedures than those who were not receiving hospice care.³³⁶ In addition, cancer patients who were enrolled in hospice 5 to 8 weeks prior to their deaths demonstrated significant cost savings, with savings decreasing as the time period enrolled shortens.³³⁷ Researchers theorize that one reason aggressive or “injurious” treatment occurs at the end of life is that end-of-life discussions are not being held with patients, and note that it is “the physician’s responsibility to counsel patients and their families and . . . focus on the need for effective palliative care as patients approach the end of life.”³³⁸

The proposed EOL-Hospice measure addresses the NQS Communication and Care Coordination and Affordable Care domains, as well as the CMS Quality Strategy goals of strengthening person

and family engagement as partners in their care and promoting effective communication and coordination of care. The proposed measure is a process measure that assesses the proportion of patients who died from cancer who were not admitted to hospice. This measure evaluates whether or not patients were admitted to hospice, and then ties in to the following measure (EOL-3DH), which evaluates whether patients who were admitted to hospice were admitted to hospice late in the course of their illness, defined as within 3 days of their death. We discuss this proposed follow-on measure, EOL-3DH, in more detail below in section IX.B.4.b.(5) of the preamble of this final rule. In summary, EOL-Hospice seeks to evaluate, simply, whether patients were admitted to hospice or not; the proposed follow-on measure EOL-3DH will then assess whether those patients admitted to hospice were admitted in a timely fashion to derive maximum benefit from hospice services. We do not expect PCHs to achieve perfect rates on the EOL-Hospice measure because we understand that some patients may refuse hospice, or that there may be additional intervening events or circumstances that impact whether or not a patient is admitted to hospice.

The proposed EOL-Hospice measure cohort includes Medicare beneficiaries who are PCH patients who died of cancer. The proposed measure uses Medicare administrative claims data to derive the numerator and denominator. The numerator in this proposed measure is defined as the proportion of PCH patients not enrolled in hospice. The denominator is defined as patients who died from cancer. The measure specifications contain no denominator exclusions nor any risk adjustment or risk stratification. The proposed measure is calculated by dividing the numerator by the denominator. Measure specifications for the proposed EOL-Hospice measure can be accessed on the NQF’s Web site at: http://www.qualityforum.org/Publications/2016/12/Palliative_and_End-of-Life_Care_2015-2016.aspx.

We invited public comment on our proposal to adopt the Proportion of Patients Who Died from Cancer Not Admitted to Hospice (NQF #0215) measure for the FY 2020 program year and subsequent years.

Comment: Many commenters supported the introduction of the EOL-Hospice measure into the PCHQR Program. Commenters stated that the measure will improve care for cancer patients by encouraging providers to have difficult but necessary conversations with their patients as well

as allowing earlier referrals to hospice care. Commenters noted that hospice referrals often come too late to be of benefit to patients, and that the measure may help PCHs identify opportunities to ensure appropriate care transitions and planning. Commenters also expressed that the measure addresses treatment that could lead to unnecessary and futile care; that in concert with the other end-of-life measures proposed, this measure will promote accountability and drive improvement; and because it addresses a measurement gap. Commenters also noted that the measure was recently re-endorsed by the NQF and that the measure aligns with NQF’s goal to improve end-of-life care.

Response: We thank the commenters for their support.

Comment: One commenter recommended adoption of the EOL-Hospice measure with modification of the measure specifications to include hospital-based palliative care services into the measure numerator. Another commenter recommended expansion of the measure to include such services because the ability of palliative care services to provide symptom management.

Response: We appreciate commenters’ recommendations. At this point, we are interested in assessing whether or not patients in PCHs are admitted to hospice prior to death because patient admission to hospice has been shown to be an indicator of the aggressiveness of care at the end of life and whether discussions are being held with patients to discuss choice and preference regarding care at the end of life. We believe that pairing this measure with the EOL-3DH outcome measure, discussed below, provides additional insight into hospice admission at PCHs. We recognize the importance of palliative care services in alleviating symptoms during the disease process, and welcome recommendations as to additional measures related to palliative care for possible incorporation into the PCHQR Program in the future.

Comment: One commenter did not support the introduction of the EOL-Hospice measure. The commenter instead recommended the adoption of a process measure that evaluates if and when terminally ill patients are timely given the opportunity to consider hospice.

Response: We appreciate the commenter’s concern, and agree that it is important to gauge whether and when patients are alerted to their prognosis and given an opportunity to make decisions regarding their end-of-life care. We intend to take under advisement the commenter’s suggestion

to adopt a process measure assessing if and when a terminally ill cancer patient is given an opportunity to consider hospice; however, we would not view such a measure as an alternative to the proposed EOL-Hospice measure. We believe that the proportion of patients admitted to hospice is an important metric, and is particularly valuable when considered alongside the proposed EOL-3DH measure, which assesses the proportion of cancer patients who died after being admitted to hospice for less than three days.

After consideration of the public comments we received, we are finalizing our proposal to adopt the Proportion of Patients Who Died From Cancer Not Admitted to Hospice (NQF #0215) measure for the FY 2020 program year and subsequent years.

(5) Proportion of Patients Who Died From Cancer Admitted to Hospice for Less Than 3 Days (EOL-3DH) Measure (NQF #0216)

Older studies of patient cohorts from the mid-1990s have shown that, though there was an increasing trend to admit cancer patients to hospice, the number of patients admitted close to death was also increasing, about which the authors surmised that hospice care was not being used to mitigate symptoms but only to manage death.³³⁹ Patients with cancer have been identified as the largest users of hospice, but are also the cohort with the highest rates of hospice stays of less than 3 days.³⁴⁰

In one study involving cancer patients' family members, patients' loved ones were more likely to report that the patients received excellent end-of-life care when hospice was initiated earlier than three days prior to death.³⁴¹ The researchers indicated that enhancing counseling of patients and families and early referral to palliative care services could result in more "preference-sensitive care for patients" and overall improvement in the quality of care cancer patients receive at the end of life.³⁴² Because this and other research indicates that earlier

discussion with patients about palliative care can positively impact the care received at the end of life, including timely admission to hospice, we believe including the proposed EOL-3DH measure in the measure set will incentivize timely discussions and admissions to hospice within the PCH setting. We believe that the emphasis on timely admission to hospice may lead to improved quality of care for cancer patients at PCHs.

The proposed EOL-3DH measure addresses the NQS Communication and Care Coordination domain. It also addresses two CMS Quality Strategy goals: Strengthening person and family engagement as partners in their care and promoting effective communication and coordination of care. The proposed EOL-3DH measure is an intermediate clinical outcome measure that assesses the proportion of patients who died from cancer who were admitted to hospice late in the course of their illness, within 3 days of their death. The measure ties in to the proposed process measure (EOL-Hospice) we discuss in section IX.B.4.b.(4) of the preamble of this final rule, above, and assesses whether, if patients were admitted to hospice, they were admitted prior to or when death was immediately imminent. As discussed, research has shown that the longer patients receive hospice services before the end of life, the more improvements in their quality of life and mood are observed.

The proposed EOL-3DH measure cohort includes Medicare beneficiaries who are PCH patients that died of cancer and were admitted to hospice within the last 3 days of their lives. The proposed measure uses Medicare administrative claims data to derive the numerator and denominator. The numerator is defined as the number of patients who died from cancer and spent fewer than 3 days in hospice. The denominator is defined as the number of patients who died from cancer and were admitted to hospice. There are no exclusions from the denominator in the measure specifications, nor risk adjustment or risk stratification, because the goal of the measure is to assess the quality of care provided to all cancer patients at the end of life. Measure specifications for the proposed EOL-3DH measure can be accessed on the NQF's Web site at: http://www.qualityforum.org/Publications/2016/12/Palliative_and_End-of-Life_Care_2015-2016.aspx.

We invited public comment on our proposal to adopt the Proportion of Patients Who Died From Cancer Admitted to Hospice for Less Than 3 Days (NQF #0216) measure for the FY

2020 program year and subsequent years.

Comment: Many commenters supported the introduction of the EOL-3DH measure into the PCHQR Program. Commenters stated that the measure will improve care for cancer patients by encouraging providers to have difficult but necessary conversations with their patients, promoting patient and family engagement in decision-making, as well as allowing earlier referrals to hospice care. Commenters noted that hospice referrals often come too late to be of benefit to patients, and that the measure may help PCHs identify opportunities to ensure appropriate care transitions and planning. Commenters also expressed that the measure addresses treatment that could lead to unnecessary and futile care; that in concert with the other proposed end-of-life measures, this measure will promote accountability and drive improvement; and because it addresses a measurement gap. Commenters also noted that the measure was recently re-endorsed by the NQF and that the measure aligns with NQF's goal to improve end-of-life care.

Response: We thank the commenters for their support.

Comment: One commenter recommended expansion of the measure to include palliative care services because of the ability of such services to provide symptom management. Another commenter recommended risk adjustment of the measure for social risk factors and comorbidities, such as dementia, that could impact timely admission to hospice.

Response: We appreciate commenters' recommendations. At this time, we are interested in adopting the EOL-3DH outcome measure because it will enable us to assess current hospice admitting practices at PCHs. We recognize the importance of palliative care services in alleviating symptoms during the disease process, and we welcome recommendations as to additional measures related to palliative care for possible incorporation into the PCHQR Program in the future. We also welcome recommendations as to other aspects of the measure specifications that could be revised in the future, such as consideration of comorbidities that could delay timely admission, or additional measures that address issues related to timely admission to hospice, for future rulemaking.

After consideration of the public comments we received we are finalizing our proposal to adopt the Proportion of Patients Who Died From Cancer Admitted to Hospice for Less Than 3 Days (NQF #0216) measure for the FY

2020 program year and subsequent years.

c. Summary of Previously Finalized and Newly Finalized PCHQR Program Measures for the FY 2020 Program Year and Subsequent Years

PCHQR Program for the FY 2020 program year and subsequent years are listed in the table below.

In summary, the previously finalized and newly finalized measures for the

PREVIOUSLY FINALIZED AND NEWLY FINALIZED PCHQR MEASURES FOR THE FY 2020 PROGRAM YEAR AND SUBSEQUENT YEARS

Short name	NQF number	Measure name
Safety and Healthcare-Associated Infection (HAI)		
CLABSI	0139	National Healthcare Safety Network (NHSN) Central Line-Associated Bloodstream Infection Outcome Measure
CAUTI	0138	National Healthcare Safety Network (NHSN) Catheter-Associated Urinary Tract Infections Outcome Measure
SSI	0753	American College of Surgeons—Centers for Disease Control and Prevention (ACS—CDC) Harmonized Procedure Specific Surgical Site Infection (SSI) Outcome Measure [currently includes SSIs following Colon Surgery and Abdominal Hysterectomy Surgery]
CDI	1717	National Healthcare Safety Network (NHSN) Facility-wide Inpatient Hospital-onset <i>Clostridium difficile</i> Infection (CDI) Outcome Measure
MRSA	1716	National Healthcare Safety Network (NHSN) Facility-wide Inpatient Hospital-onset Methicillin-resistant <i>Staphylococcus aureus</i> Bacteremia Outcome Measure
HCP	0431	Influenza Vaccination Coverage Among Healthcare Personnel
Clinical Process/Oncology Care Measures		
N/A	0382	Oncology: Radiation Dose Limits to Normal Tissues
N/A	0383	Oncology: Plan of Care for Pain—Medical Oncology and Radiation Oncology
N/A	0384	Oncology: Medical and Radiation—Pain Intensity Quantified
N/A	0390	Prostate Cancer: Adjuvant Hormonal Therapy for High Risk Prostate Cancer Patients
N/A	0389	Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low Risk Prostate Cancer Patients
EOL-Chemo	0210	Proportion of Patients Who Died From Cancer Receiving Chemotherapy in the Last 14 Days of Life*
EOL-Hospice	0215	Proportion of Patients Who Died From Cancer Not Admitted to Hospice*
Intermediate Clinical Outcome Measures		
EOL-ICU	0213	Proportion of Patients Who Died From Cancer Admitted to the ICU in the Last 30 Days of Life*
EOL-3DH	0216	Proportion of Patients Who Died From Cancer Admitted to Hospice for Less Than Three Days*
Patient Engagement/Experience of Care		
HCAHPS	0166	HCAHPS
Clinical Effectiveness Measure		
EBRT	1822	External Beam Radiotherapy for Bone Metastases
Claims Based Outcome Measure		
N/A	N/A	Admissions and Emergency Department (ED) Visits for Patients Receiving Outpatient Chemotherapy

±We note that the previously finalized measures finalized for removal in this final rule are not included in this table. These measures are: (1) Adjuvant Chemotherapy is Considered or Administered Within 4 Months (120 Days) of Diagnosis to Patients Under the Age of 80 with AJCC II (Lymph Node Positive) Colon Cancer; (2) Combination Chemotherapy is Considered or Administered Within 4 Months (120 Days) of Diagnosis for Women Under 70 with AJCC T1c, or Stage II or III Hormone Receptor Negative Breast Cancer; and (3) Adjuvant Hormonal Therapy.

* This measure is finalized for adoption for the FY 2020 program year in section IX.B.4.b of the preamble of this final rule.

5. Accounting for Social Risk Factors in the PCHQR Program

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20082 through 20083), we discussed the issue of accounting for social risk factors in the PCHQR Program. We understand that social risk factors such as income,

education, race and ethnicity, employment, disability, community resources, and social support (certain factors of which are also sometimes referred to as socioeconomic status (SES) factors or socio-demographic status (SDS) factors) play a major role in health. One of our core objectives is to improve beneficiary outcomes including

reducing health disparities, and we want to ensure that all beneficiaries, including those with social risk factors, receive high quality care. In addition, we seek to ensure that the quality of care furnished by providers and suppliers is assessed as fairly as possible under our programs while

ensuring that beneficiaries have adequate access to excellent care.

We have been reviewing reports prepared by the Office of the Assistant Secretary for Planning and Evaluation (ASPE)³⁴³ and the National Academies of Sciences, Engineering, and Medicine on the issue of measuring and accounting for social risk factors in CMS' quality measurement and payment programs, and considering options on how to address the issue in these programs. On December 21, 2016, ASPE submitted a Report to Congress on a study it was required to conduct under section 2(d) of the Improving Medicare Post-Acute Care Transformation (IMPACT) Act of 2014. The study analyzed the effects of certain social risk factors of Medicare beneficiaries on quality measures and measures of resource use used in one or more of nine Medicare value-based purchasing programs.³⁴⁴ The report also included considerations for strategies to account for social risk factors in these programs. In a January 10, 2017 report released by the National Academies of Sciences, Engineering, and Medicine, that body provided various potential methods for measuring and accounting for social risk factors, including stratified public reporting.³⁴⁵

As noted in the FY 2017 IPPS/LTCH PPS final rule, the NQF undertook a 2-year trial period in which certain new measures, measures undergoing maintenance review, and measures endorsed with the condition that they enter the trial period were assessed to determine whether risk adjustment for selected social risk factors is appropriate for these measures. This trial entailed temporarily allowing inclusion of social risk factors in the risk-adjustment approach for these measures. We await the recommendations of the NQF trial on risk adjustment for quality measures.

As we continue to consider the analyses and recommendations from these reports and await the results of the NQF pilot on risk adjustment for quality measures, we are continuing to work with stakeholders in this process. As we have previously communicated, we are concerned about holding providers to different standards for the outcomes of their patients with social risk factors

because we do not want to mask potential disparities or minimize incentives to improve the outcomes for disadvantaged populations. Keeping this concern in mind, while we sought input on this topic previously, we continue to seek public comment on whether we should account for social risk factors in the PCHQR Program, and if so, what method or combination of methods would be most appropriate for accounting for social risk factors. Examples of methods include: Confidential reporting to providers of measure rates stratified by social risk factors; public reporting of stratified measure rates; and potential risk adjustment of a particular measure as appropriate based on data and evidence.

In addition, in the proposed rule, we sought public comment on which social risk factors might be most appropriate for reporting stratified measure scores and/or potential risk adjustment of a particular measure. Examples of social risk factors include, but are not limited to, dual eligibility/low-income subsidy, race and ethnicity, and geographic area of residence. We also sought comments on which of these factors, including current data sources where this information would be available, could be used alone or in combination, and whether other data should be collected to better capture the effects of social risk. We also welcomed comment on operational considerations. Of note, implementing any of the above methods would be taken into consideration in the context of how this and other CMS programs operate (for example, data submission methods, availability of data, statistical considerations relating to reliability of data calculations, among others).

We received several comments in response to our request for public comment on whether we should account for social risk factors in the PCHQR Program and if so, what method or combination of methods would be most appropriate for accounting for social risk factors.

Comment: Commenters were generally supportive of implementing an approach to account for social risk factors in the PCHQR Program. Commenters encouraged evaluation of each measure for applicability of adjustment for social risk factors, with considerations given to type and purpose of measure and whether or not a measure is reported publicly. Commenters also urged careful balancing of the need to risk adjust for social risk factors with the potential burden of collecting more data to perform such risk adjustment.

Response: We appreciate the comments and interest in this topic. As we have previously stated, we are concerned about holding providers to different standards for the outcomes of their patients with social risk factors, because we do not want to mask potential disparities or minimize incentives to improve outcomes for disadvantaged populations. We believe that the path forward should incentivize improvements in health outcomes for disadvantaged populations while ensuring that beneficiaries have access to excellent care. We intend to consider all suggestions as we continue to assess each measure and the overall program. We appreciate that some commenters recommended risk adjustment as a strategy to account for social risk factors, while others noted the potential increased burden of collecting additional data for risk adjustment purposes.

We will consider all suggestions as we continue to assess each measure and the overall program. We intend to conduct further analyses on the impact of strategies such as measure-level risk adjustment and measure stratification by social risk factors, including the options suggested by commenters. As we consider the feasibility of collecting patient-level data and the impact of strategies to account for social risk factors through further analysis, we will continue to evaluate the reporting burden on providers. Future proposals would be made after further research and continued stakeholder engagement.

6. Possible New Quality Measure Topics for Future Years

a. Background

We discussed future quality measure topics and quality measure domain areas in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50280), the FY 2016 IPPS/LTCH PPS final rule (80 FR 4979), and the FY 2017 IPPS/LTCH PPS final rule (81 FR 25211). Specifically, we discussed public comment and suggestions for measure topics addressing the following CMS Quality Strategy domains: (1) Making care affordable; (2) communication and care coordination; and (3) working with communities to promote best practices of healthy living. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20083), we welcomed public comment and specific suggestions for measure topics that we should consider for future rulemaking, including considerations related to risk adjustment and the inclusion of social risk factors in risk adjustment for any individual performance measures.

³⁴³ <https://aspe.hhs.gov/pdf-report/report-congress-social-risk-factors-and-performance-under-medicare-value-based-purchasing-programs>.

³⁴⁴ <https://aspe.hhs.gov/pdf-report/report-congress-social-risk-factors-and-performance-under-medicare-value-based-purchasing-programs>.

³⁴⁵ National Academies of Sciences, Engineering, and Medicine. 2017. Accounting for social risk factors in Medicare payment. Washington, DC: The National Academies Press.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20083 through 20084), we also sought public comment on six measures for potential future inclusion in the PCHQR Program:

- Localized Prostate Cancer: Vitality;
- Localized Prostate Cancer: Urinary Incontinence;
- Localized Prostate Cancer: Urinary Frequency, Obstruction, and/or Irritation;
- Localized Prostate Cancer: Sexual Function;
- Localized Prostate Cancer: Bowel Function; and
- 30 Day Unplanned Readmissions for Cancer Patients.

These measures are discussed in more detail below.

b. Localized Prostate Cancer: Vitality; Localized Prostate Cancer: Urinary Incontinence; Localized Prostate Cancer: Urinary Frequency, Obstruction, and/or Irritation; Localized Prostate Cancer: Sexual Function; and Localized Prostate Cancer: Bowel Function

The Localized Prostate Cancer measures are five related, patient-reported outcome measures drawn from the Expanded Prostate Inventory Composite (EPIC), which is a survey intended to gather input from patients on their experience. The survey questions are intended to be administered to all non-metastatic prostate cancer patients undergoing radiation or surgical treatment for prostate cancer at the reporting facility (denominator); the numerator is patients with clinically significant changes in each of the listed areas from baseline to follow-up. The goal of the measurement is to identify issues of variation, suboptimal performance, and disparities in care. This measurement aligns with recent initiatives to include patient-reported outcomes and experience of care into quality reporting programs, as well as to incorporate more outcome measures generally. Patient-centered experience measures are also a component of the 2016 CMS Quality Strategy, which emphasizes patient-centered care by rating patient experience as a means for empowering patients and improving the quality of their care and care experience.³⁴⁶

These measures were included on the publicly available document entitled “List of Measures under Consideration for December 1, 2016”³⁴⁷ but were not

reviewed by the MAP. We anticipate that they will be included on a future list of measures under consideration for MAP review. For further information on these measures, we refer readers to the discussion from the Measures Application Partnership’s Hospital Workgroup Discussion at: http://public.qualityforum.org/MAP/MAP%20Hospital%20Workgroup/2016-2017%20Hospital%20MAP/MAP_Hospital_Workgroup_Discussion_Guide.html#MUC16-375PCHQ. We requested public comment on the possible inclusion of these measures in future years of the program.

Comment: A number of commenters expressed support for the future introduction of the five Localized Prostate Cancer measures. Commenters noted the importance to patients of measures that assess quality of life as well as the ability of the measures to support meaningful comparisons between providers. Commenters stated that such measures will enable patients to make informed decisions as they will have available quality of care information. A commenter also stated that the measures would improve communications between hospitals and patients.

Response: We appreciate the commenters’ support and views on these potential measures.

Comment: One commenter supported the future introduction of the measures and asked whether the tool mentioned as the means for collection, the Expanded Prostate Inventory Composite, would be the only mechanism for documenting patient-reported outcomes.

Response: We thank the commenter for its support. We welcome recommendations and stakeholder input into different mechanisms for collection of patient-reported outcomes and will take such suggestions into consideration for future rulemaking. These measures are being developed based on a single data collection tool, although we understand that there may be several other tools that could potentially collect this information. We will continue to monitor the measures’ development and testing to determine the best means of data collection for these measures.

Comment: One commenter asked whether the tool mentioned as the means for collection, the Expanded Prostate Inventory Composite, would support the move to electronic quality reporting.

Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityMeasures/Downloads/Measures-under-Consideration-List-for-2016.pdf.

Response: At this time, we cannot say with certainty whether the particular tool described in the measure specifications would support the move to electronic quality reporting. We thank the commenter for the inquiry and will take this under consideration as we continue to consider these and other measures for possible inclusion in the PCHQR Program in the future.

We thank the commenters and we will consider their views as we develop further measures for use in the PCHQR Program.

c. 30-Day Unplanned Readmissions for Cancer Patients

The 30-Day Unplanned Readmissions for Cancer Patients measure would measure the number of hospital-specific 30-day unscheduled and potentially avoidable readmissions following hospitalization among diagnosed malignant cancer patients. The measure numerator is the total number of unscheduled readmissions within 30 days of index admission. The measure denominator is total PCH admissions within the reporting year for patients, aged 18 years or older, who were discharged alive from the facility with an active malignant cancer diagnosis.

For further information on this measure, we refer readers to the AHRQ National Quality Measure Clearinghouse at: <https://www.qualitymeasures.ahrq.gov/summaries/summary/50490/cancer-30day-unplanned-readmission-rate-for-cancer-patients>. We requested public comment on the possible inclusion of this measure in future years of the program.

Comment: Several commenters generally supported the future inclusion of a 30-day, unplanned readmissions measure for cancer patients, noting that until recently no such measure existed and that the potential measure would take steps toward addressing a gap in the measurement of cancer care. One commenter supported the introduction of a measure even without NQF endorsement, stating that it believed the measure meets the criteria for introduction into the PCHQR Program without endorsement. Another commenter noted that the measure has been shown to demonstrate reliability and validity, and that the measure is currently in use in several of the PCHs for hospital-specific, non-Medicare performance improvement or payment programs. Finally, a commenter noted that the measure incorporates risk adjustment in a way that carefully distinguishes preventable from non-preventable readmissions in cancer patients.

³⁴⁶ CMS Quality Strategy 2016. Available at: <https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/qualityinitiativesgeninfo/downloads/cms-quality-strategy.pdf>.

³⁴⁷ Centers for Medicare and Medicaid Services, List of Measures under Consideration for December 1, 2016. Available at: <https://www.cms.gov/>

Response: We thank the commenters for their support.

Comment: One commenter supported the future adoption of the measure and encouraged additional consideration and evaluation of a measure that would report a five-year survival rate for cancer.

Response: We appreciate the support for the potential readmissions measure, and we will take the suggestion to adopt a survival rate measure into consideration for future rulemaking.

We thank the commenters and we will consider their views as we develop further measures for use in the PCHQR Program.

7. Maintenance of Technical Specifications for Quality Measures

We maintain technical specifications for the PCHQR Program measures, and

we periodically update those specifications. The specifications may be found on the QualityNet Web site at: <https://qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier2&cid=1228774479863>.

In the FY 2015 IPPS/LTCH PPS final rule (79 FR 50281), we adopted a policy under which we use a subregulatory process to make nonsubstantive updates to measures used for the PCHQR Program. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20084), we did not propose any changes to this policy.

8. Public Display Requirements

a. Background

Under section 1866(k)(4) of the Act, we are required to establish procedures

for making the data submitted under the PCHQR Program available to the public. Such procedures must ensure that a PCH has the opportunity to review the data that are to be made public with respect to the PCH prior to such data being made public. Section 1866(k)(4) of the Act also provides that the Secretary must report quality measures of process, structure, outcome, patients' perspective on care, efficiency, and costs of care that relate to services furnished in such hospitals on the CMS Web site. In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57191 through 57192), we listed our finalized public display requirements. The measures we have finalized for public display are shown in the table below.

PREVIOUSLY FINALIZED PUBLIC DISPLAY REQUIREMENTS

Summary of previously finalized public display requirements

Measures	Public reporting
- Adjuvant Chemotherapy is Considered or Administered Within 4 Months (120 days) of Diagnosis to Patients Under the Age of 80 with AJCC III (lymph node positive) Colon Cancer (NQF #0223) *. - Combination Chemotherapy is Considered or Administered Within 4 Months (120 days) of Diagnosis for Women Under 70 with AJCC T1cN0M0, or Stage IB—III Hormone Receptor Negative Breast Cancer (NQF #0559) *. - Adjuvant Hormonal Therapy (NQF #0220) * - Oncology: Radiation Dose Limits to Normal Tissues (NQF #0382) * - Oncology: Plan of Care for Pain—Medical Oncology and Radiation Oncology (NQF #0383). - Oncology: Medical and Radiation—Pain Intensity Quantified (NQF #0384). - Prostate Cancer: Adjuvant Hormonal Therapy for High Risk Prostate Cancer Patients (NQF #0390). - Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low Risk Prostate Cancer Patients (NQF #0389). - HCAHPS (NQF #0166). - CLABSI (NQF #0139) ** - CAUTI (NQF #0138) ** - External Beam Radiotherapy for Bone Metastases (NQF #1822) ***	2014 and subsequent years. 2015 and subsequent years. 2016 and subsequent years. Deferred. Beginning at the first opportunity in 2017 and for subsequent years.

* Update newly finalized for display for the FY 2019 program year and subsequent years in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57192)—expanded cohort will be displayed as soon as feasible.

** Deferral finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57192).

*** Measure newly finalized for public display in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57192).

* Measure finalized for removal beginning the FY 2020 program year in section IX.B.3.b of the preamble of this final rule.

As we strive to publicly display data as soon as possible on a CMS Web site, in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57191 through 57192), we finalized an update to our public display policies. We believe it is best to not specify in rulemaking the exact timeframe during the year for publication as doing so may prevent earlier publication. Therefore, we finalized our policy to make these data available as soon as it is feasible during the year, starting with the first year for which we are publishing data for each measure. We will continue to propose in rulemaking the first year for which we intend to publish data for each measure.

We intend to make the data available on at least a yearly basis.

As stated above, we are required to give PCHs an opportunity to review their data before the data are made public. Because we will make the data for this program available as soon as possible, and the timeframe for this publication may change year to year, we will not propose to specify in rulemaking the exact dates for review. However, in that final rule, we stated that the time period for review would be approximately 30 days in length. We will announce the exact timeframes on a CMS Web site and/or on our applicable listservs. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR

20084), we did not propose any changes to this policy.

b. Deferral of Public Display of Two Measures

In the FY 2015 IPPS/LTCH PPS final rule (79 FR 50281 through 50282), we finalized public display of the CLABSI and CAUTI measures beginning no later than 2017 and subsequent years. However, in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57192), we finalized a proposal to continue to defer public reporting of the CLABSI and CAUTI measures pending ongoing collaboration with the CDC to identify an appropriate timeframe for public reporting and the analytic methods that

will be used to summarize the CLABSI and CAUTI data for public reporting purposes. We continue to collaborate with the CDC on these issues and continue to defer the public reporting of these two measures accordingly.

9. Form, Manner, and Timing of Data Submission

a. Background

Section 1866(k)(2) of the Act requires that, beginning with the FY 2014 PCHQR program year, each PCH must submit to the Secretary data on quality measures specified under section 1866(k)(3) of the Act in a form and manner, and at a time, as specified by the Secretary. There are no financial incentives or penalties associated with the PCHQR Program.

Data submission requirements and deadlines for the PCHQR Program are generally posted on the QualityNet Web site at: <http://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier3&cid=1228772864228>.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20085), we did not propose any change to previously finalized data submission requirements.

b. Reporting Requirements for the Newly Finalized Measures

As further described above, we are finalizing the adoption of four new measures beginning with the FY 2020 program year: Proportion of Patients Who Died From Cancer Receiving Chemotherapy in the Last 14 Days of Life (NQF #0210); Proportion of Patients Who Died From Cancer Admitted to the ICU in the Last 30 Days of Life (NQF #0213); Proportion of Patients Who Died From Cancer Not Admitted to Hospice (NQF #0215); and Proportion of Patients Who Died From Cancer Admitted to Hospice for Less Than Three Days (NQF #0216). All four measures are claims-based measures. Therefore, there will be no separate data submission requirements for PCHs related to these measures as CMS will calculate the measures from data submitted for reimbursement purposes. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20085), we proposed to calculate these measures on a yearly basis because we will be calculating them using Medicare administrative claims data. Specifically, we proposed that the data collection period would be from July 1 of the year 3 years prior to the program year to June 30 of the year 2 years prior to the program year. Thus, for the FY 2020 program year, we would collect data from July 1, 2017 through June 30, 2018.

We invited public comment on this proposal.

Comment: One commenter supported the proposed time period for the reporting of the EOL-ICU measure data specifically, while another commenter recommended against public reporting of the EOL-ICU measure until adjustments are made to the measure specifications to account for patient characteristics.

Response: We thank the commenters for their thoughts. However, we do not plan on altering the measure specifications to account for patient characteristics because the measure is intended to assess the overall proportion of patients receiving chemotherapy within fourteen days of the end of life and provide a broad picture of end-of-life care.

Comment: One commenter sought further direction on the plans for the public reporting of the new end-of-life measures.

Response: We thank the commenter for expressing the request for additional direction, and note that further information will be available on QualityNet in the future. We strive to make data available as soon as it is feasible during the year, starting with the first year for which we are publishing data for each measure, and therefore believe it is best to not specify in rulemaking the exact timeframe during the year for publication as doing so may prevent earlier publication.

After consideration of the public comments we received we are finalizing the data collection period, as proposed, from July 1 of the year 3 years prior to the program year to June 30 of the year 2 years prior to the program year. Thus, for the FY 2020 program year, we will collect data for the four new measures from July 1, 2017 through June 30, 2018.

10. Extraordinary Circumstances Exceptions (ECE) Policy Under the PCHQR Program

a. Background

In our experience with other quality reporting and performance programs, we have noted occasions when providers have been unable to submit required quality data due to extraordinary circumstances that are not within their control (for example, natural disasters). We do not wish to increase their burden unduly during these times. Therefore, in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50848), we finalized our policy that, for the FY 2014 program year and subsequent years, PCHs may request and we may grant exceptions (formerly

referred to as waivers)³⁴⁸ with respect to the reporting of required quality data when extraordinary circumstances beyond the control of the PCH warrant. The PCH may request a reporting extension or a complete exception from the requirement to submit quality data for one or more quarters. Under our current policy, PCHs can submit a request form to CMS with the following information:

- The PCH's CCN;
- The PCH's name;
- Contact information for the PCH's CEO and any other designated personnel, including name, email address, telephone number, and mailing address (the address must be a physical address, not a post office box);
- The PCH's reason for requesting an extension or exception;
- Evidence of the impact of extraordinary circumstances, including but not limited to photographs, newspaper and other media articles; and
- A date when the PCH will again be able to submit PCHQR Program data, and a justification for the proposed date.

In addition, we finalized that the form must be signed by the PCH's CEO or designee and submitted within 30 days of the date that the extraordinary circumstances occurred. Lastly, we finalized that following the receipt of the request form, we would: (1) Provide a written acknowledgement; and (2) provide a formal response notifying the PCH of our decision.

We also clarified that the above policy does not preclude us from granting exceptions (including extensions) to PCHs that have not requested them when we determine that an extraordinary circumstance has affected an entire region or locale. We stated that if we make the determination to grant such an exception, we would communicate this decision through routine communication channels.

b. Modifications to the ECE Policy

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20085 through 20086), we proposed to modify the ECE policy for the PCHQR Program by: (1) Extending the deadline for a PCH to submit a request for an extension or exception from 30 days following the date that the extraordinary circumstance occurred to 90 days following the date that the extraordinary circumstance occurred; and (2) allowing CMS to grant an exception or extension due to CMS data system issues which affect data submission. These proposed

³⁴⁸ ECEs were originally referred to as "waivers." This term was changed to "exceptions" in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50286).

modifications will better align our ECE policy with that adopted for the Hospital IQR Program (76 FR 51651 through 51652, 78 FR 50836 through 50837, and 81 FR 57181 through 57182), the Hospital OQR Program (77 FR 68489 and 81 FR 79795), as well as other quality reporting programs that already have such policies in place or have proposed to modify their policies to achieve alignment. We proposed that these modifications would apply beginning in FY 2018 as related to extraordinary circumstances that occur on or after October 1, 2017.

We also believe that it is important for facilities to receive timely feedback regarding the status of ECE requests. We strive to complete our review of each ECE request as quickly as possible. However, we recognize that the number of requests we receive, and the complexity of the information provided impacts the actual timeframe to make ECE determinations. Therefore, to ensure transparency and understanding of our process, we are also taking this opportunity to clarify that we will strive to provide our response to an ECE request within 90 days of receipt.

(1) ECE Request Submission Deadline

In the past, we have allowed facilities to submit an ECE request form within 30 calendar days following the occurrence of an extraordinary circumstance that causes hardship and prevents them from providing data. In certain circumstances, however, it may be difficult for facilities to timely evaluate the impact of a certain extraordinary circumstance within 30 calendar days. We believe that extending the deadline to 90 calendar days would allow PCHs more time to determine whether it is necessary and appropriate to submit an ECE request and to provide a more comprehensive account of the extraordinary circumstance in their ECE request form to CMS. For example, if a PCH has suffered damage due to a hurricane on June 1, it would have until August 30 to submit an ECE form via the QualityNet Secure Portal, mail, email, or secure fax as instructed on the ECE form.

We invited public comments on this proposal.

Comment: Commenters generally supported the proposed amendments to the ECE policy to align with other quality reporting programs. One commenter specifically noted that providing additional time to request an extension or exception after an extraordinary event will enable PCHs to focus on patient needs and service recovery.

Response: We thank the commenters for their support.

After consideration of the public comments we received, we are finalizing our proposal to extend the deadline for a PCH to submit a request for an extension or exception from 30 days following the date that the extraordinary circumstance occurred to 90 days following the date that the extraordinary circumstance occurred.

(2) Exceptions or Extensions Due to CMS Data System Issues

Although we do not anticipate this situation will happen often, there may be times where CMS experiences issues with its data systems that directly affect facilities' abilities to submit data. In these circumstances, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20086), we proposed to grant exceptions or extensions to one or more data reporting requirements. If we make the determination to grant exceptions or extensions to PCHs on this basis, we proposed to communicate this decision through routine communication channels.

We invited public comment on this proposal.

Comment: Commenters generally supported the proposed amendments to the ECE policy to align with other quality reporting programs. One comment specifically noted that modifying the policy to allow an exception for CMS data system issues will avoid unfairly penalizing PCHs for circumstances outside of their control.

Response: We thank the commenters for their responses and comments. Regarding our proposal to modify the ECE policy to allow an exception for CMS data system issues, we wish to clarify that if CMS does not proactively notify PCHs that it plans to provide an exception to the policy after a data system issue, PCHs may still submit a request for an exception for CMS consideration.

After consideration of the public comments we received, we are finalizing our proposal to allow CMS to grant an exception or extension due to CMS data system issues which affect data submission.

C. Long-Term Care Hospital Quality Reporting Program (LTCH QRP)

1. Background and Statutory Authority

Section 3004(a) of the Affordable Care Act amended section 1886(m) of the Act by adding paragraph (5), requiring the Secretary to establish the Long-Term Care Hospital Quality Reporting Program (LTCH QRP). This program applies to all hospitals certified by

Medicare as LTCHs. Beginning with the FY 2014 LTCH QRP, the Secretary is required to reduce any annual update to the LTCH PPS standard Federal rate for discharges occurring during such fiscal year by 2 percentage points for any LTCH that does not comply with the requirements established by the Secretary. Specifically, section 1886(m)(5) of the Act requires that beginning with the FY 2014 LTCH QRP, each LTCH submit data on quality measures specified by the Secretary in a form and manner, and at a time, specified by the Secretary. For more information on the statutory history of the LTCH QRP, we refer readers to the FY 2015 IPPS/LTCH PPS final rule (79 FR 50286).

When we use the term "FY [year] LTCH QRP," we are referring to the fiscal year for which the LTCH QRP requirements applicable to that fiscal year must be met for an LTCH to receive the full annual update when calculating the payment rates applicable to it for that fiscal year.

The Improving Medicare Post-Acute Care Transformation Act of 2014 (IMPACT Act) (Pub. L. 113–185) amended Title XVIII of the Act, in part, by adding a new section 1899B of the Act that requires the Secretary to establish new data reporting requirements for certain post-acute care (PAC) providers, including LTCHs. Specifically, sections 1899B(a)(1)(A)(ii) and (iii) of the Act require LTCHs, inpatient rehabilitation facilities (IRFs), skilled nursing facilities (SNFs), and home health agencies (HHAs), under the provider-type's respective quality reporting program (which, for LTCHs, is found at section 1886(m)(5) of the Act), to report data on quality measures specified under section 1899B(c)(1), with respect to at least five domains, and data on resource use and other measures specified under section 1899B(d)(1) of the Act with respect to at least three domains. Section 1899B(a)(1)(A)(i) of the Act further requires each of these PAC provider-types to report under its respective quality reporting program standardized patient assessment data in accordance with subsection (b) for at least the quality measures specified under subsection (c)(1) and that is with respect to five specific categories: functional status; cognitive function and mental status; special services, treatments, and interventions; medical conditions and co-morbidities; and impairments. Section 1899B(a)(1)(B) requires that all of the data that must be reported in accordance with section 1899B(a)(1)(A) of the Act be standardized and interoperable to allow for the exchange

of the information among PAC providers and other providers and the use of such data in order to enable access to longitudinal information and to facilitate coordinated care. We refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49723 through 49724) for additional information on the IMPACT Act and its applicability to LTCHs.

2. General Considerations Used for Selection of Quality Measures for the LTCH QRP

a. Background

We refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49728) for a detailed discussion of the considerations we apply in measure selection for the LTCH QRP, such as alignment with the CMS Quality Strategy,³⁴⁹ which incorporates the three broad aims of the National Quality Strategy.³⁵⁰

As part of our consideration for measures for use in the LTCH QRP, we review and evaluate measures that have been implemented in other programs and take into account measures that have been endorsed by NQF for provider settings other than the LTCH setting. We have previously adopted measures with the term “Application of” in the names of those measures. We have received questions pertaining to the term “application” and want to clarify that when we refer to a measure as an “application of” the measure, we mean that the measure will be used in the LTCH setting, rather than the setting for which it was endorsed by the NQF. For example, in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49736 through 49739) we adopted a measure entitled, an Application of Percent of Residents Experiencing One or More Falls With Major Injury (Long Stay) (NQF #0674), which is currently endorsed for the nursing home setting but not for the LTCH setting. For such measures, we intend to seek NQF endorsement for the LTCH setting, and if the NQF endorses one or more of them, we will update the title of the measure to remove the reference to “application.”

We received several comments generally related to the proposed measures, the IMPACT Act, NQF endorsement, the NQF MAP review process, and the use of technical expert panels (TEPs), which are summarized and discussed below.

Comment: Several commenters expressed support for the goals and objectives of the IMPACT Act. One commenter supported the continued additions and modifications to the LTCH QRP as mandated by the IMPACT Act, stating that regulatory changes from the LTCH QRP have not only required LTCHs to focus more on care processes and data collection, but have also promoted a shift in provider focus toward improved care quality, increased transparency, and enhanced provider accountability. Another commenter stated that, even though it supports CMS’ effort under the IMPACT Act, additional time may be necessary to fully implement all changes as outlined in the final rule.

Response: We appreciate the commenters’ support for the continued additions and modifications to the LTCH QRP, particularly the support for modifications required by the IMPACT Act. We strive to put patients first, ensuring that they can make decisions about their own healthcare along with their clinicians. We want to ensure innovative approaches to improve quality, accessibility, and affordability while paying particular attention to improving clinicians’ and beneficiaries’ experience when interacting with CMS programs. To that end, we believe that a focus on data collection and quality measurement leads to improved care processes, facilitation of care coordination, and, ultimately, improved patient outcomes. However, we are also sensitive to LTCHs’ needs for sufficient time to implement the requirements pertaining to the LTCH QRP, and we aim to be responsive to these needs to the extent feasible and appropriate.

Comment: Several commenters expressed concern that quality measures proposed for the LTCH QRP lack NQF endorsement for the LTCH setting. One commenter noted that NQF endorsement for the LTCH setting reflects that the NQF has determined the measure to be appropriately modified for the LTCH setting, which is unique from other PAC settings due to the complexity of LTCH patient needs. A few commenters recommended that CMS obtain NQF endorsement for the LTCH setting through NQF review using the Consensus Development Process, a formal peer-review process providing input on performance measures, before proposing quality measures for the LTCH QRP. Commenters further recommended that CMS refrain from implementing measures in the LTCH QRP until the measures receive NQF endorsement for the LTCH setting.

Response: We acknowledge the commenters’ recommendation that

proposed measures receive NQF endorsement in the LTCH setting prior to implementation. We would like to note that we consider and propose measures that have been endorsed by the NQF whenever possible. However, when this is not feasible because there is not an NQF endorsed measure that addresses quality gaps identified in the program, we believe it is appropriate to specify a measure for the LTCH QRP that is not NQF-endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization, as is the case for the proposed measures, and we have considered but have not been able to identify other feasible measures that are endorsed or adopted by a consensus organization. We plan to submit measures within our program for endorsement as soon as feasible.

Comment: Several commenters expressed concern that quality measures proposed for the LTCH QRP may not be fully supported by the MAP. Commenters recommended that CMS obtain full support by the MAP before proposing quality measures for the LTCH QRP.

Response: We acknowledge that the NQF-convened MAP serves a critical function in evaluating measures under consideration and providing recommendations for measure implementation prior to rulemaking though MAP support is not a requirement for a measure to be proposed or finalized. However, as the MAP’s role is to maintain transparency for the public and encourage public engagement throughout the measure development process, we value the MAP’s input and take into consideration all input received.

We would like to clarify that the MAP recommended “conditional support for rulemaking” and “encouraged continued development” for the proposed measures for the LTCH QRP. According to the MAP, the term “conditional support for rulemaking” is applied when a measure is fully developed and tested and meets MAP assessment criteria; however should meet a condition specified by MAP before it can be supported for implementation. Measures that are conditionally supported are not expected to be resubmitted to MAP. The term “encourage continued development” is applied when a measure addresses a critical program objective or promotes alignment. In contrast, the MAP uses the phrase “do not support” when it does not support the measure at all.

For the proposed measure, Changes in Skin Integrity Post-Acute Care: Pressure

³⁴⁹ <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/CMS-Quality-Strategy.html>.

³⁵⁰ <https://www.ahrq.gov/workingforquality/reports/2011-annual-report.html>.

Ulcer/Injury, the MAP Post-Acute Care/Long-Term Care (PAC/LTC) Workgroup met on December 14 and 15, 2016, and provided CMS a recommendation of “support for rulemaking” for use of the measure in the LTCH QRP. The MAP Coordinating Committee met on January 24 and 25, 2017, and provided a recommendation of “conditional support for rulemaking” for use of the proposed measure in the LTCH QRP. The MAP’s conditions of support include as a part of measure implementation, that CMS provide guidance on the correct collection and calculation of the measure result. CMS intends to comply with all conditions recommended by the MAP and will engage in intensive training and guidance efforts to ensure appropriate calculation of the measure.

For the LTCH QRP ventilator weaning measures, Compliance with Spontaneous Breathing Trial (SBT) by Day 2 of the LTCH Stay and Ventilator Liberation Rate, the MAP met on December 12, 2014 and again on December 14 and 15, 2015. For the Compliance with SBT by Day 2 of the LTCH Stay measure, the MAP encouraged continued development, acknowledging that there is evidence for interventions that improve ventilator care, that variation in quality of care exists among LTCHs, and that ventilator care is an important safety priority for LTCHs. Pursuant to MAP review and recommendations, we have continued to refine this proposed measure and these activities are described more fully below. For the Ventilator Liberation Rate measure, the MAP encouraged continued development, stating that this measure has high value potential for the LTCH QRP because successful weaning is important for improving quality of life and decreasing morbidity, mortality, and resource use among patients. We have continued to refine these measures and these activities are described more fully below. CMS has consistently used the MAP process to improve measures prior to rulemaking and implementation and to ensure continued enhancement of the LTCH QRP. We believe that the measures have been fully and robustly developed, and believe they are appropriate for implementation and should not be delayed.

Comment: Several commenters expressed concern that quality measures proposed for the LTCH QRP may not be fully supported by a TEP. Commenters recommended that CMS obtain full support by a TEP before proposing measures for the LTCH QRP. In addition, commenters requested that the TEPs that evaluate measures under

consideration for the LTCH QRP include members who work in the LTCH setting.

Response: TEP members are a valuable part of the measure development process, and we would like to note that we take all TEP input into consideration as we develop and refine all quality measure work. When our measurement development contractors convene TEPs, they ensure we have a group of individuals that represents a wide range of clinical, consumer, and academic expertise in order to balance discipline and experience. Further, individuals are selected for TEPs because they are relevant subject matter experts who have knowledge of measure development and clinical expertise. For the LTCH QRP, selected TEP members typically include experts who work in the LTCH setting. We would like to note that the overarching purpose of a TEP is to obtain technical input on CMS work that is under development so that stakeholders can add input early in the development process.

Comment: A few commenters expressed concern regarding the intent of the IMPACT Act to facilitate care coordination and interoperability, stating there is currently a lack of comparability across PAC settings. One commenter expressed concern that data for assessment-based quality measures are collected on all patients in the LTCH setting, but collected only on Medicare Part A and Medicare Advantage patients/residents in the IRF and SNF settings, inhibiting cross-setting quality comparison. Another commenter noted that LTCHs are highly specialized acute care facilities that differ from other PAC settings in several key areas, including patient acuity levels, average length of patient stay, and regulatory requirements, making cross-setting comparison difficult. The commenter requested that CMS exercise care in the development of methods for and interpretation of findings related to differences across PAC settings. Another commenter noted some measures proposed for the LTCH QRP were not proposed in other PAC settings. The commenter suggested CMS implement all proposed LTCH QRP measures in every PAC setting and implement future PAC QRP measures in every PAC setting.

Response: Our intent is to develop standardized measures that can be collected across the LTCH, IRF, SNF, and HHA settings. However, we also recognize that each of these PAC settings is different in terms of patient mix, including complexity of care needed, therapies required, and length of stay. For this reason, we believe that

in addition to adopting cross-setting measures that apply to all four settings, it is appropriate to adopt measures specific to each individual PAC setting that address a quality issue unique to that setting.

Comment: Several commenters expressed concern regarding the increasing burden of reporting data under the current LTCH QRP. One commenter noted that reporting the proposed new data elements and related sub-elements will require additional facility clinical staff time, which may take time away from patient care. One commenter expressed concern that the value of data collection under the LTCH QRP is unsubstantiated. Another commenter stated that the reported data goes unused. One commenter encouraged CMS to reconsider the necessity of the new data elements and requested additional clarification regarding these elements and reporting requirements.

Response: We appreciate commenters’ concerns regarding burden due to the LTCH QRP data collection requirements. We also appreciate the importance of avoiding undue burden on providers and will continue to evaluate and avoid any unnecessary burden associated with the implementation of the LTCH QRP. We will also continue to work with stakeholders to explore ways to decrease burden as our shared goal is to focus on improving patient care. In response to these concerns regarding burden, and as we discuss further below, we have decided not to finalize a number of the proposed standardized patient assessment data elements.

Comment: A commenter thanked CMS for the opportunity to comment on measures proposed for the LTCH QRP but expressed concern that complete measure specifications were not available for all proposed measures. The commenter requested that CMS provide an additional opportunity for public comment when complete measure specifications are available for all proposed measures. Another commenter expressed concern that complete specifications and appropriate crosswalks were not provided for all proposed measures, noting that these materials assist staff to appropriately implement measures and utilize data to improve patient care. The commenter requested that CMS make crosswalks available prior to measure implementation, within the final rule or in a separate publication.

Response: We posted complete measure specifications for each proposed measure at the same time that we issued the proposed rule, and those

specifications can be viewed at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html>. With the final rule, in accordance with our usual posting process, we will post all final measure specifications and associated measure documentation at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html>.

We interpret the commenter's concern about crosswalks to be related to crosswalks from ICD-10 codes to LTCH CARE Data Set items. We refer readers to section IX.C.11.d. of the preamble of this final rule where we respond to similar issues.

b. Accounting for Social Risk Factors in the LTCH QRP

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20086 through 20087), we discussed accounting for social risk factors in the LTCH QRP. We stated that we consider related factors that may affect measures in the LTCH QRP. We understand that social risk factors such as income, education, race and ethnicity, employment, disability, community resources, and social support (certain factors of which are also sometimes referred to as socioeconomic status (SES) factors or socio-demographic status (SDS) factors) play a major role in health. One of our core objectives is to improve beneficiary outcomes including reducing health disparities, and we want to ensure that all beneficiaries, including those with social risk factors, receive high quality care. In addition, we seek to ensure that the quality of care furnished by providers and suppliers is assessed as fairly as possible under our programs while ensuring that beneficiaries have adequate access to excellent care.

We have been reviewing reports prepared by the Office of the Assistant Secretary for Planning and Evaluation (ASPE)³⁵¹ and the National Academies of Sciences, Engineering, and Medicine on the issue of measuring and accounting for social risk factors in CMS' quality measurement and payment programs, and considering options on how to address the issue in these programs. On December 21, 2016, ASPE submitted a Report to Congress on a study it was required to conduct under section 2(d) of the IMPACT Act. The

study analyzed the effects of certain social risk factors of Medicare beneficiaries on quality measures and measures of resource use used in one or more of nine Medicare value-based purchasing programs.³⁵² The report also included considerations for strategies to account for social risk factors in these programs. In a January 10, 2017 report released by The National Academies of Sciences, Engineering, and Medicine, that body provided various potential methods for measuring and accounting for social risk factors, including stratified public reporting.³⁵³

In addition, the NQF undertook a 2-year trial period in which new measures, measures undergoing maintenance review, and measures endorsed with the condition that they enter the trial period were assessed to determine whether risk adjustment for selected social risk factors was appropriate for these measures. A measure from the LTCH QRP was addressed in this trial (All-Cause Unplanned Readmission Measure for 30-Days Post-Discharge from LTCHs (NQF #2512)). This trial entailed temporarily allowing inclusion of social risk factors in the risk-adjustment approach for these measures. The trial has concluded, and NQF will issue recommendations on the future inclusion of social risk factors in risk adjustment for quality measures.

As we continue to consider the analyses and recommendations from these reports and await the recommendations of the NQF trial on risk adjustment for quality measures, we are continuing to work with stakeholders in this process. As we have previously communicated, we are concerned about holding providers to different standards for the outcomes of their patients with social risk factors because we do not want to mask potential disparities or minimize incentives to improve the outcomes for disadvantaged populations. Keeping this concern in mind, while we sought input on this topic previously, we continue to seek public comment on whether we should account for social risk factors in measures in the LTCH QRP, and if so, what method or combination of methods would be most appropriate for accounting for social risk factors. Examples of methods include: Confidential reporting to

providers of measure rates stratified by social risk factors; public reporting of stratified measure rates; and potential risk adjustment of a particular measure as appropriate based on data and evidence.

In addition, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20086 through 20087), we sought public comment on which social risk factors might be most appropriate for reporting stratified measure scores and/or potential risk adjustment of a particular measure. Examples of social risk factors include, but are not limited to, dual eligibility/low-income subsidy, race and ethnicity, and geographic area of residence. We also sought comments on which of these factors, including current data sources where this information would be available, could be used alone or in combination, and whether other data should be collected to better capture the effects of social risk. We will take commenters' input into consideration as we continue to assess the appropriateness and feasibility of accounting for social risk factors in the LTCH QRP. We note that any such changes would be proposed through future notice and comment rulemaking.

We look forward to working with stakeholders as we consider the issue of accounting for social risk factors and reducing health disparities in CMS programs. Of note, implementing any of the above methods would be taken into consideration in the context of how this and other CMS programs operate (for example, data submission methods, availability of data, statistical considerations relating to reliability of data calculations, among others), so we also sought comment on operational considerations. CMS is committed to ensuring that its beneficiaries have access to and receive excellent care, and that the quality of care furnished by providers and suppliers is assessed fairly in CMS programs.

Comment: We received several comments in response to our request for public comment on whether we should account for social risk factors in the LTCH QRP. Some commenters expressed appreciation for the agency's efforts and ongoing consideration of this issue. Commenters were generally supportive of accounting for social risk factors for LTCH QRP quality measures. Many commenters expressed concerns that not adjusting for social risk factors may lead to the appearance of low quality of care for LTCHs that treat more underserved patients. Some commenters noted that lack of adjustment for social risk factors may impact beneficiaries' access to care. A few commenters encouraged CMS to consider the results

³⁵¹ <https://aspe.hhs.gov/pdf-report/report-congress-social-risk-factors-and-performance-under-medicare-value-based-purchasing-programs>.

³⁵² <https://aspe.hhs.gov/pdf-report/report-congress-social-risk-factors-and-performance-under-medicare-value-based-purchasing-programs>.

³⁵³ National Academies of Sciences, Engineering, and Medicine. 2017. Accounting for social risk factors in Medicare payment. Washington, DC: The National Academies Press.

of NQF's SES trial period and closely monitor recommendations from the NQF Disparities Standing Committee.

A few commenters expressed concerns with accounting for social risk factors. One commenter noted that adjusting for social risk factors may mask potential disparities and create disincentives to improve outcomes for vulnerable populations. Similarly, another commenter cautioned that the misapplication of social risk factors in the calculation of measures may create unintended consequences for disadvantaged groups.

Regarding the methodology for risk adjustment, some commenters made specific recommendations regarding the type of risk adjustment to be used. Commenters suggested approaches for CMS to consider, such as reporting of performance stratified by certain social risk factors. A few commenters drew attention to how adjustment should be conducted on a measure-specific basis, as different social risk factors affect different outcomes. One commenter recommended that quality measures reflecting processes within the control of a provider, such as pressure ulcer incidence, not be stratified by SES factors. Other commenters recommended adjusting for social risk factors, specifically for resource use measures assessing potentially preventable readmissions, discharge to community, and Medicare spending per beneficiary. Several commenters recommended conducting additional testing and evaluating this on a measure by measure basis.

In addition to support for CMS' suggested categories of race/ethnicity, dual eligibility status, and geographical location, specific, commenters suggested social risk factors for consideration, including patient-level factors like caregiver availability, disability, income, education, presence of pre-morbid assistance, and health care literacy. Commenters also suggested community resources and other factors such as access to adequate housing, medications, food, transportation, and availability of primary care. Some commenters also recommended specific data sources, such as administrative data for dual eligibility or US census data to derive SES or SDS data. A few commenters supported data collection of SES or SDS elements by LTCHs or patient-reported information. One commenter suggested formal assessment of caregiver capacity to facilitate discharge planning. Another commenter suggested the use of confidential patient-reported data to determine social risk.

There were a few comments discussing confidential and public reporting of data adjusted for social risk factors. Some commenters supported either statistical risk-adjustment or stratifying performance for public reporting. One commenter suggested that confidential feedback reports could include unadjusted performance.

Response: As we have previously stated, we are concerned about holding providers to different standards for the outcomes of their patients with social risk factors, because we do not want to mask potential disparities. We believe that the path forward should incentivize improvements in health outcomes for disadvantaged populations while ensuring that beneficiaries have adequate access to excellent care. We will consider all suggestions as we continue to assess each measure and the overall program. We intend to explore options including but not limited to measure stratification by social risk factors in a consistent manner across programs, informed by considerations of stratification methods described in section IX.A.13. of the preamble of this final rule. We thank commenters for this important feedback and will continue to consider options to account for social risk factors that would allow us to view disparities and potentially incentivize improvement in care for patients and beneficiaries. We are considering providing feedback to providers on outcomes for individuals with social risk factors in confidential reports.

3. Collection of Standardized Patient Assessment Data Under the LTCH QRP

a. Definition of Standardized Patient Assessment Data

Section 1886(m)(5)(F)(ii) of the Act requires that, for fiscal year 2019 (beginning October 1, 2018) and each subsequent year, LTCHs report standardized patient assessment data required under section 1899B(b)(1) of the Act. For purposes of meeting this requirement, section 1886(m)(5)(F)(iii) of the Act requires an LTCH to submit the standardized patient assessment data required under section 1899B(b)(1) of the Act using the standard instrument in a time, form, and manner specified by the Secretary.

Section 1899B(b)(1)(B) of the Act describes standardized patient assessment data as data required for at least the quality measures described in section 1899B(c)(1) of the Act and that is with respect to the following categories:

- Functional status, such as mobility and self-care at admission to a PAC

provider and before discharge from a PAC provider;

- Cognitive function, such as ability to express ideas and to understand and mental status, such as depression and dementia;
- Special services, treatments and interventions such as the need for ventilator use, dialysis, chemotherapy, central line placement and total parenteral nutrition;
- Medical conditions and comorbidities such as diabetes, congestive heart failure and pressure ulcers;
- Impairments, such as incontinence and an impaired ability to hear, see or swallow; and
- Other categories deemed necessary and appropriate.

As required under section 1899B(b)(1)(A) of the Act, the standardized patient assessment data must be reported at least with respect to LTCH admissions and discharges, but the Secretary may require the data to be reported more frequently. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20087 through 20088), we proposed to define the standardized patient assessment data that LTCHs must report to comply with section 1886(m)(5)(F)(ii) of the Act, as well as the requirements for the reporting of these data. The collection of standardized patient assessment data is critical to our efforts to drive improvement in health care quality across the four PAC settings to which the IMPACT Act applies. We intend to use these data for a number of purposes, including facilitating their exchange and longitudinal use among health care providers to enable high quality care and outcomes through care coordination, as well as for quality measure calculation and identifying comorbidities that might increase the medical complexity of a particular admission.

LTCHs are currently required to report patient assessment data through the Long-Term Care Hospital Continuity Assessment Record and Evaluation Data Set (LTCH CARE Data Set or LCDS) by responding to an identical set of assessment questions using an identical set of response options (we refer to each solitary question/response option as a data element and we refer to a group of questions/responses as data elements), both of which incorporate an identical set of definitions and standards. The primary purpose of the identical questions and response options is to ensure that we collect a set of standardized data elements across LTCHs which can then be used for a number of purposes, including LTCH

payment and measure calculation for the LTCH QRP.

SNFs, IRFs, and HHAs are also required to report patient assessment data through their applicable PAC assessment instruments, and they do so by responding to identical assessment questions developed for their respective settings using an identical set of response options (which incorporate an identical set of definitions and standards). Like the LCDS, the questions and response options for each of these other PAC assessment instruments are standardized across the PAC provider type to which the PAC assessment instrument applies. However, the assessment questions and response options in the four PAC assessment instruments are not currently standardized with each other. As a result, questions and response options that appear on the LCDS cannot be readily compared with questions and response options that appear, for example, on the Inpatient Rehabilitation Facility-Patient Assessment Instrument (IRF-PAI), the PAC assessment instrument used by IRFs. This is true even when the questions and response options are similar. This lack of standardization across the four PAC providers has limited our ability to compare one PAC provider type with another for purposes such as care coordination and quality improvement.

To achieve a level of standardization across SNFs, LTCHs, IRFs, and HHAs that enables us to make comparisons between them, we proposed to define “standardized patient assessment data” as patient assessment questions and response options that are identical in all four PAC assessment instruments, and to which identical standards and definitions apply.

Standardizing the questions and response options across the four PAC assessment instruments will also enable the data to be interoperable, allowing it to be shared electronically, or otherwise, between PAC provider types. It will enable the data to be comparable for various purposes, including the development of cross-setting quality measures, which may enhance provider and patient choice when selecting a post-acute care setting that will deliver the best outcome possible, and to inform payment models that take into account patient characteristics rather than setting, as described in the IMPACT Act.

We invited public comment on this proposed definition.

Comment: A commenter expressed support for the proposed definition of standardized patient assessment data.

Response: We thank the commenter for its support.

After consideration of the public comments we received, we are finalizing, as proposed, the definition of standardized patient assessment data for the LTCH QRP.

b. General Considerations Used for the Selection of Standardized Patient Assessment Data

As part of our effort to identify appropriate standardized patient assessment data for purposes of collecting under the LTCH QRP, we sought input from the general public, stakeholder community, and subject matter experts on items that would enable person-centered, high quality health care, as well as access to longitudinal information to facilitate coordinated care and improved beneficiary outcomes.

To identify optimal data elements for standardization, our data element contractor organized teams of researchers for each category, and each team worked with a group of advisors made up of clinicians and academic researchers with expertise in PAC. Information-gathering activities were used to identify data elements, as well as key themes related to the categories described in section 1899B(b)(1)(B) of the Act. In January and February 2016, our data element contractor also conducted provider focus groups for each of the four PAC provider types, and a focus group for consumers that included current or former PAC patients and residents, caregivers, ombudsmen, and patient advocacy group representatives. The Development and Maintenance of Post-Acute Care Cross-Setting Standardized Patient Assessment Data Focus Group Summary Report is available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Post-Acute-Care-Quality-Initiatives/IMPACT-Act-of-2014/IMPACT-Act-Downloads-and-Videos.html>.

Our data element contractor also assembled a 16-member TEP that met on April 7 and 8, 2016, and January 5 and 6, 2017, in Baltimore, Maryland, to provide expert input on data elements that are currently in each PAC assessment instrument, as well as data elements that could be standardized. The Development and Maintenance of Post-Acute Care Cross-Setting Standardized Patient Assessment Data TEP Summary Reports are available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Post-Acute-Care-Quality-Initiatives/IMPACT-Act-of-2014/IMPACT-Act-Downloads-and-Videos.html>.

As part of the environmental scan, data elements currently in the four existing PAC assessment instruments were examined to see if any could be considered for proposal as standardized patient assessment data. Specifically, this evaluation included consideration of data elements in OASIS-C2 (effective January 2017); IRF-PAI, v1.4 (effective October 2016); LCDS, v3.00 (effective April 2016); and MDS 3.0, v1.14 (effective October 2016). Data elements in the standardized assessment instrument that we tested in the Post-Acute Care Payment Reform Demonstration (PAC PRD)—the Continuity Assessment Record and Evaluation (CARE)—were also considered. A literature search was also conducted to determine whether additional data elements to propose as standardized patient assessment data could be identified.

We also held four Special Open Door Forums (SODFs) on October 27, 2015; May 12, 2016; September 15, 2016; and December 8, 2016, to present data elements we were considering and solicit input. At each SODF, some stakeholders provided immediate input, and all were invited to submit additional data elements via the CMS IMPACT Mailbox at: PACQualityInitiative@cms.hhs.gov.

We also convened a meeting with federal agency subject matter experts (SMEs) on May 13, 2016. In addition, a public comment period was open from August 12 to September 12, 2016, to solicit comments on detailed candidate data element descriptions, data collection methods, and coding methods. The IMPACT Act Public Comment Summary Report containing the public comments (summarized and verbatim) and our responses is available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Post-Acute-Care-Quality-Initiatives/IMPACT-Act-of-2014/IMPACT-Act-Downloads-and-Videos.html>.

We specifically sought to identify standardized patient assessment data that we could feasibly incorporate into the LTCH, IRF, SNF, and HHA assessment instruments and that have the following attributes: (1) Being supported by current science; (2) testing well in terms of their reliability and validity, consistent with findings from the PAC PRD; (3) the potential to be shared (for example, through interoperable means) among PAC and other provider types to facilitate efficient care coordination and improved beneficiary outcomes; (4) the potential to inform the development of quality, resource use and other

measures, as well as future payment methodologies that could more directly take into account individual beneficiary health characteristics; and (5) the ability to be used by practitioners to inform their clinical decision and care planning activities. We also applied the same considerations that we apply with quality measures, including the CMS Quality Strategy which is framed using the three broad aims of the National Quality Strategy.

4. Policy for Retaining LTCH QRP Measures and Application of That Policy to Standardized Patient Assessment Data

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53614 through 53615), we adopted a policy that would allow any quality measure adopted for use in the LTCH QRP to remain in effect until the measure is removed, suspended, or replaced. For further information on how measures are considered for removal, suspension, or replacement, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53614 through 53615). In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20089), we proposed to apply this policy to the standardized patient assessment data that we adopt for the LTCH QRP.

We invited public comment on our proposal.

Comment: Some commenters expressed support for applying the CMS policy for retaining LTCH QRP measures to the standardized patient assessment data. Another commenter disagreed with applying the existing policy to standardized patient assessment data, and encouraged CMS to remove items with unsubstantiated

value as soon as possible. The commenter also stated that CMS should alleviate the data collection burden on providers as soon as it is practicable.

Response: Standardized patient assessment data elements are used to collect data for quality measures. Therefore, standardized patient assessment elements that support such data collection follow the policy for quality measures that, once adopted, are retained until CMS determines that the quality measure should be removed. This determination is based on specific criteria for removal, suspension, or replacement. For any such removal, the public will be given a chance to comment through the notice-and-comment rulemaking process.

We understand the concerns raised by commenters to alleviate the data collection burden on providers resulting from the finalization of our standardized patient assessment data proposals. We strive to balance implementing the reporting requirements of standardized patient assessment data and responding to burden concerns.

After consideration of the public comments we received, we are finalizing our proposal, as proposed, to apply the policy for retaining LTCH QRP measures to the standardized patient assessment data that we adopt for the LTCH QRP.

5. Policy for Adopting Changes to LTCH QRP Measures and Application of That Policy for Adopting Changes to Standardized Patient Assessment Data

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53615 through 53616), we adopted a subregulatory process to incorporate updates to LTCH quality

measure specifications that do not substantively change the nature of the measure. Under that policy, substantive changes to quality measures are proposed and finalized through rulemaking. For further information on what constitutes a substantive versus a nonsubstantive change and the subregulatory process we use to make nonsubstantive changes to measures, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53615 through 53616). In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20089), we proposed to apply this policy to the standardized patient assessment data that we adopt for the LTCH QRP.

We invited public comment on our proposal.

Comment: Several commenters supported CMS' subregulatory process for adopting nonsubstantive changes to LTCH QRP measures. One commenter expressed support for applying this approach to the standardized patient assessment data proposed for the LTCH QRP.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal, as proposed, to apply our policy for adopting changes to LTCH QRP measures to the standardized patient assessment data that we adopt for the LTCH QRP.

6. Quality Measures Currently Adopted for the LTCH QRP

The LTCH QRP currently has 17 adopted measures as outlined in the table below:

QUALITY MEASURES CURRENTLY ADOPTED FOR THE LTCH QRP

Short name	Measure name & data source
LTCH CARE Data Set	
Pressure Ulcers	Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678).
Patient Influenza Vaccine	Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short Stay) (NQF #0680).
Application of Falls	Application of Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674).*
Functional Assessment	Percent of Long-Term Care Hospital (LTCH) Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631).
Application of Functional Assessment	Application of Percent of Long-Term Care Hospital (LTCH) Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631).
Change in Mobility	Functional Outcome Measure: Change in Mobility Among Long-Term Care Hospital (LTCH) Patients Requiring Ventilator Support (NQF #2632).
DRR	Drug Regimen Review Conducted With Follow-Up for Identified Issues—Post Acute Care (PAC) Long-Term Care Hospital (LTCH) Quality Reporting Program (QRP).*
NHSN	
CAUTI	National Healthcare Safety Network (NHSN) Catheter-Associated Urinary Tract Infection Outcome Measure (NQF #0138).
CLABSI	National Healthcare Safety Network (NHSN) Central Line-Associated Bloodstream Infection Outcome Measure (NQF #0139).

QUALITY MEASURES CURRENTLY ADOPTED FOR THE LTCH QRP—Continued

Short name	Measure name & data source
MRSA	National Healthcare Safety Network (NHSN) Facility-wide Inpatient Hospital-onset Methicillin-resistant Staphylococcus aureus (MRSA) Bacteremia Outcome Measure (NQF #1716).
CDI	National Healthcare Safety Network (NHSN) Facility-wide Inpatient Hospital-onset Clostridium difficile Infection (CDI) Outcome Measure (NQF #1717).
HCP Influenza Vaccine	Influenza Vaccination Coverage among Healthcare Personnel (NQF #0431).
VAE	National Healthcare Safety Network (NHSN) Ventilator-Associated Event (VAE) Outcome Measure.*
Claims-based	
All-Cause Readmissions	All-Cause Unplanned Readmission Measure for 30-Days Post-Discharge from Long-Term Care Hospitals (LTCHs) (NQF #2512).
MSPB	Medicare Spending Per Beneficiary (MSPB)—Post Acute Care (PAC) Long-Term Care Hospital (LTCH) Quality Reporting Program (QRP).*
DTC	Discharge to Community—Post Acute Care (PAC) Long-Term Care Hospital (LTCH) Quality Reporting Program (QRP).*
PPR	Potentially Preventable 30-Day Post-Discharge Readmission Measure for Long-Term Care Hospital (LTCH) Quality Reporting Program (QRP).*

* Not currently NQF-endorsed for the LTCH setting.

We received comments about quality measures currently adopted for the LTCH QRP. The comments are summarized and discussed below.

Comment: A few commenters expressed views regarding Medicare Spending per Beneficiary—PAC LTCH QRP, a measure previously finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57199 through 57207). Commenters addressed the risk-adjustment approach, episode length, accounting for social risk factors, and potential for unintended consequences related to implementation of the measure. Some commenters encouraged CMS to utilize claims and patient assessment data to incorporate functional status into the risk-adjustment. One commenter recommended expanding the associated services period from 30 days to 180 days post-PAC discharge in order to enhance the measure's capacity to identify improvements in medically complex populations. Another commenter expressed concern that PAC providers' performance on this measure would focus on costs per patient, without fully accounting for patient outcomes, and that efficiency should not be based solely on the MSPB—PAC measures. This commenter also noted that this measure may result in limiting access to certain patients.

Response: Since no changes were proposed to the previously finalized measure, Medicare Spending per Beneficiary—PAC LTCH QRP, the comments received are outside the scope of the current rule. We addressed these issues in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57199 through 57207), and we refer the reader to that detailed discussion. We continue to believe that the measure specifications,

including the risk-adjustment and episode length, are appropriate for this measure. With regard to comments related to accounting for social risk factors, we refer readers to section IX.C.2.b. of the preamble of this final rule.

Comment: A few commenters expressed views related to Discharge to Community—PAC LTCH QRP, a measure previously finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57207 through 57215). Commenters suggested excluding patients who died in the observation window following return to a community setting, distinguishing between a patient's return to home in the community versus home in a custodial nursing facility, assessing reliability and validity of the claims discharge status code used to calculate the measure, and accounting for social risk factors.

Response: Since no changes were proposed to the previously finalized Discharge to Community—PAC LTCH QRP measure, the comments received are outside the scope of the current rule. We addressed these issues in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57207 through 57215), and we refer readers to that rule for a detailed discussion of these issues. We also note that in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20098), we sought comment on the exclusion of baseline nursing facility residents as a potential future modification of the Discharge to Community—PAC LTCH QRP measure. We refer readers to section IX.C.9.a. of the preamble of this final rule for a discussion of this issue. With regard to comments related to social risk factors, we refer readers to section IX.C.2.b. of the preamble of this final rule.

Comment: A few commenters expressed views regarding the Potentially Preventable 30-Day Post-Discharge Readmission Measure for LTCH QRP, a measure previously finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57215 through 57219). Commenters expressed support for this measure, but encouraged further measure testing. They also suggested some modifications to the measure, such as excluding readmissions for conditions unrelated to the initial reason for LTCH admission and risk adjusting for certain patient characteristics, such as "hospital dependent" patients. Commenters also expressed views related to accounting for social risk factors.

Response: Since no changes were proposed to the previously finalized measure, Potentially Preventable 30-Day Post-Discharge Readmission Measure for LTCH QRP, comments received are outside the scope of the current rule. We addressed these issues in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57215 through 57219), and we refer the reader to that detailed discussion. We continue to believe that the measure specifications are appropriate for this measure. We also refer readers to section IX.C.2.b. of the preamble of this final rule for responses to comments received related to social risk factors for this measure.

Comment: We received a comment regarding the Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short Stay) (NQF #0680) and Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431) measures. The commenter supported the continued inclusion of the previously adopted measure,

Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431), in the LTCH QRP. The commenter also supported CMS' proposal to extend the data collection period for the Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short Stay) (NQF #0680) measure to allow for accurate calculation of the measure outcome.

Response: Since no changes were proposed to the previously finalized measures, Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short Stay) (NQF #0680) and Influenza Vaccination Coverage among Healthcare Personnel (NQF #0431), the comments received are outside the scope of the current rule. We addressed these issues in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57227 through 57229) for the Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short Stay) (NQF #0680) measure and in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53630 through 53631) for the Influenza Vaccination Coverage among Healthcare Personnel (NQF #0431) measure. We refer readers to those rules for a detailed discussion. We continue to believe the inclusion of these influenza measures are important for the LTCH setting.

Comment: A commenter requested additional information regarding the Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and A Care Plan That Addresses Function (NQF #2631) and the Application of Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and A Care Plan That Addresses Function (NQF #2631), measures previously finalized in the FY 2015 IPPS/LTCH PPS final rule and FY 2016 IPPS/LTCH PPS final rule, respectively. The commenter requested that CMS provide detailed examples for coding a patient's discharge functional goals, and suggested removing the gateway mobility item for both measures that have been previously finalized.

Response: Since no changes were proposed to the previously finalized measures, Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and A Care Plan That Addresses Function (NQF #2631) and Application of Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and A Care Plan That Addresses Function (NQF #2631), the comments received

are outside the scope of the current rule. We addressed these issues in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50291 through 50298) and the FY 2016 IPPS/LTCH PPS final rule (80 FR 49739 through 49747), respectively. We refer readers to those rules for a detailed discussion.

We also provide examples of coding goals in Section GG of the LTCH QRP Manual, which is available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-CARE-Data-Set-and-LTCH-QRP-Manual.html>.

7. LTCH QRP Quality Measures Beginning With the FY 2020 LTCH QRP

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20090 through 20097), beginning with the FY 2020 LTCH QRP, in addition to the quality measures we are retaining under our policy described in section IX.C.4. of the preamble of this final rule, we proposed to remove the current pressure ulcer measure entitled Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678) and replace it with a modified version of the measure entitled Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury and adopt two new measures (one process and one outcome) related to ventilator weaning. We also proposed to characterize the data elements described below as standardized patient assessment data under section 1899B(b)(1)(B) of the Act that must be reported by LTCHs under the LTCH QRP through the LTCH CARE Data Set.

The proposed measures are as follows:

- Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury
- Compliance with Spontaneous Breathing Trial (SBT) by Day 2 of the LTCH Stay
- Ventilator Liberation Rate

The measures are described in more detail below.

a. Finalized Policy To Replace the Current Pressure Ulcer Quality Measure, Percent of Residents or Patients With Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), With a Modified Pressure Ulcer Measure, Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury

(1) Measure Background

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20090 through 20092), we proposed to remove the current pressure ulcer measure, Percent of Residents or Patients with Pressure

Ulcers That Are New or Worsened (Short Stay) (NQF #0678), from the LTCH QRP measure set and to replace it with a modified version of that measure, Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury, beginning with the FY 2020 LTCH QRP. The change in the measure name is to reduce confusion about the new modified measure. The modified version differs from the current version of the measure because it includes new or worsened unstageable pressure ulcers, including deep tissue injuries (DTIs), in the measure numerator. The proposed modified version of the measure also contains updated specifications intended to eliminate redundancies in the assessment items needed for its calculation and to reduce the potential for underestimating the frequency of pressure ulcers. The modified version of the measure would satisfy the IMPACT Act domain of skin integrity and changes in skin integrity.

(2) Measure Importance

As described in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51754 through 51756), pressure ulcers are high-cost adverse events and an important measure of quality. For information on the history and rationale for the relevance, importance, and applicability of having a pressure ulcer measure in the LTCH QRP, we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51748 through 51750) and the FY 2014 IPPS/LTCH PPS final rule (78 FR 50861 through 50863).

We proposed to adopt a modified version of the current pressure ulcer measure because unstageable pressure ulcers, including DTIs, are similar to Stage 2, Stage 3, and Stage 4 pressure ulcers in that they represent poor outcomes, are a serious medical condition that can result in death and disability, are debilitating and painful, and are often an avoidable outcome of medical care.^{354 355 356 357 358 359} Studies

show that most pressure ulcers can be avoided and can also be healed in acute, post-acute, and long-term care settings with appropriate medical care.³⁶⁰ Furthermore, some studies indicate that DTIs, if managed using appropriate care, can be resolved without deteriorating into a worsened pressure ulcer.^{361 362}

While there are few studies that provide information regarding the incidence of unstageable pressure ulcers in PAC settings, an analysis conducted by a contractor suggests the incidence of unstageable pressure ulcers varies according to the type of unstageable pressure ulcer and setting.³⁶³ This analysis examined the national incidence of new unstageable pressure ulcers in LTCHs at discharge compared with admission using LTCH discharges from January through December 2015. The contractor found a national incidence of 1.15 percent of new unstageable pressure ulcers due to slough and/or eschar, 0.05 percent of new unstageable pressure ulcers due to non-removable dressing/device, and 1.01 percent of new DTIs. In addition, an international study spanning the time period 2006 to 2009 provides some evidence to suggest that the proportion of pressure ulcers identified as DTI has increased over time.³⁶⁴ The study found DTIs increased by three fold, to nine percent of all observed ulcers in 2009, and that DTIs were more prevalent than either Stage 3 or 4 ulcers. During the same time period, the proportion of Stage 1 and 2 ulcers decreased, and the proportion of Stage 3 and 4 ulcers remained constant.

The inclusion of unstageable pressure ulcers, including DTIs, in the numerator

of this measure is expected to increase measure scores and variability in measure scores, thereby improving the ability to discriminate among poor- and high-performing LTCHs. In the currently implemented pressure ulcer measure, Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), analysis using data from Quarter 1 through Quarter 4 2015 data reveals that the LTCH mean score is 1.95 percent; the 25th and 75th percentiles are 0.53 percent and 2.49 percent, respectively; and 12.11 percent of facilities have perfect scores. In the proposed measure, Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury, during the same time frame, the LTCH mean score is 3.73 percent; the 25th and 75th percentiles are 1.53 percent and 4.89 percent, respectively; and 5.46 percent of facilities have perfect scores.

(3) Stakeholder Feedback

Our measure development contractor sought input from subject matter experts, including Technical Expert Panels (TEPs), over the course of several years on various skin integrity topics and specifically those associated with the inclusion of unstageable pressure ulcers, including DTIs. Most recently, on July 18, 2016, a TEP convened by our measure development contractor provided input on the technical specifications of this quality measure, including the feasibility of implementing the proposed measure's updates across PAC settings. The TEP supported the updates to the measure across PAC settings, including the inclusion in the numerator of unstageable pressure ulcers due to slough and/or eschar that are new or worsened, new unstageable pressure ulcers due to a non-removable dressing or device, and new DTIs. The TEP also supported the use of different data elements for measure calculation. The TEP recommended supplying additional guidance to providers regarding each type of unstageable pressure ulcer. This support was in agreement with earlier TEP meetings, held on June 13 and November 15, 2013, which had recommended that CMS update the specifications for the pressure ulcer measure to include unstageable pressure ulcers in the numerator.^{365 366}

Exploratory data analysis conducted by our measure development contractor suggests that the addition of unstageable pressure ulcers, including DTIs, will increase the observed incidence and variation in the rate of new or worsened pressure ulcers at the facility level, which may improve the ability of the proposed quality measure to discriminate between poor- and high-performing facilities.

We solicited stakeholder feedback on this proposed measure by means of a public comment period held from October 17 through November 17, 2016. In general, we received considerable support for the proposed measure. A few commenters supported all of the changes to the current pressure ulcer measure that resulted in the proposed measure, with one commenter noting the significance of the work to align the pressure ulcer quality measure specifications across the PAC settings.

Many commenters supported the inclusion of unstageable pressure ulcers due to slough/eschar, due to non-removable dressing/device, and DTIs in the quality measure. Other commenters did not support the inclusion of DTIs in the quality measure because they stated that there is no universally accepted definition for this type of skin injury.

Some commenters provided feedback on the data elements used to calculate the proposed quality measure. We believe that these data elements will promote facilitation of cross-setting quality comparison as mandated by the IMPACT Act, alignment between quality measures and payment, reduction in redundancies in assessment items, and prevention of inappropriate underestimation of pressure ulcers. The currently implemented pressure ulcer measure is calculated using retrospective data elements that assess the number of new or worsened pressure ulcers at each stage, while the proposed measure is calculated using the number of unhealed pressure ulcers at each stage after subtracting the number that were present upon admission. Some commenters did not support the data elements that would be used to calculate the proposed measure,

Available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Post-Acute-Care-Quality-Initiatives/Downloads/Development-of-a-Cross-Setting->

and requested further testing of these data elements. Other commenters supported the use of these data elements stating that these data elements simplified the measure calculation process.

The public comment summary report for the proposed measure is available on the CMS Web site at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Post-Acute-Care-Quality-Initiatives/IMPACT-Act-of-2014/IMPACT-Act-Downloads-and-Videos.html>. This summary includes further detail about our responses to various concerns and ideas stakeholders raised.

The NQF-convened Measures Application Partnership (MAP) Post-Acute Care/Long-Term Care (PAC/LTC) Workgroup met on December 14 and 15, 2016, and provided input to CMS about this measure. The Workgroup provided a recommendation of “support for rulemaking” for use of the proposed measure in the LTCH QRP. The MAP Coordinating Committee met on January 24 and 25, 2017, and provided a recommendation of “conditional support for rulemaking” for use of the proposed measure in the LTCH QRP. The MAP’s conditions of support include that, as a part of measure implementation, CMS provide guidance on the correct collection and calculation of the measure result, as well as guidance on public reporting Web sites explaining the impact of the specification changes on the measure result. The MAP’s conditions also specify that CMS continue analyzing the proposed measure in order to investigate unexpected results reported in public comment. We intend to fulfill these conditions by offering additional training opportunities and educational materials in advance of public reporting, and by continuing to monitor and analyze the proposed measure. More information about the MAP’s recommendations for this measure is available at: <http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=84452>.

We reviewed the NQF’s consensus endorsed measures and were unable to identify any NQF-endorsed pressure ulcer quality measures for PAC settings that are inclusive of unstageable pressure ulcers. There are related measures, but after careful review, we determined these measures are not applicable for use in LTCHs based on the populations addressed or other aspects of the specifications. We are unaware of any other such quality measures that have been endorsed or adopted by another consensus

organization for the LTCH setting. Therefore, based on the evidence discussed above, we proposed to adopt the quality measure entitled, Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury, for the LTCH QRP beginning with the FY 2020 LTCH QRP. We plan to submit the proposed measure to the NQF for endorsement consideration as soon as feasible.

(4) Data Collection

The data for this quality measure would be collected using the LTCH CARE Data Set, which is currently submitted by LTCHs through the QIES ASAP System. The proposed standardized patient assessment data applicable to this measure that must be reported by LTCHs for admissions as well as discharges occurring on or after April 1, 2018 is described in section IX.C.11. of the preamble of this final rule. While the inclusion of unstageable wounds in the proposed measure results in a measure calculation methodology that is different from the methodology used to calculate the current pressure ulcer measure, the data elements needed to calculate the proposed measure are already included on the LTCH CARE Data Set. In addition, our proposal to eliminate duplicative data elements that were used in calculation of the current pressure ulcer measure will result in an overall reduced reporting burden for LTCHs with respect to the proposed measure. To view the updated LTCH CARE Data Set, with the proposed changes, we refer readers to: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-CARE-Data-Set-and-LTCH-QRP-Manual.html>. For more information on LTCH CARE Data Set submission using the QIES ASAP System, we refer readers to: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Technical-Information.html>.

For technical information about this measure, including information about the measure calculation and the standardized patient assessment data elements used to calculate this measure, we refer readers to the document titled, *Final Specifications for LTCH QRP Quality Measures and Standardized Patient Assessment Data Elements*, available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html>.

We proposed that LTCHs would begin reporting the proposed pressure ulcer measure, Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury,

which will replace the current pressure ulcer measure, with data collection beginning April 1, 2018.

We invited public comment on our proposal to replace the current pressure ulcer measure, Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), with a modified version of that measure, entitled Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury, for the LTCH QRP beginning with the FY 2020 LTCH QRP.

Comment: Many commenters supported the proposed replacement of the current pressure ulcer measure, the Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), with a modified version of that measure, entitled Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury. Commenters appreciated that the implementation of this modified measure will reduce regulatory burden for providers while continuing to maintain a high standard for measuring the quality of care. Commenters also encouraged the expansion of this measure into other settings.

Response: We appreciate the commenters’ support, and also agree that this measure may be suitable to adapt for other settings.

Comment: Several commenters requested that additional testing analyses be conducted prior to the implementation of this measure. These commenters indicated that the purpose of this additional testing should be to verify that the specifications of this measure reflect actual differences in the care practices and the quality of care provided by LTCHs, rather than differences in compliance. Specifically, some commenters expressed concerns that the variation in measure scores between facilities could reflect differences in the interpretation of definitions for unstageable pressure ulcers or DTIs, rather than actual differences in quality or care practices. These commenters noted that a measure should not be changed to create performance variation, but rather to be consistent with current science or to provide clarity and consistent data collection. Commenters requested that additional guidance be provided to promote consistency in the way the new measure is interpreted among providers.

Response: We have performed testing to compare the performance of the proposed measure with the existing pressure ulcer/injury measure. Current findings indicate that the measure is both valid and reliable in the SNF, LTCH, and IRF settings. One of the differences between the current and

proposed pressure ulcer measures is that the proposed measure is calculated using the M0300 data element. Reliability and validity of the data elements used to calculate this quality measure have been tested in several ways.

Rigorous testing on both reliability and validity of the data elements in the MDS 3.0 provides evidence for the data elements used in the SNF, LTCH, and IRF settings.³⁶⁷ The MDS 3.0 pilot test showed good reliability, and the results are applicable to the IRF-PAI as well as the LTCH CARE Data Set because the data elements tested are the same as those used in the IRF-PAI and LTCH CARE Data Set. Across pressure ulcer data elements, average gold-standard to gold-standard kappa statistic was 0.905. The average gold-standard to facility-nurse kappa statistic was 0.937. These kappa scores indicate “almost perfect” agreement using the Landis and Koch standard for strength of agreement.³⁶⁸ Analyses conducted by the measure development contractor indicate that there is a high level of alignment between the M0300 data element and the M0800 data element, suggesting that the data elements assess an equivalent concept. Using the M0300 data elements improves accuracy by establishing a standardized calculation method.

A second main difference between the current and proposed pressure ulcer measures is that the proposed measure includes unstageable pressure ulcers, including DTIs, in the numerator of the quality measure, resulting in increased scores in all settings compared with the previously implemented pressure ulcer measure. An analysis conducted by the measure development contractor, using data from October through December 2016, showed mean scores increasing by 2.03 percentage points in LTCH. This is due to the fact that the proposed measure includes unstageable pressure ulcers, including DTIs, while the current measure does not, as well as the fact some pressure ulcers captured as new or worsened in the M0300 data element were not reported in the M0800 data element.

To assess the construct validity of this measure, or the degree to which the measure construct measures what it claims or purports to be measuring, our

measure contractor sought input from TEPs over the course of several years. Most recently, on July 18, 2016, a TEP supported the inclusion in the numerator of unstageable pressure ulcers due to slough and/or eschar that are new or worsened, new unstageable pressure ulcers/injuries due to a non-removable dressing or device, and new DTIs. The measure testing activities were presented to TEP members for their input on the reliability, validity, and feasibility of this measure change. The TEP members supported the measure construct.

The proposed measure also increased the variability of measures scores between providers, as noted by some commenters. In the currently implemented pressure ulcer measure, analysis using 2015 data from Quarter 1 through Quarter 4 reveals that the LTCH mean score is 1.95 percent; the 25th and 75th percentiles are 0.53 percent and 2.49 percent, respectively; and 12.11 percent of facilities have perfect scores. In the proposed measure, during the same timeframe, the LTCH mean score is 3.73 percent; the 25th and 75th percentiles are 1.53 percent and 4.89 percent, respectively; and 5.46 percent of facilities have perfect scores. We would like to clarify that the goal of the proposed measure is not to create performance variation where none exists, but rather to better measure existing performance variation. This increased variability of scores between facilities will improve the ability of the measure to distinguish between high- and low-performing facilities. As described above, the proposed measure has been shown to be reliable and valid through testing of the measure and data elements, and input from stakeholders.

We will continue to perform reliability and validity testing in compliance with NQF guidelines and the Blueprint for the CMS Measures Management System to ensure that the measure demonstrates scientific acceptability (including reliability and validity) and meets the goals of the QRP. Finally, as with all measure development and implementation, we will provide training and guidance prior to implementation of the measure to promote consistency in the interpretation of the measure.

Comment: A few commenters stated that the M0300 data element assesses the total number of unhealed pressure ulcers at the time of admission and of those, the total number of unhealed pressure ulcers at the time of discharge, for each stage. One commenter expressed concern that the proposed measure may disfavor LTCHs that admit patients with pressure ulcers because

those pressure ulcers might not heal by the time the patients are discharged from the LTCH.

Response: We do not believe that this measure will disfavor LTCHs that admit patients who already have pressure ulcers. We wish to clarify that the proposed measure, Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury, is calculated using a subtraction method. The M0300 data element collects the number of unhealed pressure ulcers present at the time of the assessment (that is, discharge) for each stage, and the number of those pressure ulcers that were present upon admission. The pressure ulcers that were present upon admission are subtracted from the number of pressure ulcers at the same stage that are present at discharge and, as a result, are not included in the measure.

Comment: Commenters requested further training and guidance in completing the M0300 data element that will be used to calculate the proposed quality measure. Some commenters requested comprehensive guidance on completing the “present on admission” data element. Some commenters questioned how specific scenarios involving unstageable pressure ulcers should be coded. These commenters had questions about how to code a pressure ulcer that is unstageable at admission, and becomes numerically stageable during the patient’s stay, remaining at that stage at discharge. One commenter supported the proposed measure calculation approach, which will not count pressure ulcers that were present at the time of admission at the same stage, but stated that this would add complexity in coding and would require further training. One commenter stated that the use of these data elements would require LTCHs to calculate the number of new or worsened pressure ulcers by subtracting those present on admission. Some commenters stated that the modified measure may be difficult for providers to capture because they are being asked to report on a different data element.

Response: The measure will be calculated using data reported on the M0300 data element collected at discharge, which only requires LTCHs to report the number of pressure ulcers for each stage (including stages 2, 3 and 4, unstageable due to slough and/or eschar, unstageable due to non-removable dressing/device, and DTIs) and of those, the number that were present on admission. The M0300 data element currently exists on the LTCH CARE Data Set, and the current LTCH QRP Manual, as well as prior versions

³⁶⁷ Saliba, D., & Buchanan, J. (2008, April). Development and validation of a revised nursing home assessment tool: MDS 3.0. Contract No. 500-00-0027/Task Order #2. Santa Monica, CA: Rand Corporation. Retrieved from: <http://www.cms.hhs.gov/NursingHomeQualityInits/Downloads/MDS30FinalReport.pdf>.

³⁶⁸ Landis, R., & Koch, G. (1977, March). The measurement of observer agreement for categorical data. *Biometrics* 33(1), 159–174.

of the Manual, include guidance about how to complete the M0300 data element in the scenarios described by the commenters, including unstageable pressure ulcers that become numerically stageable. The LTCH QRP Manual can be found at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-CARE-Data-Set-and-LTCH-QRP-Manual.html>.

We will provide further training, education, and guidance prior to implementation of the proposed measure. The LTCH QRP Manual will be updated with additional examples to further address the coding of unstageable pressure ulcers, and to provide further clarification on the coding of pressure ulcers/injuries that are “present on admission.”

Comment: Several comments expressed general support for the inclusion of all unstageable pressure ulcers in the proposed measure. One commenter stated that the measure will provide a more accurate picture of pressure ulcers and the quality of their prevention and treatment in PAC settings. This commenter stated that unstageable pressure ulcers may be prevented, accurately diagnosed, and effectively treated when they occur, that this measure will result in a more accurate picture of quality in post-acute care, and that the 2016 NPUAP staging definitions will help to improve diagnostic accuracy.

Some commenters did not support the inclusion of unstageable pressure ulcers in the quality measure as proposed. Some commenters stated that there is a lack of clear definitions for some types of unstageable pressure ulcers, and that those definitions may be too subjective to collect reliable data on unstageable pressure ulcers. One commenter requested that CMS clarify the criteria that would enable a LTCH to report that an unstageable pressure ulcer present on admission has improved by the time of discharge. One commenter stated that it was unclear whether mucosal pressure injuries are included in the measure, and what the definition of “worsened” is in the context of unstageable pressure ulcers. The commenter stated that it may not be possible to prevent unstageable pressure ulcers/injuries due to non-removable devices and dressings, or DTIs, and they questioned how this measure would inform improvement or inform the public. Commenters requested that CMS conduct additional testing to examine the inclusion of unstageable pressure ulcers.

Response: We appreciate the support we have received regarding the inclusion of unstageable pressure ulcers,

including DTIs, in the proposed quality measure. We believe that the inclusion of unstageable pressure ulcers in the measure will result in a fuller picture of quality to patients and families, and lead to further quality improvement efforts that will advance patient safety by reducing the rate of facility acquired pressure ulcers at any stage.

To provide greater clarity about the definitions of different types of unstageable pressure ulcers and how to code them on the LTCH CARE Data Set, we are currently engaged in multiple educational efforts. These include training events, updates to the manuals and training materials, and responses to Help Desk questions to promote understanding and proper coding of these data elements. We will continue to engage in these training activities prior to implementation of the proposed measure.

With regard to provider concerns regarding the inclusion of mucosal pressure ulcers, we wish to clarify that mucosal pressure ulcers are not included in this measure. Further instruction about these types of pressure ulcers is provided in the LTCH QRP Manual, which can be found at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-CARE-Data-Set-and-LTCH-QRP-Manual.html>. We would like to clarify that the data elements used to collect information about unstageable pressure ulcers do not reflect whether a pressure ulcer is improved at discharge compared to admission. Rather, the data element collects the number of pressure ulcers present at each stage (at discharge), and the number of those there were present at the same stage at admission.

Comment: One commenter specifically supported the inclusion of DTIs. This commenter stated that the currently implemented pressure ulcer measure is biased because it does not include DTIs, and that the inclusion of DTIs in the measure has value and directly impacts the patient. The commenter stated that prompt assessment for a DTI at early onset is optimal to initial treatment protocols, and that a well-trained clinician is able to discern DTIs during an assessment. Another commenter stated that these types of injuries may be prevented, accurately diagnosed and effectively treated when they occur, and that the 2016 NPUAP staging definitions may help to improve diagnostic accuracy.

Other commenters did not support the inclusion of DTIs in the measure. Some commenters stated that there is not a universally accepted definition of DTIs,

and one stated that DTIs are commonly misdiagnosed, which could lead to surveillance bias. One commenter stated that the category of DTI is not sufficiently mature enough to include in the measure, and that it may not be possible to prevent DTIs.

Response: We appreciate the comments regarding the specific inclusion of DTIs in the proposed quality measure. DTIs, often an avoidable outcome of medical care, are debilitating and painful, and can result in death and/or disability, similar to Stage 2, Stage 3 and Stage 4 pressure ulcers. While some DTIs may worsen, studies indicate that many DTIs, if managed using appropriate care, can be resolved without deteriorating into a worsened pressure ulcer. Therefore, we believe that the inclusion of DTIs in the proposed quality measure is essential to be able to accurately reflect the number of these types of pressure injuries and to provide the appropriate patient care. Further, we believe that it is important to do a thorough assessment on every patient in each PAC setting, including a thorough skin assessment documenting the presence of any pressure ulcers or injuries of any kind, including DTIs. We agree that it is important to conduct thorough and consistent assessments to avoid the possibility of surveillance bias.

When considering the addition of DTIs to the measure numerator, we convened cross-setting TEPs in June and November 2013, and obtained input from clinicians, experts, and other stakeholders. An additional cross-setting TEP convened by our measure development contractor in July 2016 also supported the recommendation to include unstageable pressure ulcers, including DTIs, in the numerator of the quality measure. Given DTIs’ potential impact on mortality, morbidity, and quality of life, it may be detrimental to the quality of care to exclude DTIs from a pressure ulcer quality measure.

Comment: A few commenters recommended that CMS attain NQF endorsement of the Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury measure prior to implementation.

Response: While this measure is not currently NQF-endorsed, we recognize that the NQF endorsement process is an important part of measure development and plan to submit this measure for NQF endorsement consideration as soon as feasible.

Comment: Some commenters supported adopting the NPUAP terminology regarding the use of the term “pressure injury.” These commenters believed that use of NPUAP

language will help facilitate the use of consistent definitions across PAC settings. One commenter expressed support for the term “injury” to describe “deep tissue injury,” but not other types of pressure ulcers. This commenter requested further clarification on the term “pressure ulcer/injury” used in the proposed rule for this measure.

Other commenters opposed the use of the new NPUAP terminology. Commenters stated that the term “injury” is not universally supported by wound care organizations, does not differentiate closed versus open wounds, is clinically inaccurate, and does not align with ICD-10 codes in use for pressure ulcers. These commenters indicated that, while the term “ulcer” is related to underlying medical conditions, the term “wound” is related to the results of operations and accidents, which may imply intentionality.

Response: We are aware of the array of terms used to describe alterations in skin integrity due to pressure. Some of these terms include: Pressure ulcer, pressure injury, pressure sore, decubitus ulcer, and bed sore. However, for purposes of the proposed measure, a skin condition should be coded on the LTCH CARE Data Set as a pressure ulcer if the primary cause of the skin condition is related to pressure. For example, if the medical record reflects the presence of a Stage 2 pressure injury, it should be coded on the assessment as a Stage 2 pressure ulcer.

A TEP held by our measure development contractor on July 15, 2016 was very supportive of adopting the NPUAP terminology of “pressure injury.” Some members of the TEP stated that the term “injury” may be a more inclusive term than “ulcer,” and that the term “pressure injury” may be more easily and positively understood by patients, residents, and family members than “pressure ulcer.” The TEP recommended training for providers and consumers regarding any change in terminology. We concur with the TEP’s recommendations. The purpose and intent of the measure is to provide increased surveillance of an important patient safety and quality of care issue, and language revisions are intended to ensure that patient wounds are captured in a comprehensive and systematic manner.

Regarding concerns about changes to ICD codes, we would like to clarify that the Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury measure is calculated using data elements from the LTCH CARE Data Set, and does not use ICD codes.

Comment: Several commenters expressed concern regarding the proposal to adopt a modified pressure ulcer measure. One commenter supported CMS’ efforts to implement this measure as it may reduce the burden of collecting assessment data. Other commenters believed that the implementation of the modified pressure ulcer measure will create additional administrative and financial burdens for LTCHs. One commenter urged CMS to postpone the implementation of this measure, stating that this would allow LTCHs additional time to improve their performance on the existing pressure ulcer quality measure.

Response: We do not believe that the reporting of the proposed measure will impose a new burden on LTCHs because the measure is calculated using data elements that are currently included in the LTCH CARE Data Set. Further, our proposal to remove duplicative data elements that we are finalizing in this final rule will result in an overall reduced reporting burden for providers for the proposed measure.

Comment: Several commenters recommended using both the M0300 and M0800 data elements to calculate the pressure ulcer measure, and recommended that CMS maintain the M0800 data elements on the LTCH CARE Data Set. These commenters stated that M0800 data elements are used by PAC providers to verify the number of patients with pressure ulcers that are new or worsened since admission, and believed that the use of M0300 data elements might require PAC staff to review both admission and discharge assessments when verifying the accuracy of measure calculation. One commenter found the M0800 data elements to be clear and concise.

Response: We proposed to collect the proposed measure using the M0300 data element, and to remove the M0800 from the LTCH CARE Data Set, because we have found that use of the M0800 data element could result in the underreporting of pressure ulcers. Using the M0300 data element improves the reporting accuracy by establishing a standardized calculation. Further, the use of the M0300 data element facilitates standardization of the measure across settings.

During a TEP meeting held on July 18, 2016, to discuss this measure, multiple TEP members preferred the wording of the M0300 data element, compared with the M0800 data element. TEP members stated that this data element may be clearer and reduce opportunities for error. We agree with these views, and we plan to provide additional training

opportunities to improve understanding of the data elements.

Comment: A few commenters noted that LTCH performance scores on the proposed measure are likely to differ from performance scores on the currently implemented pressure ulcer measure, Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678). They recommended development of educational materials for the public to explain the perceived shifts in performance.

Response: We appreciate commenters’ concerns about differences in performance scores between the two measures and the possibility of misinterpretation. While the proposed measure will not be directly comparable to the existing measure, it is expected to provide an improved measure of quality moving forward since it will more accurately capture the number of new and worsened pressure ulcers and include unstageable pressure ulcers. Further information and training will be provided to providers as well as consumers regarding how to interpret scores on the proposed measure, to avoid any possible confusion between the proposed measure and the existing measure.

Comment: One commenter suggested that we include additional risk factors in the proposed measure, including age, mechanical ventilation status of the patient, and incontinence associated dermatitis. The commenter also recommended that we revise the terminology to be more specific (that is, “diabetes mellitus” instead of “diabetes” and “impaired independent mobility” instead of “mobility”).

Response: We would like to note that this proposed quality measure will be risk adjusted for functional mobility admission performance, bowel continence, diabetes mellitus or peripheral vascular disease/peripheral arterial disease, and low body mass index in each of the four settings. In response to the commenters request for the use of more specific terminology of risk adjusters, we note that all terms are described in greater detail in the Specifications for LTCH QRP Quality Measures and Standardized Data Elements, available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html>. As with our measure modification and evaluation processes, we will continue to analyze this measure, specifically assessing the addition of variables to the risk adjustment model, and testing the

inclusion of other risk factors as additional risk adjusters. This continued refinement of the risk adjustment models will ensure that the measure remains valid and reliable to inform quality improvement within and across each PAC setting, and to fulfill the public reporting goals of quality reporting programs.

Comment: One commenter requested clarification on measure specification differences between LTCHs and other PAC settings. One commenter stated that there is an IMPACT Act mandate to implement “interoperable measures” across PAC settings.

Response: The Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury measure is harmonized across all PAC settings and uses standardized patient assessment data as required by the IMPACT Act. Further, we would like to clarify that the M0300 data element used to calculate this measure is standardized across all PAC settings, enabling interoperability. This standardization and interoperability of data elements allows for the exchange of information among PAC providers and other providers to whom this data is applicable. We refer readers to the measure specifications, which describe the specifications for the measure in PAC settings, *Final Specifications for LTCH QRP Quality Measures and Standardized Patient Assessment Data Elements*, available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html>.

After consideration of the public comments we received, we are finalizing our proposal to remove the current pressure ulcer measure, Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), from the LTCH QRP measure set and replace it with a modified version of that measure, entitled Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury, for the LTCH QRP with an implementation date of July 1, 2018.

b. Mechanical Ventilation Process Quality Measure: Compliance With Spontaneous Breathing Trial (SBT) by Day 2 of the LTCH Stay

Invasive mechanical ventilation care was identified through technical expert panels convened by our measure development contractor and public comment periods as a gap in the LTCH QRP measure set and aligns with the National Quality Strategy priority and the CMS Quality Strategy goal of “promoting the most effective

prevention and treatment practices” by reducing the risk of complications from unnecessarily prolonged mechanical ventilation. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20092 through 20095), we proposed to adopt the quality measure, Compliance with Spontaneous Breathing Trial (SBT) by Day 2 of the LTCH Stay, beginning with the FY 2020 LTCH QRP. The data applicable to this measure that must be reported by LTCHs for admissions as well as discharges occurring on or after April 1, 2018 is described in section IX.C.11. of the preamble of this final rule.

The Compliance with SBT by Day 2 of the LTCH Stay measure is a process quality measure. For patients on invasive mechanical ventilation support upon admission to the LTCH, except those who meet measure exclusion criteria, this measure assesses facility-level compliance with SBT, including Tracheostomy Collar Trial (TCT) or Continuous Positive Airway Pressure (CPAP) breathing trial, by Day 2 of the LTCH stay, where Day 1 is the day of admission to the LTCH and Day 2 is the subsequent calendar day. This measure is calculated and reported for the following two components: (1) The percentage of patients admitted on invasive mechanical ventilation who were assessed for readiness for SBT by Day 2 of the LTCH Stay, and (2) the percentage of patients deemed medically ready for SBT who received SBT by Day 2 of the LTCH stay. Higher percentages indicate better compliance. Patients are included in this quality measure if they are on invasive mechanical ventilation support upon admission to the LTCH, unless they meet measure exclusion criteria.

Patients on invasive mechanical ventilation support present a critical focus for assessment of high quality care because they comprise a substantial proportion of LTCH patient admissions. Mechanically ventilated patients are increasingly common in both acute care hospital intensive care units (ICUs), where up to 40 percent of patients require some duration of mechanical ventilation,³⁶⁹ and LTCHs, where patients are frequently transferred for weaning following treatment in ICUs.^{370 371 372} Patients who require

invasive mechanical ventilation of longer than 14 or 21 days are undergoing prolonged mechanical ventilation (PMV). In 2012, about 22,000 or 15.8 percent of all LTCH discharges received PMV services during the LTCH stay.³⁷³

This ventilator weaning-related process quality measure is important for encouraging implementation of evidence-based weaning guidelines as early during the LTCH patient stay as is beneficial to the patient. Although often necessary for life support, invasive mechanical ventilation is not without risk of harm to patients, and these risks increase as duration of ventilation continues.^{374 375 376} In both ICUs and LTCHs, unsuccessful weaning and delayed weaning increase patient exposure to a number of ventilator-associated negative health outcomes, including ventilator-associated pneumonia,^{377 378 379 380} ventilator-associated lung injury,^{381 382 383} ventilator induced diaphragm

dysfunction,³⁸⁴ psychological distress^{385 386 387} and post-traumatic stress disorder,³⁸⁸ disability³⁸⁹ and decreased functional status,^{390 391} and chronic critical illness syndrome.³⁹² Furthermore, these ventilator-associated negative health outcomes particularly affect the LTCH population since a significant number of its patients are on PMV. The majority of mechanically ventilated patients who are transferred to an LTCH have received mechanical ventilation for at least 21 days.³⁹³ PMV increases the risk of patient morbidity and short-term and long-term mortality. According to a recent systematic review, the pooled mortality of patients with PMV (defined here as invasive mechanical ventilation for ≥ 14 days) undergoing weaning attempts in LTCHs was 31 percent (18 studies); however, the pooled mortality at one year significantly increased to 73 percent (8 studies).³⁹⁴

In addition to increased morbidity and mortality, mechanical ventilation is also associated with higher costs. While the literature on costs of mechanical ventilation are limited for the LTCH setting, studies in the acute care

hospital ICU setting indicate that patients who require mechanical ventilation can have up to 50 percent higher costs than patients who do not receive mechanical ventilation.³⁹⁵ ICU patients who develop VAP incur at least \$40,000 more in hospital costs than ventilated patients without VAP, and costs increase with increasing duration of mechanical ventilation.^{396 397 398}

Although there is evidence regarding the benefit of daily assessments of patient readiness for weaning from invasive mechanical ventilation,³⁹⁹ as well as for the importance of adherence to weaning protocols,⁴⁰⁰ we are not aware of any studies in LTCHs that evaluate timing of assessment for readiness to wean with respect to the admission date. However, an international task force, convened in 2005, developed guideline recommendations to address the entire weaning process. Despite the limited evidence, this task force recommended that weaning be considered as soon as possible,⁴⁰¹ because failure to assess the patient for readiness to wean may lead to undue prolonged mechanical ventilation,⁴⁰² thus exposing patients unnecessarily to adverse ventilator-associated morbidity and mortality.⁴⁰³ Based on studies and observations of implementation of regular assessment for SBTs and weaning protocols in ICUs, adherence to the recommended weaning

processes, including prompt assessment of weaning readiness and initiation of SBTs, appears quite variable, likely due to differences in clinicians' intuitive thresholds for determination of patients' readiness to wean.^{404 405} Clinician delays in recognizing that weaning may be possible and beginning assessment of weaning readiness are two common causes of weaning delays.⁴⁰⁶ In one study, 50 percent of the patients considered to be incapable of sustaining spontaneous ventilation by clinicians later were able to tolerate a weaning trial. The authors concluded that tests used to validate clinician intuition on a patient's readiness for weaning are often inaccurate and that clinicians should follow explicit protocols to consistently test patients on their readiness to wean.⁴⁰⁷ Because prompt identification of patients' readiness for SBTs has been shown to reduce weaning duration without harm to patients,⁴⁰⁸ such delays indicate less than optimal performance⁴⁰⁹ and opportunities for improvement.

Indirect evidence for the need for prompt recognition of patients' readiness to wean in LTCHs comes from a recent study of patients newly admitted to LTCHs on invasive mechanical ventilation, which reported that 32 percent of invasively mechanically ventilated patients admitted to an LTCH passed a 5-day TCT following admission.⁴¹⁰ That nearly one third of newly admitted LTCH patients were able to be completely weaned within five days underscores the need to assess patients' ability to breathe without assistance soon after admission to an LTCH, and also indicates that this quality measure

has potential to positively impact the health and quality of care received by a considerable proportion of the LTCH patient population.

Because invasive mechanical ventilation should be discontinued as soon as patients are capable of breathing independently,^{411 412} unnecessarily prolonged mechanical ventilation can be an indicator of poor care quality or of persistent illness.⁴¹³ This quality measure is designed to encourage adherence to evidence-based and consensus-based guidelines through implementation of timely assessment of patient readiness to wean and trials of unassisted breathing. To increase timeliness of weaning and reduce patient risk of complications, it is important to assess a patient's need for continued mechanical ventilation at the time of admission. Measuring and comparing assessment of readiness to wean and compliance with SBT by Day 2 is expected to help differentiate among facilities with varying performance in this important domain. The anticipated improvement in quality is an improvement in timeliness of weaning and ventilator liberation for patients admitted to LTCHs on invasive mechanical ventilation. In addition, facilities can use results of this measure to improve timely compliance with evidence-based weaning guidelines and develop ventilator weaning quality improvement programs.

A TEP assembled by our measure development contractor convened nine meetings (two in-person meetings and seven webinars) between April 2014 and August 2016 in order to refine the quality measure's technical specifications, including the measure target population, inclusion and exclusion criteria, and key definitions (for example, "non-weaning"). The TEP also offered feedback on the individual LTCH CARE Data Set ventilator weaning items and supported the feasibility of implementing this measure in the LTCH setting. The measure developer recruited two former patients successfully weaned from mechanical ventilation as well as the primary caregiver of one of the patients to solicit their views on the measures. The *2014–2016 Development of Long-Term Care*

Hospital (LTCH) Ventilator Weaning Quality Measures Technical Expert Panel Summary Report is available on the CMS Web site at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html>.

We also solicited stakeholder feedback on the development of this measure through a public comment period held from May 19, 2016, through June 9, 2016. Several stakeholders and organizations supported this measure for implementation, including hospitals and professional organizations. The public comment summary report for the proposed measure is available on the CMS Web site at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html>.

Our measure development contractor conducted a pilot test on the data elements used to calculate this quality measure. The pilot test was conducted in 10 LTCHs among approximately 150 LTCH patients and used a mixed methods research design to collect data. Quantitative data on the ventilator weaning items was collected from May 27, 2016 through September 10, 2016, and qualitative data on these items was collected from June 6, 2016 through October 4, 2016. The LTCHs who participated in the pilot test were selected to represent variation across several key facility-level characteristics: geographic location, size, and profit status.

The qualitative data from the pilot test of the ventilator weaning process measure supported the importance of the measure. Results from qualitative and quantitative analysis further support the feasibility of data collection for this quality measure. Data collection for this quality measure was not seen as burdensome by pilot sites. The pilot test summary report for this measure is available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html>.

The NQF-convened MAP PAC/LTC Workgroup met on December 12, 2014 and again on December 14 and 15, 2015. During these meetings, the MAP encouraged continued development of this proposed measure, acknowledging that there is evidence for interventions that improve ventilator care,⁴¹⁴ that

variation in quality of care exists among LTCHs,⁴¹⁵ and that ventilator care is an important safety priority for LTCHs.⁴¹⁶

Since the MAP's review and recommendation of continued development in 2015, we have continued to refine this proposed measure in accordance with the MAP's recommendations. Results of continued development activities, including stakeholder feedback from the 2016 public comment period and 2016 pilot test findings, were presented to the MAP during the MAP feedback loop meeting in October 2016. The proposed measure is consistent with the information submitted to the MAP, and the original MAP submission and our continued refinements support its scientific acceptability for use in quality reporting programs. As discussed with the MAP, we fully anticipate that additional analyses will continue once data collection for the measure begins. More information about the MAP's recommendations for this proposed measure is available at: http://www.qualityforum.org/Publications/2016/02/MAP_2016_Considerations_for_Implementing_Measures_in_Federal_Programs_-_PAC-LTC.aspx.

We reviewed the NQF's consensus endorsed measures and were unable to identify any NQF-endorsed ventilator weaning quality measures focused on assessment of readiness to wean for patients admitted on invasive mechanical ventilation in the LTCH setting. We are unaware of any other quality measures for weaning from invasive mechanical ventilation that have been endorsed or adopted by another consensus organization for the LTCH setting. Therefore, based on the evidence discussed above, we proposed to adopt the quality measure entitled, Compliance with SBT by Day 2 of the LTCH Stay, for the LTCH QRP beginning with the FY 2020 LTCH QRP. We plan to submit the quality measure to the NQF for consideration for endorsement.

We proposed that data for this ventilator weaning quality measure be collected through the LTCH CARE Data

Workgroup. Available at: <http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdIdentifier=id&ItemID=78711>.

Set, with submission through the QIES ASAP System. For more information on LTCH QRP reporting using the QIES ASAP System, we refer readers to our Web site at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Technical-Information.html>. We stated that we intended to revise the LTCH CARE Data Set to include new items that assess processes for weaning from invasive mechanical ventilation, should this proposed measure be adopted.

This measure is calculated and reported for two components. The proposed measure denominator for Component 1, Percentage of Patients Assessed for Readiness for SBT by Day 2 of LTCH Stay, is the total number of patients admitted during the reporting period who were on invasive mechanical ventilation upon admission to an LTCH and expected or anticipated by the provider to undergo weaning attempts at admission. The proposed measure numerator for Component 1 is the number of patients admitted on invasive mechanical ventilation during the reporting period who were assessed for readiness for SBT (including TCT or CPAP breathing trial) by Day 2 of the LTCH stay.

The proposed measure denominator for Component 2, Percentage of Patients Ready for SBT Who Received SBT by Day 2 of LTCH Stay, is the subset of patients in the denominator of the Component 1, who were assessed and deemed medically ready for SBT by Day 2 of the LTCH stay. The proposed measure numerator for Component 2, Percentage of Patients Ready for SBT Who Received SBT by Day 2 of LTCH Stay, is the number of patients admitted on invasive mechanical ventilation during the reporting period who were ready for SBT and who received an SBT (including TCT or CPAP breathing trial) by Day 2 of the LTCH stay.

For technical information about this proposed measure, including information about the measure calculation and proposed measure denominator exclusions, we refer readers to the document titled, *Final Specifications for LTCH QRP Quality Measures and Standardized Patient Assessment Data Elements*, available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html>.

We invited public comments on our proposal to adopt the quality measure, Compliance with SBT by Day 2 of the LTCH Stay, beginning with the FY 2020 LTCH QRP.

Comment: Some commenters expressed support for the adoption of Compliance with SBT by Day 2 of the LTCH Stay for the LTCH QRP. Commenters noted that reducing risks of complications associated with prolonged mechanical ventilation, such as VAEs, and improving ventilator weaning rates are important areas for quality measurement in LTCHs. Another commenter expressed support that this measure will provide data necessary to reduce the risk of complications from unnecessarily prolonged mechanical ventilation and reduce variations in practice that do not benefit patients.

Response: We appreciate the commenters' support of the Compliance with SBT by Day 2 of the LTCH Stay measure and support for this topic for the LTCH QRP. We agree that the objective of this measure aligns with guidelines on reducing time spent on mechanical ventilation to decrease risk of complications and to improve ventilator weaning rates.

Comment: Some commenters recommended that CMS further test the Compliance with SBT by Day 2 of the LTCH Stay measure prior to finalization and implementation for the LTCH QRP.

Response: Determination of measure readiness for implementation and data collection was informed by feedback and results from the pilot test and TEP discussions. Pilot sites were able to test the items related to the measure and provided feedback via a series of check-ins that further informed measure development. The TEPs further supported measure development by providing critical insight and feedback from clinicians, researchers, and experienced LTCH administrators. In addition, patient advocates provided insight into ventilated patient experiences in the LTCH and the utility of the ventilator weaning measures. Additional testing will be conducted as data collection ensues, and we will continue to test these measures on a quarterly basis if feasible and conduct maintenance and evaluation of the measure for reliability and validity.

Comment: One commenter appreciated that the measure has significantly evolved from conception and recommended that we submit the measure to NQF for consideration of endorsement.

Response: We appreciate the commenter for their comment about the extensive work that went into the measure development process. With regard to NQF endorsement, as noted in the proposed rule, we intend to submit the measure to NQF for consideration of endorsement. We further note that we consider and propose appropriate

measures that have been endorsed by the NQF whenever possible. However, section 1886(m)(5)(D)(ii) of the Act allows the Secretary to specify a measure for the LTCH QRP that that is not NQF endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization. In the case of the proposed measure, we have not been able to identify other measures that are endorsed or adopted by a consensus organization. While we appreciate the importance of consensus endorsement and intend to seek such endorsement, we believe the need to address the measure gap in invasive mechanical ventilation care in the LTCH QRP outweighs the general rule of adopting an NQF endorsed measure at this time.

Comment: With respect to the addition of the two ventilator weaning measures for FY 2020, one commenter expressed concern that the expanded patient assessment data reporting requirements would impose a significant burden on providers.

Response: We appreciate the commenter's concern about the burden associated with the measure proposals; however, we believe that these measures are important to assess measure gaps for LTCH patients. We intend to provide guidance and training for providers to address their concerns regarding the expanded patient assessment data reporting requirements.

Comment: A commenter expressed concern that the small size of the pilot test used to inform the development of this measure may not be adequate to conclude that the measure is reliable and accurate.

Response: The focus of the pilot test was to inform measure development as well as to evaluate the feasibility of patient-level data collection and submission. To obtain a balanced sample of participants, pilot sites were chosen based on criteria including LTCH size, geographic region, and ownership type. Based on the size and projected number of ventilated patients, the number of sites recruited was deemed to provide a sufficient number of patients for analysis of the feasibility of data collection and validity of the mechanical ventilation quality measures. Pilot sites received in-depth trainings and provided feedback via a series of check-ins that further informed measure development during the course of the pilot study. We concluded that the pilot test was adequate to proceed with proposal of the measure for adoption under the LTCH QRP. We will continue to test these measures on a quarterly basis and conduct

maintenance and evaluation of the measure for reliability and validity.

Comment: Some commenters were concerned with the 2-day time frame to assess an admitted patient for readiness to perform SBT because it would be burdensome to providers especially for patients admitted during evenings or weekends. Some commenters recommended extending the time frame to complete the assessment to 5 days as used in a recent study led by Jubran et al., 2013.⁴¹⁷

Response: We wish to clarify that the 5-day time frame used by a recent study led by Jubran et al., 2013 to assess LTCH patients on invasive mechanical ventilation is not an established protocol. A task force in 2005 on the subject of weaning from mechanical ventilation, which included international scientific experts and advisors, recommended that liberation be considered as soon as possible for patients to reduce risk of complications and mortality.⁴¹⁸ Accordingly, TEP members agreed that the 5-day time frame was too long compared to best practices and that assessment for ventilator liberation should be prior to 5 days. After extensive discussion, TEP members recommended the 2-day time frame to set a high standard to encourage high quality of care and increase the chance that patients are determined to be capable of liberation from mechanical ventilation earlier.

Comment: One commenter was concerned that the proposed measure conflicts with the site neutral payment policy.

Response: We appreciate the opportunity to clarify that the proposed measure is intended to ensure that patients on invasive mechanical ventilation support upon LTCH admission are assessed for readiness for SBT as recommended. In addition, if a patient on invasive mechanical ventilation is found ready for SBT, then a provider should perform an SBT. This measure does not conflict with the site neutral payment policy because providers are not assessed on the time to liberation (completion of an SBT and liberation from mechanical ventilation), but assessed on initiating the process (completing an assessment of the patient) to determine whether the

patient is medically ready to be liberated from mechanical ventilation.

Comment: One commenter expressed concern about whether the proposed measure is a safe and feasible practice for patients. Another commenter noted that the short time frame may have unintended negative consequences for patient care and forces clinical judgment on weaning status.

Response: We appreciate the commenters' concerns pertaining to patient safety, and would like to emphasize that patient safety is a top priority in all measurement development efforts. We encourage providers to use best patient care practices when assessing patients for readiness for liberation. In addition, we note that while the measure assesses providers on completing an assessment of the patient to determine whether the patient is medically ready to be liberated from mechanical ventilation, it does not "force" providers to make any particular assessment, and we encourage providers to classify patients as "weaning" or "non-weaning" as clinically appropriate. Of note, evidence-based guidelines recommend that liberation be considered as soon as possible for patients to reduce risk of complications and mortality. If a clinician deemed a patient medically unready to perform SBT, then the decision should be documented and providers should code this item appropriately.

Comment: One commenter was concerned that the multi-component structure of the measure may be confusing to providers and that definitions embedded in the calculation of the two components (specifically, "documentation," "weaning," and "non-weaning") are too subjective.

Response: We would like to clarify that "documentation" that the patient was not deemed medically ready for SBT can be any medical record that a provider uses to document patient information. In regard to weaning status, we encourage providers to classify patients as "weaning" or "non-weaning" as clinically appropriate. We wish to further clarify that patients with specific conditions such as amyotrophic lateral sclerosis that may negate any expectation or anticipation of weaning attempts on admission may be considered "non-weaning" by the provider. We intend to provide training and guidance prior to the implementation of the quality measure to ensure that providers are prepared to properly collect the data and fully understand the measure specifications.

After consideration of the public comments we received, we are

finalizing our proposal to adopt the measure, Compliance with SBT by Day 2 of the LTCH Stay, beginning with the FY 2020 LTCH QRP with an implementation date of July 1, 2018, as discussed in section IX.C.11. of the preamble of this final rule.

c. Mechanical Ventilation Outcome Quality Measure: Ventilator Liberation Rate

Invasive mechanical ventilation care was identified as an important gap in the LTCH QRP measure set,⁴¹⁹ and aligns with the National Quality Strategy priority and the CMS Quality Strategy goal of "promoting the most effective prevention and treatment practices" by reducing the risk of complications from unnecessarily prolonged mechanical ventilation. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20095 through 20097), we proposed to adopt the quality measure, Ventilator Liberation Rate, for the LTCH QRP beginning with the FY 2020 LTCH QRP. The data applicable to this measure that must be reported by LTCHs for admissions as well as discharges occurring on or after April 1, 2018 is described in section IX.C.11. of the preamble of this final rule.

The Ventilator Liberation Rate measure is an outcome quality measure. This quality measure is a facility-level measure that reports the percentage of LTCH patients admitted on invasive mechanical ventilation, for whom weaning attempts were expected or anticipated, and are fully weaned by the end of their LTCH stay. Patients who are considered fully weaned at discharge are those who did not require any invasive mechanical ventilation support for at least 2 consecutive calendar days immediately prior to discharge. While the first ventilator weaning measure we proposed captures the weaning process, this measure captures the key outcome of successful liberation from invasive mechanical ventilation.

We refer readers to section IX.C.7.b. of the preamble of this final rule for information regarding the literature review in support of proposing the mechanical ventilation process quality measure, Compliance with SBT by Day 2 of the LTCH Stay.

Discontinuation of invasive mechanical ventilation, known as weaning or liberation, is feasible for many ventilated patients, and is associated with improved health outcomes. In LTCHs, higher weaning rates have been associated with lower

⁴¹⁷ Jubran, A., et al. (2013). "Effect of pressure support vs unassisted breathing through a tracheostomy collar on weaning duration in patients requiring prolonged mechanical ventilation: a randomized trial." *JAMA* 309(7): 671–677.

⁴¹⁸ Boles, J.M., et al. (2007). "Weaning from mechanical ventilation." *Eur Respir J* 29(5): 1033–1056.

⁴¹⁹ Technical Expert Panel Report: Quality Measures for Long-Term Care Hospitals. Thaker, S., Gage, B., Bernard, S., and Nguyen, K. March 2011.

post-discharge mortality, even among the elderly,^{420 421 422 423 424} and fewer days of mechanical ventilation may lead to decreased risk of ventilator-associated complications/events, enhanced rehabilitation opportunities, and a shorter length of stay.⁴²⁵ Based on the evidence, increasing weaning rates is expected to reduce the risk of harm associated with invasive mechanical ventilation, thus contributing to more favorable clinical outcomes for patients^{426 427} and decreased costs.

Numerous studies from 1991 through 2015 have reported a range of ventilator liberation rates among LTCHs. A review of nine single-center studies conducted between 1991 and 2001 reported that, among more than 3,000 patients with PMV >21 days, facility-level liberation rates ranged from 34 percent to 60 percent, with an overall weaning rate of 52 percent.⁴²⁸ A recent systematic review identified nine studies (4,769 patients) reporting the proportion of patients successfully liberated from ventilation in LTCHs, and found a pooled weaning rate of 47 percent (95 percent CI 42–51); rates reported by individual studies conducted in the United States varied from 13 percent to

56 percent.⁴²⁹ Lower liberation rates may indicate less-than-optimal performance.

Ventilator liberation rate is an actionable health care outcome. Multiple interventions have been shown to increase ventilator liberation rates, including selection and implementation of weaning protocols, ventilator modes, and type of pressure support strategies. Multiple studies in LTCHs^{430 431 432} and ICUs^{433 434} provide evidence to support the relationship between weaning processes and the successful weaning of mechanically ventilated LTCH patients. The effectiveness of these interventions suggests that improvement in liberation rates among LTCH patients is possible through modifying provider-led processes and interventions.

Expectations of successful ventilator liberation are high for many LTCH patients.^{435 436 437} Unnecessarily prolonged mechanical ventilation increases the risk of negative patient outcomes and can be an indicator of poor quality care or of persistent illness.⁴³⁸ Based on the evidence,

improving weaning processes and increasing weaning rates are expected to mitigate the risk of harm associated with invasive mechanical ventilation, thus contributing to more favorable clinical outcomes for patients^{439 440} and decreased costs.⁴⁴¹ This quality measure, Ventilator Liberation Rate, will assess the proportion of patients discharged alive from an LTCH who are fully weaned, thereby promoting weaning efforts and encouraging quality management of LTCH patients on invasive mechanical ventilation. Kahn et al. (2013) noted that inclusion of a liberation outcome measure is key to providing a truly patient-centered measure related to invasive mechanical ventilation weaning among LTCH patients.⁴⁴²

A TEP assembled by our measure development contractor convened nine meetings (two in-person meetings and seven webinars) between April 2014 and August 2016. TEP members provided input to guide the development of the quality measures, including feedback on the individual LTCH CARE Data Set ventilator weaning items, the target population, inclusion and exclusion criteria, and patient demographic and clinical factors that could affect ventilator weaning outcomes (risk adjusters). TEP members also supported the feasibility of implementing this measure in the LTCH setting. The measure developer recruited two former patients successfully weaned from mechanical ventilation as well as the primary caregiver of one of the patients to solicit their views on the measures. The *2014–2016 Development of Long-Term Care Hospital (LTCH) Ventilator Weaning Quality Measures Technical Expert Panel Summary Report* is available on the CMS Web site at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html>.

We also solicited stakeholder feedback on the development of this measure through a public comment period held from May 19, 2016, through June 9, 2016. Several stakeholders and organizations supported this measure for implementation, including hospitals and professional organizations. The public comment summary report for the proposed measure is available on the CMS Web site at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html>.

Our measure development contractor conducted a pilot test on the proposed data elements used to calculate this quality measure. The pilot test was conducted in ten LTCHs which included approximately 150 LTCH patients and used a mixed methods research design to collect data. Quantitative data on the ventilator weaning items was collected from May 27, 2016 through September 10, 2016, and qualitative data on these items was collected from June 6, 2016 through October 4, 2016. The LTCHs who participated in the pilot test were selected to represent variation across several key facility-level characteristics: Geographic location, size, and profit status.

The qualitative data from the pilot test of the ventilator liberation quality measure supported the importance of the measure; results from qualitative and quantitative analysis also supported the feasibility of data collection. Data collection for this quality measure was not seen as burdensome by pilot sites. The pilot test summary report for this measure is available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html>.

The NQF-convened MAP PAC/LTC Workgroup met on December 12, 2014, and on December 14 and 15, 2015. During these meetings, the MAP provided input on the importance and specifications of this measure. The MAP encouraged continued development of the measure, stating that this measure has high value potential for the LTCH QRP⁴⁴³ because successful weaning is important for improving quality of life

and decreasing morbidity, mortality, and resource use among patients.^{444 445}

Since the MAP's review and recommendation of continued development in 2015, we have continued to refine this proposed measure in accordance with the MAP's recommendations. Results of continued development activities, including stakeholder feedback from the 2016 public comment period and 2016 pilot test findings, were presented to the MAP during the MAP feedback loop meeting in October 2016. The proposed measure is consistent with the information submitted to the MAP, and the original MAP submission and our continued refinements support its scientific acceptability for use in quality reporting programs. As discussed with the MAP, we fully anticipate that additional analyses will continue once data collection for the measure begins. More information about the MAP's recommendations for this measure is available at: http://www.qualityforum.org/Publications/2016/02/MAP_2016_Considerations_for_Implementing_Measures_in_Federal_Programs_-_PAC-LTC.aspx.

We reviewed the NQF's consensus endorsed measures and were unable to identify any NQF-endorsed ventilator weaning quality measures focused on the liberation status at discharge for patients admitted on invasive mechanical ventilation in the LTCH setting. We are unaware of any other quality measures for liberation from invasive mechanical ventilation that have been endorsed or adopted by another consensus organization for the LTCH setting. Therefore, based on the evidence discussed above, we proposed to adopt the quality measure entitled, Ventilator Liberation Rate, for the LTCH QRP beginning with the FY 2020 LTCH QRP. We plan to submit the quality measure to the NQF for consideration for endorsement.

We proposed that data for this quality measure be collected through the LTCH CARE Data Set, with the submission through the QIES ASAP System. For more information on LTCH QRP reporting using the QIES ASAP system, we refer readers to our Web site at: <https://www.cms.gov/Medicare/Quality->

Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Technical-Information.html. We stated that we intended to revise the LTCH CARE Data Set to include new items that assess invasive mechanical ventilation liberation at discharge, should this proposed measure be adopted.

This measure reports facility-level Ventilator Liberation Rate for patients admitted to an LTCH on invasive mechanical ventilation, and for whom weaning attempts were expected or anticipated as reported on the Admission Assessment. The Ventilator Liberation Rate is defined as the percentage of patients on invasive mechanical ventilation upon admission who are alive and fully liberated at discharge. The proposed measure denominator is the number of patients requiring invasive mechanical ventilation support upon admission to an LTCH, except those who meet exclusion criteria. The proposed measure numerator is the number of patients who are discharged alive and fully liberated. This measure is risk-adjusted for variables such as age, neurological injury or disease, dialysis, and other comorbidities and treatments. If a patient has more than one LTCH stay during the reporting period, then each LTCH stay will be included in the measure calculation and reporting. For technical information about this measure, including information about the measure calculation, risk adjustment, and proposed measure denominator exclusions, we refer readers to the document titled, *Final Specifications for LTCH QRP Quality Measures and Standardized Patient Assessment Data Elements*, available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html>.

We invited public comments on our proposal to adopt the quality measure, Ventilator Liberation Rate, beginning with the FY 2020 LTCH QRP.

Comment: Some commenters expressed support for the adoption of Ventilator Liberation Rate into the LTCH QRP.

Response: We appreciate commenters' support for the adoption of Ventilator Liberation Rate.

Comment: Some commenters recommended that CMS further test the Ventilator Liberation Rate measure prior to finalization and implementation for the LTCH QRP.

Response: Determination of measure readiness for implementation and data collection was informed by feedback

⁴⁴³ "Spreadsheet of MAP 2016 Final Recommendations (XLSX)." Measure Applications Partnership Post Acute Care/Long-Term Care Workgroup. Available at: <http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=81593>.

⁴⁴⁴ MAP 2015 Considerations for Implementing Measures in Federal Programs: Draft for Public Comment. Measure Applications Partnership Post Acute Care/Long-Term Care Workgroup. Available at: <http://www.qualityforum.org/ProjectMaterials.aspx?projectID=75370>.

⁴⁴⁵ "Spreadsheet of MAP 2016 Final Recommendations (XLSX)." Measure Applications Partnership Post Acute Care/Long-Term Care Workgroup. Available at: <http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=81593>.

and results from the pilot test and TEP discussions. Pilot sites were able to test the items related to the measure and provided feedback via a series of check-ins that further informed measure development. The TEPs further supported measure development by providing critical insight and feedback from clinicians, researchers, and experienced LTCH administrators. In addition, patient advocates provided insight into ventilated patient experiences in the LTCH and the utility of the ventilator weaning measures. Additional testing will be conducted as data collection ensues and we will continue to test these measures on a quarterly basis if feasible and conduct maintenance and evaluation of the measure for reliability and validity.

Comment: One commenter appreciated that the measure has significantly evolved from conception. This commenter recommended that we submit the measure to NQF for consideration of endorsement.

Response: We appreciate the commenter for their comment about the extensive work that went into the measure development process. With regard to NQF endorsement, as noted in the proposed rule, we intend to submit the measure to NQF for consideration of endorsement. We further note that we consider and propose appropriate measures that have been endorsed by the NQF whenever possible. However, section 1886(m)(5)(D)(ii) of the Act allows the Secretary to specify a measure for the LTCH QRP that is not NQF endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization. In the case of the proposed measure, we have not been able to identify other measures that are endorsed or adopted by a consensus organization. While we appreciate the importance of consensus endorsement and intend to seek such endorsement, we believe the need to address the measure gap in invasive mechanical ventilation care in the LTCH QRP outweighs the general rule of adopting an NQF endorsed measure at this time.

Comment: With respect to the addition of the two ventilator weaning measures beginning with the FY 2020 LTCH QRP, one commenter expressed concern that the expanded patient assessment data reporting requirements would impose a significant burden on providers.

Response: We appreciate the commenter's concern about the burden associated with the measure proposals; however, we believe that these measures are important to assess measure gaps for LTCH patients. We intend to provide

guidance and training for providers to address their concerns regarding the expanded patient assessment data reporting requirements.

Comment: A commenter expressed concern that the small size of the pilot test used to inform the development of this measure may not be adequate to conclude that the measure is reliable and accurate.

Response: The focus of the pilot test was to inform measure development as well as to evaluate the feasibility of patient-level data collection and submission. To obtain a balanced sample of participants, pilot sites were chosen based on criteria including LTCH size, geographic region, and ownership type. Based on the size and projected number of ventilated patients, the number of sites recruited was deemed to provide a sufficient number of patients for analysis of the feasibility of data collection and validity of the mechanical ventilation quality measures. Pilot sites received in-depth trainings and provided feedback via a series of check-ins that further informed measure development during the course of the pilot study. We concluded that the pilot test was adequate to proceed with proposal of the measure for adoption under the LTCH QRP. We will continue to test these measures on a quarterly basis and conduct maintenance and evaluation of the measure for reliability and validity.

Comment: With respect to data coding restrictions for item O0200, Ventilator Liberation Rate, one commenter requested clarification on the appropriate coding for the item for patients admitted on mechanical ventilation who were not expected to wean but are liberated at discharge and for patients ventilated during the LTCH stay who were liberated at discharge.

Response: We would like to clarify that all patients who were liberated from mechanical ventilation should be coded as indicated regardless of admission status of the patient to ensure accurate data. The measure calculations for item O0200, Ventilator Liberation Rate, exclude the two sets of patients described by the commenter from the denominator. Therefore, data coding restrictions are not needed for item O0200, Ventilator Liberation Rate.

Comment: A few commenters supported that the measure was risk-adjusted and noted the importance of adequate risk adjustment to ensure that providers who care for more complex patients do not fare worse because of insufficient risk adjustment. Some commenters questioned whether the current risk-adjustment model for the measure was adequate. Specifically, one

commenter suggested that cases with progressive neuromuscular disease and severe neuromuscular injury, disease or dysfunction be excluded from the measure numerator and denominator, and another commenter recommended to combine and risk-adjust these cases together, as the conditions are captured under one category in the LTCH CARE Data Set. Another commenter recommended that ventilated patients undergoing dialysis also be considered as a measure exclusion and that special adjustments be made for larger ventilator weaning programs where most ventilated patients are accepted, unlike LTCHs that only admit patients identified for weaning.

Response: We appreciate the importance of adequate risk adjustment for this measure and appreciate the commenters' recommendations. The TEP identified several risk factors that affect ventilator liberation outcome, and these factors were included in the risk-adjustment model for initial measure testing. In addition, pilot sites have provided CMS feedback on these risk-adjustment variables. We will continue to test and refine the risk-adjustment model by further evaluating conditions such as progressive neuromuscular disease, severe neuromuscular injury, disease or dysfunction, and dialysis to ensure sufficient risk adjustment. We note that the LTCH CARE Data Set V4.00 contains two separate items that indicate either "Other Progressive Neuromuscular Disease" and "Other Severe Neurological Injury, Disease, or Dysfunction." We would like to clarify that patients who were deemed non-weaning on admission are excluded from the denominator for Ventilator Liberation Rate. As a result of this exclusion, performance on the measure would not be impacted by the proportion of patients admitted that are undergoing mechanical ventilation and identified as weaning.

After consideration of the public comments we received, we are finalizing our proposal to adopt the measure, Ventilator Liberation Rate, beginning with the FY 2020 LTCH QRP with an implementation date of July 1, 2018, as discussed in section IX.C.11. of the preamble of this final rule.

8. Removal of the All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge From LTCHs From the LTCH QRP

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20097 through 20098), we proposed to remove the All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs

(NQF #2512) beginning with the FY 2019 LTCH QRP.

In the FY 2016 IPPS/LTCH PPS final rule (80 FR 49730 through 49731), we adopted the All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs (NQF #2512) for the LTCH QRP. This measure assesses all-cause unplanned hospital readmissions from LTCHs. In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57215 through 57219), we adopted the Potentially Preventable 30-Day Post-Discharge Readmission Measure for LTCH QRP to fulfill IMPACT Act requirements. In response to the FY 2017 IPPS/LTCH PPS proposed rule, we received public comments expressing concern over the multiplicity of readmission measures and the overlap between the All-Cause Readmission and Potentially Preventable Readmission (PPR) 30-Day Post-Discharge measures (see 81 FR 57217 through 57218). Commenters also stated that more than one readmission measure would create confusion and require additional effort by providers to track and improve performance.

We retained the All-Cause Readmission measure because it would allow us to monitor trends in both all-cause and PPR rates. In particular, we could compare facility performance on the All-Cause Readmission and PPR 30-Day Post-Discharge measures. However, upon further consideration of the public comments, we believe that removing the All-Cause Readmission measure and retaining the PPR 30-Day Post-Discharge measure in the LTCH QRP would prevent duplication, because potentially preventable readmissions are a subset of all-cause readmissions. Although there is no data collection burden associated with these claims-based measures, we recognize that having two hospital readmission measures in the LTCH QRP may create confusion. We agree with commenters that there is overlap between the All-Cause Readmission measure and the PPR 30-Day Post-Discharge measure, which identifies a

subset of all-cause readmissions, and believe the PPR measure will be more actionable for quality improvement.

Accordingly, we proposed to remove the All-Cause Unplanned Readmission measure beginning with the FY 2019 LTCH QRP. We proposed that public reporting of this measure would end by October 2018 when public reporting of the PPR 30-Day Post-Discharge measure begins by October 2018. We refer readers to section IX.C.17. of the preamble of this final rule for more information regarding our proposal to publicly report the PPR 30-Day Post-Discharge measure. We refer readers to the PPR 30-Day Post-Discharge measure specifications available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/Downloads/Measure-Specifications-for-FY17-LTCH-QRP-Final-Rule.pdf>.

We invited public comment on our proposal to remove the All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs (NQF #2512) from the LTCH QRP, beginning with the FY 2019 LTCH QRP.

Comment: Commenters supported the proposed removal of the All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs from the LTCH QRP. The commenters stated that the lack of patient level data makes it difficult to track and improve performance on this measure. Several commenters supported the removal of this measure because they consider it confusing and duplicative of the PPR 30-Day Post-Discharge Measure for LTCH QRP. Some commenters urged CMS to evaluate PAC readmission measures adopted for quality reporting to ensure that they create consistent incentives across the system. One commenter requested additional detail on the components of the all-cause readmission measure that are not represented in the PPR measure, as well as details on the components of the PPR measure.

Response: We appreciate the support for the proposed removal of the All-

Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs from the LTCH QRP. We note the commenters' concerns regarding the availability of patient level data for tracking and improving performance, and we are exploring the feasibility of making additional data available to LTCHs. We thank the commenters for their concern over consistent incentives and will continue to monitor PAC readmission measures to ensure they align incentives across the system.

We appreciate the request for additional detail on the components of the all-cause and PPR measures. We wish to clarify that the PPR measure captures readmissions for conditions considered potentially preventable and unplanned, whereas the all-cause measure captured the broader set of all unplanned readmissions. For additional details on the components of the PPR measure, we refer readers to the measure specifications and Appendix 2 for the list of conditions used to define PPRs, available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/Downloads/Measure-Specifications-for-FY17-LTCH-QRP-Final-Rule.pdf>.

After consideration of the public comments we received, we are finalizing our proposal to remove the All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs (NQF #2512) from the LTCH QRP, beginning with the FY 2019 LTCH QRP.

9. LTCH QRP Quality Measures Under Consideration for Future Years

a. LTCH QRP Quality Measures Under Consideration for Future Years

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20098), we invited public comment on the importance, relevance, appropriateness, and applicability of each of the quality measures listed in the table below for future years in the LTCH QRP.

LTCH QRP QUALITY MEASURES UNDER CONSIDERATION FOR FUTURE YEARS

NQS Priority: Patient- and Caregiver-Centered Care

Measures	• Experience of Care. • Application of Percent of Residents Who Self-Report Moderate to Severe Pain (Short Stay) (NQF #0676). • Advance Care Plan.

NQS Priority: Patient Safety

Measure	• Patients Who Received an Antipsychotic Medication.

LTCH QRP QUALITY MEASURES UNDER CONSIDERATION FOR FUTURE YEARS—Continued

NQS Priority: Communication and Care Coordination

Measure	• Modification of the Discharge to Community-PAC LTCH QRP measure.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20098), we also solicited public comments on the use of survey-based experience of care measures for the LTCH QRP. We are currently developing an experience of care survey for LTCHs and survey-based measures will be developed from this survey. These survey-based measures may be considered for inclusion in the LTCH QRP through future notice-and-comment rulemaking. This survey was developed using a rigorous survey development methodology that included a public request for measures titled Request for Information To Aid in the Design and Development of a Survey Regarding Patient and Family Member Experiences With Care Received in Long-Term Care Hospitals (80 FR 72722 through 72725); focus groups and interviews with patients, family members, and caregivers; input from a TEP of LTCHs, researchers, and patient advocates; and cognitive interviewing. The survey has also been field tested. The survey explores experience of care across five main areas: (1) Beginning stay at the hospital; (2) interactions with staff; (3) experience during the hospital stay; (4) preparing for leaving hospital; and (5) overall hospital rating. We are specifically interested in comments regarding survey implementation and logistics, use of the survey-based measures in the LTCH QRP, and general feedback.

Also, we are considering a measure focused on pain that relies on the collection of patient-reported pain data, and another measure that documents whether a patient has an Advance Care Plan. Finally, we are considering a measure related to patient safety, specifically, Patients Who Received an Antipsychotic Medication.

We invited public comment on the possible inclusion of such measures in future years of the LTCH QRP.

Comment: Several commenters provided feedback on the use of an experience of care survey in the LTCH setting.

Response: We thank the commenters who submitted comments about the experience of care survey. We will take those comments into consideration as we finish developing the measure and related survey-based measures.

Comment: A number of commenters supported the inclusion of an Advance Care Plan measure in the LTCH QRP.

Several commenters expressed concern regarding the ability of the LTCH population to engage in advance care planning given their severity of illness. One commenter emphasized the importance of ensuring access to advance care plans from the short-term acute care hospital. One commenter recommended inclusion of a more detailed measure that specifies the contents of an advanced care plan. Several commenters supported adoption of the NQF-endorsed measure, Advance Care Plan (NQF #0326). One commenter supported a revision of the current NQF-endorsed measure into two separate measures to capture the distinction between advance care plans and surrogate decision makers. One commenter also discussed the need to define what is considered an advance care plan, and the ability of the measure to account for the patient's willingness to engage in such planning. The commenter also emphasized the important role a patient's goals, values, and preferences play in the care planning process.

Response: We appreciate the commenters' thoughtful comments and agree with the importance of advanced care plans as they relate to the critically, chronically ill and vulnerable patient population in LTCHs. As with all measures, we work to fulfill the aims of the NQS. Improving care through the provision of patient-centered care is one of the NQS's aims that we seek to fulfill. We acknowledge the importance of including patient preferences in advance care planning. We will take these comments into consideration as we develop future measures pertaining to advance care plans for the LTCH QRP.

Comment: A commenter stated that, regarding the Application of Percent of Residents Who Self-Report Moderate to Severe Pain (Short Stay) (NQF #0676) measure for future consideration in the LTCH QRP, the pain experience alone should not be a quality measure and suggested that CMS revisit how pain is captured and monitored, as the presence of pain, its frequency, and severity do not provide enough information to help an individual's overall quality of life. The commenter expressed support for use of a pain measure that does not encourage unnecessary opioid prescribing, and recommended modification of the existing measure to

one that relates pain to important daily functional tasks. The commenter suggested that such a measure would better capture the functional abilities of patients, as pain levels do not frequently change. Another commenter expressed caution in expanding the existing measure to the LTCH setting due to concerns with reliability, based on their experience, noting variable and inconsistent findings related to how the MDS is used to capture the data for this measure.

Response: We appreciate the comments pertaining to the Application of Percent of Residents Who Self-Report Moderate to Severe Pain (Short Stay) (NQF #0676) measure under consideration for future implementation in the LTCH QRP. We note that appropriately assessing pain as an outcome is important, acknowledge the importance of avoiding unintended consequences that may arise from such assessments, and will take into consideration the commenters' recommendations.

Comment: A commenter supported appropriate use of antipsychotic medications. Specifically, the commenter noted that measures implemented for this purpose should account for informed consent, preference, and potential improvements in the quality of life in order to accurately measure appropriate use of such medications. Another commenter suggested further development of the measure, as there is no existing baseline measurement to provide it with meaning as a measure of quality of care. A commenter noted the distinction between appropriate and inappropriate use of antipsychotic medications, and the lack of sensitivity of the proposed measure. Another commenter expressed opposition against adoption of the measure until CMS provides additional information regarding measure utilization, rationale, and specification.

Response: We appreciate the comments received pertaining to the development of this potential quality measure construct. We note the support for the inclusion of an antipsychotic measure in the LTCH QRP, but recognize the potential limitations to the inclusion of this type of measure, as stated by the commenters. As we continue to explore the development of this future measure construct, we will take the commenters' recommendations

into consideration in our measure development and testing efforts, as well as in our ongoing efforts to identify and propose appropriate measures for the LTCH QRP in the future.

Comment: A commenter supported the use of a cross-setting malnutrition measure. Another commenter also encouraged the use of malnutrition measures in post-acute care settings, and recommended the use of a nationally recognized “blueprint” that was developed to prevent and reduce malnutrition among older adults.

Response: We agree with the commenters’ rationale for consideration of adopting malnutrition quality measures, including a malnutrition care composite measure, to prevent and reduce malnutrition among older adults across the care continuum as they are important components of care for LTCH patients. We will take the suggestions into consideration as we develop future measures for the LTCH QRP.

Comment: A commenter suggested the use of pain related questions in an HCAHPS survey in the LTCH setting instead of implementing the Application of Percent of Residents Who Self-Report Moderate to Severe Pain (Short Stay) (NQF #0676) measure.

Response: We thank the commenter for the suggestion. We will continue to take these and future stakeholder inputs under advisement to inform our ongoing quality measure development.

Comment: One commenter emphasized the importance of establishing quality measures for individuals with advanced illness which address symptom management, social and spiritual support, care coordination, and identification of goals and preferences and whether those goals are met, given unique care needs and the aging of the population as CMS considers future measure topics for consideration in the LTCH QRP.

Response: We appreciate the commenter’s suggestions regarding future measures, and will take them into consideration.

b. IMPACT Act Measure—Possible Future Update To Measure Specifications

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57207 through 57215), we finalized the Discharge to Community-PAC LTCH QRP measure, which assesses successful discharge to the community from an LTCH setting, with successful discharge to the community including no unplanned rehospitalizations and no death in the 31 days following discharge from the LTCH. We received public comments (see 81 FR 57211) recommending

exclusion of baseline nursing facility residents from the measure, as these residents did not live in the community prior to their LTCH stay. At that time, we highlighted that, using Medicare FFS claims alone, we were unable to accurately identify baseline nursing facility residents. We stated that potential future modifications of the measure could include assessment of the feasibility and impact of excluding baseline nursing facility residents from the measure through the addition of patient assessment-based data. In response to these public comments, we are considering a future modification of the Discharge to Community-PAC LTCH QRP measure, which would exclude baseline nursing facility residents from the measure.

We invited public comment on the possibility of excluding baseline nursing facility residents from the Discharge to Community-PAC LTCH QRP measure in future years of the LTCH QRP.

Comment: Several commenters expressed support for excluding baseline nursing facility residents from the discharge to community measure as a potential future measure modification. Commenters stated that this exclusion would result in the measure more accurately portraying quality of care provided by LTCHs, while controlling for factors outside of LTCH control.

Response: We thank commenters for their support for exclusion of baseline nursing facility residents as a potential future measure modification. We will consider their views and determine whether to propose to exclude baseline nursing facility residents from the Discharge to Community-PAC LTCH QRP measure in future years of the LTCH QRP.

c. IMPACT Act Implementation Update

As a result of the input and suggestions provided by technical experts at the TEPs held by our measure developer, and through public comment, we are engaging in additional development work, including performing additional testing, with respect to two measures that would satisfy the domain of accurately communicating the existence of and providing for the transfer of health information and care preferences when the individual transitions, in section 1899B(c)(1)(E) of the Act. The measures under development are: *Transfer of Information at Post-Acute Care Admission, Start or Resumption of Care from other Providers/Settings*; and *Transfer of Information at Post-Acute Care Discharge, and End of Care to other Providers/Settings*. We intend to specify these measures under section

1899B(c)(1)(E) of the Act no later than October 1, 2018, and we intend to propose to adopt them for the FY 2021 LTCH QRP, with data collection beginning on or about April 1, 2019.

Comment: Commenters suggested that CMS be cautious in its development of the Transfer of Health Information measure set and only proceed to propose and adopt measures that receive NQF endorsement. One commenter cited concerns about the measure development, citing the 2016 MAP PAC/LTC meeting. One commenter noted that the unique goals, preferences, and needs of the patient should be considered in transferring patient information, and that care transitions can be a confusing time for the patient and family/caregiver. The commenter recommended that the measures require PAC facilities to communicate their capabilities and limitations to ensure that they can provide the level of care that meets a patient’s clinically assessed needs, as determined by the relevant decision-makers.

Response: We appreciate the comments and feedback on the Transfer of Health Information measures that are currently under development. As we continue to develop these measures, we will take into account the feedback pertaining to modes of information transfer, prescreening requirements for LTCHs, and patient goals and preferences. We intend to re-submit these measures for review to the MAP PAC/LTC Workgroup. Further, we plan to submit the measures to the NQF for consideration for endorsement when we believe that they are ready for NQF review.

10. Standardized Patient Assessment Data Reporting for the LTCH QRP

a. Standardized Patient Assessment Data Reporting for the FY 2019 LTCH QRP

Section 1886(m)(5)(F)(ii) of the Act requires that for fiscal year 2019 and each subsequent year, LTCHs report standardized patient assessment data required under section 1899B(b)(1) of the Act. As we describe in more detail above, we are finalizing that the current pressure ulcer measure, Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), will be removed and replaced with the proposed pressure ulcer measure, Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury, beginning with the FY 2020 LTCH QRP. The current pressure ulcer measure will remain in the LTCH QRP until that time. Accordingly, in the FY 2018 IPPS/LTCH

PPS proposed rule (82 FR 20099), with respect to the requirement that LTCHs report standardized patient assessment data for the FY 2019 LTCH QRP, we proposed that the data elements used to calculate the current pressure ulcer measure, Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), meet the definition of standardized patient assessment data with respect to medical conditions and co-morbidities under section 1899B(b)(1)(B)(iv) of the Act, and that the successful reporting of that data under section 1886(m)(5)(F)(i) of the Act with respect to admissions as well as discharges occurring during last three quarters of CY 2017 would also satisfy the requirement to report standardized patient assessment data for the FY 2019 LTCH QRP.

The collection of assessment data pertaining to skin integrity, specifically pressure related wounds, is important for multiple reasons. Clinical decision support, care planning, and quality improvement all depend on reliable assessment data collection. Pressure related wounds represent poor outcomes, are a serious medical condition that can result in death and disability, are debilitating, painful and are often an avoidable outcome of medical care.⁴⁴⁶ Pressure related wounds are considered healthcare acquired conditions.

As we note above, the data elements needed to calculate the current pressure ulcer measure are already included on the LTCH CARE Data Set and reported by LTCHs, and exhibit validity and reliability for use across PAC providers. Item reliability for these data elements was also tested for the nursing home setting during implementation of MDS 3.0. Testing results are from the RAND Development and Validation of MDS 3.0 project.⁴⁵² The RAND pilot test of the

MDS 3.0 data elements showed good reliability and is also applicable to both the IRF-PAI and the LTCH CARE Data Set because the data elements tested are the same. Across the pressure ulcer data elements, the average gold-standard nurse to gold-standard nurse kappa statistic was 0.905. The average gold-standard nurse to facility-nurse kappa statistic was 0.937. Data elements used to risk adjust this quality measure were also tested under this same pilot test, and the gold-standard to gold-standard kappa statistic, or percent agreement (where kappa statistic not available), ranged from 0.91 to 0.99 for these data elements. These kappa scores indicate “almost perfect” agreement using the Landis and Koch standard for strength of agreement.⁴⁵³

The data elements used to calculate the current pressure ulcer measure received public comment on several occasions, including when that measure was proposed in the FY 2012 IRF PPS (76 FR 47876) and IPPS/LTCH PPS proposed rules (76 FR 51754). Further, they were discussed in the past by TEPs held by our measure development contractor on June 13 and November 15, 2013, and recently by a TEP on July 18, 2016. TEP members supported the measure and its cross-setting use in PAC. The report, *Technical Expert Panel Summary Report: Refinement of the Percent of Patients or Residents with Pressure Ulcers that are New or Worsened (Short Stay) (NQF #0678) Quality Measure for Skilled Nursing Facilities (SNFs), Inpatient Rehabilitation Facilities (IRFs), Long-Term Care Hospitals (LTCHs), and Home Health Agencies (HHAs)*, is available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Post-Acute-Care-Quality-Initiatives/Downloads/July-2016-Pressure-Ulcer-TEP-Report-revised.pdf>.

We invited public comment on this proposal.

Comment: Several comments supported reporting the data elements already implemented in the LTCH QRP to fulfill the requirement to report standardized patient assessment data for the FY 2019 LTCH QRP.

Response: We appreciate the commenters' support of the proposal and agree that these data elements currently reported by LTCHs meet the definition of standardized patient

assessment data and satisfy the requirement to report standardized patient assessment data.

Comment: One commenter expressed concern regarding the proposed reporting schedule for new standardized patient assessment data elements given the volume of data that will need to be reported by LTCHs. The commenter emphasized the reporting requirements for the current pressure ulcer measure, which fulfills the standardized patient assessment data element requirements beginning with the FY 2019 LTCH QRP.

Response: We acknowledge the concerns raised by the commenter. Upon further consideration of the appropriate timeline for LTCHs to report this data for the FY 2019 LTCH QRP, we are finalizing that LTCHs would be required to report the current pressure ulcer measure for the last quarter of CY 2017 to meet the requirements for reporting standardized patient assessment data. We do not believe that the continued reporting of the current pressure ulcer measure is too burdensome on the LTCH industry since LTCHs will not need to change their reporting practices with respect to reporting the standardized pressure ulcer data, nor will they be reporting additional data as of October 1, 2017. The submission of the current pressure ulcer measure data will act to meet the requirement of submitting standardized patient assessment data beginning October 1, 2017. Further, in response to similar comments expressing concern with increased burden, CMS has decided to move the release date of the LTCH CARE Data Set Version 4.00 from April 1, 2018 to July 1, 2018 which gives LTCHs an additional 3 months to prepare. We refer readers to section IX.C.11.d which describes the effect of the delayed release date of the LTCH CARE Data Set Version 4.00 on the currently adopted LTCH QRP measures.

After consideration of the public comments received, we are finalizing our proposal, as proposed, that the data elements currently reported by LTCHs to calculate the current measure, Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), meet the definition of standardized patient assessment data with respect to medical conditions and co-morbidities under section 1899B(b)(1)(B)(iv) of the Act, and that the successful reporting of that data under section 1886(m)(5)(F)(i) of the Act would also satisfy the requirement to report standardized patient assessment data under section 1886(m)(5)(F)(ii) of the Act beginning October 1, 2017 for the FY 2019 LTCH QRP. We are also finalizing the change

in the release date of the LTCH CARE Data Set Version 4.00 from April 1, 2018 to July 1, 2018. We refer readers to section IX.C.11.c. of the preamble of this final rule for discussion on this issue.

b. Standardized Patient Assessment Data Reporting Beginning With the FY 2020 LTCH QRP

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20099 through 20116) we described our proposals for the reporting of standardized patient assessment data by LTCHs beginning with the FY 2020 LTCH QRP. LTCHs would be required to report these data with respect to LTCH admissions and discharges that occur between April 1, 2018 and December 31, 2018, with the exception of three data elements (Brief Interview of Mental Status (BIMS), Hearing, and Vision), which would be required with respect to LTCH admissions only that occur between April 1, 2018 and December 31, 2018. Following the initial reporting year for the FY 2020 LTCH QRP, subsequent years for the LTCH QRP would be based on a full calendar year of such data reporting.

In selecting the data elements proposed in the FY 2018 IPPS/LTCH PPS proposed rule, we carefully weighed the balance of burden in assessment-based data collection and aimed to minimize additional burden through the utilization of existing data in the assessment instruments. We also took into consideration the following factors with respect to each data element: Overall clinical relevance; ability to support clinical decisions, care planning and interoperable exchange to facilitate care coordination during transitions in care; and the ability to capture medical complexity and risk factors that can inform both payment and quality. In addition, the data elements had to have strong scientific reliability and validity; be meaningful enough to inform longitudinal analysis by providers; had to have received general consensus agreement for its usability; and had to have the ability to collect such data once but support multiple uses. Further, to inform the final set of data elements for proposal, we took into account technical and clinical subject matter expert review, public comment, and consensus input in which such principles were applied. We also took into account the consensus work and empirical findings from the PAC PRD.

Comment: Many commenters expressed significant concerns with respect to our standardized patient assessment data proposals. Several commenters stated that the new

standardized patient assessment data reporting requirements will impose significant burden on providers, given the volume of new standardized patient assessment data elements that were proposed to be added to the LCDS. A few commenters noted that the addition of the proposed standardized patient assessment data elements would require hiring more staff, retraining staff on revised questions or coding guidance, and reconfiguring internal databases and EHRs. Other commenters expressed concerns about the gradual but significant past and future expansion of the LCDS through the addition of standardized patient assessment data elements and quality measures, noting the challenge of coping with ongoing additions and changes.

Several commenters expressed concern related to the implementation timeline in the proposed rule, which would require LTCHs to begin collecting the proposed standardized patient assessment data elements in the timeframe stated in the proposed rule. One commenter stated that there would not be sufficient time to be ready by April 1, 2018. Another commenter noted that CMS had not yet provided sufficient specifications or educational materials to support implementation of the new patient assessments in the proposed timeline.

Several commenters urged CMS to delay the reporting of new standardized patient assessment data elements by at least one year, and to carefully assess whether all of the proposed standardized patient assessment data elements are necessary under the IMPACT Act. Commenters suggested ways to delay the proposals for standardized patient assessment data elements in the categories of Cognitive Function and Mental Status; Special Services, Treatments, and Interventions; and Impairments, including allowing voluntary or limited reporting for a period of time before making comprehensive reporting mandatory, and delaying the beginning of mandatory data collection for a period of time. Some commenters recommended that during the delay, CMS re-evaluate whether it can require the reporting of standardized patient assessment data in a less burdensome manner.

Response: We understand the concerns raised by commenters that the finalization of our standardized patient assessment data proposals would require LTCHs to spend a significant amount of resources preparing to report the data, including updating relevant protocols and systems and training appropriate staff. We also recognize that

we can meet our obligation to require the reporting of standardized patient assessment data with respect to the categories described in section 1899B(b)(1)(B) of the Act while simultaneously being responsive to these concerns. Therefore, after consideration of the public comments we received on these issues, we have decided that at this time, we will not finalize the standardized patient assessment data elements we proposed for three of the five categories under section 1899B(b)(1)(B) of the Act: Cognitive Function and Mental Status; Special Services, Treatments, and Interventions; and Impairments. Although we believe that the proposed standardized patient assessment data elements would promote transparency around quality of care and price as we continue to explore reforms to the PAC payment system, the data elements that we proposed for each of these categories would have imposed a new reporting burden on LTCHs. We agree that it would be useful to evaluate further how to best identify the standardized patient assessment data that would satisfy each of these categories; would be most appropriate for our intended purposes including payment and measure standardization; and can be reported by LTCHs in the least burdensome manner. As part of this effort, we intend to conduct a national field test that allows for stakeholder feedback and to consider how to maximize the time LTCHs have to prepare for the reporting of standardized patient assessment data in these categories. We intend to make new proposals with respect to the categories described in sections 1899B(b)(1)(B)(ii), (iii) and (v) of the Act no later than in the FY 2020 IPPS/LTCH PPS proposed rule.

In this final rule, we are finalizing the standardized patient assessment data elements that we proposed to adopt for the IMPACT Act categories of Functional Status and Medical Conditions and Co-Morbidities. Unlike the standardized patient assessment data that we are not finalizing, the standardized patient assessment data that we proposed for these categories are already required to calculate the Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (NQF #0678) quality measure, Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury quality measure (which we are finalizing in this final rule), and the Application of Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631)

quality measure (which we finalized in the FY 2016 IPPS/LTCH PPS final rule). As a result, we do not believe that finalizing these proposals creates a new reporting burden for LTCHs or otherwise necessitates a delay.

Comment: Several commenters expressed support for the adoption of standardized patient assessment data elements. One commenter expressed support for standardizing the definitions as well as the implementation of the data collection effort. The commenter also supported CMS' goal of standardizing the questions and responses across all PAC settings to help "enable the data to be interoperable, allowing it to be shared electronically, or otherwise between PAC provider types." One commenter stated that streamlining requirements across Medicare's quality reporting programs will reduce the administrative burden of quality reporting for these facilities as well as the physicians and other clinicians who contribute to that reporting. Another commenter noted full support of the IMPACT Act's goals and objectives and appreciated CMS' efforts to regularly communicate with stakeholders through various national provider calls, convening of stakeholders, and meetings with individual organizations. Another commenter recognized the value of a unified patient assessment system for PAC as part of a potential unified payment system for PAC, but encouraged CMS to look carefully at opportunities to streamline the assessment and avoid duplication.

Response: We appreciate the support of these proposals, but note that for the reasons explained above, we have decided at this time to not finalize the proposals for three of the five categories under section 1899B(b)(1)(B) of the Act: Cognitive Function and Mental Status; Special Services, Treatments, and Interventions; and Impairments.

Comment: Several commenters addressed the variation in the look-back period associated with the standardized patient assessment data elements. In general, commenters were concerned about the variation in look-back periods across items and how differences in look-back periods would affect the validity of the item responses and assessor burden. One commenter stated that the many and varied look-back periods associated with the proposed standardized patient assessment data elements would cause confusion for the assessors and patients.

Response: We appreciate the commenters' review of the proposed standardized patient assessment data elements and concerns about

implementation. We acknowledge that the look-back periods would vary for different standardized patient assessment data elements within a setting, but we wish to clarify that the look-back periods for each standardized patient assessment data element would be the same across PAC settings. In our ongoing work to identify candidate data elements for standardization, we will continue to carefully consider the impact of different look-back periods for different standardized patient assessment data elements on the validity of the data and assessor burden. We believe that it is important to collect the same information across settings, including over the same look-back period, and we will work to identify the best options for achieving this aspect of standardized assessment in the future.

Comment: Several commenters stated that there is insufficient evidence demonstrating the reliability and validity of the proposed standardized patient assessment data elements. Some commenters stated that the expanded standardized patient assessment data reporting requirements have not yet been adequately tested to ensure they collect accurate and useful data in this setting. A few commenters stated that only five of the proposed 23 standardized patient assessment data elements are currently reported in the CARE Data Set and the other 18 are currently used in other post-acute setting patient assessment instruments, mainly the Minimum Data Set (MDS) 3.0 used in skilled nursing facilities (SNFs). Other commenters stated that CMS' conclusion that the collection of these standardized patient assessment data elements in the LTCH setting would be feasible and the standardized patient assessment data elements would result in valid and reliable data was based on the current use of these data elements in the MDS and the testing of these data elements in the PAC PRD.

A few commenters stated that several of the proposed standardized patient assessment data elements that had not been adequately tested were deemed close enough to an item that had been tested in the PAC PRD or in other PAC settings and thus appropriate for implementation.

Response: Our standardized patient assessment data elements were selected based on a rigorous multi-stage process that was described in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20088 through 20089). In addition, we believe that the PAC PRD testing of many of these data elements provides good evidence from a large, national sample of patients and residents in PAC settings to support the use of these standardized

patient assessment data elements in and across PAC settings. However, as noted above, we have decided at this time to not finalize the proposals for three of the five categories under section 1899B(b)(1)(B) of the Act: Cognitive Function and Mental Status; Special Services, Treatments, and Interventions; and Impairments. Prior to making new proposals for these categories, we intend to conduct extensive testing to ensure that the standardized patient assessment data elements we select are reliable, valid and appropriate for their intended use.

A full discussion of the standardized patient assessment data elements that we proposed to adopt for the categories described in sections 1899B(b)(1)(B)(ii), (iii) and (v) of the Act can be found in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20100 through 20116). In light of our decision to not finalize our proposals with respect to these categories, we are not going to address in this final rule the specific technical comments that we received on these proposed data elements. However, we appreciate the many technical comments we did receive specific to each of these data elements, and we will take them into consideration as we develop new proposals for these categories. Below we discuss the comments we received specific to the standardized patient assessment data we proposed to adopt, and are finalizing in this final rule, for the categories of Functional Status and Medical Conditions and Co-Morbidities.

(1) Functional Status Data

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20100), we proposed that the data elements currently reported by LTCHs to calculate the measure, Application of Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631), would also meet the definition of standardized patient assessment data with respect to functional status under section 1899B(b)(1)(B)(i) of the Act, and that the successful reporting of that data under section 1886(m)(5)(F)(i) of the Act would also satisfy the requirement to report standardized patient assessment data under section 1886(m)(5)(F)(ii) of the Act.

These patient assessment data for functional status are from the CARE Item Set. The development of the CARE Item Set and a description and rationale for each item is described in a report entitled "The Development and Testing of the Continuity Assessment Record

and Evaluation (CARE) Item Set: Final Report on the Development of the CARE Item Set: Volume 1 of 3.”⁴⁵⁴ Reliability and validity testing were conducted as part of CMS’ Post-Acute Care Payment Reform Demonstration, and we concluded that the functional status items have acceptable reliability and validity. A description of the testing methodology and results are available in several reports, including the report entitled “The Development and Testing of the Continuity Assessment Record And Evaluation (CARE) Item Set: Final Report On Reliability Testing: Volume 2 of 3”⁴⁵⁵ and the report entitled “The Development and Testing of The Continuity Assessment Record And Evaluation (CARE) Item Set: Final Report on Care Item Set and Current Assessment Comparisons: Volume 3 of 3.”⁴⁵⁶ The reports are available on CMS’ Post-Acute Care Quality Initiatives Web page at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Post-Acute-Care-Quality-Initiatives/CARE-Item-Set-and-B-CARE.html>.

For more information about this quality measure and the data elements used to calculate it, we refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49739 through 49747).

We invited public comment on this proposal.

Comment: One commenter requested that the following self-care and cognitive items to be added to the Percent of Long-Term Care Hospital (LTCH) Patients With an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631) measure in order to meet the definition of standardized patient assessment data with respect to functional status: upper body dressing, lower body dressing, and putting on/taking off footwear.

Response: We take these suggestions into consideration. We believe we should seek additional stakeholder input before considering proposing adding these data elements to the LTCH CARE Data Set, because we are mindful of burden associated with adding any new data elements. We refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49739 through 49747) for a detailed discussion of the Application of Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional

Assessment and a Care Plan That Addresses Function (NQF #2631) measure.

After consideration of the public comments we received, we are finalizing as proposed that the data elements currently reported by LTCHs to calculate the measure, Application of Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631), also meet the definition of standardized patient assessment data with respect to functional status under section 1899B(b)(1)(B)(i) of the Act, and that the successful reporting of that data under section 1886(m)(5)(F)(i) of the Act will also satisfy the requirement to report standardized patient assessment data under section 1886(m)(5)(F)(ii) of the Act.

(2) Medical Condition and Comorbidity Data

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20113 through 20114), we proposed that the data elements needed to calculate the current measure, Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), and the proposed measure, Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury, meet the definition of standardized patient assessment data with respect to medical conditions and co-morbidities under section 1899B(b)(1)(B)(iv) of the Act, and that the successful reporting of that data under section 1886(m)(5)(F)(i) of the Act would also satisfy the requirement to report standardized patient assessment data under section 1886(m)(5)(F)(ii) of the Act.

“Medical conditions and comorbidities” and the conditions addressed in the standardized data elements used in the calculation and risk adjustment of these measures, that is, the presence of pressure ulcers, diabetes, incontinence, peripheral vascular disease or peripheral arterial disease, mobility, as well as low body mass index, are all health-related conditions that indicate medical complexity that can be indicative of underlying disease severity and other comorbidities.

Specifically, the data elements used in the measure are important for care planning and provide information pertaining to medical complexity. Pressure ulcers are serious wounds representing poor healthcare outcomes, and can result in sepsis and death. Assessing skin condition, care planning for pressure ulcer prevention and healing, and informing providers about

their presence in patient transitions of care is a customary and best practice. Venous and arterial disease and diabetes are associated with low blood flow which may increase the risk of tissue damage. These diseases are indicators of factors that may place individuals at risk for pressure ulcer development and are therefore important for care planning. Low BMI, which may be an indicator of underlying disease severity, may be associated with loss of fat and muscle, resulting in potential risk for pressure ulcers. Bowel incontinence, and the possible maceration to the skin associated, can lead to higher risk for pressure ulcers. In addition, the bacteria associated with bowel incontinence can complicate current wounds and cause local infection. Mobility is an indicator of impairment or reduction in mobility and movement which is a major risk factor for the development of pressure ulcers. Taken separately and together, these data elements are important for care planning, transitions in services and identifying medical complexities.

In sections IX.C.7.a. and IX.C.10.a. of the preamble of this final rule, we discuss our rationale for proposing that the data elements used in the measures meet the definition of standardized patient assessment data. In summary, we believe that the collection of such assessment data is important for multiple reasons, including clinical decision support, care planning, and quality improvement, and that the data elements assessing pressure ulcers and the data elements used to risk adjust showed good reliability. We solicited stakeholder feedback on the quality measure, and the data elements from which it is derived, by means of a public comment period and TEPs, as described in section IX.C.7.a. of the preamble of this final rule.

We invited public comment on this proposal.

Comment: Some commenters supported the reporting of data elements already implemented in the LTCH QRP to satisfy the requirement to report standardized patient assessment data.

Response: We appreciate the commenters’ support.

After consideration of the public comments we received, we are finalizing as proposed that the data elements currently reported by LTCHs to calculate the current measure, Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), and the proposed measure, Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury, meet the definition of standardized patient assessment data with respect to medical conditions and

⁴⁵⁴ Barbara Gage et al., “The Development and Testing of the Continuity Assessment Record and Evaluation (CARE) Item Set: Final Report on the Development of the CARE Item Set” (RTI International, 2012).

⁴⁵⁵ *Ibid.*

⁴⁵⁶ *Ibid.*

co-morbidities under section 1899B(b)(1)(B)(iv) of the Act, and that the successful reporting of that data under section 1886(m)(5)(F)(i) of the Act would also satisfy the requirement to report standardized patient assessment data under section 1886(m)(5)(F)(ii) of the Act.

For comments related to the pressure ulcer quality measure, we refer readers to section IX.C.7.a of the preamble of this final rule.

11. Form, Manner, and Timing of Data Submission Under the LTCH QRP

a. Start Date for Standardized Patient Assessment Data Reporting by New LTCHs

In the FY 2016 IPPS/LTCH PPS final rule (80 FR 49749 through 49752), we adopted timing for new LTCHs to begin reporting quality data under the LTCH QRP beginning with the FY 2017 LTCH QRP. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20116), we proposed that new LTCHs will be required to begin reporting standardized patient assessment data on the same schedule.

We invited public comment on this proposal. We did not receive any public comments on this proposal; therefore, we are finalizing as proposed the start date for standardized patient assessment data reporting by new LTCHs.

b. Mechanism for Reporting Standardized Patient Assessment Data Beginning With the FY 2019 LTCH QRP

Under our current policy, LTCHs report data by completing applicable sections of the LCDS, and submitting the LCDS to CMS through the QIES ASAP system. For more information on LTCH QRP reporting through the QIES ASAP system, refer to the “Related Links” section at the bottom of: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Technical-Information.html>.

Instruments/LTCH-Quality-Reporting/LTCH-Technical-Information.html.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20116), we stated that the proposed standardized patient assessment data elements are already included on, or would be added to, the LCDS. Details regarding the LCDS with respect to the proposed standardized patient assessment data are available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Measures-Information.html>.

We invited public comments on this proposal. We did not receive any comments on this proposal; therefore, we are finalizing as proposed the mechanism for reporting standardized patient assessment data beginning with the FY 2019 LTCH QRP.

c. Schedule for Reporting Standardized Patient Assessment Data Beginning With the FY 2019 LTCH QRP

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20116 through 20117), we proposed that the standardized patient assessment data necessary to calculate the quality measure “Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678)” would be used for the FY 2019 LTCH QRP. We also proposed that for purposes of the FY 2019 LTCH QRP program year such data would only include the last three quarters of calendar year 2017 (April 1, 2017 through December 31, 2017). In section IX.C.7.a of the preamble of the proposed rule, we discussed our proposal to adopt the measure, “Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury” to replace the current measure, “Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678)” with data collection beginning on April 1, 2018. We also stated that should the proposed

measure be finalized, the FY 2020 LTCH QRP will be determined using the data from the first quarter of CY 2018 using the current measure, “Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678)” and last three quarters of CY 2018 using the data from the proposed measure, “Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury.”

In section IX.C.10.b of the preamble of the proposed rule, we discussed the additional standardized patient assessment data proposed beginning with the FY 2020 LTCH QRP. Unless otherwise indicated, under our current policy, except for the first program year for which a measure is adopted, LTCHs must report data on measures with respect to LTCH admissions and discharges that occur during the 12 month calendar year period that applies to the program year. For the first program year for which a measure is adopted, LTCHs are usually required to report data for LTCH admissions and discharges that occur during the last three quarters of the calendar year that applies to that program year, as the version of the LTCH CARE Data Set that will contain the new items for LTCHs to report a new measure, is routinely released on April 1st of any given year.

For example, for the FY 2018 LTCH QRP, data on measures adopted for earlier program years must be reported with respect to all CY 2016 LTCH admissions and discharges. However, data on new measures adopted for the first time for the FY 2018 LTCH QRP must only be reported with respect to LTCH admissions and discharges that occur during the last three calendar quarters of 2016.

The tables below illustrate the data collection timeframes and data submission deadlines related to the April 1st standard release of the LTCH CARE Data Set:

SUMMARY ILLUSTRATION OF INITIAL REPORTING CYCLE FOR MEASURES AND STANDARDIZED PATIENT ASSESSMENT DATA REPORTING USING CY QUARTERS 2, 3, AND 4 DATA *

Data collection/submission quarterly reporting period *	Data submission quarterly deadlines for the FY [year] LTCH QRP * ^
Q2: April 1–June 30	Q2 Deadline: November 15.
Q3: July 1–September 30	Q3 Deadline: February 15.
Q4: October 1–December 30	Q4 Deadline: May 15.

* Applies to data reporting using the LTCH CARE Data Set and data reporting using the National Healthcare Safety Network.

^ The term “FY [year] LTCH QRP” means the fiscal year for which the LTCH QRP requirements applicable to that fiscal year must be met in order for an LTCH to receive the full annual update when calculating the payment rates applicable to it for that fiscal year.

SUMMARY ILLUSTRATION OF CALENDAR YEAR QUARTERLY REPORTING CYCLE FOR MEASURES AND STANDARDIZED PATIENT ASSESSMENT DATA REPORTING *

Data collection/submission quarterly reporting period *	Data submission quarterly deadlines for the FY [year] LTCH QRP * ^
Q1: January 1–March 31	Q1 Deadline: August 15.
Q2: April 1–June 30	Q2 Deadline: November 15.
Q3: July 1–September 30	Q3 Deadline: February 15.
Q4: October 1–December 31	Q4 Deadline: May 15.

*Applies to data reporting using the LTCH CARE Data Set and data reporting using the National Healthcare Safety Network.

^The term “FY [year] LTCH QRP” means the fiscal year for which the LTCH QRP requirements applicable to that fiscal year must be met in order for an LTCH to receive the full annual update when calculating the payment rates applicable to it for that fiscal year.

We invited public comment on our proposal for standardized patient assessment data reporting beginning with the FY 2019 LTCH QRP and to extend our current policy governing the schedule for reporting quality measure data to the reporting of standardized patient assessment data beginning with the FY 2020 LTCH QRP.

The FY 2019 LTCH QRP will be determined using standardized patient assessment data collected from October 1, 2017 through December 31, 2017 using the current measure, Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), as described in section IX.C.10.a. of the preamble of this final rule.

As described in section IX.C.10.b of the preamble of this final rule, commenters expressed concern related to the implementation timeline in the proposed rule and stated that there would not be sufficient time to be ready by April 1, 2018. In response to those comments, we are moving the implementation of the LTCH CARE Data Set Version 4.00 from April 1, 2018 to July 1, 2018.

As a result of the delayed implementation of the LTCH CARE Data Set Version 4.00, the FY 2020 LTCH QRP will be determined using the standardized patient assessment data from the first two quarters of CY 2018 using the current measure, Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), and last two quarters of CY 2018 using the standardized patient assessment data from the finalized measures, Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury and Application of Percent of Long-Term Care Hospital (LTCH) Patients With an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631), as described in IX.C.10.b. of the preamble of this final rule.

For the FY 2020 LTCH QRP, and with this final rule, LTCHs will be required to report measures and standardized patient assessment data for LTCH admissions and discharges during the last two quarters of CY 2018 as the version of the LTCH CARE Data Set that will contain the new items for LTCHs to report new measures and standardized patient assessment data will be released

July 1, 2018. This exception to our standard policy is relevant only to LTCH CARE Data Set data to be reported to CMS for new measures and standardized patient assessment data that is finalized in this FY 2018 IPPS/LTCH PPS final rule, and for which LTCHs will begin reporting data on July 1, 2018, with the release of the LTCH CARE Data Set Version 4.00, as all subsequent releases of LTCH CARE Data Set versions will revert back to their standard release date of April 1 of any given year.

The FY 2021 LTCH QRP will be determined using standardized patient assessment data from CY 2019 from the finalized measures, Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury and Application of Percent of Long-Term Care Hospital (LTCH) Patients With an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631).

The tables below illustrate the data collection timeframes and submission deadlines for measures and standardized patient assessment data finalized for the FY 2020 and FY 2021 LTCH QRP.

SUMMARY ILLUSTRATION OF INITIAL REPORTING CYCLE FOR NEWLY ADOPTED MEASURES AND STANDARDIZED PATIENT ASSESSMENT DATA REPORTING FOR CY 2018 QUARTERS 3 AND 4 DATA *

Finalized data collection/submission quarterly reporting period *	Finalized data submission quarterly deadlines beginning with the FY 2020 LTCH QRP * ^
Q3: CY 2018—7/1/2018–9/30/2018	CY 2018 Q3 Deadline: February 15, 2019.
Q4: CY 2018—10/1/2018–12/31/2018	CY 2018 Q4 Deadline: May 15, 2019.

*Applies to data reporting using the LTCH CARE Data Set and data reporting using the National Healthcare Safety Network.

^The term “FY 2020 LTCH QRP” means the fiscal year for which the LTCH QRP requirements applicable to that fiscal year must be met in order for an LTCH to receive the full annual update when calculating the payment rates applicable to it for that fiscal year.

SUMMARY ILLUSTRATION OF CALENDAR YEAR QUARTERLY REPORTING CYCLE FOR MEASURES AND STANDARDIZED PATIENT ASSESSMENT DATA REPORTING *

Finalized data collection/submission quarterly reporting period *	Finalized data submission quarterly deadlines beginning with the FY 2021 LTCH QRP * ^
Q1: CY 2019—1/1/2019–3/31/2019	CY 2019 Q1 Deadline: August 15, 2019.
Q2: CY 2019—4/1/2019–6/30/2019	CY 2019 Q2 Deadline: November 15, 2019.
Q3: CY 2019—7/1/2019–9/30/2019	CY 2019 Q3 Deadline: February 15, 2020.
Q4: CY 2019—10/1/2019–12/31/2019	CY 2019 Q4 Deadline: May 15, 2020.

*Applies to data reporting using the LTCH CARE Data Set and data reporting using the National Healthcare Safety Network.

[^]The term “FY 2021 LTCH QRP” means the fiscal year for which the LTCH QRP requirements applicable to that fiscal year must be met in order for an LTCH to receive the full annual update when calculating the payment rates applicable to it for that fiscal year.

We are finalizing our proposal for reporting standardized patient assessment data beginning with the FY 2019 LTCH QRP. We are also finalizing the exception to the standard policy related to the timing of reporting standardized patient assessment data for the FY 2020 LTCH QRP and subsequent releases of the LTCH CARE Data Set will revert back to their standard release date of April 1 of any given year.

d. Schedule for Reporting the Newly Finalized Quality Measures Beginning With the FY 2020 LTCH QRP

As discussed in section IX.C.7. of the preamble of this final rule, we adopted three quality measures beginning with the FY 2020 LTCH QRP: Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury; Compliance with SBT by Day 2 of the LTCH Stay; and Ventilator Liberation Rate. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20117), we proposed that LTCHs would report data on these measures using the LTCH CARE Data Set that is submitted through the QIES ASAP system and LTCHs would be required to report these data beginning with LTCH admissions and discharges that occur between April 1, 2018 and December 31, 2018. More information on LTCH reporting using the QIES ASAP system is located at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Technical-Information.html>.

Under our current policy, LTCHs would only be required to submit data on the proposed measures for the last three quarters of CY 2018 for purposes of the FY 2020 LTCH QRP. Starting in CY 2019, LTCHs would be required to submit data for the entire calendar year beginning with the FY 2021 LTCH QRP.

We invited public comment on this proposal.

Comment: A commenter requested that CMS reduce the unnecessary burden of the LTCH CARE Data Set, including revising the response timing requirements of the LTCH CARE Data Set, and suggested extending the response time beyond three days. The commenter also stated that CMS should provide clear assessment guidelines and guidance for reporting data.

Response: We appreciate the comment, and we are working on ways to minimize the overall burden associated with the LTCH CARE Data Set, while keeping in mind our goal to collect valid, reliable and appropriate data for the LTCH QRP.

The three-day assessment period is in place to standardize responses from all LTCHs in order to ensure that the data are comparable across LTCHs. In addition, when choosing the appropriate length of time in which to require that the assessment take place, we weighed the need for providers to have sufficient time to accurately assess the patient's clinical status at the time of admission. Due to the high acuity of LTCH patients, we believe extending the 3-day assessment period would not allow a true picture of the patient's clinical status at the time of admission. Moreover, LTCHs have approximately 135 days following the end of each calendar year quarter, during which to submit, review, and correct their quality data for that CY quarter, with exception of the Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431) measure, in which data is submitted annually and not quarterly. These timeframes are aligned with those of other quality reporting programs and allow an appropriate amount of time for LTCHs to review and correct quality data prior to the public display of that data.

We provide comprehensive training to assist LTCHs with completing the LCDS, including through training manuals, webinars, open door forums, help desk support, and a Web site that hosts training information (<http://www.youtube.com/user/CMSHHSgov>). We also provide guidance on completing and submitting the LTCH CARE Data Set in Chapter 2 of the LTCH QRP Manual, which is available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-CARE-Data-Set-and-LTCH-QRP-Manual.html>.

Comment: Some commenters requested crosswalks from ICD–10 codes to LTCH CARE Data Set items. One commenter requested that these crosswalks be kept up-to-date contemporaneously with ICD–10 changes.

Response: A list of ICD–10 codes for the 2018 LTCH CARE Data Set items will be available no sooner than July 2018. We also intend to provide and update this information in LTCH manuals, training events, and on Web site postings.

As described in section IX.C.10.c. of the preamble of this final rule, we are finalizing the schedule for reporting the newly finalized measures beginning July

1, 2018 for the FY 2020 LTCH QRP in response to public comments.

As a result of the delayed implementation of the LTCH CARE Data Set Version 4.00, as described in section IX.C.10.c of the preamble of this final rule, in addition to the currently adopted measures in the LTCH QRP, LTCHs will be required to submit data on the finalized measures, Change in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury, Compliance with SBT by Day 2 of the LTCH Stay, and Ventilator Liberation Rate, beginning with the last two quarters of CY 2018 for the FY 2020 LTCH QRP. LTCHs will also submit data on the previously finalized measure, Drug Regimen Review Conducted with Follow-Up for Identified Issues-PAC LTCH QRP, beginning with the last two quarters of CY 2018 for the FY 2020 LTCH QRP. Starting in CY 2019, LTCHs will be required to submit data for the entire calendar year beginning with the FY 2021 LTCH QRP. The finalized LTCH CARE Data Set Version 4.00 is available for review at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-CARE-Data-Set-and-LTCH-QRP-Manual.html>.

In summary, we are finalizing our proposal for reporting the standardized patient assessment data necessary to calculate quality measures beginning with the FY 2019 LTCH QRP. We are also finalizing our proposal to extend our current policy governing the schedule for reporting quality measure data to the reporting of standardized patient assessment data, including the schedule for reporting newly finalized measures beginning July 1, 2018 for the FY 2020 LTCH QRP.

e. Removal of Interrupted Stay Items From the LTCH CARE Data Set

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20117), we proposed to remove the program interruption items from the LTCH CARE Data Set. Specifically, we proposed to remove the following items: (1) A2500, Program Interruption(s); (2) A2510, Number of Program Interruptions During This Stay in This Facility; and (3) A2525, Program Interruption Dates, because we do not currently utilize this information nor do we have plans to utilize this information for the LTCH QRP. For a detailed discussion of burden related to LTCH CARE Data Set, we refer readers to section XIV.B.9. of the preamble of this final rule.

We invited public comment on this proposal.

Comment: Several commenters supported the removal of the interrupted stay items from the LTCH CARE Data Set, and commended CMS' efforts to reduce burden with the removal of these items.

Response: We thank the commenters for their support of our efforts to reduce burden.

After consideration of the public comments we received, we are finalizing our proposal to remove the program interruption items (A2500, A2510, and A2525) from the LTCH CARE Data Set Version 4.00, effective July 1, 2018.

12. Application of the LTCH QRP Participation Requirements to the Submission of Standardized Patient Assessment Data

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20117), we proposed to revise the regulatory text at § 412.560(a) to state that an LTCH must begin submitting quality data, including standardized patient assessment data, under the LTCH QRP by no later than the first day of the calendar quarter subsequent to 30 days after the date on its CMS Certification Number (CCN) notification letter.

We invited public comments on this proposal. We did not receive any public comments on this proposal. Therefore, we are finalizing our proposal as proposed to revise the regulatory text at § 412.560(a) to state that an LTCH must begin submitting quality data, including standardized patient assessment data, under the LTCH QRP by no later than the first day of the calendar quarter subsequent to 30 days after the date on its CMS Certification Number (CCN) notification letter.

13. Application of the LTCH QRP Data Submission Requirements to the Submission of Standardized Patient Assessment Data

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20117), we proposed to revise the regulatory text at § 412.560(b)(1) to require LTCHs to report both data on measures and standardized patient assessment data under the LTCH QRP in a form and manner, and at a time, specified by CMS.

We invited public comments on this proposal. We did not receive any public comments on this proposal. Therefore, we are finalizing our proposal as proposed to revise the regulatory text at § 412.560(b)(1) to require LTCHs to report both data on measures and standardized patient assessment data

under the LTCH QRP in a form and manner, and at a time, specified by CMS.

14. Application of the LTCH QRP Exception and Extension Requirements to the Submission of Standardized Patient Assessment Data

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20117 through 20118), we proposed to revise the regulatory text at § 412.560(c) to extend the Exception and Extension requirement policies to the submission of standardized patient assessment data beginning with the FY 2019 LTCH QRP.

We invited public comments on this proposal. We did not receive any public comments on this proposal. Therefore, we are finalizing our proposal as proposed to revise the regulatory text at § 412.560(c) to extend these policies to the submission of standardized patient assessment data beginning with the FY 2019 LTCH QRP.

15. Application of the LTCH QRP Reconsideration Policy to the Submission of Standardized Patient Assessment Data

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20118), we proposed to revise the regulatory text at § 412.560(d) to extend the reconsideration policies to the submission of standardized patient assessment data beginning with the FY 2019 LTCH QRP.

We invited public comments on this proposal. We did not receive any comments on this proposal. Therefore, we are finalizing our proposal to revise the regulatory text at § 412.560(d) to extend these policies to the submission of standardized patient assessment data beginning with the FY 2019 LTCH QRP.

16. Application of the LTCH QRP Data Completion Thresholds to the Submission of Standardized Patient Assessment Data Beginning With the FY 2019 LTCH QRP

In the FY 2015 IPPS/LTCH PPS final rule (79 FR 50311 through 50314), we finalized LTCH QRP thresholds for completeness of LTCH data submissions. To ensure that LTCHs are meeting an acceptable standard for completeness of submitted data, we finalized the policy that, beginning with the FY 2016 LTCH QRP, LTCHs must meet or exceed two separate data completeness thresholds: One threshold set at 80 percent for completion of measures data collected using the LTCH CARE Data Set submitted through the QIES ASAP system, and a second threshold set at 100 percent for measures data collected and submitted

using the CDC NHSN. The term "measures" refers to quality measures, resource use, and other measures.

Under our finalized policy, some assessment data will not invoke a response and, in those circumstances, are not "missing" nor is the data incomplete. For example, in the case of a patient who does not have any of the medical conditions in a "check all that apply" listing, the absence of a response of a health condition indicates that the condition is not present, and it would be incorrect to consider the *absence* of such data as missing in a threshold determination. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20118), we proposed to extend our current LTCH QRP data completion requirements to the reporting of standardized patient assessment data. We invited public comment on this proposal.

We also proposed to codify these LTCH QRP data completion thresholds at a new § 412.560(f) for measures data collected using the LTCH CARE Data Set, beginning with the FY 2016 LTCH QRP, and standardized patient assessment data elements collected using the LTCH CARE Data Set, beginning with the FY 2019 LTCH QRP. Under this section, we proposed to codify that LTCHs must meet or exceed two separate data completeness thresholds: 80 Percent for completion of measures data and standardized patient assessment data collected using the LTCH CARE Data Set submitted through the QIES; and 100 percent for measures data collected and submitted using the CDC NHSN. These thresholds would apply to all measures and data elements adopted into LTCH QRP. A LTCH must meet or exceed both thresholds to avoid receiving a 2 percentage point reduction to its annual payment update for a given fiscal year, beginning with the FY 2016 LTCH QRP for measures data and beginning with the FY 2019 LTCH QRP for standardized patient assessment data elements.

We invited public comment on our proposal to extend our current LTCH QRP data completion requirements to the reporting of standardized patient assessment data. We also invited public comment on our proposal to codify the LTCH QRP data completion thresholds at § 412.560(f) for measures and standardized patient assessment data elements collected using the LTCH CARE Data Set.

Comment: A commenter raised concerns regarding the addition of standardized patient assessment data that would be applied to the data completion threshold policy. The commenter suggested waiting a year to

impose the data completion threshold policy to the standardized patient assessment data so that providers have the opportunity to receive confidential feedback on their data from CMS.

Response: We appreciate the commenter's suggestions pertaining to the application of the data completion threshold policy to the standardized patient assessment data elements. Providers generally have 135 days following the end of each CY quarter to review and submit corrections to their data. Therefore, we believe that providers have the sufficient tools and time to manage the addition of the standardized patient assessment data to the data completion threshold policy.

After consideration of the public comments we received, we are finalizing our proposal as proposed to extend our current LTCH QRP data completion requirements to the reporting of standardized patient assessment data. We are also finalizing our proposal as proposed to codify the LTCH QRP data completion thresholds at § 412.560(f) for measures and standardized patient assessment data elements collected using the LTCH CARE Data Set.

17. Policies Regarding Public Display of Measure Data for the LTCH QRP

Section 1886(m)(5)(E) of the Act requires the Secretary to establish procedures for making the LTCH QRP data available to the public after ensuring that an LTCH has the opportunity to review its data prior to public display. Measure data is currently displayed on the Long-Term Care Hospital Compare Web site, which is an interactive web tool that assists individuals by providing information on LTCH quality of care including those who need to select an LTCH. For more information on *LTCH Compare*, we refer readers to: <https://www.medicare.gov/longtermcarehospitalcompare/>. In addition, for a more detailed discussion about the provider's confidential review process prior to public display of quality measures we refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 57231 through 57236).

We also finalized the process we use to publish a list of LTCHs that successfully meet the reporting requirements for the applicable LTCH QRP year on the LTCH QRP Web site in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57231). The list of compliant LTCHs is available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Data-Submission-Deadlines.html>.

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57231 through 57236), we finalized the public display of measure data on the *LTCH Compare* Web site in CY 2017 for the following 4 quality measures pending the availability of data: (1) NHSN Facility-wide Inpatient Hospital-onset MRSA Bacteremia Outcome Measure (NQF #1716); (2) NHSN Facility-wide Inpatient Hospital-onset CDI Outcome Measure (NQF #1717); (3) Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431); and (4) Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (NQF #0680).

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57232), we stated that "pending the availability of data," the public display of NHSN Facility-wide Inpatient Hospital-onset MRSA Bacteremia Outcome Measure (NQF #1716) and NHSN Facility-wide Inpatient Hospital-onset CDI Outcome Measure (NQF #1717) would initially be based on data collected from January 1, 2015 through December 31, 2015 and would be displayed based on 4 rolling quarters. We would like to clarify that the initial public display of data for these two quality measures (MRSA and CDI) will be based on data collected from January 1, 2016 through December 31, 2016 (CY 2016), as the CY 2015 data is not available for display using the Standardized Infection Ratio (SIR) metric. Rather, this data (CY 2015) was used by the CDC to calculate the "predicted" number of infections (the number of infections that would be expected to occur based on previously reported data) for each LTCH, so that subsequent data could be used to calculate the SIR for each of these quality measures.

The SIR is a summary statistic that compares the "predicted" number of infections to the "observed" or actual number of infections for a given LTCH. This process or "rebaselining" of data occurs periodically when the CDC determines that referent period of data or "baseline" is no longer meaningful due to changes in the quality measure protocols or changes in provider populations. When the CDC uses a specific year's data to inform newly calculated "predicted" number of infections, CMS is unable to use that specific year of data to calculate the SIR, and for this reason, we are unable to display the MRSA and CDI performance data using the CY 2015 LTCH NHSN data, and will use the CY 2016 data to inform the SIR calculations when we publicly display the SIRs for these measures in fall 2017.

The Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431) and Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (NQF #0680) will be based on the influenza vaccination season from October 1, 2015 through March 31, 2016 and will be updated annually. We refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 57231 through 57233) for details on the calculations and display of these quality measures.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20118 through 20120), pending the availability of data, we proposed to publicly report data in CY 2018 for the following 3 assessment-based measures: (1) Percent of LTCH Patients With an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631); (2) Application of Percent of LTCH Patients With an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631); and (3) Application of Percent of Residents Experiencing One or More Falls with Major Injury (NQF #0674). In addition, pending the availability of data, we proposed to publicly report data in CY 2020 for the assessment-based measure Functional Outcome Measure: Change in Mobility Among Patients Requiring Ventilator Support (NQF #2632). Data collection for these 4 new assessment-based measures began on April 1, 2016. We proposed to display data for the assessment-based measures based on four rolling quarters of data and would initially use discharges from January 1, 2017 through December 31, 2017, with the exception of Functional Outcome Measure: Change in Mobility Among Patients Requiring Ventilator Support (NQF #2632) which would be based on eight rolling quarters of data and would initially use discharges from January 1, 2017 through December 31, 2018.

In addition, we proposed to publicly report 3 claims-based measures: (1) Medicare Spending Per Beneficiary-PAC LTCH QRP; (2) Discharge to Community-PAC LTCH QRP; and (3) Potentially Preventable 30-Day Post-Discharge Readmission Measure for LTCH QRP.

These measures were adopted for the LTCH QRP in the FY 2017 IPPS/LTCH PPS final rule to be based on data from 2 consecutive calendar years. As previously adopted in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57233 through 57236), confidential feedback reports for these 3 claims-based measures will be based on calendar years 2015 and 2016 and data collected

for discharges beginning January 1, 2015 through December 31, 2016. However, our current proposal revises the dates for public reporting, and we proposed to transition from calendar year to fiscal year to make these measure data publicly available by October 2018. Thus, we proposed public reporting beginning in CY 2018 for these claims-based measures based on fiscal years 2016 and 2017 and data collected from discharges beginning October 1, 2015 through September 30, 2017.

We proposed to remove the following claims-based measure “All-Cause Unplanned Readmission Measure for 30 Days Post Discharge from LTCHs” from the LTCH QRP and public reporting by October 2018. We refer readers to section IX.C.8. of the preamble of this final rule for additional information regarding the proposed removal of this measure from quality reporting and public display. We also proposed to remove the following assessment-based measure “Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678)” and to replace it with a

modified version of the measure entitled “Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury” from the LTCH QRP and public reporting by October 2020. We refer readers to section IX.C.7.a. of the preamble of this final rule for additional information regarding the proposed replacement of this measure from quality reporting and public display.

For the assessment-based measures: Percent of LTCH Patients With an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631); Application of Percent of LTCH Patients With an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631); and Application of Percent of Residents Experiencing One or More Falls with Major Injury (NQF #0674), to ensure the statistical reliability of the measures, we proposed to assign LTCHs with fewer than 20 eligible cases during a performance period to a separate category: “The number of cases/patient stays is too small to report.” If an LTCH had fewer than 20 eligible cases, the

LTCH’s performance would not be publicly reported for the measure for that performance period.

For the claims-based measures: Discharge to Community-PAC LTCH QRP and Potentially Preventable 30-Day Post-Discharge Readmission Measure for LTCH QRP, to ensure the statistical reliability of the measures, we proposed to assign LTCHs with fewer than 25 eligible cases during a performance period to a separate category: “The number of cases/patient stays is too small to report.” If an LTCH had fewer than 25 eligible cases, the LTCH’s performance would not be publicly reported for the measure for that performance period. For Medicare Spending Per Beneficiary-PAC LTCH QRP, to ensure the statistical reliability of the measure, we proposed to assign LTCHs with fewer than 20 eligible cases during a performance period to a separate category: “The number of cases/patient stays is too small to report.” If an LTCH had fewer than 20 eligible cases, the LTCH’s performance would not be publicly reported for the measure for that performance period.

PREVIOUSLY FINALIZED AND PROPOSED MEASURES FOR CY 2018 PUBLIC DISPLAY AND CONFIDENTIAL FEEDBACK REPORTS

Previously Finalized Measures:

Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678).
National Healthcare Safety Network (NHSN) Catheter-Associated Urinary Tract Infection (CAUTI) Outcome Measure (NQF #0138).
National Healthcare Safety Network (NHSN) Central Line-Associated Bloodstream Infection (CLABSI) Measure (NQF #0139).
NHSN Facility-wide Inpatient Hospital-onset Methicillin-resistant *Staphylococcus aureus* (MRSA) Bacteremia Outcome Measure (NQF #1716).
NHSN Facility-wide Inpatient Hospital-onset *Clostridium difficile* Infection (CDI) Outcome Measure (NQF #1717).
Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431).
Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (NQF #0680).

Proposed Measures:

Percent of Long-Term Care Hospital (LTCH) Patients With an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631).
Application of Percent of Long-Term Care Hospital (LTCH) Patients With an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631).
Application of Percent of Residents Experiencing One or More Falls with Major Injury (NQF #0674).
Medicare Spending Per Beneficiary-PAC LTCH QRP.
Discharge to Community-PAC LTCH QRP.
Potentially Preventable 30-Day Post-Discharge Readmission Measure for LTCH QRP.

PROPOSED ADDITIONAL MEASURE FOR CY 2020 PUBLIC DISPLAY AND CONFIDENTIAL FEEDBACK REPORTS

Functional Outcome Measure: Change in Mobility Among Long-Term Care Hospital (LTCH) Patients Requiring Ventilator Support (NQF #2632).

We invited public comment on the proposal for the public display of the four assessment-based measures and three claims-based measures, the removal of the All-Cause Unplanned Readmission Measure for 30 Days Post Discharge from LTCHs from the LTCH QRP and public display, and the

replacement of “Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678)” with a modified version of the measure entitled “Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury” as described above.

Comment: A commenter supported CMS’ efforts to display regional comparison rates. The commenter also requested state comparison data in addition to regional comparison data for the LTCH quality measures.

Response: We appreciate the commenter’s support. We also note that we addressed this issue in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57233), and we refer the reader to that

final rule for a detailed response regarding the display of regional and state comparison rates.

Comment: A commenter supported CASPER monthly updates to the data and the provision of detailed instructions on how to obtain their confidential feedback reports.

Response: We acknowledge the commenter’s support for the current process of providing monthly updates to the confidential feedback reports. We will continue to provide detailed instructions on how to obtain CASPER reports on the LTCH QRP Web site and will continue to offer trainings to help providers understand how to utilize the reports available to them.

Comment: A commenter suggested that CMS provide consultative opportunities to assist LTCHs in their measure improvements.

Response: We note that providers can use their confidential feedback and other CASPER reports to address their internal processes to improve quality outcomes. Further, there are established help desks for our public reporting and quality reporting programs that providers can submit questions about the measures and performance results that CMS reviews and responds to. Additional information about the help desks can be found on the LTCH QRP Web site: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Help.html>. Finally, we also provide training opportunities and updated guidance which can be accessed by means of the LTCH QRP Web pages.

Comment: A few commenters expressed concern that similar or overlapping quality measures would be publicly reported at the same time on the *LTCH Compare* Web site (for example, both pressure ulcer measures, both readmission measures).

Response: We plan to remove the Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678) and All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from Long-Term Care Hospitals from the *LTCH Compare* Web site prior to when we begin to publicly display the Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury and Potentially Preventable 30-Day Post-Discharge Readmission Measure for Long-Term Care Hospital Quality Reporting Program, respectively.

Comment: A few commenters recommended enhancements to the *LTCH Compare* Web site to further explain quality measure data and results in a way that is interpretable to patients, their families, and providers. One of these commenters also suggested convening a multi-stakeholder panel to review and provide guidance on the various Compare Web sites including *LTCH Compare*.

Response: We appreciate the commenters' suggestions and will take these suggestions into consideration as we continue to enhance the *LTCH Compare* Web site, including making quality measure information interpretable for LTCH patients, families, and providers. Of note, when developing the *LTCH Compare* Web site, consumer testing of the Web site did occur during the development

stages with members of the public including Medicare beneficiaries.

Comment: A commenter expressed concerns about the ability of providers to review and correct the accuracy of measure data generated by the CDC NHSN and claims-based models prior to their display on the *LTCH Compare* Web site as mandated by the IMPACT Act. The commenter further stated that results for two of the four required measures, CLABSI and CAUTI, were not posted on the *Compare* Web site due to calculation issues while the unplanned readmission rate cannot be reviewed for accuracy by providers because they are not provided the raw source data or the model.

Response: We recognize the commenter's concerns regarding the CDC NHSN CAUTI and CLABSI and claims-based All-Cause Unplanned Readmission Measure for 30 Days Post Discharge from Long-Term Care Hospitals. Providers are required to submit accurate HAI data to CDC and are given the opportunity to review and correct any data submitted. Providers have approximately 4.5 months after the reporting quarter to correct their assessment-based and NHSN data used to calculate the measures as detailed in FY 2017 IPPS/LTCH PPS final rule (81 FR 57234 through 57236). Also, as stated in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57234), CMS can suppress data on *LTCH Compare* if it is determined that the measure performance on the Provider Preview reports contains a calculation error. We intend to display data on the CDC NHSN CAUTI and CLABSI measures for the most recent quarter when the data is corrected. We will continue to work with the CDC to ensure the accuracy of measure results. CDC measure specifications can be found on the CDC NHSN Web site (<http://www.cdc.gov/nhsn/index.html>).

Regarding the claims-based All-Cause Unplanned Readmission Measure for 30 Days Post Discharge from Long-Term Care Hospitals measure, CMS appreciates commenter's concern regarding the accuracy of the measure because they are not provided the raw source data or the model. CMS is exploring the feasibility of making additional patient level data available to providers as well as posting updated information on the risk model results used for measure calculation. We intend to continue to display results for The All-Cause Unplanned Readmission Measure for 30 Days Post Discharge from Long-Term Care Hospitals (NQF #2512) until the removal of the measure from public display by October 2018.

Comment: A commenter expressed concerns regarding the ability of CDC NHSN HAI and claims-based All-Cause Unplanned Readmission Measure for 30 Days Post Discharge from Long-Term Care Hospitals measures to accurately reflect changing patient populations.

Response: We appreciate the commenter's concerns about the CDC NHSN HAI CAUTI and CLABSI measures and the claims-based All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from Long-Term Care Hospitals. We will continue to update and refine measure specifications based on ongoing analysis of the data and patient populations. National averages are not stagnant but are calculated on an ongoing basis to reflect results based on the data from the time period reported.

After consideration of the public comments we received, we are finalizing our proposal as proposed to begin publicly reporting in CY 2018 the following assessment-based measures pending the availability of the data: "Percent of Long-Term Care Hospital (LTCH) Patients With an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function" (NQF #2631), "Application of Percent of Long-Term Care Hospital (LTCH) Patients With an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function" (NQF #2631), "Application of Percent of Residents Experiencing One or More Falls with Major Injury" (NQF #0674), as well as the following claims-based measures: "Medicare Spending Per Beneficiary-PAC LTCH QRP," "Discharge to Community-PAC LTCH QRP," and "Potentially Preventable 30-Day Post-Discharge Readmission Measure for LTCH QRP." In addition, we will publicly report data in CY 2020 the assessment-based measure: "Functional Outcome Measure: Change in Mobility Among Long-Term Care Hospital (LTCH) Patients Requiring Ventilator Support" (NQF #2632) pending availability of data.

We are finalizing our proposal to remove the claims-based measure "All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from Long-Term Care Hospitals" from the LTCH QRP and public reporting by October 2018. We are also finalizing our proposals to remove the following assessment-based measure "Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678)" and to replace it with a modified version of the measure entitled "Changes in Skin Integrity Post-Acute Care: Pressure

Ulcer/Injury” from the LTCH QRP and public reporting by October 2020.

18. Mechanism for Providing Feedback Reports to LTCHs

Section 1899B(f) of the Act requires the Secretary to provide confidential feedback reports to PAC providers on their performance on the measures specified under sections 1899B(c)(1) and (d)(1) of the Act, beginning one year after the specified application date that applies to such measures and PAC providers. In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57233 through 57236), we finalized processes to provide LTCHs the opportunity to review their data and information using confidential feedback reports that will enable LTCHs to review their performance on the measures required under the LTCH QRP. Information on how to obtain these and other reports available to the LTCH can be found at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Public-Reporting.html>.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20120), we did not propose any changes to this policy.

D. Inpatient Psychiatric Facility Quality Reporting (IPFQR) Program

1. Background

a. Statutory Authority

Section 1886(s)(4) of the Act, as added and amended by sections 3401(f) and 10322(a) of the Patient Protection and Affordable Care Act, requires the Secretary to implement a quality reporting program for inpatient psychiatric hospitals and psychiatric units. Section 1886(s)(4)(A)(i) of the Act requires that, for fiscal year (FY) 2014⁴⁵⁷ and each subsequent fiscal year, the Secretary must reduce any annual update to a standard Federal rate

for discharges occurring during the fiscal year by 2.0 percentage points for any inpatient psychiatric hospital or psychiatric unit that does not comply with quality data submission requirements with respect to an applicable fiscal year.

As provided in section 1886(s)(4)(A)(ii) of the Act, the application of the reduction for failure to report under section 1886(s)(4)(A)(i) of the Act may result in an annual update of less than 0.0 percent for a fiscal year, and may result in payment rates under section 1886(s)(1) of the Act being less than the payment rates for the preceding year. In addition, section 1886(s)(4)(B) of the Act requires that the application of the reduction to a standard Federal rate update be noncumulative across fiscal years. Thus, any reduction applied under section 1886(s)(4)(A) of the Act will apply only with respect to the fiscal year rate involved and the Secretary may not take into account the reduction in computing the payment amount under the system described in section 1886(s)(1) of the Act for subsequent years.

Section 1886(s)(4)(C) of the Act requires that, for FY 2014 (October 1, 2013 through September 30, 2014) and each subsequent year, each psychiatric hospital and psychiatric unit must submit to the Secretary data on quality measures as specified by the Secretary. The data must be submitted in a form and manner and at a time specified by the Secretary. Under section 1886(s)(4)(D)(i) of the Act, unless the exception of subclause (ii) applies, measures selected for the quality reporting program must have been endorsed by the entity with a contract under section 1890(a) of the Act. The National Quality Forum (NQF) currently holds this contract.

Section 1886(s)(4)(D)(ii) of the Act provides an exception to the requirement for NQF endorsement of measures: In the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by the entity with a contract under section 1890(a) of the Act, the Secretary may specify a measure that is not so endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary.

Section 1886(s)(4)(E) of the Act requires the Secretary to establish procedures for making public the data submitted by inpatient psychiatric hospitals and psychiatric units under the IPFQR Program. These procedures must ensure that a facility has the opportunity to review its data prior to

the data being made public. The Secretary must report quality measures that relate to services furnished by the psychiatric hospitals and units on the CMS Web site.

b. Covered Entities

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53645), we established that the IPFQR Program's quality reporting requirements cover those psychiatric hospitals and psychiatric units paid under Medicare's Inpatient Psychiatric Facility Prospective Payment System (IPF PPS) (42 CFR 412.404(b)). Generally, psychiatric hospitals and psychiatric units within acute care and critical access hospitals that treat Medicare patients are paid under the IPF PPS. Consistent with prior rules, we continue to use the term “inpatient psychiatric facility” (IPF) to refer to both inpatient psychiatric hospitals and psychiatric units. This usage follows the terminology in our IPF PPS regulations at 42 CFR 412.402. For more information on covered entities, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53645).

c. Considerations in Selecting Quality Measures

We strive to put patients first, ensuring they are empowered to make decisions about their own healthcare along with their clinicians using information from data-driven insights that are increasingly aligned with meaningful quality measures. We support technology that reduces burden and allows clinicians to focus on providing high-quality healthcare for their patients. We also support innovative approaches to improve quality, accessibility, and affordability of care while paying particular attention to improving clinicians' and beneficiaries' experience when interacting with our programs. In combination with other efforts across the Department of Health and Human Services, we believe the IPFQR program helps to incentivize facilities to improve healthcare quality and value while giving patients and providers the tools and information needed to make the best decisions for them. Consistent with these goals, our objective in selecting quality measures is to balance the need for information on the full spectrum of care delivery and the need to minimize the burden of data collection and reporting. We have primarily focused on measures that evaluate critical processes of care that have significant impact on patient outcomes and support CMS and HHS priorities for improved quality and efficiency of care provided by IPFs. When possible, we also seek to

⁴⁵⁷ The statute uses the term “rate year” (RY). However, beginning with the annual update of the inpatient psychiatric facility prospective payment system (IPF PPS) that took effect on July 1, 2011 (RY 2012), we aligned the IPF PPS update with the annual update of the ICD codes, effective on October 1 of each year. This change allowed for annual payment updates and the ICD coding update to occur on the same schedule and appear in the same Federal Register document, promoting administrative efficiency. To reflect the change to the annual payment rate update cycle, we revised the regulations at 42 CFR 412.402 to specify that, beginning October 1, 2012, the RY update period would be the 12-month period from October 1 through September 30, which we refer to as a “fiscal year” (FY) (76 FR 26435). Therefore, with respect to the IPFQR Program, the terms “rate year,” as used in the statute, and “fiscal year” as used in the regulation, both refer to the period from October 1 through September 30. For more information regarding this terminology change, we refer readers to section III of the RY 2012 IPF PPS final rule (76 FR 26434 through 26435).

incorporate measures that directly evaluate patient outcomes. We refer readers to section VIII.F.4.a of the FY 2013 IPPS/LTCH PPS final rule (77 FR 53645 through 53646) for a detailed discussion of the considerations taken into account in selecting quality measures.

(1) Measure Selection Process

Before being proposed for inclusion in the IPFQR Program, measures are placed on a list of measures under consideration, which is published annually by December 1 on behalf of CMS by the NQF. In compliance with section 1890A(a)(2) of the Act, measures proposed for the IPFQR Program were included in a publicly available document: “List of Measures under Consideration for December 1, 2016” available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Quality-Measures/Downloads/Measures-under-Consideration-List-for-2016.pdf>. The Measure Applications Partnership (MAP), a multi-stakeholder group convened by the NQF, reviews the measures under consideration for the IPFQR Program, among other Federal programs, and provides input on those measures to the Secretary. The MAP’s 2017 recommendations for quality measures under consideration are captured in the following documents: “Process and Approach for MAP Pre-Rulemaking Deliberations, 2016–2017,” available at: <http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=84455> and “2016–2017 Spreadsheet of Final Recommendations to HHS and CMS” available at: <http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=84452>. We considered the input and recommendations provided by the MAP in selecting all measures for the IPFQR Program, including those discussed below.

(2) Accounting for Social Risk Factors in the IPFQR Program

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20121), we discussed accounting for social risk factors in the IPFQR Program. We understand that social risk factors such as income, education, race and ethnicity, employment, disability, community resources, and social support (certain factors of which are also sometimes referred to as socioeconomic status (SES) factors or socio-demographic status (SDS) factors) play a major role in health. One of our core objectives is to improve beneficiary outcomes including reducing health

disparities, and we want to ensure that all beneficiaries, including those with social risk factors, receive high quality care. In addition, we seek to ensure that the quality of care furnished by providers and suppliers is assessed as fairly as possible under our programs while ensuring that beneficiaries have adequate access to excellent care.

We have been reviewing reports prepared by the Office of the Assistant Secretary for Planning and Evaluation (ASPE)⁴⁵⁸ and the National Academies of Sciences, Engineering, and Medicine on the issue of measuring and accounting for social risk factors in CMS’ value-based purchasing and quality reporting programs, and considering options on how to address the issue in these programs. On December 21, 2016, ASPE submitted a Report to Congress on a study it was required to conduct under section 2(d) of the Improving Medicare Post-Acute Care Transformation (IMPACT) Act of 2014. The study analyzed the effects of certain social risk factors in Medicare beneficiaries on quality measures and measures of resource use used in one or more of nine Medicare value-based purchasing programs.⁴⁵⁹ The report also included considerations for strategies to account for social risk factors in these programs. In a January 10, 2017 report released by the National Academies of Sciences, Engineering, and Medicine, that body provided various potential methods for measuring and accounting for social risk factors, including stratified public reporting.⁴⁶⁰

As noted in the FY 2017 IPPS/LTCH PPS final rule, the NQF undertook a 2-year trial period in which new measures, measures undergoing maintenance review, and measures endorsed with the condition that they enter the trial period could be assessed to determine whether risk adjustment for selected social risk factors is appropriate for these measures. This trial entailed temporarily allowing inclusion of social risk factors in the

risk-adjustment approach for these measures. The trial period ended in April 2017 and a draft report is available at: http://www.qualityforum.org/SES_Trial_Period.aspx.

As we continue to consider the analyses and recommendations from these reports and await the results of the NQF trial on risk adjustment for quality measures, we are continuing to work with stakeholders in this process. As we have previously communicated, we are concerned about holding providers to different standards for the outcomes of their patients with social risk factors because we do not want to mask potential disparities or minimize incentives to improve the outcomes for disadvantaged populations. Keeping this concern in mind, while we sought input on this topic previously, we continue to seek public comment on whether we should account for social risk factors in the IPFQR Program, and if so, what method or combination of methods would be most appropriate for accounting for social risk factors. Examples of methods include:

Confidential reporting to providers of measure rates stratified by social risk factors; public reporting of stratified measure rates; and potential risk adjustment of a particular measure as appropriate based on data and evidence.

In addition, in the proposed rule, we sought public comment on which social risk factors might be most appropriate for reporting stratified measure scores and/or potential risk adjustment of a particular measure. Examples of social risk factors include, but are not limited to, dual eligibility/low-income subsidy, race and ethnicity, and geographic area of residence. We also sought comments on which of these factors, including current data sources where this information would be available, could be used alone or in combination, and whether other data should be collected to better capture the effects of social risk. We will take commenters’ input into consideration as we continue to assess the appropriateness and feasibility of accounting for social risk factors in the IPFQR Program. We note that any such changes would be proposed through future notice-and-comment rulemaking.

We look forward to working with stakeholders as we consider the issue of accounting for social risk factors and reducing health disparities in CMS programs. Of note, implementing any of the above methods would be taken into consideration in the context of how this and other CMS programs operate (for example, data submission methods, availability of data, statistical considerations relating to reliability of

⁴⁵⁸ Office of the Assistant Secretary for Planning and Evaluation. 2016. Report to Congress: Social Risk Factors and Performance Under Medicare’s Value-Based Purchasing Programs. Available at: <https://aspe.hhs.gov/pdf-report/report-congress-social-risk-factors-and-performance-under-medicare-value-based-purchasing-programs>.

⁴⁵⁹ Office of the Assistant Secretary for Planning and Evaluation. 2016. Report to Congress: Social Risk Factors and Performance Under Medicare’s Value-Based Purchasing Programs. 21 Dec. 2016. Available at: <https://aspe.hhs.gov/pdf-report/report-congress-social-risk-factors-and-performance-under-medicare-value-based-purchasing-programs>.

⁴⁶⁰ National Academies of Sciences, Engineering, and Medicine. 2017. Accounting for social risk factors in Medicare payment. Washington, DC: The National Academies Press.

data calculations, among others), so we also welcomed comment on operational considerations. CMS is committed to ensuring that its beneficiaries have access to and receive excellent care, and that the quality of care furnished by providers and suppliers is assessed fairly in CMS programs.

Comment: Many commenters expressed support for the concept of accounting for social risk factors in the IPFQR Program; however, these commenters expressed concern that chart-abstracted process measures, with data submitted in aggregate, are inappropriate for risk adjustment or stratified reporting. These commenters observed that to properly risk-adjust or stratify data for the IPFQR Program, the program would benefit from collection of patient-level outcome measures data. One commenter cautioned that collecting information to stratify measures could increase burden on IPFs and reduce the amount of data publicly reported due to small sample sizes. Several commenters encouraged CMS to ensure that providers can confidentially view reports of measures data stratified by social risk factors.

One commenter expressed appreciation that CMS is dedicating time and attention to this issue, but requested that CMS improve transparency of the process by developing a work plan and timeline. One commenter encouraged CMS to collaborate with Medicare Advantage and Medicaid health plans in understanding the impact of social risk factors.

Many commenters expressed concern that incentives for reducing disparities could lead to a reduction in quality for patients who are not at risk, and recommended that CMS consider this or other unintended consequences in any program design.

Several commenters urged CMS to ensure that data are publicized in a way that is meaningful to consumers, with some commenters specifically recommending that CMS convene consumer focus groups to provide input on the data presentation.

Response: We will consider all suggestions as we continue to assess the feasibility of accounting for social risk factors and will actively perform additional research and monitor for trends to prevent unintended consequences. We intend to explore options including but not limited to measure stratification by social risk factors in a consistent manner across our quality reporting and value-based purchasing programs when appropriate. Future proposals would be made after

further research and continued stakeholder engagement.

We are committed to ensuring that CMS beneficiaries have access to and receive excellent care and the quality of care furnished by providers and suppliers is assessed fairly in CMS quality reporting and value-based purchasing programs. We thank the commenters, and we will consider their views as we develop further policy regarding social risk factors in the IPFQR Program.

(3) IPFQR Program Measures Adopted in Previous Payment Determinations

The current IPFQR Program includes 18 mandatory measures. For more information on these measures, we refer readers to the following final rules:

- The FY 2013 IPPS/LTCH PPS final rule (77 FR 53646 through 53652);
- The FY 2014 IPPS/LTCH PPS final rule (78 FR 50889 through 50895);
- The FY 2015 IPF PPS final rule (79 FR 45963 through 45974);
- The FY 2016 IPF PPS final rule (80 FR 46694 through 46714); and
- The FY 2017 IPPS/LTCH PPS final rule (81 FR 57236 through 57249).

2. Factors for Removal or Retention of IPFQR Program Measures

a. Background

The Hospital IQR Program adopted formal policies regarding measure retention and removal in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50185). We believe that it is important to be consistent between programs to the extent possible. Therefore, to align with the policies adopted in this and other quality reporting programs, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20122), we proposed to adopt similar policies within the IPFQR Program. In the past, we have retained measures from each previous year's IPFQR Program measure set for subsequent years' measure sets, except when we specifically proposed to remove or replace a measure. For example, we removed HBIPS-6 and HBIPS-7 and replaced these measures with Transition Record with Specified Elements Received by Discharged Patients (NQF #0647) and Timely Transmission of Transition Record (NQF #0648) respectively in the FY 2016 IPF PPS final rule (80 FR 46701 through 46709). In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20122), we proposed factors to consider in removing or retaining measures effective upon finalization of the proposed rule, anticipated to be effective October 1, 2017 and for subsequent years.

We will continue to use the notice-and-comment rulemaking process to

propose measures for removal or replacement.

b. Considerations in Removing or Retaining Measures

With respect to measure removal, we believe it is important to be transparent in identifying factors that we would take into consideration on a case-by-case basis as guidelines to evaluate a measure for potential removal from the IPFQR Program. We believe that these factors should be aligned between our programs whenever possible. Therefore, we refer readers to the Hospital IQR Program (80 FR 49641 through 49642) factors we consider in removing or retaining measures. We intend to align our policies in the IPFQR Program with those in the Hospital IQR Program. Thus, in the proposed rule, we proposed: (1) Measure removal factors; (2) criteria for determining when a measure is "topped-out;" and (3) measure retention factors. These proposals are discussed in more detail below.

We proposed the following measure removal factors for the IPFQR Program:

- Measure performance among IPFs is so high and unvarying that meaningful distinctions and improvements in performance can no longer be made ("topped-out" measures);
- Measure does not align with current clinical guidelines or practice;
- Measure can be replaced by a more broadly applicable measure (across settings or populations) or a measure that is more proximal in time to desired patient outcomes for the particular topic;
- Measure performance or improvement does not result in better patient outcomes;
- Measure can be replaced by a measure that is more strongly associated with desired patient outcomes for the particular topic;
- Measure collection or public reporting leads to negative unintended consequences other than patient harm; and
- Measure is not feasible to implement as specified.

For the purposes of considering measures for removal from the program, we also proposed to align our criteria for determining that a measure is "topped-out" with the Hospital IQR Program's criteria (80 FR 49642), which states that a measure is "topped-out" if there is statistically indistinguishable performance at the 75th and 90th percentiles and the truncated coefficient of variation is less than or equal to 0.10.

Furthermore, we recognize that there may be times when measures may meet some of the outlined factors for removal,

but continue to bring value to the program. Therefore, we also proposed the following factors for consideration in determining whether to retain a measure in the IPFQR Program, which also are based on factors established in the Hospital IQR Program (80 FR 49641 through 49642):

- Measure aligns with other CMS and HHS policy goals, such as those delineated in the National Quality Strategy or CMS Quality Strategy;
- Measure aligns with other CMS programs, including other quality reporting programs; and
- Measure supports efforts to move IPFs towards reporting electronic measures.

We reiterate that these removal and retention factors are considerations that we take into account in balancing the benefits and drawbacks of whether or not to remove measures on a case-by-case basis.

We invited public comment on our proposals to adopt: (1) Measure removal factors; (2) criteria for determining when a measure is “topped out;” and (3) measure retention factors as discussed above. These factors and criteria will become effective upon finalization of this rule, anticipated to be effective October 1, 2017 and for subsequent years; measures identified as appropriate for removal would be proposed through notice-and-comment rulemaking subsequent to that date.

Comment: Many commenters supported CMS’ proposal to adopt measure removal factors. Many of these commenters also expressed a desire to see measure performance data and for CMS to define and report on the outcomes that CMS believes are impacted by each process measure. One commenter supported the criteria for determining that a measure is “topped out.”

Response: We thank the commenters for their support of our proposed measure removal factors. We publish data collected through the IPFQR Program on a publicly available CMS Web site (specifically, *Hospital Compare*—<https://www.medicare.gov/hospitalcompare/psych-measures.html>) to allow the public to make informed healthcare decisions; these data can also be used to assess national performance levels on specific measures. We also note that when we propose measures for the IPFQR Program, we provide explanations of how we believe these measures impact patient outcomes, we report these data to the extent possible (through our reporting on *Hospital Compare*), and we continue to be committed to adopting applicable

outcomes measures into the IPFQR Program.

Comment: One commenter requested that CMS add “implementation puts patients at greater risk of harm” and “measure has not been specified or tested in the IPF setting” to this list of removal factors.

Response: While we agree with the commenter that the potential for increased patient harm requires removing a measure from the IPFQR Program, this was not included on the list because the list is for routine measure maintenance, and an increase in patient harm would most likely require immediate action. To clarify, if evidence suggests that a measure results in an increase in patient harm, we would take immediate action, as opposed to waiting for the notice and comment rulemaking cycle.

We disagree with the commenter’s assertion that measures must have been specified or tested in the IPF setting for adoption in the IPFQR Program. We believe that measures should address the overall care provided to patients while they are inpatients and that to accomplish this, for example, some measures which have been tested in general acute care facilities are appropriate for the IPF setting.

Comment: Many commenters did not support CMS’ proposed measure retention factors. These commenters believed that only measures specific to psychiatric care should be retained in the IPFQR Program. One commenter expressed that the measure retention factors do not appear to outweigh the benefit of removing measures that meet at least one removal factor.

Response: We disagree with the commenters’ assertion that only measures specific to psychiatric care should be included in the IPFQR Program. We believe IPFs should consider the overall health of the patient throughout the length of his/her episode of care, in addition to the patient’s psychiatric condition. We also disagree with the assertion that the measure retention factors do not outweigh the measure removal factors. We believe that selecting measures for this or any of the CMS quality reporting program requires multiple considerations, which is why we have aligned these measure removal and retention factors with those in use in other programs which must also balance multiple considerations. We refer readers to the Hospital IQR Program (80 FR 49641 through 49642), the PCHQR Program (81 FR 57182 through 57183), the Hospital OQR Program (79 FR 66942), and the ASCQR Program (79 FR 66968 through 66969) as examples of programs with similar

needs to balance multiple considerations.

Comment: Several commenters expressed concern that if CMS adopts measures that “support efforts to move IPFs towards reporting electronic measures,” it may require IPFs to make extensive infrastructure investments to participate in the IPFQR Program. Some commenters stated that measures should not be retained to support efforts to move IPFs toward reporting electronic measures.

Response: We understand the commenters’ concern regarding the adoption of infrastructure to support electronic measure reporting. We do believe that EHRs have a role in quality reporting programs, including the IPFQR Program and, as discussed in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53660) and the 2014 IPPS/LTCH PPS final rule (78 FR 50903) we are interested in increasing the use of EHRs for data collection in the future. However, we note that the only measure currently in the IPFQR Program that addresses the adoption of Electronic Health Records is the attestation measure “Use of an Electronic Health Record,” which does not require any infrastructure investment. We originally adopted this measure to assess the state of adoption of EHRs among IPFs because the use of EHRs for the collection, use, and transmission of medical information has been demonstrated to impact the quality of care. However, data collected from this measure also provides insight into the operational barriers to adopting future electronic clinical quality measures (eCQMs) as well as the potential burden posed by individual eCQMs. We would propose any future measures that address adoption of EHRs through the notice and comment rulemaking process which allows us to seek public comment on these measures.

Comment: Several commenters requested that CMS evaluate the current measures using the proposed removal and retention factors. One commenter further encouraged CMS to evaluate the measures individually and as a set.

Response: We will evaluate the effectiveness of the measures currently in the IPFQR Program, individually and as a set, using these factors for this evaluation upon finalization of this rule.

Comment: One commenter recommended that CMS also identify a set of principles to use in selecting measures for inclusion in the IPFQR Program. The commenter recommended the following principles for selecting measures: (1) Measures improve the effectiveness and efficiency of patient care; (2) measures focus on indicators

that provide the most useful clinical and operational data possible; (3) measures focus on indicators that support actionable steps that fall within the scope of responsibility and accountability of the organization being measured; (4) measures provide value in the data generated that is in proportion to the intensity of the data-collection effort; and (5) measures have the potential for being used to measurably improve the processes, outcomes, efficiency, and patient experiences of the care being delivered.

Response: We have previously described our considerations in the development and selection of measures, which include addressing the six priorities of the National Quality Strategy (NQS) while minimizing burden, publicly reporting on measures that are close to the patient centered outcome of interest, focusing on gaps of quality, reflecting important areas of service, weighing the importance of the measure versus the burden of collection, seeking measures which are endorsed by multistakeholder organizations, and supporting the HHS Strategic Plan. For a detailed discussion, we refer readers to section VIII.F.4.a. of the FY 2013 IPPS/LTCH PPS final rule (77 FR 53645 through 53646). However, we will take into consideration commenter's suggestions for the future.

Comment: One commenter expressed concern that the definition of "topped out" is not standardized across private and public payers. This commenter also expressed concern that removing "topped out" measures may worsen performance on the processes that these measures evaluate.

Response: We seek to align definitions and criteria with other programs wherever possible. However, as the commenter noted there are multiple definitions of "topped out" across private and public payers. We wish to align definitions and criteria with other programs to the extent possible, however because of the non-standardization of the definition, it is not possible to align with all payers. We proposed "topped out" criteria that align with those in use in other CMS quality reporting programs to ensure our ability to continue to be in alignment with these programs. Such quality reporting programs include the Hospital IQR Program (80 FR 49641 through 49642), the PCHQR Program (81 FR 57182 through 57183), the Hospital OQR Program (79 FR 66942), and the ASCQR Program (79 FR 66968 through 66969).

We agree with the commenter that there may be times that retaining a "topped out" measure is beneficial, as

the measure continues to encourage high levels of performance and we intend to evaluate each measure on a case-by-case basis in accordance with our removal and retention policy to address this concern.

After consideration of the public comments we received, we are adopting the measure removal factors, "topped-out" criteria, and measure retention factors as proposed.

3. Proposal for New Quality Measure for the FY 2020 Payment Determination and Subsequent Years—Medication Continuation Following Inpatient Psychiatric Discharge (NQF #3205)

a. Background

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20122 through 20126), we proposed one new measure, Medication Continuation Following Inpatient Psychiatric Discharge (NQF #3205), for the FY 2020 payment determination and subsequent years. The measure uses Medicare fee-for-service (FFS) claims to identify whether patients admitted to IPFs with diagnoses of major depressive disorder (MDD), schizophrenia, or bipolar disorder had filled at least one evidence-based medication within 2 days prior to discharge through 30 days post-discharge. We believe that medication continuation is important for patients discharged from the inpatient psychiatric setting with MDD, schizophrenia, or bipolar disorder because of significant negative outcomes associated with non-adherence to medication regimens. For example, patients with MDD who do not remain on prescribed medications are more likely to have negative health outcomes such as relapse and readmission, decreased quality of life, and increased healthcare costs.⁴⁶¹ Patients with schizophrenia who do not adhere to their medication regimen are more likely to be hospitalized, use emergency psychiatric services, be arrested, be victims of crimes, and consume alcohol or drugs compared to those who adhere to their medication regimen.⁴⁶³ Patients with bipolar disorder who do not adhere to their medications have increased

suicide risk.⁴⁶⁴ For these reasons, guidelines from the American Psychiatric Association (APA) and the Department of Veterans Affairs/Department of Defense (VA/DoD), which are based on extensive literature, recommend pharmacotherapy as the primary form of treatment for patients with these conditions.⁴⁶⁵

Interventions that can be applied in the inpatient setting that increase medication compliance and prevent the negative outcomes associated with nonadherence have been identified. These interventions include patient education, enhanced therapeutic relationships, shared decision-making, and text-message reminders, with multidimensional approaches resulting in the best outcomes.⁴⁷⁰ Furthermore, patients and caregivers interviewed during the development of this measure indicated the importance of the facility's role in communicating

information about medications to the patient, pharmacy, and outpatient providers.⁴⁷⁶

b. Appropriateness for the IPFQR Program

In compliance with section 1890A(a)(2) of the Act, this measure was included in a publicly available document: “List of Measures under Consideration for December 1, 2016” available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityMeasures/Downloads/Measures-under-Consideration-List-for-2016.pdf>. The MAP Hospital Workgroup concluded that the measure addressed a critical quality objective, was evidence-based, and would contribute to efficient use of resources.⁴⁷⁷ One Workgroup member commented that it was appropriate to hold IPFs accountable for patients filling a prescription for an evidence-based medication post-discharge, further remarking that the measure was moving in the right direction.⁴⁷⁸

The MAP Hospital Workgroup classified the measure as “Refine and Resubmit Prior to Rulemaking.”⁴⁷⁹ The measure received this classification because the MAP recommended that measure testing be completed to demonstrate reliability and validity at the facility level in the hospital setting and that the measure be submitted to NQF for review and endorsement.⁴⁸⁰ The MAP also requested additional details on the measure, such as: (1) The definition of medication dispensation; (2) how the facility would know whether the medication was dispensed; and (3) how the measure would be impacted if Medicare Part D coverage is optional. The MAP also recommended that this measure be submitted to NQF for review and endorsement. The final methodology report includes the results of reliability and validity testing, and additional measure updates that occurred between the MAP review and NQF submission in December 2016.⁴⁸¹

This methodology report also provides the additional details requested by MAP at the December meeting.

Reliability and validity testing completed in 2016 using the final measure specifications demonstrates that the measure, as specified, provides reliable and valid facility-level scores of medication continuation.⁴⁸²

Reliability was established using a method of mean denominator and volume categories. Using that approach, a minimum denominator size of 75 discharges was established to attain an overall reliability score of at least 0.7; this reliability score is within acceptable norms and indicates sufficient signal strength to discriminate performance between facilities.⁴⁸³ This means that it is possible to distinguish good performance from poor performance based on measure scores among facilities with at least 75 cases in the denominator.

Validity was established by evaluating the correlations of medication continuation scores with the conceptually related IPFQR Program measures. The medication continuation scores were moderately correlated with the scores for 7- and 30-day follow-up after hospitalization for mental illness scores as expected ($\rho = 0.35$ and 0.45 , where ρ is the Spearman's rank correlation coefficient). In other words, the positive correlation between scores of these two types of measures is expected because high follow-up rates with mental health providers and high follow-up rates of medication continuation both indicate a high-quality transition from the inpatient to the outpatient setting. The medication continuation scores were negatively correlated with readmission scores as expected ($\rho = -0.27$). This negative correlation is expected because patients that do not continue their medications are more likely to relapse and be readmitted.^{484 485 486} All correlations are

⁴⁸⁶ Gilmer TP, Dolder CR, Lacro JP, et al. Adherence to treatment with antipsychotic medication and health care costs among Medicaid

statistically significant at p-value <0.0001 . After reviewing these results and the proposed measure specifications, all of the 10 TEP members who were present for the face validity vote agreed that the measure score had face validity.

This measure was submitted to NQF for endorsement on December 16, 2016, and the measure received endorsement from the NQF Consensus Standards Approval Committee (CSAC) following the June 21 CSAC meeting, pending a 30 day appeals process that closes on August 2, 2017.⁴⁸⁷ The new version of the specifications referenced on the NQF Web site is consistent with the version reviewed and approved by the CSAC. Under section 1886(s)(4)(D)(i) of the Act, measures selected for the IPFQR Program must have been endorsed by the entity with a contract under section 1890(a) of the Act. The NQF currently holds this contract. However, section 1886(s)(4)(D)(ii) of the Act provides that, in the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by the entity with a contract under section 1890(a) of the Act, the Secretary may specify a measure that is not so endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary. We have reviewed NQF-endorsed measures related to medication continuation in this patient population and did not identify any equivalent measures. We believe this measure is consensus-based because of the extensive measure development process, including the solicitation of expert and patient opinion and public comments (discussed in more detail below).

In addition, this measure addresses several aspects of the CMS Quality Strategy goals and objectives. The measure supports the CMS Quality Strategy Goal to “promote effective prevention and treatment of chronic disease,” which includes an objective to improve behavioral health access and quality of care by using evidence-based practices.⁴⁸⁸ The measure also supports the CMS Quality Strategy Goal to

beneficiaries with schizophrenia. The American journal of psychiatry. 2004;161(4):692–699.

“promote effective communication and coordination of care.”⁴⁸⁹ Specifically, the measure addresses three objectives within the goal of “promoting effective communication and coordination of care:” (1) “to reduce admissions and readmissions”⁴⁹⁰ as patients with these conditions who do not adhere to their medication regimens are at an increased risk of relapse and readmission;^{491 492 493} (2) “to embed best practices to enable successful transitions between all settings of care,”⁴⁹⁴ because ensuring medication continuation following discharge is a critical component of transitioning from the IPF to the home or home health care; and (3) “to enable effective healthcare system navigation,”⁴⁹⁵ as we believe that this measure will encourage IPFs to provide information to patients regarding the importance of medication continuation and guidance on how to fill prescriptions following discharge.

The measure would complement the portfolio of facility-level measures in the IPFQR Program that assess the transition from the inpatient to outpatient setting: Follow-Up After Hospitalization for Mental Illness; Thirty-day All Cause Unplanned Readmission Following Psychiatric Hospitalization in an Inpatient Psychiatric Facility; Transition Record with Specified Elements Received by Discharged Patients; and Timely Transmission of Transition Record.

To access the report, click on the zip file titled “Inpatient Psychiatric Facility Medication Continuation Measure.”

c. Measure Calculation

The measure is calculated by dividing the number of admissions that meet the numerator criteria (described below) by the number of admissions that meet the denominator criteria (also described below).

(1) Numerator

The numerator for the measure includes discharges for patients with a principal diagnosis of MDD, schizophrenia, or bipolar disorder in the denominator who were dispensed at least one evidence-based outpatient medication within 2 days prior to discharge through 30 days post-discharge. The evidence-based medications that define the numerator are based on the practice guidelines for each condition from the APA and VA/DoD.^{496 497 498 499 500} Furthermore, we sought to align the medications with evidence-based medications from existing quality measures including the Antidepressant Medication Management measure from the Healthcare Effectiveness Data and Information Set (HEDIS) 2015 for MDD, the Adherence to Antipsychotic Medications for Individuals with Schizophrenia measure (NQF #1879) for schizophrenia, and the Adherence to Mood Stabilizers for Individuals with Bipolar I Disorder measure (NQF #1880) for bipolar

⁵⁰⁰ U.S. Department of Veterans Affairs & U.S. Department of Defense. (2010) VA/DOD clinical practice guideline for management of bipolar disorder in adults. Retrieved from: http://www.healthquality.va.gov/guidelines/MH/bd/bd_305_full.pdf.

disorder. Staff pharmacists reviewed these lists of medications for completeness and appropriateness in the IPF setting. The finalized lists of evidence-based medications are available in the measure methodology report at: <https://www.cms.gov/medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>. To access the report, click on the zip file titled “Inpatient Psychiatric Facility Medication Continuation Measure.”

We considered the appropriate number of days prior to discharge and post-discharge to include in the follow-up period for the numerator. Clinical experts noted that discharge planning may start as early as 2 days prior to discharge and that some facilities may help patients fill their outpatient prescriptions prior to discharge. Therefore, the numerator includes outpatient medications filled up to 2 days prior to discharge (Day – 2 through Day – 1). The follow-up period extends 30 days post-discharge (Day 0 through Day 30) to align with other care coordination measures, such as the 30 day follow-up period in Follow-Up After Hospitalization for Mental Illness (FUH) (NQF #0576) which we finalized for the IPFQR Program in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50893 through 50895). To further support a 30-day follow-up period, we confirmed that over 93 percent of the evidence-based prescriptions filled prior to the admission were for a 30-day supply, which indicates that most patients would need to fill a medication within 30 days of discharge to avoid gaps in treatment even if they had some medications at home.

(2) Denominator

The denominator for the measure includes Medicare FFS beneficiaries aged 18 years and older who were discharged from an IPF to home or home health care⁵⁰¹ with a principal diagnosis of MDD, schizophrenia, or bipolar disorder. The denominator excludes discharges for patients who:

- Received Electroconvulsive Therapy (ECT) during the inpatient stay or follow-up period because some patients who receive ECT during the inpatient stay or follow-up period may

⁵⁰¹ The measure specifications, as submitted to the MAP, did not include home health care. For details of this addition, please see the measure methodology report: <https://www.cms.gov/medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>. To access the report, click on the zip file titled “Inpatient Psychiatric Facility Medication Continuation Measure.”

have failed pharmacotherapy and would not fill an evidence-based prescription post-discharge;

- Received Transcranial Magnetic Stimulation (TMS) during the inpatient stay or follow-up period because some patients who receive TMS during the inpatient stay or follow-up period may have failed pharmacotherapy and would not fill an evidence-based prescription post-discharge;
- Were pregnant during the inpatient stay because some of the evidence-based medications for the treatment of MDD, schizophrenia, and bipolar disorder are contraindicated during pregnancy;
- Had a secondary diagnosis of delirium because some of the evidence-based medications for the treatment of MDD, schizophrenia, and bipolar disorder are contraindicated for patients with delirium; or
- Had a principal diagnosis of schizophrenia and secondary diagnosis of dementia because many FDA-approved medications for the treatment of schizophrenia have a Boxed Warning due to an increased risk of mortality in elderly patients with dementia-related psychosis treated with antipsychotic drugs.⁵⁰²

All patients in the measure denominator are enrolled in Medicare Parts A, B, and D during the measurement and follow-up periods. Therefore, these patients have prescription drug coverage for evidence-based medications in the measure. While patients are responsible for some out-of-pocket medication costs after Part D has been applied, low income patients qualify for additional support through both Medicare and Medicaid to help mitigate the cost of prescriptions and ensure that patients do not face

financial barriers to filling necessary medications. We refer readers to the measure specifications for more details about measure inclusions and exclusions at: <https://www.cms.gov/medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>. To access the report, click on the zip file titled “Inpatient Psychiatric Facility Medication Continuation Measure.”

d. Data Sources

The measure will be implemented using Medicare FFS Parts A, B, and D claims and enrollment data to calculate the measure results. Valid prescription drug claims from Medicare Parts B and D provide the data necessary to calculate this measure. Therefore, no data collection will be required from IPFs. The measure will be reported as a combined facility-level rate across all three conditions. The measurement period is 2 years to maximize the number of facilities with a minimum of 75 discharges, which is necessary for calculation of reliable facility-level scores.⁵⁰³ We will inform stakeholders of the claims data collection period through a subregulatory process, such as on a CMS Web site and/or on our applicable listservs.

e. Public Comment

During the measure development process, we solicited public comments on the measure via the CMS Quality Measures Public Comment Page.⁵⁰⁴ We provided the draft measure information form⁵⁰⁵ and draft measure justification form⁵⁰⁶ to the public for review. We accepted public comments from August 25, 2016 through September 15, 2016. Numerous commenters expressed

support for the Medication Continuation Following Inpatient Psychiatric Discharge (NQF #3205) measure (with only 6 of 53 commenters expressing reluctance to support the measure) and commented on the importance of measuring medication continuation as this is an important component of care transitions and reduces the risk of readmissions. We received public comments about denominator specifications, numerator specifications, data collection, attribution of the measure to the IPF, and the relevance of the proposed measure. After review and evaluation of all the public comments received, we expanded the follow-up period from day of discharge (Day 0) through 30 days post discharge to include outpatient prescriptions filled up to 2 days prior to discharge as described above. For specific information regarding the comments we received, we refer readers to the public comment summary at: <https://www.cms.gov/medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>. To access the report, click on the zip file titled “Inpatient Psychiatric Facility Medication Continuation Measure.”

We believe this measure evaluates a process with a demonstrated quality gap and has the potential to benefit patients. For these reasons and the reasons stated above, we proposed the Medication Continuation Following Inpatient Psychiatric Discharge (NQF #3205) measure described in this section for the FY 2020 payment determination and subsequent years.

In summary, we proposed one measure for the FY 2020 payment determination and subsequent years, as shown in the table below.

NEWLY PROPOSED IPFQR PROGRAM MEASURE FOR THE FY 2020 PAYMENT DETERMINATION AND SUBSEQUENT YEARS

National quality strategy priority	NQF #	Measure ID	Measure
Communication/Care Coordination	3205	N/A	Medication Continuation Following Inpatient Psychiatric Discharge.

We welcomed public comment on our proposal to adopt the Medication Continuation Following Inpatient Psychiatric Discharge (NQF #3205) measure.

Comment: Several commenters supported adoption of the Medication Continuation Following Inpatient Psychiatric Discharge (NQF #3205) measure. Other commenters expressed appreciation for CMS developing

claims-based measures to limit the burden on IPFs.

Response: We thank these commenters for their input and appreciate this support.

⁵⁰⁶ *Ibid.*

Comment: Many commenters expressed concerns that the Medication Continuation Following Inpatient Psychiatric Discharge (NQF #3205) measure will pose undue burden on facilities, which are still updating processes to account for previously adopted measures. Several commenters expressed the concern that IPFs have limited control of medication continuation once their patients are discharged. These commenters observed that patients may experience social or geographical barriers to filling medication prescriptions that are beyond the control of IPFs.

Response: We recognize that there are factors external to the IPF that influence filling prescriptions post-discharge in the psychiatric population. While it may not be possible to achieve complete post-discharge compliance with pharmacotherapy, there is evidence that improvements to the quality of care for patients in the IPF setting, including the discharge processes, can help to increase medication continuation rates. We discussed this evidence in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20123). However, depending on a facility's current state of performance and the implicit requirements of this measure, process changes (such as updates to clinical procedures or adoption of new workflows) to achieve higher performance may be significant and sometimes require a considerable period after initial implementation to realize measurable improvement. This may particularly be true for a measure such as the Medication Continuation Following Inpatient Psychiatric Discharge (NQF #3205) measure, which assesses the degree to which facilities address a critical element of successful care transition following discharge, a component of quality care that some facilities have not traditionally attended to. We agree with commenters that updating processes to achieve high performance, which likely requires multiple and innovative efforts related to patient communication, and coordination and communication with outpatient providers, creates burden on IPFs. While we believe this is an important measure because of the clinical benefits of appropriate pharmacotherapy post discharge and the current performance gap on the measure, we would like to be sensitive to facilities, especially small, rural facilities, that may not have sufficient resources to meet the burden this measure could bring.

To accommodate the need for facilities to develop and implement innovative efforts for this measure, we are not adopting it at this time.

However, we will consider re-proposing this measure in future rulemaking.

Comment: Many commenters expressed concerns that the NQF has not completed the endorsement review of the measure.

Response: This measure was submitted to NQF for endorsement on December 16, 2016, and the measure received endorsement from the NQF Consensus Standards Approval Committee (CSAC) following the June 21 CSAC meeting, pending a 30 day appeals process that closes on August 2, 2017.

Comment: Many commenters expressed concerns that limitation of the measure to patients enrolled in Medicare Parts A, B, and D may result in an impacted population that is both too small to be meaningful for public reporting and one that does not experience the same access to medications barriers as other inpatient psychiatric patients.

Response: We thank the commenters for expressing their concerns, but we disagree with the commenters that limiting the measure to patients with Medicare Parts A, B, and D for use in the IPFQR program limits the utility of the measure. While we agree that the patients included in the measure may not experience the same barriers to access to medications that some other patients encounter because low income Medicare patients qualify for additional support to help pay for medications, we note that the evidence based interventions to improve medication adherence would apply to all patients. Further, considering that the Medicare population may have lower barriers to access, we would expect to see higher medication continuation rates and less variation in performance across facilities. As described in the measure technical report,⁵⁰⁷ the claims data from 1,694 IPFs demonstrated ample opportunity for improvement. The mean medication continuation rate was 79 percent across all facilities, with variation of 22 percent between the 10th and 90th percentile.

Comment: Many commenters expressed concerns that IPFs may not receive feedback with sufficient time to improve processes prior to public reporting of the data since they will not be able to independently calculate measure results (as they do not have access to Part D claims).

Response: We thank the commenters for providing these comments, and we

will consider their views if we decide to propose this measure in the future.

Comment: Some commenters believed that the link between measure performance and patient outcomes has not been adequately demonstrated. Commenters further expressed the belief that the measure may not generate information that is meaningful to consumers in making healthcare choices.

Response: We thank the commenters for their comments, but disagree with them. We believe that information on medication continuation is important for patients discharged from the inpatient psychiatric setting with MDD, schizophrenia, or bipolar disorder because of significant negative outcomes associated with patients not adhering to recommended medication. We note that the MAP Hospital Workgroup concluded that the measure addressed a critical quality objective, was evidence-based, and would contribute to efficient use of resources. Further, performance on this measure in testing showed that improved performance on this measure was associated with reduced unplanned readmissions, indicating that performance on this measure is linked with patient outcomes.

Comment: Many commenters expressed the concern that filling a prescription does not always indicate compliance to treatment. They suggested that patient compliance, not claims for prescriptions, should be the target of quality measurement.

Response: We acknowledge that increasing patient compliance is the ultimate goal of quality improvement informed by the measure but disagree with the comment that a medication continuation measure assessed from prescription claims does not indicate gaps in compliance. The filling of a prescription is a critical step in improving compliance. We observed ample opportunity for improvement based on a mean medication continuation rate of 79 percent across 1,694 IPFs, with variation of 22 percent between the 10th and 90th percentile. Therefore, we know that at a minimum, approximately 20 percent of patients are not compliant because they are not in possession of their outpatient psychiatric medications following discharge. Measuring actual compliance would be burdensome for both facilities and patients and therefore is not feasible to measure.

Comment: Some commenters expressed the belief that technical questions regarding denominator inclusion and exclusion criteria and measure calculation methods have not been sufficiently answered. Commenters

⁵⁰⁷ Health Services Advisory Group. Final Methodology Report: Medication Continuation Following Inpatient Discharge. Tampa, FL; 2016.

were specifically concerned regarding how prescriptions filled for patients without Part D would be identified, how free samples provided at or before discharge would be identified, and whether facilities without inpatient pharmacies would be at a disadvantage for this measure.

Response: Patients who do not have Medicare Part D coverage are excluded from the denominator of this measure. We anticipate that few patients in the population for this measure would be eligible for samples because low income Medicare patients qualify for additional support to help pay for medication copays. Finally, this measure does not

include medications filled at inpatient pharmacies in the measure numerator. This measure gives facilities the flexibility to determine which interventions are most appropriate for their patient populations, including filling prescriptions for patients prior to discharge through outpatient pharmacies. However, the measure does not encourage any particular intervention over another because interventions to improve medication continuation should be tailored to meet each patient's needs and circumstances.

After consideration of the public comments we received, we are not finalizing adoption of the Medication

Continuation Following Inpatient Psychiatric Discharge (NQF #3205) measure for the reasons discussed above. If we decide to propose this measure in the future, we will consider information and recommendations provided by commenters at that time.

4. Summary of Previously Finalized Measures for the FY 2020 Payment Determination and Subsequent Years

The number of measures for the FY 2020 payment determination and subsequent years totals 18 as set forth in the table below.

PREVIOUSLY FINALIZED MEASURES FOR THE FY 2020 PAYMENT DETERMINATION AND SUBSEQUENT YEARS

NQF #	Measure ID	Measure
640	HBIPS-2	Hours of Physical Restraint Use.
641	HBIPS-3	Hours of Seclusion Use.
560	HBIPS-5	Patients Discharged on Multiple Antipsychotic Medications with Appropriate Justification.
576	FUH	Follow-up After Hospitalization for Mental Illness.
1661	SUB-1	Alcohol Use Screening.
1663	SUB-2 and SUB-2a	Alcohol Use Brief Intervention Provided or Offered and SUB-2a Alcohol Use Brief Intervention.
1664	SUB-3 and SUB-3a	Alcohol and Other Drug Use Disorder Treatment Provided or Offered at Discharge and SUB-3a Alcohol and Other Drug Use Disorder Treatment at Discharge.
1651	TOB-1	Tobacco Use Screening.
1654	TOB-2 and TOB-2a	Tobacco Use Treatment Provided or Offered and TOB-2a Tobacco Use Treatment.
1656	TOB-3 and TOB-3a	Tobacco Use Treatment Provided or Offered at Discharge and Tob-3a Tobacco Use Treatment at Discharge.
1659	IMM-2	Influenza Immunization.
647	N/A	Transition Record with Specified Elements Received by Discharged Patients (Discharges from an Inpatient Facility to Home/Self Care or Any Other Site of Care).
648	N/A	Timely Transmission of Transition Record (Discharges from an Inpatient Facility to Home/Self Care or Any Other Site of Care).
N/A	N/A	Screening for Metabolic Disorders.
431	N/A	Influenza Vaccination Coverage Among Healthcare Personnel.
N/A	N/A	Assessment of Patient Experience of Care.
N/A	N/A	Use of an Electronic Health Record.
2860 *	N/A	Thirty-Day All-Cause Unplanned Readmission Following Psychiatric Hospitalization in an Inpatient Psychiatric Facility.

* Since this measure was finalized in the FY 2017 IPPS/LTCH PPS final rule (57239 through 57246), NQF endorsement has been received.

5. Possible IPFQR Program Measures and Topics for Future Consideration

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20126 through 20127), we discussed possible IPFQR Program measures and topics for future consideration. As we have previously indicated (79 FR 45974 through 45975), we seek to develop a comprehensive set of quality measures to be available for widespread use for informed decision-making and quality improvement in the IPF setting. Therefore, through future rulemaking, we intend to propose new measures for development or adoption that will help further our goals of achieving better healthcare and improved health for individuals who obtain inpatient psychiatric services through the widespread dissemination

and use of quality information. As noted on the "List of Measures under Consideration for December 1, 2016"⁵⁰⁸ published by the NQF on behalf of CMS, we are considering a measure of Medication Reconciliation on Admission and a measure of Identification of Opioid Use Disorder among Patients Admitted to Inpatient Psychiatric Facilities. We welcomed comments on these measure concepts for future inclusion in the IPFQR Program. In addition, we have identified several areas which we believe are important to stakeholders, but which are not currently sufficiently covered by

⁵⁰⁸ <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityMeasures/Downloads/Measures-under-Consideration-List-for-2016.pdf>.

IPFQR Program measures. These areas are:

- Family and caregiver engagement;
- Patient experience of care;
- Opioid use and treatment;
- Access to care; and
- Inpatient assaults and violence.

We welcomed public comments on possible new measures in these or other areas.

Comment: Many commenters expressed support for measures in the areas of: (1) Family and caregiver engagement; (2) patient experience of care; (3) access to care; and (4) inpatient assaults and violence. These commenters further encouraged CMS to consider clinical outcomes measures. Finally, the commenters urged CMS to engage with stakeholders during

measure development and implementation.

Response: We thank these commenters for their support of these measure topic areas and will continue to engage with stakeholders in measure development and implementation.

Comment: Many commenters urged CMS to develop and implement a patient experience of care survey and measure specific to the inpatient psychiatric setting. One commenter further recommended that this survey include questions regarding the patient's understanding of diagnoses, treatment plans, and follow-up care.

Response: We believe that patient experience of care is an important measure gap in the IPFQR Program and are actively evaluating ways to address this topic. We will take commenters' suggestions into consideration as we develop future program policy.

Comment: Several commenters urged CMS to develop and implement measures that address suicide. Some of these commenters specifically recommended a measure to address hospital processes to help patients manage suicidal ideation in the hospital and post discharge.

Response: We will consider this input as we develop and select measures for the IPFQR Program.

Comment: Many commenters recommended that CMS develop and implement claims-based measures that evaluate clinical outcomes.

Response: We believe that clinical outcomes measures are an important part of quality reporting, and that claims-based measures are effective for reducing reporting burden on facilities. We will take commenters' suggestions into consideration as we develop and select measures for the IPFQR Program.

Comment: One commenter recommended that CMS adopt measures related to opioid treatment to determine if there are access issues associated with this treatment.

Response: We believe that the current opioid epidemic is a significant public health issue, and we are striving to address it in the IPFQR Program to the extent possible, including adoption of the SUB-3 & 3a Measure (Alcohol and Other Drug Use Disorder Treatment Provided or Offered at Discharge and SUB-3a Alcohol and Other Drug Use Disorder Treatment at Discharge) in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57239 through 57241) and inclusion of Identification of Opioid Use Disorder among Patients Admitted to Inpatient Psychiatric Facilities on the List of Measures Under Consideration for December 1, 2016. We will continue to consider ways to address this issue as

we develop and select measures for the IPFQR Program.

Comment: Many commenters recommended that CMS identify a method for data validation as part of the measure development and adoption process.

Response: We will consider this input as we develop and select measures for the IPFQR Program. We are currently seeking to identify a means to implement data validation in the IPFQR Program.

We thank the commenters and we will consider their views as we develop further measures for use in the IPFQR Program.

6. Public Display and Review Requirements

We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53653 through 53654), in which we finalized that we would publicly display the submitted data on the CMS Web site beginning in the first quarter of the calendar year following the respective payment determination year. We also finalized that IPFs would have the opportunity to preview their data between September 20 and October 19 of the respective payment determination year. In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50897 through 50898), we finalized policies on public display and review of data stating that we would publicly display the data in April of the calendar year following the start of the payment determination year and that the preview period would be 30 days approximately twelve weeks prior to the public display of the data. In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57248 through 57249), we finalized changes to how we specify the timeframes for the IPFQR Program, including that we would: (1) No longer specify the exact dates of the preview period or data publication in rulemaking; (2) make the data for the IPFQR Program available as soon as possible; (3) announce the exact timeframes through subregulatory guidance; and (4) continue our policy that the time period for review will be approximately 30 days. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20127), we did not propose any changes to the public display and review policies.

7. Form, Manner, and Timing of Quality Data Submission for the FY 2019 Payment Determination and Subsequent Years

a. Procedural Requirements for FY 2019 Payment Determination and Subsequent Years

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53654 through 77 FR 53655), we finalized procedural requirements for the IPFQR Program, including the requirements that facilities must do the following to participate in the IPFQR Program:

- Register with QualityNet before the IPF begins reporting;
- Identify a QualityNet Administrator who follows the registration process listed on the QualityNet Web site;
- Complete a Notice of Participation (NOP) within a specified time period; and,
- Submit aggregate numerator and denominator data for all age groups, for all measures.

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50901), we clarified that the policy we adopted for the FY 2016 payment determination also applies to the FY 2017 payment determination and subsequent years, unless we change it through future rulemaking. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20127), we proposed to make changes related to the Notice of Participation (NOP) and withdrawals for the FY 2019 payment determination and subsequent years.

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53654 through 53655), we finalized our policies that IPFs participating in the IPFQR Program must comply with several procedural requirements. In that rule, one of the policies we finalized was that the time frame for completing an online NOP form is between January 1 and August 15 before each respective payment determination year (for example, for the FY 2017 payment determination year, IPFs would be required to submit an NOP between January 1, 2016 and August 15, 2016). Similarly, in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53654), we also finalized that withdrawals from the IPFQR Program will be accepted no later than August 15 before the beginning of each respective payment determination year.

As described in section IX.D.7.b. of the preamble of this final rule, there have been times that we have updated the data submission period through subregulatory means; this has led to a data submission period that is not aligned with the submission period for the NOP or program withdrawal. To ensure these dates align, in the

proposed rule, we proposed to change the submission timeframes for both NOPs and withdrawals from between January 1 and August 15 before each respective payment determination year to prior to the end of the data submission period before each respective payment determination year. This means that we proposed to accept NOPs and withdrawals any time prior to the end of the data submission period before the payment determination year. For example, for the FY 2019 payment determination year, the end of the data submission period would be a date on or after June 15, 2018 (which we would announce via subregulatory means). This date will coincide with the deadline to submit an NOP or withdraw from the program. In addition, we proposed to provide precise dates that define the end of the data submission period/NOP/withdrawal submission deadline through subregulatory means, such as on a CMS Web site and/or on our applicable listservs, beginning with the FY 2019 payment determination.

We invited public comment on our proposals to: (1) Change the submission timeframes for both NOPs and withdrawals to the end of the data submission period before each respective payment determination year; and (2) provide precise dates that define the end of the data submission period/NOP/withdrawal submission deadline through subregulatory means for the FY 2019 payment determination and subsequent years.

Comment: Several commenters supported CMS' proposal to align the submission period for NOPs and withdrawals with the end of the data submission period, which will be provided through subregulatory means.

Response: We thank the commenters for this support.

After consideration of the public comments we received, we are finalizing our proposals to: (1) Change the submission timeframes for both NOPs and withdrawals to the end of the data submission period before each respective payment determination year; and (2) provide precise dates that define the end of the data submission period/NOP/withdrawal submission deadline through subregulatory means for the FY 2019 payment determination and subsequent years as proposed.

b. Data Submission Requirements for the FY 2019 Payment Determination and Subsequent Years

We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53655 through 53656) and the FY 2014 IPPS/LTCH PPS final rule (78 FR 50901) for our previously finalized policies

regarding quality data submission requirements. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20127 through 20128), we proposed to make changes related to the data submission period for the FY 2019 payment determination and subsequent years.

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53655 through 53657) we finalized our policies related to reporting periods and submission timelines for data required by the IPFQR Program. IPFs are required to submit their aggregated data on the measures on an annual basis, beginning in FY 2014 (77 FR 53655). In that rule, we specified that data must be submitted between July 1 and August 15 of the calendar year preceding a given payment determination year (for example, between July 1, 2015 and August 15, 2015 for the FY 2016 payment determination (77 FR 53655 through 53657)). In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50899), we clarified that this policy applies to all future years of data submission for the IPFQR Program unless we change the policy through future rulemaking.

Because there have been times that the submission period has been updated through the subregulatory process (for example, due to systems issues impacting data collection in the specified timeframe), in order to avoid contradictory guidance between dates established in the **Federal Register** and dates established through subregulatory guidance, in the proposed rule, we proposed to no longer specify the exact dates of the submission period through rulemaking. We proposed to provide these exact dates through a subregulatory process instead, beginning with the FY 2019 payment determination. We proposed to shift to a 45-day submission period beginning at least 30 calendar days following the end of the data collection period. For example, for the FY 2019 payment determination, the latest reporting period for a measure for which IPFs must submit data through the QualityNet Secure Portal ends on March 31, 2018 for the IMM-2 measure. In this example, the submission period would begin at least 30 days after March 31, 2018 (that is, no earlier than May 1, 2018). IPFs then would have 45 days from May 1 to submit their data, which would result in a June 15, 2018 submission deadline for this example. Because the exact dates could vary from year to year, for the FY 2019 payment determination and subsequent years, we also proposed to provide notification of the exact dates of the 45-day submission period through subregulatory means,

such as on a CMS Web site and/or on our applicable listservs.

We welcomed public comments on our proposals to: (1) Change the specification of the submission deadline from exact dates (that is, July 1–August 15) to a 45-day submission period beginning at least 30 days following the end of the data collection period; and (2) provide notification of the exact dates of the 45-day submission period through subregulatory means for the FY 2019 payment determination and subsequent years.

Comment: Several commenters supported CMS' proposal to change the specification of the submission deadline and provide notification of the exact dates through subregulatory means.

Response: We thank these commenters for this support.

Comment: One commenter asked for clarification whether this proposal pertains only to data submitted via the QualityNet Secure Portal, as opposed to through the NHSN Web site.

Response: This proposal only applies to data submitted via the QualityNet Secure Portal.

Comment: Many commenters expressed concerns that the data submission period, as proposed, may not allow adequate time to abstract and audit the data prior to submission. These commenters were also concerned that IPFs may have insufficient warning regarding the data submission timeframe for appropriate resource planning.

Response: We recognize that IPFs must plan for appropriate resources for data collection and submission. We will strive to give as much notice as possible. It is our intent to continue the July 1 to August 15 data reporting period. However, because there are instances where adherence to these dates would not be possible, we wish to provide more flexibility and communicate the dates of reporting periods (or confirmation of the July 1 through August 15 timeframe) through subregulatory means. We expect that in most, if not all, cases, changes in the July 1 to August 15 reporting period will be to delay and/or extend the reporting period, rather than to move it forward.

After consideration of the public comments we received, we are finalizing our proposals as proposed to: (1) change the specification of the submission deadline from exact dates (that is, July 1–August 15) to a 45-day submission period beginning at least 30 days following the end of the data collection period; and (2) provide notification of the exact dates of the 45-day submission period through subregulatory means for the FY 2019

payment determination and subsequent years

c. Reporting Requirements for the FY 2019 Payment Determination and Subsequent Years

We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53655 through 53657), the FY 2014 IPPS/LTCH PPS final rule (78 FR 50901 through 50902), and the FY 2016 IPF PPS final rule (80 FR 46715 and 46716), for information about data reporting periods. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20128) we did not propose any changes to these policies.

d. Population and Sampling

We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53657 through 53658), the FY 2014 IPPS/LTCH PPS final rule (78 FR 50902), FY 2015 IPF PPS final rule (79 FR 45973), the FY 2016 IPF PPS final rule (80 FR 46717 through 46719), for information about population, sampling, and minimum case thresholds. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20128), we did not propose any changes to the population and sampling methodology or to the minimum case thresholds.

e. Data Accuracy and Completeness Acknowledgement (DACA) Requirements

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20128), we did not propose any changes to the DACA requirements and refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53658) for more information on these requirements.

8. Reconsideration and Appeals Procedures

We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53658 through 53660), FY 2014 IPPS/LTCH PPS final rule (78 FR 50953), and 42 CFR 412.434 for details on our reconsideration and appeals procedures. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20128), we did not propose any changes to these policies.

9. Extraordinary Circumstances Exceptions (ECE) Policy for the IPFQR Program

a. Background

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53659 through 53660), we finalized policies for facilities to request waivers, now called “exceptions” (79 FR 45978), from quality reporting requirements for the FY 2014 payment determination and subsequent years. We stated that in the event of extraordinary circumstances not within the control of IPFs, such as a natural disaster, IPFs

may request a reporting extension or a complete waiver of the requirement to submit quality data for one or more quarters for the FY 2014 payment determination and subsequent years. In that rule, we also finalized that facilities would be required to submit a request form with the following information:

- The IPF’s CMS Certification Number (CCN);
- The IPF’s name;
- Contact information for the IPF’s Chief Executive Officer (CEO) and any other designated personnel, including name, email address, telephone number, and mailing address (the address must be a physical address, not a post office box);
- The IPF’s reason for requesting an extension or waiver;
- Evidence of the impact of extraordinary circumstances, including but not limited to photographs, newspaper and other media articles; and
- A date when the IPF will again be able to submit IPFQR Program data, and a justification for the proposed date.

In addition, we finalized that the form must be signed by the IPF’s CEO and submitted within 30 days of the date that the extraordinary circumstance occurred. We also finalized that following the receipt of the request form, we would: (1) Provide a written acknowledgement, using the contact information provided in the request, to the CEO and any additional designated IPF personnel, notifying them that the IPF’s request has been received; and (2) provide a formal response to the CEO and any designated IPF personnel, using the contact information provided in the request, notifying the IPF of our decision. Furthermore, in that rule, we discussed that the above policy does not preclude us from granting waivers or extensions to IPFs that have not requested them when we determine that an extraordinary circumstance has affected an entire region or locale. We stated that if we make the determination to grant such a waiver or extension, we would communicate this decision through routine communication channels (77 FR 53659). In the FY 2014 IPPS/LTCH PPS final rule, we did not make any changes to this policy (78 FR 50903).

In the FY 2015 IPF PPS final rule (79 FR 45978), we clarified that the term “exception” is synonymous with the term “waiver” used in previous rules and renamed our policy to “Extraordinary Circumstances Exception” in order to align with similar exceptions in other CMS quality reporting programs. In that rule, we also finalized that that we may grant a waiver or extension to IPFs if we

determine that a systemic problem with one of our data collection systems directly affects the ability of the IPFs to submit data. We stated that because we do not anticipate that these types of systemic errors will occur often, we do not anticipate granting a waiver or extension on this basis frequently (79 FR 45978). We noted that if we make the determination to grant a waiver or extension, we would communicate this decision through routine communication channels to IPFs, vendors, and quality improvement organizations (QIOs) by means of, for example, memoranda, emails, and notices on the QualityNet Web site (79 FR 45978).

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20128 through 20130), we proposed to modify aspects of our current ECE policy to align with those of other CMS quality reporting programs. Many of our quality reporting and value-based purchasing programs share common processes for requesting an exception from program reporting due to an extraordinary circumstance not within a provider’s control. We refer readers to the Hospital IQR Program (76 FR 51651 through 51652, 78 FR 50836 through 50837, 79 FR 50277, 81 FR 57181 through 57182, and 42 CFR 412.140(c)(2)), Hospital OQR Program (77 FR 68489, 78 FR 75119 through 75120, 79 FR 66966, and 80 FR 70524), and ASCQR Program (77 FR 53642 through 53643 and 78 FR 75140 through 75141) as well as the HAC Reduction Program (80 FR 49579 through 49581), Hospital Readmissions Reduction Program (80 FR 49542 through 49543), and PCHQR Program (78 FR 50848) for program specific information about extraordinary circumstances exceptions requests. In reviewing the policies for these programs, however, we found five areas in which these programs have variance: (1) Contact Information and Signature on ECE Form—there is inconsistency regarding whether the program requires contact information and a signature on the ECE form from the facility’s or hospital’s CEO versus CEO or designated personnel; (2) Submission deadline—there is inconsistency in requiring the form be submitted within 90 days following the date that the extraordinary circumstance occurred versus within 30 days following the date the extraordinary circumstance occurred; (3) CMS’ response following an ECE request—there is inconsistency regarding specification of a timeline for us to provide our formal response notifying the facility or hospital of our decision; (4) CMS system issues—there is

inconsistency regarding whether programs make explicit the ability to grant ECEs specific for systemic issues with CMS data collection systems that directly affect the ability of hospitals/facilities to submit data; and (5) Policy name—there is inconsistency in the names used to refer to the policy, with some programs using “extraordinary circumstances extensions/exemptions” and some using “extraordinary circumstances exceptions.”

We believe aligning these five areas across the programs will improve administrative efficiencies for affected facilities or hospitals. We note that, in the FY 2018 IPPS/LTCH PPS proposed rule, we also proposed to update ECE policies in the Hospital Readmissions Reduction Program (in section V.I.12. of the preamble of the proposed rule); the HAC Reduction Program (in section V.K.8. of the preamble of the proposed rule), Hospital IQR Program (in section IX.A.15. of the preamble of the proposed rule), and the PCHQR Program (in section IX.B.10. of the preamble of the proposed rule) in order to align policies. We refer readers to these sections for more details.

b. ECE Policy Modifications

The IPFQR Program currently includes policies to: (1) Make explicit the ability to grant ECEs specific for systemic issues with CMS data collection systems that directly affect the ability of hospitals/facilities to submit data; and (2) refer to the ECE policy as “extraordinary circumstances exceptions.” Therefore did not make proposals related to these two items. However, to improve cross-program alignment, in the proposed rule, we proposed to update the IPFQR Program’s ECE policy by: (1) Allowing designated personnel to sign the ECE request form that IPFs currently submit with contact information for the CEO and designated personnel and the signature from the CEO; (2) extending the deadline from 30 days following the date that the extraordinary circumstance occurred to 90 days following the date the extraordinary circumstance occurred; and (3) specifying that we will strive to provide our formal response to an ECE request notifying the IPF of our decision within 90 days of receipt of the IPF’s request. We proposed that these policies would apply beginning with extraordinary circumstances that occur on or after the effective date of the 2018 IPPS/LTCH PPS final rule, anticipated to be October 1, 2017. These proposals are discussed in more detail below.

(1) Signature of Either Designated Personnel or CEO

As discussed above, in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53659 through 53660) we finalized ECE requests for the IPFQR Program must be submitted with contact information for the CEO and any designated personnel, and be signed by the IPF’s CEO. However, we now believe that there may be circumstances in which it is not feasible for an IPF’s CEO to sign the ECE request form, such as in cases where the CEO has become disabled or is deceased. Also, in the event that the CEO of a facility affected by an extraordinary circumstance, such as a natural disaster, is unavailable to sign the ECE request form, we believe that the affected facility should be able to submit ECE form despite the CEO’s inability to sign. Therefore, we proposed that ECE forms may be signed by either the CEO or the designated personnel as listed on the ECE form.

(2) ECE Request Submission Deadline

As discussed above, in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53659 through 53660) we finalized that ECE requests for the IPFQR Program must be submitted within 30 days of the date that the extraordinary circumstance occurred. However, we believe that it may be difficult for some IPFs to timely evaluate the impact of a certain extraordinary circumstance within 30 calendar days. Therefore, we proposed to change the ECE request form submission deadline from within 30 days of the date that the extraordinary circumstance occurred to within 90 days of the date that the extraordinary circumstance occurred.

We believe that extending the deadline to 90 calendar days would allow IPFs more time to determine whether it is necessary and appropriate to submit an ECE request and to provide a more comprehensive account of the extraordinary circumstance in their ECE request form to CMS. As an example, if an IPF suffers damage due to a hurricane on October 1, 2017, it would have until December 30, 2017, 90 calendar days after the hurricane, to submit an ECE form via the QualityNet Secure Portal, mail, email, or secure fax as instructed on the ECE form.

(3) Clarification of CMS Response Timeframe

As stated above, in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53659 through 53660), we finalized that following the receipt of the request form, we would provide: (1) A written acknowledgement, using the contact

information provided in the request, to the CEO and any additional designated IPF personnel, notifying them that the IPF’s ECE request has been received; and (2) a formal response to the CEO and any designated IPF personnel, using the contact information provided in the request, notifying the IPF of our decision. We believe that it is important for IPFs to receive timely feedback in a predictable time frame regarding the status of ECE requests. We strive to complete our review of each ECE request as quickly as possible. However, the number of requests we receive and the complexity of the information provided affect the timeframe that we need to make ECE determinations. Therefore, in an effort to provide facilities with a predictable timeframe, we are clarifying that we will strive to complete our review of ECE requests within 90 days of receipt, depending on the number of requests and the complexity of the information provided by facilities.

We welcomed public comments on our proposals to: (1) Specify that ECE forms can be signed by either the CEO or the designated personnel as listed on the ECE form; and (2) change the ECE request form submission deadline to within 90 days of the date that the extraordinary circumstance occurred. We also invited public comments on our intent to clarify that we will strive to complete our review of ECE requests within 90 days of receipt.

Comment: Several commenters supported CMS’ proposals to update the ECE policies to align with other programs.

Response: We thank these commenters for their support.

After consideration of the public comments we received, we are finalizing our proposals as proposed to: (1) Specify that ECE forms can be signed by either the CEO or the designated personnel as listed on the ECE form; and (2) change the ECE request form submission deadline to within 90 days of the date that the extraordinary circumstance occurred.

E. Clinical Quality Measurement for Eligible Hospitals and Critical Access Hospitals (CAHs) Participating in the EHR Incentive Programs

1. Background

The HITECH Act (Title IV of Division B of the ARRA, together with Title XIII of Division A of the ARRA) authorizes incentive payments under Medicare and Medicaid for the adoption and meaningful use of certified electronic health record (EHR) technology (CEHRT). Incentive payments under

Medicare were available to eligible hospitals and CAHs for certain payment years (as authorized under sections 1886(n) and 1814(l) of the Act, respectively) if they successfully demonstrated meaningful use of CEHRT, which includes reporting on clinical quality measures (CQMs or eCQMs) using CEHRT.

Sections 1886(b)(3)(B)(ix) and 1814(l)(4) of the Act also establish downward payment adjustments under Medicare, beginning with FY 2015, for eligible hospitals and CAHs that do not successfully demonstrate meaningful use of CEHRT for certain associated reporting periods. Section 1903(a)(3)(F)(i) of the Act establishes 100 percent Federal financial participation (FFP) to States for providing incentive payments to eligible Medicaid providers (described in section 1903(t)(2) of the Act) to adopt, implement, upgrade and meaningfully use CEHRT.

Under sections 1814(l)(3)(A), 1886(n)(3)(A), and 1903(t)(6)(C)(i)(II) of the Act and the definition of “meaningful EHR user” under 42 CFR 495.4, eligible hospitals and CAHs must report on CQMs selected by CMS using CEHRT, as part of being a meaningful EHR user under the Medicare and Medicaid EHR Incentive Programs.

2. Modifications to the CQM Reporting Requirements for the Medicare and Medicaid EHR Incentive Programs for CY 2017

a. Background

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57255), we stated the CQM reporting periods in CY 2017 for the Medicare and Medicaid EHR Incentive Programs as outlined below. For the Medicare EHR Incentive Program, we finalized the following submission periods for eligible hospitals and CAHs reporting CQMs by attestation and eligible hospitals and CAHs electronically reporting CQMs (81 FR 57255). In regard to the Medicaid EHR Incentive Program, we provided States with the flexibility to determine the submission periods for reporting CQMs.

• *Eligible Hospitals and CAHs Reporting CQMs by Attestation:*

++ For eligible hospitals and CAHs demonstrating meaningful use for the first time in 2017, the reporting period is any continuous 90-day period within CY 2017. The submission period for attestation is the 2 months following the close of the calendar year, ending February 28, 2018.

++ For eligible hospitals and CAHs that demonstrated meaningful use in any year prior to 2017, the reporting

period is the full CY 2017 (consisting of four quarterly data reporting periods). The submission period for attestation is the 2 months following the close of the calendar year, ending February 28, 2018.

• *Eligible Hospitals and CAHs Reporting CQMs Electronically:* For eligible hospitals and CAHs demonstrating meaningful use for the first time in 2017 or that have demonstrated meaningful use in any year prior to 2017, the reporting period is the full CY 2017 (consisting of four quarterly data reporting periods). The submission period for reporting CQMs electronically begins in late spring 2017 and continues through the 2 months following the close of the calendar year, ending February 28, 2018.

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57251 through 57255), we finalized the following reporting criteria regarding the number of CQMs eligible hospitals and CAHs are required to report for the reporting periods in CY 2017:

• *For Attestation:* If only participating in the EHR Incentive Program, report on all 16 available CQMs.

• *For Electronic Reporting:* If only participating in the EHR Incentive Program, or participating in both the EHR Incentive Program and the Hospital IQR Program (81 FR 57150 through 57159), report on 8 of the available CQMs.

For further information on the policies applicable for CQM reporting for the EHR Incentive Program in 2017, we refer readers to the discussion in the FY 2017 IPPS/LTCH PPS final rule at 81 FR 57249 through 57257.

Since the publication of the FY 2017 IPPS/LTCH PPS final rule, we have continued to receive frequent feedback from hospitals and health IT vendors about the ongoing challenges of implementing CQM reporting capabilities. A summary of the main concerns identified by these data submitters is as follows:

- The timing of the transition to a new EHR system during 2017 (system upgrades or new health IT vendor) may influence hospitals' ability to report in a timely manner;
- The current timeframe for the implementation of new EHR requirements presents challenges due to the varying 6 to 24-month cycles needed for vendors to code new measures, test and institute measure updates, train hospital staff, and rollout other upgraded features;
- Hospitals have had difficulty identifying applicable measures that reflect their patient population, given

the reduction in the number of available CQMs (from 29 to 16) for CY 2017;

- Hospitals have had challenges with data mapping and workflow because of the need to collect CY 2017 data while still reporting CY 2016 data; and

- Hospitals have identified challenges in implementing annual updates and new editions of certified health IT because of significant impacts on workflow, staffing, and connected technology systems. (We note that this information was inadvertently omitted in the proposed rule at 82 FR 20130.)

In addition, there have been other recent issues related to the CMS data receiving system not being able to process QRDA Category I files, and as a result, the system is not generating notifications confirming for providers that their files have been received and processed by the system. The aforementioned issues and challenges being experienced by hospitals and health IT vendors are impacting the capability of hospitals to meet the requirements for CY 2017. As a result, we proposed modifications to the CY 2017 final policies in the proposed rule, which would reduce CQM reporting requirements in order for hospitals and health IT vendors to address these issues.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20130 through 20131), we proposed two modifications to our CY 2017 electronic CQM reporting policies for the Medicare and Medicaid EHR Incentive Programs. For eligible hospitals and CAHs reporting CQMs electronically in CY 2017, we proposed to: (1) Decrease the number of calendar quarters for which such hospitals are required to submit data; and (2) decrease the number of CQMs for which such hospitals must submit data (further discussion below). These proposals are made in conjunction with our proposals discussed in sections IX.A.8. and IX.A.10.d. of the preamble of this final rule to align requirements for the Medicare and Medicaid EHR Incentive Programs and the Hospital IQR Program. In making these proposals, we believe that eligible hospitals and CAHs would have additional time to upgrade their systems and processes in preparation for the transition to electronic reporting on additional CQMs for additional quarters in future years.

As we continue to make strides with electronic reporting, we want to ensure we provide eligible hospitals and CAHs with a robust selection of CQMs. As noted above, hospitals have expressed concerns with identifying applicable measures that reflect their patient population; thus, we believe that the

addition of new CQMs in the future will offer more clinically relevant CQMs that facilitate reporting and help drive quality improvement. In section IX.A.9.d. of the preamble of the proposed rule, we discussed and sought feedback on future potential CQMs for the Hospital IQR Program and the Medicare and Medicaid EHR Incentive Programs for eligible hospitals and CAHs.

b. Changes to Policies Regarding Electronic Reporting of CQMs for CY 2017

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20131), in response to concerns from stakeholders, we proposed to modify the CQM reporting period for eligible hospitals and CAHs reporting CQMs electronically for the Medicare and Medicaid EHR Incentive Programs in CY 2017—for eligible hospitals and CAHs demonstrating meaningful use for the first time in 2017 or that have demonstrated meaningful use in any year prior to 2017, the reporting period would be two self-selected quarters of CQM data in CY 2017.

In addition, we proposed to modify the reporting criteria regarding the required number of CQMs for eligible hospitals and CAHs that are reporting electronically for the reporting periods in CY 2017 under the Medicare and Medicaid EHR Incentive Programs—if only participating in the EHR Incentive Program, or participating in both the EHR Incentive Program and the Hospital IQR Program, eligible hospitals and CAHs would report on at least 6 (self-selected) of the available CQMs. For a list of the available CQMs for reporting periods in CY 2017, we refer readers to the table in the FY 2017 IPPS/LTCH PPS final rule at 81 FR 57255.

It should be noted that we did not propose to modify any other aspects of the policies for reporting CQMs electronically for CY 2017, including the submission periods, nor did we propose any changes to our policies for reporting CQMs by attestation.

Through our proposals for CY 2017, we intend to continue to maintain alignment between the Medicare and Medicaid EHR Incentive Programs and the Hospital IQR Program to reduce confusion and reporting burden among participants in the Medicare and Medicaid EHR Incentive Programs that also participate in the Hospital IQR Program. As noted above, we are retaining the submission period for reporting CQMs electronically under the Medicare EHR Incentive Program, in which such submission period begins in late spring 2017 and continues through

the 2 months following the close of the calendar year, ending February 28, 2018. In addition, we are continuing to provide States with the flexibility to determine the submission periods for reporting CQMs under the Medicaid EHR Incentive Program. For more details on the aligned reporting requirements for the Hospital IQR and Medicare and Medicaid EHR Incentive Programs, we refer readers to section IX.A.10.d. of the preamble of this final rule.

We believed that reducing the number of CQMs required to be electronically reported from 8 to 6 would ease the burden on data submitters, allowing them to shift resources to support system upgrades, map data, and train staff on CQMs. Similarly, we proposed reducing the number of data reporting periods to 2 quarters, rather than 4 quarters, and allowing eligible hospitals and CAHs to select which two quarters of CY 2017 to electronically report would offer greater reporting flexibility and allow eligible hospitals, CAHs, and health IT vendors more time to plan for reporting. We recognized that eligible hospitals and CAHs were concerned about their ability to meet the CY 2017 requirements established in the FY 2017 IPPS/LTCH PPS final rule and believed that the proposed modified reporting requirements for CY 2017 would account for the challenges stakeholders are experiencing while requiring the electronic reporting on a portion of CQMs, which is consistent with our goal to transition to electronic reporting (81 FR 57254).

We invited public comment on our proposals to modify the CY 2017 CQM reporting requirements for the Medicare and Medicaid EHR Incentive Programs as described above.

Comment: A majority of commenters supported CMS' proposals to reduce the number of CQMs required to be electronically reported from 8 to 6 available CQMs and reduce the reporting period from one full calendar year of data to two, self-selected quarters of data for CY 2017 electronic reporting. The commenters encouraged CMS to continue to take into account the operational implications of the electronic CQM submission requirements for smaller hospitals that have resource limitations. The commenters noted that as currently proposed, the requirements align with the CY 2017 Joint Commission reporting standards. A few commenters requested CMS to finalize requirements as proposed as soon as possible in order for hospitals to prepare and educate appropriate staff.

Several commenters indicated that the modified reporting period from one full calendar year of data to two, self-selected quarters of data would provide eligible hospitals and CAHs with sufficient time to adequately transition their EHR systems and allow them to avoid a reporting period that overlaps with the quarter in which they transition EHR systems. One commenter indicated that even if facilities were already collecting data on 8 CQMs, the reduction in the number of CQMs required to electronically report and the reporting period would give facilities that have limited resources or difficulties reporting for an entire calendar year the opportunity to be more successful.

Response: We thank the commenters for their support regarding our proposal to reduce the number of CQMs required to be electronically reported from 8 to 6 available CQMs and reduce the reporting period from one full calendar year of data to two, self-selected quarters of data for CY 2017 electronic reporting. CMS remains committed to engaging with stakeholders to address their concerns, including hospitals of varying sizes.

Comment: Several commenters supported the proposed policies for CY 2017 that reduce the reporting period from one full calendar year of data to two, self-selected quarters of data and the number of CQMs required to electronically report from 8 to 6, but recommended that CMS further reduce the CY 2017 requirements by retaining the CY 2016 established policies that required the electronic reporting of 4 CQMs for one quarter of data. The commenters indicated that maintaining the CY 2016 CQM reporting requirements for electronic submission would provide certified health IT vendors and CMS with additional time to work on measure specification and data validation, while giving hospitals more time to focus on incorporating system upgrades, data mapping, staff training, planning for data processing for CMS reporting and other issues.

In addition, some commenters expressed concern that the incremental increase in CQM electronic reporting requirements would impact the ability of eligible hospitals and CAHs to effectively meet current CQM reporting requirements and concurrently prepare for increased CQM electronic reporting requirements in the following program year. As a result, additional burden would be placed on hospitals by limiting available time for testing prior to production file submission. These commenters indicated that recent updates to measure specifications have

required labor-intensive updates to complete terminology mapping, which has limited the ability of hospitals to expand reporting on additional CQMs. The commenters noted that implementation of electronic CQM reporting is a multi-year, incremental process that requires significant capital and operating expenditure, and a significant investment of time and energy by staff.

Response: We appreciate commenters' feedback regarding the challenges associated with the electronic reporting of CQMs. As previously noted, in response to hospital and health IT vendor concerns, we proposed to modify previously finalized policies by reducing CQM reporting requirements. Based upon continued feedback from commenters, we are finalizing a modification to our proposal which reduces the CQM reporting requirements for the CY 2017 reporting period further than initially proposed. For the CY 2017 reporting period, we are requiring eligible hospitals and CAHs to report one, self-selected calendar quarter of data for 4 self-selected, available CQMs, instead of reporting two, self-selected calendar quarters of data for 6 available CQMs. We believe that these modified reporting requirements will provide eligible hospitals, CAHs, and health IT vendors with additional time to plan for data processing, report quality data to CMS, and focus on system upgrades, data mapping, staff training, and other issues, while also providing CMS with more time to address data validation. We will continue to monitor the progress of hospitals implementing the CQM reporting requirements and to engage hospitals regarding their experiences as we develop future CQM policy.

In regard to the impact of the incremental increase in CQM electronic reporting requirements and recent updates to measure specifications on the ability of eligible hospitals and CAHs to meet current CQM reporting requirements and concurrently prepare for increased CQM reporting requirements in the following program year, we believe that the modified policies that we are finalizing will address these commenters' concerns. Specifically, we decided to finalize for CY 2017 the same CQM reporting requirements established for CY 2016 (80 FR 49757 and 49758) (eligible hospitals and CAHs will be required to report one, self-selected quarter of data (for CY 2016, either Q3 or Q4) for 4 self-selected, available CQMs), which we believe will provide eligible hospitals and CAHs additional experience

reporting CQMs electronically, incorporating annual measure specification updates, and reviewing the results of CQM data collection efforts prior to an incremental increase in the CQM reporting requirements.

For the CY 2017 reporting period, eligible hospitals and CAHs will be able to self-select 4 CQMs from the available 16 CQMs in the EHR Incentive Program measure set and meet the reporting requirements by submitting data via QRDA I files, zero denominator declaration, or case threshold exemption. In addition, we are continuing to allow manual aggregation of data for those eligible hospitals and CAHs experiencing issues with data aggregation in the process of upgrading EHR systems or changing health IT vendors. In order to provide eligible hospitals and CAHs with maximum flexibility, they may self-select which calendar quarter of data to report for the CY 2017 reporting period.

We note that hospitals have reported data electronically for several years to both the Medicare EHR Incentive Program and the Hospital IQR Program (3 prior years of pilot reporting and 3 prior years of voluntary reporting) and believe that the majority of hospitals should be ready to successfully report on at least 4 electronic CQMs beginning with the CY 2017 reporting period. However, we believe that the modification to our proposal regarding the CQM reporting requirements for CY 2017 that we are finalizing is responsive to stakeholder feedback, including feedback from small, rural, tribal, and Indian Health Service hospitals that have expressed the need for additional time and flexibility to successfully implement all of the CQM reporting requirements. Lastly, CMS is aligning the requirement for the reporting of one, self-selected calendar quarter of data for 4 CQMs between the Hospital IQR Program and the Medicare and Medicaid EHR Incentive Programs in order to streamline the electronic submission of quality data for hospitals.

Although we are not finalizing our proposal to require the electronic reporting of 6 CQMs for two, self-selected calendar quarters of data in CY 2017, we encourage eligible hospitals and CAHs to continue refining their electronic reporting implementation activities in order to successfully achieve electronic data capture and reporting. In addition, we encourage early testing and the use of pre-submission testing tools to reduce errors and inaccurate data submissions in electronic CQM reporting. As time progresses, we expect that eligible hospitals and CAHs will continue to

build and refine their EHR systems and gain more familiarity with electronic reporting of more CQM data, resulting in more accurate data submissions with fewer errors. It is critical that we maintain a balance between the pace of evolving electronic standards and the timing cycle for the regulatory adoption of standards when adopting policies for the Medicare and Medicaid EHR Incentive Programs.

Comment: One commenter believed that clinical staff may have difficulty inputting patient information into the appropriate structured fields during a patient encounter due to competing clinical demands.

Response: An EHR may allow clinicians or administrative staff to update patient information at a later time if clinical staff cannot record patient information at the time of the encounter without compromising patient care, or if additional information needs to be added to the medical record. We recommend that eligible hospitals and CAHs and their health IT vendors work together to implement EHR functionalities that will successfully support clinical activities, documentation, and quality measure reporting and that are consistent with the policies and procedures of the eligible hospital or CAH. We believe that recording patient information in structured fields for the purpose of reporting CQMs electronically is more accurate and less prone to errors than using unstructured fields since it relies less on interpretation, and ultimately reduces burden on eligible hospitals and CAHs.

Comment: A few commenters expressed concern that hospitals may be penalized more than once for failing to successfully report CQMs electronically in both the Hospital IQR and EHR Incentive Programs and as a result, a significant portion of their annual payment update hinges on the maturity of health IT vendor capabilities and the ability of the CMS QualityNet Secure Portal to manage and appropriately support the volume of incoming data submissions. Commenters noted that hospitals continue to report barriers to successfully submitting CQM data electronically, including health IT vendor failures during the submission of production data (which were not present during test submissions) and limitations of the QualityNet Secure Portal, such as: (1) An inability to accept QRDA I files over a certain size; (2) an inability to run reports verifying that data have been submitted to CMS; and (3) frequent periods when the system is down due to it not being able to accommodate more than a certain

number of users at one time. The commenters also expressed concern regarding CQM measure specification.

Response: We disagree with commenters that failing to successfully report CQMs electronically in both the Hospital IQR and EHR Incentive Programs may result in duplicate payment adjustments for hospitals. Section 1886(n)(3)(B)(iii) of the Act encourages the coordination of reporting of information across CMS programs and specifically directs the Secretary to seek to avoid redundant or duplicative reporting with reporting otherwise required, including reporting under the Hospital IQR Program, in selecting measures and in establishing the form and manner for reporting measures for the EHR Incentive Program. Therefore, we have established policies that have enabled hospitals to satisfy the CQM reporting requirements of both the Medicare EHR Incentive Program and the Hospital IQR Program without duplicative reporting. In the event an eligible hospital or CAH is unable to meet the electronic CQM reporting requirements, for CY 2017, it would be able to report CQMs by attestation for purposes of the EHR Incentive Program, and if it satisfies all other program requirements, it would avoid the EHR Incentive Program downward payment adjustment under sections 1886(b)(3)(B)(ix) and 1814(l)(4) of the Act. Also, we encourage eligible hospitals or CAHs that are unable to meet the electronic CQM reporting requirements under the EHR Incentive Program to review the EHR Incentive Program's hardship exception policy.

Regarding the limitations of the QualityNet Secure Portal and QRDA I file submission difficulties that commenters described, we acknowledge that at certain times of high submission volume, some data submitters reported longer file processing times and an inability to timely run feedback reports. We are actively taking steps to improve the data submission experience for the CY 2017 reporting period, including working to increase system throughput and increase responsiveness should further issues arise. In addition, we are working to identify potential efficiencies in our EHR Incentive Program system source code which could reduce the time it takes to receive submission confirmation and run reports.

We are finalizing a modified version of our proposals regarding the previously finalized CQM reporting requirements for the CY 2017 reporting period, such that eligible hospitals and CAHs are required to electronically report on 4 self-selected available CQMs

(instead of 8 available CQMs) for one, self-selected calendar quarter of data (instead of a full calendar year (consisting of four quarterly data reporting periods)), whether reporting only for the EHR Incentive Program or reporting for both the Hospital IQR Program and the EHR Incentive Program.

Comment: One commenter did not support CMS' proposal to reduce the number of CQMs required to be electronically reported from 8 to 6 and reduce the reporting period from one full calendar year of data to two, self-selected quarters of CY 2017, and recommended that the number of CQMs and the reporting period reflect the previously finalized CY 2017 CQM reporting requirements for electronic reporting. The commenter indicated that capturing and exporting the data for a QRDA Category I file is part of the ONC EHR certification program and if a hospital is not capturing data in such a way that a QRDA I file can be generated, then this implies that either the EHR is violating its certification or the hospital is not using its EHR appropriately. Rather than modifying the CQM reporting requirements, the commenter suggested that the existing regulations be enforced and penalties be applied to health IT vendors with EHRs violating their certification. In addition, the commenter suggested that measure specifications could be published in advance to enable hospitals to view them before the reporting period begins. The commenter recognized the challenges some hospitals face, but indicated that these issues should be addressed directly rather than by changing the CQM reporting requirements.

Response: We thank the commenter for their support regarding our previously finalized CY 2017 CQM reporting requirements. We have found that many hospitals are able to successfully meet the CQM electronic reporting requirements and would be capable of successfully reporting additional measures. However, we seek to be responsive to the concerns and challenges expressed by hospitals, particularly smaller hospitals with fewer resources. In the present case we are seeking balance between hospitals' requests for more time to improve their CQM electronic reporting capabilities and furthering our goal to expand electronic data reporting. We appreciate the commenter's suggestion that measure specifications could be published further in advance to enable hospitals to view them before the reporting period begins and note that measure specifications are typically

published in the spring of the year prior to the start of the applicable reporting period.

Comment: A few commenters recommended that CMS clarify the definitions used for the terms "workflow" and "data submission," in the context of electronic measure reporting. Specifically, the commenters suggested that while "workflow" is related to technical challenges, the term is not appropriate in defining the process of data extraction and QRDA I submission.

Response: We thank the commenters for their suggestions. Our references of the terms "data submission" and "workflow" depend on the context in which the terms are used, the parties exchanging data, and the purpose for which data is exchanged. In the context of the electronic reporting of CQMs, hospitals may experience challenges modifying their internal workflow for clinical care, corresponding documentation and data capture, such that clinical staff enter patient information into the appropriate fields of an EHR at the time of the patient encounter. A clinician, medical assistant, scribe, or other staff member entering data into an EHR may find it simpler to enter patient information in the "free text" section of the EHR, even though specific fields exist in the EHR to record data so it maps appropriately for CQM reporting purposes. In suggesting that hospitals may need to make changes to their internal workflow, we expected that hospitals would train the appropriate staff to effectively capture patient data correctly in the EHR and make such efforts a priority. We further encourage hospitals to innovate and design workflows that fit their unique needs to make the best use of both clinical and non-clinical staff resources to maintain patient health information in the EHR. In addition, if clinical staff enter patient information in the "free text" sections of an EHR, clinical or administrative staff could go back after a patient encounter has completed and enter that information into the appropriate fields. This could be considered part of the hospital's "workflow" under the definition provided by the commenter. Data submission in the context of eCQM reporting would refer to the sending and subsequent receiving of clinical data corresponding to eCQM specifications through the QualityNet Secure Portal for purposes of the Hospital IQR Program and EHR Incentive Program eCQM submissions.

Comment: One commenter urged CMS to suspend all regulatory requirements regarding the electronic

reporting of CQMs, citing a lack of improvement in patient care despite the expenditure of significant time and resources to meet the CQM reporting requirements for the CY 2016 reporting period.

Response: We disagree with the commenter that the electronic reporting of CQMs does not benefit patients. We do not believe that suspending all electronic reporting of CQMs would be an appropriate approach. We recognize the need to continue to improve the electronic reporting of CQMs and establish a more seamless process to minimize burden on eligible hospitals and CAHs in meeting CQM reporting requirements. We understand that eligible hospitals and CAHs have spent resources to refine certified EHR technology to meet the electronic CQM reporting requirements. However, we also believe that CQMs will promote better quality of care as eligible hospitals and CAHs and their health IT vendors continue to refine EHR systems and integrate them into the clinical work flow. This will lead to improved accuracy, reliability, and completeness of the CQM data and promote higher quality, improved health outcomes for patients, and lower costs, while ultimately decreasing reporting burden on hospitals, and the associated operational, administrative, and financial burdens.

We will continue to monitor the progress of eligible hospitals and CAHs implementing CQM reporting requirements and encourage eligible hospitals and CAHs to continue sharing their experiences in meeting reporting requirements. In addition, we will routinely evaluate the CQMs available to report and consider new electronic measures as they become available for potential use in the Medicare and Medicaid EHR Incentive Programs and the Hospital IQR Program.

After consideration of the public comments we received, we are finalizing modifications to our proposals regarding the previously finalized CY 2017 CQM reporting requirements for electronic reporting. For the CY 2017 reporting period, eligible hospitals and CAHs that choose to report CQMs electronically are required to report one, self-selected calendar quarter of data for 4 self-selected CQMs of the available CQMs.

3. CQM Reporting for the Medicare and Medicaid EHR Incentive Programs in 2018

a. Background

In the 2015 EHR Incentive Programs Final Rule (80 FR 62892 through 62893), beginning in CY 2017 and for subsequent years, we established a CQM reporting period of one full calendar year (consisting of four quarterly data reporting periods) for the reporting of

CQMs by eligible hospitals and CAHs participating in the Medicare and Medicaid EHR Incentive Programs, with an exception for providers demonstrating meaningful use for the first time under the Medicaid EHR Incentive Program, for whom the CQM reporting period is any continuous 90-day period within the calendar year. In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57250), we noted that one full calendar year of data will result in more complete and accurate data, and hospitals will be able to submit one full calendar year of data for both the Medicare and Medicaid EHR Incentive Programs and the Hospital IQR Program, thereby reducing the reporting burden.

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57250 through 57255), we removed 13 CQMs from the set of CQMs available for eligible hospitals and CAHs to report under the Medicare and Medicaid EHR Incentive Programs, beginning with the reporting periods in CY 2017. All 16 of the remaining measures listed in Table 10 of the EHR Incentive Program Stage 2 final rule (77 FR 54083 through 54087) are available for eligible hospitals and CAHs to report for the Medicare and Medicaid EHR Incentive Programs. The following table lists the 16 CQMs available for eligible hospitals and CAHs to report for the Medicare and Medicaid EHR Incentive Programs beginning in CY 2017 (81 FR 57255).

CQMS FOR ELIGIBLE HOSPITALS AND CAHs BEGINNING WITH CY 2017

Short name	Measure name	NQF #
Electronic Clinical Quality Measures (eCQMs)		
AMI-8a	Primary PCI Received Within 90 Minutes of Hospital Arrival	0163
ED-3	Median Time from ED Arrival to ED Departure for Discharged ED Patients	0496
CAC-3	Home Management Plan of Care Document Given to Patient/Caregiver	+
ED-1	Median Time from ED Arrival to ED Departure for Admitted ED Patients	0495
ED-2	Admit Decision Time to ED Departure Time for Admitted Patients	0497
EHDI-1a	Hearing Screening Prior to Hospital Discharge	1354
PC-01	Elective Delivery (Collected in aggregate, submitted via web-based tool or electronic clinical quality measure).	0469
PC-05	Exclusive Breast Milk Feeding *	0480
STK-02	Discharged on Antithrombotic Therapy	0435
STK-03	Anticoagulation Therapy for Atrial Fibrillation/Flutter	0436
STK-05	Antithrombotic Therapy by the End of Hospital Day Two	0438
STK-06	Discharged on Statin Medication	0439
STK-08	Stroke Education	+
STK-10	Assessed for Rehabilitation	0441
VTE-1	Venous Thromboembolism Prophylaxis	0371
VTE-2	Intensive Care Unit Venous Thromboembolism Prophylaxis	0372

+ NQF endorsement has been removed.

* Measure name has been shortened. We refer readers to annually updated measure specifications on the CMS eCQI Resource Center Web page for further information: <https://www.healthit.gov/newsroom/ecqi-resource-center>.

For CY 2018 and future calendar years, we plan to continue to align the CQM reporting requirements for the Medicare and Medicaid EHR Incentive

Programs and the Hospital IQR Program. As we expect to expand the current measures to align with the National Quality Strategy, the CMS Quality

Strategy⁵⁰⁹ and incorporate updated

⁵⁰⁹ Available at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/>
Continued

standards and terminology in current CQMs, including updating the electronic specifications for these CQMs, and creating de novo CQMs, we also plan to expand the set of CQMs available for reporting under the EHR Incentive Programs in future years. We will continue to engage stakeholders to provide input on future proposals for CQMs as well as request comment on future electronic specifications for new and updated CQMs.

b. CQM Reporting Period for the Medicare and Medicaid EHR Incentive Programs in CY 2018

(1) Background

Our goal is to continue to move toward increased electronic reporting while also addressing stakeholder concerns. With the CY 2017 final policies reducing electronic reporting requirements and providing additional time for eligible hospitals, CAHs, and health IT vendors to make EHR upgrades and system transitions in CY 2017, we believe that stakeholders will be able to address some of the issues and challenges they face prior to CY 2018, but recognize that certain challenges and issues (for example, EHR upgrade and system transition challenges associated with the development cycle of technology and the timeframe to develop and execute work flows and processes and train staff based on EHR upgrades and system transitions) may not be fully resolved and as a result, may persist in CY 2018. As established in the 2015 EHR Incentive Programs Final Rule (80 FR 62894), reporting CQMs by attestation will no longer be an option for eligible hospitals and CAHs starting with the reporting periods in CY 2018, except in circumstances in which electronic reporting is not feasible.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20132 and 20133), for CY 2018, we proposed the following CQM reporting period for the Medicare and Medicaid EHR Incentive Programs and the following submission period for the Medicare EHR Incentive Program—for eligible hospitals and CAHs reporting CQMs electronically that demonstrate meaningful use for the first time in 2018 or that have demonstrated meaningful use in any year prior to 2018, the reporting period would be the first 3 quarters of CY 2018, and the submission period would be the 2 months following the close of the calendar year, ending February 28, 2019.

For eligible hospitals and CAHs that report CQMs by attestation under the Medicare EHR Incentive Program as a result of electronic reporting not being feasible, and for eligible hospitals and CAHs that report CQMs by attestation under their State's Medicaid EHR Incentive Program, we established a CQM reporting period of the full CY 2018 (consisting of 4 quarterly data reporting periods) (80 FR 62893). We also established an exception to this full-year reporting period for eligible hospitals and CAHs demonstrating meaningful use for the first time under their State's Medicaid EHR Incentive Program; under this exception, the CQM reporting period is any continuous 90-day period within CY 2018 (80 FR 62893).

In the FY 2018 IPPS/LTCH PPS proposed rule, we proposed the submission period for eligible hospitals and CAHs reporting CQMs by attestation under the Medicare EHR Incentive Program would be the 2 months following the close of the CY 2018 CQM reporting period, ending February 28, 2019.

In regard to the Medicaid EHR Incentive Program, we provide States with the flexibility to determine the method of reporting CQMs (attestation or electronic reporting) and the submission periods for reporting CQMs, subject to prior approval by CMS.

(2) CQM Reporting Criteria for the Medicare and Medicaid EHR Incentive Programs in CY 2018

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20132 through 20133), we proposed the following reporting criteria under the Medicare and Medicaid EHR Incentive Program for eligible hospitals and CAHs reporting CQMs electronically for the reporting period in CY 2018—for eligible hospitals and CAHs participating only in the EHR Incentive Program, or participating in both the EHR Incentive Program and the Hospital IQR Program, report on at least six (self-selected) of the available CQMs from the table in the FY 2017 IPPS/LTCH PPS final rule at 81 FR 57255.

We proposed the following reporting criteria for eligible hospitals and CAHs that report CQMs by attestation under the Medicare EHR Incentive Program because electronic reporting is not feasible, and for eligible hospitals and CAHs that report CQMs by attestation under their State's Medicaid EHR Incentive Program, for the reporting period in CY 2018—report on all 16 available CQMs from the table in the FY 2017 IPPS/LTCH PPS final rule at 81 FR 57255.

In developing these proposals, we considered several alternatives. Specifically, we considered aligning the requirements for CY 2018 with the proposed requirements for CY 2017 outlined in the proposed rule, such that eligible hospitals and CAHs would report on 6 (self-selected) available CQMs for two self-selected quarters of data in both CY 2017 and CY 2018. We also considered the final policy in the FY 2017 IPPS/LTCH PPS final rule for the Hospital IQR Program (81 FR 57150 through 57159), which would require hospitals to report one full calendar year of data for at least 8 (self-selected) CQMs out of the available CQMs for both the CY 2017 reporting period/FY 2019 payment determination and the CY 2018 reporting period/FY 2020 payment determination. However, we proposed changes to this previously adopted policy in the Hospital IQR Program and refer readers to section IX.A.8. of the preamble of this final rule for more details. Ultimately, we believed that our proposal balanced our goal to transition to more robust electronic reporting of quality measure data with concerns from stakeholders regarding an increased burden to meet CQM reporting requirements. We believe the electronic collection and reporting of quality data using health IT will ultimately simplify and streamline reporting for various CMS quality reporting programs, and hospitals will experience decreased financial and administrative burden as we continue to align program reporting requirements and adopt a more streamlined set of clinical quality measures with electronic specifications.

In addition, the proposal provided eligible hospitals and CAHs the opportunity to have several years of experience reporting data electronically for the Hospital IQR and Medicare and Medicaid EHR Incentive Programs. Therefore, we believed that eligible hospitals and CAHs will be better prepared to submit an additional quarter of data for the CY 2018 reporting period compared to the number of quarters we proposed for the CY 2017 reporting period. This proposal was made in conjunction with our proposals discussed in section IX.A.10.d. of the preamble of the proposed rule to align requirements for the Medicare and Medicaid EHR Incentive Programs and the Hospital IQR Program.

We invited public comment on our proposals regarding the CY 2018 reporting requirements for eligible hospitals and CAHs reporting CQMs under the Medicare and Medicaid EHR Incentive Programs.

Comment: A majority of commenters supported CMS' proposal to require eligible hospitals and CAHs to electronically report 6 CQMs for the first three calendar quarters of data for the CY 2018 reporting period. A few commenters requested CMS maintain the requirement to electronically report 6 CQMs beyond the CY 2018 reporting period while increasing the reporting period to one full calendar year and then gradually increasing the number of required CQMs to electronically report in future years. The commenters believed such approach would allow hospitals to adapt to the increased CQM reporting requirements.

Response: We thank the commenters for their support, and will consider their comments in future policymaking.

Comment: Many commenters supported requiring eligible hospitals and CAHs to electronically report 6 CQMs, but requested that CMS retain the proposed modified CY 2017 CQM reporting period for electronic reporting, which would require eligible hospitals and CAHs to report two, self-selected quarters of data for the CY 2018 reporting period instead of the first three calendar quarters of data for the CY 2018 reporting period. Some commenters noted that smaller hospitals with fewer resources require more time to become proficient in all of the parameters (mapping, new work flows, staff education, etc.) associated with electronic reporting.

A few commenters indicated that if hospitals would be able to continue to self-select two quarters of data for the CY 2018 reporting period, it would provide the necessary time for quality, health IT, and clinical teams to improve performance without significantly impairing CMS' ability to review and analyze data generated through CQM reporting.

Response: We appreciate the support from commenters regarding our proposal to require eligible hospitals and CAHs to electronically report 6 available CQMs for the CY 2018 reporting period and their suggestion that we retain the proposed CY 2017 reporting period (two, self-selected quarters of data) for CY 2018.

In response to stakeholder concerns regarding the burden associated with meeting the CQM reporting requirements (including updating EHR systems, data mapping, refining work flows, and staff education and training), we recognize that eligible hospitals and CAHs may require more time and flexibility to meet the electronic reporting requirements. Therefore, we are finalizing modifications to our proposals regarding the CQM reporting

requirements for the CY 2018 reporting period. Under the modified version of our proposals which we are finalizing for CY 2018, eligible hospitals and CAHs will be required to electronically report 4 self-selected CQMs of the available 16 CQMs under the Medicare and Medicaid EHR Incentive Programs. In addition, under the modified version of our proposals which we are finalizing, for the CY 2018 reporting period, eligible hospitals and CAHs are required to report one, self-selected calendar quarter of data for the 4 self-selected available CQMs.

By finalizing these modifications to our proposal, the CQM reporting requirements for electronic reporting for the CY 2018 reporting period will be the same as the CQM reporting requirements finalized for the CY 2017 reporting period, as discussed above. We believe that having the same reporting requirements for three reporting years will offer the consistency requested by stakeholders and allow hospitals and their health IT vendors to improve CQM reporting capabilities. We intend to establish requirements for the CY 2019 reporting period/FY 2021 payment determination and future years in future rulemaking.

We will continue to monitor the progress of eligible hospitals and CAHs implementing CQM reporting requirements and encourage hospitals to continue sharing their experiences. In addition, we encourage early testing and the use of pre-submission testing tools to reduce errors and inaccurate data submissions in electronic CQM reporting. As time progresses, we expect that eligible hospitals and CAHs will continue to build and refine their EHR systems and gain more familiarity with electronic reporting of more CQM data, resulting in more accurate data submissions with fewer errors.

Comment: Several commenters supported CMS' proposal to require eligible hospitals and CAHs to electronically report 6 CQMs for the CY 2018 reporting period, but requested that CMS allow eligible hospitals and CAHs to self-select the three quarters of data for which they would report. The commenters noted implementing requirements that differ from one calendar year to the next is time consuming and cumbersome, which includes changes and updates to CQM logic definitions, vendor relations, schemas for running reports, and XML files. Some commenters indicated that they would support reporting data from the first quarter reporting period when the year-end process is more established and predictable.

Response: We thank the commenters for their support of our proposal to require eligible hospitals and CAHs to electronically report 6 CQMs for the CY 2018 reporting period and suggestion to allow eligible hospitals and CAHs to self-select the three quarters of data for which they would report.

However, with stakeholders expressing concerns regarding eligible hospitals and CAHs experiencing an increased burden in meeting CQM reporting requirements, we are finalizing modifications to our proposals regarding the CQM reporting requirements for the CY 2018 reporting period. For CY 2018, eligible hospitals and CAHs are required to electronically report one, self-selected calendar quarter of data for 4 self-selected CQMs of the available 16 CQM under the Medicare and Medicaid EHR Incentive Programs. The CQM reporting requirements for CY 2017 and CY 2018 are the same.

Comment: Several commenters supported the proposed policies for CY 2018 reporting period that would require eligible hospitals and CAHs to electronically report the first three quarters of data for 6 self-selected available CQMs, but recommended that CMS further reduce the CY 2018 requirements by retaining the CY 2016 established policies that required the electronic reporting of 4 CQMs for one quarter of data.

In addition, some commenters expressed concern that the incremental increase in CQM electronic reporting requirements would impact the ability of eligible hospitals and CAHs to effectively meet current CQM electronic reporting requirements and concurrently prepare for increased CQM reporting requirements in the following program year. As a result, additional burden would be placed on hospitals by limiting available time for testing prior to production file submission. A few commenters expressed concern about the considerable burden required to map the necessary data elements from the EHR to the appropriate QRDA file format and noted that some health IT vendors are not properly equipped to collect and transmit such data through the CMS QualityNet Secure Portal. The commenters stated that until these issues are sufficiently addressed, CMS should not increase the required CQM reporting requirements for electronic reporting.

Response: We appreciate commenters expressing their concerns regarding the challenges associated with the electronic reporting of CQMs. As previously noted, in response to hospital and health IT vendor feedback,

we are modifying our proposed CY 2018 reporting requirements by reducing CQM reporting requirements. For the CY 2018 reporting period, we are requiring eligible hospitals and CAHs to report one, self-selected calendar quarter of data for 4 available CQMs. We believe that the modified, reduced reporting requirements will provide eligible hospitals, CAHs, and health IT vendors with additional time to plan for data processing, report quality data to CMS, and focus on system upgrades, data mapping, staff training, and other issues. We will continue to monitor the progress of hospitals in implementing CQM reporting requirements and engage in discussions with hospitals and health IT vendors regarding their experiences as we consider the establishment of CQM policies in future rulemaking.

In response to concerns from commenters that the incremental increase in CQM electronic reporting requirements would impact the ability of eligible hospitals and CAHs to both effectively execute current CQM electronic reporting requirements and concurrently prepare for increased CQM reporting requirements in the following program year, we believe that the modifications to our proposals requiring eligible hospitals and CAHs to report one, self-selected calendar quarter of data for 4 available CQMs reduce reporting requirements and provide eligible hospitals and CAHs with additional time to prepare to meet CQM reporting requirements. We believe that modestly increasing the requirements for eligible hospitals and CAHs to report CQMs electronically is consistent with our goal to make progress toward more robust electronic reporting of CQMs in the EHR Incentive Program, but recognize that some eligible hospitals and CAHs may benefit from additional time to become proficient in all of the aspects associated with electronic reporting and improving upon CQM reporting capabilities prior to increasing the number of quarters of data and number of CQMs eligible hospitals and CAHs are required to report electronically. We believe the electronic collection and reporting of quality data using health IT will ultimately simplify and streamline reporting for various CMS quality reporting programs, and hospitals will experience decreased financial and administrative burden as we continue to align program reporting requirements and adopt a more streamlined set of clinical quality measures with electronic specifications.

For the CY 2018 reporting period, eligible hospitals and CAHs will be able to self-select 4 CQMs from the available 16 CQMs in the EHR Incentive Program

measure set and meet the reporting requirements by submitting data via QRDA I files, zero denominator declaration, or case threshold exemption. In addition, we are continuing to allow abstraction of data into structured fields since some eligible hospitals and CAHs are still in the process of upgrading EHR systems and changing health IT vendors. In an effort to provide eligible hospitals and CAHs with maximum flexibility, we are finalizing a policy which permits them to self-select the one calendar quarter of data they report for the CY 2018 reporting period.

In considering what the reporting period and number of CQMs to report electronically should be, we decided to implement for CY 2018 the same CQM reporting requirements established for CY 2016 (80 FR 49757 and 49758) and finalized in this final rule for CY 2017 (eligible hospitals and CAHs will be required to report one, self-selected quarter of data (for CY 2016, either Q3 or Q4) for 4 available CQMs), which we believe will provide eligible hospitals and CAHs with additional time gaining experience reporting CQMs electronically and reviewing the results of CY 2016 CQM data collection prior to increasing the number of quarters of data and number of CQMs eligible hospitals and CAHs are required to report electronically. We note that hospitals have reported data electronically for several years to both the Medicare EHR Incentive Program and the Hospital IQR Program (3 prior years of pilot reporting and 3 prior years of voluntary reporting) and believe that the majority of hospitals should be ready to successfully report on at least 4 electronic CQMs beginning with the CY 2018 reporting period. However, we believe that the finalized modification to our proposal regarding the CQM reporting requirements for CY 2018 is responsive to stakeholder feedback, including feedback from small, rural, tribal, and Indian Health Service hospitals that have expressed the need for additional time and flexibility to successfully implement all of the CQM reporting requirements.

Comment: One commenter supported CMS' proposal that would require eligible hospitals and CAHs to electronically report 6 CQMs for the CY 2018 reporting period, but suggested that CMS retain the requirement to report one full calendar year of data. Further, the commenter suggested gradually increasing the number of required CQMs in future years. The commenter believed that such approach would allow hospitals to adapt to the increased CQM requirements.

Response: We thank the commenter for their support. For future years, we will consider requiring hospitals to report more quarters of data and to gradually increase the electronic reporting of quality measure data in the Medicare and Medicaid EHR Incentive Programs.

Comment: One commenter recommended the submission deadline be moved to the end of the first quarter of 2019 instead of February 28, 2019, which would allow for final ICD-10 coding and corrections potentially needed after receiving final documentation from physicians.

Response: We thank the commenter for the recommendation to adjust the CQM submission deadline for the Medicare EHR Incentive Program from February 28, 2019 to the end of the first quarter of 2019. We will take this suggestion into consideration; however, at this juncture, we are finalizing the submission deadline for the 2018 reporting period as proposed.

After consideration of the public comments we received, we are finalizing the CY 2018 reporting requirements as proposed, except for our proposals pertaining to the electronic reporting of CQM reporting period and reporting criteria, which we are finalizing with modifications. For CY 2018, the CQM reporting period for the Medicare and Medicaid EHR Incentive Programs and the submission period for the Medicare EHR Incentive Program are as follows—for eligible hospitals and CAHs reporting CQMs electronically that demonstrate meaningful use for the first time in 2018 or that have demonstrated meaningful use in any year prior to 2018, the reporting period is one, self-selected calendar quarter of CY 2018 data, and the submission period is the 2 months following the close of the calendar year, ending February 28, 2019.

For eligible hospitals and CAHs that report CQMs by attestation under the Medicare EHR Incentive Program as a result of electronic reporting not being feasible, and for eligible hospitals and CAHs that report CQMs by attestation under their State's Medicaid EHR Incentive Program, we established a CQM reporting period of the full CY 2018 (consisting of 4 quarterly data reporting periods) (80 FR 62893). We also established an exception to this full-year reporting period for eligible hospitals and CAHs demonstrating meaningful use for the first time under their State's Medicaid EHR Incentive Program. Under this exception, the CQM reporting period is any continuous 90-day period within CY 2018 (80 FR 62893). The submission period for

eligible hospitals and CAHs reporting CQMs by attestation under the Medicare EHR Incentive Program is the 2 months following the close of the CY 2018 CQM reporting period, ending February 28, 2019. In regard to the Medicaid EHR Incentive Program, we provide States with the flexibility to determine the method of reporting CQMs (attestation or electronic reporting) and the submission periods for reporting CQMs, subject to prior approval by CMS.

For the CY 2018 reporting period, the reporting criteria under the Medicare and Medicaid EHR Incentive Program for eligible hospitals and CAHs reporting CQMs electronically is as follows—for eligible hospitals and CAHs participating only in the EHR Incentive Program, or participating in both the EHR Incentive Program and the Hospital IQR Program, report on at least 4 self-selected CQMs of the available CQMs from the table in the FY 2017 IPPS/LTCH PPS final rule at 81 FR 57255, which is also in section IX.E.3.a. of the preamble to this final rule.

The reporting criteria for eligible hospitals and CAHs that report CQMs by attestation under the Medicare EHR Incentive Program as a result of electronic reporting not being feasible, and for eligible hospitals and CAHs that report CQMs by attestation under their State's Medicaid EHR Incentive Program, for the reporting period in CY 2018—report on all 16 available CQMs from the table in the FY 2017 IPPS/LTCH PPS final rule at 81 FR 57255.

c. CQM Reporting Form and Method for the Medicare EHR Incentive Program in 2018

In the FY 2016 IPPS/LTCH PPS final rule (80 FR 49759 through 49760), we removed the QRDA–III as an option for reporting under the Medicare EHR Incentive Program for eligible hospitals and CAHs. For the reporting periods in 2016 and future years, we are requiring QRDA–I for CQM electronic submissions for the Medicare EHR Incentive Program. As noted in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49760), States would continue to have the option, subject to our prior approval, to allow or require QRDA–III for CQM reporting.

As noted in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49759), we encourage health IT developers to test any updates, including any updates to the CQMs and CMS reporting requirements based on the CMS Implementation Guide for Quality Reporting Document Architecture (QRDA) Category I and Category III (CMS Implementation Guide for QRDA)

for Hospital Quality Reporting (HQR), on an annual basis.

The form and method of electronic submission are further explained in subregulatory guidance and the certification process. For example, the following documents are updated annually to reflect the most recent CQM electronic specifications: The CMS Implementation Guide for QRDA; program specific performance calculation guidance; and CQM electronic specifications and guidance documents. These documents are located on the eCQI Resource Center Web page at: <https://ecqi.healthit.gov/>. For further information on CQM reporting, we refer readers to the EHR Incentive Program Web site where guides and tip sheets are located at: <http://www.cms.gov/ehrincentiveprograms>. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20133), for the CY 2018 reporting period, we proposed the following for CQM submission under the Medicare EHR Incentive Program:

- Eligible hospital and CAH participating in the Medicare EHR Incentive Program (single program participation)—electronically report CQMs through QualityNet Portal.
- Eligible hospital and CAH options for electronic reporting for multiple programs (that is, EHR Incentive Program and Hospital IQR Program participation)—electronically report through QualityNet Portal.

As noted in the 2015 EHR Incentive Programs Final Rule (80 FR 62894), starting in 2018, eligible hospitals and CAHs participating in the Medicare EHR Incentive Program must electronically report CQMs where feasible; and attestation to CQMs will no longer be an option except in certain circumstances where electronic reporting is not feasible.

For the Medicaid EHR Incentive Program, States continue to be responsible for determining whether and how electronic reporting of CQMs would occur, or if they wish to allow reporting through attestation. Any changes that States make to their CQM reporting methods must be submitted through the State Medicaid Health IT Plan (SMHP) process for CMS review and approval prior to being implemented.

For CY 2018, we proposed to continue our policy regarding the electronic submission of CQMs, which would require the use of the most recent version of the CQM electronic specification for each CQM to which the EHR is certified. For the CY 2018 electronic reporting of CQMs, this means eligible hospitals and CAHs

would be required to use the Spring 2017 version of the CQM electronic specifications and any applicable addenda available on the eCQI Resource Center Web page at: <https://ecqi.healthit.gov/>. In addition, we proposed to require that an eligible hospital or CAH would need to have its EHR technology certified to all 16 available CQMs from the table in the FY 2017 IPPS/LTCH PPS final rule at 81 FR 57255 in order to meet the reporting requirements for CY 2018. In the 2015 EHR Incentive Programs Final Rule (80 FR 62767), we established that starting in CY 2018, eligible hospitals and CAHs are required to have EHR technology certified to the 2015 Edition, although as discussed in section IX.G.4 of the preamble of this final rule, we are changing that requirement for the EHR reporting period in CY 2018.

Starting in CY 2018, we proposed to require the use of EHR technology certified to the 2015 Edition for CQM reporting. Furthermore, we proposed that an EHR certified for CQMs under the 2015 Edition certification criteria would not need to be recertified each time it is updated to a more recent version of the CQMs. We believe it is not necessary for an EHR certified for CQMs under the 2015 Edition certification criteria to be recertified each time it is updated to the most recent version of the CQMs because the EHR technology continues to meet the 2015 Edition certification criteria and any updates to the CQM specifications do not impact or change any elements regarding certification and thus, we proposed that recertification is not necessary. For further discussion regarding EHR certification requirements for 2018, we refer readers to section IX.G.4. of the preamble of this final rule. We invited public comment on these proposals.

Comment: Many commenters did not support the proposal requiring EHR technology to be certified to the 2015 Edition for the CY 2018 reporting period. Several commenters supported the options described in the FY 2018 IPPS/LTCH PPS proposed rule that would allow hospitals to use 2014 Edition CEHRT or a combination of 2014 and 2015 Edition CEHRT for the CY 2018 CQM reporting period.

A few commenters recommended CMS delay the requirement for EHR technology to be certified to the 2015 Edition until the CY 2019 reporting period. The commenters indicated that additional time is necessary since the certification requirements for the 2015 Edition are extensive and expensive, and noted that health IT vendors will continue to struggle with completing the

certification process by January 1, 2018. One commenter mentioned that turn over in the industry has caused a backlog in the certification process. Another commenter expressed concern that the slow pace of certification, the number of upgrades that need to be performed, and the number of trainings yet to be held makes it highly unlikely that health systems and medical practices will be prepared to submit CQMs using EHR technology certified to the 2015 Edition for the CY 2018 reporting period. Another commenter noted that implementing the 2015 Edition of CEHRT does not automatically create the ability to submit appropriate or complete quality data.

Response: We recognize that there is burden associated with the development and deployment of each new edition of CEHRT, but we believe it is important to continue to encourage the use of the most recent edition of CEHRT, which incorporates updated standards and criteria, as it allows the collection of more relevant and accurate electronic data. We believe there are many benefits associated with upgrading to EHR technology certified to the 2015 Edition. Specifically, the 2015 Edition health IT certification criteria enables health information exchange through new and enhanced certification criteria standards, and implementation specifications for interoperability while incorporating changes that are designed to spur innovation and provide more choices to health care providers and patients for the exchange of electronic health information including new application access (API) certification criteria.

However, based on the comments we received that did not support our proposal, we are also finalizing a modified version of our proposal to require the use of EHR technology certified to the 2015 Edition for the CQM reporting period in CY 2018. For the CY 2018 CQM reporting period, eligible hospitals and CAHs will have the flexibility to use EHR technology certified to the 2014 Edition or 2015 Edition, or a combination of both Editions. We believe this provides sufficient time for eligible hospitals and CAHs to test and deploy the 2015 Edition of CEHRT in subsequent years. The utilization of the most recent version of CEHRT will provide the most relevant data, which is critical for eligible hospitals and CAHs to collect, use, and share data. We believe improved systems interoperability and use of the most current standards will facilitate more robust and accurate quality data reporting. One of the main

purposes of the ONC 2015 Edition final rule (80 FR 62603) is to facilitate greater interoperability for several clinical health information purposes and enable health information exchange through new and enhanced certification criteria, standards, and implementation specifications. We note that we have worked closely with ONC to enhance testing and validation of certified technology's ability to capture, exchange, and report electronic patient data, such as improved testing and certification through the Cypress CQM testing and certification tool.

In addition, in response to the concern regarding the burden associated with upgrading EHR technology certified to the 2015 Edition for the CY 2018 CQM reporting period, as discussed in this section of the preamble of this final rule, we are finalizing a modified version of our proposal regarding CQM reporting requirements for the CY 2018 reporting period that require reporting on 4 self-selected CQMs for one, self-selected calendar quarter of data to reduce burden. By allowing eligible hospitals and CAHs to self-select the quarters of data they report, eligible hospitals and CAHs will have more flexibility to meet certification and EHR system upgrades, such as transitioning to the 2015 Edition.

We are also finalizing a modified version of our proposal to require the use of EHR technology certified to the 2015 Edition for the CQM reporting period in CY 2018. For the CY 2018 CQM reporting period, eligible hospitals and CAHs will have the flexibility to use EHR technology certified to the 2014 Edition or 2015 Edition, or a combination of both Editions. We believe this provides sufficient time for eligible hospitals and CAHs to test and deploy the 2015 Edition of CEHRT in subsequent years.

Comment: One commenter expressed concern that allowing the flexibility to use a combination of the 2014 and 2015 Editions of CEHRT for the CY 2018 reporting period may create more problems than it could potentially solve.

Response: We acknowledge the concern from the commenter and note that we do not believe allowing hospitals to use a combination of EHR technology certified to the 2014 and 2015 Editions would make it more difficult for them to meet the CQM reporting requirements in CY 2018. We have allowed this flexibility for the CY 2016 and CY 2017 reporting periods and we are not aware of any specific issues in QRDA I file creation or submission. Based on the comments received, many eligible hospitals, CAHs, and health IT

vendors would prefer to have greater time and flexibility to implement upgrades to the 2015 Edition.

Comment: Several commenters supported the proposal to require EHR technology to be certified to all 16 CQMs for the CY 2018 reporting period since all 16 CQMs should be available for submission to allow for reporting flexibility to better reflect the populations served by hospitals.

Response: We thank the commenters for their support regarding our proposal to require EHR technology to be certified to all 16 CQMs for the CY 2018 reporting period.

Comment: Several commenters did not support the proposal to require that EHR technology be certified to all 16 CQMs for the CY 2018 reporting period. A few of these commenters noted that there is not a requirement as a condition of ONC certification for EHR technology to support all CQM reporting options for hospitals, leaving each hospital or health system to work independently with health IT vendors in implementing their measures. The commenters expressed concern that these conditions may result in additional costs and hours of additional work for hospitals, and cause a tremendous waste of limited financial and personnel resources.

In addition, some commenters expressed concern that the proposal to require EHR technology be certified to all 16 CQMs for the CY 2018 reporting period inappropriately places the burden on hospitals, rather than health IT vendors, to meet the requirement, especially for hospitals transitioning to EHR technology certified to the 2015 Edition and preparing for long-planned system upgrades. These commenters urged CMS to work with ONC and health IT vendors to ensure that the 2015 Edition CEHRT is capable of supporting hospital CQM reporting, including the reporting of any of the CQMs available to report in the Medicare and Medicaid EHR Incentive Programs.

One commenter expressed concern that this policy eliminates the opportunity for a specialty product to focus on measures only applicable to its domain, such as a surgical suite product focusing on surgery measures. The commenter also noted its concern that this policy would reduce the availability of CEHRT for hospitals or lead to poorer workflows for capturing quality data.

Response: We appreciate commenters expressing their concerns regarding the proposal to require EHR technology be certified to all available CQMs for the CY 2018 reporting period. We recognize the challenges associated with the electronic reporting of CQMs. We

believe that requiring EHR technology to be certified to all available CQMs is important in allowing us to collect the most relevant electronic data. Further, we believe that requiring EHR technology to be certified to all available CQMs would help streamline the electronic data extrapolation component of hospital workflow in the future. In addition, having EHR technology certified to all available CQMs will prevent hospitals from having to go back and consult their health IT vendors each time they want/need to report on a new or different CQM.

We do not agree that the proposal places the burden on hospitals, rather than health IT vendors, to meet the requirement. We will continue to seek stakeholder input and collaborate with ONC to define standards for EHR organization and structure, which would allow for documentation to fit into the clinical workflow and to ensure our policies are responsive to evolving electronic standards to the greatest extent possible. We also seek to ensure that EHR technology certified to the 2015 Edition is capable of supporting hospital CQM reporting requirements, including the electronic reporting of any of the CQMs that are available to report under the Medicare and Medicaid EHR Incentive Programs. We encourage eligible hospitals and CAHs to work with their health IT vendors to continue refining their electronic reporting implementation activities to successfully achieve electronic data capture and reporting despite mapping and integration issues.

With respect to the concern indicating that this policy eliminates the opportunity for a specialty product to focus on measures only applicable to its domain, such as a surgical suite product focusing on surgery measures and that it would reduce the availability of CEHRT for hospitals or lead to poorer workflows for capturing quality data, we believe focusing first on consistency and alignment across all measures and EHR systems will provide an opportunity for all specialties to report equally within the EHR technology. Focusing on unique and individual specialties is a consideration for future rules once the concept of electronic reporting is fully established. Therefore, requiring EHR technology to be certified to all available CQMs at this time outweighs the potential limitations on specialty products and any impact this might have on their workflow.

After consideration of the public comments we received, we are finalizing the following policies regarding CQM reporting form and method as proposed. For CY 2018, we

will continue our policy regarding the electronic submission of CQMs, which requires the use of the most recent version of the CQM electronic specification for each CQM to which the EHR is certified. For the CY 2018 electronic reporting of CQMs, this means eligible hospitals and CAHs are required to use the Spring 2017 version of the CQM electronic specifications and any applicable addenda available on the eCQI Resource Center Web page at: <https://ecqi.healthit.gov/>. In addition, we are requiring that an eligible hospital or CAH will need to have its EHR technology certified to all 16 available CQMs from the table in the FY 2017 IPPS/LTCH PPS final rule at 81 FR 57255 in order to meet the reporting requirements for CY 2018.

In regard to the proposal requiring eligible hospitals and CAHs to utilize EHR technology certified to the 2015 Edition for CQM reporting in CY 2018, we are finalizing a modification to our proposal. As discussed above and in section IX.G.4 of the preamble of this final rule, for the CY 2018 CQM reporting period, eligible hospitals and CAHs will have the flexibility to use EHR technology certified to either the 2014 Edition or 2015 Edition, or a combination of both Editions. We note that an EHR technology certified for CQMs under the 2014 or 2015 Edition certification criteria will not need to be recertified each time it is updated to a more recent version of the CQMs.

F. Clinical Quality Measurement for Eligible Professionals (EPs) Participating in the Medicaid EHR Incentive Program in 2017

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20134 through 20135), we discussed clinical quality measurement for eligible professionals (EPs) participating in the Medicaid EHR Incentive Program in 2017. We explained that the proposals in this section would apply only to EPs participating in the Medicaid EHR Incentive Program. They would not apply to eligible hospitals or CAHs, or to the Medicare EHR Incentive Program.

1. Modifications to the CQM Reporting Period for EPs in 2017

In the 2015 EHR Incentive Programs Final Rule (80 FR 62762), we established for the Medicare and Medicaid EHR Incentive Programs a CQM reporting period of the full CY 2017 for EPs who have demonstrated meaningful use in a prior year and a CQM reporting period of any continuous 90 days within CY 2017 for EPs who are demonstrating meaningful use for the first time (80 FR 62891

through 62892). We also noted that we would continue to allow the States to determine the form and manner in which Medicaid EPs should report CQMs, subject to CMS approval (80 FR 62891, 62894).

In the final rule with comment period titled Medicare Program; Merit-Based Incentive Payment System (MIPS) and Alternative Payment Model (APM) Incentive Under the Physician Fee Schedule, and Criteria for Physician-Focused Payment Models (81 FR 77008) (referred to as the "CY 2017 Quality Payment Program final rule with comment period"), we established at § 414.1320(a), for the 2019 MIPS payment year, a minimum of a continuous 90-day performance period within CY 2017, up to and including the full CY 2017, for the quality performance category of the MIPS. We established at § 414.1320(b), for the 2020 MIPS payment year, a performance period of the full CY 2018.

Following the publication of that final rule with comment period, we received feedback from EPs observing that having CQM reporting or performance periods for Medicare professionals under MIPS that are different from the CQM reporting period for EPs under the Medicaid EHR Incentive Program would create administrative burdens for EPs who wish to participate in both programs and to report CQMs electronically. Our goal has always been to align Medicare and Medicaid reporting and quality improvement programs to the extent possible. In addition, while participation in MIPS is required for professionals who are considered "MIPS eligible clinicians," participation in the Medicaid EHR Incentive Program is not required. If the CQM reporting periods and MIPS performance periods are not aligned, we believe it is less likely that MIPS eligible clinicians will also participate as EPs in the remaining years of the Medicaid EHR Incentive Program.

Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20134), we proposed to change the CQM reporting period for EPs who report CQMs electronically in the Medicaid EHR Incentive Program to match the performance period established under MIPS in the quality performance category for MIPS eligible clinicians. We proposed a minimum of a continuous 90-day period during CY 2017 for EPs electronically reporting CQMs for the Medicaid EHR Incentive Program. We note that we consider the reporting periods established through rulemaking to be minimums and would encourage States to accept data from longer reporting periods. We proposed that the

reporting period for CQMs for EPs who choose to attest rather than report electronically, and who have demonstrated meaningful use in a previous program year under the EHR Incentive Program, would remain one full year (CY 2017), which is in alignment with the requirements for eligible hospitals and CAHs for the Medicare and Medicaid EHR Incentive Programs for 2017 (80 FR 62892 through 62893). We noted that reporting CQMs by attestation is not an option for eligible clinicians under MIPS, so the reason for proposing a shortened reporting period for EPs reporting CQMs electronically, which is to align this reporting period with the MIPS performance period, would not exist for EPs who choose not to report electronically. We explained that nothing in this proposal would change the CQM reporting period for EPs demonstrating meaningful use for the first time, which was established in the 2015 EHR Incentive Programs Final Rule to be any continuous 90 day period regardless of the method of CQM submission (80 FR 62892).

We further explained that the CQM reporting period for the Medicaid EHR Incentive Program in 2018 for EPs that have demonstrated meaningful use in a previous program year would remain 1 full year (CY 2018) to align with the corresponding performance period in MIPS for MIPS eligible clinicians. If changes are made to the MIPS performance period through future rulemaking, we will revisit the Medicaid EHR Incentive Program policies to continue our alignment goals.

We explained that we intend to reduce EP burden and simplify the program through this proposal, which is intended to better align CQM reporting periods and CQM reporting for the Medicaid EHR Incentive Program with policies under MIPS. Overall, we believe the proposed alignment at the State attestation system and EP levels would both reduce burden associated with reporting on multiple CMS programs and enhance State and CMS operational efficiency.

We invited public comment on this proposal, including on whether making the proposed change would create burdens for EPs or States.

Comment: The majority of commenters supported our proposal to change the CQM reporting period to any continuous 90-day period during CY 2017 for EPs electronically reporting CQMs for the Medicaid EHR Incentive Program, which would align with the MIPS performance period. Commenters supported aligning the Medicaid EHR

Incentive Program with MIPS when possible to reduce EP burden.

Response: We appreciate these comments and will continue to look for ways to align the Medicaid EHR Incentive Program with MIPS when possible. Therefore, we are finalizing the proposal to change the CQM reporting period to any continuous 90-day period during CY 2017 for Medicaid EPs electronically reporting CQMs.

Comment: Several commenters, including representatives of state Medicaid agencies, requested that CMS also change the CQM reporting period for Medicaid EPs who attest to CQMs rather than report electronically in CY 2017. These commenters noted that establishing a 90-day reporting period for all CQM reporting, regardless of submission method, would further reduce EP burden and streamline the Medicaid EHR Incentive Program requirements.

Response: We thank these commenters and agree that establishing a 90-day CQM reporting period during CY 2017 for all Medicaid EPs, regardless of submission method, would reduce burden and streamline the program requirements. Due to the comments we received, the majority of which encouraged us to make this change to the proposed rule, we reconsidered the benefits to all EPs of a 90-day CQM reporting period in CY 2017. Therefore, we are establishing a CQM reporting period of any continuous 90-day period during CY 2017 for all Medicaid EPs, regardless of reporting method.

After consideration of the public comments we received, we are finalizing a CQM reporting period for 2017 of any continuous 90-day period during CY 2017 for all Medicaid EPs, regardless of submission method.

2. Modifications to CQM Reporting Requirements for Medicaid EPs Under the Medicaid EHR Incentive Program

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20134 through 20135), we also proposed to align the specific CQMs available to EPs participating in the Medicaid EHR Incentive Program with those available to clinicians participating in MIPS who submit CQMs through their EHR. In the final rule titled “Medicare and Medicaid Programs; Electronic Health Record Incentive Program—Stage 2,” we established (77 FR 54058) that EPs are required to report 9 CQMs covering at least 3 of the National Quality Strategy (NQS) domains from a list of 64 CQMs (77 FR 54069, Table 8). Subsequently and in the following years, in general, there has been alignment between the CQMs selected for the Medicaid and

Medicare EHR Incentive Programs for EPs and the electronic measures selected for the PQRS Program. Updates to the PQRS measure set were proposed and finalized in the annual Physician Fee Schedule (PFS) rule for purposes such as keeping specifications in line with industry standards and clinical guidelines.

In the CY 2017 Quality Payment Program final rule with comment period (81 FR 77144), we revised the list of CQMs for the 2019 MIPS payment year, based on performance periods within CY 2017, to better reflect updated clinical standards and guidelines. Specifically, we removed a number of CQMs that had not been updated and were no longer clinically relevant (81 FR 77773, Appendix, Table F). In order to keep CQM specifications current, we proposed to align the CQMs for Medicaid EPs with those applicable for MIPS. Specifically, we proposed that the CQMs available for Medicaid EPs in 2017 would consist of the list of available CQMs for reporting from an EHR for MIPS in 2017, available in the Appendix of the CY 2017 Quality Payment Program final rule with comment period under Table A, which are denoted with a CMS e-Measure ID number.

In the CY 2017 Quality Payment Program final rule with comment period (81 FR 77145), we noted that one commenter requested that we engage State Medicaid leaders to maximize measure alignment across Medicare and Medicaid. We responded that we intend to align quality measures among all CMS quality programs where possible, including Medicaid, and would take this comment into account in the future. In addition, States have requested alignment between the CQM set for MIPS and the CQM set for EPs in the Medicaid EHR Incentive Program for consistency and convenience, to reduce burden, and to avoid confusion. In addition, we believe it is more likely that professionals would participate in both programs if the CQM sets are aligned. While participation in MIPS is required for professionals who are considered “MIPS eligible clinicians,” participation in the Medicaid EHR Incentive Program is not required. If the CQMs are not aligned across both programs, we believe it is less likely that MIPS eligible clinicians would also participate as EPs in the remaining years of the Medicaid EHR Incentive Program. Finally, as noted above, the CQMs that were removed from MIPS (81 FR 77773, Appendix, Table F) had not been updated and were no longer clinically relevant, and we believe that the revised list of CQMs would better reflect

updated clinical standards and guidelines (81 FR 77144).

We noted in the proposed rule that we anticipate that this proposal would reduce burden for Medicaid EPs, and that the systems changes that would be needed to implement it would not be significant for either States or EPs. The set of 53 CQMs available to MIPS participants is a subset of the 64 CQMs currently available under the Medicaid EHR Incentive Program. In addition, we believe that if EPs also plan to participate in MIPS, they should already be prepared to report on the 53 CQMs. However, we welcomed comments on whether any EPs might be negatively affected by the proposal; for example, on whether any EPs might have EHRs that do not measure enough of the 53 remaining CQMs because they were relying on some of the 11 CQMs that would be removed. We do not anticipate that this would be a common situation because these 11 CQMs are outdated, and the industry is moving away from them as EHRs are upgraded to meet the MIPS requirements.

We also noted in the proposed rule that we anticipate that the proposal to reduce the number of available CQMs would have only a minimal impact on States, which would have to make minor adjustments to State systems to reduce the available measures from 64 to 53. It is our understanding that State systems can turn off or easily exclude CQMs from user visibility on the front end and still easily manage on the back end.

The data submission criteria for the MIPS quality performance category at § 414.1335(a)(1)(i) provide that individual MIPS eligible clinicians and groups who elect to submit data via claims, qualified registry, EHR or qualified clinical data registry must submit data on at least six quality measures, including at least one outcome measure (or, if an applicable outcome measure is not available, one other high priority measure). We refer readers to § 414.1335(a)(2) and (3) for the data submission criteria that apply to individual MIPS eligible clinicians and groups who elect to submit data via other data submission mechanisms.

Instead of requiring MIPS eligible clinicians to report on CQMs across a certain number of NQS domains, MIPS provides individual MIPS eligible clinicians and groups with a variety of alternatives for participating in MIPS, including a variety of data submission mechanisms and scoring criteria. We noted in the proposed rule that we believe that the burden on EPs and States of adopting all of these MIPS alternatives for the Medicaid EHR

Incentive Program would outweigh any benefits gained. The alternative reporting options for MIPS are calibrated as part of an overall quality improvement program beyond what the Medicare and Medicaid EHR Incentive Programs are designed to be. We believe it would be inappropriate to apply all of these new requirements to the Medicaid EHR Incentive Program.

We proposed to eliminate the requirement to report on CQMs across 3 of the 6 NQS domains that existed in previous years of the Medicaid EHR Incentive Program, for improved alignment with the data submission criteria for the MIPS quality performance category. The removal of this requirement would provide EPs greater flexibility in selecting CQMs to report and would assure that they could report on the same CQMs from their EHR to both MIPS and the Medicaid EHR Incentive Program.

We proposed that for 2017 Medicaid EPs would be required to report on any six measures that are relevant to the EP's scope of practice. This proposal would better align with the data submission criteria for the MIPS quality performance category in 2017.

We noted that we would continue our policy on allowing zero denominators to be reported to allow EPs to meet the CQM reporting requirements of the EHR Incentive Programs (80 FR 62889). Future years' requirements for reporting CQMs in the Medicaid EHR Incentive Program will be established in future rulemaking, as the policies for MIPS are developed for 2018 and beyond. We will continue to align the quality reporting requirements, as logical and feasible, to reduce EP burden.

We invited public comment on these proposals, specifically on whether making these proposed changes to CQM measures and measure reporting effective for 2017 would create burdens on EPs or States. If so, we stated we would consider making these proposed changes to the CQM reporting requirements effective beginning with the reporting period in 2018.

Comment: The vast majority of commenters supported CMS' proposals to change the CQM reporting requirements for EPs participating in the Medicaid EHR Incentive Program to align with the MIPS requirements for eligible clinicians and groups reporting CQMs through their EHRs. Our proposal to reduce and simplify the reporting requirement, from nine CQMs across 3 NQS domains, to any six CQMs relevant to an EP's scope of practice, received significant support from commenters.

Response: We appreciate the comments and are finalizing the

proposals as proposed. In 2017, Medicaid EPs will report any six CQMs relevant to their scope of practice, regardless of whether they report via attestation or electronically.

Comment: One provider group commented that removing CQMs from the list of available CQMs could be an issue for EPs who were expecting to report on the removed measures in 2017.

Response: We did not receive any comments from providers affirmatively stating that this would be an issue. The majority of provider comments were very supportive of aligning the Medicaid EHR Incentive Program CQM reporting requirements with MIPS, stating that it would reduce reporting burden and allow providers to participate in both programs. Reducing the number of required CQMs from 9 to 6, and removing the domain requirements gives EPs greater flexibility to meet program requirements. We believe that all Medicaid EPs will be able to find six CQMs that are relevant to their scope of practice within the updated list of available CQMs. Also, we note our continued policy to allow "zero denominator" CQM submissions, which allows EPs to report on a CQM even if they have no data on that CQM in their EHR from the reporting period.

After consideration of the public comments we received, we are finalizing the proposals without modification. For 2017, the CQMs available for Medicaid EPs will consist of the list of 53 available CQMs for reporting from an EHR for MIPS for 2017 performance periods. Also, for 2017, Medicaid EPs are required to report on any six measures that are relevant to the EP's scope of practice.

G. Changes to the Medicare and Medicaid EHR Incentive Programs

1. Summaries of Final Policies Included in This Final Rule

In this final rule, we are adopting final policies based on proposals in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20135–20139) to continue advancement of certified EHR technology utilization, focusing on interoperability and data sharing. For the reasons discussed in section IX.G.2. of the preamble of this final rule, we are finalizing an EHR reporting period of a minimum of any continuous 90-day period in CY 2018 for new and returning participants attesting to CMS or their State Medicaid agency.

As mandated by the 21st Century Cures Act (Pub. L. 114–255, enacted on December 13, 2016), we proposed an

exception from the Medicare payment adjustments for EPs, eligible hospitals, and CAHs who are unable to comply with the requirements for being a meaningful EHR user because their CEHRT has been decertified under ONC's Health IT certification program (82 FR 20136 through 20138). For the reasons discussed in section IX.G.3. of the preamble of this final rule, we are finalizing the exception and application process for EPs, eligible hospitals and CAHs as proposed.

As mandated by the 21st Century Cures Act, in the FY 2018 IPPS/LTCH PPS proposed rule (81 FR 20138 through 20139), we proposed to implement a policy in which no payment adjustments will be made in 2017 and 2018 for eligible professionals who furnish "substantially all" of their covered professional services in an Ambulatory Surgical Center (ASC). We proposed to define an ASC-based EP under § 495.4 as an EP who furnishes 75 percent or more (or alternatively, 90 percent or more) of his or her covered professional services in sites of service identified by the codes used in the HIPAA standard transaction as an ASC setting in the calendar year that is two years before the payment adjustment year. In addition, we proposed to use Place of Service (POS) Code 24 to identify services furnished in an ASC and requested public comment on whether other POS codes or mechanisms should be used to identify sites of service in addition to or in lieu of POS code 24. For the reasons discussed in section IX.G.4. of the preamble of this final rule, we are finalizing the definition of an ASC-based EP as an EP who furnishes 75 percent or more of his or her covered professional services in sites of service identified by POS 24.

In the proposed rule, we stated we were working in cooperation with our Federal partners at the ONC to monitor progress on the 2015 Edition upgrade. For the reasons discussed in section IX.G.5. of the preamble of this final rule, we are finalizing a policy to allow EPs, eligible hospitals, and CAHs the flexibility to use EHR technology certified to the 2014 Edition, 2015 Edition, or a combination of the 2014 and 2015 Editions for an EHR reporting period in 2018.

We also note that we received comments specific to the EHR Incentive Programs objectives and measures, audits for meaningful use, Merit-Based Incentive Payment System (MIPS) and allocation of grant funding for CEHRT which are out of scope for this rule.

2. Revisions to the EHR Reporting Period in 2018

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20136), we proposed to change the EHR reporting period in 2018 for new and returning participants attesting to CMS or their State Medicaid agency from the full year (CY 2018) to a minimum of any continuous 90-day period within CY 2018.

Therefore, EPs, eligible hospitals and CAHs would attest to meaningful use for an EHR reporting period of a minimum of any continuous 90-day period from January 1, 2018 through December 31, 2018. The applicable incentive payment year and payment adjustment years for the EHR reporting period in 2018, as well as the deadlines for attestation and other related program requirements, would remain the same as established in prior rulemaking. We proposed corresponding changes to the definition of "EHR reporting period" and "EHR reporting period for a payment adjustment year" at 42 CFR 495.4.

We invited public comment on our proposal.

Comment: Commenters overwhelmingly supported CMS' proposal to change the EHR reporting period to a minimum of any continuous 90-day period in CY 2018. Some commenters requested an extension of the 90-day EHR reporting period beyond CY 2018. Another commenter stated for the first year of any new "Stage" a reduced reporting period should be used. A few commenters stated CMS should adopt a 90-day reporting period for all programs, all submission methods, and all years.

Response: We thank commenters for their support on this proposed policy. We disagree that a 90-day EHR reporting period should be established indefinitely for new and returning participants in the EHR Incentive Programs. We are finalizing a 90-day EHR reporting period in CY 2018 to allow participants additional time for testing and implementation of the 2015 Edition, including the new application programming interface (API) functionality requirement for Stage 3. We previously stated that we believe a full year EHR reporting period is the most effective way to ensure that all actions related to patient safety which leverage CEHRT are fully enabled for the duration of the year. This is one of the primary considerations of our continued push for a full year EHR reporting period. We will take commenters' suggestions under advisement for purposes of future rulemaking.

Comment: A commenter requested CMS clearly define the EHR reporting period. A few commenters requested clarity on whether CMS intends to have a minimum of any continuous 90 days for reporting the meaningful use objectives and measures and the clinical quality measures.

Response: The EHR reporting period is a minimum of any continuous 90-day period within the 2018 calendar year for new and returning participants attesting to CMS or their State Medicaid agency. The EHR reporting period must occur between January 1, 2018 and December 31, 2018. For information regarding the reporting period for clinical quality measures (CQMs) for 2018, we refer readers to section IX.E.3.b. of the preamble of this final rule.

Comment: Several commenters requested clarification on when CEHRT needs to be implemented for the applicable EHR reporting period.

Response: An EP, eligible hospital, or CAH may begin the EHR reporting period and implement their EHR technology before it is certified. Certification need only be obtained prior to the end of the EHR reporting period. We caution that if an EP, eligible hospital or CAH starts the EHR reporting period without the certification complete, it runs the risk of not being a meaningful EHR user for that EHR reporting period. See FAQ2893 (available at: <https://questions.cms.gov/faq.php?isDept=0&search=FAQ2893&searchType=faqId&submitSearch=1&id=5005>).

After consideration of the public comments we received, we are finalizing for new and returning EPs, eligible hospitals, and CAHs attesting to CMS or their State Medicaid agency, an EHR reporting period in CY 2018 as a minimum of any continuous 90 days between January 1, 2018 through December 31, 2018, as proposed. The applicable incentive payment year and payment adjustment years for the EHR reporting period in 2018, as well as the deadlines for attestation and other related program requirements, will remain the same as established in prior rulemaking.

We are finalizing corresponding changes to the definitions of "EHR reporting period" and "EHR reporting period for a payment adjustment year" in the regulations under 495.4.

3. Exception for Decertified EHR Technology for EPs, Eligible Hospitals, and CAHs Seeking To Avoid the Medicare Payment Adjustment

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20136 through 20138), as mandated by sections

4002(b)(1)(A) and (b)(2) of the 21st Century Cures Act, we proposed to add a new exception for EPs, eligible hospitals and CAHs from the Medicare payment adjustments under sections 1848(a)(7)(A), 1886(b)(3)(B)(ix)(I), and 1814(l)(4) of the Act, respectively, who demonstrate through an application process that compliance with the requirement for being a meaningful EHR user is not possible because the certified EHR technology used has been decertified under ONC's Health IT Certification Program.

We proposed that to be considered for this exception, an EP, eligible hospital and CAH must submit an application in a form and manner specified by CMS and must demonstrate in its application and through supporting documentation if available that they intended to attest to meaningful use for a certain EHR reporting period and made a good faith effort to adopt and implement another CEHRT in advance of that EHR reporting period.

We proposed an EP may qualify for this exception for the CY 2018 payment adjustment year, which is the final year of the payment adjustment for EPs under section 1848(a)(7)(A) of the Act, if their certified EHR technology was decertified at any time during the 12-month period preceding the applicable EHR reporting period for the CY 2018 payment adjustment year or during the applicable EHR reporting period for the CY 2018 payment adjustment year, which under § 495.4 is any continuous 90-day period in CY 2016 or 2017, depending on whether the EP has successfully demonstrated meaningful use in a prior year.

We proposed an EP seeking to qualify for this exception would submit an application in the form and manner specified by us by October 1, 2017, or a later date specified by us. We proposed an eligible hospital may qualify for this exception beginning with the FY 2019 payment adjustment year, if their certified EHR technology was decertified at any time during the 12-month period preceding the applicable EHR reporting period for the payment adjustment year, or during the applicable EHR reporting period for the payment adjustment year.

We proposed an eligible hospital seeking to qualify for this exception would submit an application in the form and manner specified by us by July 1 of the year before the payment adjustment year (for example, for the FY 2019 payment adjustment year, by July 1, 2018), or a later date specified by us.

We proposed a CAH may qualify for this exception beginning with the FY 2018 payment adjustment year if their

certified EHR technology was decertified at any time during the 12-month period preceding the applicable EHR reporting period for the payment adjustment year, or during the applicable EHR reporting period for the payment adjustment year. We proposed a CAH seeking to qualify for this exception would submit an application in the form and manner specified by us by November 30 after the end of the applicable payment adjustment year (for example, for the FY 2018 payment adjustment year, by November 30, 2018), or a later date specified by us.

We noted in the proposed rule that sections 1848(a)(7)(B) and 1886(b)(3)(B)(ix)(II) of the Act provide that in no case may an EP, eligible hospital, or CAH be granted an exemption from the payment adjustment based on significant hardship or decertified EHR technology for more than five years.

We proposed to revise § 495.102(d) for EPs, § 412.64(d)(4) for eligible hospitals and § 413.70(a)(6) for CAHs to codify this proposed new exception.

We invited public comment on these proposals.

Comment: Many commenters supported the proposed exception for CEHRT that have been decertified by the ONC Health IT Certification Program stating it would help to mitigate potential financial loss to participants.

Response: We thank the commenters for their support. As we stated in the proposed rule (82 FR 20137), we believe participants in the Medicare EHR Incentive Program will benefit from this additional exception because there is a 6-step process that usually occurs with implementation of a certified EHR technology system. Health care providers would likely have to go through some phases of this cycle again, and we understand that it would be time consuming and may take up to a year to implement. In addition, we note that the decertification of a CEHRT by the ONC Health IT Certification Program would be outside of a health care provider's control, and we agree that additional burden would likely result from decertification. In implementing this new exception, we are attempting to reduce any potential burden while also continuing to further the goal of interoperability.

Comment: To account for the CEHRT requests for proposals (RFP) and selection process, implementation, and a 90-day EHR reporting period, several commenters requested a period of two years rather than 12 months, and one commenter suggested that CMS provide an additional 18-month grace period.

Another commenter believed there should be no requirements in moving to a new CEHRT product and that they should have at least three years to switch to a new EHR system.

A commenter indicated that the use of a 12-month period preceding the applicable EHR reporting period is confusing, stating that CMS should consider applying the exception for decertification that occurred at any time within the full calendar year prior to the EHR reporting period for the payment adjustment year and during the EHR reporting period for the payment adjustment year.

Response: We disagree that the exception should be extended beyond the 12-month period preceding the applicable EHR reporting period as suggested by the commenters. As we stated in the proposed rule at 82 FR 20137, we believe a 12-month period preceding the applicable EHR reporting period for the payment adjustment year is reasonable because it should allow ample time for health care providers to procure and deploy new certified EHR technology. We believe this provides additional flexibilities and may partially alleviate any financial burden placed upon a health care provider for having to procure a new EHR system.

Comment: Several commenters suggested that certain situations where a provider's CEHRT is decertified during the EHR reporting period would prevent them from being able to make a good faith effort to adopt and implement another CEHRT in advance of or during the remainder of the EHR reporting period, and requested clarification.

Response: We agree that acquiring another CEHRT during the applicable EHR reporting period would be difficult. We disagree, however, that a health care provider necessarily would be unable to adopt and implement a new CEHRT during the remainder of the EHR reporting period. We believe a good faith effort is necessary in order to ensure the health care provider is diligently working towards adopting and implementing new CEHRT under the circumstances presented. Health care providers may apply for this exception before or during the applicable EHR reporting period, by the deadlines we establish.

Comment: A commenter requested an extension of the application deadline to December 31st of the year of the EHR reporting period.

Response: At this time it is not feasible to extend the application until December 31st. There are time constraints we must adhere to for system updates and changes, therefore

we are unable to modify the proposed deadlines for application submission as outlined in 82 FR 20137 through 20138.

Comment: A commenter stated the application process was unclear and encouraged CMS to release timely guidance on the application.

Response: We will provide additional guidance regarding the application process after the final rule is published.

After consideration of the public comments we received, we are finalizing the policy as proposed.

We are also finalizing as proposed the corresponding changes to § 495.102(d) for EPs, § 412.64(d)(4) for eligible hospitals and § 413.70(a)(6) for CAHs.

4. Ambulatory Surgical Center (ASC)-Based Eligible Professionals (EPs)

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20138 through 20139), as mandated by section 16003 of the 21st Century Cures Act, we proposed to implement a policy in which no payment adjustments would be made under section 1848(a)(7)(A) of the Act for 2017 and 2018 for eligible professionals who furnish “substantially all” of their covered professional services in an ambulatory surgical center (ASC). We proposed to define an ASC-based EP under § 495.4 as an EP who furnishes 75 percent or more (or alternatively, 90 percent or more) of his or her covered professional services in sites of service identified by the codes used in the HIPAA standard transaction as an ASC setting in the calendar year that is two years before the payment adjustment year. The percentages of covered professional services in the primary and alternative proposals were based, respectively, on the percentages used in the definitions of a hospital-based MIPS eligible clinician under the Quality Payment Program (§ 414.1305 and 81 FR 77238 through 77240) and the definition of a hospital-based EP under the EHR Incentive Programs (§ 495.4 and 75 FR 44439 through 44442). In addition, we proposed to use Place of Service (POS) code 24 to identify services furnished in an ASC and requested public comment on whether other POS codes or mechanisms to identify sites of service should be used in addition to or in lieu of POS code 24.

We invited public comment on these proposals.

Comment: The majority of commenters supported the proposal for an ASC-based EP using 75 percent or more to define eligible professionals who furnish “substantially all” of their covered professional services in an ambulatory surgical center. The commenters believe the exception from

the payment adjustments for ASC-based EPs will significantly reduce burden and promote consistency between the EHR Incentive Program and MIPS, but also ensures EPs who have little control over EHR decisions in their practice are not subject to payment adjustments.

One commenter stated that the definition of ASC-based EP should be as broad as possible.

Response: We thank commenters for their support. We are finalizing the definition of ASC-based EP as proposed using 75 percent or more to define eligible professionals who furnish “substantially all” of their covered professional services in an ASC, which aligns with the hospital-based MIPS eligible clinician definition under the Quality Payment Program (§ 414.1305 and 81 FR 77238 through 77240). We also agree that this policy will result in a reduction in burden for ASC-based EPs who have little control over the EHR decisions in the practice.

Comment: A few commenters suggested using 50 percent as the threshold to define “substantially all” as some EPs provide more than 50 percent, but less than 75 percent or 90 percent, of their services in an ASC.

Response: The statutory definition of an ambulatory surgical center-based EP provides that to be considered an ambulatory surgical center-based EP, the EP must provide “substantially all” of his or her covered professional services in an ambulatory surgical center. Therefore, we must identify the minimum percentage of an EP’s covered professional services that must be provided in an ambulatory surgical center in order for the EP to be considered as providing “substantially all” of his or her covered professional services in an ASC setting. We do not believe that an EP who furnishes only slightly more than half of his or her covered professional services in an ASC setting is furnishing substantially all of such services in that setting. Based on the hospital-based MIPS eligible clinician definition we previously established under the Quality Payment Program, we believe that 75 percent is an appropriate minimum percentage of an EP’s covered professional services.

Comment: One commenter suggested that CMS should change “substantially all covered professional services” to “substantially all ASC covered services.” The commenter believed that CMS should combine ASC services with all other Medicare Part B services when determining whether the professional is a meaningful user of CEHRT.

Response: We are unable to adopt the commenter’s suggestion because the statute refers to “covered professional

services” furnished by the EP. When determining if an EP qualifies as an ASC-based EP, we would look at all of their Medicare services billed using POS 24, and from that we would be able to determine the percentage of covered professional services that were furnished in an ASC. In addition, we requested comments on whether additional place of service codes or mechanisms should be utilized in addition to or in lieu of POS 24, but did not receive any specific comments on this issue. We are finalizing the use of Place of Service (POS) code 24 to identify services furnished in an ASC.

Comment: One commenter suggested a change in the proposed methodology of using claims for services furnished in the year that is two years before the payment adjustment year to be consistent with methodology used to determine a hospital-based EP.

Response: We disagree with using the same methodology for hospital-based and ASC-based determinations. We determine hospital-based status using claims data from the fiscal year before the year that is 1 year prior to the payment adjustment year and the fiscal year before the year that is 2 years prior to the payment adjustment year (77 FR 54102). We adopted this methodology to ensure EPs are made aware of their hospital-based status in advance of the applicable EHR reporting period for the payment adjustment year, so they would have time to adopt and implement CEHRT and begin their EHR reporting period. In contrast, for ASC-based determinations, the applicable EHR reporting periods under § 495.4 for the 2017 and 2018 payment adjustments years have already occurred or are currently underway in 2017, and thus it is not feasible to notify EPs of their ASC-based status in advance of the EHR reporting period. In addition, we believe our proposed methodology is clear and easy for EPs to understand.

After consideration of the public comments we received, we are finalizing as proposed the definition of ASC-based EP using 75 percent or more to define eligible professionals who furnish “substantially all” of their covered professional services in an ASC. In addition, we are finalizing Place of Service (POS) code 24 to identify services furnished in an ASC. We are also finalizing the definition of “ASC-based EP” in the regulations under § 495.4.

5. Certification Requirements for 2018

In the 2015 EHR Incentive Program final rule (80 FR 62871 through 62875), we adopted a final policy regarding which Edition of CEHRT must be used

by EPs, eligible hospitals, and CAHs for the EHR Incentive Program, which is reflected in the definition of CEHRT § 495.4.

Starting with 2018, all EPs, eligible hospitals, and CAHs would be required to use technology certified to the 2015 Edition to demonstrate meaningful use for an EHR reporting period in 2018 and subsequent years (80 FR 62873 through 62875).

We received feedback from EPs, eligible hospitals and hospital associations after the 2015 EHR Incentive Program final rule was published expressing concerns regarding the burden that will likely occur as a result of the new functionalities required in the implementation of the Stage 3 requirements.

Based on our past experience with the transition from the 2011 Edition to the 2014 Edition and concerns expressed by stakeholders, we understand that transitioning to technology certified to a new Edition can be complex and can require more resources and time than anticipated, including the time necessary to effectively deploy the upgraded system and make the necessary patient safety, staff training and workflow investments. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20139), we stated that we understood and appreciated these concerns, and were working in cooperation with our Federal partners at ONC to monitor progress on the deployment and implementation status of EHR technology certified to the 2015 Edition. We further stated if we identified a change in the current trends and significant issues with the certification and deployment of the 2015 Edition, we would consider flexibility in 2018, for those EPs that attest directly to a State for the State's Medicaid EHR Incentive Program and eligible hospitals and CAHs attesting to CMS or the State's Medicaid EHR Incentive Program that are not able to implement 2015 Edition CEHRT to attest for an EHR reporting period in 2018. We indicated one possibility was the flexibility to use EHR technology certified to the 2014 Edition or 2015 Edition, or a combination of EHR technologies certified to the 2014 and 2015 Editions, for an EHR reporting period in 2018.

In efforts to track certification readiness for the 2015 Edition, ONC considers the number of health care providers likely to be covered by the individual developers seeking certification under the ONC Health IT Certification Program in real time as the testing and certification process

progresses. The ONC considers trends within the industry when projecting for 2015 Edition readiness. The market trend of consolidation was considered as part of the projection model and as of the close of the first quarter this analysis supported an estimate of greater than 85 percent of hospitals will be ready by the end of CY 2017. However, ONC has continued to update this tracking as the testing and certification process continues and this tracking as of the end of the second quarter of 2017 indicates that overall progress is behind the first quarter projections. ONC has therefore updated the overall estimate to reflect an estimate of greater than 75 percent of hospitals will be ready by the end of CY 2017.

This necessitates further consideration, both for adoption of a 90 day reporting period as discussed in IX.G.2 of this final rule and for the adoption of flexibility for the 2018 calendar year in the requirement for eligible hospitals and CAHs to use only the 2015 Edition in CY 2018. While the ONC estimates note that the majority of eligible hospitals and CAHs will be ready at the beginning of January 2018, the tracking indicates that additional flexibility should be allowed for all hospitals to ensure that those hospitals with limited resources to implement upgrades and those hospitals that may face challenges in implementing appropriate and necessary workflows are provided adequate time to successfully implement the upgrade to 2015 Edition.

We invited public comment on options for offering flexibility in CY 2018 with regard to EHR certification requirements.

Comment: A majority of commenters supported the flexibility to use 2014 Edition or 2015 Edition CEHRT in 2018 and stated the cost and administrative burden of upgrading the EHR technology is significant and delaying the requirement to use the 2015 Edition would reduce burden and improve patient-physician interactions.

A commenter requested CMS not to move forward with Stage 3 until further progress is made toward achieving interoperability and health information exchange.

Response: We thank commenters for their feedback and support of CEHRT flexibility in 2018. In an effort to grant more flexibility to health care providers who are experiencing 2015 Edition CEHRT product issues that impact the ability to be a meaningful EHR user in 2018, we are adopting a final policy to allow health care providers to use either 2014 Edition or 2015 Edition CEHRT, or

a combination of 2014 Edition and 2015 Edition CEHRT, for their EHR reporting period in 2018. We want to ensure that health care providers have adequate time to effectively deploy the 2015 Edition and make the updates necessary to improve patient safety, staff training, and workflow investments to be a meaningful user. We note that the Stage 3 objectives and measures are designed to promote interoperability with a focus on the advanced use of EHR technology and electronic standards, as well as the interoperable exchange of health information between systems. Therefore, we believe implementing Stage 3 is essential in achieving those goals.

Comment: A few commenters requested CMS finalize a policy allowing for CEHRT flexibility by the end of calendar year 2017, in order to ensure that States have adequate time to update their systems without any delay.

Response: We believe the final policy established in this final rule will provide flexibility with regard to which Edition of CEHRT may be used in 2018.

Comment: Some commenters requested clarification on how CMS would implement flexibility in 2018 and whether providers would have the option to attest to Modified Stage 2 or Stage 3.

Several commenters were confused on how to use a combination of the 2014 and 2015 Editions for an EHR reporting period in 2018.

Response: Under the final policy we are adopting, for an EHR reporting period in CY 2018, health care providers will have the option to attest to the Modified Stage 2 objectives and measures using 2014 Edition CEHRT, 2015 Edition CEHRT, or a combination of 2014 and 2015 Edition CEHRT, as long as the EHR technology they possess can support the objectives and measures to which they plan to attest. Similarly, health care providers will have the option to attest to the Stage 3 objectives and measures using 2015 Edition CEHRT or a combination of 2014 and 2015 Edition CEHRT, as long as their EHR technology can support the functionalities, objectives and measures for Stage 3.

Upon attestation for an EHR reporting period in CY 2018, health care providers may select one of these options and attest to the applicable objectives and measures based on their Edition of CEHRT. The requirements for reporting of CQMs are found in section IX.E.3.b. of the preamble of this final rule.

A health care provider utilizing 2015 Edition CEHRT in CY 2018 could attest to the Stage 3 or the Modified Stage 2 objectives and measures depending on

their ability to fully implement all of the functionalities required of 2015 Edition CEHRT, which may be limited by the timing of product installation, deployment of new processes and workflows, and employee training. A health care provider using a combination of 2014 and 2015 Edition CEHRT could attest to the Stage 3 or the Modified Stage 2 objectives and measures. Health care providers who choose to attest to Modified Stage 2 will attest to only the Modified Stage 2 objectives and measures at § 495.22. Health care providers who choose to attest to Stage 3 will attest to only the Stage 3 objectives and measures at § 495.24. Health care providers who are seeking to attest to Stage 3 in 2018 using a combination of 2014 and 2015 Editions of CEHRT cannot do so without the support of certain functions that are only available for certification as part of the 2015 Edition certification criteria.

Comment: Several commenters requested that CMS not delay the 2015 Edition CEHRT and believed that health IT vendors should be held accountable for upgrading to the 2015 Edition so there is no delay in getting certification from ONC. These commenters believed that the possible delay further hinders the health care providers' ability to adopt and demonstrate meaningful use. In addition the commenters stated they believed the 2015 Edition eases data sharing and offers increased interoperability.

Response: We appreciate those stakeholders who were able to fully implement the 2015 Edition CEHRT. Moreover, we understand the challenges faced in accomplishing the upgrade and wish to recognize the tremendous amount of work from health care providers and health IT vendors in helping to move health IT forward. However, because Stage 3 was optional for CY 2017 and individual circumstances may have prolonged the certification process, we believe that health IT vendors and providers should be given additional time to implement a product that functions as intended utilizing the standards and criteria set forth by the ONC. We received numerous comments that implementation of the 2015 Edition was met with delays related to functionality implementation (including APIs), was administratively burdensome and required more time and resources than anticipated. Our intent in considering these options to provide flexibility in 2018 was not to further complicate the program, or hinder the advancement of health information exchange or interoperability. Rather, we sought to be responsive to stakeholder concerns by

considering options for health care providers who were unable to fully implement the 2015 Edition CEHRT for an EHR reporting period in 2018 because of issues related to time constraints, implementation of new functionalities and testing new workflows to support the technology, implementation and training challenges related to new functions and standards, and potential unforeseen delays or updates required throughout the process. For those reasons we considered introducing flexibility in the use of certified EHR technology.

Comment: One commenter believed that CMS should eliminate the requirement for providers to upgrade to 2015 Edition CEHRT.

Response: We disagree that CMS should eliminate this requirement entirely, and we will require use of 2015 Edition CEHRT beginning with the EHR reporting period in 2019. Vendors and health care providers have already invested time and energy in the 2015 Edition, and we believe it will lend to an interoperable nationwide health information infrastructure focusing on the advanced use of EHR technology and electronic standards. In addition, the 2015 Edition facilitates the accessibility and exchange of data and establishes a framework that makes the Health IT Certification Program open and accessible to more types of health IT that can support a variety of care and practice settings, various HHS programs, and public and private interests. We have also heard from many health care providers that they are prepared to move to Stage 3. While this is not the case for all health care providers, we want to give those who are able to successfully attest to the Stage 3 objectives and measures the opportunity to do so.

Comment: One commenter believed that CEHRT requirements should be aligned across all programs where use of CEHRT is required, including the Quality Payment Program. Another commenter suggested that CMS should eliminate all certified EHR technology requirements.

Response: We may not be able to align CEHRT requirements across all programs as each program has different statutory authority and requirements. However, in an effort to reduce burden and promote interoperability, we will continue to align the CEHRT requirements where feasible. We cannot eliminate all requirements of CEHRT as suggested by the commenter because the statute includes certain baseline requirements (see, for example, section 1848(o)(4) of the Act).

Comment: One commenter requested more information on what CMS meant by a health care provider not being able to implement the 2015 Edition of CEHRT as they believed a wide variety of the 2015 Edition CEHRT products already exist.

Another commenter requested clarification on how to implement the 2015 Edition CEHRT and update to all new standards and functionalities for meeting the objectives and measures in Stage 3.

Response: We do acknowledge that some health care providers have successfully updated to the 2015 Edition of CEHRT but this is not the case in every situation. We also note that ONC has advised us that there are some vendors that are delayed in receiving their certification for every EHR module. In addition, as stated above, we received comments indicating a lack of preparedness for the 2015 Edition CEHRT in 2018. For these reasons, we believe that delaying the 2015 Edition of CEHRT is necessary in order to provide additional time to implement those certain elements, such as the API function, that we believe are central to increasing interoperability. For more information about the implementation of the 2015 Edition of CEHRT we refer readers to the 2015 Edition Health Information Technology (Health IT) Certification Criteria, 2015 Edition Base Electronic Health Record (EHR) Definition, and ONC Health IT Program Modifications, Final Rule. 80 FR 62602 through 62759.

Comment: A commenter stated that CMS is too focused on modifying functional requirements and does not emphasize outcomes or interoperability. The commenter indicated that better infrastructure is needed to support interoperability for data management, and to exchange content in a more effective way. The commenter expressed concerns around the expensive workarounds necessary for certified products that do not always function accurately and expressed concern that burden has shifted to staff having to identify codes which they believe is more time consuming and mundane.

Response: We disagree that we are too focused on modifying functional requirements and not enough on outcomes or interoperability. We believe the changes we are finalizing in this rule focus on increasing interoperability and ensure that we are reducing administrative burden in hopes of giving health care providers more time with their patients. In addition, we believe that as we move forward in increasing interoperability by focusing on certain objectives and measures we

will improve the delivery of services and improve patient outcomes. We understand the cost burden that some of the changes have on certain providers, but we believe there is greater benefit in having a truly integrated and interoperable health care system. We will continue to work with stakeholders.

After consideration of the public comments we received, we are finalizing a policy to allow health care providers to use either 2014 Edition or 2015 Edition CEHRT, or a combination of 2014 Edition and 2015 Edition CEHRT, for an EHR reporting period in CY 2018. As discussed above and in section IX.E.3.c. of the preamble of this final rule, for the CY 2018 CQM reporting period, eligible hospitals and CAHs will have the flexibility to use EHR technology certified to either the 2014 Edition or 2015 Edition, or a combination of both Editions.

All new and returning participants attesting to CMS or their State Medicaid agency have the option to attest to the Modified Stage 2 objectives and measures under § 495.22 for the EHR reporting period in 2018 using 2014 Edition CEHRT, 2015 Edition CEHRT, or a combination of 2014 and 2015 Edition CEHRT, as long as the EHR technology they possess can support the objectives and measures to which they plan to attest.

Similarly, all new and returning participants attesting to CMS or their State Medicaid agency have the option to attest to the Stage 3 objectives and measures under § 495.24 for the EHR reporting period in 2018 using 2015 Edition CEHRT or a combination of 2014 and 2015 Edition CEHRT, as long as their EHR technology can support the functionalities, objectives and measures for Stage 3.

Accordingly, we are revising the definition of “Certified electronic health record technology (CEHRT)” at § 495.4, the meaningful use criteria at § 495.22 and § 495.24, and the requirements for demonstrating meaningful use under § 495.40 to specify the flexible options for using CEHRT in 2018 and the objectives and associated measures to which health care providers using these options would attest.

X. Revisions of Medicare Cost Reporting and Provider Requirements

A. Electronic Signature and Submission of the Certification and Settlement Summary Page of the Medicare Cost Report

1. Background

Sections 1815(a) and 1833(e) of the Act provide that no payments will be made to a provider unless it has

furnished such information, as may be requested by the Secretary, to determine the amount of payments due the provider under the Medicare program. In general, providers submit this information through annual cost reports that cover a 12-month period of time. Under the provisions of 42 CFR 413.20(b) and 413.24(f), providers are required to submit cost reports annually, with the reporting period based on the provider's accounting year. For cost reporting periods beginning on or after October 1, 1989, section 1886(f)(1) of the Act and § 413.24(f)(4) of the regulations require hospitals to submit cost reports in a standardized electronic format, and the same requirement was later imposed for other types of providers.

Currently, under § 413.24(f)(4)(ii), hospitals, skilled nursing facilities, home health agencies, hospices, end-stage renal disease facilities, organ procurement organizations, histocompatibility laboratories, rural health clinics, Federally qualified health centers, and community mental health centers are required to file Medicare cost reports in a standardized electronic format. When preparing the cost report, the provider's electronic program must produce the CMS standardized output file in a form that can be read by the contractor's automated system. This electronic file, also known as the electronic cost report, is forwarded to the contractor for processing through its system. (42 CFR 413.24(f)(4)(ii) and (iii))

Although the Medicare cost report is forwarded to the contractor in electronic format, certain hard copy portions must be separately submitted by the provider to its contractor. Specifically, under § 413.24(f)(4)(iv), the provider is required to submit a hard copy of the settlement summary, if applicable, which is a statement of certain worksheet totals, and a certification statement containing a signature by the provider's administrator or chief financial officer certifying the accuracy of the electronic file. The certification statement and the settlement summary both appear together on the “Certification and Settlement Summary” page of the Medicare cost report for all providers that are required to file a Medicare cost report. By signing the certification statement, the provider is certifying, among other things, to the accuracy of the electronic file, and also that it has read the statement that misrepresentation or falsification of information contained in the cost report may be punishable by criminal, civil or administrative action.

This certification statement signed by the provider's administrator or chief

financial officer was incorporated into § 413.24(f)(4) of the regulations in a final rule with comment period (59 FR 26964 through 26965) issued in response to public comments received following the Uniform Electronic Cost Reporting System for Hospitals proposed rule (56 FR 41110). Currently, this certification statement is required to have an original signature. This original signature requirement is also set forth in Chapter 1 of the Provider Reimbursement Manual (CMS Pub. 15–2), which explains that a facsimile or stamped copy of the signature is unacceptable.

Due to the original signature requirement, the Certification and Settlement Summary page containing the original signature is required to be mailed by the provider to the contractor. As set forth in § 413.24(f)(4)(iv) and (5)(i) and (ii), an acceptable cost report submission must include the electronic cost report, along with a hard copy of the Certification and Settlement Summary page with an original signature, the Provider Cost Reimbursement Questionnaire, if applicable, and the supporting documentation required from teaching hospitals (the Intern and Resident Information System diskette).

2. Changes Relating to Electronic Signature on the Certification and Settlement Summary Page of the Medicare Cost Report

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20139 through 20142), in lieu of requiring the provider to sign the certification statement with an original signature on a hard copy of the Medicare cost report's Certification and Settlement Summary page, we proposed to revise § 413.24(f)(4)(iv) to allow providers to use an electronic signature. For Medicare cost reporting purposes, we proposed that this electronic signature be placed on the signature line of the certification statement and may be (1) any format of the original signature that contains the first and last name of the provider's administrator or chief financial officer (for example, photocopy or stamp) or (2) an electronic signature that must be the first and last name of the provider's administrator or chief financial officer entered in the provider's electronic program. An electronic signature for this purpose cannot be a symbol, numerical characters, or codes. We stated in the proposed rule that we believe allowing providers to utilize an electronic signature would afford providers greater flexibility in signing the certification statement and allow a faster and more efficient submission of the Medicare cost report.

To indicate the provider's election to sign the certification statement with an electronic signature, we proposed to add an electronic signature checkbox placed immediately after the certification statement and above the signature line on the Certification and Settlement Summary page of the Medicare cost report. We stated that the checkbox electing the electronic signature would read: "I have read and agree with the above certification statement. I certify that I intend my electronic signature on this certification statement to be the legally binding equivalent of my original signature." We proposed that the checkbox must be checked to signify that the certification statement has been read and that an electronic signature will be placed on the signature line by the provider.

We proposed that only when the checkbox is checked would the signature line be accepted with an electronic signature. We stated in the proposed rule that completion of both the electronic signature checkbox and the electronic signature, placed on the signature line by the provider's administrator or chief financial officer under the certification statement, would together constitute an accepted electronic signature of the provider's administrator or chief financial officer on the certification statement. By signing the certification statement with an electronic signature on the Certification and Settlement Summary page, the signatory would be attesting that its electronic signature was executed with the intent to sign the certification statement, that the electronic signature is being submitted in lieu of an original signature, and additionally that the electronic signature has the same legal effect as an original signature. Because we proposed that it would be optional for providers to utilize an electronic signature on the certification statement, providers would continue to be able to sign the certification statement with an original signature on a hard copy of the Certification and Settlement Summary page.

We invited public comments on our proposals.

Comment: Many commenters supported the utilization of technology to allow for the electronic signature of the Certification and Settlement Summary page of the Medicare cost report and further stated that this has been long awaited in the industry. The commenters stated that allowing providers the option to electronically sign the Certification and Settlement Summary page will make the process easier, more efficient, and allow for

fewer errors than the current paper process. Commenters also supported allowing facilities an option to continue using the current paper process to manually sign the Certification and Settlement Summary page.

Response: We appreciate the commenters' support.

Comment: One commenter suggested that CMS' proposal was to change the title of the signatory to the certification statement from the provider's administrator or "officer" to the provider's administrator or "chief financial officer" and disagreed with this alleged change, noting that many smaller providers do not have a chief financial officer.

Response: We disagree with this commenter's characterization of our proposal. Our proposal to allow providers the option to electronically sign the certification statement on the Certification and Settlement Summary page of the Medicare cost report, did not include a proposal to change the title of the person required to sign the certification statement. Section 413.24(f)(4)(iv) of the regulations requires that the certification statement be signed by the "provider's administrator or chief financial officer." We did not propose to change the title of the person required to sign the certification statement. The requirements pertaining to the title of the person required to sign the certification statement remain the same.

Comment: One commenter suggested that CMS change the title of the person required to sign the certification statement on the Certification and Settlement Summary page of the Medicare cost report, citing that often the signor is someone other than the provider's administrator or chief financial officer.

Response: We consider this comment to be outside the scope of the policies we proposed in the proposed rule. We note that § 413.24(f)(4)(iv) of the regulations requires that the certification statement be signed by the "provider's administrator or chief financial officer."

After consideration of the public comments we received, for the reasons discussed above, we are finalizing our proposals discussed above without modification. As proposed, we are revising § 413.24(f)(4)(iv) to allow providers the option to use an electronic signature to sign the certification statement on the Certification and Settlement Summary page of the Medicare cost report. Under § 413.24(f)(4)(iv)(C)(1) as finalized in this rule, providers that are required to file an electronic cost report may elect

to sign the certification statement with an electronic signature. As we proposed, this electronic signature must be placed on the signature line of the certification statement and may be (1) any format of the original signature that contains the first and last name of the provider's administrator or chief financial officer (for example, photocopy or stamp) or (2) an electronic signature that must be the first and last name of the provider's administrator or chief financial officer entered in the provider's electronic program. An electronic signature for this purpose cannot be a symbol, numerical characters, or codes. Furthermore, as we proposed, an electronic signature checkbox will be placed immediately after the certification statement and above the signature line on the Certification and Settlement Summary page of the Medicare cost report. The checkbox electing the electronic signature will read: "I have read and agree with the above certification statement. I certify that I intend my electronic signature on this certification statement to be the legally binding equivalent of my original signature." The checkbox must be checked to signify that the certification statement has been read and that an electronic signature will be placed on the signature line by the provider. Completion of both the electronic signature checkbox and the electronic signature, placed on the signature line by the provider's administrator or chief financial officer under the certification statement, will together constitute an accepted electronic signature of the provider's administrator or chief financial officer on the certification statement. By signing the certification statement with an electronic signature on the Certification and Settlement Summary page, the signatory is attesting that its electronic signature was executed with the intent to sign the certification statement, that the electronic signature is being submitted in lieu of an original signature, and additionally that the electronic signature has the same legal effect as an original signature. Providers that are required to file an electronic cost report will still have the option under § 413.24(f)(4)(iv)(C)(2), as finalized in this rule, to sign the certification statement with an original signature and to submit a hard copy of the settlement summary, if applicable, and certification statement. In the proposed rule, we also proposed that these revisions would apply on a prospective only basis, to provider cost reporting periods that begin on or after October 1, 2017, the effective date of this final rule. However, after

consideration of the proposed effective date that would have delayed the period of time for the providers to electronically sign and submit the Certification and Settlement Summary page by almost one year and our desire to ease cost and burden upon providers, we have decided to allow providers the option to use an electronic signature to sign the certification statement on the Certification and Settlement Summary page of the Medicare cost report effective for cost reporting periods that end on or after December 31, 2017. This will allow providers to electronically sign and submit the Certification and Settlement Summary page much sooner, with their next cost reporting submission in 2018. Accordingly, these final revisions will apply, on a prospective only basis, to provider cost reporting periods ending on or after December 31, 2017.

3. Changes Relating to Electronic Submission of the Certification and Settlement Summary Page of the Medicare Cost Report

In section X.A.2. of the preamble of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20140), we proposed to allow providers to use an electronic signature on the certification statement of the Certification and Settlement Summary page of the Medicare cost report. We further proposed that if the provider signs the certification statement with an electronic signature in the manner proposed in section X.A.2. of the preamble of the proposed rule and checks the electronic signature checkbox, the provider also may submit the Certification and Settlement Summary page electronically to the contractor at the same time and in the same manner in which the Medicare cost report is submitted. For example, if the provider submits the electronic cost report file via electronic mail to the contractor, the provider may also include the Certification and Settlement Summary page signed with an electronic signature.

Under our proposal, a provider could still choose to sign the certification statement with an original signature on a hard copy of the Certification and Settlement Summary page without checking the electronic signature box. However, if the provider chooses to do so, this page would have to be mailed to its contractor. We stated in the proposed rule that we believe this proposal to allow the electronic submission of the Certification and Settlement Summary page would reduce the need for and storage of paper documents. We stated that, under our proposal, providers would have the

option to submit the entire cost report electronically, in lieu of the previous requirement to mail a hard copy of the Certification and Settlement Summary page of the Medicare cost report to the contractor. We stated that we believe this proposed option would improve the capability of providers to efficiently transmit the Medicare cost report and save providers an appreciable amount of time as well as the cost of separately mailing a hard copy of the Certification and Settlement Summary page of the Medicare cost report to the contractor.

We invited public comments on this proposal.

Comment: One commenter asked whether a provider's option to use an electronic signature on the certification statement of the Certification and Settlement Summary page of the Medicare cost report and submit this form electronically applied to outpatient facilities and to low or no utilization cost reports where the MAC is currently requiring a signed certification statement.

Response: As set forth in the preamble of the proposed rule, (82 FR 20141) and at § 413.24(f)(4)(iv)(C) (as finalized in this rule), the option to use an electronic signature on the certification statement of the Certification and Settlement Summary page and to submit this form electronically applies to providers that are required to file an electronic Medicare cost report. These providers are specified in § 413.24(f)(4)(ii). This includes providers with low or no utilization that submit a Certification with a Settlement Summary, if applicable.

Comment: One commenter asked whether the cost report file and the electronically signed certification statement on the Certification and Settlement Summary page would be filed together and sent to the contractor or sent separately but using the same process.

Response: This final rule allows the provider great flexibility to choose how it wishes to electronically sign the certification statement on the Certification and Settlement Summary page of the Medicare cost report and electronically submit this page. As set forth in section X.A.2. of the preamble of the proposed rule (82 FR 20140), if the provider chooses to sign the certification statement with an electronic signature, this signature must be placed on the signature line of the certification statement and may be (1) any format of the original signature that contains the first and last name of the provider's administrator or chief financial officer (for example, photocopy or stamp) or (2) an electronic

signature that must be the first and last name of the provider's administrator or chief financial officer entered in the provider's electronic program. Regardless of which electronic signature method is selected by the provider, to indicate the provider's election to sign the certification statement with an electronic signature, the electronic signature checkbox placed immediately after the certification statement and above the signature line on the Certification and Settlement Summary page of the Medicare cost report must be checked to signify that the certification statement has been read and that an electronic signature will be placed on the signature line by the provider. As we stated earlier and in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20140), a provider may submit the Certification and Settlement Summary page electronically to the contractor at the same time and in the same manner in which the Medicare cost report is submitted. If the electronic signature is in the format specified "(1)" or "(2)" above (and in section X.A.2. of the preamble of the proposed rule), this electronic signature on the Certification and Settlement Summary page of the Medicare cost report can be submitted electronically with the electronic cost report to the provider's contractor. If the provider submits the Medicare cost report file to the contractor via email, the provider may elect to also send the electronically signed certification statement on the Certification and Settlement Summary page to the contractor via the same email or separately in a separate email. In addition, if the certification statement is signed with an electronic signature as in "(1)" or "(2)" above (and in section X.A.2. of the preamble of the proposed rule), the Certification and Settlement Summary page of the Medicare cost report can also be submitted on paper to the contractor via regular mailing and would still be considered to have an electronic signature. We will provide further instructions through manual provisions and provider educational materials.

After consideration of the public comments we received, for the reasons discussed above, we are finalizing our proposals without modification. As proposed, if the provider signs the certification statement with an electronic signature in the manner described in this final rule and checks the electronic signature checkbox, the provider also may submit the Certification and Settlement Summary page electronically to the contractor at the same time and in the same manner

in which the Medicare cost report is submitted. For example, if the provider submits the electronic cost report file via electronic mail to the contractor, the provider may also include the Certification and Settlement Summary page signed with an electronic signature. Thus, providers would have the option to submit the entire cost report electronically, in lieu of the previous requirement to mail a hard copy of the Certification and Settlement Summary page of the Medicare cost report to the contractor. We note that a provider could still choose to sign the certification statement with an original signature on the Certification and Settlement Summary page. However, if the provider chooses to do so, this page would have to be mailed to its contractor.

4. Clarifications Relating to the Items Required To Be Submitted by Providers With the Medicare Cost Report

a. Settlement Summary and Certification Statement

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20141), we clarified the portion of the language in § 413.24(f)(4)(iv) that describes the items a provider is required to submit along with the electronically filed cost report. We stated that § 413.24(f)(4)(iv) currently sets forth that a provider is required to submit a hard copy of a settlement summary, a statement of certain worksheet totals found within the electronic file, and a statement signed by its administrator or chief financial officer certifying the accuracy of the electronic file or the manually prepared cost report. These items are contained on the Certification and Settlement Summary page of the Medicare cost report. As we stated in the proposed rule, we believe that the structure of the sentence in the regulation text describing these items may give rise to the impression that these are three separate items: (1) A “settlement summary”; (2) a “statement of certain worksheet totals found within the electronic file”; and (3) a “statement signed by its administrator or chief financial officer certifying the accuracy of the electronic file or the manually prepared cost report,” also known as the certification statement. In the proposed rule, we clarified that “a statement of certain worksheet totals found within the electronic file” is not a separate item but rather is intended as a descriptor of the “settlement summary.” The settlement summary is actually the list of “certain worksheet totals found within the electronic file.” Therefore, in the FY 2018 IPPS/LTCH PPS proposed

rule (82 FR 20141), we proposed to revise § 413.24(f)(4)(iv) to clarify this.

We did not receive any public comments on this proposal. Thus, for the reasons discussed above, we are finalizing, without modification, our proposed revisions to § 413.24(f)(4)(iv) (as further discussed in section X.A.5. of this final rule).

b. Removal of the Transition Period Language

Following the effective dates for which certain providers were required to submit cost reports in a standardized electronic format under § 413.24(f)(4)(ii), a transition period was implemented when certain providers were required to submit a hard copy of the completed cost report forms in addition to the electronic file. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20141), we proposed to remove the language in § 413.24(f)(4)(iv) which sets forth this expired transition period. Specifically, we proposed to remove the language that specifies that, during a transition period (first two cost-reporting periods on or after December 31, 2004 for hospices and end-stage renal disease facilities, and the first two cost-reporting periods on or after March 31, 2005 for organ procurement organizations, histocompatibility laboratories, rural health clinics, federally qualified health centers, and community mental health centers), providers must submit a hard copy of the completed cost report forms in addition to the electronic file. We stated that because the transition period has expired and these providers are no longer required to submit a hard copy of the completed cost report forms in addition to the electronic file, this language in § 413.24(f)(4)(iv) is no longer necessary. We did not receive any public comments on this proposal, and thus, for the reasons discussed above, we are finalizing without modification our proposal to remove this language (as further discussed below in section X.A.5. of the preamble of this final rule).

5. Revisions to 42 CFR 413.24(f)(4)(iv)

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20139 through 20142), to reflect our proposals discussed earlier, we proposed to revise § 413.24(f)(4)(iv) to specify that, effective for cost reporting periods beginning on or after October 1, 2017, providers that are required to file an electronic Medicare cost report may elect to electronically submit the settlement summary, if applicable, and the cost report’s certification statement, found on the Certification and

Settlement Summary page of the Medicare cost report, with an electronic signature of the provider’s administrator or chief financial officer. We stated that a provider that elects to electronically sign and submit the Certification and Settlement Summary page would no longer be required to send this page in hard copy to its contractor with an original signature. We further proposed to revise § 413.24(f)(4)(iv) to specify that the provider must check the electronic signature checkbox that would be placed immediately after the certification statement and directly above the signature line of the certification statement. We proposed that this electronic signature checkbox would specify that the provider’s administrator or chief financial officer has read and agrees with the certification statement, and certifies that he or she intends the electronic signature to be the legally binding equivalent of his or her original signature. We stated that the provider must check the electronic signature checkbox in order for the provider to sign the certification statement with an electronic signature and in order for the electronic signature to be accepted. We invited public comments on this proposal.

After consideration of the public comments we received (as summarized in sections X.A.2. and in X.A.3. of the preamble of this final rule), we are finalizing our proposed revisions to § 413.24(f)(4)(iv) as discussed above with the following modification. As discussed in section X.A.2. of the preamble of this final rule, after consideration of the proposed effective date that would have delayed the period of time for the providers to electronically sign and submit the Certification and Settlement Summary page by almost a year and our desire to ease cost and burden upon providers sooner, we have decided to allow providers the option to use an electronic signature to sign the certification statement on the Certification and Settlement Summary page of the Medicare cost report and to electronically submit this page effective for cost reporting periods ending on or after December 31, 2017. As such, effective for cost reporting periods ending on or after December 31, 2017, providers that are required to file an electronic Medicare cost report may elect to electronically submit the settlement summary, if applicable, and the cost report’s certification statement, found on the Certification and Settlement Summary page of the Medicare cost report, with an electronic

signature of the provider's administrator or chief financial officer. A provider that elects to electronically sign and submit the Certification and Settlement Summary page is no longer required to send this page in hard copy to its contractor with an original signature. We are further revising § 413.24(f)(4)(iv), as proposed, to specify that the provider must check the electronic signature checkbox that would be placed immediately after the certification statement and directly above the signature line of the certification statement. This electronic signature checkbox specifies that the provider's administrator or chief financial officer has read and agrees with the certification statement, and certifies that he or she intends the electronic signature to be the legally binding equivalent of his or her original signature. The provider must check the electronic signature checkbox in order for the provider to sign the certification statement with an electronic signature and in order for the electronic signature to be accepted.

In addition, we proposed to revise the regulatory language under § 413.24(f)(4)(iv) to reflect our clarification that the phrase "a statement of certain worksheet totals found within the electronic file" describes the settlement summary and does not denote a separate item. Specifically, we proposed to revise § 413.24(f)(4)(iv) to state that a provider must submit a settlement summary, if applicable, which is a statement of certain worksheet totals found within the electronic file, and a certification statement signed by its administrator or chief financial officer certifying the accuracy of the electronic file or manually prepared cost report. We invited public comments on this proposal. We did not receive any public comments on our proposal. Therefore, for the reasons discussed above, we are finalizing, without modification, our proposal to revise the regulatory language under § 413.24(f)(4)(iv) to reflect our clarification that the phrase "a statement of certain worksheet totals found within the electronic file" describes the settlement summary and does not denote a separate item.

In addition, as indicated earlier, because the transition period during which certain providers were required to submit a hard copy of the completed cost report forms in addition to the electronic file has expired, we proposed to remove the transition period language in § 413.24(f)(4)(iv). We invited public comments on this proposal. We did not receive any public comments on this proposal, and therefore, for the reasons

discussed above, we are finalizing, without modification, our proposal to remove the language in § 413.24(f)(4)(iv) that describes this expired transition period.

Finally, we proposed to revise the regulation text at § 413.24(f)(4)(iv) by adding the certification statement from the Certification and Settlement Summary page of the Medicare cost report. This certification statement appeared in all caps in the proposed regulation text and stated as follows: "Misrepresentation or falsification of any information contained in this cost report may be punishable by criminal, civil and administrative action, fine and/or imprisonment under Federal law. Furthermore if services identified in this report were provided or procured through the payment directly or indirectly of a kickback or were otherwise illegal, criminal, civil and administrative action, fines, and/or imprisonment may result." This language has appeared on the Certification and Settlement Summary page for many years. We stated in the proposed rule that because the certification section of the Medicare cost report refers to it as having been read by the provider, incorporation of it into the regulation text would provide completeness and clarification of the certification statement.

We invited public comments on this proposal. We did not receive any public comments on our proposal. Therefore, for the reasons discussed above, we are finalizing our proposal, without modification, to revise the regulation text at § 413.24(f)(4)(iv) by adding the certification statement from the certification section of the Certification and Settlement Summary page of the Medicare cost report. This certification statement appears in all caps and informs the provider that "Misrepresentation or falsification of any information contained in this cost report may be punishable by criminal, civil and administrative action, fine and/or imprisonment under Federal law. Furthermore if services identified in this report were provided or procured through the payment directly or indirectly of a kickback or were otherwise illegal, criminal, civil and administrative action, fines, and/or imprisonment may result."

B. Clarification of Limitations on the Valuation of Depreciable Assets Disposed of on or After December 1, 1997

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20142 through 20143), we proposed revisions to the

Medicare provider reimbursement regulations to clarify our longstanding policy pertaining to allowable costs and the limits on the valuation of a depreciable asset that may be recognized in establishing an appropriate allowance for depreciation for assets disposed of on or after December 1, 1997. Questions have arisen with regard to whether this limitation on the valuation of depreciable assets depends on the manner in which a provider disposes of an asset. In the proposed rule, we clarified that the elimination of the gain or loss for depreciable assets applies to assets a provider disposes of by sale or scrapping on or after December 1, 1997, regardless of whether the asset is scrapped, sold as an individual asset of a Medicare participating provider, or sold incident to a provider's change of ownership.

Reasonable cost is defined at section 1861(v)(1)(A) of the Act and in the implementing regulations at 42 CFR part 413. Since the inception of the Medicare program, allowable costs under Medicare have included a provider's direct and indirect costs necessary for the provision of patient care, including the cost of using assets in patient care. Depreciation of these assets is an allowable cost under Medicare and the allowance is computed using the depreciable basis and estimated useful life of the assets (§ 413.134). Under Medicare's reasonable cost reimbursement system, the appropriate allowance for depreciation and for interest on capital indebtedness on buildings and equipment used in the provision of patient care is based in part on the historical cost of the asset (§ 413.134(a) and (b)). When an asset is disposed of, no further depreciation may be taken on it. Gains and losses on the disposition of depreciable assets may be includable, as applicable, either in computing allowable cost or in computing the adjustment to Medicare reimbursable cost, depending upon the manner of disposition of the asset, the date of the disposal, and the amount of the depreciation adjustment (§ 413.134 and Part 1, Chapter 1 of the Provider Reimbursement Manual (CMS Pub. 15–1)).

Prior to the enactment of the Balanced Budget Act (BBA) of 1997 (Pub. L. 105–33), when a Medicare certified provider's capital asset was disposed of through sale or scrapping, Medicare shared in any gain or loss from the transaction. In this regard, if a provider realized a gain or loss from the sale or scrapping of an asset, an adjustment to the provider's allowable costs was necessary so that Medicare paid its

share of the actual cost the provider incurred in using the asset for patient care. Generally, when a provider sold its depreciable assets at more than the net book value, Medicare shared in the gain. If the provider sold its depreciable assets at less than the net book value, Medicare shared in the loss. The amount of a gain was limited to the amount of depreciation previously included in Medicare allowable costs. The amount of a loss was limited to the undepreciated basis of the asset permitted under the program.

In the BBA of 1997, Congress eliminated Medicare's recognition of gains or losses on a provider's disposition of assets on or after December 1, 1997. Section 4404 of the BBA of 1997 amended section 1861(v)(1)(O)(i) of the Act to state that, in establishing an appropriate allowance for depreciation and for interest on capital indebtedness with respect to an asset of a provider of services which has undergone a change of ownership, such regulations shall provide, except as provided in clause (iii), that the valuation of the asset after such change of ownership shall be the historical cost of the asset, as recognized under the Medicare program, less depreciation allowed, to the owner of record as of August 5, 1997 (or, in the case of an asset not in existence as of August 5, 1997, the first owner of record of the asset after August 5, 1997).

In enacting section 4404 of the BBA of 1997, Congress was concerned with providers that may have been "creating specious 'losses'" on the disposition of assets "in order to be eligible for additional Medicare payments" (H. Rep. No. 105-149 (1997)). In addition, Congress cited the June 1997 OIG report, Medicare Losses on Hospital Sales (OEI-03-96-00170), which indicated that there were substantial Medicare losses due to depreciation adjustments for hospitals that underwent changes of ownership. In a January 1998 final rule with comment period (63 FR 1379), we conformed the regulations at § 413.134 to section 1861(v)(1)(O) of the Act, as amended by section 4404 of the BBA of 1997. In that rule, we stated that, under the provisions of section 4404 of the BBA of 1997, "when a depreciable asset of a provider undergoes a change of ownership, the valuation of the asset, for purposes of establishing a Medicare allowance for depreciation and interest, will be the historical cost of the asset to the owner of record, less depreciation allowed. Thus, when a depreciable asset is sold, the value of the asset to the seller will be the historical cost (as recognized under Medicare) to the owner of record as of August 5, 1997,

less depreciation allowed. In this case, there will be no adjustment for gain or loss on the sale. For the buyer, the value of the asset will also be the historical cost (as recognized under Medicare) to the owner of record as of August 5, 1997, less depreciation allowed. Accordingly, the new owner's allowance for depreciation and interest will be based on this value. Stated simply, the asset moves from the hands of the seller to the hands of the buyer at the asset's net book value defined in § 413.134(b)(9)" (63 FR 1381).

Our policy referenced the asset of a provider undergoing a change of ownership, meaning the asset itself changing owners, regardless of whether the provider changes ownership. In conforming the regulations to the new statutory provision, we revised the regulations at § 413.134(f)(1) to specify that "[d]epreciable assets may be disposed of through sale, scrapping, trade-in, exchange, demolition, abandonment, condemnation, fire, theft, or other casualty. If disposal of a depreciable asset, including the sale or scrapping of an asset before December 1, 1997, results in a gain or loss, an adjustment is necessary in the provider's allowable cost. (No gain or loss is recognized on either the sale or the scrapping of an asset that occurs on or after December 1, 1997.) The amount of a gain included in the determination of allowable cost is limited to the amount of depreciation previously included in Medicare allowable costs. The amount of a loss to be included is limited to the undepreciated basis of the asset permitted under the program. The treatment of the gain or loss depends upon the manner of disposition of the asset, as specified in paragraphs (f)(2) through (6) of [§ 413.134]. The gain or loss on the disposition of depreciable assets has no retroactive effect on a proprietary provider's equity capital for years prior to the year of disposition."

In the January 1998 final rule with comment period, we added the parenthetical "(No gain or loss is recognized on either the sale or the scrapping of an asset that occurs on or after December 1, 1997)" to § 413.134(f)(1). This parenthetical was intended to implement section 4404 of the BBA of 1997 by disallowing the gain or loss when a provider sells or scraps an asset.

We believe that, under section 4404 of the BBA of 1997, Medicare's nonrecognition of a loss or gain with respect to an asset a provider disposes of by sale or scrapping applies, regardless of whether the sale of the asset occurs incident to a provider's change of ownership or whether the

asset is otherwise sold or scrapped by a currently participating Medicare provider.

We note that following the enactment of the Deficit Reduction Act of 1984 (Pub. L. 98-369, section 2314), in which Congress amended section 1861(v)(1) of the Act by adding new subparagraph (O) concerning the valuation and determination of historical costs of assets after July 18, 1984, we stated that the new provisions applied "not only to the sale or purchase of groups of assets, but also to the sale or purchase of individual assets" (57 FR 43913). Similarly, we believe section 4404 of the BBA of 1997 applies to a provider's disposition of assets through sale or scrapping, including the sale or scrapping of individual provider assets and assets sold or scrapped incident to a provider's change of ownership. Accordingly, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20142 through 20143), we proposed to revise the regulation text at § 413.134(f)(1) to clarify our longstanding policy that Medicare does not recognize a provider's gain or loss on the sale or scrapping of an asset that occurs on or after December 1, 1997, regardless of whether the asset is sold incident to a provider's change of ownership or is otherwise sold or scrapped as an asset of a Medicare participating provider.

We did not receive any public comments on our proposal. We are finalizing our proposal to revise the Medicare provider reimbursement regulations at § 413.134(f)(1) to clarify our longstanding policy that Medicare does not recognize a provider's gain or loss on the sale or scrapping of an asset that occurs on or after December 1, 1997, regardless of whether the asset is sold incident to a provider's change of ownership or is otherwise sold or scrapped as an asset of a Medicare participating provider.

XI. Changes Relating to Survey and Certification Requirements

A. Revisions to the Application and Re-application Procedures for National Accrediting Organizations (AOs), and Posting of Survey Reports and Acceptable Plans of Corrections (PoCs)

In an effort to increase transparency, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20143), we proposed to require AOs with CMS-approved accreditation programs to post final accreditation survey reports and PoCs on public facing Web site designated by the AO. All current AOs with CMS-approved accreditation programs have Web sites that inform the general public about their organization.

We stated in the proposed rule that establishing the standard for posting both accredited and non-accredited provider and supplier survey reports, which would include initial and recertification surveys, and PoCs, would expand transparency even further. Disclosure of survey findings protects both patient health and safety, in which public disclosure of findings currently only shows the subset of complaint activity. Expanding these requirements through the posting of all survey reports and PoCs would allow for a more comprehensive way to show a provider's or supplier's compliance with all health and safety requirements.

In the proposed rule, we proposed to revise § 488.5 of the regulations to incorporate this proposed requirement. We further proposed to add a new standard at § 488.5(a)(21) to require that each national AO applying or reapplying for CMS-approval of its Medicare provider or supplier accreditation program provide a statement acknowledging that it agreed to make all Medicare provider or supplier final accreditation survey reports (including statements of deficiency findings), as well as acceptable PoCs publicly available on its Web site within 90 days after such information is made available to those facilities for the most recent 3 years. This provision would include all triennial, full, follow-up, focused, and complaint surveys, whether they were performed onsite or offsite. We invited public comments on these proposals.

After consideration of the public comments received, we are not finalizing our proposed changes to 42 CFR 488.5. Section 1865(b) of the Act prohibits CMS from disclosing survey reports or compelling the AOs to disclose their reports themselves. The suggestion by CMS to have the AOs post their survey reports may appear as if CMS was attempting to circumvent the provision of section 1865(b) of the Act. Therefore, this provision is effectively being withdrawn.

B. Changes to Termination Public Notice Requirements for Certain Providers and Suppliers

1. Background

Under the provisions of sections 1866(b)(2) of the Act and implementing regulations at 42 CFR 489.53, the Secretary may terminate an agreement with a provider of services if it is determined that the provider is not in substantial compliance with applicable requirements governing provider agreements. For instance, CMS must determine that the provider:

- Is not complying substantially with the terms of the agreement, the provisions of title XVIII, or regulations promulgated thereunder;
- Has failed to supply information necessary to determine whether payments are or were due and the amounts of such payments;
- Refuses to permit examination of fiscal and other records (including medical records) necessary for the verification of information furnished as a basis for claiming payment under the Medicare program; or
- Refuses to permit photocopying of any records or other information necessary to determine or verify compliance with participation requirements.

Sections 1866(b)(1) and (2) of the Act require reasonable public notice, as prescribed in regulations, of both voluntary and involuntary terminations of Medicare and Medicaid participating providers and suppliers. Various existing regulations specify the requirements of public notice for voluntary and involuntary terminations prior to termination of a provider or supplier agreement. Specifically, for voluntary terminations, providers at 42 CFR 489.52(c)(2), RHCs at 42 CFR 405.2404(d), FQHCs at 42 CFR 405.2442, ASCs at 42 CFR 416.35(d), and OPOs at 42 CFR 486.312(e) are required to publish termination notices in the local public newspaper.

2. Basis for Changes

The existing regulations requiring termination notices to be published in local newspapers have become outdated over time as the public and beneficiaries increasingly turn to the Internet and other electronic forums for information. Currently, rural health centers (RHCs), federally qualified health centers (FQHCs), ambulatory surgical centers (ASCs), and organ procurement organizations (OPOs) are required to publish public notices of voluntary and involuntary termination of participation in the Medicare and Medicaid programs in one or more local newspapers. Providers and suppliers that voluntarily terminate their participation agreement must give notice to the public at least 15 days before the effective date of termination and the notice must be published in one or more local newspapers. The use of hard copy local newspaper through time has become less effective, as a large majority of the public uses alternate sources such as Web sites or other online news and resources.

According to national studies, approximately 23 percent of the general public continues to read print

newspapers.⁵¹⁰ Many individuals have turned to digital platforms to read news rather than print news, which continues to decline on an annual basis, therefore, limiting the effectiveness of publishing termination notices in local newspapers. In light of the public's increased access to the Internet and other electronic forums for information and the decline of print newspaper readership, in this proposed rule, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20145 and 20146), we proposed changes in the existing regulations noted earlier regarding newspaper publication of termination notices to allow CMS Regional Offices and providers and suppliers more media platforms in which to publish termination notices, both voluntary and involuntary, with the intent of making these notices more visible and effective.

3. Changes to Regulations

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20145 and 20146), we proposed to remove the regulatory language specifying public notice of terminations for FQHCs, RHCs, ASCs, and OPOs to be exclusively in newspapers to allow for more flexibility for both the CMS Regional Offices and providers and suppliers. Specifically, we proposed changes to the regulations for RHCs at 42 CFR 405.2404(d), for FQHCs at 42 CFR 405.2442(a) and (b), for ASCs at 42 CFR 416.35(d), and for OPOs at 42 CFR 486.312(e) to remove the reference to publication in newspapers as the means for notifying the community of involuntary and voluntary terminations from participation in Medicare and Medicaid programs. This proposal for termination notices to the public for RHCs, FQHCs, ASCs, and OPOs would align with the termination notices CMS currently has set forth for all other providers and suppliers. For example, under 42 CFR 488.456(c) (enforcement procedures for long-term care facilities), CMS must notify the public of a termination of a nursing home's provider agreement, but the regulation does not specify through which public forum this notice is to be given. Similarly, 42 CFR 489.53(d)(5) also does not specify the method of public notification required for terminations. Through this proposed change, RHCs, FQHCs, ASCs, and OPOs would have the same requirement for the notice to the public as under 42 CFR 489.53(d)(5), where there is a termination by CMS in which public

⁵¹⁰ PewResearchCenter (2012) *Number of Americans Who Read Print Newspapers Continues Decline*. Available at: <http://www.pewresearch.org/daily-number/number-of-americans-who-read-print-newspapers-continues-decline/>.

notice is required but the method for these providers or suppliers for providing public notice is not specified, to allow for flexibility.

In addition, we proposed to revise 42 CFR 489.52(c)(2) to remove the requirement to publish notice in one or more local newspapers in circumstances of the termination of a provider agreement by a provider and instead to allow providers to inform the community via public notice, without specifying the method used for public notice. We stated in the proposed rule that we believe that these proposed changes will ensure that the community continues to be aware of terminations of Medicare and Medicaid participating providers and suppliers.

The method for delivering the required public notice is no longer being specified by removing the word “newspaper” from the regulations for RHCs, FQHCs, ASCs, and OPOs. Instead, we proposed to allow for flexibility for the CMS Regional Offices and the providers or suppliers to post public notices through a manner in which the maximum number of community individuals and beneficiaries would be informed. This may include, but is not limited to State Web site postings, facility Web sites, or local news and social media channels. It also would not preclude publication in local newspapers. Through the proposed rule, we will continue to fulfill the regulatory requirement to publicly post involuntary termination notices. We are also operationally considering allowing voluntarily terminating providers and suppliers the same public notice platform used for involuntary notices in order to meet their regulatory public notice requirements. This could include media venues such as Web site postings and press releases through the use of CMS Regional press officers.

We invited public comments on our proposals. In addition, we sought suggestions from the public on sufficient mechanisms to provide public information, other than local newspapers, for posting Medicare and Medicaid participating provider and supplier termination notices.

Comment: Several commenters supported the proposal to eliminate the use of newspapers to provide public notice and agreed that the use of newspapers has become outdated. One commenter agreed with the proposal to allow CMS Regional Offices to use media platforms in which to publish termination notices, both voluntary and involuntary, in a more visible and effective manner.

Response: We thank the commenter for its support.

We are finalizing our proposal to remove the word “newspaper” from the regulations for RHCs, FQHCs, ASCs, and OPOs under the requirements for public notices for terminations of the provider agreement.

XII. MedPAC Recommendations

Under section 1886(e)(4)(B) of the Act, the Secretary must consider MedPAC’s recommendations regarding hospital inpatient payments. Under section 1886(e)(5) of the Act, the Secretary must publish in the annual proposed and final IPPS rules the Secretary’s recommendations regarding MedPAC’s recommendations. We have reviewed MedPAC’s March 2017 “Report to the Congress: Medicare Payment Policy” and have given the recommendations in the report consideration in conjunction with the policies set forth in this final rule. MedPAC recommendations for the IPPS for FY 2018 are addressed in Appendix B to this final rule.

For further information relating specifically to the MedPAC reports or to obtain a copy of the reports, contact MedPAC at (202) 653-7226, or visit MedPAC’s Web site at: <http://www.medpac.gov>.

XIII. Other Required Information

A. Requests for Data From the Public

IPPS-related data are available on the Internet for public use. The data can be found on the CMS Web site at: <http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>. We listed the IPPS-related data files that are available in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20146 through 20147).

Commenters interested in discussing any data files used in construction of this final rule should contact Michael Treitel at (410) 786-4552.

B. Collection of Information Requirements

1. Statutory Requirement for Solicitation of Comments

Under the Paperwork Reduction Act of 1995, we are required to provide 60-day notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the Paperwork

Reduction Act of 1995 requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20147 through 20158), we solicited public comment on each of these issues for the following sections of this document that contain information collection requirements (ICRs).

2. ICRs for Temporary Exception to the LTCH PPS Site Neutral Payment Rate for Certain Spinal Cord Specialty Hospitals

In section VIII.E. of the preamble of the proposed rule and this final rule, we discuss the proposed implementation of section 15009 of Public law 114-255, which provides for a temporary exception to the site neutral payment rate for certain spinal cord specialty hospitals under section 1886(m)(6)(F) of the Act. Under this provision, discharges occurring in cost reporting periods beginning during FY 2018 and FY 2019 for LTCHs that meet the specified statutory criteria are excepted from the site neutral payment rate (that is, all discharges from such LTCHs during this period would be paid at the LTCH PPS standard Federal payment rate). In order for an LTCH to qualify for this temporary exception, the LTCH must, among other things, meet the “significant out-of-state admissions criterion” at section 1886(m)(6)(F)(iii) of the Act. To meet the significant out-of-state admissions criterion, an LTCH must have discharged inpatients (including both individuals entitled to, or enrolled for, Medicare Part A benefits and individuals not so entitled or enrolled) during FY 2014 who had been admitted from at least 20 of the 50 States, determined by the States of residency of such inpatients and based on such data submitted by the hospital to the Secretary as the Secretary may require. The statute further provides authority for the Secretary to implement the significant out-of-state admissions criterion at section 1886(m)(6)(F)(iii) of the Act by program instruction or otherwise, and exempts the policy initiatives from any information collection requirements under the Paperwork Reduction Act. As such, the burden associated with the data

submitted by the hospital to meet the significant out-of-State admissions criteria is not subject to the PRA. However, our estimate of the burden associated with this data submission is discussed in section I.J. of Appendix A of this final rule.

We did not receive any public comments on this information collection.

3. ICRs for the Hospital Inpatient Quality Reporting (IQR) Program

a. Background

OMB has currently approved 3,681,023 hours of burden and approximately \$121 million under OMB control number 0938–1022, accounting for burden experienced by 3,300 IPPS hospitals and 1,100 non-IPPS hospitals for the FY 2019 payment determination. In section IX.A. of the preambles of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20031 through 20075) and this final rule, we discuss the policies that we expect to affect our burden estimates. We refer readers to section I.A.2.h. of the preamble of this final rule, where we summarize our finalized policies. The details about our finalized policies that impact information collection requirements for IPPS-hospitals are described below.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20149) and prior rules (81 FR 57260) and (80 FR 49763), we have estimated that reporting eCQMs for the Hospital IQR Program could be accomplished by staff with a median hourly wage of \$16.42 per hour.⁵¹¹ We note that since the publication of the FY 2018 IPPS/LTCH PPS proposed rule, more recent wage data have become available, and we are updating the wage rate used in these calculations in this FY 2018 IPPS/LTCH PPS final rule. The most recent data from the Bureau of Labor Statistics reflects a median hourly wage of \$18.29 per hour for a Medical Records and Health Information Technician professional.⁵¹² We calculated the cost of overhead, including fringe benefits, at 100 percent of the median hourly wage, consistent with previous years (81 FR 57260). This is necessarily a rough adjustment, both because fringe benefits and overhead costs vary significantly from employer-to-employer and because methods of estimating these costs vary widely from study-to-study. Nonetheless, we believe that doubling the hourly wage rate ($\$18.29 \times 2 = \$36.58$) to estimate total

cost is a reasonably accurate estimation method. Accordingly, we calculate cost burden to hospitals using a wage plus benefits estimate of \$36.58 per hour throughout the discussion below for the Hospital IQR Program.

b. Burden Estimates for the Modifications to the eCQM Reporting Requirements for the CY 2017 Reporting Period/FY 2019 Payment Determination and CY 2018 Reporting Period/FY 2020 Payment Determination

In the FY 2017 IPPS/LTCH PPS final rule, we finalized policies to require hospitals to submit a full year (four quarters) of data (81 FR 57159) for at least eight of the available eCQMs in the Hospital IQR Program measure set (81 FR 57157) for both the FY 2019 and FY 2020 payment determinations. In section IX.A.8. of the preamble of this final rule, we are finalizing modified, reduced eCQM reporting requirements. For both the CY 2017 reporting period/FY 2019 payment determination and the CY 2018 reporting period/FY 2020 payment determination, hospitals will be required to report four eCQMs and to submit one, self-selected calendar quarter of data.

As in previous years, we believe the total burden associated with eCQM reporting will be similar to that previously outlined in the Medicare EHR Incentive Program Stage 2 final rule (77 FR 54126 through 54133). Under that program, the burden estimate for a hospital to report one eCQM is 10 minutes per record per quarter. We believe this estimate is accurate and appropriate to apply to the Hospital IQR Program because we align the eCQM reporting requirements between both programs. Therefore, using the estimate of 10 minutes per record per quarter, we anticipate our finalized policies to require: (1) Reporting on at least four of the available eCQMs; and (2) submission of one, self-selected quarter of eCQM data, will result in a burden reduction of 4.67 hours (280 minutes) per hospital for each of the FY 2019 and FY 2020 payment determinations. This estimate was calculated by considering the burden difference between the updated eCQM reporting requirements finalized in section IX.A.8. of the preamble of this final rule for each of the FY 2019 and FY 2020 payment determinations, which are the same (10 minutes per record $\times$ 4 eCQMs $\times$ 1 quarter = 40 minutes for 1 quarter of reporting), and the eCQM reporting requirements previously finalized in the FY 2017 IPPS/LTCH PPS final rule for each of the CY 2017 and CY 2018 reporting periods (81 FR 57157 through 57159)

(10 minutes per record $\times$ 8 eCQMs $\times$ 4 quarters = 320 minutes for 4 quarters of reporting). Through these calculations (40 minutes – 320 minutes), we arrived at a reduction of 280 minutes per hospital per year, or 4.67 hours per hospital per year, for each of the FY 2019 and FY 2020 payment determinations.

In total, for each of the FY 2019 and FY 2020 payment determinations, we expect our finalized proposal to require hospitals to report one, self-selected calendar quarter of data for 4 eCQMs (as compared to our previously finalized requirements to report four quarters of data for 8 eCQMs) to represent an annual burden reduction of 15,400 hours across all 3,300 IPPS hospitals participating in the Hospital IQR Program (-280 minutes per hospital/60 minutes per hour $\times$ 3,300 hospitals = $-15,400$ hours). Using the updated wage estimate described above, we expect this to represent a cost reduction of \$563,332 ($\$36.58$ hourly wage $\times$ 15,400 annual hours reduction) across all 3,300 IPPS hospitals participating in the Hospital IQR Program for each of the FY 2019 and FY 2020 payment determinations. In summary, we estimate a revised total burden of 2,200 hours (40 minutes per hospital/60 minutes per hour $\times$ 3,300 hospitals) and \$80,476 (2,200 hours across 3,300 hospitals $\times$ \$36.58 per hour) across all hospitals associated with this finalized policy.

c. Burden Estimate for the Modifications to eCQM Certification Requirements for the FY 2019 and FY 2020 Payment Determinations

In section IX.10.d. of the preamble of this final rule, we discuss changes we are finalizing to the Hospital IQR Program eCQM submission requirements to align them with the Medicare EHR Incentive Program for eligible hospitals and CAHs. Specifically, for both the CY 2017 reporting period/FY 2019 payment determination and the CY 2018 reporting period/FY 2020 payment determination, we are finalizing that: (1) A hospital using EHR technology certified to the 2014 Edition, 2015 Edition, or a combination of both, but such EHR technology is not certified to all available eCQMs, will be required to have its EHR technology certified to all eCQMs that are available to report; and (2) EHR technology that is certified to all available eCQMs will not need to be recertified each time it is updated to a more recent version of the eCQM specifications. Further, we are finalizing that: (1) For the CY 2017 reporting period, hospitals will be required to use

⁵¹¹ Occupational Outlook Handbook. Available at: <http://www.bls.gov/oes/2012/may/oes292071.htm>.

⁵¹² Occupational Employment and Wages, May 2016. Available at: <https://www.bls.gov/oes/current/oes292071.htm>.

the most recent version of the CQM electronic specifications (namely, the Spring 2016 version of the eCQM specifications and any applicable addenda); and (2) for the CY 2018 reporting period, hospitals be required to use the most recent version of the CQM electronic specifications (namely, the Spring 2017 version of the eCQM specifications and any applicable addenda). Because the use of certified EHR technology is already required for the Medicare EHR Incentive Program, we believe that harmonizing these finalized policies will create no additional burden for hospitals under the Hospital IQR Program. We refer readers to OMB control number 0938–1158 for a discussion of the burden associated with the requirements for the Medicare EHR Incentive Program.

d. Burden Estimates for the Modifications to the Existing Data Validation Processes

(1) Calculations for Modifications to the Validation of eCQM Data for the FY 2020 and FY 2021 Payment Determinations and Subsequent Years

In section IX.A.11. of the preamble of this final rule, we discuss our finalized policies for the eCQM data validation process for the Hospital IQR Program data beginning with validation for the FY 2020 payment determination. First, we are finalizing our proposal to require hospitals selected for eCQM data validation to submit 8 cases per quarter for eCQM validation for the FY 2020 payment determination and subsequent years. As applied with our finalized modified, reduced policy to require one, self-selected calendar quarter of data for each of the CY 2017 and CY 2018 eCQM reporting periods, hospitals will be required to submit 8 records (eight cases per quarter over one quarter) for each of the FY 2020 and FY 2021 payment determinations. Second, we are finalizing our proposal to add additional exclusion criteria to our hospital and case selection process for eCQM data validation for the FY 2020 payment determination and subsequent years. Third, we are finalizing our proposal to continue our previously finalized medical record submission requirements (81 FR 57181), for the FY 2021 payment determination and subsequent years. We believe these additional exclusions and maintaining previously finalized medical record submission requirements will have no effect on burden for hospitals, because, while they influence which hospitals and cases will be selected, they will not change the number of hospitals that must participate in eCQM validation,

the number of records that will be collected for validation, or the validation reporting requirements for the hospitals selected. We discuss the burden associated with the finalized eCQM data validation process in more detail below.

In previous years (79 FR 50347), we estimated a burden of 16 hours (960 minutes) for the submission of 12 records, which will equal 1 hour and 20 minutes (or 80 minutes) per record (960 minutes / 12 records) for validation of eCQM data. Applying the time per individual submission of 1 hour and 20 minutes (or 80 minutes) per record for the 8 records we are requiring hospitals selected for eCQM data validation to submit for each of the FY 2020 and FY 2021 payment determinations, we estimate a total burden of approximately 10.67 hours (80 minutes $\times$ 8 records/60 minutes per hour) for each hospital selected for participation in eCQM data validation for the FY 2020 and FY 2021 payment determinations. We estimate that the total burden will be approximately 2,133 hours across the 200 hospitals selected for eCQM validation (10.67 hours per hospital $\times$ 200 hospitals = 2,133 hours). As compared to our total burden estimate of 8,533 hours previously estimated in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57261), this represents a burden reduction of approximately 6,400 hours across up to 200 hospitals selected for eCQM validation (2,133 hours estimated in this final rule—8,533 hours estimated in the FY 2017 IPPS/LTCH PPS final rule = –6,400 hours). Using the estimated hourly labor cost of \$36.58, we estimate an annual cost reduction of \$234,112 (6,400 hours $\times$ \$36.58 per hour) across the 200 hospitals selected for eCQM validation due to our finalized policy to decrease the number of records collected for validation from 32 records to 8 records for each of the FY 2020 and FY 2021 payment determinations. In summary, we estimate a revised total burden of 2,133 hours (10.67 hours $\times$ 200 hospitals) and \$78,025 (2,133 hours across 200 hospitals $\times$ \$36.58 per hour) associated with this finalized policy.

(2) Calculations for Modifications to the eCQM Data Validation Exclusions for the FY 2020 Payment Determination and Subsequent Years

In section IX.A.11.b. of the preamble of this final rule, we are finalizing our additional eCQM data validation exclusion criterion. Specifically, hospitals that do not have at least five discharges for at least one reported eCQM (among the 4 required eCQMs finalized for each of the CY 2017 and

CY 2018 eCQM reporting periods) included in their QRDA I file submissions will be excluded from the random sample of up to 200 hospitals selected for eCQM validation for the FY 2020 payment determination and subsequent years. For the FY 2020 payment determination and subsequent years, hospitals meeting this newly finalized exclusion criterion discussed above and/or either of the two additional exclusion criteria previously finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57178) will be excluded from the random sample of up to 200 hospitals selected for eCQM data validation. Lastly, we are finalizing our proposal that the three exclusion criteria will be applied before the random selection of 200 hospitals for eCQM validation, such that hospitals meeting any one of these exclusions will not be eligible for selection.

In section IX.A.11.b. of the preamble of this final rule, we are finalizing our proposal to exclude the following cases from validation for those hospitals selected to participate in eCQM data validation: (1) Episodes of care that are longer than 120 days; and (2) cases with a zero denominator for each measure, for the FY 2020 payment determination and subsequent years. We do not believe that these finalized policies will affect the burden experienced by hospitals because, while they influence which hospitals and cases will be selected, they will not change the number of hospitals that must participate in eCQM validation, the number of records that will be collected for validation, or the validation reporting requirements for the hospitals selected.

e. Burden Estimate for Voluntary Reporting on the Hybrid Hospital-Wide 30-Day Readmission Measure for the CY 2018 Reporting Period

In section IX.A.7. of the preamble of this final rule, we are finalizing our proposal to begin voluntary reporting on the Hybrid Hospital-Wide 30-Day Readmission (HWR) measure for CY 2018 reporting period. This measure uses both claims-based data as well as a set of 13 core clinical data elements from patient electronic health records (EHRs) and 6 linking variables. We do not expect any additional burden to hospitals to report the claims-based portion of this measure because these data are already reported to the Medicare program for payment purposes.

As described in section IX.A.7.b. of the preamble of this final rule, we are finalizing our proposal that hospitals may voluntarily submit the 13 core clinical data elements and the six data

HOSPITAL IQR PROGRAM CY 2018 REPORTING PERIOD/FY 2020 PAYMENT DETERMINATION BURDEN ESTIMATES

Activity	Annual recordkeeping and reporting requirements under OMB control number 0938–1022 for CY 2018 reporting period/FY 2020 payment determination							
	Estimated time per record (minutes)	Number reporting quarters per year	Number of IPPS hospitals reporting	Average number records per hospital per quarter	Annual burden (hours) per hospital	Newly finalized annual burden (hours) across IPPS hospitals	Previously finalized annual burden (hours) across IPPS hospitals	Net difference in annual burden hours
Reporting on 4 eCQMs for 1 Quarter.	40 (10 minutes × 4 measures).	1	3,300	1	0.67	2,200	17,600	– 15,400
FY 2020 eCQM Data Validation.	80	1	200	8	10.67	2,133	8,533	– 6,400
Hybrid Hospital-Wide 30-Day Readmission Measure Voluntary Reporting.	10	4	100	1	0.67	67	0	67
Total Change in Burden Hours: – 21,733 Total Cost Estimate: Updated Hourly Wage (\$36.58) × Change in Burden Hours (– 21,733) = – \$794,993								

HOSPITAL IQR PROGRAM CY 2019 REPORTING PERIOD/FY 2021 PAYMENT DETERMINATION BURDEN ESTIMATES

Activity	Annual recordkeeping and reporting requirements under OMB control number 0938–1022 for CY 2019 reporting period/FY 2021 payment determination							
	Estimated time per record (minutes)	Number reporting quarters per year	Number of IPPS hospitals reporting	Average number records per hospital per quarter	Annual burden (hours) per hospital	Newly finalized annual burden (hours) across IPPS hospitals	Previously finalized annual burden (hours) across IPPS hospitals	Net difference in annual burden hours
FY 2021 eCQM Data Validation.	80	1	200	8	10.67	2,133	8,533	– 6,400
Total Change in Burden Hours: – 6,400 Total Cost Estimate: Updated Hourly Wage (\$36.58) × Change in Burden Hours (– 6,400) = – \$234,112								

We received the following public comment regarding our burden estimates.

Comment: One commenter objected to the notion that reporting eCQMs for the Hospital IQR Program measures could be accomplished by staff with a mean hourly wage of \$16.42 per hour. The commenter encouraged CMS to reevaluate this calculation and utilize the salary surveys by professional organizations like the Health Information Management System Society (HIMSS).

Response: As we noted in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20149), we acknowledge that more recent wage data have become available from the Bureau of Labor and Statistics (BLS),⁵¹³ and we have updated the Hospital IQR Program wage estimate above using these updated data in this final rule. We believe the BLS is the most appropriate source of these data, because the BLS collects a far greater volume of employment and wage data through its surveys than other sources such as the HIMSS Compensation

Survey.⁵¹⁴ In addition, the HIMSS Compensation Survey is a proprietary tool intended to assist health information technology professionals compare salaries and compensation packages, whereas the BLS is intended to provide a large-scale survey of national employment statistics. HIMSS does not suggest what level employee would likely be doing this work; we note that while the HIMSS Compensation Survey 2015 provides overall salary data, it does not explicitly state, or provide granular enough employee groupings to be able to determine which level of employee would likely be doing this work. We utilized data from the BLS since we could ascertain a specific wage rate for the associated position of a person doing this work. We will continue to evaluate the appropriateness of using the BLS wage rate in future years.

4. ICRs for PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program

As discussed in sections IX.B. of the preambles of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20075 through 20086) and this final rule,

section 1866(k)(1) of the Act requires, for purposes of FY 2014 and each subsequent fiscal year, that a hospital described in section 1886(d)(1)(B)(v) of the Act (a PPS-exempt cancer hospital, or a PCH) submit data in accordance with section 1866(k)(2) of the Act with respect to such fiscal year. There is no financial impact to PCH Medicare reimbursement if a PCH does not participate.

We refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50957 through 50959), the FY 2015 IPPS/LTCH PPS final rule (79 FR 50347 through 50348), the FY 2016 IPPS/LTCH PPS final rule (80 FR 49764), and the FY 2017 IPPS/LTCH PPS final rule (81 FR 57182), as well as to OMB Control Number 0938–1175, for a detailed discussion of the burden related to the program requirements that we have previously adopted. Below we discuss only changes in burden that will result from the policies we are finalizing in this final rule.

a. Estimated Hourly Labor Cost

Previously, we used \$66 as our hourly labor cost in calculating the burden associated with chart-abstraction activities in the PCHQR Program. However, our experience working with our data analysis contractors and those

⁵¹³ Occupational Employment and Wages, May 2016. Available at: <https://www.bls.gov/oes/current/oes292071.htm>.

⁵¹⁴ 2015 HIMSS Salary Calculator & Compensation Survey. Available at: <http://www.himss.org/compensationSurvey>.

performing chart abstraction indicates that this work is performed by a different labor category than we previously thought. In addition, our previous labor costs are different from those used in other quality reporting and value-based purchasing programs, and we do not believe there is a justification for these different values given the similarity in quality measures and required staff. Therefore, to align the estimated hourly labor costs (hourly wage plus fringe and overhead, as discussed below) used to calculate burden in the PCHQR Program with those used in other CMS quality reporting programs, including the Hospital IQR Program, we are finalizing our proposal to revise our hourly labor cost estimate to \$36.58 (\$32.84⁵¹⁵ with a modification) which incorporates hourly wage plus fringe benefits and overhead costs.

This labor cost is based on the May 2016 BLS wage for a Medical Records and Health Information Technician. The BLS is “the principal Federal agency responsible for measuring labor market activity, working conditions, and price changes in the economy.”⁵¹⁶ The BLS describes Medical Records and Health Information Technicians as those responsible for organizing and managing health information data; therefore, we believe it is reasonable to assume that these individuals will be tasked with abstracting clinical data for submission for the PCHQR Program. According to the BLS, the median pay for Medical Records and Health Information Technicians which we used in the proposed rule was \$16.42 per hour, before inclusion of overhead and fringe benefits. However, we have learned that the BLS has updated the median pay for Medical Records and Health Information Technicians to \$18.29 per hour, before inclusion of overhead and fringe benefits. We used this updated estimate for this final rule.

Obtaining data on overhead costs is challenging because overhead costs vary across PCHs, and cost elements assigned as “indirect” or “overhead” costs, as opposed to direct costs or employee wages, are subject to interpretation at the facility level. Therefore, we are finalizing our proposal to calculate the cost of overhead, including fringe benefits, at 100 percent of the median hourly wage, as is currently done in other CMS quality reporting programs.⁵¹⁷ This is necessarily a rough

adjustment, both because fringe benefits and overhead costs vary significantly from employer to employer and because methods of estimating these costs vary widely from study to study. Nonetheless, we believe that doubling the updated hourly wage rate ($\$18.29 \times 2 = \$36.58$) to estimate total cost is a reasonably accurate estimation method. Accordingly, we are finalizing, with a modification to update the hourly labor cost, our proposal to use an hourly labor cost estimate of \$36.58 (\$18.29 base salary + \$18.29 fringe and overhead) for calculation of burden forthwith. We again note that because more recent wage data has become available, we are updating the wage rate used in these calculations in this FY 2018 IPPS/LTCH PPS final rule.

We did not receive any public comments on this proposal.

b. Estimated Burden of PCHQR Program Finalized Proposals for the FY 2020 Program Year

In section IX.B.4. of the preamble of this final rule, we are finalizing our proposals to adopt four claims-based measures beginning with the FY 2020 program: (1) Proportion of Patients Who Died from Cancer Receiving Chemotherapy in the Last 14 Days of Life (NQF #0210); (2) Proportion of Patients Who Died from Cancer Admitted to the ICU in the Last 30 Days of Life (NQF #0213); (3) Proportion of Patients Who Died from Cancer Not Admitted to Hospice (NQF #0215); and (4) Proportion of Patients Who Died from Cancer Admitted to Hospice for Less Than Three Days (NQF #0216).

In conjunction with these finalized policies, in section IX.B.3.b. of the preamble of this final rule, we are finalizing the removal of three existing chart-abstracted measures beginning with the FY 2020 program—(1) Adjuvant Chemotherapy is Considered or Administered Within 4 Months (120 Days) of Diagnosis to Patients Under the Age of 80 with AJCC III (Lymph Node Positive) Colon Cancer (PCH-01/NQF #0223); (2) Combination Chemotherapy is Considered or Administered Within 4 Months (120 Days) of Diagnosis for Women Under 70 with AJCC T1c, or Stage II or III Hormone Receptor Negative Breast Cancer (PCH-02/NQF #0559); and (3) Adjuvant Hormonal Therapy (PCH-03/NQF #0220)). Therefore, the PCHQR Program measure set will consist of 18 measures for the FY 2020 program.

Our finalized policy to remove the three chart-abstracted measures will reduce the burden associated with quality data reporting on PCHs. We relied on the estimates finalized in the

FY 2013 IPPS/LTCH PPS final rule to estimate the reduction in burden because the measures we proposed to remove were adopted in the FY 2013 IPPS/LTCH PPS final rule, and the burden estimates for these chart-abstracted measures have not been amended since their introduction. The burden associated with these reporting requirements is currently under OMB Control Number 0938–1175. Therefore, based on the FY 2013 IPPS/LTCH PPS final rule (77 FR 53667) finalized estimates of the burden of collecting measure information, submitting measure information, and training personnel, we estimate the reduction in burden for collecting measure information, submitting measure information, and training personnel provided by the removal of the three measures to be approximately 3,776 hours per year for each PCH, or an average reduction in burden of 315 hours per month per PCH. Therefore, we estimate a reduction in hourly burden of chart abstraction and data submission of approximately 41,537 hours per year across the 11 PCHs.⁵¹⁸

We do not anticipate any increase in burden on the PCHs corresponding to our finalized policy to adopt four claims-based measures into the PCHQR Program beginning with the FY 2020 program year. The four measures are claims-based and therefore do not require facilities to report any additional data. Because these measures do not require facilities to submit any additional data, we do not believe that there is any increase in burden associated with this proposal.

In summary, as a result of our finalized policies, we estimate a reduction of 41,537 hours of burden per year associated with the proposals above for all 11 PCHs beginning with the FY 2020 program. Coupled with our updated estimated salary costs, we estimate that these proposed changes will result in a reduction in annual labor costs of \$1,519,427 ($41,537.1 \text{ hours} \times \$36.58 \text{ hourly labor cost}$) across the 11 PCHs beginning with the FY 2020 PCHQR Program. The burden associated with these reporting requirements is currently under OMB Control Number

⁵¹⁸ In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53667), we originally calculated the burden for reporting the three chart-abstracted cancer measures and two NHSN CDC measures (CLABSI and CAUTI) at approximately 6,293.5 hours annually for each PCH, or 69,228.5 burden hours annually for all 11 PCHs. To calculate the reduction in burden achieved by removing three of these five measures, we multiplied the annual burden by 11 (the number of PCHs), divided by 5 (the total number of measures making up the burden estimate), and multiplied the result by 3 (the total number of measures being removed).

⁵¹⁶ <http://www.bls.gov/bls/infhome.htm>.

⁵¹⁷ See, for example, FY 2016 IPPS/LTCH PPS final rule (80 FR 49764 FN 153).

0938–1175. The information collection will be revised and submitted to OMB.

5. ICRs for the Hospital Value-Based Purchasing (VBP) Program

In section V.J. of the preambles of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19968 through 19986) and this final rule, we discuss proposed and newly finalized requirements for the Hospital VBP Program. Specifically, in this final rule, with respect to quality measures, we are finalizing our proposals to: (1) Remove the current Patient Safety for Selected Indicators (PSI 90) measure beginning with the FY 2019 program year; (2) adopt the Hospital-Level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Pneumonia (PN Payment) measure beginning with the FY 2022 program year; and (3) adopt the Patient Safety and Adverse Events (Composite) (NQF #0531) (modified PSI 90) beginning with the FY 2023 program year.

As required under section 1886(o)(2)(A) of the Act, Hospital VBP Program measures, including the finalized additional and updated measures, are used in the Hospital IQR Program. Therefore, their inclusion in the Hospital VBP Program does not result in any additional burden because the Hospital VBP Program uses data that are required for and collected under the Hospital IQR Program. Therefore, the burden associated with these reporting requirements is currently approved under OMB Control Number 0938–1022.

6. ICRs for the Long-Term Care Hospital Quality Reporting Program (LTCH QRP)

As discussed in section IX.C.7.a. of the preamble of this final rule, we are finalizing our proposals to replace the current pressure ulcer measure beginning with the FY 2020 LTCH QRP and adopt two new measures also beginning with the FY 2020 LTCH QRP.

LTCH QRP QUALITY MEASURES
NEWLY FINALIZED IN THIS FY 2018
IPPS/LTCH PPS FINAL RULE BE-
GINNING WITH THE FY 2020 LTCH
QRP

Measure title
Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury.
Compliance with Spontaneous Breathing Trial (SBT) by Day 2 of the LTCH Stay.
Ventilator Liberation Rate.

The LTCH QRP measure set also currently includes claims-based measures that are calculated based on data that LTCHs are already required to

report to the Medicare program for payment purposes. In this final rule, we are finalizing our proposal to remove the All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs (NQF #2512) from the LTCH QRP measure set, beginning with the FY 2019 LTCH QRP. However, because LTCHs will still be required to report data on this measure for payment purposes, we believe that the removal of this measure will not affect the burden estimate for the LTCH QRP.

The LTCH CARE Data Set Version 3.00 was implemented April 1, 2016 and is approved under OMB control number 0938–1163. The LTCH CARE Data Set Version 3.00 is available on the LTCH QRP Web site at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-CARE-Data-Set-and-LTCH-QRP-Manual.html>. For a discussion of burden related to LTCH CARE Data Set Version 3.00, we refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 57339 through 57341).

The LTCH CARE Data Set Version 4.00 will be effective July 1, 2018, as discussed in section IX.C.11.d. of the preamble of the proposed rule. The associated burden for the Drug Regimen Review Conducted with Follow-Up for Identified Issues-PAC LTCH QRP quality measure was finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57219 through 57223).

In this final rule, we are finalizing our proposals to adopt three measures: Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury; and two new measures related to ventilator weaning, Compliance with SBT by Day 2 of the LTCH Stay and Ventilator Liberation Rate.

Adoption of the proposed pressure ulcer measure, Change in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury, to replace the current pressure ulcer measure, Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), will result in the removal of some data elements related to pressure ulcer assessment that we believe are duplicative or no longer necessary. As a result, the estimated burden and cost for LTCHs to report the measure we are finalizing in this final rule will be reduced from the burden and cost to report the current measure. Specifically, we believe that there will be a 3-minute reduction in clinical staff time to report data. We estimate 146,592 discharges from 426 LTCHs annually. This equates to a decrease of 7,330 hours in burden for all LTCHs (0.05 hours × 146,592 discharges). Given 3 minutes of RN time

at \$69.40 per hour completing an average of 344 sets of LTCH CARE Data Set assessments per provider per year, we estimated the total cost will be reduced by \$1,194.07 per LTCH annually, or \$508,674 for all LTCHs annually. This decrease in burden will be accounted for in the information collection under OMB control number (0938–1163).

We estimate the additional data elements for the newly finalized Compliance with SBT by Day 2 of the LTCH Stay quality measure will take 1.5 minutes of clinical staff time to report data on admission. We believe that the additional LTCH CARE Data Set items we are finalizing will be completed by registered nurses and respiratory therapists (RT). Individual LTCHs determine the staffing resources necessary. We estimate 146,592 discharges from 426 LTCHs annually. This equates to an increase of 3,665 hours in burden for all LTCHs (0.025 hours × 146,592 discharges). Given 0.75 minutes of RN time at \$69.40 per hour and 0.75 minutes of RT time at \$58.30 per hour completing an average of 344 sets of LTCH CARE Data Set assessments per provider per year, we estimated the total cost will be increased by \$549.29 per LTCH annually, or \$233,997 for all LTCHs annually. This increase in burden will be accounted for in the information collection under OMB control number (0938–1163).

We estimate the additional elements for the newly finalized Ventilator Liberation Rate quality measure will take 2.7 minutes of clinical staff time to report data on admission and 0.3 minutes of clinical staff time to report data on discharge, for a total of 3 minutes. We believe that the additional LTCH CARE Data Set items we are finalizing will be completed by registered nurses and respiratory therapists. Individual LTCHs determine the staffing resources necessary. We estimate 146,592 discharges from 426 LTCHs annually. This equates to an increase of 7,330 hours in burden for all LTCHs (0.05 hours × 146,592 discharges). Given 2.85 minutes of RN time at \$69.40 per hour and 0.15 minutes of respiratory therapist (RT) time at \$58.30 per hour completing an average of 344 sets of LTCH CARE Data Set assessments per provider per year, we estimated the total cost will be increased by \$1,184.52 per LTCH annually, or \$504,606 for all LTCHs annually. This increase in burden will be accounted for in the information collection under OMB control number (0938–1163).

We are finalizing our proposal to remove the program interruption items from the LTCH CARE Data Set. Specifically, we are finalizing our proposal to remove the following items: (1) A2500, Program Interruption(s); (2) A2510, Number of Program Interruptions During This Stay in This Facility; and (3) A2525, Program Interruption Dates, because we do not currently utilize this information nor do we have plans to utilize this information for the LTCH QRP. As a result, the estimated burden and cost for LTCHs will be reduced. Specifically, we believe that there will be a 3.6 minute reduction in clinical staff time to report data. We estimate 146,592 discharges from 426 LTCHs annually. This equates to a decrease of 8,796 hours in burden for all LTCHs (0.06 hours $\times$ 146,592 discharges). Given 3.6 minutes of RN time at \$69.40 per hour completing an average of 344 sets of LTCH CARE Data Set assessments per provider per year, we estimated the total cost will be reduced by \$1,432.89 per LTCH annually, or \$610,409 for all LTCHs annually. This decrease in burden will be accounted for in the information collection under OMB control number (0938–1163).

Also, in section IX.C.10. of the preamble of this final rule, we are finalizing standardized patient assessment data proposals with respect to the Functional Status and Medical Condition and Comorbidity categories. All of the data elements are already included on the LTCH CARE Data Set, and therefore our finalized proposal to characterize those data elements as standardized patient assessment data will not result in an additional reporting burden for LTCHs.

We are not finalizing our proposals to adopt 25 new standardized patient assessment data elements with respect to LTCH admissions and 17 new standardized patient assessment data elements with respect to LTCH discharges. In the FY 2018 IPPS/LTCH PPS proposed rule (81 FR 20225 through 20226), we discussed that our burden estimates for these proposals were estimated at an additional \$4,080.30 per LTCH annually, or \$1,738,206 for all LTCHs annually. Because we are not finalizing the proposals, this results in a burden reduction from what was proposed.

In summary, the 4.5-minute increase in burden for the two finalized ventilator weaning quality measures is offset by the 3 minute reduction in burden for the finalized pressure ulcer quality measure and the 3.6 minute reduction in burden for the program interruption items. This results in a net

reduction in burden of 2.1 minutes. Overall, this results in a net decrease in cost associated with the finalized changes to the LTCH QRP, which we estimate to be reduced by \$893.14 per LTCH annually, or \$380,480 for all LTCHs annually.

The finalized LTCH CARE Data Set Version 4.00 is available on the LTCH QRP Web site at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-CARE-Data-Set-and-LTCH-QRP-Manual.html>.

Under section 1899B(m) of the Act, the Paperwork Reduction Act does not apply to the specific changes to the collections of information described in this final rule. While the reporting of data on quality measures is an information collection, we believe that the burden associated with modifications to the LTCH CARE Data Set discussed in this final rule fall under the PRA exceptions provided in 1899B(m) of the Act because they are required to achieve the standardization of patient assessment data. Section 1899B(m) of the Act provides that the PRA does not apply to section 1899B and the sections referenced in section 1899B(a)(2)(B) of the Act that require modification to achieve the standardization of patient assessment data. We are, however, setting out the burden as a courtesy to advise interested parties of the proposed actions' time and costs and we also refer readers to section I.M. of Appendix A of the preamble of this final rule. The requirement and burden will be submitted to OMB for review and approval when the modifications to the LTCH CARE Data Set are not used to achieve standardization and are not exempt from the requirements under section 1899B(m) of the Act.

For a discussion of the revised burden calculations related to LTCH CARE Data Set Version 4.00, and our discussion and response to public comments we received on these information collection requirements, we refer readers to section I.M. of Appendix A of the preamble of this final rule.

7. ICRs for the Inpatient Psychiatric Facility Quality Reporting (IPFQR) Program

We refer readers to the FY 2015 IPF PPS final rule (79 FR 45978 through 45980), the FY 2016 IPF PPS final rule (80 FR 46720 through 46721), and the FY 2017 IPPS/LTCH PPS final rule (81 FR 57265 through 57266) for a detailed discussion of the burden for the program requirements that we have previously adopted. Additional information on the full burden of

existing requirements can also be found in the information collection approved under OMB Control number 0938–1171. In section IX.D. of the preambles of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20120 through 20130) and this final rule, we discuss and finalize provisions that affect the FY 2019 payment determination (through procedural requirements that occur in FY 2018). We are not finalizing the adoption of the Medication Continuation following Inpatient Psychiatric Discharge measure for the FY 2020 payment determination and subsequent years. ICRs associated with finalized proposals for each period are discussed in more detail below.

a. Burden Associated With Finalized Procedural Proposals for the FY 2019 Payment Determination and Subsequent Years

In this final rule, we are finalizing: (1) Proposed updates to the Extraordinary Circumstances Exception (ECE) process (affecting submission of ECE requests in FY 2018, which will impact payment determination year FY 2019 and subsequent years); (2) proposals to adopt measure removal factors, including criteria for determining when a measure is “topped-out,” and measure retention factors (which will take effect immediately following the finalization of this rule for updates to be proposed through future rulemaking); and (3) changes associated with procedural deadlines (which affect the FY 2019 payment determination and subsequent years).

First, for the ECE proposals, we are specifically finalizing our proposals to: (1) Specify that ECE forms may be signed by either the CEO or the designated personnel as listed in the contact information section of the form; (2) change the ECE request form submission deadline to within 90 days of the date that the extraordinary circumstance occurred; and (3) state that we will strive to complete our review of ECE requests within 90 days of receipt. These changes to the ECE process will not change data submission requirements for facilities requesting ECEs, but update procedural requirements related to ECE requests instead. Therefore, we do not expect any changes to burden associated with these proposals.

Second, the finalized proposal to adopt measures removal and retention factors does not affect the data submission requirements. These factors are intended to improve transparency of our measure review and evaluation process.

Third, for the procedural deadlines, we are finalizing our proposals to: (1) Change the submission deadline such that facilities have a 45-day submission period beginning at least 30 days following the end of the data collection period for a measure; (2) change the submission timeframes for both NOPs and withdrawals to the end of the data submission period before each respective payment determination year; and (3) provide exact dates that define the end of the data submission period/ NOP/withdrawal submission deadline through subregulatory means. These finalized proposals do not affect the data that a facility must submit; instead, these proposals affect the specification of timeframes.

Because none of the policies that we are finalizing for FY 2018 and subsequent years affects the data that IPFs are required to submit, we do not believe there will be any change in burden as compared to the burden finalized in prior rulemakings, which is described in more detail in the FY 2015 IPF PPS final rule (79 FR 45978 through 45980), the FY 2016 IPF PPS final rule (80 FR 46720 through 46721), and the FY 2017 IPPS/LTCH PPS final rule (81 FR 57265 through 57266) and in the information collection previously approved under OMB Control number 0938–1171.

b. Burden Associated With the FY 2020 Payment Determination and Subsequent Years

For FY 2020 and subsequent years, we are not finalizing our proposal to adopt one measure, Medication Continuation following Inpatient Psychiatric Discharge.

8. ICRs for the Electronic Health Record (EHR) Incentive Programs and Meaningful Use

In section IX.E. of the preambles of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20130 through 20133) and this final rule, we discuss proposed and newly finalized policies for eligible hospitals and CAHs reporting CQMs electronically under the Medicare and Medicaid EHR Incentive Programs in 2017 and 2018. As outlined in this final rule, we are finalizing modifications to our proposals and making the following modifications to the CY 2017 final CQM policies: (1) Revise the CY 2017 reporting period for eligible hospitals and CAHs reporting CQMs electronically to require the submission of one self-selected quarter of data; and (2) revise the number of CQMs eligible hospitals and CAHs are required to report electronically for CY 2017 to 4 (self-selected) available CQMs.

In addition, we are finalizing modifications to our proposals that adopt the following CQM reporting requirements for CY 2018: (1) For eligible hospitals and CAHs reporting CQMs electronically that demonstrate meaningful use for the first time in 2018 or that have demonstrated meaningful use in any year prior to 2018, the reporting period will be one, self-selected quarter of data from CY 2018 with a submission period (Medicare EHR Incentive Program only) consisting of the 2 months following the close of the calendar year, ending on February 28, 2019; (2) eligible hospitals and CAHs reporting CQMs electronically are required to report at least 4 (self-selected) of the available CQMs; (3) eligible hospitals and CAHs that report CQMs by attestation under the Medicare EHR Incentive Program because electronic reporting is not feasible, and eligible hospitals and CAHs that report CQMs by attestation under their State's Medicaid EHR Incentive Program, will be required to report on all 16 available CQMs; and (4) eligible hospitals and CAHs reporting CQMs by attestation under the Medicare EHR Incentive Program will have a submission period that will be the 2 months following the close of the CY 2018 CQM reporting period, ending February 28, 2019.

Because the finalized reporting requirements for data collection regarding the reporting of CQMs electronically under the Medicare and Medicaid EHR Incentive Programs will align with the reporting requirements under the Hospital IQR Program, we do not believe that there is any additional burden for the collection of such information. We did not propose modifications for the CQMs reporting requirements by attestation in this section. Therefore, no change in burden associated with attestation of CQMs will result from this section.

In section IX.F. of the preamble of this final rule, we discuss newly finalized policies regarding clinical quality measurement for EPs participating in the Medicaid EHR Incentive Program. We note that there may be costs incurred by States associated with systems development as a result of the newly finalized policies. State attestation systems will likely require minor updates, which may be eligible for support through enhanced Federal funding, subject to CMS prior approval, if outlined in an updated Implementation Advance Planning Document (IAPD). We anticipate that EPs may also face minor burden and incremental capital cost for updating clinical quality measures and reporting capabilities in the EHR. We intend to

reduce EP burden and simplify the program through these newly finalized policies, which are intended to better align CQM reporting periods and CQM reporting for the Medicaid EHR Incentive Program with policies under MIPS. Overall, we believe the newly finalized CQM alignment at the State attestation system and EP levels will both reduce burden associated with reporting on multiple CMS programs and enhance state and CMS operational efficiency.

In section IX.G.1. of the preamble of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20135 through 20136) and IX.G.2. of the preamble of this final rule, we discuss our proposed and newly finalized policy which changes the EHR reporting period in 2018 from the full CY 2018 to any continuous 90-day period within CY 2018 for all new and returning EPs, eligible hospitals and CAHs attesting to meaningful use in the Medicare and Medicaid EHR Incentive Programs. We do not believe that modifying the EHR reporting period for attestation will cause an increase in burden as the reporting requirements for a 90-day EHR reporting period are virtually the same as for a full calendar year EHR reporting period and the same objectives and measures will be used for attestation for a full calendar year EHR reporting period or a 90-day EHR reporting period.

In section IX.G.2. of the preamble of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20136 through 20138) and IX.G.3. of the preamble of this final rule, as required by the 21st Century Cures Act (Pub. L. 114–255), we discuss and finalize our proposal for an exemption from the payment adjustments under sections 1848(a)(7)(A), 1886(b)(3)(B)(ix)(I), and 1814(l)(4) of the Act for EPs, eligible hospitals and CAHs, respectively, that demonstrate through an application process that compliance with the requirement for being a meaningful EHR user is not possible because their certified EHR technology has been decertified under ONC's Health IT Certification Program. The application process involves participants completing an application form for an exception. While the form is standardized, we believe it is exempt from the PRA. The form is structured as an attestation. Therefore, we believe it is exempt under 5 CFR 1320.3(h)(1) of the implementing regulations of the PRA. The form is an attestation that imposes no burden beyond what is required to provide identifying information and to attest to the applicable information.

In section IX.G.3. of the preamble of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20138 through 20139) and

IX.G.4. of the preamble of this final rule, as required by the 21st Century Cures Act, we discuss and finalize our proposal to exempt ambulatory surgical center-based EPs from the 2017 and 2018 payment adjustments under section 1848(a)(7)(A) of the Act if they furnish substantially all of their covered professional services in an ambulatory surgical center. We do not believe this requirement will cause an increase in burden as CMS will identify the EPs who might meet this requirement. We did not receive any public comments regarding this information collection. For the expected effects relating to the above proposals, we refer readers to section I.O. of Appendix A of this final rule.

9. ICRs Relating to Electronic Signature and Electronic Submission of the Certification and Settlement Summary Page of Medicare Cost Reports

In section X.A. of the preambles of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20139 through 20142) and this final rule, we discuss and finalize our proposal to allow providers to use an electronic signature on the certification statement of the Certification and Settlement Summary page of the Medicare cost report and submit it electronically. The Certification and Settlement Summary page, which contains the required provider signature line, currently exists in the Medicare cost report and is mailed to the contractor from the provider. We are finalizing our proposal to allow providers the option to sign and submit this page electronically. The signature from the provider's administrator or chief financial officer is an existing data collection requirement. There will be no new data collection from providers resulting from our new policy. The policy, which allows providers to sign this page electronically, is not a substantive change to the existing data collection instrument and would have a minimal impact on providers to complete. As discussed in section I.P. of Appendix A of this final rule, we estimate that this finalized proposal will collectively save these providers approximately \$362,000 in postage costs.

10. ICRs Relating to Changes in Public Notices of Terminations

In section XI.B. of the preambles of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20145 through 20146) and this final rule, we discuss and finalize our proposal to no longer require the posting of voluntary and involuntary termination public notice in newspapers for RHCs, FQHCs, ASCs, and OPOs.

These providers and suppliers will be permitted to use other methods of notification in light of the expanded use of information technology. In this final rule, we also are finalizing our proposal to change the regulations regarding termination of provider agreements by CMS (that is, involuntary termination) or providers or suppliers to remove the provision for public notice through "newspapers" to allow flexibility in the method of public notice.

We believe none of the provisions would have a financial burden as we are only eliminating the specification which requires newspaper hard print to be the notice source. We refer readers to the economic impact provisions of section I.Q. of Appendix A of this final rule for additional information.

42 CFR Part 495

Administrative practice and procedure, Electronic health records, Health facilities, Health professions, Health maintenance organizations (HMO), Medicaid, Medicare, Penalties, Privacy, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble of this final rule, the Centers for Medicare and Medicaid Services is amending 42 CFR Chapter IV as set forth below:

PART 405—FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED

- 1. The authority citation for part 405 is revised to read as follows:

Authority: Secs. 205(a), 1102, 1142, 1861, 1862(a), 1869, 1871, 1874, 1881, and 1886(k) of the Social Security Act (42 U.S.C. 405(a), 1302, 1320b–12, 1395x, 1395y(a), 1395ff, 1395hh, 1395kk, 1395rr, and 1395ww(k)), and sec. 353 of the Public Health Service Act (42 U.S.C. 263a).

- 2. Section 405.2404 is amended by revising paragraph (d) introductory text to read as follows:

§ 405.2404 Termination of rural health clinic agreements.

* * * * *

(d) *Notice to the public.* Prompt notice of the date and effect of termination must be given to the public by either of the following:

* * * * *

- 3. Section 405.2442 is amended by revising paragraph (a) introductory text and paragraph (b) to read as follows:

§ 405.2442 Notice to the public.

(a) When the FQHC voluntarily terminates the agreement and an effective date is set for the termination, the FQHC must notify the public in the area serviced by the FQHC prior to a prospective effective date or on the actual day that business ceases, if no prospective date of termination has been set. The notice must include—

* * * * *

(b) When CMS terminates the agreement, CMS will notify the public in the area serviced by the FQHC.

PART 412—PROSPECTIVE PAYMENT SYSTEMS FOR INPATIENT HOSPITAL SERVICES

- 4. The authority citation for part 412 is revised to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh); sec. 124 of Pub. L. 106–113 (113 Stat. 1501A–332); sec. 1206 of Pub. L. 113–67; sec. 112 of Pub. L. 113–93; sec. 231 of Pub. L. 114–113; and secs. 15004, 15006, 15007, 15008, 15009, and 15010 of Pub. L. 114–255.

- 5. Section 412.22 is amended by revising paragraph (e) introductory text and paragraph (e)(1)(v) introductory text and adding paragraph (i) to read as follows:

§ 412.22 Excluded hospitals and hospital units: General rules.

* * * * *

(e) *Hospitals-within-hospitals.* A hospital-within-a-hospital is a hospital that occupies space in a building also used by another hospital, or in one or more separate buildings located on the same campus as buildings used by another hospital. Prior to October 1, 2017, except as provided in paragraphs (e)(1)(vi) and (f) of this section, a hospital-within-a-hospital must meet the following criteria in order to be excluded from the prospective payment systems specified in § 412.1(a)(1). On or after October 1, 2017, except as provided in paragraphs (e)(1)(vi) and (f) of this section, a hospital-within-hospital that is excluded from the prospective payment systems specified in § 412.1(a)(1) that occupies space in a building also used by a hospital which is not excluded from the prospective payment systems specified in § 412.1(a)(1), or in one or more separate buildings located on the same campus as buildings used by a hospital not excluded from the prospective payment systems specified in § 412.1(a)(1) must meet the following criteria in order to be excluded from the prospective payment systems specified in § 412.1(a)(1).

(1) * * *

(v) *Performance of basic hospital functions.* Prior to October 1, 2017, the hospital meets one of the following criteria:

* * * * *

(i)(1) *Requirements for extended neoplastic disease care hospitals.* For cost reporting periods beginning on or after January 1, 2015, an extended neoplastic disease care hospital is a hospital that was first excluded from the prospective payment system under this section in 1986 which has an average inpatient length of stay for all patients, including both Medicare and non-Medicare inpatients, of greater than 20 days and demonstrates that at least 80 percent of its annual Medicare inpatient discharges in the 12-month cost reporting period ending in fiscal year 1997 have a principal diagnosis that reflects a finding of neoplastic disease as defined in paragraph (f)(1)(iv) of this section.

(2) *Payment to extended neoplastic disease care hospitals.* Payment for inpatient operating costs for hospitals classified under paragraph (i)(1) of this section is made as set forth in § 412.526(c)(3). Payment for capital costs for hospitals classified under paragraph (i)(1) of this section is made as set forth in § 412.526(c)(4).

■ 6. Section 412.23 is amended by revising paragraphs (e)(2)(ii), (e)(3)(vi), and (e)(7)(iii) to read as follows:

§ 412.23 Excluded hospitals: Classifications.

* * * * *

(e) * * *

(2) * * *

(ii) For cost reporting periods beginning on or after August 5, 1997 and on or before December 31, 2014, a hospital that was first excluded from the prospective payment system under this section in 1986 meets the length-of-stay criterion if it has an average inpatient length of stay for all patients, including both Medicare and non-Medicare inpatients, of greater than 20 days and demonstrates that at least 80 percent of its annual Medicare inpatient discharges in the 12-month cost reporting period ending in fiscal year 1997 have a principal diagnosis that reflects a finding of neoplastic disease as defined in paragraph (f)(1)(iv) of this section.

(3) * * *

(vi) For cost reporting periods beginning on or after October 1, 2015, the Medicare inpatient days and discharges that are paid at the site neutral payment rate specified at § 412.522(c)(1) or paid under a Medicare Advantage plan (Medicare Part C) will not be included in the calculation of the Medicare inpatient average length of stay specified under paragraph (e)(2)(i) of this section.

* * * * *

(7) * * *

(iii) April 1, 2014 through September 30, 2017—The number of Medicare-certified beds in an existing long-term care hospital or an existing long-term care hospital satellite facility must not be increased beyond the number of Medicare-certified beds prior to April 1, 2014, unless one of the exceptions specified in paragraph (e)(6)(ii) of this section is met.

* * * * *

■ 7. Section 412.64 is amended by—

■ a. Revising paragraph (d)(1)(vii);

■ b. Adding paragraph (d)(4)(iii);

■ c. Revising paragraph (h)(4) introductory text and paragraph (h)(4)(vi) introductory text; and

■ c. Revising paragraph (i)(3)(iii).

The revisions and addition read as follows:

§ 412.64 Federal rates for inpatient operating costs for Federal fiscal year 2005 and subsequent fiscal years.

* * * * *

(d) * * *

(1) * * *

(vii) For fiscal years 2017 and 2018, the percentage increase in the market

basket index (as defined in § 413.40(a)(3) of this chapter) for prospective payment hospitals, subject to the provisions of paragraphs (d)(2) and (3) of this section, less a multifactor productivity adjustment (as determined by CMS) and less 0.75 percentage point.

* * * * *

(4) * * *

(iii) *Exception for decertified EHR technology.* Beginning with the fiscal year 2019 payment adjustment year, the Secretary shall exempt an eligible hospital that is not a qualifying eligible hospital from the application of the reduction under paragraph (d)(3) of this section if the Secretary determines that compliance with the requirement for being a meaningful EHR user is not possible because the certified EHR technology used by the eligible hospital has been decertified under ONC's Health IT Certification Program. To be considered for an exception, an eligible hospital must submit an application, in the manner specified by CMS, demonstrating that the certified EHR technology was decertified during the 12-month period preceding the applicable EHR reporting period for the payment adjustment year, or during the applicable EHR reporting period for the payment adjustment year, and that the eligible hospital made a good faith effort to obtain another certified EHR technology for that EHR reporting period. (See § 495.4 of this chapter for definitions of payment adjustment year, EHR reporting period, and meaningful EHR user.) Applications requesting this exception must be submitted by July 1 of the year before the applicable payment adjustment year, or a later date specified by CMS. This exception is subject to annual renewal, but in no case may an eligible hospital be granted an exception under paragraph (d)(4) of this section for more than 5 years.

* * * * *

(h) * * *

(4) For discharges on or after October 1, 2004 and before October 1, 2018, CMS establishes a minimum wage index for each all-urban State, as defined in paragraph (h)(5) of this section. This minimum wage index value is computed using the following methodology:

* * * * *

(vi) For discharges on or after October 1, 2012 and before October 1, 2018, the minimum wage index value for the State is the higher of the value determined under paragraph (h)(4)(iv) of this section or the value computed using the following alternative methodology:

* * * * *

(i) * * *

(3) * * *

(iii) Any wage index adjustment made under this paragraph (i) is effective for a period of 3 fiscal years, except that hospitals in a qualifying county may elect to waive the application of the wage index adjustment. A hospital may waive the application of the wage index adjustment by notifying CMS in writing within 45 days of the date of public display of the annual notice of proposed rulemaking for the hospital inpatient prospective payment system at the Office of the Federal Register.

* * * * *

■ 8. Section 412.87 is amended by revising paragraph (b)(2) to read as follows:

§ 412.87 Additional payment for new medical services and technologies: General provisions.

* * * * *

(b) * * *

(2) A medical service or technology may be considered new within 2 or 3 years after the point at which data begin to become available reflecting the inpatient hospital code (as defined in section 1886(d)(5)(K)(iii) of the Social Security Act) assigned to the new service or technology (depending on when a new code is assigned and data on the new service or technology become available for DRG recalibration). After CMS has recalibrated the DRGs, based on available data, to reflect the costs of an otherwise new medical service or technology, the medical service or technology will no longer be considered “new” under the criterion of this section.

* * * * *

■ 9. Section 412.90 is amended by revising paragraph (j) to read as follows:

§ 412.90 General rules.

* * * * *

(j) *Medicare-dependent, small rural hospitals.* For cost reporting periods beginning on or after April 1, 1990, and before October 1, 1994, and for discharges occurring on or after October 1, 1997 and before October 1, 2017, CMS adjusts the prospective payment rates for inpatient operating costs determined under subparts D and E of this part if a hospital is classified as a Medicare-dependent, small rural hospital.

* * * * *

■ 10. Section 412.92 is amended by revising paragraph (e)(3) introductory text to read as follows:

§ 412.92 Special Treatment: Sole community hospitals.

* * * * *

(e) * * *

(3) Effective for cost reporting periods beginning before October 1, 2017, the intermediary determines a lump sum adjustment amount not to exceed the difference between the hospital's Medicare inpatient operating costs and the hospital's total DRG revenue for inpatient operating costs based on DRG-adjusted prospective payment rates for inpatient operating costs (including outlier payments for inpatient operating costs determined under subpart F of this part and additional payments made for inpatient operating costs for hospitals that serve a disproportionate share of low-income patients as determined under § 412.106 and for indirect medical education costs as determined under § 412.105). Effective for cost reporting periods beginning on or after October 1, 2017, the MAC determines a lump sum adjustment amount equal to the difference between the hospital's fixed Medicare inpatient operating costs and the hospital's total MS-DRG revenue based on MS-DRG-adjusted prospective payment rates for inpatient operating costs (including outlier payments for inpatient operating costs determined under subpart F of this part and additional payments made for inpatient operating costs for hospitals that serve a disproportionate share of low-income patients as determined under § 412.106 and for indirect medical education costs as determined under § 412.105) multiplied by the ratio of the hospital's fixed inpatient operating costs to its total inpatient operating costs.

* * * * *

■ 11. Section 412.101 is amended by revising paragraph (b)(2) introductory text and adding paragraph (e) to read as follows:

§ 412.101 Special treatment: Inpatient hospital payment adjustment for low-volume hospitals.

* * * * *

(b) * * *

(2) In order to qualify for this adjustment, a hospital must meet the following criteria, subject to the provisions of paragraph (e) of this section:

* * * * *

(e) *Special treatment regarding hospitals operated by the Indian Health Service (IHS) or a Tribe.* For discharges occurring in FY 2018 and subsequent fiscal years—

(1) A hospital operated by the IHS or a Tribe will be considered to meet the applicable mileage criterion specified under paragraph (b)(2) of this section if it is located more than the specified

number of road miles from the nearest subsection (d) hospital operated by the IHS or a Tribe.

(2) A hospital, other than a hospital operated by the IHS or a Tribe, will be considered to meet the applicable mileage criterion specified under paragraph (b)(2) of this section if it is located more than the specified number of road miles from the nearest subsection (d) hospital other than a subsection (d) hospital operated by the IHS or a Tribe.

■ 12. Section 412.106 is amended by adding paragraph (g)(1)(iii)(C)(4) to read as follows:

§ 412.106 Special treatment: Hospitals that serve a disproportionate share of low-income patients.

* * * * *

(g) * * *

(1) * * *

(iii) * * *

(C) * * *

(4) For fiscal year 2018, CMS will base its estimates of the amount of hospital uncompensated care on utilization data for Medicaid and Medicare SSI patients, as determined by CMS in accordance with paragraphs (b)(2)(i) and (b)(4) of this section, using data on Medicaid utilization from 2012 and 2013 cost reports from the most recent HCRIS database extract and 2012 cost report data submitted to CMS by IHS or Tribal hospitals and the most recent available 2 years of data on Medicare SSI utilization (or, for Puerto Rico hospitals, a proxy for Medicare SSI utilization data), and for hospitals other than Puerto Rico hospitals, IHS or Tribal hospitals, and all-inclusive rate providers, data on uncompensated care costs, defined as charity care costs plus non-Medicare bad debt costs from 2014 cost reports from the most recent HCRIS database extract.

* * * * *

■ 13. Section 412.108 is amended by revising paragraph (d)(3) introductory text to read as follows:

§ 412.108 Special treatment: Medicare-dependent, small rural hospitals.

* * * * *

(d) * * *

(3) The intermediary determines a lump sum adjustment amount in accordance with the methodology set forth in § 412.92(e)(3).

* * * * *

■ 14. Section 412.140 is amended by revising paragraphs (c)(2) and (d)(2) to read as follows:

§ 412.140 Participation, data submission, and validation requirements under the Hospital Inpatient Quality Reporting (IQR) Program.

* * * * *

(c) * * *

(2) *Extraordinary circumstances exceptions.* CMS may grant an exception with respect to quality data reporting requirements in the event of extraordinary circumstances beyond the control of the hospital. CMS may grant an exception as follows:

(i) For circumstances not relating to the reporting of electronic clinical quality measure data, a hospital participating in the Hospital IQR Program that wishes to request an exception with respect to quality data reporting requirements must submit its request to CMS within 90 days of the date that the extraordinary circumstances occurred. For circumstances relating to the reporting of electronic clinical quality measures, a hospital participating in the Hospital IQR Program that wishes to request an exception must submit its request to CMS by April 1 following the end of the reporting calendar year in which the extraordinary circumstances occurred. Specific requirements for submission of a request for an exception are available on QualityNet.org.

(ii) CMS may grant an exception to one or more hospitals that have not requested an exception if: CMS determines that a systemic problem with CMS data collection systems directly affected the ability of the hospital to submit data; or if CMS determines that an extraordinary circumstance has affected an entire region or locale.

(d) * * *

(2)(i) A hospital meets the chart-abstracted validation requirement with respect to a fiscal year if it achieves a 75-percent score, as determined by CMS.

(ii) A hospital meets the eCQM validation requirement with respect to a fiscal year if it submits at least 75 percent of sampled eCQM measure medical records in a timely and complete manner, as determined by CMS.

* * * * *

■ 15. Section 412.211 is amended by revising paragraph (f)(3)(iii) to read as follows:

§ 412.211 Puerto Rico rates for Federal fiscal year 2004 and subsequent fiscal years.

* * * * *

(f) * * *

(3) * * *

(iii) Any wage index adjustment made under this paragraph (f) is effective for a period of 3 fiscal years, except that hospitals in a qualifying county may elect to waive the application of the wage index adjustment. A hospital may waive the application of the wage index adjustment by notifying CMS in writing within 45 days of the date of public display of the annual notice of proposed rulemaking for the hospital inpatient prospective payment system at the Office of the **FEDERAL REGISTER**.

* * * * *

■ 16. Section 412.230 is amended by revising paragraphs (a)(3) introductory text, (a)(3)(i) and (ii), and (d)(3) to read as follows:

§ 412.230 Criteria for an individual hospital seeking redesignation to another rural area or an urban area.

(a) * * *

(3) *Special rules for sole community hospitals and rural referral centers.* To be redesignated under the special rules in this paragraph, a hospital must be approved as a sole community hospital or a rural referral center as of the date of the MGCRB's review.

(i) A hospital that is approved as a rural referral center or a sole community hospital, or both, does not have to demonstrate a close proximity to the area to which it seeks redesignation.

(ii) If a hospital that is approved as a rural referral center or a sole community hospital, or both, qualifies for urban redesignation, it is redesignated to the urban area that is closest to the hospital or to the hospital's geographic home area. If the hospital is closer to another rural area than to any urban area, it may seek redesignation to either the closest rural area or the closest urban area.

* * * * *

(d) * * *

(3) *Rural referral center exceptions.* (i) If a hospital was ever approved as a rural referral center, it does not have to demonstrate that it meets the average hourly wage criterion set forth in paragraph (d)(1)(iii) of this section.

(ii) If a hospital was ever approved as a rural referral center, it is required to meet only the criterion that applies to rural hospitals under paragraph (d)(1)(iv) of this section, regardless of its actual location in an urban or rural area.

* * * * *

■ 17. Section 412.273 is amended by revising paragraphs (c)(1)(ii) and (c)(2) to read as follows:

§ 412.273 Withdrawing an application, terminating an approved 3-year reclassification, or cancelling a previous withdrawal or termination.

* * * * *

(c) * * *

(1) * * *

(ii) After the MGCRB issues a decision, provided that the request for withdrawal is received by the MGCRB within 45 days of the date that CMS' annual notice of proposed rulemaking is issued in the **Federal Register** concerning changes to the inpatient hospital prospective payment system and proposed payment rates for the fiscal year for which the application has been filed.

(2) A request for termination must be received by the MGCRB within 45 days of the date that CMS' annual notice of proposed rulemaking is issued in the **Federal Register** concerning changes to the inpatient hospital prospective payment system and proposed payment rates for the fiscal year for which the termination is to apply.

* * * * *

■ 18. Section 412.500 is amended by adding paragraphs (a)(7) and (8) to read as follows:

§ 412.500 Basis and scope of subpart.

(a) * * *

(7) Section 411 of Public Law 114–10 which revises the annual update to the LTCH PPS standard Federal payment rate in FY 2018.

(8) Public Law 114–255 which at—

(i) Section 15004 amended the moratorium on increasing beds in existing LTCHs and LTCH satellite facilities and amended high cost outlier payment requirements;

(ii) Section 15006 amended moratoria on certain payment policies;

(iii) Section 15007 amended the average length of stay requirements;

(iv) Section 15009 temporally excepted certain spinal cord specialty hospitals from the site neutral payment rate; and

(v) Section 15010 temporally excepted certain wound care discharges from certain LTCHs from the site neutral payment rate.

* * * * *

■ 19. Section 412.522 is amended by adding paragraphs (b)(3) and (4) to read as follows:

§ 412.522 Application of site neutral payment rate.

* * * * *

(b) * * *

(3) *Temporary exception for certain severe wound discharges.*—(i) *Definitions.* For purposes of this paragraph (b)(3) the following definitions are applicable:

Severe wound means a wound which is a stage 3 wound, stage 4 wound, unstageable wound, non-healing

surgical wound, fistula, as identified by the applicable code on the claim from the long-term care hospital.

Wound means an injury, usually involving division of tissue or rupture of the integument or mucous membrane with exposure to the external environment.

(ii) *Discharges for severe wounds.* A discharge that occurs in a cost reporting period beginning during fiscal year 2018 for a patient who was treated for a severe wound that meets all of the following criteria is excluded from the site neutral payment rate specified under this section:

(A) The severe wound meets the definition specified in paragraph (b)(3)(i) of this section.

(B) The discharge is from a long-term care hospital that is described in § 412.23(e)(2)(i) and meets the criteria of § 412.22(f); and

(C) The discharge is classified under MS–LTC–DRG 539, 540, 602, or 603.

(4) *Temporary exception for certain spinal cord specialty hospitals.* For discharges in cost reporting periods beginning in fiscal years 2018 and 2019, the site neutral payment rate specified under this section does not apply if such discharge is from a long-term care hospital that meets each of the following requirements:

(i) The hospital was a not-for-profit long-term care hospital on June 1, 2014, as determined by cost report data;

(ii) Of the discharges in calendar year 2013 from the long-term care hospital for which payment was made under subpart O, at least 50 percent were classified under MS–LTC–DRGs 28, 29, 52, 57, 551, 573, and 963; and

(iii) The long-term care hospital discharged inpatients (including both individuals entitled to, or enrolled for, benefits under Medicare Part A and individuals not so entitled or enrolled) during fiscal year 2014 who had been admitted from at least 20 of the 50 States determined by the States of residency of such inpatients.

* * * * *

■ 20. Section 412.523 is amended by—

■ a. Adding paragraph (c)(3)(xiv);

■ b. Revising paragraph (d)(1); and

■ c. Adding paragraph (d)(5).

The additions and revision read as follows:

§ 412.523 Methodology for calculating the Federal prospective payment rates.

* * * * *

(c) * * *

(3) * * *

(xiv) *For long-term care hospital prospective payment system fiscal year beginning October 1, 2017, and ending September 30, 2018.* The LTCH PPS

standard Federal payment rate for the long-term care hospital prospective payment system beginning October 1, 2017, and ending September 30, 2018, is the standard Federal payment rate for the previous long-term care hospital prospective payment system fiscal year updated by 1.0 percent and further adjusted, as appropriate, as described in paragraph (d) of this section.

* * * * *

(d) * * *

(1) *Outlier payments.* CMS adjusts the LTCH PPS standard Federal payment rate by a reduction factor of 8 percent, the estimated proportion of outlier payments under § 412.525(a) payable for discharges described in § 412.522(a)(2) (notwithstanding the provisions of § 412.525(a)(2)(ii) for FY 2018 and subsequent years.

* * * * *

(5) *Adjustment for changes to the short-stay outlier policy.* The standard Federal rate determined under paragraph (c)(3) of this section is permanently adjusted by a one-time factor so that estimated aggregate payments to LTCH PPS standard Federal rate cases in FY 2018 are projected to equal estimated aggregate payments that would have been paid for such cases without regard to the change in the short-stay outlier policy for FY 2018 under § 412.529(c)(4).

* * * * *

■ 21. Section 412.525 is amended by revising paragraph (a)(2) to read as follows:

§ 412.525 Adjustments to the Federal prospective payment.

(a) * * *

(2)(i) The fixed loss-amount for discharges from a long-term care hospital described under § 412.522(a)(2) is determined for the long-term care hospital prospective payment system payment year, using the LTC–DRG relative weights that are in effect at the start of the applicable long-term care hospital prospective payment system payment year.

(ii) For FY 2018 and subsequent years, the fixed-loss amount for long-term care hospital discharges described under § 412.522(a)(2) is determined such that the estimated proportion of outlier payments under paragraph (a) of this section payable for such discharges is projected to be equal to 99.6875 of 8 percent.

* * * * *

■ 22. Section 412.529 is amended by—

■ a. Revising paragraph (c)(3) introductory text;

■ b. Adding paragraph (c)(4); and

■ c. Revising paragraph (f) introductory text.

The revisions and addition read as follows:

§ 412.529 Special payment provision for short-stay outliers.

* * * * *

(c) * * *

(3) *Discharges occurring on or after July 1, 2007 and before December 29, 2007 and discharges occurring on or after December 29, 2012 and on or before September 30, 2017.* For discharges from long-term care hospitals described under § 412.23(e)(2)(i) occurring on or after July 1, 2007, and on or before December 29, 2007 and discharges occurring on or after December 29, 2012, and on or before September 30, 2017, the LTCH prospective payment system adjusted payment amount for a short-stay outlier case is adjusted by either of the following:

* * * * *

(4) *Discharges occurring on or after October 1, 2017.* For discharges occurring on or after October 1, 2017, short-stay outlier payments are determined according to paragraph (c)(2)(iv) of this section.

* * * * *

(f) *Reconciliation of short-stay payments.* Payments for discharges occurring before October 1, 2017 are reconciled in accordance with one of the following:

* * * * *

■ 23. Section 412.538 is amended by revising paragraph (a)(1) to read as follows:

§ 412.538 Limitation on long-term care hospital admissions from referring hospitals.

(a) * * *

(1) The provisions of this section apply to all long-term care hospitals excluded from the hospital inpatient prospective payment system under § 412.23(e), except as specified in paragraph (a)(2) of this section, effective for discharges occurring on or after October 1, 2018.

* * * * *

■ 24. Section 412.560 is amended by revising the section heading, paragraph (a), the paragraph (b) heading, paragraphs (b)(1), (c) introductory text, (c)(1), (c)(3)(vii), (c)(4)(ii), (d)(1), and (d)(2)(vii), and adding paragraph (f) to read as follows:

§ 412.560 Requirements under the Long-Term Care Hospital Quality Reporting Program (LTCH QRP).

(a) *Participation in the LTCH QRP.* A long-term-care hospital must begin

submitting data on measures specified under sections 1886(m)(5)(D), 1899B(c)(1), and 1899B(d)(1) of the Act, and standardized patient assessment data required under section 1899B(b)(1) of the Act, under the LTCH QRP by no later than the first day of the calendar quarter subsequent to 30 days after the date on its CMS Certification Number (CCN) notification letter.

(b) *Data submission requirements and payment impact.* (1) Except as provided in paragraph (c) of this section, a long-term care hospital must submit to CMS data on measures specified under sections 1886(m)(5)(D), 1899B(c)(1) and 1899B(d)(1) of the Act, and standardized patient assessment data required under section 1899B(b)(1) of the Act. Such data must be submitted in a form and manner, and at a time, specified by CMS.

* * * * *

(c) *Exception and extension request requirements.* Upon request by a long-term care hospital, CMS may grant an exception or extension with respect to the measures data and standardized patient assessment data reporting requirements, for one or more quarters, in the event of certain extraordinary circumstances beyond the control of the long-term care hospital, subject to the following:

(1) A long-term care hospital that wishes to request an exception or extension with respect to measures data and standardized patient assessment data reporting requirements must submit its request to CMS within 90 days of the date that the extraordinary circumstances occurred.

* * * * *

(3) * * *

(vii) The date on which the long-term care hospital will be able to again submit measures data and standardized patient assessment data under the LTCH QRP and a justification for the proposed date.

(4) * * *

(ii) A systemic problem with one of CMS' data collection systems directly affected the ability of the long-term care hospital to submit measures data and standardized patient assessment data.

* * * * *

(d) * * *

(1) *Written notification of noncompliance decision.* CMS will send a long-term care hospital written notification of a decision of noncompliance with the measures data and standardized patient assessment data reporting requirements for a particular fiscal year. CMS also will use the Quality Improvement and Evaluation system (QIES) Assessment

Submission and Processing (ASAP) System to provide notification of noncompliance to the long-term care hospital.

(2) * * *

(vii) Accompanying documentation that demonstrates compliance of the long-term care hospital with the LTCH QRP requirements. This documentation must be submitted electronically at the same time as the reconsideration request as an attachment to the email.

* * * * *

(f) *Data completion thresholds.* (1) Long-term care hospitals must meet or exceed two separate data completeness thresholds: One threshold set at 80 percent for completion of measures data and standardized patient assessment data collected using the LTCH CARE Data Set submitted through the QIES ASAP System; and a second threshold set at 100 percent for measures data collected and submitted using the CDC NHSN.

(2) The thresholds in paragraph (f)(1) of this section apply to all data that must be submitted under paragraph (b) of this section.

(3) A long-term care hospital must meet or exceed both thresholds in paragraph (f)(1) of this section to avoid receiving a 2 percentage point reduction to its annual payment update for a given fiscal year, beginning with the FY 2019 LTCH QRP.

PART 413—PRINCIPLES OF REASONABLE COST REIMBURSEMENT; PAYMENT FOR END-STAGE RENAL DISEASE SERVICES; OPTIONAL PROSPECTIVELY DETERMINED PAYMENT RATES FOR SKILLED NURSING FACILITIES

■ 25. The authority for part 413 is revised to read as follows:

Authority: Secs. 1102, 1812(d), 1814(b), 1815, 1833(a), (i), and (n), 1861(v), 1871, 1881, 1883 and 1886 of the Social Security Act (42 U.S.C. 1302, 1395d(d), 1395f(b), 1395g, 1395l(a), (i), and (n), 1395x(v), 1395hh, 1395rr, 1395tt, and 1395ww); and sec. 124 of Public Law 106–113, 113 Stat. 1501A–332; sec. 3201 of Public Law 112–96, 126 Stat. 156; sec. 632 of Public Law 112–240, 126 Stat. 2354; sec. 217 of Public Law 113–93, 129 Stat. 1040; and sec. 204 of Public Law 113–295, 128 Stat. 4010; and sec. 808 of Public Law 114–27, 129 Stat. 362.

■ 26. Section 413.24 is amended by revising paragraph (f)(4)(iv) to read as follows:

§ 413.24 Adequate cost data and cost finding.

* * * * *

(f) * * *

(4) * * *

(iv)(A) Effective as specified in paragraphs (f)(4)(iv)(A)(1) through (4) and except as provided in paragraph (f)(4)(iv)(C) of this section, a provider must submit a hard copy of a settlement summary, if applicable, which is a statement of certain worksheet totals found within the electronic file, and the certification statement described in paragraph (f)(4)(iv)(B) of this section signed by its administrator or chief financial officer certifying the accuracy of the electronic file or the manually prepared cost report.

(1) For hospitals, effective for cost reporting periods ending on or after September 30, 1994;

(2) For skilled nursing facilities and home health agencies, effective for cost reporting periods ending on or after February 1, 1997;

(3) For hospices and end-stage renal disease facilities, effective for cost reporting periods ending on or after December 31, 2004; and

(4) For organ procurement organizations, histocompatibility laboratories, rural health clinics, Federally qualified health centers, and community mental health centers, effective for cost reporting periods ending on or after March 31, 2005.

(B) The following certification statement must immediately precede the dated original signature, or electronic signature as set forth in paragraph (f)(4)(iv)(C)(1) of this section, of the provider's administrator or chief financial officer:

MISREPRESENTATION OR FALSIFICATION OF ANY INFORMATION CONTAINED IN THIS COST REPORT MAY BE PUNISHABLE BY CRIMINAL, CIVIL AND ADMINISTRATIVE ACTION, FINE AND/OR IMPRISONMENT UNDER FEDERAL LAW. FURTHERMORE, IF SERVICES IDENTIFIED IN THIS REPORT WERE PROVIDED OR PROCURED THROUGH THE PAYMENT DIRECTLY OR INDIRECTLY OF A KICKBACK OR WERE OTHERWISE ILLEGAL, CRIMINAL, CIVIL AND ADMINISTRATIVE ACTION, FINES AND/OR IMPRISONMENT MAY RESULT.

I hereby certify that I have read the above certification statement and that I have examined the accompanying electronically filed or manually submitted cost report and the Balance Sheet and Statement of Revenue and Expenses prepared by _____ (Provider Name(s) and Number(s)) for the cost reporting period beginning _____ a and ending _____ a and that to the best of my knowledge and belief, this report and statement are true, correct, complete and prepared from the books

and records of the provider in accordance with applicable instructions, except as noted. I further certify that I am familiar with the laws and regulations regarding the provision of health care services, and that the services identified in this cost report were provided in compliance with such laws and regulations.

(C) Effective for cost reporting periods ending on or after December 31, 2017—
(1) A provider that is required to file an electronic cost report may elect to electronically submit the settlement summary, if applicable, and the certification statement with an electronic signature of the provider's administrator or chief financial officer. The following checkbox for electronic signature and submission will immediately follow the certification statement as set forth in paragraph (f)(4)(iv)(B) of this section and must be checked if electronic signature and submission is elected.

☐ I have read and agree with the above certification statement. I certify that I intend my electronic signature on this certification statement to be the legally binding equivalent of my original signature.

(2) A provider that is required to file an electronic cost report but does not elect to electronically submit the certification statement with an electronic signature, must submit a hard copy of the settlement summary, if applicable, and a certification statement with an original signature of the provider's administrator or chief financial officer as set forth in paragraphs (f)(4)(iv)(A) and (B) of this section.

* * * * *

■ 27. Section 413.65 is amended by revising paragraph (m) introductory text to read as follows:

§ 413.65 Requirements for a determination that a facility or an organization has provider-based status.

* * * * *

(m) *Status of Indian Health Service and Tribal facilities and organizations.* Facilities and organizations operated by the Indian Health Services and Tribes will be considered to be departments of hospitals operated by the Indian Health Service or Tribes if they furnish only services that are billed, using the CGN of the main provider and with the consent of the main provider, as if they had been furnished by a department of a hospital operated by the Indian Health Service or a Tribe and they are:

* * * * *

■ 28. Section 413.70 is amended by—
■ a. Redesignating paragraph (a)(6)(iii) as paragraph (a)(6)(iv);

■ b. Adding a new paragraph (a)(6)(iii); and

■ c. Revising newly redesignated paragraph (a)(6)(iv).

The addition and revision to read as follows:

§ 413.70 Payment for services of a CAH.

(a) * * *

(6) * * *

(iii) *Exception for decertified EHR technology.* Beginning with the fiscal year 2018 payment adjustment year, the Secretary shall exempt a CAH that is not a qualifying CAH from the application of the payment adjustment under paragraph (a)(6)(i) of this section if the Secretary determines that compliance with the requirement for being a meaningful EHR user is not possible because the certified EHR technology used by the CAH has been decertified under ONC's Health IT Certification Program. In order to be considered for an exception, a CAH must submit an application, in the manner specified by CMS, demonstrating that the certified EHR technology was decertified during the 12-month period preceding the applicable EHR reporting period for the payment adjustment year, or during the applicable EHR reporting period for the payment adjustment year, and that the CAH made a good faith effort to obtain another certified EHR technology for that EHR reporting period. Applications requesting this exception must be submitted by November 30 after the end of the applicable payment adjustment year, or a later date specified by CMS.

(iv) Exceptions granted under paragraphs (a)(6)(ii) and (iii) of this section are subject to annual renewal, but in no case may a CAH be granted such an exception for more than 5 years.

* * * * *

■ 29. Section 413.134 is amended by revising paragraph (f)(1) to read as follows:

§ 413.134 Depreciation: Allowance for depreciation based on asset costs.

* * * * *

(f) * * *

(1) *General.* Depreciable assets may be disposed of through sale, scrapping, trade-in, exchange, demolition, abandonment, condemnation, fire, theft, or other casualty.

(i) *Disposal of an asset before December 1, 1997.* If disposal of a depreciable asset, including the sale or scrapping of an asset before December 1, 1997, results in a gain or loss, an adjustment is necessary in the provider's allowable cost.

(A) The amount of a gain included in the determination of allowable cost is limited to the amount of depreciation

previously included in Medicare allowable costs.

(B) The amount of a loss to be included is limited to the undepreciated basis of the asset permitted under the program.

(C) The treatment of the gain or loss depends upon the manner of disposition of the asset, as specified in paragraphs (f)(2) through (6) of this section.

(D) The gain or loss on the disposition of depreciable assets has no retroactive effect on a proprietary provider's equity capital for years prior to the year of disposition.

(ii) *Disposal of an asset on or after December 1, 1997.* No gain or loss is recognized on either the sale or scrapping of an asset that occurs on or after December 1, 1997, regardless of whether the asset is sold incident to a provider's change of ownership, or otherwise sold or scrapped as an asset of a Medicare participating provider. Gains or losses on dispositions other than sales or scrapping are recognized to the same extent as prior to December 1, 1997.

* * * * *

PART 416—AMBULATORY SURGICAL SERVICES

■ 30. The authority citation for part 416 is revised to read as follows:

Authority: Secs. 1102, 1138, and 1871 of the Social Security Act (42 U.S.C. 1302, 1320b–8, and 1395hh) and section 371 of the Public Health Service Act (42 U.S.C. 273).

■ 31. Section 416.35 is amended by revising paragraph (d) introductory text to read as follows:

§ 416.35 Termination of agreement.

* * * * *

(d) *Notice to the public.* Prompt notice of the date and effect of termination is given to the public by—

* * * * *

PART 486—CONDITIONS FOR COVERAGE OF SPECIALIZED SERVICES FURNISHED BY SUPPLIERS

■ 32. The authority citation for part 486 continues to read as follows:

Authority: Secs. 1102, 1138, and 1871 of the Social Security Act (42 U.S.C. 1302, 1320b–8, and 1395hh) and section 371 of the Public Health Service Act (42 U.S.C. 273).

■ 33. Section 486.312 is amended by revising paragraph (e) to read as follows:

§ 486.312 De-certification.

* * * * *

(e) *Public notice.* Once CMS approves the date for a voluntary termination, the OPO must provide prompt public notice

in the service area of the date of de-certification and such other information as CMS may require. In the case of involuntary termination or nonrenewal of an agreement, CMS also provides notice to the public in the service area of the date of de-certification. No payment under titles XVIII or XIX of the Act will be made with respect to organ procurement costs attributable to the OPO on or after the effective date of de-certification.

PART 488—SURVEY, CERTIFICATION, AND ENFORCEMENT PROCEDURES

■ 34. The authority citation for part 488 is revised to read as follows:

Authority: Secs. 1102, 1128l, 1864, 1865, 1871, and 1875 of the Social Security Act, unless otherwise noted (42 U.S.C. 1302, 1320a–7, 1395aa, 1395bb, 1395hh, and 1395ll).

■ 35. Section 488.5 is amended by adding paragraph (a)(21) to read as follows:

§ 488.5 Application and re-application procedures for national accrediting organizations.

(a) * * *

(21) A statement acknowledging that the organization agrees to make all Medicare cited deficiencies, both standard and condition level, immediate jeopardy situations, and dates of correction, for final accreditation survey reports publicly available on the organization's Web site within 90 days after the survey report is made available to those facilities for the most recent 3 years, on an ongoing basis in a manner specified by CMS. This acknowledgement includes all initial, triennial, full, follow-up, focused, and complaint surveys.

* * * * *

PART 489—PROVIDER AGREEMENTS AND SUPPLIER APPROVAL

■ 36. The authority citation for part 489 continues to read as follows:

Authority: Secs. 1102 1819, 1820(E), 1861, 1864(M), 1866, 1869, and 1871 of the Social Security Act (42 U.S.C. 1302, 1395i–3, 1395x, 1395aa(m), 1395cc, 1395ff, and 1395(hh)).

■ 37. Section 489.52 is amended by revising paragraph (c)(2) introductory text to read as follows:

§ 489.52 Termination by the provider.

* * * * *

(c) * * *

(2) The notice must—

* * * * *

PART 495—STANDARDS FOR THE ELECTRONIC HEALTH RECORD TECHNOLOGY INCENTIVE PROGRAM

■ 38. The authority citation for part 495 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

■ 39. Section 495.4 is amended by—

■ a. Adding in alphabetical order a definition of “Ambulatory surgical center-based EP”;

■ b. In the definition of “EHR reporting period,” revising paragraph (1)(ii) introductory text, adding paragraph

(1)(ii)(D), revising paragraph (1)(iii) introductory text, revising paragraph (2)(ii) introductory text, adding paragraph (2)(ii)(D) and revising paragraph (2)(iii) introductory text; and

■ c. In the definition of “EHR reporting period for a payment adjustment year,” revising paragraph (2)(ii) introductory text, adding paragraph (2)(ii)(D), revising paragraph (2)(iii) introductory text, revising paragraph (3)(ii) introductory text, adding paragraph (3)(ii)(D), and revising paragraph (3)(iii) introductory text.

The additions and revisions read as follows:

§ 495.4 Definitions.

* * * * *

Ambulatory surgical center-based EP means an EP who furnishes 75 percent or more of his or her covered professional services in sites of service identified by the codes used in the HIPAA standard transaction as an ASC setting in the calendar year that is 2 years before the payment adjustment year.

* * * * *

EHR reporting period. * * *

(1) * * *

(ii) The following are applicable for 2015, 2016, 2017, and 2018:

* * * * *

(D) For the CY 2018 payment year under the Medicaid EHR Incentive Program:

(1) For the EP first demonstrating he or she is a meaningful EHR user, any continuous 90-day period within CY 2018.

(2) For the EP who has successfully demonstrated he or she is a meaningful EHR user in any prior year, any continuous 90-day period within CY 2018.

(iii) The following are applicable beginning with the CY 2019 payment year under the Medicaid EHR Incentive Program:

* * * * *

(2) * * *

(ii) The following are applicable for 2015, 2016, 2017, and 2018:

* * * * *

(D) For the FY 2018 payment year under the Medicaid EHR Incentive Program:

(1) For the eligible hospital or CAH first demonstrating it is a meaningful EHR user, any continuous 90-day period within CY 2018.

(2) For the eligible hospital or CAH that has successfully demonstrated it is a meaningful EHR user in any prior year, any continuous 90-day period within CY 2018.

(iii) The following are applicable beginning with the FY 2019 payment year under the Medicaid EHR Incentive Program:

* * * * *

EHR reporting period for a payment adjustment year. * * *

(2) * * *

(ii) The following are applicable for 2015, 2016, 2017, and 2018:

* * * * *

(D) In 2018 as follows:

(1) If an eligible hospital has not successfully demonstrated it is a meaningful EHR user in a prior year, the EHR reporting period is any continuous 90-day period within CY 2018 and applies for the FY 2019 and 2020 payment adjustment years. For the FY 2019 payment adjustment year, the EHR reporting period must end before and the eligible hospital must successfully register for and attest to meaningful use no later than October 1, 2018.

(2) If in a prior year an eligible hospital has successfully demonstrated it is a meaningful EHR user, the EHR reporting period is any continuous 90-day period within CY 2018 and applies for the FY 2020 payment adjustment year.

(iii) The following are applicable beginning in 2019:

* * * * *

(3) * * *

(ii) The following are applicable for 2015, 2016, 2017, and 2018:

* * * * *

(D) In 2018 as follows:

(1) If a CAH has not successfully demonstrated it is a meaningful EHR user in a prior year, the EHR reporting period is any continuous 90-day period within CY 2018 and applies for the FY 2018 payment adjustment year.

(2) If in a prior year a CAH has successfully demonstrated it is a meaningful EHR user, the EHR reporting period is any continuous 90-day period within CY 2018 and applies for the FY 2018 payment adjustment year.

(iii) The following are applicable beginning in 2019:

* * * * *

■ 40. Section 495.22 is amended by—

- a. Revising the section heading;
 - b. Revising paragraph (a);
 - c. Revising the paragraph (b) heading and the paragraph (b)(1) heading;
 - d. Revising the paragraph (c) heading and paragraph (c)(1);
 - e. Revising the paragraph (e) heading and paragraphs (e)(8)(i)(A)(2)(ii), (e)(8)(ii)(A)(2)(ii), and (e)(9)(ii)(A)(3); and
 - f. Revising the paragraph (f) heading.
- The revisions read as follows:

§ 495.22 Meaningful use objectives and measures for EPs, eligible hospitals, and CAHs for 2015 through 2018.

(a) *General rules.* (1) Subject to the provisions of paragraph (a)(2) of this section, the criteria specified in this section are applicable for EPs, eligible hospitals, and CAHs for 2015 through 2018.

(2) For 2017 and 2018, EPs, eligible hospitals, and CAHs that have successfully demonstrated meaningful use in a prior year have the option to use the criteria specified for 2019 in § 495.24 instead of the criteria specified for 2017 and 2018 under paragraphs (e) and (f) of this section.

(b) *Criteria for EPs for 2015 through 2018—*(1) *General rule regarding criteria for meaningful use for 2015 through 2018 for EPs.* * * *

(c) *Criteria for eligible hospitals and CAHs for 2015 through 2018.*—(1) *General rule regarding criteria for meaningful use for 2015 through 2018 for eligible hospitals and CAHs.* Except as specified in paragraph (c)(2) of this section, eligible hospitals and CAHs attesting to CMS must meet all objectives and associated measures of the meaningful use criteria specified under paragraph (e) of this section to meet the definition of a meaningful EHR user in 2015 and 2016 and must meet all objectives and associated measures of the meaningful use criteria specified under paragraph (f) of this section to meet the definition of a meaningful EHR user in 2017 and 2018. Except as specified in paragraph (c)(2) of this section, eligible hospitals and CAHs attesting to a State for the Medicaid EHR Incentive Program must meet all objectives and associated measures of the meaningful use criteria specified under paragraph (e) of this section to meet the definition of a meaningful EHR user in 2015 through 2018.

* * * * *

(e) *Meaningful use objectives and measures for EPs for 2015 through 2018,*

for eligible hospitals and CAHs attesting to CMS for 2015 and 2016, and for eligible hospitals and CAHs attesting to a State for the Medicaid EHR Incentive Program for 2015 through 2018. * * *

■ 41. Section 495.24 is amended by—

- a. Revising the section heading;
- b. Revising the introductory text;
- c. Revising the paragraph (c) heading and
- d. Revising the paragraph (d) heading and paragraphs (d)(6)(i)(B)(2)(i) and (ii), (d)(6)(ii)(B)(1)(iv), and (d)(6)(ii)(B)(2)(i) and (ii).

The revisions read as follows:

§ 495.24 Stage 3 meaningful use objectives and measures for EPs, eligible hospitals and CAHs for 2019 and subsequent years.

The criteria specified in paragraphs (c) and (d) of this section are optional for 2017 and 2018 for EPs, eligible

hospitals, and CAHs that have successfully demonstrated meaningful use in a prior year. The criteria specified in paragraph (c) of this section are applicable for eligible hospitals and CAHs attesting to CMS for 2019. The criteria specified in paragraph (d) of this section are applicable for all EPs for 2019 and subsequent years, and for eligible hospitals and CAHs attesting to a State for the Medicaid EHR Incentive Program for 2019.

* * * * *

(c) *Stage 3 objectives and measures for eligible hospitals and CAHs attesting to CMS for 2019—* * * *

(d) *Stage 3 objectives and measures for all EPs for 2019 and subsequent years, and for eligible hospitals and CAHs attesting to a State for the Medicaid EHR Incentive Program for 2019—* * * *

(6) * * *

(i) * * *

(B) * * *

(2) * * *

(i) For an EHR reporting period in 2017 and 2018, for more than 5 percent of all unique patients seen by the EP during the EHR reporting period, a secure message was sent using the electronic messaging function of CEHRT to the patient (or their authorized representatives), or in response to a secure message sent by the patient; or

(ii) For an EHR reporting period other than 2017 and 2018, for more than 25 percent of all unique patients seen by the EP during the EHR reporting period, a secure message was sent using the electronic messaging function of CEHRT to the patient (or their authorized representatives), or in response to a secure message sent by the patient.

* * * * *

(ii) * * *

(B) * * *

(1) * * *

(iv) For an EHR reporting period in 2017 and 2018, an eligible hospital or CAH may meet a threshold of 5 percent instead of 10 percent for the measure at paragraph (d)(6)(ii)(B)(1) of this section.

(2) * * *

(i) For an EHR reporting period in 2017 and 2018, for more than 5 percent of all unique patients discharged from the eligible hospital or CAH inpatient or emergency department (POS 21 or 23) during the EHR reporting period, a secure message was sent using the electronic messaging function of CEHRT to the patient (or their authorized representatives), or in response to a secure message sent by the patient (or their authorized representatives).

(ii) For an EHR reporting period other than 2017 and 2018, for more than 25

percent of all unique patients discharged from the eligible hospital or CAH inpatient or emergency department (POS 21 or 23) during the EHR reporting period, a secure message was sent using the electronic messaging function of CEHRT to the patient (or their authorized representatives), or in response to a secure message sent by the patient (or their authorized representatives).

* * * * *

■ 42. Section 495.40 is amended by—
■ a. Amending paragraph (a)(2)(i)(F) by adding “and CY 2018” after “For CY 2017”;

■ b. Revising paragraph (a)(2)(i)(G); and
■ c. Revising paragraphs (b)(2)(i)(F) introductory text and (b)(2)(i)(G) introductory text.

The revisions read as follows:

§ 495.40 Demonstration of meaningful use criteria.

(a) * * *

(2) * * *

(i) * * *

(G) For CY 2019 and subsequent years, satisfied the required objectives and associated measures under § 495.24(d) for meaningful use.

(2) * * *

(i) * * *

(F) For CY 2017 and CY 2018:

* * * * *

(G) For CY 2019:

* * * * *

■ 43. Section 495.102 is amended by redesignating paragraph (d)(5) as paragraph (d)(6) and adding new paragraphs (d)(5) and (7) to read as follows:

§ 495.102 Incentive payments to EPs.

* * * * *

(d) * * *

(5) *Exception for decertified EHR technology.* The Secretary shall exempt an EP from the application of the payment adjustment for CY 2018 under paragraph (d)(1) of this section if the Secretary determines that compliance with the requirement for being a meaningful EHR user is not possible because the certified EHR technology used by the EP has been decertified under ONC's Health IT Certification Program. To be considered for an exception, an EP must submit, in the manner specified by CMS, an application demonstrating that the certified EHR technology was decertified during the 12-month period preceding the applicable EHR reporting period for the CY 2018 payment adjustment year, or during the

applicable EHR reporting period for the CY 2018 payment adjustment year, and that the EP made a good faith effort to obtain another certified EHR technology for that EHR reporting period. Applications requesting this exception must be submitted no later than October 1, 2017, or a later date specified by CMS.

* * * * *

(7) *Payment adjustments not applicable to ambulatory surgical center-based EPs.* For the CY 2017 and CY 2018 payment adjustment years, no payment adjustment under paragraphs (d)(1) through (3) of this section may be made in the case of an ambulatory surgical center-based eligible professional, as defined in § 495.4.

Dated: July 26, 2017.

Seema Verma,

Administrator, Centers for Medicare & Medicaid Services.

Dated: July 27, 2017.

Thomas E. Price,

Secretary, Department of Health and Human Services.

Note: The following Addendum and Appendixes will not appear in the Code of Federal Regulations.

Addendum—Schedule of Standardized Amounts, Update Factors, Rate-of-Increase Percentages Effective with Cost Reporting Periods Beginning on or after October 1, 2017, and Payment Rates for LTCHs Effective for Discharges Occurring on or after October 1, 2017

I. Summary and Background

In this Addendum, we are setting forth a description of the methods and data we used to determine the prospective payment rates for Medicare hospital inpatient operating costs and Medicare hospital inpatient capital-related costs for FY 2018 for acute care hospitals. We also are setting forth the rate-of-increase percentage for updating the target amounts for certain hospitals excluded from the IPPS for FY 2018. We note that, because certain hospitals excluded from the IPPS are paid on a reasonable cost basis subject to a rate-of-increase ceiling (and not by the IPPS), these hospitals are not affected by the figures for the standardized amounts, offsets, and budget neutrality factors. Therefore, in this final rule, we are setting forth the rate-of-increase percentage for updating the target amounts for certain hospitals excluded from the IPPS that will be effective for cost reporting periods beginning on or after October 1, 2017.

In addition, we are setting forth a description of the methods and data we used to determine the standard Federal payment rate that will be applicable to Medicare LTCHs for FY 2018.

In general, except for SCHs, for FY 2018, each hospital's payment per discharge under the IPPS is based on 100 percent of the Federal national rate, also known as the

national adjusted standardized amount. This amount reflects the national average hospital cost per case from a base year, updated for inflation. We note that, under section 205 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10, enacted on April 16, 2015), the MDH program is set to expire at the end of FY 2017. SCHs are paid based on whichever of the following rates yields the greatest aggregate payment: the Federal national rate (including, as discussed in section V.G. of the preamble of this final rule, uncompensated care payments under section 1886(r)(2) of the Act); the updated hospital-specific rate based on FY 1982 costs per discharge; the updated hospital-specific rate based on FY 1987 costs per discharge; the updated hospital-specific rate based on FY 1996 costs per discharge; or the updated hospital-specific rate based on FY 2006 costs per discharge. As noted, under current law, the MDH program is set to expire at the end of FY 2017.

As discussed in section V.B. of the preamble of this final rule, in accordance with section 1886(d)(9)(E) of the Act as amended by section 601 of the Consolidated Appropriations Act, 2016 (Pub. L. 114–113), for FY 2018, subsection (d) Puerto Rico hospitals will continue to be paid based on 100 percent of the national standardized amount. Because Puerto Rico hospitals are paid 100 percent of the national standardized amount and are subject to the same national standardized amount as subsection (d) hospitals that receive the full update, our discussion below does not include references to the Puerto Rico standardized amount or the Puerto Rico-specific wage index.

As discussed in section II. of this Addendum, we are making changes in the determination of the prospective payment rates for Medicare inpatient operating costs for acute care hospitals for FY 2018. In section III. of this Addendum, we discuss our policy changes for determining the prospective payment rates for Medicare inpatient capital-related costs for FY 2018. In section IV. of this Addendum, we are setting forth the rate-of-increase percentage for determining the rate-of-increase limits for certain hospitals excluded from the IPPS for FY 2018. In section V. of this Addendum, we discuss policy changes for determining the standard Federal rate for LTCHs paid under the LTCH PPS for FY 2018. The tables to which we refer in the preamble of this final rule are listed in section VI. of this Addendum and are available via the Internet on the CMS Web site.

II. Changes to Prospective Payment Rates for Hospital Inpatient Operating Costs for Acute Care Hospitals for FY 2018

The basic methodology for determining prospective payment rates for hospital inpatient operating costs for acute care hospitals for FY 2005 and subsequent fiscal years is set forth under § 412.64. The basic methodology for determining the prospective payment rates for hospital inpatient operating costs for hospitals located in Puerto Rico for FY 2005 and subsequent fiscal years is set forth under §§ 412.211 and 412.212. Below we discuss the factors we used for determining the prospective payment rates for FY 2018.

In summary, the standardized amounts set forth in Tables 1A, 1B, and 1C that are listed and published in section VI. of this Addendum (and available via the Internet on the CMS Web site) reflect—

- Equalization of the standardized amounts for urban and other areas at the level computed for large urban hospitals during FY 2004 and onward, as provided for under section 1886(d)(3)(A)(iv)(II) of the Act.

- The labor-related share that is applied to the standardized amounts to give the hospital the highest payment, as provided for under sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act. For FY 2018, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act (hereafter referred to as a hospital that submits quality data) and is a meaningful

EHR user under section 1886(b)(3)(B)(ix) of the Act (hereafter referred to as a hospital that is a meaningful EHR user), there are four possible applicable percentage increases that can be applied to the national standardized amount. We refer readers to section V.B. of the preamble of this final rule for a complete discussion on the FY 2018 inpatient hospital update. Below is a table with these four options:

FY 2018	Hospital submitted quality data and is a meaningful EHR user	Hospital submitted quality data and is NOT a meaningful EHR user	Hospital did NOT submit quality data and is a meaningful EHR user	Hospital did NOT submit quality data and is NOT a meaningful EHR user
Market Basket Rate-of-Increase	2.7	2.7	2.7	2.7
Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act	0.0	0.0	−0.675	−0.675
Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act	0.0	−2.025	0.0	−2.025
MFP Adjustment under Section 1886(b)(3)(B)(xi) of the Act	−0.6	−0.6	−0.6	−0.6
Statutory Adjustment under Section 1886(b)(3)(B)(xii) of the Act	−0.75	−0.75	−0.75	−0.75
Applicable Percentage Increase Applied to Standardized Amount	1.35	−0.675	0.675	−1.35

We note that section 1886(b)(3)(B)(viii) of the Act, which specifies the adjustment to the applicable percentage increase for “subsection (d)” hospitals that do not submit quality data under the rules established by the Secretary, is not applicable to hospitals located in Puerto Rico.

In addition, section 602 of Public Law 114–113 amended section 1886(n)(6)(B) of the Act to specify that Puerto Rico hospitals are eligible for incentive payments for the meaningful use of certified EHR technology, effective beginning FY 2016, and also to apply the adjustments to the applicable percentage increase under section 1886(b)(3)(B)(ix) of the Act to Puerto Rico hospitals that are not meaningful EHR users, effective FY 2022. Accordingly, because the provisions of section 1886(b)(3)(B)(ix) of the Act are not applicable to hospitals located in Puerto Rico until FY 2022, the adjustments under this provision are not applicable for FY 2018.

- An adjustment to the standardized amount to ensure budget neutrality for DRG recalibration and reclassification, as provided for under section 1886(d)(4)(C)(iii) of the Act.

- An adjustment to ensure the wage index and labor-related share changes are budget neutral, as provided for under section 1886(d)(3)(E)(i) of the Act (as discussed in the FY 2006 IPPS final rule (70 FR 47395) and the FY 2010 IPPS final rule (74 FR 44005). We note that section 1886(d)(3)(E)(i) of the Act requires that when we compute such budget neutrality, we assume that the provisions of section 1886(d)(3)(E)(ii) of the Act (requiring a 62-percent labor-related share in certain circumstances) had not been enacted.

- An adjustment to ensure the effects of geographic reclassification are budget neutral, as provided for under section 1886(d)(8)(D) of the Act, by removing the FY 2017 budget neutrality factor and applying a revised factor.

- Removal of the adjustment in FY 2017 to offset the cost of the 3-year hold harmless

transitional wage index provisions provided by CMS as a result of the implementation of the new OMB labor market area delineations (beginning with FY 2015).

- A single positive adjustment of 0.4588 in FY 2018 as required under section 15005 of the 21st Century Cures Act (Pub. L. 114–255), which amended section 7(b)(1)(B) of the TMA, as amended by section 631 of the ATRA and section 414 of the MACRA, to reduce the adjustment for FY 2018 from 0.5 percentage point to 0.4588 percentage point.

- An adjustment to remove the FY 2017 outlier offset and apply an offset for FY 2018, as provided for in section 1886(d)(3)(B) of the Act.

- As discussed in section V.M. of the preamble of this final rule, a factor of (1/1.006) in the calculation of the FY 2018 standardized amount. Specifically, in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57058 through 57060), using our authority under section 1886(d)(5)(I)(i) of the Act, we finalized a policy to include a permanent factor of (1/0.998) and a temporary one-time factor of (1/1.006) in the calculation of the FY 2017 standardized amount and to include a factor of (1/1.006) in the calculation of the FY 2018 standardized amount to remove the temporary one-time factor of 1.006 applied in FY 2017 to address the effects of the 0.2 percent reduction to the rate for the 2-midnight policy in effect for FY 2014, FY 2015, and FY 2016. Therefore, in this final rule, for FY 2018, we are removing the temporary one-time prospective increase to the FY 2017 standardized amount of 0.6 percent or a factor of 1.006.

For FY 2018, consistent with current law, we are applying the rural floor budget neutrality adjustment to hospital wage indexes. Also, consistent with section 3141 of the Affordable Care Act, instead of applying a State-level rural floor budget neutrality adjustment to the wage index, we are applying a uniform, national budget neutrality adjustment to the FY 2018 wage index for the rural floor. We note that, in

section III.H.2.b. of the preamble to this final rule, we are extending the imputed floor policy (both the original methodology and alternative methodology) for FY 2018.

Therefore, for FY 2018, in this final rule, we are continuing to include the imputed floor (calculated under the original methodology and alternative methodology) in calculating the uniform, national rural floor budget neutrality adjustment, which is reflected in the FY 2018 wage index.

In prior fiscal years, CMS made an adjustment to ensure the effects of the Rural Community Hospital Demonstration Program required under section 410A of Public Law 108–173, as amended by sections 3123 and 10313 of Public Law 111–148, which extended the demonstration program for an additional 5 years, were budget neutral as required under section 410A(c)(2) of Public Law 108–173. As discussed in section V.L.3. of the preamble to this final rule, section 15003 of Public Law 114–255 amended section 410A of Public Law 108–173 to provide for a 10-year extension of the demonstration (in place of the 5-year extension required by the Affordable Care Act) beginning on the date immediately following the last day of the initial 5-year period under section 410A(a)(5) of Public Law 108–173. Therefore, section 15003 of Public Law 114–255 requires an additional 5-year extension of the demonstration.

Regarding the costs of the demonstration specifically for FY 2018, as described in section V.L.3. of the preamble to this final rule, we proposed in the FY 2018 IPS/LTCH PPS proposed rule (82 FR 19994) that if the selection of additional hospitals pursuant to section 410A(g)(6) of Public Law 108–173 (as added by section 15003 of Pub. L. 114–255) was announced by June 2017, we would include in the FY 2018 IPPS/LTCH PPS final rule an estimate of the costs of the demonstration for FY 2018 and the resulting budget neutrality offset amount for the newly selected hospitals (Cohort 3 hospitals) and for the previously participating hospitals

(Cohorts 1 and 2 hospitals). We stated that if the final selection of the additional hospitals is not announced by June 2017, we would not be able to include an estimate of the costs of the demonstration for any participating hospitals or an estimated budget neutrality adjustment for FY 2018 in the FY 2018 IPPS/LTCH PPS final rule. As of June 2017, we did not announce the final selection of the additional hospitals. Therefore, for this final rule, we are not able to include an estimate of the costs of the demonstration for any participating hospitals or an estimated budget neutrality adjustment for FY 2018. We refer readers to section V.L.3. of the preamble of this final rule for complete details on the Rural Community Hospital Demonstration Program and our methodology for calculating budget neutrality for this demonstration.

A. Calculation of the Adjusted Standardized Amount

1. Standardization of Base-Year Costs or Target Amounts

In general, the national standardized amount is based on per discharge averages of adjusted hospital costs from a base period (section 1886(d)(2)(A) of the Act), updated and otherwise adjusted in accordance with the provisions of section 1886(d) of the Act. The September 1, 1983 interim final rule (48 FR 39763) contained a detailed explanation of how base-year cost data (from cost reporting periods ending during FY 1981) were established for urban and rural hospitals in the initial development of standardized amounts for the IPPS.

Sections 1886(d)(2)(B) and 1886(d)(2)(C) of the Act require us to update base-year per discharge costs for FY 1984 and then standardize the cost data in order to remove the effects of certain sources of cost variations among hospitals. These effects include case-mix, differences in area wage levels, cost-of-living adjustments for Alaska and Hawaii, IME costs, and costs to hospitals serving a disproportionate share of low-income patients.

For FY 2018, we are rebasing and revising the national labor-related and nonlabor-related shares (based on the 2014-based hospital market basket discussed in section IV. of the preamble of this final rule). Specifically, under section 1886(d)(3)(E) of the Act, the Secretary estimates, from time to time, the proportion of payments that are labor-related and adjusts the proportion (as estimated by the Secretary from time to time) of hospitals' costs which are attributable to wages and wage-related costs of the DRG prospective payment rates. We refer to the proportion of hospitals' costs that are attributable to wages and wage-related costs as the "labor-related share." For FY 2018, as discussed in section IV.B.3. of the preamble of this final rule, we are applying a labor-related share of 68.3 percent for the national standardized amounts for all IPPS hospitals (including hospitals in Puerto Rico) that have a wage index value that is greater than 1.0000. Consistent with section 1886(d)(3)(E) of the Act, we are applying the wage index to a labor-related share of 62 percent of the national standardized amount for all IPPS hospitals (including hospitals in Puerto Rico) whose wage index values are less than or equal to 1.0000.

The standardized amounts for operating costs appear in Tables 1A, 1B, and 1C that are listed and published in section VI. of the Addendum to this final rule and are available via the Internet on the CMS Web site.

2. Computing the National Average Standardized Amount

Section 1886(d)(3)(A)(iv)(II) of the Act requires that, beginning with FY 2004 and thereafter, an equal standardized amount be computed for all hospitals at the level computed for large urban hospitals during FY 2003, updated by the applicable percentage update. Accordingly, we calculated the FY 2018 national average standardized amount irrespective of whether a hospital is located in an urban or rural location.

3. Updating the National Average Standardized Amount

Section 1886(b)(3)(B) of the Act specifies the applicable percentage increase used to update the standardized amount for payment for inpatient hospital operating costs. We note that, in compliance with section 404 of the MMA, in this final rule, we used the rebased and revised 2014-based IPPS operating and capital market baskets for FY 2018. As discussed in section V.B. of the preamble of this final rule, in accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, we reduced the FY 2018 applicable percentage increase (which is based on IGI's second quarter 2017 forecast of the 2014-based IPPS market basket) by the MFP adjustment (the 10-year moving average of MFP for the period ending FY 2018) of 0.6 percentage point, which is also calculated based on IGI's second quarter 2017 forecast.

In addition, in accordance with section 1886(b)(3)(B)(i) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act, we further updated the standardized amount for FY 2018 by the estimated market basket percentage increase less 0.75 percentage point for hospitals in all areas. Sections 1886(b)(3)(B)(xi) and (xii) of the Act, as added and amended by sections 3401(a) and 10319(a) of the Affordable Care Act, further state that these adjustments may result in the applicable percentage increase being less than zero. The percentage increase in the market basket reflects the average change in the price of goods and services required as inputs to provide hospital inpatient services.

Based on IGI's 2017 second quarter forecast of the hospital market basket increase (as discussed in Appendix B of this final rule), the forecast of the hospital market basket increase for FY 2018 for this final rule is 2.7 percent. As discussed earlier, for FY 2018, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act, there are four possible applicable percentage increases that can be applied to the standardized amount. We refer readers to section V.B. of the preamble of this final rule for a complete discussion on the FY 2018 inpatient hospital update to the standardized amount. We also refer readers to the table above for the four possible applicable percentage increases that

will be applied to update the national standardized amount. The standardized amounts shown in Tables 1A through 1C that are published in section VI. of this Addendum and that are available via the Internet on the CMS Web site reflect these differential amounts.

Although the update factors for FY 2018 are set by law, we are required by section 1886(e)(4) of the Act to recommend, taking into account MedPAC's recommendations, appropriate update factors for FY 2018 for both IPPS hospitals and hospitals and hospital units excluded from the IPPS. Section 1886(e)(5)(A) of the Act requires that we publish our recommendations in the **Federal Register** for public comment. Our recommendation on the update factors is set forth in Appendix B of this final rule.

4. Methodology for Calculation of the Average Standardized Amount

The methodology we used to calculate the FY 2018 standardized amount is as follows:

- To ensure we are only including hospitals paid under the IPPS in the calculation of the standardized amount, we apply the following inclusion and exclusion criteria: Include hospitals whose last four digits fall between 0001 and 0879 (section 2779A1 of Chapter 2 of the State Operations Manual on the CMS Web site at: <https://www.cms.gov/Regulations-and-Guidance/Manuals/Downloads/som107c02.pdf>); exclude CAHs at the time of this final rule; exclude hospitals in Maryland (because these hospitals are paid under an all payer model under section 1115A of the Act); and remove PPS-excluded cancer hospitals that have a "V" in the fifth position of their provider number or a "E" or "F" in the sixth position.

- As in the past, we adjusted the FY 2018 standardized amount to remove the effects of the FY 2017 geographic reclassifications and outlier payments before applying the FY 2018 updates. We then applied budget neutrality offsets for outliers and geographic reclassifications to the standardized amount based on FY 2018 payment policies.

- We do not remove the prior year's budget neutrality adjustments for reclassification and recalibration of the DRG relative weights and for updated wage data because, in accordance with sections 1886(d)(4)(C)(iii) and 1886(d)(3)(E) of the Act, estimated aggregate payments after updates in the DRG relative weights and wage index should equal estimated aggregate payments prior to the changes. If we removed the prior year's adjustment, we would not satisfy these conditions.

Budget neutrality is determined by comparing aggregate IPPS payments before and after making changes that are required to be budget neutral (for example, changes to MS-DRG classifications, recalibration of the MS-DRG relative weights, updates to the wage index, and different geographic reclassifications). We include outlier payments in the simulations because they may be affected by changes in these parameters.

- Consistent with our methodology established in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50422 through 50433), because IME Medicare Advantage payments

are made to IPPS hospitals under section 1886(d) of the Act, we believe these payments must be part of these budget neutrality calculations. However, we note that it is not necessary to include Medicare Advantage IME payments in the outlier threshold calculation or the outlier offset to the standardized amount because the statute requires that outlier payments be not less than 5 percent nor more than 6 percent of total “operating DRG payments,” which does not include IME and DSH payments. We refer readers to the FY 2011 IPPS/LTCH PPS final rule for a complete discussion on our methodology of identifying and adding the total Medicare Advantage IME payment amount to the budget neutrality adjustments.

- Consistent with the methodology in the FY 2012 IPPS/LTCH PPS final rule, in order to ensure that we capture only fee-for-service claims, we are only including claims with a “Claim Type” of 60 (which is a field on the MedPAR file that indicates a claim is an FFS claim).

- Consistent with our methodology established in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57277), in order to further ensure that we capture only FFS claims, we are excluding claims with a “GHOPAID” indicator of 1 (which is a field on the MedPAR file that indicates a claim is not an FFS claim and is paid by a Group Health Organization).

- Consistent with our methodology established in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50422 through 50423), we examine the MedPAR file and remove pharmacy charges for anti-hemophilic blood factor (which are paid separately under the IPPS) with an indicator of “3” for blood clotting with a revenue code of “0636” from the covered charge field for the budget neutrality adjustments. We also remove organ acquisition charges from the covered charge field for the budget neutrality adjustments because organ acquisition is a pass-through payment not paid under the IPPS.

- The Bundled Payments for Care Improvement (BPCI) initiative, developed under the authority of section 3021 of the Affordable Care Act (codified at section 1115A of the Act), is comprised of four broadly defined models of care, which link payments for multiple services beneficiaries receive during an episode of care. Under the BPCI initiative, organizations enter into payment arrangements that include financial and performance accountability for episodes of care. On January 31, 2013, CMS announced the first set of health care organizations selected to participate in the BPCI initiative. Additional organizations were selected in 2014. For additional information on the BPCI initiative, we refer readers to the CMS Center for Medicare and Medicaid Innovation’s Web site at: <http://innovation.cms.gov/initiatives/Bundled-Payments/index.html>.

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53341 through 53343), for FY 2013 and subsequent fiscal years, we finalized a methodology to treat hospitals that participate in the BPCI initiative the same as prior fiscal years for the IPPS payment modeling and ratesetting process (which includes recalibration of the MS-DRG

relative weights, ratesetting, calculation of the budget neutrality factors, and the impact analysis) without regard to a hospital’s participation within these bundled payment models (that is, as if they are not participating in those models under the BPCI initiative). For FY 2018, as we proposed, we are continuing to include all applicable data from subsection (d) hospitals participating in BPCI Models 1, 2, and 4 in our IPPS payment modeling and ratesetting calculations.

- Consistent with our methodology established in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53687 through 53688), we believe that it is appropriate to include adjustments for the Hospital Readmissions Reduction Program and the Hospital VBP Program (established under the Affordable Care Act) within our budget neutrality calculations.

Both the hospital readmissions payment adjustment (reduction) and the hospital VBP payment adjustment (redistribution) are applied on a claim-by-claim basis by adjusting, as applicable, the base-operating DRG payment amount for individual subsection (d) hospitals, which affects the overall sum of aggregate payments on each side of the comparison within the budget neutrality calculations.

In order to properly determine aggregate payments on each side of the comparison, as we have done for the last 4 fiscal years, for FY 2018 and subsequent years, we are continuing to apply the hospital readmissions payment adjustment and the hospital VBP payment adjustment on each side of the comparison, consistent with the methodology that we adopted in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53687 through 53688). That is, we applied the readmissions payment adjustment factor and the hospital VBP payment adjustment factor on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum.

For the proposed rule, for the purpose of calculating the FY 2018 readmissions payment adjustment factors, we used excess readmission ratios and aggregate payments for excess readmissions based on admissions from the prior fiscal year’s applicable period because, at that time, hospitals not yet had the opportunity to review and correct the data before the data were made public under the policy we adopted regarding the reporting of hospital-specific readmission rates, consistent with section 1886(q)(6) of the Act. For FY 2018, in this final rule, we calculated the readmissions payment adjustment factors using excess readmission ratios and aggregate payments for excess readmissions based on admissions from the finalized applicable period for FY 2018 as hospitals have had the opportunity to review and correct these data under our policy regarding the reporting of hospital-specific readmission rates consistent with section 1886(q)(6) of the Act. We discuss our final policy regarding the reporting of hospital-specific readmission rates for FY 2018 in section V.I.5. of the preamble of this final rule. (For additional information on our general policy for the reporting of hospital-specific readmission rates, consistent with

section 1886(q)(6) of the Act, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53399 through 53400).)

In addition, for FY 2018, in this final rule, for the purpose of modeling aggregate payments when determining all budget neutrality factors, we used proxy hospital VBP payment adjustment factors for FY 2018 that are based on data from a historical period because hospitals have not yet had an opportunity to review and submit corrections for their data from the FY 2018 performance period. (For additional information on our policy regarding the review and correction of hospital-specific measure rates under the Hospital VBP Program, consistent with section 1886(o)(10)(A)(ii) of the Act, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53578 through 53581), the CY 2012 OPPS/ASC final rule with comment period (76 FR 74544 through 74547), and the Hospital Inpatient VBP final rule (76 FR 26534 through 26536).)

- The Affordable Care Act also established section 1886(r) of the Act, which modifies the methodology for computing the Medicare DSH payment adjustment beginning in FY 2014. Beginning in FY 2014, IPPS hospitals receiving Medicare DSH payment adjustments receive an empirically justified Medicare DSH payment equal to 25 percent of the amount that would previously have been received under the statutory formula set forth under section 1886(d)(5)(F) of the Act governing the Medicare DSH payment adjustment. In accordance with section 1886(r)(2) of the Act, the remaining amount, equal to an estimate of 75 percent of what otherwise would have been paid as Medicare DSH payments, reduced to reflect changes in the percentage of individuals under age 65 who are uninsured and an additional statutory adjustment, will be available to make additional payments to Medicare DSH hospitals based on their share of the total amount of uncompensated care reported by Medicare DSH hospitals for a given time period. In order to properly determine aggregate payments on each side of the comparison for budget neutrality, prior to FY 2014, we included estimated Medicare DSH payments on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum.

To do this for FY 2018 (as we did for the last 4 fiscal years), we included estimated empirically justified Medicare DSH payments that will be paid in accordance with section 1886(r)(1) of the Act and estimates of the additional uncompensated care payments made to hospitals receiving Medicare DSH payment adjustments as described by section 1886(r)(2) of the Act. That is, we considered estimated empirically justified Medicare DSH payments at 25 percent of what would otherwise have been paid, and also the estimated additional uncompensated care payments for hospitals receiving Medicare DSH payment adjustments on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum.

- When calculating total payments for budget neutrality, to determine total

payments for SCHs, we model total hospital-specific rate payments and total Federal rate payments and then include whichever one of the total payments is greater. As discussed in section V.G. of the preamble to this final rule and below, we are continuing the FY 2014 finalized methodology under which we take into consideration uncompensated care payments in the comparison of payments under the Federal rate and the hospital-specific rate for SCHs. Therefore, we included estimated uncompensated care payments in this comparison.

- We are including an adjustment to the standardized amount for those hospitals that are not meaningful EHR users in our modeling of aggregate payments for budget neutrality for FY 2018. Similar to FY 2017, we included this adjustment based on data on the prior year's performance. Payments for hospitals will be estimated based on the applicable standardized amount in Tables 1A and 1B for discharges occurring in FY 2018.

a. Recalibration of MS-DRG Relative Weights

Section 1886(d)(4)(C)(iii) of the Act specifies that, beginning in FY 1991, the annual DRG reclassification and recalibration of the relative weights must be made in a manner that ensures that aggregate payments to hospitals are not affected. As discussed in section II.G. of the preamble of this final rule, we normalized the recalibrated MS-DRG relative weights by an adjustment factor so that the average case relative weight after recalibration is equal to the average case relative weight prior to recalibration. However, equating the average case relative weight after recalibration to the average case relative weight before recalibration does not necessarily achieve budget neutrality with respect to aggregate payments to hospitals because payments to hospitals are affected by factors other than average case relative weight. Therefore, as we have done in past years, we are making a budget neutrality adjustment to ensure that the requirement of section 1886(d)(4)(C)(iii) of the Act is met.

For FY 2018, to comply with the requirement that MS-DRG reclassification and recalibration of the relative weights be budget neutral for the standardized amount and the hospital-specific rates, we used FY 2016 discharge data to simulate payments and compared the following:

- Aggregate payments using the FY 2017 labor-related share percentages, the FY 2017 relative weights, and the FY 2017 pre-reclassified wage data, and applied the FY 2018 hospital readmissions payment adjustments and estimated FY 2018 hospital VBP payment adjustments; and
- Aggregate payments using the FY 2017 labor-related share percentages, the FY 2018 relative weights, and the FY 2017 pre-reclassified wage data, and applied the same FY 2018 hospital readmissions payment adjustments and estimated FY 2018 hospital VBP payment adjustments applied above. (As discussed in section II.G. of the preamble of this final rule, in response to public comments, we are adopting a temporary measure for FY 2018 for MS-DRGs where the relative weight would have declined by more than 20 percent. Specifically, for these MS DRGs, the FY 2018 relative weight is set at 80 percent of the FY 2017 final relative

weight, and it is these FY 2018 relative weights that are used to determine the MS-DRG reclassification and recalibration budget neutrality factor in this final rule.)

Based on this comparison, we computed a budget neutrality adjustment factor equal to 0.997432 and applied this factor to the standardized amount. As discussed in section IV. of this Addendum, we also applied the MS-DRG reclassification and recalibration budget neutrality factor of 0.997432 to the hospital-specific rates that are effective for cost reporting periods beginning on or after October 1, 2017.

b. Updated Wage Index—Budget Neutrality Adjustment

Section 1886(d)(3)(E)(i) of the Act requires us to update the hospital wage index on an annual basis beginning October 1, 1993. This provision also requires us to make any updates or adjustments to the wage index in a manner that ensures that aggregate payments to hospitals are not affected by the change in the wage index. Section 1886(d)(3)(E)(i) of the Act requires that we implement the wage index adjustment in a budget neutral manner. However, section 1886(d)(3)(E)(ii) of the Act sets the labor-related share at 62 percent for hospitals with a wage index less than or equal to 1.0000, and section 1886(d)(3)(E)(i) of the Act provides that the Secretary shall calculate the budget neutrality adjustment for the adjustments or updates made under that provision as if section 1886(d)(3)(E)(ii) of the Act had not been enacted. In other words, this section of the statute requires that we implement the updates to the wage index in a budget neutral manner, but that our budget neutrality adjustment should not take into account the requirement that we set the labor-related share for hospitals with wage indexes less than or equal to 1.0000 at the more advantageous level of 62 percent. Therefore, for purposes of this budget neutrality adjustment, section 1886(d)(3)(E)(i) of the Act prohibits us from taking into account the fact that hospitals with a wage index less than or equal to 1.0000 are paid using a labor-related share of 62 percent. Consistent with current policy, for FY 2018, we adjusted 100 percent of the wage index factor for occupational mix. We describe the occupational mix adjustment in section III.E. of the preamble of this final rule.

To compute a budget neutrality adjustment factor for wage index and labor-related share percentage changes, we used FY 2016 discharge data to simulate payments and compared the following:

- Aggregate payments using the FY 2018 relative weights and the FY 2017 pre-reclassified wage indexes, applied the FY 2017 labor-related share of 69.6 percent to all hospitals (regardless of whether the hospital's wage index was above or below 1.0000), and applied the FY 2018 hospital readmissions payment adjustment and the estimated FY 2018 hospital VBP payment adjustment; and
- Aggregate payments using the FY 2018 relative weights and the FY 2018 pre-reclassified wage indexes, applied the labor-related share for FY 2018 of 68.3 percent to all hospitals (regardless of whether the hospital's wage index was above or below

1.0000), and applied the same FY 2018 hospital readmissions payment adjustments and estimated FY 2018 hospital VBP payment adjustments applied above.

In addition, we applied the MS-DRG reclassification and recalibration budget neutrality adjustment factor (derived in the first step) to the payment rates that were used to simulate payments for this comparison of aggregate payments from FY 2017 to FY 2018. By applying this methodology, we determined a budget neutrality adjustment factor of 1.001148 for changes to the wage index.

c. Reclassified Hospitals—Budget Neutrality Adjustment

Section 1886(d)(8)(B) of the Act provides that certain rural hospitals are deemed urban. In addition, section 1886(d)(10) of the Act provides for the reclassification of hospitals based on determinations by the MGCRB. Under section 1886(d)(10) of the Act, a hospital may be reclassified for purposes of the wage index.

Under section 1886(d)(8)(D) of the Act, the Secretary is required to adjust the standardized amount to ensure that aggregate payments under the IPPS after implementation of the provisions of sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act are equal to the aggregate prospective payments that would have been made absent these provisions. We note that the wage index adjustments provided for under section 1886(d)(13) of the Act are not budget neutral. Section 1886(d)(13)(H) of the Act provides that any increase in a wage index under section 1886(d)(13) shall not be taken into account in applying any budget neutrality adjustment with respect to such index under section 1886(d)(8)(D) of the Act. To calculate the budget neutrality adjustment factor for FY 2018, we used FY 2016 discharge data to simulate payments and compared the following:

- Aggregate payments using the FY 2018 labor-related share percentages, the FY 2018 relative weights, and the FY 2018 wage data prior to any reclassifications under sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act, and applied the FY 2018 hospital readmissions payment adjustments and the estimated FY 2018 hospital VBP payment adjustments; and
- Aggregate payments using the FY 2018 labor-related share percentages, the FY 2018 relative weights, and the FY 2018 wage data after such reclassifications, and applied the same FY 2018 hospital readmissions payment adjustments and the estimated FY 2018 hospital VBP payment adjustments applied above.

We note that the reclassifications applied under the second simulation and comparison are those listed in Table 2 associated with this final rule, which is available via the Internet on the CMS Web site. This table reflects reclassification crosswalks for FY 2018, and apply the policies explained in section III. of the preamble to this final rule. Based on these simulations, we calculated a budget neutrality adjustment factor of 0.988008 to ensure that the effects of these provisions are budget neutral, consistent with the statute. The FY 2018 budget neutrality adjustment factor was applied to

the standardized amount after removing the effects of the FY 2017 budget neutrality adjustment factor. We note that the FY 2018 budget neutrality adjustment reflects FY 2018 wage index reclassifications approved by the MGCRB or the Administrator at the time of development of this final rule.

d. Rural Floor Budget Neutrality Adjustment

Under § 412.64(e)(4), we make an adjustment to the wage index to ensure that aggregate payments after implementation of the rural floor under section 4410 of the BBA (Pub. L. 105–33) and the imputed floor under § 412.64(h)(4) are equal to the aggregate prospective payments that would have been made in the absence of such provisions. Consistent with section 3141 of the Affordable Care Act and as discussed in section III.H. of the preamble of this final rule and codified at § 412.64(e)(4)(ii), the budget neutrality adjustment for the rural floor and imputed floor is a national adjustment to the wage index.

As noted above and as discussed in section III.H.2. of the preamble of this final rule, we are extending the imputed floor policy (both the original policy and alternative methodology) for FY 2018. Therefore, in order to ensure that aggregate payments to hospitals are not affected, similar to prior years, for FY 2018 we follow our policy of including the imputed floor (calculated under the original and alternative methodologies) in the national rural floor budget neutrality adjustment to the wage index.

Similar to our calculation in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50369 through 50370), for FY 2018, we calculated a national rural Puerto Rico wage index. Because there are no rural Puerto Rico hospitals with established wage data, our calculation of the FY 2018 rural Puerto Rico wage index is based on the policy adopted in the FY 2008 IPPS final rule with comment period (72 FR 47323). That is, we use the unweighted average of the wage indexes from all CBSAs (urban areas) that are contiguous (share a border with) to the rural counties to compute the rural floor (72 FR 47323; 76 FR 51594). Under the OMB labor market area delineations, except for Arecibo, Puerto Rico (CBSA 11640), all other Puerto Rico urban areas are contiguous to a rural area. Therefore, based on our existing policy, the FY 2018 rural Puerto Rico wage index is calculated based on the average of the FY 2018 wage indexes for the following urban areas: Aguadilla-Isabela, PR (CBSA 10380); Guayama, PR (CBSA 25020); Mayaguez, PR (CBSA 32420); Ponce, PR (CBSA 38660); San German, PR (CBSA 41900); and San Juan-Carolina-Caguas, PR (CBSA 41980).

To calculate the national rural floor and imputed floor budget neutrality adjustment factor, we used FY 2016 discharge data to simulate payments and the post-reclassified national wage indexes and compared the following:

- National simulated payments without the national rural floor and imputed floor; and
- National simulated payments with the national rural floor and imputed floor.

Based on this comparison, we determined a national rural floor and imputed floor

budget neutrality adjustment factor of 0.993348. The national adjustment was applied to the national wage indexes to produce a national rural floor and imputed floor budget neutral wage index.

e. Adjustment for FY 2018 Required Under Section 414 of Public Law 114–10 (MACRA) and Section 15005 of Public Law 114–255

As stated in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56785), once the recoupment required under section 631 of the ATRA was complete, we had anticipated making a single positive adjustment in FY 2018 to offset the reductions required to recoup the \$11 billion under section 631 of the ATRA. However, section 414 of the MACRA (which was enacted on April 16, 2015) replaced the single positive adjustment we intended to make in FY 2018 with a 0.5 percent positive adjustment for each of FYs 2018 through 2023. In the FY 2017 rulemaking, we indicated that we would address the adjustments for FY 2018 and later fiscal years in future rulemaking. As noted previously, section 15005 of the 21st Century Cures Act (Public Law 114–255), which was enacted December 13, 2016, amended section 7(b)(1)(B) of the TMA, as amended by section 631 of the ATRA and section 414 of the MACRA, to reduce the adjustment for FY 2018 from 0.5 percentage points to 0.4588 percentage points. Therefore, for FY 2018, we are implementing the required +0.4588 percent adjustment to the standardized amount. This is a permanent adjustment to payment rates. In the FY 2018 IPPS/LTCH PPS proposed rule, we noted, that while we are not proposing future adjustments required under section 414 of the MACRA and section 15005 of Public Law 114–255 at this time, we expect to propose positive 0.5 percent adjustments to the standardized amounts for FYs 2019 through 2023.

f. Outlier Payments

Section 1886(d)(5)(A) of the Act provides for payments in addition to the basic prospective payments for “outlier” cases involving extraordinarily high costs. To qualify for outlier payments, a case must have costs greater than the sum of the prospective payment rate for the MS–DRG, any IME and DSH payments, uncompensated care payments, any new technology add-on payments, and the “outlier threshold” or “fixed-loss” amount (a dollar amount by which the costs of a case must exceed payments in order to qualify for an outlier payment). We refer to the sum of the prospective payment rate for the MS–DRG, any IME and DSH payments, uncompensated care payments, any new technology add-on payments, and the outlier threshold as the outlier “fixed-loss cost threshold.” To determine whether the costs of a case exceed the fixed-loss cost threshold, a hospital’s CCR is applied to the total covered charges for the case to convert the charges to estimated costs. Payments for eligible cases are then made based on a marginal cost factor, which is a percentage of the estimated costs above the fixed-loss cost threshold. The marginal cost factor for FY 2018 is 80 percent, or 90 percent for burn MS–DRGs 927, 928, 929, 933, 934 and 935. We have used a marginal

cost factor of 90 percent since FY 1989 (54 FR 36479 through 36480) for designated burn DRGs as well as a marginal cost factor of 80 percent for all other DRGs since FY 1995 (59 FR 45367).

In accordance with section 1886(d)(5)(A)(iv) of the Act, outlier payments for any year are projected to be not less than 5 percent nor more than 6 percent of total operating DRG payments (which does not include IME and DSH payments) plus outlier payments. When setting the outlier threshold, we compute the 5.1 percent target by dividing the total operating outlier payments by the total operating DRG payments plus outlier payments. We do not include any other payments such as IME and DSH within the outlier target amount. Therefore, it is not necessary to include Medicare Advantage IME payments in the outlier threshold calculation. Section 1886(d)(3)(B) of the Act requires the Secretary to reduce the average standardized amount by a factor to account for the estimated proportion of total DRG payments made to outlier cases. More information on outlier payments may be found on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/outlier.htm>.

(1) FY 2018 Outlier Fixed-Loss Cost Threshold

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50977 through 50983), in response to public comments on the FY 2013 IPPS/LTCH PPS proposed rule, we made changes to our methodology for projecting the outlier fixed-loss cost threshold for FY 2014. We refer readers to the FY 2014 IPPS/LTCH PPS final rule for detailed discussion of the changes.

As we have done in the past, to calculate the FY 2018 outlier threshold, we simulated payments by applying FY 2018 payment rates and policies using cases from the FY 2016 MedPAR file. Therefore, in order to determine the FY 2018 outlier threshold, we inflated the charges on the MedPAR claims by 2 years, from FY 2016 to FY 2018. As discussed in the FY 2015 IPPS/LTCH PPS final rule, we believe a methodology that is based on 1-year of charge data will provide a more stable measure to project the average charge per case because our prior methodology used a 6-month measure, which inherently uses fewer claims than a 1-year measure and makes it more susceptible to fluctuations in the average charge per case as a result of any significant charge increases or decreases by hospitals. As finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57282), we used the following methodology to calculate the charge inflation factor for FY 2018:

- To produce the most stable measure of charge inflation, we applied the following inclusion and exclusion criteria of hospitals claims in our measure of charge inflation: Include hospitals whose last four digits fall between 0001 and 0899 (section 2779A1 of Chapter 2 of the State Operations Manual on the CMS Web site at <https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/som107c02.pdf>); include CAHs that were IPPS hospitals for the time period of the MedPAR data being used to calculate the charge inflation factor;

include hospitals in Maryland; and remove PPS-excluded cancer hospitals who have a "V" in the fifth position of their provider number or a "E" or "F" in the sixth position.

- We excluded Medicare Advantage IME claims for the reasons described in section I.A.4. of this Addendum. We refer readers to the FY 2011 IPPS/LTCH PPS final rule for a complete discussion on our methodology of identifying and adding the total Medicare Advantage IME payment amount to the budget neutrality adjustments.

- In order to ensure that we capture only FFS claims, we included claims with a "Claim Type" of 60 (which is a field on the MedPAR file that indicates a claim is an FFS claim).

- In order to further ensure that we capture only FFS claims, we excluded claims with a "GHOPaid" indicator of 1 (which is a field on the MedPAR file that indicates a claim is not an FFS claim and is paid by a Group Health Organization).

- We examined the MedPAR file and removed pharmacy charges for anti-hemophilic blood factor (which are paid separately under the IPPS) with an indicator of "3" for blood clotting with a revenue code of "0636" from the covered charge field. We also removed organ acquisition charges from the covered charge field because organ acquisition is a pass-through payment not paid under the IPPS.

In the FY 2016 IPPS/LTCH PPS final rule (80 FR 49779 through 49780), we stated that commenters were concerned that they were unable to replicate the calculation of the charge inflation factor that CMS used in the proposed rule. In response to those comments, we stated that we continue to believe that it is optimal to use the most recent period of charge data available to measure charge inflation. In response to those comments, similar to FY 2016 and 2017, for FY 2018 we grouped claims data by quarter in the table below in order that the

public would be able to replicate the claims summary for the claims with discharge dates through September 30, 2016, that are available under the current LDS structure. In order to provide even more information in response to the commenters' request, similar to FY 2016 and FY 2017, for FY 2018 we have made available on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html> (click on the link on the left titled "FY 2018 IPPS Proposed Rule Home Page" and then click the link "FY 2018 Proposed Rule Data Files") a more detailed summary table by provider with the monthly charges that were used to compute the charge inflation factor. In the proposed rule, we stated that we would continue to work with our systems teams and privacy office to explore expanding the information available in the current LDS, perhaps through the provision of a supplemental data file for future rulemaking.

Quarter	Covered charges (January 1, 2015, through December 31, 2015)	Cases January 1, 2015, through December 31, 2015)	Covered Charges (January 1, 2016, through December 31, 2016)	Cases (January 1, 2016, through December 31, 2016)
1	\$134,654,491,108	2,550,009	\$140,324,387,852	2,503,723
2	128,043,608,047	2,432,111	134,274,423,481	2,401,159
3	125,070,725,661	2,352,162	129,395,535,792	2,318,480
4	130,224,314,081	2,386,486	104,063,409,952	1,850,535
Total	517,93,138,897	9,720,768	508,057,757,077	9,073,897

Under this methodology, to compute the 1-year average annualized rate-of-change in charges per case for FY 2018, we compared the average covered charge per case of \$53,287 (\$517,993,138,897/9,720,768) from the second quarter of FY 2015 through the first quarter of FY 2016 (January 1, 2015, through December 31, 2015) to the average covered charge per case of \$55,991 (\$508,057,757,077/9,073,897) from the second quarter of FY 2016 through the first quarter of FY 2017 (January 1, 2016, through December 31, 2016). This rate-of-change was 5.1 percent (1.05074) or 10.4 percent (1.104055) over 2 years. The billed charges are obtained from the claim from the MedPAR file and inflated by the inflation factor specified above.

Comment: Several commenters were concerned with what they stated was a lack of transparency with respect to the charge inflation component of the fixed-loss threshold calculation. One commenter requested that CMS not implement the increase in the outlier threshold from FY 2017 to FY 2018 until the agency provides data that can be independently validated to demonstrate the need for an increase in the outlier threshold.

Another commenter stated that it was unable to match the figures in the table from the proposed rule with publicly available data sources and that CMS did not disclose the source of the data. The commenter further stated that CMS has not made the necessary data available, or any guidance that describes whether and how CMS edited such data to arrive at the total of quarterly charges

and charges per case used to measure charge inflation. Consequently, the commenter stated that the table provided in the proposed rule was not useful in assessing the accuracy of the charge inflation figure that CMS used in the proposed rule to calculate the outlier threshold. The commenter noted that CMS provided a detailed summary table by provider with the monthly charges that were used to compute the charge inflation factor. The commenters appreciated the additional data, but still believed that CMS has not provided enough specific information and data to allow the underlying numbers used in CMS' calculation of the charge inflation factor to be replicated and/or tested for accuracy. The commenter concluded that, in the absence of more specific data and information about how the data were edited by CMS to arrive at the totals used in the charge inflation calculation, CMS has not provided adequate notice to allow for meaningful comment.

Response: We responded to a similar comment in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50375), FY 2016 IPPS/LTCH PPS final rule (80 FR 49779 through 49780) and FY 2017 IPPS/LTCH PPS final rule (81 FR 57283) and refer readers to those final rules for our complete response. As previously noted in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50375), we did not have sufficient time to restructure the files (such as ensuring that personal identification information is compliant with privacy regulations) prior to the publication of the proposed and this final rule. As we stated in last year's final rule, while the charge data

may not be immediately available after the issuance of this final rule, we believe the data and supporting files we have provided will provide the commenters with additional information that can be verified once the charge data are available. We have produced the actual figures we used and disclosed our formula. We intend to post the actual charge data as soon as possible so that the public can verify the raw data with the figures we used in the calculation. As stated earlier and in the proposed rule, the charge data used to calculate the charge inflation factor are sourced from our MedPAR database.

In addition, as stated in last year's final rule, for this final rule we continue to believe that it is optimal to use the most recent period of charge data available to measure charge inflation. Similar to last year, the commenters did not propose to use charge data from a different period to compute the charge inflation factor. If we computed the charge inflation factor using the latest data available to the public at the time of issuance of this final rule, we would need to compare charge data from FY 2015 (October 2014—September 2015) to FY 2016 (October 2015—September 2016), data which would be at least 10 months old compared to the charge data we currently use that are 4 months old.

Comment: One commenter requested that CMS add the claims data used to compute the charge inflation factor to the list of limited data set (LDS) files that can be ordered through the usual LDS data request process.

Response: As we stated in response to a similar comment in last year's final rule,

there are limitations on how expeditiously we can add the charge data to the LDS. After consulting with our systems teams and privacy office, we do not anticipate being able to provide the charge data we currently use to calculate the charge inflation factor within the commenter's requested timeframe. We prefer using the latest data available at the time of the proposed and final rules to compute the charge inflation factor because we believe it leads to greater accuracy in the calculation of the fixed-loss cost outlier threshold. As noted earlier and in last year's final rule, we believe that using older data may not provide the same accuracy as the current data we use. We invite commenters to inform us if they believe their need to have complete access to the data we use in our methodology outweighs the greater accuracy provided by the use of more up-to-date data. As noted above, the data we currently use will eventually be publicly available for replication but not in the timeframe the commenter has requested. To summarize, we are confronted with a dilemma—either we use older data that commenters can access earlier, or we use the most up-to-date data which will be more accurate, but will not be available to the public until after publication of the proposed and final rules. For this final rule, we continue to believe the latter approach, using the best available data to produce a more accurate charge inflation factor, is preferable. However, for the FY 2019 IPPS/LTCH PPS proposed rule, we are considering using data that commenters can access earlier. As we have done in the past, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20173), we proposed to establish the FY 2018 outlier threshold using hospital CCRs from the December 2016 update to the Provider-Specific File (PSF)—the most recent available data at the time of the development of the proposed rule. We proposed to apply the following edits to providers' CCRs in the PSF. We believe these edits are appropriate in order to accurately model the outlier threshold. We first search for Indian Health Service providers and those providers assigned the statewide average CCR from the current fiscal year. We then replace these CCRs with the statewide average CCR for the upcoming fiscal year. We also assign the statewide average CCR (for the upcoming fiscal year) to those providers that have no value in the CCR field in the PSF or whose CCRs exceed the ceilings described later in this section (3.0 standard deviations from the mean of the log distribution of CCRs for all hospitals). We do not apply the adjustment factors described below to hospitals assigned the statewide average CCR.

For FY 2018, we proposed to continue to apply an adjustment factor to the CCRs to account for cost and charge inflation (as explained below). We proposed that, if more recent data became available, we would use that data to calculate the final FY 2018 outlier threshold.

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50979), we adopted a new methodology to adjust the CCRs. Specifically, we finalized a policy to compare the national average case-weighted operating and capital CCR from the most recent update of the PSF to the national average case-weighted

operating and capital CCR from the same period of the prior year.

Therefore, as we have done since FY 2014, we proposed to adjust the CCRs from the December 2016 update of the PSF by comparing the percentage change in the national average case-weighted operating CCR and capital CCR from the December 2015 update of the PSF to the national average case-weighted operating CCR and capital CCR from the December 2016 update of the PSF. We note that, in the proposed rule, we used total transfer-adjusted cases from FY 2016 to determine the national average case-weighted CCRs for both sides of the comparison. As stated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50979), we believe that it is appropriate to use the same case count on both sides of the comparison because this will produce the true percentage change in the average case-weighted operating and capital CCR from one year to the next without any effect from a change in case count on different sides of the comparison.

Using the proposed methodology above, for the proposed rule, we calculated a December 2015 operating national average case-weighted CCR of 0.274139 and a December 2016 operating national average case-weighted CCR of 0.26579. We then calculated the percentage change between the two national operating case-weighted CCRs by subtracting the December 2015 operating national average case-weighted CCR from the December 2016 operating national average case-weighted CCR and then dividing the result by the December 2015 national operating average case-weighted CCR. This resulted in a proposed national operating CCR adjustment factor of 0.979187.

We used the same methodology proposed above to adjust the capital CCRs. Specifically, for the proposed rule, we calculated a December 2015 capital national average case-weighted CCR of 0.024047 and a December 2016 capital national average case-weighted CCR of 0.022967. We then calculated the percentage change between the two national capital case-weighted CCRs by subtracting the December 2015 capital national average case-weighted CCR from the December 2016 capital national average case-weighted CCR and then dividing the result by the December 2015 capital national average case-weighted CCR. This resulted in a proposed national capital CCR adjustment factor of 0.955068.

As discussed in section III.B.3. of the preamble to the FY 2011 IPPS/LTCH PPS final rule (75 FR 50160 and 50161) and in section III.H.3. of the preamble of the proposed rule and this final rule, in accordance with section 10324(a) of the Affordable Care Act, we created a wage index floor of 1.0000 for all hospitals located in States determined to be frontier States. We note that the frontier State floor adjustments were calculated and applied after rural floor budget neutrality adjustments were calculated for all labor market areas, in order to ensure that no hospital in a frontier State will receive a wage index less than 1.0000 due to the rural floor adjustment. In accordance with section 10324(a) of the Affordable Care Act, the frontier State adjustment will not be subject to budget

neutrality, and will only be extended to hospitals geographically located within a frontier State. However, for purposes of estimating the outlier threshold for FY 2018, it was necessary to adjust the wage index of those eligible hospitals in a frontier State when calculating the outlier threshold that results in outlier payments being 5.1 percent of total payments for FY 2018. If we did not take the above into account, our estimate of total FY 2018 payments would be too low, and, as a result, our outlier threshold would be too high, such that estimated outlier payments would be less than our projected 5.1 percent of total payments.

As we did in establishing the FY 2009 outlier threshold (73 FR 57891), in our projection of FY 2018 outlier payments, we proposed not to make any adjustments for the possibility that hospitals' CCRs and outlier payments may be reconciled upon cost report settlement. We stated that we continue to believe that, due to the policy implemented in the June 9, 2003 Outlier Final Rule (68 FR 34494), CCRs will no longer fluctuate significantly and, therefore, few hospitals will actually have these ratios reconciled upon cost report settlement. In addition, it is difficult to predict the specific hospitals that will have CCRs and outlier payments reconciled in any given year. We note that we have instructed MACs to identify for CMS any instances where (1) a hospital's actual CCR for the cost reporting period fluctuates plus or minus 10 percentage points compared to the interim CCR used to calculate outlier payments when a bill is processed; and (2) the total outlier payments for the hospital exceeded \$500,000.00 for that period. Our simulations assume that CCRs accurately measure hospital costs based on information available to us at the time we set the outlier threshold. For these reasons, we proposed not to make any assumptions regarding the effects of reconciliation on the outlier threshold calculation.

Comment: Commenters were concerned with CMS' decision not to consider outlier reconciliation in developing the outlier threshold and stated that CMS did not provide objective data concerning the number of hospitals that have been subjected to reconciliation and the amounts recovered during this process.

Response: The commenters' views were similar to comments received and responded to in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50376 through 50377), and we refer readers to that rule for our response.

As described in sections V.I. and V.J., respectively, of the preamble of this final rule, sections 1886(q) and 1886(o) of the Act establish the Hospital Readmissions Reduction Program and the Hospital VBP Program, respectively. We do not believe that it is appropriate to include the hospital VBP payment adjustments and the hospital readmissions payment adjustments in the outlier threshold calculation or the outlier offset to the standardized amount. Specifically, consistent with our definition of the base operating DRG payment amount for the Hospital Readmissions Reduction Program under § 412.152 and the Hospital VBP Program under § 412.160, outlier payments under section 1886(d)(5)(A) of the

Act are not affected by these payment adjustments. Therefore, outlier payments will continue to be calculated based on the unadjusted base DRG payment amount (as opposed to using the base-operating DRG payment amount adjusted by the hospital readmissions payment adjustment and the hospital VBP payment adjustment). Consequently, we proposed to exclude the hospital VBP payment adjustments and the hospital readmissions payment adjustments from the calculation of the outlier fixed-loss cost threshold.

We note that, to the extent section 1886(r) of the Act modifies the DSH payment methodology under section 1886(d)(5)(F) of the Act, the uncompensated care payment under section 1886(r)(2) of the Act, like the empirically justified Medicare DSH payment under section 1886(r)(1) of the Act, may be considered an amount payable under section 1886(d)(5)(F) of the Act such that it would be reasonable to include the payment in the outlier determination under section 1886(d)(5)(A) of the Act. As we have done since the implementation of uncompensated care payments in FY 2014, for FY 2018 we proposed allocating an estimated per-discharge uncompensated care payment amount to all cases for the hospitals eligible to receive the uncompensated care payment amount in the calculation of the outlier fixed-loss cost threshold methodology. We continue to believe that allocating an eligible hospital's estimated uncompensated care payment to all cases equally in the calculation of the outlier fixed-loss cost threshold would best approximate the amount we would pay in uncompensated care payments during the year because, when we make claim payments to a hospital eligible for such payments, we would be making estimated per-discharge uncompensated care payments to all cases equally. Furthermore, we continue to believe that using the estimated per-claim uncompensated care payment amount to determine outlier estimates provides predictability as to the amount of uncompensated care payments included in the calculation of outlier payments. Therefore, consistent with the methodology used since FY 2014 to calculate the outlier fixed-loss cost threshold, for FY 2018, we proposed to include estimated FY 2018 uncompensated care payments in the computation of the outlier fixed-loss cost threshold. Specifically, we proposed to use the estimated per-discharge uncompensated care payments to hospitals eligible for the uncompensated care payment for all cases in the calculation of the proposed outlier fixed-loss cost threshold methodology.

Using this methodology, we used the formula described in section I.C.1 of this Addendum to simulate and calculate the Federal payment rate and outlier payments for all claims. We proposed a threshold of \$26,713 and calculated total operating Federal payments of \$89,955,398,001 and total outlier payments of \$4,587,838,750. We then divided total outlier payments by total operating Federal payments plus total outlier payments and determined that this threshold met the 5.1 percent target. As a result, we proposed an outlier fixed-loss cost threshold

for FY 2018 equal to the prospective payment rate for the MS-DRG, plus any IME, empirically justified Medicare DSH payments, estimated uncompensated care payment, and any add-on payments for new technology, plus \$26,713.

Comment: One commenter noted that dividing the total outlier payments of \$4,587,838,750 by total operating Federal payments of \$89,955,398,001 plus total outlier payments of \$4,587,838,750 yields 4.85 percent instead of 5.1 percent.

Response: The commenter is correct. We inadvertently summed total operating Federal payments with total outlier payments in the number of \$89,955,398,001 above. The corrected total operating Federal payments for the proposed rule is \$85,367,559,251. Dividing the proposed total outlier payments of \$4,587,838,750 by the corrected proposed total operating Federal payments of \$85,367,559,251 plus proposed total outlier payments of \$4,587,838,750 yields the 5.1 percent target. We thank the commenter for noting this error.

Comment: One commenter believed that it is important that CMS accurately calculate prior year actual payment comparisons to the 5.1 percent target. The commenter asserted that it is not possible for CMS to appropriately modify the methodology to achieve an accurate result if CMS is not aware of, or misinformed about, inaccuracies resulting from the prior year's methodology. The commenter cited the FY 2017 IPPS/LTCH PPS proposed rule as an example where CMS indicated that actual outlier payments for FY 2015 were approximately 4.68 percent of overall payments. The commenter stated that it was concerned that CMS believed the agency would reach the 5.1 percent target for FY 2015 only to learn that the original estimate was overestimated and still raise the threshold for the subsequent year.

The same commenter noted that the final outlier threshold established by CMS is always significantly lower than the threshold set forth in the proposed rule. The commenter believed the decline is most likely due to the use of updated CCRs or other data in calculating the final threshold. The commenter stated this emphasizes that CMS must use the most recent data available when the agency calculates the outlier threshold. The commenter cited as an example that, in the proposed rule, CMS used data from the December 2016 PSF file, but at the time the proposed rule was issued, the March 2017 PSF file was available.

Response: We responded to similar comments in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50378 through 50379) and refer the reader to that rule for our response.

Comment: One commenter asked if CMS used more updated data for the FY 2017 proposed rule than in prior years because the variance in the outlier fixed-loss cost threshold from the FY 2017 proposed rule (\$23,681) to the FY 2017 final rule (\$23,573) was much smaller than prior fiscal years (approximately \$100 versus a variance of approximately \$1,000 to \$2,000 from FY 2009 through FY 2016).

Response: Regarding the data used for the FY 2017 proposed and final rule, we used the

same update of the MedPAR data as in prior fiscal years. Specifically, we use the December update of the MedPAR for the proposed rule and the March update of the MedPAR for the final rule.

Comment: Some commenters believed that the outlier threshold should be further reduced because outlier payments this year are on target to fall below the 5.1 percent target. The commenter suggested that CMS consider calculating the threshold at the midpoint of the target (approximately 5.5 percent) in order to ensure that the final total of outlier payments is between the statutory requirements of 5 to 6 percent of total payments.

Some commenters recommended that the threshold be maintained at the FY 2017 outlier threshold because CMS has underpaid outlier payments in prior fiscal years with no adjustment to make up for the shortfalls. One commenter noted that CMS' estimate of FY 2016 outlier payments in the proposed rule was 5.37 percent, which is above the 5.1 percent target. The commenter favored a simplified methodology and believed that by applying a 2-year charge inflation factor and a 1-year CCR factor that CMS is inadvertently compounding its charge increase with lower costs and overstating the outlier threshold. The commenter suggested that CMS apply the following formula to compute the FY 2018 outlier threshold: Step 1—FY 2016 Difference = (FY 2016 estimate of 5.37 percent – 5.1 percent target = 0.27 percent) / 5.1 percent target = 5.29 percent; Step 2—Suggested FY 2018 Threshold = Threshold from FY 2017 of \$23,570 * (100 + 5.29 from Step 1 = 105.29 percent) = \$24,817. The commenter concluded that the FY 2018 fixed-loss cost threshold should not exceed \$24,817.

Response: We responded to similar comments in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50379) and the FY 2016 IPPS/LTCH PPS final rule (80 FR 49783) and refer readers to those final rules for our complete responses.

Comment: One commenter asked that CMS consider whether it is appropriate to include extreme cases when calculating the threshold. The commenter explained that high charge cases have a significant impact on the threshold. The commenter observed that the amount of cases with over \$1.5 million in charges has increased significantly from FY 2011 (926 cases) to FY 2016 (1,733 cases). The commenter believed that the impact of these cases will cause the threshold to rise and recommended that CMS consider the removal of high charge cases from the calculation of the threshold.

Response: We thank the commenter for its analysis. The methodology used to calculate the outlier threshold includes all claims in order to account for all different types of cases, including high charge cases, to ensure that CMS meets the 5.1 percent target. As the commenter pointed out, the volume of these cases continues to rise, making their impact on the threshold significant. We believe excluding these cases would artificially lower the threshold. We believe it is important to include all cases in the calculation of the threshold no matter how high or low the charges. Including these

cases with high charges lends more accuracy to the threshold, as these cases have an impact on the threshold and continue to rise in volume. Therefore, we disagree with the commenter.

After consideration of the public comments we received, we are not making any changes

to our methodology in this final rule for FY 2018. Therefore, we are using the same methodology we proposed to calculate the final outlier threshold. We note that, as stated above, we will consider for FY 2019 using data that commenters can access earlier to validate the charge inflation factor.

Similar to the table provided in the proposed rule, for this final rule, we are providing the following table that displays covered charges and cases by quarter in the periods used to calculate the charge inflation factor based on the latest claims data from the MedPAR file.

Quarter	Covered charges (April 1, 2015, through March 31, 2016)	Cases (April 1, 2015, through March 31, 2016)	Covered charges (April 1, 2016, through March 31, 2017)	Cases (April 1, 2016, through March 31, 2017)
1	\$141,152,765,310	2,511,643	\$117,678,018,441	2,041,566
2	128,006,070,168	2,429,952	135,162,474,098	2,412,323
3	125,050,723,246	2,350,572	131,355,245,078	2,344,249
4	130,279,257,188	2,385,573	135,647,775,015	2,374,373
Total	524,488,815,912	9,677,740	519,843,512,632	9,172,511

Under our current methodology, to compute the 1-year average annualized rate-of-change in charges per case for FY 2018, we compared the average covered charge per case of \$54,195 (\$524,488,815,912/9,677,740) from the third quarter of FY 2015 through the second quarter of FY 2016 (April 1, 2015, through March 31, 2016) to the average covered charge per case of \$56,674 (\$519,843,512,632/9,172,511) from the third quarter of FY 2016 through the second quarter of FY 2017 (April 1, 2016, through March 31, 2017). This rate-of-change is 4.6 percent (1.04574) or 9.4 percent (1.09357) over 2 years. The billed charges are obtained from the claim from the MedPAR file and inflated by the inflation factor specified above.

Similar to the proposed rule, for this final rule, we have made available a more detailed summary table by provider with the monthly charges that were used to compute the charge inflation factor on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html> (click on the link on the left titled "FY 2018 IPPS Final Rule Home Page" and then click the link "FY 2018 Final Rule Data Files").

As we have done in the past, we are establishing the FY 2018 outlier threshold using hospital CCRs from the March 2017 update to the Provider-Specific File (PSF)—the most recent available data at the time of the development of this final rule. For FY 2018, we also are continuing to apply an adjustment factor to the CCRs to account for cost and charge inflation (as explained below).

Therefore, as we did for the last 4 fiscal years, we are adjusting the CCRs from the March 2017 update of the PSF by comparing the percentage change in the national average case-weighted operating CCR and capital CCR from the March 2016 update of the PSF to the national average case-weighted operating CCR and capital CCR from the March 2017 update of the PSF. We note that we used total transfer-adjusted cases from FY 2016 to determine the national average case-weighted CCRs for both sides of the comparison.

Using the methodology above, for this final rule, we calculated a March 2016 operating national average case-weighted CCR of 0.269558 and a March 2017 operating

national average case-weighted CCR of 0.265668. We then calculated the percentage change between the two national operating case-weighted CCRs by subtracting the March 2016 operating national average case-weighted CCR from the March 2017 operating national average case-weighted CCR and then dividing the result by the March 2016 national operating average case-weighted CCR. This resulted in a national operating CCR adjustment factor of 0.985569 (the factors used to determine this result were based on unrounded numbers).

We used the same methodology above to adjust the capital CCRs. Specifically, for this final rule, we calculated a March 2016 capital national average case-weighted CCR of 0.023751 and a March 2017 capital national average case-weighted CCR of 0.22615. We then calculated the percentage change between the two national capital case-weighted CCRs by subtracting the March 2016 capital national average case-weighted CCR from the March 2017 capital national average case-weighted CCR and then dividing the result by the March 2016 capital national average case-weighted CCR. This resulted in a national capital CCR adjustment factor of 0.952173 (the factors used to determine this result were based on unrounded numbers).

As discussed above, similar to the proposed rule, for FY 2018 we applied the following policies (see discussion above for more details):

- In accordance with section 10324(a) of the Affordable Care Act, we created a wage index floor of 1.0000 for all hospitals located in States determined to be frontier States.
- As we did in establishing the FY 2009 outlier threshold (73 FR 57891), in our projection of FY 2018 outlier payments, we did not make any adjustments for the possibility that hospitals' CCRs and outlier payments may be reconciled upon cost report settlement.
- We excluded the hospital VBP payment adjustments and the hospital readmissions payment adjustments from the calculation of the outlier fixed-loss cost threshold.
- We used the estimated per-discharge uncompensated care payments to hospitals eligible for the uncompensated care payment for all cases in the calculation of the outlier fixed-loss cost threshold methodology.

Using this methodology, we used the formula described in section I.C.1. of this

Addendum to simulate and calculate the Federal payment rate and outlier payments for all claims. We calculated a threshold of \$26,601 and calculated total operating Federal payments of \$85,942,484,975 and total outlier payments of \$4,618,707,285. We then divided total outlier payments by total operating Federal payments plus total outlier payments and determined that this threshold met the 5.1 percent target. As a result, we are finalizing an outlier fixed-loss cost threshold for FY 2018 equal to the prospective payment rate for the MS-DRG, plus any IME, empirically justified Medicare DSH payments, estimated uncompensated care payment, and any add-on payments for new technology, plus \$26,601.

(2) Other Changes Concerning Outliers

As stated in the FY 1994 IPPS final rule (58 FR 46348), we establish an outlier threshold that is applicable to both hospital inpatient operating costs and hospital inpatient capital-related costs. When we modeled the combined operating and capital outlier payments, we found that using a common threshold resulted in a lower percentage of outlier payments for capital-related costs than for operating costs. We project that the thresholds for FY 2018 will result in outlier payments that will equal 5.1 percent of operating DRG payments and 5.16 percent of capital payments based on the Federal rate.

In accordance with section 1886(d)(3)(B) of the Act, we reduced the FY 2018 standardized amount by the same percentage to account for the projected proportion of payments paid as outliers.

The outlier adjustment factors that were applied to the standardized amount based on the FY 2018 outlier threshold are as follows:

	Operating standardized amounts	Capital federal rate
National	0.948999	0.948400

We applied the outlier adjustment factors to the FY 2018 payment rates after removing the effects of the FY 2017 outlier adjustment factors on the standardized amount.

To determine whether a case qualifies for outlier payments, we apply hospital-specific CCRs to the total covered charges for the case. Estimated operating and capital costs

for the case are calculated separately by applying separate operating and capital CCRs. These costs are then combined and compared with the outlier fixed-loss cost threshold.

Under our current policy at § 412.84, we calculate operating and capital CCR ceilings and assign a statewide average CCR for hospitals whose CCRs exceed 3.0 standard deviations from the mean of the log distribution of CCRs for all hospitals. Based on this calculation, for hospitals for which the MAC computes operating CCRs greater than 1.16 or capital CCRs greater than 0.155, or hospitals for which the MAC is unable to calculate a CCR (as described under § 412.84(i)(3) of our regulations), statewide average CCRs are used to determine whether a hospital qualifies for outlier payments. Table 8A listed in section VI. of this Addendum (and available only via the Internet on the CMS Web site) contains the statewide average operating CCRs for urban hospitals and for rural hospitals for which the MAC is unable to compute a hospital-specific CCR within the above range. These statewide average ratios will be effective for discharges occurring on or after October 1, 2017 and will replace the statewide average ratios from the prior fiscal year. Table 8B listed in section VI. of this Addendum (and available via the Internet on the CMS Web site) contains the comparable statewide average capital CCRs. As previously stated, the CCRs in Tables 8A and 8B will be used during FY 2018 when hospital-specific CCRs based on the latest settled cost report either are not available or are outside the range noted above. Table 8C listed in section VI. of this Addendum (and available via the Internet on the CMS Web site) contains the statewide average total CCRs used under the LTCH PPS as discussed in section V. of this Addendum.

We finally note that we published a manual update (Change Request 3966) to our outlier policy on October 12, 2005, which updated Chapter 3, Section 20.1.2 of the Medicare Claims Processing Manual. The manual update covered an array of topics, including CCRs, reconciliation, and the time value of money. We encourage hospitals that are assigned the statewide average operating and/or capital CCRs to work with their MAC on a possible alternative operating and/or capital CCR as explained in Change Request 3966. Use of an alternative CCR developed by the hospital in conjunction with the MAC can avoid possible overpayments or underpayments at cost report settlement, thereby ensuring better accuracy when making outlier payments and negating the need for outlier reconciliation. We also note that a hospital may request an alternative operating or capital CCR at any time as long as the guidelines of Change Request 3966 are followed. In addition, as mentioned above, we published an additional manual update (Change Request 7192) to our outlier policy on December 3, 2010, which also updated Chapter 3, Section 20.1.2 of the Medicare Claims Processing Manual. The manual update outlines the outlier reconciliation process for hospitals and Medicare contractors. To download and view the manual instructions on outlier reconciliation,

we refer readers to the CMS Web site: <http://www.cms.hhs.gov/manuals/downloads/clm104c03.pdf>.

(3) FY 2016 Outlier Payments

Our current estimate, using available FY 2016 claims data, is that actual outlier payments for FY 2016 were approximately 5.41 percent of actual total MS-DRG payments. Therefore, the data indicate that, for FY 2016, the percentage of actual outlier payments relative to actual total payments is higher than we projected for FY 2016. Consistent with the policy and statutory interpretation we have maintained since the inception of the IPPS, we do not make retroactive adjustments to outlier payments to ensure that total outlier payments for FY 2016 are equal to 5.1 percent of total MS-DRG payments. As explained in the FY 2003 Outlier Final Rule (68 FR 34502), if we were to make retroactive adjustments to all outlier payments to ensure total payments are 5.1 percent of MS-DRG payments (by retroactively adjusting outlier payments), we would be removing the important aspect of the prospective nature of the IPPS. Because such an across-the-board adjustment would either lead to more or less outlier payments for all hospitals, hospitals would no longer be able to reliably approximate their payment for a patient while the patient is still hospitalized. We believe it would be neither necessary nor appropriate to make such an aggregate retroactive adjustment. Furthermore, we believe it is consistent with the statutory language at section 1886(d)(5)(A)(iv) of the Act not to make retroactive adjustments to outlier payments. This section calls for the Secretary to ensure that outlier payments are equal to or greater than 5 percent and less than or equal to 6 percent of projected or estimated (not actual) MS-DRG payments. We believe that an important goal of a PPS is predictability. Therefore, we believe that the fixed-loss outlier threshold should be projected based on the best available historical data and should not be adjusted retroactively. A retroactive change to the fixed-loss outlier threshold would affect all hospitals subject to the IPPS, thereby undercutting the predictability of the system as a whole.

We note that because the MedPAR claims data for the entire FY 2017 will not be available until after September 30, 2017, we are unable to provide an estimate of actual outlier payments for FY 2017 based on FY 2017 claims data in this final rule. We will provide an estimate of actual FY 2017 outlier payments in the FY 2019 IPPS/LTCH PPS proposed rule.

Comment: One commenter noted that, in the proposed rule, CMS stated that actual outlier payments for FY 2016 were approximately 5.37 percent of total MS-DRG payments. The commenter performed its own analysis and concluded that outlier payments for FY 2016 are approximately 5.27 percent of total MS-DRG payments. The commenter was concerned that CMS' estimate was overstated.

Response: We thank the commenter for the comments. We reviewed our data to ensure the estimate provided is accurate. Therefore, we believe we have provided a reliable

estimate of the outlier percentage for FY 2016. The commenter did not provide details regarding the discrepancy. We welcome additional suggestions from the public, including the commenter, to improve the accuracy of our estimate of actual outlier payments.

5. FY 2018 Standardized Amount

The adjusted standardized amount is divided into labor-related and nonlabor-related portions. Tables 1A and 1B listed and published in section VI. of this Addendum (and available via the Internet on the CMS Web site) contain the national standardized amounts that we are applying to all hospitals, except hospitals located in Puerto Rico, for FY 2018. The standardized amount for hospitals in Puerto Rico is shown in Table 1C listed and published in section VI. of this Addendum (and available via the Internet on the CMS Web site). The amounts shown in Tables 1A and 1B differ only in that the labor-related share applied to the standardized amounts in Table 1A is 68.3 percent, and the labor-related share applied to the standardized amounts in Table 1B is 62 percent. In accordance with sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act, we are applying a labor-related share of 62 percent, unless application of that percentage would result in lower payments to a hospital than would otherwise be made. In effect, the statutory provision means that we will apply a labor-related share of 62 percent for all hospitals whose wage indexes are less than or equal to 1.0000.

In addition, Tables 1A and 1B include the standardized amounts reflecting the applicable percentage increases for FY 2018.

The labor-related and nonlabor-related portions of the national average standardized amounts for Puerto Rico hospitals for FY 2018 are set forth in Table 1C listed and published in section VI. of this Addendum (and available via the Internet on the CMS Web site). Similar to above, section 1886(d)(9)(C)(iv) of the Act, as amended by section 403(b) of Public Law 108-173, provides that the labor-related share for hospitals located in Puerto Rico be 62 percent, unless the application of that percentage would result in lower payments to the hospital.

The following table illustrates the changes from the FY 2017 national standardized amount to the FY 2018 national standardized amount. The second through fifth columns display the changes from the FY 2017 standardized amounts for each applicable FY 2018 standardized amount. The first row of the table shows the updated (through FY 2017) average standardized amount after restoring the FY 2017 offsets for outlier payments, geographic reclassification budget neutrality, new labor market delineation wage index transition budget neutrality and removing the FY 2017 2-midnight rule one-time prospective increase. The MS-DRG reclassification and recalibration and wage index budget neutrality adjustment factors are cumulative. Therefore, those FY 2017 adjustment factors are not removed from this table.

CHANGES FROM FY 2017 STANDARDIZED AMOUNTS TO THE FY 2018 STANDARDIZED AMOUNTS

	Hospital submitted quality data and is a meaningful EHR user	Hospital submitted quality data and is NOT a meaningful EHR user	Hospital did NOT submit quality data and is a meaningful EHR user	Hospital did NOT submit quality data and is NOT a meaningful EHR user

FY 2018 MS-DRG Recalibration Budget Neutrality Factor.	0.997432	0.997432	0.997432	0.997432.
FY 2018 Wage Index Budget Neutrality Factor.	1.001148	1.001148	1.001148	1.001148.
FY 2018 Reclassification Budget Neutrality Factor.	0.988008	0.988008	0.988008	0.988008.
FY 2018 Operating Outlier Factor.	0.948999	0.948999	0.948999	0.98999.
Adjustment for FY 2018 Required under Section 414 of Public Law 114–10 (MACRA) and Section 15005 of Public Law 114–255.	1.004588	1.004588	1.004588	1.004588.
National Standardized Amount for FY 2018 if Wage Index is Greater Than 1.0000; Labor/Non-Labor Share Percentage (68.3/31.7).	Labor: \$3,807.12 Nonlabor: \$1,766.99	Labor: \$3,731.05 Nonlabor: \$1,731.69	Labor: \$3,781.76 Nonlabor: \$1,755.22	Labor: \$3,705.70 Nonlabor: \$1,719.92.
National Standardized Amount for FY 2018 if Wage Index is less Than or Equal to 1.0000; Labor/Non-Labor Share Percentage (62/38).	Labor: \$3,455.95 Nonlabor: \$2,118.16	Labor: \$3,386.90 Nonlabor: \$2,075.84	Labor: \$3,432.93 Nonlabor: \$2,104.05	Labor: \$3,363.88 Nonlabor: \$2,061.74.

We note that, in recent years, we have estimated the MS–DRG recalibration budget neutrality factor, wage index budget neutrality factor, reclassification budget neutrality factor and operating outlier factor to six decimal places. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20176), we stated that while we are not proposing to make any changes at this time, we were interested in receiving comments from the public as to the continued necessity of six decimal places for these four estimates or if fewer decimal places would be sufficient. We did not receive any public comments regarding the necessity of six decimals. We will consider the use of fewer decimals in future rulemaking.

B. Adjustments for Area Wage Levels and Cost-of-Living

Tables 1A through 1C, as published in section VI. of this Addendum (and available via the Internet on the CMS Web site), contain the labor-related and nonlabor-related shares that we used to calculate the prospective payment rates for hospitals located in the 50 States, the District of Columbia, and Puerto Rico for FY 2018. This section addresses two types of adjustments to the standardized amounts that are made in determining the prospective payment rates as described in this Addendum.

1. Adjustment for Area Wage Levels

Sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act require that we make an adjustment to the labor-related portion of the national prospective payment rate to account for area differences in hospital wage levels. This adjustment is made by multiplying the labor-related portion of the adjusted standardized amounts by the appropriate wage index for the area in which the hospital is located. For FY 2018, as discussed in section IV.B.3. of the preamble of this final rule, we will apply a labor-related share of 68.3 percent for the national standardized amounts for all IPPS hospitals (including hospitals in Puerto Rico) that have a wage index value that is greater

than 1.0000. Consistent with section 1886(d)(3)(E) of the Act, we will apply the wage index to a labor-related share of 62 percent of the national standardized amount for all IPPS hospitals (including hospitals in Puerto Rico) whose wage index values are less than or equal to 1.0000. In section III. of the preamble of this final rule, we discuss the data and methodology for the FY 2018 wage index.

2. Adjustment for Cost-of-Living in Alaska and Hawaii

Section 1886(d)(5)(H) of the Act provides discretionary authority to the Secretary to make adjustments as the Secretary deems appropriate to take into account the unique circumstances of hospitals located in Alaska and Hawaii. Higher labor-related costs for these two States are taken into account in the adjustment for area wages described above. To account for higher nonlabor-related costs for these two States, we multiply the nonlabor-related portion of the standardized amount for hospitals in Alaska and Hawaii by an adjustment factor. For FY 2011 and in prior fiscal years, we used the most recent cost-of-living adjustment (COLA) factors obtained from the U.S. Office of Personnel Management (OPM) Web site at <http://www.opm.gov/oca/cola/rates.asp> to update this nonlabor portion.

In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51797), we explained that sections 1911 through 1919 of the Nonforeign Area Retirement Equity Assurance Act, as contained in subtitle B of title XIX of the National Defense Authorization Act (NDAA) for Fiscal Year 2010 (Pub. L. 111–84, October 28, 2009), transitions the Alaska and Hawaii COLAs to locality pay. We finalized that, for FY 2012, as OPM transitioned away from COLAs, we would continue to use the same “frozen” COLA factors (published by OPM) that we used to adjust payments in FY 2011 (which were based on OPM’s 2009 COLA factors) to adjust the nonlabor-related portion of the standardized amount for hospitals located in Alaska and Hawaii. We refer readers to the FY 2012 IPPS/LTCH PPS final rule for a more detailed discussion of our rationale for continuing to use the frozen COLAs in FY 2012.

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53700 and 53701), for FY 2013, we continued to use the same COLA factors that were used to adjust payments in FY 2012 (as originally used to adjust payments in FY

2011, which were based on OPM’s 2009 COLA factors). We also established a methodology to update the COLA factors published by OPM every 4 years (at the same time as the update of the labor-related share of the IPPS market basket), beginning in FY 2014. We refer readers to the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 28145 and 28146) for a detailed description of this methodology. For FY 2014, we updated the COLA factors for Alaska and Hawaii published by OPM for 2009 using the methodology finalized in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53700 and 53701).

For FY 2018, we proposed to continue to update the COLA factors published by OPM for 2009 (as these are the last COLA factors OPM published prior to transitioning from COLAs to locality pay) using the methodology that we finalized in the FY 2013 IPPS/LTCH PPS final rule and implemented for the FY 2014 IPPS update. Specifically, we proposed to update the 2009 OPM COLA factors by a comparison of the growth in the Consumer Price Indices (CPIs) for Anchorage, AK, and Honolulu, HI, relative to the growth in the CPI for the average U.S. city as published by the Bureau of Labor Statistics (BLS). Because BLS publishes CPI data for only Anchorage and Honolulu, using the methodology we finalized in the FY 2013 IPPS/LTCH PPS final rule, we used the comparison of the growth in the overall CPI relative to the growth in the CPI for those cities to update the COLA factors for all areas in Alaska and Hawaii, respectively. We believe that the relative price differences between these cities and the United States (as measured by the CPIs mentioned above) are appropriate proxies for the relative price differences between the “other areas” of Alaska and Hawaii and the United States.

BLS publishes the CPI for All Items for Anchorage, Honolulu, and for the average U.S. city. However, consistent with our methodology finalized in the FY 2013 IPPS/LTCH PPS final rule, we created reweighted CPIs for each of the respective areas to reflect the underlying composition of the IPPS market basket nonlabor-related share. The current composition of the CPI for All Items for all of the respective areas is approximately 40 percent commodities and 60 percent services. However, the IPPS nonlabor-related share is comprised of a different mix of commodities and services.

Therefore, we created reweighted indexes for Anchorage, Honolulu, and the average U.S. city using the respective CPI commodities index and CPI services index and using the approximate 55 percent commodities/45 percent services shares obtained from the proposed 2014-based IPPS market basket, which is being finalized without modification as discussed in section IV. of the preamble of this final rule. We created reweighted indexes using BLS data for 2009 through 2016—the most recent data available at the time of this final rulemaking. In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50985 through 50987), we created reweighted indexes based on the FY 2010-based IPPS market basket (which was adopted for the FY 2014 IPPS update) and BLS data for 2009 through 2012 (the most recent BLS data at the time of the FY 2014 IPPS/LTCH PPS rulemaking).

We continue to believe this methodology is appropriate because we continue to make a COLA for hospitals located in Alaska and Hawaii by multiplying the nonlabor-related portion of the standardized amount by a COLA factor. We note that OPM’s COLA factors were calculated with a statutorily mandated cap of 25 percent. As stated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50985 through 50987), under the COLA update methodology we finalized in the FY 2013 IPPS/LTCH PPS final rule, we exercised our discretionary authority to adjust payments to hospitals in Alaska and Hawaii by incorporating this cap. In applying this finalized methodology for updating the COLA factors, for FY 2018, we proposed to continue to use such a cap, as our policy is based on OPM’s COLA factors (updated by the methodology described above).

Applying this methodology, the COLA factors that we proposed to establish for FY 2018 to adjust the nonlabor-related portion of the standardized amount for hospitals located in Alaska and Hawaii are shown in the table below. For comparison purposes, we also are showing the FY 2013 COLA factors (which were based on OPM’s published COLA factors for 2009) and the FY 2014 COLA factors.

Lastly, as we finalized in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53700 and 53701), we are updating the COLA factors based on our methodology every 4 years, at the same time as the update to the labor-related share of the IPPS market basket.

COST-OF-LIVING ADJUSTMENT FACTORS: ALASKA AND HAWAII HOSPITALS

Area	FY 2013	FY 2014 through FY 2017	Proposed FY 2018
Alaska:			
City of Anchorage and 80-kilometer (50-mile) radius by road	1.23	1.23	1.25
City of Fairbanks and 80-kilometer (50-mile) radius by road	1.23	1.23	1.25
City of Juneau and 80-kilometer (50-mile) radius by road	1.23	1.23	1.25
Rest of Alaska	1.25	1.25	1.25
Hawaii:			
City and County of Honolulu	1.25	1.25	1.25
County of Hawaii	1.18	1.19	1.21
County of Kauai	1.25	1.25	1.25
County of Maui and County of Kalawao	1.25	1.25	1.25

We note that the reweighted CPI for Honolulu, HI grew faster than the reweighted CPI for the average U.S. city over the 2009 to 2016 time period, at 13.7 percent and 10.5 percent, respectively. As a result, for FY 2018, we calculated proposed COLA factors for the City and County of Honolulu, County of Kauai, County of Maui, and County of Kalawao to be 1.29 compared to the FY 2013 COLA factor of 1.25 (which was based on OPM's published COLA factors for 2009, as described above). However, as stated above, we are applying our methodology as finalized in the FY 2013 IPPS/LTCH PPS final rule to incorporate a cap of 1.25 for these areas. In addition, the proposed COLA factor we calculated for the County of Hawaii for FY 2018 is 1.21 compared to the FY 2013 COLA factor of 1.18. The COLA factors adopted in FY 2014 using this same methodology can be found in the table above.

Similarly, the reweighted CPI for Anchorage, AK grew faster than the reweighted CPI for the average U.S. city over the 2009 to 2016 time period, at 12.4 percent and 10.5 percent, respectively. As a result, for FY 2018, we calculated proposed COLA factors for the City of Anchorage, City of Fairbanks, and City of Juneau to be 1.25 compared to the FY 2013 COLA factor of 1.23. For FY 2018, we calculated a proposed COLA factor of 1.27 for the rest of Alaska compared to the FY 2013 COLA factor of 1.25. However, as stated above, we are applying our methodology as finalized in the FY 2013 IPPS/LTCH PPS final rule to incorporate a cap of 1.25 for the Rest of Alaska.

As stated above, the COLA factors adopted in the FY 2014 IPPS/LTCH PPS final rule were based on the same methodology we proposed to use to determine the FY 2018 COLA factors but utilizing BLS data from 2009 through 2012 (the most recent data available at the time of FY 2014 rulemaking) rather than through 2016 (the most recent data available at the time of this rulemaking). As we noted in the proposed rule, compared to the FY 2014 COLA factors, the proposed FY 2018 COLA factors are higher—with all areas either reaching or exceeding the cap of 1.25 except the County of Hawaii.

We did not receive any public comments on our proposal to continue to update the COLA factors published by OPM for 2009 using the methodology that we finalized in the FY 2013 IPPS/LTCH PPS final rule and implemented for the FY 2014 IPPS update. In this final rule, we are finalizing the COLA factors as proposed effective for FY 2018.

C. Calculation of the Prospective Payment Rates

General Formula for Calculation of the Prospective Payment Rates for FY 2018

In general, the operating prospective payment rate for all hospitals (including hospitals in Puerto Rico) paid under the IPPS, except SCHs, for FY 2018 equals the Federal rate (which includes uncompensated care payments).

SCHs are paid based on whichever of the following rates yields the greatest aggregate payment: The Federal national rate (which, as discussed in section V.G. of the preamble of this final rule, includes uncompensated

care payments); the updated hospital-specific rate based on FY 1982 costs per discharge; the updated hospital-specific rate based on FY 1987 costs per discharge; the updated hospital-specific rate based on FY 1996 costs per discharge; or the updated hospital-specific rate based on FY 2006 costs per discharge to determine the rate that yields the greatest aggregate payment.

The prospective payment rate for SCHs for FY 2018 equals the higher of the applicable Federal rate, or the hospital-specific rate as described below.

1. Operating and Capital Federal Payment Rate and Outlier Payment Calculation

Note: The formula below is used for actual claim payment and is also used by CMS to project the outlier threshold for the upcoming fiscal year. The difference is the source of some of the variables in the formula. For example, operating and capital CCRs for actual claim payment are from the PSF while CMS uses an adjusted CCR (as described above) to project the threshold for the upcoming fiscal year. In addition, charges for a claim payment are from the bill while charges to project the threshold are from the MedPAR data with an inflation factor applied to the charges (as described earlier).

Step 1—Determine the MS-DRG and MS-DRG relative weight for each claim based on the ICD-10-CM procedure and diagnosis codes on the claim.

Step 2—Select the applicable average standardized amount depending on whether the hospital submitted qualifying quality data and is a meaningful EHR user, as described above.

Step 3—Compute the operating and capital Federal payment rate:

—Federal Payment Rate for Operating Costs = MS-DRG Relative Weight $\times$ [(Labor-Related Applicable Standardized Amount $\times$ Applicable CBSA Wage Index) + (Nonlabor-Related Applicable Standardized Amount $\times$ Cost-of-Living Adjustment)] $\times$ (1 + IME + (DSH $\times$ 0.25))
 —Federal Payment for Capital Costs = MS-DRG Relative Weight $\times$ Federal Capital Rate $\times$ Geographic Adjustment Factor $\times$ (1 + IME + DSH)

Step 4—Determine operating and capital costs:

—Operating Costs = (Billed Charges $\times$ Operating CCR)
 —Capital Costs = (Billed Charges $\times$ Capital CCR).

Step 5—Compute operating and capital outlier threshold (CMS applies a geographic adjustment to the operating and capital outlier threshold to account for local cost variation):

—Operating CCR to Total CCR = (Operating CCR)/(Operating CCR + Capital CCR)
 —Operating Outlier Threshold = [Fixed Loss Threshold $\times$ ((Labor-Related Portion $\times$ CBSA Wage Index) + Nonlabor-Related portion)] $\times$ Operating CCR to Total CCR + Federal Payment with IME, DSH + Uncompensated Care Payment + New Technology Add-On Payment Amount
 —Capital CCR to Total CCR = (Capital CCR)/(Operating CCR + Capital CCR)
 —Capital Outlier Threshold = (Fixed Loss Threshold $\times$ Geographic Adjustment Factor

$\times$ Capital CCR to Total CCR) + Federal Payment with IME and DSH

Step 6—Compute operating and capital outlier payments:

—Marginal Cost Factor = 0.80 or 0.90 (depending on the MS-DRG)
 —Operating Outlier Payment = (Operating Costs—Operating Outlier Threshold) $\times$ Marginal Cost Factor
 —Capital Outlier Payment = (Capital Costs—Capital Outlier Threshold) $\times$ Marginal Cost Factor

The payment rate may then be further adjusted for hospitals that qualify for a low-volume payment adjustment under section 1886(d)(12) of the Act and 42 CFR 412.101(b). The base-operating DRG payment amount may be further adjusted by the hospital readmissions payment adjustment and the hospital VBP payment adjustment as described under sections 1886(q) and 1886(o) of the Act, respectively. Payments also may be reduced by the 1-percent adjustment under the HAC Reduction Program as described in section 1886(p) of the Act. We also make new technology add-on payments in accordance with section 1886(d)(5)(K) and (L) of the Act. Finally, we add the uncompensated care payment to the total claim payment amount. As noted in the formula above, we take uncompensated care payments and new technology add-on payments into consideration when calculating outlier payments.

2. Hospital-Specific Rate (Applicable Only to SCHs)

a. Calculation of Hospital-Specific Rate

Section 1886(b)(3)(C) of the Act provides that SCHs are paid based on whichever of the following rates yields the greatest aggregate payment: The Federal rate; the updated hospital-specific rate based on FY 1982 costs per discharge; the updated hospital-specific rate based on FY 1987 costs per discharge; the updated hospital-specific rate based on FY 1996 costs per discharge; or the updated hospital-specific rate based on FY 2006 costs per discharge to determine the rate that yields the greatest aggregate payment. As noted above, under section 205 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10, enacted on April 16, 2015), the MDH program is set to expire at the end of FY 2017.

For a more detailed discussion of the calculation of the hospital-specific rates, we refer readers to the FY 1984 IPPS interim final rule (48 FR 39772); the April 20, 1990 final rule with comment period (55 FR 15150); the FY 1991 IPPS final rule (55 FR 35994); and the FY 2001 IPPS final rule (65 FR 47082).

b. Updating the FY 1982, FY 1987, FY 1996, FY 2002 and FY 2006 Hospital-Specific Rate for FY 2018

Section 1886(b)(3)(B)(iv) of the Act provides that the applicable percentage increase applicable to the hospital-specific rates for SCHs equals the applicable percentage increase set forth in section 1886(b)(3)(B)(i) of the Act (that is, the same update factor as for all other hospitals subject

to the IPPS). Because the Act sets the update factor for SCHs equal to the update factor for all other IPPS hospitals, the update to the hospital-specific rates for SCHs is subject to

the amendments to section 1886(b)(3)(B) of the Act made by sections 3401(a) and 10319(a) of the Affordable Care Act. Accordingly, the applicable percentage

increases to the hospital-specific rates applicable to SCHs are the following:

FY 2018	Hospital submitted quality data and is a meaningful EHR user	Hospital submitted quality data and is NOT a meaningful EHR user	Hospital did NOT submit quality data and is a meaningful EHR user	Hospital did NOT submit quality data and is NOT a meaningful EHR user
Market Basket Rate-of-Increase	2.7	2.7	2.7	2.7
Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act	0.0	0.0	-0.675	-0.675
Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act	0.0	-2.025	0.0	-2.025
MFP Adjustment under Section 1886(b)(3)(B)(xi) of the Act	-0.6	-0.6	-0.6	-0.6
Statutory Adjustment under Section 1886(b)(3)(B)(xii) of the Act	-0.75	-0.75	-0.75	-0.75
Applicable Percentage Increase Applied to Hospital-Specific Rate	1.35	-0.675	0.675	-1.35

For a complete discussion of the applicable percentage increase applied to the hospital-specific rates for SCHs, we refer readers to section V.B. of the preamble of this final rule.

In addition, because SCHs use the same MS-DRGs as other hospitals when they are paid based in whole or in part on the hospital-specific rate, the hospital-specific rate is adjusted by a budget neutrality factor to ensure that changes to the MS-DRG classifications and the recalibration of the MS-DRG relative weights are made in a manner so that aggregate IPPS payments are unaffected. Therefore, the hospital-specific rate for an SCH is adjusted by the MS-DRG reclassification and recalibration budget neutrality factor of 0.997432, as discussed in section III. of this Addendum. The resulting rate is used in determining the payment rate that an SCH will receive for its discharges beginning on or after October 1, 2017. We note that, in this final rule, for FY 2018, we are not making a documentation and coding adjustment to the hospital-specific rate. We refer readers to section II.D. of the preamble of this final rule for a complete discussion regarding our policies and previously finalized policies (including our historical adjustments to the payment rates) relating to the effect of changes in documentation and coding that do not reflect real changes in case-mix.

Also, as discussed in section V.M. of the preamble of this final rule, we are including a factor of (1/1.006) in the calculation of the FY 2018 hospital-specific rates. Specifically, in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57058 through 57060), using our authority under section 1886(d)(5)(I)(i) of the Act, we finalized a policy to include a permanent factor of (1/0.998) and a temporary one-time factor of (1.006) in the calculation of the FY 2017 hospital-specific rates and to include a factor of (1/1.006) in the calculation of the FY 2018 hospital-specific rates to remove the temporary one-time factor of 1.006 applied in FY 2017 to address the effects of the 0.2 percent reduction to the rates for the 2-midnight policy in effect for FY 2014, FY 2015, and FY 2016. Therefore, in this final rule, for FY 2018, we are removing the temporary one-time prospective increase to the FY 2017 hospital-specific rates of 0.6 percent or a factor of 1.006.

III. Changes to Payment Rates for Acute Care Hospital Inpatient Capital-Related Costs for FY 2018

The PPS for acute care hospital inpatient capital-related costs was implemented for cost reporting periods beginning on or after October 1, 1991. Effective with that cost reporting period, over a 10-year transition period (which extended through FY 2001) the payment methodology for Medicare acute care hospital inpatient capital-related costs changed from a reasonable cost-based methodology to a prospective methodology (based fully on the Federal rate).

The basic methodology for determining Federal capital prospective rates is set forth in the regulations at 42 CFR 412.308 through 412.352. Below we discuss the factors that we used to determine the capital Federal rate for FY 2018, which will be effective for discharges occurring on or after October 1, 2017.

The 10-year transition period ended with hospital cost reporting periods beginning on or after October 1, 2001 (FY 2002). Therefore, for cost reporting periods beginning in FY 2002, all hospitals (except “new” hospitals under § 412.304(c)(2)) are paid based on the capital Federal rate. For FY 1992, we computed the standard Federal payment rate for capital-related costs under the IPPS by updating the FY 1989 Medicare inpatient capital cost per case by an actuarial estimate of the increase in Medicare inpatient capital costs per case. Each year after FY 1992, we update the capital standard Federal rate, as provided at § 412.308(c)(1), to account for capital input price increases and other factors. The regulations at § 412.308(c)(2) also provide that the capital Federal rate be adjusted annually by a factor equal to the estimated proportion of outlier payments under the capital Federal rate to total capital payments under the capital Federal rate. In addition, § 412.308(c)(3) requires that the capital Federal rate be reduced by an adjustment factor equal to the estimated proportion of payments for exceptions under § 412.348. (We note that, as discussed in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53705), there is generally no longer a need for an exceptions payment adjustment factor.) However, in limited circumstances, an additional payment exception for

extraordinary circumstances is provided for under § 412.348(f) for qualifying hospitals. Therefore, in accordance with § 412.308(c)(3), an exceptions payment adjustment factor may need to be applied if such payments are made. Section 412.308(c)(4)(ii) requires that the capital standard Federal rate be adjusted so that the effects of the annual DRG reclassification and the recalibration of DRG weights and changes in the geographic adjustment factor (GAF) are budget neutral.

Section 412.374 provides for payments to hospitals located in Puerto Rico under the IPPS for acute care hospital inpatient capital-related costs. In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57061 through 57062), we revised § 412.374 to add paragraph (e) to provide that, effective with discharges on or after October 1, 2016, capital IPPS payments to hospitals located in Puerto Rico are based on 100 percent of the Federal rate.

A. Determination of the Federal Hospital Inpatient Capital-Related Prospective Payment Rate Update for FY 2018

In the discussion that follows, we explain the factors that we used to determine the capital Federal rate for FY 2018. In particular, we explain why the FY 2018 capital Federal rate will increase approximately 1.61 percent, compared to the FY 2017 capital Federal rate. As discussed in the impact analysis in Appendix A to this final rule, we estimate that capital payments per discharge will increase approximately 2.5 percent during that same period. Because capital payments constitute approximately 10 percent of hospital payments, a 1-percent change in the capital Federal rate yields only approximately a 0.1 percent change in actual payments to hospitals.

1. Projected Capital Standard Federal Rate Update

a. Description of the Update Framework

Under § 412.308(c)(1), the capital standard Federal rate is updated on the basis of an analytical framework that takes into account changes in a capital input price index (CIP) and several other policy adjustment factors. Specifically, we adjust the projected CIP rate of change as appropriate each year for case-mix index-related changes, for intensity, and

for errors in previous CIPI forecasts. The update factor for FY 2018 under that framework is 1.3 percent based on a projected 1.3 percent increase in the 2014-based CIPI, a 0.0 percentage point adjustment for intensity, a 0.0 percentage point adjustment for case-mix, a 0.0 percentage point adjustment for the DRG reclassification and recalibration, and a forecast error correction of 0.0 percentage point. As discussed in section III.C. of this Addendum, we continue to believe that the CIPI is the most appropriate input price index for capital costs to measure capital price changes in a given year. We also explain the basis for the FY 2018 CIPI projection in that same section of this Addendum. Below we describe the policy adjustments that we are applying in the update framework for FY 2018.

The case-mix index is the measure of the average DRG weight for cases paid under the IPPS. Because the DRG weight determines the prospective payment for each case, any percentage increase in the case-mix index corresponds to an equal percentage increase in hospital payments.

The case-mix index can change for any of several reasons:

- The average resource use of Medicare patient changes (“real” case-mix change);
- Changes in hospital documentation and coding of patient records result in higher-weighted DRG assignments (“coding effects”); and
- The annual DRG reclassification and recalibration changes may not be budget neutral (“reclassification effect”).

We define real case-mix change as actual changes in the mix (and resource requirements) of Medicare patients as opposed to changes in documentation and coding behavior that result in assignment of cases to higher-weighted DRGs, but do not reflect higher resource requirements. The capital update framework includes the same case-mix index adjustment used in the former operating IPPS update framework (as discussed in the May 18, 2004 IPPS proposed rule for FY 2005 (69 FR 28816)). (We no longer use an update framework to make a recommendation for updating the operating IPPS standardized amounts as discussed in section II. of Appendix B to the FY 2006 IPPS final rule (70 FR 47707).)

For FY 2018, we are projecting a 0.5 percent total increase in the case-mix index. We estimated that the real case-mix increase will equal 0.5 percent for FY 2018. The net adjustment for change in case-mix is the difference between the projected real increase in case-mix and the projected total increase in case-mix. Therefore, the net adjustment for case-mix change in FY 2018 is 0.0 percentage point.

The capital update framework also contains an adjustment for the effects of DRG reclassification and recalibration. This adjustment is intended to remove the effect on total payments of prior year's changes to the DRG classifications and relative weights, in order to retain budget neutrality for all case-mix index-related changes other than those due to patient severity of illness. Due to the lag time in the availability of data, there is a 2-year lag in data used to determine

the adjustment for the effects of DRG reclassification and recalibration. For example, we have data available to evaluate the effects of the FY 2016 DRG reclassification and recalibration as part of our update for FY 2018. We assume, for purposes of this adjustment, that the estimate of FY 2016 DRG reclassification and recalibration resulted in no change in the case-mix when compared with the case-mix index that would have resulted if we had not made the reclassification and recalibration changes to the DRGs. Therefore, we are making a 0.0 percentage point adjustment for reclassification and recalibration in the update framework for FY 2018.

The capital update framework also contains an adjustment for forecast error. The input price index forecast is based on historical trends and relationships ascertainable at the time the update factor is established for the upcoming year. In any given year, there may be unanticipated price fluctuations that may result in differences between the actual increase in prices and the forecast used in calculating the update factors. In setting a prospective payment rate under the framework, we make an adjustment for forecast error only if our estimate of the change in the capital input price index for any year is off by 0.25 percentage point or more. There is a 2-year lag between the forecast and the availability of data to develop a measurement of the forecast error. Historically, when a forecast error of the CIPI is greater than 0.25 percentage point in absolute terms, it is reflected in the update recommended under this framework. A forecast error of 0.2 percentage point was calculated for the FY 2016 update, for which there are historical data. That is, current historical data indicate that the forecasted FY 2016 CIPI (1.3 percent) used in calculating the FY 2016 update factor was 0.2 percentage points higher than actual realized price increases (1.1 percent). However, as this does not exceed the 0.25 percentage point threshold, we are not making an adjustment for forecast error in the update for FY 2018.

Under the capital IPPS update framework, we also make an adjustment for changes in intensity. Historically, we calculated this adjustment using the same methodology and data that were used in the past under the framework for operating IPPS. The intensity factor for the operating update framework reflected how hospital services are utilized to produce the final product, that is, the discharge. This component accounts for changes in the use of quality-enhancing services, for changes within DRG severity, and for expected modification of practice patterns to remove noncost-effective services. Our intensity measure is based on a 5-year average.

We calculate case-mix constant intensity as the change in total cost per discharge, adjusted for price level changes (the CPI for hospital and related services) and changes in real case-mix. Without reliable estimates of the proportions of the overall annual intensity changes that are due, respectively, to ineffective practice patterns and the combination of quality-enhancing new technologies and complexity within the DRG

system, we assume that one-half of the annual change is due to each of these factors. The capital update framework thus provides an add-on to the input price index rate of increase of one-half of the estimated annual increase in intensity, to allow for increases within DRG severity and the adoption of quality-enhancing technology.

In this final rule, we are continuing to use a Medicare-specific intensity measure that is based on a 5-year adjusted average of cost per discharge for FY 2018 (we refer readers to the FY 2011 IPPS/LTCH PPS final rule (75 FR 50436) for a full description of our Medicare-specific intensity measure). Specifically, for FY 2018, we are using an intensity measure that is based on an average of cost per discharge data from the 5-year period beginning with FY 2011 and extending through FY 2015. Based on these data, we estimated that case-mix constant intensity declined during FYs 2011 through 2015. In the past, when we found intensity to be declining, we believed a zero (rather than a negative) intensity adjustment was appropriate. Consistent with this approach, because we estimate that intensity will decline during that 5-year period, we believe it is appropriate to continue to apply a zero intensity adjustment for FY 2018. Therefore, we are making a 0.0 percentage point adjustment for intensity in the update for FY 2018.

Above, we described the basis of the components we used to develop the 1.3 percent capital update factor under the capital update framework for FY 2018 as shown in the following table.

CMS FY 2018 UPDATE FACTOR TO THE CAPITAL FEDERAL RATE

Capital Input Price Index *	1.3
Intensity:	0.0
Case-Mix Adjustment Factors:	
Real Across DRG Change	0.5
Projected Case-Mix Change	0.5
Subtotal	1.3
Effect of FY 2016 Reclassification and Recalibration	0.0
Forecast Error Correction	0.0
Total Update	1.3

* The capital input price index represents the 2014-based CIPI.

b. Comparison of CMS and MedPAC Update Recommendation

In its March 2017 Report to Congress, MedPAC did not make a specific update recommendation for capital IPPS payments for FY 2018. (We refer readers to MedPAC's Report to the Congress: Medicare Payment Policy, March 2017, Chapter 3, available on the Web site at: <http://www.medpac.gov>.)

2. Outlier Payment Adjustment Factor

Section 412.312(c) establishes a unified outlier payment methodology for inpatient operating and inpatient capital-related costs. A single set of thresholds is used to identify outlier cases for both inpatient operating and inpatient capital-related payments. Section 412.308(c)(2) provides that the standard Federal rate for inpatient capital-related costs be reduced by an adjustment factor equal to

the estimated proportion of capital-related outlier payments to total inpatient capital-related PPS payments. The outlier thresholds are set so that operating outlier payments are projected to be 5.1 percent of total operating IPPS DRG payments.

For FY 2017, we estimated that outlier payments for capital would equal 6.14 percent of inpatient capital-related payments based on the capital Federal rate in FY 2017. Based on the thresholds as set forth in section II.A. of this Addendum, we estimate that outlier payments for capital-related costs will equal 5.16 percent for inpatient capital-related payments based on the capital Federal rate in FY 2018. Therefore, we are applying an outlier adjustment factor of 0.9484 in determining the capital Federal rate for FY 2018. Thus, we estimate that the percentage of capital outlier payments to total capital Federal rate payments for FY 2018 will be lower than the percentage for FY 2017.

The outlier reduction factors are not built permanently into the capital rates; that is, they are not applied cumulatively in determining the capital Federal rate. The FY 2018 outlier adjustment of 0.9484 is a 1.04 percent change from the FY 2017 outlier adjustment of 0.9386. Therefore, the net change in the outlier adjustment to the capital Federal rate for FY 2018 is 1.0104(0.9484/0.9386). Thus, the outlier adjustment will increase the FY 2018 capital Federal rate by 1.04 percent compared to the FY 2017 outlier adjustment.

3. Budget Neutrality Adjustment Factor for Changes in DRG Classifications and Weights and the GAF

Section 412.308(c)(4)(ii) requires that the capital Federal rate be adjusted so that aggregate payments for the fiscal year based on the capital Federal rate after any changes resulting from the annual DRG reclassification and recalibration and changes in the GAF are projected to equal aggregate payments that would have been made on the basis of the capital Federal rate without such changes. The budget neutrality factor for DRG reclassifications and recalibration nationally is applied in determining the capital IPPS Federal rate, and is applicable for all hospitals, including those hospitals located in Puerto Rico.

To determine the national capital rate factors for FY 2018, we compared estimated aggregate capital Federal rate payments based on the FY 2017 MS-DRG classifications and relative weights and the FY 2017 GAF to estimated aggregate capital Federal rate payments based on the FY 2017 MS-DRG classifications and relative weights and the FY 2018 GAFs. To achieve budget neutrality for the changes in the national GAFs, based on calculations using updated data, we applied an incremental budget neutrality adjustment factor of 0.9994 for FY 2018 to the previous cumulative FY 2017 adjustment factor of 0.9850, yielding an adjustment factor of 0.9844 through FY 2018.

We then compared estimated aggregate capital Federal rate payments based on the FY 2017 MS-DRG relative weights and the FY 2018 GAFs to estimated aggregate capital Federal rate payments based on the cumulative effects of the FY 2018 MS-DRG

classifications and relative weights and the FY 2018 GAFs. The incremental adjustment factor for DRG classifications and changes in relative weights is 0.9993. The cumulative adjustment factor for MS-DRG classifications and changes in relative weights and for changes in the GAFs through FY 2018 is 0.9837. (We note that all the values are calculated with unrounded numbers.)

The GAF/DRG budget neutrality adjustment factors are built permanently into the capital rates; that is, they are applied cumulatively in determining the capital Federal rate. This follows the requirement under § 412.308(c)(4)(ii) that estimated aggregate payments each year be no more or less than they would have been in the absence of the annual DRG reclassification and recalibration and changes in the GAFs.

The methodology used to determine the recalibration and geographic adjustment factor (GAF/DRG) budget neutrality adjustment is similar to the methodology used in establishing budget neutrality adjustments under the IPPS for operating costs. One difference is that, under the operating IPPS, the budget neutrality adjustments for the effect of geographic reclassifications are determined separately from the effects of other changes in the hospital wage index and the MS-DRG relative weights. Under the capital IPPS, there is a single GAF/DRG budget neutrality adjustment factor for changes in the GAF (including geographic reclassification) and the MS-DRG relative weights. In addition, there is no adjustment for the effects that geographic reclassification has on the other payment parameters, such as the payments for DSH or IME.

The cumulative adjustment factor of 0.9986 (the product of the incremental national GAF budget neutrality adjustment factor of 0.9994 and the incremental DRG budget neutrality adjustment factor of 0.9993) accounts for the MS-DRG reclassifications and recalibration and for changes in the GAFs. It also incorporates the effects on the GAFs of FY 2018 geographic reclassification decisions made by the MGCRCB compared to FY 2017 decisions. However, it does not account for changes in payments due to changes in the DSH and IME adjustment factors.

As discussed in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57062), we made an adjustment of (1/0.998) to the national capital Federal rate to remove the 0.2 percent reduction (an adjustment factor of 0.998) to the national capital Federal rate to offset the estimated increase in capital IPPS expenditures associated with the 2-midnight policy. This was consistent with the adjustment to the operating IPPS standardized amount and the hospital-specific payment rates. In addition, consistent with the approach for the operating IPPS standardized amount and hospital-specific payment rates and for the reasons discussed in the FY 2017 IPPS/LTCH PPS final rule, we made a one-time prospective adjustment of 1.006 in FY 2017 to the national capital Federal rate to address the effect of the 0.2 percent reduction to the national capital Federal rates in effect for FY 2014, FY 2015, and FY 2016. Furthermore, as provided for in the FY 2017 IPPS/LTCH PPS

final rule (81 FR 57294) we are removing this one-time prospective adjustment through an adjustment of (1/1.006) to the national capital Federal rate in FY 2018, consistent with the approach for the operating IPPS standardized amount and hospital-specific payment rates (as discussed in section V.M. of the preamble of this final rule). We refer readers to sections V.M. and VI.C. of the preamble of this final rule for a complete discussion of these issues.

4. Capital Federal Rate for FY 2018

For FY 2017, we established a capital Federal rate of \$446.79 (81 FR 68947 through 68949 (Correction Notice)). We are establishing an update of 1.61 percent in determining the FY 2018 capital Federal rate for all hospitals. As a result of this update, the budget neutrality factors discussed earlier, and the adjustment to remove the one-time 0.6 percent adjustment made in FY 2017 to address the effect of the 0.2 percent reduction to the national capital Federal rates in effect for FY 2014, FY 2015, and FY 2016, as finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57294), we are establishing a national capital Federal rate of \$453.97 for FY 2018. The national capital Federal rate for FY 2018 was calculated as follows:

- The FY 2018 update factor is 1.0130; that is, the update is 1.3 percent.
- The FY 2018 budget neutrality adjustment factor that is applied to the capital Federal rate for changes in the MS-DRG classifications and relative weights and changes in the GAFs is 0.9986.
- The FY 2018 outlier adjustment factor is 0.9484.
- The 2-midnight policy adjustment to remove the one-time 0.6 percent adjustment is 1/1.006.

(We note that, as discussed in section VI.C. of the preamble of this final rule, we are not making an additional MS-DRG documentation and coding adjustment to the capital IPPS Federal rate for FY 2018.)

Because the FY 2018 capital Federal rate has already been adjusted for differences in case-mix, wages, cost-of-living, indirect medical education costs, and payments to hospitals serving a disproportionate share of low-income patients, we are not making additional adjustments in the capital Federal rate for these factors, other than the budget neutrality factor for changes in the MS-DRG classifications and relative weights and for changes in the GAFs.

We are providing the following chart that shows how each of the factors and adjustments for FY 2018 affects the computation of the FY 2018 national capital Federal rate in comparison to the FY 2017 national capital Federal rate as presented in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57291 through 57295) as corrected in the Correction Notice published October 5, 2016 (81 FR 68954). The FY 2018 update factor has the effect of increasing the capital Federal rate by 1.3 percent compared to the FY 2017 capital Federal rate. The GAF/DRG budget neutrality adjustment factor has the effect of decreasing the capital Federal rate by 0.14 percent. The FY 2018 outlier adjustment factor has the effect of increasing the capital Federal rate by 1.04 percent compared to the FY 2017 capital Federal rate. The removal of

the one-time 0.6 percent adjustment for FY 2017 relating to the 2-midnight policy has the effect of decreasing the capital Federal rate

by 0.60 percent. The combined effect of all the changes will increase the national capital Federal rate by approximately 1.61 percent

compared to the FY 2017 national capital Federal rate.

COMPARISON OF FACTORS AND ADJUSTMENTS: FY 2017 CAPITAL FEDERAL RATE AND FY 2018 CAPITAL FEDERAL RATE

	FY 2017	FY 2018	Change	Percent change
Update Factor ¹	1.0090	1.0130	1.0130	1.30
GAF/DRG Adjustment Factor ¹	0.9990	0.9986	0.9986	– 0.14
Outlier Adjustment Factor ²	0.9386	0.9484	1.0104	1.04
Removal of One-Time 2-Midnight Policy Adjustment Factor	1.0060	1/1.006	0.9940	– 0.60
Capital Federal Rate	\$446.79	\$453.97	1.0161	³ 1.61

¹ The update factor and the GAF/DRG budget neutrality adjustment factors are built permanently into the capital Federal rates. Thus, for example, the incremental change from FY 2017 to FY 2018 resulting from the application of the 0.9986 GAF/DRG budget neutrality adjustment factor for FY 2018 is a net change of 0.9986 (or – 0.14 percent).

² The outlier reduction factor is not built permanently into the capital Federal rate; that is, the factor is not applied cumulatively in determining the capital Federal rate. Thus, for example, the net change resulting from the application of the FY 2018 outlier adjustment factor is 0.9484/0.9386 or 1.0104 (or 1.04 percent).

³ Percent change may not sum due to rounding.

In this final rule, we also are providing the following chart that shows how the final FY

2018 capital Federal rate differs from the proposed FY 2018 capital Federal rate as

presented in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20179 through 20182).

COMPARISON OF FACTORS AND ADJUSTMENTS: PROPOSED FY 2018 CAPITAL FEDERAL RATE AND FINAL FY 2018 CAPITAL FEDERAL RATE

	Proposed FY 2018	Final FY 2018	Change	Percent change
Update Factor ¹	1.0120	1.0130	1.0010	0.10
GAF/DRG Adjustment Factor ¹	0.9992	0.9986	0.9994	– 0.06
Outlier Adjustment Factor ²	0.9434	0.9484	1.0053	0.53
Removal of One-Time 2-Midnight Policy Adjustment Factor	1/1.006	1/1.006	0.0000	– 0.00
Capital Federal Rate	\$451.37	\$453.97	1.0458	0.58

B. Calculation of the Inpatient Capital-Related Prospective Payments for FY 2018

For purposes of calculating payments for each discharge during FY 2018, the capital Federal rate is adjusted as follows: (Standard Federal Rate) × (DRG weight) × (GAF) × (COLA for hospitals located in Alaska and Hawaii) × (1 + DSH Adjustment Factor + IME Adjustment Factor, if applicable). The result is the adjusted capital Federal rate.

Hospitals also may receive outlier payments for those cases that qualify under the thresholds established for each fiscal year. Section 412.312(c) provides for a single set of thresholds to identify outlier cases for both inpatient operating and inpatient capital-related payments. The outlier thresholds for FY 2018 are in section II.A. of this Addendum. For FY 2018, a case would qualify as a cost outlier if the cost for the case plus the (operating) IME and DSH payments (including both the empirically justified Medicare DSH payment and the estimated uncompensated care payment, as discussed in section II.A.4.g.(1) of this Addendum) is greater than the prospective payment rate for the MS-DRG plus the fixed-loss amount of \$26,601.

Currently, as provided under § 412.304(c)(2), we pay a new hospital 85 percent of its reasonable costs during the first 2 years of operation unless it elects to receive payment based on 100 percent of the capital Federal rate. Effective with the third year of operation, we pay the hospital based on 100 percent of the capital Federal rate (that is, the

same methodology used to pay all other hospitals subject to the capital PPS).

C. Capital Input Price Index

1. Background

Like the operating input price index, the capital input price index (CIPI) is a fixed-weight price index that measures the price changes associated with capital costs during a given year. The CIPI differs from the operating input price index in one important aspect—the CIPI reflects the vintage nature of capital, which is the acquisition and use of capital over time. Capital expenses in any given year are determined by the stock of capital in that year (that is, capital that remains on hand from all current and prior capital acquisitions). An index measuring capital price changes needs to reflect this vintage nature of capital. Therefore, the CIPI was developed to capture the vintage nature of capital by using a weighted-average of past capital purchase prices up to and including the current year.

We periodically update the base year for the operating and capital input price indexes to reflect the changing composition of inputs for operating and capital expenses. For this FY 2018 IPPS/LTCH PPS final rule, we are rebasing and revising the IPPS operating and capital market baskets to reflect a 2014 base year. For a complete discussion of this rebasing, we refer readers to section IV. of the preamble of this final rule.

2. Forecast of the CIPI for FY 2018

Based on IGI, Inc.'s second quarter 2017 forecast, for this final rule, we are forecasting the 2014-based CIPI to increase 1.3 percent in FY 2018. This reflects a projected 1.6 percent increase in vintage-weighted depreciation prices (building and fixed equipment, and movable equipment), and a projected 3.5 percent increase in other capital expense prices in FY 2018, partially offset by a projected 1.3 percent decline in vintage-weighted interest expense prices in FY 2018. The weighted average of these three factors produces the forecasted 1.3 percent increase for the 2014-based CIPI in FY 2018.

IV. Changes to Payment Rates for Excluded Hospitals: Rate-of-Increase Percentages for FY 2018

Payments for services furnished in children's hospitals, 11 cancer hospitals, and hospitals located outside the 50 States, the District of Columbia and Puerto Rico (that is, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa) that are excluded from the IPPS are made on the basis of reasonable costs based on the hospital's own historical cost experience, subject to a rate-of-increase ceiling. A per discharge limit (the target amount as defined in § 413.40(a) of the regulations) is set for each hospital based on the hospital's own cost experience in its base year, and updated annually by a rate-of-increase percentage specified in § 413.40(c)(3). In addition, in the

FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20029), we proposed that, for cost reporting periods beginning during FY 2018, the annual update to the target amount for long-term care neoplastic disease hospitals (hospitals described under § 412.23(j); now § 412.22(i) in this final rule) also would be the rate-of-increase percentage specified in § 413.0(c)(3). (We note that, in accordance with § 403.752(a), religious nonmedical health care institutions (RNHCIs) are also subject to the rate-of-increase limits established under § 413.40 of the regulations.)

As discussed in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20003 and 20004), the proposed FY 2018 rate-of-increase percentage for updating the target amounts for the 11 cancer hospitals, children's hospitals, the short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, and RNHCIs is the estimated percentage increase in the IPPS operating market basket for FY 2018, in accordance with applicable regulations at § 413.40. Based on IGI's 2016 fourth quarter forecast, we estimated that the proposed 2014-based IPPS operating market basket update for FY 2018 was 2.9 percent (that is, the estimate of the market basket rate-of-increase). However, we proposed that if more recent data became available for the final rule, we would use them to calculate the IPPS operating market basket update for FY 2018. For this final rule, based on IGI's 2017 second quarter forecast (which is the most recent available data), we estimated that the 2014-based IPPS operating market basket update for FY 2018 is 2.7 percent (that is, the estimate of the market basket rate-of-increase). Therefore, for children's hospitals, the 11 cancer hospitals, hospitals located outside the 50 States, the District of Columbia and Puerto Rico (that is, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa), as well as long-term care neoplastic disease hospitals, which will now be called extended neoplastic disease care hospitals as discussed in section VII. of the preamble to this final rule, and RNHCIs, the FY 2018 rate-of-increase percentage that will be applied to the FY 2017 target amounts in order to determine the FY 2018 target amounts is 2.7 percent.

The IRF PPS, the IPF PPS, and the LTCH PPS are updated annually. We refer readers to section VIII. of the preamble of this final rule and section V. of the Addendum to this final rule for the update changes to the Federal payment rates for LTCHs under the LTCH PPS for FY 2018. The annual updates for the IRF PPS and the IPF PPS are issued by the agency in separate **Federal Register** documents.

V. Changes to the Payment Rates for the LTCH PPS for FY 2018

A. LTCH PPS Standard Federal Payment Rate for 2018

1. Overview

In section VIII. of the preamble of this final rule, we discuss our annual updates to the payment rates, factors, and specific policies under the LTCH PPS for FY 2018.

Under § 412.523(c)(3)(ii) of the regulations, for LTCH PPS rate years beginning with RY 2004 through RY 2006, we updated the standard Federal payment rate annually by a factor to adjust for the most recent estimate of the increases in prices of an appropriate market basket of goods and services for LTCHs. We established this policy of annually updating the standard Federal payment rate because, at that time, we believed that was the most appropriate method for updating the rate for years after the initial implementation of the LTCH PPS in FY 2003. Therefore, under § 412.523(c)(3)(ii), for RYs 2004 through 2006, the annual update to the LTCH PPS standard Federal payment rate was equal to the previous rate year's Federal rate updated by the most recent estimate of increases in the appropriate market basket of goods and services included in covered inpatient LTCH services.

In determining the annual update to the standard Federal payment rate for RY 2007, based on our ongoing monitoring activity, we believed that, rather than solely using the most recent estimate of the LTCH PPS market basket update as the basis of the annual update factor, it was appropriate to adjust the standard Federal payment rate to account for the effect of documentation and coding in a prior period that was unrelated to patients' severity of illness (71 FR 27818). Accordingly, we established under § 412.523(c)(3)(iii) that the annual update to the standard Federal payment rate for RY 2007 was zero percent based on the most recent estimate of the LTCH PPS market basket at that time, offset by an adjustment to account for changes in case-mix in prior periods due to the effect of documentation and coding that were unrelated to patients' severity of illness. For RY 2008 through FY 2011, we also made an adjustment to account for the effect of documentation and coding that was unrelated to patients' severity of illness in establishing the annual update to the standard Federal payment rate as set forth in the regulations at §§ 412.523(c)(3)(iv) through (c)(3)(vii). For FYs 2012 through 2017, we updated the standard Federal payment rate by the most recent estimate of the LTCH PPS market basket at that time, including additional statutory adjustments required by sections 1886(m)(3)(A)(i) (citing sections 1886(b)(3)(B)(xi)(II), 1886(m)(3)(A)(ii), and 1886(m)(4) of the Act as set forth in the regulations at §§ 412.523(c)(3)(viii) through (c)(3)(xiii)).

Section 1886(m)(3)(A) of the Act, as added by section 3401(c) of the Affordable Care Act, specifies that, for rate year 2010 and each subsequent rate year, any annual update to the standard Federal payment rate shall be reduced:

- For rate year 2010 through 2019, by the other adjustment specified in section 1886(m)(3)(A)(ii) and (m)(4) of the Act; and
- For rate year 2012 and each subsequent year, by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act (which we refer to as "the multifactor productivity (MFP) adjustment") as discussed in section VIII.E.2. of the preamble of this final rule.

Section 1886(m)(3)(B) of the Act provides that the application of paragraph (3) of

section 1886(m) of the Act may result in the annual update being less than zero for a rate year, and may result in payment rates for a rate year being less than such payment rates for the preceding rate year. (As noted in section VIII.C.2.b. of the preamble of this final rule, the annual update to the LTCH PPS occurs on October 1 and we have adopted the term "fiscal year" (FY) rather than "rate year" (RY) under the LTCH PPS beginning October 1, 2010. Therefore, for purposes of clarity, when discussing the annual update for the LTCH PPS, including the provisions of the Affordable Care Act, we use the term "fiscal year" rather than "rate year" for 2011 and subsequent years.) Notwithstanding those provisions, however, section 411(e) of Public Law 114–10 (the MACRA) requires a 1 percent update in FY 2018.

For FY 2017, consistent with our historical practice, we established an update to the LTCH PPS standard Federal payment rate based on the full estimated LTCH PPS market basket increase of 2.8 percent and the 1.05 percentage point reductions required by sections 1886(m)(3)(A)(i) and 1886(m)(3)(A)(ii) with 1886(m)(4)(F) of the Act. Accordingly, at § 412.523(c)(3)(xiii) of the regulations, we established an annual update of 1.75 percent to the standard Federal payment rate for FY 2017 (81 FR 57296 through 57297). In addition, as discussed in that same final rule, the annual update for FY 2017 was further reduced by 2.0 percentage points for LTCHs that failed to submit quality reporting data in accordance with the requirements of the LTCH QRP under section 1886(m)(5) of the Act.

Section 411(e) of the MACRA amended section 1886(m)(3) of the Act by providing an additional special rule for FY 2018. Specifically, as amended, section 1886(m)(3)(C) of the Act requires that the annual update for FY 2018, after applications of the reductions for the MFP adjustment and the "other adjustment" (under section 1886(m)(3)(A)) is 1 percent. (For additional details, refer to section VIII.C.2. of the preamble of this final rule.) Accordingly, in this final rule, we are providing an annual update to the LTCH PPS standard Federal payment rate of 1 percent for FY 2018 as required by section 411(e)(2) of the MACRA. For LTCHs that fail to submit the required quality reporting data for FY 2017 in accordance with the LTCH QRP, the annual update is reduced by 2.0 percentage points as required by section 1886(m)(5) of the Act. Accordingly, we are providing an annual update to the LTCH PPS standard Federal payment rate of –1.0 percent for LTCHs that fail to submit the required quality reporting data for FY 2018 (that is, the full update of 1 percent and less 2.0 percentage points for failure to submit quality reporting data as required by section 1886(m)(5) of the Act).

2. Development of the FY 2018 LTCH PPS Standard Federal Payment Rate

Consistent with our historical practice, for FY 2018, we are applying the annual update to the LTCH PPS standard Federal payment rate from the previous year. Furthermore, in determining the LTCH PPS standard Federal payment rate for FY 2018, we also are making

certain regulatory adjustments, consistent with past practices. Specifically, in determining the FY 2018 LTCH PPS standard Federal payment rate, we applied a budget neutrality adjustment factor for the changes related to the area wage adjustment (that is, changes to the wage data and labor-related share) in accordance with § 412.523(d)(4) and a budget neutrality adjustment factor for the change to the SSO payment methodology (discussed in VIII.D. of the preamble of this final rule).

For FY 2017, we established an annual update to the LTCH PPS standard Federal payment rate of 1.75 percent based on the full estimated LTCH PPS market basket increase of 2.8 percent, less the MFP adjustment of 0.3 percentage point consistent with section 1886(m)(3)(A)(i) of the Act and less the 0.75 percentage point required by sections 1886(m)(3)(A)(ii) and (m)(4)(F) of the Act. Accordingly, at § 412.523(c)(3)(xiii), we established an annual update to the LTCH PPS standard Federal payment rate for FY 2017 of 1.75 percent. That is, we applied an update factor of 1.0175 to the FY 2016 Federal rate of \$41,762.85 to determine the FY 2017 LTCH PPS standard Federal payment rate. We also applied an area wage level budget neutrality factor for FY 2017 of 0.999593 to the LTCH PPS standard Federal payment rate to ensure that any changes to the area wage level adjustment would not result in any change in estimated aggregate LTCH PPS payments. Consequently, we established an LTCH PPS standard Federal payment rate for FY 2017 of \$42,476.41 (calculated as $\$41,762.85 \times 1.0175 \times 0.999593$) (81 FR 57297).

In this final rule, as required by statute, we are establishing an annual update to the LTCH PPS standard Federal payment rate of 1 percent for FY 2018 (as described above). Accordingly, under § 412.523(c)(3)(xiii), we are applying a factor of 1.01 to the FY 2017 LTCH PPS standard Federal payment rate of \$42,476.41 to determine the FY 2018 LTCH PPS standard Federal payment rate. Also, under finalized § 412.523(c)(3)(iv), in conjunction with the provisions of § 412.523(c)(4), we are applying an annual update to the LTCH PPS standard Federal payment rate of -1.0 percent (that is, a update factor of 0.99) for FY 2018 for LTCHs that fail to submit the required quality reporting data for FY 2018 as required under the LTCH QRP. Consistent with § 412.523(d)(4), we also are applying an area wage level budget neutrality factor to the FY 2018 LTCH PPS standard Federal payment rate of 1.0006434, based on the best available data at this time, to ensure that any changes to the area wage level adjustment (that is, the annual update of the wage index values and labor-related share) would not result in any change (increase or decrease) in estimated aggregate LTCH PPS standard Federal rate payments. Finally, we are applying a budget neutrality adjustment of 0.9651 for our changes to the SSO payment methodology (discussed in VIII.D. of the preamble of this final rule). Accordingly, we are establishing an LTCH PPS standard Federal payment rate of \$41,430.56 (calculated as $\$42,476.41 \times 1.01 \times 1.0006434 \times 0.9651$) for FY 2018. For LTCHs that fail to submit quality reporting

data for FY 2018, in accordance with the requirements of the LTCHQRP under section 1886(m)(5) of the Act, we are establishing an LTCH PPS standard Federal payment rate of \$40,610.16 (calculated as $\$42,476.41 \times 0.99 \times 1.0006434 \times 0.9651$) for FY 2018.

B. Adjustment for Area Wage Levels Under the LTCH PPS for FY 2018

1. Background

Under the authority of section 123 of the BBRA, as amended by section 307(b) of the BIPA, we established an adjustment to the LTCH PPS standard Federal payment rate to account for differences in LTCH area wage levels under § 412.525(c). The labor-related share of the LTCH PPS standard Federal payment rate is adjusted to account for geographic differences in area wage levels by applying the applicable LTCH PPS wage index. The applicable LTCH PPS wage index is computed using wage data from inpatient acute care hospitals without regard to reclassification under section 1886(d)(8) or section 1886(d)(10) of the Act.

When we implemented the LTCH PPS, we established a 5-year transition to the full area wage level adjustment. The area wage level adjustment was completely phased-in for cost reporting periods beginning in FY 2007. Therefore, for cost reporting periods beginning on or after October 1, 2006, the applicable LTCH area wage index values are the full LTCH PPS area wage index values calculated based on acute care hospital inpatient wage index data without taking into account geographic reclassification under section 1886(d)(8) and section 1886(d)(10) of the Act. For additional information on the phase-in of the area wage level adjustment under the LTCH PPS, we refer readers to the August 30, 2002 LTCH PPS final rule (67 FR 56015 through 56019) and the RY 2008 LTCH PPS final rule (72 FR 26891).

2. Geographic Classifications (Labor Market Areas) for the LTCH PPS Standard Federal Payment Rate

In adjusting for the differences in area wage levels under the LTCH PPS, the labor-related portion of an LTCH's Federal prospective payment is adjusted by using an appropriate area wage index based on the geographic classification (labor market area) in which the LTCH is located. Specifically, the application of the LTCH PPS area wage level adjustment under existing § 412.525(c) is made based on the location of the LTCH—either in an “urban area,” or a “rural area,” as defined in § 412.503. Under § 412.503, an “urban area” is defined as a Metropolitan Statistical Area (MSA) (which includes a Metropolitan division, where applicable), as defined by the Executive OMB and a “rural area” is defined as any area outside of an urban area. (Information on OMB's MSA delineations based on the 2010 standards can be found at: https://obamawhitehouse.archives.gov/sites/default/files/omb/assets/fedreg_2010/06282010_metro_standards-Complete.pdf.)

The CBSA-based geographic classifications (labor market area definitions) currently used under the LTCH PPS, effective for discharges occurring on or after October 1, 2014, are based on the OMB labor market area

delineations based on the 2010 Decennial Census data. The current statistical areas (which were implemented beginning with FY 2015) are based on revised OMB delineations issued on February 28, 2013, in OMB Bulletin No. 13–01. We adopted these labor market area delineations because they are based on the best available data that reflect the local economies and area wage levels of the hospitals that are currently located in these geographic areas. We also believe that these OMB delineations will ensure that the LTCH PPS area wage level adjustment most appropriately accounts for and reflects the relative hospital wage levels in the geographic area of the hospital as compared to the national average hospital wage level. We noted that this policy was consistent with the IPPS policy adopted in FY 2015 under § 412.64(b)(1)(ii)(D) of the regulations (79 FR 49951 through 49963). (For additional information on the CBSA-based labor market area (geographic classification) delineations currently used under the LTCH PPS and the history of the labor market area definitions used under the LTCH PPS, we refer readers to the FY 2015 IPPS/LTCH PPS final rule (79 FR 50180 through 50185).)

In general, it is our historical practice to update the CBSA-based labor market area delineations annually based on the most recent updates issued by OMB. Generally, OMB issues major revisions to statistical areas every 10 years, based on the results of the decennial census. However, OMB occasionally issues minor updates and revisions to statistical areas in the years between the decennial censuses. As discussed in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56913 through 56914), OMB issued OMB Bulletin No. 15–01 on July 15, 2015 to update and supersede Bulletin No. 13–10. Bulletin No. 15–01 and its attachment provide detailed information on the update to statistical areas since the February 28, 2013 release of Bulletin No. 13–10 and are based on the application of the 2010 Standards for Delineating Metropolitan and Micropolitan Statistical Areas to Census Bureau population estimates for July 1, 2012, and July 1, 2013. A copy of this bulletin may be obtained on the Web site at: <https://obamawhitehouse.archives.gov/sites/default/files/omb/bulletins/2015/15-01.pdf>.

We believe that these revisions to the CBSA-based labor market area delineations will ensure that the LTCH PPS area wage level adjustment most appropriately accounts for and reflects the relative hospital wage levels in the geographic area of the hospital as compared to the national average hospital wage level based on the best available data that reflect the local economies and area wage levels of the hospitals that are currently located in these geographic areas (81 FR 57298). Therefore, we are continuing to use the CSBA-based labor market area delineations adopted under the LTCH PPS, effective October 1, 2017 (as adopted in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57298)). Moreover, the FY 2018 LTCH PPS wage index values in Tables 12A and 12B listed in section VI. of the Addendum of this final rule (which are available via the Internet on the CMS Web site) reflect the revisions to the CBSA-based labor market

area delineations described above. We note that, as discussed in section III.A.2. of the preamble of this final rule, the revisions to the CBSA-based delineations also were adopted under the IPPS, effective beginning October 1, 2016.

3. Labor-Related Share for the LTCH PPS Standard Federal Payment Rate

Under the payment adjustment for the differences in area wage levels under § 412.525(c), the labor-related share of an LTCH's standard Federal payment rate payment is adjusted by the applicable wage index for the labor market area in which the LTCH is located. The LTCH PPS labor-related share currently represents the sum of the labor-related portion of operating costs and a labor-related portion of capital costs using the applicable LTCH PPS market basket. Additional background information on the historical development of the labor-related share under the LTCH PPS can be found in the RY 2007 LTCH PPS final rule (71 FR 27810 through 27817 and 27829 through 27830) and the FY 2012 IPPS/LTCH PPS final rule (76 FR 51766 through 51769 and 51808).

For FY 2013, we rebased and revised the market basket used under the LTCH PPS by adopting the newly created FY 2009-based LTCH-specific market basket. In addition, beginning in FY 2013, we determined the labor-related share annually as the sum of the relative importance of each labor-related cost category of the 2009-based LTCH-specific market basket for the respective fiscal year based on the best available data. (For more details, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53477 through 53479).) As noted previously, we rebased and revised the 2009-based LTCH-specific market basket to reflect a 2013 base year. In conjunction with that policy, as discussed in section VIII.C. of the preamble of this final rule, we are establishing that the LTCH PPS labor-related share for FY 2018 is the sum of the FY 2018 relative importance of each labor-related cost category in the 2013-based LTCH market basket using the most recent available data. Specifically, we are establishing that the labor-related share for FY 2018 includes the sum of the labor-related portion of operating costs from the 2013-based LTCH market basket (that is, the sum of the FY 2018 relative importance share of Wages and Salaries; Employee Benefits; Professional Fees: Labor-Related; Administrative and Facilities Support Services; Installation, Maintenance, and Repair Services; All Other: Labor-related Services) and a portion of the Capital-Related cost weight from the 2013-based LTCH PPS market basket. Based on IGI's second quarter 2017 forecast of the 2013-based LTCH market basket, we are establishing a labor-related share under the LTCH PPS for FY 2018 of 66.2 percent. This labor-related share is determined using the same methodology as employed in calculating all previous LTCH PPS labor-related shares. Consistent with our historical practice, as we proposed, we used more recent data available to determine the final FY 2018 labor-related share in this final rule.

The labor-related share for FY 2018 is the sum of the FY 2018 relative importance of each labor-related cost category, and reflects

the different rates of price change for these cost categories between the base year (2013) and FY 2018. The sum of the relative importance for FY 2018 for operating costs (Wages and Salaries; Employee Benefits; Professional Fees: Labor-Related; Administrative and Facilities Support Services; Installation, Maintenance, and Repair Services; All Other: Labor-Related Services) is 62.0 percent. The portion of capital-related costs that is influenced by the local labor market is estimated to be 46 percent (the same percentage applied to the 2009-based LTCH-specific market basket). Because the relative importance for capital-related costs under our policies is 9.2 percent of the 2013-based LTCH market basket in FY 2018, we are taking 46 percent of 9.2 percent to determine the labor-related share of capital-related costs for FY 2018 (0.46×9.2). The result is 4.2 percent, which we added to 62.0 percent for the operating cost amount to determine the total labor-related share for FY 2018. Therefore, the labor-related share under the LTCH PPS for FY 2018 is 66.2 percent.

4. Wage Index for FY 2018 for the LTCH PPS Standard Federal Payment Rate

Historically, we have established LTCH PPS area wage index values calculated from acute care IPPS hospital wage data without taking into account geographic reclassification under sections 1886(d)(8) and 1886(d)(10) of the Act (67 FR 56019). The area wage level adjustment established under the LTCH PPS is based on an LTCH's actual location without regard to the "urban" or "rural" designation of any related or affiliated provider.

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57299 through 57301), we calculated the FY 2017 LTCH PPS area wage index values using the same data used for the FY 2017 acute care hospital IPPS (that is, data from cost reporting periods beginning during FY 2013), without taking into account geographic reclassification under sections 1886(d)(8) and 1886(d)(10) of the Act, as these were the most recent complete data available at that time. In that same final rule, we indicated that we computed the FY 2017 LTCH PPS area wage index values, consistent with the urban and rural geographic classifications (labor market areas) that were in place at that time and consistent with the pre-reclassified IPPS wage index policy (that is, our historical policy of not taking into account IPPS geographic reclassifications in determining payments under the LTCH PPS). As with the IPPS wage index, wage data for multicampus hospitals with campuses located in different labor market areas (CBSAs) are apportioned to each CBSA where the campus (or campuses) are located. We also continued to use our existing policy for determining area wage index values for areas where there are no IPPS wage data.

Consistent with our historical methodology, as discussed in the FY 2018 IPPS/LTCH PPS proposed rule, to determine the applicable area wage index values for the FY 2018 LTCH PPS standard Federal payment rate, under the broad authority of section 123 of the BBRA, as amended by section 307(b) of the BIPA, as we proposed, we used wage data collected from cost

reports submitted by IPPS hospitals for cost reporting periods beginning during FY 2014, without taking into account geographic reclassification under sections 1886(d)(8) and 1886(d)(10) of the Act because these data are the most recent complete data available. We also note that these are the same data we are using to compute the FY 2018 acute care hospital inpatient wage index, as discussed in section III. of the preamble of this final rule. We computed the FY 2018 LTCH PPS standard Federal payment rate area wage index values consistent with the "urban" and "rural" geographic classifications (that is, labor market area delineations, including the updates, as previously discussed in section V.B. of this Addendum) and our historical policy of not taking into account IPPS geographic reclassifications under sections 1886(d)(8) and 1886(d)(10) of the Act in determining payments under the LTCH PPS. As we also proposed, we are continuing to apportion wage data for multicampus hospitals with campuses located in different labor market areas to each CBSA where the campus or campuses are located, consistent with the IPPS policy. Lastly, consistent with our existing methodology for determining the LTCH PPS wage index values, for FY 2018, we are continuing to use our existing policy for determining area wage index values for areas where there are no IPPS wage data. Under our existing methodology, the LTCH PPS wage index value for urban CBSAs with no IPPS wage data will be determined by using an average of all of the urban areas within the State, and the LTCH PPS wage index value for rural areas with no IPPS wage data will be determined by using the unweighted average of the wage indices from all of the CBSAs that are contiguous to the rural counties of the State.

Based on the FY 2014 IPPS wage data that we used to determine the FY 2018 LTCH PPS standard Federal payment rate area wage index values in this final rule, there are no IPPS wage data for the urban area of Hinesville, GA (CBSA 25980). Consistent with the methodology discussed above, we calculated the FY 2018 wage index value for CBSA 25980 as the average of the wage index values for all of the other urban areas within the State of Georgia (that is, CBSAs 10500, 12020, 12060, 12260, 15260, 16860, 17980, 19140, 23580, 31420, 40660, 42340, 46660 and 47580), as shown in Table 12A, which is listed in section VI. of the Addendum to this final rule and available via the Internet on the CMS Web site). We note that, as IPPS wage data are dynamic, it is possible that urban areas without IPPS wage data will vary in the future.

Based on the FY 2014 IPPS wage data that we used to determine the FY 2018 LTCH PPS standard Federal payment rate area wage index values in this final rule, there are no rural areas without IPPS hospital wage data. Therefore, it is not necessary to use our established methodology to calculate a LTCH PPS standard Federal payment rate wage index value for proposed rural areas with no IPPS wage data for FY 2018. We note that, as IPPS wage data are dynamic, it is possible that the number of rural areas without IPPS wage data will vary in the future. The FY 2018 LTCH PPS standard Federal payment

rate wage index values that will be applicable for LTCH PPS standard Federal payment rate discharges occurring on or after October 1, 2017, through September 30, 2018, are presented in Table 12A (for urban areas) and Table 12B (for rural areas), which are listed in section VI. of the Addendum of this final rule and available via the Internet on the CMS Web site.

5. Budget Neutrality Adjustment for Changes to the LTCH PPS Standard Federal Payment Rate Area Wage Level Adjustment

Historically, the LTCH PPS wage index and labor-related share are updated annually based on the latest available data. Under § 412.525(c)(2), any changes to the area wage index values or labor-related share are to be made in a budget neutral manner such that estimated aggregate LTCH PPS payments are unaffected; that is, will be neither greater than nor less than estimated aggregate LTCH PPS payments without such changes to the area wage level adjustment. Under this policy, we determine an area wage-level adjustment budget neutrality factor that will be applied to the standard Federal payment rate to ensure that any changes to the area wage level adjustments are budget neutral such that any changes to the area wage index values or labor-related share would not result in any change (increase or decrease) in estimated aggregate LTCH PPS payments. Accordingly, under § 412.523(d)(4), we apply an area wage level adjustment budget neutrality factor in determining the standard Federal payment rate, and we also established a methodology for calculating an area wage level adjustment budget neutrality factor. (For additional information on the establishment of our budget neutrality policy for changes to the area wage level adjustment, we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51771 through 51773 and 51809).)

In this final rule, for FY 2018 LTCH PPS standard Federal payment rate cases, in accordance with § 412.523(d)(4), as we proposed, we applied an area wage level adjustment budget neutrality factor to adjust the LTCH PPS standard Federal payment rate to account for the estimated effect of the adjustments or updates to the area wage level adjustment under § 412.525(c)(1) on estimated aggregate LTCH PPS payments using a methodology that is consistent with the methodology we established in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51773). Specifically, as we proposed in the FY 2018 IPPS/LTCH PPS proposed rule, we determined an area wage level adjustment budget neutrality factor that will be applied to the LTCH PPS standard Federal payment rate under § 412.523(d)(4) for FY 2018 using the following methodology:

Step 1—We simulated estimated aggregate LTCH PPS standard Federal payment rate payments using the FY 2017 wage index values and the FY 2017 labor-related share of 66.5 percent (as established in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57099 and 57100)).

Step 2—We simulated estimated aggregate LTCH PPS standard Federal payment rate payments using the FY 2018 wage index values (as shown in Tables 12A and 12B listed in the Addendum to this final rule and

available via the Internet on the CMS Web site) and the FY 2018 labor-related share of 66.2 percent (based on the latest available data as previously discussed in this Addendum).

Step 3—We calculated the ratio of these estimated total LTCH PPS standard Federal payment rate payments by dividing the estimated total LTCH PPS standard Federal payment rate payments using the FY 2017 area wage level adjustments (calculated in Step 1) by the estimated total LTCH PPS standard Federal payment rate payments using the FY 2018 area wage level adjustments (calculated in Step 2) to determine the area wage level adjustment budget neutrality factor for FY 2018 LTCH PPS standard Federal payment rate payments.

Step 4—We then applied the FY 2018 area wage level adjustment budget neutrality factor from Step 3 to determine the FY 2018 LTCH PPS standard Federal payment rate after the application of the FY 2018 annual update (discussed previously in section V.A. of this Addendum).

We note that, with the exception of cases subject to the transitional blend payment rate provisions in the first 2 years and certain temporary exemptions for certain spinal cord specialty hospitals and certain severe wound cases, under the dual rate LTCH PPS payment structure, only LTCH PPS cases that meet the statutory criteria to be excluded from the site neutral payment rate (that is, LTCH PPS standard Federal payment rate cases) are paid based on the LTCH PPS standard Federal payment rate. Because the area wage level adjustment under § 412.525(c) is an adjustment to the LTCH PPS standard Federal payment rate, we only used data from claims that would have qualified for payment at the LTCH PPS standard Federal payment rate if such rate had been in effect at the time of discharge to calculate the FY 2017 LTCH PPS standard Federal payment rate area wage level adjustment budget neutrality factor described above.

For this final rule, using the steps in the methodology previously described, we determined a FY 2018 LTCH PPS standard Federal payment rate area wage level adjustment budget neutrality factor of 1.0006434. Accordingly, in section V.A. of the Addendum to this final rule, to determine the FY 2018 LTCH PPS standard Federal payment rate, we applied an area wage level adjustment budget neutrality factor of 1.0006434, in accordance with § 412.523(d)(4). The FY 2018 LTCH PPS standard Federal payment rate shown in Table 1E of the Addendum to this final rule reflects this adjustment factor.

C. Cost-of-Living Adjustment (COLA) for LTCHs Located in Alaska and Hawaii

Under § 412.525(b), a cost-of-living adjustment (COLA) is provided for LTCHs located in Alaska and Hawaii to account for the higher costs incurred in those States. Specifically, we apply a COLA to payments to LTCHs located in Alaska and Hawaii by multiplying the nonlabor-related portion of the standard Federal payment rate by the applicable COLA factors established annually

by CMS. Higher labor-related costs for LTCHs located in Alaska and Hawaii are taken into account in the adjustment for area wage levels previously described.

Under our current methodology, we update the COLA factors for Alaska and Hawaii every 4 years (at the same time as the update to the labor-related share of the IPPS market basket) (77 FR 53712 through 53713). This methodology is based on a comparison of the growth in the Consumer Price Indexes (CPIs) for Anchorage, Alaska, and Honolulu, Hawaii, relative to the growth in the CPI for the average U.S. city as published by the Bureau of Labor Statistics (BLS). It also includes a 25-percent cap on the CPI-updated COLA factors. Under our current policy, we update the COLA factors using the methodology described above every 4 years; the first year began in FY 2014. For FY 2014, we updated the COLA factors for Alaska and Hawaii published by OPM for 2009 using the methodology finalized in FY 2013. (For additional details on our current methodology for updating the COLA factors for Alaska and Hawaii, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53481 through 53482).) As discussed in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20186 through 20187) and this final rule, we continue to believe that determining updated COLA factors using this methodology would appropriately adjust the nonlabor-related portion of the LTCH PPS standard Federal payment rate for LTCHs located in Alaska and Hawaii.

For FY 2018, we are continuing to update the COLA factors published by OPM for 2009 (as these are the last COLA factors OPM published prior to transitioning from COLAs to locality pay) using the methodology that we finalized in the FY 2013 IPPS/LTCH PPS final rule and implemented for the FY 2014 IPPS update. Specifically, we are updating the 2009 OPM COLA factors by a comparison of the growth in the Consumer Price Indexes (CPIs) for Anchorage, Alaska, and Honolulu, Hawaii, relative to the growth in the CPI for the average U.S. city as published by the Bureau of Labor Statistics (BLS). Because BLS publishes CPI data for only Anchorage and Honolulu, using the methodology we finalized in the FY 2013 IPPS/LTCH PPS final rule, we use the comparison of the growth in the overall CPI relative to the growth in the CPI for those cities to update the COLA factors for all areas in Alaska and Hawaii, respectively. We believe that the relative price differences between these cities and the U.S. (as measured by the CPIs mentioned above) are appropriate proxies for the relative price differences between the “other areas” of Alaska and Hawaii and the United States.

BLS publishes the CPI for All Items for Anchorage, Honolulu, and for the average U.S. city. However, consistent with our methodology finalized in the FY 2013 IPPS/LTCH PPS final rule, we are creating reweighted CPIs for each of the respective areas to reflect the underlying composition of the IPPS market basket nonlabor-related share. The current composition of the CPI for All Items for all of the respective areas is approximately 40 percent commodities and 60 percent services. However, the IPPS

nonlabor-related share is comprised of a different mix of commodities and services. Therefore, we create reweighted indexes for Anchorage, Honolulu, and the average U.S. city using the respective CPI commodities index and CPI services index using the approximate 55 percent commodities/45 percent services shares obtained from the proposed 2014-based IPPS market basket. We create reweighted indexes using BLS data for 2009 through 2016—the most recent data available at the time of this rulemaking. In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50985 through 50987), we created reweighted indexes based on the FY 2010-based IPPS market basket (which was adopted for the FY 2014 update) and BLS data for 2009 through 2012 (the most recent BLS data at the time of the FY 2014 IPPS/LTCH PPS rulemaking).

We continue to believe this methodology is appropriate because we continue to make a COLA for LTCHs located in Alaska and Hawaii by multiplying the nonlabor-related portion of the LTCH PPS standard Federal rate by a COLA factor. We note that OPM's COLA factors were calculated with a statutorily mandated cap of 25 percent. As stated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50987), when developing the COLA update methodology we finalized in the FY 2013 IPPS/LTCH PPS final rule, we exercised our discretionary authority to adjust payments to LTCHs in Alaska and Hawaii by incorporating this cap. In applying this finalized methodology for updating the COLA factors, our policy for FY 2018 continues to use a 25-percent cap, as our policy is based on OPM's COLA factors

(updated by the methodology described earlier).

Applying this methodology, the COLA factors that we are establishing for FY 2018 to adjust the nonlabor related portion of the LTCH PPS standard Federal rate for LTCHs located in Alaska and Hawaii are shown in the table below. For comparison purposes, we also are showing the FY 2013 COLA factors (which were based on OPM's published COLA factors for 2009) and the COLA factors for FYs 2014 through 2017.

Lastly, as we finalized in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53700 and 53701), we are updating the COLA factors based on our methodology every 4 years, at the same time as the update to the labor-related share of the IPPS market basket.

COST-OF-LIVING ADJUSTMENT FACTORS FOR ALASKA AND HAWAII UNDER THE LTCH PPS FOR FY 2018

Area	FY 2013	FY 2014 through FY 2017	FY 2018
Alaska:			
City of Anchorage and 80-kilometer (50-mile) radius by road	1.23	1.23	1.25
City of Fairbanks and 80-kilometer (50-mile) radius by road	1.23	1.23	1.25
City of Juneau and 80-kilometer (50-mile) radius by road	1.23	1.23	1.25
Rest of Alaska	1.25	1.25	1.25
Hawaii:			
City and County of Honolulu	1.25	1.25	1.25
County of Hawaii	1.18	1.19	1.21
County of Kauai	1.25	1.25	1.25
County of Maui and County of Kalawao	1.25	1.25	1.25

We note that the reweighted CPI for Honolulu, HI grew faster than the reweighted CPI for the average U.S. city over the 2009 to 2016 time period at 13.7 percent and 10.5 percent, respectively. As a result, for FY 2018, we calculated a COLA factor of 1.29 for the City and County of Honolulu, County of Kauai, and County of Maui and County of Kalawao. However, as stated earlier, we are applying our methodology as finalized in the FY 2013 IPPS/LTCH PPS final rule to incorporate a cap of 1.25 for these areas and thus proposed a COLA factor of 1.25 for the City and County of Honolulu, the County of Kauai, and the County of Maui and County of Kalawao. In addition, the proposed COLA factor we calculated for the County of Hawaii for FY 2018 is 1.21 compared to the FY 2013 COLA factor of 1.18. The COLA factors adopted in FY 2014 using this same methodology can be found in the table above.

Similarly, the reweighted CPI for Anchorage, AK grew faster than the reweighted CPI for the average U.S. city over the 2009 to 2016 time period, at 12.4 percent and 10.5 percent, respectively. As a result, for FY 2018, we calculated COLA factors for the City of Anchorage, City of Fairbanks, and City of Juneau to be 1.25 compared to the FY 2013 COLA factor of 1.23. For FY 2018, we calculated a COLA factor of 1.27 for the Rest of Alaska compared to the FY 2013 COLA factor of 1.25. However, as stated above, we are applying our methodology as finalized in the FY 2013 IPPS/LTCH PPS final rule to incorporate a cap of 1.25 for the rest of Alaska.

As stated above, the COLA factors adopted in the FY 2014 IPPS/LTCH PPS final rule

were based on the same methodology used to determine the FY 2018 COLA factors but utilizing BLS data from 2009 through 2012 (the most recent data available at the time of the FY 2014 rulemaking) rather than through 2016 (the most recent data available at the time of this rulemaking). As we noted in the proposed rule, compared to the FY 2014 COLA factors, the proposed FY 2018 COLA factors are higher—with all areas either reaching or exceeding the cap of 1.25 except the County of Hawaii.

We did not receive any public comments in response to our discussion of the proposed FY 2018 COLA factors in the FY 2018 IPPS/LTCH PPS proposed rule. In this final rule, we are finalizing the COLA factors as proposed, effective for FY 2018.

D. Adjustment for LTCH PPS High-Cost Outlier (HCO) Cases

1. HCO Background

From the beginning of the LTCH PPS, we have included an adjustment to account for cases in which there are extraordinarily high costs relative to the costs of most discharges. Under this policy, additional payments are made based on the degree to which the estimated cost of a case (which is calculated by multiplying the Medicare allowable covered charge by the hospital's overall hospital CCR) exceeds a fixed-loss amount. This policy results in greater payment accuracy under the LTCH PPS and the Medicare program, and the LTCH sharing the financial risk for the treatment of extraordinarily high-cost cases.

We retained the basic tenets of our HCO policy in FY 2016 when we implemented the

dual rate LTCH PPS payment structure under section 1206 of Public Law 113–67. LTCH discharges that meet the criteria for exclusion from the site neutral payment rate (that is, LTCH PPS standard Federal payment rate cases) are paid at the LTCH PPS standard Federal payment rate, which includes, as applicable, HCO payments under § 412.523(e). LTCH discharges that do not meet the criteria for exclusion are paid at the site neutral payment rate, which includes, as applicable, HCO payments under § 412.522(c)(2)(i). In the same rule, we established separate fixed-loss amounts and targets for the two different LTCH PPS payment rates. Under this bifurcated policy, the historic 8 percent HCO target was retained for LTCH PPS standard Federal payment rate cases, with the fixed-loss amount calculated using only data from LTCH cases that would have been paid at the LTCH PPS standard Federal payment rate if that rate had been in effect at the time of those discharges. For site neutral payment rate cases, we adopted the operating IPPS HCO target (currently 5.1 percent) and set the fixed-loss amount for site neutral payment rate cases at the value of the IPPS fixed-loss amount. Under the HCO policy for both payment rates, an LTCH receives 80 percent of the difference between the estimated cost of the case and the applicable HCO threshold, which is the sum of the LTCH PPS payment for the case and the applicable fixed-loss amount for such case.

In order to maintain budget neutrality, consistent with the budget neutrality requirement for HCO payments to LTCH PPS standard Federal rate payment cases, we also

adopted a budget neutrality requirement for HCO payments to site neutral payment rate cases by applying a budget neutrality factor to the LTCH PPS payment for those site neutral payment rate cases. (We refer readers to § 412.522(c)(2)(i) of the regulations for further details.) We note that, during the 2-year transitional period, the site neutral payment rate HCO budget neutrality factor did not apply to the LTCH PPS standard Federal payment rate portion of the blended rate at § 412.522(c)(3) payable to site neutral payment rate cases. (For additional details on the HCO policy adopted for site neutral payment rate cases under the dual rate LTCH PPS payment structure, including the budget neutrality adjustment for HCO payments to site neutral payment rate cases, we refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49617 through 49623).)

2. Determining LTCH CCRs Under the LTCH PPS

a. Background

As noted above, CCRs are used to determine payments for HCO adjustments for both payment rates under the LTCH PPS, and also are currently used to determine payments for SSO cases under § 412.529 as well as payments for site neutral payment rate cases. (We note that the provisions of § 412.529 are only applicable to LTCH PPS standard Federal payment rate cases). However, we stated in the FY 2018 IPPS/LTCH PPS proposed rule that if our proposed SSO payment method is finalized, CCRs would no longer be used to determine the payment adjustment for SSO cases. Therefore, as we are finalizing our proposed SSO payment methodology, this discussion will only apply to HCO and site neutral payment rate calculations in FY 2018.

As noted earlier, in determining HCO, SSO payments prior to FY 2018, and the site neutral payment rate (regardless of whether the case is also an HCO) payments, we generally calculate the estimated cost of the case by multiplying the LTCH's overall CCR by the Medicare allowable charges for the case. An overall CCR is used because the LTCH PPS uses a single prospective payment per discharge that covers both inpatient operating and capital-related costs. The LTCH's overall CCR is generally computed based on the sum of LTCH operating and capital costs (as described in Section 150.24, Chapter 3, of the Medicare Claims Processing Manual (Pub. 100-4)) as compared to total Medicare charges (that is, the sum of its operating and capital inpatient routine and ancillary charges), with those values determined from either the most recently settled cost report or the most recent tentatively settled cost report, whichever is from the latest cost reporting period. However, in certain instances, we use an alternative CCR, such as the statewide average CCR, a CCR that is specified by CMS, or one that is requested by the hospital. (We refer readers to § 412.525(a)(4)(iv) of the regulations for further details regarding HCO adjustments for either LTCH PPS payment rate, § 412.529(f)(4) for SSO adjustments under the current policy, and § 412.522(c)(1)(ii) for the site neutral payment rate, respectively.)

The LTCH's calculated CCR is then compared to the LTCH total CCR ceiling. Under our established policy, an LTCH with a calculated CCR in excess of the applicable maximum CCR threshold (that is, the LTCH total CCR ceiling, which is calculated as 3 standard deviations from the national geometric average CCR) is generally assigned the applicable statewide CCR. This policy is premised on a belief that calculated CCRs above the LTCH total CCR ceiling are most likely due to faulty data reporting or entry, and CCRs based on erroneous data should not be used to identify and make payments for outlier cases.

b. LTCH Total CCR Ceiling

Consistent with our historical practice, we used the most recent data to determine the LTCH total CCR ceiling for FY 2018 in this final rule. Specifically, in this final rule, using our established methodology for determining the LTCH total CCR ceiling based on IPPS total CCR data from the March 2017 update of the Provider Specific File (PSF), which is the most recent data available, we are establishing an LTCH total CCR ceiling of 1.280 under the LTCH PPS for FY 2018 in accordance with § 412.525(a)(4)(iv)(C)(2) for HCO cases under either payment rate and § 412.522(c)(1)(ii) for the site neutral payment rate. (For additional information on our methodology for determining the LTCH total CCR ceiling, we refer readers to the FY 2007 IPPS final rule (71 FR 48118 through 48119).)

c. LTCH Statewide Average CCRs

Our general methodology for determining the statewide average CCRs used under the LTCH PPS is similar to our established methodology for determining the LTCH total CCR ceiling because it is based on "total" IPPS CCR data. (For additional information on our methodology for determining statewide average CCRs under the LTCH PPS, we refer readers to the FY 2007 IPPS final rule (71 FR 48119 through 48120).) Under the LTCH PPS HCO policy for cases paid under either payment rate at § 412.525(a)(4)(iv)(C)(2), the current SSO policy at § 412.529(f)(4)(iii)(B), and the site neutral payment rate at § 412.522(c)(1)(ii), the MAC may use a statewide average CCR, which is established annually by CMS, if it is unable to determine an accurate CCR for an LTCH in one of the following circumstances: (1) New LTCHs that have not yet submitted their first Medicare cost report (a new LTCH is defined as an entity that has not accepted assignment of an existing hospital's provider agreement in accordance with § 489.18); (2) LTCHs whose calculated CCR is in excess of the LTCH total CCR ceiling; and (3) other LTCHs for whom data with which to calculate a CCR are not available (for example, missing or faulty data). (Other sources of data that the MAC may consider in determining an LTCH's CCR include data from a different cost reporting period for the LTCH, data from the cost reporting period preceding the period in which the hospital began to be paid as an LTCH (that is, the period of at least 6 months that it was paid as a short-term, acute care hospital), or data from other comparable LTCHs, such as LTCHs in the same chain or in the same region.)

Consistent with our historical practice of using the best available data, in this final rule, using our established methodology for determining the LTCH statewide average CCRs, based on the most recent complete IPPS "total CCR" data from the March 2017 update of the PSF, we are establishing LTCH PPS statewide average total CCRs for urban and rural hospitals that will be effective for discharges occurring on or after October 1, 2017, through September 30, 2018, in Table 8C listed in section VI. of the Addendum to this final rule (and available via the Internet on the CMS Web site). Consistent with our historical practice, as we proposed, we used more recent data to determine the LTCH PPS statewide average total CCRs for FY 2018 in this final rule.

Under the current LTCH PPS labor market areas, all areas in Delaware, the District of Columbia, New Jersey, and Rhode Island are classified as urban. Therefore, there are no rural statewide average total CCRs listed for those jurisdictions in Table 8C. This policy is consistent with the policy that we established when we revised our methodology for determining the applicable LTCH statewide average CCRs in the FY 2007 IPPS final rule (71 FR 48119 through 48121) and is the same as the policy applied under the IPPS. In addition, although Connecticut has areas that are designated as rural, in our calculation of the LTCH statewide average CCRs, there was no data available from short-term, acute care IPPS hospitals to compute a rural statewide average CCR or there were no short-term, acute care IPPS hospitals or LTCHs located in that area as of March 2017.

Therefore, consistent with our existing methodology, we used the national average total CCR for rural IPPS hospitals for rural Connecticut in Table 8C. While Massachusetts also has rural areas, the statewide average CCR for rural areas in Massachusetts is based on one provider whose CCR is an atypical 1.222. Because this is much higher than the statewide urban average and furthermore implies costs exceeded charges, as with Connecticut, we used the national average total CCR for rural hospitals for hospitals located in rural Massachusetts. Furthermore, consistent with our existing methodology, in determining the urban and rural statewide average total CCRs for Maryland LTCHs paid under the LTCH PPS, we continued to use, as a proxy, the national average total CCR for urban IPPS hospitals and the national average total CCR for rural IPPS hospitals, respectively. We used this proxy because we believe that the CCR data in the PSF for Maryland hospitals may not be entirely accurate (as discussed in greater detail in the FY 2007 IPPS final rule (71 FR 48120)).

d. Reconciliation of HCO and SSO Payments

Under the HCO policy for cases paid under either payment rate at § 412.525(a)(4)(iv)(D) and SSO cases prior to FY 2018 at § 412.529(f)(4)(iv), the payments for HCO and SSO cases are subject to reconciliation. Specifically, any such payments are reconciled at settlement based on the CCR that is calculated based on the cost report coinciding with the discharge. However, under our changes to the SSO payment methodology discussed in section VIII.D. of

the preamble of this final rule, we removed estimated cost as a consideration for payment to SSO cases. As such, consistent with our changes to the SSO payment methodology, SSO payments are no longer be subject to reconciliation. Specifically, as we proposed, we are revising paragraph (f) of § 412.529 to specify that SSO payments will be reconciled only for discharges occurring before October 1, 2017.

For additional information on the reconciliation policy, we refer readers to Sections 150.26 through 150.28 of the Medicare Claims Processing Manual (Pub. 100-4), as added by Change Request 7192 (Transmittal 2111; December 3, 2010), and the RY 2009 LTCH PPS final rule (73 FR 26820 through 26821).

3. High-Cost Outlier Payments for LTCH PPS Standard Federal Payment Rate Cases

a. Changes to High-Cost Outlier Payments for LTCH PPS Standard Federal Payment Rate Cases

When we implemented the LTCH PPS, we established a fixed-loss amount so that total estimated outlier payments are projected to equal 8 percent of total estimated payments under the LTCH PPS (67 FR 56022 through 56026). Furthermore, § 412.523(d)(1) requires the LTCH PPS standard Federal payment rate be adjusted by a reduction factor of 8 percent, the estimated proportion of outlier payments under § 412.525(a) payable to LTCH PPS standard Federal payment rate cases. Section 15004(b) of the 21st Century Cures Act (Pub. L. 114-255) amended section 1886(m) of the Act by adding new paragraph (7), which specifies certain treatment of HCO payments for fiscal years beginning on or after October 1, 2017 (FY 2018). Specifically, section 1886(m)(7)(A) of the Act requires, beginning in FY 2018, that the LTCH PPS standard Federal payment rate be reduced as if estimated HCO payments for standard Federal payment rate cases would be equal to 8 percent of estimated aggregate payments for standard Federal payment rate cases for a given year. In other words, section 1886(m)(7)(A) of the Act makes our existing regulatory budget neutrality requirement at § 412.523(d)(1) for the 8 percent HCO target for standard Federal payment rate cases a statutory requirement beginning in FY 2018. In addition, section 1886(m)(7)(B) of the Act requires, beginning in FY 2018, that the fixed-loss amount for HCO payments for LTCH PPS standard Federal payment rate cases be determined so that the estimated aggregate amount of HCO payments for such cases in a given year are equal to 99.6875 percent of the 8 percent estimated aggregate payments for standard Federal payment rate cases (that is, 7.975 percent). In other words, sections 1886(m)(7)(A) and (7)(B) require that we adjust the standard Federal payment rate each year to ensure budget neutrality for HCO payments as if estimated aggregate HCO payments made for standard Federal payment rate discharges remain at 8 percent, while the fixed-loss amount for the HCO payments is set each year so that the estimated aggregate HCO payments for standard Federal payment rate cases are 7.975 percent of estimated aggregate payments for standard Federal payment rate cases.

More specifically, section 1886(m)(7)(A) of the Act stipulates that, for fiscal years beginning on or after October 1, 2017, the Secretary shall reduce the standard Federal payment rate as if the estimated aggregate amount of HCO payments for standard Federal payment rate discharges for each such fiscal year would be equal to 8 percent of estimated aggregate payments for standard Federal payment rate discharges for each such fiscal year; while section 1886(m)(7)(B) of the Act states that the Secretary shall set the fixed loss amount for HCO payments such that the estimated aggregate amount of HCO payments made for standard Federal payment rate discharges for fiscal years beginning on or after October 1, 2017, shall be equal to 99.6875 percent of 8 percent of estimated aggregate payments for standard Federal payment rate discharges for each such fiscal year. Furthermore, section 1886(m)(7)(C) of the Act requires that any reduction in payments resulting from the application of paragraph (B) shall not be taken into account in applying any budget neutrality provision. Finally, section 1886(m)(7)(D) of the Act provides there will be no effect on HCO payments to site neutral payment rate cases by this certain treatment of HCO payments by requiring that this paragraph shall not apply with respect to the computation of the applicable site neutral payment rate under section 1886(m)(6) of the Act.

To codify the treatment of HCO payments provided by section 15004(b) of the 21st Century Cures Act (discussed earlier), as we proposed, we are revising § 412.525(a) by redesignating paragraph (2) as paragraph (2)(i) and adding paragraph (2)(ii) which would specify that, for FY 2018 and subsequent years, the fixed-loss amount for LTCH discharges described under § 412.522(a)(2) is determined such that the estimated proportion of outlier payments under § 412.522(a) that are payable for such discharges is projected to be equal to 99.6875 percent of 8 percent. We also are making conforming changes to § 412.523(d)(1) to specify that the provisions under § 412.525(a)(2)(ii) will not affect the reduction factor of 8 percent that is applied to the LTCH PPS standard Federal payment rate under § 412.523(d)(1).

b. Establishment of the Fixed-Loss Amount for LTCH PPS Standard Federal Payment Rate Cases for FY 2018

When we implemented the LTCH PPS, we established a fixed loss amount so that total estimated outlier payments are projected to equal 8 percent of total estimated payments under the LTCH PPS (67 FR 56022 through 56026). When we implemented the dual rate LTCH PPS payment structure beginning in FY 2016, we established that, in general, the historical LTCH PPS HCO policy will continue to apply to LTCH PPS standard Federal payment rate cases. That is, the fixed-loss amount and target for LTCH PPS standard Federal payment rate cases is determined using the LTCH PPS HCO policy adopted when the LTCH PPS was first implemented, but we limited the data used under that policy to LTCH cases that would have been LTCH PPS standard Federal payment rate cases if the statutory changes

had been in effect at the time of those discharges.

To determine the applicable fixed-loss amount for LTCH PPS standard Federal payment rate cases, we estimate outlier payments and total LTCH PPS payments for each LTCH PPS standard Federal payment rate case (or for each case that would have been a LTCH PPS standard Federal payment rate case if the statutory changes had been in effect at the time of the discharge) using claims data from the MedPAR files. Historically, the applicable fixed-loss amount for LTCH PPS standard Federal payment rate cases results in estimated total outlier payments being projected to be equal to 8 percent of projected total LTCH PPS payments for LTCH PPS standard Federal payment rate cases. We use MedPAR claims data and CCRs based on data from the most recent PSF (or from the applicable statewide average CCR if an LTCH's CCR data are faulty or unavailable) to establish an applicable fixed-loss threshold amount for LTCH PPS standard Federal payment rate cases. For FY 2018 and subsequent fiscal years, as we proposed, we are continuing to use the same general approach as in previous years, but the applicable fixed-loss amount for LTCH PPS standard Federal payment rate cases will be estimated so that total HCO payments are 7.975 percent (that is, 99.6875 percent of 8 percent) of projected total LTCH PPS payments for LTCH PPS standard Federal payment rate cases, consistent with section 1886(m)(7)(B) of the Act (as discussed above).

In the FY 2018 IPS/LTCH PPS proposed rule (82 FR 20189), we proposed to continue to use our current methodology to calculate an applicable fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2018 using the best available data that would maintain estimated HCO payments at the projected 7.975 percent of total estimated LTCH PPS payments for LTCH PPS standard Federal payment rate cases (based on the rates and policies for these cases presented in that proposed rule).

Specifically, based on the most recent complete LTCH data available at that time (that is, LTCH claims data from the December 2016 update of the FY 2016 MedPAR file and CCRs from the December 2016 update of the PSF), we determined that a proposed fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2018 of \$30,081 would result in estimated outlier payments projected to be equal to 7.975 percent of estimated FY 2018 payments for such cases. Under this proposal, we would continue to make an additional HCO payment for the cost of an LTCH PPS standard Federal payment rate case that exceeds the HCO threshold amount that is equal to 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of the adjusted LTCH PPS standard Federal payment rate payment and the fixed-loss amount for LTCH PPS standard Federal payment rate cases of \$30,081). We also noted that the proposed fixed-loss amount for HCO cases paid under the LTCH PPS standard Federal payment rate in FY 2018 of \$30,081 is notably higher than the FY 2017 fixed-loss amount for LTCH PPS standard Federal payment rate cases of \$21,943, and

explained that the increase is largely attributable to rate-of-change in the Medicare allowable charges on the claims data in the MedPAR file.

Based on the most recent available data at the time of the proposed rule, we found that the current FY 2017 HCO threshold of \$21,943 results in estimated HCO payments for LTCH PPS standard Federal payment rate cases of approximately 8.6 percent of the estimated total LTCH PPS payments in FY 2016, which exceeds the 8 percent target by 0.6 percentage points. We also noted that fluctuations in the fixed-loss amount occurred in the first few years after the implementation of the LTCH PPS, due, in part, to the changes in LTCH behavior (such as Medicare beneficiary treatment patterns) in response to the new payment system and the lack of data and information available to predict how those changes would affect the estimate costs of LTCH cases. As we gained more experience with the effects and implementation of the LTCH PPS, the annual changes on the fixed-loss amount generally stabilized relative to the fluctuations that occurred in the early years of the LTCH PPS. Therefore, we did not propose any changes to our method for the inflation factor applied to update the costs of each case (that is, an inflation factor based on the most recent estimate of the 2013-based LTCH market basket as determined by the Office of the Actuary) in determining the proposed fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2018. We stated our continued belief that it is appropriate to continue to use our historical approach until we gain experience with the effects and implementation of the dual rate LTCH PPS payment structure that began with discharges occurring in cost reporting periods beginning on or after October 1, 2015, and the types of cases paid at the LTCH PPS standard Federal payment rate under this dual rate payment structure. We stated that we may revisit this issue in the future if data demonstrate such a change is warranted, and would propose any changes in the future through the notice-and-comment rulemaking process. Furthermore, we invited public comments on potential improvements to the determination of the fixed-loss amount for LTCH PPS standard Federal payment rate cases, including the most appropriate method of determining an inflation factor for projecting the costs of each case when determining the fixed-loss threshold.

Comment: A few commenters expressed concern with the increase in the proposed FY 2018 fixed-loss amount for LTCH PPS standard Federal payment rate cases as compared to the current fixed-loss amount for such cases. Some of these commenters expressed general support for using the required target amount of 7.975 percent for HCO payments for LTCH PPS standard Federal payment rate cases. Some commenters stated that they are concerned about the potential instability in the fixed-loss amount from year to year and requested that CMS continue to be transparent about the possible causes for such large year-to-year changes in the fixed-loss amount and how much of this variability may be attributable to the new dual rate LTCH PPS payment. In

addition to using the most recent LTCH claims data and CCRs, some commenters suggested we consider whether the new dual rate LTCH PPS payment structure warrants the use of other relevant data or a change in the inflation factor for projecting the costs of each case when determining the fixed-loss amount, but did not make any specific recommendations for other data or factors.

Response: We understand the commenters' concern with the proposed increase to the fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2018, and we appreciate the commenters' support for our proposed use of a HCO target amount of 7.975 percent for LTCH PPS standard Federal payment rate cases. As we discussed in the proposed rule, based on the best available data at that time and using our historical methodology, we estimate that the current FY 2017 HCO fixed-loss amount of \$21,943 results in estimated HCO payments for LTCH PPS standard Federal payment rate cases in excess of the FY 2017 target of 8 percent by 0.6 percentage points. Additionally, we note that we invited public comment on potential improvements to the determination of the fixed-loss amount for LTCH PPS standard Federal payment rate cases, including the most appropriate method of determining an inflation factor for projecting the costs of each case when determining the fixed-loss threshold but received no specific suggestions from comments.

As discussed in the proposed rule, fluctuations in the fixed-loss amount have occurred previously under LTCH PPS, due, in part, to the changes in LTCH behavior in response to the changes in Medicare payments and the lack of data and information available to predict how those changes affect the estimate costs of LTCH cases. As was the case when there were fluctuations in the fixed-loss amount in the early years of the LTCH PPS, we expect annual changes to the fixed-loss amount to generally stabilize as experience is gained under the new dual rate LTCH PPS payment structure. We intend to continue to monitor annual changes in the HCO fixed-loss amount, including factors that drive any such changes. We appreciate the general feedback commenters' noted for potential improvements to the determination of the fixed-loss amount for LTCH PPS standard Federal payment rate cases, including the use of other relevant data or a change in the inflation factor for projecting the costs of each case when determining the fixed-loss amount. As we indicated in the proposed rule, we may revisit this issue in the future if data demonstrate such a change is warranted, and would propose any changes in the future through the notice-and-comment rulemaking process. For these reasons we continue to maintain our historical methodology and thus believe it is necessary and appropriate to increase to the fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2017 to maintain estimated HCO payments would equal 8 percent of estimated total LTCH PPS payments for such cases as required under § 412.525(a). We note, as in greater detail discussed below, the fixed-loss amount for FY 2018 for LTCH PPS standard Federal

payment rate cases we are establishing in this final rule, after consideration of public comments and based on the most recent LTCH claims data from the MedPAR file and the latest CCRs from the PSF, does result in a fixed-loss amount for such cases that is lower than the proposed fixed-loss amount. We also note that based on the most recent available data for this final rule (discussed below), the current FY 2017 HCO threshold of \$21,943 results in estimated HCO payments for LTCH PPS standard Federal payment rate cases which exceeds the FY 2017 target of 8 percent target by 0.1 percentage points. (We also note the change in our estimate of FY 2017 HCO payments between the proposed and final rule decreased from 8.6 percent to 8.1 percent, and this change is largely attributable to updates to CCRs from the December 2016 update of the PSF to the March 2017 update of the PSF.)

After consideration of the public comments we received, for the reasons discussed above, we are finalizing our proposal to continue to use the current LTCH PPS HCO payment methodology for LTCH PPS standard Federal payment rate cases for FY 2018 without modification, as we proposed. Therefore, in this final rule, for FY 2018, we determined an applicable fixed-loss amount for LTCH PPS standard Federal payment rate cases using data from LTCH PPS standard Federal payment rate cases (or cases that would have been LTCH PPS standard Federal payment rate cases had the dual rate LTCH PPS payment structure been in effect at the time of those discharges). The fixed-loss amount for LTCH PPS standard Federal payment rate cases will continue to be determined so that estimated HCO payments will be projected to equal 7.975 percent of estimated total LTCH PPS standard Federal payment rate cases. Furthermore, in accordance with § 412.523(d)(1), a budget neutrality factor will continue to be applied to LTCH PPS standard Federal payment rate cases to offset that 8 percent so that HCO payments for LTCH PPS standard Federal payment rate cases will be budget neutral. Below we present our calculation of the fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2018, which, except for the statutory changes to the HCO target from 8 percent to 7.975 percent, is consistent with the methodology used to establish the FY 2017 LTCH PPS fixed-loss amount, as we proposed.

In this final rule, we are continuing to use our current methodology to calculate an applicable fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2018 using the best available data that will maintain estimated HCO payments at the projected 7.975 percent of total estimated LTCH PPS payments for LTCH PPS standard Federal payment rate cases (based on the payment rates and policies for these cases presented in this final rule). Specifically, based on the most recent available data available (that is, LTCH claims data from the March 2017 update of the FY 2016 MedPAR file and CCRs from the March 2017 update of the PSF), we determined a fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2018 results that

will result in estimated outlier payments of 7.975 percent of estimated FY 2018 payments for such cases. Under the broad authority of section 123(a)(1) of the BBRA and section 307(b)(1) of the BIPA, we are establishing a fixed-loss amount of \$27,382 for LTCH PPS standard Federal payment rate cases for FY 2018. Under our policy, we will continue to make an additional HCO payment for the cost of an LTCH PPS standard Federal payment rate case that exceeds the HCO threshold amount that is equal to 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of the adjusted LTCH PPS standard Federal payment rate payment and the fixed-loss amount for LTCH PPS standard Federal payment rate cases of \$27,382).

We note that the fixed-loss amount for HCO cases paid under the LTCH PPS standard Federal payment rate in FY 2018 of \$27,382 is somewhat lower than proposed FY 2018 fixed-loss amount of \$30,081 but notably higher than the FY 2017 fixed-loss amount for LTCH PPS standard Federal payment rate cases of \$21,943. However, based on the most recent available data at the time of this final rule, we found that the current FY 2017 HCO threshold of \$21,943 results in estimated HCO payments for LTCH PPS standard Federal payment rate cases of approximately 8.1 percent of the estimated total LTCH PPS payments in FY 2017, which exceeds the 8 percent target by 0.1 percentage points. We continue to believe, as discussed in detail in the FY 2017 IPPS/LTCH PPS proposed rule (81 FR 25287), this increase is largely attributable to rate-of-change (that is, increase) in the Medicare allowable charges on the claims data in the MedPAR file. In addition, using the historic 8-percent target for projected aggregate outlier payments (absent the required changes under the 21st Century Cures Act for comparison purposes), the HCO threshold would be \$27,240, which represents a 24-percent increase from the final FY 2017 HCO threshold of \$21,943. This increase is in line with the 34 percent increase in the HCO threshold between FY 2016 and FY 2017, and is consistent with our expectation that annual changes to the fixed-loss amount to generally stabilize as experience is gained under the new dual rate LTCH PPS payment structure. For these reasons, we continue to believe it is necessary and appropriate to increase the fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2018 to maintain estimated HCO payments that would equal to 7.975 percent of estimated total LTCH PPS payments for such cases as required under § 412.525(a)(2)(ii).

c. Application of the High-Cost Outlier Policy to Short Stay Outlier (SSO) Cases

Under our implementation of the dual rate LTCH PPS payment structure required by statute, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20190), we proposed that LTCH PPS standard Federal payment rate cases (that is, LTCH discharges that meet the criteria for exclusion from the site neutral payment rate) would continue to be paid based on the LTCH PPS standard Federal payment rate, and would include all of the existing payment adjustments under § 412.525(d), such as the adjustments for SSO

cases under § 412.529. Under some rare circumstances, an LTCH discharge can qualify as an SSO case (as defined in the regulations at § 412.529 in conjunction with § 412.503) and also as an HCO case, as discussed in the August 30, 2002 final rule (67 FR 56026). In this scenario, a patient could be hospitalized for less than five-sixths of the geometric average length of stay for the specific MS-LTC-DRG, and yet incur extraordinarily high treatment costs. If the estimated costs exceeded the HCO threshold (that is, the SSO payment plus the applicable fixed-loss amount), the discharge is eligible for payment as an HCO. (We noted that, under our change to the SSO policy discussed in section VIII.D. of this final rule, SSO cases would still be eligible to qualify for an HCO payment.) Therefore, for an SSO case in FY 2018, as proposed, we are establishing that the HCO payment will be 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of the fixed-loss amount of \$27,382 and the amount paid under the SSO policy as specified in § 412.529).

4. High-Cost Outlier Payments for Site Neutral Payment Rate Cases

Under § 412.525(a), site neutral payment rate cases receive an additional HCO payment for costs that exceed the HCO threshold that is equal to 80 percent of the difference between the estimated cost of the case and the applicable HCO threshold (80 FR 49618 through 49629). In the following discussion, we note that the statutory transitional payment method for cases that are paid the site neutral payment rate for LTCH discharges occurring in cost reporting periods beginning during FY 2016 or FY 2017 uses a blended payment rate, which is determined as 50 percent of the site neutral payment rate amount for the discharge and 50 percent of the standard Federal prospective payment rate amount for the discharge (§ 412.522(c)(3)). The transitional blended payment rate uses the same blend percentages (that is, 50 percent) for both years of the 2-year transition period. For FY 2018, the site neutral payment rate effective date for a given LTCH is determined based on the date on which that LTCH's cost reporting period begins during FY 2018. Specifically, for a given LTCH, those site neutral payment rate cases discharged in FY 2018 and in a cost reporting period that begins *before* October 1, 2017 continue to be paid under the blended payment rate. However, site neutral payment rate cases discharged in FY 2018 during the LTCH's cost reporting period beginning on or *after* October 1, 2017 will no longer be paid under the blended payment rate and instead will be paid the site neutral payment rate amount as determined under § 412.522(c)(1). As such, for FY 2018 discharges paid under the transitional payment method, the discussion below pertains only to the site neutral rate portion in § 412.522(c)(3)(i) of the blended payment rate (as well as to FY 2018 discharges paid the site neutral payment rate amount determined under § 412.522(c)(1)).

When we implemented the application of the site neutral payment rate in FY 2016, in examining the appropriate fixed-loss amount for site neutral payment rate cases issue, we

considered how LTCH discharges based on historical claims data would have been classified under the dual rate LTCH PPS payment structure and the CMS' Office of the Actuary projections regarding how LTCHs will likely respond to our implementation of policies resulting from the statutory payment changes. We again relied on these considerations and actuarial projections in FY 2017 because the historical claims data available in FY 2017 predated the LTCH PPS dual rate payment system. Similarly, for FY 2018, we continue to rely on these considerations and actuarial projections because, due to the rolling effective date of the site neutral payment policy, not all claims in FY 2016 were subject to the site neutral payment system.

For both FY 2016 and FY 2017, at that time our actuaries projected that the proportion of cases that would qualify as LTCH PPS standard Federal payment rate cases versus site neutral payment rate cases under the statutory provisions would remain consistent with what is reflected in the historical LTCH PPS claims data. Although our actuaries did not project an immediate change in the proportions found in the historical data, they did project cost and resource changes to account for the lower payment rates. Our actuaries also projected that the costs and resource use for cases paid at the site neutral payment rate would likely be lower, on average, than the costs and resource use for cases paid at the LTCH PPS standard Federal payment rate and would likely mirror the costs and resource use for IPPS cases assigned to the same MS-DRG, regardless of whether the proportion of site neutral payment rate cases in the future remains similar to what is found based on the historical data. As discussed in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49619), this actuarial assumption is based on our expectation that site neutral payment rate cases would generally be paid based on an IPPS comparable per diem amount under the statutory LTCH PPS payment changes that began in FY 2016, which, in the majority of cases, is much lower than the payment that would have been paid if these statutory changes were not enacted. (We note, in section I.J.1 of the Regulatory Impact in Appendix A of this final rule, we summarize and respond to a comment that references to this actuarial assumption.) In light of these projections and expectations, we discussed that we believed that the use of a single fixed-loss amount and HCO target for all LTCH PPS cases would be problematic. In addition, we discussed that we did not believe that it would be appropriate for comparable LTCH PPS site neutral payment rate cases to receive dramatically different HCO payments from those cases that would be paid under the IPPS (80 FR 49617 through 49619 and 81 FR 57305 through 57307). For those reasons, we stated that we believed that the most appropriate fixed-loss amount for site neutral payment rate cases for both FY 2016 and FY 2017 would be equal to the IPPS fixed-loss amount for that year. Therefore, we established the fixed-loss amount for site neutral payment rate cases as the FY 2016 and FY 2017 IPPS fixed-loss amounts, in FY 2016 and FY 2017 respectively. In particular,

in FY 2017, we established that the fixed-loss amount for site neutral payment rate cases is the FY 2017 IPPS fixed-loss amount of \$23,570.

As noted earlier, because not all claims in the data used for this final rule were subject to the site neutral payment rate system, we continue to rely on the same considerations and actuarial projections used in FY 2016 and FY 2017 when developing a fixed-loss amount for site neutral payment rate cases for FY 2018. Because our actuaries continue to project that site neutral payment rate cases in FY 2018 will continue to mirror an IPPS case paid under the same MS-DRG, we continue to believe that it would be inappropriate for comparable LTCH PPS site neutral payment rate cases to receive dramatically different HCO payments from those cases that would be paid under the IPPS. More specifically, as with FY 2016 and FY 2017, our actuaries project that the costs and resource use for FY 2018 cases paid at the site neutral payment rate would likely be lower, on average, than the costs and resource use for cases paid at the LTCH PPS standard Federal payment rate and will likely mirror the costs and resource use for IPPS cases assigned to the same MS-DRG, regardless of whether the proportion of site neutral payment rate cases in the future remains similar to what is found based on the historical data. (Based on the most recent FY 2016 LTCH claims data, approximately 58 percent of LTCH cases would have been paid the LTCH PPS standard Federal payment rate and approximately 42 percent of LTCH cases would have been paid the site neutral payment rate if those rates had been in effect at that time for all LTCH discharges occurring in FY 2016, regardless of LTCHs' cost reporting period beginning dates.)

For these reasons, we continue to believe that the most appropriate fixed-loss amount for site neutral payment rate cases for FY 2018 is the IPPS fixed-loss amount for FY 2018. Therefore, consistent with past practice, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20191), for FY 2018, we proposed that the applicable HCO threshold for site neutral payment rate cases is the sum of the site neutral payment rate for the case and the IPPS fixed-loss amount. That is, we proposed a fixed-loss amount for site neutral payment rate cases of \$26,713, which was the same proposed FY 2018 IPPS fixed-loss amount discussed in section II.A.4.g.(1) of the Addendum to the proposed rule. We continue to believe that this policy would reduce differences between HCO payments for similar cases under the IPPS and site neutral payment rate cases under the LTCH PPS and promote fairness between the two systems. Accordingly, for FY 2018, we proposed to calculate a HCO payment for site neutral payment rate cases with costs that exceed the HCO threshold amount, which is equal to 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of proposed site neutral payment rate payment and the proposed fixed-loss amount for site neutral payment rate cases of \$26,713).

Comment: Some commenters expressed support for our proposal to continue to use the FY 2017 IPPS fixed-loss amount and 5.1 percent HCO target for LTCH discharges paid at the site neutral payment rate in FY 2018.

Response: We appreciate the commenters support for our proposal to continue to use the FY 2018 IPPS fixed-loss amount and 5.1 percent HCO target for LTCH discharges paid at the site neutral payment rate in FY 2018. Given the current expectation that cases paid at the site neutral payment rate would likely be similar to IPPS cases assigned to the same MS-DRG, we continue to believe the most appropriate fixed-loss amount for site neutral payment rate cases is the IPPS fixed-loss amount for that fiscal year. As we indicated in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49619), to the extent experience under the revised LTCH PPS indicates site neutral payment rate cases differ sufficiently from these expectations, we agree it would be appropriate to revisit in future rulemaking the most appropriate fixed-loss amount used to determine HCO payments for site neutral payment rate cases. As we discuss in greater detail in section I.J.1., the Regulatory Impact Analysis, in Appendix A of this final rule, given the rolling nature of the start of the transition to the site neutral payment rate, many LTCH claims from FY 2016 were not subject to the site neutral payment rate at all as many LTCHs did not begin their FY 2016 cost reporting period until the fourth quarter of that fiscal year. In addition, all claims which were subject to the site neutral payment rate in FY 2016 were paid under the blended payment rate which included a payment based on 50 percent of the LTCH PPS standard Federal payment rate. As such, FY 2016 claims may not yet reflect the expected change in cost and resources once the payment for site neutral payment rate cases is fully based on the site neutral payment rate.

After consideration of public comments we received, we are finalizing without modification, our proposals to use the FY 2018 IPPS fixed-loss amount and 5.1 percent HCO target for LTCH discharges paid at the site neutral payment rate in FY 2018. Therefore, for FY 2018, as we proposed, we are establishing that the applicable HCO threshold for site neutral payment rate cases is the sum of the site neutral payment rate for the case and the IPPS fixed loss amount. That is, we are establishing a fixed-loss amount for site neutral payment rate cases of \$26,601, which is the same FY 2018 IPPS fixed-loss amount discussed in section II.A.4.g.(1) of the Addendum to this final rule. We continue to believe that this policy will reduce differences between HCO payments for similar cases under the IPPS and site neutral payment rate cases under the LTCH PPS and promote fairness between the two systems. Accordingly, under this policy, for FY 2018, we will calculate a HCO payment for site neutral payment rate cases with costs that exceed the HCO threshold amount, which is equal to 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of site neutral payment rate payment and the fixed loss amount for site neutral payment rate cases of \$26,601).

In establishing a HCO policy for site neutral payment rate cases, we established a budget neutrality adjustment under § 412.522(c)(2)(i). We established this requirement because we believed, and

continue to believe, that the HCO policy for site neutral payment rate cases should be budget neutral, just as the HCO policy for LTCH PPS standard Federal payment rate cases are budget neutral, meaning that estimated site neutral payment rate HCO payments should not result in any change in estimated aggregate LTCH PPS payments.

To ensure that estimated HCO payments payable to site neutral payment rate cases in FY 2018 would not result in any increase in estimated aggregate FY 2018 LTCH PPS payments, under the budget neutrality requirement at § 412.522(c)(2)(i), it is necessary to reduce site neutral payment rate payments (or the portion of the blended payment rate payment for FY 2018 discharges occurring in LTCH cost reporting periods beginning before October 1, 2017) by 5.1 percent to account for the estimated additional HCO payments payable to those cases in FY 2018. In order to achieve this, for FY 2018, in general, as we proposed, we are continuing to use the policy adopted for FY 2017.

As discussed earlier, consistent with the IPPS HCO payment threshold, we expect a fixed-loss threshold of \$26,601 results in HCO payments for site neutral payment rate cases equal to 5.1 percent of the site neutral payment rate payments that are based on the IPPS comparable per diem amount. As such, to ensure estimated HCO payments payable for site neutral payment rate cases in FY 2018 would not result in any increase in estimated aggregate FY 2018 LTCH PPS payments, under the budget neutrality requirement at § 412.522(c)(2)(i), it is necessary to reduce the site neutral payment rate amount paid under § 412.522(c)(1)(i) by 5.1 percent to account for the estimated additional HCO payments payable for site neutral payment rate cases in FY 2018. In order to achieve this, for FY 2018, we proposed to apply a budget neutrality factor of 0.949 (that is, the decimal equivalent of a 5.1 percent reduction, determined as $1.0 - 5.1/100 = 0.949$) to the site neutral payment rate for those site neutral payment rate cases paid under § 412.522(c)(1)(i). We noted that, consistent with the policy adopted for FY 2017, under this proposed policy the HCO budget neutrality adjustment would not be applied to the HCO portion of the site neutral payment rate amount (80 FR 57309).

Comment: As was the case in the FY 2016 and FY 2017 rulemaking cycle, commenters again objected to the proposed site neutral payment rate HCO budget neutrality adjustment, claiming that it results in savings to the Medicare program instead of being budget neutral. The commenters' primary objection was again based on their belief that, because the IPPS base rates used in the IPPS comparable per diem amount calculation of the site neutral payment rate include a budget neutrality adjustment for IPPS HCO payments (that is, a 5.1 percent adjustment on the operating IPPS standardized amount), an "additional" budget neutrality factor is not necessary and is, in fact, duplicative.

Response: We continue to disagree with the commenters that a budget neutrality adjustment for site neutral payment rate HCO payments is inappropriate, unnecessary, or duplicative. As we discussed in response to

similar comments (81 FR 57308 through 57309 and 80 FR 49621 through 49622), we have the authority to adopt the site neutral payment rate HCO policy in a budget neutral manner. More importantly, we continue to believe this budget neutrality adjustment is appropriate for reasons outlined in our response to the nearly identical comments in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57308 through 57309) and our response to similar comments in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49621 through 49622).

After consideration of the public comments we received, we are finalizing our proposal to apply a budget neutrality adjustment for HCO payments made to site neutral payment rate cases. Therefore, to ensure that estimated HCO payments payable to site neutral payment rate cases in FY 2018 will not result any increase in estimated aggregate FY 2018 LTCH PPS payments, under the budget neutrality requirement at § 412.522(c)(2)(i), it is necessary to reduce the site neutral payment rate portion of the blended rate payment by 5.1 percent to account for the estimated additional HCO payments payable to those cases in FY 2018. In order to achieve this, for FY 2018, in this final rule, to, as proposed, we are applying a budget neutrality factor of 0.949 (that is, the decimal equivalent of a 5.1 percent reduction, determined as $1.0 - 5.1/100 = 0.949$) to the site neutral payment rate (without any applicable HCO payment).

E. Update to the IPPS Comparable/ Equivalent Amounts To Reflect the Statutory Changes to the IPPS DSH Payment Adjustment Methodology

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50766), we established a policy to reflect the changes to the Medicare IPPS DSH payment adjustment methodology made by section 3133 of the Affordable Care Act in the calculation of the “IPPS comparable amount” under the SSO policy at § 412.529 and the “IPPS equivalent amount” under the 25-percent threshold payment adjustment policy at § 412.534 and § 412.536. Historically, the determination of both the “IPPS comparable amount” and the “IPPS equivalent amount” includes an amount for inpatient operating costs “for the costs of serving a disproportionate share of low-income patients.” Under the statutory changes to the Medicare DSH payment adjustment methodology that began in FY 2014, in general, eligible IPPS hospitals receive an empirically justified Medicare DSH payment equal to 25 percent of the amount they otherwise would have received under the statutory formula for Medicare DSH payments prior to the amendments made by the Affordable Care Act. The remaining amount, equal to an estimate of 75 percent of the amount that otherwise would have been paid as Medicare DSH payments, reduced to reflect changes in the percentage of individuals who are uninsured, is made available to make additional payments to each hospital that qualifies for Medicare DSH payments and that has uncompensated care. The additional uncompensated care payments are based on the hospital’s amount of uncompensated care for a given time period relative to the total amount of

uncompensated care for that same time period reported by all IPPS hospitals that receive Medicare DSH payments.

To reflect the statutory changes to the Medicare DSH payment adjustment methodology in the calculation of the “IPPS comparable amount” and the “IPPS equivalent amount” under the LTCH PPS, we stated that we will include a reduced Medicare DSH payment amount that reflects the projected percentage of the payment amount calculated based on the statutory Medicare DSH payment formula prior to the amendments made by the Affordable Care Act that will be paid to eligible IPPS hospitals as empirically justified Medicare DSH payments and uncompensated care payments in that year (that is, a percentage of the operating Medicare DSH payment amount that has historically been reflected in the LTCH PPS payments that is based on IPPS rates). We also stated that the projected percentage will be updated annually, consistent with the annual determination of the amount of uncompensated care payments that will be made to eligible IPPS hospitals. We believe that this approach results in appropriate payments under the LTCH PPS and is consistent with our intention that the “IPPS comparable amount” and the “IPPS equivalent amount” under the LTCH PPS closely resemble what an IPPS payment would have been for the same episode of care, while recognizing that some features of the IPPS cannot be translated directly into the LTCH PPS (79 FR 50766 through 50767).

For FY 2018, as discussed in greater detail in section V.G.3. of the preamble of this final rule, based on the most recent data available, our estimate of 75 percent of the amount that would otherwise have been paid as Medicare DSH payments (under the methodology outlined in section 1886(r)(2) of the Act) is adjusted to 58.01 percent of that amount to reflect the change in the percentage of individuals who are uninsured. The resulting amount is then used to determine the amount available to make uncompensated care payments to eligible IPPS hospitals in FY 2018. In other words, the amount of the Medicare DSH payments that would have been made prior to the amendments made by the Affordable Care Act will be adjusted to 43.51 percent (the product of 75 percent and 58.01 percent) and the resulting amount will be used to calculate the uncompensated care payments to eligible hospitals. As a result, for FY 2018, we project that the reduction in the amount of Medicare DSH payments pursuant to section 1886(r)(1) of the Act, along with the payments for uncompensated care under section 1886(r)(2) of the Act, will result in overall Medicare DSH payments of 68.51 percent of the amount of Medicare DSH payments that would otherwise have been made in the absence of the amendments made by the Affordable Care Act (that is, 25 percent + 43.51 percent = 68.51 percent).

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20192), for FY 2018, we proposed to establish that the calculation of the “IPPS comparable amount” under § 412.529 and the “IPPS equivalent amount” under § 412.538 would include an applicable operating Medicare DSH payment amount that is equal to 68.51 percent of the operating Medicare

DSH payment amount that would have been paid based on the statutory Medicare DSH payment formula but for the amendments made by the Affordable Care Act. Furthermore, consistent with our historical practice, we proposed that if more recent data became available, if appropriate, we would use that data to determine this factor in the final rule.

We did not receive any public comments on our proposal. In addition, there is no more recent data available that would affect the calculations in the proposed rule. Therefore, we are finalizing our proposal that the calculation of the “IPPS comparable amount” under § 412.529 and the “IPPS equivalent amount” under § 412.538 would include an applicable operating Medicare DSH payment amount that is equal to 68.51 percent of the operating Medicare DSH payment amount that would have been paid based on the statutory Medicare DSH payment formula but for the amendments made by the Affordable Care Act.

F. Computing the Adjusted LTCH PPS Federal Prospective Payments for FY 2018

Section 412.525 sets forth the adjustments to the LTCH PPS standard Federal payment rate. Under the dual rate LTCH PPS payment structure, only LTCH PPS cases that meet the statutory criteria to be excluded from the site neutral payment rate are paid based on the LTCH PPS standard Federal payment rate. Under § 412.525(c), the proposed LTCH PPS standard Federal payment rate is adjusted to account for differences in area wages by multiplying the proposed labor-related share of the LTCH PPS standard Federal payment rate for a case by the applicable LTCH PPS wage index (the FY 2018 values are shown in Tables 12A through 12B listed in section VI. of the Addendum of this final rule and are available via the Internet on the CMS Web site). The LTCH PPS standard Federal payment rate is also adjusted to account for the higher costs of LTCHs located in Alaska and Hawaii by the applicable COLA factors (the FY 2018 factors are shown in the chart in section V.C. of this Addendum) in accordance with § 412.525(b). In this final rule, we are establishing an LTCH PPS standard Federal payment rate for FY 2018 of \$41,430.56, as discussed in section V.A. of the Addendum to this final rule. We illustrate the methodology to adjust the LTCH PPS standard Federal payment rate for FY 2018 in the following example:

Example

During FY 2018, a Medicare discharge that meets the criteria to be excluded from the site neutral payment rate, that is, an LTCH PPS standard Federal payment rate case, is from an LTCH that is located in Chicago, Illinois (CBSA 16974). The FY 2018 LTCH PPS wage index value for CBSA 16974 is 1.0547 (obtained from Table 12A listed in section VI. of the Addendum of this final rule and available via the Internet on the CMS Web site). The Medicare patient case is classified into MS–LTC–DRG 189 (Pulmonary Edema & Respiratory Failure), which has a relative weight for FY 2018 of 0.9655 (obtained from Table 11 listed in section VI. of the Addendum of this final rule and available via the Internet on the CMS Web site). The LTCH

submitted quality reporting data for FY 2018 in accordance with the LTCHQRP under section 1886(m)(5) of the Act.

To calculate the LTCH's total adjusted Federal prospective payment for this Medicare patient case in FY 2018, we computed the wage-adjusted proposed Federal prospective payment amount by multiplying the unadjusted FY 2018 LTCH

PPS standard Federal payment rate (\$41,430.56) by the labor-related share (66.2 percent) and the wage index value (1.0547). This wage-adjusted amount was then added to the nonlabor-related portion of the unadjusted LTCH PPS standard Federal payment rate (33.8 percent; adjusted for cost of living, if applicable) to determine the adjusted LTCH PPS standard Federal

payment rate, which is then multiplied by the MS-LTC-DRG relative weight (0.9655) to calculate the total adjusted LTCH PPS standard Federal prospective payment for FY 2018 (\$41,449.71). The table below illustrates the components of the calculations in this example.

Unadjusted LTCH PPS Standard Federal Prospective Payment Rate	\$41,430.56
Labor-Related Share	× 0.662
Labor-Related Portion of the LTCH PPS Standard Federal Payment Rate	= \$27,427.03
Wage Index (CBSA 16974)	× 1.0547
Wage-Adjusted Labor Share of LTCH PPS Standard Federal Payment Rate	= \$28,927.29
Nonlabor-Related Portion of the LTCH PPS Standard Federal Payment Rate (\$41,430.56 × 0.338)	+ \$14,003.53
Adjusted LTCH PPS Standard Federal Payment Amount	= \$42,930.82
MS-LTC-DRG 189 Relative Weight	× 0.9655
Total Adjusted LTCH PPS Standard Federal Prospective Payment	= \$41,449.71

VI. Tables Referenced in This Final Rule and Available Only Through the Internet on the CMS Web site

This section lists the tables referred to throughout the preamble of this final rule and in this Addendum. In the past, a majority of these tables were published in the **Federal Register** as part of the annual proposed and final rules. However, similar to FYs 2012 through 2017, for the FY 2018 rulemaking cycle, the IPPS and LTCH tables will not be published in the **Federal Register** in the annual IPPS/LTCH PPS proposed and final rules and will be available only through the Internet. Specifically, all IPPS tables listed below, with the exception of IPPS Tables 1A, 1B, 1C, and 1D, and LTCH PPS Table 1E will be available only through the Internet. IPPS Tables 1A, 1B, 1C, and 1D, and LTCH PPS Table 1E are displayed at the end of this section and will continue to be published in the **Federal Register** as part of the annual proposed and final rules.

As discussed in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49807), we streamlined and consolidated the wage index tables for FY 2016 and subsequent fiscal years.

As discussed in sections II.F.14., II.F.15.b., II.F.16., II.F.17.a., and II.F.19.a.1., a.3., and c.1. of the preamble of this final rule, we developed the following ICD-10-CM and ICD-10-PCS code tables for FY 2018: Table 6A.—New Diagnosis Codes; Table 6B.—New Procedure Codes; Table 6C.—Invalid Diagnosis Codes; Table 6D.—Invalid Procedure Codes; Table 6E.—Revised Diagnosis Code Titles; Table 6F.—Revised Procedure Code Titles; Table 6G.1.—Secondary Diagnosis Order Additions to the CC Exclusion List; Table 6G.2.—Principal Diagnosis Order Additions to the CC Exclusion List; Table 6H.1.—Secondary Diagnosis Order Deletions to the CC Exclusion List; Table 6H.2.—Principal Diagnosis Order Deletions to the CC Exclusion List; Table 6I.—Complete MCC List; Table 6I.1.—Additions to the MCC List; Table 6J.—Complete CC List; Table 6I.2.—Deletions to the MCC List; Table 6J.1.—Additions to the CC List; Table 6J.2.—Deletions to the CC List; Table 6K.—Complete List of CC Exclusions; Table 6L.—Principal Diagnosis Is Its Own MCC List—FY 2018; Table 6M.—Principal Diagnosis Is Its

Own CC List—FY 2018; and Table 6P.—ICD-10-CM and ICD-10-PCS Code Designations, MCE and MS-DRG Changes. Table 6P contains multiple tables, 6P.1a through 6P.4p, that include the ICD-10-CM and ICD-10-PCS code lists relating to specific MCE and MS-DRG changes. In addition, under the HAC Reduction Program established by section 3008 of the Affordable Care Act, a hospital's total payment may be reduced by 1 percent if it is in the lowest HAC performance quartile. However, as discussed in section V.I. of the preamble of this final rule, we are not providing the hospital-level data as a table associated with this final rule. The hospital-level data for the FY 2018 HAC Reduction Program will be made publicly available once it has undergone the review and corrections process.

Finally, Table 18 associated with this final rule contains the Factor 3 for purposes of determining the FY 2018 uncompensated care payment for all hospitals and identifies whether or not a hospital is projected to receive Medicare DSH payments and, therefore, eligible to receive the additional payment for uncompensated care for FY 2018. A hospital's Factor 3 determines the proportion of the aggregate amount available for uncompensated care payments that a Medicare DSH eligible hospital will receive under section 3133 of the Affordable Care Act.

Readers who experience any problems accessing any of the tables that are posted on the CMS Web sites identified below should contact Michael Treitel at (410) 786-4552.

The following IPPS tables for this FY 2018 final rule are available only through the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>. 	Full update (1 percent)	Reduced update* (-1.0 percent)
Standard Federal Rate	\$41,430.56	\$40,610.16

* For LTCHs that fail to submit quality reporting data for FY 2018 in accordance with the LTCH Quality Reporting Program (LTCH QRP), the annual update is reduced by 2.0 percentage points as required by section 1886(m)(5) of the Act.

Appendix A: Economic Analyses

I. Regulatory Impact Analysis

A. Introduction

We have examined the impacts of this final rule as required by Executive Order 12866 on

Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (January 18, 2011), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96-354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104-4), Executive Order 13132 on Federalism (August 4, 1999), the Congressional Review Act (5 U.S.C. 804(2)), and Executive Order 13771 on Reducing Regulation and Controlling Regulatory Costs (January 30, 2017).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Section 3(f) of Executive Order 12866 defines a “significant regulatory action” as an action that is likely to result in a rule: (1) (Having

an annual effect on the economy of \$100 million or more in any 1 year, or adversely and materially affecting a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local or tribal governments or communities (also referred to as “economically significant”); (2) creating a serious inconsistency or otherwise interfering with an action taken or planned by another agency; (3) materially altering the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raising novel legal or policy issues arising out of legal mandates, the President’s priorities, or the principles set forth in the Executive Order.

We have determined that this final rule is a major rule as defined in 5 U.S.C. 804(2). We estimate that the changes for FY 2018 acute care hospital operating and capital payments will redistribute amounts in excess of \$100 million to acute care hospitals. The applicable percentage increase to the IPPS rates required by the statute, in conjunction with other payment changes in this final rule, will result in an estimated \$2.4 billion increase in FY 2018 payments, including a \$1.7 billion increase in FY 2018 operating payments, a \$0.8 billion increase in uncompensated care payments, a \$0.2 billion increase in FY 2018 capital payments, and a \$0.3 billion decrease in low volume payments. These changes are relative to payments made in FY 2017. The impact analysis of the capital payments can be found in section I.I. of this Appendix. In addition, as described in section I.J. of this Appendix, LTCHs are expected to experience a decrease in payments by \$110 million in FY 2018 relative to FY 2017.

Our operating impact estimate includes the 0.4588 percent adjustment required under section 15005 of the 21st Century Cures Act (Pub. L. 114–255) applied to the IPPS standardized amount, as discussed in section II.D. of the preamble of this final rule. In addition, our operating payment impact estimate includes the 1.35 percent hospital update to the standardized amount (which includes the estimated 2.7 percent market basket update less 0.6 percentage point for the multifactor productivity adjustment and less 0.75 percentage point required under the Affordable Care Act). Our operating payment impact estimate also includes an adjustment factor of (1/1.006) to the FY 2018 rates to remove the 1.006 temporary one-time adjustment made in FY 2017 to address the effects of the 0.2 percent reduction in effect for FYs 2014 through 2016 as a result of the 2-midnight policy (we refer readers to section V.M. of the preamble of this final rule for an explanation of this adjustment). The estimates of IPPS operating payments to acute care hospitals do not reflect any changes in hospital admissions or real case-mix intensity, which will also affect overall payment changes.

The analysis in this Appendix, in conjunction with the remainder of this document, demonstrates that this final rule is consistent with the regulatory philosophy and principles identified in Executive Orders 12866 and 13563, the RFA, and section 1102(b) of the Act. This final rule will affect

payments to a substantial number of small rural hospitals, as well as other classes of hospitals, and the effects on some hospitals may be significant. Finally, in accordance with the provisions of Executive Order 12866, the Executive Office of Management and Budget has reviewed this final rule.

B. Statement of Need

This final rule is necessary in order to make payment and policy changes under the Medicare IPPS for Medicare acute care hospital inpatient services for operating and capital-related costs as well as for certain hospitals and hospital units excluded from the IPPS. This final rule also is necessary to make payment and policy changes for Medicare hospitals under the LTCH PPS.

C. Objectives of the IPPS and the LTCH PPS

The primary objective of the IPPS and the LTCH PPS is to create incentives for hospitals to operate efficiently and minimize unnecessary costs while at the same time ensuring that payments are sufficient to adequately compensate hospitals for their legitimate costs in delivering necessary care to Medicare beneficiaries. In addition, we share national goals of preserving the Medicare Hospital Insurance Trust Fund.

We believe that the changes in this final rule will further each of these goals while maintaining the financial viability of the hospital industry and ensuring access to high quality health care for Medicare beneficiaries. We expect that these changes will ensure that the outcomes of the prospective payment systems are reasonable and equitable while avoiding or minimizing unintended adverse consequences.

Because this final rule contains a range of policies, we refer readers to the section of the final rule where each policy is discussed. These sections include the rationale for our decisions, including the need for the policy.

D. Limitations of Our Analysis

The following quantitative analysis presents the projected effects of our policy changes, as well as statutory changes effective for FY 2018, on various hospital groups. We estimate the effects of individual policy changes by estimating payments per case while holding all other payment policies constant. We use the best data available, but, generally, we do not attempt to make adjustments for future changes in such variables as admissions, lengths of stay, or case-mix. In addition, we discuss limitations of our analysis for specific policies in the discussion of those policies as needed.

E. Hospitals Included in and Excluded From the IPPS

The prospective payment systems for hospital inpatient operating and capital-related costs of acute care hospitals encompass most general short-term, acute care hospitals that participate in the Medicare program. There were 31 Indian Health Service hospitals in our database, which we excluded from the analysis due to the special characteristics of the prospective payment methodology for these hospitals. Among other short-term, acute care hospitals, hospitals in Maryland are paid in accordance with the Maryland All-Payer Model, and

hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, 5 short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa) receive payment for inpatient hospital services they furnish on the basis of reasonable costs, subject to a rate-of-increase ceiling.

As of July 2017, there were 3,292 IPPS acute care hospitals included in our analysis. This represents approximately 55 percent of all Medicare-participating hospitals. The majority of this impact analysis focuses on this set of hospitals. There also are approximately 1,387 CAHs. These small, limited service hospitals are paid on the basis of reasonable costs rather than under the IPPS. IPPS-excluded hospitals and units, which are paid under separate payment systems, include IPFs, IRFs, LTCHs, RNHCIs, children’s hospitals, 11 cancer hospitals, extended neoplastic disease care hospitals, and 5 short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa. With the exception of the IPFQR provisions presented in section IX.D. of the preamble of this final rule, changes in the prospective payment systems for IPFs and IRFs are made through separate rulemaking. Payment impacts of changes to the prospective payment systems for these IPPS-excluded hospitals and units are not included in this final rule. The impact of the update and policy changes to the LTCH PPS for FY 2018 is discussed in section I.J. of this Appendix.

F. Effects on Hospitals and Hospital Units Excluded From the IPPS

As of July 2017, there were 98 children’s hospitals, 11 cancer hospitals, 5 short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands and American Samoa, 1 extended neoplastic disease care hospital, and 18 RNHCIs being paid on a reasonable cost basis subject to the rate-of-increase ceiling under § 413.40. (In accordance with § 403.752(a) of the regulation, RNHCIs are paid under § 413.40.) Among the remaining providers, 276 rehabilitation hospitals and 864 rehabilitation units, and approximately 419 LTCHs, are paid the Federal prospective per discharge rate under the IRF PPS and the LTCH PPS, respectively, and 517 psychiatric hospitals and 1,104 psychiatric units are paid the Federal per diem amount under the IPF PPS. As stated previously, IRFs and IPFs are not affected by the rate updates discussed in this final rule. The impacts of the changes on LTCHs are discussed in section I.J. of this Appendix. For children’s hospitals, the 11 cancer hospitals, the 5 short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, extended neoplastic disease care hospitals, and RNHCIs, the update of the rate-of-increase limit (or target amount) is the estimated FY 2018 percentage increase in the 2014-based IPPS operating market basket, consistent with section 1886(b)(3)(B)(ii) of the Act, and §§ 403.752(a) and 413.40 of the regulations. As discussed in section IV. of the preamble of this final rule, we are rebasing and revising the IPPS operating market

basket to a 2014 base year. Therefore, we used the percentage increase in the 2014-based IPPS operating market basket to update the target amounts for FY 2018 and subsequent years for children's hospitals, the 11 cancer hospitals, the 5 short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, extended neoplastic disease care hospitals, and RNHCs that are paid based on reasonable costs subjects to the rate-of-increase limits. Consistent with current law, based on IGI's 2017 second quarter forecast of the 2014-based IPPS market basket increase, we are estimating the FY 2018 update to be 2.7 percent (that is, the estimate of the market basket rate-of-increase). We used the most recent data available for this final rule to calculate the IPPS operating market basket update for FY 2018. However, the Affordable Care Act requires an adjustment for multifactor productivity (currently 0.6 percentage point for FY 2018) and a 0.75 percentage point reduction to the market basket update, resulting in a 1.35 percent applicable percentage increase for IPPS hospitals that submit quality data and are meaningful EHR users, as discussed in section V.B. of the preamble of this final rule. Children's hospitals, the 11 cancer hospitals, the 5 short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, extended neoplastic disease care hospitals, and RNHCs that continue to be paid based on reasonable costs subject to rate-of-increase limits under § 413.40 of the regulations are not subject to the reductions in the applicable percentage increase required under the Affordable Care Act. Therefore, for those hospitals paid under § 413.40 of the regulations, the update is the percentage increase in the 2014-based IPPS operating market basket for FY 2018, estimated at 2.7 percent, without the reductions described previously under the Affordable Care Act.

The impact of the update in the rate-of-increase limit on those excluded hospitals depends on the cumulative cost increases experienced by each excluded hospital since its applicable base period. For excluded hospitals that have maintained their cost increases at a level below the rate-of-increase limits since their base period, the major effect is on the level of incentive payments these excluded hospitals receive. Conversely, for excluded hospitals with cost increases above the cumulative update in their rate-of-increase limits, the major effect is the amount of excess costs that would not be paid.

We note that, under § 413.40(d)(3), an excluded hospital that continues to be paid under the TEFRA system and whose costs exceed 110 percent of its rate-of-increase limit receives its rate-of-increase limit plus the lesser of: (1) 50 percent of its reasonable costs in excess of 110 percent of the limit; or (2) 10 percent of its limit. In addition, under the various provisions set forth in § 413.40, hospitals can obtain payment adjustments for justifiable increases in operating costs that exceed the limit.

G. Quantitative Effects of the Policy Changes Under the IPPS for Operating Costs

1. Basis and Methodology of Estimates

In this final rule, we are announcing policy changes and payment rate updates for the IPPS for FY 2018 for operating costs of acute care hospitals. The FY 2018 updates to the capital payments to acute care hospitals are discussed in section I.I. of this Appendix.

Based on the overall percentage change in payments per case estimated using our payment simulation model, we estimate that total FY 2018 operating payments will increase by 1.3 percent compared to FY 2017. In addition to the applicable percentage increase, this amount reflects the FY 2018 adjustment required under section 15005 of the 21st Century Cures Act described in section II.D. of the preamble of this final rule of 0.4588 percent to the IPPS national standardized amounts. This amount also reflects the adjustment factor of (1/1.006) to remove the 1.006 temporary one-time adjustment made in FY 2017 to address the effects of the 0.2 percent reduction in effect for FYs 2014 through 2016 related to the 2-midnight policy, which is discussed in section V.M. of the preamble of this final rule. The impacts do not reflect changes in the number of hospital admissions or real case-mix intensity, which will also affect overall payment changes. We have prepared separate impact analyses of the changes to each system. This section deals with the changes to the operating inpatient prospective payment system for acute care hospitals. Our payment simulation model relies on the most recent available data to enable us to estimate the impacts on payments per case of certain changes in this final rule. However, there are other changes for which we do not have data available that would allow us to estimate the payment impacts using this model. For those changes, we have attempted to predict the payment impacts based upon our experience and other more limited data.

The data used in developing the quantitative analyses of changes in payments per case presented in this section are taken from the FY 2016 MedPAR file and the most current Provider-Specific File (PSF) that is used for payment purposes. Although the analyses of the changes to the operating PPS do not incorporate cost data, data from the most recently available hospital cost reports were used to categorize hospitals. Our analysis has several qualifications. First, in this analysis, we do not make adjustments for future changes in such variables as admissions, lengths of stay, or underlying growth in real case-mix. Second, due to the interdependent nature of the IPPS payment components, it is very difficult to precisely quantify the impact associated with each change. Third, we use various data sources to categorize hospitals in the tables. In some cases, particularly the number of beds, there is a fair degree of variation in the data from the different sources. We have attempted to construct these variables with the best available source overall. However, for individual hospitals, some miscategorizations are possible.

Using cases from the FY 2016 MedPAR file, we simulate payments under the

operating IPPS given various combinations of payment parameters. As described previously, Indian Health Service hospitals and hospitals in Maryland were excluded from the simulations. The impact of payments under the capital IPPS, and the impact of payments for costs other than inpatient operating costs, are not analyzed in this section. Estimated payment impacts of the capital IPPS for FY 2018 are discussed in section I.I. of this Appendix.

We discuss the following changes:

- The effects of the application of the adjustment required under section 15005 of the 21st Century Cures Act and the applicable percentage increase (including the market basket update, the multifactor productivity adjustment, and the applicable percentage reduction in accordance with the Affordable Care Act) to the standardized amount and hospital-specific rates.

- The effects of the adjustment of (1/1.006) to remove the 1.006 temporary one-time adjustment made in FY 2017 to address the effects of the 0.2 percent reduction in effect for FYs 2014 through 2016 related to the 2-midnight policy, as discussed in section V.M. of the preamble of this final rule.

- The effects of the changes to the relative weights and MS-DRG GROUPER.

- The effects of the changes in hospitals' wage index values reflecting updated wage data from hospitals' cost reporting periods beginning during FY 2014, compared to the FY 2013 wage data, to calculate the FY 2018 wage index.

- The effects of the geographic reclassifications by the MGRB (as of publication of this final rule) that will be effective for FY 2018.

- The effects of the rural floor and imputed floor with the application of the national budget neutrality factor to the wage index.

- The effects of the frontier State wage index adjustment under the statutory provision that requires hospitals located in States that qualify as frontier States to not have a wage index less than 1.0. This provision is not budget neutral.

- The effects of the implementation of section 1886(d)(13) of the Act, as added by section 505 of Public Law 108-173, which provides for an increase in a hospital's wage index if a threshold percentage of residents of the county where the hospital is located commute to work at hospitals in counties with higher wage indexes. This provision is not budget neutral.

- The effects of the expiration of the special payment status for MDHs at the end of FY 2017 under current law as a result of which MDHs that currently receive the higher of payments made based on the Federal rate or the payments made based on the Federal rate plus 75 percent of the difference between payments based on the Federal rate and the hospital-specific rate will be paid based on the Federal rate starting in FY 2018.

- The total estimated change in payments based on the FY 2018 policies relative to payments based on FY 2017 policies that include the applicable percentage increase of 1.35 percent (or 2.7 percent market basket update with a reduction of 0.6 percentage point for the multifactor productivity

adjustment, and a 0.75 percentage point reduction, as required under the Affordable Care Act).

To illustrate the impact of the FY 2018 changes, our analysis begins with a FY 2017 baseline simulation model using: The FY 2017 applicable percentage increase of 1.65 percent and the documentation and coding adjustment of –1.5 percent to the Federal standardized amount; the adjustment of (1/0.998) to permanently remove the –0.2 percent reduction to the rate put in place in FY 2014 to offset the estimated increase in IPPS expenditures as a result of the 2-midnight policy; the 1.006 temporary adjustment to address the effects of the 0.2 percent reduction in effect for FYs 2014 through 2016 related to the 2-midnight policy; the FY 2017 MS–DRG GROUPER (Version 34); the FY 2017 CBSA designations for hospitals based on the OMB definitions from the 2010 Census; the FY 2017 wage index; and no MGCRB reclassifications. Outlier payments are set at 5.1 percent of total operating MS–DRG and outlier payments for modeling purposes.

Section 1886(b)(3)(B)(viii) of the Act, as added by section 5001(a) of Public Law 109–171, as amended by section 4102(b)(1)(A) of the ARRA (Pub. L. 111–5) and by section 3401(a)(2) of the Affordable Care Act (Pub. L. 111–148), provides that, for FY 2007 and each subsequent year through FY 2014, the update factor will include a reduction of 2.0 percentage points for any subsection (d) hospital that does not submit data on measures in a form and manner and at a time specified by the Secretary. Beginning in FY 2015, the reduction is one-quarter of such applicable percentage increase determined without regard to section 1886(b)(3)(B)(ix), (xi), or (xii) of the Act, or one-quarter of the market basket update. Therefore, for FY 2018, hospitals that do not submit quality information under rules established by the Secretary and that are meaningful EHR users under section 1886(b)(3)(B)(ix) of the Act will receive an applicable percentage increase of 0.675 percent. At the time that this impact was prepared, 82 hospitals are estimated to not receive the full market basket rate-of-increase for FY 2018 because they failed the quality data submission process or did not choose to participate but are meaningful EHR users. For purposes of the simulations shown later in this section, we modeled the payment changes for FY 2018 using a reduced update for these hospitals.

For FY 2018, in accordance with section 1886(b)(3)(B)(ix) of the Act, a hospital that has been identified as not a meaningful EHR user will be subject to a reduction of three-quarters of such applicable percentage increase determined without regard to section 1886(b)(3)(B)(ix), (xi), or (xii) of the Act. Therefore, for FY 2018, hospitals that are identified as not meaningful EHR users and do submit quality information under section 1886(b)(3)(B)(viii) of the Act will receive an applicable percentage increase of –0.675 percent. At the time that this impact analysis was prepared, 103 hospitals are estimated to not receive the full market basket rate-of-increase for FY 2018 because they are identified as not meaningful EHR users that do submit quality information under section

1886(b)(3)(B)(viii) of the Act. For purposes of the simulations shown in this section, we modeled the payment changes for FY 2018 using a reduced update for these hospitals.

Hospitals that are identified as not meaningful EHR users under section 1886(b)(3)(B)(ix) of the Act and also do not submit quality data under section 1886(b)(3)(B)(viii) of the Act will receive an applicable percentage increase of –1.35 percent, which reflects a one-quarter reduction of the market basket update for failure to submit quality data and a three-quarter reduction of the market basket update for being identified as not a meaningful EHR user. At the time that this impact was prepared, 21 hospitals are estimated to not receive the full market basket rate-of-increase for FY 2018 because they are identified as not meaningful EHR users that do not submit quality data under section 1886(b)(3)(B)(viii) of the Act.

Each policy change, statutory or otherwise, is then added incrementally to this baseline, finally arriving at an FY 2018 model incorporating all of the changes. This simulation allows us to isolate the effects of each change.

Our final comparison illustrates the percent change in payments per case from FY 2017 to FY 2018. Two factors not discussed separately have significant impacts here. The first factor is the update to the standardized amount. In accordance with section 1886(b)(3)(B)(i) of the Act, we are updating the standardized amounts for FY 2018 using an applicable percentage increase of 1.35 percent. This includes our forecasted IPPS operating hospital market basket increase of 2.7 percent with a 0.6 percentage point reduction for the multifactor productivity adjustment and a 0.75 percentage point reduction as required under the Affordable Care Act. Hospitals that fail to comply with the quality data submission requirements and are meaningful EHR users will receive an update of 0.675 percent. This update includes a reduction of one-quarter of the market basket update for failure to submit these data. Hospitals that do comply with the quality data submission requirements but are not meaningful EHR users will receive an update of –0.675 percent, which includes a reduction of three-quarters of the market basket update. Furthermore, hospitals that do not comply with the quality data submission requirements and also are not meaningful EHR users will receive an update of –1.35 percent. Under section 1886(b)(3)(B)(iv) of the Act, the update to the hospital-specific amounts for SCHs is also equal to the applicable percentage increase, or 1.35 percent if the hospital submits quality data and is a meaningful EHR user.

A second significant factor that affects the changes in hospitals' payments per case from FY 2017 to FY 2018 is the change in hospitals' geographic reclassification status from one year to the next. That is, payments may be reduced for hospitals reclassified in FY 2017 that are no longer reclassified in FY 2018. Conversely, payments may increase for hospitals not reclassified in FY 2017 that are reclassified in FY 2018.

2. Analysis of Table I

Table I displays the results of our analysis of the changes for FY 2018. The table categorizes hospitals by various geographic and special payment consideration groups to illustrate the varying impacts on different types of hospitals. The top row of the table shows the overall impact on the 3,292 acute care hospitals included in the analysis.

The next four rows of Table I contain hospitals categorized according to their geographic location: All urban, which is further divided into large urban and other urban; and rural. There are 2,492 hospitals located in urban areas included in our analysis. Among these, there are 1,340 hospitals located in large urban areas (populations over 1 million), and 1,152 hospitals in other urban areas (populations of 1 million or fewer). In addition, there are 800 hospitals in rural areas. The next two groupings are by bed-size categories, shown separately for urban and rural hospitals. The final groupings by geographic location are by census divisions, also shown separately for urban and rural hospitals.

The second part of Table I shows hospital groups based on hospitals' FY 2018 payment classifications, including any reclassifications under section 1886(d)(10) of the Act. For example, the rows labeled urban, large urban, other urban, and rural show that the numbers of hospitals paid based on these categorizations after consideration of geographic reclassifications (including reclassifications under sections 1886(d)(8)(B) and 1886(d)(8)(E) of the Act that have implications for capital payments) are 2,373, 1,354, 1,019, and 919, respectively.

The next three groupings examine the impacts of the changes on hospitals grouped by whether or not they have GME residency programs (teaching hospitals that receive an IME adjustment) or receive Medicare DSH payments, or some combination of these two adjustments. There are 2,204 nonteaching hospitals in our analysis, 839 teaching hospitals with fewer than 100 residents, and 249 teaching hospitals with 100 or more residents.

In the DSH categories, hospitals are grouped according to their DSH payment status, and whether they are considered urban or rural for DSH purposes. The next category groups together hospitals considered urban or rural, in terms of whether they receive the IME adjustment, the DSH adjustment, both, or neither.

The next three rows examine the impacts of the changes on rural hospitals by special payment groups (SCHs, and RRCs). There were 263 RRCs, 316 SCHs, and 131 hospitals that are both SCHs and RRCs.

The next series of groupings are based on the type of ownership and the hospital's Medicare utilization expressed as a percent of total patient days. These data were taken from the FY 2015 or FY 2014 Medicare cost reports.

The next two groupings concern the geographic reclassification status of hospitals. The first grouping displays all urban hospitals that were reclassified by the MGCRB for FY 2018. The second grouping shows the MGCRB rural reclassifications.

Other Reclassified Hospitals (Section 1886(d)(8)(B))	47	1.1	0.5	0.3	3.4	-0.3	0	-1.2	0.6

¹ Because data necessary to classify some hospitals by category were missing, the total number of hospitals in each category may not equal the national total. Discharge data are from FY 2016, and hospital cost report data are from reporting periods beginning in FY 2014 and FY 2015.

² This column displays the payment impact of the hospital rate update and other adjustments, including the 1.35 percent adjustment to the national standardized amount and the hospital-specific rate (the estimated 2.7 percent market basket update reduced by 0.6 percentage point for the multifactor productivity adjustment and the 0.75 percentage point reduction under the Affordable Care Act), the 0.4588 percent adjustment to the national standardized amount required under section 15005 of the 21st Century Cures Act and a factor of (1/1.006) to remove the 1.006 temporary one-time adjustment made in FY 2017 to address the effects of the 0.2 percent reduction in effect for FYs 2014 through 2016 related to the 2-midnight policy.

³ This column displays the payment impact of the changes to the Version 35 GROUPE, the changes to the relative weights and the recalibration of the MS-DRG weights based on FY 2016 MedPAR data in accordance with section 1886(d)(4)(C)(iii) of the Act. This column displays the application of the recalibration budget neutrality factor of 0.997432 in accordance with section 1886(d)(4)(C)(iii) of the Act.

⁴ This column displays the payment impact of the update to wage index data using FY 2014 and 2013 cost report data and the OMB labor market area delineations based on 2010 Decennial Census data. This column displays the payment impact of the application of the wage budget neutrality factor, which is calculated separately from the recalibration budget neutrality factor, and is calculated in accordance with section 1886(d)(3)(E)(i) of the Act. The wage budget neutrality factor is 1.001148.

⁵ Shown here are the effects of geographic reclassifications by the Medicare Geographic Classification Review Board (MGCRB). The effects demonstrate the FY 2018 payment impact of going from no reclassifications to the reclassifications scheduled to be in effect for FY 2018.

Reclassification for prior years has no bearing on the payment impacts shown here. This column reflects the geographic budget neutrality factor of 0.988008.

⁶ This column displays the effects of the rural floor and imputed floor. The Affordable Care Act requires the rural floor budget neutrality adjustment to be 100 percent national level adjustment. The rural floor budget neutrality factor (which includes the imputed floor) applied to the wage index is 0.993348.

⁷ This column shows the combined impact of the policy required under section 10324 of the Affordable Care Act that hospitals located in frontier States have a wage index no less than 1.0 and of section 1886(d)(13) of the Act, as added by section 505 of Pub. L. 108-173, which provides for an increase in a hospital's wage index if a threshold percentage of residents of the county where the hospital is located commute to work at hospitals in counties with higher wage indexes. These are not budget neutral policies.

⁸ This column displays the impact of the expiration of MDH status for FY 2018, a non-budget neutral payment provision.

⁹ This column shows the estimated change in payments from FY 2017 to FY 2018.

BILLING CODE 4120-01-C

a. Effects of the Hospital Update, Adjustment Required Under Section 15005 of the 21st Century Cures Act, and Other Adjustments (Column 1)

As discussed in section V.B. of the preamble of this final rule, this column includes the hospital update, including the 2.7 percent market basket update, the reduction of 0.6 percentage point for the multifactor productivity adjustment, and the 0.75 percentage point reduction in accordance with the Affordable Care Act. In addition, as discussed in section II.D. of the preamble of this final rule, this column includes the FY 2018 adjustment of 0.4588 percent on the national standardized amount required under section 15005 of the 21st Century Cures Act and, as discussed in section V.M. of the preamble of this final rule, the adjustment factor of (1/1.006) to remove the 1.006 temporary one-time adjustment made in FY 2017 to address the effects of the 0.2 percent reduction in effect for FYs 2014 through 2016 related to the 2-midnight policy. As a result, we are making a 1.2 percent update to the national standardized amount. This column also includes the update to the hospital-specific rates which includes the 2.7 percent market basket update, the reduction of 0.6 percentage point for the multifactor productivity adjustment, and the 0.75 percentage point reduction in accordance with the Affordable Care Act and, as discussed in section V.M. of the preamble of this final rule, the adjustment factor of (1/1.006) to remove the 1.006 temporary one-time adjustment made in FY 2017 to address the effects of the 0.2 percent reduction in effect for FYs 2014 through 2016 related to the 2-midnight policy. As a result, we are making a 0.75 percent update to the hospital-specific rates.

Overall, hospitals will experience a 1.2 percent increase in payments primarily due to the combined effects of the hospital update and the 0.4588 percent adjustment on the national standardized amount and the hospital update to the hospital-specific rate as well as the adjustment factor of (1/1.006) to remove the 1.006 temporary one-time adjustment made in FY 2017 to address the effects of the 0.2 percent reduction in effect for FYs 2014 through 2016 related to the 2-midnight policy to both the national standardized amount and the hospital-specific rate. Hospitals that are paid under the hospital-specific rate will experience a 0.75 percent increase in payments; therefore, hospital categories containing hospitals paid under the hospital-specific rate will experience a lower than average increase in payments.

b. Effects of the Changes to the MS-DRG Reclassifications and Relative Cost-Based Weights With Recalibration Budget Neutrality (Column 2)

Column 2 shows the effects of the changes to the MS-DRGs and relative weights with the application of the recalibration budget neutrality factor to the standardized amounts. Section 1886(d)(4)(C)(i) of the Act requires us annually to make appropriate classification changes in order to reflect changes in

treatment patterns, technology, and any other factors that may change the relative use of hospital resources. Consistent with section 1886(d)(4)(C)(iii) of the Act, we calculated a recalibration budget neutrality factor to account for the changes in MS-DRGs and relative weights to ensure that the overall payment impact is budget neutral.

As discussed in section II.E. of the preamble of this final rule, the FY 2018 MS-DRG relative weights will be 100 percent cost-based and 100 percent MS-DRGs. For FY 2018, the MS-DRGs are calculated using the FY 2016 MedPAR data grouped to the Version 35 (FY 2018) MS-DRGs. The methodology to calculate the relative weights and the reclassification changes to the GROUPE are described in more detail in section II.G. of the preamble of this final rule.

The "All Hospitals" line in Column 2 indicates that changes due to the MS-DRGs and relative weights will result in a 0.0 percent change in payments with the application of the recalibration budget neutrality factor of 0.997432 to the standardized amount. Hospital categories that generally treat more surgical cases than medical cases will experience a decrease in their payments under the relative weights for reasons that include the policies regarding operating room procedures described in section II.G. of the preamble of this final rule. Rural hospitals will experience a 0.2 percent increase in payments in part because rural hospitals tend to treat fewer surgical cases than medical cases, while teaching hospitals with more than 100 residents will experience a -0.2 percent decrease in payments in part because those hospitals treat more surgical cases than medical cases.

c. Effects of the Wage Index Changes (Column 3)

Column 3 shows the impact of updated wage data using FY 2014 cost report data, with the application of the wage budget neutrality factor. The wage index is calculated and assigned to hospitals on the basis of the labor market area in which the hospital is located. Under section 1886(d)(3)(E) of the Act, beginning with FY 2005, we delineate hospital labor market areas based on the Core Based Statistical Areas (CBSAs) established by OMB. The current statistical standards used in FY 2018 are based on OMB standards published on February 28, 2013 (75 FR 37246 and 37252), and 2010 Decennial Census data (OMB Bulletin No. 13-01), as updated in OMB Bulletin No. 15-01. (We refer readers to the FY 2015 IPPS/LTCH PPS final rule (79 FR 49951 through 49963) for a full discussion on our adoption of the OMB labor market area delineations based on the 2010 Decennial Census data, effective beginning with the FY 2015 IPPS wage index, and to section III.A.2. of the preamble of the FY 2017 IPPS/LTCH PPS final rule (81 FR 56913) for a discussion of our adoption of the CBSA updates in OMB Bulletin No. 15-01, which were effective beginning with the FY 2017 wage index.)

Section 1886(d)(3)(E) of the Act requires that, beginning October 1, 1993, we annually update the wage data used to calculate the wage index. In accordance with this requirement, the wage index for acute care hospitals for FY 2018 is based on data

submitted for hospital cost reporting periods beginning on or after October 1, 2013 and before October 1, 2014. The estimated impact of the updated wage data using the FY 2014 cost report data and the OMB labor market area delineations on hospital payments is isolated in Column 3 by holding the other payment parameters constant in this simulation. That is, Column 3 shows the percentage change in payments when going from a model using the FY 2017 wage index, based on FY 2013 wage data, the labor-related share of 69.6 percent, under the OMB delineations and having a 100-percent occupational mix adjustment applied, to a model using the FY 2018 pre-reclassification wage index based on FY 2014 wage data with the labor-related share of 68.3 percent, under the OMB delineations, also having a 100-percent occupational mix adjustment applied, while holding other payment parameters such as use of the Version 35 MS-DRG GROUPE constant. The FY 2018 occupational mix adjustment is based on the CY 2013 occupational mix survey.

In addition, the column shows the impact of the application of the wage budget neutrality to the national standardized amount. In FY 2010, we began calculating separate wage budget neutrality and recalibration budget neutrality factors, in accordance with section 1886(d)(3)(E) of the Act, which specifies that budget neutrality to account for wage index changes or updates made under that subparagraph must be made without regard to the 62 percent labor-related share guaranteed under section 1886(d)(3)(E)(ii) of the Act. Therefore, for FY 2018, we calculated the wage budget neutrality factor to ensure that payments under updated wage data and the labor-related share of 68.3 percent are budget neutral without regard to the lower labor-related share of 62 percent applied to hospitals with a wage index less than or equal to 1.0. In other words, the wage budget neutrality is calculated under the assumption that all hospitals receive the higher labor-related share of the standardized amount. The FY 2018 wage budget neutrality factor is 1.001148, and the overall payment change is 0.0 percent.

Column 3 shows the impacts of updating the wage data using FY 2014 cost reports. Overall, the new wage data and the labor-related share, combined with the wage budget neutrality adjustment, will lead to no change for all hospitals as shown in Column 3.

In looking at the wage data itself, the national average hourly wage will increase 1.02 percent compared to FY 2017. Therefore, the only manner in which to maintain or exceed the previous year's wage index was to match or exceed the 1.02 percent increase in the national average hourly wage. Of the 3,298 hospitals with wage data for both FYs 2017 and 2018, 1,612 or 51.1 percent will experience an average hourly wage increase of 1.02 percent or more.

The following chart compares the shifts in wage index values for hospitals due to changes in the average hourly wage data for FY 2018 relative to FY 2017. Among urban hospitals, 4 will experience a decrease of 10 percent or more, and 4 urban hospitals will

experience an increase of 10 percent or more. Ninety-nine urban hospitals will experience an increase or decrease of at least 5 percent or more but less than 10 percent. Among rural hospitals, none will experience an increase of at least 5 percent or more, but 2 rural hospitals will experience a decrease of greater than or equal to 5 percent but less than 10 percent. Three rural hospitals will experience decreases of 10 percent or more. However, 787 rural hospitals will experience increases or decreases of less than 5 percent, while 2,390 urban hospitals will experience increases or decreases of less than 5 percent. Nine urban hospitals and no rural hospitals experience no change to their wage index.

These figures reflect changes in the “pre-reclassified, occupational mix-adjusted wage index,” that is, the wage index before the application of geographic reclassification, the rural and imputed floors, the out-migration adjustment, and other wage index exceptions and adjustments. (We refer readers to sections III.G. through III.L. of the preamble of this final rule for a complete discussion of the exceptions and adjustments to the wage index.) We note that the “post-reclassified wage index” or “payment wage index,” which is the wage index that includes all such exceptions and adjustments (as reflected in Tables 2 and 3 associated with this final rule, which are available via the

Internet on the CMS Web site) is used to adjust the labor-related share of a hospital’s standardized amount, either 68.3 percent or 62 percent, depending upon whether a hospital’s wage index is greater than 1.0 or less than or equal to 1.0. Therefore, the pre-reclassified wage index figures in the following chart may illustrate a somewhat larger or smaller change than will occur in a hospital’s payment wage index and total payment.

The following chart shows the projected impact of changes in the area wage index values for urban and rural hospitals.

FY 2018 percentage change in area wage index values	Number of hospitals	
	Urban	Rural
Increase 10 percent or more	4	0
Increase greater than or equal to 5 percent and less than 10 percent	50	0
Increase or decrease less than 5 percent	2,390	787
Decrease greater than or equal to 5 percent and less than 10 percent	49	2
Decrease 10 percent or more	4	3
Unchanged	9	0

d. Effects of MGCRB Reclassifications (Column 4)

Our impact analysis to this point has assumed acute care hospitals are paid on the basis of their actual geographic location (with the exception of ongoing policies that provide that certain hospitals receive payments on bases other than where they are geographically located). The changes in Column 4 reflect the per case payment impact of moving from this baseline to a simulation incorporating the MGCRB decisions for FY 2018.

By spring of each year, the MGCRB makes reclassification determinations that will be effective for the next fiscal year, which begins on October 1. The MGCRB may approve a hospital’s reclassification request for the purpose of using another area’s wage index value. Hospitals may appeal denials of MGCRB decisions to the CMS Administrator. Further, hospitals have 45 days from the date the IPPS proposed rule is issued in the **Federal Register** to decide whether to withdraw or terminate an approved geographic reclassification for the following year (we refer readers to the discussion of our clarification of this policy in section III.I.2. of the preamble to this final rule).

The overall effect of geographic reclassification is required by section 1886(d)(8)(D) of the Act to be budget neutral. Therefore, for purposes of this impact analysis, we are applying an adjustment of 0.988008 to ensure that the effects of the reclassifications under section 1886(d)(10) of the Act are budget neutral (section II.A. of the Addendum to this final rule). Geographic reclassification generally benefits hospitals in rural areas. We estimate that the geographic reclassification will increase payments to rural hospitals by an average of 1.4 percent. By region, all the rural hospital categories will experience increases in payments due to MGCRB reclassifications.

Table 2 listed in section VI. of the Addendum to this final rule and available via

the Internet on the CMS Web site reflects the reclassifications for FY 2018.

e. Effects of the Rural Floor and Imputed Floor, Including Application of National Budget Neutrality (Column 5)

As discussed in section III.B. of the preamble of the FY 2009 IPPS final rule, the FY 2010 IPPS/RV 2010 LTCH PPS final rule, the FYs 2011, 2012, 2013, 2014, 2015, 2016, and 2017 IPPS/LTCH PPS final rules, and this FY 2018 final rule, section 4410 of Pub. L. 105–33 established the rural floor by requiring that the wage index for a hospital in any urban area cannot be less than the wage index received by rural hospitals in the same State. We would apply a uniform budget neutrality adjustment to the wage index.

The imputed floor, which is also included in the calculation of the budget neutrality adjustment to the wage index, was extended in FY 2012 for 2 additional years and in FY 2014 and FY 2015 for 1 additional year. Prior to FY 2013, only urban hospitals in New Jersey received the imputed floor. As discussed in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53369), we established an alternative temporary methodology for the imputed floor, which resulted in an imputed floor for Rhode Island for FY 2013. For FY 2014 and FY 2015, we extended the imputed rural floor, as calculated under the original methodology and the alternative methodology. Due to the adoption of the new OMB labor market area delineations in FY 2015, the State of Delaware also became an all-urban State and thus eligible for an imputed floor. For FY 2016 and FY 2017, we extended the imputed floor for 1 year, as calculated under the original methodology and the alternative methodology, through September 30, 2016 and September 30, 2017, respectively. For FY 2018, we are extending the imputed rural floor for 1 year, as calculated under the original methodology and the alternative methodology, through September 30, 2018. As a result, New Jersey,

Rhode Island, and Delaware will be able to receive an imputed floor through September 30, 2018. In New Jersey, 17 out of 64 hospitals will receive the imputed floor for FY 2018, 10 out of 11 hospitals in Rhode Island, and 6 out of 6 hospitals in Delaware.

The Affordable Care Act requires that we apply one rural floor budget neutrality factor to the wage index nationally, and we include the imputed floor in the calculation of this budget neutrality factor. We have calculated an FY 2018 rural floor and imputed floor budget neutrality factor to be applied to the wage index of 0.993348, which reduces wage indexes by 0.67 percent.

Column 5 shows the projected impact of the rural floor and imputed floor with the national rural floor and imputed floor budget neutrality factor applied to the wage index based on the OMB labor market area delineations. The column compares the post-reclassification FY 2018 wage index of providers before the rural floor and imputed floor adjustment and the post-reclassification FY 2018 wage index of providers with the rural floor and imputed floor adjustment based on the OMB labor market area delineations. Only urban hospitals can benefit from the rural and imputed floors. Because the provision is budget neutral, all other hospitals (that is, all rural hospitals and those urban hospitals to which the adjustment is not made) will experience a decrease in payments due to the budget neutrality adjustment that is applied nationally to their wage index.

We estimate that 400 hospitals will receive the rural and imputed floors in FY 2018. All IPPS hospitals in our model will have their wage index reduced by the rural floor budget neutrality adjustment of 0.993348. We project that, in aggregate, rural hospitals will experience a 0.67 percent decrease in payments as a result of the application of the rural floor budget neutrality because the rural hospitals do not benefit from the rural floor, but have their wage indexes downwardly

adjusted to ensure that the application of the rural floor is budget neutral overall. We project hospitals located in urban areas will experience no change in payments because increases in payments by hospitals benefitting from the rural floor offset decreases in payments by nonrural floor urban hospitals whose wage index is downwardly adjusted by the rural floor budget neutrality factor. Urban hospitals in the New England region will experience a 1.4 percent increase in payments primarily due to the application of the rural floor in Massachusetts and the imputed floor in Rhode Island. Thirty-six urban providers in Massachusetts are expected to receive the rural floor wage index value, including the rural floor budget neutrality adjustment, increasing payments overall to Massachusetts by an estimated \$44 million. We estimate that Massachusetts hospitals will receive approximately a 1.3 percent increase in IPPS payments due to the application of the rural floor in FY 2018.

Urban Puerto Rico hospitals are expected to experience a 0.2 percent increase in payments as a result of the application of the rural floor.

There are 17 hospitals out of the 64 hospitals in New Jersey that will benefit from the extension of the imputed floor and will receive the imputed floor wage index value under the OMB labor market area delineations. Overall, New Jersey will receive a net decrease of \$4 million in payments (to the nearest million) taking into account the 17 hospitals that will benefit from the imputed floor and the application of the national rural floor and imputed floor budget neutrality adjustment to all hospitals in the state. There are 10 hospitals out of the 11 hospitals in Rhode Island that will benefit from the extension of the imputed floor and will receive the imputed floor wage index value. Overall, Rhode Island will receive a net increase of \$19 million in payments (to the nearest million) taking into account the 10 hospitals that will benefit from the imputed floor and the application of the national rural floor and imputed floor budget neutrality adjustment to all hospitals in the State. All 6 hospitals in Delaware will benefit from the extension of the imputed floor and will receive the imputed floor wage index value. Overall, Delaware will receive a net increase of \$8 million in payments (to the nearest million) taking into account the 6

hospitals that will benefit from the imputed floor and the application of the national rural floor and imputed floor budget neutrality adjustment to all hospitals in the State.

In response to a public comment addressed in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51593), we are providing the payment impact of the rural floor and imputed floor with budget neutrality at the State level. Column 1 of the following table displays the number of IPPS hospitals located in each State. Column 2 displays the number of hospitals in each State that will receive the rural or imputed floor wage index for FY 2018. Column 3 displays the percentage of total payments each State will receive or contribute to fund the rural floor and imputed floor with national budget neutrality. The column compares the post-reclassification FY 2018 wage index of providers before the rural floor and imputed floor adjustment and the post-reclassification FY 2018 wage index of providers with the rural and imputed floor adjustment. Column 4 displays the estimated payment amount that each State will gain or lose due to the application of the rural floor and imputed floor with national budget neutrality.

FY 2018 IPPS ESTIMATED PAYMENTS DUE TO RURAL AND IMPUTED FLOOR WITH NATIONAL BUDGET NEUTRALITY

State	Number of hospitals	Number of hospitals that will receive the rural or imputed floor	Percent change in payments due to application of rural floor and imputed floor with budget neutrality	Difference (in \$ millions)

f. Effects of the Application of the Frontier State Wage Index and Out-Migration Adjustment (Column 6)

This column shows the combined effects of the application of section 10324(a) of the Affordable Care Act, which requires that we establish a minimum post-reclassified wage-index of 1.00 for all hospitals located in “frontier States,” and the effects of section 1886(d)(13) of the Act, as added by section 505 of Public Law 108–173, which provides for an increase in the wage index for hospitals located in certain counties that have a relatively high percentage of hospital employees who reside in the county, but work in a different area with a higher wage index. These two wage index provisions are not budget neutral and increase payments overall by 0.1 percent compared to the provisions not being in effect.

The term “frontier States” is defined in the statute as States in which at least 50 percent of counties have a population density less than 6 persons per square mile. Based on these criteria, 5 States (Montana, Nevada, North Dakota, South Dakota, and Wyoming) are considered frontier States and 49 hospitals located in those States will receive a frontier wage index of 1.0000. Overall, this provision is not budget neutral and is estimated to increase IPPS operating payments by approximately \$65 million. Rural and urban hospitals located in the West North Central region will experience an increase in payments by 0.3 and 0.7 percent, respectively, because many of the hospitals located in this region are frontier State hospitals.

In addition, section 1886(d)(13) of the Act, as added by section 505 of Public Law 108–173, provides for an increase in the wage index for hospitals located in certain

counties that have a relatively high percentage of hospital employees who reside in the county, but work in a different area with a higher wage index. Hospitals located in counties that qualify for the payment adjustment are to receive an increase in the wage index that is equal to a weighted average of the difference between the wage index of the resident county, post-reclassification and the higher wage index work area(s), weighted by the overall percentage of workers who are employed in an area with a higher wage index. There are an estimated 267 providers that will receive the out-migration wage adjustment in FY 2018. Rural hospitals generally qualify for the adjustment, resulting in a 0.2 percent increase in payments. This provision appears to benefit section 401 hospitals and RRCs in that they will each experience a 0.3 percent increase in payments. This out-migration wage adjustment also is not budget neutral, and we estimate the impact of these providers receiving the out-migration increase will be approximately \$42 million.

g. Effects of the Expiration of MDH Special Payment Status (Column 7)

Column 7 shows our estimate of the changes in payments due to the expiration of MDH status, a nonbudget neutral payment provision. Section 205 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10, enacted on April 16, 2015) extended the MDH program (which, under previous law, was to be in effect for discharges on or before March 31, 2015 only) for discharges occurring on or after April 1, 2015, through FY 2017 (that is, for discharges occurring on or before September 30, 2017). Therefore, under current law, the MDH program will expire at

the end of FY 2017. Hospitals that qualified to be MDHs receive the higher of payments made based on the Federal rate or the payments made based on the Federal rate amount plus 75 percent of the difference between payments based the Federal rate and payments based the hospital-specific rate (a hospital-specific cost-based rate). Because this provision was not budget neutral, the expiration of this payment provision results in a 0.1 percent decrease in payments overall. There are currently 159 MDHs, of which we estimate 96 would have been paid under the blended payment based on the Federal rate and hospital-specific rate if the MDH program had not expired. Because those 96 MDHs will no longer receive the blended payment and will be paid only under the Federal rate in FY 2018, it is estimated that those hospitals will experience an overall decrease in payments of approximately \$119 million.

MDHs were generally rural hospitals, so the expiration of the MDH program will result in an overall decrease in payments to rural hospitals of 0.9 percent. Rural New England hospitals can expect a decrease in payments of 2.2 percent because 6 out of the 23 rural New England hospitals are MDHs that will lose this special payment status under the expiration of the program at the end of FY 2017. MDHs that would have been paid under the blended payment based on the Federal rate and hospital-specific rate can expect a decrease in payments of 12 percent.

h. Effects of All FY 2018 Changes (Column 8)

Column 8 shows our estimate of the changes in payments per discharge from FY 2017 and FY 2018, resulting from all changes reflected in this final rule for FY 2018. It

includes combined effects of the year to year change of the previous columns in the table.

The average increase in payments under the IPPS for all hospitals is approximately 1.3 percent for FY 2018 relative to FY 2017 and for this row is primarily driven by the changes reflected in Column 1. Column 8 includes the annual hospital update of 1.35 percent to the national standardized amount. This annual hospital update includes the 2.7 percent market basket update, the 0.6 percentage point reduction for the multifactor productivity adjustment, and the 0.75 percentage point reduction under section 3401 of the Affordable Care Act. As discussed in section II.D. of the preamble of this final rule, this column also includes the FY 2018 adjustment of 0.4588 percent on the national standardized amount. In addition, this column includes the adjustment factor of (1/1.006) to remove the 1.006 temporary one-time adjustment made in FY 2017 to address the effects of the 0.2 percent reduction in effect for FYs 2014 through 2016 related to the 2-midnight policy, which is discussed in section V.M. of the preamble of this final

rule. Hospitals paid under the hospital-specific rate will receive a 0.75 percent hospital update. As described in Column 1, the annual hospital update with the adjustment of 0.4588 percent for hospitals paid under the national standardized amount, the adjustment of (1/1.006) to remove the 1.006 temporary one-time adjustment made in FY 2017 to address the effects of the 0.2 percent reduction in effect for FYs 2014 through 2016, which is discussed in section V.M. of the preamble of this final rule, combined with the annual hospital update for hospitals paid under the hospital-specific rates will result in a 1.3 percent increase in payments in FY 2018 relative to FY 2017. There are also interactive effects among the various factors comprising the payment system that we are not able to isolate which contribute to our estimate of the changes in payments per discharge from FY 2017 and FY 2018 in Column 8.

Overall payments to hospitals paid under the IPPS due to the applicable percentage increase and changes to policies related to MS-DRGs, geographic adjustments, and

outliers are estimated to increase by 1.3 percent for FY 2018. Hospitals in urban areas will experience a 1.4 percent increase in payments per discharge in FY 2018 compared to FY 2017. Hospital payments per discharge in rural areas are estimated to increase by 0.2 percent in FY 2018.

3. Impact Analysis of Table II

Table II presents the projected impact of the changes for FY 2018 for urban and rural hospitals and for the different categories of hospitals shown in Table I. It compares the estimated average payments per discharge for FY 2017 with the estimated average payments per discharge for FY 2018, as calculated under our models. Therefore, this table presents, in terms of the average dollar amounts paid per discharge, the combined effects of the changes presented in Table I. The estimated percentage changes shown in the last column of Table II equal the estimated percentage changes in average payments per discharge from Column 8 of Table I.

TABLE II—IMPACT ANALYSIS OF CHANGES FOR FY 2018 ACUTE CARE HOSPITAL OPERATING PROSPECTIVE PAYMENT SYSTEM
[Payments per Discharge]

	Number of hospitals	Estimated average FY 2017 payment per discharge	Estimated average FY 2018 payment per discharge	FY 2018 changes

H. Effects of Other Policy Changes

In addition to those policy changes discussed previously that we are able to model using our IPPS payment simulation model, we are making various other changes in this final rule. Generally, we have limited or no specific data available with which to estimate the impacts of these changes. Our estimates of the likely impacts associated with these other changes are discussed in this section.

1. Effects of Policy Relating to New Medical Service and Technology Add-On Payments

In section II.H. of the preamble to this final rule, we discuss three technologies for which we received applications for add-on payments for new medical services and technologies for FY 2018. We note that three applicants withdrew their applications prior to the issuance of the proposed rule, one applicant withdrew its application prior to the issuance of this final rule, and two applicants did not receive FDA approval for their technologies by the July 1 deadline. We

also discuss the status of the new technologies that were approved to receive new technology add-on payments in FY 2017. As explained in the preamble to this final rule, add-on payments for new medical services and technologies under section 1886(d)(5)(K) of the Act are not required to be budget neutral.

As discussed in section II.H.6. of the preamble of this final rule, we are approving three applications (Bezlotoxumab (Zinplava™), EDWARDS INTUITY Elite™ Valve System (INTUITY) and Liva Nova Perceval Valve (Perceval), and Ustekinumab

(Stelara®)) for new technology add on payments for FY 2018. In addition, as we proposed, in this final rule, we are continuing to make new technology add-on payments for Defitelio® (Defibrotide), GORE® EXCLUDER® Iliac Branch Endoprosthesis (IBE), Idarucizumab and Vistogard™ (Uridine Triacetate) in FY 2018 because these four technologies are still considered new.

We note that new technology add-on payments for each case are limited to the lesser of (1) 50 percent of the costs of the new technology or (2) 50 percent of the amount by which the costs of the case exceed the standard MS-DRG payment for the case. Because it is difficult to predict the actual new technology add-on payment for each case, our estimates below are based on the increase in new technology add-on payments for FY 2018 as if every claim that would qualify for a new technology add-on payment would receive the maximum add-on payment. The following are estimates for FY 2018 for the four technologies that we are continuing to make new technology add-on payments in FY 2018.

- Based on the applicant's estimate from FY 2017, we currently estimate that new technology add-on payments for the Defitelio® will increase overall FY 2018 payments by \$5,161,200 (maximum add-on payment of \$75,900 * 68 patients).
- Based on the applicant's estimate for FY 2017, we currently estimate that new technology add-on payments for the GORE® EXCLUDER® IBE will increase overall FY 2018 payments by \$5,685,750 (maximum add-on payment of \$5,250 * 1,083 patients).
- Based on the applicant's estimate for FY 2017, we currently estimate that new technology add-on payments for Idarucizumab will increase overall FY 2018 payments by \$14,766,500 (maximum add-on payment of \$1,750 * 8,438 patients).
- Based on the applicant's estimate for FY 2017, we currently estimate that new technology add-on payments for Vistogard™ will increase overall FY 2018 payments by \$3,009,750 (maximum add-on payment of \$40,130 * 75 patients).

The following are estimates for FY 2018 for the three technologies that we are approving for new technology add-on payments beginning with FY 2018.

- Based on the applicant's estimate for FY 2018, we currently estimate that new technology add-on payments for Zinplava™ will increase overall FY 2018 payments by \$2,857,600 (maximum add-on payment of \$1,900 * 1,504 patients).
- Based on the estimates for INTUITY and Perceval for FY 2018 and using a weighted average, we currently estimate that new technology add-on payments for INTUITY and Perceval will increase overall FY 2018 payments by \$14,841,749 (maximum add-on payment of \$6,110.23 * 2,429 patients).
- Based on the applicant's estimate for FY 2018, we currently estimate that new technology add-on payments for Stelara® will increase overall FY 2018 payments by \$400,800 (maximum add-on payment of \$2,400 * 167 patients).

2. Effects of Changes to MS-DRGs Subject to the Postacute Care Transfer Policy and the MS-DRG Special Payment Policy

In section V.A. of the preamble of this final rule, we discuss our changes to the list of MS-DRGs subject to the postacute care transfer policy and the MS-DRG special payment policy. As reflected in Table 5 listed in section VI. of the Addendum to this final rule (which is available via the Internet on the CMS Web site), using criteria set forth in regulations at 42 CFR 412.4, we evaluated MS-DRG charge, discharge, and transfer data to determine which MS-DRGs qualify for the postacute care transfer and MS-DRG special payment policies. We note that we did not propose to make any changes in these payment policies in the FY 2018 IPPS/LTCH PPS proposed rule. As a result of finalization of our proposals to revise the MS-DRG classifications for FY 2018, which are discussed in section II.F. of the preamble of this final rule, we are adding three MS-DRGs to the list of MS-DRGs subject to the MS-DRG special payment policy. Column 4 of Table I in this Appendix A shows the effects of the changes to the MS-DRGs and the relative payment weights and the application of the recalibration budget neutrality factor to the standardized amounts. Section 1886(d)(4)(C)(i) of the Act requires us annually to make appropriate DRG classification changes in order to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources. The analysis and methods for determining the changes due to the MS-DRGs and relative payment weights account for and include changes as a result of the changes to the MS-DRGs subject to the MS-DRG postacute care transfer and MS-DRG special payment policies. We refer readers to section I.G. of this Appendix A for a detailed discussion of payment impacts due to the MS-DRG reclassification policies for FY 2018.

3. Effects of the Changes to the Volume Decrease Adjustment for Sole Community Hospitals (SCHs)

In section V.C. of the preamble of this final rule, we discuss our proposed and finalized policies to modify the methodology used to calculate volume decrease adjustments for SCHs. We are prospectively requiring that the MACs compare Medicare revenue allocable to fixed costs from the cost reporting period when the hospital experienced the volume decrease to the hospital's fixed costs from that same cost reporting period when calculating a volume decrease adjustment. We also are providing that the cap will no longer be applied to the volume decrease adjustment calculation methodology in future periods. In addition, we are prospectively modifying the volume decrease adjustment process to no longer require that a hospital explicitly demonstrate that it appropriately adjusted the number of staff in inpatient areas of the hospital based on the decrease in the number of inpatient days and to no longer require the MACs to adjust the volume decrease adjustment payment amount for excess staffing. We estimate that these changes to the volume decrease adjustment will increase aggregate volume

decrease adjustment payments by a total of approximately \$15 million for cost reporting periods beginning in FY 2018. Given that the volume decrease adjustment is only available to SCHs and is predicated on the unanticipated nature of the volume decrease, it is difficult to predict how many hospitals will qualify for the adjustment in FY 2018. We assumed 20 hospitals will qualify for the adjustment in FY 2018 and that the additional amount of the volume decrease adjustment payment based on our methodology will be \$750,000 per hospital.

4. Effects of Changes to Low-Volume Hospital Payment Adjustment Policy

In section V.E. of the preamble of this final rule, we discuss the expiration of the temporary changes to the low-volume hospital payment policy originally provided for by the Affordable Care Act and extended through FY 2017 by subsequent legislation. Effective for FY 2018 and subsequent years, qualifying hospitals must have less than 200 combined Medicare and non-Medicare discharges (instead of 1,600 Medicare discharges) and must be located more than 25 road miles from another subsection (d) hospital (instead of 15 road miles from another subsection (d) hospital). In this same section, we discuss our proposed and finalized parallel low-volume hospital payment adjustment regarding hospitals operated by the IHS or a Tribe. Under this finalized policy, an IHS hospital will be able to qualify for a low-volume hospital adjustment based on its distance to the nearest IHS hospital, and a non-IHS hospital will be able to qualify to receive a low-volume hospital adjustment based on its distance to the nearest non-IHS hospital. Based upon the best available data at this time, we estimate the expiration of the temporary changes to the low-volume hospital payment and the change to the low-volume payment adjustments will decrease aggregate low-volume payment adjustments from \$316 million in FY 2017 to \$4 million in FY 2018. This \$312 million decrease in FY 2018 is based on an estimated \$315 million decrease in payments from the expiration of the temporary changes to the low-volume hospital definition and payment adjustment methodology together with an estimated increase of \$3 million in payments made to hospitals that are expected to qualify under our parallel low-volume hospital payment adjustment. These payment estimates were determined by identifying providers that, based on the best available data, are expected to qualify under the criteria that will apply in FY 2018 (that is, are located at least 25 miles from the nearest subsection (d) hospital and have less than 200 total discharges), and were determined from the same data used in developing the quantitative analyses of changes in payments per case discussed previously in section I.G. of this Appendix A.

5. Effects of the Changes to Medicare DSH and Uncompensated Care Payments for FY 2018

As discussed in section V.G. of the preamble of this final rule, under section 3133 of the Affordable Care Act, hospitals that are eligible to receive Medicare DSH payments will receive 25 percent of the

amount they previously would have received under the statutory formula for Medicare DSH payments under section 1886(d)(5)(F) of the Act. The remainder, equal to an estimate of 75 percent of what formerly would have been paid as Medicare DSH payments (Factor 1), reduced to reflect changes in the percentage of uninsured individuals and additional statutory adjustments (Factor 2), is available to make additional payments to each hospital that qualifies for Medicare DSH payments and that has uncompensated care. Each hospital eligible for Medicare DSH payments will receive an additional payment based on its estimated share of the total amount of uncompensated care for all hospitals eligible for Medicare DSH payments. The uncompensated care payment methodology has redistributive effects based on the proportion of a hospital's uncompensated care relative to the uncompensated care for all hospitals eligible for Medicare DSH payments (Factor 3).

For FY 2018, we are establishing a Factor 2 of 58.01 percent determined using the uninsured estimates produced by CMS' Office of the Actuary (OACT) as part of the development of the National Health Expenditure Accounts (NHEA). Although we are continuing to use low-income insured patient days as a proxy for uncompensated care, for the first time, we are using these data in combination with data on uncompensated care costs from Worksheet S-10 in the calculation of Factor 3. The uncompensated care payment methodology has redistributive effects based on the proportion of a hospital's uncompensated care relative to the total uncompensated care for all hospitals eligible for Medicare DSH payments. The change to Medicare DSH payments under section 3133 of the Affordable Care Act is not budget neutral.

In this final rule, we are establishing the amount to be distributed as uncompensated care payments to DSH eligible hospitals, which for FY 2018 is \$6,766,695,163.56. This figure represents 75 percent of the amount that otherwise would have been paid for Medicare DSH payment adjustments adjusted by a Factor 2 of 58.01 percent. For FY 2017, the amount available to be distributed for uncompensated care was \$5,977,483,146.86, or 75 percent of the amount that otherwise would have been paid for Medicare DSH payment adjustments adjusted by a Factor 2 of 55.36 percent. To calculate Factor 3 for FY 2018, we used an average of data computed using Medicaid days from hospitals' 2012 and 2013 cost reports from the March 2017 update of the HCRIS database, uncompensated care costs from hospitals' 2014 cost reports from the same extract of HCRIS, Medicaid days from 2012 cost report data submitted to CMS by IHS hospitals, and SSI days from the FY 2014 and FY 2015 SSI ratios. For each eligible hospital, we

calculated an individual Factor 3 for cost reporting years FYs 2012, 2013, and 2014. We then added the individual amounts and divided the sum by the number of cost reporting periods with data to calculate an average Factor 3 for FY 2018. For purposes of this final rule, as we proposed, we used the most recent data from the March 2017 update of the HCRIS database for the Medicaid days component of the Factor 3 calculation as well as for the Worksheet S-10 uncompensated care cost component.

The FY 2018 policy of using data from hospitals' FY 2012, FY 2013, and FY 2014 cost reporting years to determine Factor 3 is based on our FY 2017 final policy (81 FR 56943 through 56973), which is in contrast to the methodology used in FY 2016, when we used Medicaid days from the more recent of a hospital's full year 2012 or 2011 cost report from the March 2015 update of the HCRIS database, Medicaid days from 2012 cost report data submitted to CMS by IHS hospitals, and SSI days from the FY 2013 SSI ratios to calculate Factor 3. In addition, as explained in section V.G.4.c. of the preamble of this final rule, we are making several additional modifications to the Factor 3 methodology: (1) To annualize Medicaid data and uncompensated care data if a hospital's cost report does not equal 12 months of data; (2) to apply a scaling factor to the uncompensated care payment amount calculated for each DSH eligible hospital so that total uncompensated care payments are consistent with the estimated amount available to make uncompensated care payments for FY 2018; (3) to apply statistical trims to the CCRs on Worksheet S-10 that are considered anomalies to ensure reasonable CCRs are used to convert charges to costs for purposes of determining uncompensated care costs; (4) to calculate Factor 3 for Puerto Rico hospitals, all-inclusive rate providers, and Indian Health Service and Tribal hospitals by substituting data regarding low-income insured days for FY 2013 for the Worksheet S-10 data on uncompensated care costs from FY 2014 cost reports, and (5) to determine the ratio of uncompensated care costs relative to total operating costs on the hospital's 2014 cost report (as of March 2017), and in cases where the ratio of uncompensated care costs relative to total operating costs exceeds 50 percent, to determine the ratio of uncompensated care costs to total operating costs from the hospital's 2015 cost report (as of March 2017) and apply that ratio to the hospital's total operating costs from its 2014 cost report to determine uncompensated care costs for FY 2014.

We also are continuing the policies that were finalized in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50020 through 50022) to address several specific issues concerning the process and data to be employed in determining Factor 3 in the case of hospital

mergers for FY 2018 and subsequent years, as well as continuing the policies finalized in the FY 2017 IPPS/LTCH PPS final rule concerning the methodology for calculating each hospital's relative share of uncompensated care, such as combining data from multiple cost reports beginning in the same fiscal year and calculating Factor 3 based on an average of the three individual Factor 3s for FYs 2012, 2013, and 2014, determined by adding the Factor 3 values for these years, and dividing by the number of cost reporting periods with data.

To estimate the impact of the combined effect of changes in Factors 1 and 2, as well as the changes to the data used in determining Factor 3, on the calculation of Medicare DSH payments, including both empirically justified Medicare DSH payments and uncompensated care payments, we compared total DSH payments estimated in the FY 2017 IPPS/LTCH PPS final rule to total DSH payments estimated in this FY 2018 IPPS/LTCH PPS final rule. For FY 2017, for each hospital, we calculated the sum of: (1) 25 percent of the estimated amount of what would have been paid as Medicare DSH in FY 2017 in the absence of section 3133 of the Affordable Care Act; and (2) 75 percent of the estimated amount of what would have been paid as Medicare DSH payments in the absence of section 3133 of the Affordable Care Act, adjusted by a Factor 2 of 55.36 percent and multiplied by a Factor 3 calculated as described in the FY 2017 IPPS/LTCH PPS final rule. For FY 2018, we calculated the sum of: (1) 25 percent of the estimated amount of what would be paid as Medicare DSH payments in FY 2018 absent section 3133 of the Affordable Care Act; and (2) 75 percent of the estimated amount of what would be paid as Medicare DSH payments absent section 3133 of the Affordable Care Act, adjusted by a Factor 2 of 58.01 percent and multiplied by a Factor 3 calculated using the methodology described above.

Our analysis included 2,427 hospitals that are projected to be eligible for DSH in FY 2018. It did not include hospitals that had terminated their participation in the Medicare program as of July 1, 2017, Maryland hospitals, and SCHs that are expected to be paid based on their hospital-specific rates. In addition, data from merged or acquired hospitals were combined under the surviving hospital's CCN, and the nonsurviving CCN was excluded from the analysis. The estimated impact of the changes to Factors 1, 2, and 3 across all hospitals projected to be eligible for DSH payments in FY 2018, by hospital characteristic, is presented in the following table.

**MODELED DISPROPORTIONATE SHARE HOSPITAL PAYMENTS FOR ESTIMATED FY 2018 DSHS BY HOSPITAL TYPE:
MODEL DSH \$ (IN MILLIONS) FROM FY 2017 TO FY 2018**

	Number of estimated DSHs	FY 2017 final rule estimated DSH \$ (in millions)	FY 2018 final rule estimated DSH \$ (in millions)	Dollar dif- ference: FY 2017–FY 2018 (in millions)	Percent change**

* Dollar DSH calculated by $[0.25 * \text{estimated section 1886(d)(5)(F) payments}] + [0.75 * \text{estimated section 1886(d)(5)(F) payments} * \text{Factor 2} * \text{Factor 3}]$. When summed across all hospitals projected to receive DSH payments, DSH payments are estimated to be \$9,553 million in FY 2017 and \$10,626 million in FY 2018.

** Percentage change is determined as the difference between Medicare DSH payments modeled for the FY 2018 IPPS/LTCH PPS final rule (column 3) and Medicare DSH payments modeled for the FY 2017 IPPS/LTCH PPS final rule (column 2) divided by Medicare DSH payments modeled for the FY 2017 final rule (column 2) 1 times 100 percent.

Changes in projected FY 2018 DSH payments from DSH payments in FY 2017 are primarily driven by (1) changes to Factor 1, which increased from \$10.797 billion to \$11.665 billion; (2) changes to Factor 2, which increased from 55.36 percent to 58.01

percent; (3) changes to the data used to determine Factor 3; and (4) changes to the number of DSH-eligible hospitals within a given hospital type. The impact analysis found that, across all projected DSH eligible hospitals, FY 2018 DSH payments are estimated at approximately \$10.626 billion, or an increase of approximately 11.2 percent from FY 2017 DSH payments (approximately \$9.553 billion). While these changes result in a net increase in the amount available to be distributed in uncompensated care payments, DSH payments to select hospital types are expected to decrease. This redistribution of DSH payments is caused by changes in the data used to determine Factor 3 and changes in the number of DSH-eligible hospitals within a given hospital type.

As seen in the above table, percent changes in DSH payments of less than 11.2 percent indicate that hospitals within the specified category are projected to experience a smaller increase in DSH payments, on average, compared to the universe of projected FY 2018 DSH hospitals. Conversely, percent changes in DSH payments that are greater than 11.2 percent indicate a hospital type is projected to have a larger increase than the overall percent change on average. The variation in the distribution of DSH payments by hospital characteristic is largely dependent on the change in a given hospital's number of Medicaid days and SSI days for purposes of the low-income insured days proxy between FY 2017 and FY 2018, as well as on its uncompensated care costs as reported on its FY 2014 Worksheet S-10.

Many rural hospitals, grouped by geographic location, payment classification, and bed size, are projected to experience a larger increase in DSH payments than their urban counterparts. Overall, urban hospitals are projected to receive a 10.9 percent increase in DSH payments, and rural hospitals are projected to receive a 17.3 percent increase in DSH payments. However, only smaller and medium-sized rural hospitals are projected to receive increases in DSH payments that are, on average, higher than the 11.2 percent change across all hospitals that are projected to be eligible for DSH in FY 2018, with rural hospitals that have 0–99 beds projected to experience a 23.3 percent payment increase, those with 100–249 beds projected to receive a 14.1 percent increase, and larger rural hospitals with 250+ beds projected to experience an 8.4 percent payment increase. This trend is somewhat consistent with urban hospitals, in which the smallest urban hospitals (0–99 beds) are projected to receive an increase in DSH payments of 27.7 percent. Medium-sized hospitals (100–250 beds) and larger hospitals (250+ beds) are projected to receive increases of 10.8 and 10.5 percent in DSH payments, respectively, which are relatively consistent with the overall average.

By region, projected DSH payment increases for urban hospitals are smallest in

the New England, Middle Atlantic, East North Central, and East South Central, and Pacific regions. The South Atlantic, West North Central, and West South Central region hospitals are projected to receive increases in DSH payments that are, on average, larger than the 11.2 percent change across all hospitals projected to be eligible for DSH in FY 2018. Increases in remaining urban hospital regions are generally consistent with the overall average percent increase of 11.2 percent. Regionally, rural hospitals are projected to receive a wider range of increases. Rural hospitals in the Middle Atlantic and Pacific regions are expected to receive a decrease in DSH payments, while increases that are, on average, smaller than the 11.2 overall percent change are projected for the East South Central region. Increases are projected to be substantially larger than the overall average in many regions, including New England, South Atlantic, East North Central, West North Central, West South Central, and Mountain.

Teaching hospitals with 100 or more residents are projected to receive, on average, larger increases than the overall percent change of 11.2 percent, with a projected increase of 14.1 percent. Conversely, smaller teaching hospitals with fewer than 100 residents are projected to receive a smaller increase than the overall average, at 8.8 percent. Government hospitals are projected to receive a larger than average 25.8 percent increase, while voluntary hospitals are expected to receive increases somewhat smaller than the overall average (9.6 percent). Proprietary hospitals are expected to receive almost no change in DSH payments. Hospitals with 25 to 50 percent Medicare utilization are projected to receive increases in DSH payments slightly below the overall average at 9.9 percent, while all other hospitals are projected to receive larger increases.

6. Effects of Reduction Under the Hospital Readmissions Reduction Program

In section V.I. of the preamble of this final rule, we discuss our finalized proposals for the FY 2018 Hospital Readmissions Reduction Program (established under section 3025 of the Affordable Care Act), which requires a reduction to a hospital's base operating MS-DRG payments to account for excess readmissions. In this final rule, we estimate that 2,577 hospitals would have their base operating MS-DRG payments reduced by their proposed proxy FY 2018 hospital-specific readmissions adjustment. As a result, we estimate that the Hospital Readmissions Reduction Program would save approximately \$556 million in FY 2018, an increase of \$24 million over the estimated FY 2017 savings. This estimate is based on the same data used in developing the quantitative analyses of proposed changes in payments per case discussed previously in section I.G. of this Regulatory Impact

Analysis, in conjunction with the FY 2017 hospital-specific readmissions adjustment factors and the proxy FY 2018 hospital-specific readmissions adjustment factors found in Table 15 of this final rule (available only through the Internet as described in section VI. of the Addendum to this final rule).

The table and analysis below illustrate the estimate of the financial impact of the implementation methodology for the provisions of the 21st Century Cures Act, as outlined in this final rule. We are presenting the estimated impact of the finalized methodology on hospitals by hospital characteristic.

The table presents results of hospitals stratified into quintiles based on the proportion of dual-eligible beneficiaries among Medicare FFS and managed care patients discharged between July 1, 2013 and June 30, 2016. Hospital excess readmission ratios (ERRs) are assessed relative to their peer group median and a neutrality modifier is applied to the payment reduction to maintain budget neutrality. The table includes three penalty metrics: Average payment reduction, total Medicare savings, and share of payment adjustments as a percentage of total payments. The average payment reduction is the average reduction in Medicare DRG payments of hospitals with a specified characteristic. The total Medicare savings column shows the total estimated penalties borne by hospitals with that characteristic. The share of payment adjustments is total Medicare savings for all hospitals with that characteristic as a percentage of all DRG payments for FY 2016 (October 1, 2015 to September 30, 2016). Because the payment reduction is applied to hospitals' base DRG payments, hospitals with more discharges will contribute a larger amount of Medicare savings to the group total of Medicare savings. For example, under the finalized methodology, the share of payment adjustments as a percentage of all DRG payments for urban hospitals is 0.63 percent. This means that total penalties for all urban hospitals are 0.63 percent of total payments for urban hospitals (that is, the ratio of total penalties to total DRG payments is 0.63 percent). The metric allows us to compare the financial impact of the method for assessing penalties between hospitals with different numbers of beds even though larger hospitals tend to generate higher total Medicare savings since their payment reduction is applied to more DRG payments. Measuring the financial impact on hospitals as a proportion of total DRG payments allows us to account for differences in the amount of DRG payments for hospitals within the group when comparing the financial impact of the program on different groups of hospitals.

**THE IMPACT OF THE FINALIZED CHANGES TO THE HOSPITAL READMISSIONS REDUCTION PROGRAM PAYMENT ADJUSTMENT
FORMULA BY HOSPITAL CHARACTERISTIC**

Hospital characteristic	Number of hospitals	Penalty reduction (%)	Total medicare savings	Share of payment adjustments as a percentage of all base operating DRG payments (%)
All Hospitals	3,074	0.60	\$565,847,690	0.63
By Geographic Location:				
Urban	2,295	0.63	523,183,133	0.63
Rural	779	0.53	42,664,557	0.61
By Bed Size:				
1–99 beds	1,099	0.51	40,264,581	0.58
100–199 beds	881	0.68	123,751,723	0.71
200–299 beds	452	0.71	122,943,199	0.71
300–399 beds	279	0.61	89,688,666	0.63
400–499 beds	152	0.53	54,484,491	0.53
500 or more beds	211	0.55	134,715,029	0.57
By Teaching Status:				
Non-teaching	2,038	0.60	246,681,611	0.70
Teaching	1,036	0.60	319,166,078	0.59
Fewer than 100 residents	787	0.62	208,876,515	0.63
100 or more residents	249	0.51	110,289,563	0.51
By Ownership Type:				
Government	482	0.49	58,536,682	0.54
Proprietary	751	0.72	122,880,821	0.87

By Safety-net Status:				
Safety net hospitals	621	0.49	94,429,377	0.54
Non-safety net hospitals	2,453	0.63	471,418,312	0.65
By DSH Payment Eligibility:				
Not eligible	460	0.64	59,681,863	0.65
DSH payment eligible	2,614	0.60	506,165,827	0.63
By DSH Patient Percentage Quintile:				
First Quintile	560	0.64	79,746,089	0.65
Second Quintile	632	0.66	132,231,066	0.72
Third Quintile	633	0.60	126,404,719	0.62
Fourth Quintile	628	0.63	133,036,439	0.63
Fifth Quintile	621	0.49	94,429,377	0.54
By Medicare Cost Report (MCR) Percent:				
0–24	401	0.38	45,026,649	0.42
25–49	2,071	0.62	433,616,692	0.64
50 and over	592	0.69	87,133,066	0.80
By Region:				
New England	129	0.63	41,123,715	0.74
Middle Atlantic	352	0.78	108,046,217	0.81
South Atlantic	511	0.78	132,626,599	0.78
East North Central	480	0.58	85,657,162	0.60
East South Central	288	0.74	52,465,078	0.84
West North Central	250	0.44	26,564,022	0.39
West South Central	481	0.55	54,135,151	0.57
Mountain	219	0.47	22,147,627	0.44
Pacific	364	0.35	43,082,119	0.36

Notes: Results based on July 1, 2013 through June 30, 2016 discharges among subsection (d) and Maryland hospitals only. Although data from all subsection (d) and Maryland hospitals are used in calculations of each hospital's ERR, this table does not include results for Maryland hospitals. This table only includes results for hospitals who are eligible for a penalty under the program on the basis of having at least 25 eligible discharges for at least one measure. Hospitals are stratified into quintiles based on the proportion of dual-eligible beneficiaries for the 3-year FY 2018 performance period. Hospital penalties are scaled by a neutrality modifier of 0.9481 to maintain budget neutrality. To calculate the payment adjustment as a proportion of total base operating DRG payments this analysis used MedPAR data to calculate the total base operating DRG payments from October 1, 2015 through September 30, 2016 (FY 2016). The group average share of payment adjustments as a percentage of all DRG payments is calculated as the sum of all Medicare savings for the group of hospitals divided by total FY 2016 base operating DRG payments for all hospitals in that group. Hospital characteristics from the FY 2018 Hospital Inpatient Prospective Payment System (IPPS) proposed rule impact file. Data on SSI ratio comes from FY 2014 SSI data file. The total number of hospitals with hospital characteristics data do not add up to the total number of hospitals included in the FY 2018 Hospital Readmissions Reduction Program because not all hospitals have data for all characteristics. A hospital is considered a teaching hospital if it has an IME adjustment factor for Operation PPS (TCHOP) greater than zero and is considered a DSH hospital if it has a DSH patient percentage greater than zero. A hospital is a safety-net hospital if they are in the top DSH quintile. MCR percent is the percentage of total inpatient stays from Medicare patients.

The estimated impact of the finalized stratified methodology for the FY 2019

Hospital Readmissions Reduction Program compared to the current methodology

according to this metric is shown in the table below. The table is based on results when

hospitals are stratified into quintiles based on the proportion of dual-eligible beneficiaries among Medicare fee-for-service and managed care patients discharged between July 1, 2013 through June 30, 2016. The table shows the

share of payment adjustments as a percentage of all DRG payments for each group of hospitals. The group share is calculated as the sum of penalties for all hospitals with that characteristic over the sum of all DRG

payments for those hospitals between October 1, 2015 and September 30, 2016 (FY 2016).

PENALTY AS SHARE OF PAYMENT WHEN HOSPITALS ARE STRATIFIED INTO QUINTILES USING THE 3-YEAR DUAL PROPORTION AMONG FFS AND MANAGED CARE PATIENTS, BY HOSPITAL CHARACTERISTIC FOR THE CURRENT AND FINALIZED PAYMENT ADJUSTMENT FACTOR METHODOLOGIES

Hospital characteristic	Current methodology: FY 2018 hospital readmissions reduction program (%)	Finalized FY 2019 methodology: median plus neutrality modifier (NM = 0.9481) (%)

PENALTY AS SHARE OF PAYMENT WHEN HOSPITALS ARE STRATIFIED INTO QUINTILES USING THE 3-YEAR DUAL PROPORTION AMONG FFS AND MANAGED CARE PATIENTS, BY HOSPITAL CHARACTERISTIC FOR THE CURRENT AND FINALIZED PAYMENT ADJUSTMENT FACTOR METHODOLOGIES—Continued

Hospital characteristic	Current methodology: FY 2018 hospital readmissions reduction program (%)	Finalized FY 2019 methodology: median plus neutrality modifier (NM = 0.9481) (%)
Pacific	0.41	0.36

Notes: Results based on July 1, 2013 through June 30, 2016 discharges among subsection (d) and Maryland hospitals only. Although data from all subsection (d) and Maryland hospitals are used in calculations of each hospital's ERR, this table does not include results for Maryland hospitals. This table only includes results for hospitals who are eligible for a penalty under the program on the basis of having at least 25 eligible discharges for at least one measure. Under the finalized methodology, hospitals are stratified into quintiles based on the proportion of FFS and managed care dual-eligible beneficiaries for the 3-year FY 2018 performance period. To calculate the payment adjustment as a proportion of total FY 2016 base operating DRG payments this analysis used MedPAR data to calculate the total base operating DRG payments from October 1, 2015 through September 30, 2016 (FY 2016). The group average share of payment adjustments as a percentage of all DRG payments is calculated as the sum of all Medicare savings for the group of hospitals divided by total base operating DRG payments for all hospitals in that group. Hospital characteristics from the FY 2018 Hospital Inpatient Prospective Payment System (IPPS) proposed rule impact file. Data on SSI ratio comes from FY 2014 SSI data file. The total number of hospitals with hospital characteristics data do not add up to the total number of hospitals included in the FY 2018 Hospital Readmissions Reduction Program because not all hospitals have data for all characteristics. A hospital is considered a teaching hospital if it has an IME adjustment factor for Operation PPS (TCHOP) greater than zero and is considered a DSH hospital if it has a DSH patient percentage greater than zero. A hospital is a safety-net hospitals if they are in the top DSH quintile. MCR percent is the percentage of total inpatient stays from Medicare patients.

7. Effects of Changes Under the FY 2018 Hospital Value-Based Purchasing (VBP) Program

In section V.J. of the preamble of this final rule, we discuss the Hospital VBP Program under which the Secretary makes value-based incentive payments to hospitals based on their performance on measures during the performance period with respect to a fiscal year. These incentive payments will be funded for FY 2018 through a reduction to the FY 2018 base operating DRG payment amounts for all discharges for participating hospitals for such fiscal year, as required by section 1886(o)(7)(B) of the Act. The applicable percentage for FY 2018 and subsequent years is 2 percent. The total amount available for value-based incentive payments must be equal to the total amount of reduced payments for all hospitals for the fiscal year, as estimated by the Secretary.

In section V.J.1.b. of the preamble of this final rule, we estimate the available pool of funds for value-based incentive payments in the FY 2018 program year, which, in accordance with section 1886(o)(7)(C)(v) of the Act, will be 2.00 percent of base operating DRG payments, or a total of

approximately \$1.9 billion. This estimated available pool for FY 2018 is based on the historical pool of hospitals that were eligible to participate in the FY 2017 program year and the payment information from the March 2017 update of the FY 2016 MedPAR file.

The estimated impacts of the FY 2018 program year by hospital characteristic, found in the table below, are based on historical TPSs. We used the FY 2017 program year's TPSs to calculate the proxy adjustment factors used for this impact analysis. These are the most recently available scores that hospitals were given an opportunity to review and correct. The proxy adjustment factors use estimated annual base operating DRG payment amounts derived from the March 2017 update to the FY 2016 MedPAR file. The proxy adjustment factors can be found in Table 16A associated with this final rule (available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-For-Service-Payment/AcuteInpatientPPS/index.html>).

The impact analysis shows that, for the FY 2018 program year, the number of hospitals that would receive an increase in their base operating DRG payment amounts is higher

than the number of hospitals that would receive a decrease. Among urban hospitals, those in the New England, South Atlantic, East North Central, East South Central, West North Central, West South Central, Mountain, and Pacific regions would have an increase, on average, in their base operating DRG payment amounts. Urban hospitals in the Middle Atlantic region would receive an average decrease in their base operating DRG payment amounts. Among rural hospitals, those in all geographic regions would have an increase, on average, in their base operating DRG payment amounts.

On average, hospitals that receive a higher (over 65) percent of DSH payments would receive decreases in base operating DRG payment amounts. With respect to hospitals' Medicare utilization as a percent of inpatient days (MCR), those hospitals with an MCR above 65 percent would have the largest average increase in base operating DRG payment amounts.

Non-teaching hospitals would have an average increase, and teaching hospitals would experience an average decrease in base operating DRG payment amounts.

IMPACT ANALYSIS OF BASE OPERATING DRG PAYMENT AMOUNT CHANGES RESULTING FROM THE FY 2018 HOSPITAL VBP PROGRAM

	Number of hospitals	Average percentage change
By Geographic Location:		
All Hospitals	2,955	0.183

By Teaching Status:		
Non-Teaching	1,905	0.316
Teaching	1,050	–0.059

Actual FY 2018 program year's TPSs will not be reviewed and corrected by hospitals until after the FY 2018 IPPS/LTCH PPS final rule has been published. Therefore, the same historical universe of eligible hospitals and corresponding TPSs from the FY 2017 program year are used for the updated impact analysis in this final rule.

8. Effects of Proposed Changes to the HAC Reduction Program for FY 2018

The table and analysis below illustrate the estimated cumulative effect of the measures and scoring system for the Hospital-Acquired Condition (HAC) Reduction Program, as outlined in section V.K. of the preamble of this FY 2018 IPPS/LTCH PPS final rule. We are presenting the estimated impact of the FY 2018 HAC Reduction Program on hospitals by hospital characteristic.

These FY 2018 HAC Reduction Program results were calculated using the Winsorized z-score methodology finalized in the FY 2017 IPPS/LTCH PPS final rule (80 FR 57022 through 57025). Each hospital's Total HAC

Score was calculated as the weighted average of the hospital's Domain 1 score (15 percent) and Domain 2 score (85 percent). Non-Maryland hospitals with a Total HAC Score above the 75th percentile Total HAC Score were identified as being in the worst-performing quartile. The table below presents the estimated proportion of hospitals in the worst-performing quartile of the Total HAC Scores by hospital characteristic. We are not providing hospital-level data or payment impact in conjunction with this final rule because scores will undergo a 30-day review and correction period that will not conclude until after the publication of this final rule.

We used the modified Recalibrated Patient Safety Indicator (PSI) 90 Composite measure results based on Medicare fee-for-service (FFS) discharges from July 1, 2014 through September 30, 2015 and recalibrated version 6.0.2 of the PSI software to estimate the impact of the FY 2018 HAC Reduction Program. For the CDC Central Line-Associated Bloodstream Infection (CLABSI), Catheter-Associated Urinary Tract Infection

(CAUTI), Colon and Abdominal Hysterectomy Surgical Site Infection (SSI), Methicillin-resistant *Staphylococcus aureus* (MRSA) bacteremia, and *Clostridium difficile* Infection (CDI) measure results, we used standardized infection ratios (SIRs) calculated with hospital surveillance data reported to the National Healthcare Safety Network (NHSN) for infections occurring between January 1, 2015 and December 31, 2016.

To analyze the results by hospital characteristic, we used the FY 2018 Proposed Rule Impact File. This table includes 3,233 non-Maryland hospitals with a FY 2018 Total HAC Score. Of these, 3,215 hospitals had information for geographic location, region, bed size, disproportionate share hospital (DSH) percent, and teaching status; 3,184 had information for ownership; and 3,190 had information for Medicare utilization as a percent of inpatient days, which is also known as the Medicare Cost Report (MCR) percent. Maryland hospitals and hospitals

without a Total HAC Score are not included in the table below.

The second column in the table indicates the total number of non-Maryland hospitals with available data for each characteristic that have a Total HAC Score for the FY 2018 HAC Reduction Program. For example, with regard to teaching status, 2,151 hospitals are characterized as non-teaching hospitals, 815 are characterized as teaching hospitals with fewer than 100 residents, and 249 are characterized as teaching hospitals with at least 100 residents. This only represents a total of 3,215 hospitals because the other 18

hospitals have missing data for teaching status.

The third column in the table indicates the number of hospitals for each characteristic that would be in the worst-performing quartile of Total HAC Scores. These hospitals would receive a payment reduction under the FY 2018 HAC Reduction Program. For example, with regard to teaching status, 500 hospitals out of 2,151 hospitals characterized as non-teaching hospitals would be subject to a payment reduction. Among teaching hospitals, 189 out of 815 hospitals with fewer than 100 residents and 103 out of 249

hospitals with 100 or more residents would be subject to a payment reduction.

The fourth column in the table indicates the proportion of hospitals for each characteristic that would be in the worst-performing quartile of Total HAC Scores and would receive a payment reduction under the FY 2018 HAC Reduction Program. For example, 23.2 percent of the 2,151 hospitals characterized as non-teaching hospitals, 23.2 percent of the 815 teaching hospitals with fewer than 100 residents, and 41.4 percent of the 249 teaching hospitals with 100 or more residents would be subject to a payment reduction.

ESTIMATED PROPORTION OF HOSPITALS IN THE WORST-PERFORMING QUARTILE (>75TH PERCENTILE) OF THE TOTAL HAC SCORES FOR THE FY 2018 HAC REDUCTION PROGRAM (BY HOSPITAL CHARACTERISTIC)

Hospital characteristic	Number of hospitals	Number of hospitals in the worst-performing quartile ^a	Percent of hospitals in the worst-performing quartile ^b
Total ^c	3,233	808	25.0
By Geographic Location: (n = 3,215) ^d			
Urban hospitals	2,417	618	25.6
1–99 beds	612	156	25.5

Government	498	145	29.1
By MCR Percent^h (n = 3,190):			
0–24	475	139	29.3
25–49	2,103	482	22.9
50–64	524	138	26.3
65 and over	88	19	21.6

Source: FY 2018 HAC Reduction Program Final Rule Results are based on Recalibrated PSI 90 Composite data from July 2014 through September 2015 and CDC CLABSI, CAUTI, SSI, CDI, and MRSA results from January 2015 through December 2016. Hospital Characteristics are based on the FY 2018 Proposed Rule Impact File.

^a This column is the number of non-Maryland hospitals with a Total HAC Score within the corresponding characteristic that are estimated to be in the worst-performing quartile.

^b This column is the percent of non-Maryland hospitals within each characteristic that are estimated to be in the worst-performing quartile. The percentages are calculated by dividing the number of non-Maryland hospitals with a Total HAC Score in the worst-performing quartile by the total number of non-Maryland hospitals with a Total HAC Score within that characteristic.

^c The number of non-Maryland hospitals with a FY 2018 Total HAC Score (N = 3,233). Note that not all hospitals have data for all hospital characteristics.

^d The number of hospitals that had information for: geographic location including urban/rural, bed size, and region; Disproportionate Share Hospital (DSH); and teaching status (n = 3,215).

^e A hospital is considered a DSH hospital if it has a DSH patient percentage greater than zero.

^f A hospital is considered a teaching hospital if it has an IME adjustment factor for Operation PPS (TCHOP) greater than zero.

^g Not all hospitals had data for type of ownership (n = 3,184).

^h Not all hospitals had data for MCR percent (n = 3,190).

9. Effects of Implementation of the Additional 5-Year Extension of the Rural Community Hospital Demonstration Program

In section V.L. of the preamble of this final rule, we discuss our implementation of section 410A of Public Law 108–173, as amended by sections 3123 and 10313 of Public Law 111–148, and more recently, by section 15003 of Public Law 114–255, which requires the Secretary to conduct a demonstration that tests the feasibility and advisability of establishing “rural community” hospitals to furnish covered inpatient hospital services to Medicare beneficiaries. The demonstration makes payments under a reasonable cost methodology for covered inpatient hospital services furnished to Medicare beneficiaries by up to 30 rural hospitals. Section 15003 of Public Law 114–255, enacted December 13, 2016, requires a 10-year extension period (in place of the 5-year extension required by Public Law 111–148) for the demonstration. Therefore, the Secretary is required to conduct the demonstration for an additional 5-year period. Section 15003 of Public Law 114–255 also requires that, no later than 120 days after enactment of Public Law 114–255, the Secretary issue a solicitation for applications to select additional hospitals to participate in the demonstration program for the second 5 years of the 10-year extension period so long as the maximum number of 30 hospitals stipulated by Public Law 111–148 is not exceeded. Section 410A(c)(2) of Public Law 108–173 requires that, in conducting the demonstration program under this section, the Secretary shall ensure that the aggregate payments made by the Secretary do not exceed the amount which the Secretary would have paid if the demonstration program under this section was not implemented (budget neutrality).

In this FY 2018 IPPS/LTCH PPS final rule, we describe our proposed and finalized policies for implementation of the extension under section 15003 of Public Law 114–255, the budget neutrality methodology for the extension period authorized by the legislation, and the reconciliation of actual and estimated costs of the demonstration for previous years (2011, 2012, and 2013). Our proposal and final policy for budget neutrality adopted the general methodology used in previous years for the demonstration. As discussed in section V.L. of the preamble of the proposed rule, in the IPPS final rules from FYs 2005 through 2016, we estimated the additional payments made by the program for each of the participating hospitals as a result of the demonstration. In order to achieve budget neutrality, we adjusted the national IPPS rates by an amount sufficient to account for the added costs of this demonstration. In other words, we have applied budget neutrality across the payment system as a whole rather than across

the participants of this demonstration. The language of the statutory budget neutrality requirement permits the agency to implement the budget neutrality provision in this manner. The statutory language requires that aggregate payments made by the Secretary do not exceed the amount which the Secretary would have paid if the demonstration was not implemented, but does not identify the range across which aggregate payments must be held equal.

Section 15003 of Public Law 114–255 requires the Secretary to conduct the Rural Community Hospital Demonstration for a 10-year extension period (in place of the 5-year extension period required by the Affordable Care Act), beginning on the date immediately following the last day of the initial 5-year period under section 410A(a)(5) of Public Law 108–173. Specifically, section 15003 of Public Law 114–255 amended section 410A(g)(4) of Public Law 108–173 to require that, for hospitals participating in the demonstration as of the last day of the initial 5-year period, the Secretary shall provide for continued participation of such rural community hospitals in the demonstration during the 10-year extension period, unless the hospital makes an election to discontinue participation. Furthermore, section 15003 of Public Law 114–255 requires that, during the second 5 years of the 10-year extension period, the Secretary shall provide for participation under the demonstration during the second 5 years of the 10-year extension period for hospitals that are not described in subsection 410A(g)(4).

In the FY 2018 IPPS/LTCH PPS proposed rule, we proposed to implement the second 5 years of the 10-year extension period in a way that recognizes a gap in participation for the previously participating hospitals between the end of the first 5 years and the start of the second 5 years of the extension period, and that provides for alignment of the periods of performance under the extension among all participating hospitals. Thus, for each previously participating hospital that decides to participate in the second 5 years of the 10-year extension period, we proposed that the start date for the period of performance under the second 5-year extension period would be the start of the first cost reporting period on or after October 1, 2017 following upon the announcement of the selection of the additional hospitals for the demonstration. Our goal was to finalize this selection by June 2017, in time to include in the FY 2018 IPPS final rule an estimate of the costs of the demonstration during FY 2018 and the resulting budget neutrality offset amount for these newly participating hospitals, as well as for those hospitals among the previously participating hospitals that decide to participate in the extension period.

In the proposed rule, we proposed that if the selection of the additional hospitals

under the solicitation were not to be announced by June 2017, we would include the estimated costs of the demonstration for all participating hospitals for FY 2018 in the budget neutrality offset amount to be calculated in the FY 2019 IPPS/LTCH PPS proposed and final rules.

In the preamble in section V.L. of the proposed rule, we also described an alternative implementation approach, according to which each previously participating hospital would begin the second 5 years of the 10-year extension period on the date immediately after the date the period of performance under the first 5-year extension period ended. We also described the methodology that we considered for calculating the budget neutrality offset amount under this alternative approach.

In response to public comments that indicated that our proposed implementation approach would cause financial hardship for some of the previously participating hospitals, we are adopting this alternative implementation approach in this FY 2018 IPPS/LTCH PPS final rule. We describe the method for calculating budget neutrality under this approach. Because we were unable to announce the selections of additional hospitals by June 2017, in time for including the estimates of the cost of the demonstration for both previously and newly participated hospitals in FY 2018 in this FY 2018 final rule, we will include this estimate in the FY 2019 IPPS/LTCH PPS proposed and final rules. In addition, we will determine the costs of the demonstration for the previously participating hospitals for the period from when their period of performance ended for the first 5-year extension period and the start of the cost report year in FY 2018 when finalized cost reports for this period are available. We will include these costs for the demonstration in future rulemaking.

In previous years, we have incorporated a second component into the budget neutrality offset amounts identified in the final IPPS rules. As finalized cost reports became available, we determined the amount by which the actual costs of the demonstration for an earlier, given year differed from the estimated costs for the demonstration set forth in the final IPPS rule for the corresponding fiscal year, and we incorporated that amount into the budget neutrality offset amount for the upcoming fiscal year. We have calculated this difference for FYs 2005 through 2010 between the actual costs of the demonstration as determined from finalized cost reports once available, and estimated costs of the demonstration as identified in the applicable IPPS final rules for these years.

With the extension of the demonstration for another 5-year period, as authorized by section 15003 of Public Law 114–255, we

will continue this general procedure. Specifically, when finalized cost reports for FYs 2011, 2012, and 2013 are available, we will include this difference for these years in the budget neutrality offset adjustment to be applied to the national IPPS rates in a future final rule. We expect that this will occur in FY 2019. Also, when finalized cost reports for FYs 2014 through 2016 are available, we will include the difference between the actual costs as reflected on these cost reports and the amounts included in the budget neutrality offset amounts for these fiscal years in a future final rule.

10. Effects of Changes Relating to Provider-Based Status of Indian Health Service and Tribal Facilities and Organizations

In section V.N. of the preamble of this final rule, we discuss our proposals and finalized policies relating to provider-based status of Indian Health Service (IHS) and tribal facilities and organizations. Regulations at § 413.65(m) currently grandfather facilities from provider-based regulations if they meet certain criteria, including on or before April 7, 2000, having furnished only services that were billed as if they had been furnished by a department of a hospital operated by the IHS or a Tribe. We have also issued subregulatory guidance on circumstances that would or would not result in a facility or organization losing its grandfathered status. After consideration of the special and legally recognized relationship between Indian Tribes and the U.S. Government, as well as current IHS policies and procedures, as we proposed, we remove the date limitation in § 413.65(m) that restricted the grandfathering provision to IHS or Tribal facilities and organizations furnishing services on or before April 7, 2000. We also made a technical change to make the regulation text more consistent with our current rules that require these facilities to comply with all applicable Medicare conditions of participation that apply to the main provider. We do not expect any significant payment impact because these finalized policies are in line with current guidance, and we believe that IHS policies and procedures regarding the planning, operation, and funding of such facilities are resulting in appropriate Medicare payments.

11. Effects of Changes Relating to Hospital-within-Hospital (HwH) Policy

In section VII.B. of the preamble of this final rule, we discuss our proposal and finalized policy to revise the regulations applicable to HwHs so that the separateness and control requirements would only apply to IPPS-excluded HwHs that are co-located with IPPS hospitals beginning in FY 2018. This policy change is premised on the belief that the policy concerns that underlie our existing HwH regulations (that is, inappropriate patient shifting and hospitals acting as illegal de facto units) are sufficiently moderated in situations where IPPS-excluded hospitals are co-located with each other but not IPPS hospitals, in large part due to the payment system changes that have occurred over the intervening years for IPPS-excluded hospitals. In addition, we are revising the HwH requirements to no longer require the provisions that outline

performance of basic hospital functions in order to maintain IPPS-exclusion beginning in FY 2018. This revision will not result in a practical change to how HwHs are currently operated because the performance of basic hospital functions that are required under the HwH regulations are currently addressed under CMS' interpretative guidelines for the hospital conditions of participation. We do not expect any significant payment impact because these policies are primarily administrative in nature or in line with current guidance.

12. Effects of Continued Implementation of the Frontier Community Health Integration Project (FCHIP) Demonstration

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57064 through 57065) we finalized, and in section VII.D.2. of the preamble of this final rule we discuss, the implementation of the FCHIP demonstration, which allows eligible entities to develop and test new models for the delivery of health care services in eligible counties in order to improve access to and better integrate the delivery of acute care, extended care, and other health care services to Medicare beneficiaries in no more than four States. Budget neutrality estimates for CAHs selected for the demonstration will be based on the demonstration period, August 1, 2016 through July 31, 2019. The demonstration includes three intervention prongs, under which specific waivers of Medicare payment rules will allow for enhanced payment: telehealth, skilled nursing facility/nursing facility, and ambulance services. These waivers are being implemented with the goal of increasing access to care with no net increase in costs.

We have specified the payment enhancements for the demonstration with the goal of maintaining the budget neutrality of the demonstration on its own terms (that is, the demonstration will produce savings from reduced transfers and admissions to other health care providers, thus offsetting any increase in payments resulting from the demonstration). However, because of the small size of this demonstration program and uncertainty associated with projected Medicare utilization and costs, we adopted a contingency plan (81 FR 57064 through 57065) to ensure that the budget neutrality requirement in section 123 of Public Law 110–275 is met. Accordingly, if analysis of claims data for the Medicare beneficiaries receiving services at each of the participating CAHs, as well as of other data sources, including cost reports, show that increases in Medicare payments under the demonstration during the 3-year period are not sufficiently offset by reductions elsewhere, we will recoup the additional expenditures attributable to the demonstration through a reduction in payments to all CAHs nationwide. The demonstration is projected to impact payments to participating CAHs under both Medicare Part A and Part B. Thus, in the event that we determine that aggregate payments under the demonstration exceed the payments that would otherwise have been made, CMS will recoup payments through reductions of Medicare payments to all CAHs under both Medicare Part A and Part B. Because of the small scale of the

demonstration, it would not be feasible to implement budget neutrality by reducing payments only to the participating CAH providers. Therefore we will make the reduction to payments to all CAHs, not just those participating in the demonstration, because the FCHIP program is specifically designed to test innovations that affect delivery of services by this provider category. We explained our belief that the language of the statutory budget neutrality requirement at section 123(g)(1)(B) of the Act permits the agency to implement the budget neutrality provision in this manner. The statutory language merely refers to ensuring that aggregate payments made by the Secretary do not exceed the amount which the Secretary estimates would have been paid if the demonstration project was not implemented, and does not identify the range across which aggregate payments must be held equal.

Given the 3-year period of performance of the FCHIP demonstration and the time needed to conduct the budget neutrality analysis, in the event the demonstration is found not to have been budget neutral, any excess costs will be recouped over a period of three cost reporting periods, beginning in CY 2020. Therefore, this policy will have no impact for any national payment system for FY 2018.

I. Effects of Changes in the Capital IPPS

1. General Considerations

For the impact analysis presented below, we used data from the March 2017 update of the FY 2016 MedPAR file and the March 2017 update of the Provider-Specific File (PSF) that is used for payment purposes. Although the analyses of the changes to the capital prospective payment system do not incorporate cost data, we used the March 2017 update of the most recently available hospital cost report data (FYs 2014 and 2015) to categorize hospitals. Our analysis has several qualifications. We use the best data available and make assumptions about case-mix and beneficiary enrollment as described later in this section.

Due to the interdependent nature of the IPPS, it is very difficult to precisely quantify the impact associated with each change. In addition, we draw upon various sources for the data used to categorize hospitals in the tables. In some cases (for instance, the number of beds), there is a fair degree of variation in the data from different sources. We have attempted to construct these variables with the best available sources overall. However, it is possible that some individual hospitals are placed in the wrong category.

Using cases from the March 2017 update of the FY 2016 MedPAR file, we simulated payments under the capital IPPS for FY 2017 and payments for FY 2018 for a comparison of total payments per case. Any short-term, acute care hospitals not paid under the general IPPS (for example, hospitals in Maryland) are excluded from the simulations.

The methodology for determining a capital IPPS payment is set forth at § 412.312. The basic methodology for calculating the capital IPPS payments in FY 2018 is as follows:

(Standard Federal Rate) × (DRG weight) × (GAF) × (COLA for hospitals located in

Alaska and Hawaii) $\times (1 + \text{DSH Adjustment Factor} + \text{IME adjustment factor, if applicable})$.

In addition to the other adjustments, hospitals may receive outlier payments for those cases that qualify under the threshold established for each fiscal year. We modeled payments for each hospital by multiplying the capital Federal rate by the GAF and the hospital's case-mix. We then added estimated payments for indirect medical education, disproportionate share, and outliers, if applicable. For purposes of this impact analysis, the model includes the following assumptions:

- We estimate that the Medicare case-mix index will increase by 0.5 percent in both FYs 2017 and 2018.
- We estimate that Medicare discharges will be approximately 11.0 million in FY 2017 and 11.1 million in FY 2018.
- The capital Federal rate was updated beginning in FY 1996 by an analytical framework that considers changes in the prices associated with capital-related costs and adjustments to account for forecast error, changes in the case-mix index, allowable changes in intensity, and other factors. As discussed in section III.A.1.a. of the Addendum to this rule, the update is 1.3 percent for FY 2018.
- In addition to the FY 2018 update factor, the FY 2018 capital Federal rate was calculated based on a GAF/DRG budget neutrality adjustment factor of 0.9986, an outlier adjustment factor of 0.9484, and an adjustment to remove the one-time prospective adjustment of 1.006 made in FY 2017 to address the effect of the 0.2 percent reduction to the national capital Federal rates in effect for FY 2014, FY 2015, and FY 2016 relating to the 2-midnight policy. The 2-midnight adjustment that was finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57294) is discussed in section V.C. of the preamble of this final rule as it relates to the capital Federal rate. As also discussed in section V.C. of the preamble of this final rule, we are not making an additional MS-DRG documentation and coding adjustment to the capital IPPS Federal rate for FY 2018.

2. Results

We used the actuarial model previously described in section I.I. of Appendix A of this final rule to estimate the potential impact of our changes for FY 2018 on total capital payments per case, using a universe of 3,292 hospitals. As previously described, the

individual hospital payment parameters are taken from the best available data, including the March 2017 update of the FY 2016 MedPAR file, the March 2017 update to the PSF, and the most recent cost report data from the March 2017 update of HCRIS. In Table III, we present a comparison of estimated total payments per case for FY 2017 and estimated total payments per case for FY 2018 based on the FY 2018 payment policies. Column 2 shows estimates of payments per case under our model for FY 2017. Column 3 shows estimates of payments per case under our model for FY 2018. Column 4 shows the total percentage change in payments from FY 2017 to FY 2018. The change represented in Column 4 includes the 1.3 percent update to the capital Federal rate and other changes in the adjustments to the capital Federal rate. The comparisons are provided by: (1) Geographic location; (2) region; and (3) payment classification.

The simulation results show that, on average, capital payments per case in FY 2018 are expected to increase as compared to capital payments per case in FY 2017. This expected increase overall is due to the approximately 1.3 percent update to the capital Federal rate for FY 2018, as well as the outlier adjustment of 0.9484 which is a 1.04 percent change from the FY 2017 outlier adjustment of 0.9386. The change in the outlier adjustment is expected to increase capital payments per case for most hospitals to a lesser or greater extent. (For a discussion of the determination of the capital Federal rate and adjustments, we refer readers to section III.A. of the Addendum to this final rule.) Hospitals within both rural and urban regions may experience an increase or a decrease in capital payments per case due to changes in the GAFs. These regional effects of the changes to the GAFs on capital payments are consistent with the projected changes in payments due to changes in the wage index (and policies affecting the wage index) as shown in Table I in section I.G. of this Appendix A.

The net impact of these changes is an estimated 2.5 percent change in capital payments per case from FY 2017 to FY 2018 for all hospitals (as shown in Table III).

The geographic comparison shows that, on average, most hospitals in all classifications (urban and rural) will experience an increase in capital IPPS payments per case in FY 2018 as compared to FY 2017. Capital IPPS payments per case for hospitals in large urban areas as well as hospitals in rural

areas, would increase by an estimated 2.9 percent, from FY 2017 to FY 2018. Capital IPPS payments per case for other urban hospitals are estimated to increase 2.0 percent.

The comparisons by region show that the estimated increases in capital payments per case from FY 2017 to FY 2018 in urban areas range from a 3.7 percent increase for the West South Central urban region to a 0.8 percent increase for the Mountain urban region. For rural regions, the New England rural region is projected to experience the largest increase in capital IPPS payments per case of 5.2 percent, while the South Atlantic rural region is projected to experience an increase in capital IPPS payments per case of 1.9 percent.

Hospitals of all types of ownership (that is, voluntary hospitals, government hospitals, and proprietary hospitals) are expected to experience an increase in capital payments per case from FY 2017 to FY 2018. The increase in capital payments for voluntary hospitals is estimated to be 2.3 percent. Government hospitals and proprietary hospitals, are expected to experience an increase in capital IPPS payments of 3.2 percent.

Section 1886(d)(10) of the Act established the MGCRB. Hospitals may apply for reclassification for purposes of the wage index for FY 2018. Reclassification for wage index purposes also affects the GAFs because that factor is constructed from the hospital wage index. To present the effects of the hospitals being reclassified as of the publication of this rule for FY 2018, we show the average capital payments per case for reclassified hospitals for FY 2018. Urban reclassified hospitals are expected to experience an increase in capital payments of 1.6 percent; urban nonreclassified hospitals are expected to experience an increase in capital payments of 2.9 percent. The estimated percentage increase for rural reclassified hospitals as well as for rural nonreclassified hospitals is 2.8 percent. Hospitals reclassified under section 401 are among the few groups of hospitals not expected to experience an increase in capital payments—it is expected that these hospitals would experience a decrease in capital payments of 1.6 percent, while capital payments for other reclassified hospitals are expected to increase an estimated 6.6 percent.

TABLE III—COMPARISON OF TOTAL PAYMENTS PER CASE
[FY 2017 payments compared to FY 2018 payments]

	Number of hospitals	Average FY 2017 payments/case	Average FY 2018 payments/case	Change
By Geographic Location:				
All hospitals	3,292	920	943	2.5
Large urban areas (populations over 1 million)	1,340	1,007	1,036	2.9
Other urban areas (populations of 1 million or fewer)	1,152	896	913	2.0
Rural areas	800	625	644	2.9
Urban hospitals	2,492	953	977	2.5
0–99 beds	648	768	798	3.9

J. Effects of Payment Rate Changes and Policy Changes Under the LTCH PPS

1. Introduction and General Considerations

In section VIII. of the preamble of this final rule and section V. of the Addendum to this final rule, we set forth the annual update to the payment rates for the LTCH PPS for FY 2018. In the preamble of this final rule, we specify the statutory authority for the provisions that are presented, identify the proposed and finalized policies, and present rationales for our decisions as well as alternatives that were considered. In this section of Appendix A to this final rule, we discuss the impact of the changes to the payment rate, factors, and other payment rate policies related to the LTCH PPS that are presented in the preamble of this final rule in terms of their estimated fiscal impact on the Medicare budget and on LTCHs.

There are 415 LTCHs included in this impacts analysis. We note that, although there are currently approximately 428 LTCHs, for purposes of this impact analysis, we excluded the data of all-inclusive rate providers consistent with the development of the FY 2018 MS–LTC–DRG relative weights (discussed in section VIII.B.3.c. of the preamble of this final rule. Moreover, in the claims data use for this final rule, two of these 415 LTCHs only have claims for site neutral payment rate cases and are thus not included in our impact analysis for LTCH PPS standard Federal payment rate cases.) In the impact analysis, we used the payment rate, factors, and policies presented in this final rule, which include the rolling end to transition to the site neutral payment rate required by section 1886(m)(6)(A) of the Act (as described below), the 1.0 percent annual update to the LTCH PPS standard Federal payment rate required by section 411 of Pub. L. 114–10, the update to the MS–LTC–DRG classifications and relative weights, the update to the wage index values and labor-related share, the change to the SSO payment methodology (discussed in VIII.E. of the preamble of this final rule), our finalized policy to adopt a 1-year regulatory delay of the full implementation of the 25-percent threshold policy for FY 2018, and our finalized policies to implement certain provisions of the 21st Century Cures Act, and the best available claims and CCR data to estimate the change in payments for FY 2018.

Under the dual rate LTCH PPS payment structure, payment for LTCH discharges that meet the criteria for exclusion from the site neutral payment rate (that is, LTCH PPS

standard Federal payment rate cases) is based on the LTCH PPS standard Federal payment rate. Consistent with the statute, the site neutral payment rate is the lower of the IPPS comparable per diem amount as determined under § 412.529(d)(4), including any applicable outlier payments as specified in § 412.525(a); or 100 percent of the estimated cost of the case as determined under existing § 412.529(d)(2). In addition, there are two separate HCO targets—one for LTCH PPS standard Federal payment rate cases and one for site neutral payment rate cases. The statute also establishes a transitional payment method for cases that are paid the site neutral payment rate for LTCH discharges occurring in cost reporting periods beginning during FY 2016 and FY 2017. For FY 2018, the applicability of this transitional payment method for site neutral payment rate cases is dependent upon both the discharge date and the start date of the LTCH's FY 2018 cost reporting period. Specifically, the transitional payment method only applies to those site neutral payment rate cases that occur in cost reporting periods that begin *before* October 1, 2017. The transitional payment amount for site neutral payment rate cases is a blended payment rate, which is calculated as 50 percent of the applicable site neutral payment rate amount for the discharge as determined under § 412.522(c)(1) and 50 percent of the applicable LTCH PPS standard Federal payment rate for the discharge determined under § 412.523, while site neutral payment rate cases in cost reporting periods beginning on or *after* October 1, 2017 are paid the site neutral payment rate amount determined under § 412.522(c)(1).

Comment: Several commenters requested that we extend the transition period to the site neutral payment rate under the LTCH PPS' dual payment rate structure.

Response: Under Section 1886(m)(6)(B)(i)(II) of the Act, we are required to pay for discharges that do not to meet the statutory criteria for exclusion from the site neutral payment rate at the site neutral payment rate for discharges in cost reporting periods beginning in FY 2018 or later. The statute only provides for payments at the blended payment rate for discharges that do not to meet the statutory criteria for exclusion from the site neutral payment rate for those discharges that occur in cost reporting periods beginning during FY 2016 or FY 2017. Therefore, under Section 1886(m)(6)(B)(i)(II) of the Act, we lack the

statutory authority to do as these commenters request.

Comment: Several commenters objected to our expectation that the site neutral payment rate would not affect access to or quality of care for patients based on what they assert are incorrect actuarial assumptions. In support of this objection, some commenters analyzed FY 2016 claims data which they believe shows that site neutral payment rate cases have not matched our actuarial assumptions that the costs and resource use for cases paid at the site neutral payment rate will likely mirror the costs and resource use for IPPS cases assigned to the same MS–DRG. These commenters believe CMS' statements could mislead LTCHs and Medicare beneficiaries about the projected impact of the site neutral payment rate on access to or quality of care.

Response: While we understand and share commenters' concerns about access to and quality of care for Medicare beneficiaries, we disagree that our stated expectation that the site neutral payment rate will not affect these is incorrect or misleading. To the extent that the data from FY 2016 appears to rebut our actuarial assumptions on the costs and resource of site neutral payment rate cases, we remind commenters that given the rolling nature of the start of the transition to the site neutral payment rate (discharges in cost reporting periods beginning on or after October 1, 2015), many LTCH claims from FY 2016 were not subject to the site neutral payment rate at all as many LTCHs did not begin their FY 2016 cost reporting period until the fourth quarter of that fiscal year. In addition, no LTCH is fully subject to the site neutral payment rate until its cost reporting period beginning in FY 2018 due to the 2-year transition period provided by the statute (meaning that all claims which were subject to the site neutral payment rate in FY 2016 were paid under the blended payment rate which included a payment based on 50 percent of the LTCH PPS standard Federal payment rate). Therefore, the analysis presented by commenters, based on FY 2016 data, does not invalidate our assumptions about the costs and resource use for site neutral payment rate cases as the FY 2016 claims appear to not yet reflect the expected change in cost and resources once the payment for site neutral payment rate cases is fully based on the site neutral payment rate. We will continue to monitor the data and review the assumptions as appropriate. However, we continue to believe that the

assumptions underlying our conclusion that the site neutral payment system will not negatively impact access to or quality of care are valid, as is the conclusion. As demonstrated in areas where there is little or no LTCH presence, general short-term acute care hospitals are effectively providing treatment for the same types of patients that are treated in LTCHs in areas where there is one or more LTCH present.

Based on the best available data for the 415 LTCHs in our database that were considered in the analyses used for this final rule, we estimate that overall LTCH PPS payments in FY 2018 will decrease by approximately 4.2 percent (or approximately \$195 million) based on the rates and factors presented in section VIII. of the preamble and section V. of the Addendum to this final rule. (We note that this estimate does not reflect our finalized policy to adopt a 1-year regulatory delay of the full implementation of the 25-percent threshold policy for FY 2018 and, with the exception of changes to the HCO payment policy, does not reflect our finalized policies regarding the implementation of certain provisions of the 21st Century Cures Act. As discussed in greater detail below, our actuaries estimate these finalized policies will increase spending by approximately \$85 million in FY 2018.) This projection takes into account estimated payments for LTCH cases in our database that met or would have met the patient-level criteria and been paid the LTCH PPS standard Federal payment rate if those criteria had been in effect at the time of the discharge, and estimated payments for LTCH cases that did not meet or would not have met the patient-level criteria and been paid under the site neutral payment rate if that rate had been in effect at the time of the discharge, as described in the following paragraph.

The statutory transitional payment method for cases that are paid the site neutral payment rate for LTCH discharges occurring in cost reporting periods beginning during FY 2016 or FY 2017 uses a blended payment rate, which is determined as 50 percent of the site neutral payment rate amount for the discharge and 50 percent of the standard Federal prospective payment rate amount for the discharge (§ 412.522(c)(3)). The transitional blended payment rate uses the same blend percentages (that is, 50 percent) for both years of the 2-year transition period. Therefore, when estimating FY 2017 LTCH PPS payments for site neutral payment rate cases for this impact analysis, the transitional blended payment rate was applied to all such cases because all discharges in FY 2017 are either in the hospital's cost reporting period that began during FY 2016 or in the hospital's cost reporting period that will begin during FY 2017. However, when estimating FY 2018 LTCH PPS payments for site neutral payment rate cases for this impact analysis, because the statute specifies that the site neutral payment rate effective date (and 2-year transitional period) for a given LTCH is based on the date that LTCH's cost reporting period begins during FY 2018, we included an adjustment to account for this rolling effective date, consistent with the general approach used for the LTCH PPS impact analysis presented in the FY 2016

IPPS/LTCH PPS final rule (80 FR 49831). This approach accounts for the fact that site neutral payment rate cases in FY 2018 that are in a LTCH's cost reporting period that begin *before* October 1, 2017 continue to be paid under the transitional payment method until the start of the LTCH's first cost reporting period beginning on or *after* October 1, 2017. Site neutral payment rate cases in a LTCH's cost reporting period beginning on or after October 1, 2017 will no longer be paid under the transitional payment method and will instead be paid the site neutral payment rate amount as determined by § 412.522(c)(1).

For purposes of this impact analysis, to estimate total FY 2018 LTCH PPS payments for site neutral payment rate cases, we used the same general approach as was used in the FY 2016 IPPS/LTCH PPS final rule with modifications to account for the rolling end date to the transitional site neutral payment rate in FY 2018 instead of the rolling effective date for implementation of the transitional site neutral payment rate in FY 2016. In summary, under this approach, we grouped LTCHs based on the quarter their cost reporting periods will begin during FY 2018. For example, LTCHs with cost reporting periods that begin during October through December 2017 begin during the first quarter of FY 2018. For LTCHs grouped in each quarter of FY 2018, we modeled those LTCHs' estimated FY 2018 site neutral payment rate payments under the transitional blended payment rate based on the quarter in which the LTCHs in each group would continue to be paid the transitional payment method for the site neutral payment rate cases.

For purposes of this estimate, then, we assume the cost reporting period is the same for all LTCHs in each of the quarterly groups and that this cost reporting period begins on the first day of that quarter. (For example, our first group consists of 42 LTCHs whose cost reporting period will begin in the first quarter of FY 2018 so that, for purposes of this estimate, we assume all 42 LTCHs will begin their FY 2018 cost reporting period on October 1, 2017.) Second, we estimated the proportion of FY 2018 site neutral payment rate cases in each of the quarterly groups, and we then assume this proportion is applicable for all four quarters of FY 2018. (For example, as discussed in more detail below, we estimate the first quarter group will discharge 6.6 percent of all FY 2018 site neutral payment rate cases and therefore, we estimate that group of LTCHs will discharge 6.6 percent of all FY 2018 site neutral payment rate cases in each quarter of FY 2018.) Then, we modeled estimated FY 2018 payments on a quarterly basis under the LTCH PPS standard Federal payment rate based on the assumptions described above. We continue to believe that this approach is a reasonable means of taking the rolling effective date into account when estimating FY 2018 payments.

Based on the fiscal year begin date information in the March 2017 update of the PSF and the LTCH claims from the March 2017 update of the FY 2016 MedPAR files for the 415 LTCHs in our database used for this final rule, we found the following: 6.6

percent of site neutral payment rate cases are from 42 LTCHs whose cost reporting periods will begin during the first quarter of FY 2018; 21.2 percent of site neutral payment rate cases are from 97 LTCHs whose cost reporting periods will begin in the second quarter of FY 2018; 10.2 percent of site neutral payment rate cases are from 57 LTCHs whose cost reporting periods will begin in the third quarter of FY 2018; and 62.1 percent of site neutral payment rate cases are from 219 LTCHs whose cost reporting periods will begin in the fourth quarter of FY 2018. Therefore, the following percentages apply in the approach described above:

- First Quarter FY 2018: 6.6 percent of site neutral payment rate cases (that is, the percentage of discharges from LTCHs whose FY 2018 cost reporting will begin in the first quarter of FY 2018) are no longer eligible for the transitional payment method, while the remaining 93.4 percent of site neutral payment rate discharges are eligible to be paid under the transitional payment method.

- Second Quarter FY 2018: 27.7 percent of site neutral payment rate second quarter discharges (that is, the percentage of discharges from LTCHs whose FY 2018 cost reporting will begin in the first or second quarter of FY 2018) are no longer eligible for the transitional payment method while the remaining 72.3 percent of site neutral payment rate second quarter discharges are eligible to be paid under the transitional payment method.

- Third Quarter FY 2018: 37.9 percent of site neutral payment rate third quarter discharges (that is, the percentage of discharges from LTCHs whose FY 2018 cost reporting will begin in the first, second, or third quarter of FY 2018) are no longer eligible for the transitional payment method while the remaining 62.1 percent of site neutral payment rate third quarter discharges are eligible to be paid under the transitional payment method.

- Fourth Quarter FY 2018: 100.0 percent of site neutral payment rate fourth quarter discharges (that is, the percentage of discharges from LTCHs whose FY 2018 cost reporting will begin in the first, second, third, or fourth quarter of FY 2018) are no longer eligible for the transitional payment method so that no site neutral payment rate case discharges are eligible to be paid under the transitional payment method.

Based on the FY 2016 LTCH cases that were used for the analyses in this final rule, approximately 42 percent of those cases were or would have been classified as site neutral payment rate cases if the site neutral payment rate had been in effect at the time of the discharge (that is, 42 percent of LTCH cases did not or would not have met the patient-level criteria for exclusion from the site neutral payment rate). Our Office of the Actuary estimates that the percent of LTCH PPS cases that will be paid at the site neutral payment rate in FY 2018 will not change significantly from the historical data. Taking into account the transitional blended payment rate and other changes that will apply to the site neutral payment rate cases in FY 2018, we estimate that aggregate LTCH PPS payments for these site neutral payment

rate cases will decrease by approximately 20 percent (or approximately \$230 million).

Approximately 58 percent of LTCH cases are expected to meet the patient-level criteria for exclusion from the site neutral payment rate in FY 2018, and will be paid based on the LTCH PPS standard Federal payment rate for the full year. We estimate that total LTCH PPS payments for these LTCH PPS standard Federal payment rate cases in FY 2018 will increase approximately 1.0 percent (or approximately \$35 million). This estimated increase in LTCH PPS payments for LTCH PPS standard Federal payment rate cases in FY 2018 is primarily due to the 1.0 percent annual update to the LTCH PPS standard Federal payment rate for FY 2018 required by section 411 of Public Law 114–10 (discussed in section V.A. of the Addendum to this final rule). (We note that because our SSO payment methodology discussed in VIII.E. of the preamble of this final rule incorporates a budget neutrality adjustment, this policy does not increase or decrease aggregate payments, and therefore does not factor into the 1.0 percent increase in aggregate payments.)

Based on the 415 LTCHs that were represented in the FY 2016 LTCH cases that were used for the analyses in this final rule presented in this Appendix, we estimate that aggregate FY 2018 LTCH PPS payments will be approximately \$4.418 billion, as compared to estimated aggregate FY 2017 LTCH PPS payments of approximately \$4.612 billion, resulting in an estimated overall decrease in LTCH PPS payments of approximately \$195 million. Furthermore, as discussed in more detail below, our Office of the Actuary is estimating an additional increase in aggregate FY 2018 LTCH PPS payments of approximately \$85 million with \$70 million resulting from our finalized policy to delay full implementation of the 25-percent threshold policy for FY 2018 and another \$15 million coming from our implementation of certain provisions of the 21st Century Cures Act. Therefore, in total, we project an overall decrease in LTCH PPS payments of approximately \$110 million (–\$195 million + \$85 million) or approximately a 2.4 percent decrease in LTCH PPS payments in FY 2018 as compared to FY 2017. Because the combined distributional effects and estimated payment changes exceed \$100 million, this final rule is a major economic rule. We note that the estimated \$195 million decrease in LTCH PPS payments in FY 2018 (which includes estimated payments for LTCH PPS standard Federal payment rate cases and site neutral payment rate cases, but does not include estimated payments for our finalized policy to delay full implementation of the 25-percent threshold policy for FY 2018 or the certain provisions of the 21st Century Cures Act) does not reflect changes in LTCH admissions or case-mix intensity, which will also affect the overall payment effects of the policies in this final rule.

The LTCH PPS standard Federal payment rate for FY 2017 is \$42,476.41. For FY 2018, we are establishing an LTCH PPS standard Federal payment rate of \$41,430.56 which reflects the 1.0 percent annual update to the LTCH PPS standard Federal payment rate, the area wage budget neutrality factor of

1.0006434 to ensure that the changes in the wage indexes and labor-related share do not influence aggregate payments, and the budget neutrality adjustment of 0.9651 to ensure that our changes to the SSO payment methodology (discussed in VIII.E. of the preamble of this final rule) do not influence aggregate payments. For LTCHs that fail to submit data for the LTCH QRP, in accordance with section 1886(m)(5)(C) of the Act, we are establishing an LTCH PPS standard Federal payment rate of \$40,610.16. This reduced LTCH PPS standard Federal payment rate reflects the updates and factors previously described as well as the required 2.0 percentage point reduction to the annual update for failure to submit data under the LTCH QRP. We note that the factors previously described to determine the FY 2018 LTCH PPS standard Federal payment rate are applied to the FY 2017 LTCH PPS standard Federal rate set forth under § 412.523(c)(3)(xiv) (that is, \$42,476.41).

Table IV shows the estimated impact for LTCH PPS standard Federal payment rate cases. The estimated change attributable solely to the annual update of 1.0 percent to the LTCH PPS standard Federal payment rate is projected to result in an increase of 0.9 percent in payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2017 to FY 2018, on average, for all LTCHs (Column 6). In addition to the annual update to the LTCH PPS standard Federal payment rate for FY 2018, the estimated increase of 0.9 percent shown in Column 6 of Table IV also includes estimated payments for SSO cases that will be paid using special methodologies that are not affected by the annual update to the LTCH PPS standard Federal payment rate (without incorporating our SSO payment methodology as discussed in VIII.E. of the preamble of this final rule), as well as the reduction that is applied to the annual update of LTCHs that do not submit the required LTCH QRP data. Therefore, for all hospital categories, the projected increase in payments based on the proposed LTCH PPS standard Federal payment rate to LTCH PPS standard Federal payment rate cases is somewhat less than the 1.0 percent annual update for FY 2018 required under section 411 of Pub. L. 114–10.

For FY 2018, we are updating the wage index values based on the most recent available data, and we are continuing to use labor market areas based on the OMB CBSA delineations (as discussed in section V.B. of the Addendum to this final rule). In addition, we reduced the labor-related share from 66.5 percent to 66.2 percent under the LTCH PPS for FY 2018, based on the most recent available data on the relative importance of the labor-related share of operating and capital costs of the 2013-based LTCH market basket. We also applied an area wage level budget neutrality factor of 1.0006434 to ensure that the changes to the wage data and labor-related share do not result in a change in estimated aggregate LTCH PPS payments to LTCH PPS standard Federal payment rate cases.

As we discuss in VIII.E. of the preamble of this final rule, we are simplifying our SSO payment methodology in order to alleviate

potential incentives to improperly hold patients beyond the SSO threshold. We also note we do not believe aggregate payments to LTCHs should increase or decrease as a result of our policy, and thus, we applied a budget neutrality factor of 0.9651 to ensure the changes to the SSO payment methodology does not result in a change in estimated aggregate LTCH PPS payments to LTCH PPS standard Federal payment rate cases.

We currently estimate total HCO payments for LTCH PPS standard Federal payment rate cases will decrease from FY 2017 to FY 2018. Based on the FY 2016 LTCH cases that were used for the analyses in this final rule, we estimate that the FY 2017 HCO threshold of \$21,943 (as established in the FY 2017 IPPS/LTCH PPS final rule) will result in estimated HCO payments for LTCH PPS standard Federal payment rate cases in FY 2017 that are above the estimated 8 percent target. Specifically, we currently estimate that HCO payments for LTCH PPS standard Federal payment rate cases will be approximately 8.1 percent of the estimated total LTCH PPS standard Federal payment rate payments in FY 2017. Combined with our estimate that FY 2018 HCO payments for LTCH PPS standard Federal payment rate cases will be 7.975 percent of estimated total LTCH PPS standard Federal payment rate payments in FY 2018 as required by section 15004 of the 21st Century Cures Act, this will result in the estimated decrease in HCO payments of approximately 0.1 percent between FY 2017 and FY 2018.

In calculating these estimated HCO payments, we increased estimated costs by our actuaries' projected market basket percentage increase factor. Without the change to our SSO payment methodology, this increase in estimated costs will result in a projected increase in SSO payments in FY 2018 (because 100 percent of the estimated cost of the case is an option in the SSO payment formula (§ 412.529)). We estimate that those increased SSO payments in FY 2018 will increase total payments for LTCH PPS standard Federal payment rate cases by approximately 0.2 percent.

Table IV shows the estimated impact of the payment rate and policy changes on LTCH PPS payments for LTCH PPS standard Federal payment rate cases for FY 2018 by comparing estimated FY 2017 LTCH PPS payments to estimated FY 2018 LTCH PPS payments. (As noted earlier, our analysis does not reflect changes in LTCH admissions or case-mix intensity.) The projected increase in payments from FY 2017 to FY 2018 for LTCH PPS standard Federal payment rate cases of 1.0 percent is attributable to the impacts of the change to the LTCH PPS standard Federal payment rate (0.9 percent in Column 6) and the effect of the estimated decrease in HCO payments for LTCH PPS standard Federal payment cases (0.1 percent), and the estimated increase in payments for SSO cases (0.2 percent) prior to incorporation of our SSO payment methodology. We note that these impacts do not include LTCH PPS site neutral payment rate cases for the reasons discussed in section I.J.4. of this Appendix.

As we discuss in detail throughout this final rule, based on the most recent available

data, we believe that the provisions of this final rule relating to the LTCH PPS, which are projected to result in an overall decrease in estimated aggregate LTCH PPS payments, and the resulting LTCH PPS payment amounts will result in appropriate Medicare payments that are consistent with the statute.

2. Impact on Rural Hospitals

For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of an urban area and has fewer than 100 beds. As shown in Table IV, we are projecting a 0.1 percent decrease in estimated payments for LTCH PPS standard Federal payment rate cases. This estimated impact is based on the FY 2016 data for the 21 rural LTCHs (out of 415 LTCHs) that were used for the impact analyses shown in Table IV.

3. Impact of Other Changes Under the LTCH PPS for FY 2018

Overall, our actuaries estimate the provisions of the 21st Century Cures Act that affect LTCH PPS payments will increase aggregate spending to LTCHs by approximately \$15 million in FY 2018. Specifically, they estimate the provisions in section 15004, which provide for certain exceptions to the moratorium on an increase in beds in LTCH or LTCH satellite locations (discussed in section VIII.H of the preamble of this final rule) and a change in the treatment of HCO payments to LTCH PPS standard rate cases (discussed in section V.D. of the Addendum of this final rule) to result in an aggregate increase in Medicare spending of \$10 million. The remaining estimated increase of \$5 million in Medicare spending comes from the temporary exception to the site neutral payment rate for certain spinal cord hospitals provided for under section 15009 (as discussed in section VIII.E. of the preamble of this final rule). Our actuaries estimate the remaining provisions of the 21st Century Cures Act applicable to LTCHs (that is, sections 15007, 15008, and 15010, discussed in sections VIII.I., VIII.J., and VIII.F., respectively, of the preamble of this final rule) will have negligible impact on aggregate Medicare spending in FY 2018. (We note that section 15006, which provides for an additional delay in the full implementation of the 25-percent threshold policy (discussed in VIII.G. of the preamble of this final rule), does not impact FY 2018 LTCH PPS payments.) In addition, our actuaries estimate that our implementation of a further delay the full implementation of the 25-percent threshold policy for FY 2018 will increase aggregate Medicare spending by \$70 million, up from our estimate of \$50 million in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20218). This increase is due to updating the estimate for consistency with the assumptions used to develop the Midsession Review of the President's Budget, in addition to refinements in modeling LTCH PPS payments under the new dual rate payment system.

As discussed in section VIII.E. of the preamble of this final rule, section 15009 of the 21st Century Cures Act provides for a temporary exception to the site neutral payment rate for certain spinal cord specialty hospitals for discharges occurring in cost

reporting periods beginning during FY 2018 and FY 2019. To qualify for this temporary exception, an LTCH must, among other things, meet the "significant out-of-state admissions criterion" at section 1886(m)(6)(F)(iii) of the Act. The statute further provides authority for the Secretary to implement the significant out-of-state admissions criterion at section 1886(m)(6)(F)(iii) of the Act by program instruction or otherwise, and exempts the policy initiatives from any information collection requirements under the Paperwork Reduction Act. Although exempt from these information collection requirements, we estimate that each application will require 2.5 hours of work from each LTCH (to review the billing addresses of the hospital's Medicare and non-Medicare inpatients). This information will be collected on a one-time basis. Based on the best information available to CMS, we estimate that only two hospitals meet the other requirements for this exception. Therefore, we estimate that the total number of hours associated with this request will be 5 (2.5 hours per hospital for 2 hospitals). We estimate a current, average salary of \$29 per hour plus 100 percent for fringe benefits (\$58 per hour). Therefore, we estimate the total costs associated with this information collection will be \$290 (5 hours at \$58 per hour).

4. Anticipated Effects of LTCH PPS Payment Rate Changes and Policy Changes

a. Budgetary Impact

Section 123(a)(1) of the BBRA requires that the PPS developed for LTCHs "maintain budget neutrality." We believe that the statute's mandate for budget neutrality applies only to the first year of the implementation of the LTCH PPS (that is, FY 2003). Therefore, in calculating the FY 2003 standard Federal payment rate under § 412.523(d)(2), we set total estimated payments for FY 2003 under the LTCH PPS so that estimated aggregate payments under the LTCH PPS were estimated to equal the amount that would have been paid if the LTCH PPS had not been implemented.

Section 1886(m)(6)(A) of the Act establishes a dual rate LTCH PPS payment structure with two distinct payment rates for LTCH discharges beginning in FY 2016. Under this statutory change, LTCH discharges that meet the patient-level criteria for exclusion from the site neutral payment rate (that is, LTCH PPS standard Federal payment rate cases) are paid based on the LTCH PPS standard Federal payment rate. LTCH discharges paid at the site neutral payment rate are generally paid the lower of the IPPS comparable per diem amount, including any applicable HCO payments, or 100 percent of the estimated cost of the case. The statute also establishes a transitional payment method for cases that are paid at the site neutral payment rate for LTCH discharges occurring in cost reporting periods beginning during FY 2016 or FY 2017, under which the site neutral payment rate cases are paid based on a blended payment rate calculated as 50 percent of the applicable site neutral payment rate amount for the discharge and 50 percent of the applicable LTCH PPS standard Federal

payment rate for the discharge. As discussed in more detail in section I.J. of this Appendix, some LTCH discharges in FY 2018 will still be eligible to be paid based on the blended payment rate.

As discussed in section I.J. of this Appendix, we project a decrease in aggregate LTCH PPS payments in FY 2018 of approximately \$195 million. This estimated decrease in payments reflects the projected increase in payments to LTCH PPS standard Federal payment rate cases of approximately \$35 million and the projected decrease in payments to site neutral payment rate cases of approximately \$230 million under the dual rate LTCH PPS payment rate structure required by the statute beginning in FY 2016. (As stated previously, this estimate does not include the estimated increase in aggregate FY 2018 LTCH PPS payments for our finalized policy to delay full implementation of the 25-percent threshold policy or certain provisions of the 21st Century Cures Act, which are discussed in section I.J.3. of this Appendix.)

As discussed in section V.D. of the Addendum of this final rule, our actuaries project cost and resource changes for site neutral payment rate cases due to the site neutral payment rates required under the statute. Specifically, our actuaries project that the costs and resource use for cases paid at the site neutral payment rate will likely be lower, on average, than the costs and resource use for cases paid at the LTCH PPS standard Federal payment rate, and will likely mirror the costs and resource use for IPPS cases assigned to the same MS-DRG. While we are able to incorporate this projection at an aggregate level into our payment modeling, because the historical claims data that we are using in this final rule to project estimated FY 2018 LTCH PPS payments (that is, FY 2016 LTCH claims data) do not reflect this actuarial projection, we are unable to model the impact of the change in LTCH PPS payments for site neutral payment rate cases at the same level of detail with which we are able to model the impacts of the proposed changes to LTCH PPS payments for LTCH PPS standard Federal payment rate cases. Therefore, Table IV only reflects changes in LTCH PPS payments for LTCH PPS standard Federal payment rate cases and, unless otherwise noted, the remaining discussion in section I.J.4. of this Appendix refers only to the impact on LTCH PPS payments for LTCH PPS standard Federal payment rate cases. In the following section, we present our provider impact analysis for the changes that affect LTCH PPS payments for LTCH PPS standard Federal payment rate cases.

b. Impact on Providers

Under the dual rate LTCH PPS payment structure, there are two distinct payment rates for LTCH discharges occurring in cost reporting periods beginning on or after October 1, 2016. Under that statute, any discharges that occur on or after October 1, 2015, but prior to the start of the LTCH's FY 2016 cost reporting period, will be paid at the LTCH PPS standard Federal payment rate. On or after the start of an LTCH's FY 2017 cost reporting period, discharges are paid based on whether or not the discharge meets

the patient-level criteria to be excluded from the site neutral payment rate. That is, LTCH PPS standard Federal payment rate cases are defined as LTCH discharges that meet the patient-level criteria to be excluded from the typically lower site neutral payment rate, and site neutral payment rate cases are defined as LTCH discharges that do not meet the patient-level criteria and generally will be paid the lower site neutral payment rate. However, for discharges occurring in cost reporting periods beginning in FY 2016 or 2017, the statute specifies that site neutral payment rate cases are paid based on a transitional payment method that is calculated as 50 percent of the applicable site neutral payment rate amount and 50 percent of the applicable LTCH PPS standard Federal payment rate (which, as discussed earlier, will continue to apply to certain discharges occurring during FY 2018).

The basic methodology for determining a per discharge payment for LTCH PPS standard Federal payment rate cases is currently set forth under §§ 412.515 through 412.538. In addition to adjusting the LTCH PPS standard Federal payment rate by the MS–LTC–DRG relative weight, we make adjustments to account for area wage levels and SSOs (including our proposed SSO payment methodology). LTCHs located in Alaska and Hawaii also have their payments adjusted by a COLA. Under our application of the dual rate LTCH PPS payment structure, the LTCH PPS standard Federal payment rate is generally only used to determine payments for LTCH PPS standard Federal payment rate cases (that is, those LTCH PPS cases that meet the statutory criteria to be excluded from the site neutral payment rate). LTCH discharges that do not meet the patient-level criteria for exclusion are paid the site neutral payment rate, which we are calculating as the lower of the IPPS comparable per diem amount as determined under § 412.529(d)(4), including any applicable outlier payments, or 100 percent of the estimated cost of the case as determined under existing § 412.529(d)(2). In addition, when certain thresholds are met, LTCHs also receive HCO payments for both LTCH PPS standard Federal payment rate cases and site neutral payment rate cases that are paid at the IPPS comparable per diem amount.

To understand the impact of the changes to the LTCH PPS payments for LTCH PPS standard Federal payment rate cases presented in this final rule on different categories of LTCHs for FY 2018, it is necessary to estimate payments per discharge for FY 2017 using the rates, factors, and the policies established in the FY 2017 IPPS/LTCH PPS final rule and estimate payments per discharge for FY 2018 using the rates, factors, and the policies in this FY 2018 IPPS/LTCH PPS final rule (as discussed in section VIII. of the preamble of this final rule and section V. of the Addendum to this final rule). As discussed elsewhere in this final rule, these estimates are based on the best available LTCH claims data and other factors, such as the application of inflation factors to estimate costs for HCO cases in each year. The resulting analyses can then be used to compare how our policies applicable to LTCH PPS standard Federal payment rate cases affect different groups of LTCHs.

For the following analysis, we group hospitals based on characteristics provided in the OSCAR data, cost report data in HCRIS, and PSF data. Hospital groups included the following:

- Location: large urban/other urban/rural.
- Participation date.
- Ownership control.
- Census region.
- Bed size.

c. Calculation of LTCH PPS Payments for LTCH PPS Standard Federal Payment Rate Cases

For purposes of this impact analysis, to estimate the per discharge payment effects of our finalized policies on payments for LTCH PPS standard Federal payment rate cases, we simulated FY 2017 and FY 2018 payments on a case-by-case basis using historical LTCH claims from the FY 2016 MedPAR files that met or would have met the criteria to be paid at the LTCH PPS standard Federal payment rate if the statutory patient-level criteria had been in effect at the time of discharge for all cases in the FY 2016 MedPAR files. For modeling FY 2017 LTCH PPS payments, we used the FY 2017 standard Federal payment rate of \$42,476.41 (or \$41,641.49 for LTCHs that failed to submit quality data as required under the requirements of the LTCH QRP). Similarly, for modeling payments based on the FY 2018 LTCH PPS standard Federal payment rate, we used the FY 2018 standard Federal payment rate of \$41,430.56 (or \$40,610.16 for LTCHs that failed to submit quality data as required under the requirements of the LTCH QRP). In each case, we applied the applicable adjustments for area wage levels and the COLA for LTCHs located in Alaska and Hawaii. Specifically, for modeling FY 2017 LTCH PPS payments, we used the current FY 2017 labor-related share (66.5 percent); the wage index values established in the Tables 12A and 12B listed in the Addendum to the FY 2017 IPPS/LTCH PPS final rule (which are available via the Internet on the CMS Web site); the FY 2017 HCO fixed-loss amount for LTCH PPS standard Federal payment rate cases of \$21,943 (as discussed in section V.D. of the Addendum to that final rule) and the FY 2017 COLA factors (shown in the table in section V.C. of the Addendum to that final rule) to adjust the FY 2017 nonlabor-related share (33.5 percent) for LTCHs located in Alaska and Hawaii. Similarly, for modeling FY 2018 LTCH PPS payments, we used the FY 2018 LTCH PPS labor-related share (66.2 percent), the FY 2018 wage index values from Tables 12A and 12B listed in section VI. of the Addendum to this final rule (which are available via the Internet on the CMS Web site), the FY 2018 fixed-loss amount for LTCH PPS standard Federal payment rate cases of \$27,382 (as discussed in section V.D.3. of the Addendum to this final rule), and the FY 2018 COLA factors (shown in the table in section V.C. of the Addendum to this final rule) to adjust the FY 2018 nonlabor-related share (33.8 percent) for LTCHs located in Alaska and Hawaii.

As previously discussed, our impact analysis reflects an estimated change in payments for SSO cases (including our changes to the SSO payment methodology),

as well as an estimated decrease in HCO payments for LTCH PPS standard Federal payment rate cases (as described previously in section I.J.1. of this Appendix). In modeling payments for SSO cases prior to accounting for our SSO payment methodology and for HCO cases for LTCH PPS standard Federal payment rate cases, we applied an inflation factor of 5.5 percent (determined by the Office of the Actuary) to update the 2016 costs of each case.

The impacts that follow reflect the estimated “losses” or “gains” among the various classifications of LTCHs from FY 2017 to FY 2018 based on the payment rates and policy changes applicable to LTCH PPS standard Federal payment rate cases presented in this final rule. Table IV illustrates the estimated aggregate impact of the change in LTCH PPS payments for LTCH PPS standard Federal payment rate cases among various classifications of LTCHs. (As discussed previously, these impacts do not include LTCH PPS site neutral payment rate cases.)

- The first column, LTCH Classification, identifies the type of LTCH.
- The second column lists the number of LTCHs of each classification type.
- The third column identifies the number of LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria.
- The fourth column shows the estimated FY 2017 payment per discharge for LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria (as described previously).
- The fifth column shows the estimated FY 2018 payment per discharge for LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria (as described previously).
- The sixth column shows the percentage change in estimated payments per discharge for LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria from FY 2017 to FY 2018 due to the annual update to the standard Federal rate (as discussed in section V.A.2. of the Addendum to this final rule).
- The seventh column shows the percentage change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2017 to FY 2018 for changes to the area wage level adjustment (that is, the wage indexes and the labor-related share), including the application of the area wage level budget neutrality factor (as discussed in section V.B. of the Addendum to this final rule).
- The eighth column shows the percentage change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases for changes resulting from our SSO payment methodology and associated budget neutral adjustment to the LTCH PPS standard Federal payment rate (column 7).
- The ninth column shows the percentage change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2017 (Column 4) to FY 2018 (Column 5) for all changes (and includes the effect of estimated changes to HCO and SSO payments).

TABLE IV—IMPACT OF PAYMENT RATE AND POLICY CHANGES TO LTCH PPS PAYMENTS FOR STANDARD PAYMENT RATE CASES FOR FY 2018

[Estimated FY 2017 payments compared to estimated FY 2018 payments]

LTCH classification	Number of LTCHS	Number of LTCH PPS standard payment rate cases	Average FY 2017 LTCH PPS payment per standard payment rate	Average FY 2018 LTCH PPS payment per standard payment rate ¹	Percent change due to change to the annual update to the standard federal rate ²	Percent change due to changes to area wage adjustment with wage budget neutrality ³	Proposed percent change due to change to the short stay outlier payment methodology change ⁴	Percent change due to all standard payment rate changes ⁵

¹ Estimated FY 2018 LTCH PPS payments for LTCH PPS standard Federal payment rate criteria based on the payment rate and factor changes applicable to such cases presented in the preamble of and the Addendum to this final rule.

² Percent change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2017 to FY 2018 for the annual update to the LTCH PPS standard Federal payment rate.

³ Percent change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2017 to FY 2018 for changes to the area wage level adjustment under § 412.525(c) (as discussed in section V.B. of the Addendum to this final rule).

⁴ Percent change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2017 to FY 2018 for change to the SSO payment methodology.

⁵ Percent change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2017 (shown in Column 4) to FY 2018 (shown in Column 5), including all of the changes to the rates and factors applicable to such cases presented in the preamble and the Addendum to this final rule. We note that this column, which shows the percent change in estimated payments per discharge for all changes, does not equal the sum of the percent changes in estimated payments per discharge for the annual update to the LTCH PPS standard Federal payment rate (Column 6) and the changes to the area wage level adjustment with budget neutrality (Column 7) due to the effect of estimated changes in both estimated payments to SSO cases (prior to accounting for the change to the SSO payment methodology) and aggregate HCO payments for LTCH PPS standard Federal payment rate cases (as discussed in this impact analysis), as well as other interactive effects that cannot be isolated.

d. Results

Based on the FY 2016 LTCH cases (from 415 LTCHs) that were used for the analyses in this final rule, we have prepared the following summary of the impact (as shown in Table IV) of the LTCH PPS payment rate and policy changes for LTCH PPS standard Federal payment rate cases presented in this final rule. The impact analysis in Table IV shows that estimated payments per discharge for LTCH PPS standard Federal payment rate cases are projected to increase 1.0 percent, on average, for all LTCHs from FY 2017 to FY 2018 as a result of the payment rate and policy changes applicable to LTCH PPS standard Federal payment rate cases presented in this final rule. This estimated 1.0 percent increase in LTCH PPS payments

per discharge was determined by comparing estimated FY 2018 LTCH PPS payments (using the payment rates and factors discussed in this final rule) to estimated FY 2017 LTCH PPS payments for LTCH discharges which will be LTCH PPS standard Federal payment rate cases if the dual rate LTCH PPS payment structure was or had been in effect at the time of the discharge (as described in section I.J.4. of this Appendix).

As stated previously, we are updating the LTCH PPS standard Federal payment rate for FY 2018 by 1.0 percent as required by statute. For LTCHs that fail to submit quality data under the requirements of the LTCH QRP, as required by section 1886(m)(5)(C) of the Act, a 2.0 percentage point reduction is applied to the annual update to the LTCH PPS standard

Federal payment rate. Consistent with § 412.523(d)(4), we also are applying an area wage level budget neutrality factor to the FY 2018 LTCH PPS standard Federal payment rate of 1.0006434, based on the best available data at this time, to ensure that any changes to the area wage level adjustment (that is, the annual update of the wage index values and labor-related share) will not result in any change (increase or decrease) in estimated aggregate LTCH PPS standard Federal payment rate payments. Finally, we are making a budget neutrality adjustment of 0.9651 for our changes to the SSO payment methodology (discussed in VIII.E.2.d. of the preamble of this final rule). As we also explained earlier in this section, for most categories of LTCHs (as shown in Table IV,

Column 6), the estimated payment increase due to the 1.0 percent annual update to the LTCH PPS standard Federal payment rate is projected to result in approximately a 0.9 percent increase in estimated payments per discharge for LTCH PPS standard Federal payment rate cases for all LTCHs from FY 2017 to FY 2018. This is because our estimate of the changes in payments due to the update to the LTCH PPS standard Federal payment rate also reflects estimated payments for SSO cases that are paid using special methodologies that are not affected by the update to the LTCH PPS standard Federal payment rate (prior to accounting for the change to the SSO payment methodology). Consequently, for certain hospital categories, we estimate that payments to LTCH PPS standard Federal payment rate cases may increase by less than 1.0 percent due to the annual update to the LTCH PPS standard Federal payment rate for FY 2018.

(1) Location

Based on the most recent available data, the vast majority of LTCHs are located in urban areas. Only approximately 5 percent of the LTCHs are identified as being located in a rural area, and approximately 3 percent of all LTCH PPS standard Federal payment rate cases are expected to be treated in these rural hospitals. The impact analysis presented in Table IV shows that the overall average percent increase in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2017 to FY 2018 for all hospitals is 1.0 percent. However, for rural LTCHs, the overall percent change for LTCH PPS standard Federal payment rate cases is estimated to be a 0.1 percent decrease. This projected decrease is primarily driven by a projected decrease resulting from changes to the changes to the area wage index adjustment. For urban LTCHs, we estimate an increase of 1.0 percent from FY 2017 to FY 2018. Among the urban LTCHs, large urban LTCHs are projected to experience an increase of 1.2 percent in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2017 to FY 2018, and the remaining urban LTCHs are projected to experience an increase of 0.9 percent in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2017 to FY 2018, as shown in Table IV.

(2) Participation Date

LTCHs are grouped by participation date into four categories: (1) Before October 1983; (2) between October 1983 and September 1993; (3) between October 1993 and September 2002; and (4) October 2002 and after. Based on the most recent available data, the categories of LTCHs with the largest expected percentage of LTCH PPS standard Federal payment rate cases (approximately 48 percent) are in LTCHs that began participating in the Medicare program after October 2002, and they are projected to experience a 1.0 percent increase in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2017 to FY 2018, as shown in Table IV.

Approximately 2.7 percent of LTCHs began participating in the Medicare program before

October 1983, and these LTCHs are projected to experience an average percent increase of 1.9 percent in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2017 to FY 2018, as shown in Table IV with a large portion of this increase among this small group of LTCHs to be a projected 0.7 percent increase resulting from our SSO payment methodology. Approximately 10 percent of LTCHs began participating in the Medicare program between October 1983 and September 1993, and these LTCHs are projected to experience an increase of 0.7 percent in estimated payments for LTCH PPS standard Federal payment rate cases from FY 2017 to FY 2018. LTCHs that began participating in the Medicare program between October 1993 and October 1, 2002, which treat approximately 37 percent of all LTCH PPS standard Federal payment rate cases, are projected to experience a 1.0 percent increase in estimated payments from FY 2017 to FY 2018.

(3) Ownership Control

LTCHs are grouped into four categories based on ownership control type: voluntary, proprietary, government and unknown. Based on the most recent available data, approximately 17 percent of LTCHs are identified as voluntary (Table IV). The majority (approximately 80 percent) of LTCHs are identified as proprietary, while government owned and operated LTCHs represent approximately 3 percent of LTCHs. Based on ownership type, voluntary LTCHs are expected to experience a 0.6 percent increase in payments to LTCH PPS standard Federal payment rate cases, while proprietary LTCHs are expected to experience an average increase of 1.1 percent in payments to LTCH PPS standard Federal payment rate cases. Government owned and operated LTCHs, meanwhile, are expected to experience a 0.5 percent decrease in payments to LTCH PPS standard Federal payment rate cases from FY 2017 to FY 2018.

(4) Census Region

Estimated payments per discharge for LTCH PPS standard Federal payment rate cases for FY 2017 are projected to increase across 8 of the 9 census regions. LTCHs located in the West North Central region are projected to experience a slight decrease of 0.1 percent, while LTCHs located in all other regions are projected to experience an increase in estimated payments per discharge in comparison to FY 2017. Of the 9 census regions, we project that the increase in estimated payments per discharge to LTCH PPS standard Federal payment rate cases will have the largest positive impact on LTCHs in the New England regions (2.5 percent, as shown in Table IV), which is largely attributable to changes to the SSO payment methodology. In contrast, LTCHs located in the Middle Atlantic region are projected to experience the smallest increase in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2017 to FY 2018 (0.6 percent).

(5) Bed Size

LTCHs are grouped into six categories based on bed size: 0–24 beds; 25–49 beds;

50–74 beds; 75–124 beds; 125–199 beds; and greater than 200 beds. We project that LTCHs with 0–24 beds will experience an increase in payments for LTCH PPS standard Federal payment rate cases of 0.3 percent, and LTCHs with 25–49 beds will experience an increase in payments for LTCH PPS standard Federal payment rate cases of 0.8 percent. LTCHs with 50–74 beds will experience an increase in payments for LTCH PPS standard Federal payment rate cases of 0.6 percent. We project the largest increases in payments to occur in LTCHs with at least 75 beds. In particular, we project LTCHs with 75–124 beds will experience an increase in payments for LTCH PPS standard Federal payment rate cases of 1.3 percent while LTCHs with 125–199 beds will experience an increase in payments for LTCH PPS standard Federal payment rate cases of 1.2 percent. Finally, LTCHs with 200 or more beds will experience the largest increase in payments for LTCH PPS standard Federal payment rate cases of 2.4 percent mostly due to estimated increase in payments from changes to our SSO payment methodology.

4. Effect on the Medicare Program

As stated previously, we project that the provisions of this final rule will result in an increase in estimated aggregate LTCH PPS payments to LTCH PPS standard Federal payment rate cases in FY 2018 relative to FY 2017 of approximately 35 million (or approximately 1.0 percent) for the 415 LTCHs in our database. Although, as stated previously, the hospital-level impacts do not include LTCH PPS site neutral payment rate cases, we estimate that the provisions of this final rule will result in a decrease in estimated aggregate LTCH PPS payments to site neutral payment rate cases in FY 2018 relative to FY 2017 of approximately \$230 million (or approximately 20 percent) for the 415 LTCHs in our database. Therefore, we project that the provisions of this final rule will result in a decrease in estimated aggregate LTCH PPS payments to all LTCH cases in FY 2018 relative to FY 2017 of approximately \$195 million (or approximately 4.2 percent) for the 415 LTCHs in our database. Furthermore, as stated previously, our Office of the Actuary estimates an additional estimated increase in aggregate FY 2018 LTCH PPS payments of approximately \$85 million for our finalized policy to delay full implementation of the 25-percent threshold policy for FY 2018 and our implementation of certain provisions of the 21st Century Cures Act. Therefore, in total, we project an overall decrease in LTCH PPS payments of approximately \$110 million (\$195 million decrease + \$85 million increase) or approximately a 2.4 percent decrease in LTCH PPS payments in FY 2018 as compared to FY 2017.

5. Effect on Medicare Beneficiaries

Under the LTCH PPS, hospitals receive payment based on the average resources consumed by patients for each diagnosis. We do not expect any changes in the quality of care or access to services for Medicare beneficiaries as a result of this final rule, but we continue to expect that paying prospectively for LTCH services will enhance the efficiency of the Medicare program. As

discussed above, we do not expect the continued implementation of the site neutral payment system to have a negative impact access to or quality of care, as demonstrated in areas where there is little or no LTCH presence, general short-term acute care hospitals are effectively providing treatment for the same types of patients that are treated in LTCHs.

K. Effects of Requirements for the Hospital Inpatient Quality Reporting (IQR) Program

1. Background

In section IX.A. of the preambles of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20031 through 20075) and this final rule, we discuss our requirements for hospitals to report quality data under the Hospital IQR Program in order to receive the full annual percentage increase for the FY 2020 payment determination.

In this final rule, we are finalizing our policies to: (1) modify the previously finalized the electronic clinical quality measure (eCQM) reporting requirements for the FY 2019 and FY 2020 payment determinations, such that hospitals submit one, self-selected calendar quarter of data for 4 eCQMs; (2) update the eCQM certification requirements for the FY 2019 and FY 2020 payment determinations; (3) modify the previously finalized eCQM data validation process, whereby hospitals selected for eCQM data validation will be required to submit a reduced number of cases for eCQM data validation for the FY 2020 and FY 2021 payment determinations; (4) allow hospitals to use an educational review process to correct incorrect validation results for the first three quarters of validation for chart-abstracted measures beginning with the FY 2020 payment determination and for subsequent years; (5) begin voluntary reporting on the Hybrid Hospital-Wide 30-Day Readmission (HWR) measure for the CY 2018 reporting period; (6) refine the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey measure to replace the questions on Pain Management for the FY 2020 payment determination and subsequent years; (7) refine the Hospital 30-Day Mortality Following Acute Ischemic Stroke Hospitalization measure to include the use of NIH Stroke Scale claims data for the FY 2023 payment determination and subsequent years; and (8) update the terminology used to refer to the Extraordinary Circumstances Exceptions (ECE) policy for the FY 2020 payment determination and subsequent years.

As further explained in section XIII.B.3. of the preamble of this final rule, we believe that there will be an overall decrease in burden for hospitals due to the finalized policies discussed above. We refer readers to section XIII.B.3. of the preamble of this final rule for a summary of our burden estimates.

2. Impact of the Updates to the eCQM Reporting Requirements for the CY 2017 Reporting Period/FY 2019 and CY 2018 Reporting Period/FY 2020 Payment Determinations

In the FY 2017 IPPS/LTCH PPS final rule, we finalized policies to require hospitals to

submit a full year (four quarters) of data (81 FR 57159) for at least eight eCQMs (81 FR 57157) for both the FY 2019 and FY 2020 payment determinations. In section IX.A.8. of the preamble of this final rule, we are finalizing modifications to the eCQM reporting requirements we proposed in the FY 2018 IPPS/LTCH PPS proposed rule, such that, for the CY 2017 reporting period/FY 2019 payment determination and CY 2018 reporting period/FY 2020 payment determination, hospitals must submit one, self-selected, calendar quarter of data for 4 eCQMs. As discussed in section XIII.B.3.b. of the preamble of this final rule, we believe the reduced number of eCQMs required for the CY 2017 and CY 2018 reporting periods will result in a reduction of 15,400 hours (– 280 minutes per hospital per year/60 minutes per hour × 3,300 hospitals) and \$563,332 (15,400 hours × \$36.58 per hour) for each of the FY 2019 and FY 2020 payment determinations.

3. Impact of the Modifications to the Existing Data Validation Processes for the FY 2020 Payment Determination and Subsequent Years

In section IX.A.11. of the preamble of this final rule, we discuss our finalized policy to modify the existing eCQM data validation process for the Hospital IQR Program data beginning with validation for the FY 2020 payment determination. First, we are finalizing with modifications our proposal to require hospitals selected for eCQM data validation to submit eight cases per quarter for the FY 2020 payment determination and subsequent years.⁵¹⁹ We are also finalizing our proposals to: (1) Add additional exclusion criteria to our hospital and case selection process for eCQM data validation for the FY 2020 payment determination and subsequent years; and (2) extend our previously finalized medical record submission requirements the accuracy of eCQM data submitted for validation will not affect a hospital's validation score for the FY 2021 payment determination and subsequent years. As discussed in section XIII.B.3.d.(1) of the preamble of this final rule, we estimate our proposal to reduce the number of cases submitted by hospitals submitted by hospitals selected for eCQM data validation will result in an annual burden reduction of approximately 6,400 hours (8,533 hours estimated in the FY 2017 IPPS/LTCH PPS final rule – 2,133 hours estimated in this final rule) and \$234,112 (6,400 hours × \$36.58 per hour) across the 200 hospitals selected for eCQM validation.

4. Impact of the Voluntary Reporting on the Hybrid Hospital-Wide 30-Day Readmission Measure for the CY 2018 Reporting Period

In section IX.A.7.b. of the preamble of this final rule, we are finalizing our proposal that

⁵¹⁹ We are finalizing this requirement in conjunction with our finalized policy to require hospitals to report one, self-selected quarter of data for 4 eCQMs for each of the CY 2017 and CY 2018 eCQM reporting periods, as described above. Accordingly, we are finalizing our modified policy and will require the number of required case files for validation will be 8 records (eight cases for one quarter) for each of the FY 2020 and FY 2021 payment determinations.

hospitals may voluntarily submit the 13 core clinical data elements and the 6 data elements required for linking with claims data for this measure using the same submission process required for eCQM reporting, specifically, that these data be reported using QRDA I files submitted to the CMS data receiving system. As discussed in section XIII.B.3.e., we expect the burden associated with voluntary reporting of this measure to be approximately 67 hours (40 minutes per hospital/60 minutes per hour × 100 hospitals = 67 hours) and \$2,451 (\$36.58 per hour × 67 hours annually) across up to 100 hospitals voluntarily participating in reporting for the Hybrid HWR measure.

5. Summary of Effects

Historically, 100 hospitals, on average, that participate in the Hospital IQR Program do not receive the full annual percentage increase in any fiscal year due to the requirements of this program. We anticipate that, because of the modified, reduced requirements for eCQM reporting that we are finalizing for the FY 2019 and FY 2020 payment determinations, the number of hospitals not receiving the full annual percentage increase will not substantially increase due to this requirement of the program. If the number of hospitals failing to receive the full annual percentage increase does increase because of our modified requirements, we anticipate that, over the long run, this number will decline as hospitals gain more experience with these requirements.

In implementing the Hospital IQR Program and other quality reporting programs, we have focused on measures that have high impact and support CMS and HHS priorities for improving the quality of care and value for Medicare beneficiaries.

L. Effects of Requirements for the PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program

In section IX.B. of the preambles of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20075 through 20086) and this final rule, we discuss our policies for the quality data reporting program for PPS-exempt cancer hospitals (PCHs), which we refer to as the PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program. The PCHQR Program is authorized under section 1866(k) of the Act, which was added by section 3005 of the Affordable Care Act. There is no financial impact to PCH Medicare reimbursement if a PCH does not submit data.

In section IX.B.4. of the preamble of this final rule, we are finalizing our proposals to adopt four claims-based measures beginning with the FY 2020 program: (1) Proportion of Patients Who Died from Cancer Receiving Chemotherapy in the Last 14 Days of Life (NQF #0210); (2) Proportion of Patients Who Died from Cancer Admitted to the ICU in the Last 30 Days of Life (NQF #0213); (3) Proportion of Patients Who Died from Cancer Not Admitted to Hospice (NQF #0215); and (4) Proportion of Patients Who Died from Cancer Admitted to Hospice for Less Than Three Days (NQF #0216)). In conjunction with our finalized proposal in section IX.B.3.b. of the preamble of this final rule to

remove three existing chart-abstracted measures beginning with the FY 2020 program—(1) Adjuvant Chemotherapy is Considered or Administered Within 4 Months (120 Days) of Diagnosis to Patients Under the Age of 80 with AJCC III (Lymph Node Positive) Colon Cancer (PCH-01/NQF #0223); (2) Combination Chemotherapy is Considered or Administered Within 4 Months (120 Days) of Diagnosis for Women Under 70 with AJCC T1c, or Stage II or III Hormone Receptor Negative Breast Cancer (PCH-02/NQF #0559); and (3) Adjuvant Hormonal Therapy (PCH-03/NQF #0220)—the PCHQR Program measure set will consist of 18 measures for the FY 2020 program.

As further explained in section XIII.B.4. of the preamble of this final rule, we anticipate that these new requirements will reduce overall burden on participating PCHs. In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53667), we estimated a burden of 30 minutes for a PCH to perform chart abstraction of a single patient record and submit it to CMS. Using estimates from the FY 2013 IPPS/LTCH PPS final rule (77 FR 53667), we estimate the total annual hourly burden for each PCH for the collection and submission of measure information and the training of personnel for submitting quality measure data applicable to one (1) chart-abstracted measure is approximately 1,258.7 hours per year, or 104.9 hours per month (1,258.7 hours per year/12 months). We multiply this number by three (3) to obtain our estimated reduction in burden for collecting measure information, submitting measure information, and training personnel provided by the finalized removal of the three measures, which is approximately 3,776 hours per year for each PCH, or an average reduction in burden of 315 hours per month per PCH and a total of 41,536 hours across all 11 PCHs. Our finalized removal of three chart-abstracted measures will reduce the burden associated with quality data reporting on PCHs by reducing quality measure chart abstraction by approximately 16,364 cases across all 11 PCHs.

We do not anticipate any increase in burden on the PCHs corresponding to our finalized adoption of four claims-based measures into the PCHQR Program beginning with the FY 2020 program year. These measures are claims-based and therefore do not require facilities to report any additional data. Because these measures do not require facilities to submit any additional data, we do not believe that there is any associated burden with this finalized policy.

M. Effects of Requirements for the Long-Term Care Hospital Quality Reporting Program (LTCH QRP)

In section IX.C.1. of the preambles of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20086 through 20121) and this final rule, we discuss the implementation of the LTCH QRP. At the time that this analysis was prepared, 41, or approximately 9.7 percent, of 424 eligible LTCHs were determined to be noncompliant and therefore received a 2 percentage point reduction to their FY 2017 annual payment update. We anticipate that fewer LTCHs will receive the reduction for FY 2018 as LTCHs become more familiar

with the requirements as we believe that continued trainings, as well as utilization of new reports for LTCHs, will help LTCHs comply with the LTCH QRP requirements. Thus, we estimate that the proposals that we are finalizing in this final rule will have a negligible impact on overall LTCH payments for FY 2018.

In section IX.C.7. of the preamble of this final rule, we are finalizing our proposal to replace the current pressure ulcer measure, Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), with a new modified version of the measure, Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury, beginning with the FY 2020 LTCH QRP. We are also finalizing our proposals to adopt two additional measures: Compliance with Spontaneous Breathing Trial (SBT) by Day 2 of the LTCH Stay; and Ventilator Liberation Rate, beginning with the FY 2020 LTCH QRP. In addition, we are finalizing our proposals that data for these measures will be collected and reported using the LTCH CARE Data Set (LTCH CARE Data Set Version 4.00, which will be effective July 1, 2018). For more information regarding the LTCH CARE Data Set Version 4.00 implementation date, we refer readers to section IX.C.11. of the preamble of this final rule.

We also are finalizing our proposal to remove the All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from LTCHs (NQF #2512). Because LTCHs will still be required to report data on this measure for payment purposes, we believe that the removal of this measure will not affect the burden estimate for the LTCH QRP.

In addition, adoption of the pressure ulcer measure, Change in Skin Integrity Post-Acute Care: Pressure Ulcer Injury which will replace the current pressure ulcer measure, Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678), will result in the removal of some data elements related to pressure ulcer assessment that we believe are duplicative or no longer necessary. As a result, the estimated burden and cost for LTCHs to report the newly finalized measure will be reduced from the burden and cost to report the current measure.

We also are finalizing our proposals to remove the program interruption items from the LTCH CARE Data Set. Specifically, we are finalizing our proposals to remove the following items: A2500, Program Interruption(s); A2510, Number of Program Interruptions During This Stay in This Facility; and A2525, Program Interruption Dates, because we do not currently utilize this information and do not have plans to utilize this information for the LTCH QRP. As a result, the estimated burden and cost for LTCHs will be reduced.

In section IX.C.10. of the preamble of this final rule, we are finalizing standardized patient assessment data proposals with respect to the Functional Status and Medical Condition and Comorbidity categories. All of the data elements are already included on the LTCH CARE Data Set and therefore our finalized policy to characterize those data

elements as standardized patient assessment data will not result in an additional reporting burden for LTCHs.

We are not finalizing our proposals to require LTCHs to report 25 new standardized patient assessment data elements with respect to LTCH admissions and 17 new standardized patient assessment data elements with respect to LTCH discharges. This results in a burden reduction from what we proposed. We refer readers to the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20225 through 20226), for a discussion of our burden estimates for these proposals.

As described in section XIII.B.6. of the preamble of this final rule, the 4.5-minute increase in burden for the two finalized ventilator weaning quality measures is offset by the 3 minute reduction in burden for the finalized pressure ulcer quality measure and the 3.6 minute reduction in burden for the program interruption items. This results in a net reduction in burden of 2.1 minutes. Overall, this results in a net decrease in cost associated with the finalized changes to the LTCH QRP, which we estimate to be reduced by estimated at a reduction of \$893.14 per LTCH annually, or \$380,480 for all LTCHs annually.

For additional discussion of information collection requirements related to our finalized proposals, we refer readers to section XIII.B.6 of the preamble of this final rule. We received public comments about the effects of requirements for the LTCH QRP, which we summarize and respond to below.

Comment: Several commenters expressed views regarding the burden imposed by the proposed LTCH CARE Data Set Version 4.00. One commenter commended CMS for ensuring robust and accurate quality reporting, but noted that the absence of EHRs in the LTCH setting contributes to this burden and requires extra staff to collect, process, and transmit the necessary data. Another commenter noted the importance of assessing the value of new quality measures, and ensuring that they are not prematurely implemented.

Response: We always considers provider burden, and we take this into account when developing quality measures or standardized patient assessment data elements for inclusion into our quality reporting programs. We assess the value of adopting new quality measures into the LTCH QRP and we consider overall clinical relevance and usability to support clinical decision-making, care transitions, and resource utilization.

In response to the commenter's concern regarding EHRs, while we support the use of EHRs, we do not require that providers use EHRs to populate assessment data in the LCDS. We also disagree with the commenter's suggestion that we do not provide a mechanism for collecting, processing, and transmitting data, and we note that with each assessment release, we offer free software for LTCHs (LASER), allowing LTCHs to record and transmit the required LTCH CARE Data Set assessment based data. This free software, including instructions for installing and using the software, is located at: <https://www.qts.com/laser.html>.

We intend to continue to closely monitor the effects of the LTCH QRP on LTCHs and help facilitate successful reporting outcomes through ongoing stakeholder education, national trainings, LTCH announcements, Web site postings, CMS Open Door Forums, and general and technical help desks.

As discussed in section IX.C.11.d. of the preamble of this final rule, after consideration of the public comments we received, we are moving the release date for the LTCH CARE Data Set Version 4.00 from April 1, 2018 to July 1, 2018. The LTCH CARE Data Set Version 4.00, which will be effective July 1, 2018, will contain additional data elements needed to calculate the Drug Regimen Review Conducted with Follow-Up for Identified Issues-PAC LTCH QRP quality measure, which was finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57219 through 57223), as well as the data elements needed to calculate the measures we are adopting in this final rule.

Comment: A few commenters stated that CMS' burden estimates were inaccurate, pointing out the need for additional staff, training, and expenses when items are added to the LTCH CARE Data Set.

Response: Our burden estimates only capture the time needed to complete LTCH CARE Data Set data elements and do not include clinical time spent assessing the patient as this activity is already part of the healthcare providers standard of care.

N. Effects of Updates to the Inpatient Psychiatric Facility Quality Reporting (IPFQR) Program

As discussed in section IX.D. of the preambles of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20120 through 20130) and this final rule, and in accordance with section 1886(s)(4)(A) of the Act, we will implement a 2 percentage point reduction in the FY 2020 market basket update for IPFs that have failed to comply with the IPFQR Program requirements for the FY 2020 payment determination. In section IX.D. of the preamble of this final rule, we discuss how the 2 percentage point reduction will be applied. For the FY 2017, payment determination (that is, data collected during CY 2015 and submitted in CY 2016) of the 1,647 IPFs eligible for the IPFQR Program, 49 did not receive the full market basket update due to reasons specific to the IPFQR Program; 22 of these IPFs chose not to participate and 27 did not meet the requirements of the Program. We anticipate that even fewer IPFs will receive the reduction for FY 2018 as IPFs become more familiar with the requirements. Thus, we estimate that the IPFQR Program will have a negligible impact on overall IPF payments for FY 2018.

We intend to closely monitor the effects of this quality reporting program on IPFs and to help facilitate successful reporting outcomes through ongoing stakeholder education, national trainings, and a technical help desk.

We are finalizing our proposals, without change, that impact the FY 2018 procedural requirements and subsequent years. We are not finalizing our proposal to adopt one claims-based measure for the FY 2020 payment determinations and subsequent years. We refer readers to section XIII.B.7. of

the preamble of this final rule for details discussing information collection requirements for the IPFQR Program.

O. Effects of Requirements Regarding the Electronic Health Record (EHR) Incentive Programs and Meaningful Use

In section IX.E of the preambles of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20130 through 20133) and this final rule, we discuss proposed and newly finalized policies for eligible hospitals and CAHs reporting CQMs electronically under the Medicare and Medicaid EHR Incentive Programs in 2017 and 2018. As outlined in this final rule, we are finalizing modifications to our proposals and making the following modifications to the CY 2017 final CQM policies: (1) Revising the CY 2017 reporting period for eligible hospitals and CAHs reporting CQMs electronically to require the submission of one, self-selected calendar quarter of data; and (2) revising the number of CQMs eligible hospitals and CAHs are required to report electronically for CY 2017 to 4 (self-selected) available CQMs.

In addition, we are finalizing modifications to our proposals that adopt the following CQM reporting requirements for CY 2018: (1) For eligible hospitals and CAHs reporting CQMs electronically that demonstrate meaningful use for the first time in 2018 or that have demonstrated meaningful use in any year prior to 2018, the reporting period will be one, self-selected quarter of data from CY 2018 with a submission period (Medicare EHR Incentive Program only) consisting of the 2 months following the close of the calendar year, ending on February 28, 2019; (2) eligible hospitals and CAHs reporting CQMs electronically will be required to report at least 4 (self-selected) of the available CQMs; (3) eligible hospitals and CAHs that report CQMs by attestation under the Medicare EHR Incentive Program because electronic reporting is not feasible, and eligible hospitals and CAHs that report CQMs by attestation under their State's Medicaid EHR Incentive Program, will be required to report on all 16 available CQMs; and (4) eligible hospitals and CAHs reporting CQMs by attestation under the Medicare EHR Incentive Program will have a submission period that will be the 2 months following the close of the CY 2018 CQM reporting period, ending February 28, 2019.

Because the finalized reporting requirements for data collection regarding the reporting of CQMs electronically under the Medicare and Medicaid EHR Incentive Programs will align with the reporting requirements under the Hospital IQR Program, we do not believe that there is any additional burden for the collection of such information. We did not propose modifications for the CQMs reporting requirements by attestation in this section. Therefore, no change in burden associated with attestation of CQMs will result from this section.

In section IX.F of the preambles of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20134 through 20135) and this final rule, we discuss proposed and newly finalized policies regarding clinical quality measurement for EPs participating in the

Medicaid EHR Incentive Program. We note that there may be costs incurred by States associated with systems development as a result of the newly finalized policies. State attestation systems will likely require minor updates, which may be eligible for support through enhanced Federal funding, subject to CMS prior approval, if outlined in an updated Implementation Advance Planning Document (IAPD). We anticipate that eligible professionals (EPs) may also face minor burden and incremental capital cost for updating clinical quality measures and reporting capabilities in the EHR. However, we intend to reduce EP burden and simplify the program through these newly finalized policies, which are intended to better align CQM reporting periods and CQM reporting for the Medicaid EHR Incentive Program with policies under MIPS. Overall, we believe the finalized CQM alignment at the State attestation system and EP levels will both reduce burden associated with reporting on multiple CMS programs and enhance State and CMS operational efficiency.

In section IX.G.1. of the preamble of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20135 through 20136) and section IX.G.2. of the preamble of this final rule, we discuss our proposed and newly finalized policies to change the EHR reporting period in 2018 from the full CY 2018 to any continuous 90-day period within CY 2018 for all new and returning EPs, eligible hospitals and CAHs attesting to meaningful use in the Medicare and Medicaid EHR Incentive Programs. We do not believe that modifying the EHR reporting period for attestation will cause an increase in cost because the reporting requirements for a 90-day EHR reporting period are virtually the same as for a full calendar year EHR reporting period because the requirements for a full calendar year EHR reporting period and 90-day EHR reporting period require the same number of objectives and measures to be met.

In section IX.G.2. of the preamble of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20136 through 20138) and section IX.G.3. of the preamble of this final rule, as required by the 21st Century Cures Act (Pub. L. 114–255), we discuss and finalize our proposal for an exemption from the payment adjustments under sections 1848(a)(7)(A), 1886(b)(3)(B)(ix)(I), and 1814(l)(4) of the Act for EPs, eligible hospitals and CAHs, respectively, that demonstrate through an application process that compliance with the requirements for being a meaningful EHR user is not possible because their certified EHR technology has been decertified under ONC's Health IT Certification Program. The application process involves participants completing an application form for an exception. While the form is standardized, we believe it is exempt from the PRA. The form is structured as an attestation. Therefore, we believe it is exempt under 5 CFR 1320.3(h)(1) of the implementing regulations of the PRA. The form is an attestation that imposes no burden beyond what is required to provide identifying information and to attest to the applicable information.

In section IX.G.3. of the preamble of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR

20138 through 20139) and IX.G.4. of the preamble of this final rule, as required by the 21st Century Cures Act, we discuss and finalize our proposal to exempt ambulatory surgical center-based EPs from the 2017 and 2018 payment adjustments under section 1848(a)(7)(A) of the Act if they furnish substantially all of their covered professional services in an ambulatory surgical center. We do not believe this requirement will cause an increase in burden as CMS will identify the EPs who might meet this requirement.

For the information collection requirements relating to the above finalized proposals, we refer readers to section XIII.B.8. of the preamble of this final rule.

P. Effects of Electronic Signature and Electronic Submission of the Certification and Settlement Summary Page of Medicare Cost Reports

In section X.A. of the preambles of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20139 through 20142) and this final rule, we discuss and finalize our proposal to allow providers to use an electronic signature on the certification statement of the Certification and Settlement Summary page of the Medicare cost report and submit it electronically. This final policy will result in savings to providers.

Using the most current data from Medicare's System for Tracking Audit and Reimbursement, approximately 51,000 providers file a Medicare cost report and, therefore, must currently mail the Certification and Settlement Summary page. Because most providers mail the Certification and Settlement Summary page via certified mail with return receipt (which includes delivery confirmation), at the current U.S. Postal Service price of \$7.10, if all of these providers elect to electronically submit the Certification and Settlement Summary page with an electronic signature, this final policy will collectively save these providers approximately \$362,000 in postage costs. This is an underestimate as it does not include mailing costs when providers choose to mail the Certification and Settlement Summary page to their contractors via overnight mail at a significantly higher expense.

Q. Effects of Changes Relating to Survey and Certification Requirements

In section XI.B. of the preambles of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20145 through 20146) and this final rule, we discuss and finalize our proposal to eliminate the term "newspaper" from the requirement to publish public notice upon a provider's involuntary termination for RHCs, FQHCs, ASCs, and OPOs. Eliminating the term

"newspaper" will allow greater flexibility for the CMS Regional Offices in publishing public notices and will also reduce burden on the CMS Regional Offices.

The print newspaper advertisements for an involuntary termination are required to be purchased by the CMS Regional Office assigned to that provider or supplier. The advertisement is placed under the legal advertisement section of the local newspaper outlet. A single CMS Regional Office may incur an average annual cost of approximately \$3,000 to \$5,000 for the purchase of involuntary termination notices for the providers or suppliers assigned to its region. For example, from 2014 to 2016, the Dallas Regional Office spent \$14,331.89 on the publication of termination notices in local newspapers, with costs of \$3,949.45 in 2014, costs of \$5,386.67 in 2015, and costs of \$4,998.77 in 2016. In same timeframe of 2014 to 2016, the Philadelphia Regional Office spent a total of \$7,114.75 and the Kansas Regional Office spent a total of \$11,121.40. The table below depicts the actual FY 2016 costs for all 10 CMS Regional Offices.

Regional office	2016 costs
Boston	\$4,766
New York	645
Philadelphia	3,570
Atlanta	6,712
Chicago	10,853
Dallas	4,252
Kansas City	3,098
Denver	910
San Francisco	1,507
Seattle	707
Total Cost	37,020.00

If one CMS Regional Office spends approximately \$5,000 annually, and there are 10 CMS Regional Offices, the average cost nationwide per annum for termination notices could be as high as \$50,000.

The cost associated with the involuntary termination notice is assessed only to the CMS Regional Offices. The provider or supplier is not required to post a notice for an involuntary termination. Therefore, there will be no associated costs for the provider or supplier.

All CMS Regional Offices have Web sites available to the public, which are regularly maintained and updated. Creation of a subsite to reflect termination notices for providers will be at no cost to CMS. In addition, the use of Regional Press Officers to convey termination of a provider will be a minimal cost to CMS and absorbed through the Survey & Certification budget.

R. Effects of Clarification of Limitations on the Valuation of Depreciable Assets Disposed of on or after December 1, 1997

In section X.B. of the preambles of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20142 through 20143) and this final rule, we discuss and finalize our proposal to revise the Medicare provider reimbursement regulations to clarify our longstanding policy pertaining to allowable costs and the limits on the valuation of a depreciable asset that may be recognized in establishing an appropriate allowance for depreciation for assets disposed of on or after December 1, 1997. Specifically, we are clarifying that the elimination of the gain or loss for depreciable assets applies to assets a provider disposes of by sale or scrapping on or after December 1, 1997, regardless of whether the asset is scrapped, sold as an individual asset of a Medicare participating provider, or sold incident to a provider change of ownership. Because we are not making any change in policy, but rather are restating longstanding Medicare policy, there is no economic impact on providers resulting from this policy clarification.

S. Alternatives Considered

This final rule contains a range of policies. It also provides descriptions of the statutory provisions that are addressed, identifies the finalized policies, and presents rationales for our decisions and, where relevant, alternatives that were considered.

As discussed in section III.H. of the preamble of this final rule, we are extending the imputed floor policy for developing the hospital wage index for 1 additional year. We note that if the imputed floor policy had expired at the end of FY 2017, we estimate that IPPS payments would have decreased by approximately \$12 million in New Jersey, \$22 million in Rhode Island, and \$12 million in Delaware. Because the imputed floor policy is budget neutral nationally, had the policy expired, these payments would have been redistributed to all IPPS hospitals nationally.

T. Reducing Regulation and Controlling Regulatory Costs

Executive Order 13771, titled "Reducing Regulation and Controlling Regulatory Costs," was issued on January 30, 2017. This final rule is considered an Executive Order 13771 regulatory action. In the table below, we provide a summation of the savings/costs delineated in the sections XIII.B of the preamble and section I. of Appendix A of this final rule. Additional details on the estimated costs of this rule can be found in the preceding and subsequent analyses.

Section of the final rule	Description	Amount of costs or savings
Section XII.B.3. of the preamble	ICRs for the Hospital IQR Programs	(\$1,592,437)
Section XII.B.4. of the preamble	ICRs for the PCHQR Program	(1,519,427)
Section I.M.of Appendix A	Effects of Requirements for the LTCH QRP	(380,480)

Section of the final rule	Description	Amount of costs or savings
Section I.P.of Appendix A	Effects of Electronic Signature and Electronic Submission of the Certification and Settlement Summary Page of Medicare Cost Reports for FY 2018.	(362,000)
Total		(3,854,344)

U. Overall Conclusion

1. Acute Care Hospitals

Table I of section I.G. of this Appendix demonstrates the estimated distributional impact of the IPPS budget neutrality requirements for the MS-DRG and wage index changes, and for the wage index reclassifications under the MGCRB. Table I also shows a projected overall increase of 1.3 percent in operating payments before accounting for the impact of the changes in Medicare DSH payments and uncompensated care payments. When combined with the impact of those changes, consistent with our policy discussed in section V.G. of the preamble of this final rule, we estimate that operating payments will increase by approximately 2.3 percent in FY 2018, or approximately \$2.5 billion. We also currently estimate that the changes in new technology add-on payments for FY 2018 will decrease spending by approximately \$34 million and the changes to the volume decrease adjustment will increase spending by approximately \$15 million. In addition, we estimate the change in low-volume hospital payments, including the statutory expiration of the temporary increase in the low-volume hospital payment adjustment in FY 2018 will decrease spending by approximately \$312 million in FY 2018. These estimates, combined with our estimated increase in FY 2018 operating payment of \$2.5 billion, will result in an estimated increase of approximately \$2.2 billion for FY 2018. We estimate that hospitals will experience a 2.7 percent increase in capital payments per case, as shown in Table III of section I.I. of this Appendix. We project that there will be a \$226 million increase in capital payments in FY 2018 compared to FY 2017. The cumulative operating and capital payments will result in a net increase of approximately \$2.4 billion to IPPS providers. The discussions presented in the previous pages, in combination with the rest of this final rule, constitute a regulatory impact analysis.

2. LTCHs

Overall, LTCHs are projected to experience a decrease in estimated payments per

discharge in FY 2018. In the impact analysis, we are using the rates, factors, and policies presented in this final rule based on the best available claims and CCR data to estimate the change in payments under the LTCH PPS for FY 2018. Accordingly, based on the best available data for the 415 LTCHs in our database, we estimate that FY 2018 LTCH PPS payments will decrease approximately \$110 million relative to FY 2017 as a result of the payment rates and factors presented in this final rule.

V. Regulatory Review Costs

If regulations impose administrative costs on private entities, such as the time needed to read and interpret a rule, we should estimate the cost associated with regulatory review. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20228), due to the uncertainty involved with accurately quantifying the number of entities that would review the proposed rule, we assumed that the total number of timely pieces of correspondence on last year's proposed rule would be the number of reviewers of the proposed rule. We acknowledged that this assumption may overstate or overstate the costs of reviewing the rule. It is possible that not all commenters reviewed last year's rule in detail, and it is also possible that some reviewers chose not to comment on the proposed rule. For those reasons, we decided that the number of past commenters would be a fair estimate of the number of reviewers of the proposed rule. We welcomed any public comments on the approach in estimating the number of entities that would review the proposed rule. We did not receive any public comments specific to our solicitation.

We also recognized that different types of entities are in many cases affected by mutually exclusive sections of the proposed rule. Therefore, for the purposes of our estimate, we assumed that each reviewer read approximately 50 percent of the proposed rule. We sought public comments on this assumption. We did not receive any public comments specific to our solicitation.

We have used the number of timely pieces of correspondence on the FY 2018 proposed rule as our estimate for the number of reviewers of this final rule. We continue to acknowledge the uncertainty involved with using this number, but we believe it is a fair estimate due to the variety of entities affected and the likelihood that some of them choose to rely (in full or in part) on press releases, newsletters, fact sheets, or other sources rather than the comprehensive review of preamble and regulatory text. Using the wage information from the BLS for medical and health service managers (Code 11-9111), we estimate that the cost of reviewing the final rule is \$105.16 per hour, including overhead and fringe benefits (https://www.bls.gov/oes/current/oes_nat.htm). Assuming an average reading speed, we estimate that it will take approximately 21 hours for the staff to review half of the final rule. For each IPPS hospital or LTCH that reviews the final rule, the estimated cost is \$2,208.36 (21 hours x \$105.16). Therefore, we estimate that the total cost of reviewing the final rule is \$9,707,951 (\$2,208.36 x 4,396 reviewers).

II. Accounting Statements and Tables

A. Acute Care Hospitals

As required by OMB Circular A-4 (available at https://obamawhitehouse.archives.gov/omb/circulars_a-004_a-4/ and <https://georgewbush-whitehouse.archives.gov/omb/circulars/a004/a-4.html>), in the following Table V., we have prepared an accounting statement showing the classification of the expenditures associated with the provisions of this final rule as they relate to acute care hospitals. This table provides our best estimate of the change in Medicare payments to providers as a result of the changes to the IPPS presented in this final rule. All expenditures are classified as transfers to Medicare providers.

As shown below in Table V., the net costs to the Federal Government associated with the policies in this final rule are estimated at \$2.4 billion.

TABLE V—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES UNDER THE IPPS FROM FY 2017 TO FY 2018

Category	Transfers
Annualized Monetized Transfers	\$2.4 billion.
From Whom to Whom	Federal Government to IPPS Medicare Providers.

B. LTCHs

As discussed in section I.J. of this Appendix, the impact analysis of the payment rates and factors presented in this final rule under the LTCH PPS is projected to result in a decrease in estimated aggregate LTCH PPS payments in FY 2018 relative to FY 2017 of approximately \$110 million based on the data for 415 LTCHs in our database that are subject to payment under the LTCH

PPS. Therefore, as required by OMB Circular A-4 (available at https://obama.whitehouse.archives.gov/omb/circulars_a004_a-4/ and <https://georgewbush-whitehouse.archives.gov/omb/circulars/a004/a-4.html>), in Table VI., we have prepared an accounting statement showing the classification of the expenditures associated with the provisions of this final rule as they relate to the changes to the LTCH PPS. Table VI. provides our best estimate of

the estimated change in Medicare payments under the LTCH PPS as a result of the payment rates and factors and other provisions presented in this final rule based on the data for the 415 LTCHs in our database.

As shown in Table VI. below, the net savings to the Federal Government associated with the policies for LTCHs in this final rule are estimated at \$110 million.

TABLE VI—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES FROM THE FY 2017 LTCH PPS TO THE FY 2018 LTCH PPS

Category	Transfers
Annualized Monetized Transfers	– \$110 million
From Whom to Whom	Federal Government to LTCH Medicare Providers

C. Information Collection Requirements, Regulatory Impact Analyses, and Regulatory Familiarization Costs

As noted in section I.T. of Appendix A of this final rule, the savings and costs reflected

in the information collection requirements and regulatory impact analyses of this final rule is a savings of \$3,854,344. Also, as noted in section I.V. of Appendix A of this final

rule, the regulatory review cost for this final rule is \$9,707,951.

TABLE VII—ACCOUNTING STATEMENT: SAVINGS FROM THE HOSPITAL IQR PROGRAM AND COST OF REGULATION FAMILIARIZATION

Category	Cost *
Cost (in millions)	\$5.853607

* Familiarization cost is one time and some of the savings associated with the Hospital IQR Program are annually.

III. Regulatory Flexibility Act (RFA) Analysis

The RFA requires agencies to analyze options for regulatory relief of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small government jurisdictions. We estimate that most hospitals and most other providers and suppliers are small entities as that term is used in the RFA. The great majority of hospitals and most other health care providers and suppliers are small entities, either by being nonprofit organizations or by meeting the SBA definition of a small business (having revenues of less than \$7.5 million to \$38.5 million in any 1 year). (For details on the latest standards for health care providers, we refer readers to page 36 of the Table of Small Business Size Standards for NAIC 622 found on the SBA Web site at: http://www.sba.gov/sites/default/files/files/Size_Standards_Table.pdf.)

For purposes of the RFA, all hospitals and other providers and suppliers are considered to be small entities. Individuals and States are not included in the definition of a small entity. We believe that the provisions of this final rule relating to acute care hospitals will have a significant impact on small entities as explained in this Appendix. For example, because all hospitals are considered to be small entities for purposes of the RFA, the hospital impacts described in this final rule are impacts on small entities. For example, we refer readers to “Table I—Impact Analysis of Changes to the IPPS for Operating Costs for FY 2018.” Because we lack data on

individual hospital receipts, we cannot determine the number of small proprietary LTCHs. Therefore, we are assuming that all LTCHs are considered small entities for the purpose of the analysis in section I.J. of this Appendix. MACs are not considered to be small entities because they do not meet the SBA definition of a small business. Because we acknowledge that many of the affected entities are small entities, the analysis discussed throughout the preamble of this final rule constitutes our regulatory flexibility analysis. This final rule contains a range of policies. It provides descriptions of the statutory provisions that are addressed, identifies the finalized policies, and presents rationales for our decisions and, where relevant, alternatives that were considered.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20229), we solicited public comments on our estimates and analysis of the impact of our proposals on those small entities. Any public comments that we received and our responses are presented throughout this final rule.

IV. Impact on Small Rural Hospitals

Section 1102(b) of the Social Security Act requires us to prepare a regulatory impact analysis for any proposed or final rule that may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. With the exception of hospitals located in certain New England counties, for purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is

located outside of an urban area and has fewer than 100 beds. Section 601(g) of the Social Security Amendments of 1983 (Pub. L. 98–21) designated hospitals in certain New England counties as belonging to the adjacent urban area. Thus, for purposes of the IPPS and the LTCH PPS, we continue to classify these hospitals as urban hospitals. (We refer readers to Table I in section I.G. of this Appendix for the quantitative effects of the policy changes under the IPPS for operating costs.)

V. Unfunded Mandates Reform Act Analysis

Section 202 of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of \$100 million in 1995 dollars, updated annually for inflation. In 2017, that threshold level is approximately \$146 million. This final rule will not mandate any requirements for State, local, or tribal governments, nor will it affect private sector costs.

VI. Executive Order 13175

Executive Order 13175 directs agencies to consult with Tribal officials prior to the formal promulgation of regulations having tribal implications. This final rule contains provisions applicable to hospitals and facilities operated by the Indian Health Service or Tribes or Tribal organizations under the Indian Self-Determination and Education Assistance Act and, thus, has tribal implications. Therefore, in accordance with Executive Order 13175 and the CMS Tribal Consultation Policy (December 2015),

CMS has consulted with Tribal officials on these Indian-specific provisions of the proposed rule prior to the formal promulgation of this final rule.

VII. Executive Order 12866

In accordance with the provisions of Executive Order 12866, the Executive Office of Management and Budget reviewed this final rule.

Appendix B: Recommendation of Update Factors for Operating Cost Rates of Payment for Inpatient Hospital Services

I. Background

Section 1886(e)(4)(A) of the Act requires that the Secretary, taking into consideration the recommendations of MedPAC, recommend update factors for inpatient hospital services for each fiscal year that take into account the amounts necessary for the efficient and effective delivery of medically appropriate and necessary care of high quality. Under section 1886(e)(5) of the Act, we are required to publish update factors recommended by the Secretary in the proposed and final IPPS rules, respectively. Accordingly, this Appendix provides the recommendations for the update factors for the IPPS national standardized amount, the hospital-specific rate for SCHs, and the rate-of-increase limits for certain hospitals excluded from the IPPS, as well as LTCHs. In prior years, we have made a recommendation in the IPPS proposed rule and final rule for the update factors for the payment rates for IRFs and IPFs. However, for FY 2018, consistent with approach for FY 2017, we are including the Secretary's recommendation for the update factors for IRFs and IPFs in separate **Federal Register** documents at the time that we announce the annual updates for IRFs and IPFs. We also discuss our response to MedPAC's recommended update factors for inpatient hospital services.

II. Inpatient Hospital Update for FY 2018

A. FY 2018 Inpatient Hospital Update

As discussed in section V.B. of the preamble to this final rule, for FY 2018, consistent with section 1886(b)(3)(B) of the

Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act, we are setting the applicable percentage increase by applying the following adjustments in the following sequence. Specifically, the applicable percentage increase under the IPPS is equal to the rate-of-increase in the hospital market basket for IPPS hospitals in all areas, subject to a reduction of one-quarter of the applicable percentage increase (prior to the application of other statutory adjustments; also referred to as the market basket update or rate-of-increase (with no adjustments)) for hospitals that fail to submit quality information under rules established by the Secretary in accordance with section 1886(b)(3)(B)(viii) of the Act and a reduction of three-quarters of the applicable percentage increase (prior to the application of other statutory adjustments; also referred to as the market basket update or rate-of-increase (with no adjustments)) for hospitals not considered to be meaningful electronic health record (EHR) users in accordance with section 1886(b)(3)(B)(ix) of the Act, and then subject to an adjustment based on changes in economy-wide productivity (the multifactor productivity (MFP) adjustment), and an additional reduction of 0.75 percentage point as required by section 1886(b)(3)(B)(xii) of the Act. Sections 1886(b)(3)(B)(xi) and (b)(3)(B)(xii) of the Act, as added by section 3401(a) of the Affordable Care Act, state that application of the MFP adjustment and the additional FY 2018 adjustment of 0.75 percentage point may result in the applicable percentage increase being less than zero.

We note that, in compliance with section 404 of the MMA, in this final rule, we are replacing the FY 2010-based IPPS operating and capital market baskets with the rebased and revised 2014-based IPPS operating and capital market baskets for FY 2018.

In the FY 2018 IPPS/LTCH PPS proposed rule, based on the most recent data available at that time, in accordance with section 1886(b)(3)(B) of the Act, we proposed to establish the FY 2018 market basket update used to determine the applicable percentage increase for the IPPS on the IGI's fourth quarter 2016 forecast of the proposed 2014-based IPPS market basket rate-of-increase with historical data through third quarter 2016, which was estimated to be 2.9 percent. Based on the most recent data available for

this FY 2018 IPPS/LTCH PPS final rule, in accordance with section 1886(b)(3)(B) of the Act, we are establishing the FY 2018 market basket update used to determine the applicable percentage increase for the IPPS on IGI's second quarter 2017 forecast of the 2014-based IPPS market basket rate-of-increase with historical data through first quarter 2017, which is estimated to be 2.7 percent.

In accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, in section V.B. of the preamble of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19932), we proposed an MFP adjustment of 0.4 percent for FY 2018. Therefore, based on IGI's fourth quarter 2016 forecast of the proposed 2014-based IPPS market basket, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act (hereafter referred to as a hospital that submits quality data) and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act (hereafter referred to as a hospital that is a meaningful EHR user), we presented in the proposed rule four possible applicable percentage increases that could be applied to the standardized amount. Based on the most recent data available for this FY 2018 IPPS/LTCH PPS final rule, in accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, in section V.B. of the preamble of this final rule, we are establishing a MFP adjustment (the 10-year moving average percent change of MFP for the period ending FY 2018) of 0.6 percent.

In accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, in section V.B. of the preamble of this final rule, we are establishing the applicable percentages increases for the FY 2018 updates based on IGI's second quarter 2017 forecast of the 2014-based IPPS market basket, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act as outlined in the table below.

FY 2018	Hospital submitted quality data and is a meaningful EHR user	Hospital submitted quality data and is NOT a meaningful EHR user	Hospital did NOT submit quality data and is a meaningful EHR user	Hospital did NOT submit quality data and is NOT a meaningful EHR user
Market Basket Rate-of-Increase	2.7	2.7	2.7	2.7
Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act	0.0	0.0	-0.675	-0.675
Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act	0.0	-2.025	0.0	-2.025
MFP Adjustment under Section 1886(b)(3)(B)(xi) of the Act	-0.6	-0.6	-0.6	-0.6
Statutory Adjustment under Section 1886(b)(3)(B)(xii) of the Act	-0.75	-0.75	-0.75	-0.75
Applicable Percentage Increase Applied to Standardized Amount	1.35	-0.675	0.675	-1.35

B. Update for SCHs for FY 2018

Section 1886(b)(3)(B)(iv) of the Act provides that the FY 2018 applicable percentage increase in the hospital-specific rate for SCHs equals the applicable percentage increase set forth in section 1886(b)(3)(B)(i) of the Act (that is, the same update factor as for all other hospitals subject to the IPPS).

(We note that, as discussed in section V.H. of the preamble of this final rule, section 205 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10, enacted on April 16, 2015) extended the MDH program (which, under previous law, was to be in effect for discharges on or before March 31, 2015 only) for discharges occurring on or after April 1, 2015, through FY 2017 (that is, for discharges occurring on or before September 30, 2017). Therefore, under current law, the MDH program will expire at the end of FY 2017. However, as discussed in section V.H. of the preamble of this final rule, MDHs have the opportunity to apply for SCH status in advance of the expiration of the MDH program and be paid as such under certain conditions, as specified in the regulations at 42 CFR 412.92(b)(2)(i) and (b)(2)(v).)

As previously mentioned, the update to the hospital specific rate for SCHs is subject to section 1886(b)(3)(B)(i) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act. Accordingly, depending on whether a hospital submits quality data and is a meaningful EHR user, we are establishing the same four possible applicable percentage increases in the table above for the hospital-specific rate applicable to SCHs.

C. FY 2018 Puerto Rico Hospital Update

As discussed in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56939), prior to January 1, 2016, Puerto Rico hospitals were paid based on 75 percent of the national standardized amount and 25 percent of the Puerto Rico-specific standardized amount. Section 601 of Public Law 114–113 amended section 1886(d)(9)(E) of the Act to specify that the payment calculation with respect to operating costs of inpatient hospital services of a subsection (d) Puerto Rico hospital for inpatient hospital discharges on or after January 1, 2016, shall use 100 percent of the national standardized amount. Because Puerto Rico hospitals are no longer paid with a Puerto Rico-specific standardized amount under the amendments to section 1886(d)(9)(E) of the Act, there is no longer a need for us to make an update to the Puerto Rico standardized amount. Hospitals in Puerto Rico are now paid 100 percent of the national standardized amount and, therefore, are subject to the same update to the national standardized amount discussed under section V.B.1. of the preamble of this final rule. Accordingly, for FY 2018, we are establishing an applicable percentage increase of 1.35 percent to the standardized amount for hospitals located in Puerto Rico.

D. Update for Hospitals Excluded from the IPPS for FY 2018

Section 1886(b)(3)(B)(ii) of the Act is used for purposes of determining the percentage

increase in the rate-of-increase limits for children's hospitals, cancer hospitals, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa). Section 1886(b)(3)(B)(ii) of the Act sets the percentage increase in the rate-of-increase limits equal to the market basket percentage increase. In accordance with § 403.752(a) of the regulations, RNHCIs are paid under the provisions of § 413.40, which also use section 1886(b)(3)(B)(ii) of the Act to update the percentage increase in the rate-of-increase limits.

Currently, children's hospitals, PPS-excluded cancer hospitals, RNHCIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa are among the remaining types of hospitals still paid under the reasonable cost methodology, subject to the rate-of-increase limits. As discussed in section VII. of the preamble of this final rule, we are using the percentage increase in the 2014-based IPPS operating market basket to update the target amounts for children's hospitals, PPS-excluded cancer hospitals, RNHCIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa for FY 2018 and subsequent fiscal years. Accordingly, for FY 2018, the rate-of-increase percentage to be applied to the target amount for these children's hospitals, cancer hospitals, RNHCIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa would be the FY 2018 percentage increase in the 2014-based IPPS operating market basket. For this final rule, the current estimate of the IPPS operating market basket percentage increase for FY 2018 is 2.7 percent.

E. Update for LTCHs for FY 2018

Section 123 of Public Law 106–113, as amended by section 307(b) of Public Law 106–554 (and codified at section 1886(m)(1) of the Act), provides the statutory authority for updating payment rates under the LTCH PPS.

As discussed in section V.A. of the Addendum to this final rule, we are establishing an update the LTCH PPS standard Federal payment rate by 1.0 percent for FY 2018, consistent with the amendments to section 1886(m)(3) of the Act provided by section 411 of MACRA. In accordance with the LTCHQR Program under section 1886(m)(5) of the Act, we are reducing the annual update to the LTCH PPS standard Federal rate by 2.0 percentage points for failure of a LTCH to submit the required quality data. Accordingly, we are establishing an update factor of 1.01 in determining the LTCH PPS standard Federal rate for FY 2018. For LTCHs that fail to submit quality data for FY 2018, we are establishing an annual update to the LTCH PPS standard Federal rate of –1.0 percent (that is, the annual update for FY 2018 of 1.0 percent less 2.0 percentage points for failure to submit the required quality data in accordance with section 1886(m)(5)(C) of the Act and our

rules) by applying an update factor of 0.99 in determining the LTCH PPS standard Federal rate for FY 2018.

For FY 2018, consistent with the amendments to section 1886(m)(3) of the Act provided by section 411 of MACRA, for LTCHs that submit quality data, we are recommending an update of 1.0 percent to the LTCH PPS standard Federal rate. For LTCHs that fail to submit quality data for FY 2018, we are recommending an annual update to the LTCH PPS standard Federal rate of –1.0 percent.

III. Secretary's Recommendations

MedPAC is recommending an inpatient hospital update in the amount specified in current law for FY 2018. MedPAC's rationale for this update recommendation is described in more detail below. As mentioned above, section 1886(e)(4)(A) of the Act requires that the Secretary, taking into consideration the recommendations of MedPAC, recommend update factors for inpatient hospital services for each fiscal year that take into account the amounts necessary for the efficient and effective delivery of medically appropriate and necessary care of high quality. Consistent with current law, depending on whether a hospital submits quality data and is a meaningful EHR user, we are recommending the four applicable percentage increases to the standardized amount listed in the table under section II. of this Appendix B. We are recommending that the same applicable percentage increases apply to SCHs.

In addition to making a recommendation for IPPS hospitals, in accordance with section 1886(e)(4)(A) of the Act, we are recommending update factors for certain other types of hospitals excluded from the IPPS. Consistent with our policies for these facilities, we are recommending an update to the target amounts for children's hospitals, cancer hospitals, RNHCIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa of 2.7 percent.

For FY 2018, consistent with the amendments to section 1886(m)(3) of the Act provided by section 411 of MACRA, for LTCHs that submit quality data, we are recommending an update of 1.0 percent to the LTCH PPS standard Federal rate. For LTCHs that fail to submit quality data for FY 2018, we are recommending an annual update to the LTCH PPS standard Federal rate of –1.0 percent.

IV. MedPAC Recommendation for Assessing Payment Adequacy and Updating Payments in Traditional Medicare

In its March 2017 Report to Congress, MedPAC assessed the adequacy of current payments and costs, and the relationship between payments and an appropriate cost base. MedPAC recommended an update to the hospital inpatient rates in the amount specified in current law. We refer the reader to the March 2017 MedPAC report, which is available for download at www.medpac.gov for a complete discussion on this recommendation. MedPAC expects Medicare margins to decline from 2015 to 2017.

Response: We agree with MedPAC, and consistent with current law, we are applying

an applicable percentage increase for FY 2018 of 1.35 percent, provided the hospital submits quality data and is a meaningful EHR user, consistent with statutory requirements.

We note that, because the operating and capital prospective payment systems remain separate, we are continuing to use separate updates for operating and capital payments. The update to the capital rate is discussed in

section III. of the Addendum to this final rule.

LIST OF PUBLIC LAWS

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion

in today's **List of Public Laws**.

Last List August 8, 2017

Public Laws Electronic Notification Service (PENS)

PENS is a free electronic mail notification service of newly

enacted public laws. To subscribe, go to <http://listserv.gsa.gov/archives/publaws-l.html>

Note: This service is strictly for E-mail notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
