

FEDERAL REGISTER

Vol. 82

Monday,

No. 155

August 14, 2017

Book 1 of 2 Books

Pages 37805–37988

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097-6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402 is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see www.ofr.gov.

The seal of the National Archives and Records Administration authenticates the **Federal Register** as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at www.fdsys.gov, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 59, 1 (January 2, 1994) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, gpocusthelp.com.

The annual subscription price for the **Federal Register** paper edition is \$749 plus postage, or \$808, plus postage, for a combined **Federal Register**, **Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is \$165, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register**, including postage, is based on the number of pages: \$11 for an issue containing less than 200 pages; \$22 for an issue containing 200 to 400 pages; and \$33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for \$3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see bookstore.gpo.gov.

There are no restrictions on the republication of material appearing in the **Federal Register**.

How To Cite This Publication: Use the volume number and the page number. Example: 82 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Rules and Regulations

Federal Register

Vol. 82, No. 155

Monday, August 14, 2017

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 25

[Docket No. FAA–2016–8030; Special Conditions No. 25–698–SC]

Special Conditions: Garmin International, Beechcraft Corporation Model 400A Airplanes; Airplane Electronic-System Security Protection From Unauthorized Internal Access

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final special conditions; request for comments.

SUMMARY: These special conditions are issued for Garmin International (Garmin) for modifications to Beechcraft Corporation (Beechcraft) Model 400A airplanes. These airplanes, as modified by Garmin, will have a novel or unusual design feature when compared to the state of technology envisioned in the airworthiness standards for transport-category airplanes. This design feature incorporates the Garmin G5000 satellite-based navigation system into the airplanes. The applicable airworthiness regulations do not contain adequate or appropriate safety standards for this design feature. These special conditions contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that established by the existing airworthiness standards.

DATES: This action is effective on Garmin on August 14, 2017. We must receive your comments by September 28, 2017.

ADDRESSES: Send comments identified by docket number FAA–2016–8030 using any of the following methods:

- *Federal eRegulations Portal:* Go to <http://www.regulations.gov/> and follow the online instructions for sending your comments electronically.
- *Mail:* Send comments to Docket Operations, M–30, U.S. Department of

Transportation (DOT), 1200 New Jersey Avenue SE., Room W12–140, West Building Ground Floor, Washington, DC 20590–0001.

- *Hand Delivery or Courier:* Take comments to Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE., Washington, DC between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

- *Fax:* Fax comments to Docket Operations at 202–493–2251.

Privacy: The FAA will post all comments it receives, without change, to <http://www.regulations.gov/>, including any personal information the commenter provides. Using the search function of the docket Web site, anyone can find and read the electronic form of all comments received into any FAA docket, including the name of the individual sending the comment (or signing the comment for an association, business, labor union, etc.). DOT's complete Privacy Act Statement can be found in the **Federal Register** published on April 11, 2000 (65 FR 19477–19478).

Docket: Background documents or comments received may be read at <http://www.regulations.gov/> at any time. Follow the online instructions for accessing the docket or go to Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Varun Khanna, FAA, Airplane and Flightcrew Interface, ANM–111, Transport Airplane Directorate, Aircraft Certification Service, 1601 Lind Avenue SW., Renton, Washington 98057–3356; telephone 425–227–1298; facsimile 425–227–1320.

SUPPLEMENTARY INFORMATION: The FAA has determined that notice of, and opportunity for prior public comment on, these special conditions is impracticable because these procedures would significantly delay issuance of the design approval, and thus delivery, of the affected airplane.

In addition, the substance of these special conditions has been published in the **Federal Register** for public comment in several prior instances with no substantive comments received. The FAA therefore finds it unnecessary to delay the effective date and finds that good cause exists for making these

special conditions effective upon publication in the **Federal Register**.

The FAA is requesting comments to allow interested persons to submit views that may not have been submitted in response to the prior opportunities for comment described above.

Comments Invited

We invite interested people to take part in this rulemaking by sending written comments, data, or views. The most helpful comments reference a specific portion of the special conditions, explain the reason for any recommended change, and include supporting data.

We will consider all comments we receive by the closing date for comments. We may change these special conditions based on the comments we receive.

Background

On February 13, 2014, Garmin applied for a supplemental type certificate to install the Garmin G5000 satellite-based navigation system in Beechcraft Model 400A airplanes. These airplanes, which are currently approved under Type Certificate No. A16SW, are twin-engine corporate turbojet airplanes with a maximum takeoff weight of 16,100 lbs., and seating for 7 to 9 passengers and 2 crew members.

Type Certification Basis

Under the provisions of title 14, Code of Federal Regulations (14 CFR) 21.101, Garmin must show that the Beechcraft Model 400A airplanes, as modified by Garmin, continue to meet the applicable provisions of the regulations listed in Type Certificate No. A16SW or the applicable regulations in effect on the date of application for the change, except for earlier amendments as agreed upon by the FAA.

If the Administrator finds that the applicable airworthiness regulations (*i.e.*, 14 CFR part 25) do not contain adequate or appropriate safety standards for the Beechcraft Model 400A airplanes because of a novel or unusual design feature, special conditions are prescribed under the provisions of § 21.16.

Special conditions are initially applicable to the model for which they are issued. Should the applicant apply for a supplemental type certificate to modify any other model included on the same type certificate to incorporate the

same novel or unusual design feature, these special conditions would also apply to the other model under § 21.101.

In addition to the applicable airworthiness regulations and special conditions, the Beechcraft Model 400A airplanes must comply with the fuel-vent and exhaust-emission requirements of 14 CFR part 34, and the noise-certification requirements of 14 CFR part 36.

The FAA issues special conditions, as defined in 14 CFR 11.19, in accordance with § 11.38, and they become part of the type certification basis under § 21.101.

Novel or Unusual Design Features

The Beechcraft Model 400A airplanes, as modified by Garmin, will incorporate the following novel or unusual design feature:

Installation of the Garmin G5000 satellite-based navigation system into the airplanes.

Discussion

The Garmin G5000 satellite-based navigation-system design, installed in Beechcraft Model 400A airplanes, introduces the potential for unauthorized persons, accessing the passenger-services domain, to access the airplane-control domain and airplane information-services domain; and further may introduce security vulnerabilities related to the introduction of viruses, worms, user errors, and intentional sabotage of airplane networks, systems, and databases.

The operating systems for current airplane systems usually are proprietary. Therefore, they are not as susceptible to corruption from worms, viruses, and other malicious actions as are more widely used commercial operating systems, such as Microsoft Windows, because access to the design details of these proprietary operating systems is limited to the system developer and airplane integrator. Some systems installed on the Beechcraft Model 400A airplanes will use operating systems that are widely used and commercially available from third-party software suppliers. The security vulnerabilities of these operating systems may be more widely known than proprietary operating systems currently used by avionics manufacturers.

These special conditions contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that established by the existing airworthiness standards.

Applicability

As discussed above, these special conditions are applicable to Beechcraft Model 400A airplanes modified by Garmin. Should Garmin apply at a later date for a supplemental type certificate to incorporate the same novel or unusual design feature for any other model included on the same type certificate, these special conditions would apply to that model as well.

Conclusion

This action affects only a certain novel or unusual design feature on one model of airplane. It is not a rule of general applicability and affects only the applicant who applied to the FAA for approval of this feature on the airplane.

List of Subjects in 14 CFR Part 25

Aircraft, Aviation safety, Reporting and recordkeeping requirements.

The authority citation for these special conditions is as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701, 44702, 44704.

The Special Conditions

Accordingly, pursuant to the authority delegated to me by the Administrator, the following special conditions are issued as part of the type certification basis for Beechcraft Model 400A airplanes modified by Garmin.

1. The applicant must ensure that the design provides isolation from, or airplane electronic-system security protection against, access by unauthorized sources internal to the airplane. The design must prevent inadvertent and malicious changes to, and all adverse impacts upon, airplane equipment, systems, networks, or other assets required for safe flight and operations.

2. The applicant must establish appropriate procedures to allow the operator to ensure that continued airworthiness of the airplane is maintained, including all post-type-certification modifications that may have an impact on the approved electronic-system security safeguards.

Issued in Renton, Washington, on July 31, 2017.

Victor Wicklund,

*Manager, Transport Standards Branch,
Aircraft Certification Service.*

BILLING CODE 4910-13-P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 25

[Docket No. FAA-2017-0316; Special Conditions No. 25-699-SC]

Special Conditions: Embraer S.A. Model ERJ 190-300 Airplane; Flight Envelope Protection: High Incidence Protection System

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final special conditions; request for comments.

SUMMARY: These special conditions are issued for the Embraer S.A. (Embraer) Model ERJ 190-300 airplane. This airplane will have a novel or unusual design feature when compared to the state of technology envisioned in the airworthiness standards for transport-category airplanes. This design feature is a high-incidence protection function that limits the angle of attack (AOA) at which the airplane can be flown during normal low-speed operation, and that cannot be overridden by the flightcrew. The applicable airworthiness regulations do not contain adequate or appropriate safety standards for this design feature. These special conditions contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that established by the existing airworthiness standards.

DATES: This action is effective on Embraer S.A. on August 14, 2017. We must receive your comments by September 28, 2017.

ADDRESSES: Send comments identified by docket number FAA-2017-0316 using any of the following methods:

- **Federal eRegulations Portal:** Go to <http://www.regulations.gov> and follow the online instructions for sending your comments electronically.

- **Mail:** Send comments to Docket Operations, M-30, U.S. Department of Transportation (DOT), 1200 New Jersey Avenue SE., Room W12-140, West Building Ground Floor, Washington, DC 20590-0001.

- **Hand Delivery or Courier:** Take comments to Docket Operations in Room W12-140 of the West Building Ground Floor at 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

- **Fax:** Fax comments to Docket Operations at 202-493-2251.

Privacy: The FAA will post all comments it receives, without change, to <http://www.regulations.gov>,

including any personal information the commenter provides. Using the search function of the docket Web site, anyone can find and read the electronic form of all comments received into any FAA docket, including the name of the individual sending the comment (or signing the comment for an association, business, labor union, etc.). DOT's complete Privacy Act Statement can be found in the **Federal Register** published on April 11, 2000 (65 FR 19477–19478).

Docket: Background documents or comments received may be read at <http://www.regulations.gov/> at any time. Follow the online instructions for accessing the docket or go to Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Joe Jacobsen, FAA, Airplane and Flight Crew Interface, ANM–111, Transport Airplane Directorate, Aircraft Certification Service, 1601 Lind Avenue SW., Renton, Washington 98057–3356; telephone 425–227–2011; facsimile 425–227–1320.

SUPPLEMENTARY INFORMATION: The substance of these special conditions has been subject to the notice and comment period in several prior instances and has been derived without substantive change from those previously issued. It is unlikely that prior public comment would result in a significant change from the substance contained herein. Therefore, because a delay would significantly affect the certification of the airplane, the FAA has determined that prior public notice and comment are unnecessary and impracticable.

In addition, since the substance of these special conditions has been subject to the public comment process in several prior instances with no substantive comments received, the FAA finds it unnecessary to delay the effective date and finds that good cause exists for adopting these special conditions upon publication in the **Federal Register**.

The FAA is requesting comments to allow interested persons to submit views that may not have been submitted in response to the prior opportunities for comment described above.

Comments Invited

We invite interested people to take part in this rulemaking by sending written comments, data, or views. The most helpful comments reference a specific portion of the special conditions, explain the reason for any

recommended change, and include supporting data.

We will consider all comments we receive by the closing date for comments. We may change these special conditions based on the comments we receive.

Background

On September 13, 2013, Embraer applied for an amendment to Type Certificate No. A57NM to include the new Model ERJ 190–300 airplane. The Model ERJ 190–300 airplane, which is a derivative of the Embraer Model ERJ 190–100 STD airplane currently approved under Type Certificate No. A57NM, is a 97- to 114-passenger transport-category airplane, designed with a new wing with a high aspect ratio and raked wingtip, and a new electrical-distribution system. The maximum take-off weight is 124,340 lbs (56,400 kg).

Type Certification Basis

Under the provisions of title 14, Code of Federal Regulations (14 CFR) 21.101, Embraer must show that the Model ERJ 190–300 airplane meets the applicable provisions of the regulations listed in Type Certificate No. A57NM, or the applicable regulations in effect on the date of application for the change, except for earlier amendments as agreed upon by the FAA.

If the Administrator finds that the applicable airworthiness regulations (i.e., 14 CFR part 25) do not contain adequate or appropriate safety standards for the Model ERJ 190–300 airplane because of a novel or unusual design feature, special conditions are prescribed under the provisions of § 21.16.

Special conditions are initially applicable to the model for which they are issued. Should the type certificate for that model be amended later to include any other model that incorporates the same novel or unusual design feature, or should any other model already included on the same type certificate be modified to incorporate the same novel or unusual design feature, these special conditions would also apply to the other model under § 21.101.

In addition to the applicable airworthiness regulations and special conditions, the Embraer Model ERJ 190–300 airplane must comply with the fuel-vent and exhaust-emission requirements of 14 CFR part 34, and the noise-certification requirements of 14 CFR part 36.

The FAA issues special conditions, as defined in 14 CFR 11.19, in accordance with § 11.38, and they become part of

the type certification basis under § 21.101.

Novel or Unusual Design Features

The Embraer Model ERJ 190–300 airplane will incorporate the following novel or unusual design feature:

A high-incidence protection function that limits the angle of attack (AOA) at which the airplane can be flown during normal low-speed operation, and that cannot be overridden by the flightcrew.

Discussion

The Model ERJ 190–300 airplane design has a complex, full-digital flight-control system, referred to as fly-by-wire (FBW) architecture. This FBW architecture provides closed-loop flight-control laws and multiple protection functions.

The Model ERJ 190–300 airplane is equipped with a high-incidence protection function that limits the angle of attack (AOA) at which the airplane can be flown during normal low-speed operation, and cannot be overridden by the flightcrew. The application of this AOA limit impacts the stall-speed determination, the stall characteristics and stall-warning demonstration, and the longitudinal airplane-handling characteristics. The high-incidence protection function prevents the airplane from stalling at low speeds and, therefore, a stall warning system is backed up during normal flight conditions. If the high-incidence protection function has a failure that is not shown to be extremely improbable, stall warning must be provided in a conventional manner. Also, the flight characteristics at the AOA for V_{CLmax} (AOA at the maximum lift co-efficient and associated speed) must be suitable in the traditional sense. Per 14 CFR 21.16, therefore, special conditions are needed to address the unique features of the high-incidence protection function installed on the Model ERJ 190–300 airplane.

These special conditions contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that established by the existing airworthiness standards.

Applicability

As discussed above, these special conditions are applicable to the Model ERJ 190–300 airplane. Should Embraer apply at a later date for a change to the type certificate to include another model incorporating the same novel or unusual design feature, these special conditions would apply to that model as well.

Conclusion

This action affects only certain novel or unusual design features on one model of airplane. It is not a rule of general applicability.

List of Subjects in 14 CFR Part 25

Aircraft, Aviation safety, Reporting and recordkeeping requirements.

The authority citation for these special conditions is as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701, 44702, 44704.

The Special Conditions

Accordingly, pursuant to the authority delegated to me by the Administrator, the following special conditions are issued as part of the type certification basis for the Embraer Model ERJ 190–300 airplane.

Flight Envelope Protection: High Incidence Protection System

The current airworthiness standards do not contain adequate safety standards for the unique features of the high incidence protection system on the Embraer Model ERJ 190–300 airplane. Part I of the following special conditions are issued in lieu of the specified paragraphs of §§ 25.103, 25.145, 25.201, 25.203, 25.207, and 25.1323 of title 14, Code of Federal Regulations (CFR) or in addition to the requirements of § 25.21. Part II are in lieu of the specified paragraphs of §§ 25.103, 25.105, 25.107, 25.121, 25.123, 25.125, 25.143, and 25.207 of title 14 CFR.

Special Conditions Part I

Stall Protection and Scheduled Operating Speeds

The following special conditions are in lieu of §§ 25.103, 25.145(a), 25.145(b)(6), 25.201, 25.203, 25.207, and 25.1323(d) or in addition to the requirements of § 25.21.

Foreword

In the following paragraphs, “in icing conditions” means with the ice accretions (relative to the relevant flight phase) as defined in 14 CFR part 25, Amendment 121, appendix C.

1. Definitions

The following are terms relating to the novel or unusual design features these special conditions address:

- *High incidence protection system:* A system that operates directly and automatically on the airplane’s flying controls to limit the maximum angle of attack that can be attained to a value below that at which an aerodynamic stall would occur.

- *Alpha-limit:* The maximum angle of attack at which the airplane stabilizes with the high incidence protection system operating, and the longitudinal control held on its aft stop.

- *V_{min}:* The minimum steady flight speed in the airplane configuration under consideration with the high incidence protection system operating. See Part I, section 3 of these special conditions.

- *V_{min1g}:* V_{min} corrected to 1g conditions. See Part I, section 3 of these special conditions. It is the minimum calibrated airspeed at which the airplane can develop a lift force normal to the flight path and equal to its weight when at an angle of attack not greater than that determined for V_{min}.

2. Capability and Reliability of the High Incidence Protection System

The capability and reliability of the high incidence protection system can be established by flight test, simulation, and analysis as appropriate. The capability and reliability required are as follows:

1. It must not be possible during pilot-induced maneuvers to encounter a stall, and handling characteristics must be acceptable, as required by section 5 of Part I of these special conditions.

2. The airplane must be protected against stalling due to the effects of wind-shears and gusts at low speeds as required by section 6 of Part I of these special conditions.

3. The ability of the high incidence protection system to accommodate any reduction in stalling incidence must be verified in icing conditions.

4. The high incidence protection system must be provided in each abnormal configuration of the high lift devices that is likely to be used in flight following system failures.

5. The reliability of the system and the effects of failures must be acceptable in accordance with § 25.1309.

3. Minimum Steady Flight Speed and Reference Stall Speed

In lieu of § 25.103, the following requirements apply:

- (a) The minimum steady flight speed, V_{min}, is the final stabilized calibrated airspeed obtained when the airplane is decelerated until the longitudinal control is on its stop in such a way that the entry rate does not exceed 1 knot per second.

- (b) The minimum steady flight speed, V_{min}, must be determined if it is used to determine compliance with a required performance standard or other requirements demonstrations in icing or non-icing conditions with:

- (1) The high incidence protection system operating normally;
- (2) Idle thrust and automatic thrust system (if applicable) inhibited;
- (3) All combinations of flap settings and landing gear position for which V_{min} is required to be determined;
- (4) The weight used when reference stall speed, V_{SR}, is being used as a factor to determine compliance with a required performance standard;
- (5) The most unfavorable center of gravity allowable; and
- (6) The airplane trimmed for straight flight at a speed selected by the applicant, but not less than 1.13 V_{SR} and not greater than 1.3 V_{SR}.

- (c) The 1-g minimum steady flight speed, V_{min1g}, is the minimum calibrated airspeed at which the airplane can develop a lift force (normal to the flight path) equal to its weight, while at an angle of attack not greater than that at which the minimum steady flight speed of subparagraph (a) was determined. It must be determined if it is used to determine compliance with a required performance standard or other requirements demonstrations in icing or non-icing conditions.

- (d) The reference stall speed, V_{SR}, is a calibrated airspeed defined by the applicant. V_{SR} may not be less than a 1g stall speed. V_{SR} must be determined in non-icing conditions (and as an option, in icing conditions) and expressed as:

$$V_{SR} \geq \frac{V_{CL_{MAX}}}{\sqrt{n_{zw}}}$$

where—

$V_{CL_{max}}$ = Calibrated airspeed obtained when the load factor-corrected lift

coefficient ($\frac{n_{zw}W}{qS}$) is first a maximum during the maneuver

prescribed in sub-paragraph (e)(7) of this paragraph.

N_{zw} = Load factor normal to the flight path at $V_{CL_{max}}$

W = Airplane gross weight;

S = Aerodynamic reference wing area; and

q = Dynamic pressure.

(e) $V_{CL_{max}}$ is determined with:

(1) Engines idling, or, if that resultant thrust causes an appreciable decrease in stall speed, not more than zero thrust at the stall speed;

(2) The airplane in other respects (such as flaps, landing gear, and ice accretions) in the condition existing in the test or performance standard in which V_{SR} is being used;

(3) The weight used when V_{SR} is being used as a factor to determine compliance with a required performance standard;

(4) The center of gravity position that results in the highest value of reference stall speed;

(5) The airplane trimmed for straight flight at a speed achievable by the automatic trim system, but not less than 1.13 V_{SR} and not greater than 1.3 V_{SR} ; and

(6) The high incidence protection system adjusted or disabled, at the option of the applicant, to allow higher incidence than is possible with the normal production system.

(7) Starting from the stabilized trim condition, apply the longitudinal control to decelerate the airplane so that the speed reduction does not exceed 1 knot per second.

4. Stall Warning

In lieu of § 25.207, the following requirements apply:

4.1 Normal Operation

If the capability requirements of the high incidence protection system are successfully demonstrated, then the conditions of section 2, “Capability and Reliability of the High Incidence Protection System,” are satisfied. These conditions provide safety equivalent to § 25.207, *Stall warning*, so the provision of an additional, unique warning device is not required.

4.2 High Incidence Protection System Failure

Following failures of the high incidence protection system, not shown to be extremely improbable, such that the capability of the system no longer satisfies items (1), (2), and (3) of section 2, “Capability and Reliability of the High Incidence Protection System,” stall warning must be provided and must protect against encountering unacceptable stall characteristics and against encountering stall.

(a) Stall warning with the flaps and landing gear in any normal position must be clear and distinctive to the pilot and meet the requirements specified in paragraphs (d) and (e) below.

(b) Stall warning must also be provided in each abnormal configuration of the high lift devices that is likely to be used in flight following system failures.

(c) The warning may be furnished either through the inherent aerodynamic qualities of the airplane or by a device that will give clearly distinguishable indications under expected conditions of flight. However, a visual stall warning device that requires the attention of the crew within the cockpit is not acceptable by itself. If a warning device is used, it must provide a warning in each of the airplane configurations prescribed in paragraph (a) above and for the conditions prescribed in paragraphs (d) and (e) below.

(d) In non-icing conditions stall warning must provide sufficient margin to prevent encountering unacceptable stall characteristics and encountering stall in the following conditions:

(1) In power off (engine power or thrust at flight idle) straight deceleration not exceeding 1 knot per second to a speed 5 knots or 5 percent calibrated airspeed, whichever is greater, below the warning onset.

(2) In turning flight stall deceleration at entry rates up to 3 knots per second when recovery is initiated not less than 1 second after the warning onset.

(e) In icing conditions stall warning must provide sufficient margin to prevent encountering unacceptable characteristics and encountering stall, in power-off (engine power or thrust at flight idle) straight and turning flight decelerations not exceeding 1 knot per

second, when the pilot starts a recovery maneuver not less than three seconds after the onset of stall warning.

(f) An airplane is considered stalled when the behavior of the airplane gives the pilot a clear and distinctive indication of an acceptable nature that the airplane is stalled. Acceptable indications of a stall, occurring either individually or in combination are:

(1) A nose-down pitch that cannot be readily arrested;

(2) Buffeting, of a magnitude and severity that is strong and effective deterrent to further speed reduction; or

(3) The pitch control reaches the aft stop and no further increase in pitch attitude occurs when the control is held full aft for a short time before recovery is initiated.

(g) An aircraft exhibits unacceptable characteristics during straight or turning flight decelerations if it is not always possible to produce and to correct roll and yaw by unreversed use of aileron and rudder controls, or abnormal nose-up pitching occurs.

5. Handling Characteristics at High Incidence

In lieu of §§ 25.201 and 25.203, the following requirements apply:

5.1 High Incidence Handling Demonstration

In lieu of § 25.201:

(a) Maneuvers to the limit of the longitudinal control, in the nose-up pitch, must be demonstrated in straight flight and in 30° banked turns with:

(1) The high incidence protection system operating normally;

(2) Initial power conditions of:

i. Power off (engine power or thrust at flight idle); and

ii. The power necessary to maintain level flight at $1.5 V_{SR1}$, where V_{SR1} is the reference stall speed with flaps in approach position, the landing gear retracted, and maximum landing weight;

(3) Flaps, landing gear, and deceleration devices in any likely combination of positions;

(4) Representative weights within the range for which certification is requested; and

(5) The airplane trimmed for straight flight at a speed selected by the applicant, but not less than $1.13 V_{SR}$ and not greater than $1.3 V_{SR}$.

(b) The following procedures must be used to show compliance in non-icing and icing conditions:

(1) Starting at a speed sufficiently above the minimum steady flight speed to ensure that a steady rate of speed reduction can be established, apply the longitudinal control so that the speed

reduction does not exceed 1 knot per second until the control reaches the stop;

(2) The longitudinal control must be maintained at the stop until the airplane has reached a stabilized flight condition and must then be recovered by normal recovery techniques;

(3) Maneuvers with increased deceleration rates:

(i) In non-icing conditions, the requirements must also be met with increased rates of entry to the incidence limit, up to the maximum practical entry rate; and

(ii) In icing conditions, with the anti-ice system working normally, the requirements must also be met with increased rates of entry to the incidence limit, up to 3 knots per second; and

(4) Maneuver with ice accretion prior to operation of the normal anti-ice system. With the ice accretion prior to operation of the normal anti-ice system, the requirements must also be met in deceleration at 1 knot per second. The deceleration must be continued until one second after the activation of the tactile stall warning system or three seconds after reaching full back stick, whichever occurs first. A primary ice detection system must automatically activate the ice protection.

5.2 Characteristics in High Incidence Maneuvers

In lieu of § 25.203:

In icing and non-icing conditions:

(a) Throughout maneuvers with a rate of deceleration of not more than 1 knot per second, both in straight flight and in 30° banked turns, the airplane's characteristics must be as follows:

(1) There must not be any abnormal nose-up pitching.

(2) There must not be any uncommanded nose-down pitching, which would be indicative of stall. However, reasonable attitude changes associated with stabilizing the incidence at Alpha limit as the longitudinal control reaches the stop would be acceptable.

(3) There must not be any uncommanded lateral or directional motion and the pilot must retain good lateral and directional control, by conventional use of the controls, throughout the maneuver.

(4) The airplane must not exhibit buffeting of a magnitude and severity that would act as a deterrent from completing the maneuver specified in paragraph 5.1(a).

(b) In maneuvers with increased rates of deceleration, some degradation of characteristics is acceptable, associated with a transient excursion beyond the stabilized Alpha limit. However, the

airplane must not exhibit dangerous characteristics or characteristics that would deter the pilot from holding the longitudinal control on the stop for a period of time appropriate to the maneuver.

(c) It must always be possible to reduce incidence by conventional use of the controls.

(d) The rate at which the airplane can be maneuvered from trim speeds associated with scheduled operating speeds such as V_2 and V_{REF} up to Alpha limit must not be unduly damped or be significantly slower than can be achieved on conventionally controlled transport airplanes.

5.3 Characteristics Up to Maximum Lift Angle of Attack

Also in lieu of § 25.201:

(a) In non-icing conditions:

Maneuvers with a rate of deceleration of not more than 1 knot per second up to the angle of attack at which V_{CLmax} was obtained as defined in section 3, "Minimum Steady Flight Speed and Reference Stall Speed," must be demonstrated in straight flight and in 30° banked turns in the following configurations:

(1) The high incidence protection deactivated or adjusted, at the option of the applicant, to allow higher incidence than is possible with the normal production system;

(2) Automatic thrust increase system inhibited (if applicable);

(3) Engines idling;

(4) Flaps and landing gear in any likely combination of positions; and

(5) The airplane trimmed for straight flight at a speed selected by the applicant, but not less than $1.13 V_{SR}$ and not greater than $1.3 V_{SR}$.

(b) In icing conditions:

Maneuvers with a rate of deceleration of not more than 1 knot per second up to the maximum angle of attack reached during maneuvers from paragraph 5.1(b)(3)(ii) must be demonstrated in straight flight with:

(1) The high incidence protection deactivated or adjusted, at the option of the applicant, to allow higher incidence than is possible with the normal production system;

(2) Automatic thrust increase system inhibited (if applicable);

(3) Engines idling;

(4) Flaps and landing gear in any likely combination of positions, and

(5) The airplane trimmed for straight flight at a speed achievable by the automatic trim system.

(c) During the maneuvers used to show compliance with paragraphs (a) and (b) above, the airplane must not exhibit dangerous characteristics, and it

must always be possible to reduce angle of attack by conventional use of the controls. The pilot must retain good lateral and directional control, by conventional use of the controls, throughout the maneuver.

6. Atmospheric Disturbances

Operation of the high incidence protection system must not adversely affect aircraft control during expected levels of atmospheric disturbances, nor impede the application of recovery procedures in case of wind-shear. This must be demonstrated in non-icing and icing conditions.

7. Proof of Compliance

In addition to the requirements of § 25.21, the following requirement applies:

(b) The flying qualities must be evaluated at the most unfavorable center-of-gravity position.

8. Sections 25.145(a), 25.145(b)(6), and 25.1323(d)

The following requirements apply:

- For § 25.145(a), add “ V_{min} ” in lieu of “stall identification.”
- For § 25.145(b)(6), and “ V_{min} ” in lieu of “ V_{sw} .”
- For § 25.1323(d), add “From 1.23 V_{SR} to V_{min} . . .,” in lieu of, “1.23 V_{SR} to the speed at which stall warning begins . . .,” and, “. . . speeds below V_{min} . . .” in lieu of, “. . . speeds below stall warning.”

Special Conditions Part II

Credit for Robust Envelope Protection in Icing Conditions

The following special conditions are in lieu of the specified paragraphs of §§ 25.103, 25.105, 25.107, 25.121, 25.123, 25.125, 25.143, and 25.207.

1. Define the stall speed as provided in these special conditions, Part I, in lieu of § 25.103.

2. In lieu of § 25.105(a)(2)(i), the following requirement applies:

(i) The V_2 speed scheduled in non-icing conditions does not provide the maneuvering capability specified in § 25.143(h) for the takeoff configuration, or

3. In lieu of § 25.107(c) and (g), the following requirements apply, with additional sections (c') and (g'):

Takeoff speeds:

(c) In non-icing conditions V_2 , in terms of calibrated airspeed, must be selected by the applicant to provide at least the gradient of climb required by § 25.121(b) but may not be less than—

(1) V_{2MIN} ;

(2) V_R plus the speed increment attained in accordance with § 25.111(c)(2)) before reaching a height of 35 feet above the takeoff surface; and

(3) A speed that provides the maneuvering capability specified in § 25.143(h).

(c') In icing conditions with the “takeoff ice” accretion defined in part 25, appendix C, V_2 may not be less than—

(1) The V_2 speed determined in non-icing conditions; and

(2) A speed that provides the maneuvering capability specified in § 25.143(h).

(g) In non-icing conditions, V_{FTO} , in terms of calibrated airspeed, must be selected by the applicant to provide at least the gradient of climb required by § 25.121(c), but may not be less than—

(1) 1.18 V_{SR} ; and

(2) A speed that provides the maneuvering capability specified in § 25.143(h).

(g') In icing conditions with the “final takeoff ice” accretion defined in part 25, appendix C, V_{FTO} , may not be less than—

(1) The V_{FTO} speed determined in non-icing conditions.

(2) A speed that provides the maneuvering capability specified in § 25.143(h).

4. In lieu of §§ 25.121(b)(2)(ii)(A), 25.121(c)(2)(ii)(A), and 25.121(d)(2)(ii), the following requirements apply:

In lieu of § 25.121(b)(2)(ii)(A):

(A) The V_2 speed scheduled in non-icing conditions does not provide the maneuvering capability specified in § 25.143(h) for the takeoff configuration; or

In lieu of § 25.121(c)(2)(ii)(A):

(A) The V_{FTO} speed scheduled in non-icing conditions does not provide the maneuvering capability specified in § 25.143(h) for the en-route configuration; or

In lieu of § 25.121(d)(2)(ii):

(d)(2) The requirements of subparagraph (d)(1) of this paragraph must be met: (ii) In icing conditions with the approach ice accretion defined in appendix C, in a configuration corresponding to the normal all-engines-operating procedure in which V_{min1g} for this configuration does not exceed 110% of the V_{min1g} for the related all-engines-operating landing configuration in icing, with a climb speed established with normal landing procedures, but not more than 1.4 V_{SR} (V_{SR} determined in non-icing conditions).

5. In lieu of § 25.123(b)(2)(i), the following requirements apply:

(i) The minimum en-route speed scheduled in non-icing conditions does not provide the maneuvering capability specified in § 25.143(h) for the en-route configuration, or

6. In lieu of §§ 25.125(b)(2)(ii)(B) and 25.125(b)(2)(ii)(C), the following requirements apply:

(B) A speed that provides the maneuvering capability specified in § 25.143(h) with the landing ice accretion defined in part 25, appendix C.

(C) 1.17 V_{min1g} .

7. In lieu of § 25.143(j)(1), the following requirement applies:

(1) The airplane is controllable in a pull-up maneuver up to 1.5 g load factor or lower if limited by angle of attack protection; and

8. In lieu of § 25.207, *Stall warning*, to read as the requirements defined in these special conditions Part I, Section 4.

Issued in Renton, Washington, on July 31, 2017.

Victor Wicklund,

Manager, Transport Standards Branch, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 25

[Docket No. FAA–2017–0484; Special Conditions No. 25–700–SC]

Special Conditions: Textron Aviation Inc. Model 700 Airplanes; Use of Automatic Power Reserve for Go-Around Performance Credit

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final special conditions; request for comments.

SUMMARY: These special conditions are issued for the Textron Aviation Inc. (Textron) Model 700 airplane. This airplane will have a novel or unusual design feature when compared to the state of technology envisioned in the airworthiness standards for transport-category airplanes. This design feature is an Automatic Takeoff Thrust Control System (ATTCS), referred to as an Automatic Power Reserve (APR), to set the performance level for approach-climb operation after an engine failure. The applicable airworthiness regulations do not contain adequate or appropriate safety standards for this design feature. These special conditions contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that established by the existing airworthiness standards.

DATES: This action is effective on Textron on August 14, 2017. Send your comments by September 28, 2017.

ADDRESSES: Send comments identified by docket number FAA–2017–0484 using any of the following methods:

- *Federal eRegulations Portal:* Go to <http://www.regulations.gov/> and follow the online instructions for sending your comments electronically.

- *Mail:* Send comments to Docket Operations, M–30, U.S. Department of Transportation (DOT), 1200 New Jersey Avenue SE., Room W12–140, West Building Ground Floor, Washington, DC, 20590–0001.

- *Hand Delivery or Courier:* Take comments to Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

- *Fax:* Fax comments to Docket Operations at 202–493–2251.

Privacy: The FAA will post all comments it receives, without change, to <http://www.regulations.gov/>, including any personal information the commenter provides. Using the search function of the docket Web site, anyone can find and read the electronic form of all comments received into any FAA docket, including the name of the individual sending the comment (or signing the comment for an association, business, labor union, etc.). DOT's complete Privacy Act Statement can be found in the **Federal Register** published on April 11, 2000 (65 FR 19477–19478).

Docket: Background documents or comments received may be read at <http://www.regulations.gov/> at any time. Follow the online instructions for accessing the docket or go to Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Joe Jacobsen, FAA, Airplane and Flightcrew Interface, ANM–111, Transport Airplane Directorate, Aircraft Certification Service, 1601 Lind Avenue SW., Renton, Washington 98057–3356; telephone 425–227–2011; facsimile 425–227–1320.

SUPPLEMENTARY INFORMATION: The substance of these special conditions has been subject to the notice and comment period in several prior instances and has been derived without substantive change from those previously issued. It is unlikely that prior public comment would result in a significant change from the substance contained herein. Therefore, because a delay would significantly affect the certification of the airplane, the FAA has determined that prior public notice

and comment are unnecessary and impracticable.

In addition, since the substance of these special conditions has been subject to the public comment process in several prior instances with no substantive comments received, the FAA finds it unnecessary to delay the effective date and finds that good cause exists for adopting these special conditions upon publication in the **Federal Register**.

The FAA is requesting comments to allow interested persons to submit views that may not have been submitted in response to the prior opportunities for comment described above.

Comments Invited

We invite interested people to take part in this rulemaking by sending written comments, data, or views. The most helpful comments reference a specific portion of the special conditions, explain the reason for any recommended change, and include supporting data.

We will consider all comments we receive by the closing date for comments. We may change these special conditions based on the comments we receive.

Background

On November 20, 2014, Textron applied for a type certificate for their new Model 700 airplane. The Model 700 airplane is a turboprop-powered executive-jet airplane with seating for two crewmembers and 12 passengers. This airplane will have a maximum takeoff weight of 38,514 pounds.

Type Certification Basis

Under the provisions of Title 14, Code of Federal Regulations (14 CFR) 21.17, Textron must show that the Model 700 airplane meets the applicable provisions of part 25, as amended by Amendments 25–1 through 25–139, 25–141, and 25–143.

If the Administrator finds that the applicable airworthiness regulations (*i.e.*, 14 CFR part 25) do not contain adequate or appropriate safety standards for the Textron Model 700 airplane because of a novel or unusual design feature, special conditions are prescribed under the provisions of § 21.16.

Special conditions are initially applicable to the model for which they are issued. Should the type certificate for that model be amended later to include any other model that incorporates the same novel or unusual design feature, these special conditions would also apply to the other model under § 21.101.

In addition to the applicable airworthiness regulations and special conditions, the Model 700 airplane must comply with the fuel-vent and exhaust-emission requirements of 14 CFR part 34, and the noise-certification requirements of 14 CFR part 36.

The FAA issues special conditions, as defined in 14 CFR 11.19, in accordance with § 11.38, and they become part of the type certification basis under § 21.17(a)(2).

Novel or Unusual Design Features

The Model 700 airplane will incorporate the following novel or unusual design feature: An Automatic Takeoff Thrust Control System, referred to as an Automatic Power Reserve, to set the performance level for approach-climb operation after an engine failure.

Discussion

Textron proposes using the ATTCS function of the Model 700 airplane during go-around and requests approach-climb performance credit for the use of the additional power. The Model 700 powerplant control system comprises a Full Authority Digital Electronic Control (FADEC) for the AS907–2–1S engine. The control system includes an ATTCS feature, referred to as Maximum Takeoff Thrust (MTO), and in the airplane flight manual (AFM), Automatic Power Reserve.

Section 25.904 and part 25, appendix I, limit the application of performance credit for ATTCS to takeoff only. Because the airworthiness regulations do not contain appropriate safety standards for approach-climb performance using ATTCS, special conditions are required to ensure a level of safety equivalent to that established in the regulations.

These special conditions contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that established by the existing airworthiness standards.

Applicability

As discussed above, these special conditions are applicable to the Textron Model 700 airplane. Should Textron apply at a later date for a change to the type certificate to include another model incorporating the same novel or unusual design feature, these special conditions would apply to that model as well.

Conclusion

This action affects only certain novel or unusual design features on one model of airplane. It is not a rule of general applicability.

List of Subjects in 14 CFR Part 25

Aircraft, Aviation safety, Reporting and recordkeeping requirements.

The authority citation for these special conditions is as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701, 44702, 44704.

The Special Conditions

The Textron Model 700 airplane must comply with the requirements of 14 CFR 25.904, and appendix I, and the following requirements for the go-around phase of flight:

1. Definitions

a. Takeoff/go-around (TOGA): Throttle lever in takeoff or go-around position.

b. Automatic Takeoff Thrust Control System: The ATTCS in Model 700 airplanes is defined as the entire automatic system available during takeoff and in go-around mode, including all devices, both mechanical and electrical, that sense engine failure, transmit signals, actuate fuel controls or power levers (or increase engine power by other means on operating engines to achieve scheduled thrust or power

increase), and furnish cockpit information on system operation.

c. Critical time interval:

(1) When conducting an approach for landing using ATTCS, the critical time interval is defined as follows:

(i) The critical time interval begins at a point on a 2.5-degree approach glide path from which, assuming a simultaneous engine and ATTCS failure, the resulting approach-climb flight path intersects a flight path originating at a later point on the same approach path that corresponds to the part 25 one-engine-inoperative approach-climb gradient. The period of time from the point of simultaneous engine and ATTCS failure, to the intersection of these flight paths, must be no shorter than the time interval used in evaluating the critical time interval for takeoff, beginning from the point of simultaneous engine and ATTCS failure and ending upon reaching a height of 400 feet.

(ii) The critical time interval ends at the point on a minimum performance, all-engines-operating go-around flight path from which, assuming a

simultaneous engine and ATTCS failure, the resulting minimum approach-climb flight path intersects a flight path corresponding to the part 25 minimum one-engine-inoperative approach-climb gradient. The all-engines-operating go-around flight path, and the part 25 one-engine-inoperative approach-climb gradient flight path, originate from a common point on a 2.5-degree approach path. The period of time from the point of simultaneous engine and ATTCS failure, to the intersection of these flight paths, must be no shorter than the time interval used in evaluating the critical time interval for the takeoff, beginning from the point of simultaneous engine and ATTCS failure and ending upon reaching a height of 400 feet.

(2) The critical time interval must be determined at the altitude resulting in the longest critical time interval for which one-engine-inoperative approach-climb performance data are presented in the airplane flight manual.

(3) The critical time interval is illustrated in the following figure:

* The engine and ATTCS failed time interval must be no shorter than the time interval from the point of simultaneous engine and ATTCS failure to a height of 400 feet used to comply with 125.2(b) for ATTCS use during takeoff.

2. Performance and system reliability requirements: The applicant must comply with the performance and ATTCS reliability requirements as follows:

a. An ATTCS failure or a combination of failures in the ATTCS during the critical time interval:

(1) Must not prevent the insertion of the maximum approved go-around thrust or power, or must be shown to be a remote event.

(2) Must not result in a significant loss or reduction in thrust or power, or must be shown to be an extremely improbable event.

b. The concurrent existence of an ATTCS failure and an engine failure

during the critical time interval must be shown to be extremely improbable.

c. All applicable performance requirements of part 25 must be met with an engine failure occurring at the most critical point during go-around with the ATTCS functioning.

d. The probability analysis must include consideration of ATTCS failure occurring after the time at which the flightcrew last verifies that the ATTCS is in a condition to operate until the beginning of the critical time interval.

e. The propulsive thrust obtained from the operating engine, after failure of the critical engine during a go-around used to show compliance with the one-

engine-inoperative climb requirements of § 25.121(d), may not be greater than the lesser of:

(1) The actual propulsive thrust resulting from the initial setting of power or thrust controls with the ATTCS functioning, or

(2) 111 percent of the propulsive thrust resulting from the initial setting of power or thrust controls with the ATTCS failing to reset thrust or power, and without any action by the flightcrew to reset thrust or power.

3. Thrust setting

a. The initial go-around thrust setting on each engine at the beginning of the go-around phase may not be less than any of the following:

(1) That required to permit normal operation of all safety-related systems and equipment dependent upon engine thrust or power lever position; or

(2) That are shown to be free of hazardous engine-response characteristics, and not to result in any unsafe airplane operating or handling characteristics when thrust or power is advanced from the initial go-around position to the maximum approved power setting.

b. For approval to use an ATTCs for go-arounds, the thrust-setting procedure must be the same for go-arounds initiated with all engines operating as for go-around initiated with one engine inoperative.

4. Powerplant controls

a. In addition to the requirements of § 25.1141, no single failure or malfunction, or probable combination thereof, of the ATTCs, including associated systems, may cause the failure of any powerplant function necessary for safety.

b. The ATTCs must be designed to:

(1) Apply thrust or power to the operating engine(s), following any one-engine failure during a go-around, to achieve the maximum approved go-around thrust without exceeding the engine operating limits;

(2) Permit manual decrease or increase in thrust or power up to the maximum go-around thrust approved for the airplane, under the existing conditions, through the use of the power lever. For airplanes equipped with limiters that automatically prevent the engine operating limits from being exceeded under existing ambient conditions, other means may be used to increase the thrust in the event of an ATTCs failure, provided that the means:

(i) Is located on or forward of the power levers;

(ii) Is easily identified and operated under all operating conditions by a single action of either pilot with the hand that is normally used to actuate the power levers; and

(iii) Meets the requirements of § 25.777(a), (b), and (c).

(3) Provide a means to verify to the flightcrew, before beginning an approach for landing, that the ATTCs is in a condition to operate (unless it can be demonstrated that an ATTCs failure, combined with an engine failure during an entire flight, is extremely improbable); and

(4) Provide a means for the flightcrew to deactivate the automatic function. This means must be designed to prevent inadvertent deactivation.

5. Powerplant instruments: In addition to the requirements of § 25.1305:

a. A means must be provided to indicate when the ATTCs is in the OFF or FAILED condition; and

b. If the inherent flight characteristics of the airplane do not provide adequate warning that an engine has failed, a warning system that is independent of the ATTCs must be provided to give the pilot a clear warning of any engine failure during a go-around.

Issued in Renton, Washington, on August 8, 2017.

Victor Wicklund,

Manager, Transport Standards Branch, Policy and Innovation Division, Aircraft Certification Service.

BILLING CODE 4910-13-P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Docket No. FAA-2017-0222; **Airspace**
Docket No. 17-AWP-8]

Amendment of Class D and E Airspace; Hilo, HI

AGENCY: Federal Aviation
Administration (FAA), DOT.

ACTION: Final rule, technical
amendment, correction.

SUMMARY: This action corrects a final rule, technical amendment published in **Federal Register** on June 22, 2017, that amends Class E airspace designated as an extension at Hilo International, General Lyman Field, Hilo, HI. The airport name is corrected to Hilo International Airport, Hilo, HI, removing “General Lyman Field” from the airport name to match the FAA’s aeronautical database. This technical amendment also corrects the airport name in Class D, Class E surface area airspace, and Class E airspace extending upward from 700 feet above the surface.

DATES: Effective 0901 UTC, August 17, 2017. The Director of the Federal Register approves this incorporation by reference action under Title 1, Code of Federal Regulations, Part 51, subject to the annual revision of FAA Order 7400.11 and publication of conforming amendments.

FOR FURTHER INFORMATION CONTACT:

Robert LaPlante, Federal Aviation Administration, Operations Support Group, Western Service Center, 1601 Lind Avenue SW., Renton, WA 98057; telephone (425) 203-4566.

SUPPLEMENTARY INFORMATION:

History

The FAA published a final rule, technical amendment in the **Federal Register** (82 FR 28404, June 22, 2017) Docket No. FAA-2017-0222, amending Class E Airspace designated as an extension, removing the Notice to Airmen (NOTAM) part-time status at Hilo International, General Lyman Field, Hilo, HI. Subsequent to publication, the FAA found the airport name was incorrect and is now corrected from Hilo International, General Lyman Field, to Hilo International Airport.

In making the airport name change in Class E airspace designated as an extension, the FAA realized that the airport name change for Hilo International Airport also affects Class D airspace, Class E surface area airspace, and Class E airspace extending upward from 700 feet above the surface. This technical amendment correction includes amending the above airspace areas by removing General Lyman Field from the airport name, and does not affect the boundaries or operating requirements of the airport in the associated airspace.

Authority: 49 U.S.C. 106(f), 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959-1963 Comp., p. 389.

Correction to Final Rule

■ Accordingly, pursuant to the authority delegated to me, in the **Federal Register** of June 22, 2017 (82 FR 28404) FR Doc. 2017-13048, Amendment of Class E Airspace; Hilo HI, is corrected as follows:

§ 71.1 [Amended]

Paragraph 5000 Class D Airspace.

* * * * *

AWP HI D Hilo, HI [Amended]

Hilo International Airport, HI
(Lat. 19°43'13" N., long. 155°02'55" W.)

That airspace extending upward from the surface to and including 2,500 feet MSL within a 4.3-mile radius of Hilo International Airport. This Class D airspace area is effective during the specific dates and times established in advance by a Notice to Airmen. The effective date and time will thereafter be continuously published in the Pacific Chart Supplement.

Paragraph 6002 Class E Airspace Areas Designated as a Surface Area.

* * * * *

AWP HI E2 Hilo, HI [Amended]

Hilo International, HI
(Lat. 19°43'13" N., long. 155°02'55" W.)

That airspace extending upward from the surface within a 4.3-mile radius of Hilo International Airport. This Class E airspace area is effective during the specific dates and

times established in advance by a Notice to Airmen. The effective date and time will thereafter be continuously published in the Pacific Chart Supplement.

Paragraph 6004 Class E Airspace Areas Designated as an Extension to a Class D or Class E Surface Area.

* * * * *

AWP HI E4 Hilo, HI [Corrected]

Hilo International Airport, HI
(Lat. 19°43'13" N., long. 155°02'55" W.)
Hilo VORTAC
(Lat. 19°43'17" N., long. 155°00'39" W.)

That airspace extending upward from the surface within 3 miles each side of the Hilo VORTAC 090° radial, extending from the 4.3-mile radius of Hilo International Airport to 8.7 miles east of the Hilo VORTAC.

Paragraph 6005 Class E Airspace Extending Upward From 700 Feet or More Above the Surface of the Earth.

* * * * *

AWP HI E5 Hilo, HI [Amended]

Hilo International Airport, HI
(Lat. 19°43'13" N., long. 155°02'55" W.)
Hilo VORTAC
(Lat. 19°43'17" N., long. 155°00'39" W.)

That airspace extending upward from 700 feet above the surface within a 4.3-mile radius of Hilo International Airport and within 3 miles each side of the Hilo VORTAC 090° radial, extending from the 4.3-mile radius to 8.7 miles east of the VORTAC and that airspace extending from the 4.3-mile radius to the 7.4-mile radius of the Hilo International Airport extending clockwise from a line 1.8 miles southwest of and parallel to the Hilo VORTAC 321° radial to a line 3 miles north of and parallel to the Hilo VORTAC 090° radial.

Issued in Seattle, Washington, on August 3, 2017.

Byron Chew,

Acting Group Manager, Operations Support Group, Western Service Center.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 133

[Docket No. FDA-2017-D-4713]

Ultrafiltered Milk in the Production of Standardized Cheeses and Related Cheese Products: Guidance for Industry; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notification of availability.

SUMMARY: The Food and Drug Administration (FDA or we) is announcing the availability of a

guidance for industry entitled “Ultrafiltered Milk in the Production of Standardized Cheeses and Related Cheese Products: Guidance for Industry.” The guidance advises manufacturers who wish to use ultrafiltered milk (UF milk) or ultrafiltered nonfat milk (UF nonfat milk) in the production of standardized cheeses and related cheese products that, pending completion of a rulemaking regarding the use of UF milk in the production of these products, we intend to exercise enforcement discretion regarding the use of fluid UF milk and fluid UF nonfat milk in the production of standardized cheeses and related cheese products. We also intend to exercise enforcement discretion regarding the declaration of ingredients in the labeling of standardized cheeses and related cheese products when fluid UF milk and fluid UF nonfat milk are used as ingredients.

DATES: The announcement of the guidance is published in the **Federal Register** on August 14, 2017. Submit either electronic or written comments on FDA guidance at any time.

ADDRESSES: You may submit comments as follows:

Electronic Submissions

Submit electronic comments in the following way:

- **Federal eRulemaking Portal:** <https://www.regulations.gov>. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to <https://www.regulations.gov> will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on <https://www.regulations.gov>.

- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see “Written/Paper Submissions” and “Instructions”).

Written/Paper Submissions

Submit written/paper submissions as follows:

- **Mail/Hand delivery/Courier (for written/paper submissions):** Dockets

Management Staff (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in “Instructions.”

Instructions: All submissions received must include the Docket No. FDA-2017-D-4713 for “Ultrafiltered Milk in the Production of Standardized Cheeses and Related Cheese Products: Guidance for Industry.” Received comments will be placed in the docket and, except for those submitted as “Confidential Submissions,” publicly viewable at <https://www.regulations.gov> or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday.

- **Confidential Submissions—**To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states “THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.” We will review this copy, including the claimed confidential information, in our consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on <https://www.regulations.gov>. Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as “confidential.” Any information marked as “confidential” will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: <https://www.gpo.gov/fdsys/pkg/FR-2015-09-18/pdf/2015-23389.pdf>.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to <https://www.regulations.gov> and insert the docket number, found in brackets in the heading of this document, into the “Search” box and follow the prompts and/or go to the Dockets Management

Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

Submit written requests for single copies of the guidance to the Office of Nutrition and Food Labeling, Center for Food Safety and Applied Nutrition (HFS-830), Food and Drug Administration, 5001 Campus Dr., College Park, MD 20740. Send two self-addressed adhesive labels to assist that office in processing your request. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the guidance.

FOR FURTHER INFORMATION CONTACT:

Terri Wenger, Center for Food Safety and Applied Nutrition (HFS-800), Food and Drug Administration, 5001 Campus Dr., College Park, MD 20740, 240-402-2373.

SUPPLEMENTARY INFORMATION:

I. Background

We are announcing the availability of a guidance for industry entitled “Ultrafiltered Milk in the Production of Standardized Cheeses and Related Cheese Products: Guidance for Industry.” We are issuing this guidance consistent with our good guidance practices regulation (21 CFR 10.115). The guidance represents the current thinking of FDA on this topic. It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations.

Our regulations specify the standards of identity for cheeses and related cheese products in part 133 (21 CFR part 133). The general provisions within part 133, in part, define “milk” and “nonfat milk” that may be used in the manufacture of cheeses and related cheese products. The definitions for “milk” and “nonfat milk” in § 133.3(a) and (b), respectively, list different forms of milk and nonfat milk, including concentrated, reconstituted, and dried forms, that may be used in the making of cheeses and related cheese products. However, fluid or dried filtered forms of milk obtained through mechanical filtration of milk or nonfat milk are not included within these definitions. Therefore, while current regulations permit the use of concentrated, reconstituted, and dried forms of milk and nonfat milk as basic dairy ingredients (*i.e.*, the only difference in these ingredients is the amount of water), they do not provide for the use of fluid or dried filtered milk or fluid or dried filtered nonfat milk as basic dairy ingredients in standardized cheeses and related cheese products.

Mechanical filtration technologies available for milk processing include

ultrafiltration. For purposes of this guidance, we consider filtration to be a process whereby milk is passed over a series of semipermeable membranes with varying pore sizes. Ultrafiltration retains macromolecules and particles larger than about 0.001–0.02 micrometers. In dairy processing, ultrafiltration is typically used to retain all protein components of milk, including casein and whey proteins, while some of the lactose, minerals, and water soluble vitamins present in milk are lost along with water.

For purposes of the guidance, UF milk means raw or pasteurized milk that is passed over one or more semipermeable membranes to partially remove water, lactose, minerals, and water-soluble vitamins without altering the casein:whey protein ratio of the milk and resulting in a liquid product. UF nonfat milk is defined similarly, except that raw or pasteurized nonfat milk is used.

In the **Federal Register** of October 19, 2005 (70 FR 60751), we issued a proposed rule that would amend our regulations to provide for the use of fluid UF milk in the manufacture of standardized cheeses and related cheese products. We tentatively concluded that the proposed rule, if finalized, would promote honesty and fair dealing in the interest of consumers and, to the extent practicable, achieve consistency with existing international standards of identity for cheeses and related cheese products.

While we have not completed the rulemaking as of August 2017, we are aware of issues regarding UF milk in the United States. In brief, due to recent developments in the export market, the United States dairy industry is experiencing an oversupply of and pricing challenges with domestically produced UF milk (Refs. 1 and 2). Additionally, we have received requests to exercise enforcement discretion while the rulemaking is pending, in part to mitigate the impact on U.S. companies producing UF milk (Ref. 3).

FDA believes that food standards should provide for flexibility in manufacturing procedures and ingredients, provided that the basic nature and essential characteristics of the food are preserved. Given the oversupply of UF milk and the pending rulemaking, through this guidance we are announcing our intent to exercise enforcement discretion regarding the use of fluid UF milk and fluid UF nonfat milk in the production of standardized cheeses and related cheese products under part 133, in addition to the other required dairy ingredients, provided that the physical, chemical, and

organoleptic properties of the cheese or cheese product are not affected. FDA is also announcing its intent to exercise enforcement discretion with respect to the labeling of standardized cheeses and related cheese products, when, in addition to milk or nonfat milk, fluid UF milk or fluid UF nonfat milk is used as an ingredient, but is not declared in the ingredient statement, provided that milk or nonfat milk is declared in the ingredient statement. We are exercising enforcement discretion with respect to the labeling of fluid UF milk and fluid UF nonfat milk in recognition of the costs and logistics involved in label changes; however, we encourage industry to identify these ingredients as “ultrafiltered milk” and “ultrafiltered nonfat milk” to the extent feasible and appropriate. We intend to exercise enforcement discretion until we have completed a rulemaking process amending our regulations with respect to the issues covered by this guidance, or announce in the **Federal Register** our determination not to proceed with such a rulemaking.

We are issuing this guidance without prior public comment under 21 CFR 10.115(g)(2) because we have determined that prior public participation is not feasible or appropriate, as this guidance implements a temporary enforcement policy to address an oversupply of UF pending the completion of rulemaking regarding the use of UF milk in the production of standardized cheeses and related cheese products. The oversupply of UF milk would be worsened if we deferred exercising of enforcement discretion regarding the matters in the guidance while providing an opportunity for prior public comment. (We also note that, as we stated in the preamble to the 2005 proposed rule, we tentatively conclude that fluid UF milk can be used in standardized cheeses while maintaining the essential characteristics of those cheeses specified in the individual standards of identity in part 133 (see 70 FR 60751 at 60756 through 60757).) However, as with all Agency guidances, the public may comment on the guidance at any time. This guidance is not subject to Executive Order 12866.

II. Electronic Access

Persons with access to the internet may obtain the guidance at either <https://www.fda.gov/Food/Guidances> or <https://www.regulations.gov>. Use the FDA Web site listed in the previous sentence to find the most current version of the guidance.

III. References

The following references are on display in the Dockets Management Staff (see **ADDRESSES**) and are available for viewing by interested persons between 9 a.m. and 4 p.m., Monday through Friday; they are also available electronically at <https://www.regulations.gov>. FDA has verified the Web site addresses, as of the date this document publishes in the **Federal Register**, but Web sites are subject to change over time.

Arbitrage Guidance for Tax-Exempt Bonds; Correction

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Correcting amendment.

SUMMARY: This document contains a correction to final regulations (TD 9777) that were published in the **Federal Register** on Monday, July 18, 2016 (81 FR 46582). The final regulations relate to the arbitrage restrictions under

section 148 of the Internal Revenue Code applicable to tax-exempt bonds and other tax-advantaged bonds issued by State and local governments.

DATES: This correction is effective August 14, 2017 and applicable July 18, 2016.

FOR FURTHER INFORMATION CONTACT: Spence Hanemann at (202) 317-6980 (not a toll-free number).

SUPPLEMENTARY INFORMATION:

Background

The final regulations (TD 9777) that are the subject of this correction are under section 148 of the Internal Revenue Code.

Need for Correction

As published, the final regulations (TD 9777) contain an error that may prove to be misleading and are in need of clarification.

List of Subjects in 26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

Correction of Publication

Accordingly, 26 CFR part 1 is amended by making the following correcting amendment:

PART 1—INCOME TAXES

■ **Paragraph 1.** The authority citation for part 1 continues to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

§ 1.148-11 [Amended]

■ **Par. 2.** Amend § 1.148-11(k)(1) by adding "1.148-6(d)(3)(iii)(A);" before "1.148-6(d)(4)".

Martin V. Franks,

Chief, Publications and Regulations Branch, Legal Processing Division, Associate Chief Counsel (Procedure and Administration).

BILLING CODE 4830-01-P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA-R09-OAR-2017-0034; FRL-9965-26-Region 9]

Approval of California Air Plan Revisions, San Joaquin Valley Unified Air Pollution Control District

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is taking final action to approve a revision to the San Joaquin Valley Unified Air Pollution Control District (SJVUAPCD or "the District") portion of the California State Implementation Plan (SIP). This revised rule concerns emissions of oxides of nitrogen, carbon monoxide, oxides of sulfur, and particulate matter of 10 microns or less from boilers, steam generators and process heaters. We are approving a local rule that regulates these emission sources under the Clean Air Act (CAA or the Act).

DATES: This rule will be effective on September 13, 2017.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA-R09-OAR-2017-0034. All documents in the docket are listed on the <http://www.regulations.gov> Web site. Although listed in the index, some information is not publicly available, e.g., Confidential Business Information or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available through <http://www.regulations.gov>, or please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section for additional availability information.

FOR FURTHER INFORMATION CONTACT: Nancy Levin, EPA Region IX, (415) 972-3848, levin.nancy@epa.gov.

SUPPLEMENTARY INFORMATION: Throughout this document, "we," "us" and "our" refer to the EPA.

Table of Contents

- I. Proposed Action
- II. Public Comments and EPA Responses
- III. EPA Action
- IV. Incorporation by Reference
- V. Statutory and Executive Order Reviews

I. Proposed Action

On March 21, 2017 (82 FR 14496), the EPA proposed to approve the following rule into the California SIP.

Local agency	Rule No.	Rule title	Amended	Submitted
SJVUAPCD	4307	Boilers, Steam Generators, and Process Heaters—2.0 MMBtu/hr to 5.0 MMBtu/hr.	4/21/16	8/22/16

We proposed to approve this rule because we determined that it complied with the relevant CAA requirements. Our proposed action contains more information on the rule and our evaluation.

II. Public Comments and EPA Responses

The EPA's proposed action provided a 30-day public comment period. During this period, we received one comment.

Comment: The commenter asked how the rule revisions would affect San Joaquin Valley residents, who would benefit from the revisions, and whether the project's impact on human health and the environment outweigh the costs of implementing the revisions.

Response: This comment does not provide any new information or basis for either supporting or opposing EPA's proposal. It merely poses three questions that were previously addressed by EPA's proposal and supporting docket materials. Nonetheless, out of courtesy to the commenter, we summarize our previous analysis, as follows. Prior to the rule revision, the rule exempted tree-nut pasteurizers fired exclusively on natural gas. The revisions expand the exemption to tree-nut pasteurizers fired by liquefied petroleum gas (LPG). The District anticipates a handful of new LPG-fired tree-nut pasteurizers will benefit from the rule revisions, but predicts that the difference in emissions from LPG instead of natural gas will be negligible. The District states that "[T]he proposed amendment would not result in new or more stringent regulatory controls and would not affect air quality or emission limitations . . . [and that] no costs are associated with this proposed rule amendment."¹

III. EPA Action

No comments were submitted that change our assessment of the rule as described in our proposed action. Therefore, as authorized in section 110(k)(3) of the Act, the EPA is fully approving this rule into the California SIP.

IV. Incorporation by Reference

In this rule, the EPA is finalizing regulatory text that includes

incorporation by reference. In accordance with the requirements of 1 CFR 51.5, the EPA is finalizing the incorporation by reference of the SJVUAPCD rule described in the amendments to 40 CFR part 52 set forth below. The EPA has made, and will continue to make, these documents available through www.regulations.gov and at the EPA Region IX Office (please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section of this preamble for more information).

V. Statutory and Executive Order Reviews

Under the Clean Air Act, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, the EPA's role is to approve state choices, provided that they meet the criteria of the Clean Air Act. Accordingly, this action merely approves state law as meeting federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);

- is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act; and

- does not provide the EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where the EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications and will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

The Congressional Review Act, 5 U.S.C. 801 *et seq.*, as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. The EPA will submit a report containing this action and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a "major rule" as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by October 13, 2017. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements (see section 307(b)(2)).

BILLING CODE 6560-50-P

ENVIRONMENTAL PROTECTION AGENCY**40 CFR Part 52**

[EPA-R01-OAR-2017-0150; FRL-9965-92-Region 1]

Air Plan Approval; Connecticut; Nonattainment New Source Review Permit Requirements for the 2008 8-Hour Ozone Standard

AGENCY: Environmental Protection Agency (EPA).

ACTION: Direct final rule.

SUMMARY: The Environmental Protection Agency (EPA) is taking direct final action to approve the state implementation plan (SIP) revision submitted on March 9, 2017, by the State of Connecticut, through the Connecticut Department of Energy and Environmental Protection (CT DEEP), addressing the nonattainment new source review (NNSR) requirements for the 2008 8-hour ozone National Ambient Air Quality Standards (NAAQS). The SIP revision addresses both of Connecticut’s ozone nonattainment areas for the 2008 ozone NAAQS; the Greater Connecticut area and the Connecticut portion of the New York-N. New Jersey-Long Island, NY-NJ-CT area. The Connecticut portion of the New York-N. New Jersey-Long Island, NY-NJ-CT ozone nonattainment area consists of Fairfield, New Haven, and Middlesex counties. The Greater Connecticut nonattainment area includes the rest of the State. This action is being taken pursuant to the Clean Air Act (CAA or Act) and its implementing regulations.

DATES: This direct final rule is effective October 13, 2017 without further notice, unless EPA receives adverse comments by September 13, 2017. If EPA receives such comments, it will publish a timely withdrawal of the direct final rule in the *Federal Register* and inform the public that the rule will not take effect.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA-R01-OAR-2017-0150 at <https://www.regulations.gov>. Follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from *Regulations.gov*. EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and

should include discussion of all points you wish to make. EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.*, on the web, cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit <https://www2.epa.gov/dockets/commenting-epa-dockets>.

Mr. Dahl’s telephone number is (617) 918-1657; email address: dahl.donald@epa.gov.

SUPPLEMENTARY INFORMATION:

Throughout this document whenever “we,” “us,” or “our” is used, we mean EPA.

Organization of this document. The following outline is provided to aid in locating information in this preamble.

- I. Background and Purpose
- II. Analysis of Connecticut’s Nonattainment New Source Review Requirements
- III. Final Action
- IV. Statutory and Executive Order Reviews

I. Background and Purpose

On March 12, 2008, EPA promulgated a revised 8-hour ozone NAAQS of 0.075 parts per million (ppm). See 73 FR 16436 (March 27, 2008). Under EPA’s regulations at 40 CFR 50.15, the 2008 8-hour ozone NAAQS is attained when the 3-year average of the annual fourth-highest daily maximum 8-hour average ambient air quality ozone concentrations is less than or equal to 0.075 ppm. Ambient air quality monitoring data for the 3-year period must meet a data completeness requirement. The ambient air quality monitoring data completeness requirement is met when the average percent of days with valid ambient monitoring data is greater than 90 percent, and no single year has less than 75 percent data completeness as determined in Appendix I of part 50.

Upon promulgation of a new or revised NAAQS, the CAA requires EPA to designate as nonattainment any area that is violating the NAAQS based on the three most recent years of ambient air quality data at the conclusion of the designation process. The two Connecticut areas were designated nonattainment for the 2008 8-hour ozone NAAQS on April 30, 2012

(effective July 20, 2012) using 2009–2011 ambient air quality data. *See* 77 FR 30088 (May 21, 2012). At the time of designation, both Connecticut areas were classified as marginal nonattainment areas. On March 6, 2015, EPA issued a final rule entitled, “Implementation of the 2008 National Ambient Air Quality Standards for Ozone: State Implementation Plan Requirements” (SIP Requirements Rule), which establishes the requirements that state, tribal, and local air quality management agencies must meet as they develop implementation plans for areas where air quality exceeds the 2008 8-hour ozone NAAQS.¹ *See* 80 FR 12264. Areas that were designated as marginal ozone nonattainment areas were required to attain the 2008 8-hour ozone NAAQS no later than July 20, 2015, based on 2012–2014 monitoring data. *See* 40 CFR 51.1103. The Connecticut areas did not attain the 2008 8-hour ozone NAAQS by July 20, 2015, and therefore on April 11, 2016, the EPA Administrator signed a final rule reclassifying both Connecticut areas from marginal nonattainment areas to moderate nonattainment areas for the 2008 8-hour ozone standard. *See* 81 FR 26697 (May 4, 2016). Moderate areas are required to attain the 2008 8-hour ozone NAAQS no later than July 20, 2018, six years after the effective date of the initial nonattainment designations. *See* 40 CFR 51.1103.

Based on the initial nonattainment designation for the 2008 8-hour ozone standard, Connecticut was required to develop a SIP revision addressing certain CAA requirements for both nonattainment areas. One component of that was a SIP addressing nonattainment new source review. *See* 40 CFR 51.1114. On March 9, 2017, Connecticut submitted a SIP revision addressing the NNSR requirements related to the 2008 8-hour ozone NAAQS for both nonattainment areas.² EPA’s analysis of

how this SIP revision addresses the NNSR requirements for the 2008 8-hour ozone NAAQS is provided below.

II. Analysis of Connecticut’s Nonattainment New Source Review Requirements

The minimum SIP requirements for NNSR permitting programs for the 2008 8-hour ozone NAAQS are located in 40 CFR 51.165. These NNSR program requirements include those promulgated in the “Phase 2 Rule” implementing the 1997 8-hour ozone NAAQS (70 FR 71612 (November 29, 2005)) and the SIP Requirements Rule implementing the 2008 8-hour ozone NAAQS. Under the Phase 2 Rule, the SIP for each ozone nonattainment area must contain NNSR provisions that: Set major source thresholds for NO_x and VOC pursuant to 40 CFR 51.165(a)(1)(iv)(A)(1)(i) through (iv) and (a)(1)(iv)(A)(2); classify physical changes at a major source if the change would constitute a major source by itself pursuant to 40 CFR 51.165(a)(1)(iv)(A)(3); consider any significant net emissions increase of NO_x as a significant net emissions increase for ozone pursuant to 40 CFR 51.165(a)(1)(v)(E); consider increases of VOC emissions in extreme ozone nonattainment areas as significant net emissions increases and major modifications for ozone pursuant to 40 CFR 51.165(a)(1)(v)(F); set significant emissions rates for VOC and NO_x as ozone precursors pursuant to 40 CFR 51.165(a)(1)(x)(A) through (C) and (E); contain provisions for emissions reductions credits pursuant to 40 CFR 51.165(a)(3)(ii)(C)(1) and (2); provide that the requirements applicable to VOC also apply to NO_x pursuant to 40 CFR 51.165(a)(8); and set offset ratios for VOC and NO_x pursuant to 40 CFR 51.165(a)(9)(i) through (iii) (renumbered as (a)(9)(ii) through (iv) under the SIP Requirements Rule for the 2008 8-hour ozone NAAQS). Under the SIP Requirements Rule for the 2008 8-hour ozone NAAQS, the SIP for each ozone nonattainment area designated nonattainment for the 2008 8-hour ozone NAAQS and designated nonattainment for the 1997 ozone NAAQS on April 6, 2015, must also contain NNSR provisions that include the anti-backsliding requirements at 40 CFR 51.1105.

deadline contained in CAA section 182(a)(2)(C) applies to NNSR SIP revisions for implementing the 8-hour ozone NAAQS. *See* 80 FR 12264, 12267 (March 6, 2015); 70 FR 71612, 71683 (November 29, 2005). The submission of NNSR SIPs due on November 15, 1992, satisfied the requirement for states to submit NNSR SIP revisions to meet the requirements of CAA sections 172(c)(5) and 173 within two years after the date of enactment of the 1990 CAA Amendments. *Id.*

Connecticut’s longstanding SIP-approved NNSR program, established in Regulations of Connecticut State Agencies (RCSA) Sections 22a–174–1 (definitions), and 22a–174–3a (applicability and substantive requirements) applies to the construction and modification of stationary sources, including major stationary sources in nonattainment areas. In its SIP revision, Connecticut certifies that the version of RCSA Sections 22a–174–1 and 22a–174–3a in the current SIP meet the federal NNSR requirements for both ozone nonattainment areas within Connecticut. EPA last approved revisions to the SIP-approved version of Connecticut’s NNSR rule in 2015 addressing, among other things, the NNSR requirements that apply when a major source or major modification causes a significant impact in an area that is violating the PM_{2.5} ambient air quality standard.

Connecticut’s SIP-approved NNSR regulation retains the NNSR requirements applicable to serious and severe nonattainment areas, even though the two nonattainment areas in the State are now classified as moderate nonattainment under the 2008 8-hour ozone NAAQS. Connecticut’s SIP-approved NNSR regulation defines the term “Severe nonattainment area for ozone” as including the cities and towns that were historically part of the severe New York-N. New Jersey-Long Island, NY–NJ–CT ozone nonattainment area designated on November 15, 1990 for the 1-hr ozone NAAQS. The term “Serious nonattainment area for ozone” is defined to include “all towns within the State of Connecticut, except those towns located in the severe nonattainment area for ozone.” This is the portion of the State that was historically part of the serious Greater Connecticut nonattainment area designated on November 15, 1990 for the 1-hr ozone NAAQS. The SIP’s definition of “Major stationary source” then uses these terms to define the NO_x and VOC emission thresholds when determining if a source is major for ozone. The SIP’s major stationary source threshold for NO_x and VOC in the area defined as a “Severe nonattainment area for ozone” is 25 tons per year. The SIP’s major stationary source threshold for NO_x and VOC in the area defined as a “Serious nonattainment area for ozone” is 50 tons per year. These thresholds for NO_x and VOC are consistent with EPA regulations.

Connecticut’s NNSR SIP also properly addresses the thresholds for VOC and NO_x, as precursors to ozone, in the definition of “Major modification” by

¹ The SIP Requirements Rule addresses a range of nonattainment area SIP requirements for the 2008 ozone NAAQS, including requirements pertaining to attainment demonstrations, reasonable further progress (RFP), reasonably available control technology, reasonably available control measures, major new source review, emission inventories, and the timing of SIP submissions and of compliance with emission control measures in the SIP. The rule also revokes the 1997 ozone NAAQS and establishes anti-backsliding requirements.

² States have three years after the effective date of designation for the 2008 8-hour ozone NAAQS to submit SIP revisions addressing NNSR for their nonattainment areas. *See* 40 CFR 51.1114. Connecticut’s SIP revision certified that its SIP-approved state regulation addressing nonattainment new source review for all new stationary sources and modified existing stationary sources in the State exceeds the requirements of section 182(a)(2)(C) for the 2008 8-hour ozone NAAQS. However, EPA does not believe that the two-year

establishing the threshold for either of these ozone precursors at 25 tons per year. This threshold for a major modification is consistent with EPA regulations. Lastly, since Connecticut's NNSR SIP retains the definitions "Serious nonattainment area for ozone" and "Severe nonattainment area for ozone" that are based on how the State was designated nonattainment on November 15, 1990 for the 1-hr ozone standard, the State's SIP meets the anti-backsliding requirements.

III. Final Action

EPA is approving Connecticut's March 9, 2017, SIP revision addressing the NNSR requirements for the 2008 8-hour ozone NAAQS for both nonattainment areas in the State. The approval encompasses both the original designations under the 2008 8-hour ozone NAAQS of marginal and the subsequent reclassification of both nonattainment areas to moderate. The approval also includes the applicable NNSR provisions of Connecticut's regulations that satisfy the CAA's anti-backsliding requirements. As discussed above in this notice, Connecticut's SIP retains the NNSR requirements applicable to serious and severe nonattainment areas, even though the two nonattainment areas in the State are now classified as moderate nonattainment areas. EPA has concluded that the State's submission fulfills the 40 CFR 51.1114 revision requirement and meets the requirements of CAA section 110 and the minimum SIP requirements of 40 CFR 51.165.

The EPA is publishing this action without prior proposal because the Agency views this as a noncontroversial amendment and anticipates no adverse comments. However, in the proposed rules section of this **Federal Register** publication, EPA is publishing a separate document that will serve as the proposal to approve the SIP revision should relevant adverse comments be filed. This rule will be effective October 13, 2017 without further notice unless the Agency receives relevant adverse comments by September 13, 2017.

If the EPA receives such comments, then EPA will publish a notice withdrawing the final rule and informing the public that the rule will not take effect. All public comments received will then be addressed in a subsequent final rule based on the proposed rule. The EPA will not institute a second comment period on the proposed rule. All parties interested in commenting on the proposed rule should do so at this time. If no such comments are received, the public is advised that this rule will be effective

on October 13, 2017 and no further action will be taken on the proposed rule. Please note that if EPA receives adverse comment on an amendment, paragraph, or section of this rule and if that provision may be severed from the remainder of the rule, EPA may adopt as final those provisions of the rule that are not the subject of an adverse comment.

In addition, Connecticut was issued a finding of failure to submit, which started an 18 month sanctions clock and a 24 month Federal Implementation Plan (FIP) clock. See 82 FR 9158 (February 3, 2017). The 18 month sanctions clock was stopped when Connecticut submitted the SIP and we determined it complete on April 19, 2017. The 24 month FIP clock will stop upon the effective date of our final approval, October 13, 2017.

IV. Statutory and Executive Order Reviews

Under the Clean Air Act, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the Clean Air Act. Accordingly, this action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104-4);
- Does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);

- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);

- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act; and

- Does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications and will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

The Congressional Review Act, 5 U.S.C. 801 *et seq.*, as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this action and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a "major rule" as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by October 13, 2017. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. Parties with objections to this direct final rule are encouraged to file a comment in response to the parallel notice of proposed rulemaking for this action published in the proposed rules section of today's **Federal Register**, rather than file an immediate petition for judicial review of this direct final rule, so that

EPA can withdraw this direct final rule and address the comment in the proposed rulemaking. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Nitrogen dioxide, Ozone, Reporting and recordkeeping requirements, Volatile organic compounds.

Dated: July 24, 2017.

Deborah A. Szaro,

Acting Regional Administrator, EPA New England.

40 CFR part 52 is amended as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

■ 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart H—Connecticut

■ 2. Section 52.377 is amended by adding paragraph (r) to read as follows:

§ 52.377 Control strategy: Ozone.

* * * * *

(r) *Approval.* Submittal from the Connecticut Department of Energy and Environmental Protection dated March 9, 2017, to address the nonattainment new source review requirements for the 2008 8-hour ozone NAAQS for the Greater Connecticut and the New York-N. New Jersey-Long Island, NY-NJ-CT ozone nonattainment areas, as it meets the requirements for both the State's marginal and moderate classifications.

RIN 2060-AT15

Revisions to Procedure 2—Quality Assurance Requirements for Particulate Matter Continuous Emission Monitoring Systems at Stationary Sources

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is finalizing revisions to Procedure 2 that were proposed in the **Federal Register** on November 21, 2016. Procedure 2 includes quality assurance/quality control (QA/QC) procedures for particulate matter (PM) continuous emission monitoring systems (CEMS) used for compliance determination at stationary sources. The QA procedures specify the minimum requirements necessary for the control and assessment of the quality of PM CEMS data submitted to the EPA and other regulatory authorities. This action establishes consistent requirements for ensuring and assessing the quality of PM data measured by CEMS that meet initial acceptance requirements in Performance Specification (PS) 11 of appendix B to part 60.

DATES: This final rule is effective on September 13, 2017.

ADDRESSES: *Docket:* The EPA has established a docket for this rulemaking under Docket ID No. EPA-HQ-OAR-2016-0382. All documents in the docket are listed at <https://www.regulations.gov>.

Although listed in the index, some information is not publicly available, e.g., Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available either electronically through www.regulations.gov or in hard copy at the EPA Docket Center, Room 3334, EPA WJC West Building, 1301 Constitution Avenue NW., Washington, DC 20004. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566-1744, and the telephone number for the EPA Docket Center is (202) 566-1742.

FOR FURTHER INFORMATION CONTACT: Ms. Kimberly Garnett, Office of Air Quality Planning and Standards, Air Quality Assessment Division, Measurement Technology Group (Mail Code: E143-02), U.S. Environmental Protection Agency, Research Triangle Park, NC 27709; telephone number: (919) 541-1158; fax number: (919) 541-0516; email address: garnett.kim@epa.gov.

SUPPLEMENTARY INFORMATION:

The information in this document is organized as follows:

I. General Information

A. Does this action apply to me?

B. Where can I get a copy of this document and other related information?

C. Judicial Review

II. Background

III. Final Revisions to Procedure 2

IV. Summary of Major Comments and Responses

V. Statutory and Executive Order Reviews

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

B. Paperwork Reduction Act (PRA)

C. Regulatory Flexibility Act (RFA)

D. Unfunded Mandates Reform Act (UMRA)

E. Executive Order 13132: Federalism

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

H. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use

I. National Technology Transfer and Advancement Act (NTTAA)

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

K. Congressional Review Act (CRA)

I. General Information

A. Does this action apply to me?

The entities potentially affected by this rule include any facility that is required to install and operate a PM CEMS under any provision of title 40 of the Code of Federal Regulations. If you have any questions regarding the applicability of this action to a particular entity, consult the person listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.

B. Where can I get a copy of this document and other related information?

In addition to being available in the docket, an electronic copy of this action is available on the Internet through the EPA's Technology Transfer Network (TTN) Web site, a forum for information and technology exchange in various areas of air quality management, measurement standards and implementation, etc. Following publication in the **Federal Register**, the EPA will post the **Federal Register** version of the promulgation and key technical documents on the TTN at <http://www.epa.gov/ttn/emc/promulgated.html>.

C. Judicial Review

Under section 307(b)(1) of the Clean Air Act (CAA), judicial review of this final rule is available only by filing a petition for review in the U.S. Court of Appeals for the District of Columbia Circuit by October 13, 2017. Under

section 307(d)(7)(B) of the CAA, only an objection to this final rule that was raised with reasonable specificity during the period for public comment can be raised during judicial review. Moreover, under section 307(b)(2) of the CAA, the requirements established by this final rule may not be challenged separately in any civil or criminal proceedings brought by the EPA to enforce these requirements. Section 307(d)(7)(B) of the CAA further provides that “[o]nly an objection to a rule or procedure which was raised with reasonable specificity during the period for public comment (including any public hearing) may be raised during judicial review.” This section also provides a mechanism for the EPA to convene a proceeding for reconsideration, “[i]f the person raising an objection can demonstrate to the EPA that it was impracticable to raise such objection within [the period for public comment] or if the grounds for such objection arose after the period for public comment (but within the time specified for judicial review) and if such objection is of central relevance to the outcome of the rule.” Any person seeking to make such a demonstration to us should submit a Petition for Reconsideration to the Office of the Administrator, U.S. EPA, Room 3000, William Jefferson Clinton Building, 1200 Pennsylvania Avenue NW., Washington, DC 20460, with a copy to both the person(s) listed in the preceding **FOR FURTHER INFORMATION CONTACT** section, and the Associate General Counsel for the Air and Radiation Law Office, Office of General Counsel (Mail Code 2344A), U.S. EPA, 1200 Pennsylvania Avenue NW., Washington, DC 20460. Filing a petition for reconsideration by the Administrator of this final action does not affect the finality of this action for the purposes of judicial review, nor does it extend the time within which a petition for judicial review must be filed, and shall not postpone the effectiveness of this action.

II. Background

On January 12, 2004, the EPA promulgated Procedure 2—Quality Assurance Requirements for Particulate Matter Continuous Emission Monitoring Systems at Stationary Sources (69 FR 1786). Procedure 2, sections 10.4 (5) and (6), contain a requirement for conducting the annual Relative Correlation Audit (RCA) or Relative Response Audit (RRA) QA/QC test procedures, in which a specified amount of the required number of PM CEMS response values, or data points, must lie within the PM CEMS response range used to develop the PM CEMS

correlation curve. In other words, when conducting the annual QA/QC tests, the PM CEMS response values should not be higher or lower than the values used to develop the correlation curve for that PM CEMS. Recently, as PM emission limits have been reduced and facilities have installed more robust PM emission control devices, a number of facilities have found that their PM emissions are lower than their PM CEMS correlation curve and, as a result, the facilities are now unable to meet the criteria needed to pass the annual Procedure 2 QA/QC tests. The EPA proposed to modify this language in Procedure 2 through a direct final rule (81 FR 83160; November 21, 2016) and a parallel proposed rule (81 FR 83189; November 21, 2016). In the direct final rule, the EPA stated that if the agency received any significant and relevant adverse comments to the direct final rule, it would withdraw the direct final rule and address all public comments in a subsequent final rule based on the proposed rule. The EPA stated it would not institute a second comment period on the proposed rule (81 FR 83161, November 21, 2016). The EPA received one significant and relevant adverse comment and, therefore, published a withdrawal of the direct final rule (81 FR 10711; February 15, 2017). With this action, the EPA is responding to the adverse comment and finalizing revisions to Procedure 2.

III. Final Revisions to Procedure 2

This action finalizes the changes to Procedure 2 that were proposed on November 21, 2016 (81 FR 83189), and responds to the adverse comment received in response to that proposal by addressing conflicting language in sections 10.4(5) and 10.4(6).

IV. Summary of Major Comments and Responses

A commenter stated that the revisions to Procedure 2, as proposed by the EPA on November 21, 2016, do not achieve the intended result. As the commenter points out, sections 10.4(5) and 10.4(6) still contain language which requires that a portion of the data points from the RRA and RCA “*must lie within the PM CEMS output range used to develop your correlation curve.*” The commenter suggested that language in sections 10.4(5)(ii) and 10.4(6)(ii) be removed. The EPA agrees with the commenter and removed the language in sections 10.4(5)(ii) and 10.4(6)(ii). In addition, the language allowing the extension of the correlation curve to accommodate points that are lower than the original curve has been moved to make it clear that it is needed only when determining if the RRA and RCA meet the ± 25

percent criteria originally contained in sections 10.4(5)(iii) and 10.4(6)(iii).

V. Statutory and Executive Order Reviews

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

This action is not a significant regulatory action and was, therefore, not submitted to the Office of Management and Budget (OMB) for review.

B. Paperwork Reduction Act (PRA)

This action does not impose an information collection burden under the PRA. This action provides performance criteria and QA/QC test procedures for assessing the acceptability of PM CEMS performance and data quality. These criteria and QA/QC test procedures do not add information collection requirements beyond those currently required under the applicable regulation.

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA. This action will not impose any requirements on small entities. There are no small entities in the regulated industry for which Procedure 2 applies.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain any unfunded mandate as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. This action imposes no enforceable duty on any state, local or tribal governments or the private sector.

E. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have tribal implications, as specified in Executive Order 13175. Procedure 2 is applicable to facility owners and operators who are responsible for one or more PM CEMS used for monitoring emissions. Thus, Executive Order 13175 does not apply to this action.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

The EPA interprets Executive Order 13045 as applying only to those regulatory actions that concern environmental health or safety risks that the EPA has reason to believe may disproportionately affect children, per the definition of “covered regulatory action” in section 2–202 of the Executive Order. This action is not subject to Executive Order 13045 because it does not concern an environmental health risk or safety risk.

H. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use

This action is not subject to Executive Order 13211, because it is not a significant regulatory action under Executive Order 12866.

I. National Technology Transfer and Advancement Act (NTTAA)

This rulemaking does not involve technical standards.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

The EPA believes that this action will not have disproportionately high and adverse human health or environmental effects on minority or low-income populations because it does not affect the level of protection provided to human health or the environment. This action will help to ensure that emission control devices are operated properly and maintained as needed, thereby helping to ensure compliance with emission standards, which would benefit all affected populations.

K. Congressional Review Act (CRA)

This action is subject to the CRA, and the EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action is not a “major rule” as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 60

Environmental protection, Administrative practice and procedure, Air pollution control, Continuous emission monitoring systems, Particulate matter, Performance specifications, Test methods and procedures.

Dated: August 7, 2017.

E. Scott Pruitt,
Administrator.

For the reasons stated in the preamble, title 40, chapter I of the Code of Federal Regulations is amended as follows:

PART 60—STANDARDS OF PERFORMANCE FOR NEW STATIONARY SOURCES

■ 1. The authority citation for part 60 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

■ 2. In Appendix F, Procedure 2, in section 10.4, paragraphs (5) and (6) are revised to read as follows:

Appendix F to Part 60—Quality Assurance Procedures

* * * * *

Procedure 2—Quality Assurance Requirements for Particulate Matter Continuous Emission Monitoring Systems at Stationary Sources

* * * * *

10.4 * * *

(5) What are the criteria for passing a RCA? To pass a RCA, you must meet the criteria specified in paragraphs (5)(i) and (ii) of this section. If your PM CEMS fails to meet these RCA criteria, it is out of control.

(i) For all 12 data points, the PM CEMS response value can be no greater than the greatest PM CEMS response value used to develop your correlation curve.

(ii) At least 75 percent of a minimum number of 12 sets of PM CEMS and reference method measurements must fall within a specified area on a graph of the correlation regression line. The specified area on the graph of the correlation regression line is defined by two lines parallel to the correlation regression line, offset at a distance of ± 25 percent of the numerical emission limit value from the correlation regression line. If any of the PM CEMS response values resulting from your RCA are lower than the lowest PM CEMS response value of your existing correlation curve, you may extend your correlation regression line to the point corresponding to the lowest PM CEMS response value obtained during the RCA. This extended correlation regression line must then be used to determine if the RCA data meets this criterion.

(6) What are the criteria to pass a RRA? To pass a RRA, you must meet the criteria specified in paragraphs (6)(i) and (ii) of this section. If your PM CEMS fails to meet these RRA criteria, it is out of control.

(i) For all three data points, the PM CEMS response value can be no greater than the greatest PM CEMS response value used to develop your correlation curve.

(ii) At least two of the three sets of PM CEMS and reference method measurements must fall within the same specified area on a graph of the correlation regression line as

required for the RCA and described in paragraph (5)(ii) of this section.

RIN 0648–XF578

Western and Central Pacific Fisheries for Highly Migratory Species; 2017 Bigeye Tuna Longline Fishery Closure

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; fishery closure.

SUMMARY: NMFS is closing the U.S. pelagic longline fishery for bigeye tuna in the western and central Pacific Ocean because the fishery has reached the 2017 catch limit. This action is necessary to ensure compliance with NMFS regulations that implement decisions of the Western and Central Pacific Fisheries Commission (WCPFC).

DATES: Effective 12:01 a.m. local time September 1, 2017, 2017, through December 31, 2017.

ADDRESSES: NMFS prepared a plain language guide and frequently asked questions that explain how to comply with this rule; both are available at <https://www.regulations.gov/docket?D=NOAA-NMFS-2017-0092>.

FOR FURTHER INFORMATION CONTACT: Jarad Makaiau, NMFS Pacific Islands Region, 808–725–5176.

SUPPLEMENTARY INFORMATION: Pelagic longline fishing in the western and central Pacific Ocean is managed, in part, under the Western and Central Pacific Fisheries Convention Implementation Act (Act). Regulations governing fishing by U.S. vessels in accordance with the Act appear at 50 CFR part 300, subpart O.

NMFS established a calendar year 2017 limit of 3,138 metric tons (mt) of bigeye tuna (*Thunnus obesus*) that may be caught and retained in the U.S. pelagic longline fishery in the area of application of the Convention on the Conservation and Management of Highly Migratory Fish Stocks in the Western and Central Pacific Ocean (Convention Area) (82 FR 36341, August 4, 2017). NMFS monitored the retained

catches of bigeye tuna using logbook data submitted by vessel captains and other available information, and determined that the 2017 catch limit would be reached by September 1, 2017.

In accordance with 50 CFR 300.224(e), this rule serves as notification to fishermen, the fishing industry, and the general public that the U.S. longline fishery for bigeye tuna in the Convention Area will be closed during the dates provided in the **DATES** heading. The fishery is scheduled to reopen on January 1, 2018. This rule does not apply to the longline fisheries of American Samoa, Guam, or the Commonwealth of the Northern Mariana Islands, collectively "the territories," as described below.

During the closure, a U.S. fishing vessel may not retain on board, transship, or land bigeye tuna caught by longline gear in the Convention Area, except that any bigeye tuna already on board a fishing vessel upon the effective date of the restrictions may be retained on board, transshipped, and landed, provided that they are landed within 14 days of the start of the closure, that is, by September 15, 2017. This 14-day landing requirement does not apply to a vessel that has declared to NMFS, pursuant to 50 CFR 665.803(a), that the current trip type is shallow-setting.

During the effective period of the restrictions, longline-caught bigeye tuna may be retained on board, transshipped, and landed if the fish are caught by a vessel with a valid American Samoa longline permit, or if the fish are landed in the territories. In either case, the following conditions must be met:

(1) The fish is not caught in the U.S. Exclusive Economic Zone (EEZ) around Hawaii;

(2) Other applicable laws and regulations are followed; and

(3) The vessel has a valid permit issued under 50 CFR 660.707 or 665.801.

Bigeye tuna caught by longline gear during the closure may also be retained on board, transshipped, and/or landed if they are caught by a vessel that is included in a valid specified fishing agreement under 50 CFR 665.819(c), in accordance with 50 CFR 300.224(f)(1)(iv).

During the closure, a U.S. vessel is also prohibited from transshipping bigeye tuna caught in the Convention Area by longline gear to any vessel other than a U.S. fishing vessel with a valid permit issued under 50 CFR 660.707 or 665.801.

The catch limit and this closure do not apply to bigeye tuna caught by longline gear outside the Convention Area, such as in the eastern Pacific

Ocean. To ensure compliance with the restrictions related to bigeye tuna caught by longline gear in the Convention Area, however, the following requirements apply during the closure period (see 50 CFR 300.224):

(1) Longline fishing both inside and outside the Convention Area is not allowed during the same fishing trip. An exception would be a fishing trip that is in progress on September 1, 2017. In that case, the catch of bigeye tuna must be landed by September 15, 2017; and

(2) If a longline vessel fishes outside the Convention Area and the vessel then enters the Convention Area during the same fishing trip, the fishing gear must be stowed and not readily available for fishing in the Convention Area. Specifically, hooks, branch lines, and floats must be stowed and the mainline hauler must be covered.

The above two additional prohibitions do not apply to the following vessels:

(1) Vessels on declared shallow-setting trips pursuant to 50 CFR 665.803(a); and

(2) Vessels operating in the longline fisheries of the territories. This includes vessels included in a valid specified fishing agreement under 50 CFR 665.819(c), in accordance with 50 CFR 300.224(f)(1)(iv). This group also includes vessels with valid American Samoa longline permits and vessels landing bigeye tuna in one of the territories, as long as the bigeye tuna were not caught in the EEZ around Hawaii, the fishing was compliant with all applicable laws, and the vessel has a valid permit issued under 50 CFR 660.707 or 665.801.

Classification

There is good cause under 5 U.S.C. 553(b)(B) to waive prior notice and the opportunity for public comment on this action, because it would be unnecessary and contrary to the public interest. This rule closes the U.S. longline fishery for bigeye tuna in the western and central Pacific as a result of reaching the applicable bigeye tuna catch limit. The limit is codified in Federal regulations and is based on agreed limits established by the Western and Central Pacific Fisheries Commission. 50 CFR 300.224(e) notifies the public that fishing prohibitions will be placed in effect when the limit is reached. NMFS forecasts that the fishery will reach the 2017 limit by September 1, 2017. Longline fishermen have been subject to longline bigeye tuna limits in the western and central Pacific since 2009. They have received ongoing, updated information about the 2017 catch and progress of the fishery in reaching the Convention Area limit via the NMFS

Web site, social media, and other means. This constitutes adequate advance notice of this fishery closure. Additionally, the publication timing of this rule provides longline fishermen with seven days advance notice of the closure date, and allows two weeks to return to port and land their catch of bigeye tuna.

For the reasons stated above, there is also good cause under 5 U.S.C. 553(d)(3) to waive the 30-day delay in effectiveness for this temporary rule. NMFS must close the fishery as soon as possible to ensure that fishery does not exceed the catch limit. According to NMFS stock-status-determination criteria, bigeye tuna in the Pacific Ocean are currently experiencing overfishing. NMFS implemented the catch limit to reduce the effects of fishing on bigeye tuna and restore the stock to levels capable of producing maximum sustainable yield on a continuing basis. Failure to close the fishery immediately would result in additional fishing pressure on this stock, in violation of Federal law and regulations that implement WCPFC decisions.

This action is required by 50 CFR 300.224 and is exempt from review under Executive Order 12866.

Authority: 16 U.S.C. 6901 *et seq.*

Dated: August 9, 2017.

Emily H. Menashes,
Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

50 CFR Part 635

[Docket No. 150121066-5717-02]

RIN 0648-XF534

Atlantic Highly Migratory Species; Atlantic Bluefin Tuna Fisheries

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; closure of Angling category northern area trophy fishery.

SUMMARY: NMFS closes the northern area Angling category fishery for large medium and giant ("trophy" (*i.e.*, measuring 73 inches curved fork length or greater)) Atlantic bluefin tuna (BFT). This action is being taken to prevent

overharvest of the Angling category northern area trophy BFT subquota.

DATES: Effective 11:30 p.m., local time, August 11, 2017, through December 31, 2017.

FOR FURTHER INFORMATION CONTACT: Sarah McLaughlin or Brad McHale, 978–281–9260.

SUPPLEMENTARY INFORMATION:

Regulations implemented under the authority of the Atlantic Tunas Convention Act (ATCA; 16 U.S.C. 971 *et seq.*) and the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act; 16 U.S.C. 1801 *et seq.*) governing the harvest of BFT by persons and vessels subject to U.S. jurisdiction are found at 50 CFR part 635. Section 635.27 subdivides the U.S. BFT quota recommended by the International Commission for the Conservation of Atlantic Tunas (ICCAT) among the various domestic fishing categories, per the allocations established in the 2006 Consolidated Atlantic Highly Migratory Species Fishery Management Plan (2006 Consolidated HMS FMP) (71 FR 58058, October 2, 2006) and amendments.

NMFS is required, under § 635.28(a)(1), to file a closure notice with the Office of the Federal Register for publication when a BFT quota is reached or is projected to be reached. On and after the effective date and time of such notification, for the remainder of the fishing year or for a specified period as indicated in the notification, retaining, possessing, or landing BFT under that quota category is prohibited until the opening of the subsequent quota period or until such date as specified in the notice.

Angling Category Large Medium and Giant Northern “Trophy” Fishery Closure

The 2017 BFT fishing year, which is managed on a calendar-year basis and subject to an annual calendar-year quota, began January 1, 2017. The Angling category season opened January 1, 2017, and continues through December 31, 2017. The currently codified Angling category quota is 195.2 mt, of which 4.5 mt is allocated for the harvest of large medium and giant (trophy) BFT by vessels fishing under the Angling category quota, with 1.5 mt allocated for each of the following areas: North of 39°18' N. lat. (off Great Egg Inlet, NJ) (the “northern area”); south of 39°18' N. lat. and outside the Gulf of

Mexico (the “southern area”); and in the Gulf of Mexico. Trophy BFT measure 73 inches (185 cm) curved fork length or greater.

Based on reported landings from the NMFS Automated Catch Reporting System, NMFS has determined that the codified Angling category northern area trophy BFT subquota has been reached and that a closure of the northern area trophy BFT fishery is warranted. Therefore, retaining, possessing, or landing large medium or giant BFT north of 39°18' N. lat. by persons aboard vessels permitted in the HMS Angling category and the HMS Charter/Headboat category (when fishing recreationally) must cease at 11:30 p.m. local time on August 11, 2017. This closure will remain effective through December 31, 2017. This action is intended to prevent overharvest of the Angling category northern area trophy BFT subquota, and is taken consistent with the regulations at § 635.28(a)(1). NMFS previously closed the 2017 trophy BFT fishery in the southern area on March 20, 2017 (82 FR 14162, March 17, 2017) and in the Gulf of Mexico on June 7, 2017 (82 FR 26603, June 8, 2017). Therefore, as of August 11, 2017, the Angling category trophy BFT fishery will be closed in all areas for 2017.

If needed, subsequent Angling category adjustments will be published in the **Federal Register**. Information regarding the Angling category fishery for Atlantic tunas, including daily retention limits for BFT measuring 27 inches (68.5 cm) to less than 73 inches and any further Angling category adjustments, is available at hmspermits.noaa.gov or by calling (978) 281–9260. HMS Angling and HMS Charter/Headboat category permit holders may catch and release (or tag and release) BFT of all sizes, subject to the requirements of the catch-and-release and tag-and-release programs at § 635.26. Anglers are also reminded that all BFT that are released must be handled in a manner that will maximize survival, and without removing the fish from the water, consistent with requirements at § 635.21(a)(1). For additional information on safe handling, see the “Careful Catch and Release” brochure available at www.nmfs.noaa.gov/sfa/hms/.

HMS Charter/Headboat and Angling category vessel owners are required to report the catch of all BFT retained or discarded dead, within 24 hours of the

landing(s) or end of each trip, by accessing hmspermits.noaa.gov or by using the HMS Catch Reporting App.

Classification

The Assistant Administrator for NMFS (AA) finds that it is impracticable and contrary to the public interest to provide prior notice of, and an opportunity for public comment on, this action for the following reasons:

The regulations implementing the 2006 Consolidated HMS FMP and amendments provide for inseason retention limit adjustments and fishery closures to respond to the unpredictable nature of BFT availability on the fishing grounds, the migratory nature of this species, and the regional variations in the BFT fishery. The closure of the northern area Angling category trophy fishery is necessary to prevent any further overharvest of the northern area trophy fishery subquota. NMFS provides notification of closures by publishing the notice in the **Federal Register**, emailing individuals who have subscribed to the Atlantic HMS News electronic newsletter, and updating the information posted on the Atlantic Tunas Information Line and on hmspermits.noaa.gov.

These fisheries are currently underway and delaying this action would be contrary to the public interest as it could result in excessive trophy BFT landings that may result in future potential quota reductions for the Angling category, depending on the magnitude of a potential Angling category overharvest. NMFS must close the northern area trophy BFT fishery before additional landings of these sizes of BFT occur. Therefore, the AA finds good cause under 5 U.S.C. 553(b)(B) to waive prior notice and the opportunity for public comment. For all of the above reasons, there is good cause under 5 U.S.C. 553(d) to waive the 30-day delay in effectiveness.

This action is being taken under 50 CFR 635.28(a)(1), and is exempt from review under Executive Order 12866.

Authority: 16 U.S.C. 971 *et seq.* and 1801 *et seq.*

Dated: August 9, 2017.

Emily H. Menashes,

Proposed Rules

Federal Register

Vol. 82, No. 155

Monday, August 14, 2017

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 1051

[Docket No. AO-15-0071; AMS-DA-14-0095]

Proposed California Federal Milk Marketing Order; Documents for Official Notice

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Request for public comments.

SUMMARY: This document announces the intention of the Agricultural Marketing Service (AMS) to take Official Notice of documents related to the California Federal Milk Marketing Order (FMMO) rulemaking proceeding. This document invites interested parties to submit comments on whether the documents are relevant to the material issues of the proceeding.

DATES: Comments are due August 29, 2017.

ADDRESSES: Comments should be submitted at the Federal eRulemaking portal: www.regulations.gov. Comments may also be filed with the Hearing Clerk, U.S. Department of Agriculture, Room 1031-S, Washington, DC 20250-9200, Facsimile number (202) 720-9976. All comments should reference the docket number and the date and page number of this issue of the **Federal Register**. All comments will be made available for public inspection in the Office of the Hearing Clerk during regular business hours, or can be viewed at: www.regulations.gov.

FOR FURTHER INFORMATION CONTACT: Erin Taylor, Acting Director, Order Formulation and Enforcement Division, USDA/AMS/Dairy Program, STOP 0231, Room 2969-S, 1400 Independence Ave. SW., Washington, DC 20250-0231, telephone: (202) 720-7311, or email address: erin.taylor@ams.usda.gov.

SUPPLEMENTARY INFORMATION: The U.S. Department of Agriculture (Department) held a hearing from September 22, 2015,

through November 8, 2015, regarding promulgation of a Federal Milk Marketing Order (FMMO) in California. During the hearing, participants requested the Department take Official Notice of several documents and resources relevant to the proceeding. The Administrative Law Judge presiding over the hearing ruled that interested parties could submit requests for Official Notice of documents and resources through their post-hearing briefs, and the Department could then make a determination regarding the requests.

Two parties submitted Official Notice requests in their post-hearing briefs and provided lists and sources for the relevant documents. On February 14, 2017, the Department published in the **Federal Register** a recommended decision on the establishment of a California FMMO (82 FR 10634). After an initial review, the Department took Official Notice of many of the documents in the recommended decision. However, the Department did not make a formal determination regarding others.

Two comments filed in response to the recommended decision took exception to the fact that the Department did not rule upon all documents requested for Official Notice submitted in post-hearing briefs by California Dairies, Inc.; Dairy Farmers of America, Inc.; and Land O'Lakes, Inc. (the Cooperatives); and by the Dairy Institute of California (the Institute).

In response, AMS is considering taking Official Notice of these additional documents. The Code of Federal Regulations (7 CFR 900.8) requires providing interested parties an opportunity to object to taking Official Notice of documents because they are inaccurate or erroneously noticed; for example, if they are not relevant to the material issues of the proceeding. This Notice serves to provide interested parties the opportunity to object to the documents below if they believe that any do not meet the requirements of 7 CFR 900.8.

A complete list of these documents, along with links and sources to access them, is available at www.ams.usda.gov/caorder. Comments should focus on whether the documents are relevant to the material issues of the California FMMO proceeding, which are as follows:

1. Whether the handling of milk in the proposed marketing area is in the current of interstate commerce, or directly burdens, obstructs, or affects interstate commerce in milk or its products;

2. Whether economic and marketing conditions in California show a need for a Federal marketing order that would tend to effectuate the declared policy of the Act;

3. If an order is issued, what its provisions should be with respect to:

a. Handlers to be regulated and milk to be priced and pooled under the order;

b. Classification of milk, and assignment of receipts to classes of utilization;

c. Pricing of milk;

d. Distribution of proceeds to producers; and

e. Administrative provisions.

The Department will consider any objections filed prior to making a determination in this matter.

The Department compiled the following list after reviewing the documents submitted for Official Notice, verifying or correcting the titles provided, and determining whether publically accessible sources exist. As interested parties did not provide hard copies of the documents they were requesting for Official Notice, those documents for which a source was not provided or that the Department determined to lack a publically accessible source are excluded from Official Notice consideration.

BILLING CODE 3410–02–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R01–OAR–2017–0150; FRL–9965–91–Region 1]

Air Plan Approval; Connecticut; Nonattainment New Source Review Permit Requirements for the 2008 8-Hour Ozone Standard

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve the state implementation plan (SIP) revision submitted on March 9, 2017, by the State of Connecticut, through the Connecticut Department of Energy and Environmental Protection (CT DEEP), addressing the nonattainment new source review (NNSR) requirements for the 2008 8-hour ozone National Ambient Air Quality Standards (NAAQS). The SIP revision addresses both of Connecticut's ozone nonattainment areas for the 2008 ozone NAAQS; the Greater Connecticut area and the Connecticut portion of the New York-N. New Jersey-Long Island, NY-NJ-CT area. The Connecticut portion of the New York-N. New Jersey-Long Island, NY-NJ-CT ozone nonattainment area consists of Fairfield, New Haven, and Middlesex counties. The Greater Connecticut nonattainment area includes the rest of the State. This action is being taken pursuant to the Clean Air Act (CAA or Act) and its implementing regulations.

DATES: Written comments must be received on or before September 13, 2017.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R01–OAR–2017–0150 at <https://www.regulations.gov>, or via email to dahl.donald@epa.gov. For comments submitted at [Regulations.gov](https://www.regulations.gov), follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from [Regulations.gov](https://www.regulations.gov). For either manner of submission, the EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to

make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.* on the web, cloud, or other file sharing system). For additional submission methods, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section. For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit <https://www.epa.gov/dockets/commenting-epa-dockets>.

FOR FURTHER INFORMATION CONTACT: Donald Dahl, U.S. Environmental Protection Agency, EPA New England Regional Office, Office of Ecosystem Protection, Air Permits, Toxics, and Indoor Programs Unit, 5 Post Office Square—Suite 100, (Mail code OEP05–2), Boston, MA 02109–3912. Mr. Dahl’s telephone number is (617) 918–1657; email address: dahl.donald@epa.gov.

SUPPLEMENTARY INFORMATION: In the Final Rules Section of this issue of the **Federal Register**, EPA is approving the State’s SIP submittal as a direct final rule without prior proposal because the Agency views this as a noncontroversial submittal and anticipates no adverse comments. A detailed rationale for the approval is set forth in the direct final rule. If no adverse comments are received in response to this action rule, no further activity is contemplated. If EPA receives adverse comments, the direct final rule will be withdrawn and all public comments received will be addressed in a subsequent final rule based on this proposed rule. EPA will not institute a second comment period. Any parties interested in commenting on this action should do so at this time. Please note that if EPA receives adverse comment on an amendment, paragraph, or section of this rule and if that provision may be severed from the remainder of the rule, EPA may adopt as final those provisions of the rule that are not the subject of an adverse comment.

For additional information, see the direct final rule which is located in the Rules Section of this issue of the **Federal Register**.

Dated: July 24, 2017.

Deborah A. Szaro,

Acting Regional Administrator, EPA New England.

BILLING CODE 6560–50–P

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 64

[CG Docket No. 17–169; FCC 17–91]

Protecting Consumers From Unauthorized Carrier Changes and Related Unauthorized Charges

AGENCY: Federal Communications Commission.

ACTION: Proposed rule.

SUMMARY: In this document, the Commission proposes to amend its rules to prohibit carriers from misrepresenting themselves when placing telemarketing sales calls to consumers and placing unauthorized charges on their phone bills. The Commission seeks comment on ways to strengthen its rules to protect consumers from slamming and cramming and proposes to codify a rule prohibiting misrepresentations on carrier telemarketing calls to consumers that often precede a carrier switch, and proposes to codify a rule against cramming. The intended effect of this action is to prevent unscrupulous carriers from targeting vulnerable populations from committing fraud either on sales calls or when “verifying” a consumer switch.

DATES: Comments are due on or before September 13, 2017, and reply comments are due on or before October 13, 2017.

ADDRESSES: You may submit comments identified by CG Docket No. 17–169 and/or FCC Number 17–91, by any of the following methods:

- **Electronic Filers:** Comments may be filed electronically using the Internet by accessing the Commission’s Electronic Comment Filing System (ECFS), through the Commission’s Web site: <http://apps.fcc.gov/ecfs/>. Filers should follow the instructions provided on the Web site for submitting comments. For ECFS filers, in completing the transmittal screen, filers should include their full name, U.S. Postal service mailing address, and CG Docket No. 17–169.

- **Mail:** Parties who choose to file by paper must file an original and one copy of each filing. Filings can be sent by hand or messenger delivery, by commercial overnight courier, or by first-class or overnight U.S. Postal Service mail (although the Commission continues to experience delays in receiving U.S. Postal Service mail). All filings must be addressed to the Commission’s Secretary, Office of the Secretary, Federal Communications Commission.

For detailed instructions for submitting comments and additional information on the rulemaking process, see the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT:

Kimberly A. Wild, Consumer Policy Division, Consumer and Governmental Affairs Bureau (CGB), at (202) 418–1324, email: Kimberly.Wild@fcc.gov.

SUPPLEMENTARY INFORMATION: This is a summary of the Commission’s *Rules and Policies Protecting Consumers from Unauthorized Carrier Changes and Related Unauthorized Charges, Notice of Proposed Rulemaking*, document FCC 17–91, adopted on July 13, 2017, released on July 14, 2017. The full text of document FCC 17–91 will be available for public inspection and copying via ECFS, and during regular business hours at the FCC Reference Information Center, Portals II, 445 12th Street SW., Room CY–A257, Washington, DC 20554. A copy of document FCC 17–91 and any subsequently filed documents in this matter may also be found by searching ECFS at: <http://apps.fcc.gov/ecfs/> (insert CG Docket No. 17–169 into the Proceeding block).

Pursuant to 47 CFR 1.415, 1.419, interested parties may file comments and reply comments on or before the dates indicated on the first page of this document. Comments may be filed using ECFS. See *Electronic Filing of Documents in Rulemaking Proceedings*, 63 FR 24121 (1998).

- All hand-delivered or messenger-delivered paper filings for the Commission’s Secretary must be delivered to FCC Headquarters at 445 12th Street SW., Room TW–A325, Washington, DC 20554. All hand deliveries must be held together with rubber bands or fasteners. Any envelopes must be disposed of before entering the building.

- Commercial Mail sent by overnight mail (other than U.S. Postal Service Express Mail and Priority Mail) must be sent to 9300 East Hampton Drive, Capitol Heights, MD 20743.

- U.S. Postal Service first-class, Express, and Priority mail should be addressed to 445 12th Street SW., Washington, DC 20554.

Pursuant to § 1.1200 of the Commission’s rules, 47 CFR 1.1200, this matter shall be treated as a “permit-but-disclose” proceeding in accordance with the Commission’s *ex parte* rules. Persons making oral *ex parte* presentations are reminded that memoranda summarizing the presentations must contain summaries of the substances of the presentations

and not merely a listing of the subjects discussed. More than a one or two sentence description of the views and arguments presented is generally required. See 47 CFR 1.1206(b). Other rules pertaining to oral and written *ex parte* presentations in permit-but-disclose proceedings are set forth in § 1.1206(b) of the Commission's rules, 47 CFR 1.1206(b).

Document FCC 17-91 can also be downloaded in Word or Portable Document Format (PDF) at: <https://www.fcc.gov/document/fcc-proposes-rules-aid-investigation-threatening-calls>.

Initial Paperwork Reduction Act of 1995 Analysis

Document FCC 17-91 seeks comment on proposed rule amendments that may result in modified information collection requirements. If the Commission adopts any modified information collection requirements, the Commission will publish another notice in the **Federal Register** inviting the public to comment on the requirements, as required by the Paperwork Reduction Act (PRA). Public Law 104-13; 44 U.S.C. 3501-3520. In addition, pursuant to the Small Business Paperwork Relief Act of 2002, the Commission seeks comment on how it might further reduce the information collection burden for small business concerns with fewer than 25 employees. Public Law 107-198, 116 Stat. 729; 44 U.S.C. 3506(c)(4).

Synopsis

1. All too often, unscrupulous carriers target Americans, including those within vulnerable populations like the elderly, recent immigrants, small businesses, and non-English speakers, to carry out unauthorized carrier changes, or "slams." These carriers misrepresent who they are and why they are calling, fraudulently verify carrier changes, and add unauthorized charges, or "crams," onto consumers' bills. Some sales agents pretend they are calling from a consumer's existing carrier, others pretend to call about a package delivery to record a consumer saying certain key phrases like their name and "yes." Still others bill for services never rendered or refuse to stop billing for new services even after a consumer terminates service.

2. With document FCC 17-91, the Commission seeks comment on additional steps to protect consumers

from slamming and cramming. The Commission seeks to strengthen its ability to take action against slammers and crammers, and deter carriers from slamming and cramming in the first place, without impeding competition or impairing the ability of consumers to switch providers.

Background

Slamming Rules

3. Section 258 of the Communications Act of 1934, as amended (Communications Act or Act), makes it unlawful for any telecommunications carrier to "submit or execute a change in a subscriber's selection of a provider of telephone exchange service or telephone toll service except in accordance with such verification procedures as the Commission shall prescribe." To further protect consumers from slamming and provide them with control over their service providers, the Commission's rules allow consumers to opt in to freeze their choice of carriers. At the same time, the rules do not allow for the executing carrier to verify that the subscriber wants to change carriers, so as to avoid undue delay in authorized switches. Finally, the Commission adopted rules for calculating slamming carrier liability.

Continuing Problem

4. Notwithstanding the Commission's rulemaking and enforcement actions to date, slamming and cramming continue to be a problem. Slammers, or would-be slammers, have also crammed consumers as part of their fraud schemes. The Commission is cognizant that it must balance the benefits of the proposals in document FCC 17-91 against the burden they may place on legitimate carrier changes and third-party charges. The steps the Commission seeks comment on today to strengthen its rules seek to address the evolving practices of bad actors with respect to slamming and cramming, while not impeding competition or impairing the ability of consumers to switch providers.

Notice of Proposed Rulemaking

5. In document FCC 17-91, the Commission seeks comment on ways to strengthen its rules to protect consumers from slamming and cramming. The Commission believes its legal authority stems directly from sections 201(b) and 258 of the Act. The Commission has based slamming and cramming rules on these provisions of the Act in the past. The Commission notes that section 258 of the Act is clear that carriers cannot execute switches unless they do so "in

accordance with such verification procedures as the Commission shall prescribe." The Commission believes the anti-slamming steps it proposes here are "verification procedures" consistent with the authority specified in section 258 of the Act. Similarly, the Commission has found that both sections 201(b) and 258 of the Act support its truth-in-billing rules, including those to prevent cramming on consumers' bills. The Commission seeks comment on the nature and scope of its authority to adopt the rules it proposes in document FCC 17-91.

Banning Misrepresentation and Unauthorized Charges

6. The Commission's recent enforcement actions reveal that a major source of slamming is deception in the sales calls. The Commission seeks comment on proposed new rules to address sales call abuses and further reduce slamming. The Commission's current rules contain detailed verification procedures, adopted under section 258 of the Act, that specify that carriers shall not submit or execute carrier changes without authorization from the subscriber and verification of that authorization. The Commission has previously held that misrepresentations on sales calls are an unjust and unreasonable practice and unlawful under section 201(b) of the Act.

Although the Commission has in place verification rules to prevent slamming, its rules do not expressly ban carrier- or carrier-agent-misrepresentations on the sales calls that typically precede a slam. The Commission thus proposes to codify, pursuant to sections 258 and 201(b) of the Act, a new § 64.1120(a)(1)(i)(A) of its rules banning misrepresentations on the sales calls and stating that any misrepresentation or deception would invalidate any subsequent verification of a carrier change, even where the submitting carrier purports to have evidence of consumer authorization (e.g., a TPV recording). The Commission believes codifying such a ban would provide even greater clarity to carriers and will aid its enforcement efforts. The Commission seeks comment on this proposal. Are there any potential downsides to a codified rule against sales call misrepresentation? The Commission notes that its slamming rules currently do not apply to CMRS, pre-paid wireless, or interconnected Voice over Internet Protocol (VoIP). Are such misrepresentations enough of a problem for CMRS, pre-paid wireless and interconnected VoIP and sufficient to justify extending its proposed rule to cover those services? Would such a rule

impose any burden on legitimate marketing? How should the proposed rule interact with existing State slamming rules?

7. The Commission also proposes to codify a rule against cramming. While cramming has been a long-standing problem and the Commission has adopted truth-in-billing rules to help detect it, the Commission has never codified a rule against cramming. The Commission thus proposes to codify in a new § 64.2401(g) of its rules the existing prohibition against cramming that the Commission has enforced under section 201(b) of the Act. The Commission believes codifying the cramming prohibition for wireline and wireless carriers would act as a deterrent. The Commission believes codifying a ban against cramming would provide even greater clarity to carriers and will aid its enforcement. The Commission seeks comment on this proposal. Are there any potential downsides to such a rule? The Commission's cramming rules currently do not apply to interconnected VoIP, and only some of the cramming rules apply to CMRS. Should the Commission extend this proposed rule to CMRS, pre-paid wireless and interconnected VoIP? Are there limitations on the Commission's ability to adopt the proposed cramming rule? Should this proposed rule be codified under the slamming rules as opposed to the cramming rules? The truth-in-billing rules do not define "cramming" or "telephone bill." The Commission seeks comment on whether it should adopt such definitions for clarity of its rules. Many consumers today receive electronic bills and have constant online access to their telephone account showing in near real-time all fees, charges and assessments. If the Commission defines "telephone bill" in its rules, should it include the various ways that consumers can keep track of their telephone account activity?

PIC Freezes and Third-Party Billing Preferred Carrier Freezes by Default

8. The Commission's current rules allow consumers to protect themselves from slamming by "freezing" their choice of wireline providers if their local exchange carrier offers that ability. But to do so, a consumer must affirmatively opt in. Given the trend of consumers preferring to buy local and long-distance services together rather than separately, as well as emerging abusive practices in the market for resold local and long-distance services, the Commission seeks comment on making freezes the default so that

consumers are automatically afforded additional protection against slamming, rather than requiring them to take extra steps to do so. The Commission believes this would give consumers more control to prevent slamming. Today, carriers must offer freezes for local, intraLATA and interLATA services and get separate authorization from consumers for each of the services the consumer chooses to freeze. A majority of consumers today purchase bundles of services rather than selecting individual services, and the Commission believes most consumers have no reason to distinguish interLATA and intraLATA services. The Commission seeks comment on eliminating the service distinctions for these purposes and having carrier freezes apply to all telephone services a consumer has with no need to seek separate authorization. The Commission believes consumers purchase CMRS and interconnected VoIP as all distance services and thus a default freeze does not make sense for these services. The Commission seeks comment on that view and whether it should consider extending default freezes to those services.

9. If the Commission were to adopt a default freeze rule, should it apply to all local exchange carriers, or only those that currently offer freezes? What effect would the Commission's proposal have on carrier billing systems and sales practices? How should consumers be notified about this change to ensure they are fully aware of the default freeze? Should the Commission change its current requirements for notifying consumers about freezes, or relax those requirements? What procedures should be put in place to lift a default freeze? The Commission seeks comment on whether its freeze proposal would affect number exhaustion by incenting carriers to issue new numbers to consumers while waiting for the freeze to be lifted. The Commission's goals are to ensure that the default freeze is a strong safeguard against slamming while not unduly burdening consumers who may want to opt out of a freeze or giving executing carriers who may be losing the customer an opportunity to behave anti-competitively. The Commission seeks comment on how to achieve these goals along with whether carriers should be able to charge for freezes.

10. What are the costs and benefits of a default freeze? For carriers that already offer consumers a freeze option, the cost to implement a default freeze should be relatively low, essentially changing a field in a preexisting database. For carriers that do not currently offer a preferred carrier freeze to their consumers, the implementation

costs would presumably be greater. The benefits of a default freeze may be substantial, because would-be slammers would face significant obstacles to carrying out their intended slams. The Commission seeks comment on these views and ask commenters to provide details on costs and benefits of both implementing a default freeze and procedures to lift a default freeze. Can the Commission mitigate the costs by, for example, extending implementation deadlines and considering additional specific relief for smaller carriers? Could costs be further mitigated by applying a default freeze only to new customers and not existing ones? Should the Commission distinguish between smaller local exchange carriers and larger local exchange carriers in what rules should apply? What would be the cost savings for consumers and carriers in avoiding the expense and inconvenience of restoring service with their original carrier after a slam and seeking a refund for the unauthorized charges?

Blocking Certain Third-Party Billing by Default

11. Today, the Commission's rules do not prohibit carriers from placing third-party charges on consumers' bills without verification by the consumer, a practice that has led to cramming. Consumers who do not have a preferred long-distance provider have been crammed when a third-party carrier adds its long-distance service to the consumer's bill without authorization. Some consumers discover a slam and have their preferred carrier's service reinstated but are still billed by the slamming carrier for local or long-distance service.

12. The Commission seeks comment on requiring wireline carriers to block third-party charges for local and long-distance service—a frequent source of slamming-related cramming—by default, and only bill such charges if a consumer opts in. Do consumers generally expect to be charged for local or long-distance service by third parties? What trends, if any, could inform the Commission's understanding of how consumers make choices in the market for telephone service? How prevalent are such third-party charges? Do the natural reductions in third-party billing as a result of market changes reduce the need for the type of rule the Commission proposes? The Commission notes that the vast majority of complaints and enforcement actions appear to target the billing practices of traditional local exchange carriers, not wireless carriers or interconnected VoIP providers. Is that because wireless

carriers and interconnected VoIP providers generally offer local and long-distance services as a bundle or for some other reason? Notwithstanding the lack of complaints and enforcement actions about CMRS and interconnected VoIP, the Commission seeks comment on whether it should extend its proposal to those services.

13. How exactly should an opt-in process for third-party local and long-distance service work? For example, if a carrier offered its subscribers access to information about their account online, could a simple control be added so that consumers could opt in (or later opt back out) of third-party local and long-distance service billing? What opt-in options should be available for consumers that do not have Internet access? What information, if any, should be presented to consumers before they opt in to such third-party charges? Should opting in last indefinitely, or sunset after some period of time? Or could consumers opt in for only a single service change? How should consumers be made aware of the opt-in option? Should the Commission require providers to notify consumers at the point of sale? Should such notice appear on the provider's Web site and advertising materials or on consumers' bills? The Commission notes that several carriers have committed to blocking certain non-telecommunications third-party charges in the past. The Commission seeks specific comments on the processes they used to inform consumers about these changes.

14. The Commission also seeks comment on several corner cases. For local exchange carriers that do not offer long-distance service, should opt in be required before any third-party long-distance service is charged to the consumer or only any change in third-party long-distance service? For consumers that currently subscribe to a third-party local or long-distance service, should those services be grandfathered? Or should those consumers be considered to have opted in already? And how should the Commission structure any rule to minimize the impact on single-use services—such as placing an international call through a third-party carrier or receiving a collect call—or other legitimate third-party local or long-distance services that haven't been subject to the same pattern of abuse that the Commission has seen in recent slamming and cramming cases?

15. The Commission seeks comment on the costs and benefits of an opt-in process for third-party local and long-distance charges. The Commission

believes that blocking such charges would be beneficial to consumers and reduce slamming and cramming significantly. Yet the Commission recognizes that changes to carrier billing systems can be costly. The Commission believes many carriers already have the ability to block third-party charges, and seeks comment on whether this is correct, and whether there would be any challenges, including billing system and notification changes, for carriers arising from adopting an opt-in mechanism for third-party charges. What are the costs of implementing an opt-in mechanism for third-party charges? For those carriers that do not currently offer the option to block third-party charges, what costs would be associated with making that protection available to consumers and how could the Commission craft rules to minimize those costs and burdens? Would the costs to carriers be mitigated if the timeframe to implement the opt-in mechanism was extended or if the opt-in mechanism was phased in, for example, by requiring an opt-in for new customers only? Do small carriers have unique implementation costs or other burdens, and if so, how should the Commission address those issues?

Double-Checking a Switch With the Consumer

16. Rather than requiring an opt in before placing third-party local or long-distance charges on a bill, should the Commission require the executing carrier to confirm or “double-check” whether the consumer wants to switch providers before making the change? Requiring the executing carrier to double-check a change request could be a strong anti-slamming safeguard because it gives the consumer a second opportunity to confirm a switch. If the Commission were to adopt such a requirement, the Commission seeks comment on how the Commission could best implement it.

17. Would requiring that the executing carrier obtain the consumer's consent in writing or through the email address of record sufficiently protect consumers? Would mandating that the executing carrier obtain oral consent via a phone call to the consumer at the telephone number of record provide consumers with more protection from slamming? If the Commission requires the executing provider to confirm a switch request, what should the executing carrier be required to ask (*e.g.*, “the submitting carrier says that you would like to switch to them. Is that correct?”)? Are there First Amendment implications related to prescribing the language to be used by the executing

carrier? Should the executing carrier have to follow, for all switch requests, the procedures that are presently only in place when a consumer has activated a preferred carrier freeze? Should the double-check by the executing carrier be strictly limited to certain narrow questions with no opportunity for retention marketing? Should there be a deadline by which the double-check must occur? Should the executing carrier be required to notify the new carrier of the timing and outcome of the double-check? If so, should there be a timeframe within which that notice must occur? Finally, what should the consequences be if an executing carrier fails to meet the deadline? The Commission seeks comment on the effect the proposal would have on carrier billing systems and sales practices. Finally, the Commission seeks comment on whether its proposed double-check would have any effect on number exhaustion by incenting carriers to issue new numbers to consumers while waiting for verification and execution of the carrier change.

18. Currently, unless a consumer has activated a preferred carrier freeze, the slamming rules do not allow the executing carrier to verify whether the subscriber wants to change carriers when it receives a preferred carrier change request because of previous Commission concerns that that approach would be expensive, unnecessary, and duplicative of the submitting carrier's verification. At the time those rules were adopted, the local and long-distance markets had only been recently opened to competition, and there was concern that an executing carrier might intentionally delay the carrier change or attempt to retain the subscriber. Today, the market for wireline communications services is more established and competitive, and consumers have access to a wide variety of providers and technologies to obtain long-distance services and are more likely to purchase bundles of services from the same provider. In addition, slamming has evolved, and the rules the Commission adopted almost two decades ago have not proven effective in preventing slamming. Do market trends involving stand-alone long-distance service impact the need for the type of slamming rules the Commission proposes? Based on the marketplace today, the Commission also seeks comment on the relationship between the ease of switching voice providers and broadband adoption. The Commission seeks to avoid unintended negative consequences of its proposals. For example, would they effectively

“lock” consumers into bundles of services that may not meet their current broadband needs? Finally, and fundamentally, the Commission seeks comment on the prevalence of incidences of slamming as seen in its enforcement actions versus the number of legitimate carrier changes that occur.

19. Given these changes in the marketplace and the continued and evolving problem of slamming faced by consumers, the Commission seeks comment on whether the Commission’s previous concerns about delays and anti-competitive practices that could arise from a double-check requirement are still valid. If the previous concerns are still well-founded, are those concerns now outweighed by other factors, such as ensuring that consumers are not victimized by the new forms of slamming? The Commission seeks comment on whether and how the changed circumstances since 1998 have reduced the danger of anti-competitive behavior, as well as how to structure a double-check mechanism to avoid or limit any competitive harms. Similar to its proposals above, the Commission seeks comment on whether it should extend its proposal to CMRS and interconnected VoIP providers. In the past, the Commission expressed concern that requiring verification by the executing carrier could be a *de facto* preferred carrier freeze without the consumer’s consent that would take control away from consumers. The Commission seeks comment on whether the Commission should adopt both a verification by the executing carrier and the default carrier freeze proposed above. Are these processes duplicative and if so, does it make sense to provide consumers with two levels of protection against slamming? Does one option benefit consumers in ways that the other does not? The Commission seeks comment on the costs to consumers, if any, of both options.

20. The Commission also seeks comment on the costs and benefits of requiring some form of secondary verification by the executing carrier before switching a consumer’s long-distance provider. The Commission believes the costs of requiring the executing carrier to perform a simple double-check by phone, email or in writing would be fairly modest, yet the consumer benefit in stopping slamming would be substantial. The Commission seeks comment on these views and ask commenters to provide details on costs and benefits. The Commission also seeks comment on how it can further mitigate the costs by, for example, extending implementation deadlines of any rules adopted and considering

additional specific relief for smaller carriers.

21. *Section 222(b) of the Act.* When it previously determined that executing carriers should not verify carrier changes, the Commission expressed concern that such verification would violate section 222(b) of the Act. Section 222(b) of the Act states that a carrier that “receives or obtains proprietary information from another carrier for purposes of providing any telecommunications service shall use such information only for such purpose, and shall not use such information for its own marketing efforts.” The Commission found that the information contained in a submitting carrier’s change request is proprietary because the submitting carrier must provide information regarding the consumer’s choice of long-distance providers to the executing carrier, to which the executing carrier would otherwise not have access, to obtain provisioning of service for the new subscriber. Thus, under the Commission’s current rules the executing carrier can only use the information to provide service to the submitting carrier, *i.e.*, changing the subscriber’s carrier, and may not attempt to verify that subscriber’s decision to change carriers.

22. The Commission notes that section 222(d)(2) of the Act provides an exception allowing the carrier to use the customer *information* “to protect users of those services and other carriers from fraudulent, abusive, or unlawful use of, or subscription to such services.” The Commission tentatively concludes that this exception supports its proposals to allow the executing carrier to use the customer information to re-verify that the consumer wants to change providers. The Commission seeks comment on this interpretation. The Commission also seeks comment on whether a carrier indeed is using the “proprietary information” received from a submitting carrier only for “purposes of providing any telecommunications service” if it uses that information to verify a carrier switch without conducting any additional marketing. The Commission seeks comment on whether double-checking by the executing provider could be permissive, rather than required, and whether permissive double-checking would fulfill the Commission’s policy goals of deterring slamming.

23. If the Commission determines that section 222 of the Act supports requiring executing carriers to confirm a switching request, it is important to note that the exceptions in section 222(d) of the Act that allow the carrier to use the consumer information for a specific

purpose would not allow the re-verification process to be used for retention marketing, and any rule the Commission adopts would bar the executing carrier from using the confirmation process for marketing or anticompetitive purposes. The Commission seeks comment on this view, and on how its rules could best implement such a bar.

Other Measures

Recording Sales Calls

24. The Commission’s current verification rules provide that carriers shall not submit or execute carrier changes without authorization from the subscriber and verification of that authorization. The Commission seeks comment on whether submitting carriers that rely on TPVs should be required to record the entire sales call that precedes a switch. The Commission seeks comment on how to define a sales call. The Commission believes that a requirement to record all sales calls would deter misrepresentation and aid enforcement if misrepresentation does occur. The Commission seeks comment on this view.

25. If the Commission requires that sales calls be recorded, should the Commission require the same two-year retention of the recordings as it currently does for TPV calls? Should the Commission also require that sales representatives give the consumer specific information to help them understand the call’s purpose, for example: (1) The identity of the company that is calling or on whose behalf the call is being made; (2) that the sales representative is not affiliated with the consumer’s current long-distance, international, or other toll carrier (if true); and (3) the purpose of the call is to inquire whether the consumer is authorized to make a change to and wishes to change his or her long-distance, international, or other toll service from his or her current preferred carrier to the calling carrier. Should the Commission’s rules also prohibit the sales representative from (1) making any false or misleading statements to the consumer regarding the third-party verifier or the role of the verifier, and (2) instructing the consumer in how he or she should respond to the verifier’s questions? In the alternative, the Commission seeks comment on whether recording the sales call should be voluntary as opposed to being required and whether a valid recording should serve as an affirmative defense if a slamming complaint was filed against the carrier. Further, are there First

Amendment implications related to prescribing specific notifications?

26. The Commission does not believe that requiring the disclosures discussed above, as well as recording and preserving the sales call, would be costly for providers. At the same time, based on evidence from recent consumer complaints and enforcement actions indicating that sales call misrepresentations are a significant source of slamming, the Commission believes the benefits to consumers are material. The Commission seeks comment on these views and asks commenters to provide details on costs and benefits of its proposals. The Commission also seeks comment on how it can further mitigate the costs by, for example, extending implementation deadlines and considering additional specific relief for smaller carriers.

Third-Party Verifications

27. The Commission seeks comment on whether TPVs are an effective means of providing evidence that a consumer wishes to switch carriers. Would eliminating TPVs as a verification mechanism be effective in preventing slamming and provide substantial benefits to consumers? How would the elimination of TPVs affect legitimate providers' sales efforts? If the TPV is eliminated, are there other mechanisms the Commission should put in place to verify authorization of a carrier change? Should consumers have the option to sign up for service online after the sales call has ended, or to call a designated customer service number to confirm their desire to switch long distance or other toll services? The Commission seeks comment on the impact of these or other verification mechanisms on competition. The Commission seeks comment on the costs and benefits of elimination of the TPV option. The Commission also seeks comment on how it can further mitigate any costs to providers by, for example, extending implementation deadlines and considering additional specific relief for smaller carriers.

28. If the Commission decides to retain TPVs as evidence of a consumer's wish to switch providers, how might it make them more difficult to falsify? The Commission's rules require that TPVs elicit certain information, including the subscriber's identity, that the person on the call is authorized and wishes to make the switch, and the telephone numbers to be switched. Should the Commission update the TPV requirements to require that consumers affirmatively state all telephone numbers to be switched, rather than, as is currently permitted, to allow the

third-party verifier to read off the numbers to be switched? Because the third-party verifier must already obtain specific information during the TPV, the Commission does not believe adding this requirement represents a significant additional cost. But the Commission believes it would benefit consumers by making it more difficult to falsify TPVs.

29. Are there other ways to ensure the validity of the TPV? For example, should the Commission require certification of third-party verifiers by either carriers or the Commission? Does the Commission have authority to require such certification? The Commission also seeks comment on whether there are any current provisions in its verification requirements that it could update to make the rules clearer and easier to follow. Should the Commission eliminate the requirement that verifiers must get confirmation of each individual service sold (e.g., intraLATA and interLATA service)? Does this requirement make sense in today's bundle-oriented marketplace? The Commission asks commenters to provide details on costs and benefits of implementing these potential rule changes. The Commission also seeks comment on how it can further mitigate the costs by, for example, extending implementation deadlines and considering additional specific relief for smaller carriers.

Initial Regulatory Flexibility Act Analysis

30. As required by the Regulatory Flexibility Act of 1980, as amended, (RFA), the Commission has prepared the Initial Regulatory Flexibility Analysis (IRFA) of the possible significant economic impact on a substantial number of small entities by the policies and rules proposed in document FCC 17–91. Written public comments are requested on the IRFA. Comments must be identified as responses to the IRFA and must be filed by the deadlines for comments on document FCC 17–91 provided on the first page of document FCC 17–91. The Commission will send a copy of document FCC 17–91, including the IRFA, to the Chief Counsel for Advocacy of the Small Business Administration (SBA).

Need for, and Objectives of, the Proposed Rules

30. Document FCC 17–91 contains proposals regarding how to strengthen the Commission's rules to prevent slamming and cramming. Slamming is the unauthorized change of a consumer's preferred interexchange telecommunications service provider

and cramming is the placement of unauthorized charges on a consumer's telephone bill. Despite detailed slamming rules and truth-in-billing rules, thousands of consumers are still being slammed and billed for unauthorized charges. Since, 2010, the Commission's Enforcement Bureau has brought multiple actions against carriers for slamming and cramming violations. These actions have resulted in over \$80 million dollars in fines and proposed forfeitures. The Commission believes that adopting the proposals in document FCC 17–91 will provide consumers with the additional safeguards they need to protect themselves from this risk.

31. Specifically, document FCC 17–91 seeks comment on whether and, if so, how: (1) The Commission should codify in a rule the prohibition against deceptive marketing and misrepresentations on the sales call; (2) the Commission should codify in a rule the prohibition against placing unauthorized charges on a consumer's telephone bill; (3) the Commission should make preferred carrier freezes the default rather than something the consumer must initiate; (4) the Commission should require consumers to opt in to third-party billing; (5) the Commission should require executing carriers to make contact with consumers to verify preferred carrier change requests prior to execution; (6) the Commission should require recording and retention of the sales call; and (7) the Commission should modify the verification rules relating to preferred carrier changes to require the consumer to affirmatively list the telephone numbers to be switched in a TPV, or update the TPV requirements to eliminate the requirement to list all services being changed, or eliminate the TPV altogether as an option to verify authorization of a carrier switch.

Legal Basis

32. The legal basis for any action that may be taken pursuant to document FCC 17–91 is contained in sections 1–4, 201(b), and 258 of the Communications Act of 1934, as amended, 47 U.S.C. 151–154, 201(b), 258.

Description and Estimate of the Number of Small Entities to Which the Proposed Rules Will Apply

33. The RFA directs agencies to provide a description of, and where feasible, an estimate of the number of small entities that will be affected by the proposed rules, if adopted. The RFA generally defines the term "small entity" as having the same meaning as the terms "small business," "small

organization,” and “small governmental jurisdiction.” In addition, the term “small business” has the same meaning as the term “small business concern” under the Small Business Act. Under the Small Business Act, a “small business concern” is one that: (1) Is independently owned and operated; (2) is not dominant in its field of operation; and (3) meets any additional criteria established by the Small Business Administration.

Wireline Carriers

34. *Incumbent Local Exchange Carriers (Incumbent LECs).* Neither the Commission nor the SBA has developed a small business size standard specifically for incumbent local exchange services. The closest applicable size standard under SBA rules is for the category Wired Telecommunications Carriers. The U.S. Census Bureau defines this industry as “establishments primarily engaged in operating and/or providing access to transmission facilities and infrastructure that they own and/or lease for the transmission of voice, data, text, sound, and video using wired communications networks. Transmission facilities may be based on a single technology or a combination of technologies. Establishments in this industry use the wired telecommunications network facilities that they operate to provide a variety of services, such as wired telephony services, including VoIP services, wired (cable) audio and video programming distribution, and wired broadband internet services. By exception, establishments providing satellite television distribution services using facilities and infrastructure that they operate are included in this industry.” Under that size standard, such a business is small if it has 1,500 or fewer employees. Census data for 2012 show that there were 3,117 firms that operated that year. Of this total, 3,083 operated with fewer than 1,000 employees. Consequently, the Commission estimates that most providers of incumbent local exchange service are small businesses.

35. *Competitive Local Exchange Carriers (Competitive LECs), Competitive Access Providers (CAPs), Shared-Tenant Service Providers, and Other Local Service Providers.* Neither the Commission nor the SBA has developed a small business size standard specifically for these service providers. The appropriate size standard under SBA rules is for the category Wired Telecommunications Carriers. The U.S. Census Bureau defines this industry as “establishments primarily engaged in operating and/or providing

access to transmission facilities and infrastructure that they own and/or lease for the transmission of voice, data, text, sound, and video using wired communications networks.

Transmission facilities may be based on a single technology or a combination of technologies. Establishments in this industry use the wired telecommunications network facilities that they operate to provide a variety of services, such as wired telephony services, including VoIP services, wired (cable) audio and video programming distribution, and wired broadband internet services. By exception, establishments providing satellite television distribution services using facilities and infrastructure that they operate are included in this industry.” Under that size standard, such a business is small if it has 1,500 or fewer employees. Census data for 2012 show that there were 3,117 firms that operated that year. Of this total, 3,083 operated with fewer than 1,000 employees. Consequently, the Commission estimates that most providers of competitive local exchange service, competitive access providers, Shared-Tenant Service Providers, and other local service providers are small entities.

36. The Commission has included small incumbent LECs in this present RFA analysis. As noted above, a “small business” under the RFA is one that, *inter alia*, meets the pertinent small business size standard (e.g., a telephone communications business having 1,500 or fewer employees), and “is not dominant in its field of operation.” The SBA’s Office of Advocacy contends that, for RFA purposes, small incumbent LECs are not dominant in their field of operation because any such dominance is not “national” in scope. The Commission has therefore included small incumbent LECs in this RFA analysis, although it emphasizes that the RFA action has no effect on Commission analyses and determinations in other, non-RFA contexts.

37. *Interexchange Carriers (IXCs).* Neither the Commission nor the SBA has developed a small business size standard specifically for providers of interexchange services. The appropriate size standard under SBA rules is for the category Wired Telecommunications Carriers. The U.S. Census Bureau defines this industry as “establishments primarily engaged in operating and/or providing access to transmission facilities and infrastructure that they own and/or lease for the transmission of voice, data, text, sound, and video using wired communications networks. Transmission facilities may be based on

a single technology or a combination of technologies. Establishments in this industry use the wired telecommunications network facilities that they operate to provide a variety of services, such as wired telephony services, including VoIP services, wired (cable) audio and video programming distribution, and wired broadband internet services. By exception, establishments providing satellite television distribution services using facilities and infrastructure that they operate are included in this industry.” Under that size standard, such a business is small if it has 1,500 or fewer employees. Census data for 2012 show that there were 3,117 firms that operated that year. Of this total, 3,083 operated with fewer than 1,000 employees. Consequently, the Commission estimates that the majority of IXCs are small entities.

38. *Other Toll Carriers.* Neither the Commission nor the SBA has developed a size standard for small businesses specifically applicable to Other Toll Carriers. This category includes toll carriers that do not fall within the categories of interexchange carriers, operator service providers, pre-paid calling card providers, satellite service carriers, or toll resellers. The closest applicable size standard under SBA rules is for Wired Telecommunications Carriers. The U.S. Census Bureau defines this industry as “establishments primarily engaged in operating and/or providing access to transmission facilities and infrastructure that they own and/or lease for the transmission of voice, data, text, sound, and video using wired communications networks. Transmission facilities may be based on a single technology or a combination of technologies. Establishments in this industry use the wired telecommunications network facilities that they operate to provide a variety of services, such as wired telephony services, including VoIP services, wired (cable) audio and video programming distribution, and wired broadband internet services. By exception, establishments providing satellite television distribution services using facilities and infrastructure that they operate are included in this industry.” Under that size standard, such a business is small if it has 1,500 or fewer employees. Census data for 2012 show that there were 3,117 firms that operated that year. Of this total, 3,083 operated with fewer than 1,000 employees. Thus, under this category and the associated small business size standard, the majority of Other Toll Carriers can be considered small.

Wireless Carriers

39. *Wireless Telecommunications Carriers (except Satellite)*. Since 2007, the Census Bureau has placed wireless firms within this new, broad, economic census category. Under the present and prior categories, the SBA has deemed a wireless business to be small if it has 1,500 or fewer employees. For the category of Wireless Telecommunications Carriers (except Satellite), Census data for 2012 show that there were 967 firms that operated for the entire year. Of this total, 955 firms had fewer than 1,000 employees. Thus under this category and the associated size standard, the Commission estimates that the majority of wireless telecommunications carriers (except satellite) are small entities. Similarly, according to internally developed Commission data, 413 carriers reported that they were engaged in the provision of wireless telephony, including cellular service, Personal Communications Service PCS, and Specialized Mobile Radio SMR services. Of this total, an estimated 261 have 1,500 or fewer employees. Thus, using available data, the Commission estimates that the majority of wireless firms can be considered small.

Resellers

40. *Local Resellers*. The SBA has developed a small business size standard for the category of Telecommunications Resellers. Under that size standard, such a business is small if it has 1,500 or fewer employees. Census data for 2012 show that 1,341 firms provided resale services during that year. Of that number, all operated with fewer than 1,000 employees. Thus, under this category and the associated small business size standard, the majority of these pre-paid calling card providers can be considered small entities.

41. *Toll Resellers*. The SBA has developed a small business size standard for the category of Telecommunications Resellers. Under that size standard, such a business is small if it has 1,500 or fewer employees. Census data for 2012 show that 1,341 firms provided resale services during that year. Of that number, all operated with fewer than 1,000 employees. Thus, under this category and the associated small business size standard, the majority of these pre-paid calling card providers can be considered small entities.

Description of Projected Reporting, Recordkeeping, and Other Compliance Requirements for Small Entities

42. Document FCC 17–91 contains proposals regarding how to strengthen the Commission's rules to prevent slamming and cramming. Until the proposed rules are defined in full, it is not possible to predict with certainty whether the costs of compliance will be proportionate between small and large providers. The Commission seeks to minimize the burden associated with reporting, recordkeeping, and other compliance requirements for the proposed rules.

43. The proposals under consideration could result in additional costs to regulated entities. These proposals may necessitate that some carriers create new processes or make changes to their existing processes which would impose some additional costs to carriers. Document FCC 17–91 proposes to require: Reverification by the executing carrier; a default carrier freeze and procedures to lift the freeze; recording of sales calls and retention of such recordings for two years; certain information be conveyed during the sales call; implementation of new marketing methods; and an explicit opt-in decision for third-party billing. These proposals may require changes to certain carrier processes. However, some carriers may already be in compliance with some of these requirements and therefore, no additional compliance efforts will be required.

Steps Taken To Minimize Significant Economic Impact on Small Entities, and Significant Alternatives Considered

44. The RFA requires an agency to describe any significant alternatives that it has considered in reaching its proposed approach, which may include the following four alternatives (among others): (1) The establishment of differing compliance or reporting requirements or timetables that take into account the resources available to small entities; (2) the clarification, consolidation, or simplification of compliance or reporting requirements under the rule for small entities; (3) the use of performance, rather than design, standards; and (4) an exemption from coverage of the rule, or any part thereof, for small entities.

45. The Commission proposes rules to eliminate slamming and cramming on consumers' bills. The Commission believes that any economic burden these proposed rules may have on carriers is outweighed by the considerable benefits to consumers. Consumers are currently

being charged for services they never authorized and in some instances never received. In addition, consumers must expend significant time and energy trying to recoup these costs and get back to the provider of their choice. In document FCC 17–91 the Commission specifically asks how to minimize the economic impact of its proposals on small entities. For instance, the Commission seeks comment on the specific costs of the measures it discusses in document FCC 17–91, and ways it might mitigate any implementation costs, including by extending implementation deadlines for small carriers. It also particularly asks whether smaller carriers face unique implementation costs and, if so, how the Commission might address those concerns. In addition, for example, it seeks comment on alternatives for how a carrier should obtain a consumer's decision to opt in to third-party charges, if the Commission decides to adopt an "opt-in" approach. Finally, the Commission seeks comment on the overall economic impact these proposed rules may have on carriers because the Commission seeks to minimize all costs associated with these proposed rules.

46. The Commission expects to consider the economic impact on small entities, as identified in comments filed in response to document FCC 17–91 and the IRFA, in reaching its final conclusions and taking action in this proceeding.

Federal Rules That May Duplicate, Overlap, or Conflict With the Proposed Rules

47. None.

List of Subjects in 47 CFR Part 64

Claims, Communications common carriers, Computer technology, Credit, Foreign relations, Individuals with disabilities, Political candidates, Radio, Reporting and recordkeeping requirements, Telecommunications, Telegraph, Telephone.

Federal Communications Commission.

Katura Jackson,

Federal Register Liaison Officer, Office of the Secretary.

For the reasons discussed in the preamble, the Federal Communications Commission proposes to amend 47 CFR part 64 as follows:

PART 64—MISCELLANEOUS RULES RELATING TO COMMON CARRIERS

■ 1. The authority citation for part 64 continues to read as follows:

Authority: 47 U.S.C. 154, 225, 254(k), 403(b)(2)(B), (c), 715, Pub. L. 104–104, 110

Stat. 56. Interpret or apply 47 U.S.C. 201, 218, 222, 225, 226, 227, 228, 254(k), 616, 620, and the Middle Class Tax Relief and Job Creation Act of 2012, Pub. L. 112–96, unless otherwise noted.

■ 2. Amend § 64.1120 by revising paragraph (a)(1)(i) to read as follows:

§ 64.1120 Verification of orders for telecommunications services.

- (a) * * *
- (1) * * *

(i) Authorization from the subscriber, subject to the following:

(A) Misrepresentation and/or deception on the sales call is prohibited. Authorization is not valid if there is any misrepresentation and/or deception when making the sales call.

(B) [Reserved]
* * * * *

■ 3. Amend § 64.2401 by adding paragraph (g) to read as follows:

§ 64.2401 Truth-in Billing Requirements.
* * * * *

(g) Prohibition against unauthorized charges. Carriers shall not place or cause to be placed on any telephone bill charges that have not been authorized by the subscriber. For purposes of this subsection, telephone bill means any bill that contains charges for an interstate telecommunications service.

Federal Register

Vol. 82, No. 155

Monday, August 14, 2017

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF COMMERCE

U.S. Census Bureau

Proposed Information Collection; Comment Request; Participant Statistical Areas Program

AGENCY: U.S. Census Bureau, Commerce.

ACTION: Notice.

SUMMARY: The Department of Commerce, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995.

DATES: To ensure consideration, submit written comments, on or before October 13, 2017.

ADDRESSES: Direct all written comments to Jennifer Jessup, Departmental Paperwork Clearance Officer, Department of Commerce, Room 6616, 14th and Constitution Avenue NW., Washington, DC 20230 (or via the internet at PRAComments@doc.gov).

FOR FURTHER INFORMATION CONTACT: Direct requests for additional information or copies of the information collection instrument(s) and instructions to Robin A. Pennington, U.S. Census Bureau, 4600 Silver Hill Road, Washington, DC 20233 (or via the internet at robin.a.pennington@census.gov).

SUPPLEMENTARY INFORMATION:

I. Abstract

Following Census Bureau guidelines, the Participant Statistical Areas Program (PSAP) allows participants to review and suggest modifications to the boundaries for block groups, census tracts, census county divisions (CCDs), and census designated places (CDPs). Additionally, tribal government

designees can review or propose changes for tribal statistical areas, which include: Tribal block groups (TBGs), tribal census tracts (TCTs), CDPs, tribal designated statistical areas (TDSAs), state designated tribal statistical areas (SDTSAs), state reservations,¹ Alaska Native village statistical areas (ANVSAs), Oklahoma tribal statistical areas (OTSA), and OTSA tribal subdivisions. Participants, usually geographers or planners, are representatives from tribal, state, county, or local governments, and planning agencies. The Census Bureau contacts participants from the 2010 PSAP and invites tribal, state, county, or local governments, and planning agencies to the 2020 PSAP. The statistical boundaries delineated in PSAP reflect localized knowledge, meet Census Bureau-established criteria and guidelines, and are intended to better meet data user needs. These standard or tribal statistical geographies are reviewed and refined once every ten years in advance of each decennial census.

The PSAP geographies represent statistical units for the tabulation and dissemination of small area data from the decennial census, the American Community Survey (ACS), and other Census Bureau programs and surveys. While legal boundaries, such as cities and counties, allow the Census Bureau to publish data by those areas, local governments often need data for planning by smaller units, such as neighborhoods. PSAP is a unique program initiated and executed by the Census Bureau to allow local and regional governments to break larger geographic areas into smaller units so that they can receive 2020 Census and ACS data by these smaller units and better plan local services. PSAP occurs between March 2018 and October 2020 and has three primary components:

1. PSAP Internal Review.
2. PSAP Delineation.
3. PSAP Verification.

The primary participants are tribal governments, regional planning agencies, and councils of governments. Individual counties and incorporated places may participate in the program if they have the resources or better local knowledge of their geography. State

¹ State reservations are not statistical areas, but they are included in PSAP for administrative reasons.

agencies may also act on behalf of non-tribal, local governments that lack the resources to participate in the program.

1—PSAP Internal Review

From March 2018 through May 2018, Census Bureau staff will contact 2010 Census PSAP participants to solicit participation in the 2020 Census PSAP. During this time, Census Bureau staff will also research and identify contacts where the Census Bureau has no 2010 Census PSAP participant contact information. Census Bureau staff will encourage designated 2020 Census PSAP contacts to reach out to tribal, state, county and local contacts, as well as planning organizations to ensure additional stakeholders have the opportunity to be involved in the 2020 Census PSAP.

In July 2018, all tribal, state, county, or local governments, and planning agencies receive an official invitation package by mail. The participant receives a Contact Update Form that they fill out and return to the Census Bureau. The Census Bureau then sends reminder packages to governments that do not respond in the time period mentioned on the Contact Update Form. Census Bureau staff perform an internal review of PSAP entities prior to the distribution of materials to the partners. This internal review ensures each of the statistical areas meets the criteria as defined. Partners will have an option to start with statistical areas from 2010 or the Census Bureau proposed areas for 2020.

2—Program Delineation

In December 2018, the Census Bureau notifies program participants of the start of the delineation phase. The Census Bureau conducts delineation of the 2020 PSAP boundaries using the web-based Geographic Update Partnership Software (GUPS), a customized geographic information system (GIS) based on an open-source platform. Participants can either download the materials and software online from the Census Bureau's Web site or have them shipped on DVDs. Tribal participants have the additional option to use Census Bureau-provided paper maps for the delineation. Participants have a maximum of 120 days from the date of receipt of materials to complete and submit statistical geography updates to the Census Bureau. The delineation phase occurs between December 2018

and July 2019. Then, in July 2019, the Census Bureau sends follow-up letters to inform participants when the verification phase will start.

3—Program Verification

The verification phase allows participants to review the proposed edits from Census Bureau geographers. The Census Bureau sends a prepaid postcard to participants asking them to verify, accept, or reject the final version of the proposed plan, which is available online or by paper maps for tribal participants. Participants have 90 calendar days to review updates. Census Bureau staff contacts non-respondents through a follow-up mail-out and follow-up telephone calls. Once the Census Bureau receives the postcard with the participants' approval or acceptance of the final verification plan, the Census Bureau finalizes the 2020 statistical boundaries. This phase occurs between December 2019 and April 2020.

II. Method of Collection

The Census Bureau offers two methods of collection for the 2020 Census PSAP: GUPS submission (electronic) and paper map submission. The Census Bureau uses several formats to collect information and updates for statistical boundaries during the internal review, delineation, and verification phases. The Census Bureau collects updated contact information from participants who choose to participate in the program online, by email, and by telephone. The Census Bureau-provided software, GUPS, is the only method of response for state and local governments. Some tribal participants only have the option to use the paper map submission (TDSAs, ANVSAs, STDSAs, OTSAs, and OTSA tribal subdivisions).

GUPS Submission

The Census Bureau developed GUPS to provide (1) a free digital update option to those participants lacking an existing GIS and (2) standardized tools and functions enabling participants to navigate quickly and accurately through the update process. In addition, the standardized GUPS submissions enable Census Bureau staff to review, process, and incorporate submissions quickly and accurately into its database. Participants can download GUPS materials via the Web site or request DVDs of the materials via mail.

Participants use GUPS to review their updated standard or tribal statistical geographies already delineated by the Census Bureau. The Census Bureau designs two types of packages: One for GUPS participants who are delineating

or reviewing standard statistical geographies, and one for tribal statistical geography review.

A. The 2020 Census PSAP package for standard statistical geographies contains:

- (1) *Cover letter from the Director of the Census Bureau.*
- (2) *2020 Census Participant Statistical Areas Program (PSAP) Information Guide.*
- (3) *2020 Census Participant Statistical Areas Program (PSAP) Geographic Update Partnership Software (GUPS) Respondent Guide.*
- (4) Quick reference guides for county and local governments. A one-page document providing criteria for each statistical geography eligible for updates as part of PSAP:
- (a) Overview.
- (b) Block groups.
- (c) Census tracts.
- (d) Census county divisions (CCDs).
- (e) Census designated places (CDPs).
- (5) *GUPS Quick Start Online Download.*
- (6) *GUPS Quick Start DVD Download.*
- (7) *DVD for GUPS and DVD for Spatial Data.*

(8) Postage-paid envelope to submit boundary changes.

(9) Delineation and verification prepaid postage postcards.

B. The typical PSAP package for tribal statistical geographies contains:

- (1) *Cover letter from the Director of the Census Bureau.*
- (2) *2020 Census Participant Statistical Areas Program (PSAP) Tribal Information Guide.*
- (3) *2020 Census Participant Statistical Areas Program (PSAP) Geographic Update Partnership Software (GUPS) Tribal Respondent Guide.*
- (4) Quick reference guides for tribal governments. A one-page document providing criteria for each statistical geography eligible for updates as part of PSAP:
- (a) Overview.
- (b) Census designated places (CDPs).
- (c) Census county divisions (CCDs).
- (d) Tribal block groups (TBGs).
- (e) Tribal census tracts (TCTs).
- (f) Tribal designated statistical areas (TDSAs).
- (g) State designated tribal statistical areas (SDTSAs).
- (h) Alaska Native village statistical areas (ANVSAs).
- (i) Oklahoma tribal statistical areas (OTSAs).
- (j) OTSA tribal subdivisions.
- (5) *GUPS Quick Start Online Download.*
- (6) *GUPS Quick Start DVD Download.*
- (7) *DVD for GUPS and DVD for Spatial Data.*

(8) Postage-paid envelope to submit boundary changes.

(9) Delineation and verification prepaid postage postcards.

Paper Map Submission Only

Submission using paper maps is the only option offered to tribal governments and state tribal liaisons whose spatial data are not available in GUPS. The participant receives a large paper map and draws the boundary updates on the maps using pencils provided in the package. The participant uses the postage-paid envelope to submit the annotated map to the Census Bureau and then Census Bureau digitizes the map. The typical PSAP paper map submission package contains:

- (1) *Cover letter from the Director of the Census Bureau.*
- (2) *2020 Census Participant Statistical Areas Program (PSAP) Tribal Paper Respondent Guide.*
- (3) Quick reference guides for tribal governments. A one-page document providing criteria for each statistical geography eligible for updates as part of PSAP:
- (a) Overview.
- (b) Census designated places (CDPs).
- (c) Census county divisions (CCDs).
- (d) Tribal block groups (TBGs).
- (e) Tribal census tracts (TCTs).
- (f) Tribal designated statistical areas (TDSAs).
- (g) State designated tribal statistical areas (SDTSAs).
- (h) Alaska Natives village statistical areas (ANVSAs).
- (i) Oklahoma tribal statistical areas (OTSAs).
- (j) OTSA tribal subdivisions.
- (4) Set of maps of their statistical geographic entities.
- (5) Supplies for updating paper maps.
- (6) Postage-paid envelope to submit boundary changes.
- (7) Delineation and verification prepaid postage postcards.

III. Data

OMB Control Number

Form Number: 20PSAP-F-500—State Recognized Tribes Update Form. 20PSAP-F-510—Contact Update Form. 20PSAP-F-511—Product Preference Form. 20PSAP-F-520—State Tribal Liaison Contact Update Form. 20PSAP-F-530—Federally Recognized Tribe Contact Update Form. 20PSAP-F-540—Federally Recognized Tribe Product Preference Form.

Type of Review: Regular submission.

Affected Public: All Federally or state recognized Indian tribes and Alaska Natives in the United States, states,

counties, local governments, and planning agencies.

Estimated Number of Respondents: 3,801.

Estimated Time per Response: Between 7 and 606 hours, estimated average 40 hours.

Estimated Total Burden Hours: 152,040.

Estimated Total Annual Cost to Public: \$4,523,190.

Respondent's Obligation: Voluntary.

Legal Authority: Title 13 U.S.C. Section 6.

IV. Request for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden (including hours and cost) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Summarization of comments submitted in response to this notice will be included in the request for OMB approval of this information collection. Comments will also become a matter of public record.

Sheleen Dumas,

PRA Department Lead, Office of the Chief Information Officer.

BILLING CODE 3510-07-P

DEPARTMENT OF COMMERCE

Foreign-Trade Zones Board

[S-75-2017]

Approval of Subzone Status; Universal Metal Products, Inc.; Pharr, Texas

On May 10, 2017, the Executive Secretary of the Foreign-Trade Zones (FTZ) Board docketed an application submitted by McAllen Foreign Trade Zone, Inc., grantee of FTZ 12, requesting subzone status subject to the existing activation limit of FTZ 12, on behalf of Universal Metal Products, Inc., in Pharr, Texas.

The application was processed in accordance with the FTZ Act and Regulations, including notice in the **Federal Register** inviting public comment (82 FR 25240, June 1, 2017).

The FTZ staff examiner reviewed the application and determined that it meets the criteria for approval. Pursuant to the authority delegated to the FTZ Board Executive Secretary (15 CFR Sec. 400.36(f)), the application to establish Subzone 12B was approved on July 14, 2017, subject to the FTZ Act and the Board's regulations, including Section 400.13, and further subject to FTZ 12's 873.5-acre activation limit.

Dated: August 8, 2017.

Andrew McGilvray,

Executive Secretary.

International Trade Administration

[C-351-851]

Silicon Metal From Brazil: Preliminary Affirmative Countervailing Duty Determination, and Alignment of Final Determination With Final Antidumping Duty Determination

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (the Department) preliminarily determines that countervailable subsidies are being provided to producers and exporters of silicon metal from Brazil. The period of investigation is January 1, 2016, through December 31, 2016.

DATES: Effective August 14, 2017.

FOR FURTHER INFORMATION CONTACT: Robert Palmer or George Ayache, AD/CVD Operations, Office VIII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482-9068 or (202) 482-2623, respectively.

SUPPLEMENTARY INFORMATION:

Background

This preliminary determination is made in accordance with section 703(b) of the Tariff Act of 1930, as amended (the Act). The Department published the notice of initiation of this investigation on April 4, 2017.¹ On May 16, 2017, the Department postponed the preliminary determination of this investigation and the revised deadline is now August 7,

¹ See *Silicon Metal from Australia, Brazil, and Kazakhstan: Initiation of Countervailing Duty Investigations*, 82 FR 16356 (April 4, 2017) (*Initiation Notice*).

2017.² For a complete description of the events that followed the initiation of this investigation, see the Preliminary Decision Memorandum.³ A list of topics discussed in the Preliminary Decision Memorandum is included as Appendix II to this notice. The Preliminary Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at <http://access.trade.gov>, and is available to all parties in the Central Records Unit, Room B8024 of the main Department of Commerce building. In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly at <http://enforcement.trade.gov/frn/>. The signed and electronic versions of the Preliminary Decision Memorandum are identical in content.

Scope of the Investigation

The product covered by this investigation is silicon metal from Brazil. For a complete description of the scope of this investigation, see Appendix I.

Scope Comments

In accordance with the preamble to the Department's regulations,⁴ the *Initiation Notice* set aside a period of time for parties to raise issues regarding product coverage, (i.e., scope).⁵ Certain interested parties commented on the scope of the investigation as it appeared in the *Initiation Notice*. For a summary of the product coverage comments and rebuttal responses submitted to the record for this preliminary determination, and accompanying discussion and analysis of all comments timely received, see the Preliminary Scope Decision Memorandum.⁶ The Department preliminarily is not modifying the scope language as it appeared in the *Initiation Notice*. See Appendix I.

² See *Silicon Metal from Australia, Brazil and Kazakhstan: Notice of Postponement of Preliminary Determinations of Antidumping Duty Investigations*, 82 FR 22490 (May 16, 2017).

³ See Memorandum, "Decision Memorandum for the Preliminary Determination: Countervailing Duty Investigation of Silicon Metal from Brazil," dated concurrently with, and hereby adopted by, this notice (Preliminary Decision Memorandum).

⁴ See *Antidumping Duties; Countervailing Duties, Final Rule*, 62 FR 27296, 27323 (May 19, 1997).

⁵ See *Initiation Notice*.

⁶ See Memorandum, "Silicon Metal from Australia, Brazil, Kazakhstan, and Norway: Scope Comments Decision Memorandum for the Preliminary Determinations," dated June 27, 2017 (Preliminary Scope Decision Memorandum).

Methodology

The Department is conducting this investigation in accordance with section 701 of the Act. For each of the subsidy programs found countervailable, the Department preliminarily determines that there is a subsidy, *i.e.*, a financial contribution by an “authority” that gives rise to a benefit to the recipient, and that the subsidy is specific.⁷

In making these findings, the Department relied, in part, on facts available and, because it finds that one or more respondents did not act to the best of their ability to respond to the Department’s requests for information, it drew an adverse inference where appropriate in selecting from among the facts otherwise available.⁸ For further information, *see* “Use of Facts Otherwise Available and Adverse Inferences” in the Preliminary Decision Memorandum.

Alignment

On March 28, 2017, the Department initiated this countervailing duty (CVD) investigation of silicon metal from Brazil.⁹ On the same day, the Department also initiated antidumping duty (AD) investigations of silicon metal from Australia, Brazil, and Norway.¹⁰ This CVD investigation and the AD investigations of Australia, Brazil, and Norway cover the same class or kind of merchandise.

As noted in the Preliminary Decision Memorandum, in accordance with section 705(a)(1) of the Act and 19 CFR 351.210(b)(4), the Department is aligning the final CVD determination in this investigation with the final determinations in the companion AD investigations of silicon metal from Australia, Brazil, and Norway, based on a request made by the petitioner.¹¹ Consequently, the final CVD determination will be issued on the same date as the final AD determinations, which are currently scheduled to be issued no later than December 18, 2017, unless postponed.

All-Others Rate

Sections 703(d) and 705(c)(5)(A) of the Act provide that in the preliminary

determination, the Department shall determine an estimated all-others rate for companies not individually examined. This rate shall be an amount equal to the weighted average of the estimated subsidy rates established for those companies individually examined, excluding any zero and *de minimis* rates and any rates based entirely under section 776 of the Act.

In this investigation, the Department preliminarily assigned a rate based entirely on facts available to Ligas de Alumínio S.A.—LIASA (LIASA). Therefore, the only rate for an individually-examined respondent that is not zero, *de minimis* or based entirely on facts otherwise available is the rate calculated for Dow Corning Silício do Brasil Indústria e Comércio Ltda. (DC Silício). Consequently, the rate calculated for DC Silício is also assigned as the rate for all-other producers and exporters, pursuant to section 705(c)(5)(A)(i) of the Act.

Preliminary Determination

The Department preliminarily determines that the following estimated countervailable subsidy rates exist:

Company	Subsidy rate (percent)
Dow Corning Silício do Brasil Indústria e Comércio Ltda. ¹²	3.69
Ligas de Alumínio S.A.—LIASA	52.07
All-Others	3.69

Suspension of Liquidation

In accordance with section 703(d)(1)(B) and (d)(2) of the Act, the Department will direct U.S. Customs and Border Protection (CBP) to suspend liquidation of entries of subject merchandise as described in the scope of the investigation section entered, or withdrawn from warehouse, for consumption on or after the date of publication of this notice in the **Federal Register**. Further, pursuant to 19 CFR 351.205(d), the Department will instruct CBP to require a cash deposit equal to the rates indicated above.

Disclosure

The Department intends to disclose to interested parties its calculations and analysis performed in this preliminary determination within five days of its public announcement, or if there is no

public announcement, within five days of the publication date of this notice in accordance with 19 CFR 351.224(b).

Verification

As provided in section 782(i)(1) of the Act, the Department intends to verify the information relied upon in making its final determination.

Public Comment

Case briefs or other written comments may be submitted to the Assistant Secretary for Enforcement and Compliance no later than seven days after the date on which the last verification report is issued in this investigation. Rebuttal briefs, limited to issues raised in case briefs, may be submitted no later than five days after the deadline date for case briefs.¹³ Pursuant to 19 CFR 351.309(c)(2) and (d)(2), parties who submit case briefs or rebuttal briefs in this investigation are encouraged to submit with each argument: (1) A statement of the issue; (2) a brief summary of the argument; and (3) a table of authorities.

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing, limited to issues raised in the case and rebuttal briefs, must submit a written request to the Assistant Secretary for Enforcement and Compliance, U.S. Department of Commerce within 30 days after the date of publication of this notice. Requests should contain the party’s name, address, and telephone number, the number of participants, whether any participant is a foreign national, and a list of the issues to be discussed. If a request for a hearing is made, the Department intends to hold the hearing at the U.S. Department of Commerce, 1401 Constitution Avenue NW., Washington, DC 20230, at a time and date to be determined. Parties should confirm by telephone the date, time, and location of the hearing two days before the scheduled date.

International Trade Commission Notification

In accordance with section 703(f) of the Act, the Department will notify the International Trade Commission (ITC) of its determination. If the final determination is affirmative, the ITC will make its final injury determination before the later of 120 days after the date of this preliminary determination or 45 days after the final determination.

¹³ See 19 CFR 351.309; *see also* 19 CFR 351.303 (for general filing requirements).

⁷ See sections 771(5)(B) and (D) of the Act regarding financial contribution; section 771(5)(E) of the Act regarding benefit; and section 771(5A) of the Act regarding specificity.

⁸ See sections 776(a) and (b) of the Act.

⁹ See Initiation Notice, 82 FR 16356.

¹⁰ See *Silicon Metal from Australia, Brazil, and Norway: Initiation of Less-Than-Fair-Value Investigations*, 82 FR 16352 (April 4, 2017).

¹¹ See Letter from the petitioner, “Silicon Metal from Australia, Brazil, and Kazakhstan; Countervailing Duty Investigations; Request for Alignment of Final Determinations,” dated July 10, 2017.

¹² As discussed in the Preliminary Decision Memorandum, the Department has found the following companies to be cross-owned with Dow Corning Silício do Brasil Indústria e Comércio Ltda.: Palmyra Recursos Naturais Exploração e Comércio Ltda. and Dow Corning Metais do Pará IND.

Notification to Interested Parties

This determination is issued and published pursuant to sections 703(f) and 777(i) of the Act and 19 CFR 351.205(c).

Dated: August 7, 2017.

Carole Showers,

*Executive Director, Office of Policy,
performing the duties of Deputy Assistant
Secretary for Enforcement and Compliance.*

Appendix I**Scope of the Investigation**

The scope of this investigation covers all forms and sizes of silicon metal, including silicon metal powder. Silicon metal contains at least 85.00 percent but less than 99.99 percent silicon, and less than 4.00 percent iron, by actual weight. Semiconductor grade silicon (merchandise containing at least 99.99 percent silicon by actual weight and classifiable under Harmonized Tariff Schedule of the United States (HTSUS) subheading 2804.61.0000) is excluded from the scope of these investigations.

Silicon metal is currently classifiable under subheadings 2804.69.1000 and 2804.69.5000 of the HTSUS. While HTSUS numbers are provided for convenience and customs purposes, the written description of the scope remains dispositive.

Final Determination With Final
Antidumping Duty Determination**

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (the Department) preliminarily determines that countervailable subsidies are being provided to a producer/exporter of silicon metal from Australia. The period of investigation is January 1, 2016 through December 31, 2016.

DATES: Effective August 14, 2017.

FOR FURTHER INFORMATION CONTACT:

Katherine Johnson or John Anwesen, AD/CVD Operations, Office VIII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482-4929 or (202) 482-0131, respectively.

SUPPLEMENTARY INFORMATION:**Background**

This preliminary determination is made in accordance with section 703(b) of the Tariff Act of 1930, as amended (the Act). The Department published the notice of initiation of this investigation on April 4, 2017.¹ On May 16, 2017, the Department postponed the preliminary determination of this investigation and the revised deadline is now August 7, 2017.² For a complete description of the events that followed the initiation of this investigation, *see* the Preliminary Decision Memorandum.³ A list of topics discussed in the Preliminary Decision Memorandum is included as Appendix II to this notice. The Preliminary Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at <http://access.trade.gov>, and is available to all parties in the Central Records Unit, room B8024 of the main Department of Commerce building. In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly at <http://enforcement.trade.gov/frn/>. The signed and electronic versions of the Preliminary Decision Memorandum are identical in content.

Scope of the Investigation

The product covered by this investigation is silicon metal from Australia. For a complete description of the scope of this investigation, *see* Appendix I.

Scope Comments

In accordance with the preamble to the Department's regulations,⁴ the *Initiation Notice* set aside a period of time for parties to raise issues regarding product coverage, (*i.e.*, scope).⁵ Certain interested parties commented on the scope of the investigation as it appeared in the *Initiation Notice*. For a summary of the product coverage comments and rebuttal responses submitted to the record for this preliminary determination, and accompanying discussion and analysis of all comments timely received, *see* the Preliminary Scope Decision Memorandum.⁶ The Department preliminarily is not modifying the scope language as it appeared in the *Initiation Notice*. *See* Appendix I.

Methodology

The Department is conducting this investigation in accordance with section 701 of the Act. For each of the subsidy programs found countervailable, the Department preliminarily determines that there is a subsidy, *i.e.*, a financial contribution by an "authority" that gives rise to a benefit to the recipient, and that the subsidy is specific.⁷

Alignment

On March 28, 2017, the Department initiated this countervailing duty (CVD) investigation of silicon metal from Australia.⁸ On the same day, the Department also initiated antidumping duty (AD) investigations of silicon metal from Australia, Brazil, and Norway.⁹ This CVD investigation and the AD investigations of Australia, Brazil, and Norway cover the same class or kind of merchandise.

As noted in the Preliminary Decision Memorandum, in accordance with section 705(a)(1) of the Act and 19 CFR 351.210(b)(4), the Department is aligning the final CVD determination in this investigation with the final determinations in the companion AD investigations of silicon metal from Australia, Brazil, and Norway based on

⁴ *See Antidumping Duties; Countervailing Duties, Final Rule*, 62 FR 27296, 27323 (May 19, 1997).

⁵ *See Initiation Notice*.

⁶ *See* Memorandum, "Silicon Metal from Australia, Brazil, Kazakhstan, and Norway: Scope Comments Decision Memorandum for the Preliminary Determinations," dated June 27, 2017 (Preliminary Scope Decision Memorandum).

⁷ *See* sections 771(5)(B) and (D) of the Act regarding financial contribution; section 771(5)(E) of the Act regarding benefit; and section 771(5A) of the Act regarding specificity.

⁸ *See Initiation Notice*.

⁹ *See Silicon Metal from Australia, Brazil and Norway: Initiation of Less-Than-Fair-Value Investigations*, 82 FR 16352 (April 4, 2017).

¹ *See Silicon Metal from Australia, Brazil, and Kazakhstan: Initiation of Countervailing Duty Investigations*, 82 FR 16356 (April 4, 2017) (*Initiation Notice*).

² *See Silicon Metal from Australia, Brazil, and Kazakhstan: Postponement of Preliminary Determinations of Countervailing Duty Investigations*, 82 FR 22490 (May 16, 2017).

³ *See* Memorandum, "Decision Memorandum for the Preliminary Determination in the Countervailing Duty Investigation of Silicon Metal from Australia," dated concurrently with, and hereby adopted by, this notice (Preliminary Decision Memorandum).

a request made by the petitioner.¹⁰ Consequently, the final CVD determination will be issued on the same date as the final AD determinations for Australia, Brazil, and Norway, which are currently scheduled to be issued no later than December 18, 2017, unless postponed.

All-Others Rate

Sections 703(d) and 705(c)(5)(A) of the Act provide that in the preliminary determination, the Department shall determine an estimated all-others rate for companies not individually examined. This rate shall be an amount equal to the weighted average of the estimated subsidy rates established for those companies individually examined, excluding any zero and *de minimis* rates and any rates based entirely under section 776 of the Act. The Department calculated an individual estimated countervailable subsidy rate for Simcoa Operations Pty. Ltd. (Simcoa), the only individually examined producer/exporter in this investigation. Because the only individually calculated rate is not zero, *de minimis*, or based entirely on facts otherwise available, the estimated weighted-average rate calculated for Simcoa is the rate assigned to all-other producers and exporters, pursuant to section 705(c)(5)(A)(i) of the Act.

Preliminary Determination

The Department preliminarily determines that the following estimated countervailable subsidy rates exist:

Company	Subsidy rate (percent)
Simcoa Operations Pty Ltd ¹¹	16.23
All-Others	16.23

Suspension of Liquidation

In accordance with section 703(d)(1)(B) and (d)(2) of the Act, the Department will direct U.S. Customs and Border Protection (CBP) to suspend liquidation of entries of subject merchandise as described in the scope of the investigation section entered, or withdrawn from warehouse, for consumption on or after the date of publication of this notice in the **Federal**

¹⁰ See Letter from the petitioner, “Silicon Metal from Australia, Brazil, and Kazakhstan; Countervailing Duty Investigations; Request for Alignment of Final Determinations,” dated July 10, 2017.

¹¹ As discussed in the Preliminary Decision Memorandum, the Department has found the following companies to be cross-owned with Simcoa: Silicon Metal Company of Australia Pty Ltd., Microsilica Pty Ltd., and Simcoa International Pty Ltd.

Register. Further, pursuant to 19 CFR 351.205(d), the Department will instruct CBP to require a cash deposit equal to the rates indicated above.

Disclosure

The Department intends to disclose to interested parties its calculations and analysis performed in this preliminary determination within five days of its public announcement, or if there is no public announcement, within five days of the publication date of this notice in accordance with 19 CFR 351.224(b).

Verification

As provided in section 782(i)(1) of the Act, the Department intends to verify the information relied upon in making its final determination.

Public Comment

Case briefs or other written comments may be submitted to the Assistant Secretary for Enforcement and Compliance at a date to be determined. Rebuttal briefs, limited to issues raised in case briefs, may be submitted no later than five days after the deadline date for case briefs.¹² Pursuant to 19 CFR 351.309(c)(2) and (d)(2), parties who submit case briefs or rebuttal briefs in this investigation are encouraged to submit with each argument: (1) A statement of the issue; (2) a brief summary of the argument; and (3) a table of authorities.

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing, limited to issues raised in the case and rebuttal briefs, must submit a written request to the Assistant Secretary for Enforcement and Compliance, U.S. Department of Commerce within 30 days after the date of publication of this notice. Requests should contain the party’s name, address, and telephone number, the number of participants, whether any participant is a foreign national, and a list of the issues to be discussed. If a request for a hearing is made, the Department intends to hold the hearing at the U.S. Department of Commerce, 1401 Constitution Avenue NW., Washington, DC 20230, at a time and date to be determined. Parties should confirm by telephone the date, time, and location of the hearing two days before the scheduled date.

International Trade Commission Notification

In accordance with section 703(f) of the Act, the Department will notify the International Trade Commission (ITC) of

¹² See 19 CFR 351.309; see also 19 CFR 351.303 (for general filing requirements).

its determination. If the final determination is affirmative, the ITC will make its final injury determination before the later of 120 days after the date of this preliminary determination or 45 days after the final determination.

Notification to Interested Parties

This determination is issued and published pursuant to sections 703(f) and 777(i) of the Act and 19 CFR 351.205(c).

Dated: August 7, 2017.
Carole Showers,
Executive Director, Office of Policy,
performing the duties of Deputy Assistant Secretary for Enforcement and Compliance.

Appendix I

Scope of the Investigation

The scope of these investigation covers all forms and sizes of silicon metal, including silicon metal powder. Silicon metal contains at least 85.00 percent but less than 99.99 percent silicon, and less than 4.00 percent iron, by actual weight. Semiconductor grade silicon (merchandise containing at least 99.99 percent silicon by actual weight and classifiable under Harmonized Tariff Schedule of the United States (HTSUS) subheading 2804.61.0000) is excluded from the scope of these investigations. Silicon metal is currently classifiable under subheadings 2804.69.1000 and 2804.69.5000 of the HTSUS. While HTSUS numbers are provided for convenience and customs purposes, the written description of the scope remains dispositive.

Certain Aluminum Foil From the People’s Republic of China: Preliminary Affirmative Countervailing Duty Determination

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.
SUMMARY: The Department of Commerce (the Department) preliminarily determines that countervailable subsidies are being provided to

producers and exporters of certain aluminum foil (aluminum foil) from the People's Republic of China (PRC). The period of investigation is January 1, 2016, through December 31, 2016.

DATES: August 14, 2017.

FOR FURTHER INFORMATION CONTACT: John Corrigan at (202) 482-7438, AD/CVD Operations, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW., Washington, DC 20230.

SUPPLEMENTARY INFORMATION:

Background

This preliminary determination is made in accordance with section 703(b) of the Tariff Act of 1930, as amended (the Act). The Department published the notice of initiation of this investigation on March 30, 2017.¹ On May 17, 2017, the Department postponed the preliminary determination of this investigation and the revised deadline is now August 7, 2017.² For a complete description of the events that followed the initiation of this investigation, *see* the Preliminary Decision Memorandum.³ A list of topics discussed in the Preliminary Decision Memorandum is included as Appendix II to this notice. The Preliminary Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at <http://access.trade.gov>, and is available to all parties in the Central Records Unit, room B8024 of the main Department of Commerce building. In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly at <http://enforcement.trade.gov/frn/>. The signed and electronic versions of the Preliminary Decision Memorandum are identical in content.

Scope of the Investigation

The product covered by this investigation is aluminum foil from the PRC. For a complete description of the

scope of this investigation, *see* Appendix I.

Scope Comments

In accordance with the preamble to the Department's regulations,⁴ the *Initiation Notice* set aside a period of time for parties to raise issues regarding product coverage, (*i.e.*, scope).⁵ Certain interested parties commented on the scope of the investigation as it appeared in the *Initiation Notice* as well as additional language proposed by the Department. The Department intends to issue its preliminary decision regarding comments concerning the scope of the antidumping duty (AD) and countervailing duty (CVD) investigations in the preliminary determination of the companion AD investigation.

Methodology

The Department is conducting this investigation in accordance with section 701 of the Act. For each of the subsidy programs found countervailable, the Department preliminarily determines that there is a subsidy, *i.e.*, a financial contribution by an "authority" that gives rise to a benefit to the recipient, and that the subsidy is specific.⁶

The Department notes that, in making these findings, it relied, in part, on facts available and, because it finds that one or more respondents did not act to the best of their ability to respond to the Department's requests for information, it drew an adverse inference where appropriate in selecting from among the facts otherwise available.⁷ For further information, *see* "Use of Facts Otherwise Available and Adverse Inferences" in the Preliminary Decision Memorandum.

All-Others Rate

Sections 703(d) and 705(c)(5)(A) of the Act provide that in the preliminary determination, the Department shall determine an estimated all-others rate for companies not individually examined. This rate shall be an amount equal to the weighted average of the estimated subsidy rates established for those companies individually examined, excluding any zero and *de minimis* rates and any rates based entirely under section 776 of the Act. In this investigation, the Department preliminarily assigned rates based

entirely on facts available to Loften Aluminum (Hong Kong) Limited (Loften HK), as well as Manakin Industries, LLC (Manakin Industries). Therefore, the only rates that are not zero, *de minimis*, or based entirely on facts otherwise available, are the rates calculated for Dingsheng Aluminum Industries (Hong Kong) Trading Co., Ltd. (Dingsheng HK) and Jiangsu Zhongji Lamination Materials Co., Ltd. (Zhongji). Consequently, a simple average of the rates calculated for Dingsheng HK and Zhongji is also assigned as the rate for all-other producers and exporters.

Preliminary Determination

The Department preliminarily determines that the following estimated countervailable subsidy rates exist:

Company	Subsidy rate (percent)
Dingsheng Aluminum Industries (Hong Kong) Trading Co., Ltd. ⁸	28.33
Jiangsu Zhongji Lamination Materials Co., Ltd. ⁹	16.56
Loften Aluminum (Hong Kong) Limited	80.97
Manakin Industries, LLC ¹⁰	80.97
All-Others	22.45

Suspension of Liquidation

In accordance with section 703(d)(1)(B) and (d)(2) of the Act, the Department will direct U.S. Customs and Border Protection (CBP) to suspend liquidation of entries of subject merchandise as described in the scope of the investigation section entered, or withdrawn from warehouse, for consumption on or after the date of publication of this notice in the **Federal**

⁸ As discussed in the Preliminary Decision Memorandum, the Department has found the following companies to be cross-owned with Dingsheng HK: Jiangsu Dingsheng New Materials Joint-Stock Co., Ltd.; Hangzhou Teemful Aluminum Co., Ltd.; Hangzhou Five Star Aluminum Co., Ltd.; Hangzhou DingCheng Aluminum Co., Ltd.; Luoyang Longding Aluminum Co., Ltd.; Hangzhou Dingsheng Industrial Group Co., Ltd.; Hangzhou Dingsheng Import & Export Co., Ltd.; and Walson (HK) Trading Co., Limited.

⁹ As discussed in the Preliminary Decision Memorandum, the Department has found the following companies to be cross-owned with Zhongji: Shantou Wanshun Package Material Stock Co., Ltd.; Jiangsu Huafeng Aluminum Industry Co., Ltd.; and Jiangsu Zhongji Lamination Materials Co., (HK) Ltd.

¹⁰ As discussed in the Preliminary Decision Memorandum, the Department preliminarily finds that Manakin Industries and Suzhou Manakin Aluminum Processing Technology Co., Ltd., effectively function by joint operation as a trading company. Therefore, the rate for Manakin Industries also applies to Suzhou Manakin Aluminum Processing Technology Co., Ltd. For additional information, *see* Preliminary Decision Memorandum.

⁵ *See Initiation Notice*.

⁶ *See* sections 771(5)(B) and (D) of the Act regarding financial contribution; section 771(5)(E) of the Act regarding benefit; and section 771(5A) of the Act regarding specificity.

⁷ *See* sections 776(a) and (b) of the Act.

Register. Further, pursuant to 19 CFR 351.205(d), the Department will instruct CBP to require a cash deposit equal to the rates indicated above.

Disclosure

The Department intends to disclose its calculations and analysis performed to interested parties in this preliminary determination within five days of its public announcement, or if there is no public announcement, within five days of the date of this notice in accordance with 19 CFR 351.224(b).

Verification

As provided in section 782(i)(1) of the Act, the Department intends to verify the information relied upon in making its final determination.

Public Comment

Case briefs or other written comments may be submitted to the Assistant Secretary for Enforcement and Compliance no later than seven days after the date on which the last verification report is issued in this investigation. Rebuttal briefs, limited to issues raised in case briefs, may be submitted no later than five days after the deadline date for case briefs.¹¹ Pursuant to 19 CFR 351.309(c)(2) and (d)(2), parties who submit case briefs or rebuttal briefs in this investigation are encouraged to submit with each argument: (1) A statement of the issue; (2) a brief summary of the argument; and (3) a table of authorities.

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing, limited to issues raised in the case and rebuttal briefs, must submit a written request to the Assistant Secretary for Enforcement and Compliance, U.S. Department of Commerce, within 30 days after the date of publication of this notice. Requests should contain the party's name, address, and telephone number, the number of participants, and a list of the issues to be discussed. If a request for a hearing is made, the Department intends to hold the hearing at the U.S. Department of Commerce, 1401 Constitution Avenue NW., Washington, DC 20230, at a time and date to be determined. Parties should confirm by telephone the date, time, and location of the hearing two days before the scheduled date.

International Trade Commission Notification

In accordance with section 703(f) of the Act, the Department will notify the

International Trade Commission (ITC) of its determination. If the final determination is affirmative, the ITC will determine before the later of 120 days after the date of this preliminary determination or 45 days after the final determination.

Notification to Interested Parties

This determination is issued and published pursuant to sections 703(f) and 777(i) of the Act and 19 CFR 351.205(c).

Dated: August 7, 2017.

Carole Showers,

Executive Director, Office of Policy, performing the duties of Deputy Assistant Secretary for Enforcement and Compliance.

Appendix I

Scope of the Investigation

The merchandise covered by this investigation is aluminum foil having a thickness of 0.2 mm or less, in reels exceeding 25 pounds, regardless of width. Aluminum foil is made from an aluminum alloy that contains more than 92 percent aluminum. Aluminum foil may be made to ASTM specification ASTM B479, but can also be made to other specifications. Regardless of specification, however, all aluminum foil meeting the scope description is included in the scope.

Excluded from the scope of this investigation is aluminum foil that is backed with paper, paperboard, plastics, or similar backing materials on only one side of the aluminum foil, as well as etched capacitor foil and aluminum foil that is cut to shape.

Where the nominal and actual measurements vary, a product is within the scope if application of either the nominal or actual measurement would place it within the scope based on the definitions set forth above. The products under investigation are currently classifiable under Harmonized Tariff Schedule of the United States (HTSUS) subheadings 7607.11.3000, 7607.11.6000, 7607.11.9030, 7607.11.9060, 7607.11.9090, and 7607.19.6000. Further, merchandise that falls within the scope of this proceeding may also be entered into the United States under HTSUS subheadings 7606.11.3060, 7606.11.6000, 7606.12.3045, 7606.12.3055, 7606.12.3090, 7606.12.6000, 7606.91.3090, 7606.91.6080, 7606.92.3090, and 7606.92.6080. Although the HTSUS subheadings are provided for convenience and customs purposes, the written description of the scope of this proceeding is dispositive.

DEPARTMENT OF COMMERCE

International Trade Administration

Initiation of Antidumping and Countervailing Duty Administrative Reviews

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

FOR FURTHER INFORMATION CONTACT:

Marcia E. Short, Office of AD/CVD Operations, Customs Liaison Unit, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW., Washington, DC 20230, telephone: (202) 482-1560.

SUPPLEMENTARY INFORMATION:

Background

On August 1, 2017, the Department of Commerce (the Department) published the June *Initiation Notice*¹ in which the Department inadvertently initiated an antidumping duty administrative review of Polyester Staple Fiber from Taiwan (A-583-833) covering the period May 1, 2016, through April 30, 2017. The Department did not intend to initiate a review with respect to this order. Instead, the Department intended to correct the May *Initiation Notice*² in which the Department inadvertently included TFM North America, Inc. in the initiation notice with respect to the antidumping duty administrative review of Certain Stillbenic Optical Brightening Agents (A-583-848) covering the period May 1, 2016 through April 30, 2017. The Department only intended to initiate a review with respect to Teh Fong Min International Co. Ltd. In addition, in the June *Initiation Notice* the Department misspelt Teh Fong Min International Co. Ltd. as The Fong Min International Co. Ltd.³ This notice serves as a correction to the June *Initiation Notice*.

¹ See *Initiation of Antidumping and Countervailing Duty Administrative Reviews*; 82 FR 35749 (August 2, 2017) (*June Initiation Notice*).

Silicon Metal From the Republic of Kazakhstan: Preliminary Affirmative Countervailing Duty Determination and Alignment of Final Determination With Final Antidumping Duty Determination

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (the Department) preliminarily determines that countervailable subsidies are being provided to producers and exporters of silicon metal from the Republic of Kazakhstan (Kazakhstan). The period of investigation is January 1, 2016, through December 31, 2016.

DATES: Effective August 14, 2017.

FOR FURTHER INFORMATION CONTACT:

Terre Keaton Stefanova or Rebecca Janz, AD/CVD Operations, Office II, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482-1280 or (202) 482-2972, respectively.

SUPPLEMENTARY INFORMATION:

Background

This preliminary determination is made in accordance with section 703(b) of the Tariff Act of 1930, as amended (the Act). The Department published the notice of initiation of this investigation on April 4, 2017.¹ On May 16, 2017, the Department postponed the preliminary determination of this investigation and the revised deadline is now August 7, 2017.² For a complete description of the events that followed the initiation of this investigation, see the Preliminary Decision Memorandum.³ Tau-Ken

Temir LLP (Tau-Ken Temir), a producer and exporter of silicon metal from Kazakhstan, is the sole mandatory respondent for which we have determined there were exports during the period of investigation to the United States. A list of topics discussed in the Preliminary Decision Memorandum is included as Appendix II to this notice. The Preliminary Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at <http://access.trade.gov>, and is available to all parties in the Central Records Unit, room B8024 of the main Department of Commerce building. In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly at <http://enforcement.trade.gov/frn/>. The signed and electronic versions of the Preliminary Decision Memorandum are identical in content.

Scope of the Investigation

The product covered by this investigation is silicon metal from Kazakhstan. For a complete description of the scope of this investigation, see Appendix I.

Scope Comments

In accordance with the preamble to the Department's regulations,⁴ the *Initiation Notice* set aside a period of time for parties to raise issues regarding product coverage (*i.e.*, scope).⁵ Certain interested parties commented on the scope of the investigation as it appeared in the *Initiation Notice*. For a summary of the product coverage comments and rebuttal responses submitted to the record for this preliminary determination, and accompanying discussion and analysis of all comments timely received, see the Preliminary Scope Decision Memorandum.⁶ The Department preliminarily is not modifying the scope language as it appeared in the *Initiation Notice*. See Appendix I.

Methodology

The Department is conducting this investigation in accordance with section

701 of the Act. For each of the subsidy programs found countervailable, the Department preliminarily determines that there is a subsidy, *i.e.*, a financial contribution by an "authority" that gives rise to a benefit to the recipient, and that the subsidy is specific.⁷

In its questionnaire responses, Tau-Ken Temir refused to provide the Department with requested information or analyze whether its cross-owned companies received countervailable subsidies.⁸ Furthermore, the Government of Kazakhstan's (GOK)'s initial questionnaire response was wholly deficient with respect to an allegation that electricity was sold to Tau-Ken Temir for less than adequate remuneration, and its supplemental response regarding this allegation was untimely filed.⁹ Thus, the Department has relied on facts available as part of its analysis. Additionally, because we find that Tau-Ken Temir and the GOK did not act to the best of their abilities to respond to the Department's requests for information and, therefore, impeded this investigation, we drew an adverse inference where appropriate in selecting from among the facts otherwise available.¹⁰ For further information, see "Use of Facts Otherwise Available and Adverse Inferences" in the Preliminary Decision Memorandum.

Alignment

On March 28, 2017, the Department initiated this countervailing duty (CVD) investigation of silicon metal from Kazakhstan.¹¹ On the same day, the Department also initiated antidumping duty (AD) investigations of silicon metal from Australia, Brazil, and Norway.¹² This CVD investigation and the AD investigations of Australia, Brazil, and Norway cover the same class or kind of merchandise.

As noted in the Preliminary Decision Memorandum, in accordance with section 705(a)(1) of the Act and 19 CFR 351.210(b)(4), the Department is aligning the final CVD determination in this investigation with the final determinations in the companion AD investigations of silicon metal from Australia, Brazil, and Norway based on

⁷ See sections 771(5)(B) and (D) of the Act regarding financial contribution; section 771(5)(E) of the Act regarding benefit; and section 771(5A) of the Act regarding specificity.

⁸ See Tau-Ken Temir's Supplemental Affiliation Response, dated May 15, 2017 (Tau-Ken Temir May 15, 2017 SAFFR).

⁹ See GOK's June 1, 2017 Initial Questionnaire Response (GOK June 1, 2017 IQR).

⁵ See *Initiation Notice*.

⁶ See Memorandum, "Silicon Metal from Australia, Brazil, Kazakhstan, and Norway: Scope Comments Decision Memorandum for the Preliminary Determinations," dated June 27, 2017 (Preliminary Scope Decision Memorandum).

a request made by the petitioner.¹³ Consequently, the final CVD determination will be issued on the same date as the final AD determinations for Australia, Brazil, and Norway, which are currently scheduled to be issued no later than December 18, 2017, unless postponed.

All-Others Rate

Sections 703(d) and 705(c)(5)(A) of the Act provide that in the preliminary determination, the Department shall determine an estimated all-others rate for companies not individually examined. This rate shall be an amount equal to the weighted average of the estimated subsidy rates established for those companies individually examined, excluding any zero or *de minimis* rates and any rates based entirely under section 776 of the Act. Pursuant to section 705(c)(5)(A)(ii) of the Act, if the individual estimated countervailable subsidy rates established for all exporters and producers individually examined are zero, *de minimis*, or determined based entirely on facts otherwise available, the Department may use any reasonable method to establish the estimated subsidy rate for all-other producers or exporters.

In this investigation, the Department preliminarily assigned a rate based entirely on facts available to Tau-Ken Temir. Accordingly, we are using “any reasonable method” to establish the all-others rate. We find that it is reasonable to rely on the rate established for Tau-Ken Temir as the all-others rate, particularly because there is no other information on the record that can be used to determine an all-others rate.¹⁴

Preliminary Determination

The Department preliminarily determines that the following estimated countervailable subsidy rates exist:

Company	Subsidy rate (percent)
Tau-Ken Temir LLP ¹⁵	120.00

¹³ See Letter from the petitioner, “Silicon Metal from Australia, Brazil, and Kazakhstan; Countervailing Duty Investigations; Request for Alignment of Final Determinations,” dated July 10, 2017.

¹⁴ See, e.g., *Grain-Oriented Electrical Steel from the People's Republic of China: Final Affirmative Countervailing Duty Determination*, 79 FR 59221 (October 1, 2014), and accompanying Issues and Decision Memorandum at Comment 1; *Circular Welded Carbon-Quality Steel Pipe from India: Final Affirmative Countervailing Duty Determination*, 77 FR 64468, 64470 (October 22, 2012); and *Certain Potassium Phosphate Salts from the People's Republic of China: Final Affirmative Countervailing Duty Determination and Termination of Critical Circumstances Inquiry*, 75 FR 30375 (June 1, 2010).

Company	Subsidy rate (percent)
All-Others	120.00

Suspension of Liquidation

In accordance with section 703(d)(1)(B) and (d)(2) of the Act, the Department will direct U.S. Customs and Border Protection (CBP) to suspend liquidation of entries of subject merchandise as described in the scope of the investigation section entered, or withdrawn from warehouse, for consumption on or after the date of publication of this notice in the **Federal Register**. Further, pursuant to 19 CFR 351.205(d), the Department will instruct CBP to require a cash deposit equal to the rates indicated above.

Disclosure

Normally, the Department discloses to interested parties the calculations performed in connection with a preliminary determination within five days of the public announcement of, where there is no public announcement, within five days of the date of publication of the notice of preliminary determination in the **Federal Register**, in accordance with 19 CFR 351.224(b). However, because the Department preliminarily applied facts available with an adverse inference to the individually examined company Tau-Ken Temir in this investigation in accordance with section 776 of the Act, and the applied facts available rate is based solely on the corporate income tax rate in Kazakhstan, there are no calculations to disclose.

Verification

Because both Tau-Ken Temir and the GOK did not provide information requested by the Department, and the Department preliminarily determines that Tau-Ken Temir and the GOK have been uncooperative, we do not intend to conduct verification.

Public Comment

Case briefs or other written comments may be submitted to the Assistant Secretary for Enforcement and Compliance no later than 30 days after the date of publication of the preliminary determination. Rebuttal briefs, limited to issues raised in case briefs, may be submitted no later than five days after the deadline date for case

¹⁵ As discussed in the Preliminary Decision Memorandum, the Department has found the following companies to be cross-owned with Tau-Ken Temir LLP: JSC NMC Tau-Ken Samruk and LLP Silicon Mining.

briefs.¹⁶ Pursuant to 19 CFR 351.309(c)(2) and (d)(2), parties who submit case briefs or rebuttal briefs in this investigation are encouraged to submit with each argument: (1) A statement of the issue; (2) a brief summary of the argument; and (3) a table of authorities.

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing, limited to issues raised in the case and rebuttal briefs, must submit a written request to the Assistant Secretary for Enforcement and Compliance, U.S. Department of Commerce within 30 days after the date of publication of this notice. Requests should contain the party's name, address, and telephone number, the number of participants, whether any participant is a foreign national, and a list of the issues to be discussed. If a request for a hearing is made, the Department intends to hold the hearing at the U.S. Department of Commerce, 1401 Constitution Avenue NW., Washington, DC 20230, at a time and date to be determined. Parties should confirm by telephone the date, time, and location of the hearing two days before the scheduled date.

International Trade Commission Notification

In accordance with section 703(f) of the Act, the Department will notify the International Trade Commission (ITC) of its determination. If the final determination is affirmative, the ITC will make its final injury determination before the later of 120 days after the date of this preliminary determination or 45 days after the final determination.

Notification to Interested Parties

This determination is issued and published pursuant to sections 703(f) and 777(i) of the Act and 19 CFR 351.205(c).

Dated: August 7, 2017.

Carole Showers,

Executive Director, Office of Policy performing the duties of Deputy Assistant Secretary for Enforcement and Compliance.

Appendix I

Scope of the Investigation

The scope of this investigation covers all forms and sizes of silicon metal, including silicon metal powder. Silicon metal contains at least 85.00 percent but less than 99.99 percent silicon, and less than 4.00 percent iron, by actual weight. Semiconductor grade silicon (merchandise containing at least 99.99 percent silicon by actual weight and classifiable under Harmonized Tariff Schedule of the United States (HTSUS)

¹⁶ See 19 CFR 351.309; see also 19 CFR 351.303 (for general filing requirements).

subheading 2804.61.0000) is excluded from the scope of this investigation.

Silicon metal is currently classifiable under subheadings 2804.69.1000 and 2804.69.5000 of the HTSUS. While HTSUS numbers are provided for convenience and customs purposes, the written description of the scope remains dispositive.

BILLING CODE 3510-DS-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648-XF604

Permanent Advisory Committee To Advise the U.S. Commissioners to the Western and Central Pacific Fisheries Commission; Meeting Announcement

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of public meeting.

SUMMARY: NMFS announces a public meeting of the Permanent Advisory Committee (PAC) to advise the U.S. Commissioners to the Commission for the Conservation and Management of Highly Migratory Fish Stocks in the Western and Central Pacific Ocean (WCPFC) on September 12, 2017.

DATES: The meeting of the PAC will be held via conference call on September 12, 2017, from 11 a.m. to 1 p.m. HST (or until business is concluded). Members of the public may submit written comments; comments must be received by September 7, 2017.

ADDRESSES: The public meeting will be conducted via conference call. For details on how to call in to the conference line or to submit comments, please contact Emily Crigler, NMFS Pacific Islands Regional Office; telephone: 808-725-5036; email: emily.crigler@noaa.gov. Documents to be considered by the PAC will be sent out via email in advance of the conference call. Please submit contact information to Emily Crigler (telephone:

808-725-5036; email: emily.crigler@noaa.gov) at least 3 days in advance of the call to receive documents via email.

FOR FURTHER INFORMATION CONTACT:

Emily Crigler, NMFS Pacific Islands Regional Office; 1845 Wasp Blvd., Bldg. 176, Honolulu, HI 96818; telephone: 808-725-5036; facsimile: 808-725-5215; email: emily.crigler@noaa.gov.

SUPPLEMENTARY INFORMATION:

In accordance with the Western and Central Pacific Fisheries Convention Implementation Act (16 U.S.C. 6901 *et seq.*), the Permanent Advisory Committee, or PAC, has been formed to advise the U.S. Commissioners to the WCPFC. Members of the PAC have been appointed by the Secretary of Commerce in consultation with the U.S. Commissioners to the WCPFC. The PAC supports the work of the U.S. National Section to the WCPFC in an advisory capacity. The U.S. National Section is made up of the U.S. Commissioners and the Department of State. NMFS Pacific Islands Regional Office provides administrative and technical support to the PAC in cooperation with the Department of State. More information on the WCPFC, established under the Convention on the Conservation and Management of Highly Migratory Fish Stocks in the Western and Central Pacific Ocean, can be found on the WCPFC Web site: <http://wcpfc.int/>.

Meeting Topics

The purpose of the September 12, 2017, conference call is to discuss outcomes of: The 2017 regular session of the WCPFC Scientific Committee (SC13), the 2017 regular session of the WCPFC Northern Committee (NC13), and the Intersessional Meeting to progress the draft Bridging CMM on Tropical Tuna. There will also be a discussion on topics relevant to the subsequent regular session of the Technical and Compliance Committee (TCC13).

Special Accommodations

The conference call is accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Emily Crigler at 808-725-5036 at least ten working days prior to the meeting.

Authority: 16 U.S.C. 6902 *et seq.*

Dated: August 9, 2017.

Emily H. Menashes,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

BILLING CODE 3510-22-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648-XF431

Endangered Species; File No. 21516

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of availability; request for public comments.

SUMMARY: We, NMFS, have received an application from Virginia Electric and Power Company, D.B.A. Dominion Virginia Power (Dominion) for an incidental take permit, pursuant to the Endangered Species Act (ESA) of 1973, as amended, for activities associated with the otherwise lawful continued operation and maintenance of the Dominion Chesterfield Power Station (CPS) in Chesterfield, VA. We are considering issuing a 10-year permit to the applicant that would authorize take of ESA-listed Atlantic sturgeon (*Acipenser oxyrinchus oxyrinchus*) from the Chesapeake Bay Distinct Population Segment (DPS) incidental to otherwise lawful activities associated with the withdrawal of cooling water from the James River and entrainment and impingement sampling required by the Clean Water Act. Pursuant to the ESA and the National Environmental Policy Act (NEPA), we announce the availability of Dominion's ITP application and draft habitat conservation plan (HCP), as well as our draft environmental assessment (EA), for public review and comment. We provide this notice to seek comments from the public and Federal, Tribal, State, and local governments.

DATES: To allow for timely processing of the permit application, we must receive your comments no later than September 13, 2017.

ADDRESSES: The application is available for download and review at http://www.nmfs.noaa.gov/pr/permits/esa_review.htm under the section heading ESA section 10(a)(1)(B) Permits and Applications and at <http://www.regulations.gov>. The application is also available upon written request or by appointment in the following office: Protected Resources Division, NMFS Greater Atlantic Regional Fisheries Office, 55 Great Republic Drive, Gloucester, MA 01930; phone (978) 281-9328.

Submit your comments by including NOAA-NMFS-2017-0051, by either of the following methods:

- **Electronic Submissions:** Submit all electronic public comments via the Federal e-Rulemaking Portal.

1. Go to www.regulations.gov/docketDetail;D=NOAA-NMFS-2017-0051,

2. Click the “Comment Now!” icon, complete the required fields

3. Enter or attach your comments.

- **Mail:** Submit written information to Julie Crocker, NMFS, Greater Atlantic Regional Fisheries Office, Protected Resources Division, 55 Great Republic Drive, Gloucester, MA 01930.

Instructions: We may not consider comments if they are sent by any other method, to any other address or individual, or received after the end of the specified period. All comments received are a part of the public record and will generally be posted for public viewing on www.regulations.gov without change. All personal identifying information (e.g., name, address, etc.) confidential business information, or otherwise sensitive or protected information submitted voluntarily by the sender is publicly accessible. We will accept anonymous comments (enter “N/A” in the required fields if you wish to remain anonymous). We will accept attachments to electronic comments in Microsoft Word or Excel, WordPerfect, or Adobe PDF file formats, only.

FOR FURTHER INFORMATION CONTACT: Julie Crocker, (978) 282–8480.

SUPPLEMENTARY INFORMATION: We received an initial draft application from Dominion in December 2016 and a complete application on April 10, 2017, for an ITP to take federally listed Atlantic sturgeon over a 10-year period. The ITP would authorize take resulting from continued operations of the facility, including impingement and entrainment in the cooling water intake system and collection during studies and sampling required by section 316(b) of the Clean Water Act. A conservation program to minimize and mitigate for the impacts of the incidental take would be implemented by Dominion as described in the draft HCP.

To comply with the National Environmental Policy Act (42 U.S.C. 4321 *et seq.*) (NEPA), we prepared an EA that describes the proposed action, issuance of an ITP to Dominion, and possible alternatives and analyzes the effects of the proposed action and alternatives on the human environment. We will evaluate whether the EA’s analysis is adequate to support a Finding of No Significant Impact.

Background

Section 9 of the ESA and Federal regulations prohibit the “take” of

species listed as endangered or threatened. The ESA defines “take” to mean harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct. However, under section 10(a)(1)(B) of the ESA, we may issue permits to authorize incidental take of listed species. “Incidental take” is defined by the ESA as take that is incidental to, and not the purpose of, carrying out an otherwise lawful activity. Section 10(a)(2)(A) of the ESA requires an ITP applicant to submit an HCP that specifies the steps the applicant will take to minimize and mitigate the impacts of the taking. Regulations governing ITPs for threatened and endangered species are found at 50 CFR 222.307.

The CPS is a coal-fueled power station in Chesterfield, Virginia in the upper tidal portion, approximately river mile 82 (river kilometer, rkm, 132), of the James River. It has been in operation since 1945. It operates pursuant to a permit issued by the Virginia Department of Environmental Quality under section 402 of the Clean Water Act (the National Pollutant Discharge Elimination System program). CPS has a design intake flow of approximately 1,090 million gallons per day (MGD), at least 25 percent of which is used exclusively for cooling purposes, and is therefore subject to the Clean Water Act section 316(b) existing facility rule (79 FR 48300, August 15, 2014).

Dominion is seeking a permit for the incidental take of Atlantic sturgeon for a term of 10-years. Incidental take may occur as a result of operation of the cooling water intakes and performance of studies required to comply with Clean Water Act 316(b). Additional activities considered, but for which take is not expected include, dredging, constituent discharge, thermal discharge, vessel movements, and shoreline and structure maintenance. The permit application includes Dominion’s consideration of the potential effects to shortnose sturgeon (*Acipenser brevirostrum*). However, Dominion does not anticipate incidental take of shortnose sturgeon because shortnose sturgeon rarely occur in the James River.

Dominion estimates the take of up to 846 Atlantic sturgeon larvae per year from the Chesapeake Bay DPS due to entrainment in the Dominion CPS cooling water intakes. Dominion estimates the take of up to two juvenile, subadult or adult Atlantic sturgeon from the Chesapeake Bay DPS over a ten-year period as a result of impingement at the Dominion CPS intakes.

Conservation Plan

Section 10(a)(1)(B) of the ESA specifies that no permit may be issued unless an applicant submits an adequate HCP. Dominion’s proposed HCP describes measures designed to minimize, monitor, and mitigate the incidental take of Atlantic sturgeon. Dominion’s proposed HCP includes support for two research initiatives to increase knowledge of Atlantic sturgeon in the James River. The first would build on the existing knowledge of the genetic structure of cohorts spawning in the James River. The second would characterize Atlantic sturgeon spatial and temporal use of the upper tidal portion of the James River. The HCP also includes monitoring of incidental take. Other monitoring and mitigation actions will be undertaken as required.

The proposed action is the issuance of an ITP and implementation of the proposed HCP. Dominion considered two alternatives to the proposed action in its HCP: (1) No change to existing operations, studies and maintenance at CPS, and (2) avoiding and minimizing permitted activities (e.g., modifying water withdrawals; modifying the cooling water intake structure; not conducting or not continuing the planned CWA 316(b) studies; not dredging and/or dredging less frequently; not using barges or vessels for the shipment or delivery of bulk materials; not performing or reducing shoreline and structure maintenance activities at CPS).

National Environmental Policy Act

In compliance with NEPA, we analyzed the impacts of the proposed issuance of an ITP and implementation of the HCP, and alternatives. Based on this analysis and any new information resulting from public comment, we will determine if there are any significant impacts caused by the proposed action. We have prepared a draft EA on the proposed action and have made it available for public inspection online or in person at the Greater Atlantic Regional Fisheries Office (see Availability of Documents).

This notice is provided pursuant to section 10(c) of the ESA and the National Environmental Policy Act regulations (40 CFR 1506.6). We will evaluate the application, associated documents, and submitted comments received to determine whether the application meets the requirements of section 10 of the ESA (16 U.S.C. 1531 *et seq.*). We will also evaluate whether issuance of a section 10(a)(1)(B) permit would comply with section 7 of the ESA by conducting an intra-Service section 7

consultation. We will use the results of this consultation, in combination with the above findings, in our final analysis to determine whether to issue a permit. If the requirements are met, we will issue the permit to the applicant.

We will publish a record of our final action in the **Federal Register**.

Authority: This notice is provided pursuant to section 10(c) of the ESA (16 U.S.C. 1531 *et seq.*) and NEPA regulations (40 CFR 1506.6).

Dated: August 9, 2017.

Angela Somma,

Chief, Endangered Species Division, Office of Protected Resources, National Marine Fisheries Service.

BILLING CODE 3510-22-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648-XF561

Taking and Importing Marine Mammals; Taking Marine Mammals Incidental to the U.S. Navy Training and Testing Activities in the Atlantic Fleet Training and Testing Study Area

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; receipt of application for letter of authorization; request for comments and information.

SUMMARY: NMFS has received a request from the U.S. Navy (Navy) for authorization to take marine mammals incidental to the training and testing activities conducted in the Atlantic Fleet Training and Testing (AFTT) Study Area from October 2018 through October 2023. Pursuant to the Marine Mammal Protection Act (MMPA), NMFS is announcing our receipt of the Navy's request for the development and implementation of regulations governing the incidental taking of marine mammals and inviting information, suggestions, and comments on the Navy's application and request.

DATES: Comments and information must be received no later than September 13, 2017.

ADDRESSES: Comments on the application should be addressed to Jolie Harrison, Chief, Permits, Conservation and Education Division, Office of Protected Resources, National Marine Fisheries Service, 1315 East-West Highway, Silver Spring, MD 20910-3225. The mailbox address for providing

email comments is ITP.Egger@noaa.gov. NMFS is not responsible for email comments sent to addresses other than the one provided here. Comments sent via email, including all attachments, must not exceed a 10-megabyte file size.

Instructions: All comments received are a part of the public record and will generally be posted to www.nmfs.noaa.gov/pr/permits/incidental.htm#applications without change. All Personal Identifying Information (for example, name, address, etc.) voluntarily submitted by the commenter may be publicly accessible. Do not submit Confidential Business Information or otherwise sensitive or protected information.

FOR FURTHER INFORMATION CONTACT: Stephanie Egger, Office of Protected Resources, NMFS; phone: (301) 427-8401.

SUPPLEMENTARY INFORMATION:

Availability

An electronic copy of the Navy's application may be obtained online at: www.nmfs.noaa.gov/pr/permits/incidental.htm#applications. The Navy released a draft Environmental Impact Statement (EIS)/Overseas EIS (OEIS) for the on June 30, 2017. A copy of the draft EIS, which would also support NMFS' proposed rulemaking under the MMPA, is available at www.aftteis.com.

Background

Sections 101(a)(5)(A) and (D) of the MMPA (16 U.S.C. 1361 *et seq.*) direct the Secretary of Commerce (Secretary) to allow, upon request, the incidental, but not intentional taking of marine mammals by U.S. citizens who engage in a specified activity (other than commercial fishing) if certain findings are made and regulations are issued or, if the taking is limited to harassment, notice of a proposed authorization is provided to the public for review.

Incidental take authorizations shall be granted if NMFS finds that the taking will have a negligible impact on the species or stock(s), will not have an unmitigable adverse impact on the availability of the species or stock(s) for subsistence uses (where relevant), and if the permissible methods of taking and requirements pertaining to the mitigation, monitoring and reporting of such taking are set forth.

NMFS has defined "negligible impact" in 50 CFR 216.103 as "an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival."

With respect to military readiness activities, the MMPA defines "harassment" as any act that injures or has the significant potential to injure a marine mammal or marine mammal stock in the wild (Level A Harassment); or (ii) any act that disturbs or is likely to disturb a marine mammal or marine mammal stock in the wild by causing disruption of natural behavioral patterns, including, but not limited to, migration, surfacing, nursing, breeding, feeding, or sheltering, to a point where such behavioral patterns are abandoned or significantly altered (Level B Harassment).

Summary of Request

On June 16, 2017, NMFS received an application from the Navy requesting authorization to take individuals of 39 marine mammal species by Level A and B (behavioral) harassment incidental to training, testing, and routine military operations (all categorized as military readiness activities) from the use of sonar and other transducers, in-water detonations, air guns, and impact pile driving/vibratory extraction. In addition, the Navy is requesting nine mortalities of four marine mammal species during ship shock trials, and three takes (not to exceed two from any individual stock) by injury or mortality from vessel strikes over the five-year period. One marine mammal species, the North Atlantic right whale (*Eubalaena glacialis*), has designated critical habitat in the AFTT Study Area. The Navy's training and testing activities would occur over five years beginning October 2018. On August 4, 2017, the Navy sent an amendment to its application and Navy's application was considered final and complete.

This will be NMFS' third rule making for AFTT activities under the MMPA. NMFS published the first rule effective from January 22, 2009 through January 22, 2014 on January 27, 2009 (74 FR 4844) and the second rule effective from November 14, 2013 through November 13, 2018 on December 4, 2013 (78 FR 73009). For this third rule making, the Navy is proposing to conduct similar sonar activities in the proposed rulemaking as they have conducted over the past nine years in the previous two rule makings.

Description of the Specified Activity

The Navy's training and testing activities to be conducted within the AFTT Study Area (includes areas of the western Atlantic Ocean along the east coast of North America, portions of the Caribbean Sea, and the Gulf of Mexico, covering approximately 2.6 million square nautical miles of ocean area,

oriented from the mean high tide line along the U.S. coast and extends east to the 45-degree west longitude line, north to the 65-degree north latitude line, and south to approximately the 20-degree north latitude line) over the course of 5 years. Please refer to the application, specifically Figure 1.1–1 for a map of the Study Area and Figures 2.2–1 through Figure 2.2–3 for additional maps of the range complexes and testing ranges. The following types of training and testing, which are classified as military readiness activities pursuant to the MMPA, as amended by the National Defense Authorization Act, would be covered under the LOAs (if authorized): amphibious warfare (in-water detonations), anti-submarine warfare (sonar and other transducers, in-water detonations), expeditionary warfare (in-water detonations), surface warfare (in-water detonations), mine warfare (sonar and other transducers, in-water detonations), and other (sonar and other transducers, impact pile driving/vibratory extraction, air guns).

The Navy has proposed a suite of mitigation measures for marine mammals that could be implemented during training and testing activities in the AFTT Study Area. Procedural mitigation generally involves: (1) The use of one or more trained Lookouts to diligently observe for specific biological resources within a mitigation zone, (2) requirements for Lookouts to immediately communicate sightings of specific biological resources to the appropriate watch station for information dissemination, and (3) requirements for the watch station to implement mitigation (e.g., halt an activity) until certain recommencement conditions have been met. Mitigation measures are also conducted in specific mitigation zones and can consist of a variety of measures including, but not limited to: Conducting a certain number of major training exercise per year, not planning or avoid planning major training exercises, minimizing or not conducting active sonar, conducting a certain amount of hull-mounted mid-frequency active sonar per year, not expending explosive or non-explosive ordnance, and implementing vessel speed reductions.

The Navy also proposes to undertake monitoring and reporting efforts to track compliance with take authorizations and to help investigate the effectiveness of implemented mitigation measures in the AFTT Study Area. This can include Adaptive Management, the Integrated Comprehensive Monitoring Program, the Strategic Planning Process, and Annual Monitoring and Exercise and Testing Reports. As an example, under

the Integrated Comprehensive Monitoring Program, the monitoring relating to the effects of Navy training and testing activities on protected marine species are designed to increase in the understanding of the likely occurrence of marine mammals in the vicinity of the action (i.e., presence, abundance, distribution, and density of species) and to increase the understanding of the nature, scope, or context of the likely exposure of marine mammals to any of the potential stressors associated with the action. Please refer to Chapter 13 of the Navy's application for full details on monitoring and reporting proposed by the Navy.

Information Solicited

Interested persons may submit information, suggestions, and comments concerning the Navy's request (see **ADDRESSES**). NMFS will consider all information, suggestions, and comments related to the Navy's request and NMFS' potential development and implementation of regulations governing the incidental taking of marine mammals by the Navy's testing and training activities for the AFTT Study Area.

Dated: August 8, 2017.

BILLING CODE 6717-01-P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. RM98-1-000]

Records Governing Off-the-Record Communications; Public Notice

This constitutes notice, in accordance with 18 CFR 385.2201(b), of the receipt of prohibited and exempt off-the-record communications.

Order No. 607 (64 FR 51222, September 22, 1999) requires Commission decisional employees, who make or receive a prohibited or exempt off-the-record communication relevant to the merits of a contested proceeding, to deliver to the Secretary of the Commission, a copy of the communication, if written, or a summary of the substance of any oral communication.

Prohibited communications are included in a public, non-decisional file associated with, but not a part of, the decisional record of the proceeding. Unless the Commission determines that the prohibited communication and any responses thereto should become a part of the decisional record, the prohibited off-the-record communication will not be considered by the Commission in reaching its decision. Parties to a proceeding may seek the opportunity to respond to any facts or contentions made in a prohibited off-the-record communication, and may request that the Commission place the prohibited communication and responses thereto in the decisional record. The Commission will grant such a request only when it determines that fairness so requires. Any person identified below as having made a prohibited off-the-record communication shall serve the document on all parties listed on the official service list for the applicable proceeding in accordance with Rule 2010, 18 CFR 385.2010.

Exempt off-the-record communications are included in the decisional record of the proceeding, unless the communication was with a cooperating agency as described by 40 CFR 1501.6, made under 18 CFR 385.2201(e)(1)(v).

The following is a list of off-the-record communications recently received by the Secretary of the Commission. The communications listed are grouped by docket numbers in ascending order. These filings are available for electronic review at the Commission in the Public Reference Room or may be viewed on the Commission's Web site at <http://www.ferc.gov> using the eLibrary link.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 739-034]

Appalachian Power Company; Notice of Application Accepted for Filing and Soliciting Comments, Motions to Intervene, and Protests

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection:

a. *Application Type:* Shoreline Management Plan Update.

b. *Project No:* 739-034.

c. *Date Filed:* June 14, 2017.

d. *Applicant:* Appalachian Power Company.

e. *Name of Project:* Claytor Hydroelectric Project.

f. *Location:* The project is located on the New River, in Pulaski County, Virginia.

g. *Filed Pursuant to:* Federal Power Act, 16 U.S.C. 791a-825r.

h. *Applicant Contact:* Elizabeth Parcell, Process Supervisor Senior; Appalachian Power Company, 40 Franklin Road SW., P.O. Box 2021, Roanoke, VA 24011-2121; (540) 985-2441.

i. *FERC Contact:* Krista Sakallaris; (202) 502-6302; Krista.Sakallaris@ferc.gov.

j. *Deadline for filing comments, motions to intervene, and protests:* September 6, 2017.

The Commission strongly encourages electronic filing. Please file comments, motions to intervene, and protests using the Commission's eFiling system at <http://www.ferc.gov/docs-filing/efiling.asp>. Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at <http://www.ferc.gov/docs-filing/ecomment.asp>. You must include your name and contact information at the end of your comments. For assistance, please contact FERC Online Support at FERCOnlineSupport@ferc.gov, (866) 208-3676 (toll free), or (202) 502-8659 (TTY). In lieu of electronic filing, please send a paper copy to: Secretary, Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426. The first page of any filing should include docket number P-739-034. Comments emailed to Commission staff are not considered part of the Commission record.

The Commission's Rules of Practice and Procedure require all intervenors filing documents with the Commission to serve a copy of that document on each person whose name appears on the official service list for the project. Further, if an intervenor files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

k. *Description of Request:* The licensee filed an update to the Claytor Project's Shoreline Management Plan (SMP), pursuant to Section 3.5 of the current SMP and Article 414 of the project's license. The revised SMP includes minor revisions and updates throughout the plan, including formatting changes and updates to existing tables to reflect current data. Other notable changes include: Clarification of terms used (*i.e.*, steep slope, automatic boat cover, high-density multi-use, etc.); amending vegetation removal regulations; adding permitting exceptions; and incorporating various changes requested by agencies during the consultation process.

l. *Locations of the Application:* A copy of the application is available for inspection and reproduction at the Commission's Public Reference Room, located at 888 First Street NE., Room 2A, Washington, DC 20426, or by calling (202) 502-8371. This filing may also be viewed on the Commission's Web site at <http://www.ferc.gov> using the "eLibrary" link. Enter the docket number excluding the last three digits in the docket number field to access the

document. You may also register online at <http://www.ferc.gov/docs-filing/esubscription.asp> to be notified via email of new filings and issuances related to this or other pending projects. For assistance, call 1-866-208-3676 or email FERCOnlineSupport@ferc.gov, for TTY, call (202) 502-8659. A copy is also available for inspection and reproduction at the address in item (h) above. Agencies may obtain copies of the application directly from the applicant.

m. Individuals desiring to be included on the Commission's mailing list should so indicate by writing to the Secretary of the Commission.

n. *Comments, Protests, or Motions To Intervene:* Anyone may submit comments, a protest, or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210, .211, .214, respectively. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any comments, protests, or motions to intervene must be received on or before the specified comment date for the particular application.

o. *Filing and Service of Documents:* Any filing must (1) bear in all capital letters the title "COMMENTS", "PROTEST", or "MOTION TO INTERVENE" as applicable; (2) set forth in the heading the name of the applicant and the project number of the application to which the filing responds; (3) furnish the name, address, and telephone number of the person commenting, protesting or intervening; and (4) otherwise comply with the requirements of 18 CFR 385.2001 through 385.2005. All comments, motions to intervene, or protests must set forth their evidentiary basis. Any filing made by an intervenor must be accompanied by proof of service on all persons listed in the service list prepared by the Commission in this proceeding, in accordance with 18 CFR 385.2010.

Dated: August 8, 2017.

Nathaniel J. Davis, Sr.,

Deputy Secretary.

[Project No. 2809–034]

KEI (Maine) Power Management (III); Notice Soliciting Scoping Comments

Take notice that the following hydroelectric license application has been filed with the Commission and is available for public inspection.

a. *Type of Application:* Subsequent Minor License.

b. *Project No.:* P–2809–034.

c. *Date filed:* April 28, 2017.

d. *Applicant:* KEI (Maine) Power Management (III) LLC (KEI Power).

e. *Name of Project:* American Tissue Hydroelectric Project.

f. *Location:* On Cobbosseecontee Stream, in the Town of Gardiner, Kennebec County, Maine. There are no Federal or tribal lands within the project boundary.

g. *Filed Pursuant to:* Federal Power Act 16 U.S.C. 791(a)–825(r).

h. *Applicant Contact:* Lewis C. Loon, Operations and Maintenance Manager, USA, KEI (Maine) Power Management (III) LLC, 423 Brunswick Avenue, Gardiner, ME 04345; (207) 203–3026.

i. *FERC Contact:* John Baummer, 202–502–6837, or john.baummer@ferc.gov.

j. *Deadline for filing scoping*

comments: September 7, 2017.

The Commission strongly encourages electronic filing. Please file scoping comments using the Commission's eFiling system at <http://www.ferc.gov/docs-filing/efiling.asp>. Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at <http://www.ferc.gov/docs-filing/ecomment.asp>. You must include your name and contact information at the end of your comments. For assistance, please contact FERC Online Support at FERCOnlineSupport@ferc.gov, (866) 208–3676 (toll free), or (202) 502–8659 (TTY). In lieu of electronic filing, please send a paper copy to: Secretary, Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426. The first page of any filing should include docket number P–2809–034.

The Commission's Rules of Practice require all intervenors filing documents with the Commission to serve a copy of that document on each person on the official service list for the project. Further, if an intervenor files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

k. This application is not ready for environmental analysis at this time.

l. *The existing American Tissue Project consists of:* (1) A 256-foot-long, 23-foot-high cut granite, stone and brick masonry dam that includes a 61-foot-long west abutment section, a 100-foot-long spillway section with 12-inch-high flashboards and a crest elevation of 122.3 feet mean sea level (msl), and a 95-foot-long east abutment section with an intake structure that includes: (a) Trashracks with 2-inch clear spacing, (b) a manually-operated headgate that controls flow to the penstock, and (c) three low level outlets at an elevation of about 100 feet msl for releasing minimum flows to the bypassed reach; (2) an approximately 5.5-acre, 1,000-foot-long impoundment with a normal maximum water surface elevation of 123.3 feet msl; (3) a 280-foot-long, 7-foot-diameter underground steel penstock; (4) a 37-foot-long, 34-foot-wide concrete and wooden powerhouse containing a single 1.0-MW turbine-generator unit; (5) a 250-foot-long, 12-kilovolt transmission line; (6) a tailrace; and (7) appurtenant facilities.

KEI Power operates the project in a run-of-river mode with an average annual generation of 5,430 megawatt-hours. KEI Power proposes to release year-round minimum flows of 10 cubic feet per second (cfs) (or inflow to the impoundment, whichever is less), to the bypassed reach to enhance habitat for aquatic organisms and provide downstream passage for alewives. KEI Power also proposes to release a minimum flow of 52 cfs (or inflow, whichever is less) to the tailrace to protect aquatic resources in the downstream reach. In addition, KEI Power proposes to upgrade the existing downstream fish passage facility, construct and operate a new upstream passage facility for American eel, and release 40 cfs through the low level gates of the dam from September 1 to November 15 to facilitate downstream eel passage.

Enter the docket number excluding the last three digits in the docket number field to address the document. For assistance, contact FERC Online Support. A copy is available for inspection and reproduction at the address in item (h) above.

n. You may also register online at <http://www.ferc.gov/docs-filing/esubscription.asp> to be notified via email of new filings and issuances related to this or other pending projects.

For assistance, contact FERC Online Support.

o. Scoping Process: The Commission staff intends to prepare a single Environmental Assessment (EA) for the American Tissue Hydroelectric Project in accordance with the National Environmental Policy Act. The EA will consider both site-specific and cumulative environmental impacts and reasonable alternatives to the proposed action.

Commission staff does not propose to conduct any on-site scoping meetings at this time. Instead, we are soliciting comments, recommendations, and information, on Scoping Document 1 (SD1) issued on August 8, 2017.

Copies of SD1 outlining the subject areas to be addressed in the EA were distributed to the parties on the Commission's mailing list and the applicant's distribution list. Copies of SD1 may be viewed on the web at <http://www.ferc.gov> using the "eLibrary" link. Enter the docket number excluding the last three digits in the docket number field to access the document. For assistance, call 1-866-208-3676 or for TTY, (202) 502-8659.

Dated: August 8, 2017.

Nathaniel J. Davis, Sr.,

Deputy Secretary.

BILLING CODE 6715-01-P

FEDERAL MARITIME COMMISSION

Notice of Agreements Filed

The Commission hereby gives notice of the filing of the following agreements under the Shipping Act of 1984. Interested parties may submit comments on the agreement to the Secretary, Federal Maritime Commission, Washington, DC 20573, within twelve days of the date this notice appears in the **Federal Register**. A copy of the agreement is available through the Commission's Web site (www.fmc.gov) or by contacting the Office of Agreements at (202)-523-5793 or tradeanalysis@fmc.gov.

Agreement No.: 012108-006.

Title: The World Liner Data Agreement.

Parties: Maersk Line A/S; CMA CGM S.A.; COSCO Shipping Lines Co., Ltd.; Hamburg-Sud; Hapag-Lloyd AG; Mediterranean Shipping Company S.A.; Orient Overseas Container Line Ltd.; United Arab Shipping Company S.A.G.; Hyundai Merchant Marine Co., Ltd.; Evergreen Line Joint Service Agreement; Nile Dutch Africa Line B.V.; Zim Integrated Shipping Services Limited; and Independent Container Line Ltd.

Filing Party: Wayne Rohde, Esq.; Cozen O'Connor; 1200 Nineteenth Street NW.; Washington, DC 20036.

Synopsis: The amendment deletes ANL and Hanjin as parties and adds COSCO and Nile Dutch as parties to the Agreement.

Agreement No.: 012300-001.

Title: The COSCO Shipping/KL/YMUK/ELJSA Slot Allocation and Sailing Agreement.

Parties: COSCO Shipping Lines Co., Ltd., Limited; Kawasaki Kisen Kaisha, Ltd.; Yang Ming (UK) Ltd.; Hanjin Shipping Co., Ltd.; and the Evergreen Line Joint Service Agreement.

Filing Party: Eric C. Jeffrey, Esq.; Nixon Peabody LLP; 799 9th Street NW., Suite 500; Washington, DC 20001.

Synopsis: The amendment deletes Hanjin Shipping as a member of the agreement, changes the name of the agreement accordingly, and updates the name of COSCO Shipping.

Agreement No.: 012439-001.

Title: THE Alliance Agreement.

Parties: Hapag-Lloyd AG and Hapag-Lloyd USA LLC (acting as one party); Kawasaki Kisen Kaisha, Ltd.; Mitsui O.S.K. Lines, Ltd.; Nippon Yusen Kaisha; and Yang Ming Marine Transport Corp.

Filing Party: David F. Smith, Esq.; Cozen O'Connor; 1200 Nineteenth Street NW.; Washington, DC 20036.

Synopsis: The amendment authorizes the Parties to the Agreement to form, contribute funds to, develop rules for, and administer a contingency fund designed to protect against the effects of one of the parties experiencing financial distress or an insolvency event. The parties have requested expedited review.

By Order of the Federal Maritime Commission.

Dated: August 9, 2017.

JoAnne D. O' Bryant,

Program Analyst.

BILLING CODE 6731-AA-P

FEDERAL RESERVE SYSTEM

Change in Bank Control Notices; Acquisitions of Shares of a Bank or Bank Holding Company

The notificants listed below have applied under the Change in Bank Control Act (12 U.S.C. 1817(j)) and § 225.41 of the Board's Regulation Y (12 CFR 225.41) to acquire shares of a bank or bank holding company. The factors that are considered in acting on the notices are set forth in paragraph 7 of the Act (12 U.S.C. 1817(j)(7)).

The notices are available for immediate inspection at the Federal Reserve Bank indicated. The notices also will be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing to the Reserve Bank indicated for that notice or to the offices of the Board of Governors. Comments must be received not later than August 29, 2017.

A. Federal Reserve Bank of Kansas City (Dennis Denney, Assistant Vice President) 1 Memorial Drive, Kansas City, Missouri 64198-0001:

1. *Deborah Viergutz, Ellenton, Florida; Lisa A. Verzani, Helena, Montana; Donald Verzani and Patricia L. Verzani, both of Portland, Oregon; and Jenny Wilcynski and Mike Wilcynski, both of Big Sky, Montana;* to retain or acquire voting shares of First State Bancorp, Inc., Randolph, Nebraska, and for approval as members of the Viergutz Family Group to control voting shares of First State Bancorp,

Inc., and thereby own shares of First State Bank, both of Randolph, Nebraska.

Board of Governors of the Federal Reserve System, August 9, 2017.

Yao-Chin Chao,

Assistant Secretary of the Board.

BILLING CODE 6210-01-P

FEDERAL RESERVE SYSTEM

Formations of, Acquisitions by, and Mergers of Bank Holding Companies

The companies listed in this notice have applied to the Board for approval, pursuant to the Bank Holding Company Act of 1956 (12 U.S.C. 1841 *et seq.*) (BHC Act), Regulation Y (12 CFR part 225), and all other applicable statutes and regulations to become a bank holding company and/or to acquire the assets or the ownership of, control of, or the power to vote shares of a bank or bank holding company and all of the banks and nonbanking companies owned by the bank holding company, including the companies listed below.

The applications listed below, as well as other related filings required by the Board, are available for immediate inspection at the Federal Reserve Bank indicated. The applications will also be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the standards enumerated in the BHC Act (12 U.S.C. 1842(c)). If the proposal also involves the acquisition of a nonbanking company, the review also includes whether the acquisition of the nonbanking company complies with the standards in section 4 of the BHC Act (12 U.S.C. 1843). Unless otherwise noted, nonbanking activities will be conducted throughout the United States.

Unless otherwise noted, comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than September 7, 2017.

A. Federal Reserve Bank of Boston (Prabal Chakrabarti, Senior Vice President) 600 Atlantic Avenue, Boston, Massachusetts 02210-2204. Comments can also be sent electronically to BOS.SRC.Applications.Comments@bos.frb.org.

1. *Mascoma Mutual Financial Services Corporation*, Lebanon, New Hampshire; to become a bank holding company by acquiring voting shares of Macsoma Savings Bank, Lebanon, New Hampshire.

Board of Governors of the Federal Reserve System, August 9, 2017.

Yao-Chin Chao,

Assistant Secretary of the Board.

OFFICE OF GOVERNMENT ETHICS

Solicitation of Input From Stakeholders Regarding the U.S. Office of Government Ethics Strategic Plan (FY 2018-2022)

AGENCY: Office of Government Ethics (OGE).

ACTION: Notice of request for public comment.

SUMMARY: The U.S. Office of Government Ethics (OGE) is providing notice of request for public comment on its draft Strategic Plan (Plan). The Plan describes OGE's priorities for the next five years. OGE will consider all comments received by the deadline. You may access the Plan at <https://www.oge.gov/web/OGE.nsf/News+Releases/B0EE73EF1ADC7AF38525816F0075CB6F?opendocument>, or you may obtain a copy of the plan by sending an email request to OGEStrategicPlan@oge.gov.

DATES: All comments must be received by August 25, 2017.

ADDRESSES: You may submit comments by any of the following methods:

Email: OGEStrategicPlan@oge.gov.

Mail, Hand Delivery/Courier: U.S. Office of Government Ethics, Suite 500, 1201 New York Avenue NW., Washington, DC 20005-3917, Attention: Nicole Stein, OGE Strategic Plan.

Instructions: All submissions must include OGE's agency name and the words "Strategic Plan." All comments, including attachments and other supporting materials, will become part of the public record and subject to public disclosure. Comments may be posted on OGE's Web site, www.oge.gov. Sensitive personal information, such as account numbers or Social Security numbers, should not be included. Comments generally will not be edited to remove any identifying or contact information.

FOR FURTHER INFORMATION CONTACT:

Nicole Stein, Chief, Agency Assistance Branch, U.S. Office of Government Ethics, Suite 500, 1201 New York Avenue NW., Washington, DC 20005-3917; Telephone (202) 482-9255; TTY: 800-877-8339; Email: nicole.stein@oge.gov.

Dated: August 8, 2017.

David J. Apol,

Acting Director, U.S. Office of Government Ethics.

BILLING CODE 6345-03-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

[Docket Number: NIOSH 278]

Board of Scientific Counselors, National Institute for Occupational Safety and Health

ACTION: Notice of meeting.

SUMMARY: In accordance with section 10(a)(2) of the Federal Advisory Committee Act, the Centers for Disease Control and Prevention (CDC) announces the following meeting of the aforementioned committee. This meeting is open to the public. The public comment period is from 12:30 p.m. to 12:45 p.m. Please note that the public comment period ends at the time indicated above or following the last call for comments, whichever is earlier. Each commenter will be provided up to five minutes for comment. A limited number of time slots are available and will be assigned on a first come-first served basis. Written comments will also be accepted from those unable to attend the public session via an on-line form at the following Web site: <http://www.cdc.gov/niosh/bsc/contact.html>.

This meeting is open to the public, limited only by the space available. The meeting room accommodates approximately 33 people. The meeting is also open to the public via webcast. If you wish to attend in person or by webcast, please see the NIOSH Web site to register (<http://www.cdc.gov/niosh/bsc/>) or call (404-498-2539) at least five business days in advance of the meeting. Teleconference is available toll-free; please dial (888) 397-9578, Participant Pass Code 63257516. Adobe Connect webcast will be available at <https://odniosh.adobeconnect.com/nioshbsc/> for participants wanting to connect remotely.

DATES: The meeting will be held on September 26, 2017, 8:30 a.m.-2:30 p.m., EDT.

ADDRESSES: Patriots Plaza I, 395 E Street SW., Room 9000, Washington, DC 20201.

FOR FURTHER INFORMATION CONTACT:

Alberto Garcia, M.S., Executive Secretary, BSC, NIOSH, CDC, 1090

Tusculum Avenue, MS-R5, Cincinnati, OH 45226, telephone (513) 841-4596, fax (513) 841-4506.

SUPPLEMENTARY INFORMATION:

Purpose: The Secretary, the Assistant Secretary for Health, and by delegation the Director, Centers for Disease Control and Prevention, are authorized under Sections 301 and 308 of the Public Health Service Act to conduct directly or by grants or contracts, research, experiments, and demonstrations relating to occupational safety and health and to mine health. The Board of Scientific Counselors provides guidance to the Director, National Institute for Occupational Safety and Health on research and prevention programs. Specifically, the Board provides guidance on the Institute's research activities related to developing and evaluating hypotheses, systematically documenting findings and disseminating results. The Board evaluates the degree to which the activities of the National Institute for Occupational Safety and Health: (1) Conform to appropriate scientific standards, (2) address current, relevant needs, and (3) produce intended results.

Matters for Discussion: The agenda for the meeting addresses occupational safety and health issues related to: Stockpiled surgical gowns & respirators; the increased use and complexity of robots; NIOSH's disaster science responder research; and fentanyl exposures to emergency responders.

Agenda items are subject to change as priorities dictate.

An agenda is also posted on the NIOSH Web site (<http://www.cdc.gov/niosh/bsc/>). Members of the public who wish to address the NIOSH BSC are requested to contact the Executive Secretary for scheduling purposes (see contact information below). Alternatively, written comments to the BSC may be submitted via an on-line form at the following Web site: <http://www.cdc.gov/niosh/bsc/contact.html>.

The Director, Management Analysis and Services Office, has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and Prevention and the Agency for Toxic Substances and Disease Registry.

Elaine L. Baker,

Director, Management Analysis and Services Office, Centers for Disease Control and Prevention.

BILLING CODE 4163-18-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Meeting of Board of Scientific Counselors BSC National Center for Injury Prevention

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice of meeting.

SUMMARY: In accordance with the Federal Advisory Committee Act, the Centers for Disease Control and Prevention (CDC) announces the following meeting of the aforementioned committee. This meeting is open to the public. The public is also welcome to listen to the meeting by joining the teleconference at the USA toll-free, dial-in number, 1-877-492-3517 and the passcode is 2576415. The phone line has 75 ports available for teleconference participants. The meeting room will only accommodate 50 people. There will be 15 minutes allotted on Wednesday, September 27, 2017 from 11:30 a.m.-11:45 a.m. for public comments. The public is welcome to submit written comment in advance of the meeting, to the contact person listed below. Written comments received in advance of the meeting will be included in the official record of the meeting.

DATES: The meeting will be held on September 26, 2017, 9:00 a.m. to 4:40 p.m., EDT, and September 27, 2017, 9:30 a.m.-12:00 p.m., EDT.

ADDRESSES: Crown Plaza Atlanta Perimeter at Ravinia, 4355 Ashford Dunwoody Road NE., Atlanta, 30346 and via Teleconference: Dial-In Number: 1-877-492-3517, Participant Code: 2576415.

FOR FURTHER INFORMATION CONTACT:

Gwendolyn H. Cattledge, Ph.D., M.S.E.H., Deputy Associate Director for Science, NCIPC, CDC, 4770 Buford Highway NE., Mailstop F-63, Atlanta, GA 30341, Telephone (770) 488-1430. Email address: GCattledge@cdc.gov.

SUPPLEMENTARY INFORMATION:

Purpose: The Board will: (1) Conduct, encourage, cooperate with, and assist other appropriate public health authorities, scientific institutions, and scientists in the conduct of research, investigations, experiments, demonstrations, and studies relating to the causes, diagnosis, treatment, control, and prevention of physical and mental diseases, and other impairments; (2) assist States and their political

subdivisions in preventing and suppressing communicable and non-communicable diseases and other preventable conditions and in promoting health and well-being; and (3) conduct and assist in research and control activities related to injury.

The Board of Scientific Counselors makes recommendations regarding policies, strategies, objectives, and priorities; and reviews progress toward injury prevention goals and provides evidence in injury prevention-related research and programs. The Board also provides advice on the appropriate balance of intramural and extramural research, the structure, progress and performance of intramural programs. The Board is designed to provide guidance on extramural scientific program matters, including the: (1) Review of extramural research concepts for funding opportunity announcements; (2) conduct of Secondary Peer Review of extramural research grants, cooperative agreements, and contracts applications received in response to the funding opportunity announcements as it relates to the Center's programmatic balance and mission; (3) submission of secondary review recommendations to the Center Director of applications to be considered for funding support; (4) review of research portfolios, and (5) review of program proposals.

Matters To Be Considered: The Board of Scientific Counselors Agenda for the two-day meeting will be: September 26, 2017—Will discuss science matters to include research strategies needed to guide the Center's focus, as well as updates on the NCIPC extramural research program, the National Intimate and Sexual Violence Workgroup, and the Pediatric Mild-Traumatic Injury Workgroup. September 27, 2017—Will discuss science matters to include the Essentials for Childhood Workgroup Portfolio Review, the Suicide Strategic Plan, and Opioid Overdose CDC Coordination/Strategic Directions. Agenda items are subject to change as priorities dictate.

The Director, Management Analysis and Services Office, has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and

Prevention and the Agency for Toxic Substances and Disease Registry.

Elaine L. Baker,
Director, Management Analysis and Services Office, Centers for Disease Control and Prevention.

Centers for Disease Control and Prevention

[30Day-17-17NS]

Agency Forms Undergoing Paperwork Reduction Act Review

The Centers for Disease Control and Prevention (CDC) has submitted the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The notice for the proposed information collection is published to obtain comments from the public and affected agencies.

Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address any of the following: (a) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) Enhance the quality, utility, and clarity of the information to be collected; (d) Minimize the burden of

the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses; and (e) Assess information collection costs.

To request additional information on the proposed project or to obtain a copy of the information collection plan and instruments, call (404) 639-7570 or send an email to omb@cdc.gov. Written comments and/or suggestions regarding the items contained in this notice should be directed to the Attention: CDC Desk Officer, Office of Management and Budget, Washington, DC 20503 or by fax to (202) 395-5806. Written comments should be received within 30 days of this notice.

Proposed Project

Assessing the Infrastructure for Public Sexually Transmitted Disease (STD) Prevention Services—NEW—National Center for HIV/AIDS, Viral Hepatitis, STD, and TB Prevention (NCHHSTP), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

Annually, there are nearly 20 million cases of sexually transmitted diseases (STD) in the United States (US) causing an estimated \$15.6 billion in direct medical costs. A significant percentage of reported cases of STDs are diagnosed in publicly funded clinics, such as STD clinics that are operated by state health departments (SHDs) and local health departments (LHDs). Additionally, state and local health departments also engage in other essential STD prevention activities such as partner services and disease surveillance. Therefore, it is important to periodically assess the current level of publicly-

funded STD prevention services that are offered by health departments in the US.

The STD infrastructure survey will aid CDC in understanding the scope of the delivery of timely public STD preventive and clinical services that are provided to reduce the number of newly acquired STDs and prevent STD-related sequelae. There is no national data available that focuses on detailed STD prevention activities conducted by state and local health departments.

The purpose of this survey is to periodically, (i.e., every three years) examine STD prevention services provided by local and state health departments. The survey will include all state health departments and a nationally representative sample of local health departments in the US. The local health department sample will allow for estimates by jurisdiction population size and US Census region.

The survey contains sections on STD program structure within the health department, STD-related clinical services (local health departments only), partner and other prevention services, and workforce and impacts of any budget reductions.

CDC will administer the STD infrastructure survey to all 50 state health departments and a random sample of 668 local health departments from a list of local health departments maintained by the National Association of City and County Health Officials (NACCHO). Using a web-based survey, multiple reminders will be sent to non-responders in order to reach the target of 44 completed state and 334 completed local surveys for each data collection (different respondents per data collection). The total estimated annual burden hours are 238. There is no cost to respondents other than their time.

ESTIMATED ANNUAL BURDEN HOURS

Type of respondents	Form name	Number of respondents	Number of responses per respondent	Average burden per response (in hours)
STD program director, LHDs	LHD survey	668	1	15/60
STD program director, SHDs	SHD survey	50	1	85/60

BILLING CODE 4163-18-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Advisory Board on Radiation and Worker Health (ABRWH or the Advisory Board), Subcommittee for Dose Reconstruction Reviews (SDRR), National Institute for Occupational Safety and Health (NIOSH)

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice of meeting.

SUMMARY: In accordance with the Federal Advisory Committee Act, the Centers for Disease Control and Prevention (CDC), announces the following meeting for the aforementioned subcommittee. This meeting is open to the public, but without a public comment period. The public is welcome to submit written comments in advance of the meeting, to the contact person below. Written comments received in advance of the meeting will be included in the official record of the meeting. The public is also welcome to listen to the meeting by joining the teleconference at the USA toll-free, dial-in number at 1-866-659-0537 and the pass code is 9933701. The conference line has 150 ports for callers.

DATES: The meeting will be held on September 28, 2017, 10:30 a.m.–5:00 p.m., EDT.

ADDRESSES: Audio Conference Call via FTS Conferencing. The USA toll-free dial-in number is 1-866-659-0537 and the pass code is 9933701.

FOR FURTHER INFORMATION CONTACT:

Theodore Katz, MPA, Designated Federal Officer, NIOSH, CDC, 1600 Clifton Road, Mailstop E-20, Atlanta, Georgia 30333, Telephone (513) 533-6800, Toll Free 1 (800) CDC-INFO, Email ocas@cdc.gov.

SUPPLEMENTARY INFORMATION:

Background: The Advisory Board was established under the Energy Employees Occupational Illness Compensation Program Act of 2000 to advise the President on a variety of policy and technical functions required to implement and effectively manage the

new compensation program. Key functions of the Advisory Board include providing advice on the development of probability of causation guidelines, which have been promulgated by the Department of Health and Human Services (HHS) as a final rule; advice on methods of dose reconstruction, which have also been promulgated by HHS as a final rule; advice on the scientific validity and quality of dose estimation and reconstruction efforts being performed for purposes of the compensation program; and advice on petitions to add classes of workers to the Special Exposure Cohort (SEC).

In December 2000, the President delegated responsibility for funding, staffing, and operating the Advisory Board to HHS, which subsequently delegated this authority to the CDC. NIOSH implements this responsibility for CDC. The charter was issued on August 3, 2001, renewed at appropriate intervals, rechartered on March 22, 2016 pursuant to Executive Order 13708, and will expire on September 30, 2017.

Purpose: The Advisory Board is charged with (a) providing advice to the Secretary, HHS, on the development of guidelines under Executive Order 13179; (b) providing advice to the Secretary, HHS, on the scientific validity and quality of dose reconstruction efforts performed for this program; and (c) upon request by the Secretary, HHS, advise the Secretary on whether there is a class of employees at any Department of Energy facility who were exposed to radiation but for whom it is not feasible to estimate their radiation dose, and on whether there is reasonable likelihood that such radiation doses may have endangered the health of members of this class. The Subcommittee for Dose Reconstruction Reviews was established to aid the Advisory Board in carrying out its duty to advise the Secretary, HHS, on dose reconstruction.

Matters To Be Considered: The agenda for the Subcommittee meeting includes the following dose reconstruction program quality management and assurance activities: Dose reconstruction cases under review from Sets 14–23, including the Oak Ridge sites (Y-12, K-25, Oak Ridge National Laboratory), Hanford, Feed Materials Production Center (“Fernald”), Lawrence Livermore National Laboratory, Mound Plant, Rocky Flats Plant, Nevada Test Site, Idaho National Laboratory, Savannah River Site, Brookhaven National Laboratory, Westinghouse, W.R. Grace, Uranium Mill in Monticello, Ventron Corporation, Weldon Springs Plant, and other Department of Energy and “Atomic Weapons Employer” facilities.

The agenda is subject to change as priorities dictate.

The Director, Management Analysis and Services Office, has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and Prevention and the Agency for Toxic Substances and Disease Registry.

Elaine L. Baker,

*Director, Management Analysis and Services
Office, Centers for Disease Control and
Prevention.*

BILLING CODE 4163-19-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

[CFDA Numbers: 93.581, 93.587, 93.612]

Request for Public Comment on the Proposed Adoption of Administration for Native Americans Program Policies and Procedures

AGENCY: Administration for Native Americans, ACF, HHS.

ACTION: Notice for public comment.

SUMMARY: Pursuant to Section 814 of the Native American Programs Act of 1974 (NAPA), as amended, the Administration for Native Americans (ANA) is required to provide members of the public an opportunity to comment on proposed changes in interpretive rules and general statements of policy and to give notice of the final adoption of such changes no less than 30 days before such changes become effective. In accordance with notice requirements of NAPA, ANA herein describes proposed interpretive rules and general statements of policy that relate to ANA’s funding opportunities beginning in Fiscal Year (FY) 2018. Changes to FY 2018 Funding Opportunity Announcements (FOAs) will be based on the following previously published programs: Environmental Regulatory Enhancement (ERE) HHS-2017-ACF-ANA-NR-1221, Native American Language Preservation and Maintenance-Esther Martinez Immersion (EMI) HHS-2017-ACF-ANA-NB-1226, Native American Language Preservation and Maintenance (P&M) HHS-2017-ACF-ANA-NL-1235, Social and Economic Development Strategies (SEDS) HHS-2017-ACF-ANA-NA-1236, Social and Economic Development Strategies-Alaska (SEDS-AK) HHS-2015-ACF-ANA-NK-0960,

and Native Youth Initiative for Leadership, Empowerment, and Development (ILEAD) HHS-2017-ACF-ANA-NC-1263. This notice of public comment also provides additional information about ANA's plan for administering grant programs.

DATES: The deadline for receipt of comments is 30 days from the date of publication in the **Federal Register**. No FOA will be published prior to 30 days from publication of this Notice.

ADDRESSES: Comments in response to this notice should be addressed to Carmelia Strickland, Director of Program Operations, Administration for Native Americans, 330 C Street SW., Washington, DC 20201. Delays may occur in mail delivery to federal offices; therefore, a copy of comments should be emailed to ANAComments@acf.hhs.gov. Comments will be available for inspection by members of the public at the Administration for Native Americans, 330 C Street SW., Washington, DC 20201.

FOR FURTHER INFORMATION CONTACT: Carmelia Strickland, Director, Division of Program Operations, Administration for Native Americans (877) 922-9262.

SUPPLEMENTARY INFORMATION: Section 814 of NAPA, as amended, incorporates provisions of the Administrative Procedure Act (APA) that require ANA to provide notice of its proposed interpretive rules and statements of policy and to seek public comment on such proposals. This notice serves to fulfill the statutory notice and public comment requirement. ANA has also chosen to provide notice of its proposed rules of agency practice and procedure. The proposed interpretive rules, statements of policy, and rules of ANA practice and procedure reflected in clarifications, modifications, and new text will appear in the six FY 2018 FOAs: Environmental Regulatory Enhancement (ERE), Native American Language Preservation and Maintenance-Esther Martinez Immersion (EMI), Native American Language Preservation and Maintenance (P&M), Social and Economic Development Strategies (SEDS), Social and Economic Development Strategies-Alaska (SEDS-AK), and Native Youth Initiative for Leadership, Empowerment, and Development (ILEAD). This notice also reflects ANA's elimination of the Sustainable Employment and Economic Strategies (SEEDS) FOA.

For information on the types of projects funded by ANA, please refer to the following for information on current and previously funded ANA grants at <https://www.acf.hhs.gov/ana/grants>.

Pre-publication information on ANA's FOAs is available at <https://www.grants.gov/web/grants/search-grants.html> by clicking on 'Forecasted' under Opportunity Status and 'Administration for Children and Families—ANA [HHS-ACF-ANA]' on the left side of the page. ANA's FOAs can be accessed at: <http://www.acf.hhs.gov/grants/open/foa/office/ana> or <http://www.acf.hhs.gov/grants/open/foa/>. Synopses and application forms will be available on <https://www.grants.gov/>.

A. Interpretive rules, statements of policy, procedures, and practice. The proposals below reflect ANA's proposed changes in rules, policy, or procedure which will take effect in the FY 2018 FOAs.

1. Application periods. ANA proposes to provide an open application period of no less than 90 days to respond to FOAs. ANA is increasing the open application period to provide applicants with additional time to review proposed changes that are actualized in the FY 2018 FOAs, and to develop their applications according to FOA requirements. ANA intends to maintain the 90 day open application period for subsequent years.

2. Two-File Upload Requirement. ANA proposes to include the grant application submission requirement established by the Administration for Children and Families (ACF), which specifies "applicants submitting their applications electronically are required to upload only two electronic files. No more than two files will be accepted for the review and additional files will be removed. Standard Forms will not be considered as additional files." ANA requested to deviate from this policy in order to provide rural communities and lower capacity organizations an opportunity to adjust to any technological, or bandwidth requirements that go along with transfer and upload of large files. The policy has now been in existence for several years for other ACF Programs, therefore ANA will no longer request a deviation from this standard ACF policy.

3. Reduced project period for ILEAD. ANA proposes to maintain the reduced maximum project period for awards made under the ILEAD FOA from four years (four 12-month budget periods) to three years (three 12-month budget periods). The reduced project period was made in FY 2017 FOAs to align the program with ANA's Social and Economic Development Strategies (SEDS) program, which is published under the same CFDA number as ILEAD.

4. FY 2018 FOA—Project Description. ANA proposes to modify the information requested in the project description for FY 2018 application submissions. Modifications are being proposed to reflect a shift away from a deficit approach, towards a strength-based approach to defining projects and addressing long-term community goals, and to align the application request for information with common terminology related to program evaluation. The following is applicable to project description requests, and evaluation criterion for all ANA FOAs published beginning in FY 2018:

(a) ANA will no longer require the "Problem Statement" or include the section titled "Objectives and Need for Assistance". Instead, ANA proposes to focus on long term community goals, the community condition, and how the project outcomes relate to the community condition. Information will be requested under the Expected Outcomes section of the Project Description request.

(b) To shift terms included in the FOA towards commonly used evaluation terminology, objectives will no longer be referred to as Specific, Measureable, Achievable, Relevant, and Time-bound (SMART). ANA proposes to define objectives with population, targets, indicators, and timelines. In addition the terms "results" and "benefits" will be replaced with "outcomes" and "outputs."

(c) ANA proposes to require information that addresses elements of a "Project Framework". The project framework will include the following elements: Long-term community goal, current community condition, outcomes; project goal, objectives, indicators, and outputs. The project framework includes elements previously requested in ANA FOAs, in combination with new elements, to fully identify the project in relation to overall community goals; identify project outcomes related to the enhancement of a current community condition; and establish a framework for monitoring changes and identifying tangible results from the project.

(d) ANA will no longer require the identification of impact or an impact indicator; instead, ANA proposes the requirement of an outcome tracking strategy. The outcome tracking strategy will require applicants to identify an indicator and outcome for each objective; a means for measuring change to the indicator, which includes data points and establishes targets to be met throughout project implementation; and a list of project outputs related to each project objective. Within the FY 2018

FOAs, ANA intends to include a suggested format for organizing the information included in the outcome tracking strategy, similar to the suggestion included in the FY 2017 FOAs for organizing impact indicators.

(e) To prioritize community based projects, ANA proposes to require information to identify a community-based strategy for project implementation. The requirement will include information to describe how the proposed project relates to community based priorities, how the community was involved in project development, and how the community will be involved in implementation and sustainability.

(f) The ANA Objective Work Plan (OWP) [current OMB form 0970–0452] will be modified. The terms “results” and “benefits” will no longer be used; instead, applicants will be required to identify outcomes and outputs. Key project activities will be included separately from administrative activities. Requirements for key activities will include alignment to outputs that are created by project implementation and a maximum of 25 key activities per objective during each year of implementation.

(a) To accommodate modifications to ANA’s application information request, ANA proposes the following evaluation criteria headings and scoring values: Outcomes Expected (0–25 points), Outcome Tracking Strategy (0–10 points), Approach (0–25 points), Organizational Capacity (0–15 points), OWP (0–15 points), and Budget (0–10 points).

(b) A scoring table will be included in all FOAs to provide additional guidance to panel reviewers regarding the allocation of points in relation to the quality of information provided in the application.

5. ANA Administrative Policies. The following modifications are applicable to the ANA Administrative Policies included in all FY 2018 FOAs:

(a) ANA proposes to add an administrative policy to prioritize the award of funds to applicant organizations that are local, community based organizations. In the case of national, regional, or non-local based organizations, ANA may provide support to organizations that have provided information to justify they are the appropriate applicant organization to administer the proposed project in support of the community and project beneficiaries being served. The policy is proposed as follows:

Prioritized Funding for Local, Native American Community Based Organizations:

ANA reserves the right to prioritize funding to local Native American community-based organizations serving their local communities and populations. Applications from national and regional organizations that propose projects that are performed in a different geographic location must clearly demonstrate how the target community was selected. They must also demonstrate a need for the project, explain how the project originated, discuss the community-based delivery strategy of the project, identify and describe the intended beneficiaries, describe and relate the actual project benefits to the community and organization, and describe a community-based delivery system. National and regional organizations must describe their membership, define how the organization operates and demonstrate Native community and/or Tribal government involvement in the development of the project and support for the project. The type of community to be served will determine the type of documentation necessary to support the project.

This proposed administrative policy is based on the priority for self-sufficiency for Native American communities, and follows the premise that self-sufficiency is best obtained when local organizations are leading efforts to achieve community goals. The policy will state ANA’s priority for community local, community based organizations, and describe information requirements for national, regional, or non-local based organizations.

(b) Limitation on Number of Awards Based on Two Consecutively Funded Projects: ANA proposes to edit language for this policy to clarify that a no cost extension (NCE) will be included as a period of project implementation, towards consecutively funded projects. The policy is proposed as follows:

Limitation on Number of Awards Based on Two Consecutively Funded Projects:

ANA will maximize the reach of its limited funding. Therefore, applicants that have implemented at least two consecutive projects within one CFDA number may not be funded for a third consecutive project within the same CFDA number if other applicants who have not received ANA funding in the past 3 years are within the scoring range to be funded. Project implementation periods are comprised of newly awarded first year project periods, Non Competing Continuation (NCC) periods, and any No Cost Extensions (NCE) periods.

Therefore grantees that have been approved for a NCE must complete a year after the end of the NCE period without implementing an ANA project under the same CFDA number before they are considered to be exempt from this policy. This specific issue has raised several questions during the implementation period for ANA projects. Editing the policy is meant to

clarify its application prior to the start of an award.

6. Ineligible Activities. ANA proposes to revise language describing ineligible third party training and technical assistance, which is included in the list of Projects Ineligible for Funding in all FY 2018 FOAs. The revision will remove the statement that describes third party training and technical assistance as activities that duplicate training and technical assistance provided by ANA T/TA providers, and the language will directly align the ineligible activity with language in Subchapter D—The Administration for Native Americans, Native American programs, 45 CFR 1336.33(b).

Ineligible Third Party Training and Technical Assistance activities will be stated in the FOAs as follows:

Projects for which a grantee will provide training and technical assistance to other tribes or Native American organizations or to non-members of the grantee organization (third party training or technical assistance).

7. Disqualification Factors. ANA proposes the following edits to the ANA Disqualification Factors included in all FY 2018 FOAs:

(a) ANA will include language to clarify that Tribal Colleges and public agencies serving native peoples from Guam, American Samoa, or the Commonwealth of the Northern Mariana Islands, are required to submit Assurance of Community Representation and Governing Body Documentation from the governing body of the Tribal College. Documentation from the governing body of the Tribe will not fulfill the requirements for this documentation. This clarification is proposed to reduce the number of applications that are disqualified due to misunderstanding the requirements.

(b) ANA will revise the categories for community representation, as described under the Assurance of Community Representation on Board of Directors. ANA proposes to remove the second category of affiliation/relationship to the community being served. This category was listed as: “persons eligible to be a participant in, or beneficiary of the project.” The Assurance of Community Representation is included to ensure ANA funds are awarded to organizations that directly represent the Native American community that will be served (See 45 CFR 1336.33). However, ANA does not limit project participants or beneficiaries to individuals that represent the community being served. Therefore ANA has determined that the inclusion of this category does not support the intention of this policy.

The revised policy is proposed as follows:

Assurance of Community Representation on Board of Directors

Applicants other than tribes or Alaska Native Villages applying for funding must show that a majority of board members are representative of a Native American community to be served. Applicants must submit documentation that identifies each board member by name and indicates his/her affiliation or relationship to at least one of ANA's three categories of community representation, which include: (1) Members of federally or state-recognized tribes; (2) persons who are recognized by members of the eligible Native American community to be served as having a cultural relationship with that community; or (3) persons considered to be Native American as defined in 45 CFR 1336.10 and Native American Pacific Islanders as defined in Section 815 of the Native American Programs Act. Applicants that do not include this documentation will be considered non-responsive, and the application will not be considered for competition. See Section IV.2. Project Description, Additional Eligibility Documentation.

Public agencies serving native peoples from Guam, American Samoa, or the Commonwealth of the Northern Mariana Islands, and Tribal Colleges governed by a board that is separate from the governing body of a tribe, must include Assurance of Community Representation from the governing body of the Tribal College, and not from the governing body of the Tribe. If the documentation is not included by the submission deadline, the application will be considered unresponsive and will be disqualified from the competition.

8. Review and Selection Process. ANA will modify the implementation of the Review and Selection process, as stated in all FY 2018 FOAs as follows:

(a) ANA's commissioner has the discretion to make all final funding decisions. In exercising this discretion, the commissioner includes a list in Section V.2. Review and Selection Process of projects that may not be chosen for funding. For the FY 2018 FOAs, ANA proposes the following:

Additions:

- Projects that have not demonstrated a community-based strategy as described in Section I. Program Description, Key Project Features.

- Projects proposed by national, regional, and non-local organization that have not justified their position as the best applicant organization to address long term community goals for a local community. Please see Section I. Administrative Policies, Prioritized Funding for Local, Native American Community Based Organizations.

- Projects proposing activities that were previously implemented without Federal Assistance.

Because ANA funding is limited, ANA proposes adding these items to the

list in order to align with new language emphasizing community-based strategies, and to highlight the priority for funding these projects. ANA also wants to ensure that its limited funding is being used for projects that are not able to secure other sources of funding for activities that were being previously implemented without support from the Federal Government.

Deletion:

- Projects that provide couples or family counseling activities that are medically-based.

ANA has stated in other administrative policies that it will not fund human research, or projects that may cause unintended harm to project participants. Outside of these limitations, and in an effort to support the Native American community's ability to determine if these activities are actually beneficially to achievement of their long-term goals, ANA will no longer limit the proposal of projects that include medically-based couples or family counseling activities.

9. Native American Preservation and Maintenance Program. The following modifications are being proposed to the "Native American Languages Preservation and Maintenance," and "Native American Languages Preservation and Maintenance Esther Martinez Immersion" FOAs only:

(a) ANA proposes the identification of language specific outcomes that relate to one of the following categories: Language fluency, increased community member use of language learning resources; certified language teachers; or increased capacity to implement a language program. The categories are being proposed in order to further define the outcomes for ANA language projects, and to support the monitoring and evaluation of ANA's language and preservation program.

(b) ANA will include language in the FY 2018 FOAs to restate application requirements included in Section 803C(c)(5–6) of the Native American Programs Act (NAPA) of 1974. The requirements are as follows:

(5) if appropriate, an identification of opportunities for the replication of such project or the modification of such project for use by other Native Americans; and

(6) a plan for the preservation of the products of the Native American language project for the benefit of future generations of Native Americans and other interested persons"

This language will be added directly as stated in ANA's authorizing legislation to ensure that applications meet the requirements of NAPA.

Statutory Authority: Section 814 of the Native American Programs Act of 1974 (NAPA), as amended.

Kimberly Romaine,

Deputy Commissioner, Administration for Native Americans.

BILLING CODE 4184–34–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

Submission for OMB Review; Comment Request

Title: Social Services Block Grant (SSBG) Post-Expenditure Report.

OMB No.: 0970–0234.

Description: The purpose of this is to request approval to: (1) Reinstate and extend the collection of post-expenditure data using the current OMB approved Post-Expenditure Reporting form (OMB No. 0970–0234) with modification past the current expiration date of November 30, 2017; (2) propose 8 minor additions to the current Post-Expenditure Reporting form; and (3) to request that grantees continue to voluntarily submit estimated pre-expenditure data using the Post-Expenditure Reporting form, as part of the required annual Intended Use Plan.

The Social Services Block Grant (SSBG) is authorized under Title XX of the Social Security Act, as amended, and is codified at 42 U.S.C § 1397 through § 1397e. SSBG provides funds to States, the District of Columbia, Puerto Rico, American Samoa, Guam, the Virgin Islands, and the Commonwealth of the Northern Mariana Islands (hereinafter referred to as States and Territories or grantees) to assist in delivering critical services to vulnerable older adults, persons with disabilities, at-risk adolescents and young adults, and children and families. SSBG funds are distributed to each State and the District of Columbia based on each State's population relative to all other States. Distributions are made to Puerto Rico, Guam, American Samoa, the Virgin Islands, and the Commonwealth of the Northern Mariana Islands based on the same ratio allotted to them in 1981 as compared to the total 1981 appropriation.

Each State or Territory is responsible for designing and implementing its own use of SSBG funds to meet the specialized needs of their most vulnerable populations. States and Territories may determine what services will be provided, who will be eligible,

and how funds will be distributed among the various services. State or local SSBG agencies (*i.e.*, county, city, regional offices) may provide the services or grantees may purchase services from qualified agencies, organizations, or individuals. States and Territories must administer the SSBG according to their accepted Intended Use Plan, along with amendments, and in conformance with their own implementing rules and policies. The Office of Community Services (OCS), Administration for Children and Families administers the SSBG.

Annually, grantees are required to submit a Pre-Expenditure Report and Intended Use Plan as a prerequisite to receiving SSBG funds. The Pre-Expenditure Report must include information on the types of services to be supported and the characteristics of individuals to be served. This report is to be submitted 30 days prior to the start of the Fiscal Year (June 1 if the State operates on a July–June Fiscal Year, or September 1 if the State operates on a Federal Fiscal Year). No specific format is required for the Intended Use Plan. Grantees are required to submit a revised Intended Use Plan and Pre-Expenditure Report if the planned use of SSBG funds changes during the year (42 U.S.C. 1397c).

In order to provide a more accurate analysis of the extent to which funds are spent “in a manner consistent” with each of the grantees’ plan for their use, as required by 42 U.S.C. 1397e (a), OCS continues to request that States voluntarily use the format of the Post-Expenditure Reporting form to create their Pre-Expenditure Report, which provides estimates of the amount of expenditures and the number of recipients, by service category, and is submitted as part of the grantees’ Intended Use Plan. Most of the States and Territories are currently using the format of the Post-Expenditure Reporting form to report estimated expenditures and recipients (the Pre-Expenditure Report), by service category, as part of their Intended Use Plan.

On an annual basis, States and Territories are also required to submit a Post-Expenditure Report that details their use of SSBG funds in each of 29 service categories. Grantees are required to submit their Post-Expenditure Report within six months of the end of the period covered by the report. The Post-Expenditure Report must address (1) The number of individuals (including number of children and number of adults) who receive services paid for, in whole or in part, with Federal funds under the SSBG; (2) The amount of

SSBG funds spent in providing each service; (3) The total amount of Federal, State, and Local funds spent in providing each service, including SSBG funds; (4) The method(s) by which each service is provided, showing separately the services provided by public and private agencies; and (5) the criteria applied in determining eligibility for each service such as income eligibility guidelines, sliding scale fees, the effect of public assistance benefits, and any requirements for enrollment in school or training programs (45 CFR 96.74a). The Post-Expenditure Report must also; (1) indicate if recipient totals are actual or if the total reported is based on estimates and/or sampled data; and (2) use its own definition of child and adult in reporting the required data (45 CFR 96.74b).

This request seeks approval to reinstate and continue the use of the current OMB approved Post-Expenditure Reporting form (OMB No. 0970–0234) with modification, for estimating expenditures and recipients as part of States’/Territories’ Pre-Expenditure Reports and for annual Post-Expenditure Reporting. The proposed modifications seek to consolidate information that would be stored or transmitted elsewhere into the singular reporting form to allow OCS to better analyze and provide guidance to improve States efficiency in grant administration. These modifications address the regulations 42 U.S.C. 1397e and 45 CFR 96.74 cited above by providing space on the Post-Expenditure form to indicate the required information.

Beginning in 2013, States completed the current reporting form on the SSBG Portal. The SSBG Portal is a secure web-based data portal. The SSBG Portal allows for more efficient data submission without increasing the overall burden on States. Until recently, Territories reported the data on the Post-Expenditure Reporting form in Microsoft Excel and submitted it to ACF, via email or posted mail. In 2017, Territories can complete the current reporting form on the SSBG Portal. The SSBG Portal provides a user-friendly means for States and Territories to submit and access their Pre-Expenditure and Post-Expenditure and Recipient Data.

Information collected in the Post-Expenditure Reports submitted by States and Territories is analyzed and described in an annual report on SSBG expenditures and recipients produced by the Office of Community Services (OCS), Administration for Children and Families (ACF). The information contained in this report is used for grant

planning and management. The data establishes how SSBG funding is used for the provision of services in each State or Territory.

The data is also analyzed to determine the performance of States and Territories in meeting the SSBG performance measures developed to meet the requirements of the Government Performance and Results Act of 1993 (GPRA), as amended by the GPRA Modernization Act of 2010 [Pub. L. 11–352; 31 U.S.C 1115(b)(10)]. GPRA requires all Federal agencies to develop measurable performance goals.

The SSBG currently has an administrative costs efficiency measure which is intended to decrease the percentage of SSBG funds identified as administrative costs in the Post-Expenditure Reports [U.S. Department of Health and Human Services, Administration for Children and Families, Office of Community Services. (2007, June). *Implementing a new performance measure to enhance efficiency* (Information Memorandum Transmittal No. 04–2007). Available from <https://www.acf.hhs.gov/ocs/resource/implementing-a-new-performance-measure-to-enhance-efficiency>]. The SSBG also implements a performance measure designed to ensure that SSBG funds are spent effectively and efficiently while maintaining the intrinsic flexibility of the SSBG as a block grant. The performance measure assesses the degree to which States and Territories spend SSBG funds in a manner consistent with their intended use, as required by Federal law [42 U.S.C. 1397e(a); U.S. Department of Health and Human Services, Administration for Children and Families, Office of Community Services. (2012, February). *Implementation of a new performance measure* (Information Memorandum Transmittal No. 01–2012). Available from <https://www.acf.hhs.gov/ocs/resource/implementation-of-a-new-performance-measure>]. It will be used to determine how well grantees are doing overall in minimizing variance between projected and actual expenditures of SSBG funds. This program measure began implementation with FY 2013 data and remains ongoing.

Respondents: The Post-Expenditure Reporting form and Pre-Expenditure Report are completed once annually by a representative of the agency that administers the Social Services Block Grant at the State or Territory level. Respondents include the 50 States, the District of Columbia, and Puerto Rico, as well as the territories of American Samoa, Guam, the Virgin Islands, and

the Commonwealth of Northern Mariana Islands.

ANNUAL BURDEN ESTIMATES

Instrument	Number of respondents	Number of responses per respondent	Average burden hours per response	Total burden hours
Post-Expenditure Reporting Form	56	1	110	6,160
Use of Post-Expenditure Reporting Form as Part of the Intended Use Plan	56	1	2	112

Estimated Total Annual Burden Hours: 6,272.

Additional Information: Copies of the proposed collection may be obtained by writing to the Administration for Children and Families, Office of Planning, Research and Evaluation, 330 C Street SW., Washington, DC 20201. Attention Reports Clearance Officer. All requests should be identified by the title of the information collection. Email address: infocollection@acf.hhs.gov.

OMB Comment: OMB is required to make a decision concerning the collection of information between 30 and 60 days after publication of this document in the **Federal Register**. Therefore, a comment is best assured of having its full effect if OMB receives it within 30 days of publication. Written comments and recommendations for the proposed information collection should be sent directly to the following: Office of Management and Budget, Paperwork Reduction Project, Email: OIRA_SUBMISSION@OMB.EOP.GOV, Attn: Desk Officer for the Administration for Children and Families.

Robert Sargis,

Reports Clearance Officer.

BILLING CODE 4184-24-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA-2017-N-4515]

International Drug Scheduling; Convention on Psychotropic Substances; Single Convention on Narcotic Drugs; Ocfentanil, Carfentanil, Pregabalin, Tramadol, Cannabidiol, Ketamine, and Eleven Other Substances; Request for Comments

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is requesting interested persons to submit comments

concerning abuse potential, actual abuse, medical usefulness, trafficking, and impact of scheduling changes on availability for medical use of 17 drug substances. These comments will be considered in preparing a response from the United States to the World Health Organization (WHO) regarding the abuse liability and diversion of these drugs. WHO will use this information to consider whether to recommend that certain international restrictions be placed on these drugs. This notice requesting comments is required by the Controlled Substances Act (the CSA).

DATES: Submit either electronic or written comments by September 13, 2017.

ADDRESSES: You may submit comments as follows. Please note that late, untimely filed comments will not be considered. Electronic comments must be submitted on or before September 13, 2017. The <https://www.regulations.gov> electronic filing system will accept comments until midnight Eastern Time at the end of September 13, 2017. Comments received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are postmarked or the delivery service acceptance receipt is on or before that date.

Electronic Submissions

Submit electronic comments in the following way:

- **Federal eRulemaking Portal:** <https://www.regulations.gov>. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to <https://www.regulations.gov> will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your

comments, that information will be posted on <https://www.regulations.gov>.

- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see "Written/Paper Submissions" and "Instructions").

Written/Paper Submissions

Submit written/paper submissions as follows:

- **Mail/Hand Delivery/Courier (for Written/Paper Submissions):** Dockets Management Staff (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in "Instructions."

Instructions: All submissions received must include the Docket No. FDA-2017-N-4515 for "International Drug Scheduling; Convention on Psychotropic Substances; Single Convention on Narcotic Drugs; Ocfentanil; Furanyl fentanyl (Fu-F); Acryloylfentanyl (Acrylfentanyl); Carfentanil; 4-fluoroisobutyrfentanyl (4-FIBF); Tetrahydrofuranylfentanyl (THF-F); 4-fluoroamphetamine (4-FA); AB-PINACA; AB-CHMINACA; 5F-PB-22; UR-144; 5F-ADB; Etizolam; Pregabalin; Tramadol; Cannabidiol; Ketamine; Request for Comments." Received comments, those filed in a timely manner (see **ADDRESSES**), will be placed in the docket and, except for those submitted as "Confidential Submissions," publicly viewable at <https://www.regulations.gov> or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday.

- **Confidential Submissions—**To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential

with a heading or cover note that states "THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION." The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on <https://www.regulations.gov>. Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as "confidential." Any information marked as "confidential" will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: <https://www.gpo.gov/fdsys/pkg/FR-2015-09-18/pdf/2015-23389.pdf>.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to <https://www.regulations.gov> and insert the docket number, found in brackets in the heading of this document, into the "Search" box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: James R. Hunter, Center for Drug Evaluation and Research, Controlled Substance Staff, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 51, Rm. 5150, Silver Spring, MD 20993-0002, 301-796-3156, email: james.hunter@fda.hhs.gov.

SUPPLEMENTARY INFORMATION:

I. Background

The United States is a party to the 1971 Convention on Psychotropic Substances (Psychotropic Convention). Article 2 of the Psychotropic Convention provides that if a party to the convention or WHO has information about a substance, which in its opinion may require international control or change in such control, it shall so notify the Secretary-General of the United Nations (the U.N. Secretary-General) and provide the U.N. Secretary-General with information in support of its opinion.

Section 201 of the CSA (21 U.S.C. 811) (Title II of the Comprehensive Drug Abuse Prevention and Control Act of 1970) provides that when WHO notifies

the United States under Article 2 of the Psychotropic Convention that it has information that may justify adding a drug or other substances to one of the schedules of the Psychotropic Convention, transferring a drug or substance from one schedule to another, or deleting it from the schedules, the Secretary of State must transmit the notice to the Secretary of Health and Human Services (Secretary of HHS). The Secretary of HHS must then publish the notice in the **Federal Register** and provide opportunity for interested persons to submit comments that will be considered by HHS in its preparation of the scientific and medical evaluations of the drug or substance.

II. WHO Notification

The Secretary of HHS received the following notice from WHO (non-relevant text removed):

Ref.: C.L.xx.2017

The World Health Organization (WHO) presents its compliments to Member States and Associate Members and has the pleasure of informing that the Thirty-ninth Expert Committee on Drug Dependence (ECDD) will meet in Geneva from 6 to 10 November 2017 to review a number of substances with potential for dependence, abuse and harm to health, and will make recommendations to the U.N. Secretary-General, on the need for and level of international control of these substances.

At its 126th session in January 2010, the Executive Board approved the publication "Guidance on the WHO review of psychoactive substances for international control" (EB126/2010/REC1, Annex 6) which requires the Secretariat to request relevant information from Ministers of Health in Member States to prepare a report for submission to the ECDD. For this purpose, a questionnaire was designed to gather information on the legitimate use, harmful use, status of national control and potential impact of international control for each substance under evaluation. Member States are invited to collaborate, as in the past, in this process by providing pertinent information as requested in the questionnaire and concerning substances under review.

It would be appreciated if a person from the Ministry of Health could be designated as the focal point responsible for coordinating and answering the questionnaire. (non relevant information from letter not shown, see letter for text not shown here) The designated focal point, and only this person, should access and complete the questionnaires:

1. Ocfentanil
2. Furanyl fentanyl (Fu-F)
3. Acryloylfentanyl (Acrylfentanyl)
4. Carfentanil
5. 4-fluoroisobutyrfentanyl (4-FIBF)
6. Tetrahydrofuranylfentanyl (THF-F)
7. 4-fluoroamphetamine (4-FA)
8. AB-PINACA
9. AB-CHMINACA
10. 5F-PB-22

11. UR-144
12. 5F-ADB
13. Etizolam
14. Pregabalin
15. Tramadol
16. Cannabidiol
17. Ketamine

PDF versions of the questionnaire in English, French and Spanish may be downloaded from the link <http://www.who.int/medicines/access/controlled-substances/ecdd/en/>. Please note that these versions are for reference only and all questionnaires must be answered through the online system. Further clarification regarding the questionnaire may be obtained from the Secretariat by emailing: ecddsecretariat@who.int.

Replies to the questionnaire must reach the Secretariat by 30 September 2017 in order to facilitate analyses and preparation of the report before the planned meeting. Where there is a competent National Authority under the International Drug Control Treaties, it is kindly requested that the questionnaire be completed in collaboration with such body.

The summary information from the questionnaire will be published online as part of the report on the Web site for the Thirty-ninth ECDD linked to the Department of Essential Medicines and Health Products (EMP). The provisional agenda of the Thirty-ninth ECDD and the list of psychoactive substances under review are also published on Thirty-ninth ECDD Web page: <http://www.who.int/medicines/access/controlled-substances/ecdd/en/>.

Member States are also encouraged to provide any additional relevant information (unpublished or published) that is available on these substances to: ecddsecretariat@who.int. This information will be an invaluable contribution to the ECDD and all submissions will be treated as confidential.

The World Health Organization takes this opportunity to renew to Member States and Associate Members the assurance of its highest consideration.

GENEVA, 7 July 2017

FDA has verified the Web site addresses contained in the WHO notice, as of the date this document publishes in the **Federal Register**, but Web sites are subject to change over time.

III. Substances Under WHO Review

Ocfentanil is a synthetically produced opioid that is structurally related to fentanyl and approximately equipotent in effect. Reported risks associated with use of ocfentanil include development of opioid use disorder, overdose, and fatal overdose. It has no approved medical use in the United States and is not a controlled substance in the United States under the CSA.

Furanyl fentanyl (Fu-F) is a potent clandestinely produced synthetic opioid that is an analog of fentanyl. Evidence suggests that the pattern of abuse of fentanyl analogues, including furanyl fentanyl, parallels that of heroin and

prescription opioid analgesics. Fu-F produces the typical opioid effects that include respiratory depression and loss of consciousness. Seizures of Fu-F have been encountered in powder form. Fu-F has been connected to fatal overdoses, in which intravenous routes of administration are documented. It has no approved medical use in the United States. On November 29, 2016, the Drug Enforcement Administration (DEA) issued a final order to temporarily schedule Fu-F and its isomers, esters, ethers, salts and salts of isomers, esters and ethers, into Schedule I pursuant to the temporary scheduling provisions of the CSA.

Acryloylfentanyl (Acrylfentanyl) belongs to the 4-anilidopiperidine class of synthetic opioids and is similar in structure to fentanyl. Acryloylfentanyl is a clandestinely produced analog of fentanyl and sold illegally as a research chemical on several Web sites. Acryloylfentanyl has also been associated with adverse events typically associated with opioid use such as respiratory depression, anxiety, constipation, tiredness, hallucinations, and withdrawal. The use of acryloylfentanyl has also been linked to the development of opioid use disorder, overdose, and fatal overdose. Acryloylfentanyl has no commercial or medical uses. On July 14, 2017, the DEA issued a temporary order to temporarily schedule acryloylfentanyl, its isomers, esters, ethers, salts and salts of isomers, esters, and ethers, into Schedule I pursuant to the temporary scheduling provisions of the CSA.

Carfentanil, also known as 4-carbomethoxyfentanyl, is an extremely potent synthetic opioid that is similar in structure to and approximately 100 times more potent than fentanyl as an analgesic. At one time legitimately produced, carfentanil is no longer manufactured, marketed, or used in the United States; it is approved by FDA for use under restricted conditions by veterinarians as a immobilizing agent for certain large animals. Illicitly produced carfentanil is a particularly harmful fentanyl analogue that is also being laced into heroin or sold by itself and trafficked in the United States. It is not approved for human use. Drug seizure data indicate that carfentanil is typically used in small doses to cut heroin and other illicitly abused drugs. The significant risk to public health associated with carfentanil use stems from its respiratory depressive effects with very small amounts. Several fatalities have been reported as the result of carfentanil overdoses. On October 28, 1988, the DEA placed carfentanil in Schedule II of the CSA.

4-fluoroisobutyrfentanyl is a clandestinely produced synthetic opioid that is an analog of fentanyl. It has μ -receptor agonist activity similar to that of fentanyl. This would result in effects associated with opioid agonists such as analgesia, respiratory depression, anxiety, constipation, tiredness, hallucinations, withdrawal, the development of opioid use disorder, overdose, and fatal overdose. The use of 4-fluoroisobutyrfentanyl has been implicated in several cases of overdose and fatal overdoses. 4-fluoroisobutyrfentanyl has not been approved for medical use in the U.S. On May 3, 2017, the DEA issued a temporary order to temporarily schedule 4-fluoroisobutyrfentanyl, its isomers, esters, ethers, salts and salts of isomers, esters and ethers, into Schedule I pursuant to the temporary scheduling provisions of the CSA.

Tetrahydrofuranylfentanyl (THF-F) is a synthetic opioid that is an analog of fentanyl. It has μ -receptor agonist activity similar to that of fentanyl, resulting in effects associated with opioid agonists such as analgesia, respiratory depression, anxiety, constipation, tiredness, hallucinations, withdrawal, the development of opioid use disorder, overdose, and fatal overdose. THF-F is not approved for medical use or controlled in the United States under the CSA.

4-Fluoroamphetamine (4-FA) is a psychoactive substance of the phenethylamine and substituted amphetamine chemical classes and produces stimulant effects. WHO reports that 4-FA is clandestinely produced, and its use is associated with fatal and non-fatal intoxications. 4-FA was reviewed at the 37th ECDD (2015) and, while not placed under international control due to insufficient data, was kept under surveillance. 4-FA is not approved for medical use in the United States and it is not controlled under the CSA.

AB-PINACA is a clandestinely produced synthetic cannabinoid agonist approximately 1.5 times as potent as delta-9-tetrahydrocannabinol. Adverse effects produced by cannabinoid agonists include tachycardia, agitation, hallucination, chest pain, seizure, anxiety, acute psychosis, and death. AB-PINACA has been detected in illicit synthetic cannabinoid substances, and reported in cases of overdose and hospitalizations. It has not been approved for medical use in the United States. On January 27, 2017, the DEA published a Notice of Proposed Rulemaking to permanently control AB-PINACA as a Schedule I substance under the CSA.

AB-CHMINACA is a clandestinely produced synthetic cannabinoid agonist that is approximately 16 times more potent than delta-9-tetrahydrocannabinol. Adverse effects produced by cannabinoid agonists include tachycardia, agitation, hallucination, chest pain, seizure, anxiety, acute psychosis, and death. AB-CHMINACA has been detected in illicit synthetic cannabinoid substances and found in cases of overdose and hospitalizations. AB-CHMINACA has not been pre-reviewed or critically reviewed by the WHO. On January 27, 2017, the DEA published a Notice of Proposed Rulemaking to permanently control AB-CHMINACA as a Schedule I substance under the CSA.

5F-PB-22 is a synthetic cannabinoid agonist with similar effects to delta-9-tetrahydrocannabinol, one of the main psychoactive components of cannabis. Adverse effects produced by cannabinoid agonists include tachycardia, agitation, hallucination, chest pain, seizure, anxiety, acute psychosis, and death. 5F-PB-22 is clandestinely produced. It has been found laced on plant material and marketed as herbal products, and is smoked for its psychoactive effects. According to the WHO, 5F-PB-22 has been associated with fatal intoxications. On September 6, 2016, the DEA issued a final rule to permanently place 5F-PB-22 into Schedule I of the CSA.

UR-144 is a clandestinely produced synthetic cannabinoid agonist. In general, adverse effects produced by cannabinoid agonists include tachycardia, agitation, hallucination, chest pain, seizure, anxiety, and acute psychosis. UR-144 has been detected in herbal smoking blends that are sold as herbal incense. In June 2014, the 36th (2014) ECDD reviewed UR-144 and recommended that it be placed under surveillance. On May 11, 2016, the DEA issued a final rule to permanently schedule UR-144 into Schedule I of the CSA.

5F-ADB is a clandestinely produced synthetic cannabinoid agonist. In general, adverse effects produced by cannabinoid agonists include tachycardia, agitation, hallucination, chest pain, seizure, anxiety, and acute psychosis. 5F-ADB has been identified in overdose and/or cases involving death attributed to their abuse. Adverse health effects reported from incidents involving 5F-ADB and other synthetic cannabinoids have included: Nausea, persistent vomiting, agitation, altered mental status, seizures, convulsions, loss of consciousness, and/or cardio toxicity. On April 10, 2017, the DEA issued a temporary scheduling order to

temporarily schedule 5F–ADB, its isomers, esters, ethers, salts and salts of isomers, esters, and ethers into Schedule I pursuant to the temporary scheduling provisions of the CSA.

Etizolam belongs to a class of substances known as benzodiazepines. Benzodiazepines produce central nervous system depression and are commonly used to treat insomnia, anxiety, and seizure disorders. Etizolam is currently prescribed in some countries to treat generalized anxiety disorder with depressive symptoms, but is not approved for medical use or controlled in the United States under the CSA. WHO reported that non-fatal intoxications that include cases of driving under the influence of drugs have been linked to etizolam. The ECDD at its 37th (2015 meeting reviewed etizolam and recommended that a critical review of etizolam is warranted.

Pregabalin is an anticonvulsant-type drug used to treat pain generated from the nervous system. It is available as an oral capsule and oral solution and approved for medical use in the United States for the management of neuropathic pain associated with diabetic peripheral neuropathy, post-herpetic neuralgia, and adjunctive therapy for partial onset seizures, fibromyalgia, and neuropathic pain associated with spinal cord injury. Although the mechanism of action of pregabalin is unknown, studies in animals suggest that binding to the nervous system tissues may be involved in its pain-relieving and anti-seizure effects. Pregabalin binds with high affinity to the alpha 2-delta receptor site (a subunit of voltage-gated calcium channels) in the central nervous system. The binding of pregabalin at this site is thought to be responsible for its therapeutic effect on neuropathic pain. Reports indicate that patients are self-administering higher than recommended doses to achieve euphoria, especially patients who have a history of substance abuse, particularly opioids, and psychiatric illness. While effects of excessively high doses are generally non-lethal, gabapentinoids such as pregabalin are increasingly being identified in post-mortem toxicology analyses. Pregabalin is a Schedule V controlled substance in the United States under the CSA.

Tramadol is an opioid analgesic that produces its primary opioid-like action through an active metabolite referred to as the M1 metabolite (O-desmethyltramadol). Tramadol was first approved for marketing in the United States in 1995 and is available as immediate-release, extended-release, and combination products for the

treatment of moderate to moderately severe pain. On July 2, 2014, the DEA published a final rule in the **Federal Register** controlling tramadol as a Schedule IV substance of the CSA effective from August 18, 2014. Tramadol was pre-reviewed by the ECDD at its 28th (1992) and 32nd (2000) meetings, and critically reviewed at the 33rd (2002) meeting and not recommended for international control but placed on surveillance. Tramadol was pre-reviewed again by the ECDD at its 34th (2006) meeting; however, the ECDD concluded that there was not sufficient evidence to justify a critical review. At the 36th (2014) meeting, the ECDD considered updated information on tramadol, but again concluded that there was insufficient evidence to warrant a critical review.

Cannabidiol (CBD) is one of the active cannabinoids identified in cannabis. CBD has been shown to be beneficial in experimental models of several neurological disorders, including those of seizure and epilepsy. In the United States, CBD-containing products are in human clinical testing in three therapeutic areas, but no such products are approved by FDA for marketing for medical purposes in the United States. CBD is a Schedule I controlled substance under the CSA. At the 37th (2015) meeting of the ECDD, the committee requested that the Secretariat prepare relevant documentation to conduct pre-reviews for several substances, including CBD.

Ketamine is classified as a rapid-acting general anesthetic agent used for short diagnostic and surgical procedures that do not require skeletal muscle relaxation. It is marketed in the United States as a solution for injection. Ketamine is controlled in Schedule III of the CSA in the United States. It is not controlled internationally under the Convention on Psychotropic Substances or the Single Convention on Narcotic Drugs. The ECDD reviewed ketamine at its 34th (2006), 35th (2012), and 36th (2014) meetings. On March 13, 2015, the Commission on Narcotic Drugs (CND) decided by consensus to postpone the consideration of a proposal concerning the recommendation to place ketamine in Schedule IV of the Psychotropic Convention. The CND requested additional information from the WHO. The ECDD reviewed updated information at its 37th (2015) meeting and found no reason to recommend a new pre-review or critical review of ketamine that could potentially change its standing 2014 recommendation that ketamine should not be placed under international control.

IV. Opportunity To Submit Domestic Information

As required by section 201(d)(2)(A) of the CSA, FDA, on behalf of HHS, invites interested persons to submit comments regarding the 17 named drug substances. Any comments received will be considered by HHS when it prepares a scientific and medical evaluation of these drug substances. HHS will forward a scientific and medical evaluation of these drug substances to WHO, through the Secretary of State, for WHO's consideration in deciding whether to recommend international control/decontrol of any of these drug substances. Such control could limit, among other things, the manufacture and distribution (import/export) of these drug substances and could impose certain recordkeeping requirements on them.

Although FDA is, through this notice, requesting comments from interested persons, which will be considered by HHS when it prepares an evaluation of these drug substances, HHS will not now make any recommendations to WHO regarding whether any of these drugs should be subjected to international controls. Instead, HHS will defer such consideration until WHO has made official recommendations to the Commission on Narcotic Drugs, which are expected to be made in early 2018. Any HHS position regarding international control of these drug substances will be preceded by another **Federal Register** notice soliciting public comments, as required by section 201(d)(2)(B) of the CSA.

V. Electronic Access

Persons with access to the Internet may obtain the document at either <https://www.fda.gov/Drugs/GuidanceComplianceRegulatoryInformation/Guidances/default.htm> or <https://www.regulations.gov>.

Dated: August 9, 2017.

Anna K. Abram,

Deputy Commissioner for Policy, Planning, Legislation, and Analysis.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Indian Health Service

Division of Behavioral Health; Office of Clinical and Preventive Services; Behavioral Health Integration Initiative (BH2I)

Announcement Type: New.

Funding Announcement Number:
HHS-2017-IHS-BH2I-0001.

Catalog of Federal Domestic Assistance Number: 93.933.

Key Dates

Application Deadline Date:
September 16, 2017.

Review Date: September 18, 2017.

Earliest Anticipated Start Date:
September 30, 2017.

Signed Tribal Resolutions Due Date:
September 16, 2017.

Proof of Non-Profit Status Due Date:
September 16, 2017.

I. Funding Opportunity Description

Statutory Authority

The Indian Health Service (IHS) Office of Clinical and Preventative Services, Division of Behavioral Health, is accepting applications for its Behavioral Health Integration Initiative (Short Title: BH2I) to plan, develop, implement, and evaluate behavioral health integration with primary care, community based settings, and/or integrating primary care, nutrition, diabetes care, and chronic disease management with behavioral health. This program is authorized under: The Snyder Act, 25 U.S.C. 13, and 25 U.S.C. 1665j. This program is described in the Catalog of Federal Domestic Assistance (CFDA) under 93.933.

Background

IHS supports changing the paradigm of mental health and substance use disorder services from being episodic, fragmented, specialty, and/or disease focused to incorporating it into the patient-centered home model. Research has shown that more than 70 percent of primary care visits stem from behavioral health issues. Depression is the most common type of mental illness, currently affecting more than a quarter of the U.S. adult population. With major depression currently the second leading cause of disability, it is clear that primary care settings have become an important access point for addressing both physical and behavioral health care needs. In addition, American Indian and Alaska Native (AI/AN) communities experience alarming rates of suicide, alcohol and drug-related deaths, domestic and sexual violence, and homicide. Describing the burden of trauma within any population is difficult, however indicators in terms of socially destructive behaviors are often used to illustrate this public health issue that creates impact through lifespan accumulation and chronic stress. Studies now indicate that resulting trauma from such events can

even be passed from one generation to the next, resulting in intergenerational and historical trauma. While mental health needs can often go untreated and even unnoticed, the lasting effects of childhood trauma into adulthood is often evident in physical manifestations leading to negative health consequences. These extreme disparities highlight an urgent need for improving access to mental health services in primary care for children and families through the integration of behavioral health services, including trauma-informed care, within primary care settings. In addition, recognizing that behavioral and physical health problems are interwoven, delivery of behavioral health services in primary care settings reduces stigma and discrimination, and the majority of people with behavioral health disorders treated within an integrated primary care setting have improved outcomes.

Purpose

The purpose of the Behavioral Health Integration Initiative (BH2I) grant opportunity is to improve the physical and mental health status of people with behavioral health issues by developing an integrative, coordinated system of care between behavioral health and primary care providers. This effort supports the IHS mission to raise the physical, mental, social and spiritual health of AI/ANs to the highest level. Increasing capacity among IHS, Tribal, and Urban Indian Organization (I/T/U) health facilities to implement an integrative approach in the delivery of behavioral health services, including trauma-informed care, nutrition, exercise, social, spiritual, cultural, and primary care services will improve morbidity and mortality outcomes among the AI/AN population. In addition, this effort will support activities that address improving the quality of life for individuals suffering from mental illness, substance use disorders, and adverse childhood experiences. Other outcomes related to this effort include improved behavioral health services that will increase access to integrated health and social well-being services and the early identification and intervention of mental health, substance use, and serious physical health issues, including chronic disease. This work will also identify and assess various models addressing unique integrative needs and the challenges, barriers and successes in AI/AN health systems. Finally, an improvement in the overall health of patients participating in integrative programs is expected.

For this grant, the full spectrum of behavioral health services are strongly encouraged and are defined as: Screening for mental and substance use disorders, including serious mental illness; alcohol, substance, and opioid use disorders; suicidality and trauma (e.g., interpersonal violence, physical abuse, adverse childhood experiences) assessment, including risk assessment and diagnosis; patient-centered treatment planning, evidence based outpatient mental and substance use disorder treatment services (including pharmacological and psychosocial services); crisis services; peer support services; and care coordination.

Models of Care

IHS understands unique challenges and circumstances exist across Tribal communities and sites. In fact, integrative models of care vary according to needs and capabilities but all strive to enhance clinical processes and workflow across multi-disciplinary teams. This grant will support sites that have identified gaps in services and established efforts that moved toward linking those critical connections, including those with new and innovative ways of conducting business between differing management of operations between Federal and Tribal health services.

II. Award Information

Type of Award: Grant.

Estimated Funds Available

The total amount of funding identified for the current fiscal year (FY) 2017 is approximately \$6,000,000. Individual award amounts are anticipated to be \$500,000. The amount of funding available for competing awards issued under this announcement are subject to the availability of appropriations and budgetary priorities of the agency. IHS is under no obligation to make awards that are selected for funding under this announcement.

Anticipated Number of Awards

Approximately 12 awards will be issued under this notice of funding opportunity announcement.

Project Period

The project period will be for three years and will run consecutively from September 30, 2017, to September 29, 2020.

III. Eligibility Information

I.

1. Eligibility

To be eligible for this New Funding Opportunity under this announcement, an applicant must be one of the following as defined by 25 U.S.C. 1603:

- A Federally recognized Indian Tribe as defined by 25 U.S.C. 1603(14);
- A Tribal organization as defined by 25 U.S.C. 1603(26);
- An Urban Indian organization as defined by 25 U.S.C. 1603(29); a nonprofit corporate body situated in an urban center, governed by an Urban Indian controlled board of directors, and providing for the maximum participation of all interested Indian groups and individuals, which body is capable of legally cooperating with other public and private entities for the purpose of performing the activities described in 25 U.S.C. 1653(a). Applicants must provide proof of non-profit status with the application, *e.g.*, 501(c)(3).

Note: Please refer to Section IV.2 (Application and Submission Information/Subsection 2, Content and Form of Application Submission) for additional proof of applicant status documents required, such as Tribal resolutions, proof of non-profit status, etc.

2. Cost Sharing or Matching

The IHS does not require matching funds or cost sharing for grants or cooperative agreements.

3. Other Requirements

If application budgets exceeds the award amount outlined under the "Estimated Funds Available" section within this funding announcement, the application will be considered ineligible and will not be reviewed for further consideration. If deemed ineligible, IHS will not return the application. The applicant will be notified by email by the Division of Grants Management (DGM) of this decision.

Tribal Resolution

An Indian Tribe or Tribal organization that is proposing a project affecting another Indian Tribe must include *Tribal resolutions from all affected Tribes to be served*. Applications by Tribal organizations will not require a specific Tribal resolution if the current Tribal resolution(s) under which they operate would encompass the proposed grant activities.

An official signed Tribal resolution must be received by the DGM prior to a Notice of Award (NoA) being issued to any applicant selected for funding. However, if an official signed Tribal

resolution cannot be submitted with the electronic application submission prior to the official application deadline date, a draft Tribal resolution must be submitted by the deadline in order for the application to be considered complete and eligible for review. The draft Tribal resolution is not in lieu of the required signed resolution, but is acceptable until a signed resolution is received. If an official signed Tribal resolution is not received by DGM when funding decisions are made, then a Notice of Award will not be issued to that applicant and they will not receive any IHS funds until such time as they have submitted a signed resolution to the Grants Management Specialist listed in this Funding Announcement.

Proof of Non-Profit Status

Organizations claiming non-profit status must submit proof. A copy of the 501(c)(3) Certificate must be received with the application submission by the Application Deadline Date listed under the Key Dates section on page one of this announcement.

An applicant submitting any of the above additional documentation after the initial application submission due date is required to ensure the information was received by the IHS DGM by obtaining documentation confirming delivery (*i.e.*, FedEx tracking, postal return receipt, etc.).

IV. Application and Submission Information

1. Obtaining Application Materials

The application package and detailed instructions for this announcement can be found at <http://www.Grants.gov> or <http://www.ihs.gov/dgm/funding/>.

Questions regarding the electronic application process may be directed to Mr. Paul Gettys at (301) 443-2114 or (301) 443-5204.

2. Content and Form Application Submission

The applicant must include the project narrative as an attachment to the application package. Mandatory documents for all applicants include:

- Table of contents.
- Abstract (one page) summarizing the project.
- Application forms:
 - SF-424, Application for Federal Assistance.
 - SF-424A, Budget Information—Non-Construction Programs.
 - SF-424B, Assurances—Non-Construction Programs.
 - Project Narrative (must be single-spaced and not exceed 12 pages).
 - Statement of need, program planning and implementation approach,

staff and organizational capacity, performance assessment and data, and evaluation plan.

- Budget, Budget Justification and Narrative (must be single-spaced and not exceed four pages).
- Tribal Resolution(s).
- Letter(s) of Support:
 - For all applicants: Local organizational partners;
 - For all applicants: Community partners;
 - For Tribal organizations and UIOs: From the board of directors (or relevant equivalent);
 - 501(c)(3) Certificate (if applicable).
 - Biographical sketches for all Key Personnel (*e.g.*, project coordinator etc.).
 - Contractor/Consultant resumes or qualifications and scope of work.
 - Disclosure of Lobbying Activities (SF-LLL).
 - Certification Regarding Lobbying (GG-Lobbying Form).
 - Copy of current Negotiated Indirect Cost rate (IDC) agreement (required in order to receive IDC).
 - Organizational Chart (optional).
 - Documentation of current Office of Management and Budget (OMB) Financial Audit (if applicable).

Acceptable forms of documentation include:

- Email confirmation from Federal Audit Clearinghouse (FAC) that audits were submitted; or
- Face sheets from audit reports. These can be found on the FAC Web site: <https://harvester.census.gov/facdissem/Main.aspx>.

Public Policy Requirements

All Federal-wide public policies apply to IHS grants and cooperative agreements with exception of the Discrimination policy.

Requirements for Project and Budget Narratives

A. Project Narrative (12 pages)

The project narrative (Parts A through E listed below) should be in a separate Word document that should not exceed 12 pages and must: Be single-spaced, type written, have consecutively numbered pages, use black type not smaller than 12 points, and be printed on one side only of standard size 8½" x 11" paper.

Be sure to succinctly address all items listed under the evaluation criteria section (refer to Section V.1, Evaluation criteria in this announcement) and place all responses and required information in the correct section (noted below), or they will not be considered or scored. These narratives will assist the Objective Review Committee (ORC) in

becoming familiar with the applicant's activities and accomplishments prior to this possible grant award. If the narrative exceeds the page limit, only the first 12 pages will be reviewed. The 12-page limit for the narrative does not include the table of contents, abstract, standard forms, Tribal resolutions, budget, budget justification narrative, and/or other appendix items.

There are five (5) parts to the project narrative:

- Part A—Statement of Need;
- Part B—Program Planning and Implementation Approach;
- Part C—Staff and Organization Capacity;
- Part D—Performance Assessment and Data; and
- Part E—Evaluation Plan.

Below are additional details about what must be included in the project narrative.

Part A: Statement of Need (2 pages)

The statement of need describes the current situation in the applicant's Tribal community ("community" means the applicant's Tribe, village, Tribal organization, or consortium of Tribes or Tribal organizations). The statement of need provides the facts and evidence that support the need for the project and establishes that the Tribe, Tribal organization, or UIO understands the problems and can reasonably address them. The statement of need must not exceed two single-spaced pages.

- Describe the community and priority population for your program including the patients or participants that you expect to serve and the reasons integrated behavioral health and primary care services are needed.
- Describe current behavioral health and/or primary care services in place along with challenges and gaps to provide integrated behavioral health/primary care services to individuals.
- Explain how the BH2I can improve or enhance the current systems in place.

Part B: Program Planning and Implementation Approach (5 pages)

- State the purpose, goals and objectives of your proposed project.
- Describe evidence-based programs, services or practices proposed for implementation, or will continue implementation through support of this grant opportunity.
- Describe your current level of behavioral health integration (using the SAMHSA–HRSA Center for Integrated Health Solutions six-level framework (http://www.integration.samhsa.gov/integrated-care-models/A_Standard_Framework_for_Levels_of_Integrated_Healthcare.pdf) and forecast how you

will progress to higher levels of health integration.

- Describe your plan to formally integrate behavioral health through:
 - Improving workflow in the assessment of behavioral health in primary care such as screenings, referral, and policy development.
 - Health information technology changes or improvements that facilitate behavioral health integration
 - Improving physical environment barriers in the delivery of integrated health care
 - Cross training staff, including psycho-education training for staff within primary care settings and basic medical education for behavioral health staff.
 - Establishing formal and informal channels of communication that facilitates behavioral health integration.
 - Describe how you will identify those individuals during the screening process who may indicate opioid and/or alcohol use disorders and how you will refer them to Medication-Assisted Treatment (MAT)-qualified specialty treatment providers.

Part C: Staff and Organization Capacity (2 pages)

This section should describe applicant agency organization and structure and the capabilities possessed to complete proposed activities. This grant opportunity will focus on applicants and the applicant's ability to implement a formalized integration plan focused on the enhancing the clinical processes for patient care among the IHS service areas.

- Identify qualified professionals who will implement proposed grant activities, administer the grant, including progress and financial reports or provide salary costs for the addition of full-time equivalent (FTE) licensed behavioral health provider(s).
- Describe the organization's current system of providing at least one service of primary care and/or behavioral health, including screening, assessment, and care management. The primary applicant must directly deliver, operate, and/or manage at least one portion of direct primary care or behavioral health treatment services.
- Describe the organization's plan to hire full-time equivalent (FTE) licensed behavioral health provider(s).

Part D: Performance Assessment and Data (2 pages)

This section of the application should describe efforts to collect and report project data that will support and demonstrate BH2I activities. BH2I grantees will be required to collect and

report data pertaining to activities, processes and outcomes. Data collection activities should capture and document actions conducted throughout awarded years including those that will contribute relevant project impact.

- Describe specific data collection efforts that will be required as part of the EBP, or proposed evidence-based projects.
- Describe data collection process and workflow that will assist in completing progress and evaluation requirements.
- Explain proposed efforts to utilize health technology including accessibility, collection and monitoring of relevant data for proposed BH2I project.

Part E: Evaluation Plan (1 page)

The evaluation section should describe applicant's plan to evaluate program activities. The evaluation plan should describe expected results and any identified metrics to support program effectiveness. Evaluation plans should incorporate questions related to outcomes and process including documentation of lessons learned.

- Describe proposed evaluation methods including performance measures and other data relevant to evaluation outcomes including intended results (*i.e.*, impact and outcomes), including any partners who will conduct evaluation if separate from the primary applicant.
- Describe efforts to monitor improvements through the evaluation of increased coordination of care, co-located care, and integrated care with reference to the SAMHSA–HRSA Center for Integrated Health Solutions framework at http://www.integration.samhsa.gov/integrated-care-models/CIHS_Framework_Final_charts.pdf.

B. Budget Narrative (4 pages)

This narrative must include a line item budget with a narrative justification for all expenditures identifying reasonable allowable, allocable costs necessary to accomplish the goals and objectives as outlined in the project narrative. Budget should match the scope of work described in the project narrative. The budget and budget narrative should not exceed 4 pages.

3. Submission Dates and Times

Applications must be submitted electronically through Grants.gov by 11:59 p.m. Eastern Daylight Time (EDT) on the Application Deadline Date listed in the Key Dates section on page one of this announcement. Any application

received after the application deadline will not be accepted for processing, nor will it be given further consideration for funding. *Grants.gov* will notify the applicant via email if the application is rejected.

If technical challenges arise and assistance is required with the electronic application process, contact *Grants.gov* Customer Support via email to support@grants.gov or at (800) 518-4726. Customer Support is available to address questions 24 hours a day, 7 days a week (except on Federal holidays). If problems persist, contact Mr. Gettys (Paul.Gettys@ihs.gov), DGM Grant Systems Coordinator, by telephone at (301) 443-2114 or (301) 443-5204. Please be sure to contact Mr. Gettys at least ten days prior to the application deadline. Please do not contact the DGM until you have received a *Grants.gov* tracking number. In the event you are not able to obtain a tracking number, call the DGM as soon as possible.

4. Intergovernmental Review

Executive Order 12372 requiring intergovernmental review is not applicable to this program.

5. Funding Restrictions

- Pre-award costs are not allowable.
- The available funds are inclusive of direct and appropriate indirect costs.
- Only one grant/cooperative agreement will be awarded per applicant.
- IHS will not acknowledge receipt of applications.

6. Electronic Submission Requirements

All applications must be submitted electronically. Please use the <http://www.Grants.gov> Web site to submit an application electronically and select the "Find Grant Opportunities" link on the homepage. Follow the instructions for submitting an application under the Package tab. Electronic copies of the application may not be submitted as attachments to email messages addressed to IHS employees or offices.

If the applicant needs to submit a paper application instead of submitting electronically through *Grants.gov*, a waiver must be requested. Prior approval must be requested and obtained from Mr. Robert Tarwater, Director, DGM, (see Section IV.6 below for additional information). A written waiver request must be sent to GrantsPolicy@ihs.gov with a copy to Robert.Tarwater@ihs.gov. The waiver must: (1) Be documented in writing (emails are acceptable), before submitting a paper application, and (2) include clear justification for the need

to deviate from the required electronic grants submission process.

Once the waiver request has been approved, the applicant will receive a confirmation of approval email containing submission instructions and the mailing address to submit the application. A copy of the written approval must be submitted along with the hardcopy of the application that is mailed to DGM. Paper applications that are submitted without a copy of the signed waiver from the Director of the DGM will not be reviewed or considered for funding. The applicant will be notified via email of this decision by the Grants Management Officer of the DGM. Paper applications must be received by the DGM no later than 5:00 p.m., EDT, on the Application Deadline Date listed in the Key Dates section on page one of this announcement. Late applications will not be accepted for processing or considered for funding. Applicants that do not adhere to the timelines for System for Award Management (SAM) and/or <http://www.Grants.gov> registration or that fail to request timely assistance with technical issues will not be considered for a waiver to submit a paper application.

Please be aware of the following:

- Please search for the application package in <http://www.Grants.gov> by entering the CFDA number or the Funding Opportunity Number. Both numbers are located in the header of this announcement.
- If you experience technical challenges while submitting your application electronically, please contact *Grants.gov* Support directly at: support@grants.gov or (800) 518-4726. Customer Support is available to address questions 24 hours a day, 7 days a week (except on Federal holidays).
- Upon contacting *Grants.gov*, obtain a tracking number as proof of contact. The tracking number is helpful if there are technical issues that cannot be resolved and a waiver from the agency must be obtained.
- Applicants are strongly encouraged not to wait until the deadline date to begin the application process through *Grants.gov* as the registration process for SAM and *Grants.gov* could take up to fifteen working days.
- Please use the optional attachment feature in *Grants.gov* to attach additional documentation that may be requested by the DGM.
- All applicants must comply with any page limitation requirements described in this funding announcement.
- After electronically submitting the application, the applicant will receive an automatic acknowledgment from

Grants.gov that contains a *Grants.gov* tracking number. The DGM will download the application from *Grants.gov* and provide necessary copies to the appropriate agency officials. Neither the DGM nor the DBH will notify the applicant that the application has been received.

- Email applications will not be accepted under this announcement.

Dun and Bradstreet (D&B) Data Universal Numbering System (DUNS)

All IHS applicants and grantee organizations are required to obtain a DUNS number and maintain an active registration in the SAM database. The DUNS number is a unique 9-digit identification number provided by D&B which uniquely identifies each entity. The DUNS number is site specific; therefore, each distinct performance site may be assigned a DUNS number. Obtaining a DUNS number is easy, and there is no charge. To obtain a DUNS number, you may access it through <http://fedgov.dnb.com/webform>, or to expedite the process, call (866) 705-5711.

All HHS recipients are required by the Federal Funding Accountability and Transparency Act of 2006, as amended ("Transparency Act"), to report information on sub-awards. Accordingly, all IHS grantees must notify potential first-tier sub-recipients that no entity may receive a first-tier sub-award unless the entity has provided its DUNS number to the prime grantee organization. This requirement ensures the use of a universal identifier to enhance the quality of information available to the public pursuant to the Transparency Act.

System for Award Management (SAM)

Organizations that were not registered with Central Contractor Registration and have not registered with SAM will need to obtain a DUNS number first and then access the SAM online registration through the SAM home page at <https://www.sam.gov> (U.S. organizations will also need to provide an Employer Identification Number from the Internal Revenue Service that may take an additional 2-5 weeks to become active). Completing and submitting the registration takes approximately one hour to complete and SAM registration will take 3-5 business days to process. Registration with the SAM is free of charge. Applicants may register online at <https://www.sam.gov>.

Additional information on implementing the Transparency Act, including the specific requirements for DUNS and SAM, can be found on the IHS Grants Management, Grants Policy

Web site: <http://www.ihs.gov/dgm/policytopics/>.

V. Application Review Information

The instructions for preparing the application narrative also constitute the evaluation criteria for reviewing and scoring the application. Weights assigned to each section are noted in parentheses. The 12 page project narrative should include only the first budget year of activities; information for multi-year projects should be included as an appendix. See “Multi-year Project Requirements” at the end of this section for more information. The narrative section should be written in a manner that is clear to outside reviewers unfamiliar with prior related activities of the applicant. It should be well organized, succinct, and contain all information necessary for reviewers to understand the project fully. Points will be assigned to each evaluation criteria adding up to a total of 100 points. A minimum score of 65 points is required for funding. Points are assigned as follows:

1. Evaluation Criteria

Applications will be reviewed and scored according to the quality of responses to the required application components in Sections A–F outlined below. In developing the required sections of this application, use the instructions provided for each section, which have been tailored to this program. The application must use the six sections (Sections A–F) in developing the application. The applicant must place the required information in the correct section *or it will not be considered for review*. The application will be scored according to how well the applicant addresses the requirements for each section listed below. The number of points after each section heading is the maximum number of points the review committee may assign to that section. Although scoring weights are not assigned to individual bullets, each bullet is assessed deriving the overall section score.

A. Statement of Need (25 points)

- The degree to which the applicant’s description of the service area/target population demonstrates the need for new/increased integrated primary health care/behavioral health services.
- How well the applicant describes the unique characteristics of the service area and population that impact access to or utilization of behavioral health care.
- How well the applicant describes existing behavioral health care

providers in the service area, including identified gaps in behavioral health care services that the applicant can address via BH2I funds.

B. Program Planning and Implementation Approach (25 points)

- The degree to which the applicant’s purpose, goals and objectives of proposed project will address the mental and physical health needs through integrated an approach between primary health care/behavioral health services.

- How well the applicant describes the evidence-based practices, practice-based evidence, promising practices and intervention efforts, including culturally appropriate services and interventions, to produce meaning and relevant results including additional detail to support evidence of effectiveness will support proposed project.

- How well the applicant describes their current level of behavioral health integration (using the SAMHSA–HRSA Center for Integrated Health Solutions framework at http://www.integration.samhsa.gov/integrated-care-models/CIHS_Framework_Final_charts.pdf) and forecasts how they will progress to higher levels of health integration.

- How well the applicant describe their plan to formally integrate behavioral health through:

- Improving workflow in the assessment of behavioral health in primary care such as screenings, referral, and policy development.
- Health information technology changes or improvements that facilitate behavioral health integration.
- Improving physical environment barriers in the delivery of integrated health care.
- Cross training staff, including psycho-education training for staff within primary care settings and basic medical education for behavioral health staff.

- Establishing formal and informal channels of communication that facilitates behavioral health integration.

- How well the applicant describes how they will identify those individuals during the screening process who may indicate opioid and/or alcohol use disorders and how they will refer them to Medication-Assisted Treatment (MAT)-qualified specialty treatment providers.

C. Staff and Organizational Capacity (20 points)

- The degree to which the applicant describes the organization’s current system of providing at least one service of primary care and/or behavioral

health, including screening, assessment, and care management. Does the applicant directly deliver, operate, and/or manage at least one portion of direct primary care or behavioral health treatment services?

- How well does the applicant identify qualified professionals who will implement proposed grant activities, administer the grant, including completion and submission of progress and financial reports, and how project continuity will be maintained if/when there is a change in the operational environment (*e.g.*, staff turnover, change in project leadership) to ensure project stability over the life of the grant.

- The degree to which the applicant describes the organization’s plan to hire full-time equivalent (FTE) licensed behavioral health provider(s).

- For individuals that are identified and currently on staff, include a biographical sketch for the project director, project coordinator, and other key positions as *attachments* to the project proposal/application. Each biographical sketch should not exceed one page. [Note: Attachments will not count against the 12 page maximum]. Do not include any of the following:

- Personally Identifiable Information;
- Resumes; or
- Curriculum Vitae.

D. Performance Assessment & Data (10 points)

- How well does the applicant describe plans for data collection, management, analysis and reporting for integration activities.

- The degree to which the applicant lists expected data collection efforts that will be required as part of the EBP, or proposed evidence-based projects.

- How well does the applicant explain proposed efforts to utilize health information technology including accessibility, collection and monitoring of relevant data for proposed BH2I project.

- The degree to which the applicant discusses evaluation methods (including expertise and tools) that will be used to assess impacts and outcomes.

E. Evaluation Plan (10 points)

- How well did the applicant propose methods including quantitative and qualitative tools and resources, including techniques that will be utilized to measure outcomes, and partners who will conduct evaluation if separate from the primary applicant.

- The degree to which the applicant describes performance measures and other data relevant to evaluation

outcomes including intended results (*i.e.*, impact and outcomes).

- The degree to which the applicant discusses how expected results will be measured (define indicators or measures that will be used to monitor and measure progress).

- The degree to which the applicant describes a plan to monitor improvements through the evaluation of increased coordinated care, co-located care, and integrated care using the SAMHSA–HRSA Center for Integrated Health Solutions six-level framework (http://www.integration.samhsa.gov/integrated-care-models/A_Standard_Framework_for_Levels_of_Integrated_Healthcare.pdf).

F. Categorical Budget and Budget Justification (10 points)

This narrative must include a line item budget with a narrative justification for all expenditures identifying reasonable allowable, allocable costs necessary to accomplish the goals and objectives as outlined in the project narrative. Budget should match the scope of work described in the project narrative. The budget and budget narrative should not exceed 4 pages.

Multi-Year Project Requirements

Projects requiring a second and third year must include a brief project narrative and budget (one additional page per year) addressing the developmental plans for each additional year of the project.

Additional Documents Can Be Uploaded as Appendix Items in Grants.gov

- Work plan, logic model and/or time line for proposed objectives.
- Position descriptions for key staff.
- Resumes of key staff that reflect current duties.
- Consultant or contractor proposed scope of work and letter of commitment (if applicable).
- Current Indirect Cost Agreement.
- Organizational chart.
- Map of area identifying project location(s).
- Additional documents to support narrative (*i.e.* data tables, key news articles, etc.).

2. Review and Selection

Each application will be prescreened by the DGM staff for eligibility and completeness as outlined in the funding announcement. Applications that meet the eligibility criteria shall be reviewed for merit by the ORC based on evaluation criteria in this funding announcement. The ORC could be

composed of both Tribal and Federal reviewers appointed by the IHS Program to review and make recommendations on these applications. The technical review process ensures selection of quality projects in a national competition for limited funding. Incomplete applications and applications that are non-responsive to the eligibility criteria will not be referred to the ORC. The applicant will be notified via email of this decision by the Grants Management Officer of the DGM. Applicants will be notified by DGM, via email, to outline minor missing components (*i.e.*, budget narratives, audit documentation, key contact form) needed for an otherwise complete application. All missing documents must be sent to DGM on or before the due date listed in the email of notification of missing documents required.

To obtain a minimum score for funding by the ORC, applicants must address all program requirements and provide all required documentation.

VI. Award Administration Information

1. Award Notices

The NoA is a legally binding document signed by the Grants Management Officer and serves as the official notification of the grant award. The NoA will be initiated by the DGM in our grant system, GrantSolutions (<https://www.grantsolutions.gov>). Each entity that is approved for funding under this announcement will need to request or have a user account in GrantSolutions in order to retrieve their NoA. The NoA is the authorizing document for which funds are dispersed to the approved entities and reflects the amount of Federal funds awarded, the purpose of the grant, the terms and conditions of the award, the effective date of the award, and the budget/project period.

Disapproved Applicants

Applicants who received a score less than the recommended funding level for approval, 65 points, and were deemed to be disapproved by the ORC, will receive an Executive Summary Statement from the IHS program office within 30 days of the conclusion of the ORC outlining the strengths and weaknesses of their application. The summary statement will be sent to the Authorized Organizational Representative that is identified on the face page (SF–424) of the application. The IHS program office will also provide additional contact information as needed to address questions and

concerns as well as provide technical assistance if desired.

Approved But Unfunded Applicants

Approved but unfunded applicants that met the minimum scoring range and were deemed by the ORC to be “Approved,” but were not funded due to lack of funding, will have their applications held by DGM for a period of one year. If additional funding becomes available during the course of FY 2017 the approved but unfunded application may be re-considered by the awarding program office for possible funding. The applicant will also receive an Executive Summary Statement from the IHS program office within 30 days of the conclusion of the ORC.

Note: Any correspondence other than the official NoA signed by an IHS grants management official announcing to the project director that an award has been made to their organization is not an authorization to implement their program on behalf of IHS.

2. Administrative Requirements

Grants are administered in accordance with the following regulations and policies:

A. The criteria as outlined in this program announcement.

B. Administrative Regulations for Grants:

- Uniform Administrative Requirements for HHS Awards, located at 45 CFR part 75.

C. Grants Policy:

- HHS Grants Policy Statement, Revised 01/07.

D. Cost Principles:

- Uniform Administrative Requirements for HHS Awards, “Cost Principles,” located at 45 CFR part 75, subpart E.

E. Audit Requirements:

- Uniform Administrative Requirements for HHS Awards, “Audit Requirements,” located at 45 CFR part 75, subpart F.

3. Indirect Costs

This section applies to all grant recipients that request reimbursement of indirect costs (IDC) in their grant application. In accordance with HHS Grants Policy Statement, Part II–27, IHS requires applicants to obtain a current IDC rate agreement prior to award. The rate agreement must be prepared in accordance with the applicable cost principles and guidance as provided by the cognizant agency or office. A current rate covers the applicable grant activities under the current award’s budget period. If the current rate is not on file with the DGM at the time of award, the IDC portion of the budget will be restricted. The restrictions

remain in place until the current rate is provided to the DGM.

Generally, IDC rates for IHS grantees are negotiated with the Division of Cost Allocation (DCA) <https://rates.psc.gov/> and the Department of Interior (Interior Business Center) <https://www.doi.gov/ibc/services/finance/indirect-Cost-Services/indian-tribes>. For questions regarding the indirect cost policy, please call the Grants Management Specialist listed under "Agency Contacts" or the main DGM office at (301) 443-5204.

4. Reporting Requirements

The grantee must submit required reports consistent with the applicable deadlines. Failure to submit required reports within the time allowed may result in suspension or termination of an active grant, withholding of additional awards for the project, or other enforcement actions such as withholding of payments or converting to the reimbursement method of payment. Continued failure to submit required reports may result in one or both of the following: (1) The imposition of special award provisions; and (2) the non-funding or non-award of other eligible projects or activities. This requirement applies whether the delinquency is attributable to the failure of the grantee organization or the individual responsible for preparation of the reports. Per DGM policy, all reports are required to be submitted electronically by attaching them as a "Grant Note" in GrantSolutions. Personnel responsible for submitting reports will be required to obtain a login and password for GrantSolutions. Please see the Agency Contacts list in section VII for the systems contact information.

The reporting requirements for this program are noted below.

A. Progress Reports

Program progress reports are required to be submitted annually, within 30 days after the budget period ends. Progress reports will include a set of standard questions that will be provided to each grantee. Additional information for reporting and associated requirements will be in the "Programmatic Terms and Conditions" in the official Notice of Award, if funded.

A final program progress report must be submitted within 90 days of expiration of the budget/project period at the end of the grant funding cycle.

B. Financial Reports

Federal Financial Report (FFR or SF-425), Cash Transaction Reports are due 30 days after the close of every calendar quarter to the Payment Management

Services, HHS at <https://pms.psc.gov>. It is recommended that the applicant also send a copy of the FFR (SF-425) report to the Grants Management Specialist. Failure to submit timely reports may cause a disruption in timely payments to the organization.

Grantees are responsible and accountable for accurate information being reported on all required reports: The Progress Reports and Federal Financial Report.

C. Federal Sub-Award Reporting System (FSRS)

This award may be subject to the Transparency Act sub-award and executive compensation reporting requirements of 2 CFR part 170.

The Transparency Act requires the OMB to establish a single searchable database, accessible to the public, with information on financial assistance awards made by Federal agencies. The Transparency Act also includes a requirement for recipients of Federal grants to report information about first-tier sub-awards and executive compensation under Federal assistance awards.

IHS has implemented a Term of Award into all IHS Standard Terms and Conditions, Notice of Funding Opportunities and funding announcements regarding the FSRS reporting requirement. This IHS Term of Award is applicable to all IHS grant and cooperative agreements issued on or after October 1, 2010, with a \$25,000 sub-award obligation dollar threshold met for any specific reporting period. Additionally, all new (discretionary) IHS awards (where the project period is made up of more than one budget period) and where: (1) The project period start date was October 1, 2010 or after and (2) the primary awardee will have a \$25,000 sub-award obligation dollar threshold during any specific reporting period will be required to address the FSRS reporting.

For the full IHS award term implementing this requirement and additional award applicability information, visit the DGM Grants Policy Web site at: <http://www.ihs.gov/dgm/policytopics/>.

D. Compliance With Executive Order 13166 Implementation of Services Accessibility Provisions for All Grant Application Packages and Funding Opportunity Announcements

Recipients of federal financial assistance (FFA) from HHS must administer their programs in compliance with federal civil rights law. This means that recipients of HHS funds

must ensure equal access to their programs without regard to a person's race, color, national origin, disability, age and, in some circumstances, sex and religion. This includes ensuring your programs are accessible to persons with limited English proficiency. HHS provides guidance to recipients of FFA on meeting their legal obligation to take reasonable steps to provide meaningful access to their programs by persons with limited English proficiency. Please see <http://www.hhs.gov/civil-rights/for-individuals/special-topics/limited-english-proficiency/guidance-federal-financial-assistance-recipients-title-VI/>.

The HHS Office for Civil Rights (OCR) also provides guidance on complying with civil rights laws enforced by HHS. Please see <http://www.hhs.gov/civil-rights/for-individuals/section-1557/index.html>; and <http://www.hhs.gov/civil-rights/index.html>. Recipients of FFA also have specific legal obligations for serving qualified individuals with disabilities. Please see <http://www.hhs.gov/civil-rights/for-individuals/disability/index.html>. Please contact the HHS OCR for more information about obligations and prohibitions under federal civil rights laws at <https://www.hhs.gov/civil-rights/index.html> or call 1-800-368-1019 or TDD 1-800-537-7697. Also note it is an HHS Departmental goal to ensure access to quality, culturally competent care, including long-term services and supports, for vulnerable populations. For further guidance on providing culturally and linguistically appropriate services, recipients should review the National Standards for Culturally and Linguistically Appropriate Services in Health and Health Care at <http://minorityhealth.hhs.gov/omh/browse.aspx?lvl=2&lvlid=53>.

Pursuant to 45 CFR 80.3(d), an individual shall not be deemed subjected to discrimination by reason of his/her exclusion from benefits limited by federal law to individuals eligible for benefits and services from the IHS.

Recipients will be required to sign the HHS-690 Assurance of Compliance form which can be obtained from the following Web site: <http://www.hhs.gov/sites/default/files/forms/hhs-690.pdf>, and send it directly to the: U.S. Department of Health and Human Services, Office of Civil Rights, 200 Independence Ave. SW., Washington, DC 20201.

E. Federal Awardee Performance and Integrity Information System (FAPIIS)

The IHS is required to review and consider any information about the applicant that is in the Federal Awardee Performance and Integrity Information

System (FAPIS) before making any award in excess of the simplified acquisition threshold (currently \$150,000) over the period of performance. An applicant may review and comment on any information about itself that a federal awarding agency previously entered. IHS will consider any comments by the applicant, in addition to other information in FAPIS in making a judgment about the applicant's integrity, business ethics, and record of performance under federal awards when completing the review of risk posed by applicants as described in 45 CFR 75.205.

As required by 45 CFR part 75 Appendix XII of the Uniform Guidance, non-federal entities (NFEs) are required to disclose in FAPIS any information about criminal, civil, and administrative proceedings, and/or affirm that there is no new information to provide. This applies to NFEs that receive federal awards (currently active grants, cooperative agreements, and procurement contracts) greater than \$10,000,000 for any period of time during the period of performance of an award/project.

Mandatory Disclosure Requirements

As required by 2 CFR part 200 of the Uniform Guidance, and the HHS implementing regulations at 45 CFR part 75, effective January 1, 2016, the IHS must require a non-federal entity or an applicant for a federal award to disclose, in a timely manner, in writing to the IHS or pass-through entity all violations of federal criminal law involving fraud, bribery, or gratuity violations potentially affecting the federal award.

Submission is required for all applicants and recipients, in writing, to the IHS and to the HHS Office of Inspector General all information related to violations of federal criminal law involving fraud, bribery, or gratuity violations potentially affecting the federal award. 45 CFR 75.113.

Disclosures must be sent in writing to: U.S. Department of Health and Human Services, Indian Health Service, Division of Grants Management, ATTN: Robert Tarwater, Director, 5600 Fishers Lane, Mail Stop: 09E70, Rockville, MD 20857 (Include "Mandatory Grant Disclosures" in subject line), Office: (301) 443-5204, Fax: (301) 594-0899, Email: Robert.Tarwater@ihs.gov.

AND

U.S. Department of Health and Human Services, Office of Inspector General, ATTN: Mandatory Grant Disclosures, Intake Coordinator, 330 Independence Avenue SW., Cohen Building, Room 5527, Washington, DC

20201, URL: <http://oig.hhs.gov/fraud/report-fraud/index.asp> (Include "Mandatory Grant Disclosures" in subject line), Fax: (202) 205-0604 (Include "Mandatory Grant Disclosures" in subject line) or Email: MandatoryGranteeDisclosures@oig.hhs.gov.

Failure to make required disclosures can result in any of the remedies described in 45 CFR 75.371 Remedies for noncompliance, including suspension or debarment (See 2 CFR parts 180 & 376 and 31 U.S.C. 3321).

VII. Agency Contacts

1. Questions on the programmatic issues may be directed to: Miranda Carman, Public Health Advisor, Mental Health Lead, Division of Behavioral Health, 5600 Fishers Lane, Mail Stop 08N34A, Rockville, MD 20857, Phone: (301) 443-2038, Fax: (301) 594-6213, Email: Miranda.Carman@ihs.gov.

2. Questions on grants management and fiscal matters may be directed to: Willis Grant, Senior Grants Management Specialist, 5600 Fishers Lane, Mail Stop: 09E70, Rockville, MD 20857, Phone: (301) 443-5204, Fax: (301) 594-0899, Email: Willis.Grant@ihs.gov.

3. Questions on systems matters may be directed to: Paul Gettys, Grant Systems Coordinator, 5600 Fishers Lane, Mail Stop: 09E70, Rockville, MD 20857, Phone: (301) 443-2114; or the DGM main line (301) 443-5204, Fax: (301) 594-0899, Email: Paul.Gettys@ihs.gov.

VIII. Other Information

The Public Health Service strongly encourages all cooperative agreement and contract recipients to provide a smoke-free workplace and promote the non-use of all tobacco products. In addition, Public Law 103-227, the Pro-Children Act of 1994, prohibits smoking in certain facilities (or in some cases, any portion of the facility) in which regular or routine education, library, day care, health care, or early childhood development services are provided to children. This is consistent with the HHS mission to protect and advance the physical and mental health of the American people.

Dated: August 8, 2017.

Michael D. Weahkee,

Assistant Surgeon General, U.S. Public Health Service, Acting Director, Indian Health Service.

BILLING CODE 4165-16-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Indian Health Service

Preventing Alcohol-Related Deaths (PARD) Through Social Detoxification

Announcement Type: New.
Funding Announcement Number: HHS-2017-IHS-PARD-0001.
Catalog of Federal Domestic Assistance Number: 93.933.

Key Dates

Application Deadline Date:

September 16, 2017.

Review Date: September 18, 2017.

Earliest Anticipated Start Date:

September 30, 2017.

Signed Tribal Resolutions Due Date:

September 16, 2017.

Proof of Non-Profit Status Due Date:

September 16, 2017.

I. Funding Opportunity Description

Statutory Authority

The Indian Health Service (IHS) Office of Clinical and Preventive Services' Division of Behavioral Health is accepting applications for cooperative agreements for Preventing Alcohol-Related Deaths (PARD) through Social Detoxification. This program is authorized under: Snyder Act, 25 U.S.C. 13; Consolidated Appropriations Act of 2017, Public Law 115-31, 131 Stat. 135 (2017); and 25 U.S.C. 1665a. This program is described in the Catalog of Federal Domestic Assistance (CFDA) under 93.933.

Background

Alcohol-related deaths are 520 percent greater among the American Indian and Alaska Native (AI/AN) population than the general United States population (IHS Trends in Indian Health, 2014). Providing social detoxification services is often a first step toward recovery for individuals with an alcohol use disorder to minimize physical harm, including death. Detoxification alone is not sufficient treatment for alcohol use disorder but is part of the continuum of care that fosters an individual's entry into treatment and rehabilitation. Alcohol use disorders are brain disorders and not evidence of moral weakness. All individuals with alcohol use disorders should be treated with respect and dignity at all times, in a nonjudgmental and supportive manner. Services should be completed in partnership with the individual and his or her social support network with due consideration for individual background, culture, preferences,

gender identity, vulnerabilities, and strengths.

Purpose

The purpose of this IHS cooperative agreement is to increase access to community-based prevention strategies to provide social detoxification, evaluation, stabilization, fostering patient readiness for and entry into treatment for alcohol use disorders and when appropriate, other substance use disorders. Applicants must have a fully operational and staffed social detoxification program that provides all three critical components of the detoxification process that primarily serves Indians.

IHS will use this funding to focus on the provision of services in the Navajo and Great Plains Areas. Congress has highlighted that the community of Gallup, New Mexico, continues to face urgent needs for substance abuse treatment, residential services, and detoxification services to address an ongoing crisis of alcohol-related deaths of Tribal members. Senate Appropriations Committee Report 114–281 expressed the Committee's expectation that IHS use funds provided in its appropriation to continue its assistance toward addressing this issue in the city of Gallup, New Mexico. Additionally, IHS is aware of the urgent need for alcohol detoxification services in the Great Plains Area after the removal of liquor licenses in White Clay, Nebraska, leading to the potential for increased mortality if services are unavailable for alcohol detoxification and subsequent treatment services.

II. Award Information

Type of Award: Cooperative Agreement.

Estimated Funds Available

The total amount of funding identified for the current fiscal year (FY) 2017 is approximately \$2,000,000. Individual award amounts are anticipated to be between \$500,000 and \$1,500,000. The amount of funding available for competing and continuation awards issued under this announcement are subject to the availability of appropriations and budgetary priorities of the Agency. The IHS is under no obligation to make awards that are selected for funding under this announcement.

Anticipated Number of Awards

Approximately two awards will be issued under this program announcement.

Project Period

The project period is for five years and will run consecutively from September 30, 2017, to September 29, 2022.

Cooperative Agreement

Cooperative agreements awarded by the Department of Health and Human Services (HHS) are administered under the same policies as a grant. However, the funding agency (IHS) is required to have substantial programmatic involvement in the project during the entire award segment. Below is a detailed description of the level of involvement required for both IHS and the grantee. IHS will be responsible for activities listed under section A and the grantee will be responsible for activities listed under section B as stated:

Substantial Involvement Description for Cooperative Agreement

A. IHS Programmatic Involvement

(1) Participate in community-level meetings with key stakeholders that address a strategy to combat the issue of alcohol use disorders and subsequent alcohol-related deaths.

(2) Provide quarterly site visits for technical assistance on increasing the clinical capacity of services offered between the grantee and IHS programs, where available.

(3) Provide subject matter expertise on policies, procedures, guidelines, and other services provided by the grantee.

(4) Provide medical services as appropriate for individuals requiring a higher level of care, or medical clearance.

B. Grantee Cooperative Agreement Award Activities

(1) Provide quarterly reports to the IHS program officer on the number of individuals served, number of individuals referred to treatment services, number of individuals who access services more than once, number of individuals who access safe housing options.

(2) Provide semi-annual reports on successes and challenges, in addition to the data included in quarterly reports.

(3) Host quarterly site visits for IHS officials to discuss progress, partnerships, and clinical capacity, challenges, and opportunities for improvement.

(4) Provide hot meals, showers, hygiene kits, and other activities of daily living that are necessary for individuals in detoxification and treatment services.

(5) Ensure coordination with cultural services and traditional healers to

provide services while individuals are participating in services.

(6) Provide transportation to and from medical appointments or for medical clearance and ensure that medication management is offered while individuals are participating in services.

(7) Must use 100 percent of IHS grant funds for services provided to Indians.

III. Eligibility Information

1. Eligibility

To be eligible for this “New Opportunity” under this announcement, an applicant must be a public or private institution operated by a state, local, Tribal, or private entity that operates direct, on-site alcohol and/or substance use disorder treatment services, including social alcohol detoxification services, to Indians. For purposes of this announcement, “institution” means an entity that provides services on an inpatient services. Eligible applicants must be able to start services on the first day of the award. Eligible applicants must serve Indians that make up at least 85 percent of the institution's average daily census.

Note: Please refer to Section IV.2 (Application and Submission Information/ Subsection 2, Content and Form of Application Submission) for additional proof of applicant status documents required, such as Tribal resolutions, proof of non-profit status, etc.

2. Cost Sharing or Matching

The IHS does not require matching funds or cost sharing for grants or cooperative agreements.

3. Other Requirements

If application budgets exceed the highest dollar amount outlined under the “Estimated Funds Available” section within this funding announcement, the application will be considered ineligible and will not be reviewed for further consideration. If deemed ineligible, IHS will not return the application. The applicant will be notified by email by the Division of Grants Management (DGM) of this decision.

Tribal Resolution

An Indian Tribe or Tribal organization that is proposing a project affecting another Indian Tribe must include Tribal resolutions from all affected Tribes to be served. Applications by Tribal organizations will not require a specific Tribal resolution if the current Tribal resolution(s) under which they operate would encompass the proposed grant activities.

An official signed Tribal resolution must be received by the DGM prior to

a Notice of Award (NoA) being issued to any applicant selected for funding. However, if an official signed Tribal resolution cannot be submitted with the electronic application submission prior to the official application deadline date, a draft Tribal resolution must be submitted by the deadline in order for the application to be considered complete and eligible for review. The draft Tribal resolution is not in lieu of the required signed resolution, but is acceptable until a signed resolution is received. If an official signed Tribal resolution is not received by DGM when funding decisions are made, then a NoA will not be issued to that applicant and they will not receive any IHS funds until such time as they have submitted a signed resolution to the Grants Management Specialist listed in this Funding Announcement.

Proof of Non-Profit Status

Organizations claiming non-profit status must submit proof. A copy of the 501(c)(3) Certificate must be received with the application submission by the Application Deadline Date listed under the Key Dates section on page one of this announcement.

An applicant submitting any of the above additional documentation after the initial application submission due date is required to ensure the information was received by the IHS DGM by obtaining documentation confirming delivery (*i.e.* FedEx tracking, postal return receipt, etc.).

IV. Application and Submission Information

1. Obtaining Application Materials

The application package and detailed instructions for this announcement can be found at <http://www.Grants.gov> or <http://www.ihs.gov/dgm/funding/>.

Questions regarding the electronic application process may be directed to Mr. Paul Gettys at (301) 443-2114 or (301) 443-5204.

2. Content and Form Application Submission

The applicant must include the project narrative as an attachment to the application package. Mandatory documents for all applicants include:

- Table of contents.
- Abstract (one page) summarizing the project.
- Application forms:
 - SF-424, Application for Federal Assistance.
 - SF-424A, Budget Information—Non-Construction Programs.
 - SF-424B, Assurances—Non-Construction Programs.

- Budget Justification and Narrative (must be single-spaced and not exceed four pages).

- Project Narrative (must be single-spaced and not exceed 10 pages).

- Background information on the organization.
- Proposed scope of work, objectives, and activities that provide a description of what will be accomplished, including a one-page Timeframe Chart.

- Letters of Support from organization's Board of Directors.
- Tribal Resolution(s).
- 501(c)(3) Certificate (if applicable).
- Biographical sketches for all Key Personnel.

- Contractor/Consultant resumes or qualifications and scope of work.

- Disclosure of Lobbying Activities (SF-LLL).

- Certification Regarding Lobbying (GG-Lobbying Form).

- Copy of current Negotiated Indirect Cost rate (IDC) agreement (required in order to receive IDC).

- Organizational Chart (optional).

- Documentation of current Office of Management and Budget (OMB) Financial Audit (if applicable).

Acceptable forms of documentation include:

- Email confirmation from Federal Audit Clearinghouse (FAC) that audits were submitted; or

- Face sheets from audit reports.

These can be found on the FAC Web site: <https://harvester.census.gov/facdissem/Main.aspx>.

Public Policy Requirements

All Federal-wide public policies apply to IHS grants and cooperative agreements with exception of the Discrimination policy.

Requirements for Project and Budget Narratives

A. Project Narrative: This narrative should be a separate Word document that is no longer than 10 pages and must: Be single-spaced, type written, have consecutively numbered pages, use black type not smaller than 12 points, and be printed on one side only of standard size 8½" x 11" paper.

Be sure to succinctly answer all questions listed under the evaluation criteria (refer to Section V.1, Evaluation criteria in this announcement) and place all responses and required information in the correct section (noted below), or they will not be considered or scored. These narratives will assist the Objective Review Committee (ORC) in becoming familiar with the applicant's activities and accomplishments prior to this possible cooperative agreement

award. If the narrative exceeds the page limit, only the first 10 pages will be reviewed. The 10-page limit for the narrative does not include the work plan, standard forms, Tribal resolutions, table of contents, budget, budget justifications, narratives, and/or other appendix items.

There are three parts to the narrative: Part A—Program Information; Part B—Program Planning and Evaluation; and Part C—Program Report. See below for additional details about what must be included in the narrative.

The page limitations below are for each narrative and budget submitted.

Part A: Program Information (2 Pages)

Section 1: Needs

Describe the current issue of alcohol use disorders, alcohol-related deaths, and rates of alcohol-related liver cirrhosis, as well as other social and health issues impacted by alcohol-related deaths. Describe the program's current social detoxification program, who operates it, number of employees, how long it has been operating, what programs or services are currently being provided. Describe why the program is seeking additional funding and how it will be utilized to enhance current services. Provide a statement of fact on the clientele served, average daily census, and ratio of individuals served who are enrolled members of federally recognized Tribes to those who are not.

Part B: Program Planning and Evaluation (6 Pages)

Section 1: Program Plans

Describe fully and clearly the direction the applicant plans to take to provide social detoxification, including three critical components of evaluation, stabilization, and fostering patient readiness for and entry into treatment. Describe how the applicant will provide safe housing and custodial care in a safe environment by employees who have successfully passed background checks who have been trained in social detoxification and who are familiar with the features of substance use withdrawal, have training in basic life support, and have access to emergency medical systems. Describe how the applicant will provide appropriate monitoring and security to prevent self-harm of served individuals and harm to others. Describe how the applicant has the ability to provide transportation to and from emergency departments, as needed.

Describe fully and clearly the types of community partnerships and referral providers to provide health and behavioral health treatment services,

among others. Include information how the applicant will implement a communication and support strategy that includes with family members of individuals served (with their consent). Describe the applicant's ability to provide daily activities of living, such as exercise, showers, and hot meals, personal hygiene, blankets, appropriate clothing. Include information on how the applicant will provide culturally appropriate interventions and activities. Provide details on nurse support for medical issues and medication management and referral to a higher level of care, when needed; medication management, assessments, and screening of clients; and case management services.

Section 2: Program Evaluation

Describe how the program intends to evaluate its activities to include successes, challenges, outputs, and outcomes.

Part C: Program Report (2 Pages)

Section 1: Describe your organization's capacity to provide the activities that align with the purpose of this funding opportunity. Please identify current staffing and key personnel who will be responsible for the management of the cooperative agreement. Describe significant program activities and accomplishments over the past five years associated with the goals of this announcement.

B. Budget Narrative (4 Pages)

This narrative must include a line item budget with a narrative justification for all expenditures identifying reasonable allowable, allocable costs necessary to accomplish the goals and objectives as outlined in the project narrative. Budget should match the scope of work described in the project narrative.

3. Submission Dates and Times

Applications must be submitted electronically through *Grants.gov* by 11:59 p.m. Eastern Daylight Time (EDT) on the Application Deadline Date listed in the Key Dates section on page one of this announcement. Any application received after the application deadline will not be accepted for processing, nor will it be given further consideration for funding. *Grants.gov* will notify the applicant via email if the application is rejected.

If technical challenges arise and assistance is required with the electronic application process, contact *Grants.gov* Customer Support via email to support@grants.gov or at (800) 518-4726. Customer Support is available to

address questions 24 hours a day, 7 days a week (except on Federal holidays). If problems persist, contact Mr. Gettys (Paul.Gettys@ihs.gov), DGM Grant Systems Coordinator, by telephone at (301) 443-2114 or (301) 443-5204. Please be sure to contact Mr. Gettys at least ten days prior to the application deadline. Please do not contact the DGM until you have received a *Grants.gov* tracking number. In the event you are not able to obtain a tracking number, call the DGM as soon as possible.

4. Intergovernmental Review

Executive Order 12372 requiring intergovernmental review is not applicable to this program.

5. Funding Restrictions

- Pre-award costs are not allowable.
- The available funds are inclusive of direct and appropriate indirect costs.
- Only one grant/cooperative agreement will be awarded per applicant.
- IHS will not acknowledge receipt of applications.

6. Electronic Submission Requirements

All applications must be submitted electronically. Please use the <http://www.Grants.gov> Web site to submit an application electronically and select the "Find Grant Opportunities" link on the homepage. Follow the instructions for submitting an application under the Package tab. Electronic copies of the application may not be submitted as attachments to email messages addressed to IHS employees or offices.

If the applicant needs to submit a paper application instead of submitting electronically through *Grants.gov*, a waiver must be requested. Prior approval must be requested and obtained from Mr. Robert Tarwater, Director, DGM, (see Section IV.6 below for additional information). A written waiver request must be sent to GrantsPolicy@ihs.gov with a copy to Robert.Tarwater@ihs.gov. The waiver must: (1) Be documented in writing (emails are acceptable), before submitting a paper application, and (2) include clear justification for the need to deviate from the required electronic grants submission process.

Once the waiver request has been approved, the applicant will receive a confirmation of approval email containing submission instructions and the mailing address to submit the application. A copy of the written approval must be submitted along with the hardcopy of the application that is mailed to DGM. Paper applications that are submitted without a copy of the signed waiver from the Director of the

DGM will not be reviewed or considered for funding. The applicant will be notified via email of this decision by the Grants Management Officer of the DGM. Paper applications must be received by the DGM no later than 5:00 p.m., EDT, on the Application Deadline Date listed in the Key Dates section on page one of this announcement. Late applications will not be accepted for processing or considered for funding. Applicants that do not adhere to the timelines for System for Award Management (SAM) and/or <http://www.Grants.gov> registration or that fail to request timely assistance with technical issues will not be considered for a waiver to submit a paper application.

Please be aware of the following:

- Please search for the application package in <http://www.Grants.gov> by entering the CFDA number or the Funding Opportunity Number. Both numbers are located in the header of this announcement.
- If you experience technical challenges while submitting your application electronically, please contact *Grants.gov* Support directly at: support@grants.gov or (800) 518-4726. Customer Support is available to address questions 24 hours a day, 7 days a week (except on Federal holidays).
- Upon contacting *Grants.gov*, obtain a tracking number as proof of contact. The tracking number is helpful if there are technical issues that cannot be resolved and a waiver from the agency must be obtained.
- Applicants are strongly encouraged not to wait until the deadline date to begin the application process through *Grants.gov* as the registration process for SAM and *Grants.gov* could take up to fifteen working days.
- Please use the optional attachment feature in *Grants.gov* to attach additional documentation that may be requested by the DGM.
- All applicants must comply with any page limitation requirements described in this funding announcement.
- After electronically submitting the application, the applicant will receive an automatic acknowledgment from *Grants.gov* that contains a *Grants.gov* tracking number. The DGM will download the application from *Grants.gov* and provide necessary copies to the appropriate agency officials. Neither the DGM nor the Division of Behavioral Health will notify the applicant that the application has been received.
- Email applications will not be accepted under this announcement.

Dun and Bradstreet (D&B) Data Universal Numbering System (DUNS)

All IHS applicants and grantee organizations are required to obtain a DUNS number and maintain an active registration in the SAM database. The DUNS number is a unique 9-digit identification number provided by D&B which uniquely identifies each entity. The DUNS number is site specific; therefore, each distinct performance site may be assigned a DUNS number. Obtaining a DUNS number is easy, and there is no charge. To obtain a DUNS number, you may access it through <http://fedgov.dnb.com/webform>, or to expedite the process, call (866) 705-5711.

All HHS recipients are required by the Federal Funding Accountability and Transparency Act of 2006, as amended ("Transparency Act"), to report information on sub-awards. Accordingly, all IHS grantees must notify potential first-tier sub-recipients that no entity may receive a first-tier sub-award unless the entity has provided its DUNS number to the prime grantee organization. This requirement ensures the use of a universal identifier to enhance the quality of information available to the public pursuant to the Transparency Act.

System for Award Management (SAM)

Organizations that were not registered with Central Contractor Registration and have not registered with SAM will need to obtain a DUNS number first and then access the SAM online registration through the SAM home page at <https://www.sam.gov> (U.S. organizations will also need to provide an Employer Identification Number from the Internal Revenue Service that may take an additional 2–5 weeks to become active). Completing and submitting the registration takes approximately one hour to complete and SAM registration will take 3–5 business days to process. Registration with the SAM is free of charge. Applicants may register online at <https://www.sam.gov>.

Additional information on implementing the Transparency Act, including the specific requirements for DUNS and SAM, can be found on the IHS Grants Management, Grants Policy Web site: <http://www.ihs.gov/dgm/policytopics/>.

V. Application Review Information

The instructions for preparing the application narrative also constitute the evaluation criteria for reviewing and scoring the application. Weights assigned to each section are noted in parentheses. The 10 page narrative

should include only the first year of activities; information for multi-year projects should be included as an appendix. See "Multi-year Project Requirements" at the end of this section for more information. The narrative section should be written in a manner that is clear to outside reviewers unfamiliar with prior related activities of the applicant. It should be well organized, succinct, and contain all information necessary for reviewers to understand the project fully. Points will be assigned to each evaluation criteria adding up to a total of 100 points. A minimum score of 70 points is required for funding. Points are assigned as follows:

1. Criteria

A. Need for Assistance (30 Points)

- The degree to which the applicant describes the issue of alcohol use disorders, alcohol-related deaths, and other social and health issues attributed to alcohol in the community they serve.
- The degree to which the applicant demonstrates the need for funding and how the funding will complement, increase, and/or expand the services currently provided.
- This section must include the applicant's service population, average daily census, and statement of fact that more than 85 percent of the clientele they serve are members of federally recognized Tribes. Without this information, applicants will receive a score of 0 for this section.

B. Work Plan, Approach, and Program Approach (40 Points)

- The degree to which the applicant plans to provide social detoxification, safe housing, and outpatient treatment, including custodial care in a safe environment.
- How well the applicant describes the process of ensuring employees have passed background checks and are training in appropriate substance use disorder intervention and treatment.
- How well the applicant describes its community partnerships and referral network for health and behavioral health treatment services.
- How well the applicant describes appropriate monitoring of individuals accessing services and provides security services to ensure safety and prevention of self-harm and harm to others.
- How well the applicant describes its communication strategy with family members.
- How well the applicant describes its community partnerships and referral network for treatment services, including when medical detoxification is required.

- How well the applicant describes its ability to provide activities of daily living, exercise, showers, hot meals, cultural activities, blankets, and appropriate clothing.

- How well the applicant describes its ability to provide nurse support for medical issues and medication management, assessments, screening, and case management.

C. Program Evaluation (10 Points)

- How well the applicant provides a plan to evaluate its own impact, including successes and challenges, as well as a plan for the type of data that will be collected and submitted on a quarterly basis that demonstrate the program's outputs and annual basis that demonstrate the program's annual outcomes.

D. Organizational Capabilities, Key Personnel and Qualifications (10 Points)

- How well the applicant describes the capacity to provide services on day 1 of the award.
- How well the applicant describes the operations and management of the services currently being provided.
- The degree to which the applicant describes its staffing level, experience and education of staff, and key personnel who will manage the project.

E. Categorical Budget and Budget Justification (10 Points)

- How clear the applicant demonstrates each budget item aligns with its proposed work plan and program approach.
- The degree to which the applicant budgets for evaluation activities.

Multi-Year Project Requirements

Projects requiring a second, third, fourth, and/or fifth year must include a brief project narrative and budget (one additional page per year) addressing the developmental plans for each additional year of the project.

Additional Documents Can Be Uploaded as Appendix Items in Grants.gov

- Work plan, logic model and/or time line for proposed objectives.
- Position descriptions for key staff.
- Resumes of key staff that reflect current duties.
- Consultant or contractor proposed scope of work and letter of commitment (if applicable).
- Current Indirect Cost Agreement.
- Organizational chart.
- Map of area identifying project location(s).
- Additional documents to support narrative (*i.e.* data tables, key news articles, etc.).

2. Review and Selection

Each application will be prescreened by the DGM staff for eligibility and completeness as outlined in the funding announcement. Applications that meet the eligibility criteria shall be reviewed for merit by the ORC based on evaluation criteria in this funding announcement. The ORC could be composed of both Tribal and Federal reviewers appointed by the IHS Program to review and make recommendations on these applications. The technical review process ensures selection of quality projects in a national competition for limited funding. Incomplete applications and applications that are non-responsive to the eligibility criteria will not be referred to the ORC. The applicant will be notified via email of this decision by the Grants Management Officer of the DGM. Applicants will be notified by DGM, via email, to outline minor missing components (*i.e.*, budget narratives, audit documentation, key contact form) needed for an otherwise complete application. All missing documents must be sent to DGM on or before the due date listed in the email of notification of missing documents required.

To obtain a minimum score for funding by the ORC, applicants must address all program requirements and provide all required documentation.

VI. Award Administration Information

1. Award Notices

The Notice of Award (NoA) is a legally binding document signed by the Grants Management Officer and serves as the official notification of the grant award. The NoA will be initiated by the DGM in our grant system, GrantSolutions (<https://www.grantsolutions.gov>). Each entity that is approved for funding under this announcement will need to request or have a user account in GrantSolutions in order to retrieve their NoA. The NoA is the authorizing document for which funds are dispersed to the approved entities and reflects the amount of Federal funds awarded, the purpose of the grant, the terms and conditions of the award, the effective date of the award, and the budget/project period.

Disapproved Applicants

Applicants who received a score less than the recommended funding level for approval, 70 and were deemed to be disapproved by the ORC, will receive an Executive Summary Statement from the IHS program office within 30 days of the conclusion of the ORC outlining the strengths and weaknesses of their

application. The summary statement will be sent to the Authorized Organizational Representative that is identified on the face page (SF-424) of the application. The IHS program office will also provide additional contact information as needed to address questions and concerns as well as provide technical assistance if desired.

Approved But Unfunded Applicants

Approved but unfunded applicants that met the minimum scoring range and were deemed by the ORC to be "Approved," but were not funded due to lack of funding, will have their applications held by DGM for a period of one year. If additional funding becomes available during the course of FY 2017 the approved but unfunded application may be re-considered by the awarding program office for possible funding. The applicant will also receive an Executive Summary Statement from the IHS program office within 30 days of the conclusion of the ORC.

Note: Any correspondence other than the official NoA signed by an IHS grants management official announcing to the project director that an award has been made to their organization is not an authorization to implement their program on behalf of IHS.

2. Administrative Requirements

Cooperative agreements are administered in accordance with the following regulations and policies:

A. The criteria as outlined in this program announcement.

B. Administrative Regulations for Grants:

- Uniform Administrative Requirements for HHS Awards, located at 45 CFR part 75.

C. Grants Policy:

- HHS Grants Policy Statement, Revised 01/07.

D. Cost Principles:

- Uniform Administrative Requirements for HHS Awards, "Cost Principles," located at 45 CFR part 75, subpart E.

E. Audit Requirements:

- Uniform Administrative Requirements for HHS Awards, "Audit Requirements," located at 45 CFR part 75, subpart F.

3. Indirect Costs

This section applies to all grant recipients that request reimbursement of indirect costs (IDC) in their grant application. In accordance with HHS Grants Policy Statement, Part II-27, IHS requires applicants to obtain a current IDC rate agreement prior to award. The rate agreement must be prepared in accordance with the applicable cost principles and guidance as provided by

the cognizant agency or office. A current rate covers the applicable grant activities under the current award's budget period. If the current rate is not on file with the DGM at the time of award, the IDC portion of the budget will be restricted. The restrictions remain in place until the current rate is provided to the DGM.

Generally, IDC rates for IHS grantees are negotiated with the Division of Cost Allocation (DCA) <https://rates.psc.gov/> and the Department of Interior (Interior Business Center) <https://www.doi.gov/ibc/services/finance/indirect-Cost-Services/indian-tribes>. For questions regarding the indirect cost policy, please call the Grants Management Specialist listed under "Agency Contacts" or the main DGM office at (301) 443-5204.

4. Reporting Requirements

The grantee must submit required reports consistent with the applicable deadlines. Failure to submit required reports within the time allowed may result in suspension or termination of an active grant, withholding of additional awards for the project, or other enforcement actions such as withholding of payments or converting to the reimbursement method of payment. Continued failure to submit required reports may result in one or both of the following: (1) The imposition of special award provisions; and (2) the non-funding or non-award of other eligible projects or activities. This requirement applies whether the delinquency is attributable to the failure of the grantee organization or the individual responsible for preparation of the reports. Per DGM policy, all reports are required to be submitted electronically by attaching them as a "Grant Note" in GrantSolutions. Personnel responsible for submitting reports will be required to obtain a login and password for GrantSolutions. Please see the Agency Contacts list in section VII for the systems contact information.

The reporting requirements for this program are noted below.

A. Progress Reports

Program progress reports are required semi-annually, within 30 days after the budget period ends. These reports must include a brief comparison of actual accomplishments to the goals established for the period, a summary of progress to date or, if applicable, provide sound justification for the lack of progress, and other pertinent information as required. A final report must be submitted within 90 days of expiration of the budget/project period.

B. Financial Reports

Federal Financial Report (FFR or SF-425), Cash Transaction Reports are due 30 days after the close of every calendar quarter to the Payment Management Services, HHS at <https://pms.psc.gov>. It is recommended that the applicant also send a copy of the FFR (SF-425) report to the Grants Management Specialist. Failure to submit timely reports may cause a disruption in timely payments to the organization.

Grantees are responsible and accountable for accurate information being reported on all required reports: The Progress Reports and Federal Financial Report.

C. Federal Sub-Award Reporting System (FSRS)

This award may be subject to the Transparency Act sub-award and executive compensation reporting requirements of 2 CFR part 170.

The Transparency Act requires the OMB to establish a single searchable database, accessible to the public, with information on financial assistance awards made by Federal agencies. The Transparency Act also includes a requirement for recipients of Federal grants to report information about first-tier sub-awards and executive compensation under Federal assistance awards.

IHS has implemented a Term of Award into all IHS Standard Terms and Conditions, NoAs and funding announcements regarding the FSRS reporting requirement. This IHS Term of Award is applicable to all IHS grant and cooperative agreements issued on or after October 1, 2010, with a \$25,000 sub-award obligation dollar threshold met for any specific reporting period. Additionally, all new (discretionary) IHS awards (where the project period is made up of more than one budget period) and where: (1) The project period start date was October 1, 2010 or after and (2) the primary awardee will have a \$25,000 sub-award obligation dollar threshold during any specific reporting period will be required to address the FSRS reporting.

For the full IHS award term implementing this requirement and additional award applicability information, visit the DGM Grants Policy Web site at: <http://www.ihs.gov/dgm/policytopics/>.

D. Compliance With Executive Order 13166 Implementation of Services Accessibility Provisions for All Grant Application Packages and Funding Opportunity Announcements

Recipients of federal financial assistance (FFA) from HHS must administer their programs in compliance with federal civil rights law. This means that recipients of HHS funds must ensure equal access to their programs without regard to a person's race, color, national origin, disability, age and, in some circumstances, sex and religion. This includes ensuring your programs are accessible to persons with limited English proficiency. HHS provides guidance to recipients of FFA on meeting their legal obligation to take reasonable steps to provide meaningful access to their programs by persons with limited English proficiency. Please see <http://www.hhs.gov/civil-rights/for-individuals/special-topics/limited-english-proficiency/guidance-federal-financial-assistance-recipients-title-VI/>.

The HHS Office for Civil Rights (OCR) also provides guidance on complying with civil rights laws enforced by HHS. Please see <http://www.hhs.gov/civil-rights/for-individuals/section-1557/index.html>; and <http://www.hhs.gov/civil-rights/index.html>. Recipients of FFA also have specific legal obligations for serving qualified individuals with disabilities. Please see <http://www.hhs.gov/civil-rights/for-individuals/disability/index.html>. Please contact the HHS OCR for more information about obligations and prohibitions under federal civil rights laws at <https://www.hhs.gov/ocr/about-us/index.html> or call 1-800-368-1019 or TDD 1-800-537-7697. Also note it is an HHS Departmental goal to ensure access to quality, culturally competent care, including long-term services and supports, for vulnerable populations. For further guidance on providing culturally and linguistically appropriate services, recipients should review the National Standards for Culturally and Linguistically Appropriate Services in Health and Health Care at <http://minorityhealth.hhs.gov/omh/browse.aspx?lvl=2&lvlid=53>.

Pursuant to 45 CFR 80.3(d), an individual shall not be deemed subjected to discrimination by reason of his/her exclusion from benefits limited by federal law to individuals eligible for benefits and services from the IHS.

Recipients will be required to sign the HHS-690 Assurance of Compliance form which can be obtained from the following Web site: <http://www.hhs.gov/sites/default/files/forms/hhs-690.pdf>, and send it directly to the: U.S.

Department of Health and Human Services, Office of Civil Rights, 200 Independence Ave. SW., Washington, DC 20201.

F. Federal Awardee Performance and Integrity Information System (FAPIIS)

The IHS is required to review and consider any information about the applicant that is in the Federal Awardee Performance and Integrity Information System (FAPIIS) before making any award in excess of the simplified acquisition threshold (currently \$150,000) over the period of performance. An applicant may review and comment on any information about itself that a federal awarding agency previously entered. IHS will consider any comments by the applicant, in addition to other information in FAPIIS in making a judgment about the applicant's integrity, business ethics, and record of performance under federal awards when completing the review of risk posed by applicants as described in 45 CFR 75.205.

As required by 45 CFR part 75 Appendix XII of the Uniform Guidance, non-federal entities (NFEs) are required to disclose in FAPIIS any information about criminal, civil, and administrative proceedings, and/or affirm that there is no new information to provide. This applies to NFEs that receive federal awards (currently active grants, cooperative agreements, and procurement contracts) greater than \$10,000,000 for any period of time during the period of performance of an award/project.

Mandatory Disclosure Requirements

As required by 2 CFR part 200 of the Uniform Guidance, and the HHS implementing regulations at 45 CFR part 75, effective January 1, 2016, the IHS must require a non-federal entity or an applicant for a federal award to disclose, in a timely manner, in writing to the IHS or pass-through entity all violations of federal criminal law involving fraud, bribery, or gratuity violations potentially affecting the federal award.

Submission is required for all applicants and recipients, in writing, to the IHS and to the HHS Office of Inspector General all information related to violations of federal criminal law involving fraud, bribery, or gratuity violations potentially affecting the federal award. 45 CFR 75.113.

Disclosures must be sent in writing to: U.S. Department of Health and Human Services, Indian Health Service, Division of Grants Management, ATTN: Robert Tarwater, Director, 5600 Fishers Lane, Mail Stop: 09E70, Rockville, MD 20857, (Include "Mandatory Grant

Disclosures" in subject line), *Office*: (301) 443-5204, *Fax*: (301) 594-0899, *Email*: Robert.Tarwater@ihs.gov.

AND

U.S. Department of Health and Human Services, Office of Inspector General, ATTN: Mandatory Grant Disclosures, Intake Coordinator, 330 Independence Avenue SW., Cohen Building, Room 5527, Washington, DC 20201, *URL*: <http://oig.hhs.gov/fraud/report-fraud/index.asp> (Include "Mandatory Grant Disclosures" in subject line), *Fax*: (202) 205-0604 (Include "Mandatory Grant Disclosures" in subject line) or *Email*: MandatoryGranteeDisclosures@oig.hhs.gov.

Failure to make required disclosures can result in any of the remedies described in 45 CFR 75.371 Remedies for noncompliance, including suspension or debarment (See 2 CFR parts 180 & 376 and 31 U.S.C. 3321).

VII. Agency Contacts

1. Questions on the programmatic issues may be directed to: Dr. Beverly Cotton, Director, Division of Behavioral Health, 5600 Fishers Lane, Mail Stop: 08N34A, Rockville, MD 20857, *Phone*: (301) 443-4754, *Email*: beverly.cotton@ihs.gov.

2. Questions on grants management and fiscal matters may be directed to: Willis Grant, Senior Grants Management Specialist, 5600 Fishers Lane, Mail Stop: 09E70, Rockville, MD 20857, *Phone*: (301) 443-2214, *Fax*: (301) 594-0899, *Email*: Willis.Grant@ihs.gov.

3. Questions on systems matters may be directed to: Paul Gettys, Grant Systems Coordinator, 5600 Fishers Lane, Mail Stop: 09E70, Rockville, MD 20857, *Phone*: (301) 443-2114; or the DGM main line (301) 443-5204, *Fax*: (301) 594-0899, *Email*: Paul.Gettys@ihs.gov.

VIII. Other Information

The Public Health Service strongly encourages all cooperative agreement and contract recipients to provide a smoke-free workplace and promote the non-use of all tobacco products. In addition, Public Law 103-227, the Pro-Children Act of 1994, prohibits smoking in certain facilities (or in some cases, any portion of the facility) in which regular or routine education, library, day care, health care, or early childhood development services are provided to children. This is consistent with the HHS mission to protect and advance the physical and mental health of the American people.

Dated: August 8, 2017.

Michael D. Weahkee,

Assistant Surgeon General, U.S. Public Health Service, Acting Director, Indian Health Service.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

National Cancer Institute; Notice of Meeting

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended, notice is hereby given of a meeting of the National Cancer Advisory Board.

The meeting will be open to the public as indicated below, with attendance limited to space available. Individuals who plan to attend and need special assistance, such as sign language interpretation or other reasonable accommodations, should notify the Contact Person listed below in advance of the meeting. The open session will be videocast and can be accessed from the NIH Videocasting and Podcasting Web site (<http://videocast.nih.gov>).

A portion of the National Cancer Advisory Board meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Cancer Advisory Board.

Date: September 12, 2017.

Open: 1:00 p.m. to 2:55 p.m.

Agenda: Acting Director's and program reports and presentations; business of the Board.

Closed: 3:00 p.m. to 4:00 p.m.

Agenda: To review and evaluate grant applications.

Place: National Cancer Institute—Shady Grove, 9609 Medical Center Drive, Room TE406 & 408, Rockville, MD 20850 (Virtual Meeting).

Contact Person: Paulette S. Gray, Ph.D., Executive Secretary, Division of Extramural Activities, National Cancer Institute—Shady Grove, National Institutes of Health, 9609 Medical Center Drive, Room 7W444, Bethesda, MD 20892, 240-276-6340, grayp@mail.nih.gov.

Any interested person may file written comments with the committee by forwarding the statement to the Contact Person listed on this notice. The statement should include the name, address, telephone number and when applicable, the business or professional affiliation of the interested person.

In the interest of security, NIH has instituted stringent procedures for entrance onto the NCI-Shady Grove campus. Visitors will be asked to show one form of

identification (for example, a government-issued photo ID, driver's license, or passport) and to state the purpose of their visit.

Information is also available on the Institute's/Center's home page: NCAB: <http://deainfo.nci.nih.gov/advisory/ncab/ncab.htm>, where an agenda and any additional information for the meeting will be posted when available.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Scientific Advisory Committee on Alternative Toxicological Methods; Announcement of Meeting; Request for Comments

SUMMARY: This notice announces a meeting of the Scientific Advisory Committee on Alternative Toxicological Methods (SACATM). SACATM advises the Interagency Coordinating Committee on the Validation of Alternative Methods (ICCVAM), the National Toxicology Program (NTP) Interagency Center for the Evaluation of Alternative Toxicological Methods (NICEATM), and the Director of the National Institute of Environmental Health Sciences (NIEHS) and NTP regarding statutorily mandated duties of ICCVAM and activities of NICEATM. The meeting is open to the public, and registration is requested for both public attendance and oral comment and required to access the webcast. Information about the meeting and registration is available at <http://ntp.niehs.nih.gov/go/32822>.

DATES:

Meeting: September 18–19, 2017; it begins 9:00 a.m. Eastern Daylight Time (EDT) each day and continues until adjournment.

Written Public Comment

Submissions: Deadline is September 11, 2017.

Registration for Oral Comments:

Deadline is September 11, 2017.

Registration for the meeting and to View Webcast: Deadline is September 19, 2017.

Registration to view the meeting via the webcast is required.

ADDRESSES:

Meeting Location: Natcher Conference Center, Building 45, Room E1 & E2, National Institutes of Health, Bethesda, MD 20984.

Meeting Web page: The preliminary agenda, registration information, and background materials should be posted at <http://ntp.niehs.nih.gov/go/32822> by August 15, 2017.

Webcast: The meeting will be webcast; the URL will be provided to those who register for viewing.

FOR FURTHER INFORMATION CONTACT: Dr. Mary Wolfe, Designated Federal Official for SACATM, Office of Liaison, Policy, and Review, Division of NTP, NIEHS, P.O. Box 12233, K2-03, Research Triangle Park, NC 27709. Phone: 919-541-7539, fax: 301-451-6890, email: wolfe@niehs.nih.gov. Hand Deliver/Courier address: 530 Davis Drive, Room K2130, Morrisville, NC 27560.

SUPPLEMENTARY INFORMATION:

Preliminary Agenda and Other Meeting Information: A preliminary agenda, roster of SACATM members, and background materials should be available by August 15, 2017, on the SACATM meeting Web site (<http://ntp.niehs.nih.gov/go/32822>) and available upon request from the Designated Federal Official. Public comments and any additional information will be posted when available. The meeting's agenda will focus on the US strategic roadmap for implementation of new approaches to safety evaluation, which is under development, and ICCVAM agencies' activities related to the development and implementation of alternative methods. Following the meeting, summary minutes will be prepared and available on the SACATM Web site or upon request from the Designated Federal Official.

Meeting and Registration: This meeting is open to the public with time scheduled for oral public comments. The public may attend the meeting at Natcher Conference Center, where attendance is limited only by the space available, or view the webcast. Registration is required to view the webcast; the URL for the webcast will be provided in the email confirming registration. Individuals who plan to attend and/or provide oral comments are encouraged to register at <http://ntp.niehs.nih.gov/go/32822> by September 11, 2017, to facilitate planning for the meeting. Individuals are encouraged to access the Web site to stay abreast of the most current information regarding the meeting.

Visitor information for those attending in person is available at <https://www.nih.gov/about-nih/visitor-information>. Campus access and security information is located at <https://www.nih.gov/about-nih/visitor-information/campus-access-security>. Individuals with disabilities who need accommodation to participate in this event should contact Ms. Robbin Guy at phone: 919-541-4363 or email: guyr2@niehs.nih.gov. TTY users should contact the Federal TTY Relay Service at 800-877-8339. Requests should be made at least five business days in advance of the event.

Request for Comments: Both written and oral public input on the agenda topics is invited. Written comments submitted in response to this notice should be received by September 11, 2017. Comments will be posted on the SACATM meeting Web site and persons submitting them will be identified by their name and affiliation and/or sponsoring organization, if applicable. Persons submitting written comments should include their name, affiliation (if applicable), and sponsoring organization (if any) with the document. Guidelines for public comments are at http://ntp.niehs.nih.gov/ntp/about_ntp/guidelines_public_comments_508.pdf.

Time is allotted during the meeting for the public to present oral comments on the agenda topics. Public comments can be presented in-person at the meeting or by teleconference line. There are 50 lines for this call; availability is on a first-come, first-served basis. The lines will be open from 9:00 a.m. until adjournment on September 18 and 19; although SACATM will receive public comments only during the formal public comment periods, as indicated on the preliminary agenda. Each organization is allowed one time slot per agenda topic. Each speaker is allotted at least 7 minutes, which if time permits, may be extended to 10 minutes at the discretion of the SACATM chair.

Persons wishing to present oral comments are encouraged to register using the SACATM meeting registration form (<http://ntp.niehs.nih.gov/go/32822>) by September 11, 2017. Registrants should indicate the topic(s) on which they plan to comment and whether they will present comments in-person or via the teleconference. The access number for the teleconference line for public comments will be provided to registrants by email prior to the meeting. Registrants are requested to, if possible, send a copy of their statement to wolfe@niehs.nih.gov by September 11, 2017, to enable review by SACATM, NICEATM, ICCVAM, and NIEHS/NTP staff prior to the meeting. Written statements can

supplement and may expand the oral presentation. Registration for on-site oral comments will also be available on the meeting day, although time allowed for comments by these registrants may be limited and will be determined by the number of persons who register at the meeting. If registering on-site and reading from written text, please bring 30 copies of the statement for distribution and to supplement the record.

Background Information on ICCVAM, NICEATM, and SACATM: ICCVAM is an interagency committee composed of representatives from 16 federal regulatory and research agencies that require, use, generate, or disseminate toxicological and safety testing information. ICCVAM conducts technical evaluations of new, revised, and alternative safety testing methods with regulatory applicability and promotes the scientific validation and regulatory acceptance of toxicological and safety-testing methods that more accurately assess the safety and hazards of chemicals and products and that reduce, refine (decrease or eliminate pain and distress), or replace animal use. The ICCVAM Authorization Act of 2000 (42 U.S.C. 285l-3) established ICCVAM as a permanent interagency committee of the NIEHS under NICEATM.

NICEATM administers ICCVAM, provides scientific and operational support for ICCVAM-related activities, and conducts independent validation studies to assess the usefulness and limitations of new, revised, and alternative test methods and strategies. NICEATM and ICCVAM work collaboratively to evaluate new and improved test methods and strategies applicable to the needs of U.S. Federal agencies. NICEATM and ICCVAM welcome the public nomination of new, revised, and alternative test methods and strategies for validation studies and technical evaluations. Additional information about ICCVAM and NICEATM can be found at <http://ntp.niehs.nih.gov/go/iccvam> and <http://ntp.niehs.nih.gov/go/niceatm>.

SACATM was established in response to the ICCVAM Authorization Act [Section 285l-3(d)] and is composed of scientists from the public and private sectors. SACATM advises ICCVAM, NICEATM, and the Director of the NIEHS and NTP regarding statutorily mandated duties of ICCVAM and activities of NICEATM. SACATM provides advice on priorities and activities related to the development, validation, scientific review, regulatory acceptance, implementation, and national and international

harmonization of new, revised, and alternative toxicological test methods. Additional information about SACATM, including the charter, roster, and records of past meetings, can be found at <http://ntp.niehs.nih.gov/go/167>.

Dated: August 1, 2017.

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

[Docket No. USCG-2017-0194]

Waterway Suitability Assessment for Operation of Liquefied Hazardous Gas Terminal; Port Arthur, TX

AGENCY: Coast Guard, DHS.

ACTION: Notice and request for comments.

SUMMARY: In accordance with Coast Guard regulations, Lynx Terminals LLC (Lynx Terminals) has submitted a Letter of Intent and Preliminary Waterway Suitability Assessment to the Coast Guard Captain of the Port, Port Arthur, TX (COTP) regarding the company's plans to handle and transport Liquefied Hazardous Gas (LHG) at the Port of Port Arthur docks in Port Arthur, TX. The Coast Guard is notifying the public of this proposed increase in LHG marine traffic on the Sabine-Neches Waterway and is soliciting comments relevant to the Coast Guard's preparation of a Letter of Recommendation (LOR) for issue to the federal, state or local agency with jurisdiction over the proposed facility.

DATES: Comments and related material must be received on or before September 13, 2017.

ADDRESSES: You may submit comments identified by docket number USCG-2017-0194 using the Federal eRulemaking Portal at <http://www.regulations.gov>. See the "Public Participation and Request for Comments" portion of the **SUPPLEMENTARY INFORMATION** section below for further instructions on submitting comments.

FOR FURTHER INFORMATION CONTACT: If you have questions on this notice, call or email Commander Loan T. O'Brien, U.S. Coast Guard; telephone 409-723-6564, email: Loan.T.O'Brien@uscg.mil.

SUPPLEMENTARY INFORMATION:

Public Participation and Request for Comments

We encourage you to submit comments and related material in response to this notice through the Federal eRulemaking Portal at <http://www.regulations.gov>. We will consider all submissions and may adjust our final action based on your comments. If you submit a comment, please include the docket number for this notice, indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation.

We encourage you to submit comments through the Federal

eRulemaking Portal at <http://www.regulations.gov>. If your material cannot be submitted using <http://www.regulations.gov>, contact the person in the **FOR FURTHER INFORMATION CONTACT** section of this document for alternate instructions. Documents mentioned in this notice, and all public comments, are in our online docket at <http://www.regulations.gov> and can be viewed by following that Web site's instructions. Additionally, if you go to the online docket and sign up for email alerts, you will be notified when comments are posted or a final rule is published. To view comments, go to <http://www.regulations.gov>, type the docket number (USCG-2017-0194) in the "SEARCH" box and click "SEARCH." Click on "Open Docket Folder" on the line associated with this notice and request for comment. We accept anonymous comments. All comments received will be posted without change to <http://www.regulations.gov> and will include any personal information you have provided. For more about privacy and the docket, you may review a Privacy Act notice regarding the Federal Docket Management System in the March 24, 2005, issue of the **Federal Register** (70 FR 15086).

Privacy Act

Anyone can search the electronic form of comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review a Privacy Act notice regarding our public dockets in the January 17, 2008, issue of the **Federal Register** (73 FR 3316).

Public Meeting

We do not now plan to hold a public meeting, but you may submit a request for one, using one of the methods specified under **ADDRESSES**. Please explain why you believe a public meeting would be beneficial. If we determine that a public meeting would aid the Captain of the Port, Port Arthur (COTP) in validating the information in the WSA and preparing the Letter of Recommendation (LOR), we will hold one at a time and place announced by a later notice in the **Federal Register**.

Discussion

Under 33 CFR 127.007(a), an owner or operator planning to build a new facility handling Liquefied Hazardous Gas (LHG), or an owner or operator planning new construction to expand or modify marine terminal operations in an existing facility handling LHG, where

the construction, expansion, or modification would result in an increase in the size and/or frequency of LHG marine traffic on the waterway associated with the proposed facility or modification to an existing facility, must submit a Letter of Intent (LOI) to the COTP of the zone in which the facility is or will be located. Under 33 CFR 127.007(e), an owner or operator planning such new construction or expansion of an existing facility must also file or update a Waterway Suitability Assessment (WSA) that addresses the proposed increase in LHG marine traffic in the associated waterway. Lynx Terminals, located in Port Arthur, TX submitted an LOI and WSA on August 09, 2016 regarding the company's proposed plans to handle and transport LHG at the Port of Port Arthur, TX facility.

Under 33 CFR 127.009, after receiving an LOI, the COTP issues a LOR as to the suitability of the waterway for LNG or LHG marine traffic to the appropriate jurisdictional authorities. The LOR is based on a series of factors listed in 33 CFR 127.009 that relate to the physical nature of the affected waterway and issues of safety and security associated with LHG marine traffic on the affected waterway.

The purpose of this notice is to solicit public comments on the proposed increase in LHG marine traffic on the Sabine-Neches Waterway. The Coast Guard believes that input from the public may be useful to the COTP with respect to validating the information provided in Lynx Terminals' WSA and development of the LOR. Additionally, the Coast Guard intends to task the Area Maritime Security Committee, Port Arthur, TX and the Southeast Texas Waterways Advisory Council with forming a subcommittee comprised of affected port users and stakeholders. The goal of this subcommittee will be to gather information to help the COTP assess the suitability of the associated waterway for increased LHG marine traffic as it relates to navigational safety and maritime security. In addition to the other documents referenced in this notice, a brief summation of LYNX Terminals' proposal is available for viewing in the public docket for this notice.

On January 24, 2011, the Coast Guard published Navigation and Vessel Inspection Circular (NVIC) 01-2011, "Guidance Related to Waterfront Liquefied Natural Gas (LNG) Facilities". NVIC 01-2011 provides guidance for owners and operators seeking approval to build and operate LNG facilities. While NVIC 01-2011 is specific to LNG, it provides useful process information

and guidance for owners and operators seeking approval to build and operate LHG facilities as well. The Coast Guard will refer to NVIC 01-2011 for process information and guidance in evaluating Lynx Terminals' WSA. A copy of NVIC 01-2011 is available for viewing in the public docket for this notice and also on the Coast Guard's Web site at <http://www.uscg.mil/hq/cg5/nvic/2010s.asp>.

Dated: August 8, 2017.

Jaqueline Twomey,

Captain, U.S. Coast Guard, Captain of the Port, Port Arthur.

BILLING CODE 9110-04-P

DEPARTMENT OF HOMELAND SECURITY

U.S. Customs and Border Protection

Automated Commercial Environment (ACE) Export Manifest for Air Cargo Test: Expansion of Test To Include Additional Participants, Modification of Required Data Elements, and Extension of Test

AGENCY: U.S. Customs and Border Protection, Department of Homeland Security.

ACTION: General notice.

SUMMARY: This notice announces that CBP is modifying the U.S. Customs and Border Protection's (CBP's) Automated Commercial Environment (ACE) Export Manifest for Air Cargo Test, a National Customs Automation Program (NCAP) test concerning ACE export manifest capability, by making certain of the export manifest data elements optional. CBP is also extending the test and will be accepting additional applications for participation in this modified test from all parties meeting the eligibility requirements.

DATES: The modifications of the ACE Export Manifest for Air Cargo Test set forth in this document are effective August 14, 2017. The modified test will run until August 10, 2018. Applications from additional participants may be submitted at any time. Current test participants do not need to reapply. Comments concerning this notice and all aspects of the test may be submitted at any time during the test period to the email address below.

ADDRESSES: Applications to participate in the ACE Export Manifest for Air Cargo Test must be submitted via email to cbpexportmanifest@cbp.dhs.gov. In the subject line of the email, please use "ACE Export Manifest for Air Cargo Test Application". Written comments

concerning program, policy, and technical issues may also be submitted via email to CBP Export Manifest at cbpexportmanifest@cbp.dhs.gov. In the subject line of the email, please use "Comment on ACE Export Manifest for Air Cargo Test".

FOR FURTHER INFORMATION CONTACT:

Robert C. Rawls, Outbound Enforcement and Policy Branch, Office of Field Operations, U.S. Customs and Border Protection, via email at cbpexportmanifest@cbp.dhs.gov.

SUPPLEMENTARY INFORMATION:

Background

The ACE Export Manifest for Air Cargo Test is a voluntary test in which participants agree to submit export manifest data to CBP electronically, at least 4 hours prior to loading of the cargo onto the aircraft in preparation for departure from the United States. The ACE Export Manifest for Air Cargo Test is authorized under § 101.9(b) of title 19 of the Code of Federal Regulations (19 CFR 101.9(b)), which provides for the testing of NCAP programs or procedures.

CBP announced the procedures and criteria related to participation in the ACE Export Manifest for Air Cargo Test in a notice published in the **Federal Register** on July 10, 2015 (80 FR 39790). This test was originally set to run for approximately two years. For further details on the background and procedures regarding the test, please refer to the July 10, 2015 notice.

Expansion of Test to Additional Participants

In the July 10, 2015 notice announcing the initial phase of the ACE Export Manifest for Air Cargo Test, CBP stated that participation in the test was limited to nine stakeholders composed of air carriers and freight forwarders who met the eligibility requirements. This notice announces that the ACE Export Manifest for Air Cargo Test is now open to all eligible applicants. CBP will endeavor to accept all new eligible applicants on a first come first serve basis; however, if the number of eligible applicants exceeds CBP's administrative capabilities, CBP reserves the right to select eligible participants in order to achieve a diverse participant pool.

Eligibility Requirements

Except for the expansion to additional participants, the eligibility requirements for the ACE Export Manifest for Air Cargo Test set forth in the July 10, 2015 notice are not changing. For clarity and convenience to the public, CBP sets forth below the eligibility requirements for participation in the test.

Participation in the ACE Export Manifest for Air Cargo Test is limited to those parties able to electronically transmit manifest data in the identified acceptable format. Prospective ACE Export Manifest for Air Cargo Test participants must have the technical capability to electronically submit data to CBP and receive response message sets via Cargo-IMP, AIR CAMIR, IATA XML, or Unified XML,¹ and must successfully complete certification testing with their client representative. Once parties have applied to participate, they must complete a test phase to determine if the data transmission is in the required readable format. Applicants will be notified once they have successfully completed testing and are permitted to participate fully in the test. In selecting participants, CBP will take into consideration the order in which the applications are received.

There are no restrictions with regard to the participant's organization size, location or commodity type for participation in the test.

Modification of the Filing Condition of Certain Data Elements

One of the main purposes of the ACE Export Manifest for Air Cargo Test is to test the feasibility of requiring the manifest information to be filed electronically in ACE within a specified time before the cargo is loaded on the aircraft. Another purpose is to test the functionality regarding the filing of export manifest data for air cargo electronically to ACE within a specified time before the cargo is loaded on the aircraft. Under the current regulatory requirements, advance electronic filing of export data is generally not required. In most cases, the aircraft commander or agent must file a general declaration on CBP Form 7507 pertaining to the outbound flight. Also, the aircraft commander or agent must file the air cargo manifest, CBP Form 7509, with CBP at each port where export cargo is loaded on the aircraft. Additionally, the airline must file the complete air cargo manifest generally within 4 days after departure of the aircraft. See 19 CFR 122.72, 19 CFR 122.73, 19 CFR 122.74, 19 CFR 122.75, and 19 CFR 192.14. The U.S. Principal Party in Interest (USPPI) must file any required Electronic Export Information (EEI) for the cargo on the aircraft. See 15 CFR part 30. (For additional details about filing requirements for the aircraft commander and USPPI, please see the July 10, 2015

¹ Unified XML was not yet functional at the time of the original Automated Commercial Environment (ACE) Export Manifest for Air Cargo Test. It is now fully functional and available for use.

notice.) The data and the results of the ACE Export Manifest for Air Cargo Test will aid CBP in determining which parties are the best source of the export manifest data and when the data is available to be submitted to CBP.

CBP has been consulting with the Commercial Customs Operations Advisory Committee (COAC) to address ongoing issues concerning the quality, accessibility, and timeliness of export manifest data received during the test. Through this process, the COAC advised CBP that certain data elements currently required under the test may not be available to the party submitting the export manifest data to CBP 4 hours prior to loading the cargo on the aircraft in preparation for departure from the United States and urged CBP to make those data elements optional. For some, such as the in-bond number, COAC has suggested that the information may not be necessary because it is available to CBP through other electronic systems.

After evaluating the initial phase of the ACE Export Manifest for Air Cargo Test and considering the COAC's comments, CBP has determined that, in order to better test the functionality and feasibility of submitting the specified export data 4 hours in advance, five of the mandatory or conditional data elements should be changed to optional. This will enable participants to submit the optional information when and if it is available. These data elements are listed below. (Data elements which are "mandatory" must be provided to CBP for every shipment. Data elements which are "conditional" must be provided to CBP only if the particular information pertains to the cargo. Data elements which are "optional" may be provided to CBP but are not required).

- Number of pieces/unit of measure (Data Element #11)
- Number of house air waybills (Data Element #13)
- Split air waybill indicator (Data Element #18)
- In-bond number (Data Element #21)
- Mode of transportation (Data Element #22)

The remaining data elements under the ACE Export Manifest for Air Cargo Test continue to be mandatory, conditional or optional as provided in the July 10, 2015 notice. The full list of data elements is set forth below. Unless otherwise noted, the data elements are mandatory.

- (1) Exporting Carrier (As reflected in the July 10, 2015 notice, CBP finds this term to be clearer than the term "Owner/Operator" used on CBP Form 7509.)
- (2) Marks of nationality and registration

- (3) Flight number
- (4) Port of lading
- (5) Port of unloading
- (6) Scheduled date of departure (As reflected in the July 10, 2015 notice, CBP finds this term to be clearer than the term "Date" used on CBP Form 7509.)
- (7) Consolidator (conditional)
- (8) De-consolidator (conditional)
- (9) Air waybill type (Master, House, Simple or Sub)
- (10) Air waybill number
- (11) Number of pieces and unit of measure (optional)
- (12) Weight (kg./lb.)
- (13) Number of house air waybills (optional)
- (14) Shipper name and address
- (15) Consignee name and address
- (16) Cargo description (As reflected in the July 10, 2015 notice, CBP finds this term to be clearer than the term "Nature of goods" used on CBP Form 7509.)
- (17) AES Internal Transaction Number (ITN) or AES Exemption Statement/Exception Classification (per shipment)
- (18) Split air waybill indicator (optional)
- (19) Hazmat indicator (Yes/No)
- (20) UN Number (conditional) (If the hazmat indicator is yes, the four-digit UN (United Nations) Number assigned to the hazardous material must be provided.)
- (21) In-bond number (optional)
- (22) Mode of transportation (Air, containerized or Air, non-containerized) (optional)

If, after the conclusion of the ACE Export Manifest for Air Cargo Test, CBP decides to conduct rulemaking to amend the regulations concerning the filing of the air export cargo manifest, CBP will reevaluate the filing conditions for each data element to determine the feasibility of requiring that data element to be filed electronically in ACE within a specified time before the cargo is loaded on the aircraft.

Extension of the Test

To continue further evaluation of the ACE Export Manifest for Air Cargo Test, CBP is extending the test for an additional year. The expanded and modified test will run until August 10, 2018.

Applicability of Initial Test Notice

Unless explicitly changed by this or subsequent notices published in the **Federal Register**, all other aspects of the initial test announced in the July 10, 2015 notice, including test procedures and conditions, the application process, and the waiver of certain regulatory requirements, remain in effect.

Paperwork Reduction Act

In accordance with the Paperwork Reduction Act of 1995 (Pub. L. 104–13, 44 U.S.C. 3507), an agency may not conduct, and a person is not required to respond to, a collection of information unless the collection of information displays a valid control number assigned by the Office of Management and Budget (OMB). The collections of information in this NCAP test have been approved by OMB in accordance with the requirements of the Paperwork Reduction Act and assigned OMB control number 1651–0001.

Dated: August 8, 2017.

Todd C. Owen,

Executive Assistant Commissioner, Office of Field Operations.

BILLING CODE 9111–14–P

DEPARTMENT OF HOMELAND SECURITY

U.S. Customs and Border Protection

Automated Commercial Environment (ACE) Export Manifest for Vessel Cargo Test: Expansion of Test To Include Additional Participants, Modification of Required Data Elements, and Extension of Test

AGENCY: U.S. Customs and Border Protection, Department of Homeland Security.

ACTION: General notice.

SUMMARY: This notice announces that CBP is modifying the U.S. Customs and Border Protection's (CBP's) Automated Commercial Environment (ACE) Export Manifest for Vessel Cargo Test, a National Customs Automation Program (NCAP) test concerning ACE export manifest capability, by making certain of the export manifest data elements optional. CBP is also extending the test and will be accepting additional applications for participation in this modified test from all parties meeting the eligibility requirements.

DATES: The modifications of the ACE Export Manifest for Vessel Cargo Test set forth in this document are effective August 14, 2017. The modified test will run until September 21, 2018. Applications from additional participants may be submitted at any time. Current test participants do not need to reapply. Comments concerning this notice and all aspects of the test may be submitted at any time during the test period to the email address below.

ADDRESSES: Applications to participate in the ACE Export Manifest for Vessel

Cargo Test must be submitted via email to CBP Export Manifest at cbpvesselexportmanifest@cbp.dhs.gov. In the subject line of the email, please use "ACE Export Manifest for Vessel Cargo Test Application". Written comments concerning program, policy, and technical issues may also be submitted via email to CBP Export Manifest at cbpvesselexportmanifest@cbp.dhs.gov. In the subject line of the email, please use "Comment on ACE Export Manifest for Vessel Cargo Test".

FOR FURTHER INFORMATION CONTACT:

Robert C. Rawls, Outbound Enforcement and Policy Branch, Office of Field Operations, U.S. Customs and Border Protection, via email at cbpvesselexportmanifest@cbp.dhs.gov.

SUPPLEMENTARY INFORMATION:

Background

The ACE Export Manifest for Vessel Cargo Test is a voluntary test in which participants agree to submit export manifest data to CBP electronically, at least 24 hours prior to loading of the cargo onto the vessel in preparation for departure from the United States. The ACE Export Manifest for Vessel Cargo Test is authorized under § 101.9(b) of title 19 of the Code of Federal Regulations (19 CFR 101.9(b)), which provides for the testing of NCAP programs or procedures. *See* Treasury Decision (T.D.) 95–21.

CBP announced the procedures and criteria related to participation in the ACE Export Manifest for Vessel Cargo Test in a notice published in the **Federal Register** on August 20, 2015 (80 FR 50644). On October 20, 2015, CBP issued a notice published in the **Federal Register** (80 FR 63575) correcting an error in the initial notice that misstated the technical capability requirements for submitting data to CBP. This test was originally set to run for approximately two years. For further details on the background and procedures regarding the test, please refer to the August 20, 2015 notice.

Expansion of Test to Additional Participants

In the August 20, 2015 notice announcing the initial phase of the ACE Export Manifest for Vessel Cargo Test, CBP stated that participation in the test was limited to nine stakeholders composed of a mix of a certain number of vessel carriers and freight forwarders or non-vessel operating common carriers (NVOCCs) who met the eligibility requirements. This notice announces that the ACE Export Manifest for Vessel Cargo Test is now open to all eligible applicants. CBP will endeavor

to accept all new eligible applicants on a first come first serve basis; however, if the number of eligible applicants exceeds CBP's administrative capabilities, CBP reserves the right to select eligible participants in order to achieve a diverse participant pool.

Eligibility Requirements

Except for the expansion to additional participants, the eligibility requirements for the ACE Export Manifest for Vessel Cargo Test have not changed since the October 20, 2015 correction notice. For clarity and convenience to the public, CBP sets forth below the eligibility requirements for participation in the test.

Participation in the ACE Export Manifest for Vessel Cargo Test is limited to those parties able to electronically transmit manifest data in the identified acceptable format. Prospective ACE Export Manifest for Vessel Cargo Test participants must have the technical capability to electronically submit data to CBP and receive response message sets via Ocean CAMIR, ANSI X12, or Unified XML,¹ and must successfully complete certification testing with their client representative. Once parties have applied to participate, they must complete a test phase to determine if the data transmission is in the required readable format. Applicants will be notified once they have successfully completed testing and are permitted to participate fully in the test. In selecting participants, CBP will take into consideration the order in which the applications are received.

There are no restrictions with regard to the participant's organization size, location, or commodity type for participation in the test.

Modification of the Filing Condition of Certain Data Elements

One of the main purposes of the ACE Export Manifest for Vessel Cargo Test is to test the feasibility of requiring certain manifest information to be filed electronically in ACE at least 24 hours before the cargo is loaded on the vessel. Another purpose is to test the functionality regarding the filing of such export manifest data within the above specified time. Under the current regulatory requirements, the complete manifest is generally not required to be submitted until after the departure of the vessel. See 19 CFR 4.75, 4.76 and 4.84. The data and the results of the ACE Export Manifest for Vessel Cargo Test will aid CBP in determining which

parties are the best source of the export manifest data and when the data is available to be submitted to CBP.

CBP has been consulting with the Commercial Customs Operations Advisory Committee (COAC) to address ongoing issues concerning the quality, accessibility, and timeliness of export manifest data received during the test. Through this process, the COAC advised CBP that certain data elements currently required under the test may not be available to the party submitting the export manifest data to CBP 24 hours prior to loading of the cargo onto the vessel in preparation for departure from the United States and urged CBP to make those data elements optional.

After evaluating the initial phase of the ACE Export Manifest for Vessel Cargo Test and considering COAC's comments, CBP has determined that, in order to better test the functionality and feasibility of submitting the specified export data at least 24 hours prior to loading of the cargo on the vessel, four of the previously mandatory or conditional data elements should be changed to optional. This will enable participants to submit the optional information when and if it is available. (Data elements which are "mandatory" must be provided to CBP for every shipment. Data elements which are "conditional" must be provided to CBP only if the particular information pertains to the cargo. Data elements which are "optional" may be provided to CBP but are not required.)

CBP is modifying the ACE Export Manifest for Vessel Cargo Test to change the following four mandatory or conditional data elements to optional:

- Name of the Master (Data Element #4)
- Number of House Bills of Lading (Data Element #9)
- Split Shipment Indicator (Data Element #22)
- Portion of Split Shipments (Data Element #23)

The remaining data elements under the ACE Export Manifest for Vessel Cargo Test continue to be mandatory, conditional, or optional as provided in the August 20, 2015 notice. The full list of data elements is set forth below. Unless otherwise noted, the data elements are mandatory.

- (1) Mode of transportation (Vessel, containerized or Vessel, non-containerized)
- (2) Name of ship or vessel
- (3) Nationality of ship
- (4) Name of Master (optional)
- (5) Port of loading
- (6) Port of discharge
- (7) Bill of Lading number (Master and House)

- (8) Bill of Lading type (Master, House, Simple or Sub)
- (9) Number of House Bills of Lading (optional)
- (10) Marks and Numbers (conditional)
- (11) Container Numbers (conditional)
- (12) Seal Numbers (conditional)
- (13) Number and kind of packages
- (14) Description of goods
- (15) Gross Weight (lb. or kg.) or Measurements (per HTSUS)
- (16) Shipper name and address
- (17) Consignee name and address
- (18) Notify Party name and address (conditional)
- (19) Country of Ultimate Destination
- (20) In-bond number (conditional)
- (21) Internal Transaction Number (ITN) or AES Exemption Statement (per shipment)
- (22) Split Shipment Indicator (Yes/No) (optional)
- (23) Portion of split shipment (e.g., 1 of 10, 4 of 10, 5 of 10—Final, etc.) (optional)
- (24) Hazmat Indicator (Yes/No)
- (25) UN Number (conditional) (If the hazmat indicator is yes, then UN (for United Nations Number) or NA (North American Number) and the corresponding 4-digit identification number assigned to the hazardous material must be provided.)
- (26) Chemical Abstract Service (CAS) Registry Number (conditional)
- (27) Vehicle Identification Number (VIN) or Product Identification Number (conditional) (For shipments of used vehicles, the VIN must be reported, or for used vehicles that do not have a VIN, the Product Identification Number must be reported.)

If, after the conclusion of the ACE Export Manifest for Vessel Cargo Test, CBP decides to conduct rulemaking to amend the regulations concerning the filing of the vessel export cargo manifest, CBP will reevaluate the filing conditions for each data element to determine the feasibility of requiring that data element to be filed electronically in ACE within the specified time before the cargo is loaded on the vessel.

Extension of the Test

To continue further evaluation of the ACE Export Manifest for Vessel Cargo Test, CBP is extending the test for an additional year. The expanded and modified test will run until September 21, 2018.

Applicability of Initial Test Notice

Unless explicitly changed by this or subsequent notices published in the **Federal Register**, all other aspects of the initial test announced in the August 20,

¹ Unified XML was not yet functional at the time of the original Automated Commercial Environment (ACE) Export Manifest for Vessel Cargo Test. It is now fully functional and available for use.

2015 notice (and corrected in the October 20, 2015 notice), including test procedures and conditions, the application process, and the waiver of certain regulatory requirements, remain in effect.

Paperwork Reduction Act

In accordance with the Paperwork Reduction Act of 1995 (Pub. L. 104–13, 44 U.S.C. 3507), an agency may not conduct, and a person is not required to respond to, a collection of information unless the collection of information displays a valid control number assigned by the Office of Management and Budget (OMB). The collections of information in this NCAP test have been approved by OMB in accordance with the requirements of the Paperwork Reduction Act and assigned OMB control number 1651–0001.

Dated: August 8, 2017.

DEPARTMENT OF HOMELAND SECURITY

U.S. Customs and Border Protection

[CBP Dec. No. 17–09]

Expansion of Global Entry Eligibility to Citizens of the Republic of Colombia, Citizens of the Republic of Singapore, and Citizens of Switzerland

AGENCY: U.S. Customs and Border Protection; Department of Homeland Security.

ACTION: General notice.

SUMMARY: U.S. Customs and Border Protection (CBP) operates the Global Entry international trusted traveler program at most major U.S. airports. Global Entry allows pre-approved participants dedicated CBP processing into the United States using Global Entry kiosks located at designated airports. This document announces that CBP is expanding eligibility for Global Entry to include citizens of the Republic of Colombia, citizens of the Republic of Singapore, and citizens of Switzerland. All of these individuals also must satisfy the requirements to participate in the Global Entry program. Additionally, this document announces that U.S. citizens who participate in Global Entry will have the option to apply for membership in Singapore's enhanced-Immigration Automated Clearance System (e-IACS).

DATES: Applications will be accepted from qualified citizens of the Republic of Colombia, qualified citizens of the Republic of Singapore, and qualified citizens of Switzerland beginning on August 14, 2017.

FOR FURTHER INFORMATION CONTACT:

Garret Conover, Office of Field Operations, (202) 325–4062, Garret.A.Conover@cbp.dhs.gov.

SUPPLEMENTARY INFORMATION:

Background

Global Entry Program

Global Entry is a voluntary program that provides pre-approved travelers arriving in the United States dedicated CBP processing at Global Entry kiosks located at designated airports. In a final rule published in the **Federal Register** (77 FR 5681) on February 6, 2012, CBP promulgated the regulation (8 CFR 235.12) to establish Global Entry as an ongoing voluntary regulatory program. Section 235.12 contains a description of the program, the eligibility criteria, the application and enrollment process, and the redress procedures. Travelers who wish to participate in Global Entry must apply via the Global On-Line Enrollment System (GOES) Web site, <https://goes-app.cbp.dhs.gov>, and pay the applicable fee. Applications for Global Entry must be completed and submitted electronically. The list of airports with Global Entry kiosks is available at <http://www.globalentry.gov>.

Eligibility for participation in Global Entry is limited to U.S. citizens, U.S. nationals, U.S. lawful permanent residents, and certain nonimmigrant aliens from countries that have entered into arrangements with CBP regarding international trusted traveler programs. Specifically, certain nonimmigrant aliens from countries that have entered into arrangements with CBP concerning international trusted traveler programs may be eligible to apply for participation in Global Entry. CBP announces the arrangement by publication of a notice in the **Federal Register**. The notice includes the country, the scope of eligibility of nonimmigrant aliens from that country (e.g., whether only citizens of the foreign country or citizens and noncitizens are eligible) and other conditions that may apply based on the terms of the arrangement. See 8 CFR 235.12(b)(1)(ii). Since establishing the Global Entry program, CBP has announced several expansions of the program.¹

¹ For further information see 75 FR 82202, December 29, 2010 (utilization of Global Entry kiosks by NEXUS and SENTRI participants); 78 FR

CBP may deny applicants enrollment in the Global Entry program for various reasons. An individual who is inadmissible to the United States under U.S. immigration law or has, at any time, been granted a waiver of inadmissibility or parole is ineligible to participate in Global Entry. CBP will automatically reject applications from such individuals. CBP also may reject an application for Global Entry if an applicant has ever been arrested for, or convicted of, a criminal offense, or if the individual has ever been found in violation of customs or immigration laws, or of any criminal law. Additionally, CBP will not accept an applicant for participation in Global Entry if CBP determines that the applicant presents a potential risk of terrorism, or criminality (including smuggling), or if CBP cannot sufficiently determine that the applicant meets all the program eligibility criteria. The eligibility criteria are set forth in more detail in the Global Entry final rule and 8 CFR 235.12. See also <http://www.globalentry.gov>.

The Republic of Colombia

On April 27, 2015, the U.S. Department of Homeland Security, CBP and the Ministry of Foreign Affairs of the Republic of Colombia signed a Joint Statement regarding the development of an initiative involving their respective international trusted traveler programs. In the Joint Statement, the parties agreed to cooperate in the expansion of Global Entry to certain eligible citizens of Colombia and to mutually develop procedures for the implementation and operation of the expansion. Based on this Joint Statement, CBP is announcing that citizens of the Republic of Colombia are eligible to apply for participation in Global Entry.

In order to apply for Global Entry, citizens of the Republic of Colombia must first complete the on-line application located on the GOES Web site, pay the nonrefundable Global Entry fee, and satisfy all the requirements of Global Entry. These applicants will then undergo a thorough risk assessment by both CBP and the Republic of Colombia's Ministry of Foreign Affairs and an interview with CBP. The vetting criteria were mutually developed and

48706, August 9, 2013 (expansion to certain citizens of the Republic of Korea and expansion through limited pilots to a number of citizens from the United Kingdom, the State of Qatar and Germany); 80 FR 1509, January 12, 2015 (expansion to certain citizens of Panama); 81 FR 7822, February 16, 2016 (expansion to all German citizens); and, 81 FR 45170, July 12, 2016 (expansion to all citizens of the United Kingdom).

are consistent with each agency's applicable domestic laws and policies.

Once the risk assessment has been completed, CBP will notify the applicant of the results and next steps necessary to complete the enrollment. More information on how to apply is available at www.globalentry.gov.

U.S. Citizens' Participation in Colombia's Trusted Traveler Program

Consistent with the Joint Statement, U.S. citizens who participate in Global Entry will have the option to apply for participation in Colombia's trusted traveler program, once such program is established. Once the program is established, CBP plans to announce it on CBP's Web site at <http://www.globalentry.gov>.

The Republic of Singapore

On December 1, 2014, the U.S. Department of Homeland Security, CBP and the Ministry of Home Affairs for the Republic of Singapore, Immigration & Checkpoints Authority signed a Joint Statement regarding the development of an initiative involving their respective international trusted traveler programs. In the Joint Statement, the parties agreed to cooperate in the expansion of their respective trusted traveler programs to eligible citizens of Singapore and the United States and to mutually develop procedures for the implementation and operation of the expansions. Based on this Joint Statement, CBP is announcing that citizens of the Republic of Singapore are eligible to apply for participation in Global Entry.

In order to apply for Global Entry, citizens of the Republic of Singapore must first complete the on-line application located on the GOES Web site, pay the nonrefundable Global Entry fee, and satisfy all the requirements of Global Entry. These applicants will then undergo a thorough risk assessment by both CBP and the Republic of Singapore's Immigration & Checkpoints Authority and an interview with CBP. The vetting criteria were mutually developed and are consistent with each agency's applicable domestic laws and policies.

Once the risk assessment has been completed, CBP will notify the applicant of the results and next steps necessary to complete the enrollment. More information on how to apply is available at www.globalentry.gov.

U.S. Citizens' Participation in Singapore's Enhanced-Immigration Automated Clearance System (e-IACS)

Pursuant to the Joint Statement, U.S. citizens who are Global Entry participants will have the option to

apply for Singapore's enhanced-Immigration Automated Clearance System (e-IACS). e-IACS is a trusted traveler program in Singapore that uses automated kiosks to offer expedited processing for travelers through clearance formalities when entering the Republic of Singapore. All U.S. applicants must apply for e-IACS directly with the Government of Singapore, be thoroughly vetted by the Republic of Singapore, meet specific passport and travel qualifications, and appear in person at an e-IACS enrollment center to complete the enrollment process. There is no fee for participation in e-IACS. The Republic of Singapore will notify the U.S. applicant directly about whether he or she was approved for e-IACS. More information about how to apply for e-IACS is available at <https://ltpass.ica.gov.sg/ttp/>.

Switzerland

On December 16, 2015, the U.S. Department of Homeland Security, CBP and the Federal Department of Justice and Police of the Swiss Confederation signed a Joint Statement regarding the development of an initiative involving their respective international trusted traveler programs. In the Joint Statement, the parties agreed to cooperate in the expansion of Global Entry to certain eligible citizens of Switzerland and to mutually develop procedures for the implementation and operation of the expansion. Based on this Joint Statement, CBP is announcing that citizens of Switzerland are eligible to apply for participation in Global Entry.

In order to apply for Global Entry, citizens of Switzerland must first obtain clearance from the Swiss Federal Office of Police. CBP will not process applications from citizens of Switzerland unless such clearance has been obtained. To apply for clearance, an applicant must submit an application and pay a nonrefundable fee to the Swiss Federal Office of Police. The Swiss Federal Office of Police will notify the applicants whether clearance has been granted.

After the applicant has obtained the necessary clearance, the applicant must complete the Global Entry on-line application located on the GOES Web site, pay the nonrefundable Global Entry fee, and satisfy all the requirements of Global Entry. These applicants will then undergo a thorough risk assessment by both CBP and the Federal Department of Justice and Police of the Swiss Confederation and an interview with CBP. The vetting criteria were mutually developed and are consistent with each

agency's applicable domestic laws and policies.

After the risk assessment has been completed, CBP will notify the applicant of the results and next steps necessary to complete the enrollment. More information on how to apply is available at www.globalentry.gov.

U.S. Citizens' Participation in Switzerland's Trusted Traveler Program

Consistent with the Joint Statement, U.S. citizens who participate in Global Entry will have the option to apply for participation in Switzerland's trusted traveler program, once such program is established. Once the program is established, CBP plans to announce it on CBP's Web site at <http://www.globalentry.gov>.

Dated: August 8, 2017.

Todd C. Owen,

Executive Assistant Commissioner, Office of Field Operations.

BILLING CODE 9111-14-P

DEPARTMENT OF HOMELAND SECURITY

U.S. Customs and Border Protection

Automated Commercial Environment (ACE) Export Manifest for Rail Cargo Test: Expansion of Test To Include Additional Participants, Modification of Required Data Elements, and Extension of Test

AGENCY: U.S. Customs and Border Protection, Department of Homeland Security.

ACTION: General notice.

SUMMARY: This notice announces that CBP is modifying the U.S. Customs and Border Protection's (CBP's) Automated Commercial Environment (ACE) Export Manifest for Rail Cargo Test, a National Customs Automation Program (NCAP) test concerning ACE export manifest capability by changing the reporting requirements for certain data elements. CBP is also extending the test and will be accepting additional applications for participation in this modified test from all parties meeting the eligibility requirements.

DATES: The modifications of the ACE Export Manifest for Rail Cargo Test set forth in this document are effective August 14, 2017. The modified test will run until October 9, 2018. Applications from additional participants may be submitted at any time. Current test participants do not need to reapply. Comments concerning this notice and all aspects of the test may be submitted

at any time during the test period to the email address below.

ADDRESSES: Applications to participate in the ACE Export Manifest for Rail Cargo Test must be submitted via email to CBP Export Manifest at cbprailexportmanifest@cbp.dhs.gov. In the subject line of the email, please use "ACE Export Manifest for Rail Cargo Test Application". Written comments concerning program, policy, and technical issues may also be submitted via email to CBP Export Manifest at cbprailexportmanifest@cbp.dhs.gov. In the subject line of the email, please use "Comment on ACE Export Manifest for Rail Cargo Test".

FOR FURTHER INFORMATION CONTACT: Robert C. Rawls, Outbound Enforcement and Policy Branch, Office of Field Operations, U.S. Customs and Border Protection, via email at cbprailexportmanifest@cbp.dhs.gov.

SUPPLEMENTARY INFORMATION:

Background

The ACE Export Manifest for Rail Cargo Test is a voluntary test in which participants agree to submit export manifest data to CBP electronically, at least 2 hours prior to loading of the cargo onto the train in preparation for departure from the United States or, for empty rail cars, upon assembly of the train. The ACE Export Manifest for Rail Cargo Test is authorized under § 101.9(b) of title 19 of the Code of Federal Regulations (19 CFR 101.9(b)), which provides for the testing of NCAP programs or procedures. *See* Treasury Decision (T.D.) 95–21.

CBP announced the procedures and criteria related to participation in the ACE Export Manifest for Rail Cargo Test in a notice published in the **Federal Register** on September 9, 2015 (80 FR 54305). This test was originally set to run for approximately two years. For further details on the background and procedures regarding the test, please refer to the September 9, 2015 notice.

Expansion of Test to Additional Participants

In the September 9, 2015 notice announcing the initial phase of the ACE Export Manifest for Rail Cargo Test, CBP stated that participation in the test was limited to nine stakeholders composed of rail carriers who met the eligibility requirements. This notice announces that the ACE Export Manifest for Rail Cargo Test is now open to all eligible applicants. CBP will endeavor to accept all new eligible applicants on a first come first serve basis. If the number of eligible applicants exceeds CBP's administrative capabilities, CBP

reserves the right to select eligible participants in order to achieve a diverse participant pool.

Eligibility Requirements

Except for the expansion to additional participants, the eligibility requirements for the ACE Export Manifest for Rail Cargo Test have not changed since the September 9, 2015 notice. For clarity and convenience to the public, CBP sets forth below the eligibility requirements for participation in the test.

Participation in the ACE Export Manifest for Rail Cargo Test is limited to those parties able to electronically transmit manifest data in the identified acceptable format. Prospective ACE Export Manifest for Rail Cargo Test participants must have the technical capability to electronically submit data to CBP and receive response message sets via Cargo-ANSI X12 (also known as "Rail X12") or Unified XML,¹ and must successfully complete certification testing with their client representative. Once parties have applied to participate, they must complete a test phase to determine if the data transmission is in the required readable format. Applicants will be notified once they have successfully completed testing and are permitted to participate fully in the test. In selecting participants, CBP will take into consideration the order in which the applications are received.

There are no restrictions with regard to the participant's organization size, location, or commodity type for participation in the test.

Modification of the Filing Condition of Certain Data Elements

One of the main purposes of the ACE Export Manifest for Rail Cargo Test is to test the feasibility of requiring rail carriers to file export manifest data to CBP. Another purpose is to test the functionality regarding the filing of export manifest data for rail cargo electronically to ACE within a specified time before the cargo is loaded on the train. Under the current regulatory requirements, the rail carrier is not required to submit a paper or electronic manifest for cargo exported from the United States by rail. The U.S. Principal Party in Interest (USPPI) is required to transmit and verify system acceptance of certain advance information to CBP for export cargo leaving the United States by rail *See* 19 CFR 192.14. For further details about current requirements, please refer to the September 9, 2015 notice. The data and

¹ Unified XML was not yet functional at the time of the original Automated Commercial Environment (ACE) Export Manifest for Rail Cargo Test. It is now fully functional and available for use.

the results of the ACE Export Manifest for Rail Cargo Test will aid CBP in determining which parties are the best source of the export manifest data and when the data is available to be submitted to CBP.

CBP has been consulting with the Commercial Customs Operations Advisory Committee (COAC) to address ongoing issues concerning the quality, accessibility, and timeliness of export manifest data received during the test. One issue of concern to COAC is the availability of certain data elements currently required under the test 2 hours prior to loading of the cargo on the train in preparation for departure from the United States. COAC urged CBP to change the filing condition of those data elements.

After evaluating the initial phase of the ACE Export Manifest for Rail Cargo Test and considering COAC's comments, CBP has determined that, in order to better test the functionality and feasibility of submitting the specified export data 2 hours prior to loading of the cargo on the train, the filing condition for nine of the data elements should be changed. The modified filing conditions will enable CBP to better determine the appropriate reporting requirements for each data element. (Data elements which are "mandatory" must be provided to CBP for every shipment. Data elements which are "conditional" must be provided to CBP only if the particular information pertains to the cargo. Data elements which are "optional" may be provided to CBP but are not required.)

CBP is modifying the ACE Export Manifest for Rail Cargo Test to change the following eight mandatory or conditional data elements to optional:

- Mode of Transportation (Rail, containerized or Rail, non-containerized) (Data Element #1)
- Place where the carrier took possession (Data Element #14)
- Country of Ultimate Destination (Data Element #16)
- Equipment Type Code (Data Element #17)
- Number of House Bills of Lading (Data Element #22)
- Split Shipment Indicator (Data Element #29)
- Portion of Split Shipment (Data Element #30)
- Mexican Pedimento Number (Data Element #32)

CBP is modifying the ACE Export Manifest for Rail Cargo Test to change the following data element from mandatory to conditional:

- Marks and Numbers (Data Element #10)

The remaining data elements under the ACE Export Manifest for Rail Cargo Test continue to be mandatory, conditional, or optional as provided in the September 9, 2015 notice. The full list of data elements for all shipments, including empty rail cars, is set forth below. Unless otherwise noted, the data elements are mandatory.

- (1) Mode of Transportation (Rail, containerized or Rail, non-containerized) (optional)
- (2) Port of Departure from the United States
- (3) Date of Departure
- (4) Manifest Number
- (5) Train Number
- (6) Rail Car Order
- (7) Car Locator Message
- (8) Hazmat Indicator (Yes/No)
- (9) 6-character Hazmat Code (conditional) (If the hazmat indicator is yes, then UN (for United Nations Number) or NA (North American Number) and the corresponding 4-digit identification number assigned to the hazardous material must be provided.)
- (10) Marks and Numbers (conditional)
- (11) SCAC (Standard Carrier Alpha Code) for exporting carrier
- (12) Shipper name and address (For empty rail cars, the shipper may be the railroad from whom the rail carrier received the empty rail car to transport.)
- (13) Consignee name and address (For empty rail cars, the consignee may be the railroad to whom the rail carrier is transporting the empty rail car.)
- (14) Place where the rail carrier takes possession of the cargo shipment or empty rail car (optional)
- (15) Port of Unlading
- (16) Country of Ultimate Destination (optional)
- (17) Equipment Type Code (optional)
- (18) Container Number(s) (for containerized shipments) or Rail Car Number(s) (for all other shipments)
- (19) Empty Indicator (Yes/No)
If the empty indicator is no, then the following data elements must also be provided, unless otherwise noted:
- (20) Bill of Lading Numbers (Master and House)
- (21) Bill of Lading type (Master, House, Simple or Sub)
- (22) Number of house bills of lading (optional)
- (23) Notify Party name and address (conditional)
- (24) AES Internal Transaction Number or AES Exemption Statement (per shipment)
- (25) Cargo Description

- (26) Weight of Cargo (may be expressed in either pounds or kilograms)
- (27) Quantity of Cargo and Unit of Measure
- (28) Seal Number (only required if the container was sealed)
- (29) Split Shipment Indicator (Yes/No) (optional)
- (30) Portion of split shipment (e.g. 1 of 10, 4 of 10, 5 of 10—Final. etc.) (optional)
- (31) In-bond number (conditional)
- (32) Mexican Pedimento Number (only for shipments for export to Mexico) (optional)

If, after the conclusion of the ACE Export Manifest for Rail Cargo Test, CBP decides to conduct rulemaking to amend the regulations concerning the filing of the manifest for rail cargo, CBP will reevaluate the filing conditions for each data element to determine the feasibility of requiring that data element to be filed electronically in ACE within a specified time before the cargo is loaded on the train.

Extension of the Test

To continue further evaluation of the ACE Export Manifest for Rail Cargo Test, CBP is extending the test for an additional year. The expanded and modified test will run until October 9, 2018.

Applicability of Initial Test Notice

Unless explicitly changed by this or subsequent notices published in the **Federal Register**, all other aspects of the initial test announced in the September 9, 2015 notice, including test procedures and conditions, the application process, and the waiver of certain regulatory requirements, remain in effect.

Paperwork Reduction Act

In accordance with the Paperwork Reduction Act of 1995 (Pub. L. 104–13, 44 U.S.C. 3507), an agency may not conduct, and a person is not required to respond to, a collection of information unless the collection of information displays a valid control number assigned by the Office of Management and Budget (OMB). The collections of information in this NCAP test have been approved by OMB in accordance with the requirements of the Paperwork Reduction Act and assigned OMB control number 1651–0001.

Dated: August 8, 2017.

Todd C. Owen,
Executive Assistant Commissioner, Office of Field Operations.

Fish and Wildlife Service

[FWS–HQ–R–2017–N118;
FXGO1664091HCC0–FF09D00000–178]

Wildlife and Hunting Heritage Conservation Council; Public Teleconference

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of teleconference.

SUMMARY: We, the U.S. Fish and Wildlife Service, announce a public teleconference of the Wildlife and Hunting Heritage Conservation Council (Council). The Council provides advice about wildlife and habitat conservation endeavors that benefit wildlife resources; encourage partnership among the public, sporting conservation organizations, states, Native American tribes, and the Federal Government; and benefit recreational hunting.

DATES: *Meeting:* Wednesday August 30, 2017, from 9 a.m. to 5 p.m. (Eastern Daylight Time). For deadlines and directions on registering to participate, submitting written material, and giving an oral presentation, please see Public Input under **SUPPLEMENTARY INFORMATION**.

FOR FURTHER INFORMATION CONTACT: Joshua Winchell, Council Designated Federal Officer, by U.S. mail at the U.S. Fish and Wildlife Service, National Wildlife Refuge System, 5275 Leesburg Pike, Falls Church, VA 22041–3803; by telephone at (703) 358–2639; or by email at joshua_winchell@fws.gov.

SUPPLEMENTARY INFORMATION: In accordance with the requirements of the Federal Advisory Committee Act, 5 U.S.C. Appendix 2, we announce that the Wildlife and Hunting Heritage Conservation Council (Council) will hold a teleconference.

Background

Formed in February 2010, the Council provides advice about wildlife and habitat conservation endeavors that:

1. Benefit wildlife resources;
2. Encourage partnership among the public, sporting conservation organizations, states, Native American tribes, and the Federal Government; and
3. Benefit recreational hunting.

The Council advises the Secretary of the Interior and the Secretary of Agriculture, reporting through the Director, U.S. Fish and Wildlife Service (Service), in consultation with the Director, Bureau of Land Management (BLM); Director, National Park Service (NPS); Chief, Forest Service (USFS);

Chief, Natural Resources Conservation Service (NRCS); and Administrator, Farm Services Agency (FSA). The Council’s duties are strictly advisory and consist of, but are not limited to, providing recommendations for:

1. Implementing the Recreational Hunting and Wildlife Resource Conservation Plan;
2. Increasing public awareness of and support for the Wildlife Restoration Program;
3. Fostering wildlife and habitat conservation and ethics in hunting and shooting sports recreation;
4. Stimulating sportsmen and women’s participation in conservation and management of wildlife and habitat resources through outreach and education;

5. Fostering communication and coordination among state, tribal, and Federal governments; industry; hunting and shooting sportsmen and women; wildlife and habitat conservation and management organizations; and the public;
6. Providing appropriate access to Federal lands for recreational shooting and hunting;
7. Providing recommendations to improve implementation of Federal conservation programs that benefit wildlife, hunting, and outdoor recreation on private lands; and
8. When requested by the Designated Federal Officer in consultation with the Council Chairperson, performing a variety of assessments or reviews of policies, programs, and efforts through

the Council’s designated subcommittees or workgroups.

Background information on the Council is available at <http://www.fws.gov/whhcc>.

Meeting Agenda

The Council will convene to consider issues including:

1. Implementing Department of the Interior Secretarial Order 3347—Conservation Stewardship and Outdoor Recreation;
2. Status of the Recreation Hunting and Wildlife Conservation Plan, as directed by Executive Order 13443; and
3. Other Council business.

The final agenda will be posted on the internet at <http://www.fws.gov/whhcc>.

Public Input

If you wish to:	You must contact the Council Designated Federal Officer (see FOR FURTHER INFORMATION CONTACT) no later than:
Listen to the Teleconference	August 17, 2017.
Submit written information or questions before the teleconference for the Council to consider during the meeting.	August 17, 2017.
Give an oral presentation during the teleconference	August 17, 2017.

Submitting Written Information or Questions

Interested members of the public may submit relevant information or questions for the Council to consider during the public teleconference. Written statements must be received by the date in Public Input so that the information may be made available to the Council for consideration prior to this meeting. Written statements must be supplied to the Council Designated Federal Officer in both of the following formats: One hard copy with original signature, and one electronic copy via email (acceptable file formats are Adobe Acrobat PDF, MS Word, MS PowerPoint, or rich text file).

Giving an Oral Presentation

Individuals or groups who want to make an oral presentation during the teleconference will be limited to 2 minutes per speaker, with no more than a total of 30 minutes for all speakers. Interested parties should contact the Council Designated Federal Officer, in writing (preferably via email; see **FOR FURTHER INFORMATION CONTACT**), to be placed on the public speaker list for this teleconference. Nonregistered public speakers cannot be accommodated during the teleconference. Registered speakers who wish to expand upon their oral statements, or those who had wished to speak but could not be accommodated on the agenda, may

submit written statements to the Council Designated Federal Officer up to 30 days subsequent to the teleconference.

Meeting Minutes

Summary minutes of the teleconference will be maintained by the Council Designated Federal Officer (see **FOR FURTHER INFORMATION CONTACT**). They will be available for public inspection within 90 days of the teleconference, and will be posted on the Council’s Web site at <http://www.fws.gov/whhcc>.

Public Disclosure of Comments: Before including your address, phone number, email address, or other personal identifying information in your comment, please be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Authority: 5 U.S.C. Appendix 2.

Joshua Winchell,
Designated Federal Officer, U.S. Fish and Wildlife Service.

Proposed Low-Effect Habitat Conservation Plan for the Olympia Subspecies of the Mazama Pocket Gopher, Thurston County, Washington

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of availability; request for comments.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), received an application from Mr. Steven McLain (applicant) for an Incidental Take Permit (ITP) pursuant to the Endangered Species Act of 1973, as amended (ESA). The applicant requests an ITP that would authorize “take” of the threatened Olympia subspecies of the Mazama pocket gopher incidental to otherwise lawful construction of a single-family home in Thurston County, Washington. The application includes a draft Habitat Conservation Plan (HCP) with measures to minimize and mitigate the impacts of the taking on the covered species. We have also prepared a draft Environmental Action Statement (EAS) for our preliminary determination that the HCP and permit decision may be eligible for categorical exclusion under the National Environmental Policy Act

(NEPA). We invite comments from all interested parties regarding the permit application, draft HCP, and the draft EAS.

DATES: To ensure consideration, please submit written comments by September 13, 2017.

ADDRESSES: You may view or download copies of the draft HCP and obtain additional information on the Internet at <http://www.fws.gov/wafwo/>. To request further information or submit written comments, please use one of the following methods, and note that your information request or comments are in reference to “The McLain HCP”:

- *Electronic:* wfwocomments@fws.gov.

- *U.S. Mail:* Public Comments Processing, Attn: FWS–R1–ES–2017–N097; U.S. Fish and Wildlife Service; Washington Fish and Wildlife Office, 510 Desmond Drive SE., Suite 102; Lacey, Washington 98503.

- *In-Person Drop-off, Viewing, or Pickup:* Call 360–753–5823 to make an appointment (necessary for viewing or picking up documents only) during normal business hours at the above address.

FOR FURTHER INFORMATION CONTACT: Tim Romanski, Conservation Planning and Hydropower Branch Manager, Washington Fish and Wildlife Office, U.S. Fish and Wildlife Service (see **ADDRESSES**), telephone: 360–753–5823. If you use a telecommunications device for the deaf, please call the Federal Relay Service at 800–877–8339.

SUPPLEMENTARY INFORMATION:

Background

Section 9 of the ESA prohibits “take” of fish and wildlife species listed as endangered or threatened. Under the ESA, the term “take” means to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct (16 U.S.C. 1532(19)). The term “harm,” as defined in our regulations, includes significant habitat modification or degradation that results in death or injury to listed species by significantly impairing essential behavioral patterns, including breeding, feeding, or sheltering (50 CFR 17.3). The term “harass” is defined in our regulations as to carry out actions that create the likelihood of injury to listed species to such an extent as to significantly disrupt normal behavioral patterns, which include, but are not limited to, breeding, feeding, or sheltering (50 CFR 17.3).

Section 10(a)(1)(B) of the ESA contains provisions that authorize the Service to issue permits to non-federal entities for the take of endangered and

threatened species caused by otherwise lawful activities, provided the following criteria are met: (1) The taking will be incidental; (2) the applicant will, to the maximum extent practicable, minimize and mitigate the impact of such taking; (3) the applicant will ensure that adequate funding for the plan will be provided; (4) the taking will not appreciably reduce the likelihood of the survival and recovery of the species in the wild; and (5) the applicant will carry out any other measures that the Service may require as being necessary or appropriate for the purposes of the plan. Regulations governing permits for endangered and threatened species are found in 50 CFR 17.22 and 17.32, respectively.

We received an application from the applicant for an ITP pursuant to Section 10(a)(1)(B) of the ESA. The applicant requests an ITP having a 2-year term that would authorize “take” of the threatened Olympia subspecies of the Mazama pocket gopher (*Thomomys mazama pugetensis*), hereafter referred to as Olympia pocket gopher, incidental to otherwise lawful construction of one single-family home on land he owns in Thurston County, Washington. The application includes a draft HCP that describes actions the applicant will take to minimize and mitigate the impacts of the taking on covered species.

Proposed Action

The Service proposes to issue the requested 2-year ITP based on the applicant’s commitment to implement the draft HCP, if permit issuance criteria are met. Covered activities include construction of the single-family home. The area covered under the draft HCP consists of an approximately one-half acre project development site and an approximately one acre conservation site on land owned by the applicant. Take of the Olympia pocket gopher would occur within the half-acre development site and will be offset by permanently managing an acre of occupied habitat for the covered species on the applicant’s land until and unless the take impacts are offset by purchasing equivalent credits from a Service-approved conservation bank for the Olympia pocket gopher.

National Environmental Policy Act Compliance

The proposed issuance of an ITP is a Federal action that triggers the need for compliance with NEPA (42 U.S.C. 4321 *et seq.*). Pursuant to NEPA, we prepared an Environmental Action Statement (EAS) to analyze the environmental impacts of the proposed Federal action of issuing the requested ITP and

implementation of the conservation program under the proposed HCP.

Based on the EAS, we have preliminarily determined that the applicant’s proposal, including the proposed mitigation measures, would have minor or negligible effects on the species covered in the HCP. Therefore, we determined that the proposed HCP is eligible for “low-effect” status and qualifies for categorical exclusion under NEPA, as provided by the Department of the Interior NEPA regulations (43 CFR part 46). A low-effect HCP is one involving (1) minor or negligible effects on federally listed or candidate species and their habitat, and (2) minor or negligible effects on other environmental values or resources.

Public Comments

You may submit your comments and materials by one of the methods listed in the **ADDRESSES** section. We specifically request information, views, and suggestions from interested parties regarding our proposed Federal action, including adequacy of the draft HCP pursuant to the requirements for permits at 50 CFR parts 13 and 17 and adequacy of the EAS pursuant to NEPA.

Public Availability of Comments

All comments and materials we receive become part of the public record associated with this action. Before including your address, phone number, email address, or other personally identifiable information in your comments, you should be aware that your entire comment—including your personally identifiable information—may be made publicly available at any time. While you can ask us in your comment to withhold your personally identifiable information from public review, we cannot guarantee that we will be able to do so. All submissions from organizations or businesses, and from individuals identifying themselves as representatives or officials of organizations or businesses, will be made available for public disclosure in their entirety. Comments and materials we receive will be available for public inspection by appointment, during normal business hours, at our Washington Fish and Wildlife Office (see **ADDRESSES**).

Next Steps

We will evaluate the permit application, the HCP, and any comments received to determine whether the permit application meets the requirements of section 10(a)(1)(B) of the ESA. We will also evaluate whether issuance of the requested permit would comply with section 7 of

the ESA by conducting an intra-Service section 7 consultation on anticipated ITP actions. We will use the results of this consultation, in combination with the above findings, in our final analysis to determine whether to issue the ITP. If we determine that all requirements are met, we will issue an ITP under section 10(a)(1)(B) of the ESA to the applicant for the take of the covered species, incidental to otherwise lawful covered activities. We will make the final permit decision no sooner than 30 days after the date of this notice.

Authority

We provide this notice in accordance with the requirements of section 10 of the ESA and NEPA and their implementing regulations (50 CFR 17.32 and 40 CFR 1506.6, respectively).

Dated: June 20, 2017.

Theresa E. Rabot,

Deputy Regional Director, Pacific Region, U.S. Fish and Wildlife Service, Portland, Oregon.

BILLING CODE 4333-15-P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337-TA-1066]

Certain Recombinant Factor IX Products; Institution of Investigation

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that a complaint was filed with the U.S. International Trade Commission on July 7, 2017, under section 337 of the Tariff Act of 1930, as amended, on behalf of Bioverativ Inc. of Waltham, Massachusetts; Bioverativ Therapeutics Inc. of Waltham, Massachusetts; and Bioverativ U.S. LLC of Waltham, Massachusetts. A supplement to the complaint was filed on July 14, 2017. The complaint alleges violations of section 337 based upon the importation into the United States, the sale for importation, and the sale within the United States after importation of certain recombinant Factor IX products by reason of infringement of certain claims of U.S. Patent No. 9,670,475 ("the '475 patent"); U.S. Patent No. 9,623,091 ("the '091 patent"); and U.S. Patent No. 9,629,903 ("the '903 patent"). The complaint further alleges that an industry in the United States exists as required by the applicable Federal Statute.

The complainants request that the Commission institute an investigation

and, after the investigation, issue a limited exclusion order and cease and desist orders.

ADDRESSES: The complaint, except for any confidential information contained therein, is available for inspection during official business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary, U.S. International Trade Commission, 500 E Street SW., Room 112, Washington, DC 20436, telephone (202) 205-2000. Hearing impaired individuals are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205-1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at (202) 205-2000. General information concerning the Commission may also be obtained by accessing its internet server at <https://www.usitc.gov>. The public record for this investigation may be viewed on the Commission's electronic docket (EDIS) at <https://edis.usitc.gov>.

FOR FURTHER INFORMATION CONTACT:

Pathenia M. Proctor, The Office of Unfair Import Investigations, U.S. International Trade Commission, telephone (202) 205-2560.

SUPPLEMENTARY INFORMATION:

Authority: The authority for institution of this investigation is contained in section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337 and in section 210.10 of the Commission's Rules of Practice and Procedure, 19 CFR 210.10 (2017).

Scope of Investigation: Having considered the complaint, the U.S. International Trade Commission, on August 8, 2017, *ordered that*—

(1) Pursuant to subsection (b) of section 337 of the Tariff Act of 1930, as amended, an investigation be instituted to determine whether there is a violation of subsection (a)(1)(B) of section 337 in the importation into the United States, the sale for importation, or the sale within the United States after importation of certain recombinant Factor IX products by reason of infringement of one or more of claims 1, 2, 4-19, 24, 25, 29, and 34 of the '475 patent; claims 1-7, 11-16, 18, 19, 21, and 23-27 of the '091 patent; and claims 1-10, 13-15, and 17-28 of the '903 patent; and whether an industry in the United States exists as required by subsection (a)(2) of section 337;

(2) Pursuant to Commission Rule 210.50(b)(1), 19 CFR 210.50(b)(1), the presiding Administrative Law Judge shall take evidence or other information and hear arguments from the parties or other interested persons with respect to

the public interest in this investigation, as appropriate, and provide the Commission with findings of fact and a recommended determination on this issue, which shall be limited to the statutory public interest factors set forth in 19 U.S.C. 1337(d)(1), (f)(1), (g)(1);

(3) For the purpose of the investigation so instituted, the following are hereby named as parties upon which this notice of investigation shall be served:

(a) The complainants are: Bioverativ Inc., 225 Second Avenue, Waltham, MA 02451. Bioverativ Therapeutics Inc., 225 Second Avenue, Waltham, MA 02451. Bioverativ U.S. LLC, 225 Second Avenue, Waltham, MA 02451.

(b) The respondents are the following entities alleged to be in violation of section 337, and are the parties upon which the complaint is to be served: CSL Behring LLC, 1020 First Avenue, King of Prussia, PA 19406. CSL Behring GmbH, Emil-von-Behring-Strasse 76, Marburg, Hessen 35041 Germany. CSL Behring Recombinant Facility AG, Wankdorfstrasse 10, Bern, Bern 3014 Switzerland.

(c) The Office of Unfair Import Investigations, U.S. International Trade Commission, 500 E Street SW., Suite 401, Washington, DC 20436; and

(4) For the investigation so instituted, the Chief Administrative Law Judge, U.S. International Trade Commission, shall designate the presiding Administrative Law Judge.

Responses to the complaint and the notice of investigation must be submitted by the named respondents in accordance with section 210.13 of the Commission's Rules of Practice and Procedure, 19 CFR 210.13. Pursuant to 19 CFR 201.16(e) and 210.13(a), such responses will be considered by the Commission if received not later than 20 days after the date of service by the Commission of the complaint and the notice of investigation. Extensions of time for submitting responses to the complaint and the notice of investigation will not be granted unless good cause therefor is shown.

Failure of a respondent to file a timely response to each allegation in the complaint and in this notice may be deemed to constitute a waiver of the right to appear and contest the allegations of the complaint and this notice, and to authorize the administrative law judge and the Commission, without further notice to the respondent, to find the facts to be as alleged in the complaint and this notice and to enter an initial determination and a final determination containing such findings, and may result in the issuance of an exclusion order or a cease

and desist order or both directed against the respondent.

By order of the Commission.

Issued: August 8, 2017.

Lisa R. Barton,

Secretary to the Commission.

BILLING CODE P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–1065]

Certain Mobile Electronic Devices and Radio Frequency and Processing Components Thereof; Institution of Investigation

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that a complaint was filed with the U.S. International Trade Commission on July 7, 2017, under section 337 of the Tariff Act of 1930, as amended, on behalf of Qualcomm Incorporated of San Diego, California. A supplement was filed on July 7, 2017. The complaint, as supplemented, alleges violations of section 337 based upon the importation into the United States, the sale for importation, and the sale within the United States after importation of certain mobile electronic devices and radio frequency and processing components thereof by reason of infringement of U.S. Patent No. 8,633,936 (“the ‘936 patent”); U.S. Patent No. 8,698,558 (“the ‘558 patent”); U.S. Patent No. 8,487,658 (“the ‘658 patent”); U.S. Patent No. 8,838,949 (“the ‘949 patent”); U.S. Patent No. 9,535,490 (“the ‘490 patent”); and U.S. Patent No. 9,608,675 (“the ‘675 patent”). The complaint further alleges that an industry in the United States exists as required by the applicable Federal Statute.

The complainant requests that the Commission institute an investigation and, after the investigation, issue a limited exclusion order and a cease and desist order.

ADDRESSES: The complaint, except for any confidential information contained therein, is available for inspection during official business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary, U.S. International Trade Commission, 500 E Street SW., Room 112, Washington, DC 20436, telephone (202) 205–2000. Hearing impaired individuals are advised that information on this matter can be obtained by contacting the Commission’s TDD

terminal on (202) 205–1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at (202) 205–2000. General information concerning the Commission may also be obtained by accessing its internet server at <https://www.usitc.gov>. The public record for this investigation may be viewed on the Commission’s electronic docket (EDIS) at <https://edis.usitc.gov>.

FOR FURTHER INFORMATION CONTACT:

Pathenia M. Proctor, The Office of Unfair Import Investigations, U.S. International Trade Commission, telephone (202) 205–2560.

SUPPLEMENTARY INFORMATION:

Authority: The authority for institution of this investigation is contained in section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337 and in section 210.10 of the Commission’s Rules of Practice and Procedure, 19 CFR 210.10 (2017).

Scope of Investigation: Having considered the complaint, the U.S. International Trade Commission, on August 8, 2017, *ordered that*—

(1) Pursuant to subsection (b) of section 337 of the Tariff Act of 1930, as amended, an investigation be instituted to determine whether there is a violation of subsection (a)(1)(B) of section 337 in the importation into the United States, the sale for importation, or the sale within the United States after importation of certain mobile electronic devices and radio frequency and processing components thereof by reason of infringement of one or more of claims 1–27, 29, 38, 49, 55–60, 67, and 68 of the ‘936 patent; claims 1 and 6–20 of the ‘558 patent; claims 9, 10, 12, 14, and 20–22 of the ‘658 patent; claims 1–8, 10–14, 16, 20, and 22 of the ‘949 patent; claims 1–6, 8, 10, 16, 17, and 31 of the ‘490 patent; and claims 1–3 and 7–14 of the ‘675 patent; and whether an industry in the United States exists as required by subsection (a)(2) of section 337;

(2) Pursuant to Commission Rule 210.50(b)(1), 19 CFR 210.50(b)(1), the presiding Administrative Law Judge shall take evidence or other information and hear arguments from the parties or other interested persons with respect to the public interest in this investigation, as appropriate, and provide the Commission with findings of fact and a recommended determination on this issue, which shall be limited to the statutory public interest factors set forth in 19 U.S.C. 1337(d)(1), (f)(1), (g)(1);

(3) For the purpose of the investigation so instituted, the following are hereby named as parties upon which

this notice of investigation shall be served:

(a) The complainant is: Qualcomm Incorporated, 5775 Morehouse Drive, San Diego, CA 92121.

(b) The respondent is the following entity alleged to be in violation of section 337, and is the party upon which the complaint is to be served: Apple Inc., 1 Infinite Loop, Cupertino, CA 95014.

(c) The Office of Unfair Import Investigations, U.S. International Trade Commission, 500 E Street SW., Suite 401, Washington, DC 20436; and

(4) For the investigation so instituted, the Chief Administrative Law Judge, U.S. International Trade Commission, shall designate the presiding Administrative Law Judge.

Responses to the complaint and the notice of investigation must be submitted by the named respondent in accordance with section 210.13 of the Commission’s Rules of Practice and Procedure, 19 CFR 210.13. Pursuant to 19 CFR 201.16(e) and 210.13(a), such responses will be considered by the Commission if received not later than 20 days after the date of service by the Commission of the complaint and the notice of investigation. Extensions of time for submitting responses to the complaint and the notice of investigation will not be granted unless good cause therefor is shown.

Failure of the respondent to file a timely response to each allegation in the complaint and in this notice may be deemed to constitute a waiver of the right to appear and contest the allegations of the complaint and this notice, and to authorize the administrative law judge and the Commission, without further notice to the respondent, to find the facts to be as alleged in the complaint and this notice and to enter an initial determination and a final determination containing such findings, and may result in the issuance of an exclusion order or a cease and desist order or both directed against the respondent.

By order of the Commission.

Issued: August 8, 2017.

Lisa R. Barton,

Secretary to the Commission.

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. TA–201–75]

Crystalline Silicon Photovoltaic Cells (Whether or Not Partially or Fully Assembled Into Other Products) Determination Not To Close Any Portion of the Commission's Hearing on Injury Issues

AGENCY: United States International Trade Commission.

ACTION: Commission determination not to close any part of the hearing on injury issues in the above-captioned investigation to the public.

SUMMARY: The Commission has determined to deny a request to conduct a portion of its hearing on injury issues scheduled for August 15, 2017 *in camera*.

FOR FURTHER INFORMATION CONTACT:

Mary Jane Alves, Office of the General Counsel, U.S. International Trade Commission, telephone 202–708–2969. Hearing-impaired individuals are advised that information on this matter may be obtained by contacting the Commission's TDD terminal on 202–205–1810.

SUPPLEMENTARY INFORMATION: On August 4, 2017, the Solar Energy Industries Association and its member company SunPower Inc. (collectively SEIA) requested in the above-captioned investigation that the Commission conduct *in camera* a portion of its hearing on injury issues scheduled for August 15, 2017. The Commission believes it should conduct its business in public in all but the most unusual circumstances. The Commission has determined that, in light of the nature of this investigation and the ample opportunity given parties to present written arguments, including those relying on confidential information, it will be able to assess adequately all arguments raised by SEIA without resorting to the extraordinary measure of an *in camera* hearing. Accordingly, the Commission has determined that the public interest would be best served by a hearing that is entirely open to the public. See 19 CFR 201.36(c)(1).

Authority: This notice is provided pursuant to 19 CFR 201.35(b).

By order of the Commission.

Issued: August 9, 2017.

Lisa R. Barton,

Secretary to the Commission.

BILLING CODE 7020–02–P

DEPARTMENT OF JUSTICE

Bureau of Justice Statistics

[OMB Number 1121–0064]

Agency Information Collection Activities; Proposed eCollection Activities; Proposed eComments Requested; Extension of a Currently Approved Collection: Annual Parole Survey, Annual Probation Survey, and Annual Probation Survey (Short Form)

AGENCY: Bureau of Justice Statistics, Department of Justice.

ACTION: 30-day notice.

SUMMARY: The Department of Justice (DOJ), Office of Justice Programs, Bureau of Justice Statistics, will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The proposed information collection was previously published in the **Federal Register** on April 25, 2017, allowing a 60-day comment period. Following publication of the 60-day notice, the Bureau of Justice Statistics received one request for survey instruments and comments from two organizations. These comments will be addressed in the supporting statement.

DATES: Comments are encouraged and will be accepted for an additional 30 days until September 13, 2017.

FOR FURTHER INFORMATION CONTACT: If you have additional comments especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact Danielle Kaeble, Statistician, Bureau of Justice Statistics, 810 Seventh Street NW., Washington, DC 20531 (email: Danielle.kaeble@usdoj.gov; telephone: 202–305–2017).

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Bureau of Justice Statistics, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information,

- including the validity of the methodology and assumptions used;
- Evaluate whether and if so how the quality, utility, and clarity of the information to be collected can be enhanced; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of responses.

Overview of this information collection:

1. *Type of Information Collection:* Extension of a currently approved collection.
2. *The Title of the Form/Collection:* Annual Parole Survey, Annual Probation Survey
3. *The agency form number, if any, and the applicable component of the Department sponsoring the collection:* Form numbers for the questionnaire are CJ–7 Annual Parole Survey; CJ–8 Annual Probation Survey; CJ–8a Annual Probation Survey (Short Form). The applicable component within the Department of Justice is the Bureau of Justice Statistics, in the Office of Justice Programs.
4. *Affected public who will be asked or required to respond, as well as a brief abstract:* Primary: state departments of corrections or state probation and parole authorities. Others: The Federal Bureau of Prisons, city and county courts and probation offices for which a central reporting authority does not exist. For the CJ–7 form, the affected public consists of 53 respondents including 51 central reporters (two state respondents in Pennsylvania, and one each from the remaining states), the District of Columbia, and the Federal Bureau of Prisons responsible for keeping records on parolees. For the CJ–8 form, the affected public includes 305 reporters including 35 state respondents, the District of Columbia, the Federal Bureau of Prisons, and 268 from local authorities responsible for keeping records on probationers. For the CJ–8a form, the affected public includes 151 reporters who are all local authorities responsible for keeping records on probationers. The Annual Parole Survey and Annual Probation surveys have been used since 1977 to collect annual yearend counts and yearly movements of community corrections populations; characteristics of the community supervision population, such as gender, racial composition, ethnicity, conviction status, offense, and supervision status.

5. *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* 506 respondents each taking an average of 1.20 hours to respond.

6. *An estimate of the total public burden (in hours) associated with the collection:* There is an estimated 716 total burden hours associated with this collection.

If additional information is required contact: Melody Braswell, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE., 3E.405A, Washington, DC 20530.

Dated: August 9, 2017.

Melody Braswell,

Department Clearance Officer for PRA, U.S. Department of Justice.

[FR Doc. 2017-17097 Filed 8-11-17; 8:45 am]

BILLING CODE 4410-18-P

DEPARTMENT OF JUSTICE

[OMB Number 1122-NEW]

Agency Information Collection Activities; Proposed eCollection eComments Requested; Approval of a New Collection

AGENCY: Office on Violence Against Women, Department of Justice.

ACTION: 60-Day notice.

SUMMARY: The Department of Justice, Office on Violence Against Women (OVW) will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995.

DATES: Comments are encouraged and will be accepted for 60 days until October 13, 2017.

FOR FURTHER INFORMATION CONTACT: Written comments and/or suggestion regarding the items contained in this notice, especially the estimated public burden and associated response time, should be directed to Cathy Poston, Office on Violence Against Women, at 202-514-5430 or Catherine.poston@usdoj.gov.

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

(1) Evaluate whether the proposed collection of information is necessary for the proper performance of the

functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Overview of This Information Collection

(1) *Type of Information Collection:* Approval of a new collection.

(2) *Title of the Form/Collection:* Semi-annual progress report for the Grants to Tribal Governments to Exercise Special Domestic Violence Criminal Jurisdiction Program (Tribal Jurisdiction Program).

(3) *Agency form number, if any, and the applicable component of the Department of Justice sponsoring the collection:* Form Number: 1122-XXXX. U.S. Department of Justice, Office on Violence Against Women.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:* The affected public includes the estimated 20 grantees under the Tribal Jurisdiction Program, a new grant program authorized in the Violence Against Women reauthorization Act of 2013. The Tribal Jurisdiction Program is designed to assist Indian tribes in exercising special domestic violence criminal jurisdiction (SDVCJ). Through this grant program, Indian tribes will receive support and technical assistance for planning, developing and implementing changes in their criminal justice systems necessary to exercise SDVCJ. The program encourages collaborations among tribal leadership, tribal courts, tribal prosecutors, tribal attorneys, tribal defenders, law enforcement, probation, service providers, and other partners to ensure that non-Indians who commit crimes of domestic violence, dating violence, and violations of protection orders are held accountable. The Tribal Jurisdiction Program encourages the coordinated involvement of the entire tribal criminal justice system and victim service providers to incorporate systemic change that ensures victim safety and offender accountability.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond/reply:* It is estimated that it will take the 20 respondents (Tribal Jurisdiction Program grantees) approximately one hour to complete a semi-annual progress report. The semi-annual progress report is divided into sections that pertain to the different types of activities that grantees may engage in (i.e. victim services, training, prosecutions, law enforcement activities) and grantees will be expected to provide information only in connection with those activities supported by OVW funding.

(6) *An estimate of the total public burden (in hours) associated with the collection:* The total annual hour burden to complete the annual progress report is 40 hours.

If additional information is required contact: Melody Braswell, Deputy Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE., 3E, 405B, Washington, DC 20530.

Dated: August 9, 2017.

Melody Braswell,

Department Clearance Officer, PRA, U.S. Department of Justice.

BILLING CODE 4410-FX-P

OFFICE OF MANAGEMENT AND BUDGET

Uniform Administrative Requirements, Cost Principles, and Audit Requirements

AGENCY: Executive Office of the President, Office of Management and Budget.

ACTION: Notice.

SUMMARY: This Notice announces the availability of the 2017 OMB Audit Requirements, Appendix XI—Compliance Supplement (2017 Supplement). This Notice also offers interested parties an opportunity to comment on the 2017 Supplement.

DATES: The 2017 Supplement supersedes the 2016 Supplement and will apply to audits of fiscal years beginning after June 30, 2016. All comments on the 2017 Supplement must be in writing and received by October 31, 2017. Late comments will be considered to the extent practicable. OMB received no comments on the 2016 Supplement.

Due to potential delays in OMB's receipt and processing of mail sent through the U.S. Postal Service, we encourage respondents to submit comments electronically to ensure timely receipt. We cannot guarantee that comments mailed will be received before the comment closing date.

ADDRESSES: Electronic mail comments may be submitted to: *Hai M. Tran@omb.eop.gov*. Please include "2 CFR Part 200 Subpart F—Audit Requirements, Appendix XI—Compliance Supplement—2017" in the subject line and the full body of your comments in the text of the electronic message and as an attachment. Please include your name, title, organization, postal address, telephone number, and email address in the text of the message. Comments may also be submitted via facsimile at 202-395-3952.

Comments may be mailed to Gilbert Tran, Office of Federal Financial Management, Office of Management and Budget, 725 17th Street NW., Room 6025, New Executive Office Building, Washington, DC 20503.

Comments may also be sent through <http://www.regulations.gov>—a Federal E-Government Web site that allows the public to find, review, and submit comments on documents that agencies have published in the **Federal Register** and that are open for comment. Simply type "2 CFR part 200 Subpart F—Audit Requirements, Appendix XI—Compliance Supplement—2017" (in quotes) in the Comment or Submission search box, click Go, and follow the instructions for submitting comments. Comments received through the Web site by the date specified above will be included as part of the official record.

The 2017 Supplement is available online on the OMB home page at <https://www.whitehouse.gov/omb/offices/offm>.

FOR FURTHER INFORMATION CONTACT:

Recipients and auditors should contact their cognizant or oversight agency for audit, or Federal awarding agency, as appropriate under the circumstances. The Federal agency contacts are listed in Appendix III of the Supplement. Subrecipients should contact their pass-through entity. Federal agencies should contact Gilbert Tran, Office of Management and Budget, Office of Federal Financial Management, at (202) 395-3052.

SUPPLEMENTARY INFORMATION: The 2017 Supplement adds four new programs, including one added to an existing cluster; adds two new clusters; and, deletes three programs (see listing below). The 2017 Supplement is also updated to reflect program changes and

technical corrections. Part 3 of the 2017 Supplement—Compliance Requirements continues to be divided into two subparts. Subpart 3.1 is applicable to awards issued prior to December 26, 2014 and Subpart 3.2 is applicable to awards issued on or after December 26, 2014.

The added programs/clusters are:

- CFDA 20.224—Federal Lands Access Program, add to the existing Highway Planning and Construction cluster
- CFDA 87.051—Gulf Coast Ecosystem Restoration Council Comprehensive Plan Component Program
- CFDA 87.052—Gulf Coast Ecosystem Restoration Council Spill Impact Program
- CFDA 93.870—Maternal, Infant, and Early Childhood Home Visiting Grant Program to form a new cluster with CFDA 93.505, Affordable Care Act—Maternal, Infant, And Early Childhood Home Visiting Program
- The 477 cluster, a cross-agency cluster, that applies to the following Department of Interior, Department of Labor, and Department of Health and Human Services (HHS) programs as indicated therein:
 - CFDA 15.025—Services to Indian Children, Elderly and Families
 - CFDA 15.026—Indian Adult Education
 - CFDA 15.113—Indian Social Services—Welfare Assistance
 - CFDA 15.114—Indian Education—Higher Education Grant
 - CFDA 15.130—Indian Education—Assistance to Schools
 - CFDA 17.265—Native American Employment and Training
 - CFDA 93.558—Temporary Assistance for Needy Families
 - CFDA 93.569—Community Services Block Grant
 - CFDA 93.575—Child Care and Development Block Grant
 - CFDA 93.594—Tribal Work Grants—Native Employment Works
 - CFDA 93.596—Child Care Mandatory and Matching Funds of the Child Care and Development Fund.

The deleted programs are:

- CFDA 11.558—State Broadband Data and Development Grant Program.
- CFDA 93.889—Bioterrorism Hospital Preparedness Program.
- CFDA 10.781—Water and Waste Disposal Systems for Rural Communities—(American Recovery and Reinvestment Act), resulting in the elimination of a cluster.

Highlights of the changes in the Appendices of the Supplement include the following:

- Appendix III provides the updated list of the National Single Audit

Coordinators and Single Audit Key Management Liaisons, along with their distinct roles for answering public inquiries regarding Single Audit.

- Appendix V lists the changes to the 2017 Supplement.

- Appendix VII adds information related to treatment of an existing cluster if a new program is added to the cluster.

Due to its length, the 2017 Supplement is not included in this Notice.

Mark Reger,

Deputy Controller.

BILLING CODE P

NUCLEAR REGULATORY COMMISSION

[NRC-2016-0203]

Information Collection: NRC Form 64, "Travel Voucher" (Part 1); NRC Form 64A, "Travel Voucher" (Part 2); and NRC Form 64B, "Optional Travel Voucher" (Part 2)

AGENCY: Nuclear Regulatory Commission.

ACTION: Notice of submission to the Office of Management and Budget; request for comment.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) has recently submitted a request for renewal of an existing collection of information to the Office of Management and Budget (OMB) for review. The information collection is entitled, "NRC Form 64, "Travel Voucher" (Part 1); NRC Form 64A, "Travel Voucher" (Part 2); and NRC Form 64B, "Optional Travel Voucher" (Part 2)."

DATES: Submit comments by September 13, 2017.

ADDRESSES: Submit comments directly to the OMB reviewer at: Aaron Szabo, Desk Officer, Office of Information and Regulatory Affairs (3150-0192), NEOB-10202, Office of Management and Budget, Washington, DC 20503; telephone: 202-395-3621, email: oir_submission@omb.eop.gov.

FOR FURTHER INFORMATION CONTACT: David Cullison, NRC Clearance Officer, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001; telephone: 301-415-2084; email: INFOCOLLECTS.Resource@nrc.gov.

SUPPLEMENTARY INFORMATION:

I. Obtaining Information and Submitting Comments

A. Obtaining Information

Please refer to Docket ID NRC–2016–0203 when contacting the NRC about the availability of information for this action. You may obtain publicly-available information related to this action by any of the following methods:

- **Federal Rulemaking Web site:** Go to <http://www.regulations.gov> and search for Docket ID NRC–2016–0203.
- **NRC's Agencywide Documents Access and Management System (ADAMS):** You may obtain publicly-available documents online in the ADAMS Public Documents collection at <http://www.nrc.gov/reading-rm/adams.html>. To begin the search, select "ADAMS Public Documents" and then select "Begin Web-based ADAMS Search." For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to pdr.resource@nrc.gov. A copy of the collection of information and related instructions may be obtained without charge by accessing ADAMS Accession ML17179A612.
- **NRC's PDR:** You may examine and purchase copies of public documents at the NRC's PDR, Room O1–F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852.
- **NRC's Clearance Officer:** A copy of the collection of information and related instructions may be obtained without charge by contacting the NRC's Clearance Officer, David Cullison, Office of the Chief Information Officer, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–2084; email: INFOCOLLECTS.Resource@NRC.GOV.

B. Submitting Comments

Please include Docket ID NRC–2016–0203 in the subject line of your comment submission, in order to ensure that the NRC is able to make your comment submission available to the public in this docket.

The NRC cautions you not to include identifying or contact information in comment submissions that you do not want to be publicly disclosed in your comment submission. All comment submissions are posted at <http://www.regulations.gov> and entered into ADAMS. Comment submissions are not routinely edited to remove identifying or contact information.

If you are requesting or aggregating comments from other persons for submission to the OMB, then you should inform those persons not to include identifying or contact

information that they do not want to be publicly disclosed in their comment submission. Your request should state that the NRC does not routinely edit comment submissions to remove such information before making the comment submissions available to the public or entering the comment submissions into ADAMS.

II. Background

Under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the NRC recently submitted a request for renewal of an existing collection of information to OMB for review entitled, NRC Form 64, "Travel Voucher" (Part 1); NRC Form 64A, "Travel Voucher" (Part 2); and NRC Form 64B, "Optional Travel Voucher" (Part 2). The NRC hereby informs potential respondents that an agency may not conduct or sponsor, and that a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

The NRC published a **Federal Register** notice with a 60-day comment period on this information collection on March 31, 2017; 82 FR16074.

1. *The title of the information collection:* NRC Form 64, "Travel Voucher" (Part 1); NRC Form 64A, "Travel Voucher" (Part 2); and NRC Form 64B, "Optional Travel Voucher" (Part 2).
2. *OMB approval number:* 3150–0192.
3. *Type of submission:* Extension.
4. *The form number if applicable:* NRC Forms 64, 64A and 64B.
5. *How often the collection is required or requested:* On occasion.
6. *Who will be required or asked to respond:* Contractors, consultants and invited

NRC travelers who travel in the course of conducting business for the NRC.

7. *The estimated number of annual responses:* 100.

8. *The estimated number of annual respondents:* 100.

9. *An estimate of the total number of hours needed annually to comply with the information collection requirement or request:* 100 (1 hour per form).

10. *Abstract:* Consultants, contractors, and those invited by the NRC to travel (e.g., prospective employees) must file travel vouchers and trip reports in order to be reimbursed for their travel expenses. The information collected includes the name, address, social security number, and the amount to be reimbursed. Travel expenses that are reimbursed are confined to those expenses essential to the transaction of official business for an approved trip.

Dated at Rockville, Maryland, this 9th day of August, 2017.

For the Nuclear Regulatory Commission.

Dave Cullison,

NRC Clearance Officer, Office of the Chief Information Officer.

[FR Doc. 2017–17124 Filed 8–11–17; 8:45 am]

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[Docket No. 70–1151; License No. SNM–1107; EA–16–173; NRC–2017–0176]

Westinghouse Electric Company, LLC

AGENCY: Nuclear Regulatory Commission.

ACTION: Confirmatory order; issuance.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) issued a confirmatory order (Order) to Westinghouse Electric Company, LLC, (the licensee), confirming the agreement reached in an Alternative Dispute Resolution mediation session held on May 19, 2017, and follow-up discussions held between May 19, 2017, and August 3, 2017. This Order will ensure the licensee restores compliance with NRC's regulations.

DATES: The Order was issued on August 9, 2017.

ADDRESSES: Please refer to Docket ID NRC–2017–0176 when contacting the NRC about the availability of information regarding this document. You may obtain publicly-available information related to this document using any of the following methods:

- **Federal Rulemaking Web site:** Go to <http://www.regulations.gov> and search for Docket ID NRC–2017–0176. Address questions about NRC dockets to Carol Gallagher; telephone: 301–415–3463; email: Carol.Gallagher@nrc.gov. For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.

- **NRC's Agencywide Documents Access and Management System (ADAMS):** You may obtain publicly-available documents online in the ADAMS Public Documents collection at <http://www.nrc.gov/reading-rm/adams.html>. To begin the search, select "ADAMS Public Documents" and then select "Begin Web-based ADAMS Search." For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to pdr.resource@nrc.gov. The ADAMS accession number for each document referenced (if it is available in

ADAMS) is provided the first time that it is mentioned in this document.

- *NRC's PDR*: You may examine and purchase copies of public documents at the NRC's PDR, Room O1-F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852.

FOR FURTHER INFORMATION CONTACT:

Scott Sparks, Region II, U.S. Nuclear Regulatory Commission, Atlanta, Georgia 30303-1257; telephone: 404-997-4422; email: Scott.Sparks@nrc.gov.

SUPPLEMENTARY INFORMATION: The text of the Order is attached.

Dated at Atlanta, Georgia, this 9th day of August, 2017.

For the Nuclear Regulatory Commission.

Catherine Haney,

Regional Administrator.

NUCLEAR REGULATORY COMMISSION

[Docket No. 70-1151; License No. SNM-1107; EA-16-173; NRC-2017-0176]
In the Matter of Westinghouse Electric Company, LLC
CONFIRMATORY ORDER (EFFECTIVE UPON ISSUANCE)

I

Westinghouse Electric Company (Westinghouse, or the licensee) is the holder of NRC License No. SNM-1107, issued by the U.S. Nuclear Regulatory Commission (NRC or Commission) pursuant to 10 CFR part 70 on September 30, 2007. The license authorizes the operation of the Columbia Fuel Fabrication Facility (CFFF) in accordance with the conditions specified therein. The facility is located on the licensee's site in Hopkins, South Carolina.

This Confirmatory Order (CO) is the result of an agreement reached during an alternative dispute resolution (ADR) mediation session conducted on May 19, 2017, and follow-up discussions held between May 19, 2017, and August 3, 2017.

II

On May 28, 2016, as part of the licensee's routine maintenance activities, the licensee started the S-1030 scrubber inspection and cleanout activities. The licensee completed the S-1030 scrubber cleanout activities on June 1, 2016, removing a total of 197 kilograms (kg) of material. The scrubber was subsequently restarted following the maintenance outage on June 2, 2016. On July 13, 2016, the preliminary results of samples taken of the material removed from the S-1030 scrubber indicated a 40-50% concentration of uranium (U) enriched to less than 5%. This equates to approximately 100 kg of

U in the scrubber, exceeding the mass limit in the Criticality Safety Evaluation (CSE) of 29 kg U.

The scrubber was shut down on July 14, 2016, when the determination was made by the licensee that the mass limit in the CSE had been exceeded. The licensee reported this event to the NRC as a 24-hour event due to a high consequence event being "unlikely" (EN 52090). On July 31, 2016, the event report was updated to a one hour report per 10 CFR 70 Appendix A (a)(4) because no items relied upon for safety (IROFS) remained available and reliable to perform their function.

On August 11, 2016, the NRC issued a Confirmatory Action Letter (CAL) to Westinghouse (ML16224B082). The purpose of the CAL was to confirm the commitments made by Westinghouse regarding additional actions Westinghouse will take in response to the U buildup reported to the NRC in July 2016. These actions were intended to ensure that the causes of the U buildup have been adequately identified and evaluated and that appropriate corrective actions have been implemented to improve the performance of the Nuclear Criticality Safety (NCS) program.

On September 27, 2016, the NRC completed an Augmented Inspection at the Westinghouse facility, the details of which are documented in NRC Inspection Report 70-1151/2016-007 (ML16301A001).

A follow-up NRC inspection (70-1151/2017-007) was also conducted, the results of which were issued on February 27, 2017 (ML17058A448). This inspection report identified the following four Apparent Violations (AVs), all of which were considered for escalated enforcement in accordance with the NRC's Enforcement Policy:

1. An AV was identified for failure to ensure criticality accident sequences remain highly unlikely, as required by Title 10 of the *Code of Federal Regulations* (10 CFR) 10 CFR 70.61(b).

2. An AV was identified for failure to assure that under normal and credible abnormal conditions, all nuclear processes were subcritical including use of an approved margin of subcriticality, as required by 10 CFR 70.61(d).

3. An AV was identified for failure to establish adequate management measures to ensure that items relied on for safety (IROFS) perform their function when needed, as required by 10 CFR 70.62(d).

4. An AV was identified for failure to make a one hour report, as required by Appendix A (a)(4) of 10 CFR part 70.

In response to the NRC's inspection report of February 27, 2017,

Westinghouse advised the NRC of its desire to participate in the Agency's ADR program to resolve the enforcement aspects of this matter.

III

On May 19, 2017, the NRC and Westinghouse met in an ADR session mediated by a professional mediator, arranged through Cornell University's Institute on Conflict Resolution. Additional discussions were held between the NRC and Westinghouse between May 19, 2017, and August 3, 2017, to resolve the enforcement aspects of this matter. ADR is a process in which a neutral mediator with no decision-making authority assists the parties in reaching an agreement or resolving any differences regarding their dispute. This CO is issued pursuant to the agreement reached during the ADR process. The elements of the agreement consist of the following:

1. Westinghouse acknowledges that four violations occurred, as stated in NRC Inspection Report 70-1151/2017-007.

2. Based on ADR, the parties agreed that the safety significance of violations described in Section II above is characterized as escalated enforcement as described in the NRC Enforcement Policy.

3. Approximately two years (+/- 6 months) after issuance of the CO, Westinghouse shall conduct an additional Nuclear Safety Culture (NSC) survey by the Westinghouse corporate nuclear safety culture organization or an experienced independent third party, consistent with the depth and scope of the NSC survey completed under the CAL dated August 11, 2016. Identified deficiencies shall be entered into the corrective action program (CAP) for tracking corrective actions to completion.

4. Westinghouse shall implement improvements to reduce uranium carryover from the Calcliner scrubbers, and implement additional design changes to reduce U carryover from the Blue M oven filtration system. Specifically:

- (1) For the calciner scrubbers, within eighteen (18) months of issuance of the CO, an engineering evaluation of the calciner and calciner off-gas scrubber design and operation shall be completed to determine methods to reduce uranium carry-over into the S-1030 scrubber.

- (2) For the Blue M oven, within eighteen (18) months of issuance of the CO, an engineering evaluation of the Conversion Scrap Cage Blue M oven shall be completed to determine methods to improve the functionality of

the Blue M oven in a wet environment and improve accessibility for inspection and maintenance activities.

(3) Within three (3) years of issuance of the CO, improvements based on the engineering evaluations described above shall be implemented.

5. In response to the May 2016 event, Westinghouse implemented several modifications to the S-1030 scrubber system, as part of its overall corrective actions to preclude recurrence and enhance performance. These modifications were considered by the NRC, under the CAL, in support of a safety basis to authorize restart of conversion process equipment and the S-1030 scrubber system, as documented in the NRC's letter to Westinghouse dated October 20, 2016 (ML16294A296). The modifications included but were not limited to:

(1) The plenums for the scrap cage Blue M oven hoods were equipped with a filter to capture at least 95% of the mass entrained in the air stream based on particle size distribution and the manufacturer's published efficiency data.

(2) Packing baskets were implemented to permit complete removal and inspection of the packed media and to maintain clearance between the packed media and the scrubber floor.

(3) A feed and bleed system for the scrubber recirculating liquid was maintained at a minimum output flow of 0.5 gallons per minute. If feed and bleed is not available, a controlled shutdown of the scrubber would be initiated in accordance with plant procedures.

(4) The scrubber was opened to remove the packed media baskets, to clean and inspect the inlet transition and scrubber body on a quarterly basis.

(5) Weekly visual inspections of the scrubber inlet transition were to be conducted.

6. Within two (2) years of issuance of the CO, Westinghouse shall develop and implement additional methods to monitor system parameters that are early indicators of an abnormal accumulation in the S-1030 scrubber from a process upset that could challenge the accumulation rate and/or criticality safety mass limits. The methods will provide timely indications to enable the operators to take appropriate actions in accordance with approved procedures.

7. A member of senior Westinghouse leadership shall present training on lessons learned from the scrubber event at an industry forum, including NSC and criticality safety standards aspects.

This item was completed on June 14, 2017, when the site vice president of

CFFF presented training on lessons learned from the scrubber event at Fuel Cycle Information Exchange (an industry-wide forum), including NSC and criticality safety standards aspects.

8. Within eighteen (18) months of issuance of the CO, Westinghouse shall develop and implement a criticality safety basis/IROFS database to help maintain the proper flow down of the safety basis into implementing documents.

9. Within six (6) months of issuance of the CO, Westinghouse shall develop a method to reinforce positive NSC leadership behavior and monitor for effectiveness in the NSC monitoring panel. Westinghouse shall implement such method for three years, after which it may evaluate the need to continue this item.

10. Within three (3) months of issuance of the CO, Westinghouse shall develop and implement a new metric or periodic report that creates an aggregate picture of the health of the criticality safety program. This shall include items such as IROFS challenges, trends, audit and inspection finding status, violations, and health of management measures and be made available for inspection. Identified deficiencies shall be evaluated in accordance with the CAP.

11. Within nine (9) months, Westinghouse shall implement risk-informed standards for the preparation of procedures and data sheets informed by appropriate guidance in INPO 11-003, "Guideline for Excellence in Procedure and Work Instruction Use and Adherence." This will consist of issuance of a procedure writers' guide, procedure format template, and a procedure use and adherence standard.

12. The NRC agrees that issuance of this CO serves to close the CAL issued to Westinghouse on August 11, 2016. NRC acknowledges that Westinghouse has taken extensive actions to address items in the CAL including completing a root cause analysis (RCA), completing a review of criticality safety evaluations, performing inspections to validate system design and operating parameters, installing physical modifications to support the safety basis to improve safety performance, conducting an independent third party nuclear safety culture assessment, and completing several corrective actions designed to preclude recurrence.

NRC also acknowledges that Westinghouse has taken some actions to close post-restart CAL items 1, 3, and 5, but are not yet complete. Therefore, post-restart CAL items 1, 3, and 5, as modified below, are transferred to this CO. Upon completion of these items,

Westinghouse will notify the NRC Region II Administrator.

a. CAL Item 1—Westinghouse shall implement the remaining corrective actions to prevent recurrence identified in their RCA.

b. CAL Item 3—Westinghouse shall conduct effectiveness reviews of corrective actions to prevent recurrence specified in their RCA.

c. CAL Item 5—Westinghouse shall evaluate the results of the independent third party nuclear safety culture assessment, and any identified deficiencies will be entered into the CAP to track to completion.

The NRC concludes that CAL post-restart items 2 and 4 are closed because these items will be sampled as part of the NRC's inspection program.

The NRC concludes that CAL post-restart item 6 is closed because of the extensive corrective actions completed by Westinghouse to date.

13. Within three (3) months of completion of the terms of the CO, Westinghouse will provide the NRC with a letter discussing its basis for concluding that the CO has been satisfied.

14. In consideration of the commitments delineated herein, the NRC agrees to refrain from proposing a civil penalty or issuing a Notice of Violation for all four AVs identified in NRC Inspection Report 70-1151/2017-007 (EA-16-173).

15. The NRC and Westinghouse agree that the above elements will be incorporated into a CO.

16. This agreement is binding upon successors and assigns of Westinghouse.

On August 8, 2017, Westinghouse consented to issuance of this CO with the commitments, as described in Section V below. Westinghouse further agreed that this CO is to be effective upon issuance and that it has waived its right to a hearing.

IV

Because Westinghouse has taken corrective actions to address NRC concerns, as set forth in Section III above, and has agreed to take additional corrective actions as set forth in Section V below, the NRC has concluded that its concerns can be resolved through issuance of this CO.

I find that Westinghouse's commitments as set forth in Section V are acceptable and necessary and conclude that with these commitments, the public health and safety are reasonably assured. In view of the foregoing, I have determined that public health and safety require that Westinghouse's commitments be confirmed by this CO. Based on the

above and Westinghouse's consent, this CO is effective upon issuance.

V

Accordingly, pursuant to Sections 104b., 161b., 161i., 161o., 182, and 186 of the Atomic Energy Act of 1954, as amended, and the Commission's regulations in 10 CFR 2.202 and 10 CFR part 70, *it is hereby ordered, that License No. SNM-1107 is modified as follows:*

1. In recognition of the corrective actions taken in response to the four violations, as discussed at the ADR, and in response to the Confirmatory Action Letter dated August 11, 2016 (ML16224B082), Westinghouse agrees to submit a written statement or explanation to the Director, Office of Enforcement, U.S. Nuclear Regulatory Commission, with a copy to the Document Control Desk, Washington, DC 20555-0001, within 30 days of the date of the CO. This reply should include for each of the four violations: (1) The reason for the violation; (2) the corrective steps that have been taken to restore compliance; and (3) additional corrective actions and enhancements taken to preclude repetition.

2. Approximately two years (+/- 6 months) after issuance of the CO, Westinghouse shall conduct an additional NSC survey by the Westinghouse corporate nuclear safety culture organization or an experienced independent third party, consistent with the depth and scope of the NSC survey completed under the CAL dated August 11, 2016. Identified deficiencies shall be entered into the CAP for tracking corrective actions to completion.

3. Westinghouse shall implement improvements to reduce uranium carryover from the Calcliner scrubbers, and implement additional design changes to reduce U carryover from the Blue M oven filtration system. Specifically:

(1) For the calciner scrubbers, within eighteen (18) months of issuance of the CO, an engineering evaluation of the calciner and calciner off-gas scrubber design and operation shall be completed to determine methods to reduce uranium carry-over into the S-1030 scrubber.

(2) For the Blue M oven, within eighteen (18) months of issuance of the CO, an engineering evaluation of the Conversion Scrap Cage Blue M oven shall be completed to determine methods to improve the functionality of the Blue M oven in a wet environment and improve accessibility for inspection and maintenance activities.

(3) Within three (3) years of issuance of the CO, improvements based on the

engineering evaluations described above shall be implemented.

4. Westinghouse shall notify the NRC within fifteen (15) working days prior to implementing changes to the modifications to the S-1030 scrubber system, as discussed below. This requirement ends once the Regional Administrator determines that the CO has been satisfied. These modifications were incorporated as corrective actions prior to the October 20, 2016, system restart authorization (ML16294A296) and support, in part, the safety basis for the S-1030 scrubber. Specifically, these modifications are:

(1) The plenums for the scrap cage Blue M oven hoods shall be equipped with a filter to capture at least 95% of the mass entrained in the air stream based on particle size distribution and the manufacturer's published efficiency data.

(2) Packing baskets were implemented to permit complete removal and inspection of the packed media and to maintain clearance between the packed media and the scrubber floor.

(3) A feed and bleed system for the scrubber recirculating liquid shall be maintained at a minimum output flow of 0.5 gallons per minute. If feed and bleed is not available, a controlled shutdown of the scrubber shall be initiated in accordance with plant procedures.

(4) The scrubber shall be opened to remove the packed media baskets, to clean and inspect the inlet transition and scrubber body on a quarterly basis.

(5) Weekly visual inspections of the scrubber inlet transition shall be conducted.

5. Within two (2) years of issuance of the CO, Westinghouse shall develop and implement additional methods to monitor system parameters that are early indicators of an abnormal accumulation in the S-1030 scrubber from a process upset that could challenge the accumulation rate and/or criticality safety mass limits. The methods will provide timely indications to enable the operators to take appropriate actions in accordance with approved procedures.

6. Within eighteen (18) months of issuance of the CO, Westinghouse shall develop and implement a criticality safety basis/IROFS database to maintain the proper flow down of the safety basis into implementing documents.

7. Within six (6) months of issuance of the CO, Westinghouse shall develop a method to reinforce positive NSC leadership behavior and monitor for effectiveness in the NSC monitoring panel. Westinghouse shall implement such method for three (3) years, after

which it may evaluate the need to continue this item.

8. Within three (3) months of issuance of the CO, Westinghouse shall develop and implement a new metric or periodic report that creates an aggregate picture of the health of the criticality safety program. This shall include items such as IROFS challenges, trends, audit and inspection finding status, violations, and health of management measures and be made available for inspection. Identified deficiencies shall be evaluated in accordance with the CAP.

9. Within nine (9) months of issuance of the CO, Westinghouse shall implement risk-informed standards for the preparation of procedures and data sheets informed by appropriate guidance in INPO 11-003, "Guideline for Excellence in Procedure and Work Instruction Use and Adherence." This shall consist of issuance of a procedure writers' guide, procedure format template, and a procedure use and adherence standard.

10. The NRC agrees that issuance of this CO serves to close the CAL issued to Westinghouse on August 11, 2016. NRC acknowledges that Westinghouse has taken extensive actions to address items in the CAL including completing an RCA, completing a review of criticality safety evaluations, performing inspections to validate system design and operating parameters, installing physical modifications to support the safety basis to improve safety performance, conducting an independent third party nuclear safety culture assessment, and completing several corrective actions designed to preclude recurrence.

The NRC also acknowledges that Westinghouse has taken some actions to close post-restart CAL items 1, 3, and 5, but are not yet complete. Therefore, post-restart CAL items 1, 3, and 5, as modified below, are transferred to this CO. Upon completion of these items, Westinghouse will notify the NRC Region II Administrator.

a. CAL Item 1—Westinghouse shall implement the remaining corrective actions to prevent recurrence identified in their RCA.

b. CAL Item 3—Westinghouse shall conduct effectiveness reviews of corrective actions to prevent recurrence specified in their RCA.

c. CAL Item 5—Westinghouse shall evaluate the results of the independent third party nuclear safety culture assessment, and any identified deficiencies will be entered into the CAP to track to completion.

This CO supersedes the CAL issued to Westinghouse on August 11, 2016. Post-restart CAL items 2 and 4 will be

sampled as part of the NRC's inspection program.

Post-restart CAL item 6 is closed because of the extensive corrective actions completed by Westinghouse to date.

11. Within three (3) months of completing implementation of the terms of the CO, Westinghouse will provide the NRC with a letter discussing its basis for concluding that the CO has been satisfied.

This agreement is binding upon successors and assigns of Westinghouse.

Unless otherwise specified, all dates are from the date of issuance of the CO.

The Regional Administrator, NRC Region II, may relax or rescind, in writing, any of the above conditions upon a showing by Westinghouse of good cause.

VI

In accordance with 10 CFR 2.202 and 10 CFR 2.309, any person adversely affected by this CO, other than Westinghouse, may request a hearing within 30 calendar days of the date of issuance of this CO. Where good cause is shown, consideration will be given to extending the time to request a hearing. A request for extension of time must be made in writing to the Director, Office of Enforcement, U.S. Nuclear Regulatory Commission, Washington, DC 20555, and include a statement of good cause for the extension.

All documents filed in the NRC adjudicatory proceedings, including a request for hearing, a petition for leave to intervene, any motion or other document filed in the proceeding prior to the submission of a request for hearing or petition to intervene, and documents filed by interested governmental entities participating under 10 CFR 2.315(c), must be filed in accordance with the NRC's E-Filing rule (72 FR 49139, August 28, 2007, as amended at 77 FR 46562, August 3, 2012). The E-Filing process requires participants to submit and serve all adjudicatory documents over the internet, or in some cases to mail copies on electronic storage media. Detailed guidance on making electronic submissions may be found in the Guidance for Electronic Submissions to the NRC and on the NRC's Web site at <http://www.nrc.gov/site-help/e-submittals.html>. Participants may not submit paper copies of their filings unless they seek an exemption in accordance with the procedures described below.

To comply with the procedural requirements of E-Filing, at least 10 days prior to the filing deadline, the participant should contact the Office of

the Secretary by email at hearing.docket@nrc.gov, or by telephone at 301-415-1677, to (1) request a digital identification (ID) certificate, which allows the participant (or its counsel or representative) to digitally sign submissions and access the E-Filing system for any proceeding in which it is participating; and (2) advise the Secretary that the participant will be submitting a petition or other adjudicatory document (even in instances in which the participant, or its counsel or representative, already holds an NRC-issued digital ID certificate). Based upon this information, the Secretary will establish an electronic docket for the hearing in this proceeding if the Secretary has not already established an electronic docket.

Information about applying for a digital ID certificate is available on the NRC's public Web site at <http://www.nrc.gov/site-help/e-submittals/getting-started.html>. Once a participant has obtained a digital ID certificate and a docket has been created, the participant can then submit adjudicatory documents. Submissions must be in Portable Document Format (PDF). Additional guidance on PDF submissions is available on the NRC's public Web site at <http://www.nrc.gov/site-help/electronic-sub-ref-mat.html>. A filing is considered complete at the time the document is submitted through the NRC's E-Filing system. To be timely, an electronic filing must be submitted to the E-Filing system no later than 11:59 p.m. Eastern Time on the due date. Upon receipt of a transmission, the E-Filing system time-stamps the document and sends the submitter an email notice confirming receipt of the document. The E-Filing system also distributes an email notice that provides access to the document to the NRC's Office of the General Counsel and any others who have advised the Office of the Secretary that they wish to participate in the proceeding, so that the filer need not serve the document on those participants separately. Therefore, applicants and other participants (or their counsel or representative) must apply for and receive a digital ID certificate before adjudicatory documents are filed so that they can obtain access to the documents via the E-Filing system.

A person filing electronically using the NRC's adjudicatory E-Filing system may seek assistance by contacting the NRC's Electronic Filing Help Desk through the "Contact Us" link located on the NRC's public Web site at <http://www.nrc.gov/site-help/e-submittals.html>, by email to MSHD.Resource@nrc.gov, or by a toll-

free call at 1-866-672-7640. The NRC Electronic Filing Help Desk is available between 9 a.m. and 6 p.m., Eastern Time, Monday through Friday, excluding government holidays.

Once a participant has obtained a digital ID certificate and a docket has been created, the participant can then submit a request for hearing or petition for leave to intervene through the EIE System. Submissions should be in Portable Document Format (PDF) in accordance with NRC guidance available on the NRC public Web site at <https://www.nrc.gov/site-help/e-submittals.html>. A filing is considered complete at the time the documents are submitted through the NRC's E-Filing system. To be timely, an electronic filing must be submitted to the E-Filing system no later than 11:59 p.m. Eastern Time on the due date. Upon receipt of a transmission, the E-Filing system time-stamps the document and sends the submitter an email notice confirming receipt of the document. The E-Filing system also distributes an email notice that provides access to the document to the NRC Office of the General Counsel and any others who have advised the Office of the Secretary that they wish to participate in the proceeding, so that the filer need not serve the documents on those participants separately. Therefore, applicants and other participants (or their counsel or representative) must apply for and receive a digital ID certificate before a hearing request/petition to intervene is filed so that they can obtain access to the document via the E-Filing system.

A person filing electronically using the NRC's adjudicatory E-Filing system may seek assistance by contacting the NRC's Electronic Filing Help Desk through the "Contact Us" link located on the NRC's public Web site at <http://www.nrc.gov/site-help/e-submittals.html>, by email to MSHD.Resource@nrc.gov, or by a toll-free call at 1-866-672-7640. The NRC Electronic Filing Help Desk is available between 9 a.m. and 6 p.m., Eastern Time, Monday through Friday, excluding government holidays.

Participants who believe that they have a good cause for not submitting documents electronically must file an exemption request, in accordance with 10 CFR 2.302(g), with their initial paper filing stating why there is good cause for not filing electronically and requesting authorization to continue to submit documents in paper format. Such filings must be submitted by: (1) First class mail addressed to the Office of the Secretary of the Commission, U.S. Nuclear Regulatory Commission,

Washington, DC 20555-0001, Attention: Rulemaking and Adjudications Staff; or (2) courier, express mail, or expedited delivery service to the Office of the Secretary, 11555 Rockville Pike, Rockville, Maryland, 20852, Attention: Rulemaking and Adjudications Staff. Participants filing adjudicatory documents in this manner are responsible for serving the document on all other participants. Filing is considered complete by first-class mail as of the time of deposit in the mail, or by courier, express mail, or expedited delivery service upon depositing the document with the provider of the service. A presiding officer, having granted an exemption request from using E-Filing, may require a participant or party to use E-Filing if the presiding officer subsequently determines that the reason for granting the exemption from use of E-Filing no longer exists.

Documents submitted in adjudicatory proceedings will appear in the NRC's electronic hearing docket which is available to the public at <https://adams.nrc.gov/ehd>, unless excluded pursuant to an order of the Commission or the presiding officer. If you do not have an NRC-issued digital ID certificate as described above, click cancel when the link requests certificates and you will be automatically directed to the NRC's electronic hearing dockets where you will be able to access any publicly available documents in a particular hearing docket. Participants are requested not to include personal privacy information, such as social security numbers, home addresses, or personal phone numbers in their filings, unless an NRC regulation or other law requires submission of such information. For example, in some instances, individuals provide home addresses in order to demonstrate proximity to a facility or site. With respect to copyrighted works, except for limited excerpts that serve the purpose of the adjudicatory filings and would constitute a Fair Use application, participants are requested not to include copyrighted materials in their submission.

If a person (other than Westinghouse) requests a hearing, that person shall set forth with particularity the manner in which his interest is adversely affected by this CO and shall address the criteria set forth in 10 CFR 2.309(d) and (f).

If a hearing is requested by a person whose interest is adversely affected, the Commission will issue an order designating the time and place of any hearing. If a hearing is held, the issue to be considered at such hearing shall be whether this CO should be sustained.

In the absence of any request for hearing, or written approval of an extension of time in which to request a hearing, the provisions specified in Section V above shall be final 30 days from the date of this CO without further order or proceedings. If an extension of time for requesting a hearing has been approved, the provisions specified in Section V shall be final when the extension expires if a hearing request has not been received.

Dated at Atlanta, Georgia, this 9th day of August, 2017.

For the Nuclear Regulatory Commission.

Catherine Haney,

Regional Administrator.

BILLING CODE 7590-01-P

NUCLEAR REGULATORY COMMISSION

[Docket No. 50-458; NRC-2017-0141]

Entergy Operations, Inc.; River Bend Station, Unit 1

AGENCY: Nuclear Regulatory Commission.

ACTION: License renewal application; opportunity to request a hearing and to petition for leave to intervene.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is considering an application for the renewal of operating license NPF-47, which authorizes Entergy Operations, Inc., (the applicant), to operate River Bend Station, Unit 1 (RBS). The renewed license would authorize the applicant to operate RBS for an additional 20 years beyond the period specified in the current license. The current operating license for RBS expires at midnight on August 29, 2025.

DATES: A request for a hearing or petition for leave to intervene must be filed by October 13, 2017.

ADDRESSES: Please refer to Docket ID NRC-2017-0141 when contacting the NRC about the availability of information regarding this document. You may obtain publicly-available information related to this document using any of the following methods:

- *Federal Rulemaking Web site:* Go to <http://www.regulations.gov> and search for Docket ID NRC-2017-0141. Address questions about NRC dockets to Carol Gallagher; telephone: 301-415-3463; email: Carol.Gallagher@nrc.gov. For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.

- *NRC's Agencywide Documents Access and Management System*

(ADAMS): You may obtain publicly-available documents online in the ADAMS Public Documents collection at <http://www.nrc.gov/reading-rm/adams.html>. To begin the search, select "ADAMS Public Documents" and then select "Begin Web-based ADAMS Search." For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1-800-397-4209, 301-415-4737, or by email to pdr.resource@nrc.gov. The License Renewal Application is available in ADAMS under Accession No. ML17153A282.

- *NRC's PDR:* You may examine and purchase copies of public documents at the NRC's PDR, Room O1-F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852.

FOR FURTHER INFORMATION CONTACT:

Emmanuel Sayoc, Office of Nuclear Reactor Regulation, U.S. Nuclear Regulatory Commission, Washington DC 20555-0001; telephone: 301-415-4084; email: Emmanuel.Sayoc@nrc.gov.

SUPPLEMENTARY INFORMATION:

I. Introduction

The NRC received a license renewal application (LRA) from Entergy Operations, Inc., dated May 25, 2017, requesting renewal of operating license No. NPF-47, which authorizes Entergy Operations, Inc., to operate RBS at 3091 megawatts thermal. The RBS is a boiling-water reactor designed by General Electric and is located in St. Francisville, Louisiana. Entergy Operations, Inc., submitted the application, pursuant to part 54 of title 10 of the *Code of Federal Regulations* (10 CFR). A notice of receipt of the LRA was published in the **Federal Register** on June 28, 2017 (82 FR 29344).

The NRC's staff has determined that Entergy Operations, Inc. has submitted sufficient information in accordance with 10 CFR 54.19, 54.21, 54.22, 54.23, 51.45, and 51.53(c), to enable the staff to undertake a review of the application, and that the application is, therefore, acceptable for docketing. The current docket No., 50-458, for operating license No. NPF-47, will be retained. The determination to accept the LRA for docketing does not constitute a determination that a renewed license should be issued, and does not preclude the NRC staff from requesting additional information as the review proceeds.

Before issuance of the requested renewed license, the NRC will have made the findings required by the Atomic Energy Act of 1954, as amended (the Act), and the Commission's rules and regulations. In accordance with 10 CFR 54.29, the NRC may issue a

renewed license on the basis of its review if it finds that actions have been identified and have been or will be taken with respect to: (1) Managing the effects of aging during the period of extended operation on the functionality of structures and components that have been identified as requiring aging management review; and (2) time-limited aging analyses that have been identified as requiring review, such that there is reasonable assurance that the activities authorized by the renewed license will continue to be conducted in accordance with the current licensing basis (CLB) and that any changes made to the plant's CLB will comply with the Act and the Commission's regulations.

Additionally, in accordance with 10 CFR 51.95(c), the NRC will prepare an environmental impact statement as a supplement to the Commission's NUREG-1437, "Generic Environmental Impact Statement for License Renewal of Nuclear Power Plants," dated June 2013. In considering the LRA, the Commission must find that the applicable requirements of Subpart A of 10 CFR part 51 have been satisfied, and that matters raised under 10 CFR 2.335 have been addressed. Pursuant to 10 CFR 51.26, and as part of the environmental scoping process, the staff intends to hold public scoping meetings. Detailed information regarding the environmental scoping meetings will be the subject of a separate **Federal Register** notice.

II. Opportunity To Request a Hearing and Petition for Leave To Intervene

Within 60 days after the date of publication of this notice, any persons (petitioner) whose interest may be affected by this action may file a request for a hearing and petition for leave to intervene (petition) with respect to the action. Petitions shall be filed in accordance with the Commission's "Agency Rules of Practice and Procedure" in 10 CFR part 2. Interested persons should consult a current copy of 10 CFR 2.309. The NRC's regulations are accessible electronically from the NRC Library on the NRC's Web site at <http://www.nrc.gov/reading-rm/doc-collections/cfr/>. Alternatively, a copy of the regulations is available at the NRC's Public Document Room, located at One White Flint North, Room O1-F21, 11555 Rockville Pike (first floor), Rockville, Maryland 20852. If a petition is filed, the Commission or a presiding officer will rule on the petition and, if appropriate, a notice of hearing will be issued.

As required by 10 CFR 2.309, a petition should specifically explain the reasons why intervention should be

permitted with particular reference to the following general requirements for standing: (1) The name, address, and telephone number of the petitioner; (2) the nature of the petitioner's right under the Act to be made a party to the proceeding; (3) the nature and extent of the petitioner's property, financial, or other interest in the proceeding; and (4) the possible effect of any decision or order which may be entered in the proceeding on the petitioner's interest.

In accordance with 10 CFR 2.309(f), the petition must also set forth the specific contentions which the petitioner seeks to have litigated in the proceeding. Each contention must consist of a specific statement of the issue of law or fact to be raised or controverted. In addition, the petitioner must provide a brief explanation of the bases for the contention and a concise statement of the alleged facts or expert opinion which support the contention and on which the petitioner intends to rely in proving the contention at the hearing. The petitioner must also provide references to the specific sources and documents on which the petitioner intends to rely to support its position on the issue. The petition must include sufficient information to show that a genuine dispute exists with the applicant or licensee on a material issue of law or fact. Contentions must be limited to matters within the scope of the proceeding. The contention must be one which, if proven, would entitle the petitioner to relief. A petitioner who fails to satisfy the requirements at 10 CFR 2.309(f) with respect to at least one contention will not be permitted to participate as a party.

Those permitted to intervene become parties to the proceeding, subject to any limitations in the order granting leave to intervene. Parties have the opportunity to participate fully in the conduct of the hearing with respect to resolution of that party's admitted contentions, including the opportunity to present evidence, consistent with the NRC's regulations, policies, and procedures.

Petitions must be filed no later than 60 days from the date of publication of this notice. Petitions and motions for leave to file new or amended contentions that are filed after the deadline will not be entertained absent a determination by the presiding officer that the filing demonstrates good cause by satisfying the three factors in 10 CFR 2.309(c)(1)(i) through (iii). The petition must be filed in accordance with the filing instructions in the "Electronic Submissions (E-Filing)" section of this document.

A State, local governmental body, Federally-recognized Indian Tribe, or

agency thereof, may submit a petition to the Commission to participate as a party under 10 CFR 2.309(h)(1). The petition should state the nature and extent of the petitioner's interest in the proceeding. The petition should be submitted to the Commission by October 13, 2017. The petition must be filed in accordance with the filing instructions in the "Electronic Submission (E-Filing)" section of this document, and should meet the requirements for petitions set forth in this section, except that under 10 CFR 2.309(h)(2) a State, local governmental body, or federally recognized Indian Tribe, or agency thereof does not need to address the standing requirements in 10 CFR 2.309(d) if the facility is located within its boundaries. Alternatively, a State, local governmental body, Federally-recognized Indian Tribe, or agency thereof may participate as a non-party under 10 CFR 2.315(c).

If a hearing is granted, any person who is not a party to the proceeding and is not affiliated with or represented by a party may, in the discretion of the presiding officer, be permitted to make a limited appearance pursuant to the provisions of 10 CFR 2.315(a). A person making a limited appearance may make an oral or written statement of his or her position on the issues but may not otherwise participate in the proceeding. A limited appearance may be made at any session of the hearing or at any prehearing conference, subject to the limits and conditions as may be imposed by the presiding officer. Details regarding the opportunity to make a limited appearance will be provided by the presiding officer if such sessions are scheduled.

III. Electronic Submissions (E-Filing)

All documents filed in NRC adjudicatory proceedings, including a request for hearing and petition for leave to intervene (petition), any motion or other document filed in the proceeding prior to the submission of a request for hearing or petition to intervene, and documents filed by interested governmental entities that request to participate under 10 CFR 2.315(c), must be filed in accordance with the NRC's E-Filing rule (72 FR 49139; August 28, 2007, as amended at 77 FR 46562, August 3, 2012). The E-Filing process requires participants to submit and serve all adjudicatory documents over the internet, or in some cases to mail copies on electronic storage media. Detailed guidance on making electronic submissions may be found in the Guidance for Electronic Submissions to the NRC and on the NRC's Web site at <http://www.nrc.gov/>

[site-help/e-submittals.html](http://www.nrc.gov/site-help/e-submittals.html). Participants may not submit paper copies of their filings unless they seek an exemption in accordance with the procedures described below.

To comply with the procedural requirements of E-Filing, at least 10 days prior to the filing deadline, the participant should contact the Office of the Secretary by email at hearing.docket@nrc.gov, or by telephone at 301-415-1677, to request (1) a digital identification (ID) certificate, which allows the participant (or its counsel or representative) to digitally sign submissions and access the E-Filing system for any proceeding in which it is participating; and (2) advise the Secretary that the participant will be submitting a request or other adjudicatory document (even in instances in which the participant, or its counsel or representative, already holds an NRC-issued digital ID certificate). Based upon this information, the Secretary will establish an electronic docket for the hearing in this proceeding if the Secretary has not already established an electronic docket.

Information about applying for a digital ID certificate is available on the NRC's public Web site at <http://www.nrc.gov/site-help/e-submittals/getting-started.html>. Once a participant has obtained a digital ID certificate and a docket has been created, the participant can then submit adjudicatory documents. Submissions must be in Portable Document Format (PDF). Additional guidance on PDF submissions is available on the NRC's public Web site at <http://www.nrc.gov/site-help/electronic-sub-ref-mat.html>. A filing is considered complete at the time the document is submitted through the NRC's E-Filing system. To be timely, an electronic filing must be submitted to the E-Filing system no later than 11:59 p.m. Eastern Time on the due date. Upon receipt of a transmission, the E-Filing system time-stamps the document and sends the submitter an email notice confirming receipt of the document. The E-Filing system also distributes an email notice that provides access to the document to the NRC's Office of the General Counsel and any others who have advised the Office of the Secretary that they wish to participate in the proceeding, so that the filer need not serve the document on those participants separately. Therefore, applicants and other participants (or their counsel or representative) must apply for and receive a digital ID certificate before adjudicatory documents are filed so that they can obtain access to the documents via the E-Filing system.

A person filing electronically using the NRC's adjudicatory E-Filing system may seek assistance by contacting the NRC's Electronic Filing Help Desk through the "Contact Us" link located on the NRC's public Web site at <http://www.nrc.gov/site-help/e-submittals.html>, by email to MSHD.Resource@nrc.gov, or by a toll-free call at 1-866-672-7640. The NRC Electronic Filing Help Desk is available between 9 a.m. and 6 p.m., Eastern Time, Monday through Friday, excluding government holidays.

Participants who believe that they have a good cause for not submitting documents electronically must file an exemption request, in accordance with 10 CFR 2.302(g), with their initial paper filing stating why there is good cause for not filing electronically and requesting authorization to continue to submit documents in paper format. Such filings must be submitted by: (1) First class mail addressed to the Office of the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001, Attention: Rulemaking and Adjudications Staff; or (2) courier, express mail, or expedited delivery service to the Office of the Secretary, 11555 Rockville Pike, Rockville, Maryland, 20852, Attention: Rulemaking and Adjudications Staff. Participants filing adjudicatory documents in this manner are responsible for serving the document on all other participants. Filing is considered complete by first-class mail as of the time of deposit in the mail, or by courier, express mail, or expedited delivery service upon depositing the document with the provider of the service. A presiding officer, having granted an exemption request from using E-Filing, may require a participant or party to use E-Filing if the presiding officer subsequently determines that the reason for granting the exemption from use of E-Filing no longer exists.

Documents submitted in adjudicatory proceedings will appear in the NRC's electronic hearing docket which is available to the public at <https://adams.nrc.gov/ehd>, unless excluded pursuant to an order of the Commission or the presiding officer. If you do not have an NRC-issued digital ID certificate as described above, click cancel when the link requests certificates and you will be automatically directed to the NRC's electronic hearing dockets where you will be able to access any publicly available documents in a particular hearing docket. Participants are requested not to include personal privacy information, such as social security numbers, home addresses, or personal phone numbers in their filings,

unless an NRC regulation or other law requires submission of such information. For example, in some instances, individuals provide home addresses in order to demonstrate proximity to a facility or site. With respect to copyrighted works, except for limited excerpts that serve the purpose of the adjudicatory filings and would constitute a Fair Use application, participants are requested not to include copyrighted materials in their submission.

Detailed information about the license renewal process can be found under the Nuclear Reactors icon at <http://www.nrc.gov/reactors/operating/licensing/renewal.html> on the NRC's Web site. Copies of the application to renew the operating license for RBS are available for public inspection at the NRC's PDR, and at <http://www.nrc.gov/reactors/operating/licensing/renewal/applications.html>, the NRC's Web site while the application is under review.

The NRC staff has verified that a copy of the license renewal application is also available to local residents near the site at the St. Charles Parish Library—East Regional Library, 160 W. Campus Drive, Destrehan, Louisiana 70047.

Dated at Rockville, Maryland, this 9th day of August, 2017.

For the Nuclear Regulatory Commission.

Sheldon Stuchell,

Chief, Projects Management and Guidance Branch, Division of License Renewal, Office of Nuclear Reactor Regulation.

BILLING CODE 7590-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-81348; File No. SR-BX-2017-038]

Self-Regulatory Organizations; NASDAQ BX, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend Chapter V, Section 6, Nullification and Adjustment of Options Transactions Including Obvious Errors

August 8, 2017.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on August 3, 2017, NASDAQ BX, Inc. ("BX" or "Exchange") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I and II

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Chapter V, Section 6 of the Exchange's Options Rules (the "Rules"), entitled "Nullification and Adjustment of Options Transactions including Obvious Errors."

While these amendments are effective upon filing, the Exchange has designated the proposed amendments to be operative on a date that is within ninety (90) days after the Commission approved a similar proposal filed by Bats BZX on July 6, 2017.

The text of the proposed rule change is available on the Exchange's Web site at <http://nasdaqbx.cchwallstreet.com/>, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange and other options exchanges recently adopted a new, harmonized rule related to the adjustment and nullification of erroneous options transactions, including a specific provision related to coordination in connection with large-scale events involving erroneous options transactions.³ The Exchange believes that the changes the options exchanges implemented with the new, harmonized rule have led to increased transparency and finality with respect to the adjustment and nullification of

erroneous options transactions. However, as part of the initial initiative, the Exchange and other options exchanges deferred a few specific matters for further discussion. Specifically, as described in the Initial Filing, the Exchange and all other options exchanges have been working to further improve the review of potentially erroneous transactions as well as their subsequent adjustment by creating an objective and universal way to determine Theoretical Price in the event a reliable NBBO is not available. Because this initiative required additional exchange and industry discussion as well as additional time for development and implementation, the Exchange and the other options exchanges determined to proceed with the Initial Filing and to undergo a secondary initiative to complete any additional improvements to the applicable rule. In this filing, the Exchange proposes to adopt procedures that will lead to a more objective and uniform way to determine Theoretical Price in the event a reliable NBBO is not available. In addition to this change, the Exchange has proposed two additional minor changes to its rules. The Exchange's proposal mirrors that of Bats BZX, which the Exchange [sic] approved on July 6, 2017,⁴ and those that the other options exchanges intend to file.

Calculation of Theoretical Price Using a Third Party Provider

Under the harmonized rule, when reviewing a transaction as potentially erroneous, the Exchange needs to first determine the "Theoretical Price" of the option, *i.e.*, the Exchange's estimate of the correct market price for the option. Pursuant to Chapter V, Section 6 of the Rules, if the applicable option series is traded on at least one other options exchange, then the Theoretical Price of an option series is the last national best bid ("NBB") just prior to the trade in question with respect to an erroneous sell transaction or the last national best offer ("NBO") just prior to the trade in question with respect to an erroneous buy transaction unless one of the exceptions described below exists. Thus, whenever the Exchange has a reliable NBB or NBO, as applicable, just prior to the transaction, then the Exchange uses this NBB or NBO as the Theoretical Price.

The Rule also contains various provisions governing specific situations

where the NBB or NBO is not available or may not be reliable. Specifically, the Rule specifies situations in which there are no quotes or no valid quotes for comparison purposes, when the national best bid or offer ("NBBO") is determined to be too wide to be reliable, and at the open of trading on each trading day. In each of these circumstances, in turn, because the NBB or NBO is not available or is deemed to be unreliable, the Exchange determines Theoretical Price. Under the current Rule, when determining Theoretical Price, Exchange personnel generally consult and refer to data such as the prices of related series, especially the closest strikes in the option in question. Exchange personnel may also take into account the price of the underlying security and the volatility characteristics of the option as well as historical pricing of the option and/or similar options. Although the Rule is administered by experienced personnel and the Exchange believes the process is currently appropriate, the Exchange recognizes that it is also subjective and could lead to disparate results for a transaction that spans multiple options exchanges.

The Exchange proposes to adopt Commentary .04 to specify how the Exchange will determine Theoretical Price when required by sub-paragraphs (b)(1)–(3) of the Rule (*i.e.*, at the open, when there are no valid quotes or when there is a wide quote). In particular, the Exchange has been working with other options exchanges to identify and select a reliable third party vendor ("TP Provider") that would provide Theoretical Price to the Exchange whenever one or more transactions is under review pursuant to Chapter V, Section 6 of the Rules and the NBBO is unavailable or deemed unreliable pursuant to Chapter V, Section 6(b) of the Rules. The Exchange and other options exchanges have selected CBOE Livevol, LLC ("Livevol") as the TP Provider, as described below. As further described below, proposed Commentary .04 would codify the use of the TP Provider as well as limited exceptions where the Exchange would be able to deviate from the Theoretical Price given by the TP Provider.

Pursuant to proposed Commentary .04, when the Exchange must determine Theoretical Price pursuant to the sub-paragraphs (b)(1)–(3) of the Rule, the Exchange will request Theoretical Price from the third party vendor to which the Exchange and all other options exchanges have subscribed. Thus, as set forth in this proposed language, Theoretical Price would be provided to the Exchange by the TP Provider on

³ See Securities Exchange Act Release No. 34–74916 (May 8, 2015); 80 FR 27733 (May 14, 2015) (SR–BX–2015–028) (the "Initial Filing").

⁴ See Securities Exchange Act Release No. 34–81084 (July 6, 2017) (granting approval of Bats BZX proposal), 82 FR 32216 (July 12, 2017); 82 FR 23684 (May 23, 2017) (SR–BatsBZX–2017–035) (notice of filing of Bats BZX proposal).

request and not through a streaming data feed.⁵ This language also makes clear that the Exchange and all other options exchanges will use the same TP Provider.

As noted above, the proposed TP Provider selected by the Exchange and other options exchanges is Livevol. The Exchange proposes to codify this selection in proposed paragraph (d) to Commentary .04. As such, the Exchange would file a rule proposal and would provide notice to the options industry of any proposed change to the TP Provider.

The Exchange and other options exchanges have selected Livevol as the proposed TP Provider after diligence into various alternatives. Livevol has, since 2009, been the options industry leader in providing equity and index options market data and analytics services.⁶ The Exchange believes that Livevol has established itself within the options industry as a trusted provider of such services and notes that it and all other options exchanges already subscribe to various Livevol services. In connection with this proposal, Livevol will develop a new tool based on its existing technology and services that will supply Theoretical Price to the Exchange and other options exchanges upon request. The Theoretical Price tool will leverage current market data and surrounding strikes to assist in a relative value pricing approach to generating a Theoretical Price. When relative value methods are incapable of generating a valid Theoretical Price, the Theoretical Price tool will utilize historical trade and quote data to calculate Theoretical Price.

Because the purpose of the proposal is to move away from a subjective determination by Exchange personnel when the NBBO is unavailable or unreliable, the Exchange intends to use the Theoretical Price provided by the TP Provider in all such circumstances. However, the Exchange believes it is necessary to retain the ability to contact the TP Provider if it believes that the Theoretical Price provided is fundamentally incorrect and to determine the Theoretical Price in the limited circumstance of a systems issue experienced by the TP Provider, as described below.

⁵ Though the Exchange and other options exchanges considered a streaming feed, it was determined that it would be more feasible to develop and implement an on demand service and that such a service would satisfy the goals of the initiative.

⁶ The Exchange notes that in 2015, Livevol was acquired by CBOE Holdings, Inc., the ultimate parent company of the Chicago Board Options Exchange ("CBOE") and C2 Options Exchange ("C2").

As proposed, to the extent an Official⁷ of the Exchange believes that the Theoretical Price provided by the TP Provider is fundamentally incorrect and cannot be used consistent with the maintenance of a fair and orderly market, the Official shall contact the TP Provider to notify the TP Provider of the reason the Official believes such Theoretical Price is inaccurate and to request a review and correction of the calculated Theoretical Price. For example, if an Official received from the TP Provider a Theoretical Price of \$80 in a series that the Official might expect to be instead in the range of \$8 to \$10 because of a recent corporate action in the underlying, the Official would request that the TP Provider review and confirm its calculation and determine whether it had appropriately accounted for the corporate action. In order to ensure that other options exchanges that may potentially be relying on the same Theoretical Price that, in turn, the Official believes to be fundamentally incorrect, the Exchange also proposes to promptly provide notice to other options exchanges that the TP Provider has been contacted to review and correct the calculated Theoretical Price at issue and to include a brief explanation of the reason for the request.⁸ Although not directly addressed by the proposed Rule, the Exchange expects that all other options exchanges once in receipt of this notification would await the determination of the TP Provider and would use the corrected price as soon as it is available. The Exchange further notes that it expects the TP Provider to cooperate with, but to be independent of, the Exchange and other options exchanges.⁹

The Exchange believes that the proposed provision to allow an Official to contact the TP Provider if he or she believes the provided Theoretical Price is fundamentally incorrect is necessary, particularly because the Exchange and other options exchanges will be using the new process for the first time. Although the exchanges have conducted

⁷ For purposes of the Rule, an Official is an Exchange staff member or contract employee designated as such by the Chief Regulatory Officer. See BX Rules, Chapter V, Sec. 6(a)(3).

⁸ See proposed paragraph (b) to Commentary .04.

⁹ The Exchange expects any TP Provider selected by the Exchange and other options exchanges to act independently in its determination and calculation of Theoretical Price. With respect to Livevol specifically, the Exchange again notes that Livevol is a subsidiary of CBOE Holdings, Inc., which is also the ultimate parent company of multiple options exchanges. The Exchange expects Livevol to calculate Theoretical Price independent of its affiliated exchanges in the same way it will calculate Theoretical Price independent of non-affiliated exchanges.

thorough diligence with respect to Livevol as the selected TP Provider and would do so with any potential replacement TP Provider, the Exchange is concerned that certain scenarios could arise where the Theoretical Price generated by the TP Provider does not take into account relevant factors and would result in an unfair result for market participants involved in a transaction. The Exchange notes that if such situations do indeed arise, to the extent practicable the Exchange will also work with the TP Provider and other options exchanges to improve the TP Provider's calculation of Theoretical Price in future situations. For instance, if the Exchange determines that a particular type of corporate action is not being appropriately captured by the TP Provider when such provider is generating Theoretical Price, while the Exchange believes that it needs the ability to request a review and correction of the Theoretical Price in connection with a specific review in order to provide a timely decision to market participants, the Exchange would share information regarding the specific situation with the TP Provider and other options exchanges in an effort to improve the Theoretical Price service for future use. The Exchange notes that it does not anticipate needing to rely on this provision frequently, if at all, but believes the provision is necessary nonetheless to best prepare for all potential circumstances. Further, the Theoretical Price used by the Exchange in connection with its rulings will always be that received from the TP Provider and the Exchange has not proposed the ability to deviate from such price.¹⁰

Pursuant to proposed paragraph (c) to Commentary .04, an Official of the Exchange may determine the Theoretical Price if the TP Provider has experienced a systems issue that has rendered its services unavailable to accurately calculate Theoretical Price and such issue cannot be corrected in a timely manner. The Exchange notes that it does not anticipate needing to rely on this provision frequently, if at all, but believes the provision is necessary nonetheless to best prepare for all potential circumstances. Further, consistent with existing text in Chapter V, Section 6(e)(4) of the Rules, the Exchange has not proposed a specific time by which the service must be available in order to be considered

¹⁰ To the extent the TP Provider has been contacted by an Official of the Exchange, reviews the Theoretical Price provided but disagrees that there has been any error, then the Exchange would be bound to use the Theoretical Price provided by the TP Provider.

timely.¹¹ The Exchange expects that it would await the TP Provider's services becoming available again so long as the Exchange was able to obtain information regarding the issue and the TP Provider had a reasonable expectation of being able to resume normal operations within the next several hours based on communications with the TP Provider. More specifically with respect to Livevol, Livevol has business continuity and disaster recovery procedures that will help to ensure that the Theoretical Price tool remains available or, in the event of an outage, that service is restored in a timely manner.

The Exchange also notes that if a wide-scale event occurred, even if such event did not qualify as a "Significant Market Event" pursuant to Chapter V, Section 6(e) of the Rules, and the TP Provider was unavailable or otherwise experiencing difficulty, the Exchange believes that it and other options exchanges would seek to coordinate to the extent possible. In particular, the Exchange and other options exchanges now have a process, administered by the Options Clearing Corporation, to invoke a discussion amongst all options exchanges in the event of any widespread or significant market events. The Exchange believes that this process could be used in the event necessary if there were an issue with the TP Provider.

The Exchange also proposes to adopt language in paragraph (d) of Commentary .04 to Chapter V, Section 6 of the Rules to disclaim the liability of the Exchange and the TP Provider in connection with the proposed Rule, the TP Provider's calculation of Theoretical Price, and the Exchange's use of such Theoretical Price. Specifically, the proposed rule would state that neither the Exchange, the TP Provider, nor any affiliate of the TP Provider (the TP Provider and its affiliates are referred to collectively as the "TP Provider"), makes any warranty, express or implied, as to the results to be obtained by any person or entity from the use of the TP Provider pursuant to Commentary .04. The proposed rule would further state that the TP Provider does not guarantee the accuracy or completeness of the calculated Theoretical Price and that the TP Provider disclaims all warranties of merchantability or fitness for a particular purpose or use with respect to such Theoretical Price. Finally, the proposed Rule would state that neither the Exchange nor the TP Provider shall

have any liability for any damages, claims, losses (including any indirect or consequential losses), expenses, or delays, whether direct or indirect, foreseen or unforeseen, suffered by any person arising out of any circumstance or occurrence relating to the use of such Theoretical Price or arising out of any errors or delays in calculating such Theoretical Price. This proposed language is modeled after existing language in Exchange Rules regarding "reporting authorities" that calculate indices.¹²

In connection with the proposed change described above, the Exchange proposes to modify Chapter V, Section 6 of the Rules to state that the Exchange will rely on paragraph (b) and Commentary .04 when determining Theoretical Price.

No Valid Quotes—Market Participant Quoting on Multiple Exchanges

As described above, one of the times where the NBB or NBO is deemed to be unreliable for purposes of Theoretical Price is when there are no quotes or no valid quotes for the affected series. In addition to when there are no quotes, the Exchange does not consider the following to be valid quotes: (i) All quotes in the applicable option series published at a time where the last NBB is higher than the last NBO in such series (a "crossed market"); (ii) quotes published by the Exchange that were submitted by either party to the transaction in question; and (iii) quotes published by another options exchange against which the Exchange has declared self-help. In recognition of today's market structure where certain participants actively provide liquidity on multiple exchanges simultaneously, the Exchange proposes to add an additional category of invalid quotes. Specifically, in order to avoid a situation where a market participant has established the market at an erroneous price on multiple exchanges, the Exchange proposes to consider as invalid the quotes in a series published by another options exchange if either party to the transaction in question submitted the quotes in the series representing such options exchange's best bid or offer. Thus, similar to being able to ignore for purposes of the Rule the quotes published by the Exchange if submitted by either party to the transaction in question, the Exchange would be able to ignore for purposes of the rule quotations on other options

exchanges by that same market participant.

In order to continue to apply the Rule in a timely and organized fashion, however, the Exchange proposes to initially limit the scope of this proposed provision in two ways. First, because the process will take considerable coordination with other options exchanges to confirm that the quotations in question on an away options exchange were indeed submitted by a party to a transaction on the Exchange, the Exchange proposes to limit this provision to apply to up to twenty-five (25) total options series (*i.e.*, whether such series all relate to the same underlying security or multiple underlying securities). Second, the Exchange proposes to require the party that believes it established the best bid or offer on one or more other options exchanges to identify to the Exchange the quotes which were submitted by such party and published by other options exchanges. In other words, as proposed, the burden will be on the party seeking that the Exchange disregard their quotations on other options exchanges to identify such quotations. In turn, the Exchange will verify with such other options exchanges that such quotations were indeed submitted by such party.

Below are examples of both the current rule and the rule as proposed to be amended.

Example 1—Current Rule, Member Erroneously Quotes on One Exchange Assumptions

For purposes of this example, assume the following:

- A Member acting as a Market Maker on the Exchange ("Market Maker A") is quoting in twenty series of options underlying security ABCD on the Exchange (and only the Exchange).
- Market Maker A makes an error in calculating the market for options on ABCD, and publishes quotes in all twenty series to buy options at \$1.00 and to sell options at \$1.05.
- In fact, options on ABCD in these series are nearly worthless and no other market participant is quoting in such series.
- Therefore, the NBBO in the twenty series at issue is $\$1.00 \times \$1.05$ (with the Exchange representing the NBBO based on Market Maker A's quotes).
- Assume Member A immediately enters sell orders and executes against Market Maker A's quotes at \$1.00.
- Assume Market Maker A submits to the Exchange a timely request for review of the trades with Member A as potentially erroneous transactions to buy.

¹¹ In the context of a Significant Market Event, the Exchange may determine, "in consultation with other options exchanges . . . that timely adjustment is not feasible due to the extraordinary nature of the situation." See BX Rules, Chapter V, Sec. 6(e)(4).

¹² See, *e.g.*, BX Rules, Chapter XIV, Sec. 13, which relates to index options potentially listed and traded on the Exchange and disclaims liability for a reporting authority and their affiliates.

Result

- Based on the Exchange's current rules, the Exchange would identify Market Maker A as a participant to the trades at issue and would consider Market Maker A's quotations invalid pursuant to Chapter V, Section 6(b)(2) of the Rules.

- As there were no other valid quotes to use as a reference price, the Exchange would then determine Theoretical Price.

- Assume the Exchange determines a Theoretical Price of \$0.05.

- The execution price of \$1.00 exceeds the \$0.25 minimum amount set forth in the Exchange's table to determine whether an obvious error has occurred (*i.e.*, $\$0.05 + \$0.25 = \$0.30$) so any execution at or above this price is an obvious error.

- Accordingly, the executions in all series would be adjusted by the Exchange to executions at \$0.20 per contract (Theoretical Price of \$0.05 plus \$0.15) to the extent the incoming orders submitted by Member A were non-Customer orders.

- The executions in all series would be nullified to the extent the incoming orders submitted by Member A were Customer orders.

Example 2—Current Rule, Member Erroneously Quotes on Multiple Exchanges

Assumptions

For purposes of this example, assume the following:

- A Member acting as a Market Maker on the Exchange ("Market Maker A") is quoting in twenty series of options underlying security ABCD on the Exchange and on a second exchange ("Away Exchange").

- Market Maker A makes an error in calculating the market for options on ABCD, and publishes quotes on both the Exchange and the Away Exchange in all twenty series to buy options at \$1.00 and to sell options at \$1.05.

- In fact, options on ABCD in these series are nearly worthless and no other market participant is quoting in such series.

- Therefore, the NBBO in the twenty series at issue is $\$1.00 \times \$1.05$ (with the Exchange and the Away Exchange representing the NBBO based on Market Maker A's quotes).

- Assume Member A immediately enters sell orders and executes against Market Maker A's quotes at \$1.00.

- Assume Market Maker A submits to the Exchange and to the Away Exchange timely requests for review of the trades with Member A as potentially erroneous transactions to buy.

Result

- Based on the Exchange's current rules, the Exchange would identify Market Maker A as a participant to the trades at issue and would consider Market Maker A's quotations on the Exchange invalid pursuant to Chapter V, Section 6(b)(2) of the Rules. The Exchange, however, would view the Away Exchange's quotations as valid, and would thus determine Theoretical Price to be \$1.05 (*i.e.*, the NBO in the case of a potentially erroneous buy transaction).

- The execution price of \$1.00 does not exceed the \$0.25 minimum amount set forth in the Exchange's table to determine whether an obvious error has occurred (*i.e.*, $\$1.05 + \$0.25 = \$1.30$) so any execution at or above this price is an obvious error.

- The transactions on the Exchange would not be nullified or adjusted.

- As the Exchange and all other options exchanges have identical rules with respect to the process described above, the transactions on the Away Exchange would not be nullified or adjusted.

Example 3—Proposed Rule, Member Erroneously Quotes on Multiple Exchanges¹³

Assumptions

For purposes of this example, assume the following:

- A Member acting as a Market Maker on the Exchange ("Market Maker A") is quoting in twenty series of options underlying security ABCD on the Exchange and on a second exchange ("Away Exchange").¹⁴

- Market Maker A makes an error in calculating the market for options on ABCD, and publishes quotes on both the Exchange and the Away Exchange in all twenty series to buy options at \$1.00 and to sell options at \$1.05.

- In fact, options on ABCD in these series are nearly worthless and no other market participant is quoting in such series.

- Therefore, the NBBO in the twenty series at issue is $\$1.00 \times \$1.05$ (with the Exchange and the Away Exchange representing the NBBO based on Market Maker A's quotes).

¹³ The Exchange notes that its proposed rule will not impact the proposed handling of a request for review where a market participant is quoting only on the Exchange, thus, the Exchange has not included a separate example for such a fact pattern.

¹⁴ The Exchange notes that the proposed rule would operate the same if Market Maker A was quoting on more than two exchanges. The Exchange has limited the example to two exchanges for simplicity.

- Assume Member A immediately enters sell orders and executes against Market Maker A's quotes at \$1.00.

- Assume Market Maker A submits to the Exchange and to the Away Exchange timely requests for review of the trades with Member A as potentially erroneous transactions to buy. At the time of submitting the requests for review to the Exchange and the Away Exchange, Market Maker A identifies to the Exchange the quotes on the Away Exchange as quotes also represented by Market Maker A (and to the Away Exchange, the quotes on the Exchange as quotes also represented by Market Maker A).

Result

- Based on the proposed rules, the Exchange would identify Market Maker A as a participant to the trades at issue and would consider Market Maker A's quotations on the Exchange invalid pursuant to Chapter V, Section 6(b)(2) of the Rules.

- The Exchange and the Away Exchange would also coordinate to confirm that the quotations identified by Market Maker A on the other exchange were indeed Market Maker A's quotations. Once confirmed, each of the Exchange and the Away Exchange would also consider invalid the quotations published on the other exchange.

- As there were no other valid quotes to use as a reference price, the Exchange would then determine Theoretical Price.

- Assume the Exchange determines a Theoretical Price of \$0.05.

- The execution price of \$1.00 exceeds the \$0.25 minimum amount set forth in the Exchange's table to determine whether an obvious error has occurred (*i.e.*, $\$0.05 + \$0.25 = \$0.30$) so any execution at or above this price is an obvious error.

- Accordingly, the executions in all series would be adjusted by the Exchange to executions at \$0.20 per contract (Theoretical Price of \$0.05 plus \$0.15) to the extent the incoming orders submitted by Member A were non-Customer orders.

- The executions in all series would be nullified to the extent the incoming orders submitted by Member A were Customer orders.

- As the Exchange and all other options exchanges would have identical rules with respect to the process described above, as other options exchanges intend to adopt the same rule if the proposed rule is approved, the transactions on the Away Exchange would also be nullified or adjusted as set forth above.

• If this example was instead modified such that Market Maker A was quoting in 200 series rather than 20, the Exchange notes that Market Maker A could only request that the Exchange consider as invalid their quotations in 25 of those series on other exchanges. As noted above, the Exchange has proposed to limit the proposed rule to 25 series in order to continue to process requests for review in a timely and organized fashion in order to provide certainty to market participants. This is due to the amount of coordination that will be necessary in such a scenario to confirm that the quotations in question on an away options exchange were indeed submitted by a party to a transaction on the Exchange.

Trading Halts—Clarifying Change to Chapter V, Section 6

Commentary .03 to Chapter V, Section 6 of the Rules describes the Exchange's authority to declare trading halts in one or more options traded on the Exchange. The Exchange proposes to modify this provision to provide that, with respect to equity options, the Exchange shall nullify any transaction that occurs during a regulatory halt as declared by the primary listing market for the underlying security. The Exchange believes this change is necessary to distinguish a declared regulatory halt, where the underlying security should not be actively trading on any venue, from an operational issue on the primary listing exchange where the security continues to safely trade on other trading venues.

Implementation Date

The Exchange proposes to delay the operative date of this proposal to a date within ninety (90) days after the Commission approved the Bats BZX proposal on July 6, 2017. The Exchange will announce the operative date in a Regulatory Alert made available to its Members.

2. Statutory Basis

The Exchange believes that its proposal is consistent with the requirements of the Act and the rules and regulations thereunder that are applicable to a national securities exchange, and, in particular, with the requirements of Section 6(b) of the Act.¹⁵

Specifically, the proposal is consistent with Section 6(b)(5) of the Act¹⁶ because it would promote just and equitable principles of trade, remove impediments to, and perfect the

mechanism of, a free and open market and a national market system, and, in general, protect investors and the public interest.

As described above, the Exchange and other options exchanges are seeking to further modify their harmonized rules related to the adjustment and nullification of erroneous options transactions. The Exchange believes that the proposal to utilize a TP Provider in the event the NBBO is unavailable or unreliable will provide greater transparency and clarity with respect to the adjustment and nullification of erroneous options transactions. Particularly, the proposed changes seek to achieve consistent results for participants across U.S. options exchanges while maintaining a fair and orderly market, protecting investors and protecting the public interest. Thus, the Exchange believes that the proposal is consistent with Section 6(b)(5) of the Act¹⁷ in that the proposed Rule will foster cooperation and coordination with persons engaged in regulating and facilitating transactions.

The Exchange again reiterates that it has retained the standard of the current rule for most reviews of options transactions pursuant to Chapter V, Section 6 of the Rules, which is to rely on the NBBO to determine Theoretical Price if such NBBO can reasonably be relied upon. The proposal to use a TP Provider when the NBBO is unavailable or unreliable is consistent with Section 6(b)(5) of the Act¹⁸ in that the proposed Rule will foster cooperation and coordination with persons engaged in regulating and facilitating transactions by further reducing the possibility of disparate results between options exchanges and increasing the objectivity of the application of Chapter V, Section 6 of the Rules. Further, the Exchange believes that the proposed Rule is transparent with respect to the limited circumstances under which the Exchange will request a review and correction of Theoretical Price from the TP Provider, and has sought to limit such circumstances as much as possible. The Exchange notes that under the current Rule, Exchange personnel are required to determine Theoretical Price in certain circumstances and yet rarely do so because such circumstances have already been significantly limited under the harmonized rule (for example, because the wide quote provision of the harmonized rule only applies if the quote was narrower and then gapped but does not apply if the quote had been persistently wide). Thus, the Exchange

believes it will need to request Theoretical Price from the TP Provider only in very rare circumstances and in turn, the Exchange anticipates that the need to contact the TP Provider for additional review of the Theoretical Price provided by the TP Provider will be even rarer. Similarly, the Exchange believes it is unlikely that an Exchange Official will ever be required to determine Theoretical Price, as such circumstance would only be in the event of a systems issue that has rendered the TP Provider's services unavailable and such issue cannot be corrected in a timely manner.

The Exchange also believes its proposal to adopt language in paragraph (d) of Commentary .04 to Chapter V, Section 6 of the Rules to disclaim the liability of the Exchange and the TP Provider in connection with the proposed Rule, the TP Provider's calculation of Theoretical Price, and the Exchange's use of such Theoretical Price is consistent with the Act. As noted above, this proposed language is modeled after existing language in Exchange Rules regarding "reporting authorities" that calculate indices,¹⁹ and is consistent with Section 6(b)(5) of the Act²⁰ in that the proposed Rule will foster cooperation and coordination with persons engaged in regulating and facilitating transactions.

As described above, the Exchange proposes a modification to the valid quotes provision to also exclude quotes in a series published by another options exchange if either party to the transaction in question submitted the orders or quotes in the series representing such options exchange's best bid or offer. The Exchange believes this proposal is consistent with Section 6(b)(5) of the Act²¹ because the application of the rule will foster cooperation and coordination with persons engaged in regulating and facilitating transactions by allowing the Exchange to coordinate with other options exchanges to determine whether a market participant that is party to a potentially erroneous transaction on the Exchange established the market in an option on other options exchanges; to the extent this can be established, the Exchange believes such participant's quotes should be excluded in the same way such quotes are excluded on the Exchange. The Exchange also believes it is reasonable to limit the scope of this provision to twenty-five (25) series and to require the party that believes it established the best bid or offer on one

¹⁵ 15 U.S.C. 78f(b).

¹⁶ 15 U.S.C. 78f(b)(5).

²⁰ 15 U.S.C. 78f(b)(5).

²¹ 15 U.S.C. 78f(b)(5).

or more other options exchanges to identify to the Exchange the quotes which were submitted by that party and published by other options exchanges. The Exchange believes these limitations are consistent with Section 6(b)(5) of the Act²² because they will ensure that the Exchange is able to continue to apply the Rule in a timely and organized fashion, thus fostering cooperation and coordination with persons engaged in regulating and facilitating transactions and also removing impediments to and perfecting the mechanism of a free and open market and a national market system.

Finally, with respect to the proposed modification to Commentary .03 to Chapter V, Section 6, the Exchange believes that this proposal is consistent with Section 6(b)(5) of the Act²³ because it specifically provides for nullification where a trading halt exists with respect to an underlying security across the industry (*i.e.*, a regulatory halt) as distinguished from a situation where the primary exchange has experienced a technical issue but the underlying security continues to trade on other equities platforms. The Exchange notes that a similar provision already exists in the rules of certain other options exchanges, and thus, has been found to be consistent with the Act.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange believes the entire proposal is consistent with Section 6(b)(8) of the Act²⁴ in that it does not impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act as explained below.

Importantly, the Exchange does not believe that the proposal will impose a burden on intermarket competition but rather that it will alleviate any burden on competition because it is the result of a collaborative effort by all options exchanges to further harmonize and improve the process related to the adjustment and nullification of [sic] erroneous options transactions. The Exchange does not believe that the rules applicable to such process is an area where options exchanges should compete, but rather, that all options exchanges should have consistent rules to the extent possible. Particularly where a market participant trades on several different exchanges and an erroneous trade may occur on multiple markets nearly simultaneously, the

Exchange believes that a participant should have a consistent experience with respect to the nullification or adjustment of transactions. To that end, the selection and implementation of a TP Provider utilized by all options exchanges will further reduce the possibility that participants with potentially erroneous transactions that span multiple options exchanges are handled differently on such exchanges. Similarly, the proposed ability to consider quotations invalid on another options exchange if ultimately originating from a party to a potentially erroneous transaction on the Exchange represents a proposal intended to further foster cooperation by the options exchanges with respect to market events. The Exchange understands that all other options exchanges either have or they intend to file proposals that are substantially similar to this proposal.

The Exchange does not believe that the proposed rule change imposes a burden on intramarket competition because the proposed provisions apply to all market participants equally.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days after the date of the filing, or such shorter time as the Commission may designate, it has become effective pursuant to 19(b)(3)(A) of the Act²⁵ and Rule 19b-4(f)(6)²⁶ thereunder.

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the

²⁵ 15 U.S.C. 78s(b)(3)(A).

²⁶ 17 CFR 240.19b-4(f)(6). In addition, Rule 19b-4(f)(6) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-BX-2017-038 on the subject line.

Paper Comments

- Send paper comments in triplicate to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-BX-2017-038. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-BX-2017-038, and should be submitted on or before September 5, 2017.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-81347; File No. SR-ICC-2017-011]

Self-Regulatory Organizations; ICE Clear Credit LLC; Order Granting Accelerated Approval of Proposed Rule Change Relating to the ICC Liquidity Risk Management Framework and the ICC Stress Testing Framework

August 8, 2017.

I. Introduction

On June 28, 2017, ICE Clear Credit LLC (“ICC” or “ICE Clear Credit”) filed with the Securities and Exchange Commission (“Commission”), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (“Exchange Act”) ¹ and Rule 19b-4 thereunder,² a proposed rule change (SR-ICC-2017-011) to revise the ICC Liquidity Risk Management Framework and the ICC Stress Testing Framework. The proposed rule change was published for comment in the **Federal Register** on July 12, 2017.³ The Commission did not receive comments regarding the proposed changes. For the reasons discussed below, the Commission is approving the proposed rule change on an accelerated basis.

II. Description of the Proposed Rule Change

ICC stated that the proposed revisions to its Liquidity Risk Management Framework and Stress Testing Framework are for the purpose of revising its liquidity monitoring program to enhance compliance with U.S. Commodity Futures Trading Commission (“CFTC”) regulations, including Regulations 39.11, 39.33, and 39.36.⁴ ICC represented that the proposed revisions will also facilitate the prompt and accurate clearance and settlement of securities transactions and derivative agreements, contracts, and transactions for which it is responsible. These revisions would not require any

changes to the ICC Clearing Rules (“Rules”).

A. Liquidity Risk Management Framework

ICC proposed to reorganize the format of the Liquidity Risk Management Framework to consist of three elements: Liquidity Risk Management Model; Measurement and Monitoring; and Governance. The Regulatory Requirements element, previously included as an element of the framework, would be deleted; however, the regulatory requirements applicable to liquidity risk management would still be referenced in the framework.

1. Liquidity Risk Management Model

ICC proposed to enhance the description of several components of its Liquidity Risk Management Model. As revised, the Liquidity Risk Management Model now includes, but is not limited to, the following components: Currency-Specific Risk Requirements; Acceptable Collateral; Liquidity Requirements; Collateral Valuation Methodology; Investment Strategy; Clearing Participant (“CP”) Deposits as a Liquidity Pool, Liquidity Facilities (including committed repo facilities and committed foreign exchange (“FX”) facilities); and Liquidity Waterfall.

For the Currency-Specific Risk Requirements component, ICC proposed to add language to cross reference ICC’s current policy of maintaining cash and collateral assets posted by CPs (on behalf of themselves and/or their clients) to meet currency-specific Initial Margin (“IM”) and Guaranty Fund (“GF”) requirements, to ensure ICC has sufficient total resources in the required currencies of denomination.

With respect to the Liquidity Requirements component,⁵ ICC proposed to add a cross reference to ICC’s requirement that each CP contribute to the GF a minimum of 20 million wholly in U.S. Dollars (“USD”), which is not a change but rather a restatement of ICC’s current rules.⁶ Further, ICC proposed revisions to extend ICC’s margin risk horizon up to 6-days in order to account for the risk associated with clearing Asia Pacific products. This change would apply throughout the framework.

With respect to the Liquidity Facilities component, ICC proposed revisions to add reference to its

committed repurchase facility, consisting of committed repo lines from multiple financial institutions (as opposed to committed repurchase agreements as before), and its recently instituted committed FX facilities for converting USD cash to EUR cash. ICC also proposed removing reference to FX Swaps and Immediate FX Spot Transactions because these arrangements are not committed and therefore are not “qualifying liquidity resources” under CFTC Regulation 39.33, according to ICC.⁷ ICC also proposed removing reference to the Intercontinental Exchange, Inc. committed line of credit because ICC no longer participates in the arrangement.

In the Liquidity Waterfall component, ICC proposed revisions to its definition of Available Liquidity Resources (“ALR”) to note that ALR consists of the available deposits currently in cash of the required currency of denomination and the cash equivalent of the available deposits in collateral types that ICC can convert to cash, in the required currency of denomination, using all sources of liquidity available to it. For reference, the Liquidity Waterfall classifies ALR on any given day into four levels. Level One includes the House IM and GF cash deposits of the defaulting CP. Level Two includes GF cash deposits of ICC and non-defaulting CPs. Level Three includes House IM cash deposits of the non-defaulting CPs. Level Four includes committed repo facilities and FX facilities, as described above in the changes to the Liquidity Facilities component.

A few of the Liquidity Risk Management Model components would remain the same or substantially the same. The Acceptable Collateral component would remain the same and will note that CPs may post IM and GF deposits that meet ICC’s acceptable collateral criteria as described in ICC’s Treasury Operations Policies and Procedures and Schedule 401 of the ICC Rules. The Investment Strategy component would remain substantially the same and was proposed to be revised to note that, when beneficial, ICC diversifies its cash investments across multiple depository institutions to reduce its liquidity exposure to any single depository. The CP Deposits as a Liquidity Pool and Collateral Valuation Methodology components also would remain substantially the same.

2. Measurement and Monitoring

With respect to the Measurement and Monitoring element of the Liquidity Risk Management Framework, ICC

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ Exchange Act Release No. 34-81132 (July 12, 2017), 82 FR 32895 (July 18, 2017) (SR-ICC-2017-011) (“Notice”).

⁴ 17 CFR 39.11; 17 CFR 39.33; 17 CFR 39.36.

⁵ The Liquidity Requirements component also reflects the changes to ICC’s liquidity thresholds for Euro (“EUR”) denominated products approved by the Commission in rule filing ICC-2017-002. See Exchange Act Release No. 34-80324 (Mar. 28, 2017), 82 FR 16244 (Apr. 3, 2017).

⁶ See Schedule 401 of the ICC Rules.

⁷ 17 CFR 39.33.

proposed changes to the Methodology section to change the calculation for ALR. In response to CFTC feedback to ensure consistency with CFTC Regulation 39.33,⁸ ICC proposed replacing the estimation of minimum ALR based on risk requirements with the observation of cash and collateral on deposit (excluding cash that will be unavailable by the applicable ICC Payout Deadline because it has been invested by ICC). Accordingly, ICC proposed removing the section from the Liquidity Risk Management Framework which described the process for computing the estimation of minimum ALR. In addition, ICC proposed removing other references throughout the framework related to the estimation of minimum ALR. Thus, under its revised approach, ICC proposed executing stress test analysis by using the amount of liquid assets currently on deposit.

ICC proposed additional changes to the Methodology section. Among other things, the proposed revisions clarify that ICC's measurement and monitoring methodology assesses the adequacy of ICC's established liquidity resources in response to historically observed and hypothetically created (forward looking) scenarios with risk horizons up to and including 6-days. The analyzed scenarios feature assumptions that directly impact the ability of ICC to meet its payment obligations. Based on available IM and GF collateral on deposit on the day of the considered default(s), the analysis determines currency-specific ALR by liquidity waterfall level, and compares these ALRs to the currency-specific Liquidity Obligations resulting from the analyzed scenarios on each day of the considered time horizon. According to ICC, to be conservative, the analysis assumes no client-related ALR and that only the day-1 ALR are available throughout the considered time horizon (*i.e.*, the analysis does not consider ICC's ability during the considered time horizon to liquefy non-cash collateral on deposit or transform the currency of cash on deposit).

In addition, ICC proposed changes to the Historical Analysis section of the Measurement and Monitoring element of the Liquidity Risk Management Framework. ICC proposed adding language to note that, as part of its historical liquidity analysis, ICC analyzes historical data sets to assess the level of liquidity coverage achieved for each currency. Under the revised framework, ICC would continue to conduct a historical liquidity analysis

on both an individual affiliate group ("AG") basis and a cover-2 basis.

ICC also proposed the use of the Basel Traffic Light System⁹ to determine if the minimum cash component of its risk requirements truly covers historically observed 1-day liquidity obligations with a 99% level of confidence. ICC's risk requirements are designed to meet at least a 99% N-day VaR equivalent level of coverage. CPs must meet their IM and GF requirements with a minimum cash component equivalent to the 1-day portion of the N-day requirement, computed using the square-root-of-time approach.¹⁰

ICC proposed additional enhancements to consider the simultaneous default of the two worst-case AGs of CPs, rather than the two worst-case CPs, which, according to ICC, is consistent with CFTC regulations, including CFTC Regulation 39.33(c)(1)(ii).¹¹ Under the revised framework, when computing a CP's combined house and client origin liquidity obligation for the purposes of selecting which AGs are considered to be in a state of default, ICC proposed to eliminate the application of house origin gains against client origin losses, or house origin losses against client origin gains. This analysis is designed to demonstrate to what extent the liquidity resources available to ICC were sufficient to meet historical single and multi-day cover-2 Liquidity Obligations, consistent with CFTC Regulation 39.33(c)(1)(ii), according to ICC.¹²

ICC also proposed enhancements to note that, for each day of its historical analysis and on a currency specific basis, its Risk Department explores predefined cover-2 scenarios considering the default of the CPs within two AGs creating the largest remaining Liquidity Obligation after applying the IM and GF cash deposits of each constituent CP to that CP's Liquidity Obligation.¹³

ICC proposed clarifying changes to note that the prices considered for historical analysis purposes are "dirty" prices as they include riskless (deterministic) payments (*e.g.*, upfront fees, coupon payments, credit event

payments, interest on mark-to-market margin). ICC proposed adding explanatory language regarding its calculation of the N-day worst-case cumulative (combined house and client origin) liquidity obligations. ICC also proposed removing a measurement and monitoring framework diagram, representing that the diagram was no longer relevant or necessary in light of the larger changes to the framework.

Finally, ICC proposed revisions to note that ICC reports cover-2 results from the observed immediate liquidity obligation scenarios and the worst-case five-day liquidity obligation scenarios to various audiences, depending on the results. ICC notes that the results should exhibit no deficiencies of the combined resources in Levels One through Four of the Liquidity Waterfall.

ICC proposed changes to the Stress Testing Analysis section of the Measurement and Monitoring element of the Liquidity Risk Management Framework. ICC proposed re-categorizing and adding to the stress testing scenarios. Under the revised approach, ICC would enhance its description of its historically observed extreme but plausible market scenarios to note that the scenarios define spread or price shocks based on observations during specific historical events. The historical data set from which ICC derives the proposed scenarios will continue to begin on April 1, 2007 and include periods of extreme market events such as the Bear Stearns collapse, the Lehman Brothers default, the 2009 Credit Crisis, the US "Flash Crash" event, and the European Sovereign Crisis. The scenarios are similar to the stress testing currently performed under the financial resources Stress Testing Framework.

ICC proposed eliminating all scenarios not expected to be realized as market outcomes (*i.e.*, those considered extreme and not plausible). Under the revised approach, ICC would continue to have the ability to execute liquidity analyses based on extreme but not plausible scenarios on an ad-hoc basis. Further, ICC proposed to add 1-day, 2-day, and N-day analogues in place of existing 5-day scenarios. Under the revised framework, each historically observed scenario would have three analogues: one representing a 1-day horizon, one representing a 2-day horizon, and one representing an N-day horizon. Previously, only analogues representing an N-day horizon were considered. The addition of the 1-day analogue would demonstrate ICC's ability to meet its immediate payment obligations over a one-day period (*e.g.*, intraday and same-day obligations),

⁹ See Basel Committee on Banking Supervision ("BCBS"), Supervisory Framework for the use of "Backtesting" in Conjunction with the Internal Models Approach to Market Risk Capital Requirements (Jan. 1996).

¹⁰ See BCBS, Amendment to the Capital Accord to Incorporate Market Risk (Jan. 1996).

¹² *Id.*

¹³ ICC's cover-2 analysis considers the liquidity resources provided by the defaulting CPs, the GF, IM liquidity resources provided by the non-defaulting CPs and ICC, and any externally available liquidity resources.

⁸ 17 CFR 39.33.

while the 2-day and N-day analogues would demonstrate ICC's ability to meet its payment obligations over a multiday period.

ICC also proposed adding a number of hypothetically constructed (forward looking) extreme but plausible market scenarios comprised of a given historically observed extreme but plausible market scenario and additional stress enhancements representing forward looking hypothetical adverse market events. Specifically, two sets of hypothetically constructed (forward looking) extreme but plausible market scenarios were proposed: loss-given default scenarios and one-service-provider-down scenarios. The loss-given default scenarios consider the addition of up to three adverse credit events including the holder of the considered portfolio, one additional CP name, and one additional non-CP name. The one-service-provider-down scenarios consider a reduction in ALR designed to represent ICC's worst-case exposure to a single service provider at which it maintains cash deposits or investments, due to ICC's potential inability to access those deposits and/or investments when required. ICC proposed that the reduction in ALR used in the one-service-provider-down scenarios is based on ICC's analysis of the diversification of its deposits and investments across its multiple service providers. Additionally, ICC proposed revisions to further describe its analysis under the above referenced scenarios.

ICC proposed revisions to consider the simultaneous default of the two worst-case AGs of CPs, rather than the two worst-case CPs, to conform with CFTC regulations, including CFTC Regulation 39.33(c)(1)(ii), as ICC interprets such regulations.¹⁴ Under the proposed revisions, ICC would perform cover-2 analysis in which, for each scenario, it determines the two AGs creating the largest remaining Liquidity Obligation after applying the IM and GF cash deposits of each constituent CP to its own Liquidity Obligation. ICC would compare the remaining Liquidity Obligation of the AG to the remaining liquidity resources to determine if there are sufficient resources to meet the obligation.

ICC proposed enhancements to describe its cover-N analysis in which, for each scenario, it first considers the default of one AG, then the defaults of two AGs, then three AGs, and so forth. The sequence of selecting AGs is based on the remaining Liquidity Obligation associated with the constituent CP's

portfolios after applying the IM and GF cash deposits of each constituent CP to its own Liquidity Obligation. AGs are sequenced from largest to smallest remaining Liquidity Obligation. For each set of AGs considered to be in a state of default (1 AG, 2 AGs, 3 AGs, etc.), ICC compares the total remaining Liquidity Obligation to the remaining liquidity resources to determine if there are sufficient resources to meet the obligation. In this way, ICC determines how many AGs it would require to be in a state of default to consume all available liquidity resources.

To determine the Liquidity Obligations in the above analysis, ICC applies the stress scenarios to actual cleared portfolios to determine a currency-specific profit/loss for each CP, representing the largest cumulative loss over the specified risk horizon. The considered profit/loss in the analysis is the sum of the upfront fee changes corresponding to the clean prices associated with the hypothetical scenarios, and excluding the riskless (deterministic) payments.

To determine ICC's liquidity needs for each scenario, ICC's Risk Department computes Liquidity Obligations for futures commission merchant and broker-dealer CPs by combining the net payments for house and client origin accounts. For the purposes of selecting defaulting AGs, ICC's Risk Department does not offset client origin losses with house origin gains, or offset house origin losses with client origin gains.

3. Governance

With respect to the Governance element of the Liquidity Risk Management Framework, the Required Analysis and Interpretation of Results and Potential Actions sections would remain substantially the same. The Model Validation section would be revised to note that the Liquidity Risk Management Framework is under the purview of the Model Validation Framework and subject to initial validations.

In the Materiality and Reporting Framework section, ICC proposed a change that would note that, at each ICC Risk Committee meeting, ICC's Risk Department would provide a summary of historical liquidity analysis and liquidity stress testing analysis intended to demonstrate the adequacy of ICC's liquidity resources to cover Liquidity Obligations over N-days. Such analyses would also include any instance where Level Three resources were required to meet Liquidity Obligations in response to any of the considered historical liquidity or liquidity stress testing scenarios.

Further, ICC proposed revisions to note that, when exceedances of funded and/or unfunded resources are identified, ICC's Risk Department would be required to report them to the senior management team and the ICC Risk Committee, and (i) demonstrate that the breaches do not highlight a significant liquidity risk management weaknesses or (ii) recommend specific liquidity risk management model enhancements that produce an adequate increase in funded and/or unfunded liquidity resources under the identified scenario(s). In addition to the reporting described above, ICC's Risk Department would also report to the ICC Risk Committee any instances where the Basel Traffic Light System categorizes the number of observed exceedances in its individual AG historical analysis as being in the predefined "red zone." In these instances, ICC's Risk Department would discuss with ICC's Risk Committee the appropriateness of its liquidity thresholds, and if appropriate, make revisions.

B. Stress Testing Framework

ICC proposed revisions to its Stress Testing Framework to unify the stress testing scenarios with the liquidity stress testing scenarios set forth in the Liquidity Risk Management Framework. ICC operates its stress testing and liquidity stress testing on a unified set of stress testing scenarios and systems. As such, revisions to the stress testing scenarios are necessary to ensure scenario unification following changes to the Liquidity Risk Management Framework. The proposed revisions are described in detail as follows.

ICC proposed to introduce Risk Factor specific scenarios for all stress test scenarios. Previously, corporate single names were considered at the sector level, as opposed to the Risk Factor level. This change would be reflected throughout the framework.

ICC also proposed to add clarifying language to note that the predefined stress testing scenarios set forth in its Stress Testing Framework would be applied to all cleared instruments, and that name-specific scenarios would be applied to all sovereign and corporate reference entities.

ICC proposed revisions to extend ICC's margin risk horizon up to 6-days, to account for the risk associated with clearing Asia Pacific products. This change would apply throughout the framework.

ICC also proposed to revise its description of the Historically Observed Extreme but Plausible Market Scenarios section to note that the stress spread changes considered as part of each

¹⁴ 17 CFR 39.33(c)(1)(ii).

scenario are extracted from the market history of the most actively traded instrument for the considered Risk Factors.

ICC proposed to revise the Hypothetically Constructed (Forward Looking) Extreme but Plausible Market Scenarios section to ensure consistency with the loss-given default stress scenario set forth in the Liquidity Risk Management Framework, which combines a given historically observed extreme but plausible market scenario with explicit Jump-to-Default events. The proposed revisions specify that there would be up to two reference entities selected for a hypothetical adverse credit event.

Finally, ICC proposed to revise the description of the discordant scenarios (*i.e.*, scenarios under which selected risk factors move in opposite directions) in the Stress Testing Framework to reflect the introduction of Risk Factor specific scenarios. According to ICC, the discordant scenarios are designed to reproduce significant discordant market outcomes observed during the considered historical period. ICC creates discordant scenarios for North American corporate single names and indices; European corporate single names and indices; and sovereign reference entities.

III. Discussion and Commission Findings

Section 19(b)(2)(C) of the Exchange Act directs the Commission to approve a proposed rule change of a self-regulatory organization if it finds that such proposed rule change is consistent with the requirements of the Exchange Act and the rules and regulations thereunder applicable to such organization.¹⁵ Section 17A(b)(3)(F) of the Exchange Act requires, among other things, that the rules of a registered clearing agency be designed to promote the prompt and accurate clearance and settlement of securities transactions and, to the extent applicable, derivative agreements, contracts, and transactions.¹⁶ Rule 17Ad-22(d)(11) requires, in relevant part, that a registered clearing agency establish default procedures that ensure that the clearing agency can take timely action to contain losses and liquidity pressures and to continue meeting its obligations in the event of a participant default.

The Commission finds that the proposed rule change, which revises ICC's Liquidity Risk Management Framework and makes conforming changes to ICC's Stress Testing

Framework, is consistent with Section 17A of the Exchange Act and Rule 17Ad-22(d)(11) thereunder. As represented by ICC, the various elements set forth in the Liquidity Risk Management Framework, and described above, ensure that ICC has sufficient liquidity resources to effectively measure, monitor, and manage its liquidity risk. Further, ICC represented the Liquidity Risk Management Framework supports ICC's ability to maintain sufficient liquid resources in all relevant currencies to effect same-day and, where appropriate, intraday and multiday settlement of payment obligations with a high degree of confidence under a wide range of potential stress scenarios. ICC represented that changes to the Stress Testing Framework were necessary following recent changes to the Liquidity Risk Management Framework, as ICC operates its stress testing and liquidity stress testing on a unified set of stress testing scenarios and systems. ICC stated that its stress testing practices will continue to ensure the adequacy of systemic risk protections. ICC represented that the revised stress test scenarios set forth in the Stress Testing Framework will continue to ensure that ICC maintains sufficient financial resources to withstand a default by the CP family to which it has the largest exposure in extreme but plausible market conditions. The Commission therefore believes that the proposed revisions to the ICC Liquidity Risk Management Framework and Stress Testing Framework are designed to promote the prompt and accurate settlement of securities transactions, derivatives agreements, contracts, and transactions for which ICC is responsible, consistent with Section 17A(b)(3)(F) of the Exchange Act. Furthermore, for similar reasons, the Commission finds that the proposed revisions are consistent with the requirements of Rule 17Ad-22(d)(11).

Section 19(b)(2)(C)(iii) of the Exchange Act allows the Commission to approve a proposed rule change earlier than 30 days after the date of publication of the notice of the proposed rule change in the **Federal Register** where the Commission finds good cause for so doing and publishes the reason for the finding.¹⁷ In its filing, ICC requested that the Commission approve the proposed rule change on an accelerated basis for good cause shown. ICC represented that the amendments to ICC's Liquidity Risk Management Framework and Stress Testing Framework set forth in the proposed

rule change further ICC's compliance with CFTC regulations. The Commission also notes that the CFTC is the supervisory agency for ICC under Section 803(8)(A)(ii) of the Payment, Clearing, and Settlement Supervision Act of 2010.¹⁸ Based on the foregoing, the Commission finds that good cause exists to approve the proposed rule change on an accelerated basis pursuant to Section 19(b)(2)(C)(iii) of the Exchange Act.

IV. Conclusion

It is therefore ordered pursuant to Section 19(b)(2) of the Exchange Act that the proposed rule change (SR-ICC-2017-011) be, and hereby is, approved on an accelerated basis.¹⁹

For the Commission by the Division of Trading and Markets, pursuant to delegated authority.²⁰

Eduardo A. Aleman,
Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-81351; File No. SR-BOX-2017-25]

Self-Regulatory Organizations; BOX Options Exchange LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend BOX Rule 7170 (Nullification and Adjustment of Options Transactions Including Obvious Errors)

August 8, 2017.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on August 3, 2017, BOX Options Exchange LLC (the "Exchange") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

¹⁸ 12 U.S.C. 5462(8)(A)(ii).

¹⁹ In approving the proposed rule change, the Commission considered the proposal's impact on efficiency, competition, and capital formation. 15 U.S.C. 78c(f).

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend BOX Rule 7170 (Nullification and Adjustment of Options Transactions including Obvious Errors). The text of the proposed rule change is available from the principal office of the Exchange, at the Commission's Public Reference Room and also on the Exchange's Internet Web site at <http://boxexchange.com>.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange and other options exchanges recently adopted a new, harmonized rule related to the adjustment and nullification of erroneous options transactions, including a specific provision related to coordination in connection with large-scale events involving erroneous options transactions.³ The Exchange believes that the changes the options exchanges implemented with the new, harmonized rule have led to increased transparency and finality with respect to the adjustment and nullification of erroneous options transactions. However, as part of the initial initiative, the Exchange and other options exchanges deferred a few specific matters for further discussion. Specifically, as described in the Initial Filing, the Exchange and all other options exchanges have been working to further improve the review of potentially erroneous transactions as well as their subsequent adjustment by creating an objective and universal way to determine Theoretical Price in the

event a reliable NBBO is not available. Because this initiative required additional exchange and industry discussion as well as additional time for development and implementation, the Exchange and the other options exchanges determined to proceed with the Initial Filing and to undergo a secondary initiative to complete any additional improvements to the applicable rule. In this filing, the Exchange proposes to adopt procedures that will lead to a more objective and uniform way to determine Theoretical Price in the event a reliable NBBO is not available. In addition to this change, the Exchange has proposed two additional minor changes to its rules. The Exchange's proposal mirrors that of Bats BZX, which the Commission approved on July 6, 2017,⁴ and those that the other options exchanges intend to file, except that it omits the section of the proposal that pertains to trading halts due to the fact that IM-7080-3 already includes the applicable language.

Calculation of Theoretical Price Using a Third Party Provider

Under the harmonized rule, when reviewing a transaction as potentially erroneous, the Exchange needs to first determine the "Theoretical Price" of the option, *i.e.*, the Exchange's estimate of the correct market price for the option. Pursuant to Rule 7170, if the applicable option series is traded on at least one other options exchange, then the Theoretical Price of an option series is the last national best bid ("NBB") just prior to the trade in question with respect to an erroneous sell transaction or the last national best offer ("NBO") just prior to the trade in question with respect to an erroneous buy transaction unless one of the exceptions described below exists. Thus, whenever the Exchange has a reliable NBB or NBO, as applicable, just prior to the transaction, then the Exchange uses this NBB or NBO as the Theoretical Price.

The Rule also contains various provisions governing specific situations where the NBB or NBO is not available or may not be reliable. Specifically, the Rule specifies situations in which there are no quotes or no valid quotes for comparison purposes, when the national best bid or offer ("NBBO") is determined to be too wide to be reliable, and at the open of trading on each trading day. In each of these circumstances, in turn, because the NBB or NBO is not available or is deemed to

be unreliable, the Exchange determines Theoretical Price. Under the current Rule, when determining Theoretical Price, Exchange personnel generally consult and refer to data such as the prices of related series, especially the closest strikes in the option in question. Exchange personnel may also take into account the price of the underlying security and the volatility characteristics of the option as well as historical pricing of the option and/or similar options. Although the Rule is administered by experienced personnel and the Exchange believes the process is currently appropriate, the Exchange recognizes that it is also subjective and could lead to disparate results for a transaction that spans multiple options exchanges.

The Exchange proposes to adopt IM-7170-5 to specify how the Exchange will determine Theoretical Price when required by sub-paragraphs (b)(1)-(3) of the Rule (*i.e.*, at the open, when there are no valid quotes or when there is a wide quote). In particular, the Exchange has been working with other options exchanges to identify and select a reliable third party vendor ("TP Provider") that would provide Theoretical Price to the Exchange whenever one or more transactions is under review pursuant to Rule 7170 and the NBBO is unavailable or deemed unreliable pursuant to Rule 7170(b). The Exchange and other options exchanges have selected CBOE Livevol, LLC ("Livevol") as the TP Provider, as described below. As further described below, proposed IM-7170-5 would codify the use of the TP Provider as well as limited exceptions where the Exchange would be able to deviate from the Theoretical Price given by the TP Provider.

Pursuant to proposed IM-7170-5, when the Exchange must determine Theoretical Price pursuant to the sub-paragraphs (b)(1)-(3) of the Rule, the Exchange will request Theoretical Price from the third party vendor to which the Exchange and all other options exchanges have subscribed. Thus, as set forth in this proposed language, Theoretical Price would be provided to the Exchange by the TP Provider on request and not through a streaming data feed.⁵ This language also makes clear that the Exchange and all other options exchanges will use the same TP Provider.

³ See Securities Exchange Act Release No. 74556 (March 20, 2015), 80 FR 16031 (March 26, 2015) (SR-BATS-2014-067); see also Securities Exchange Act Release No. 73884 (December 18, 2014), 79 FR 77557 (December 24, 2014) (the "Initial Filing").

⁴ See Securities Exchange Act Release No. 34-81084 (July 6, 2017) (granting approval of Bats BZX proposal), 82 FR 32216 (July 12, 2017); 82 FR 23684 (May 23, 2017) (SR-BatsBZX-2017-035) (notice of filing of Bats BZX proposal).

⁵ Though the Exchange and other options exchanges considered a streaming feed, it was determined that it would be more feasible to develop and implement an on demand service and that such a service would satisfy the goals of the initiative.

As noted above, the proposed TP Provider selected by the Exchange and other options exchanges is Livevol. The Exchange proposes to codify this selection in proposed paragraph (d) to IM-7170-5. As such, the Exchange would file a rule proposal and would provide notice to the options industry of any proposed change to the TP Provider.

The Exchange and other options exchanges have selected Livevol as the proposed TP Provider after diligence into various alternatives. Livevol has, since 2009, been the options industry leader in providing equity and index options market data and analytics services.⁶ The Exchange believes that Livevol has established itself within the options industry as a trusted provider of such services and notes that it and all other options exchanges already subscribe to various Livevol services. In connection with this proposal, Livevol will develop a new tool based on its existing technology and services that will supply Theoretical Price to the Exchange and other options exchanges upon request. The Theoretical Price tool will leverage current market data and surrounding strikes to assist in a relative value pricing approach to generating a Theoretical Price. When relative value methods are incapable of generating a valid Theoretical Price, the Theoretical Price tool will utilize historical trade and quote data to calculate Theoretical Price.

Because the purpose of the proposal is to move away from a subjective determination by Exchange personnel when the NBBO is unavailable or unreliable, the Exchange intends to use the Theoretical Price provided by the TP Provider in all such circumstances. However, the Exchange believes it is necessary to retain the ability to contact the TP Provider if it believes that the Theoretical Price provided is fundamentally incorrect and to determine the Theoretical Price in the limited circumstance of a systems issue experienced by the TP Provider, as described below.

As proposed, to the extent an Official⁷ of the Exchange believes that the Theoretical Price provided by the TP Provider is fundamentally incorrect and cannot be used consistent with the maintenance of a fair and orderly market, the Official shall contact the TP

Provider to notify the TP Provider of the reason the Official believes such Theoretical Price is inaccurate and to request a review and correction of the calculated Theoretical Price. For example, if an Official received from the TP Provider a Theoretical Price of \$80 in a series that the Official might expect to be instead in the range of \$8 to \$10 because of a recent corporate action in the underlying, the Official would request that the TP Provider review and confirm its calculation and determine whether it had appropriately accounted for the corporate action. In order to ensure that other options exchanges that may potentially be relying on the same Theoretical Price that, in turn, the Official believes to be fundamentally incorrect, the Exchange also proposes to promptly provide notice to other options exchanges that the TP Provider has been contacted to review and correct the calculated Theoretical Price at issue and to include a brief explanation of the reason for the request.⁸ Although not directly addressed by the proposed Rule, the Exchange expects that all other options exchanges once in receipt of this notification would await the determination of the TP Provider and would use the corrected price as soon as it is available. The Exchange further notes that it expects the TP Provider to cooperate with, but to be independent of, the Exchange and other options exchanges.⁹

The Exchange believes that the proposed provision to allow an Official to contact the TP Provider if he or she believes the provided Theoretical Price is fundamentally incorrect is necessary, particularly because the Exchange and other options exchanges will be using the new process for the first time. Although the exchanges have conducted thorough diligence with respect to Livevol as the selected TP Provider and would do so with any potential replacement TP Provider, the Exchange is concerned that certain scenarios could arise where the Theoretical Price generated by the TP Provider does not take into account relevant factors and would result in an unfair result for market participants involved in a

transaction. The Exchange notes that if such situations do indeed arise, to the extent practicable the Exchange will also work with the TP Provider and other options exchanges to improve the TP Provider's calculation of Theoretical Price in future situations. For instance, if the Exchange determines that a particular type of corporate action is not being appropriately captured by the TP Provider when such provider is generating Theoretical Price, while the Exchange believes that it needs the ability to request a review and correction of the Theoretical Price in connection with a specific review in order to provide a timely decision to market participants, the Exchange would share information regarding the specific situation with the TP Provider and other options exchanges in an effort to improve the Theoretical Price service for future use. The Exchange notes that it does not anticipate needing to rely on this provision frequently, if at all, but believes the provision is necessary nonetheless to best prepare for all potential circumstances. Further, the Theoretical Price used by the Exchange in connection with its rulings will always be that received from the TP Provider and the Exchange has not proposed the ability to deviate from such price.¹⁰

Pursuant to proposed paragraph (c) of IM-7170-5, an Official of the Exchange may determine the Theoretical Price if the TP Provider has experienced a systems issue that has rendered its services unavailable to accurately calculate Theoretical Price and such issue cannot be corrected in a timely manner. The Exchange notes that it does not anticipate needing to rely on this provision frequently, if at all, but believes the provision is necessary nonetheless to best prepare for all potential circumstances. Further, consistent with existing text in Rule 7170(e)(4), the Exchange has not proposed a specific time by which the service must be available in order to be considered timely.¹¹ The Exchange expects that it would await the TP Provider's services becoming available again so long as the Exchange was able to obtain information regarding the issue and the TP Provider had a reasonable expectation of being able to

⁸ See proposed paragraph (b) to IM-7170-5.

⁹ The Exchange expects any TP Provider selected by the Exchange and other options exchanges to act independently in its determination and calculation of Theoretical Price. With respect to Livevol specifically, the Exchange again notes that Livevol is a subsidiary of CBOE Holdings, Inc., which is also the ultimate parent company of multiple options exchanges. The Exchange expects Livevol to calculate Theoretical Price independent of its affiliated exchanges in the same way it will calculate Theoretical Price independent of non-affiliated exchanges.

¹⁰ To the extent the TP Provider has been contacted by an Official of the Exchange, reviews the Theoretical Price provided but disagrees that there has been any error, then the Exchange would be bound to use the Theoretical Price provided by the TP Provider.

¹¹ In the context of a Significant Market Event, the Exchange may determine, "in consultation with other options exchanges . . . that timely adjustment is not feasible due to the extraordinary nature of the situation." See Rule 7170(e)(4).

⁶ The Exchange notes that in 2015, Livevol was acquired by CBOE Holdings, Inc., the ultimate parent company of the Chicago Board Options Exchange ("CBOE") and C2 Options Exchange ("C2").

⁷ For purposes of the Rule, an Official is an Officer of the Exchange or such other employee designee of the Exchange that is trained in the application of Rule 7170.

resume normal operations within the next several hours based on communications with the TP Provider. More specifically with respect to Livevol, Livevol has business continuity and disaster recovery procedures that will help to ensure that the Theoretical Price tool remains available or, in the event of an outage, that service is restored in a timely manner.

The Exchange also notes that if a wide-scale event occurred, even if such event did not qualify as a "Significant Market Event" pursuant to Rule 7170(e), and the TP Provider was unavailable or otherwise experiencing difficulty, the Exchange believes that it and other options exchanges would seek to coordinate to the extent possible. In particular, the Exchange and other options exchanges now have a process, administered by the Options Clearing Corporation, to invoke a discussion amongst all options exchanges in the event of any widespread or significant market events. The Exchange believes that this process could be used in the event necessary if there were an issue with the TP Provider.

The Exchange also proposes to adopt language in paragraph (d) of IM-7170-5 to disclaim the liability of the Exchange and the TP Provider in connection with the proposed Rule, the TP Provider's calculation of Theoretical Price, and the Exchange's use of such Theoretical Price. Specifically, the proposed rule would state that neither the Exchange, the TP Provider, nor any affiliate of the TP Provider (the TP Provider and its affiliates are referred to collectively as the "TP Provider"), makes any warranty, express or implied, as to the results to be obtained by any person or entity from the use of the TP Provider pursuant to IM-7170-5. The proposed rule would further state that the TP Provider does not guarantee the accuracy or completeness of the calculated Theoretical Price and that the TP Provider disclaims all warranties of merchantability or fitness for a particular purpose or use with respect to such Theoretical Price. Finally, the proposed Rule would state that neither the Exchange nor the TP Provider shall have any liability for any damages, claims, losses (including any indirect or consequential losses), expenses, or delays, whether direct or indirect, foreseen or unforeseen, suffered by any person arising out of any circumstance or occurrence relating to the use of such Theoretical Price or arising out of any errors or delays in calculating such Theoretical Price. This proposed language is modeled after existing language in Exchange Rules regarding

"reporting authorities" that calculate indices.¹²

In connection with the proposed change described above, the Exchange proposes to modify Rule 7170 to state that the Exchange will rely on paragraph (b) and IM-7170-5 when determining Theoretical Price.

No Valid Quotes—Market Participant Quoting on Multiple Exchanges

As described above, one of the times where the NBB or NBO is deemed to be unreliable for purposes of Theoretical Price is when there are no quotes or no valid quotes for the affected series. In addition to when there are no quotes, the Exchange does not consider the following to be valid quotes: (i) All quotes in the applicable option series published at a time where the last NBB is higher than the last NBO in such series (a "crossed market"); (ii) quotes published by the Exchange that were submitted by either party to the transaction in question; and (iii) quotes published by another options exchange against which the Exchange has declared self-help. In recognition of today's market structure where certain participants actively provide liquidity on multiple exchanges simultaneously, the Exchange proposes to add an additional category of invalid quotes. Specifically, in order to avoid a situation where a market participant has established the market at an erroneous price on multiple exchanges, the Exchange proposes to consider as invalid the quotes in a series published by another options exchange if either party to the transaction in question submitted the quotes in the series representing such options exchange's best bid or offer. Thus, similar to being able to ignore for purposes of the Rule the quotes published by the Exchange if submitted by either party to the transaction in question, the Exchange would be able to ignore for purposes of the rule quotations on other options exchanges by that same market participant.

In order to continue to apply the Rule in a timely and organized fashion, however, the Exchange proposes to initially limit the scope of this proposed provision in two ways. First, because the process will take considerable coordination with other options exchanges to confirm that the quotations in question on an away options exchange were indeed submitted by a party to a transaction on the Exchange,

the Exchange proposes to limit this provision to apply to up to twenty-five (25) total options series (*i.e.*, whether such series all relate to the same underlying security or multiple underlying securities). Second, the Exchange proposes to require the party that believes it established the best bid or offer on one or more other options exchanges to identify to the Exchange the quotes which were submitted by such party and published by other options exchanges. In other words, as proposed, the burden will be on the party seeking that the Exchange disregard their quotations on other options exchanges to identify such quotations. In turn, the Exchange will verify with such other options exchanges that such quotations were indeed submitted by such party.

Below are examples of both the current rule and the rule as proposed to be amended.

Example 1—Current Rule, Participant Erroneously Quotes on One Exchange Assumptions

For purposes of this example, assume the following:

- A Participant acting as a Market Maker on the Exchange ("Market Maker A") is quoting in twenty series of options underlying security ABCD on the Exchange (and only the Exchange).
- Market Maker A makes an error in calculating the market for options on ABCD, and publishes quotes in all twenty series to buy options at \$1.00 and to sell options at \$1.05.
- In fact, options on ABCD in these series are nearly worthless and no other market participant is quoting in such series.
- Therefore, the NBBO in the twenty series at issue is \$1.00 × \$1.05 (with the Exchange representing the NBBO based on Market Maker A's quotes).
- Assume Participant A immediately enters sell orders and executes against Market Maker A's quotes at \$1.00.
- Assume Market Maker A submits to the Exchange a timely request for review of the trades with Participant A as potentially erroneous transactions to buy.

Result

- Based on the Exchange's current rules, the Exchange would identify Market Maker A as a participant to the trades at issue and would consider Market Maker A's quotations invalid pursuant to Rule 7170(b)(2).
- As there were no other valid quotes to use as a reference price, the Exchange would then determine Theoretical Price.
- Assume the Exchange determines a Theoretical Price of \$0.05.

¹² See, e.g., Rule 6110, which relates to index options potentially listed and traded on the Exchange and disclaims liability for a reporting authority and their affiliates.

○ The execution price of \$1.00 exceeds the \$0.25 minimum amount set forth in the Exchange's table to determine whether an obvious error has occurred (*i.e.*, $\$0.05 + \$0.25 = \$0.30$) so any execution at or above this price is an obvious error.

○ Accordingly, the executions in all series would be adjusted by the Exchange to executions at \$0.20 per contract (Theoretical Price of \$0.05 plus \$0.15) to the extent the incoming orders submitted by Participant A were non-Customer orders.

○ The executions in all series would be nullified to the extent the incoming orders submitted by Participant A were Customer orders.

Example 2—Current Rule, Participant Erroneously Quotes on Multiple Exchanges

Assumptions

For purposes of this example, assume the following:

- A Participant acting as a Market Maker on the Exchange ("Market Maker A") is quoting in twenty series of options underlying security ABCD on the Exchange and on a second exchange ("Away Exchange").

- Market Maker A makes an error in calculating the market for options on ABCD, and publishes quotes on both the Exchange and the Away Exchange in all twenty series to buy options at \$1.00 and to sell options at \$1.05.

- In fact, options on ABCD in these series are nearly worthless and no other market participant is quoting in such series.

- Therefore, the NBBO in the twenty series at issue is $\$1.00 \times \$1.05$ (with the Exchange and the Away Exchange representing the NBBO based on Market Maker A's quotes).

- Assume Participant A immediately enters sell orders and executes against Market Maker A's quotes at \$1.00.

- Assume Market Maker A submits to the Exchange and to the Away Exchange timely requests for review of the trades with Participant A as potentially erroneous transactions to buy.

Result

- Based on the Exchange's current rules, the Exchange would identify Market Maker A as a participant to the trades at issue and would consider Market Maker A's quotations on the Exchange invalid pursuant to Rule 7170(b)(2). The Exchange, however, would view the Away Exchange's quotations as valid, and would thus determine Theoretical Price to be \$1.05 (*i.e.*, the NBO in the case of a potentially erroneous buy transaction).

- The execution price of \$1.00 does not exceed the \$0.25 minimum amount set forth in the Exchange's table to determine whether an obvious error has occurred (*i.e.*, $\$1.05 + \$0.25 = \$1.30$) so any execution at or above this price is an obvious error.

- The transactions on the Exchange would not be nullified or adjusted.

- As the Exchange and all other options exchanges have identical rules with respect to the process described above, the transactions on the Away Exchange would not be nullified or adjusted.

Example 3—Proposed Rule, Participant Erroneously Quotes on Multiple Exchanges¹³

Assumptions

For purposes of this example, assume the following:

- A Participant acting as a Market Maker on the Exchange ("Market Maker A") is quoting in twenty series of options underlying security ABCD on the Exchange and on a second exchange ("Away Exchange").¹⁴

- Market Maker A makes an error in calculating the market for options on ABCD, and publishes quotes on both the Exchange and the Away Exchange in all twenty series to buy options at \$1.00 and to sell options at \$1.05.

- In fact, options on ABCD in these series are nearly worthless and no other market participant is quoting in such series.

- Therefore, the NBBO in the twenty series at issue is $\$1.00 \times \$1.05$ (with the Exchange and the Away Exchange representing the NBBO based on Market Maker A's quotes).

- Assume Participant A immediately enters sell orders and executes against Market Maker A's quotes at \$1.00.

- Assume Market Maker A submits to the Exchange and to the Away Exchange timely requests for review of the trades with Participant A as potentially erroneous transactions to buy. At the time of submitting the requests for review to the Exchange and the Away Exchange, Market Maker A identifies to the Exchange the quotes on the Away Exchange as quotes also represented by Market Maker A (and to the Away Exchange, the quotes on the Exchange as quotes also represented by Market Maker A).

¹³ The Exchange notes that its proposed rule will not impact the proposed handling of a request for review where a market participant is quoting only on the Exchange, thus, the Exchange has not included a separate example for such a fact-pattern.

¹⁴ The Exchange notes that the proposed rule would operate the same if Market Maker A was quoting on more than two exchanges. The Exchange has limited the example to two exchanges for simplicity.

Result

- Based on the proposed rules, the Exchange would identify Market Maker A as a participant to the trades at issue and would consider Market Maker A's quotations on the Exchange invalid pursuant to Rule 7170(b)(2).

- The Exchange and the Away Exchange would also coordinate to confirm that the quotations identified by Market Maker A on the other exchange were indeed Market Maker A's quotations. Once confirmed, each of the Exchange and the Away Exchange would also consider invalid the quotations published on the other exchange.

- As there were no other valid quotes to use as a reference price, the Exchange would then determine Theoretical Price.

- Assume the Exchange determines a Theoretical Price of \$0.05.

- The execution price of \$1.00 exceeds the \$0.25 minimum amount set forth in the Exchange's table to determine whether an obvious error has occurred (*i.e.*, $\$0.05 + \$0.25 = \$0.30$) so any execution at or above this price is an obvious error.

- Accordingly, the executions in all series would be adjusted by the Exchange to executions at \$0.20 per contract (Theoretical Price of \$0.05 plus \$0.15) to the extent the incoming orders submitted by Participant A were non-Customer orders.

- The executions in all series would be nullified to the extent the incoming orders submitted by Participant A were Customer orders.

- As the Exchange and all other options exchanges would have identical rules with respect to the process described above, as other options exchanges intend to adopt the same rule if the proposed rule is approved, the transactions on the Away Exchange would also be nullified or adjusted as set forth above.

- If this example was instead modified such that Market Maker A was quoting in 200 series rather than 20, the Exchange notes that Market Maker A could only request that the Exchange consider as invalid their quotations in 25 of those series on other exchanges. As noted above, the Exchange has proposed to limit the proposed rule to 25 series in order to continue to process requests for review in a timely and organized fashion in order to provide certainty to market participants. This is due to the amount of coordination that will be necessary in such a scenario to confirm that the quotations in question on an away options exchange were indeed submitted by a party to a transaction on the Exchange.

Implementation Date

The Exchange proposes to delay the operative date of this proposal to a date within ninety (90) days after the Commission approved the Bats BZX proposal on July 6, 2017. The Exchange will announce the operative date in a Regulatory Circular made available to its Participants.

2. Statutory Basis

The Exchange believes that the proposal is consistent with the requirements of Section 6(b) of the Securities Exchange Act of 1934 (the “Act”),¹⁵ in general, and Section 6(b)(5) of the Act,¹⁶ in particular, in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general to protect investors and the public interest. In particular, the Exchange believes that the proposal to utilize a TP Provider in the event the NBBO is unavailable or unreliable will provide greater transparency and clarity with respect to the adjustment and nullification of erroneous options transactions. Particularly, the proposed changes seek to achieve consistent results for participants across U.S. options exchanges while maintaining a fair and orderly market, protecting investors and protecting the public interest. Thus, the Exchange believes that the proposal is consistent with Section 6(b)(5) of the Act¹⁷ in that the proposed Rule will foster cooperation and coordination with persons engaged in regulating and facilitating transactions.

The Exchange again reiterates that it has retained the standard of the current rule for most reviews of options transactions pursuant to Rule 7170, which is to rely on the NBBO to determine Theoretical Price if such NBBO can reasonably be relied upon. The proposal to use a TP Provider when the NBBO is unavailable or unreliable is consistent with Section 6(b)(5) of the Act¹⁸ in that the proposed Rule will foster cooperation and coordination with persons engaged in regulating and facilitating transactions by further reducing the possibility of disparate results between options exchanges and increasing the objectivity of the

application of Rule 7170. Further, the Exchange believes that the proposed Rule is transparent with respect to the limited circumstances under which the Exchange will request a review and correction of Theoretical Price from the TP Provider, and has sought to limit such circumstances as much as possible. The Exchange notes that under the current Rule, Exchange personnel are required to determine Theoretical Price in certain circumstances and yet rarely do so because such circumstances have already been significantly limited under the harmonized rule (for example, because the wide quote provision of the harmonized rule only applies if the quote was narrower and then gapped but does not apply if the quote had been persistently wide). Thus, the Exchange believes it will need to request Theoretical Price from the TP Provider only in very rare circumstances and in turn, the Exchange anticipates that the need to contact the TP Provider for additional review of the Theoretical Price provided by the TP Provider will be even rarer. Similarly, the Exchange believes it is unlikely that an Exchange Official will ever be required to determine Theoretical Price, as such circumstance would only be in the event of a systems issue that has rendered the TP Provider’s services unavailable and such issue cannot be corrected in a timely manner.

The Exchange also believes its proposal to adopt language in paragraph (d) of IM-7170-5 to disclaim the liability of the Exchange and the TP Provider in connection with the proposed Rule, the TP Provider’s calculation of Theoretical Price, and the Exchange’s use of such Theoretical Price is consistent with the Act. As noted above, this proposed language is modeled after existing language in Exchange Rules regarding “reporting authorities” that calculate indices,¹⁹ and is consistent with Section 6(b)(5) of the Act²⁰ in that the proposed Rule will foster cooperation and coordination with persons engaged in regulating and facilitating transactions.

As described above, the Exchange proposes a modification to the valid quotes provision to also exclude quotes in a series published by another options exchange if either party to the transaction in question submitted the orders or quotes in the series representing such options exchange’s best bid or offer. The Exchange believes this proposal is consistent with Section 6(b)(5) of the Act²¹ because the

application of the rule will foster cooperation and coordination with persons engaged in regulating and facilitating transactions by allowing the Exchange to coordinate with other options exchanges to determine whether a market participant that is party to a potentially erroneous transaction on the Exchange established the market in an option on other options exchanges; to the extent this can be established, the Exchange believes such participant’s quotes should be excluded in the same way such quotes are excluded on the Exchange. The Exchange also believes it is reasonable to limit the scope of this provision to twenty-five (25) series and to require the party that believes it established the best bid or offer on one or more other options exchanges to identify to the Exchange the quotes which were submitted by that party and published by other options exchanges. The Exchange believes these limitations are consistent with Section 6(b)(5) of the Act²² because they will ensure that the Exchange is able to continue to apply the Rule in a timely and organized fashion, thus fostering cooperation and coordination with persons engaged in regulating and facilitating transactions and also removing impediments to and perfecting the mechanism of a free and open market and a national market system.

B. Self-Regulatory Organization’s Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act as explained below.

Importantly, the Exchange does not believe that the proposal will impose a burden on intermarket competition but rather that it will alleviate any burden on competition because it is the result of a collaborative effort by all options exchanges to further harmonize and improve the process related to the adjustment and nullification of erroneous options transactions. The Exchange does not believe that the rules applicable to such process is an area where options exchanges should compete, but rather, that all options exchanges should have consistent rules to the extent possible. Particularly where a market participant trades on several different exchanges and an erroneous trade may occur on multiple markets nearly simultaneously, the Exchange believes that a participant should have a consistent experience with respect to the nullification or

¹⁸ *Id.*

¹⁹ See *supra*, note 12.

²⁰ 15 U.S.C. 78f(b)(5).

²¹ 15 U.S.C. 78f(b)(5).

²² 15 U.S.C. 78f(b)(5).

adjustment of transactions. To that end, the selection and implementation of a TP Provider utilized by all options exchanges will further reduce the possibility that participants with potentially erroneous transactions that span multiple options exchanges are handled differently on such exchanges. Similarly, the proposed ability to consider quotations invalid on another options exchange if ultimately originating from a party to a potentially erroneous transaction on the Exchange represents a proposal intended to further foster cooperation by the options exchanges with respect to market events. The Exchange understands that all other options exchanges intend to file proposals that are substantially similar to this proposal.

The Exchange does not believe that the proposed rule change imposes a burden on intramarket competition because the proposed provisions apply to all market participants equally.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange has neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days after the date of the filing, or such shorter time as the Commission may designate, it has become effective pursuant to 19(b)(3)(A) of the Act²³ and Rule 19b-4(f)(6)²⁴ thereunder.

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings

to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-BOX-2017-25 on the subject line.

Paper Comments

- Send paper comments in triplicate to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-BOX-2017-25. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-BOX-2017-25, and should be submitted on or before September 5, 2017.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.²⁵

Eduardo A. Aleman,

Assistant Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-81353; File No. SR-MRX-2017-16]

Self-Regulatory Organizations; Nasdaq MRX, LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend Rule 720, Nullification and Adjustment of Options Transactions Including Obvious Errors

August 8, 2017.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on August 3, 2017, Nasdaq MRX, LLC ("MRX" or "Exchange") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Rule 720, Nullification and Adjustment of Options Transactions including Obvious Errors.

While these amendments are effective upon filing, the Exchange has designated the proposed amendments to be operative on a date that is within ninety (90) days after the Commission approved a similar proposal filed by Bats BZX on July 6, 2017.

The text of the proposed rule change is available on the Exchange's Web site at www.ise.com, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for

²³ 15 U.S.C. 78s(b)(3)(A).

²⁴ 17 CFR 240.19b-4(f)(6). In addition, Rule 19b-4(f)(6) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

²⁵ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange and other options exchanges recently adopted a new, harmonized rule related to the adjustment and nullification of erroneous options transactions, including a specific provision related to coordination in connection with large-scale events involving erroneous options transactions.³ The Exchange believes that the changes the options exchanges implemented with the new, harmonized rule have led to increased transparency and finality with respect to the adjustment and nullification of erroneous options transactions. However, as part of the initial initiative, the Exchange and other options exchanges deferred a few specific matters for further discussion. Specifically, as described in the Initial Filing, the Exchange and all other options exchanges have been working to further improve the review of potentially erroneous transactions as well as their subsequent adjustment by creating an objective and universal way to determine Theoretical Price in the event a reliable NBBO is not available. Because this initiative required additional exchange and industry discussion as well as additional time for development and implementation, the Exchange and the other options exchanges determined to proceed with the Initial Filing and to undergo a secondary initiative to complete any additional improvements to the applicable rule. In this filing, the Exchange proposes to adopt procedures that will lead to a more objective and uniform way to determine Theoretical Price in the event a reliable NBBO is not available. In addition to this change, the Exchange has proposed two additional minor changes to its rules. The Exchange's proposal mirrors that of Bats

BZX, which the Exchange [sic] approved on July 6, 2017,⁴ and those that the other options exchanges intend to file, except that it omits the section of the proposal that pertains to trading halts due to the fact that the Supplementary Material to Exchange Rule 702 already includes the applicable language.

Calculation of Theoretical Price Using a Third Party Provider

Under the harmonized rule, when reviewing a transaction as potentially erroneous, the Exchange needs to first determine the "Theoretical Price" of the option, *i.e.*, the Exchange's estimate of the correct market price for the option. Pursuant to Rule 720, if the applicable option series is traded on at least one other options exchange, then the Theoretical Price of an option series is the last national best bid ("NBB") just prior to the trade in question with respect to an erroneous sell transaction or the last national best offer ("NBO") just prior to the trade in question with respect to an erroneous buy transaction unless one of the exceptions described below exists. Thus, whenever the Exchange has a reliable NBB or NBO, as applicable, just prior to the transaction, then the Exchange uses this NBB or NBO as the Theoretical Price.

The Rule also contains various provisions governing specific situations where the NBB or NBO is not available or may not be reliable. Specifically, the Rule specifies situations in which there are no quotes or no valid quotes for comparison purposes, when the national best bid or offer ("NBBO") is determined to be too wide to be reliable, and at the open of trading on each trading day. In each of these circumstances, in turn, because the NBB or NBO is not available or is deemed to be unreliable, the Exchange determines Theoretical Price. Under the current Rule, when determining Theoretical Price, Exchange personnel generally consult and refer to data such as the prices of related series, especially the closest strikes in the option in question. Exchange personnel may also take into account the price of the underlying security and the volatility characteristics of the option as well as historical pricing of the option and/or similar options. Although the Rule is administered by experienced personnel and the Exchange believes the process is currently appropriate, the Exchange recognizes that it is also subjective and

could lead to disparate results for a transaction that spans multiple options exchanges.

The Exchange proposes to adopt Supplementary Material to Rule 720, Item .04 to specify how the Exchange will determine Theoretical Price when required by sub-paragraphs (b)(1)–(3) of the Rule (*i.e.*, at the open, when there are no valid quotes or when there is a wide quote). In particular, the Exchange has been working with other options exchanges to identify and select a reliable third party vendor ("TP Provider") that would provide Theoretical Price to the Exchange whenever one or more transactions is under review pursuant to Rule 720 and the NBBO is unavailable or deemed unreliable pursuant to Rule 720(b). The Exchange and other options exchanges have selected CBOE Livevol, LLC ("Livevol") as the TP Provider, as described below. As further described below, proposed Supplementary Material to Rule 720, Item .04 would codify the use of the TP Provider as well as limited exceptions where the Exchange would be able to deviate from the Theoretical Price given by the TP Provider.

Pursuant to proposed Supplementary Material to Rule 720, Item .04, when the Exchange must determine Theoretical Price pursuant to the sub-paragraphs (b)(1)–(3) of the Rule, the Exchange will request Theoretical Price from the third party vendor to which the Exchange and all other options exchanges have subscribed. Thus, as set forth in this proposed language, Theoretical Price would be provided to the Exchange by the TP Provider on request and not through a streaming data feed.⁵ This language also makes clear that the Exchange and all other options exchanges will use the same TP Provider.

As noted above, the proposed TP Provider selected by the Exchange and other options exchanges is Livevol. The Exchange proposes to codify this selection in proposed paragraph (d) to Supplementary Material to Rule 720, Item .04. As such, the Exchange would file a rule proposal and would provide notice to the options industry of any proposed change to the TP Provider.

The Exchange and other options exchanges have selected Livevol as the proposed TP Provider after diligence into various alternatives. Livevol has, since 2009, been the options industry

³ The Exchange's application for registration as a national securities exchange, ss [sic] approved by the Commission, incorporated the changes made previously by the other options exchanges. See Securities Exchange Act Release No. 34-76998 (January 29, 2016); 81 FR 6066 (Feb. 4, 2016) (the "Initial Filing").

⁴ See Securities Exchange Act Release No. 34-81084 (July 6, 2017) (granting approval of Bats BZX proposal), 82 FR 32216 (July 12, 2017); 82 FR 23684 (May 23, 2017) (SR-BatsBZX-2017-035) (notice of filing of Bats BZX proposal).

⁵ Though the Exchange and other options exchanges considered a streaming feed, it was determined that it would be more feasible to develop and implement an on demand service and that such a service would satisfy the goals of the initiative.

leader in providing equity and index options market data and analytics services.⁶ The Exchange believes that Livevol has established itself within the options industry as a trusted provider of such services and notes that it and all other options exchanges already subscribe to various Livevol services. In connection with this proposal, Livevol will develop a new tool based on its existing technology and services that will supply Theoretical Price to the Exchange and other options exchanges upon request. The Theoretical Price tool will leverage current market data and surrounding strikes to assist in a relative value pricing approach to generating a Theoretical Price. When relative value methods are incapable of generating a valid Theoretical Price, the Theoretical Price tool will utilize historical trade and quote data to calculate Theoretical Price.

Because the purpose of the proposal is to move away from a subjective determination by Exchange personnel when the NBBO is unavailable or unreliable, the Exchange intends to use the Theoretical Price provided by the TP Provider in all such circumstances. However, the Exchange believes it is necessary to retain the ability to contact the TP Provider if it believes that the Theoretical Price provided is fundamentally incorrect and to determine the Theoretical Price in the limited circumstance of a systems issue experienced by the TP Provider, as described below.

As proposed, to the extent an Official⁷ of the Exchange believes that the Theoretical Price provided by the TP Provider is fundamentally incorrect and cannot be used consistent with the maintenance of a fair and orderly market, the Official shall contact the TP Provider to notify the TP Provider of the reason the Official believes such Theoretical Price is inaccurate and to request a review and correction of the calculated Theoretical Price. For example, if an Official received from the TP Provider a Theoretical Price of \$80 in a series that the Official might expect to be instead in the range of \$8 to \$10 because of a recent corporate action in the underlying, the Official would request that the TP Provider review and confirm its calculation and determine whether it had appropriately accounted

for the corporate action. In order to ensure that other options exchanges that may potentially be relying on the same Theoretical Price that, in turn, the Official believes to be fundamentally incorrect, the Exchange also proposes to promptly provide notice to other options exchanges that the TP Provider has been contacted to review and correct the calculated Theoretical Price at issue and to include a brief explanation of the reason for the request.⁸ Although not directly addressed by the proposed Rule, the Exchange expects that all other options exchanges once in receipt of this notification would await the determination of the TP Provider and would use the corrected price as soon as it is available. The Exchange further notes that it expects the TP Provider to cooperate with, but to be independent of, the Exchange and other options exchanges.⁹

The Exchange believes that the proposed provision to allow an Official to contact the TP Provider if he or she believes the provided Theoretical Price is fundamentally incorrect is necessary, particularly because the Exchange and other options exchanges will be using the new process for the first time. Although the exchanges have conducted thorough diligence with respect to Livevol as the selected TP Provider and would do so with any potential replacement TP Provider, the Exchange is concerned that certain scenarios could arise where the Theoretical Price generated by the TP Provider does not take into account relevant factors and would result in an unfair result for market participants involved in a transaction. The Exchange notes that if such situations do indeed arise, to the extent practicable the Exchange will also work with the TP Provider and other options exchanges to improve the TP Provider's calculation of Theoretical Price in future situations. For instance, if the Exchange determines that a particular type of corporate action is not being appropriately captured by the TP Provider when such provider is generating Theoretical Price, while the Exchange believes that it needs the

ability to request a review and correction of the Theoretical Price in connection with a specific review in order to provide a timely decision to market participants, the Exchange would share information regarding the specific situation with the TP Provider and other options exchanges in an effort to improve the Theoretical Price service for future use. The Exchange notes that it does not anticipate needing to rely on this provision frequently, if at all, but believes the provision is necessary nonetheless to best prepare for all potential circumstances. Further, the Theoretical Price used by the Exchange in connection with its rulings will always be that received from the TP Provider and the Exchange has not proposed the ability to deviate from such price.¹⁰

Pursuant to proposed paragraph (c) to Supplementary Material to Rule 720, Item .04, an Official of the Exchange may determine the Theoretical Price if the TP Provider has experienced a systems issue that has rendered its services unavailable to accurately calculate Theoretical Price and such issue cannot be corrected in a timely manner. The Exchange notes that it does not anticipate needing to rely on this provision frequently, if at all, but believes the provision is necessary nonetheless to best prepare for all potential circumstances. Further, consistent with existing text in Rule 720(e)(4), the Exchange has not proposed a specific time by which the service must be available in order to be considered timely.¹¹ The Exchange expects that it would await the TP Provider's services becoming available again so long as the Exchange was able to obtain information regarding the issue and the TP Provider had a reasonable expectation of being able to resume normal operations within the next several hours based on communications with the TP Provider. More specifically with respect to Livevol, Livevol has business continuity and disaster recovery procedures that will help to ensure that the Theoretical Price tool remains available or, in the event of an outage, that service is restored in a timely manner.

The Exchange also notes that if a wide-scale event occurred, even if such

⁶ The Exchange notes that in 2015, Livevol was acquired by CBOE Holdings, Inc., the ultimate parent company of the Chicago Board Options Exchange ("CBOE") and C2 Options Exchange ("C2").

⁷ For purposes of the Rule, an Official is an Officer of the Exchange or such other employee designee of the Exchange that is trained in the application of this Rule. See Rule 720(a)(3).

⁸ See proposed paragraph (b) to Supplementary Material to Rule 720, Item .04.

⁹ The Exchange expects any TP Provider selected by the Exchange and other options exchanges to act independently in its determination and calculation of Theoretical Price. With respect to Livevol specifically, the Exchange again notes that Livevol is a subsidiary of CBOE Holdings, Inc., which is also the ultimate parent company of multiple options exchanges. The Exchange expects Livevol to calculate Theoretical Price independent of its affiliated exchanges in the same way it will calculate Theoretical Price independent of non-affiliated exchanges.

¹⁰ To the extent the TP Provider has been contacted by an Official of the Exchange, reviews the Theoretical Price provided but disagrees that there has been any error, then the Exchange would be bound to use the Theoretical Price provided by the TP Provider.

¹¹ In the context of a Significant Market Event, the Exchange may determine, "in consultation with other options exchanges . . . that timely adjustment is not feasible due to the extraordinary nature of the situation." See Rule 720(e)(4).

event did not qualify as a “Significant Market Event” pursuant to Rule 720(e), and the TP Provider was unavailable or otherwise experiencing difficulty, the Exchange believes that it and other options exchanges would seek to coordinate to the extent possible. In particular, the Exchange and other options exchanges now have a process, administered by the Options Clearing Corporation, to invoke a discussion amongst all options exchanges in the event of any widespread or significant market events. The Exchange believes that this process could be used in the event necessary if there were an issue with the TP Provider.

The Exchange also proposes to adopt language in paragraph (d) of Supplementary Material to Rule 720, Item .04 to Rule 720 to disclaim the liability of the Exchange and the TP Provider in connection with the proposed Rule, the TP Provider’s calculation of Theoretical Price, and the Exchange’s use of such Theoretical Price. Specifically, the proposed rule would state that neither the Exchange, the TP Provider, nor any affiliate of the TP Provider (the TP Provider and its affiliates are referred to collectively as the “TP Provider”), makes any warranty, express or implied, as to the results to be obtained by any person or entity from the use of the TP Provider pursuant to Supplementary Material to Rule 720, Item .04. The proposed rule would further state that the TP Provider does not guarantee the accuracy or completeness of the calculated Theoretical Price and that the TP Provider disclaims all warranties of merchantability or fitness for a particular purpose or use with respect to such Theoretical Price. Finally, the proposed Rule would state that neither the Exchange nor the TP Provider shall have any liability for any damages, claims, losses (including any indirect or consequential losses), expenses, or delays, whether direct or indirect, foreseen or unforeseen, suffered by any person arising out of any circumstance or occurrence relating to the use of such Theoretical Price or arising out of any errors or delays in calculating such Theoretical Price. This proposed language is modeled after existing language in Exchange Rules regarding “reporting authorities” that calculate indices.¹²

In connection with the proposed change described above, the Exchange proposes to modify Rule 720 to state

that the Exchange will rely on paragraph (b) and Supplementary Material to Rule 720, Item .04 when determining Theoretical Price.

No Valid Quotes—Market Participant Quoting on Multiple Exchanges

As described above, one of the times where the NBB or NBO is deemed to be unreliable for purposes of Theoretical Price is when there are no quotes or no valid quotes for the affected series. In addition to when there are no quotes, the Exchange does not consider the following to be valid quotes: (i) All quotes in the applicable option series published at a time where the last NBB is higher than the last NBO in such series (a “crossed market”); (ii) quotes published by the Exchange that were submitted by either party to the transaction in question; and (iii) quotes published by another options exchange against which the Exchange has declared self-help. In recognition of today’s market structure where certain participants actively provide liquidity on multiple exchanges simultaneously, the Exchange proposes to add an additional category of invalid quotes. Specifically, in order to avoid a situation where a market participant has established the market at an erroneous price on multiple exchanges, the Exchange proposes to consider as invalid the quotes in a series published by another options exchange if either party to the transaction in question submitted the quotes in the series representing such options exchange’s best bid or offer. Thus, similar to being able to ignore for purposes of the Rule the quotes published by the Exchange if submitted by either party to the transaction in question, the Exchange would be able to ignore for purposes of the rule quotations on other options exchanges by that same market participant.

In order to continue to apply the Rule in a timely and organized fashion, however, the Exchange proposes to initially limit the scope of this proposed provision in two ways. First, because the process will take considerable coordination with other options exchanges to confirm that the quotations in question on an away options exchange were indeed submitted by a party to a transaction on the Exchange, the Exchange proposes to limit this provision to apply to up to twenty-five (25) total options series (*i.e.*, whether such series all relate to the same underlying security or multiple underlying securities). Second, the Exchange proposes to require the party that believes it established the best bid or offer on one or more other options

exchanges to identify to the Exchange the quotes which were submitted by such party and published by other options exchanges. In other words, as proposed, the burden will be on the party seeking that the Exchange disregard their quotations on other options exchanges to identify such quotations. In turn, the Exchange will verify with such other options exchanges that such quotations were indeed submitted by such party.

Below are examples of both the current rule and the rule as proposed to be amended.

Example 1—Current Rule, Member Erroneously Quotes on One Exchange Assumptions

For purposes of this example, assume the following:

- A Member acting as a Market Maker on the Exchange (“Market Maker A”) is quoting in twenty series of options underlying security ABCD on the Exchange (and only the Exchange).
- Market Maker A makes an error in calculating the market for options on ABCD, and publishes quotes in all twenty series to buy options at \$1.00 and to sell options at \$1.05.
- In fact, options on ABCD in these series are nearly worthless and no other market participant is quoting in such series.
- Therefore, the NBBO in the twenty series at issue is $\$1.00 \times \$1.05$ (with the Exchange representing the NBBO based on Market Maker A’s quotes).
- Assume Member A immediately enters sell orders and executes against Market Maker A’s quotes at \$1.00.
- Assume Market Maker A submits to the Exchange a timely request for review of the trades with Member A as potentially erroneous transactions to buy.

Result

- Based on the Exchange’s current rules, the Exchange would identify Market Maker A as a participant to the trades at issue and would consider Market Maker A’s quotations invalid pursuant to Rule 720(b)(2).
- As there were no other valid quotes to use as a reference price, the Exchange would then determine Theoretical Price.
- Assume the Exchange determines a Theoretical Price of \$0.05.
- The execution price of \$1.00 exceeds the \$0.25 minimum amount set forth in the Exchange’s table to determine whether an obvious error has occurred (*i.e.*, $\$0.05 + \$0.25 = \$0.30$) so any execution at or above this price is an obvious error.
- Accordingly, the executions in all series would be adjusted by the

¹² See, e.g., ISE Rule 2011, which is incorporated by reference into the MRX rules and which relates to index options potentially listed and traded on the Exchange and disclaim [sic] liability for a reporting authority and their affiliates.

Exchange to executions at \$0.20 per contract (Theoretical Price of \$0.05 plus \$0.15) to the extent the incoming orders submitted by Member A were non-Customer orders.

- The executions in all series would be nullified to the extent the incoming orders submitted by Member A were Customer orders.

Example 2—Current Rule, Member Erroneously Quotes on Multiple Exchanges

Assumptions

For purposes of this example, assume the following:

- A Member acting as a Market Maker on the Exchange (“Market Maker A”) is quoting in twenty series of options underlying security ABCD on the Exchange and on a second exchange (“Away Exchange”).
- Market Maker A makes an error in calculating the market for options on ABCD, and publishes quotes on both the Exchange and the Away Exchange in all twenty series to buy options at \$1.00 and to sell options at \$1.05.
- In fact, options on ABCD in these series are nearly worthless and no other market participant is quoting in such series.
- Therefore, the NBBO in the twenty series at issue is $\$1.00 \times \$1.05$ (with the Exchange and the Away Exchange representing the NBBO based on Market Maker A’s quotes).
- Assume Member A immediately enters sell orders and executes against Market Maker A’s quotes at \$1.00.
- Assume Market Maker A submits to the Exchange and to the Away Exchange timely requests for review of the trades with Member A as potentially erroneous transactions to buy.

Result

- Based on the Exchange’s current rules, the Exchange would identify Market Maker A as a participant to the trades at issue and would consider Market Maker A’s quotations on the Exchange invalid pursuant to Rule 720(b)(2). The Exchange, however, would view the Away Exchange’s quotations as valid, and would thus determine Theoretical Price to be \$1.05 (*i.e.*, the NBO in the case of a potentially erroneous buy transaction).
- The execution price of \$1.00 does not exceed the \$0.25 minimum amount set forth in the Exchange’s table to determine whether an obvious error has occurred (*i.e.*, $\$1.05 + \$0.25 = \$1.30$) so any execution at or above this price is an obvious error.
- The transactions on the Exchange would not be nullified or adjusted.

- As the Exchange and all other options exchanges have identical rules with respect to the process described above, the transactions on the Away Exchange would not be nullified or adjusted.

Example 3—Proposed Rule, Member Erroneously Quotes on Multiple Exchanges¹³

Assumptions

For purposes of this example, assume the following:

- A Member acting as a Market Maker on the Exchange (“Market Maker A”) is quoting in twenty series of options underlying security ABCD on the Exchange and on a second exchange (“Away Exchange”).¹⁴
- Market Maker A makes an error in calculating the market for options on ABCD, and publishes quotes on both the Exchange and the Away Exchange in all twenty series to buy options at \$1.00 and to sell options at \$1.05.
- In fact, options on ABCD in these series are nearly worthless and no other market participant is quoting in such series.
- Therefore, the NBBO in the twenty series at issue is $\$1.00 \times \$1.05$ (with the Exchange and the Away Exchange representing the NBBO based on Market Maker A’s quotes).
- Assume Member A immediately enters sell orders and executes against Market Maker A’s quotes at \$1.00.
- Assume Market Maker A submits to the Exchange and to the Away Exchange timely requests for review of the trades with Member A as potentially erroneous transactions to buy. At the time of submitting the requests for review to the Exchange and the Away Exchange, Market Maker A identifies to the Exchange the quotes on the Away Exchange as quotes also represented by Market Maker A (and to the Away Exchange, the quotes on the Exchange as quotes also represented by Market Maker A).

Result

- Based on the proposed rules, the Exchange would identify Market Maker A as a participant to the trades at issue and would consider Market Maker A’s quotations on the Exchange invalid pursuant to Rule 720(b)(2).

¹³ The Exchange notes that its proposed rule will not impact the proposed handling of a request for review where a market participant is quoting only on the Exchange, thus, the Exchange has not included a separate example for such a fact pattern.

¹⁴ The Exchange notes that the proposed rule would operate the same if Market Maker A was quoting on more than two exchanges. The Exchange has limited the example to two exchanges for simplicity.

- The Exchange and the Away Exchange would also coordinate to confirm that the quotations identified by Market Maker A on the other exchange were indeed Market Maker A’s quotations. Once confirmed, each of the Exchange and the Away Exchange would also consider invalid the quotations published on the other exchange.

- As there were no other valid quotes to use as a reference price, the Exchange would then determine Theoretical Price.
- Assume the Exchange determines a Theoretical Price of \$0.05.
- The execution price of \$1.00 exceeds the \$0.25 minimum amount set forth in the Exchange’s table to determine whether an obvious error has occurred (*i.e.*, $\$0.05 + \$0.25 = \$0.30$) so any execution at or above this price is an obvious error.
- Accordingly, the executions in all series would be adjusted by the Exchange to executions at \$0.20 per contract (Theoretical Price of \$0.05 plus \$0.15) to the extent the incoming orders submitted by Member A were non-Customer orders.
- The executions in all series would be nullified to the extent the incoming orders submitted by Member A were Customer orders.
- As the Exchange and all other options exchanges would have identical rules with respect to the process described above, as other options exchanges intend to adopt the same rule if the proposed rule is approved, the transactions on the Away Exchange would also be nullified or adjusted as set forth above.

- If this example was instead modified such that Market Maker A was quoting in 200 series rather than 20, the Exchange notes that Market Maker A could only request that the Exchange consider as invalid their quotations in 25 of those series on other exchanges. As noted above, the Exchange has proposed to limit the proposed rule to 25 series in order to continue to process requests for review in a timely and organized fashion in order to provide certainty to market participants. This is due to the amount of coordination that will be necessary in such a scenario to confirm that the quotations in question on an away options exchange were indeed submitted by a party to a transaction on the Exchange.

Implementation Date

The Exchange proposes to delay the operative date of this proposal to a date within ninety (90) days after the Commission approved the Bats BZX proposal on July 6, 2017. The Exchange will announce the operative date in a

Regulatory Alert made available to its Members.

2. Statutory Basis

The Exchange believes that its proposal is consistent with the requirements of the Act and the rules and regulations thereunder that are applicable to a national securities exchange, and, in particular, with the requirements of Section 6(b) of the Act.¹⁵ Specifically, the proposal is consistent with Section 6(b)(5) of the Act¹⁶ because it would promote just and equitable principles of trade, remove impediments to, and perfect the mechanism of, a free and open market and a national market system, and, in general, protect investors and the public interest.

As described above, the Exchange and other options exchanges are seeking to further modify their harmonized rules related to the adjustment and nullification of erroneous options transactions. The Exchange believes that the proposal to utilize a TP Provider in the event the NBBO is unavailable or unreliable will provide greater transparency and clarity with respect to the adjustment and nullification of erroneous options transactions. Particularly, the proposed changes seek to achieve consistent results for participants across U.S. options exchanges while maintaining a fair and orderly market, protecting investors and protecting the public interest. Thus, the Exchange believes that the proposal is consistent with Section 6(b)(5) of the Act¹⁷ in that the proposed Rule will foster cooperation and coordination with persons engaged in regulating and facilitating transactions.

The Exchange again reiterates that it has retained the standard of the current rule for most reviews of options transactions pursuant to Rule 720, which is to rely on the NBBO to determine Theoretical Price if such NBBO can reasonably be relied upon. The proposal to use a TP Provider when the NBBO is unavailable or unreliable is consistent with Section 6(b)(5) of the Act¹⁸ in that the proposed Rule will foster cooperation and coordination with persons engaged in regulating and facilitating transactions by further reducing the possibility of disparate results between options exchanges and increasing the objectivity of the application of Rule 720. Further, the Exchange believes that the proposed Rule is transparent with respect to the

limited circumstances under which the Exchange will request a review and correction of Theoretical Price from the TP Provider, and has sought to limit such circumstances as much as possible. The Exchange notes that under the current Rule, Exchange personnel are required to determine Theoretical Price in certain circumstances and yet rarely do so because such circumstances have already been significantly limited under the harmonized rule (for example, because the wide quote provision of the harmonized rule only applies if the quote was narrower and then gapped but does not apply if the quote had been persistently wide). Thus, the Exchange believes it will need to request Theoretical Price from the TP Provider only in very rare circumstances and in turn, the Exchange anticipates that the need to contact the TP Provider for additional review of the Theoretical Price provided by the TP Provider will be even rarer. Similarly, the Exchange believes it is unlikely that an Exchange Official will ever be required to determine Theoretical Price, as such circumstance would only be in the event of a systems issue that has rendered the TP Provider's services unavailable and such issue cannot be corrected in a timely manner.

The Exchange also believes its proposal to adopt language in paragraph (d) of Supplementary Material to Rule 720, Item .04 to Rule 720 to disclaim the liability of the Exchange and the TP Provider in connection with the proposed Rule, the TP Provider's calculation of Theoretical Price, and the Exchange's use of such Theoretical Price is consistent with the Act. As noted above, this proposed language is modeled after existing language in Exchange Rules regarding "reporting authorities" that calculate indices,¹⁹ and is consistent with Section 6(b)(5) of the Act²⁰ in that the proposed Rule will foster cooperation and coordination with persons engaged in regulating and facilitating transactions.

As described above, the Exchange proposes a modification to the valid quotes provision to also exclude quotes in a series published by another options exchange if either party to the transaction in question submitted the orders or quotes in the series representing such options exchange's best bid or offer. The Exchange believes this proposal is consistent with Section 6(b)(5) of the Act²¹ because the application of the rule will foster cooperation and coordination with

persons engaged in regulating and facilitating transactions by allowing the Exchange to coordinate with other options exchanges to determine whether a market participant that is party to a potentially erroneous transaction on the Exchange established the market in an option on other options exchanges; to the extent this can be established, the Exchange believes such participant's quotes should be excluded in the same way such quotes are excluded on the Exchange. The Exchange also believes it is reasonable to limit the scope of this provision to twenty-five (25) series and to require the party that believes it established the best bid or offer on one or more other options exchanges to identify to the Exchange the quotes which were submitted by that party and published by other options exchanges. The Exchange believes these limitations are consistent with Section 6(b)(5) of the Act²² because they will ensure that the Exchange is able to continue to apply the Rule in a timely and organized fashion, thus fostering cooperation and coordination with persons engaged in regulating and facilitating transactions and also removing impediments to and perfecting the mechanism of a free and open market and a national market system.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange believes the entire proposal is consistent with Section 6(b)(8) of the Act²³ in that it does not impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act as explained below.

Importantly, the Exchange does not believe that the proposal will impose a burden on intermarket competition but rather that it will alleviate any burden on competition because it is the result of a collaborative effort by all options exchanges to further harmonize and improve the process related to the adjustment and nullification of [sic] erroneous options transactions. The Exchange does not believe that the rules applicable to such process is an area where options exchanges should compete, but rather, that all options exchanges should have consistent rules to the extent possible. Particularly where a market participant trades on several different exchanges and an erroneous trade may occur on multiple markets nearly simultaneously, the Exchange believes that a participant should have a consistent experience with respect to the nullification or

¹⁵ 15 U.S.C. 78f(b).

²⁰ 15 U.S.C. 78f(b)(5).

²¹ 15 U.S.C. 78f(b)(5).

²² *Id.*

²³ 15 U.S.C. 78f(b)(8).

adjustment of transactions. To that end, the selection and implementation of a TP Provider utilized by all options exchanges will further reduce the possibility that participants with potentially erroneous transactions that span multiple options exchanges are handled differently on such exchanges. Similarly, the proposed ability to consider quotations invalid on another options exchange if ultimately originating from a party to a potentially erroneous transaction on the Exchange represents a proposal intended to further foster cooperation by the options exchanges with respect to market events. The Exchange understands that all other options exchanges either have or they intend to file proposals that are substantially similar to this proposal.

The Exchange does not believe that the proposed rule change imposes a burden on intramarket competition because the proposed provisions apply to all market participants equally.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A)(iii) of the Act²⁴ and subparagraph (f)(6) of Rule 19b-4 thereunder.²⁵

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) Necessary or appropriate in the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings

to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-MRX-2017-16 on the subject line.

Paper Comments

- Send paper comments in triplicate to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-MRX-2017-16. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-MRX-2017-16, and should be submitted on or before September 5, 2017.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.²⁶

Eduardo A. Aleman,

Assistant Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-81339; File No. SR-NSCC-2017-011]

Self-Regulatory Organizations; National Securities Clearing Corporation; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Make Certain Adjustments, Clarifications and Corrections to the Fee Provisions for Insurance and Retirement Processing Services

August 8, 2017.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")¹ and Rule 19b-4 thereunder,² notice is hereby given that on August 3, 2017, National Securities Clearing Corporation ("NSCC") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I, II and III below, which Items have been prepared by the clearing agency. NSCC filed the proposed rule change pursuant to Section 19(b)(3)(A)³ of the Act and subparagraphs (f)(2)⁴ and (f)(4)⁵ of Rule 19b-4 thereunder so that the proposal was effective upon filing with the Commission. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Clearing Agency's Statement of the Terms of Substance of the Proposed Rule Change

The proposed rule change would make certain adjustments, clarifications and corrections to the fee provisions for NSCC's Insurance and Retirement Processing Services ("I&RS") set forth in Addendum A (Fee Structure) ("Addendum A") of NSCC's Rules & Procedures ("Rules"), as described below.⁶

²⁵ 17 CFR 240.19b-4(f)(6). In addition, Rule 19b-4(f)(6) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

²⁶ 17 CFR 200.30-3(a)(12).

II. Clearing Agency's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the clearing agency included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The clearing agency has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

(A) Clearing Agency's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

NSCC is proposing to make adjustments, clarifications and corrections to the fee provisions for I&RS set forth in Addendum A, as described below, in order to (i) align the fees charged more closely with the costs of providing the associated products and services to Members and Limited Members of NSCC (collectively, "NSCC Members"); (ii) allocate those fees equitably among NSCC Members; and (iii) make the Rules more consistent and clear with respect to these fees.

(i) Proposed Changes to Fees

NSCC is proposing to make the following changes to fees set forth in Section IV.K. of Addendum A:

A. Proposed Change to Fees for Multiple Destination Files

NSCC currently charges NSCC Members an additional monthly fee for directing NSCC to deliver I&RS files to more than two destinations.⁷ NSCC added the additional monthly fees for multiple destinations in 2016 to align the fees charged with the cost of providing products and services to NSCC Members with multiple file destinations.⁸ Currently, the Rules state that NSCC charges an additional \$50 per month for delivering files to three to four destinations and an additional \$100 per month for delivering files to five or more destinations.⁹ NSCC has determined that charging an additional \$50 monthly fee for NSCC Members that send files to five destinations is sufficient to allow NSCC to recover costs to NSCC of delivering files to such

multiple destinations. Therefore, NSCC is proposing to amend its fee structure so that NSCC Members that direct NSCC to deliver files to five destinations would be charged an additional \$50 per month rather than an additional \$100 per month. As such, NSCC is proposing to change the additional fees charged for delivering files to multiple destinations, as described in Section IV.K. of Addendum A, to charge an additional \$50 per month for delivering files to three to five destinations, and an additional \$100 per month for delivering files to more than five destinations.

B. Proposed Change to Fees for Positions for Retirement Plans Files

NSCC is proposing to add a fee for the Positions for Retirement Plans file type into the billing tier for the Positions and Valuations service ("Positions") in Section IV.K. of Addendum A.¹⁰ Pursuant to Section 5 of Rule 57, NSCC Members can send four file types using Positions—Positions Full, Positions New, Positions for Retirement Plans, and Positions Focused.¹¹ In 2009, NSCC created two billing tiers for Positions, with one fee for Positions Full and Positions New, and a reduced fee charged for Positions Focused.¹² The fees charged for processing Positions Focused file types are lower because these files include less data than other Positions file types.¹³ In 2015, NSCC introduced a new file type for Positions—Positions for Retirement Plans. This file type is a full data file type, similar to the Positions Full and Positions New file types.

Therefore, NSCC is now proposing to amend Addendum A to add a fee for the Positions for Retirement Plans file type that is identical to the fee for the Positions Full and Positions New file types. NSCC believes this proposed change would align the fees for processing the Positions for Retirement Plans file type with the costs of delivering this service because the costs of processing the Positions for Retirement Plans file type are similar to the cost of processing the Positions Full and Positions New file types.

C. Proposed Change to Fees for Positions Focused

As stated above, NSCC amended Addendum A in the 2009 Fee Filing to change the fees to be charged for

processing the Positions Full, Positions New, and Positions Focused file types.¹⁴ The 2009 Fee Filing incorrectly amended Addendum A to state that NSCC would charge \$1.50 per 1,000 items for processing Positions Focused files from 2,000,001 to 4,000,000 items per month.¹⁵ NSCC management had previously determined that, in order to align the fee charged with the cost of providing this service, the fee for processing Positions Focused files from 2,000,001 to 4,000,000 items per month should be \$1.00 per 1,000 items.¹⁶ Therefore, NSCC is proposing to correct this error and amend Addendum A to provide that NSCC would charge \$1.00 per 1,000 items for processing Positions Focused files from 2,000,001 to 4,000,000 items per month.

D. Proposed Change to Fees for APP Non-Settlement Tiers

NSCC is proposing to modify the fee structure for the Initial Application Information feature of I&RS ("APP") in order to align the fees charged to settling NSCC Members with the fees charged to non-settling NSCC Members. In 2003, NSCC established two categories for the fee structure for APP—a category for settling NSCC Members and a separate category for non-settling NSCC Members.¹⁷ When the fee structure was implemented in 2003, the fees charged to settling NSCC Members were higher than the fees charged to non-settling NSCC Members and the category for settling NSCC Members contained three tiers while the category for non-settling NSCC Members contained two tiers.¹⁸ In the 2009 Fee Filing, NSCC reduced the fees applicable to settling NSCC Members for APP resulting in the fees in the first two tiers being identical to the fees in the tiers for the non-settling

¹⁴ 2009 Fee Filing, *supra* note 12.

¹⁵ Subsection 2.a.(ii), Section IV.K. of Addendum A, *supra* note 6. NSCC's Important Notice announcing the 2009 fee changes identified the intended price for this tier at \$1.00 per 1,000 items. See NSCC Important Notice, "2009 Fee Revisions," A# 6766, P&S# 6336, dated December 31, 2008, available at <http://www.dtcc.com/~media/Files/pdf/2008/12/31/a6766.pdf>.

¹⁶ A fee of \$1.00 per 1,000 items for processing Positions Focused files from 2,000,001 to 4,000,000 items per month was approved by the NSCC Core Services Operations and Planning Committee on November 13, 2008.

¹⁷ See Securities Exchange Act Release No. 48284 (August 5, 2003), 68 FR 48430 (August 13, 2003) (File No. SR-NSCC-2003-13).

¹⁸ See *id.* The fees for settling NSCC Members contained three tiers: (1) 0–1,999 items per month, (2) 2,000–3,499 items per month and (3) more than 3,499 per month. The fees for non-settling NSCC Members contained only two tiers: (1) 0–1,999 items per month, and (2) more than 1,999 items per month.

¹¹ Rule 57, *supra* note 6.

¹² Securities Exchange Act Release No. 59285 (January 23, 2009), 74 FR 5875 (February 2, 2009) (File No. SR-NSCC-2008-13) ("2009 Fee Filing").

¹³ Subsection 2.a.(ii), Section IV.K. of Addendum A, *supra* note 6.

NSCC Members.¹⁹ In addition, in the 2009 Fee Filing, NSCC reduced the fees in the third tier for settling NSCC Members. The result of these changes is that currently, settling NSCC Members that process more than 3,499 items a month receive a discount per item while non-settling NSCC Members do not.²⁰

NSCC believes the discount tier for processing more than 3,499 items a month was not added in the category for non-settling NSCC Members because these firms are unlikely to process transactions with more than 1,999 items per month and a tier for processing more items per month above 1,999 was unnecessary. Although NSCC believes it is unlikely that non-settling NSCC Members will process more than 1,999 items per month, NSCC is proposing to remove the separate fee categories for settling and non-settling NSCC Members in order to provide that the same fees apply to both settling NSCC Members and non-settling NSCC Members. The cost to NSCC for processing APP files for settling NSCC Members and non-settling NSCC Members is the same. Therefore, NSCC proposes to amend subsection 2.d. of Section IV.K of Addendum A to provide non-settling NSCC Members with the same discount that settling NSCC Members receive if they process more than 3,499 items per month.

(ii) Proposed Changes to the Organization of Addendum A

NSCC is also proposing to make the following changes to the organization of Section IV.K. of Addendum A, as described below:

A. Proposed Change to Location of Fees for Producer Management Portal

NSCC is proposing to revise Addendum A, Section IV.K., by deleting subsection 4. and moving the fees under the heading “Batch Service Fees” in that subsection to subsection 2.h.²¹ These fees would be renamed “Distributor Batch Service Fees.” These fees are charged in connection with use of the Producer Management Portal and are only charged to NSCC Members that are distributors, which include broker-dealers, banks and insurance agencies that act as intermediaries for insurance companies. The proposed change would include these fees with the other fees

charged for use of the Producer Management Portal, so such fees are identified in one section, and would further clarify that these fees are only charged to distributors. This proposed change would clarify this section of Addendum A, and would not change the fees charged for any services or products.

B. Proposed Change to Location of Fees Listed Under TIER 6

NSCC is proposing to revise Addendum A, Section IV.K., subsection 3., by deleting TIER 6, and moving each of the fees listed under this TIER into TIERS 3 and 5 based on the fees being charged.²² As a result of the proposed change, each product would be listed together with other products for which the same fee is being charged under one TIER.²³ The proposed rule change would move fees for “Values Inquiry” and “Policy Administration Inquiry” to TIER 3 and move fees for “Policy Administration Request,” “Death Notification Request,” “Fund Transfer,” “Withdrawals,” and “Arrangements” to TIER 5. Each of the fees moved from TIER 6 would be identified as being subject to the “In Force Transaction Chart,” which is currently set forth at the end of subsection 3., and would continue to apply to these fees. This proposed change would clarify this subsection of Addendum A, and would not change the fees charged for any services or products.

2. Statutory Basis

Section 17A(b)(3)(D) of the Act requires, in part, that the Rules provide for the equitable allocation of reasonable dues, fees, and other charges among its participants.²⁴

The proposed changes to Addendum A set forth in item II(A)(1)(i)(A) above are consistent with 17A(b)(3)(D) of the Act²⁵ because the proposed fees would be equitably allocated among NSCC Members based on each NSCC Member’s utilization of directing NSCC to send files to multiple destinations. In addition, NSCC believes that the proposed fee changes are reasonable because the proposed \$50 additional fee is less than the \$100 additional fee currently charged for delivering to five destinations, while continuing to allow NSCC to recover the costs associated with delivering to five destinations. Therefore, NSCC believes the proposed fee modifications set forth in item

II(A)(1)(i)(A) above are consistent with the requirements of Section 17A(b)(3)(D) of the Act.²⁶

The proposed changes to Addendum A set forth in items II(A)(1)(i)(B) and (D) above are consistent with 17A(b)(3)(D) of the Act²⁷ because the proposed fees would be allocated equitably among the NSCC Members that subscribe for those services based on each NSCC Member’s use of such services. In addition, NSCC believes that the proposed fees are reasonable because they would enable NSCC to better align its revenue with the costs and expenses required for NSCC to provide the services to NSCC Members. Specifically, with respect to II(A)(1)(i)(B), the costs of processing the Positions for Retirement Plans file type are similar to the cost of processing other full data file types and NSCC has determined that charging the same fee as is charged for other full data file types would enable it to recover its costs for processing the Positions for Retirement Plans file type. With respect to II(A)(1)(i)(D), the cost to NSCC of processing over 3,499 items per month in APP is the same for settling NSCC Members and non-settling NSCC Members and therefore the fees for settling NSCC Members and non-settling NSCC Members for APP should be the same. Therefore, by establishing fees that align with the cost of delivery of these products and services and allocating those fees equitably among the subscribing NSCC Members, the proposed changes to Addendum A set forth in items II(A)(1)(i)(B) and (D) are consistent with the requirements of Section 17A(b)(3)(D) of the Act.²⁸

NSCC believes the proposed fees set forth in item II(A)(1)(i)(C) above are also consistent with the requirements of 17A(b)(3)(D) of the Act.²⁹ Specifically, the proposed fees would be equitably allocated among NSCC Members that choose to process the file type for Positions Focused. NSCC also believes the proposed fees set forth in item II(A)(1)(i)(C) above are reasonable because the proposed fee for processing Position Focused files from 2,000,001 to 4,000,000 items per month is less than the fee currently charged, while continuing to allow NSCC to recover the costs associated with processing such items. In addition, the proposed fee changes were previously approved by NSCC management,³⁰ and NSCC Members were previously notified of the

¹⁹ 2009 Fee Filing, *supra* note 12.

²⁰ Subsection 2.d. Section IV.K. of Addendum A, *supra* note 6 (provides that settling NSCC Members that process more than 3,499 items per month in APP are charged \$0.50 per item compared to \$1.00 per item for processing 2,000 to 3,499 items per month).

²¹ Subsections 2. and 4., Section IV.K. of Addendum A, *supra* note 6.

²² Subsection 3., Section IV.K. of Addendum A of the Rules, *supra* note 6.

²³ TIER 6, subsection 3., Section IV.K. of Addendum A of the Rules, *supra* note 6.

²⁴ 15 U.S.C. 78q-1(b)(3)(D).

²⁵ *Id.*

²⁶ *Id.*

²⁷ *Id.*

²⁸ *Id.*

²⁹ *Id.*

³⁰ See *supra*, note 16.

fee changes,³¹ at the time the fee changes were originally contemplated for 2009. Therefore, NSCC believes the proposed fee modifications are consistent with the requirements of Section 17A(b)(3)(D) of the Act.³²

Section 17A(b)(3)(F) of the Act requires, in part, that the Rules promote the prompt and accurate clearance and settlement of securities transactions.³³ The proposed changes to Addendum A set forth in item II(A)(1)(ii) above would enhance NSCC Members' ability to understand the fees associated with the I&RS services. Specifically, the proposed rule change relating to Addendum A described above in item II(A)(1)(ii) would clarify the meaning of certain provisions of Addendum A relating to the fees and enhance clarity and consistency in the Rules in this regard. As such, the proposed rule change would allow NSCC Members to have a better understanding of the Rules in relation to their I&RS activity, and thereby assist in promoting the prompt and accurate clearance and settlement of securities transactions, consistent with the requirements of Section 17A(b)(3)(F) of the Act.³⁴

Rule 17Ad-22(e)(23)(i) under the Act requires, in part, that NSCC establish, implement, maintain and enforce written policies and procedures reasonably designed to provide for publicly disclosing all relevant rules and material procedures.³⁵ Rule 17Ad-22(e)(23)(ii) under the Act requires, in part, that NSCC establish, implement, maintain and enforce written policies and procedures reasonably designed to provide for providing sufficient information to enable participants to identify and evaluate the risks, fees, and other material costs they incur by participating in NSCC.³⁶ The proposed rule change set forth in item II(A)(1)(ii) above would enhance clarity and consistency with respect to the fees described herein. In this way, the proposed rule change would provide for the public disclosure of these fees through the proposed changes to Addendum A. The proposed rule change would allow NSCC to further provide its participants with sufficient information to enable those participants to identify and evaluate the fees incurred through their participation in NSCC. As such, NSCC believes the proposed rule change is consistent with

both Rule 17Ad-22(e)(23)(i) and (ii) under the Act.³⁷

(B) Clearing Agency's Statement on Burden on Competition

NSCC does not believe that the proposed changes to Addendum A set forth in items II(A)(1)(i)(A), (C) and (D) above would have an adverse impact, or impose any burden, on competition because, in each case, the proposed fee changes would be a reduction in fees as currently set forth in the Rules that would not disproportionately impact any NSCC Members. As a reduction to the fees currently in the Addendum A for these services, the proposed changes would not impede any NSCC Members from engaging in the services or have an adverse impact on any NSCC Members.

Moreover, the proposed rule changes may promote competition because, in each case, the proposed fee modifications would allow NSCC Members to engage in a greater number of transactions with lower fee costs than they would incur today for the same number of transactions. For instance, the proposed changes in item II(A)(1)(i)(A) above would allow NSCC Members that are currently sending to three or four destinations to begin to send to five destinations without incurring a higher fee than if files were sent to only three or four destinations because, as a result of the proposed rule change, the additional fee incurred by NSCC Members to send to five destinations would be the same as the additional fee to send to three or four destinations. Similarly, the proposed changes in item II(A)(1)(i)(C) above could result in NSCC Members that are currently sending 500,001 to 2,000,000 items per month to begin to send 2,000,001 to 4,000,000 items per month in order to take advantage of the proposed stated fee of \$1.00 per 1,000 items rather than \$1.50 per 1,000 items which is the current fee. In addition, the proposed change in item II(A)(1)(i)(D) above could result in non-settling NSCC Members that are currently sending less than 3,499 items per month to be more likely to send more than 3,499 items per month in order to take advantage of the proposed stated fee of \$0.50 per item rather than \$1.00 per item which is the current fee for non-settling NSCC Members. NSCC Members sending data to more destinations and sending additional data items relating to Positions and APP products and services would enhance participation in the marketplace by providing NSCC Members and their counterparties with more data. Finally, as discussed above,

NSCC believes that the proposed fee changes are appropriate in light of the expenses incurred by NSCC in providing its services.

NSCC believes that the proposed changes to Addendum A set forth in item II(A)(1)(i)(B), could have an impact on competition because NSCC Members would need to pay the fees for a full file type in order to deliver Positions for Retirement Plan file types similar to Positions Full and Position New file types rather than paying the reduced fee that NSCC Members pay to deliver the Positions Focused file type. The higher fee may make it less likely for some NSCC Members to deliver the Position for Retirement Plan file type rather than the Position Focused file type. NSCC believes, however, that any burden on competition that would be created by the proposed rule change would be necessary and appropriate in furtherance of the Act. Specifically, the proposed rule change is necessary to align the fees charged for sending the Positions for Retirement Plans file type feature with the costs and expenses required for NSCC to process that file type. As stated above, NSCC believes the costs of processing the Positions for Retirement Plans file type for NSCC are similar to the cost of processing the Positions Full and the Positions New file types. As such, NSCC believes that the fee for processing the Positions Full and the Positions for Retirement Plans file type should be the same as the fee for processing the Positions Full and Positions New file types and is appropriate given the costs to NSCC of delivering the full data file types.

NSCC does not believe that the proposed changes to Addendum A set forth in item II(A)(1)(ii) above would have any impact on competition because such changes are clarifications of the Rules which would not affect the rights or obligations of NSCC Members. Moreover, the proposed changes set forth in item II(A)(1)(ii) are revenue neutral and would not affect one set of NSCC Members in favor of another.

(C) Clearing Agency's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments relating to the proposed rule change have not yet been solicited or received. NSCC will notify the Commission of any written comments received by NSCC.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section

³¹ See *supra*, note 15.

19(b)(3)(A)³⁸ of the Act and subparagraphs (f)(2)³⁹ and (f)(4)⁴⁰ of Rule 19b-4 thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-NSCC-2017-011 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.
- All submissions should refer to File Number SR-NSCC-2017-011. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of NSCC and on DTCC's Web site

(<http://dtcc.com/legal/sec-rule-filings.aspx>). All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-NSCC-2017-011 and should be submitted on or before September 5, 2017.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.⁴¹

Eduardo A. Aleman,
Assistant Secretary.

[FR Doc. 2017-17044 Filed 8-11-17; 8:45 am]

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-81340; File No. SR-NYSEAMER-2017-03]

Self-Regulatory Organizations; NYSE American LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend Supplementary Material .01 and .02 to NYSE American Rule 5.2E(j)(3) To Provide for the Inclusion of Cash in an Index Underlying a Series of Investment Company Units

August 8, 2017.

Pursuant to Section 19(b)(1)¹ of the Securities Exchange Act of 1934 (the "Act")² and Rule 19b-4 thereunder,³ notice is hereby given that, on July 27, 2017, NYSE American LLC (the "Exchange" or "NYSE American") filed with the Securities and Exchange Commission (the "Commission") the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Supplementary Material .01 and .02 to NYSE American Rule 5.2E(j)(3) to provide for the inclusion of cash in an index underlying a series of Investment Company Units, which amendments conform to amendments to NYSE Arca Equities Rule 5.2(j)(3) previously approved by the Commission. The

proposed rule change is available on the Exchange's Web site at www.nyse.com, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes (1) to amend Supplementary Material .01 and .02 to NYSE American Rule 5.2E(j)(3) to provide for the inclusion of cash in an index underlying a series of Investment Company Units ("Units"), which amendments conform to amendments to NYSE Arca Equities Rule 5.2(j)(3) previously approved by the Commission.⁴

Amendments to NYSE American Rule 5.2E(j)(3)

NYSE American Rule 5.2E(j)(3) permits the trading of Units pursuant to unlisted trading privileges ("UTP"). The Exchange proposes to amend Commentaries .01 and .02 to NYSE American Rule 5.2E(j)(3) to permit trading of Units based on an index or portfolio that includes cash as a component. While Units, like mutual funds, will generally hold an amount of cash, NYSE American Rule 5.2E(j)(3) currently provides that components of an index or portfolio underlying a series of Units consist of securities—namely, US Component Stocks, Non-US Component Stocks, Fixed Income Securities or a combination thereof. As described below, the proposed amendments to Supplementary Material .01 and .02 to Rule 5.2E(j)(3) would

⁴ See Securities Exchange Act Release No. 80777 (May 25, 2017) (SR-NYSEArca-2017-30) (order approving amendments to Commentary .01 and Commentary .02 to NYSE Arca Equities Rule 5.2(j)(3) to provide for the inclusion of cash in an index underlying a series of Investment Company Units).

³⁸ 15 U.S.C. 78s(b)(3)(A).

³⁹ 17 CFR 240.19b-4(f)(2).

⁴⁰ 17 CFR 240.19b-4(f)(4).

⁴¹ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 15 U.S.C. 78a.

³ 17 CFR 240.19b-4.

permit inclusion of cash as an index or portfolio component.

Currently, Supplementary Material .01(a)(A) to NYSE American Rule 5.2E(j)(3) provides that an underlying index or portfolio of US Component Stocks⁵ must meet specified criteria. The Exchange proposes to amend Supplementary Material .01(a)(A) to provide that the components of an index or portfolio underlying a series of Units may also include cash. In addition, the percentage weighting criteria in Supplementary Material .01(a)(A)(1) through (4) each would be amended to make clear that such criteria would be applied only to the US Component Stocks portion of an index or portfolio. For example, in applying the criteria in proposed Supplementary Material .01(a)(A)(1),⁶ if 85% of the weight of an index consists of US Component Stocks and 15% of the index weight is cash, the requirement that component stocks (excluding Exchange Traded Products) that in the aggregate account for at least 90% of the weight of the US Component Stocks portion of the index or portfolio (excluding such Exchange Traded Products) each will have a minimum market value of \$75 million minimum would be applied only to the 85% portion consisting of US Component Stocks.

Supplementary Material .01 (a)(B) to NYSE American Rule 5.2E(j)(3), which relates to international or global indexes or portfolios, would be amended to provide that components of an index or portfolio underlying a series of Units may consist of (a) only Non-US Component Stocks, (b) Non-US Component Stocks and cash, (c) both US Component Stocks and Non-US Component Stocks, or (d) US Component Stocks, Non-US Component Stocks and cash. In addition, the percentage weighting criteria in Supplementary Material .01(a)(B)(1) through (4) each would be amended to make clear that such criteria would be applied only to the combined US and Non-US Component Stocks portions of an index or portfolio.

Supplementary Material .02 to NYSE American Rule 5.2E(j)(3) provides

⁵ Rule 5.2E(j)(3) defines “US Component Stock” as an equity security that is registered under Sections 12(b) or 12(g) of the Act or an American Depositary Receipt, the underlying equity security of which is registered under Sections 12(b) or 12(g) of the Act.

⁶ Supplementary Material .01(a)(A)(1) provides that component stocks (excluding Units and securities defined in Section 2 of Rule 8E, collectively, “Exchange Traded Products”) that in the aggregate account for at least 90% of the weight of the US Component Stocks portion of the index or portfolio (excluding such Exchange Traded Products) each shall have a minimum market value of at least \$75 million.

generic criteria applicable to trading of Units whose underlying index or portfolio includes Fixed Income Securities.⁷ Currently, Commentary .02(a)(1) provides that an underlying index or portfolio must consist of Fixed Income Securities. The Exchange proposes to amend Commentary .02(a)(1) to provide that the index or portfolio may also include cash. In addition, the percentage weighting criteria in Supplementary Material .02(a)(2), (a)(4) and (a)(6) each would be amended to make clear that such criteria would be applied only to the Fixed Income Securities portion of an index or portfolio. For example, in applying the criteria in proposed Supplementary Material .02(a)(2),⁸ if 90% of the weight of an index or portfolio consists of Fixed Income Securities and 10% of the index weight is cash, the requirement that Fixed Income Security components accounting for at least 75% of the Fixed Income Securities portion of the weight of the index or portfolio each will have a minimum original principal amount outstanding of \$100 million would be applied only to the 90% portion consisting of Fixed Income Securities.

The Exchange notes that the Commission has previously approved NYSE Arca rules allowing portfolios held by issues of Managed Fund Shares (actively-managed exchange-traded funds) under Commentary .01 to NYSE Arca Equities Rule 8.600 to include cash.⁹ Like the provision in Supplementary Material .01(c) to Exchange Rule 8.600E (which is similar to Commentary .01(c) to NYSE Arca Equities Rule 8.600), which states that there is no limit to cash holdings by an issue of Managed Fund Shares traded under Supplementary Material .01 to Exchange Rule 8.600E, there is no proposed limit to the weighting of cash in an index underlying a series of Units. The Exchange believes this is appropriate in that cash does not, in itself, impose investment or market risk.

⁷ As defined in Supplementary Material .02 to NYSE American Rule 5.2E(j)(3), Fixed Income Securities are debt securities that are notes, bonds, debentures or evidence of indebtedness that include, but are not limited to, U.S. Department of Treasury securities (“Treasury Securities”), government-sponsored entity securities (“GSE Securities”), municipal securities, trust preferred securities, supranational debt and debt of a foreign country or a subdivision thereof.

⁸ Supplementary Material .02(a)(2) provides that Fixed Income Security components that in aggregate account for at least 75% of the Fixed Income Securities portion of the weight of the index or portfolio each shall have a minimum original principal amount outstanding of \$100 million or more.

⁹ See Commentary .01(c) to NYSE Arca Equities Rule 8.600.

The Exchange also proposes to make a non-substantive change to Supplementary Material .02 to Exchange Rule 5.2E(j)(3) to change “shall” to “will” in one place to conform to other usages in Rule 5.2E(j)(3).

The Exchange believes the proposed amendments, by permitting inclusion of cash as a component of indexes underlying series of Units, would provide issuers of Units with additional choice in indexes permitted to underlie Units that are permitted to trade on the Exchange pursuant to the Rule 19b–4(e), which would enhance competition among market participants, to the benefit of investors and the marketplace. In addition, the proposed amendments would provide investors with greater ability to hold Units based on underlying indexes that may accord more closely with an investor’s assessment of market risk, in that some investors may view cash as a desirable component of an underlying index under certain market conditions.

2. Statutory Basis

The basis under the Act for this proposed rule change is the requirement under Section 6(b)(5)¹⁰ that an exchange have rules that are designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to remove impediments to, and perfect the mechanism of a free and open market and, in general, to protect investors and the public interest.

The proposed rule changes are designed to perfect the mechanism of a free and open market and, in general, to protect investors and the public interest. The basis under the Exchange Act for this proposed rule change is the requirement under Section 6(b)(5) that an exchange have rules that are designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to remove impediments to, and perfect the mechanism of a free and open market and, in general, to protect investors and the public interest.

With respect to the proposed amendments to Supplementary Material .01(a)(B)(1) through (4) to Rule 5.2E(j)(3), as described above, the percentage weighting criteria in Supplementary Material .01(a)(B)(1) through (4) to Rule 5.2E(j)(3) each would be amended to make clear that such criteria would be applied only to the combined US and Non-US Component Stocks portions of an index or portfolio. The percentage weighting criteria in Supplementary Material

¹⁰ 15 U.S.C. 78f(b)(5).

.02(a)(2), (a)(4) and (a)(6) to Rule 5.2E(j)(3) each would be amended to make clear that such criteria would be applied only to the Fixed Income Securities portion of an index or portfolio. Such applications of the proposed amendments would assure that the weighting requirements in Supplementary Material .01 and .02 would continue to be applied only to securities in an index or portfolio, and would not be diluted as a result of inclusion of a cash component. In addition, the addition of cash as a permitted component of indexes underlying Units traded on the Exchange pursuant to Rule 19b-4(e) does not raise regulatory issues because cash does not, in itself, impose investment or market risk and is not susceptible to manipulation. The non-substantive change to Supplementary Material .02 to Exchange Rule 5.2E(j)(3) to change "shall" to "will" conforms to other usages in Rule 5.2E(j)(3).

The Exchange believes these proposed amendments, by permitting inclusion of cash as a component of indexes underlying series of Units, would provide issuers of Units with additional choice in indexes permitted to underlie Units that are permitted to trade on the Exchange pursuant to UTP, which would enhance competition among market participants, to the benefit of investors and the marketplace. In addition, the proposed amendments would provide investors with greater ability to hold Units based on underlying indexes that may accord more closely with an investor's assessment of market risk.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purpose of the Act. The Exchange believes the proposed rule change will enhance intermarket competition by allowing trading on the Exchange pursuant to UTP of the above-described securities pursuant to rules that have been previously approved by the Commission for NYSE Arca, Inc.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A) of the Act¹¹ and Rule 19b-4(f)(6) thereunder.¹²

A proposed rule change filed under Rule 19b-4(f)(6) normally does not become operative prior to 30 days after the date of filing. However, Rule 19b-4(f)(6)(iii)T¹³ permits the Commission to designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has asked the Commission to waive the 30-day operative delay so that the proposal may become operative immediately upon filing. As noted above, the Exchange believes that the proposed rule change would provide additional choices to issuers of Units and investors in Units. The Exchange also noted that the amendments it is proposing to Rule 5.2E(j)(3) conform to amendments to NYSE Arca Equities Rule 5.2(j)(3) that the Commission previously approved,¹⁴ and that this proposed rule change may enhance competition between the exchanges. The Commission believes that waiver of the 30-day operative delay is consistent with the protection of investors and the public interest. Therefore, the Commission hereby waives the 30-day operative delay and designates the proposed rule change to be operative upon filing.¹⁵

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the

¹¹ 15 U.S.C. 78s(b)(3)(A).

¹² 17 CFR 240.19b-4(f)(6). As required under Rule 19b-4(f)(6)(iii), the Exchange provided the Commission with written notice of its intent to file the proposed rule change, along with a brief description and the text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission.

¹³ 17 CFR 240.19b-4(f)(6)(iii).

¹⁴ See *supra* note 4.

¹⁵ For purposes only of waiving the 30-day operative delay, the Commission has also considered the proposed rule's impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-NYSEAMER-2017-03 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-NYSEAMER-2017-03. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing will also be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-NYSEAMER-2017-03 and should be submitted on or before September 5, 2017.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹⁶

Eduardo A. Aleman,

Assistant Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-81345; File No. SR-ISE-2017-71]

Self-Regulatory Organizations; Nasdaq ISE, LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend ISE's Schedule of Fees With Respect to the Options Regulatory Fee

August 8, 2017.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on July 26, 2017, Nasdaq ISE, LLC ("ISE" or "Exchange") filed with the Securities and Exchange Commission ("SEC" or "Commission") the proposed rule change as described in Items I, II, and III, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to revise ISE's Schedule of Fees to: (i) Make adjustments to the amount of the Options Regulatory Fee ("ORF"); (ii) more closely reflect the manner in which ISE assesses and collects its ORF; and (iii) remove rule text related to the timing when the Exchange may increase or decrease the amount of the ORF.

While the changes proposed herein are effective upon filing, the Exchange has designated the amendments [sic] become operative on August 1, 2017.

The text of the proposed rule change is available on the Exchange's Web site at www.ise.com, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements

concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

ISE initially filed to establish its ORF in 2010.³ The Exchange has amended its ORF several times since the inception of this fee.⁴ At this time, the Exchange proposes to: (i) Amend the amount of its ORF; (ii) more closely reflect the manner in which ISE assesses and collects its ORF; and (iii) remove rule text related to the timing when the Exchange may increase or decrease the amount of its ORF.

The Exchange supports a common approach for the assessment and collection of ORF among the various options exchanges that assess such a fee. Furthermore, the Exchange supports guidance from the Commission regarding regulatory cost structures to ensure equal knowledge and treatment among options markets assessing ORF.

Proposal 1—Amend the Amount of the ORF

The Exchange assesses an ORF of \$0.0039 per contract side. The Exchange proposes to decrease the ORF from \$0.0039 per contract side to \$0.0016 per contract side as of August 1, 2017 to account for synergies which resulted from Nasdaq's acquisition of the Exchange. On June 30, 2016, Nasdaq completed its acquisition of the International Securities Exchange, which included acquiring three electronic options exchanges.⁵ With the

³ See Securities Exchange Act Release Nos. 61154 (December 11, 2009), 74 FR 67278 (December 18, 2009) (SR-ISE-2009-105) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change Relating to the Registered Representative Fee and an Options Regulatory Fee).

⁴ See Securities Exchange Act Release Nos. 62012 (April 30, 2010), 75 FR 25306 (May 7, 2010) (SR-ISE-2010-36); 67087 (May 31, 2012), 77 FR 33535 (June 6, 2012) (SR-ISE-2012-43); and 70859 (November 13, 2013), 78 FR 69501 (November 19, 2013) (SR-ISE-2014-54).

⁵ On June 30, 2016, Nasdaq, Inc. acquired all of the capital stock of U.S. Exchange Holdings, Inc., the ISE's indirect parent company. As a result, ISE in addition to its affiliates, which are now known as Nasdaq GEMX, LLC and Nasdaq MRX, LLC, became a wholly-owned subsidiary of Nasdaq, Inc. See Securities Exchange Act Release No. 78119

acquisition, ISE [sic] regulatory program has been examined and conformed to certain best practices which exist today on NASDAQ PHLX LLC, The NASDAQ Options Market LLC and NASDAQ BX, Inc. (collectively "Nasdaq Markets") and Nasdaq GEMX, LLC. These synergies in combination with conforming the expense and revenue review of ISE to that of the Nasdaq Markets has resulted in a projected decreased in regulatory expenses for ISE and therefore ISE is decreasing the amount of its ORF. The Exchange believes that this decreased number reflects efficiencies in the regulatory program today within the Nasdaq Markets.

The Exchange's proposed change to the ORF should balance the Exchange's regulatory cost [sic] against the anticipated revenue. The Exchange regularly reviews its ORF to ensure that the ORF, in combination with its other regulatory fees and fines, does not exceed regulatory costs. The Exchange believes this adjustment will permit the Exchange to cover a material portion of its regulatory costs, while not exceeding regulatory costs.

The Exchange notified members of this ORF adjustment thirty (30) calendar days prior to the proposed operative date.⁶

Proposal 2—Reflect the Manner in Which ISE Assesses and Collects its ORF

Currently, ISE assesses its ORF for each customer option transaction that is either: (1) Executed by a member on ISE; or (2) cleared by a ISE member at The Options Clearing Corporation ("OCC") in the customer range,⁷ even if the transaction was executed by a non-member of ISE, regardless of the exchange on which the transaction occurs.⁸ If the OCC clearing member is a ISE member, ORF is assessed and collected on all cleared customer contracts (after adjustment for CMTA⁹); and (2) if the OCC clearing member is not a ISE member, ORF is collected only on the cleared customer contracts executed at ISE, taking into account any

(June 21, 2016), 81 FR 41611 (June 27, 2016) (SR-ISE-2016-11).

⁶ See Options Trader Alert #2017-54.

⁷ Members must record the appropriate account origin code on all orders at the time of entry in order. The Exchange represents that it has surveillances in place to verify that members mark orders with the correct account origin code.

⁸ The Exchange uses reports from OCC when assessing and collecting the ORF.

⁹ CMTA or Clearing Member Trade Assignment is a form of "give-up" whereby the position will be assigned to a specific clearing firm at OCC.

¹⁶ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

CMTA instructions which may result in collecting the ORF from a non-member.

By way of example, if Broker A, an ISE member, routes a customer order to CBOE and the transaction executes on CBOE and clears in Broker A's OCC Clearing account, ORF will be collected by ISE from Broker A's clearing account at OCC via direct debit. While this transaction was executed on a market other than ISE, it was cleared by an ISE member in the member's OCC clearing account in the customer range, therefore there is a regulatory nexus between ISE and the transaction. If Broker A was not an ISE member, then no ORF should be assessed and collected because there is no nexus; the transaction did not execute on ISE nor was it cleared by an ISE member.

In the case where a member both executes a transaction and clears the transaction, the ORF is assessed to and collected from the member only once. In the case where a member executes a transaction and a different member clears the transaction, the ORF is assessed to and collected from the member who clears the transaction and not the member who executes the transaction. In the case where a non-member executes a transaction at an away market and a member clears the transaction, the ORF is assessed to and collected from the member who clears the transaction. In the case where a member executes a transaction on ISE and a non-member clears the transaction, the ORF is assessed to the member that executed the transaction and collected from the non-member who cleared the transaction. In the case where a member executes a transaction at an away market and a non-member clears the transaction, the ORF is not assessed to the member who executed the transaction or collected from the non-member who cleared the transaction because the Exchange does not have access to the data to make absolutely certain that ORF should apply. Further, the data does not allow the Exchange to identify the member executing the trade at an away market.

ORF Revenue and Monitoring of ORF

The Exchange monitors the amount of revenue collected from the ORF to ensure that it, in combination with other regulatory fees and fines, does not exceed regulatory costs. In determining whether an expense is considered a regulatory cost, the Exchange reviews all costs and makes determinations if there is a nexus between the expense and a regulatory function. The Exchange notes that fines collected by the Exchange in connection with a disciplinary manner offset ORF.

The ORF is designed to recover a material portion of the costs to the Exchange of the supervision and regulation of its members, including performing routine surveillances, investigations, examinations, financial monitoring, and policy, rulemaking, interpretive, and enforcement activities.

The Exchange believes that revenue generated from the ORF, when combined with all of the Exchange's other regulatory fees, will cover a material portion, but not all, of the Exchange's regulatory costs. The Exchange will continue to monitor the amount of revenue collected from the ORF to ensure that it, in combination with its other regulatory fees and fines, does not exceed regulatory costs. If the Exchange determines regulatory revenues exceed regulatory costs, the Exchange will adjust the ORF by submitting a fee change filing to the Commission.

Finally, the Exchange notes that it is amending ISE's Schedule of Fees to remove certain rule text and include new rule text to make clear the manner in which ORF is assessed and collected on ISE.

Proposal 3—Semi-Annual Changes to ORF

The Exchange's current ORF rule text provides that, "The Exchange may only increase or decrease the Options Regulatory Fee semi-annually, and any such fee change will be effective on the first business day of February or August." The Exchange is proposing to eliminate the requirement that its ORF may be only increased or decreased semi-annually because the Exchange believes it requires the flexibility to amend its ORF as needed to meet its regulatory requirements and adjust its ORF to account for the regulatory revenue that it receives and the costs that it incurs. While the Exchange is eliminating the requirement to adjust only semi-annually, it will continue to submit a rule proposal with the Commission for each modification to the ORF and notify participants via an Options Trader Alert of any proposed change in the amount of the fee at least thirty (30) calendar days prior to the effective date. The Exchange believes that the prior notification to market participants will provide guidance on the timing of any changes to the ORF and ensure market participants are prepared to configure their systems to properly account for the ORF.

The Exchange also notes it now issues Options Trader Alerts instead of circulars to provide notification to members. The Exchange is amending the rule text to reflect this change.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act¹⁰ in general, and furthers the objectives of Sections 6(b)(4) and 6(b)(5) of the Act¹¹ in particular, in that it provides for the equitable allocation of reasonable dues, fees and other charges among members and issuers and other persons using its facility and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Exchange believes the proposed clarifications in the Fee Schedule to the ORF further the objectives of Section 6(b)(4) of the Act and are equitable and reasonable since they expressly describe the Exchange's existing practices regarding the manner in which the Exchange assesses and collects its ORF.

Proposal 1—Amend the Amount of the ORF

The Exchange believes that decreasing the ORF from \$0.0039 per contract side to \$0.0016 per contract side as of August 1, 2017 is reasonable because the Exchange's collection of ORF needs to be balanced against the amount of regulatory cost collected [sic] by the Exchange. The decrease is a result of synergies among the Nasdaq owned self-regulatory organizations. The synergies in combination with conforming the expense and revenue review of ISE to that of the Nasdaq Markets has resulted in a decreased ORF for ISE. The Exchange believes that this decreased number reflects efficiencies in the regulatory program today within the Nasdaq Markets. The Exchange's proposed change to the ORF should balance the Exchange's regulatory cost against the anticipated regulatory revenue. The Exchange regularly reviews its ORF to ensure that the ORF, in combination with its other regulatory fees and fines, does not exceed regulatory costs.

The Exchange believes that decreasing the ORF from \$0.0039 per contract side to \$0.0016 per contract side as of August 1, 2017 is equitable and not unfairly discriminatory because this decrease will serve to balance the Exchange's regulatory revenue against the anticipated regulatory costs in light of recent synergies experienced from the merger described herein. The ORF seeks to recover the costs of supervising and regulating members, including performing routine surveillances, investigations, examinations, financial monitoring, and policy, rulemaking, interpretive, and enforcement activities.

¹⁰ 15 U.S.C. 78f(b).

¹¹ 15 U.S.C. 78f(b)(4) and (5).

Moreover, the Exchange believes the ORF ensures fairness by assessing fees to those members that are directly based on the amount of customer options business they conduct. Regulating customer trading activity is much more labor intensive and requires greater expenditure of human and technical resources than regulating non-customer trading activity, which tends to be more automated and less labor-intensive. As a result, the costs associated with administering the customer component of the Exchange's overall regulatory program are materially higher than the costs associated with administering the non-customer component (*e.g.* member proprietary transactions) of its regulatory program.

The ORF is designed to recover a material portion of the costs of supervising and regulating member's customer options business including performing routine surveillances, investigations, examinations, financial monitoring, and policy, rulemaking, interpretive, and enforcement activities. The Exchange will monitor the amount of revenue collected from the ORF to ensure that it, in combination with its other regulatory fees and fines, does not exceed the Exchange's total regulatory costs. The Exchange has designed the ORF to generate revenues that, when combined with all of the Exchange's other regulatory fees, will be less than or equal to the Exchange's regulatory costs, which is consistent with the Commission's view that regulatory fees be used for regulatory purposes and not to support the Exchange's business side. In this regard, the Exchange believes that the proposed amount of the fee is reasonable.

Proposal 2—Reflect the Manner in Which ISE Assesses and Collects Its ORF

The Exchange believes it is reasonable and appropriate for the Exchange to charge the ORF for options transactions regardless of the exchange on which the transactions occur. The Exchange has a statutory obligation to enforce compliance by members and their associated persons under the Act and the rules of the Exchange and to surveil for other manipulative conduct by market participants (including non-members) trading on the Exchange. The Exchange cannot effectively surveil for such conduct without looking at and evaluating activity across all options markets. Many of the Exchange's market surveillance programs require the Exchange to look at and evaluate activity across all options markets, such as surveillance for position limit violations, manipulation, front-running

and contrary exercise advice violations/expiring exercise declarations. The Exchange, because it lacks access to information on the identity of the entering firm for executions that occur on away markets, believes it is appropriate to assess the ORF on its member's clearing activity, based on information the Exchange receives from OCC, including for away market activity. Among other reasons, doing so better and more accurately captures activity that occurs away from the Exchange over which the Exchange has a degree of regulatory responsibility. In so doing, the Exchange believes that assessing ORF on member clearing firms in certain instances equitably distributes the collection of ORF in a fair and reasonable manner. Also, the Exchange and the other options exchanges are required to populate a consolidated options audit trail ("COATS")¹² system in order to surveil a member's activities across markets.¹³

The Exchange believes that assessing the ORF to each Exchange member for options transactions cleared by OCC in the customer range where the execution occurs on another exchange and is cleared by a ISE Member is an equitable allocation of reasonable dues, fees, and other charges among its members and issuers and other persons using its facilities. The ORF is collected by OCC on behalf of ISE from Exchange clearing members for all customer transactions they clear or from non-Members for all customer transactions they clear that were executed on ISE. The Exchange believes that this collection practice is reasonable and appropriate because higher fees are assessed to those Members that require more Exchange regulatory services based on the amount of customer options business they conduct.

¹² COATS effectively enhances intermarket options surveillance by enabling the options exchanges to reconstruct the market promptly to effectively surveil certain rules.

¹³ In addition to its own surveillance programs, the Exchange works with other SROs and exchanges on intermarket surveillance related issues. Through its participation in the Intermarket Surveillance Group ("ISG"), the Exchange shares information and coordinates inquiries and investigations with other exchanges designed to address potential intermarket manipulation and trading abuses. The Exchange's participation in ISG helps it to satisfy the requirement that it has coordinated surveillance with markets on which security futures are traded and markets on which any security underlying security futures are traded to detect manipulation and insider trading. See Section 6(h)(3)(I) of the Act. ISG is an industry organization formed in 1983 to coordinate intermarket surveillance among the SROs by co-operatively sharing regulatory information pursuant to a written agreement between the parties. The goal of the ISG's information sharing is to coordinate regulatory efforts to address potential intermarket trading abuses and manipulations.

Regulating customer trading activity is more labor intensive and requires greater expenditure of human and technical resources than regulating non-customer trading activity, which tends to be more automated and less labor intensive. As a result, the costs associated with administering the customer component of the Exchange's overall regulatory program are anticipated to be typically higher than the costs associated with administering the non-customer component of its regulatory program. The Exchange proposes assessing higher fees to those members that will require more Exchange regulatory services based on the amount of customer options business they conduct. Additionally, the dues and fees paid by members go into the general funds of the Exchange, a portion of which is used to help pay the costs of regulation. The Exchange has in place a regulatory structure to surveil, conduct examinations and monitor the marketplace for violations of Exchange Rules. The ORF assists the Exchange to fund the cost of this regulation of the marketplace.

Proposal 3—Semi-Annual Changes to ORF

The Exchange believes that the proposed rule change to remove the limit to amend the ORF only semi-annually, with advance notice, is reasonable because the Exchange will continue to provide market participants with thirty (30) days advance notice of amending the amount of the ORF. Also, the Exchange is required to monitor the amount of revenue collected from the ORF to ensure that it, in combination with its other regulatory fees and fines, do not exceed regulatory costs. Therefore, the Exchange believes it is reasonable to remove the semi-annual limit to amend its ORF in order to permit the Exchange to make amendments to its ORF as necessary to comply with the Exchange's obligations. This proposed change would conform this rule with that of NASDAQ PHLX LLC ("Phlx"), The NASDAQ Options Market LLC ("NOM") and NASDAQ BX, Inc. ("BX").¹⁴

The Exchange believes that the proposed rule change to remove the limit to amend the ORF only semi-annually, with advance notice, is equitable and not unfairly discriminatory because it will apply in the same manner to all members that are subject to the ORF. The Exchange has in place a regulatory structure to surveil for, conduct examinations and monitor

¹⁴ See Phlx's Pricing Schedule and NOM and BX Rules at Chapter XV, Sections 5.

the marketplace for violations of Exchange Rules. The ORF assists the Exchange to fund the cost of this regulation of the marketplace.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. The ORF is not intended to have any impact on competition. Rather, it is designed to enable the Exchange to recover a material portion of the Exchange's cost related to its regulatory activities. The Exchange is obligated to ensure that the amount of regulatory revenue collected from the ORF, in combination with its other regulatory fees and fines, does not exceed regulatory costs.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act.¹⁵ At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) necessary or appropriate in the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File No. SR-ISE-2017-71 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File No. SR-ISE-2017-71. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File No. SR-ISE-2017-71, and should be submitted on or before September 5, 2017.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹⁶

Eduardo A. Aleman,

Assistant Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-81338; File Nos. SR-DTC-2017-014; SR-FICC-2017-017; SR-NSCC-2017-013]

Self-Regulatory Organizations; The Depository Trust Company; Fixed Income Clearing Corporation; National Securities Clearing Corporation; Notice of Filings of Proposed Rule Changes To Adopt the Clearing Agency Operational Risk Management Framework

DATE: August 8, 2017.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934, as amended ("Act")¹ and Rule 19b-4 thereunder,² notice is hereby given that on July 25, 2017, The Depository Trust Company ("DTC"), Fixed Income Clearing Corporation ("FICC"), and National Securities Clearing Corporation ("NSCC," and together with DTC and FICC, the "Clearing Agencies") filed with the Securities and Exchange Commission ("Commission") the proposed rule changes as described in Items I and II below, which Items have been prepared primarily by the Clearing Agencies. The Commission is publishing this notice to solicit comments on the proposed rule changes from interested persons.

I. Clearing Agencies' Statement of the Terms of Substance of the Proposed Rule Changes

The proposed rule changes would adopt the Clearing Agency Operational Risk Management Framework ("Framework") of the Clearing Agencies, described below. The Framework would apply to both of FICC's divisions, the Government Securities Division ("GSD") and the Mortgage-Backed Securities Division ("MBSD"). The Framework would be maintained by the Clearing Agencies to support their compliance with Rule 17Ad-22(e)(17) under the Act, as described below.³

Although the Clearing Agencies would consider the Framework to be a rule, the proposed rule changes do not require any changes to the Rules, By-laws and Organization Certificate of DTC ("DTC Rules"), the Rulebook of GSD ("GSD Rules"), the Clearing Rules of MBSD ("MBSD Rules"), or the Rules & Procedures of NSCC ("NSCC Rules"), as the Framework would be a standalone document.⁴

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ 17 CFR 240.17Ad-22(e)(17).

⁴ Capitalized terms not defined herein are defined in the DTC Rules, GSD Rules, MBSD Rules, or

¹⁵ 15 U.S.C. 78s(b)(3)(A)(ii).

¹⁶ 17 CFR 200.30-3(a)(12).

II. Clearing Agencies' Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Changes

In their filings with the Commission, the Clearing Agencies included statements concerning the purpose of and basis for the proposed rule changes and discussed any comments they received on the proposed rule changes. The text of these statements may be examined at the places specified in Item IV below. The Clearing Agencies have prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

(A) Clearing Agencies' Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Changes

1. Purpose

The Clearing Agencies are proposing to adopt the Framework, which would describe the manner in which each of the Clearing Agencies manages operational risk, which is defined by the Clearing Agencies in the Framework as the risk of direct or indirect loss or reputational harm resulting from an event, internal or external, that is the result of inadequate or failed processes, people, and systems ("Operational Risk"). As described in more detail below, the Framework would set forth the manner in which the Clearing Agencies (1) generally manage Operational Risk; (2) more specifically manage their information technology risks; and (3) more specifically manage their business continuity risks. The processes and systems described in the Framework, and any policies, procedures or other documents created to support those processes, support the Clearing Agencies' compliance with the requirements of Rule 17Ad-22(e)(17).⁵ The Framework would be maintained by the DTCC Operational Risk Management group ("ORM"), on behalf of the Clearing Agencies.⁶

Operational Risk Management

The Framework would describe how the Clearing Agencies generally manage their Operational Risks. The Framework would describe how ORM is specifically charged with establishing appropriate systems, policies, procedures, and controls to enable management to

identify plausible sources of Operational Risk in order to mitigate their impact to the Clearing Agencies, including through the Risk Tolerance Statements and Risk Profiles, as described below.

The Framework would describe how the Clearing Agencies identify key risks and set metrics to categorize such risks (from "no impact" to "severe impact") through "Risk Tolerance Statements." The Framework would describe how the Risk Tolerance Statements document the overall risk reduction or mitigation objectives for the Clearing Agencies with respect to identified risks to the Clearing Agencies. The Framework would also describe how the Risk Tolerance Statements document the risk controls and other measures used to manage such identified risks, including escalation requirements in the event of risk metric breaches. The Framework would state that each Risk Tolerance Statement is reviewed, revised, updated, and/or created, as necessary, by ORM on an annual basis.

The Framework would also describe how the Clearing Agencies monitor key risks, including Operational Risk, through "Risk Profiles," which document the assessment of risk for each of the Clearing Agencies' businesses and support areas (each a "Clearing Agency Business" and/or "Clearing Agency Support Area"). The risk assessment documented in these profiles includes (1) identification and assessment of inherent risk, which is risk without any mitigating controls; (2) identification of existing controls, and, as appropriate, any new additional controls, and evaluation of the same risk against the strength of such controls; and (3) identification of any residual risk and a determination to either further mitigate such risk or accept such risk by the applicable Clearing Agency Business or Clearing Agency Support Area.

The Framework would also provide a description of the responsibilities of ORM, which is a part of the second line of defense within the Clearing Agencies' Three Lines of Defense approach to risk management.⁷ The Framework would

identify some of those responsibilities as including, for example, management of the Risk Tolerance Statements and working with the Clearing Agency Businesses and Clearing Agency Support Areas to create and monitor Risk Profiles.

Information Technology Risk

The Framework would describe how the Clearing Agencies address information technology risks. The Framework would state that the DTCC Technology Risk Management group ("TRM"), on behalf of the Clearing Agencies, is responsible for establishing appropriate programs, policies, procedures, and controls with respect to the Clearing Agencies' information technology risks to help management ensure that systems have a high degree of security, resiliency, operational reliability, and adequate, scalable capacity. The Framework would identify some of the recognized information technology standards that may be used by TRM, as applicable, in support of executing its responsibilities.

The Framework would also identify some of TRM's responsibilities, which include, for example, (1) performing risk assessments to, among other things, facilitate the determination of the Clearing Agencies' investment and remediation priorities; (2) facilitating annual mandatory and periodic information security awareness, education, training, and communication to personnel of Clearing Agency Businesses and Clearing Agency Support Areas and relevant external parties; and (3) creating, implementing, and managing certain programs, including programs that (i) address information security throughout a system's lifecycle, (ii) facilitate compliance with evolving and established regulatory rules and guidelines that govern protection of the information assets of the Clearing Agencies and their participants, (iii) identify, prioritize, and manage the level of cyber threats to the Clearing Agencies, and (iv) assure that access to Clearing Agency information assets is appropriately authorized and authenticated based on current business need.

The Framework would state that TRM's risk strategy is closely aligned to the Clearing Agencies' business drivers and future strategic direction, such that efforts to achieve information security threat mitigation objectives, resiliency of infrastructure supporting Clearing Agency critical business applications,

filings is available at <http://www.dtcc.com/legal/sec-rule-filings>.

NSCC Rules, as applicable, available at <http://dtcc.com/legal/rules-and-procedures>.

⁵ 17 CFR 240.17Ad-22(e)(17).

⁶ The parent company of the Clearing Agencies is The Depository Trust & Clearing Corporation ("DTCC"). DTCC operates on a shared services model with respect to the Clearing Agencies. Most corporate functions are established and managed on an enterprise-wide basis pursuant to intercompany agreements under which it is generally DTCC that provides a relevant service to a Clearing Agency.

⁷ The Three Lines of Defense approach to risk management identifies the roles and responsibilities of different Clearing Agency Businesses or Clearing Agency Support Areas in identifying, assessing, measuring, monitoring, mitigating, and reporting certain key risks faced by the Clearing Agencies. The Three Lines of Defense approach is more fully described in a separate framework, the Clearing Agency Risk Management Framework, maintained by the DTCC General Counsel's Office. See SR-DTC-2017-013, SR-FICC-2017-016, SR-NSCC-2017-012, which was filed with the Commission but has not yet been published in the **Federal Register**. A copy of these proposed rule change

and operational reliability are prioritized. The Framework would state this is also accomplished through TRM's early and consistent involvement in initiatives to develop new products and systems. The Framework would state that, by involving TRM from the initial planning phase, through the design, build and operative phases of those initiatives, resiliency, operational effectiveness, reliability, and availability requirements are addressed and incorporated into design and execution from both a technology and cyber security perspective.

The Framework would also describe the Clearing Agencies' security strategy and defense, and would state that the Clearing Agencies' network security framework and preventive controls are designed to support a reliable and robust tiered security strategy and defense. These controls include modern and technically advanced security firewalls, intrusion detection, system and data monitoring, and data protection tools. The Framework would describe the Clearing Agencies' enhanced security features and the standards they use to assess vulnerabilities and potential threats.

Business Continuity Risk

Finally, the Framework would describe how the Clearing Agencies have established and maintain business continuity plans to address events that may pose a significant risk of disrupting their operations. The Framework would describe how the business continuity process for each Clearing Agency Business and Clearing Agency Support Area is ranked within a range of tiers, from 0 to 5, based on criticality to each applicable Clearing Agency's operations (each a "Tier"), where Tier 0 equates to critical operations or support of such operations for which virtually no downtime is permitted under applicable regulatory standards, and Tier 5 equates to non-essential operations or support of such operations for which recovery times of greater than five days is permitted.

The Framework would state that, on an annual basis, each Clearing Agency Business and Clearing Agency Support Area updates its own business continuity plan and reviews and ratifies its business impact analysis. These analyses are used by the DTCC Business Continuity Management department ("BCM"), on behalf of the Clearing Agencies, to validate that business' or area's current Tier ranking. The Framework would identify the key elements of these business impact analyses, which include (1) an assessment of the criticality of the

applicable Clearing Agency Business or Clearing Agency Support Area, based on potential impact to the Clearing Agency; (2) an estimation of the maximum allowable downtime for the applicable Clearing Agency Business or Clearing Agency Support Area; and (3) the identification of dependencies, and ranking such dependencies to align with the process criticality for recovery, of the applicable Clearing Agency Business or Clearing Agency Support Area.

The Framework would describe the Clearing Agencies' multiple data centers, and the emergency monitoring and back up systems available at each site. The Framework would describe the capacity of the various data centers. The Framework would also describe the Clearing Agencies' operating centers, and would describe how each Clearing Agency Business and Clearing Agency Support Area creates and deploys its own work area recovery strategy to mitigate the loss of primary workspace and/or associated desktop technology, as well as for purposes of social distancing among personnel. The Framework would describe how each of these work area recovery strategies is developed and executed, based on the applicable Clearing Agency Business' and Clearing Agency Support Area's current Tier ranking, as described above.

The Framework would describe the responsibilities of BCM in managing a disruptive business event, which includes coordination with a team of representatives from each Clearing Agency Business and Clearing Agency Support Area. Finally, the Framework would describe how the Clearing Agencies conduct regular exercises used to simulate loss of Clearing Agency locations, and would describe some of the preventive measures the Clearing Agencies take with respect to business continuity risk management.

2. Statutory Basis

The Clearing Agencies believe that the proposed rule changes are consistent with the requirements of the Act and the rules and regulations thereunder applicable to a registered clearing agency. In particular, the Clearing Agencies believe that the Framework is consistent with Section 17A(b)(3)(F) of the Act⁸ and the subsections cited below of Rule 17Ad-22(e)(17),⁹ promulgated under the Act, for the reasons described below.

Section 17A(b)(3)(F) of the Act requires, in part, that the rules of a registered clearing agency be designed

to promote the prompt and accurate clearance and settlement of securities transactions, and to assure the safeguarding of securities and funds which are in the custody or control of the clearing agency or for which it is responsible.¹⁰ As described above, the Framework would describe how the Clearing Agencies manage their Operational Risk, technology and information security risks, and their business continuity risks. The processes, systems, and controls used by the Clearing Agencies to identify, manage, and mitigate these risks, as described in the Framework, and the policies and procedures that support these activities, assist the Clearing Agencies to continue the prompt and accurate clearance and settlement of securities transactions and continue to assure the safeguarding of securities and funds which are in their custody or control or for which they are responsible notwithstanding the realization of these risks. Therefore, the Clearing Agencies believe the Framework is consistent with the requirements of Section 17A(b)(3)(F) of the Act.¹¹

The Clearing Agencies believe that the Framework is consistent with the requirements of each of the subsections of Rule 17Ad-22(e)(17),¹² cited below, for the reasons described below.

Rule 17Ad-22(e)(17)(i) under the Act requires, in part, that each covered clearing agency establish, implement, maintain and enforce written policies and procedures reasonably designed to manage the covered clearing agency's operational risks by identifying the plausible sources of operational risk, both internal and external, and mitigating their impact through the use of appropriate systems, policies, procedures, and controls.¹³ The Framework would describe how the Risk Tolerance Statements and the Risk Profiles both assist the Clearing Agencies to identify the plausible sources of Operational Risk, both internal and external. As described above, the Risk Tolerance Statements identify both internal and external Clearing Agency risks, categorize the respective Clearing Agencies' tolerance for those risks, and then identify governance process applicable to any breach of those tolerances. In this way, the Risk Tolerance Statements allow the Clearing Agencies to identify and manage the risks they face. As described above, the Risk Profiles serve a similar

¹⁰ 15 U.S.C. 78q-1(b)(3)(F).

¹¹ *Id.*

¹² 17 CFR 240.17Ad-22(e)(17).

¹³ 17 CFR 240.17Ad-22(e)(17)(i).

⁸ 15 U.S.C. 78q-1(b)(3)(F).

⁹ 17 CFR 240.17Ad-22(e)(17).

function, by serving as a tool for identifying and assessing inherent risks, and evaluating the controls around those risks. The Framework also describes the role of ORM, which includes oversight of the Risk Tolerance Statements and Risk Profiles. By describing the functions of the Risk Tolerance Statements and Risk Profiles, which, together, assist the Clearing Agencies in effectively managing their operational risks by identifying the plausible sources of operational risk, both internal and external, and by assisting the Clearing Agencies in mitigating the impact of those risks, and by describing the role of ORM in facilitating these tools, the Clearing Agencies believe the Framework is consistent with the requirements of Rule 17Ad-22(e)(17)(i).¹⁴

Rule 17Ad-22(e)(17)(ii) under the Act requires, in part, that each covered clearing agency establish, implement, maintain and enforce written policies and procedures reasonably designed to manage the covered clearing agency's operational risks by ensuring that systems have a high degree of security, resiliency, operational reliability, and adequate, scalable capacity.¹⁵ The Framework would describe the role, and some of the responsibilities, of TRM, in managing the Clearing Agencies' information technology risks and in helping the Clearing Agencies maintain systems with a high degree of security, resiliency, operational reliability, and adequate, scalable capacity. The Framework would also describe the programs, systems, and controls used by TRM in performing this function, and would identify some of the standards on information technology risk management that may be used by TRM in support of its responsibilities. The Framework would also describe TRM's role in product and project initiatives to address security issues through the lifecycle of an initiative. Therefore, by describing the role and responsibilities of TRM in managing the Clearing Agencies' information technology risks and in helping the Clearing Agencies maintain systems with a high degree of security, resiliency, operational reliability, and adequate, scalable capacity, the Clearing Agencies believe the Framework is consistent with the requirements of Rule 17Ad-22(e)(17)(ii).¹⁶

Rule 17Ad-22(e)(17)(iii) under the Act requires, in part, that each covered clearing agency establish, implement, maintain and enforce written policies

and procedures reasonably designed to manage the covered clearing agency's operational risks by establishing and maintaining a business continuity plan that addresses events posing a significant risk of disrupting operations.¹⁷ The Framework would describe how the Clearing Agencies have established and maintain business continuity plans, and would describe the critical features of those plans to demonstrate how such plans address events posing a significant risk of disrupting the Clearing Agencies' operations. The Framework would also describe how each Clearing Agency Business and Clearing Agency Support Area reviews and ratifies its respective plan and its business impact analysis, relative to its assigned Tier. Therefore, through this description of the establishment, management and maintenance of the business continuity plans of the Clearing Agencies, the Clearing Agencies believe the Framework is consistent with the requirements of Rule 17Ad-22(e)(17)(iii).¹⁸

(B) Clearing Agencies' Statement on Burden on Competition

None of the Clearing Agencies believe that the Framework would have any impact, or impose any burden, on competition because the proposed rule changes reflect some of the existing methods by which the Clearing Agencies manage Operational Risk, including their management of information technology and business continuity risks, and would not effectuate any changes to the Clearing Agencies' processes described therein as they currently apply to their respective participants.

(C) Clearing Agencies' Statement on Comments on the Proposed Rule Changes Received From Members, Participants, or Others

The Clearing Agencies have not solicited or received any written comments relating to this proposal. The Clearing Agencies will notify the Commission of any written comments received by the Clearing Agencies.

III. Date of Effectiveness of the Proposed Rule Changes, and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period up to 90 days (i) as the Commission may designate if it finds such longer period to be appropriate and publishes its

reasons for so finding or (ii) as to which the clearing agency consents, the Commission will:

- (A) By order approve or disapprove such proposed rule changes, or
- (B) institute proceedings to determine whether the proposed rule changes should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule changes are consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-DTC-2017-014, SR-FICC-2017-017, or SR-NSCC-2017-013 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549.

All submissions should refer to File Number SR-DTC-2017-014, SR-FICC-2017-017, or SR-NSCC-2017-013. One of these file numbers should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule changes that are filed with the Commission, and all written communications relating to the proposed rule changes between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Clearing Agencies and on DTCC's Web site (<http://dtcc.com/legal/sec-rule-filings.aspx>). All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only

¹⁴ *Id.*

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-81341; File No. SR-BX-2017-032]

Self-Regulatory Organizations; NASDAQ BX, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Revise the Rules Regarding the Exchange's Options Regulatory Fee

DATES: August 8, 2017.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")¹, and Rule 19b-4 thereunder,² notice is hereby given that on July 26, 2017, NASDAQ BX, Inc. ("BX" or "Exchange") filed with the Securities and Exchange Commission ("SEC" or "Commission") the proposed rule change as described in Items I, II, and III, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to revise BX Rules at Chapter XV, Section 5 to: (i) Make adjustments to the amount of its Options Regulatory Fee ("ORF"); and (ii) more closely reflect the manner in which BX assesses and collects its ORF.

While the changes proposed herein are effective upon filing, the Exchange has designated the amendments [sic] become operative on August 1, 2017.

The text of the proposed rule change is available on the Exchange's Web site at <http://nasdaqbx.cchwallstreet.com/>, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

BX initially filed to establish its ORF in 2016.³ The Exchange has amended its ORF several times since the inception of this fee.⁴ At this time, the Exchange proposes to: (i) Amend the amount of its ORF; and (ii) revise BX Rules at Chapter XV, Section 5 to more closely reflect the manner in which BX assesses and collects its ORF.

The Exchange supports a common approach for the assessment and collection of ORF among the various options exchanges that assess such a fee. Furthermore, the Exchange supports guidance from the Commission regarding regulatory cost structures to ensure equal knowledge and treatment among options markets assessing ORF.

Proposal 1—Amend the Amount of the ORF

The Exchange assesses an ORF of \$0.0004 per contract side. The Exchange proposes to increase the ORF from \$0.0004 per contract side to \$0.0005 per contract side as of August 1, 2017 to account for a reduction in market volume. The Exchange's proposed change to the ORF should balance the Exchange's regulatory cost [sic] against the anticipated revenue. The Exchange regularly reviews its ORF to ensure that the ORF, in combination with its other regulatory fees and fines, does not exceed regulatory costs. The Exchange believes this adjustment will permit the Exchange to cover a material portion of

its regulatory costs, while not exceeding regulatory costs.

The Exchange notified its Participants of this ORF adjustment thirty (30) calendar days prior to the proposed operative date.⁵

Proposal 2—Reflect the Manner in Which BX Assesses and Collects its ORF

Currently, BX assesses its ORF for each Customer option transaction that is either: (1) Executed by a Participant on BX; or (2) cleared by a BX Participant at The Options Clearing Corporation ("OCC") in the Customer range,⁶ even if the transaction was executed by a non-member of BX, regardless of the exchange on which the transaction occurs.⁷ If the OCC clearing member is a BX Participant, ORF is assessed and collected on all cleared Customer contracts (after adjustment for CMTA⁸); and (2) if the OCC clearing member is not a BX Participant, ORF is collected only on the cleared Customer contracts executed at BX, taking into account any CMTA instructions which may result in collecting the ORF from a non-member.

By way of example, if Broker A, a BX Participant, routes a Customer order to CBOE and the transaction executes on CBOE and clears in Broker A's OCC Clearing account, ORF will be collected by BX from Broker A's clearing account at OCC via direct debit. While this transaction was executed on a market other than BX, it was cleared by a BX Participant in the Participant's OCC clearing account in the Customer range, therefore there is a regulatory nexus between BX and the transaction. If Broker A was not a BX Participant, then no ORF should be assessed and collected because there is no nexus; the transaction did not execute on BX nor was it cleared by a BX Participant.

In the case where a Participant both executes a transaction and clears the transaction, the ORF is assessed to and collected from the Participant only once. In the case where a Participant executes a transaction and a different Participant clears the transaction, the ORF is assessed to and collected from the Participant who clears the transaction and not the Participant who executes the transaction. In the case

⁵ See Options Trader Alert #2017-54.

⁶ Exchange Rules require each member to record the appropriate account origin code on all orders at the time of entry in order to allow the Exchange to properly prioritize and route orders and assess transaction fees pursuant to the Rules of the Exchange and report resulting transactions to OCC.

⁷ The Exchange uses reports from OCC to determine the identity of the executing clearing firm and ultimate clearing firm.

⁸ CMTA or Clearing Member Trade Assignment is a form of "give-up" whereby the position will be assigned to a specific clearing firm at OCC.

¹⁹ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ See Securities Exchange Act Release Nos. 77053 (February 4, 2016), 81 FR 7163 (February 10, 2016) (SR-BX-2016-007); (Notice of Filing and Immediate Effectiveness of Proposed Rule Change Relating To Adopt an Options Regulatory Fee).

⁴ See Securities Exchange Act Release No. 78361 (July 19, 2016), 81 FR 48485 (July 25, 2016) (SR-BX-2016-043).

where a non-member executes a transaction at an away market and a Participant clears the transaction, the ORF is assessed to and collected from the Participant who clears the transaction. In the case where a Participant executes a transaction on BX and a non-member clears the transaction, the ORF is assessed to the Participant that executed the transaction and collected from the non-member who cleared the transaction. In the case where a Participant executes a transaction at an away market and a non-member clears the transaction, the ORF is not assessed to the Participant who executed the transaction or collected from the non-member who cleared the transaction because the Exchange does not have access to the data to make absolutely certain that ORF should apply. Further, the data does not allow the Exchange to identify the Participant executing the trade at an away market.

ORF Revenue and Monitoring of ORF

The Exchange monitors the amount of revenue collected from the ORF to ensure that it, in combination with other regulatory fees and fines, does not exceed regulatory costs. In determining whether an expense is considered a regulatory cost, the Exchange reviews all costs and makes determinations if there is a nexus between the expense and a regulatory function. For example, a cost related to BX's equity platform, would not be considered an expense that is compared to ORF revenue. An options surveillance employee's cost, however would be an expense that is compared to ORF revenue. The Exchange notes that fines collected by the Exchange in connection with a disciplinary manner offset ORF.

The ORF is designed to recover a material portion of the costs to the Exchange of the supervision and regulation of its Participants, including performing routine surveillances, investigations, examinations, financial monitoring, and policy, rulemaking, interpretive, and enforcement activities.

The Exchange believes that revenue generated from the ORF, when combined with all of the Exchange's other regulatory fees, will cover a material portion, but not all, of the Exchange's regulatory costs. The Exchange will continue to monitor the amount of revenue collected from the ORF to ensure that it, in combination with its other regulatory fees and fines, does not exceed regulatory costs. If the Exchange determines regulatory revenues exceed regulatory costs, the Exchange will adjust the ORF by

submitting a fee change filing to the Commission.

Finally, the Exchange notes that it is amending its rule text at Chapter XV, Section 5 to remove certain rule text and include new text to make clear the manner in which ORF is assessed and collected on BX.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act⁹ in general, and furthers the objectives of Sections 6(b)(4) and 6(b)(5) of the Act¹⁰ in particular, in that it provides for the equitable allocation of reasonable dues, fees and other charges among members and issuers and other persons using its facility and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Exchange believes the proposed clarifications in the Fee Schedule to the ORF further the objectives of Section 6(b)(4) of the Act and are equitable and reasonable since they expressly describe the Exchange's existing practices regarding the manner in which the Exchange assesses and collects its ORF.

Proposal 1—Amend the Amount of the ORF

The Exchange believes that increasing the ORF from \$0.0004 per contract side to \$0.0005 per contract side as of August 1, 2017 is reasonable because the Exchange's collection of ORF needs to be balanced against the amount of regulatory cost collected [sic] by the Exchange. The Exchange believes that the proposed adjustments noted herein will serve to balance the Exchange's regulatory cost against the anticipated regulatory revenue. The Exchange regularly reviews its ORF to ensure that the ORF, in combination with its other regulatory fees and fines, does not exceed regulatory costs.

The Exchange believes that increasing the ORF from \$0.0004 per contract side to \$0.0005 per contract side as of August 1, 2017 is equitable and not unfairly discriminatory because this modest increase will serve to balance the Exchange's regulatory revenue against the anticipated regulatory costs. The ORF seeks to recover the costs of supervising and regulating members, including performing routine surveillances, investigations, examinations, financial monitoring, and policy, rulemaking, interpretive, and enforcement activities. Moreover, the Exchange believes the ORF ensures fairness by assessing fees to those

Participants that are directly based on the amount of Customer options business they conduct. Regulating Customer trading activity is much more labor intensive and requires greater expenditure of human and technical resources than regulating non-customer trading activity, which tends to be more automated and less labor-intensive. As a result, the costs associated with administering the Customer component of the Exchange's overall regulatory program are materially higher than the costs associated with administering the non-Customer component (e.g. Participant proprietary transactions) of its regulatory program.

The ORF is designed to recover a material portion of the costs of supervising and regulating Participants' Customer options business including performing routine surveillances, investigations, examinations, financial monitoring, and policy, rulemaking, interpretive, and enforcement activities. The Exchange will monitor the amount of revenue collected from the ORF to ensure that it, in combination with its other regulatory fees and fines, does not exceed the Exchange's total regulatory costs. The Exchange has designed the ORF to generate revenues that, when combined with all of the Exchange's other regulatory fees, will be less than or equal to the Exchange's regulatory costs, which is consistent with the Commission's view that regulatory fees be used for regulatory purposes and not to support the Exchange's business side. In this regard, the Exchange believes that the proposed amount of the fee is reasonable.

Proposal 2—Reflect the Manner in Which BX Assesses and Collects Its ORF

The Exchange believes it is reasonable and appropriate for the Exchange to charge the ORF for options transactions regardless of the exchange on which the transactions occur. The Exchange has a statutory obligation to enforce compliance by Participants and their associated persons under the Act and the rules of the Exchange and to surveil for other manipulative conduct by market participants (including non-members) trading on the Exchange. The Exchange cannot effectively surveil for such conduct without looking at and evaluating activity across all options markets. Many of the Exchange's market surveillance programs require the Exchange to look at and evaluate activity across all options markets, such as surveillance for position limit violations, manipulation, front-running and contrary exercise advice violations/expiring exercise declarations. The Exchange, because it lacks access to

⁹ 15 U.S.C. 78f(b).

¹⁰ 15 U.S.C. 78f(b)(4) and (5).

information on the identity of the entering firm for executions that occur on away markets, believes it is appropriate to assess the ORF on its Participant's clearing activity, based on information the Exchange receives from OCC, including for away market activity. Among other reasons, doing so better and more accurately captures activity that occurs away from the Exchange over which the Exchange has a degree of regulatory responsibility. In so doing, the Exchange believes that assessing ORF on Participant clearing firms in certain instances equitably distributes the collection of ORF in a fair and reasonable manner. Also, the Exchange and the other options exchanges are required to populate a consolidated options audit trail ("COATS")¹¹ system in order to surveil a Participant's activities across markets.¹²

The Exchange believes that assessing the ORF to each Exchange member for options transactions cleared by OCC in the Customer range where the execution occurs on another exchange and is cleared by a BX member is an equitable allocation of reasonable dues, fees, and other charges among its members and issuers and other persons using its facilities. The ORF is collected by OCC on behalf of BX from Exchange clearing members for all Customer transactions they clear or from non-members for all Customer transactions they clear that were executed on BX. The Exchange believes that this collection practice is reasonable and appropriate because higher fees are assessed to those members that require more Exchange regulatory services based on the amount of Customer options business they conduct.

Regulating Customer trading activity is more labor intensive and requires

greater expenditure of human and technical resources than regulating non-Customer trading activity. Surveillance, regulation and examination of non-Customer trading activity generally tends to be more automated and less labor intensive. As a result, the costs associated with administering the Customer component of the Exchange's overall regulatory program are anticipated to be typically higher than the costs associated with administering the non-Customer component of its regulatory program. The Exchange proposes assessing higher fees to those members that will require more Exchange regulatory services based on the amount of Customer options business they conduct. Additionally, the dues and fees paid by members go into the general funds of the Exchange, a portion of which is used to help pay the costs of regulation. The Exchange has in place a regulatory structure to surveil, conduct examinations and monitor the marketplace for violations of Exchange Rules. The ORF assists the Exchange to fund the cost of this regulation of the marketplace.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. The ORF is not intended to have any impact on competition. Rather, it is designed to enable the Exchange to recover a material portion of the Exchange's cost related to its regulatory activities. The Exchange is obligated to ensure that the amount of regulatory revenue collected from the ORF, in combination with its other regulatory fees and fines, does not exceed regulatory costs.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act.¹³

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) Necessary or appropriate in

the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File No. SR-BX-2017-032 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File No. SR-BX-2017-032. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File No. SR-BX-2017-032, and should be submitted on or before September 5, 2017.

¹¹ COATS effectively enhances intermarket options surveillance by enabling the options exchanges to reconstruct the market promptly to effectively surveil certain rules.

¹² In addition to its own surveillance programs, the Exchange works with other SROs and exchanges on intermarket surveillance related issues. Through its participation in the Intermarket Surveillance Group ("ISG"), the Exchange shares information and coordinates inquiries and investigations with other exchanges designed to address potential intermarket manipulation and trading abuses. The Exchange's participation in ISG helps it to satisfy the requirement that it has coordinated surveillance with markets on which security futures are traded and markets on which any security underlying security futures are traded to detect manipulation and insider trading. See Section 6(h)(3)(I) of the Act. ISG is an industry organization formed in 1983 to coordinate intermarket surveillance among the SROs by co-operatively sharing regulatory information pursuant to a written agreement between the parties. The goal of the ISG's information sharing is to coordinate regulatory efforts to address potential intermarket trading abuses and manipulations.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-81352; File No. SR-Phlx-2017-66]

Self-Regulatory Organizations; NASDAQ PHLX LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend Rule 1092, Nullification and Adjustment of Options Transactions Including Obvious Errors

August 8, 2017.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the “Act”),¹ and Rule 19b-4 thereunder,² notice is hereby given that on August 3, 2017, NASDAQ PHLX LLC (“Phlx” or “Exchange”) filed with the Securities and Exchange Commission (“Commission”) the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Rule 1092, Nullification and Adjustment of Options Transactions including Obvious Errors.

While these amendments are effective upon filing, the Exchange has designated the proposed amendments to be operative on a date that is within ninety (90) days after the Commission approved a similar proposal filed by Bats BZX on July 6, 2017.

The text of the proposed rule change is available on the Exchange’s Web site at <http://nasdaqphlx.cchwallstreet.com/>, at the principal office of the Exchange, and at the Commission’s Public Reference Room.

II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements

concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange and other options exchanges recently adopted a new, harmonized rule related to the adjustment and nullification of erroneous options transactions, including a specific provision related to coordination in connection with large-scale events involving erroneous options transactions.³ The Exchange believes that the changes the options exchanges implemented with the new, harmonized rule have led to increased transparency and finality with respect to the adjustment and nullification of erroneous options transactions. However, as part of the initial initiative, the Exchange and other options exchanges deferred a few specific matters for further discussion. Specifically, as described in the Initial Filing, the Exchange and all other options exchanges have been working to further improve the review of potentially erroneous transactions as well as their subsequent adjustment by creating an objective and universal way to determine Theoretical Price in the event a reliable NBBO is not available. Because this initiative required additional exchange and industry discussion as well as additional time for development and implementation, the Exchange and the other options exchanges determined to proceed with the Initial Filing and to undergo a secondary initiative to complete any additional improvements to the applicable rule. In this filing, the Exchange proposes to adopt procedures that will lead to a more objective and uniform way to determine Theoretical Price in the event a reliable NBBO is not available. In addition to this change, the Exchange has proposed two additional minor changes to its rules. The Exchange’s proposal mirrors that of Bats BZX, which the Commission approved

on July 6, 2017,⁴ and those that the other options exchanges intend to file.

Calculation of Theoretical Price Using a Third Party Provider

Under the harmonized rule, when reviewing a transaction as potentially erroneous, the Exchange needs to first determine the “Theoretical Price” of the option, *i.e.*, the Exchange’s estimate of the correct market price for the option. Pursuant to Rule 1092, if the applicable option series is traded on at least one other options exchange, then the Theoretical Price of an option series is the last national best bid (“NBB”) just prior to the trade in question with respect to an erroneous sell transaction or the last national best offer (“NBO”) just prior to the trade in question with respect to an erroneous buy transaction unless one of the exceptions described below exists. Thus, whenever the Exchange has a reliable NBB or NBO, as applicable, just prior to the transaction, then the Exchange uses this NBB or NBO as the Theoretical Price.

The Rule also contains various provisions governing specific situations where the NBB or NBO is not available or may not be reliable. Specifically, the Rule specifies situations in which there are no quotes or no valid quotes for comparison purposes, when the national best bid or offer (“NBBO”) is determined to be too wide to be reliable, and at the open of trading on each trading day. In each of these circumstances, in turn, because the NBB or NBO is not available or is deemed to be unreliable, the Exchange determines Theoretical Price. Under the current Rule, when determining Theoretical Price, Exchange personnel generally consult and refer to data such as the prices of related series, especially the closest strikes in the option in question. Exchange personnel may also take into account the price of the underlying security and the volatility characteristics of the option as well as historical pricing of the option and/or similar options. Although the Rule is administered by experienced personnel and the Exchange believes the process is currently appropriate, the Exchange recognizes that it is also subjective and could lead to disparate results for a transaction that spans multiple options exchanges.

The Exchange proposes to adopt Commentary .05 to specify how the Exchange will determine Theoretical Price when required by sub-paragraphs

⁴ See Securities Exchange Act Release No. 34-81084 (July 6, 2017) (granting approval of Bats BZX proposal), 82 FR 32216 (July 12, 2017); 82 FR 23684 (May 23, 2017) (SR-BatsBZX-2017-035) (notice of filing of Bats BZX proposal).

¹⁴ 17 CFR 200.30-3(a)(12).

¹⁵ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ See Securities Exchange Act Release No. 34-74919 (May 8, 2015); 80 FR 27766 (May 14, 2015) (SR-PHLX-2015-43) (the “Initial Filing”).

(b)(1)–(3) of the Rule (*i.e.*, at the open, when there are no valid quotes or when there is a wide quote). In particular, the Exchange has been working with other options exchanges to identify and select a reliable third party vendor (“TP Provider”) that would provide Theoretical Price to the Exchange whenever one or more transactions is under review pursuant to Rule 1092 and the NBBO is unavailable or deemed unreliable pursuant to Rule 1092(b). The Exchange and other options exchanges have selected CBOE Livevol, LLC (“Livevol”) as the TP Provider, as described below. As further described below, proposed Commentary .05 would codify the use of the TP Provider as well as limited exceptions where the Exchange would be able to deviate from the Theoretical Price given by the TP Provider.

Pursuant to proposed Commentary .05, when the Exchange must determine Theoretical Price pursuant to the subparagraphs (b)(1)–(3) of the Rule, the Exchange will request Theoretical Price from the third party vendor to which the Exchange and all other options exchanges have subscribed. Thus, as set forth in this proposed language, Theoretical Price would be provided to the Exchange by the TP Provider on request and not through a streaming data feed.⁵ This language also makes clear that the Exchange and all other options exchanges will use the same TP Provider.

As noted above, the proposed TP Provider selected by the Exchange and other options exchanges is Livevol. The Exchange proposes to codify this selection in proposed paragraph (d) to Commentary .05. As such, the Exchange would file a rule proposal and would provide notice to the options industry of any proposed change to the TP Provider.

The Exchange and other options exchanges have selected Livevol as the proposed TP Provider after diligence into various alternatives. Livevol has, since 2009, been the options industry leader in providing equity and index options market data and analytics services.⁶ The Exchange believes that Livevol has established itself within the options industry as a trusted provider of such services and notes that it and all other options exchanges already

subscribe to various Livevol services. In connection with this proposal, Livevol will develop a new tool based on its existing technology and services that will supply Theoretical Price to the Exchange and other options exchanges upon request. The Theoretical Price tool will leverage current market data and surrounding strikes to assist in a relative value pricing approach to generating a Theoretical Price. When relative value methods are incapable of generating a valid Theoretical Price, the Theoretical Price tool will utilize historical trade and quote data to calculate Theoretical Price.

Because the purpose of the proposal is to move away from a subjective determination by Exchange personnel when the NBBO is unavailable or unreliable, the Exchange intends to use the Theoretical Price provided by the TP Provider in all such circumstances. However, the Exchange believes it is necessary to retain the ability to contact the TP Provider if it believes that the Theoretical Price provided is fundamentally incorrect and to determine the Theoretical Price in the limited circumstance of a systems issue experienced by the TP Provider, as described below.

As proposed, to the extent an Official⁷ of the Exchange believes that the Theoretical Price provided by the TP Provider is fundamentally incorrect and cannot be used consistent with the maintenance of a fair and orderly market, the Official shall contact the TP Provider to notify the TP Provider of the reason the Official believes such Theoretical Price is inaccurate and to request a review and correction of the calculated Theoretical Price. For example, if an Official received from the TP Provider a Theoretical Price of \$80 in a series that the Official might expect to be instead in the range of \$8 to \$10 because of a recent corporate action in the underlying, the Official would request that the TP Provider review and confirm its calculation and determine whether it had appropriately accounted for the corporate action. In order to ensure that other options exchanges that may potentially be relying on the same Theoretical Price that, in turn, the Official believes to be fundamentally incorrect, the Exchange also proposes to promptly provide notice to other options exchanges that the TP Provider has been contacted to review and correct the calculated Theoretical Price at issue and to include a brief

explanation of the reason for the request.⁸ Although not directly addressed by the proposed Rule, the Exchange expects that all other options exchanges once in receipt of this notification would await the determination of the TP Provider and would use the corrected price as soon as it is available. The Exchange further notes that it expects the TP Provider to cooperate with, but to be independent of, the Exchange and other options exchanges.⁹

The Exchange believes that the proposed provision to allow an Official to contact the TP Provider if he or she believes the provided Theoretical Price is fundamentally incorrect is necessary, particularly because the Exchange and other options exchanges will be using the new process for the first time. Although the exchanges have conducted thorough diligence with respect to Livevol as the selected TP Provider and would do so with any potential replacement TP Provider, the Exchange is concerned that certain scenarios could arise where the Theoretical Price generated by the TP Provider does not take into account relevant factors and would result in an unfair result for market participants involved in a transaction. The Exchange notes that if such situations do indeed arise, to the extent practicable the Exchange will also work with the TP Provider and other options exchanges to improve the TP Provider's calculation of Theoretical Price in future situations. For instance, if the Exchange determines that a particular type of corporate action is not being appropriately captured by the TP Provider when such provider is generating Theoretical Price, while the Exchange believes that it needs the ability to request a review and correction of the Theoretical Price in connection with a specific review in order to provide a timely decision to market participants, the Exchange would share information regarding the specific situation with the TP Provider and other options exchanges in an effort to improve the Theoretical Price service for future use. The Exchange notes that it does not anticipate needing to rely on this provision frequently, if at all, but

⁵ See proposed paragraph (b) to Commentary .05.

⁹ The Exchange expects any TP Provider selected by the Exchange and other options exchanges to act independently in its determination and calculation of Theoretical Price. With respect to Livevol specifically, the Exchange again notes that Livevol is a subsidiary of CBOE Holdings, Inc., which is also the ultimate parent company of multiple options exchanges. The Exchange expects Livevol to calculate Theoretical Price independent of its affiliated exchanges in the same way it will calculate Theoretical Price independent of non-affiliated exchanges.

⁵ Though the Exchange and other options exchanges considered a streaming feed, it was determined that it would be more feasible to develop and implement an on demand service and that such a service would satisfy the goals of the initiative.

⁶ The Exchange notes that in 2015, Livevol was acquired by CBOE Holdings, Inc., the ultimate parent company of the Chicago Board Options Exchange (“CBOE”) and C2 Options Exchange (“C2”).

⁷ For purposes of the Rule, an Official is an Exchange staff member or contract employee designated as such by the Chief Regulatory Officer. See Rule 1092(a)(3).

believes the provision is necessary nonetheless to best prepare for all potential circumstances. Further, the Theoretical Price used by the Exchange in connection with its rulings will always be that received from the TP Provider and the Exchange has not proposed the ability to deviate from such price.¹⁰

Pursuant to proposed paragraph (c) to Commentary .05, an Official of the Exchange may determine the Theoretical Price if the TP Provider has experienced a systems issue that has rendered its services unavailable to accurately calculate Theoretical Price and such issue cannot be corrected in a timely manner. The Exchange notes that it does not anticipate needing to rely on this provision frequently, if at all, but believes the provision is necessary nonetheless to best prepare for all potential circumstances. Further, consistent with existing text in Rule 1092(e)(4), the Exchange has not proposed a specific time by which the service must be available in order to be considered timely.¹¹ The Exchange expects that it would await the TP Provider's services becoming available again so long as the Exchange was able to obtain information regarding the issue and the TP Provider had a reasonable expectation of being able to resume normal operations within the next several hours based on communications with the TP Provider. More specifically with respect to Livevol, Livevol has business continuity and disaster recovery procedures that will help to ensure that the Theoretical Price tool remains available or, in the event of an outage, that service is restored in a timely manner.

The Exchange also notes that if a wide-scale event occurred, even if such event did not qualify as a "Significant Market Event" pursuant to Rule 1092(e), and the TP Provider was unavailable or otherwise experiencing difficulty, the Exchange believes that it and other options exchanges would seek to coordinate to the extent possible. In particular, the Exchange and other options exchanges now have a process, administered by the Options Clearing Corporation, to invoke a discussion amongst all options exchanges in the event of any widespread or significant

market events. The Exchange believes that this process could be used in the event necessary if there were an issue with the TP Provider.

The Exchange also proposes to adopt language in paragraph (d) of Commentary .05 to Rule 1092 to disclaim the liability of the Exchange and the TP Provider in connection with the proposed Rule, the TP Provider's calculation of Theoretical Price, and the Exchange's use of such Theoretical Price. Specifically, the proposed rule would state that neither the Exchange, the TP Provider, nor any affiliate of the TP Provider (the TP Provider and its affiliates are referred to collectively as the "TP Provider"), makes any warranty, express or implied, as to the results to be obtained by any person or entity from the use of the TP Provider pursuant to Commentary .05. The proposed rule would further state that the TP Provider does not guarantee the accuracy or completeness of the calculated Theoretical Price and that the TP Provider disclaims all warranties of merchantability or fitness for a particular purpose or use with respect to such Theoretical Price. Finally, the proposed Rule would state that neither the Exchange nor the TP Provider shall have any liability for any damages, claims, losses (including any indirect or consequential losses), expenses, or delays, whether direct or indirect, foreseen or unforeseen, suffered by any person arising out of any circumstance or occurrence relating to the use of such Theoretical Price or arising out of any errors or delays in calculating such Theoretical Price. This proposed language is modeled after existing language in Exchange Rules regarding "reporting authorities" that calculate indices.¹²

In connection with the proposed change described above, the Exchange proposes to modify Rule 1092 to state that the Exchange will rely on paragraph (b) and Commentary .05 when determining Theoretical Price.

No Valid Quotes—Market Participant Quoting on Multiple Exchanges

As described above, one of the times where the NBB or NBO is deemed to be unreliable for purposes of Theoretical Price is when there are no quotes or no valid quotes for the affected series. In addition to when there are no quotes, the Exchange does not consider the following to be valid quotes: (i) All quotes in the applicable option series

published at a time where the last NBB is higher than the last NBO in such series (a "crossed market"); (ii) quotes published by the Exchange that were submitted by either party to the transaction in question; and (iii) quotes published by another options exchange against which the Exchange has declared self-help. In recognition of today's market structure where certain participants actively provide liquidity on multiple exchanges simultaneously, the Exchange proposes to add an additional category of invalid quotes. Specifically, in order to avoid a situation where a market participant has established the market at an erroneous price on multiple exchanges, the Exchange proposes to consider as invalid the quotes in a series published by another options exchange if either party to the transaction in question submitted the quotes in the series representing such options exchange's best bid or offer. Thus, similar to being able to ignore for purposes of the Rule the quotes published by the Exchange if submitted by either party to the transaction in question, the Exchange would be able to ignore for purposes of the rule quotations on other options exchanges by that same market participant.

In order to continue to apply the Rule in a timely and organized fashion, however, the Exchange proposes to initially limit the scope of this proposed provision in two ways. First, because the process will take considerable coordination with other options exchanges to confirm that the quotations in question on an away options exchange were indeed submitted by a party to a transaction on the Exchange, the Exchange proposes to limit this provision to apply to up to twenty-five (25) total options series (*i.e.*, whether such series all relate to the same underlying security or multiple underlying securities). Second, the Exchange proposes to require the party that believes it established the best bid or offer on one or more other options exchanges to identify to the Exchange the quotes which were submitted by such party and published by other options exchanges. In other words, as proposed, the burden will be on the party seeking that the Exchange disregard their quotations on other options exchanges to identify such quotations. In turn, the Exchange will verify with such other options exchanges that such quotations were indeed submitted by such party.

Below are examples of both the current rule and the rule as proposed to be amended.

¹⁰ To the extent the TP Provider has been contacted by an Official of the Exchange, reviews the Theoretical Price provided but disagrees that there has been any error, then the Exchange would be bound to use the Theoretical Price provided by the TP Provider.

¹¹ In the context of a Significant Market Event, the Exchange may determine, "in consultation with other options exchanges . . . that timely adjustment is not feasible due to the extraordinary nature of the situation." See Rule 1092(e)(4).

¹² See, *e.g.*, Rule 1102A, which relates to index options potentially listed and traded on the Exchange and disclaims liability for a reporting authority and their affiliates.

Example 1—Current Rule, Member Erroneously Quotes on One Exchange Assumptions

For purposes of this example, assume the following:

- A Member acting as a Market Maker on the Exchange (“Market Maker A”) is quoting in twenty series of options underlying security ABCD on the Exchange (and only the Exchange).
- Market Maker A makes an error in calculating the market for options on ABCD, and publishes quotes in all twenty series to buy options at \$1.00 and to sell options at \$1.05.
- In fact, options on ABCD in these series are nearly worthless and no other market participant is quoting in such series.
- Therefore, the NBBO in the twenty series at issue is $\$1.00 \times \$1.05$ (with the Exchange representing the NBBO based on Market Maker A’s quotes).
- Assume Member A immediately enters sell orders and executes against Market Maker A’s quotes at \$1.00.
- Assume Market Maker A submits to the Exchange a timely request for review of the trades with Member A as potentially erroneous transactions to buy.

Result

- Based on the Exchange’s current rules, the Exchange would identify Market Maker A as a participant to the trades at issue and would consider Market Maker A’s quotations invalid pursuant to Rule 1092(b)(2).
- As there were no other valid quotes to use as a reference price, the Exchange would then determine Theoretical Price.
- Assume the Exchange determines a Theoretical Price of \$0.05.
- The execution price of \$1.00 exceeds the \$0.25 minimum amount set forth in the Exchange’s table to determine whether an obvious error has occurred (*i.e.*, $\$0.05 + \$0.25 = \$0.30$) so any execution at or above this price is an obvious error.
- Accordingly, the executions in all series would be adjusted by the Exchange to executions at \$0.20 per contract (Theoretical Price of \$0.05 plus \$0.15) to the extent the incoming orders submitted by Member A were non-Customer orders.
- The executions in all series would be nullified to the extent the incoming orders submitted by Member A were Customer orders.

Example 2—Current Rule, Member Erroneously Quotes on Multiple Exchanges

Assumptions

For purposes of this example, assume the following:

- A Member acting as a Market Maker on the Exchange (“Market Maker A”) is quoting in twenty series of options underlying security ABCD on the Exchange and on a second exchange (“Away Exchange”).
- Market Maker A makes an error in calculating the market for options on ABCD, and publishes quotes on both the Exchange and the Away Exchange in all twenty series to buy options at \$1.00 and to sell options at \$1.05.
- In fact, options on ABCD in these series are nearly worthless and no other market participant is quoting in such series.
- Therefore, the NBBO in the twenty series at issue is $\$1.00 \times \$1.05$ (with the Exchange and the Away Exchange representing the NBBO based on Market Maker A’s quotes).
- Assume Member A immediately enters sell orders and executes against Market Maker A’s quotes at \$1.00.
- Assume Market Maker A submits to the Exchange and to the Away Exchange timely requests for review of the trades with Member A as potentially erroneous transactions to buy.

Result

- Based on the Exchange’s current rules, the Exchange would identify Market Maker A as a participant to the trades at issue and would consider Market Maker A’s quotations on the Exchange invalid pursuant to Rule 1092(b)(2). The Exchange, however, would view the Away Exchange’s quotations as valid, and would thus determine Theoretical Price to be \$1.05 (*i.e.*, the NBO in the case of a potentially erroneous buy transaction).
- The execution price of \$1.00 does not exceed the \$0.25 minimum amount set forth in the Exchange’s table to determine whether an obvious error has occurred (*i.e.*, $\$1.05 + \$0.25 = \$1.30$) so any execution at or above this price is an obvious error.
- The transactions on the Exchange would not be nullified or adjusted.
- As the Exchange and all other options exchanges have identical rules with respect to the process described above, the transactions on the Away Exchange would not be nullified or adjusted.

Example 3—Proposed Rule, Member Erroneously Quotes on Multiple Exchanges¹³

Assumptions

For purposes of this example, assume the following:

- A Member acting as a Market Maker on the Exchange (“Market Maker A”) is quoting in twenty series of options underlying security ABCD on the Exchange and on a second exchange (“Away Exchange”).¹⁴
- Market Maker A makes an error in calculating the market for options on ABCD, and publishes quotes on both the Exchange and the Away Exchange in all twenty series to buy options at \$1.00 and to sell options at \$1.05.
- In fact, options on ABCD in these series are nearly worthless and no other market participant is quoting in such series.
- Therefore, the NBBO in the twenty series at issue is $\$1.00 \times \$1.05$ (with the Exchange and the Away Exchange representing the NBBO based on Market Maker A’s quotes).
- Assume Member A immediately enters sell orders and executes against Market Maker A’s quotes at \$1.00.
- Assume Market Maker A submits to the Exchange and to the Away Exchange timely requests for review of the trades with Member A as potentially erroneous transactions to buy. At the time of submitting the requests for review to the Exchange and the Away Exchange, Market Maker A identifies to the Exchange the quotes on the Away Exchange as quotes also represented by Market Maker A (and to the Away Exchange, the quotes on the Exchange as quotes also represented by Market Maker A).

Result

- Based on the proposed rules, the Exchange would identify Market Maker A as a participant to the trades at issue and would consider Market Maker A’s quotations on the Exchange invalid pursuant to Rule 1092(b)(2).
- The Exchange and the Away Exchange would also coordinate to confirm that the quotations identified by Market Maker A on the other exchange were indeed Market Maker A’s quotations. Once confirmed, each of the Exchange and the Away Exchange

¹³ The Exchange notes that its proposed rule will not impact the proposed handling of a request for review where a market participant is quoting only on the Exchange, thus, the Exchange has not included a separate example for such a fact pattern.

¹⁴ The Exchange notes that the proposed rule would operate the same if Market Maker A was quoting on more than two exchanges. The Exchange has limited the example to two exchanges for simplicity.

would also consider invalid the quotations published on the other exchange.

- As there were no other valid quotes to use as a reference price, the Exchange would then determine Theoretical Price.

- Assume the Exchange determines a Theoretical Price of \$0.05.

- The execution price of \$1.00 exceeds the \$0.25 minimum amount set forth in the Exchange's table to determine whether an obvious error has occurred (*i.e.*, \$0.05 + \$0.25 = \$0.30) so any execution at or above this price is an obvious error.

- Accordingly, the executions in all series would be adjusted by the Exchange to executions at \$0.20 per contract (Theoretical Price of \$0.05 plus \$0.15) to the extent the incoming orders submitted by Member A were non-Customer orders.

- The executions in all series would be nullified to the extent the incoming orders submitted by Member A were Customer orders.

- As the Exchange and all other options exchanges would have identical rules with respect to the process described above, as other options exchanges intend to adopt the same rule if the proposed rule is approved, the transactions on the Away Exchange would also be nullified or adjusted as set forth above.

- If this example was instead modified such that Market Maker A was quoting in 200 series rather than 20, the Exchange notes that Market Maker A could only request that the Exchange consider as invalid their quotations in 25 of those series on other exchanges. As noted above, the Exchange has proposed to limit the proposed rule to 25 series in order to continue to process requests for review in a timely and organized fashion in order to provide certainty to market participants. This is due to the amount of coordination that will be necessary in such a scenario to confirm that the quotations in question on an away options exchange were indeed submitted by a party to a transaction on the Exchange.

Trading Halts—Clarifying Change to Rule 1092, Commentary .03

Commentary .03 to Rule 1092 describes the Exchange's authority to declare trading halts in one or more options traded on the Exchange. The Exchange proposes to modify Commentary .03 to provide that, with respect to equity options, the Exchange shall nullify any transaction that occurs during a regulatory halt as declared by the primary listing market for the underlying security. The Exchange believes this change is necessary to

distinguish a declared regulatory halt, where the underlying security should not be actively trading on any venue, from an operational issue on the primary listing exchange where the security continues to safely trade on other trading venues.

Implementation Date

The Exchange proposes to delay the operative date of this proposal to a date within ninety (90) days after the Commission approved the Bats BZX proposal on July 6, 2017. The Exchange will announce the operative date in a Regulatory Alert made available to its Members.

2. Statutory Basis

The Exchange believes that its proposal is consistent with the requirements of the Act and the rules and regulations thereunder that are applicable to a national securities exchange, and, in particular, with the requirements of Section 6(b) of the Act.¹⁵

Specifically, the proposal is consistent with Section 6(b)(5) of the Act¹⁶ because it would promote just and equitable principles of trade, remove impediments to, and perfect the mechanism of, a free and open market and a national market system, and, in general, protect investors and the public interest.

As described above, the Exchange and other options exchanges are seeking to further modify their harmonized rules related to the adjustment and nullification of erroneous options transactions. The Exchange believes that the proposal to utilize a TP Provider in the event the NBBO is unavailable or unreliable will provide greater transparency and clarity with respect to the adjustment and nullification of erroneous options transactions. Particularly, the proposed changes seek to achieve consistent results for participants across U.S. options exchanges while maintaining a fair and orderly market, protecting investors and protecting the public interest. Thus, the Exchange believes that the proposal is consistent with Section 6(b)(5) of the Act¹⁷ in that the proposed Rule will foster cooperation and coordination with persons engaged in regulating and facilitating transactions.

The Exchange again reiterates that it has retained the standard of the current rule for most reviews of options transactions pursuant to Rule 1092, which is to rely on the NBBO to

determine Theoretical Price if such NBBO can reasonably be relied upon. The proposal to use a TP Provider when the NBBO is unavailable or unreliable is consistent with Section 6(b)(5) of the Act¹⁸ in that the proposed Rule will foster cooperation and coordination with persons engaged in regulating and facilitating transactions by further reducing the possibility of disparate results between options exchanges and increasing the objectivity of the application of Rule 1092. Further, the Exchange believes that the proposed Rule is transparent with respect to the limited circumstances under which the Exchange will request a review and correction of Theoretical Price from the TP Provider, and has sought to limit such circumstances as much as possible. The Exchange notes that under the current Rule, Exchange personnel are required to determine Theoretical Price in certain circumstances and yet rarely do so because such circumstances have already been significantly limited under the harmonized rule (for example, because the wide quote provision of the harmonized rule only applies if the quote was narrower and then gapped but does not apply if the quote had been persistently wide). Thus, the Exchange believes it will need to request Theoretical Price from the TP Provider only in very rare circumstances and in turn, the Exchange anticipates that the need to contact the TP Provider for additional review of the Theoretical Price provided by the TP Provider will be even rarer. Similarly, the Exchange believes it is unlikely that an Exchange Official will ever be required to determine Theoretical Price, as such circumstance would only be in the event of a systems issue that has rendered the TP Provider's services unavailable and such issue cannot be corrected in a timely manner.

The Exchange also believes its proposal to adopt language in paragraph (d) of Commentary .05 to Rule 1092 to disclaim the liability of the Exchange and the TP Provider in connection with the proposed Rule, the TP Provider's calculation of Theoretical Price, and the Exchange's use of such Theoretical Price is consistent with the Act. As noted above, this proposed language is modeled after existing language in Exchange Rules regarding "reporting authorities" that calculate indices,¹⁹ and is consistent with Section 6(b)(5) of the Act²⁰ in that the proposed Rule will foster cooperation and coordination

¹⁵ 15 U.S.C. 78f(b).

¹⁶ 15 U.S.C. 78f(b)(5).

¹⁷ *Id.*

¹⁸ *Id.*

¹⁹ See *supra*, note 12.

²⁰ 15 U.S.C. 78f(b)(5).

with persons engaged in regulating and facilitating transactions.

As described above, the Exchange proposes a modification to the valid quotes provision to also exclude quotes in a series published by another options exchange if either party to the transaction in question submitted the orders or quotes in the series representing such options exchange's best bid or offer. The Exchange believes this proposal is consistent with Section 6(b)(5) of the Act²¹ because the application of the rule will foster cooperation and coordination with persons engaged in regulating and facilitating transactions by allowing the Exchange to coordinate with other options exchanges to determine whether a market participant that is party to a potentially erroneous transaction on the Exchange established the market in an option on other options exchanges; to the extent this can be established, the Exchange believes such participant's quotes should be excluded in the same way such quotes are excluded on the Exchange. The Exchange also believes it is reasonable to limit the scope of this provision to twenty-five (25) series and to require the party that believes it established the best bid or offer on one or more other options exchanges to identify to the Exchange the quotes which were submitted by that party and published by other options exchanges. The Exchange believes these limitations are consistent with Section 6(b)(5) of the Act²² because they will ensure that the Exchange is able to continue to apply the Rule in a timely and organized fashion, thus fostering cooperation and coordination with persons engaged in regulating and facilitating transactions and also removing impediments to and perfecting the mechanism of a free and open market and a national market system.

Finally, with respect to the proposed modification to Commentary .03 to Rule 1092, the Exchange believes that this proposal is consistent with Section 6(b)(5) of the Act²³ because it specifically provides for nullification where a trading halt exists with respect to an underlying security across the industry (*i.e.*, a regulatory halt) as distinguished from a situation where the primary exchange has experienced a technical issue but the underlying security continues to trade on other equities platforms. The Exchange notes that a similar provision already exists in the rules of certain other options

exchanges, and thus, has been found to be consistent with the Act.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange believes the entire proposal is consistent with Section 6(b)(8) of the Act²⁴ in that it does not impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act as explained below.

Importantly, the Exchange does not believe that the proposal will impose a burden on intermarket competition but rather that it will alleviate any burden on competition because it is the result of a collaborative effort by all options exchanges to further harmonize and improve the process related to the adjustment and nullification of [sic] erroneous options transactions. The Exchange does not believe that the rules applicable to such process is an area where options exchanges should compete, but rather, that all options exchanges should have consistent rules to the extent possible. Particularly where a market participant trades on several different exchanges and an erroneous trade may occur on multiple markets nearly simultaneously, the Exchange believes that a participant should have a consistent experience with respect to the nullification or adjustment of transactions. To that end, the selection and implementation of a TP Provider utilized by all options exchanges will further reduce the possibility that participants with potentially erroneous transactions that span multiple options exchanges are handled differently on such exchanges. Similarly, the proposed ability to consider quotations invalid on another options exchange if ultimately originating from a party to a potentially erroneous transaction on the Exchange represents a proposal intended to further foster cooperation by the options exchanges with respect to market events. The Exchange understands that all other options exchanges either have or they intend to file proposals that are substantially similar to this proposal.

The Exchange does not believe that the proposed rule change imposes a burden on intramarket competition because the proposed provisions apply to all market participants equally.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days after the date of the filing, or such shorter time as the Commission may designate, it has become effective pursuant to 19(b)(3)(A) of the Act²⁵ and Rule 19b-4(f)(6)²⁶ thereunder.

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-Phlx-2017-66 on the subject line.

Paper Comments

- Send paper comments in triplicate to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090. All submissions should refer to File Number SR-Phlx-2017-66. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/>

²⁵ 15 U.S.C. 78s(b)(3)(A).

²⁶ 17 CFR 240.19b-4(f)(6). In addition, Rule 19b-4(f)(6) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

²¹ 15 U.S.C. 78f(b)(5).

²² *Id.*

²³ *Id.*

rules/sro.shtml). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-Phlx-2017-66, and should be submitted on or before September 5, 2017.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.²⁷

Eduardo A. Aleman,
Assistant Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-81344; File No. SR-NASDAQ-2017-068]

Self-Regulatory Organizations; The NASDAQ Stock Market LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Revise the NASDAQ Options Market LLC Rules Regarding the Options Regulatory Fee

August 8, 2017.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on July 26, 2017, The NASDAQ Stock Market LLC ("Nasdaq" or "Exchange") filed with the Securities and Exchange Commission ("SEC" or "Commission") the proposed rule change as described in Items I, II, and III, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to

solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to revise The NASDAQ Options Market LLC ("NOM") Rules at Chapter XV, Section 5 to: (i) Make adjustments to the amount of its Options Regulatory Fee ("ORF"); and (ii) more closely reflect the manner in which NOM assesses and collects its ORF.

While the changes proposed herein are effective upon filing, the Exchange has designated the amendments [sic] become operative on August 1, 2017.

The text of the proposed rule change is available on the Exchange's Web site at <http://nasdaq.cchwallstreet.com>, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

NOM initially filed to establish its ORF in 2011.³ The Exchange has amended its ORF several times since the inception of this fee.⁴ At this time, the Exchange proposes to: (i) Amend the amount of its ORF; and (ii) revise NOM's Rules at Chapter XV, Section 5 to more closely reflect the manner in which NOM assesses and collects its ORF.

The Exchange supports a common approach for the assessment and

collection of ORF among the various options exchanges that assess such a fee. Furthermore, the Exchange supports guidance from the Commission regarding regulatory cost structures to ensure equal knowledge and treatment among options markets assessing ORF.

Proposal 1—Amend the Amount of the ORF

The Exchange assesses an ORF of \$0.0021 per contract side. The Exchange proposes to increase the ORF from \$0.0021 per contract side to \$0.0027 per contract side as of August 1, 2017 to account for a reduction in market volume. The Exchange's proposed change to the ORF should balance the Exchange's regulatory cost [sic] against the anticipated revenue. The Exchange regularly reviews its ORF to ensure that the ORF, in combination with its other regulatory fees and fines, does not exceed regulatory costs. The Exchange believes this adjustment will permit the Exchange to cover a material portion of its regulatory costs, while not exceeding regulatory costs.

The Exchange notified its Participants of this ORF adjustment thirty (30) calendar days prior to the proposed operative date.⁵

Proposal 2—Reflect the Manner in Which NOM Assesses and Collects Its ORF

Currently, NOM assesses its ORF for each Customer option transaction that is either: (1) Executed by a Participant on NOM; or (2) cleared by a NOM Participant at The Options Clearing Corporation ("OCC") in the Customer range,⁶ even if the transaction was executed by a non-member of NOM, regardless of the exchange on which the transaction occurs.⁷ If the OCC clearing member is a NOM Participant, ORF is assessed and collected on all cleared Customer contracts (after adjustment for CMTA⁸); and (2) if the OCC clearing member is not a NOM Participant, ORF is collected only on the cleared Customer contracts executed at NOM, taking into account any CMTA instructions which may result in collecting the ORF from a non-member.

By way of example, if Broker A, a NOM Participant, routes a Customer

⁵ See Options Trader Alert #2017-54.

⁶ Exchange Rules require each member to record the appropriate account origin code on all orders at the time of entry in order to allow the Exchange to properly prioritize and route orders and assess transaction fees pursuant to the Rules of the Exchange and report resulting transactions to OCC.

⁷ The Exchange uses reports from OCC when assessing and collecting the ORF.

⁸ CMTA or Clearing Member Trade Assignment is a form of "give-up" whereby the position will be assigned to a specific clearing firm at OCC.

²⁷ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ See Securities Exchange Act Release No. 65913 (December 8, 2011), 76 FR 77883 (December 14, 2011) (SR-NASDAQ-2011-163) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change Relating to the Options Regulatory Fee).

⁴ See Securities Exchange Act Release Nos. 76950 (January 21, 2016), 81 FR 4687 (January 27, 2016) (SR-NASDAQ-2016-003); and 78360 (July 19, 2016), 81 FR 48475 (July 25, 2016) (SR-NASDAQ-2016-096).

order to CBOE and the transaction executes on CBOE and clears in Broker A's OCC Clearing account, ORF will be collected by NOM from Broker A's clearing account at OCC via direct debit. While this transaction was executed on a market other than NOM, it was cleared by a NOM Participant in the Participant's OCC clearing account in the Customer range, therefore there is a regulatory nexus between NOM and the transaction. If Broker A was not a NOM Participant, then no ORF should be assessed and collected because there is no nexus; the transaction did not execute on NOM nor was it cleared by a NOM Participant.

In the case where a Participant both executes a transaction and clears the transaction, the ORF is assessed to and collected from the Participant only once. In the case where a Participant executes a transaction and a different Participant clears the transaction, the ORF is assessed to and collected from the Participant who clears the transaction and not the Participant who executes the transaction. In the case where a non-member executes a transaction at an away market and a Participant clears the transaction, the ORF is assessed to and collected from the Participant who clears the transaction. In the case where a Participant executes a transaction on NOM and a non-member clears the transaction, the ORF is assessed to the Participant that executed the transaction and collected from the non-member who cleared the transaction. In the case where a Participant executes a transaction at an away market and a non-member clears the transaction, the ORF is not assessed to the Participant who executed the transaction or collected from the non-member who cleared the transaction because the Exchange does not have access to the data to make absolutely certain that ORF should apply. Further, the data does not allow the Exchange to identify the Participant executing the trade at an away market.

ORF Revenue and Monitoring of ORF

The Exchange monitors the amount of revenue collected from the ORF to ensure that it, in combination with other regulatory fees and fines, does not exceed regulatory costs. In determining whether an expense is considered a regulatory cost, the Exchange reviews all costs and makes determinations if there is a nexus between the expense and a regulatory function. For example, a cost related to Nasdaq's equity platform, would not be considered an expense that is compared to ORF revenue. An options surveillance

employee's cost, however would be an expense that is compared to ORF revenue. The Exchange notes that fines collected by the Exchange in connection with a disciplinary manner offset ORF.

The ORF is designed to recover a material portion of the costs to the Exchange of the supervision and regulation of its Participants, including performing routine surveillances, investigations, examinations, financial monitoring, and policy, rulemaking, interpretive, and enforcement activities.

The Exchange believes that revenue generated from the ORF, when combined with all of the Exchange's other regulatory fees, will cover a material portion, but not all, of the Exchange's regulatory costs. The Exchange will continue to monitor the amount of revenue collected from the ORF to ensure that it, in combination with its other regulatory fees and fines, does not exceed regulatory costs. If the Exchange determines regulatory revenues exceed regulatory costs, the Exchange will adjust the ORF by submitting a fee change filing to the Commission.

Finally, the Exchange notes that it is amending its rule text at Chapter XV, Section 5 to remove certain rule text and include new text to make clear the manner in which ORF is assessed and collected on NOM.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act⁹ in general, and furthers the objectives of Sections 6(b)(4) and 6(b)(5) of the Act¹⁰ in particular, in that it provides for the equitable allocation of reasonable dues, fees and other charges among members and issuers and other persons using its facility and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Exchange believes the proposed clarifications in the Fee Schedule to the ORF further the objectives of Section 6(b)(4) of the Act and are equitable and reasonable since they expressly describe the Exchange's existing practices regarding the manner in which the Exchange assesses and collects its ORF.

Proposal 1—Amend the Amount of the ORF

The Exchange believes that increasing the ORF from \$0.0021 per contract side to \$0.0027 per contract side as of August 1, 2017 is reasonable because the Exchange's collection of ORF needs to be balanced against the amount of

regulatory cost collected [sic] by the Exchange. The Exchange believes that the proposed adjustments noted herein will serve to balance the Exchange's regulatory cost against the anticipated regulatory revenue. The Exchange regularly reviews its ORF to ensure that the ORF, in combination with its other regulatory fees and fines, does not exceed regulatory costs.

The Exchange believes that increasing the ORF from \$0.0021 per contract side to \$0.0027 per contract side as of August 1, 2017 is equitable and not unfairly discriminatory because this modest increase will serve to balance the Exchange's regulatory revenue against the anticipated regulatory costs. The ORF seeks to recover the costs of supervising and regulating members, including performing routine surveillances, investigations, examinations, financial monitoring, and policy, rulemaking, interpretive, and enforcement activities.

Moreover, the Exchange believes the ORF ensures fairness by assessing fees to those Participants that are directly based on the amount of Customer options business they conduct. Regulating Customer trading activity is much more labor intensive and requires greater expenditure of human and technical resources than regulating non-customer trading activity, which tends to be more automated and less labor-intensive. As a result, the costs associated with administering the Customer component of the Exchange's overall regulatory program are materially higher than the costs associated with administering the non-Customer component (*e.g.* Participant proprietary transactions) of its regulatory program.

The ORF is designed to recover a material portion of the costs of supervising and regulating Participants' Customer options business including performing routine surveillances, investigations, examinations, financial monitoring, and policy, rulemaking, interpretive, and enforcement activities. The Exchange will monitor the amount of revenue collected from the ORF to ensure that it, in combination with its other regulatory fees and fines, does not exceed the Exchange's total regulatory costs. The Exchange has designed the ORF to generate revenues that, when combined with all of the Exchange's other regulatory fees, will be less than or equal to the Exchange's regulatory costs, which is consistent with the Commission's view that regulatory fees be used for regulatory purposes and not to support the Exchange's business side. In this regard, the Exchange believes

⁹ 15 U.S.C. 78f(b).

¹⁰ 15 U.S.C. 78f(b)(4) and (5).

that the proposed amount of the fee is reasonable.

Proposal 2—Reflect the Manner in Which NOM Assesses and Collects Its ORF

The Exchange believes it is reasonable and appropriate for the Exchange to charge the ORF for options transactions regardless of the exchange on which the transactions occur. The Exchange has a statutory obligation to enforce compliance by Participants and their associated persons under the Act and the rules of the Exchange and to surveil for other manipulative conduct by market participants (including non-members) trading on the Exchange. The Exchange cannot effectively surveil for such conduct without looking at and evaluating activity across all options markets. Many of the Exchange's market surveillance programs require the Exchange to look at and evaluate activity across all options markets, such as surveillance for position limit violations, manipulation, front-running and contrary exercise advice violations/expiring exercise declarations. The Exchange, because it lacks access to information on the identity of the entering firm for executions that occur on away markets, believes it is appropriate to assess the ORF on its Participant's clearing activity, based on information the Exchange receives from OCC, including for away market activity. Among other reasons, doing so better and more accurately captures activity that occurs away from the Exchange over which the Exchange has a degree of regulatory responsibility. In so doing, the Exchange believes that assessing ORF on Participant clearing firms in certain instances equitably distributes the collection of ORF in a fair and reasonable manner. Also, the Exchange and the other options exchanges are required to populate a consolidated options audit trail ("COATS")¹¹ system in order to surveil a Participant's activities across markets.¹²

¹¹ COATS effectively enhances intermarket options surveillance by enabling the options exchanges to reconstruct the market promptly to effectively surveil certain rules.

¹² In addition to its own surveillance programs, the Exchange works with other SROs and exchanges on intermarket surveillance related issues. Through its participation in the Intermarket Surveillance Group ("ISG"), the Exchange shares information and coordinates inquiries and investigations with other exchanges designed to address potential intermarket manipulation and trading abuses. The Exchange's participation in ISG helps it to satisfy the requirement that it has coordinated surveillance with markets on which security futures are traded and markets on which any security underlying security futures are traded to detect manipulation and insider trading. See Section 6(h)(3)(I) of the

The Exchange believes that assessing the ORF to each Exchange member for options transactions cleared by OCC in the Customer range where the execution occurs on another exchange and is cleared by a NOM member is an equitable allocation of reasonable dues, fees, and other charges among its members and issuers and other persons using its facilities. The ORF is collected by OCC on behalf of NOM from Exchange clearing members for all Customer transactions they clear or from non-members for all Customer transactions they clear that were executed on NOM. The Exchange believes that this collection practice is reasonable and appropriate because higher fees are assessed to those members that require more Exchange regulatory services based on the amount of Customer options business they conduct.

Regulating Customer trading activity is more labor intensive and requires greater expenditure of human and technical resources than regulating non-Customer trading activity. Surveillance, regulation and examination of non-Customer trading activity generally tends to be more automated and less labor intensive. As a result, the costs associated with administering the Customer component of the Exchange's overall regulatory program are anticipated to be typically higher than the costs associated with administering the non-Customer component of its regulatory program. The Exchange proposes assessing higher fees to those members that will require more Exchange regulatory services based on the amount of Customer options business they conduct. Additionally, the dues and fees paid by members go into the general funds of the Exchange, a portion of which is used to help pay the costs of regulation. The Exchange has in place a regulatory structure to surveil, conduct examinations and monitor the marketplace for violations of Exchange Rules. The ORF assists the Exchange to fund the cost of this regulation of the marketplace.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance

Act. ISG is an industry organization formed in 1983 to coordinate intermarket surveillance among the SROs by co-operatively sharing regulatory information pursuant to a written agreement between the parties. The goal of the ISG's information sharing is to coordinate regulatory efforts to address potential intermarket trading abuses and manipulations.

of the purposes of the Act. The ORF is not intended to have any impact on competition. Rather, it is designed to enable the Exchange to recover a material portion of the Exchange's cost related to its regulatory activities. The Exchange is obligated to ensure that the amount of regulatory revenue collected from the ORF, in combination with its other regulatory fees and fines, does not exceed regulatory costs.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received from Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act.¹³

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) Necessary or appropriate in the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File No. SR-NASDAQ-2017-068 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090. All submissions should refer to File No. SR-NASDAQ-2017-068. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use

¹³ 15 U.S.C. 78s(b)(3)(A)(ii).

only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File No. SR-NASDAQ-2017-068, and should be submitted on or before September 5, 2017.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹⁴

Eduardo A. Aleman,

Assistant Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-81354; File No. SR-GEMX-2017-36]

Self-Regulatory Organizations; Nasdaq GEMX, LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend Rule 720, Nullification and Adjustment of Options Transactions Including Obvious Errors

August 8, 2017.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on August 3, 2017, Nasdaq GEMX, LLC ("GEMX" or "Exchange") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I and II

below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Rule 720, Nullification and Adjustment of Options Transactions Including Obvious Errors.

While these amendments are effective upon filing, the Exchange has designated the proposed amendments to be operative on a date that is within ninety (90) days after the Commission approved a similar proposal filed by Bats BZX on July 6, 2017.

The text of the proposed rule change is available on the Exchange's Web site at www.ise.com, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange and other options exchanges recently adopted a new, harmonized rule related to the adjustment and nullification of erroneous options transactions, including a specific provision related to coordination in connection with large-scale events involving erroneous options transactions.³ The Exchange believes that the changes the options exchanges implemented with the new, harmonized rule have led to increased transparency and finality with respect to the adjustment and nullification of erroneous options transactions. However, as part of the initial initiative, the Exchange and other options

exchanges deferred a few specific matters for further discussion. Specifically, as described in the Initial Filing, the Exchange and all other options exchanges have been working to further improve the review of potentially erroneous transactions as well as their subsequent adjustment by creating an objective and universal way to determine Theoretical Price in the event a reliable NBBO is not available. Because this initiative required additional exchange and industry discussion as well as additional time for development and implementation, the Exchange and the other options exchanges determined to proceed with the Initial Filing and to undergo a secondary initiative to complete any additional improvements to the applicable rule. In this filing, the Exchange proposes to adopt procedures that will lead to a more objective and uniform way to determine Theoretical Price in the event a reliable NBBO is not available. In addition to this change, the Exchange has proposed two additional minor changes to its rules. The Exchange's proposal mirrors that of Bats BZX, which the Exchange [sic] approved on July 6, 2017,⁴ and those that the other options exchanges intend to file, except that it omits the section of the proposal that pertains to trading halts due to the fact that the Supplementary Material to Exchange Rule 702 already includes the applicable language.

Calculation of Theoretical Price Using a Third Party Provider

Under the harmonized rule, when reviewing a transaction as potentially erroneous, the Exchange needs to first determine the "Theoretical Price" of the option, *i.e.*, the Exchange's estimate of the correct market price for the option. Pursuant to Rule 720, if the applicable option series is traded on at least one other options exchange, then the Theoretical Price of an option series is the last national best bid ("NBB") just prior to the trade in question with respect to an erroneous sell transaction or the last national best offer ("NBO") just prior to the trade in question with respect to an erroneous buy transaction unless one of the exceptions described below exists. Thus, whenever the Exchange has a reliable NBB or NBO, as applicable, just prior to the transaction, then the Exchange uses this NBB or NBO as the Theoretical Price.

⁴ See Securities Exchange Act Release No. 34-81084 (July 6, 2017) (granting approval of Bats BZX proposal), 82 FR 32216 (July 12, 2017); 82 FR 23684 (May 23, 2017) (SR-BatsBZX-2017-035) (notice of filing of Bats BZX proposal).

¹⁴ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ See Securities Exchange Act Release No. 74897 (May 7, 2015); 80 FR 27415 (May 13, 2015) (SR-ISE-Gemini-2015-11) (the "Initial Filing").

The Rule also contains various provisions governing specific situations where the NBB or NBO is not available or may not be reliable. Specifically, the Rule specifies situations in which there are no quotes or no valid quotes for comparison purposes, when the national best bid or offer ("NBBO") is determined to be too wide to be reliable, and at the open of trading on each trading day. In each of these circumstances, in turn, because the NBB or NBO is not available or is deemed to be unreliable, the Exchange determines Theoretical Price. Under the current Rule, when determining Theoretical Price, Exchange personnel generally consult and refer to data such as the prices of related series, especially the closest strikes in the option in question. Exchange personnel may also take into account the price of the underlying security and the volatility characteristics of the option as well as historical pricing of the option and/or similar options. Although the Rule is administered by experienced personnel and the Exchange believes the process is currently appropriate, the Exchange recognizes that it is also subjective and could lead to disparate results for a transaction that spans multiple options exchanges.

The Exchange proposes to adopt Supplementary Material to Rule 720, Item .04 to specify how the Exchange will determine Theoretical Price when required by sub-paragraphs (b)(1)–(3) of the Rule (*i.e.*, at the open, when there are no valid quotes or when there is a wide quote). In particular, the Exchange has been working with other options exchanges to identify and select a reliable third party vendor ("TP Provider") that would provide Theoretical Price to the Exchange whenever one or more transactions is under review pursuant to Rule 720 and the NBBO is unavailable or deemed unreliable pursuant to Rule 720(b). The Exchange and other options exchanges have selected CBOE Livevol, LLC ("Livevol") as the TP Provider, as described below. As further described below, proposed Supplementary Material to Rule 720, Item .04 would codify the use of the TP Provider as well as limited exceptions where the Exchange would be able to deviate from the Theoretical Price given by the TP Provider.

Pursuant to proposed Supplementary Material to Rule 720, Item .04, when the Exchange must determine Theoretical Price pursuant to the sub-paragraphs (b)(1)–(3) of the Rule, the Exchange will request Theoretical Price from the third party vendor to which the Exchange and all other options exchanges have

subscribed. Thus, as set forth in this proposed language, Theoretical Price would be provided to the Exchange by the TP Provider on request and not through a streaming data feed.⁵ This language also makes clear that the Exchange and all other options exchanges will use the same TP Provider.

As noted above, the proposed TP Provider selected by the Exchange and other options exchanges is Livevol. The Exchange proposes to codify this selection in proposed paragraph (d) to Supplementary Material to Rule 720, Item .04. As such, the Exchange would file a rule proposal and would provide notice to the options industry of any proposed change to the TP Provider.

The Exchange and other options exchanges have selected Livevol as the proposed TP Provider after diligence into various alternatives. Livevol has, since 2009, been the options industry leader in providing equity and index options market data and analytics services.⁶ The Exchange believes that Livevol has established itself within the options industry as a trusted provider of such services and notes that it and all other options exchanges already subscribe to various Livevol services. In connection with this proposal, Livevol will develop a new tool based on its existing technology and services that will supply Theoretical Price to the Exchange and other options exchanges upon request. The Theoretical Price tool will leverage current market data and surrounding strikes to assist in a relative value pricing approach to generating a Theoretical Price. When relative value methods are incapable of generating a valid Theoretical Price, the Theoretical Price tool will utilize historical trade and quote data to calculate Theoretical Price.

Because the purpose of the proposal is to move away from a subjective determination by Exchange personnel when the NBBO is unavailable or unreliable, the Exchange intends to use the Theoretical Price provided by the TP Provider in all such circumstances. However, the Exchange believes it is necessary to retain the ability to contact the TP Provider if it believes that the Theoretical Price provided is fundamentally incorrect and to

⁵ Though the Exchange and other options exchanges considered a streaming feed, it was determined that it would be more feasible to develop and implement an on demand service and that such a service would satisfy the goals of the initiative.

⁶ The Exchange notes that in 2015, Livevol was acquired by CBOE Holdings, Inc., the ultimate parent company of the Chicago Board Options Exchange ("CBOE") and C2 Options Exchange ("C2").

determine the Theoretical Price in the limited circumstance of a systems issue experienced by the TP Provider, as described below.

As proposed, to the extent an Official⁷ of the Exchange believes that the Theoretical Price provided by the TP Provider is fundamentally incorrect and cannot be used consistent with the maintenance of a fair and orderly market, the Official shall contact the TP Provider to notify the TP Provider of the reason the Official believes such Theoretical Price is inaccurate and to request a review and correction of the calculated Theoretical Price. For example, if an Official received from the TP Provider a Theoretical Price of \$80 in a series that the Official might expect to be instead in the range of \$8 to \$10 because of a recent corporate action in the underlying, the Official would request that the TP Provider review and confirm its calculation and determine whether it had appropriately accounted for the corporate action. In order to ensure that other options exchanges that may potentially be relying on the same Theoretical Price that, in turn, the Official believes to be fundamentally incorrect, the Exchange also proposes to promptly provide notice to other options exchanges that the TP Provider has been contacted to review and correct the calculated Theoretical Price at issue and to include a brief explanation of the reason for the request.⁸ Although not directly addressed by the proposed Rule, the Exchange expects that all other options exchanges once in receipt of this notification would await the determination of the TP Provider and would use the corrected price as soon as it is available. The Exchange further notes that it expects the TP Provider to cooperate with, but to be independent of, the Exchange and other options exchanges.⁹

The Exchange believes that the proposed provision to allow an Official to contact the TP Provider if he or she believes the provided Theoretical Price

⁷ For purposes of the Rule, an Official is an Officer of the Exchange or such other employee designee of the Exchange that is trained in the application of this Rule. See Rule 720(a)(3).

⁸ See proposed paragraph (b) to Supplementary Material to Rule 720, Item .04.

⁹ The Exchange expects any TP Provider selected by the Exchange and other options exchanges to act independently in its determination and calculation of Theoretical Price. With respect to Livevol specifically, the Exchange again notes that Livevol is a subsidiary of CBOE Holdings, Inc., which is also the ultimate parent company of multiple options exchanges. The Exchange expects Livevol to calculate Theoretical Price independent of its affiliated exchanges in the same way it will calculate Theoretical Price independent of non-affiliated exchanges.

is fundamentally incorrect is necessary, particularly because the Exchange and other options exchanges will be using the new process for the first time. Although the exchanges have conducted thorough diligence with respect to Livevol as the selected TP Provider and would do so with any potential replacement TP Provider, the Exchange is concerned that certain scenarios could arise where the Theoretical Price generated by the TP Provider does not take into account relevant factors and would result in an unfair result for market participants involved in a transaction. The Exchange notes that if such situations do indeed arise, to the extent practicable the Exchange will also work with the TP Provider and other options exchanges to improve the TP Provider's calculation of Theoretical Price in future situations. For instance, if the Exchange determines that a particular type of corporate action is not being appropriately captured by the TP Provider when such provider is generating Theoretical Price, while the Exchange believes that it needs the ability to request a review and correction of the Theoretical Price in connection with a specific review in order to provide a timely decision to market participants, the Exchange would share information regarding the specific situation with the TP Provider and other options exchanges in an effort to improve the Theoretical Price service for future use. The Exchange notes that it does not anticipate needing to rely on this provision frequently, if at all, but believes the provision is necessary nonetheless to best prepare for all potential circumstances. Further, the Theoretical Price used by the Exchange in connection with its rulings will always be that received from the TP Provider and the Exchange has not proposed the ability to deviate from such price.¹⁰

Pursuant to proposed paragraph (c) to Supplementary Material to Rule 720, Item .04, an Official of the Exchange may determine the Theoretical Price if the TP Provider has experienced a systems issue that has rendered its services unavailable to accurately calculate Theoretical Price and such issue cannot be corrected in a timely manner. The Exchange notes that it does not anticipate needing to rely on this provision frequently, if at all, but believes the provision is necessary nonetheless to best prepare for all

potential circumstances. Further, consistent with existing text in Rule 720(e)(4), the Exchange has not proposed a specific time by which the service must be available in order to be considered timely.¹¹ The Exchange expects that it would await the TP Provider's services becoming available again so long as the Exchange was able to obtain information regarding the issue and the TP Provider had a reasonable expectation of being able to resume normal operations within the next several hours based on communications with the TP Provider. More specifically with respect to Livevol, Livevol has business continuity and disaster recovery procedures that will help to ensure that the Theoretical Price tool remains available or, in the event of an outage, that service is restored in a timely manner.

The Exchange also notes that if a wide-scale event occurred, even if such event did not qualify as a "Significant Market Event" pursuant to Rule 720(e), and the TP Provider was unavailable or otherwise experiencing difficulty, the Exchange believes that it and other options exchanges would seek to coordinate to the extent possible. In particular, the Exchange and other options exchanges now have a process, administered by the Options Clearing Corporation, to invoke a discussion amongst all options exchanges in the event of any widespread or significant market events. The Exchange believes that this process could be used in the event necessary if there were an issue with the TP Provider.

The Exchange also proposes to adopt language in paragraph (d) of Supplementary Material to Rule 720, Item .04 to Rule 720 to disclaim the liability of the Exchange and the TP Provider in connection with the proposed Rule, the TP Provider's calculation of Theoretical Price, and the Exchange's use of such Theoretical Price. Specifically, the proposed rule would state that neither the Exchange, the TP Provider, nor any affiliate of the TP Provider (the TP Provider and its affiliates are referred to collectively as the "TP Provider"), makes any warranty, express or implied, as to the results to be obtained by any person or entity from the use of the TP Provider pursuant to Supplementary Material to Rule 720, Item .04. The proposed rule would further state that the TP Provider does not guarantee the accuracy or completeness of the calculated

Theoretical Price and that the TP Provider disclaims all warranties of merchantability or fitness for a particular purpose or use with respect to such Theoretical Price. Finally, the proposed Rule would state that neither the Exchange nor the TP Provider shall have any liability for any damages, claims, losses (including any indirect or consequential losses), expenses, or delays, whether direct or indirect, foreseen or unforeseen, suffered by any person arising out of any circumstance or occurrence relating to the use of such Theoretical Price or arising out of any errors or delays in calculating such Theoretical Price. This proposed language is modeled after existing language in Exchange Rules regarding "reporting authorities" that calculate indices.¹²

In connection with the proposed change described above, the Exchange proposes to modify Rule 720 to state that the Exchange will rely on paragraph (b) and Supplementary Material to Rule 720, Item .04 when determining Theoretical Price.

No Valid Quotes—Market Participant Quoting on Multiple Exchanges

As described above, one of the times where the NBB or NBO is deemed to be unreliable for purposes of Theoretical Price is when there are no quotes or no valid quotes for the affected series. In addition to when there are no quotes, the Exchange does not consider the following to be valid quotes: (i) All quotes in the applicable option series published at a time where the last NBB is higher than the last NBO in such series (a "crossed market"); (ii) quotes published by the Exchange that were submitted by either party to the transaction in question; and (iii) quotes published by another options exchange against which the Exchange has declared self-help. In recognition of today's market structure where certain participants actively provide liquidity on multiple exchanges simultaneously, the Exchange proposes to add an additional category of invalid quotes. Specifically, in order to avoid a situation where a market participant has established the market at an erroneous price on multiple exchanges, the Exchange proposes to consider as invalid the quotes in a series published by another options exchange if either party to the transaction in question submitted the quotes in the series representing such options exchange's

¹⁰ To the extent the TP Provider has been contacted by an Official of the Exchange, reviews the Theoretical Price provided but disagrees that there has been any error, then the Exchange would be bound to use the Theoretical Price provided by the TP Provider.

¹¹ In the context of a Significant Market Event, the Exchange may determine, "in consultation with other options exchanges . . . that timely adjustment is not feasible due to the extraordinary nature of the situation." See Rule 720(e)(4).

¹² See, e.g., ISE Rule 2011, which is incorporated by reference into the GEMX rules and which relates to index options potentially listed and traded on the Exchange and disclaim [sic] liability for a reporting authority and their affiliates.

best bid or offer. Thus, similar to being able to ignore for purposes of the Rule the quotes published by the Exchange if submitted by either party to the transaction in question, the Exchange would be able to ignore for purposes of the rule quotations on other options exchanges by that same market participant.

In order to continue to apply the Rule in a timely and organized fashion, however, the Exchange proposes to initially limit the scope of this proposed provision in two ways. First, because the process will take considerable coordination with other options exchanges to confirm that the quotations in question on an away options exchange were indeed submitted by a party to a transaction on the Exchange, the Exchange proposes to limit this provision to apply to up to twenty-five (25) total options series (*i.e.*, whether such series all relate to the same underlying security or multiple underlying securities). Second, the Exchange proposes to require the party that believes it established the best bid or offer on one or more other options exchanges to identify to the Exchange the quotes which were submitted by such party and published by other options exchanges. In other words, as proposed, the burden will be on the party seeking that the Exchange disregard their quotations on other options exchanges to identify such quotations. In turn, the Exchange will verify with such other options exchanges that such quotations were indeed submitted by such party.

Below are examples of both the current rule and the rule as proposed to be amended.

Example 1—Current Rule, Member Erroneously Quotes on One Exchange Assumptions

For purposes of this example, assume the following:

- A Member acting as a Market Maker on the Exchange (“Market Maker A”) is quoting in twenty series of options underlying security ABCD on the Exchange (and only the Exchange).
- Market Maker A makes an error in calculating the market for options on ABCD, and publishes quotes in all twenty series to buy options at \$1.00 and to sell options at \$1.05.
- In fact, options on ABCD in these series are nearly worthless and no other market participant is quoting in such series.
- Therefore, the NBBO in the twenty series at issue is \$1.00 × \$1.05 (with the Exchange representing the NBBO based on Market Maker A’s quotes).

- Assume Member A immediately enters sell orders and executes against Market Maker A’s quotes at \$1.00.
- Assume Market Maker A submits to the Exchange a timely request for review of the trades with Member A as potentially erroneous transactions to buy.

Result

- Based on the Exchange’s current rules, the Exchange would identify Market Maker A as a participant to the trades at issue and would consider Market Maker A’s quotations invalid pursuant to Rule 720(b)(2).
- As there were no other valid quotes to use as a reference price, the Exchange would then determine Theoretical Price.
- Assume the Exchange determines a Theoretical Price of \$0.05.
- The execution price of \$1.00 exceeds the \$0.25 minimum amount set forth in the Exchange’s table to determine whether an obvious error has occurred (*i.e.*, \$0.05 + \$0.25 = \$0.30) so any execution at or above this price is an obvious error.
- Accordingly, the executions in all series would be adjusted by the Exchange to executions at \$0.20 per contract (Theoretical Price of \$0.05 plus \$0.15) to the extent the incoming orders submitted by Member A were non-Customer orders.
- The executions in all series would be nullified to the extent the incoming orders submitted by Member A were Customer orders.

Example 2—Current Rule, Member Erroneously Quotes on Multiple Exchanges

Assumptions

For purposes of this example, assume the following:

- A Member acting as a Market Maker on the Exchange (“Market Maker A”) is quoting in twenty series of options underlying security ABCD on the Exchange and on a second exchange (“Away Exchange”).
- Market Maker A makes an error in calculating the market for options on ABCD, and publishes quotes on both the Exchange and the Away Exchange in all twenty series to buy options at \$1.00 and to sell options at \$1.05.
- In fact, options on ABCD in these series are nearly worthless and no other market participant is quoting in such series.
- Therefore, the NBBO in the twenty series at issue is \$1.00 × \$1.05 (with the Exchange and the Away Exchange representing the NBBO based on Market Maker A’s quotes).

- Assume Member A immediately enters sell orders and executes against Market Maker A’s quotes at \$1.00.
- Assume Market Maker A submits to the Exchange and to the Away Exchange timely requests for review of the trades with Member A as potentially erroneous transactions to buy.

Result

- Based on the Exchange’s current rules, the Exchange would identify Market Maker A as a participant to the trades at issue and would consider Market Maker A’s quotations on the Exchange invalid pursuant to Rule 720(b)(2). The Exchange, however, would view the Away Exchange’s quotations as valid, and would thus determine Theoretical Price to be \$1.05 (*i.e.*, the NBO in the case of a potentially erroneous buy transaction).
- The execution price of \$1.00 does not exceed the \$0.25 minimum amount set forth in the Exchange’s table to determine whether an obvious error has occurred (*i.e.*, \$1.05 + \$0.25 = \$1.30) so any execution at or above this price is an obvious error.
- The transactions on the Exchange would not be nullified or adjusted.
- As the Exchange and all other options exchanges have identical rules with respect to the process described above, the transactions on the Away Exchange would not be nullified or adjusted.

Example 3—Proposed Rule, Member Erroneously Quotes on Multiple Exchanges¹³

Assumptions

For purposes of this example, assume the following:

- A Member acting as a Market Maker on the Exchange (“Market Maker A”) is quoting in twenty series of options underlying security ABCD on the Exchange and on a second exchange (“Away Exchange”).¹⁴
- Market Maker A makes an error in calculating the market for options on ABCD, and publishes quotes on both the Exchange and the Away Exchange in all twenty series to buy options at \$1.00 and to sell options at \$1.05.
- In fact, options on ABCD in these series are nearly worthless and no other market participant is quoting in such series.

¹³ The Exchange notes that its proposed rule will not impact the proposed handling of a request for review where a market participant is quoting only on the Exchange, thus, the Exchange has not included a separate example for such a fact pattern.

¹⁴ The Exchange notes that the proposed rule would operate the same if Market Maker A was quoting on more than two exchanges. The Exchange has limited the example to two exchanges for simplicity.

- Therefore, the NBBO in the twenty series at issue is \$1.00 *\$1.05 (with the Exchange and the Away Exchange representing the NBBO based on Market Maker A's quotes).

- Assume Member A immediately enters sell orders and executes against Market Maker A's quotes at \$1.00.

- Assume Market Maker A submits to the Exchange and to the Away Exchange timely requests for review of the trades with Member A as potentially erroneous transactions to buy. At the time of submitting the requests for review to the Exchange and the Away Exchange, Market Maker A identifies to the Exchange the quotes on the Away Exchange as quotes also represented by Market Maker A (and to the Away Exchange, the quotes on the Exchange as quotes also represented by Market Maker A).

Result

- Based on the proposed rules, the Exchange would identify Market Maker A as a participant to the trades at issue and would consider Market Maker A's quotations on the Exchange invalid pursuant to Rule 720(b)(2).

- The Exchange and the Away Exchange would also coordinate to confirm that the quotations identified by Market Maker A on the other exchange were indeed Market Maker A's quotations. Once confirmed, each of the Exchange and the Away Exchange would also consider invalid the quotations published on the other exchange.

- As there were no other valid quotes to use as a reference price, the Exchange would then determine Theoretical Price.

- Assume the Exchange determines a Theoretical Price of \$0.05.

- The execution price of \$1.00 exceeds the \$0.25 minimum amount set forth in the Exchange's table to determine whether an obvious error has occurred (*i.e.*, $\$0.05 + \$0.25 = \$0.30$) so any execution at or above this price is an obvious error.

- Accordingly, the executions in all series would be adjusted by the Exchange to executions at \$0.20 per contract (Theoretical Price of \$0.05 plus \$0.15) to the extent the incoming orders submitted by Member A were non-Customer orders.

- The executions in all series would be nullified to the extent the incoming orders submitted by Member A were Customer orders.

- As the Exchange and all other options exchanges would have identical rules with respect to the process described above, as other options exchanges intend to adopt the same rule if the proposed rule is approved, the

transactions on the Away Exchange would also be nullified or adjusted as set forth above.

- If this example was instead modified such that Market Maker A was quoting in 200 series rather than 20, the Exchange notes that Market Maker A could only request that the Exchange consider as invalid their quotations in 25 of those series on other exchanges. As noted above, the Exchange has proposed to limit the proposed rule to 25 series in order to continue to process requests for review in a timely and organized fashion in order to provide certainty to market participants. This is due to the amount of coordination that will be necessary in such a scenario to confirm that the quotations in question on an away options exchange were indeed submitted by a party to a transaction on the Exchange.

Implementation Date

The Exchange proposes to delay the operative date of this proposal to a date within ninety (90) days after the Commission approved the Bats BZX proposal on July 6, 2017. The Exchange will announce the operative date in a Regulatory Alert made available to its Members.

2. Statutory Basis

The Exchange believes that its proposal is consistent with the requirements of the Act and the rules and regulations thereunder that are applicable to a national securities exchange, and, in particular, with the requirements of Section 6(b) of the Act.¹⁵ Specifically, the proposal is consistent with Section 6(b)(5) of the Act¹⁶ because it would promote just and equitable principles of trade, remove impediments to, and perfect the mechanism of, a free and open market and a national market system, and, in general, protect investors and the public interest.

As described above, the Exchange and other options exchanges are seeking to further modify their harmonized rules related to the adjustment and nullification of erroneous options transactions. The Exchange believes that the proposal to utilize a TP Provider in the event the NBBO is unavailable or unreliable will provide greater transparency and clarity with respect to the adjustment and nullification of erroneous options transactions. Particularly, the proposed changes seek to achieve consistent results for participants across U.S. options exchanges while maintaining a fair and

orderly market, protecting investors and protecting the public interest. Thus, the Exchange believes that the proposal is consistent with Section 6(b)(5) of the Act¹⁷ in that the proposed Rule will foster cooperation and coordination with persons engaged in regulating and facilitating transactions.

The Exchange again reiterates that it has retained the standard of the current rule for most reviews of options transactions pursuant to Rule 720, which is to rely on the NBBO to determine Theoretical Price if such NBBO can reasonably be relied upon. The proposal to use a TP Provider when the NBBO is unavailable or unreliable is consistent with Section 6(b)(5) of the Act¹⁸ in that the proposed Rule will foster cooperation and coordination with persons engaged in regulating and facilitating transactions by further reducing the possibility of disparate results between options exchanges and increasing the objectivity of the application of Rule 720. Further, the Exchange believes that the proposed Rule is transparent with respect to the limited circumstances under which the Exchange will request a review and correction of Theoretical Price from the TP Provider, and has sought to limit such circumstances as much as possible. The Exchange notes that under the current Rule, Exchange personnel are required to determine Theoretical Price in certain circumstances and yet rarely do so because such circumstances have already been significantly limited under the harmonized rule (for example, because the wide quote provision of the harmonized rule only applies if the quote was narrower and then gapped but does not apply if the quote had been persistently wide). Thus, the Exchange believes it will need to request Theoretical Price from the TP Provider only in very rare circumstances and in turn, the Exchange anticipates that the need to contact the TP Provider for additional review of the Theoretical Price provided by the TP Provider will be even rarer. Similarly, the Exchange believes it is unlikely that an Exchange Official will ever be required to determine Theoretical Price, as such circumstance would only be in the event of a systems issue that has rendered the TP Provider's services unavailable and such issue cannot be corrected in a timely manner.

The Exchange also believes its proposal to adopt language in paragraph (d) of Supplementary Material to Rule 720, Item .04 to Rule 720 to disclaim the liability of the Exchange and the TP

¹⁵ 15 U.S.C. 78f(b).

¹⁶ 15 U.S.C. 78f(b)(5).

¹⁷ *Id.*

¹⁸ *Id.*

Provider in connection with the proposed Rule, the TP Provider's calculation of Theoretical Price, and the Exchange's use of such Theoretical Price is consistent with the Act. As noted above, this proposed language is modeled after existing language in Exchange Rules regarding "reporting authorities" that calculate indices,¹⁹ and is consistent with Section 6(b)(5) of the Act²⁰ in that the proposed Rule will foster cooperation and coordination with persons engaged in regulating and facilitating transactions.

As described above, the Exchange proposes a modification to the valid quotes provision to also exclude quotes in a series published by another options exchange if either party to the transaction in question submitted the orders or quotes in the series representing such options exchange's best bid or offer. The Exchange believes this proposal is consistent with Section 6(b)(5) of the Act²¹ because the application of the rule will foster cooperation and coordination with persons engaged in regulating and facilitating transactions by allowing the Exchange to coordinate with other options exchanges to determine whether a market participant that is party to a potentially erroneous transaction on the Exchange established the market in an option on other options exchanges; to the extent this can be established, the Exchange believes such participant's quotes should be excluded in the same way such quotes are excluded on the Exchange. The Exchange also believes it is reasonable to limit the scope of this provision to twenty-five (25) series and to require the party that believes it established the best bid or offer on one or more other options exchanges to identify to the Exchange the quotes which were submitted by that party and published by other options exchanges. The Exchange believes these limitations are consistent with Section 6(b)(5) of the Act²² because they will ensure that the Exchange is able to continue to apply the Rule in a timely and organized fashion, thus fostering cooperation and coordination with persons engaged in regulating and facilitating transactions and also removing impediments to and perfecting the mechanism of a free and open market and a national market system.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange believes the entire proposal is consistent with Section 6(b)(8) of the Act²³ in that it does not impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act as explained below.

Importantly, the Exchange does not believe that the proposal will impose a burden on intermarket competition but rather that it will alleviate any burden on competition because it is the result of a collaborative effort by all options exchanges to further harmonize and improve the process related to the adjustment and nullification of [sic] erroneous options transactions. The Exchange does not believe that the rules applicable to such process is an area where options exchanges should compete, but rather, that all options exchanges should have consistent rules to the extent possible. Particularly where a market participant trades on several different exchanges and an erroneous trade may occur on multiple markets nearly simultaneously, the Exchange believes that a participant should have a consistent experience with respect to the nullification or adjustment of transactions. To that end, the selection and implementation of a TP Provider utilized by all options exchanges will further reduce the possibility that participants with potentially erroneous transactions that span multiple options exchanges are handled differently on such exchanges. Similarly, the proposed ability to consider quotations invalid on another options exchange if ultimately originating from a party to a potentially erroneous transaction on the Exchange represents a proposal intended to further foster cooperation by the options exchanges with respect to market events. The Exchange understands that all other options exchanges either have or they intend to file proposals that are substantially similar to this proposal.

The Exchange does not believe that the proposed rule change imposes a burden on intramarket competition because the proposed provisions apply to all market participants equally.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A)(iii) of the Act²⁴ and subparagraph (f)(6) of Rule 19b-4 thereunder.²⁵

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) Necessary or appropriate in the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-GEMX-2017-36 on the subject line.

Paper Comments

- Send paper comments in triplicate to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090. All submissions should refer to File Number SR-GEMX-2017-36. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's

²⁴ 15 U.S.C. 78s(b)(3)(A)(iii).

²⁵ 17 CFR 240.19b-4(f)(6). In addition, Rule 19b-4(f)(6) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-81343; File No. SR-Phlx-2017-54]

Self-Regulatory Organizations; NASDAQ PHLX LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend the Exchange's Pricing Schedule With Respect to the Options Regulatory Fee

August 8, 2017.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")¹, and Rule 19b-4 thereunder,² notice is hereby given that on July 26, 2017, NASDAQ PHLX LLC ("Phlx" or "Exchange") filed with the Securities and Exchange Commission ("SEC" or "Commission") the proposed rule change as described in Items I, II, and III, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to

solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to revise Section IV, Part D of the Pricing Schedule to more closely reflect the manner in which Phlx assesses and collects its Options Regulatory Fee ("ORF").

The text of the proposed rule change is available on the Exchange's Web site at <http://nasdaqphlx.cchwallstreet.com/>, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

Phlx initially filed to establish its ORF in 2009.³ The Exchange has amended its ORF several times since the inception of this fee.⁴ At this time, the Exchange proposes to revise Section IV, Part D of the Pricing Schedule to more closely reflect the manner in which Phlx assesses and collects its ORF.

The Exchange supports a common approach for the assessment and

collection of ORF among the various options exchanges that assess such a fee. Furthermore, the Exchange supports guidance from the Commission regarding regulatory cost structures to ensure equal knowledge and treatment among options markets assessing ORF.

The Exchange assesses an ORF of \$0.0045 per contract side. This proposed rule change does not seek to amend the amount of the ORF. Currently, Phlx assesses its ORF for each Customer option transaction that is either: (1) Executed by a member⁵ on Phlx; or (2) cleared by a Phlx member at The Options Clearing Corporation ("OCC") in the Customer range,⁶ even if the transaction was executed by a non-member of Phlx, regardless of the exchange on which the transaction occurs.⁷ If the OCC clearing member is a Phlx member, ORF is assessed and collected on all cleared Customer contracts (after adjustment for CMTA⁸); and (2) if the OCC clearing member is not a Phlx member, ORF is collected only on the cleared Customer contracts executed at Phlx, taking into account any CMTA instructions which may result in collecting the ORF from a non-member.

By way of example, if Broker A, a Phlx member, routes a Customer order to CBOE and the transaction executes on CBOE and clears in Broker A's OCC Clearing account, ORF will be collected by Phlx from Broker A's clearing account at OCC via direct debit. While this transaction was executed on a market other than Phlx, it was cleared by a Phlx member in the member's OCC clearing account in the Customer range, therefore there is a regulatory nexus between Phlx and the transaction. If Broker A was not a Phlx member, then no ORF should be assessed and collected because there is no nexus; the

⁵ For purposes of this filing the term "member" shall mean either a "member" or a "member organization."

⁶ Exchange Rules require each member to record the appropriate account origin code on all orders at the time of entry in order to allow the Exchange to properly prioritize and route orders and assess transaction fees pursuant to the Rules of the Exchange and report resulting transactions to OCC. The Exchange represents that it has surveillances in place to verify that members mark orders with the correct account origin code.

⁷ The Exchange uses reports from OCC when assessing and collecting the ORF.

⁸ CMTA or Clearing Member Trade Assignment is a form of "give-up" whereby the position will be assigned to a specific clearing firm at OCC. Phlx Rule 1052 provides that every Clearing Member is responsible for the clearance of the Exchange options transactions of such Clearing Member and of each member who gives up the name of such Clearing Member in an Exchange options transaction, provided the Clearing Member has authorized such member to give up its name with respect to Exchange options transactions.

⁴ See Securities Exchange Act Release Nos. 61529 (February 17, 2010), 75 FR 8421 (February 24, 2010) (SR-Phlx-2010-17); 62619 (July 30, 2010), 75 FR 47874 (August 9, 2010) (SR-Phlx-2010-100); 63436 (December 6, 2010), 75 FR 77021 (December 10, 2010) (SR-Phlx-2010-166); 65897 (December 6, 2011), 76 FR 77277 (December 12, 2011) (SR-Phlx-2011-163); 66664 (March 27, 2012), 77 FR 19743 (April 2, 2012) (SR-Phlx-2012-36); 71569 (February 19, 2014), 79 FR 10593 (February 25, 2014) (SR-Phlx-2014-12); 75749 (August 21, 2015), 80 FR 52073 (August 27, 2017) (SR-Phlx-2015-71); 77032 (February 2, 2016), 81 FR 6560 (February 8, 2016) (SR-Phlx-2016-04); and 79751 (January 6, 2017), 82 FR 3826 (January 12, 2017) (SR-Phlx-2017-02).

transaction did not execute on Phlx nor was it cleared by a Phlx member.

In the case where a member both executes a transaction and clears the transaction, the ORF is assessed to and collected from the member only once. In the case where a member executes a transaction and a different member clears the transaction, the ORF is assessed to and collected from the member who clears the transaction and not the member who executes the transaction. In the case where a non-member executes a transaction at an away market and a member clears the transaction, the ORF is assessed to and collected from the member who clears the transaction. In the case where a member executes a transaction on Phlx and a non-member clears the transaction, the ORF is assessed to the member that executed the transaction and collected from the non-member who cleared the transaction. In the case where a member executes a transaction at an away market and a non-member clears the transaction, the ORF is not assessed to the member who executed the transaction or collected from the non-member who cleared the transaction because the Exchange does not have access to the data to make absolutely certain that ORF should apply. Further, the data does not allow the Exchange to identify the member executing the trade at an away market.

ORF Revenue and Monitoring of ORF

The Exchange monitors the amount of revenue collected from the ORF to ensure that it, in combination with other regulatory fees and fines, does not exceed regulatory costs. In determining whether an expense is considered a regulatory cost, the Exchange reviews all costs and makes determinations if there is a nexus between the expense and a regulatory function. For example, a cost related to PSX, the Exchange's equity platform, would not be considered an expense that is compared to ORF revenue. An options surveillance employee's cost, however would be an expense that is compared to ORF revenue. The Exchange notes that fines collected by the Exchange in connection with a disciplinary manner offset ORF.

The ORF is designed to recover a material portion of the costs to the Exchange of the supervision and regulation of its members, including performing routine surveillances, investigations, examinations, financial monitoring, and policy, rulemaking, interpretive, and enforcement activities.

The Exchange believes that revenue generated from the ORF, when combined with all of the Exchange's

other regulatory fees, will cover a material portion, but not all, of the Exchange's regulatory costs. The Exchange will continue to monitor the amount of revenue collected from the ORF to ensure that it, in combination with its other regulatory fees and fines, does not exceed regulatory costs. If the Exchange determines regulatory revenues exceed regulatory costs, the Exchange will adjust the ORF by submitting a fee change filing to the Commission.

Finally, the Exchange notes that it is amending its rule text at Section IV, Part D to remove outdated rule text and include new rule text to make clear the manner in which ORF is assessed and collected on Phlx.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act⁹ in general, and furthers the objectives of Sections 6(b)(4) and 6(b)(5) of the Act¹⁰ in particular, in that it provides for the equitable allocation of reasonable dues, fees and other charges among members and issuers and other persons using its facility and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Exchange believes the proposed clarifications in the Fee Schedule to the ORF further the objectives of Section 6(b)(4) of the Act and are equitable and reasonable since they expressly describe the Exchange's existing practices regarding the manner in which the Exchange assesses and collects its ORF.

The Exchange believes it is reasonable and appropriate for the Exchange to charge the ORF for options transactions regardless of the exchange on which the transactions occur. The Exchange has a statutory obligation to enforce compliance by members and their associated persons under the Act and the rules of the Exchange and to surveil for other manipulative conduct by market participants (including non-members) trading on the Exchange. The Exchange cannot effectively surveil for such conduct without looking at and evaluating activity across all options markets. Many of the Exchange's market surveillance programs require the Exchange to look at and evaluate activity across all options markets, such as surveillance for position limit violations, manipulation, front-running and contrary exercise advice violations/expiring exercise declarations. The Exchange, because it lacks access to information on the identity of the

entering firm for executions that occur on away markets, believes it is appropriate to assess the ORF on its member's clearing activity, based on information the Exchange receives from OCC, including for away market activity. Among other reasons, doing so better and more accurately captures activity that occurs away from the Exchange over which the Exchange has a degree of regulatory responsibility. In so doing, the Exchange believes that assessing ORF on member clearing firms in certain instances equitably distributes the collection of ORF in a fair and reasonable manner. Also, the Exchange and the other options exchanges are required to populate a consolidated options audit trail ("COATS")¹¹ system in order to surveil a member's activities across markets.¹²

The Exchange believes that assessing the ORF to each Exchange member for options transactions cleared by OCC in the Customer range where the execution occurs on another exchange and is cleared by a Phlx member is an equitable allocation of reasonable dues, fees, and other charges among its members and issuers and other persons using its facilities. The ORF is collected by OCC on behalf of Phlx from Exchange clearing members for all Customer transactions they clear or from non-members for all Customer transactions they clear that were executed on Phlx. The Exchange believes that this collection practice is reasonable and appropriate because higher fees are assessed to those members that require more Exchange regulatory services based on the amount of Customer options business they conduct.

Regulating Customer trading activity is more labor intensive and requires greater expenditure of human and

¹¹ COATS effectively enhances intermarket options surveillance by enabling the options exchanges to reconstruct the market promptly to effectively surveil certain rules.

¹² In addition to its own surveillance programs, the Exchange works with other SROs and exchanges on intermarket surveillance related issues. Through its participation in the Intermarket Surveillance Group ("ISG"), the Exchange shares information and coordinates inquiries and investigations with other exchanges designed to address potential intermarket manipulation and trading abuses. The Exchange's participation in ISG helps it to satisfy the requirement that it has coordinated surveillance with markets on which security futures are traded and markets on which any security underlying security futures are traded to detect manipulation and insider trading. See Section 6(h)(3)(I) of the Act. ISG is an industry organization formed in 1983 to coordinate intermarket surveillance among the SROs by co-operatively sharing regulatory information pursuant to a written agreement between the parties. The goal of the ISG's information sharing is to coordinate regulatory efforts to address potential intermarket trading abuses and manipulations.

⁹ 15 U.S.C. 78f(b).

¹⁰ 15 U.S.C. 78f(b)(4) and (5).

technical resources than regulating non-Customer trading activity, which tends to be more automated and less labor intensive. As a result, the costs associated with administering the Customer component of the Exchange's overall regulatory program are anticipated to be typically higher than the costs associated with administering the non-Customer component of its regulatory program. The Exchange proposes assessing higher fees to those members that will require more Exchange regulatory services based on the amount of Customer options business they conduct. Additionally, the dues and fees paid by members go into the general funds of the Exchange, a portion of which is used to help pay the costs of regulation. The Exchange has in place a regulatory structure to surveil, conduct examinations and monitor the marketplace for violations of Exchange Rules. The ORF assists the Exchange to fund the cost of this regulation of the marketplace.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. The ORF is not intended to have any impact on competition. Rather, it is designed to enable the Exchange to recover a material portion of the Exchange's cost related to its regulatory activities. The Exchange is obligated to ensure that the amount of regulatory revenue collected from the ORF, in combination with its other regulatory fees and fines, does not exceed regulatory costs.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act.¹³

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) Necessary or appropriate in the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act.

If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File No. SR-Phlx-2017-54 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File No. SR-Phlx-2017-54. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly.

All submissions should refer to File No. SR-Phlx-2017-54, and should be submitted on or before September 5, 2017.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹⁴

Eduardo A. Aleman,

Assistant Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-81350; File No. SR-ISE-2017-77]

Self-Regulatory Organizations; Nasdaq ISE, LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend Its Schedule of Fees

August 8, 2017.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on August 1, 2017, Nasdaq ISE, LLC ("ISE" or "Exchange") filed with the Securities and Exchange Commission ("SEC" or "Commission") the proposed rule change as described in Items I and II, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend its Schedule of Fees to (1) eliminate Priority Customer complex order rebates for all net zero complex orders without any associated average daily volume requirement, and (2) reduce the maker fee charged to Market Makers and Non-Nasdaq ISE Market Makers for Regular Orders in Select Symbols when trading against Priority Customer complex orders that leg into the regular order book.

The text of the proposed rule change is available on the Exchange's Web site at www.ise.com, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed

¹⁴ 17 CFR 200.30-3(a)(12).

¹⁵ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

¹³ 15 U.S.C. 78s(b)(3)(A)(ii).

any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of the proposed rule change is to amend the Schedule of Fees to (1) eliminate Priority Customer³ complex order rebates for all net zero complex orders without any associated average daily volume ("ADV") requirement, and (2) reduce the maker fee charged to Market Makers⁴ and Non-Nasdaq ISE Market Makers⁵ for Regular Orders in Select Symbols⁶ when trading against Priority Customer complex orders that leg into the regular order book. These changes are designed to eliminate rebate arbitrage where market participants enter valueless complex orders solely for the purpose of earning a rebate, and to reduce disincentives for Market Makers to provide liquidity on the Exchange.

Currently, the Exchange does not provide Priority Customer rebates for complex orders that leg in to the regular order book and trade at a net price per contract that is at or near \$0.00 (*i.e.*, net zero complex orders), provided those orders are entered on behalf of originating market participants that execute an ADV of at least 1,000 contracts in net zero complex orders in a given month. For purposes of determining which complex orders qualify as net zero the Exchange counts all complex orders that leg in to the regular order book and are executed at a net price per contract that is within a range of \$0.01 credit and \$0.01 debit. The Exchange now proposes to eliminate Priority Customer complex order rebates for all net zero complex

orders, regardless of whether the order is entered on behalf of originating market participants that execute a specified ADV of net zero complex orders.

Priority Customer complex orders are typically eligible for tiered rebates that range from \$0.26 per contract (*i.e.*, for Tier 1) to \$0.49 per contract (*i.e.*, for Tier 8) depending on the member's Priority Customer Complex ADV. Pursuant to the provision described above, however, the Exchange does not provide these rebates for net zero complex orders entered on behalf of originating market participants that execute a significant ADV of these orders in a given month. This provision is designed to prevent members from engaging in rebate arbitrage by entering essentially valueless complex orders solely to recover rebates. While net zero complex orders would generally not find a counterparty in the complex order book, they may leg in to the regular order book where they are typically executed by Market Makers or other market participants on the individual legs who pay a fee to trade with this order flow. Market Makers have continued to express concerns about trading against net zero complex orders that leg into the regular market, as offending firms modify their behavior to stay within the ADV requirements set by the Exchange. These Market Makers have indicated that continued interaction with these economically valueless orders impedes their ability to provide liquidity on the Exchange as they are charged to trade against these net zero complex orders when they leg into the regular market and execute against their quotes.

The Exchange believes that it is in the interest of a fair and orderly market to provide appropriate incentives for Market Makers to maintain quality markets. As a result, the Exchange has instituted several programs that are aimed at incentivizing Market Makers to provide liquidity, including, for example, the Market Maker Plus program, which rewards Market Makers for routinely quoting at the national best bid or offer.⁷ Despite the Exchange's efforts to date, market participants have continued to enter valueless net zero complex orders and may earn rebates for those orders if they stay within the ADV threshold described in the rule. In particular, today, market participants can reduce their ADV in net zero complex orders and/or split their net zero order flow across multiple originating market participants to stay

within the ADV thresholds set by the Exchange, and thereby qualify for Priority Customer complex order rebates. The Exchange believes that it is appropriate at this time to completely remove incentives for trading net zero complex orders by eliminating the current ADV threshold. With this proposed change, all net zero complex orders will be ineligible for Priority Customer complex order rebates. Eliminating the ADV requirement will discourage market participants from engaging in this economically valueless conduct, which impedes Market Makers' ability to maintain quality markets, as no net zero complex orders will be rebate eligible. Priority Customer complex orders that do not meet the definition of a net zero complex order will continue to receive rebates based on the tier achieved.

In addition, the Exchange proposes to reduce the fee charged to Market Makers and Non-Nasdaq ISE Market Makers for Regular Orders in Select Symbols when trading against Priority Customer complex orders that leg into the regular order book. Currently, Market Makers (including Market Makers that qualify for Market Maker Plus)⁸ and Non-Nasdaq ISE Market Makers are charged a maker fee of \$0.30 per contract for Regular Orders in Select Symbols when trading against Priority Customer complex orders that leg into the regular order book.⁹ This higher maker fee was originally adopted because the Exchange pays a rebate to Priority Customer complex orders that leg into the regular order book. With the changes described above, the Exchange believes that it is appropriate to revisit this fee, and now proposes to reduce the fee to \$0.10 per contract. This change will reduce disincentives for Market Makers

³ A "Priority Customer" is a person or entity that is not a broker/dealer in securities, and does not place more than 390 orders in listed options per day on average during a calendar month for its own beneficial account(s), as defined in Nasdaq ISE Rule 100(a)(37A).

⁴ The term "Market Makers" refers to "Competitive Market Makers" and "Primary Market Makers" collectively. See ISE Rule 100(a)(25).

⁵ A "Non-Nasdaq ISE Market Maker" is a market maker as defined in Section 3(a)(38) of the Securities Exchange Act of 1934, as amended, registered in the same options class on another options exchange.

⁶ "Select Symbols" are options overlying all symbols listed on the Nasdaq ISE that are in the Penny Pilot Program.

⁷ See ISE Schedule of Fees, Section I., Regular Order Fees and Rebates.

⁸ A Market Maker Plus is a Market Maker who is on the National Best Bid or National Best Offer a specified percentage of the time for series trading between \$0.03 and \$3.00 (for options whose underlying stock's previous trading day's last sale price was less than or equal to \$100) and between \$0.10 and \$3.00 (for options whose underlying stock's previous trading day's last sale price was greater than \$100) in premium in each of the front two expiration months. The specified percentage is at least 80% but lower than 85% of the time for Tier 1, at least 85% but lower than 95% of the time for Tier 2, and at least 95% of the time for Tier 3. A Market Maker's single best and single worst quoting days each month based on the front two expiration months, on a per symbol basis, will be excluded in calculating whether a Market Maker qualifies for this rebate, if doing so will qualify a Market Maker for the rebate.

⁹ Market Makers that qualify for Market Maker Plus are not charged a fee or provided a rebate when trading against non-Priority Customer complex orders that leg into the regular order book. Other Market Makers and Non-Nasdaq ISE Market Makers are charged the regular \$0.10 per contract fee when trading against non-Priority Customer complex orders that leg into the regular order book.

to provide liquidity to the benefit of all market participants that trade on the Exchange.¹⁰

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6 of the Act,¹¹ in general, and Section 6(b)(4) of the Act,¹² in particular, in that it is designed to provide for the equitable allocation of reasonable dues, fees, and other charges among its members and other persons using its facilities.

The Exchange believes that it is reasonable and equitable to remove the ADV threshold from the net zero provision in the Schedule of Fees as this change is designed to remove financial incentives for market participants to engage in rebate arbitrage by entering net zero complex orders on the Exchange that do not have any economic substance. With the current provision, offending firms have repeatedly found ways to continue to submit these economically valueless orders to the detriment of the Exchange and market participants that trade on the Exchange. The continued submission of these net zero complex orders by a handful of market participants has generated complaints from the Market Makers that trade against these orders in the regular order book, as firms recognize these net zero complex orders as essentially non-economic. The Exchange believes that eliminating the ADV threshold will take away the incentives for firms to continue to enter net zero complex orders purely to earn a rebate, thereby reducing the cost of these trades to the Exchange and its members.

Market Makers may be impeded in providing liquidity when doing so may result in trading against these net zero complex orders that leg into the regular market. The Exchange believes that it is important that Market Makers be properly incentivized to maintain quality markets, and is therefore proposing to take steps to eliminate the incentives for market participants to enter net zero complex orders. Priority Customer complex orders, including net zero complex orders that leg in to the regular order book, are currently paid significant rebates by the Exchange,

which are funded in part by charging higher fees to the market participants that trade against these orders. The Exchange believes that eliminating the ADV requirement in this provision will discourage market participants from entering valueless net zero complex orders, which are entered for the sole purpose of earning a rebate. As a result, the Exchange believes that Market Makers will be aided in their role of providing liquidity and maintaining quality markets to the benefit of all market participants that trade on the Exchange.

Furthermore, the Exchange believes that the proposed change is not unfairly discriminatory as it is designed to stop market participants from taking advantage of Exchange rebates by entering orders that lack economic substance. The Exchange is proposing to eliminate Priority Customer complex order rebates for all market participants, regardless of their ADV in this activity. Thus, all market participants that enter net zero complex orders will be uniformly denied rebates for those orders. To the extent that those market participants execute non-net zero complex orders, however, they will continue to receive Priority Customer complex order rebates based on their ADV in that activity. The Exchange does not believe that it is unfairly discriminatory to eliminate the ADV threshold for net zero complex orders since the elimination of this threshold means that no market participants will receive rebates for these orders.

The Exchange also believes that it is reasonable and equitable to reduce the maker fee charged to Market Makers and Non-Nasdaq ISE Market Makers for Regular Orders in Select Symbols when trading against Priority Customer complex orders that leg into the regular order book. With the changes described above related to net zero complex orders, which will eliminate rebates for certain Priority Customer complex orders that leg in to the regular order book, the Exchange believes that it is appropriate to also reduce the amount charged to Market Makers when trading against such Priority Customer complex orders in the regular order book. Furthermore, the Exchange believes that reducing the fee charged to Market Makers and Non-Nasdaq ISE Makers when trading against Priority Customer complex order that leg into the regular order book will increase incentives for those firms to provide liquidity to the benefit of all market participants that trade on the Exchange. The Exchange does not believe that this change is unfairly discriminatory as the same \$0.10 per contract maker fee applies to

Market Makers (other than those that qualify for Market Maker Plus) and Non-Nasdaq ISE Market Makers when trading against other orders in these symbols, and is also the same as the maker fees charged to Firm Proprietary,¹³ Broker-Dealer,¹⁴ and Professional Customer orders.¹⁵

B. Self-Regulatory Organization's Statement on Burden on Competition

In accordance with Section 6(b)(8) of the Act,¹⁶ the Exchange does not believe that the proposed rule change will impose any burden on intermarket or intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act. By eliminating the ADV requirement applicable to the Exchange's net zero complex order provision in the Schedule of Fees, the proposed rule change is designed to eliminate the ability for certain market participants to engage in rebate arbitrage to the detriment of the Exchange and its members. Rather than impede competition, the Exchange believes that this change will enhance competition by enabling Market Makers to step up and maintain quality markets to the benefit of all market participants that trade on the Exchange. In addition, the reduction of Market Maker and Non-Nasdaq ISE Market Maker fees for trading against Priority Customer complex orders that leg into the regular order book will also further competition as the fees are consistent with those charged to other market participants. The Exchange operates in a highly competitive market in which market participants can readily direct their order flow to competing venues. In such an environment, the Exchange must continually review, and consider adjusting, its fees and rebates to remain competitive with other exchanges. For the reasons described above, the Exchange believes that the proposed fee changes reflect this competitive environment.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

¹³ A "Firm Proprietary" order is an order submitted by a member for its own proprietary account.

¹⁴ A "Broker-Dealer" order is an order submitted by a member for a broker-dealer account that is not its own proprietary account.

¹⁵ A "Professional Customer" is a person or entity that is not a broker/dealer and is not a Priority Customer.

¹⁶ 15 U.S.C. 78f(b)(8).

¹⁰ With the proposed fee reduction, Market Makers (other than those that qualify for Market Maker Plus) and Non-Nasdaq ISE Market Makers will be charged a maker fee of \$0.10 per contract for Regular Orders in Select Symbols regardless of the order on the other side of the trade. The Exchange therefore proposes to effectuate this change by deleting footnote 11.

¹¹ 15 U.S.C. 78f.

¹² 15 U.S.C. 78f(b)(4).

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act,¹⁷ and Rule 19b-4(f)(2)¹⁸ thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) Necessary or appropriate in the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-ISE-2017-77 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-ISE-2017-77. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public

Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-ISE-2017-77 and should be submitted on or before September 5, 2017.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹⁹

Eduardo A. Aleman,
Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-81337; File No. SR-NYSEAMER-2017-02]

Self-Regulatory Organizations; NYSE American LLC; Notice of Filing and Immediate Effectiveness of Proposed Change in Connection With Its Recent Name Change From NYSE MKT LLC to NYSE American LLC and the Related Rebranding of NYSE Amex Options to NYSE American Options

DATES: August 8, 2017.

Pursuant to Section 19(b)(1)¹ of the Securities Exchange Act of 1934 (the "Act")² and Rule 19b-4 thereunder,³ notice is hereby given that, on July 27, 2017, NYSE American LLC (the "Exchange" or "NYSE American") filed with the Securities and Exchange Commission (the "Commission") the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes in connection with its recent name change from NYSE MKT LLC ("NYSE MKT") to NYSE American and the related rebranding of NYSE Amex Options to NYSE American

Options, to make technical and conforming changes to the rules of the Exchange ("Rules") and the NYSE American Options Fee Schedule ("Fee Schedule"). The proposed change is available on the Exchange's Web site at www.nyse.com, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes, in connection with its name change from NYSE MKT to NYSE American and the related rebranding of NYSE Amex Options to NYSE American Options, to make technical and conforming changes to the Rules and Fee Schedule.⁴

Background

On March 16, 2017, the Exchange filed rule changes with the Commission in connection with its name change to NYSE American.⁵ In addition, on May 19, 2017, the Exchange filed rule changes with the Commission associated with the rebranding of NYSE Amex Options, the Exchange's facility for trading options, to NYSE American Options.⁶ In those filings, the Exchange committed to submitting subsequent rule filings as necessary to make any technical and conforming changes to proposed rule changes that were pending as of the time of those filings or that occurred after such filings but before the operative date of the name

⁴ The Exchange originally filed the proposed changes on July 21, 2017 (SR-NYSEAMKT-2017-47) and withdrew such filing on July 27, 2017.

⁵ See Securities Exchange Act Release No. 80283 (March 21, 2017), 82 FR 15244 (March 27, 2017) (SR-NYSEAMKT-2017-14).

⁶ See Securities Exchange Act Release No. 80748 (May 23, 2017), 82 FR 24764 (May 30, 2017) (SR-NYSEAMKT 2017-20).

¹⁷ 15 U.S.C. 78s(b)(3)(A)(ii).

¹⁸ 17 CFR 240.19b-4(f)(2).

¹⁹ 17 CFR 200.30-3(a)(12).

² 15 U.S.C. 78a.

³ 17 CFR 240.19b-4.

change.⁷ The Exchange's name change became operative on July 24, 2017. Accordingly, the Exchange now proposes to make technical and conforming changes to its Rules and Fee Schedule to reflect the name change to NYSE American and rebrand from NYSE Amex Options to NYSE American Options, as detailed below.

Proposed Changes

- In Rule 36—Equities, Supplementary Materials .21, .23, and .70 (Communications Between Exchange and Members' Offices), the Exchange proposes to change references to "NYSE Amex Options Trading Floor" to "NYSE American Options Trading Floor."

- In the Fee Schedule, under Section I. Options Transaction Fees and Credits, subpart M.BOLD Mechanism Fees & Credits, the Exchange proposes to change the reference to "NYSE Amex Options Market Makers" to "NYSE American Options Market Makers".

None of the foregoing changes are substantive.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b) of the Exchange Act⁸ in general, and with Section 6(b)(1)⁹ in particular, in that it enables the Exchange to be so organized as to have the capacity to be able to carry out the purposes of the Exchange Act and to comply, and to enforce compliance by its exchange members and persons associated with its exchange members, with the provisions of the Exchange Act, the rules and regulations thereunder, and the rules of the Exchange.

The proposed rule change is a non-substantive change and does not impact the governance or ownership of the Exchange. The Exchange believes that the proposed rule change would enable the Exchange to continue to be so organized as to have the capacity to carry out the purposes of the Exchange Act and comply and enforce compliance with the provisions of the Exchange Act by its members and persons associated with its members, because ensuring that the Rules and Fee Schedule accurately reflect the name of the Exchange and its facility for trading options would contribute to the orderly operation of the Exchange by adding clarity and transparency to such documents and rules.

For similar reasons, the Exchange also believes that the proposed rule change

is consistent with Section 6(b)(5) of the Act,¹⁰ in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system and, in general, to protect investors and the public interest.

The Exchange believes that the proposed rule change would remove impediments to and perfect the mechanism of a free and open market and a national market system by ensuring that market participants can more easily navigate, understand and comply with the Rules and Fee Schedule. The Exchange believes that, by ensuring that the Rules and Fee Schedule accurately reflect the name of the Exchange and its options market the proposed rule change would reduce potential investor or market participant confusion.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The proposed rule change is not intended to address competitive issues but rather is concerned solely with updating the Rules and Fee Schedule to reflect its name change from NYSE MKT to NYSE American and the related rebranding of NYSE Amex Options to NYSE American Options.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The proposed rule change has become effective pursuant to Section 19(b)(3)(A) of the Act¹¹ and Rule 19b-4(f)(3)¹² thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of

investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B)¹³ of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-NYSEAMER-2017-02 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-NYSEAMER-2017-02. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–81342; File No. SR–GEMX–2017–31]

Self-Regulatory Organizations; Nasdaq GEMX, LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend GEMX's Schedule of Fees With Respect to the Options Regulatory Fee

August 8, 2017.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (“Act”),¹ and Rule 19b–4 thereunder,² notice is hereby given that on July 26, 2017, Nasdaq GEMX, LLC (“GEMX” or “Exchange”) filed with the Securities and Exchange Commission (“SEC” or “Commission”) the proposed rule change as described in Items I, II, and III, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to revise GEMX's Schedule of Fees to: (i) More closely reflect the manner in which GEMX assesses and collects its ORF; and (ii) remove rule text related to the timing when the Exchange may increase or decrease the amount of the ORF.

The text of the proposed rule change is available on the Exchange's Web site at www.ise.com, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for

the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

GEMX initially filed to establish its ORF in 2013.³ At this time, the Exchange proposes to: (i) More closely reflect the manner in which GEMX assesses and collects its ORF; and (ii) remove rule text related to the timing when the Exchange may increase or decrease the amount of its ORF.

The Exchange supports a common approach for the assessment and collection of ORF among the various options exchanges that assess such a fee. Furthermore, the Exchange supports guidance from the Commission regarding regulatory cost structures to ensure equal knowledge and treatment among options markets assessing ORF.

Proposal 1—Reflect the Manner in Which GEMX Assesses and Collects Its ORF

Currently, GEMX assesses an ORF of \$0.0010 per contract side. This proposed rule change does not seek to amend the amount of the ORF. Currently, GEMX assesses its ORF for each customer option transaction that is either: (1) Executed by a member on GEMX; or (2) cleared by a GEMX member at The Options Clearing Corporation (“OCC”) in the customer range,⁴ even if the transaction was executed by a non-member of GEMX, regardless of the exchange on which the transaction occurs.⁵ If the OCC clearing member is a GEMX member, ORF is assessed and collected on all cleared customer contracts (after adjustment for CMTA⁶); and (2) if the OCC clearing member is not a GEMX member, ORF is

collected only on the cleared customer contracts executed at GEMX, taking into account any CMTA instructions which may result in collecting the ORF from a non-member.

By way of example, if Broker A, a GEMX member, routes a customer order to CBOE and the transaction executes on CBOE and clears in Broker A's OCC Clearing account, ORF will be collected by GEMX from Broker A's clearing account at OCC via direct debit. While this transaction was executed on a market other than GEMX, it was cleared by a GEMX member in the member's OCC clearing account in the customer range, therefore there is a regulatory nexus between GEMX and the transaction. If Broker A was not a GEMX member, then no ORF should be assessed and collected because there is no nexus; the transaction did not execute on GEMX nor was it cleared by a GEMX member.

In the case where a member both executes a transaction and clears the transaction, the ORF is assessed to and collected from the member only. In the case where a member executes a transaction and a different member clears the transaction, the ORF is assessed to and collected from the member who clears the transaction and not the member who executes the transaction. In the case where a non-member executes a transaction at an away market and a member clears the transaction, the ORF is assessed to and collected from the member who clears the transaction. In the case where a member executes a transaction on GEMX and a non-member clears the transaction, the ORF is assessed to the member that executed the transaction and collected from the non-member who cleared the transaction. In the case where a member executes a transaction at an away market and a non-member clears the transaction, the ORF is not assessed to the member who executed the transaction or collected from the non-member who cleared the transaction because the Exchange does not have access to the data to make absolutely certain that ORF should apply. Further, the data does not allow the Exchange to identify the member executing the trade at an away market.

ORF Revenue and Monitoring of ORF

The Exchange monitors the amount of revenue collected from the ORF to ensure that it, in combination with other regulatory fees and fines, does not exceed regulatory costs. In determining whether an expense is considered a regulatory cost, the Exchange reviews all costs and makes determinations if there is a nexus between the expense

⁴ Members must record the appropriate account origin code on all orders at the time of entry in order. The Exchange represents that it has surveillances in place to verify that members mark orders with the correct account origin code.

⁵ The Exchange uses reports from OCC when assessing and collecting the ORF.

⁶ CMTA or Clearing Member Trade Assignment is a form of “give-up” whereby the position will be assigned to a specific clearing firm at OCC.

and a regulatory function. The Exchange notes that fines collected by the Exchange in connection with a disciplinary manner offset ORF.

The ORF is designed to recover a material portion of the costs to the Exchange of the supervision and regulation of its members, including performing routine surveillances, investigations, examinations, financial monitoring, and policy, rulemaking, interpretive, and enforcement activities.

The Exchange believes that revenue generated from the ORF, when combined with all of the Exchange's other regulatory fees, will cover a material portion, but not all, of the Exchange's regulatory costs. The Exchange will continue to monitor the amount of revenue collected from the ORF to ensure that it, in combination with its other regulatory fees and fines, does not exceed regulatory costs. If the Exchange determines regulatory revenues exceed regulatory costs, the Exchange will adjust the ORF by submitting a fee change filing to the Commission.

Finally, the Exchange notes that it is amending GEMX's Schedule of Fees to remove certain rule text and include new rule text to make clear the manner in which ORF is assessed and collected on GEMX.

Proposal 2—Semi-Annual Changes to ORF

The Exchange's current ORF rule text provides that, "The Exchange may only increase or decrease the Options Regulatory Fee semi-annually, and any such fee change will be effective on the first business day of February or August." The Exchange is proposing to eliminate the requirement that its ORF may be only increased or decreased semi-annually because the Exchange believes it requires the flexibility to amend its ORF as needed to meet its regulatory requirements and adjust its ORF to account for the regulatory revenue that it receives and the costs that it incurs. While the Exchange is eliminating the requirement to adjust only semi-annually, it will continue to submit a rule proposal with the Commission for each modification to the ORF and notify participants via an Options Trader Alert of any proposed change in the amount of the fee at least thirty (30) calendar days prior to the effective date. The Exchange believes that the prior notification to market participants will provide guidance on the timing of any changes to the ORF and ensure market participants are prepared to configure their systems to properly account for the ORF.

The Exchange also notes it now issues Options Trader Alerts instead of circulars to provide notification to members. The Exchange is amending the rule text to reflect this change.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act⁷ in general, and furthers the objectives of Sections 6(b)(4) and 6(b)(5) of the Act⁸ in particular, in that it provides for the equitable allocation of reasonable dues, fees and other charges among members and issuers and other persons using its facility and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Exchange believes the proposed clarifications in the Fee Schedule to the ORF further the objectives of Section 6(b)(4) of the Act and are equitable and reasonable since they expressly describe the Exchange's existing practices regarding the manner in which the Exchange assesses and collects its ORF.

Proposal 1—Reflect the Manner in Which GEMX Assesses and Collects Its ORF

The Exchange believes it is reasonable and appropriate for the Exchange to charge the ORF for options transactions regardless of the exchange on which the transactions occur. The Exchange has a statutory obligation to enforce compliance by members and their associated persons under the Act and the rules of the Exchange and to surveil for other manipulative conduct by market participants (including non-members) trading on the Exchange. The Exchange cannot effectively surveil for such conduct without looking at and evaluating activity across all options markets. Many of the Exchange's market surveillance programs require the Exchange to look at and evaluate activity across all options markets, such as surveillance for position limit violations, manipulation, front-running and contrary exercise advice violations/expiring exercise declarations. The Exchange, because it lacks access to information on the identity of the entering firm for executions that occur on away markets, believes it is appropriate to assess the ORF on its member's clearing activity, based on information the Exchange receives from OCC, including for away market activity. Among other reasons, doing so better and more accurately captures activity that occurs away from the Exchange over which the Exchange has

a degree of regulatory responsibility. In so doing, the Exchange believes that assessing ORF on member clearing firms in certain instances equitably distributes the collection of ORF in a fair and reasonable manner. Also, the Exchange and the other options exchanges are required to populate a consolidated options audit trail ("COATS")⁹ system in order to surveil a member's activities across markets.¹⁰

The Exchange believes that assessing the ORF to each Exchange member for options transactions cleared by OCC in the customer range where the execution occurs on another exchange and is cleared by a GEMX member is an equitable allocation of reasonable dues, fees, and other charges among its members and issuers and other persons using its facilities. The ORF is collected by OCC on behalf of GEMX from Exchange clearing members for all customer transactions they clear or from non-members for all customer transactions they clear that were executed on GEMX. The Exchange believes that this collection practice is reasonable and appropriate because higher fees are assessed to those members that require more Exchange regulatory services based on the amount of customer options business they conduct.

Regulating customer trading activity is more labor intensive and requires greater expenditure of human and technical resources than regulating non-customer trading activity, which tends to be more automated and less labor intensive. As a result, the costs associated with administering the customer component of the Exchange's overall regulatory program are anticipated to be typically higher than the costs associated with administering the non-customer component of its

⁹ COATS effectively enhances intermarket options surveillance by enabling the options exchanges to reconstruct the market promptly to effectively surveil certain rules.

¹⁰ In addition to its own surveillance programs, the Exchange works with other SROs and exchanges on intermarket surveillance related issues. Through its participation in the Intermarket Surveillance Group ("ISG"), the Exchange shares information and coordinates inquiries and investigations with other exchanges designed to address potential intermarket manipulation and trading abuses. The Exchange's participation in ISG helps it to satisfy the requirement that it has coordinated surveillance with markets on which security futures are traded and markets on which any security underlying security futures are traded to detect manipulation and insider trading. See Section 6(h)(3)(I) of the Act. ISG is an industry organization formed in 1983 to coordinate intermarket surveillance among the SROs by co-operatively sharing regulatory information pursuant to a written agreement between the parties. The goal of the ISG's information sharing is to coordinate regulatory efforts to address potential intermarket trading abuses and manipulations.

⁷ 15 U.S.C. 78f(b).

⁸ 15 U.S.C. 78f(b)(4) and (5).

regulatory program. The Exchange proposes assessing higher fees to those members that will require more Exchange regulatory services based on the amount of customer options business they conduct. Additionally, the dues and fees paid by members go into the general funds of the Exchange, a portion of which is used to help pay the costs of regulation. The Exchange has in place a regulatory structure to surveil, conduct examinations and monitor the marketplace for violations of Exchange Rules. The ORF assists the Exchange to fund the cost of this regulation of the marketplace.

Proposal 2—Semi-Annual Changes to ORF

The Exchange believes that the proposed rule change to remove the limit to amend the ORF only semi-annually, with advance notice, is reasonable because the Exchange will continue to provide market participants with thirty (30) days advance notice of amending the amount of the ORF. Also, the Exchange is required to monitor the amount of revenue collected from the ORF to ensure that it, in combination with its other regulatory fees and fines, do not exceed regulatory costs. Therefore, the Exchange believes it is reasonable to remove the semi-annual limit to amend its ORF in order to permit the Exchange to make amendments to its ORF as necessary to comply with the Exchange's obligations. This proposed change would conform this rule with that of NASDAQ PHLX LLC ("Phlx"), The NASDAQ Options Market LLC ("NOM") and NASDAQ BX, Inc. ("BX").¹¹

The Exchange believes that the proposed rule change to remove the limit to amend the ORF only semi-annually, with advance notice, is equitable and not unfairly discriminatory because it will apply in the same manner to all members that are subject to the ORF. The Exchange has in place a regulatory structure to surveil for, conduct examinations and monitor the marketplace for violations of Exchange Rules. The ORF assists the Exchange to fund the cost of this regulation of the marketplace.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. The ORF is not intended to have any impact on

competition. Rather, it is designed to enable the Exchange to recover a material portion of the Exchange's cost related to its regulatory activities. The Exchange is obligated to ensure that the amount of regulatory revenue collected from the ORF, in combination with its other regulatory fees and fines, does not exceed regulatory costs.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act.¹² At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) Necessary or appropriate in the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File No. SR-GEMX-2017-31 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090. All submissions should refer to File No. SR-GEMX-2017-31. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's

Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File No. SR-GEMX-2017-31, and should be submitted on or before September 5, 2017.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹³

change as described in Items I, II and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Pursuant to the provisions of Section 19(b)(1) under the Securities Exchange Act of 1934 ("Act"),⁴ and Rule 19b-4 thereunder,⁵ Investors Exchange LLC ("IEX" or "Exchange") is filing with the Commission a proposed rule change to make a correction to the Exchange Fee Schedule related to fees for executions that involve taking resting interest with non-displayed priority with a displayable order. The Exchange proposes to implement the change beginning on September 1, 2017.

The text of the proposed rule change is available at the Exchange's Web site at www.iextrading.com, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statement [sic] may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend its Fee Schedule, pursuant to IEX Rule 15.110(a) and (c), to make a correction related to the fees for executions that involve taking non-displayed resting interest with a displayable order. Subject to certain exceptions, the Exchange charges \$0.0009 per share (or 0.30% of the total dollar value of the transaction for securities priced below \$1.00) to Members for executions on IEX that include resting non-displayed

interest⁶ for both the liquidity providing and liquidity removing order (the "Non-Displayed Match Fee").⁷ One exception relates to certain displayable orders that remove non-displayed liquidity upon entry. The Exchange Fee Schedule provides that the Non-Displayed Match Fee is not charged for displayable orders⁸ that remove non-displayed liquidity upon entry if, on a monthly basis, at least 90% of the liquidity removing Member's aggregate executed shares of displayable orders added liquidity during the month in question.⁹

The Fee Schedule describes the calculation to determine if the Non-Displayed Match Fee is charged with reference to "TMVD" which means "total monthly volume displayable calculated as the sum of executions from the Member's displayable orders during the calendar month."¹⁰ However, the reference to a "Member's" displayable orders was inadvertent, and should instead have referred to each of a Member's market participant identifiers, or MPIDs, which is how the Exchange in practice has been calculating TMVD and thus determines whether the Non-Displayed Match Fee is applicable to particular executions.

Accordingly, the Exchange proposes to correct the IEX Fee Schedule to provide that TMVD means "total monthly volume displayable calculated as the sum of executions from each of the Member's MPIDs (on a per MPID basis) displayable orders during the calendar month." In addition, the Exchange proposes a clarifying amendment to the single asterisked footnote related to the Non-Displayed Match Fee to specify that the 90% calculation will be performed on a per MPID basis. Thus, the phrase "on a per MPID basis" would be added after the phrase "at least 90% of TMVD" in the footnote. Finally, the Exchange proposes to add a definition of MPID to the Fee Schedule.

With respect to the calculation of the Non-Displayed Match Fee and the applicable 90% threshold exception for

executions of displayable orders that remove resting non-displayed liquidity upon entry, IEX reviewed Member invoices since its launch as an exchange in August 2016 through June 30, 2017 to assess whether any Members were charged fees that differed from those described in the Fee Schedule. In other words, IEX recalculated the Non-Displayed Match Fee and the 90% threshold exception on a "per Member" basis (which is how the Fee Schedule currently reads) instead of on a "per MPID" basis (which is how IEX in practice had been calculating that fee). This assessment identified that nine Members were charged such differential fees in particular months, in some cases more than the fees described in the Fee Schedule and in some cases less than the fees described in the Fee Schedule. In total, seven Members were charged and paid \$18,948.54 in excess fees¹¹ and eight Members were not charged \$44,175.28 in fees that should have been charged.¹² Five Members were overcharged and undercharged in different months.

In order to address the discrepancies, IEX will charge or credit each impacted member for the net amount overpaid or underpaid and will be included in the August 2017 monthly invoices to be sent in September 2017 pursuant to IEX Rule 15.120 notwithstanding that fees included thereof are for trading activity that occurred over prior months.¹³

The Exchange proposes to implement the revised fee on a going forward basis as of September 1, 2017, after which IEX will assess this fee on a MPID basis. Members will be charged for July and August based on the current Fee Schedule whereby the 90% calculation will be performed on a per Member basis, aggregating all of the Member's MPIDs.

2. Statutory Basis

IEX believes that the proposed rule change is consistent with the provisions of Section 6(b)¹⁴ of the Act in general, and furthers the objectives of Sections 6(b)(4)¹⁵ of the Act, in particular, in that it is designed to provide for the equitable allocation of reasonable dues, fees and other charges among its Members and other persons using its facilities. In addition, the Exchange believes that it is consistent with the Act to correct the Fee Schedule so that the Fee Schedule is accurate, avoiding

⁶ Non-displayed priority refers to an order or portion of a reserve order that is booked and ranked with non-display priority on the Order Book. See Rules 11.190(b)(3) and 11.190(b)(2).

⁷ This pricing is referred to by the Exchange as the "Non-Displayed Match Fee" on the Fee Schedule with a Fee Code of 'I' which is provided by the Exchange on execution reports.

⁸ See Rule 11.190(b)(3).

⁹ However, in such transactions, the non-displayed liquidity adding interest will be subject to the Non-Displayed Match Fee. The Exchange also does not charge a fee where the adding and removing order originated from the same Exchange Member.

¹⁰ See IEX Fee Schedule.

¹¹ The range is from \$0.09 to 7811.66.

¹² The range is from \$1.51 to \$29,482.12.

¹³ In the event that a Member owed a credit declines the credit, IEX will make a charitable donation in the amount of such credit.

¹⁴ 15 U.S.C. 78f.

¹⁵ 15 U.S.C. 78f(b)(4).

⁴ 15 U.S.C. 78s(b)(1).

⁵ 17 CFR 240.19b-4.

any potential confusion among Members. The Exchange further believes that the correction to the Fee Schedule is reasonable, equitable, and not unfairly discriminatory because all similar situated Members will be subject to the same fee structure.

The Exchange also believes that it is consistent with the Act and an equitable allocation of reasonable dues, fees and other charges among its members and other persons using its facilities to measure whether the 90% threshold for adding liquidity with displayable orders is reached on an MPID basis. As explained in IEX's rule change adopting the exception to the Non-Displayed Match Fee, the flexibility is designed to address limited inadvertent liquidity removal by Members who are largely adding displayed liquidity and generally intend to add displayed liquidity on IEX, to further encourage aggressively priced displayed orders.¹⁶ The Exchange believes that Members that utilize multiple MPIDs generally use different MPIDs for different trading strategies or customers. Therefore, the Exchange believes that measuring by MPIDs is a more precise manner of assessing whether a Member's trading strategy (or that of a customer) is largely adding displayed liquidity and generally intends to add displayed liquidity with displayable orders.

B. Self-Regulatory Organization's Statement on Burden on Competition

IEX does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The proposed rule change is designed to correct an inadvertent error rather than a competitive issue. The Exchange does not believe the proposed rule change will result on a burden on intramarket competition because all Members will be subject to the Non-Displayed Match Fee in the same manner on a fair and consistent basis. While different fees will be assessed in some circumstances, these different fees are not based on the type of Member entering the order and all Members can submit any type of order. Further, assessing whether the Non-Displayed Match Fee is applicable on a per MPID basis is intended to encourage market participants to enter aggressively priced displayed orders on the Exchange, which enhances price discovery and deepens the Exchange's liquidity pool to the benefit of all market participants. Further, the

Exchange operates in a highly competitive environment in which market participants can readily favor competing venues if fee schedules at other venues are viewed as more favorable.

The Exchange also does not believe that the proposed rule change will result in any burden on intermarket competition because other venues are free to adopt comparable pricing.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii)¹⁷ of the Act. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B)¹⁸ of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-IEX-2017-25 on the subject line.

Paper Comments

- Send paper comments in triplicate to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-IEX-2017-25. This file number should be included in the subject line if email is used. To help the

Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-IEX-2017-25 and should be submitted on or before September 5, 2017.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹⁹

Eduardo A. Aleman,

Assistant Secretary.

BILLING CODE 4710–08–P

DEPARTMENT OF STATE

[Public Notice 10086]

Notice of Public Meeting

The Department of State will conduct an open meeting at 9:30 a.m. on Wednesday, August 30, 2017, in room 7P15–01 of the Douglas A. Munro Coast Guard Headquarters Building at St. Elizabeth's, 2703 Martin Luther King Jr. Avenue SE., Washington, DC 20593. The primary purpose of the meeting is to prepare for the fourth session of the International Maritime Organization's (IMO) Sub-Committee on Carriage of Cargoes and Containers to be held at the IMO Headquarters, United Kingdom, September 11–15, 2017.

The agenda items to be considered include:

- Adoption of the agenda
- Decisions of other IMO bodies
- Amendments to the IGF Code and development of guidelines for low-flashpoint fuels
- Suitability of high manganese austenitic steel for cryogenic service and development of any necessary amendments to the IGC Code and IGF Code
- Amendments to the IMSBC Code and supplements
- Amendments to the IMDG Code and supplements
- Unified interpretations of provisions of IMO safety, security and environment-related conventions
- Consideration of reports of incidents involving dangerous goods or marine pollutants in packaged form on board ships or in port areas
- Biennial status report and provisional agenda for CCC 5
- Election of Chair and Vice-Chair for 2018
- Any other business
- Report to the Committees

Members of the public may attend this meeting up to the seating capacity of

the room. Upon request to the meeting coordinator, members of the public may also participate via teleconference, up to the capacity of the teleconference phone line. To access the teleconference line, participants should call (202) 475–4000 and use Participant Code: 887 809 72. To facilitate the building security process, and to request reasonable accommodation, those who plan to attend should contact the meeting coordinator, Dr. Amy Parker, by email at Amy.M.Parker@uscg.mil, by phone at (202) 372–1423, or in writing at 2703 Martin Luther King Jr. Ave. SE., Stop 7509, Washington DC 20593–7509 not later than August 24, 2017, five working days prior to the meeting. Requests made after August 24, 2017 might not be able to be accommodated. Please note that due to security considerations, two valid, government-issued photo identifications must be presented to gain entrance to the Coast Guard Headquarters building. USCG Headquarters is accessible by taxi, public transportation, and privately owned conveyance (upon request).

Joel C. Coito,

Coast Guard Liaison Officer, Office of Ocean and Polar Affairs, Department of State.

BILLING CODE 4710–05–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

[Summary Notice No. 2017–67]

Petition for Exemption; Summary of Petition Received; Rolls-Royce plc

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice.

SUMMARY: This notice contains a summary of a petition seeking relief from specified requirements of Federal Aviation Regulations. The purpose of this notice is to improve the public's awareness of, and participation in, the FAA's exemption process. Neither publication of this notice nor the inclusion or omission of information in the summary is intended to affect the legal status of the petition or its final disposition.

DATES: Comments on this petition must identify the petition docket number and must be received on or before August 24, 2017.

ADDRESSES: Send comments identified by docket number FAA–2017–0791 using any of the following methods:

- **Federal eRulemaking Portal:** Go to <http://www.regulations.gov> and follow the online instructions for sending your comments electronically.

- **Mail:** Send comments to Docket Operations, M–30; U.S. Department of Transportation (DOT), 1200 New Jersey Avenue SE., Room W12–140, West Building Ground Floor, Washington, DC 20590–0001.

- **Hand Delivery or Courier:** Take comments to Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

- **Fax:** Fax comments to Docket Operations at 202–493–2251.

Privacy: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to <http://www.regulations.gov>, as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at <http://www.dot.gov/privacy>.

Docket: Background documents or comments received may be read at <http://www.regulations.gov> at any time. Follow the online instructions for accessing the docket or go to the Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT:

Brent Hart (202) 267–4034, Office of Rulemaking, Federal Aviation Administration, 800 Independence Avenue SW., Washington, DC 20591. This notice is published pursuant to 14 CFR 11.85.

Issued in Washington, DC, on August 7, 2017.

Lirio Liu,

Director, Office of Rulemaking.

PETITION FOR EXEMPTION

Docket No.: FAA–2017–0791.

Petitioner: Rolls-Royce plc.

Section(s) of 14 CFR Affected: 34.21(e)(2) and 87.23(c)(1).

Description of Relief Sought: Rolls-Royce plc seeks a time limited exemption to allow production of the Trent 1000–TEN engine models identified its petition, while Rolls-Royce plc develops and implements modifications to ensure compliance with 14 CFR 34.21(e)(2) and 40 CFR 87.23(c)(1).

DEPARTMENT OF TRANSPORTATION**Federal Aviation Administration****Twelfth RTCA SC-229 406 MHz ELT Joint Plenary With EUROCAE WG-98**

AGENCY: Federal Aviation Administration (FAA), U.S. Department of Transportation (DOT).

ACTION: Twelfth RTCA SC-229 406 MHz ELT Joint Plenary with EUROCAE WG-98.

SUMMARY: The FAA is issuing this notice to advise the public of the Twelfth RTCA SC-229 406 MHz ELT Plenary held jointly with EUROCAE WG-98. SC-229 is a subcommittee to RTCA.

DATES: The meeting will be held September 5-8, 2017 from 9:00 a.m.-5:00 p.m.

ADDRESSES: The meeting will be held at: EUROCAE Facilities, Triangle, 9-23 rue Paul Lafargue, 93200 Saint-Denis, France.

FOR FURTHER INFORMATION CONTACT: Rebecca Morrison at rmorrison@rtca.org or 202-330-0654, or The RTCA Secretariat, 1150 18th Street NW., Suite 910, Washington, DC 20036, or by telephone at (202) 833-9339, fax at (202) 833-9434, or Web site at <http://www.rtca.org>.

SUPPLEMENTARY INFORMATION: Pursuant to section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92-463, 5 U.S.C., App.), notice is hereby given for a meeting of the Twelfth RTCA SC-229 406 MHz ELT Joint Plenary with EUROCAE WG-98. The agenda will include the following:

Tuesday September 5, 2017, 9:00 a.m.-5:00 p.m.

1. Welcome/Introductions/Administrative Remarks
2. Agenda Overview and Approval
3. Minutes Washington D.C. Meeting Review and Approval
4. Review Action Items From Washington D.C. Meeting
5. Industry Coordination and Presentations
6. Week's Plan
7. Working Group of the Whole Meeting (Rest of the Day)

Wednesday September 6, 2017, 9:00 a.m.-5:00 p.m.

1. Working Group of the Whole Meeting

Thursday September 7, 2017, 9:00 a.m.-5:00 p.m.

1. Working Group of the Whole Meeting

Friday September 8, 2017, 9:00 a.m.-4:00 p.m.

1. Working Group of the Whole Meeting

2. Industry Coordination and Presentations (if any)
3. Work Plan
4. Discuss a Motion To Begin Open Consultation/Final Review and Comment on the ED-62A/DO-204A Document To Become Revision B
5. Other Business
6. Adjourn

Attendance is open to the interested public but limited to space availability. With the approval of the chairman, members of the public may present oral statements at the meeting. Persons wishing to present statements or obtain information should contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section. Members of the public may present a written statement to the committee at any time.

Issued in Washington, DC on August 8, 2017.

Mohannad Dawoud,

Management & Program Analyst, Partnership Contracts Branch, ANG-A17, NextGen, Procurement Services Division, Federal Aviation Administration.

BILLING CODE 4910-13-P

DEPARTMENT OF TRANSPORTATION**Federal Railroad Administration**

[Docket No. FRA-2017-0002-N-22]

Proposed Agency Information Collection Activities; Comment Request

AGENCY: Federal Railroad Administration (FRA), Department of Transportation (DOT).

ACTION: Notice of information collection; request for comment.

SUMMARY: Under the Paperwork Reduction Act of 1995 (PRA), this notice announces that FRA is forwarding the Information Collection Request (ICR) abstracted below to the Office of Management and Budget (OMB) for review and comment. The ICR describes the information collection and its expected burden. On May 22, 2017, FRA published a notice providing a 60-day period for public comment on the ICR.

DATES: Comments must be submitted on or before September 13, 2017.

FOR FURTHER INFORMATION CONTACT: Mr. Robert Brogan, Information Collection Clearance Officer, Office of Railroad Safety, Regulatory Analysis Division, RRS-21, Federal Railroad Administration, 1200 New Jersey Avenue SE., Mail Stop 25, Washington, DC 20590 (Telephone: (202) 493-6292); or Ms. Kim Toone, Information Collection Clearance Officer, Office of Administration, Office of Information Technology, RAD-20, Federal Railroad Administration, 1200 New Jersey Avenue SE., Mail Stop 35, Washington, DC 20590 (Telephone: (202) 493-6132).

SUPPLEMENTARY INFORMATION: The PRA, 44 U.S.C. 3501-3520, and its implementing regulations, 5 CFR part 1320, require Federal agencies to issue two notices seeking public comment on information collection activities before OMB may approve paperwork packages. 44 U.S.C. 3506, 3507; 5 CFR 1320.5, 1320.8(d)(1), and 1320.10. On May 22, 2017, FRA published a 60-day notice in the **Federal Register** soliciting comment on the ICR for which it is now seeking OMB approval. See 82 FR 17498. FRA received no comments in response to that notice.

Before OMB decides whether to approve these proposed collections of information, it must provide 30 days for public comment. 44 U.S.C. 3507(b); 5 CFR 1320.10. Federal law requires OMB to approve or disapprove paperwork packages between 30 and 60 days after the 30-day notice is published. 44 U.S.C. 3507(b)-(c); 5 CFR 1320.10; see also 60 FR 44978, 44983, Aug. 29, 1995. OMB believes the 30-day notice gives the regulated community to the opportunity to file relevant comments and affords the agency adequate time to digest public comments before it renders a decision. *Id.* Therefore, respondents should submit their respective comments to OMB within 30 days of publication to best ensure having their full effect.

The summary below describes the ICR and its expected burden. FRA is

submitting this renewal request for clearance by OMB as the PRA requires.

Title: Survey of Plant and Insular Tourist Railroads Subject to FRA Bridge Safety Standards (49 CFR part 237).

OMB Control Number: 2130-0617.

Abstract: FRA's *Bridge Safety Standards* (49 CFR part 237) apply to all owners of railroad track with a gage of 2 feet or more supported by a bridge. This includes track owners with bridges located within an installation which is not part of the general railroad system of transportation (general system), but over which a general system railroad operates (*i.e.*, bridges within an insular tourist railroad, and bridges within an industrial installation (plant) that is not part of the general system, but over which a general system railroad operates). Currently, FRA relies on the railroad accident/incident reports (49 CFR part 225) to identify track owners subject to the requirements of part 237. However, plant and insular tourist railroads are exempt from 49 CFR part 225 (Railroad Accidents/Incidents: Reports, Classification, and Investigations). FRA wants to identify plant and insular tourist railroads that may be subject to part 237 requirements, but are exempt from part 225 reporting requirements. FRA will use this information to help evaluate risks related to railroad safety and to plan oversight activities.

FRA is requesting any railroad serving a plant and moving railroad equipment over bridges within the plant, or the plant itself, to advise FRA by email if there are railroad bridges within the plant potentially subject to FRA Bridge Safety Standards. FRA is also requesting insular tourist railroads whose tracks are supported by one or more bridges to advise FRA of the existence of their bridges by email. Email notifications should be sent to FRAPlantTouristSurvey@dot.gov and should include the name of the plant, installation, or insular tourist railroad, and that entity's address (including city and State, contact name, telephone number, and email address). Notification may also be made by telephone to Yuijiang Zhang at (202) 493-6460. This survey is ongoing with approval requested for 3 years.

Type of Request: Extension without change of a previously approved information collection.

Affected Public: Freight railroads, industrial installations (plants), insular tourist railroads.

Form(s): N/A.

Total Estimated Annual Responses: 210.

Total Estimated Annual Burden: 53 hours.

Addressee: Send comments regarding these information collections to the Office of Information and Regulatory Affairs, Office of Management and Budget, 725 17th Street NW., Washington, DC 20503, Attention: FRA Desk Officer. Comments may also be sent via email to OMB at the following address: oir-submissions@omb.eop.gov.

FRA requests comment on all aspects of this ICR, but commenters should focus on the following: Whether the proposed collection of information is necessary for DOT to properly perform its functions, including whether the information will have practical utility; the accuracy of DOT's estimates of the burden of the proposed information collections; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the collections of information on respondents, including the use of automated collection techniques or other forms of information technology.

A comment to OMB is best assured of having its full effect if OMB receives it within 30 days of publication of this notice in the **Federal Register**.

Authority: 44 U.S.C. 3501-3520.

Sarah L. Inderbitzin,
Deputy Chief Counsel.

BILLING CODE 4910-06-P

DEPARTMENT OF THE TREASURY

Office of Foreign Assets Control

Sanctions Actions Pursuant to the Foreign Narcotics Kingpin Designation Act

AGENCY: Office of Foreign Assets Control, Department of the Treasury.

ACTION: Notice.

SUMMARY: The U.S. Department of the Treasury's Office of Foreign Assets Control (OFAC) is publishing the names of persons whose property and interests in property are blocked pursuant to the Foreign Narcotics Kingpin Designation Act (Kingpin Act).

DATES: OFAC's actions described in this notice were effective on August 9, 2017.

FOR FURTHER INFORMATION CONTACT: OFAC: Associate Director for Global Targeting, tel.: 202-622-2420; Assistant Director for Licensing, tel.: 202-622-2480, Assistant Director for Regulatory Affairs, tel.: 202-622-4855, Assistant Director for Sanctions Compliance & Evaluation, tel.: 202-622-2490; or the Department of the Treasury's Office of the General Counsel: Office of the Chief

Counsel (Foreign Assets Control), tel.: 202-622-2410 (not toll free numbers).

SUPPLEMENTARY INFORMATION:

Electronic Availability

The list of Specially Designated Nationals and Blocked Persons (SDN List) and additional information concerning OFAC sanctions programs are available on OFAC's Web site at <http://www.treasury.gov/ofac>.

Notice of OFAC Actions

On August 9, 2017, OFAC's Acting Director determined that the property and interests in property of the following persons are blocked pursuant to the Kingpin Act and placed them on the SDN List.

Individuals

1. ALVAREZ MONTELONGO, Julio Cesar (a.k.a. ALVAREZ, Julion), Paseo de la Hacienda 443, Fracc. Los Mangos, Mazatlan, Sinaloa, Mexico; Ontario 1102, Col. DEPARTMENT OF THE TREASURY

Office of Foreign Assets Control

Notice of OFAC Sanctions Actions

AGENCY: Office of Foreign Assets Control, Department of the Treasury.
ACTION: Notice.

SUMMARY: The U.S. Department of the Treasury's Office of Foreign Assets Control (OFAC) is publishing the names of persons that have been placed on OFAC's Specially Designated Nationals and Blocked Persons List based on OFAC's determination that one or more applicable legal criteria were satisfied. All property and interests in property subject to U.S. jurisdiction of these persons are blocked, and U.S. persons are generally prohibited from engaging in transactions with them.

DATES: See **SUPPLEMENTARY INFORMATION** section for applicable date.

FOR FURTHER INFORMATION CONTACT: OFAC: Associate Director for Global Targeting, tel.: (202) 622-2420; Assistant Director for Licensing, tel.: (202) 622-2480; Assistant Director for Regulatory Affairs, tel.: (202) 622-4855; Assistant Director for Sanctions Compliance & Evaluation, tel.: (202) 622-2490; or the Department of the Treasury's Office of the General Counsel: Office of the Chief Counsel

(Foreign Assets Control), tel.: (202) 622-2410.

SUPPLEMENTARY INFORMATION:

Electronic Availability

The list of Specially Designated Nationals and Blocked Persons (SDN List) and additional information concerning OFAC sanctions programs are available on OFAC's Web site (<http://www.treasury.gov/ofac>).

Notice of OFAC Actions

On August 9, 2017, OFAC determined that the property and interests in property of the following persons are blocked under the relevant sanctions authority listed below.

1. AMELIACH ORTA, Francisco Jose (Latin: AMELIACH ORTA, Francisco José), Carabobo, Venezuela; DOB 14 Jun 1963; POB Valencia, Carabobo, Venezuela; citizen Venezuela; Gender Male; Cedula No. 7062172 (Venezuela); Constituent of Venezuela's Constituent Assembly for Valencia Municipality in Carabobo State; Member of Venezuela's Presidential Commission for the Constituent Assembly (individual) [VENEZUELA]. Designated pursuant to section 1(a)(ii)(C) of Executive Order 13692 of March 8, 2015, "Blocking Property and Suspending Entry of Certain Persons Contributing to the Situation in Venezuela" (E.O. 12692) for being a current or former official of the Government of Venezuela.

2. CHAVEZ FRIAS, Adan Coromoto (Latin: CHÁVEZ FRÍAS, Adán Coromoto), Barinas, Venezuela; DOB 11 Apr 1953; citizen Venezuela; Gender Male; Cedula No. 3915103 (Venezuela); Constituent of Venezuela's Constituent Assembly for Barinas Municipality in Barinas State; Secretary of Venezuela's Presidential Commission for the Constituent Assembly (individual) [VENEZUELA]. Designated pursuant to section 1(a)(ii)(C) of E.O. 13692 for being a current or former official of the Government of Venezuela.

3. D'AMELIO CARDIET, Tania, Vargas, Venezuela; DOB 05 Dec 1971; Gender Female; Cedula No. 11691429 (Venezuela); Rector of Venezuela's National Electoral Council (individual) [VENEZUELA]. Designated pursuant to section 1(a)(ii)(C) of E.O. 13692 for being a current or former official of the Government of Venezuela.

4. ESCARRA MALAVE, Hermann Eduardo, Miranda, Venezuela; DOB 08 Apr 1952; citizen Venezuela; Gender Male; Cedula No. 3820195 (Venezuela); Constituent of Venezuela's Constituent Assembly for Zamora Municipality in Miranda State; Member of Venezuela's Presidential Commission for the Constituent Assembly (individual)

[VENEZUELA]. Designated pursuant to section 1(a)(ii)(A)(1) of E.O. 13692 for being responsible for or complicit in, or responsible for ordering, controlling, or otherwise directing, or to have participated in, directly or indirectly, actions or policies that undermine democratic processes or institutions in or in relation to Venezuela.

5. FARIAS PENA, Erika del Valle (Latin: FARIAS PEÑA, Erika del Valle), Cojedes, Venezuela; DOB 31 Oct 1972; citizen Venezuela; Gender Female; Cedula No. 9493443 (Venezuela); Constituent of Venezuela's Constituent Assembly for Ezequiel Zamora Municipality in Cojedes State (individual) [VENEZUELA]. Designated pursuant to section 1(a)(ii)(C) of E.O. 13692 for being a current or former official of the Government of Venezuela.

6. LUGO ARMAS, Bladimir Humberto (a.k.a. LUGO ARMAS, Vladimir Humberto), Caracas, Capital District, Venezuela; DOB 18 Nov 1968; Gender Male; Cedula No. 8760081 (Venezuela); Commander of the Special Unit to the Federal Legislative Palace of Venezuela's Bolivarian National Guard (individual) [VENEZUELA]. Designated pursuant to section 1(a)(ii)(C) of E.O. 13692 for being a current or former official of the Government of Venezuela.

7. MELENDEZ RIVAS, Carmen Teresa (Latin: MELÉNDEZ RIVAS, Carmen Teresa), Lara, Venezuela; DOB 03 Nov 1961; POB Barinas, Venezuela; citizen Venezuela; Gender Female; Cedula No. 8146803 (Venezuela); Constituent of Venezuela's Constituent Assembly for Iribarren Municipality in Lara State (individual) [VENEZUELA]. Designated pursuant to section 1(a)(ii)(C) of E.O. 13692 for being a current or former official of the Government of Venezuela.

8. VIVAS VELASCO, Ramon Dario, Vargas, Venezuela; DOB 12 Jun 1950; citizen Venezuela; Gender Male; Cedula No. 3569721 (Venezuela); Constituent of Venezuela's Constituent Assembly for Vargas Municipality in Vargas State (individual) [VENEZUELA]. Designated pursuant to section 1(a)(ii)(C) of E.O. 13692 for being a current or former official of the Government of Venezuela.

BILLING CODE 4810-AL-P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Extension of Information Collection Request Submitted for Public Comment; Election To Expense Certain Refineries

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Internal Revenue Service, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995. Currently, the IRS is soliciting comments concerning the election to expense certain refineries.

DATES: Written comments should be received on or before October 13, 2017 to be assured of consideration.

ADDRESSES: Direct all written comments to Tuawana Pinkston, Internal Revenue Service, Room 6141, 1111 Constitution Avenue NW., Washington, DC 20224. Requests for additional information or copies of the regulations should be directed to R. Joseph Durbala, at Internal Revenue Service, Room 6129, 1111 Constitution Avenue NW., Washington, DC 20224, or through the internet, at RJoseph.Durbala@irs.gov.

SUPPLEMENTARY INFORMATION:

Title: Election To Expense Certain Refineries.

OMB Number: 1545-2103.

Regulation Project Number: TD 9547.

Abstract: This document contains regulations relating to the election to expense qualified refinery property under section 179C of the Internal Revenue Code, and affects taxpayers who own refineries located in the United States. These regulations reflect the Energy Policy Act of 2005.

Section 179C of the Internal Revenue Code provides that a taxpayer can elect to treat 50% of the cost of "qualified refinery property" as a deductible expense not chargeable to capital account. The taxpayer makes an election under section 179C by entering the amount of the deduction at the appropriate place on the taxpayer's timely filed original federal income tax return for the taxable year in which the qualified refinery property is placed in service and by attaching a report specifying (a) the name and address of the refinery and (b) the production

capacity requirement under which the refinery qualifies.

If the taxpayer making the expensing election described above is a cooperative described in section 1381, and one or more persons directly holding an ownership interest in the taxpayer are organizations described in section 1381, the taxpayer can elect to allocate all or a portion of the deduction allowable under section 179C to those persons. The allocation must be equal to the person's ratable share of the total amount allocated, determined on the basis of the person's ownership interest in the taxpayer/cooperative.

Current Actions: There is no change to the burden previously approved.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations.

Estimated Number of Respondents: 12.

Estimated Time per Respondent: 10 Hours.

Estimated Total Annual Burden Hours: 120.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number.

Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Desired Focus of Comments: The Internal Revenue Service (IRS) is particularly interested in comments that:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

- Enhance the quality, utility, and clarity of the information to be collected; and

- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology,

e.g., by permitting electronic submissions of responses.

Comments submitted in response to this notice will be summarized and/or included in the ICR for OMB approval of the extension of the information collection; they will also become a matter of public record.

Approved: August 8, 2017.

R. Joseph Durbala,

IRS Tax Analyst.

BILLING CODE 4830-01-P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Collection; Comment Request for Regulation Project

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Internal Revenue Service, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on continuing information collections, as required by the Paperwork Reduction Act of 1995. The IRS is soliciting comments concerning suspension or reduction of safe harbor nonelective contributions.

DATES: Written comments should be received on or before October 13, 2017 to be assured of consideration.

ADDRESSES: Direct all written comments to L. Brimmer, Internal Revenue Service, room 6529, 1111 Constitution Avenue NW., Washington, DC 20224. Requests for additional information or copies of the regulations should be directed to Kerry Dennis, Internal Revenue Service, Room 6529, 1111

Constitution Avenue NW., Washington DC 20224, or through the internet, at Kerry.Dennis@irs.gov.

SUPPLEMENTARY INFORMATION:

Title: Suspension or Reduction of Safe Harbor Nonelective Contributions.

OMB Number: 1545-2191.

Regulation Project Number: T.D. 9641.

Abstract: The final regulation allows a 401(k) plan using the safe harbor provisions of section 401(k)(12) to suspend or reduce nonelective safe harbor contributions if the employer is operating at an economic loss described in section 412(2)(A). The final regulations permit an employer to reduce or suspend safe harbor nonelective contributions without regard to the financial condition of the employer if notice is provided to participants before the beginning of the plan year which discloses the possibility that the contributions might be reduced or suspended midyear. The final regulations also permit matching contributions to be reduced or suspended under a mid-year amendment if the notice provided to participants before the beginning of the plan year discloses that the contributions might be reduced or suspended mid-year. These notices must also provide that a supplemental notice will be provided to plan participants if a reduction or suspension does occur and that the reduction or suspension will not apply until at least 30 days after the supplemental notice is provided.

Current Actions: There is no change to this existing regulation.

Type of Review: Extension of a currently approved collection.

Affected Public: Individuals and Households, Businesses and other for-profit organizations.

Estimated Number of Respondents: 5,000.

Estimated Time per Respondent: 2 hours.

Estimated Total Annual Burden Hours: 10,000.

The following paragraph applies to all of the collections of information covered by this notice.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: August 7, 2017.

SUMMARY: We are revising the Medicare hospital inpatient prospective payment systems (IPPS) for operating and capital-related costs of acute care hospitals to implement changes arising from our continuing experience with these systems for FY 2018. Some of these changes implement certain statutory provisions contained in the Pathway for Sustainable Growth Rate (SGR) Reform Act of 2013, the Improving Medicare Post-Acute Care Transformation Act of 2014, the Medicare Access and CHIP Reauthorization Act of 2015, the 21st Century Cures Act, and other legislation. We also are making changes relating to the provider-based status of Indian Health Service (IHS) and Tribal facilities and organizations and to the low-volume hospital payment adjustment for hospitals operated by the IHS or a Tribe. In addition, we are providing the market basket update that will apply to the rate-of-increase limits for certain hospitals excluded from the IPPS that are paid on a reasonable cost basis subject to these limits for FY 2018. We are updating the payment policies and the annual payment rates for the Medicare prospective payment system (PPS) for inpatient hospital services provided by long-term care hospitals (LTCHs) for FY 2018.

In addition, we are establishing new requirements or revising existing

requirements for quality reporting by specific Medicare providers (acute care hospitals, PPS-exempt cancer hospitals, LTCHs, and inpatient psychiatric facilities). We also are establishing new requirements or revising existing requirements for eligible professionals (EPs), eligible hospitals, and critical access hospitals (CAHs) participating in the Medicare and Medicaid Electronic Health Record (EHR) Incentive Programs. We are updating policies relating to the Hospital Value-Based Purchasing (VBP) Program, the Hospital Readmissions Reduction Program, and the Hospital-Acquired Condition (HAC) Reduction Program.

We also are making changes relating to transparency of accrediting organization survey reports and plans of correction of providers and suppliers; electronic signature and electronic submission of the Certification and Settlement Summary page of the Medicare cost reports; and clarification of provider disposal of assets.

DATES: This final rule is effective on October 1, 2017.

SUPPLEMENTARY INFORMATION:**Electronic Access**

This **Federal Register** document is available from the **Federal Register** online database through Federal Digital System (FDsys), a service of the U.S. Government Printing Office. This database can be accessed via the Internet at: <http://www.gpo.gov/fdsys>.

Tables Available Only Through the Internet on the CMS Web Site

In the past, a majority of the tables referred to throughout this preamble and in the Addendum to the proposed rule and the final rule were published in the **Federal Register** as part of the annual proposed and final rules. However, beginning in FY 2012, some of the IPPS tables and LTCH PPS tables are no longer published in the **Federal Register**. Instead, these tables generally will be available only through the Internet. The IPPS tables for this final rule are available through the Internet on the CMS Web site at: <http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>. Click on the link on the left side of the screen titled, “FY 2018 IPPS Final Rule Home Page” or “Acute Inpatient—Files for Download”. The LTCH PPS tables for this FY 2018 final rule are available through the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/LongTermCareHospitalPPS/index.html> under the list item for Regulation Number CMS–1677–F. For further details on the contents of the tables referenced in this final rule, we refer readers to section VI. of the Addendum to this final rule.

Readers who experience any problems accessing any of the tables that are posted on the CMS Web sites identified above should contact Michael Treitel at (410) 786–4552.

1. Background on the Prospective MS–DRG Documentation and Coding Adjustments for FY 2008 and FY 2009 Authorized by Public Law 110–90
2. Recoupment or Repayment Adjustment Authorized by Section 631 of the American Taxpayer Relief Act of 2012 (ATRA)
3. Adjustment for FY 2018 Required Under Section 414 of Public Law 114–10 (MACRA) and Section 15005 of Public Law 114–255
- E. Refinement of the MS–DRG Relative Weight Calculation
 1. Background
 2. Discussion of Policy for FY 2018
- F. Changes to Specific MS–DRG Classifications
 1. Discussion of Changes to Coding System and Basis for FY 2018 MS–DRG Updates
 - a. Conversion of MS–DRGs to the International Classification of Diseases, 10th Revision (ICD–10)
 - b. Basis for FY 2018 MS–DRG Updates
 2. MDC 1 (Diseases and Disorders of the Nervous System)
 - a. Functional Quadriplegia
 - b. Responsive Neurostimulator (RNS®) System
 - c. Precerebral Occlusion or Transient Ischemic Attack With Thrombolytic
 3. MDC 2 (Diseases and Disorders of the Eye: Swallowing Eye Drops (Tetrahydrozoline))
 4. MDC 5 (Diseases and Disorders of the Circulatory System)
 - a. Percutaneous Cardiovascular Procedures and Insertion of a Radioactive Element
 - b. Modification of the Titles for MS–DRG 246 (Percutaneous Cardiovascular Procedures With Drug-Eluting Stent With MCC or 4+ Vessels or Stents) and MS–DRG 248 (Percutaneous Cardiovascular Procedures With Non-Drug-Eluting Stent With MCC or 4+ Vessels or Stents)
 - c. Transcatheter Aortic Valve Replacement (TAVR) and Left Atrial Appendage Closure (LAAC)
 - d. Percutaneous Mitral Valve Replacement Procedures
 - e. Percutaneous Tricuspid Valve Repair
 5. MDC 8 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue)
 - a. Total Ankle Replacement (TAR) Procedures
 - b. Revision of Total Ankle Replacement (TAR) Procedures
 - c. Magnetic Controlled Growth Rods (MAGEC® System)
 - d. Combined Anterior/Posterior Spinal Fusion
 6. MDC 14 (Pregnancy, Childbirth and the Puerperium)
 - a. Vaginal Delivery and Complicating Diagnoses
 - b. MS–DRG 998 (Principal Diagnosis Invalid as Discharge Diagnosis)
 - c. MS–DRG 782 (Other Antepartum Diagnoses Without Medical Complications)
 - d. Shock During or Following Labor and Delivery
 7. MDC 15 (Newborns and Other Neonates with Conditions Originating in Perinatal Period): Observation and Evaluation of Newborn
 8. MDC 21 (Injuries, Poisonings and Toxic Effects of Drugs): Complication Codes
 9. MDC 23 (Factors Influencing Health Status and Other Contacts With Health Services): Updates to MS–DRGs 945 and 946 (Rehabilitation With CC/MCC and Without CC/MCC, Respectively)
 10. Changes to the Medicare Code Editor (MCE)
 - a. Age Conflict Edit
 - b. Sex Conflict Edit
 - c. Non-Covered Procedure Edit
 - d. Unacceptable Principal Diagnosis Edit
 - e. Future Enhancement
 11. Changes to Surgical Hierarchies
 12. Changes to the MS–DRG Diagnosis Codes for FY 2018
 - a. Background of the CC List and the CC Exclusions List
 - b. Additions and Deletions to the Diagnosis Code Severity Levels for FY 2018
 - c. Principal Diagnosis Is Its Own CC or MCC
 - d. CC Exclusions List for FY 2018
 13. Comprehensive Review of CC List for FY 2019
 14. Review of Procedure Codes in MS DRGs 981 Through 983; 984 Through 986; and 987 Through 989
 - a. Moving Procedure Codes From MS–DRGs 981 Through 983 or MS–DRGs 987 Through 989 Into MDCs
 - b. Reassignment of Procedures Among MS–DRGs 981 Through 983, 984 Through 986, and 987 Through 989
 15. Changes to the ICD–10–CM and ICD–10–PCS Coding Systems
 16. Replaced Devices Offered Without Cost or With a Credit
 - a. Background
 - b. Changes for FY 2018
 17. Other Policy Changes: Other Operating Room (O.R.) and Non-O.R. Issues
 - a. O.R. Procedures to Non-O.R. Procedures
 - b. Revision of Neurostimulator Generator
 - c. External Repair of Hymen
 - d. Non-O.R. Procedures in MDC 17 (Myeloproliferative Diseases and Disorders Poorly Differentiated Neoplasms)
- G. Recalibration of the FY 2018 MS–DRG Relative Weights
 1. Data Sources for Developing the Relative Weights
 2. Methodology for Calculation of the Relative Weights
 3. Development of National Average CCRs
- H. Add-On Payments for New Services and Technologies for FY 2018
 1. Background
 2. Public Input Before Publication of a Notice of Proposed Rulemaking on Add-On Payments
 3. ICD–10–PCS Section “X” Codes for Certain New Medical Services and Technologies
 4. Revision of Reference to an ICD–9–CM Code in § 412.87(b)(2) of the Regulations
 5. FY 2018 Status of Technologies Approved for FY 2017 Add-On Payments
 - a. CardioMEMS™ HF (Heart Failure) Monitoring System
 - b. Defitelio® (Defibrotide)
 - c. GORE® EXCLUDER® Iliac Branch Endoprosthesis (IBE)
- d. Idarucizumab
- e. Lutonix® Drug Coated Balloon PTA Catheter and In.PACT™ Admiral™ Paclitaxel Coated Percutaneous Transluminal Angioplasty (PTA) Balloon Catheter
- f. MAGEC® Spinal Bracing and Distraction System (MAGEC® Spine)
- g. Vistogard™ (Uridine Triacetate)
- h. Blnatumomab (BLINCYTO™ Trade Brand)
6. FY 2018 Applications for New Technology Add-On Payments
 - a. Bezlotoxumab (ZINPLAVA™)
 - b. EDWARDS INTUITY Elite™ Valve System (INTUITY) and Liva Nova Perceval Valve (Perceval)
 - c. Ustekinumab (Stelara®)
- III. Changes to the Hospital Wage Index for Acute Care Hospitals
 - A. Background
 1. Legislative Authority
 2. Core-Based Statistical Areas (CBSAs) for the FY 2018 Hospital Wage Index
 3. Codes for Constituent Counties in CBSAs
 - B. Worksheet S–3 Wage Data for the FY 2018 Wage Index
 1. Included Categories of Costs
 2. Excluded Categories of Costs
 3. Use of Wage Index Data by Suppliers and Providers Other Than Acute Care Hospitals Under the IPPS
 - C. Verification of Worksheet S–3 Wage Data
 - D. Method for Computing the FY 2018 Unadjusted Wage Index
 1. Methodology for FY 2018
 2. Clarification of Other Wage Related Costs in the Wage Index
 - E. Occupational Mix Adjustment to the FY 2018 Wage Index
 1. Use of 2013 Occupational Mix Survey for the FY 2018 Wage Index
 2. Use of the 2016 Medicare Wage Index Occupational Mix Survey for the FY 2019 Wage Index
 3. Calculation of the Occupational Mix Adjustment for FY 2018
 - F. Analysis and Implementation of the Occupational Mix Adjustment and the FY 2018 Occupational Mix Adjusted Wage Index
 - G. Application of the Rural, Imputed, and Frontier Floors
 1. Rural Floor
 2. Expiration of the Imputed Floor Policy
 3. State Frontier Floor for FY 2018
 - H. FY 2018 Wage Index Tables
 - I. Revisions to the Wage Index Based on Hospital Redesignations and Reclassifications
 1. General Policies and Effects of Reclassification and Redesignation
2. MGCRB Reclassification and Redesignation Issues for FY 2018
 - a. FY 2018 Reclassification Requirements and Approvals
 - b. Extension of PRA Information Collection Requirement Approval for MGCRB Applications
 - c. Deadline for Submittal of Documentation of Sole Community Hospital (SCH) and Rural Referral Center (RRC) Classification Status to the MGCRB

- d. Clarification of Special Rules for SCHs and RRCs Reclassifying to Geographic Home Area
3. Redesignations Under Section 1886(d)(8)(B) of the Act
4. Changes to the 45-Day Notification Rules
- J. Out-Migration Adjustment Based on Commuting Patterns of Hospital Employees
- K. Reclassification From Urban to Rural Under Section 1886(d)(8)(E) of the Act Implemented at 42 CFR 412.103
- L. Clarification of Application Deadline for Rural Referral Center (RRC) Classification
- M. Process for Requests for Wage Index Data Corrections
 1. Process for Hospitals to Accept Wage Index Data Corrections
 2. Process for Wage Index Data Corrections by CMS After the January Public Use File (PUF)
- N. Labor Market Share for the FY 2018 Wage Index
- IV. Rebasings and Revising of the Hospital Market Baskets for Acute Care Hospitals
 - A. Background
 - B. Rebasings and Revising the IPPS Market Basket
 1. Development of Cost Categories and Weights
 - a. Use of Medicare Cost Report Data
 - b. Final Major Cost Category Computation
 - c. Derivation of the Detailed Cost Weights
 2. Selection of Price Proxies
 3. Labor-Related Share
 - C. Market Basket for Certain Hospitals Presently Excluded From the IPPS
 - D. Rebasings and Revising the Capital Input Price Index (CIPI)
- V. Other Decisions and Changes to the IPPS for Operating Costs
 - A. Changes to MS–DRGs Subject to Postacute Care Transfer and MS–DRG Special Payment Policies
 - B. Changes in the Inpatient Hospital Updates for FY 2018 (§ 412.64(d))
 1. FY 2018 Inpatient Hospital Update
 2. FY 2018 Puerto Rico Hospital Update
 - C. Change to Volume Decrease Adjustment for Sole Community Hospitals (SCHs) and Medicare-Dependent, Small Rural Hospitals (MDHs) (§ 412.92)
 1. Background
 2. Changes to the Volume Decrease Adjustment Calculation Methodology for SCHs
 - D. Rural Referral Centers (RRCs): Annual Updates to Case-Mix Index (CMI) and Discharge Criteria (§ 412.96)
 1. Case-Mix Index (CMI)
 2. Discharges
 - E. Payment Adjustment for Low-Volume Hospitals (§ 412.101)
 1. Expiration of Temporary Changes to Low-Volume Hospital Payment Policy
 2. Background
 3. Payment Adjustment for FY 2018 and Subsequent Fiscal Years
 4. Parallel Low-Volume Hospital Payment Adjustment Regarding Hospitals Operated by the Indian Health Service (IHS) or a Tribe
 - F. Indirect Medical Education (IME) Payment Adjustment (§ 412.105)
 - G. Payment Adjustment for Medicare Disproportionate Share Hospitals (DSHs) for FY 2018 (§ 412.106)
 1. General Discussion
 2. Eligibility for Empirically Justified Medicare DSH Payments and Uncompensated Care Payments
 3. Empirically Justified Medicare DSH Payments
 4. Uncompensated Care Payments
 - a. Calculation of Factor 1 for FY 2018
 - b. Calculation of Factor 2 for FY 2018
 - (1) Background
 - (2) Methodology for Calculation of Factor 2 for FY 2018
 - c. Calculation of Factor 3 for FY 2018
 - (1) Background
 - (2) Data Source for FY 2018
 - (3) Time Period for Calculating Factor 3 for FY 2018, Including Methodology for Incorporating Worksheet S–10 Data
 - (4) Methodological Considerations for Calculating Factor 3
 - (5) Methodological Considerations for Incorporating Worksheet S–10 Data
 - H. Medicare-Dependent, Small Rural Hospital (MDH) Program (§ 412.108)
 1. Background for the MDH Program
 - a. Expiration of the MDH Program
 - I. Hospital Readmissions Reduction Program: Updates and Changes (§§ 412.150 Through 412.154)
 1. Statutory Basis for the Hospital Readmissions Reduction Program
 2. Regulatory Background
 3. Maintenance of Technical Specifications for Quality Measures
 4. Policies for the Hospital Readmissions Reduction Program
 5. Applicable Period for FY 2018
 6. Calculation of Aggregate Payments for Excess Readmissions for FY 2018
 7. Background and Current Payment Adjustment Methodology
 - a. Background
 - b. Current Payment Adjustment Methodology
 8. Provisions for the Payment Adjustment Methodology for FY 2019: Methodology for Calculating the Proportion of Dual-Eligible Patients
 - a. Background
 - b. Data Sources Used To Determine Dual Eligibility
 - c. Data Period Used To Define Dual Eligibility
 9. Provisions for the Payment Adjustment Methodology for FY 2019: Methodology for Assigning Hospitals to Peer Groups
 10. Provisions for the Payment Adjustment Methodology for FY 2019: Payment Adjustment Formula Calculation Methodology
 - a. Background
 - b. Proposals
 - c. Analysis
 11. Accounting for Social Risk Factors in the Hospital Readmissions Reduction Program
 12. Extraordinary Circumstances Exceptions (ECE) Policy
 13. Timeline for Public Reporting of Excess Readmission Ratios on *Hospital Compare* for the FY 2018 Payment Determination
 - J. Hospital Value-Based Purchasing (VBP) Program: Policy Changes
 1. Background
 - a. Statutory Background and Overview of Past Program Years
 - b. FY 2018 Program Year Payment Details
 2. Accounting for Social Risk Factors in the Hospital VBP Program
 3. Retention and Removal of Quality Measures for the FY 2019 Program Year
 - a. Retention of Previously Adopted Hospital VBP Program Measures
 - b. Removal of the PSI 90 Measure
 - c. Summary of Previously Adopted Measures and Measure for Removal for the FY 2019 and FY 2020 Program Years
 4. New Measures for the FY 2022 Program Year, FY 2023 Program Year, and Subsequent Years
 - a. New Measure for the FY 2022 Program Year and Subsequent Years: Hospital-Level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Pneumonia (PN Payment)
 - b. New Measure for the FY 2023 Program Year and Subsequent Years: Patient Safety and Adverse Events (Composite) (NQF #0531)
 5. Previously Adopted and Baseline and Performance Periods
 - a. Background
 - b. Person and Community Engagement Domain
 - c. Efficiency and Cost Reduction Domain
 - d. Safety Domain
 - e. Clinical Care Domain
 - f. Summary of Previously Adopted and Newly Finalized Baseline and Performance Periods for the FY 2019 Through FY 2023 Program Years
 6. Performance Standards for the Hospital VBP Program
 - a. Background
 - b. Previously Adopted and Newly Finalized Performance Standards for the FY 2020 Program Year
 - c. Previously Adopted Performance Standards for Certain Measures for the FY 2021 Program Year
 - d. Previously Adopted and Newly Finalized Performance Standards for Certain Measures for the FY 2022 Program Year
 - e. Performance Standards for Certain Measures for the FY 2023 Program Year
 7. Scoring Methodology and Data Requirements for the FY 2019 Program Year and Subsequent Years
 - a. Domain Weighting for the FY 2020 Program Year and Subsequent Years for Hospitals That Receive a Score on All Domains
 - b. Domain Weighting for the FY 2019 Program Year and Subsequent Years for Hospitals Receiving Scores on Fewer than Four Domains
 - c. Minimum Numbers of Cases for Hospital VBP Program Measures for the FY 2019 Program Year and Subsequent Years
 - d. Weighting Measures Within the Efficiency and Cost Reduction Domain

 - C. Changes to the LTCH PPS Payment Rates and Other Changes to the LTCH PPS for FY 2018
 1. Overview of Development of the LTCH PPS Standard Federal Payment Rates
 2. FY 2018 LTCH PPS Standard Federal Payment Rate Annual Market Basket Update
 - a. Overview
 - b. Annual Update to the LTCH PPS Standard Federal Payment Rate for FY 2018
 - c. Adjustment to the LTCH PPS Standard Federal Payment Rate under the Long-Term Care Hospital Quality Reporting Program (LTCH QRP)
 - d. Annual Update under the LTCH PPS for FY 2018
 - D. Changes to the Short-Stay Outlier Adjustment Policy (§ 412.529)
 - E. Temporary Exception to the Site Neutral Payment Rate for Certain Spinal Cord Specialty Hospitals
 - F. Temporary Exception to the Site Neutral Payment Rate for Certain Discharges With Severe Wounds From Certain LTCHs
 - G. Moratorium and Regulatory Delay of the Full Implementation of the “25-Percent” Threshold Policy” Adjustment (§ 412.538)
 - H. Revision to Moratorium on Increasing Beds in Existing LTCH or LTCH Satellite Locations Under the 21st Century Cures Act (Pub. L. 114–255) (§ 412.23)
 - I. Changes to the Average Length of Stay Criterion Under the 21st Century Cures Act (Pub. L. 114–255)
 - J. Change in Medicare Classification for Certain Hospitals (§ 412.23)
- IX. Quality Data Reporting Requirements for Specific Providers and Suppliers
 - A. Hospital Inpatient Quality Reporting (IQR) Program
 1. Background
 - a. History of the Hospital IQR Program
 - b. Maintenance of Technical Specifications for Quality Measures
 - c. Public Display of Quality Measures
 - d. Accounting for Social Risk Factors in the Hospital IQR Program
 2. Retention of Previously Adopted Hospital IQR Program Measures for Subsequent Payment Determinations
 3. Removal and Suspension of Previously Adopted Hospital IQR Program Measures
 4. Previously Adopted Hospital IQR Program Measures for the FY 2019 Payment Determination and Subsequent Years
 5. Considerations in Expanding and Updating of Quality Measures
 6. Refinements to Existing Measures in the Hospital IQR Program for the FY 2020 Payment Determination and Subsequent Years
 - a. Refining Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) Survey (NQF #0166) for the FY 2020 Payment Determination and Subsequent Years
 - b. Refinement of the Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) following Acute Ischemic Stroke Hospitalization Measure for the FY 2023 Payment Determination and Subsequent Years
 - c. Summary of Previously Adopted Hospital IQR Program Measures for the FY 2020 Payment Determination and Subsequent Years
 7. Voluntary Hybrid Hospital-Wide Readmission Measure With Claims and Electronic Health Record Data (NQF #2879)
 - a. Background
 - b. Voluntary Reporting of Electronic Health Record Data for the Hybrid HWR Measure (NQF #2879)
 - c. Data Sources
 - d. Outcome
 - e. Cohort
 - f. Inclusion and Exclusion Criteria
 - g. Risk-Adjustment
 - h. Calculating the Risk-Standardized Readmission Rate (RSRR)
 - i. Data Submission and Reporting Requirements
 - j. Confidential Hospital-Specific Reports
 8. Changes to Policies on Reporting of eQCMs
 - a. Background
 - b. Modifications to the eCQM Reporting Requirements for the Hospital IQR Program for the CY 2017 Reporting Period/FY 2019 Payment Determination
 - c. Modifications to the eCQM Reporting Requirements for the Hospital IQR Program for the CY 2018 Reporting Period/FY 2020 Payment Determination
 9. Possible New Quality Measures and Measure Topics for Future Years
 - a. Potential Inclusion of the Quality of Informed Consent Documents for Hospital-Performed, Elective Procedures Measure
 - b. Potential Inclusion of Four End-of-Life (EOL) Measures for Cancer Patients
 - c. Potential Inclusion of Two Nurse Staffing Measures
 - d. Potential Inclusion of Additional Electronic Clinical Quality Measures (eQCMs) in the Hospital IQR and Medicare and Medicaid EHR Incentive Programs

10. Form, Manner, and Timing of Quality Data Submission
 - a. Background
 - b. Procedural Requirements for the FY 2020 Payment Determination and Subsequent Years
 - c. Data Submission Requirements for Chart-Abstracted Measures
 - d. Changes to the Reporting and Submission Requirements for eQCMs
 - e. Submission Form and Method for the Voluntary Hybrid Hospital-Wide Readmission Measure with Claims and Electronic Health Record Data (NQF #2879)
 - f. Sampling and Case Thresholds for the FY 2020 Payment Determination and Subsequent Years
 - g. HCAHPS Administration and Submission Requirements for the FY 2020 Payment Determination and Subsequent Years
 - h. Data Submission Requirements for Structural Measures for the FY 2020 Payment Determination and Subsequent Years
 - i. Data Submission and Reporting Requirements for HAI Measures Reported via NHSN
11. Modifications to the Validation of Hospital IQR Program Data
 - a. Background
 - b. Changes to the Existing Processes for Validation of Hospital IQR Program eCQM Data for the FY 2020 Payment Determination and Subsequent Years
 - c. Modifications to the Educational Review Process for Chart-Abstracted Measures Validation
12. Data Accuracy and Completeness Acknowledgement (DACA) Requirements for the FY 2020 Payment Determination and Subsequent Years
13. Public Display Requirements for the FY 2020 Payment Determination and Subsequent Years
 - a. Background
 - b. Potential Options for Confidential and Public Reporting of Hospital IQR Measures Stratified by Patient Dual-Eligibility Status
14. Reconsideration and Appeal Procedures for the FY 2020 Payment Determination and Subsequent Years
15. Change to the Hospital IQR Program Extraordinary Circumstances Exceptions (ECE) Policy
 - a. Background
 - b. Alignment of the Hospital IQR Program ECE Policy With Other CMS Quality Programs
- B. PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program
 1. Background
 2. Criteria for Removal and Retention of PCHQR Program Measures
 3. Retention and Removal of Previously Finalized Quality Measures for PCHs Beginning With the FY 2020 Program Year
 - a. Background
 - b. Removal of Measures from the PCHQR Program Beginning With the FY 2020 Program Year
 4. New Quality Measures Beginning With the FY 2020 Program Year

I. Executive Summary and Background

A. Executive Summary

1. Purpose and Legal Authority

This final rule makes payment and policy changes under the Medicare inpatient prospective payment systems (IPPS) for operating and capital-related costs of acute care hospitals as well as for certain hospitals and hospital units excluded from the IPPS. We also are making changes relating to the provider-based status of Indian Health Service (IHS) and Tribal facilities and organizations and to the IPPS low-volume hospital payment adjustment for hospitals operated by the IHS or a Tribe. In addition, it makes payment and policy changes for inpatient hospital services provided by long-term care hospitals (LTCHs) under the long-term care hospital prospective payment system (LTCH PPS). It also makes policy changes to programs associated with Medicare IPPS hospitals, IPPS-excluded hospitals, and LTCHs.

We are establishing new requirements or revising requirements for quality reporting by specific providers (acute care hospitals, PPS-exempt hospitals, LTCHs, and inpatient psychiatric facilities) that are participating in Medicare. We also are establishing new requirements or revising existing requirements for eligible professionals (EPs), eligible hospitals, and CAHs participating in the Medicare and Medicaid EHR Incentive Programs. We are updating policies relating to the Hospital Value-Based Purchasing (VBP) Program, the Hospital Readmissions Reduction Program, and the Hospital-Acquired Condition (HAC) Reduction Program. We also are making changes

related to the transparency of accrediting organization survey reports and plans of correction; to allow electronic signature and electronic submission of the Certification and Settlement Summary page of the Medicare cost reports; and to clarify provider reimbursement regulations relative to the sale or scrapping of depreciable assets on or after December 1, 1997.

Under various statutory authorities, we are making changes to the Medicare IPPS, to the LTCH PPS, and to other related payment methodologies and programs for FY 2018 and subsequent fiscal years. These statutory authorities include, but are not limited to, the following:

- Section 1886(d) of the Social Security Act (the Act), which sets forth a system of payment for the operating costs of acute care hospital inpatient stays under Medicare Part A (Hospital Insurance) based on prospectively set rates. Section 1886(g) of the Act requires that, instead of paying for capital-related costs of inpatient hospital services on a reasonable cost basis, the Secretary use a prospective payment system (PPS).

- Section 1886(d)(1)(B) of the Act, which specifies that certain hospitals and hospital units are excluded from the IPPS. These hospitals and units are: Rehabilitation hospitals and units; LTCHs; psychiatric hospitals and units; children's hospitals; cancer hospitals; extended neoplastic disease care hospitals (previously referred to as "long-term care neoplastic disease hospitals" and renamed in this final rule), and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa). Religious nonmedical health care institutions (RNHCIs) are also excluded from the IPPS.

- Sections 123(a) and (c) of the BBRA (Pub. L. 106–113) and section 307(b)(1) of the BIPA (Pub. L. 106–554) (as codified under section 1886(m)(1) of the Act), which provide for the development and implementation of a prospective payment system for payment for inpatient hospital services of LTCHs described in section 1886(d)(1)(B)(iv) of the Act.

- Sections 1814(l), 1820, and 1834(g) of the Act, which specify that payments are made to critical access hospitals (CAHs) (that is, rural hospitals or facilities that meet certain statutory requirements) for inpatient and outpatient services and that these payments are generally based on 101 percent of reasonable cost.

- Section 1866(k) of the Act, as added by section 3005 of the Affordable Care Act, which establishes a quality reporting program for hospitals described in section 1886(d)(1)(B)(v) of the Act, referred to as “PPS-exempt cancer hospitals.”

- Section 1886(a)(4) of the Act, which specifies that costs of approved educational activities are excluded from the operating costs of inpatient hospital services. Hospitals with approved graduate medical education (GME) programs are paid for the direct costs of GME in accordance with section 1886(h) of the Act.

- Section 1886(b)(3)(B)(viii) of the Act, which requires the Secretary to reduce the applicable percentage increase that would otherwise apply to the standardized amount applicable to a subsection (d) hospital for discharges occurring in a fiscal year if the hospital does not submit data on measures in a form and manner, and at a time, specified by the Secretary.

- Section 1886(o) of the Act, which requires the Secretary to establish a Hospital Value-Based Purchasing (VBP) Program under which value-based incentive payments are made in a fiscal year to hospitals meeting performance standards established for a performance period for such fiscal year.

- Section 1886(p) of the Act, as added by section 3008 of the Affordable Care Act, which establishes a Hospital-Acquired Condition (HAC) Reduction Program, under which payments to applicable hospitals are adjusted to provide an incentive to reduce hospital-acquired conditions.

- Section 1886(q) of the Act, as added by section 3025 of the Affordable Care Act and amended by section 10309 of the Affordable Care Act and section 15002 of the 21st Century Cures Act, which establishes the “Hospital Readmissions Reduction Program.” Under the program, payments for discharges from an “applicable hospital” under section 1886(d) of the Act will be reduced to account for certain excess readmissions. Section 15002 of the 21st Century Cures Act requires the Secretary to compare cohorts of hospitals to each other in determining the extent of excess readmissions.

- Section 1886(r) of the Act, as added by section 3133 of the Affordable Care Act, which provides for a reduction to disproportionate share hospital (DSH) payments under section 1886(d)(5)(F) of the Act and for a new uncompensated care payment to eligible hospitals. Specifically, section 1886(r) of the Act requires that, for fiscal year 2014 and each subsequent fiscal year, subsection

(d) hospitals that would otherwise receive a DSH payment made under section 1886(d)(5)(F) of the Act will receive two separate payments: (1) 25 percent of the amount they previously would have received under section 1886(d)(5)(F) of the Act for DSH (“the empirically justified amount”), and (2) an additional payment for the DSH hospital’s proportion of uncompensated care, determined as the product of three factors. These three factors are: (1) 75 percent of the payments that would otherwise be made under section 1886(d)(5)(F) of the Act; (2) 1 minus the percent change in the percent of individuals who are uninsured (minus 0.2 percentage point for FY 2018 through FY 2019); and (3) a hospital’s uncompensated care amount relative to the uncompensated care amount of all DSH hospitals expressed as a percentage.

- Section 1886(m)(6) of the Act, as added by section 1206(c) of the Pathway for Sustainable Growth Rate (SGR) Reform Act of 2013 (Pub. L. 113–67), which provided for the establishment of site neutral payment rate criteria under the LTCH PPS with implementation beginning in FY 2016.

- Section 1886(m)(6) of the Act, as amended by section 15009 of the 21st Century Cures Act (Pub. L. 114–255), which provides for a temporary exception to the application of the site neutral payment rate under the LTCH PPS for certain spinal cord specialty hospitals for discharges in cost reporting periods beginning during FYs 2018 and 2019.

- Section 1886(m)(6) of the Act, as amended by section 15010 of the 21st Century Cures Act (Pub. L. 114–255), which provides for a temporary exception to the application of the site neutral payment rate under the LTCH PPS for certain LTCHs with certain discharges with severe wounds occurring in cost reporting periods beginning during FY 2018.

- Section 1886(m)(5)(D)(iv) of the Act, as added by section 1206(c) of the Pathway for Sustainable Growth Rate (SGR) Reform Act of 2013 (Pub. L. 113–67), which provides for the establishment of a functional status quality measure under the LTCH QRP for change in mobility among inpatients requiring ventilator support.

- Section 1899B of the Act, as added by section 2(a) of the Improving Medicare Post-Acute Care Transformation Act of 2014 (the IMPACT Act, Pub. L. 113–185), which provides for the establishment of data reporting for certain post-acute care providers, including LTCHs.

2. Summary of the Major Provisions

a. MS–DRG Documentation and Coding Adjustment

Section 631 of the American Taxpayer Relief Act of 2012 (ATRA, Pub. L. 112–240) amended section 7(b)(1)(B) of Public Law 110–90 to require the Secretary to make a recoupment adjustment to the standardized amount of Medicare payments to acute care hospitals to account for changes in MS–DRG documentation and coding that do not reflect real changes in case-mix, totaling \$11 billion over a 4-year period of FYs 2014, 2015, 2016, and 2017. The FY 2014 through FY 2017 adjustments represented the amount of the increase in aggregate payments as a result of not completing the prospective adjustment authorized under section 7(b)(1)(A) of Public Law 110–90 until FY 2013. Prior to the ATRA, this amount could not have been recovered under Public Law 110–90. Section 414 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10) replaced the single positive adjustment we intended to make in FY 2018 with a 0.5 percent positive adjustment to the standardized amount of Medicare payments to acute care hospitals for FYs 2018 through 2023. The FY 2018 adjustment was subsequently adjusted to 0.4588 percent by section 15005 of the 21st Century Cures Act.

For FY 2018, we are making the 0.4588 percent positive adjustment to the standardized amount as required by section 414 of Public Law 114–10, as amended by section 15005 of the 21st Century Cures Act.

b. Adjustment to IPPS Rates Resulting From 2-Midnight Policy

In FY 2017, we made a permanent adjustment to the standardized amount, the hospital-specific payment rates, and the national capital Federal rate to prospectively remove the 0.2 percent reduction to the rates put in place in FY 2014 to offset the estimated increase in IPPS expenditures as a result of the 2-midnight policy. In addition, we made a temporary one-time prospective increase to the FY 2017 standardized amount, the hospital-specific payment rates, and the national capital Federal rate of 0.6 percent by including a temporary one-time factor of 1.006 in the calculation of the standardized amount, the hospital-specific payment rates, and the national capital Federal rate to address the effects of the 0.2 percent reduction to the rate for the 2-midnight policy in effect for FYs 2014, 2015, and 2016.

For FY 2018, we are including a factor of (1/1.006) in the calculation of the FY

2018 standardized amount, the hospital-specific payment rates, and the national capital Federal rate to remove the temporary one-time factor of 1.006, as established in the FY 2017 IPPS/LTCH PPS final rule.

c. Reduction of Hospital Payments for Excess Readmissions

We are making changes to policies for the Hospital Readmissions Reduction Program, which is established under section 1886(q) of the Act, as added by section 3025 of the Affordable Care Act, as amended by section 10309 of the Affordable Care Act. The Hospital Readmissions Reduction Program requires a reduction to a hospital's base operating DRG payment to account for excess readmissions of selected applicable conditions. For FY 2018 and subsequent years, the reduction is based on a hospital's risk-adjusted readmission rate during a 3-year period for acute myocardial infarction (AMI), heart failure (HF), pneumonia, chronic obstructive pulmonary disease (COPD), total hip arthroplasty/total knee arthroplasty (THA/TKA), and coronary artery bypass graft (CABG). In this final rule, we are establishing the following policies: (1) Specify applicable time period for FY 2018; (2) specifying the calculation of aggregate payments for excess readmissions for FY 2018; (3) making changes to the payment adjustment factor in accordance with the 21st Century Cures Act for FY 2019; and (4) updating the Extraordinary Circumstances Exceptions policy.

d. Hospital Value-Based Purchasing (VBP) Program

Section 1886(o) of the Act requires the Secretary to establish a Hospital VBP Program under which value-based incentive payments are made in a fiscal year to hospitals based on their performance on measures established for a performance period for such fiscal year. In this final rule, we are removing one previously adopted measure, the PSI 90: Patient Safety for Selected Indicators measure, from the Hospital VBP Program beginning with the FY 2019 program year. We also are adopting one new measure, Hospital-Level, Risk-Standardized Payment Associated with a 30-Day Episode of Care for Pneumonia, beginning with the FY 2022 program year, and adopting a modified version of a previously adopted measure, Patient Safety and Adverse Events Composite (NQF #0531), beginning with the FY 2023 program year. In addition, we are making two modifications to our domain scoring policies beginning with the FY 2019 program year, and further

establishing a new weighting methodology for the measures within the Efficiency and Cost Reduction domain. We also are addressing public comment submitted in response to our comment solicitation on whether and how to account for social risk factors in the Hospital VBP Program.

e. Hospital-Acquired Condition (HAC) Reduction Program

Section 1886(p) of the Act, as added under section 3008(a) of the Affordable Care Act, establishes an incentive to hospitals to reduce the incidence of hospital-acquired conditions by requiring the Secretary to make an adjustment to payments to applicable hospitals effective for discharges beginning on October 1, 2014. This 1-percent payment reduction applies to a hospital whose ranking is in the top quartile (25 percent) of all applicable hospitals, relative to the national average, of conditions acquired during the applicable period and on all of the hospital's discharges for the specified fiscal year. In this final rule, we are establishing the following policies: (1) Specifying the data collection time periods for the FY 2020 HAC Reduction Program; and (2) updating the Extraordinary Circumstances Exception policy for the HAC Reduction Program. In this final rule, we also are responding to comments received regarding: (1) Additional measures and potential future adoption; (2) accounting for social risk factors; and (3) the inclusion of disability and medical complexity for the CDC NHSN measures.

f. DSH Payment Adjustment and Additional Payment for Uncompensated Care

Section 3133 of the Affordable Care Act modified the Medicare disproportionate share hospital (DSH) payment methodology beginning in FY 2014. Under section 1886(r) of the Act, which was added by section 3133 of the Affordable Care Act, starting in FY 2014, DSHs receive 25 percent of the amount they previously would have received under the statutory formula for Medicare DSH payments in section 1886(d)(5)(F) of the Act. The remaining amount, equal to 75 percent of the amount that otherwise would have been paid as Medicare DSH payments, is paid as additional payments after the amount is reduced for changes in the percentage of individuals that are uninsured. Each Medicare DSH will receive an additional payment based on its share of the total amount of uncompensated care for all Medicare DSHs for a given time period.

In this final rule, we are updating our estimates of the three factors used to determine uncompensated care payments for FY 2018. The statute permits the use of a data source other than the CBO estimates to determine the percent change in the rate of uninsurance as part of the calculation of Factor 2 beginning in FY 2018. We are using uninsured estimates produced by CMS' Office of the Actuary (OACT) as part of the development of the National Health Expenditure Accounts (NHEA) in the calculation of Factor 2. We also are beginning to incorporate data from Worksheet S-10 in the calculation of hospitals' share of uncompensated care by combining data on uncompensated care costs from the Worksheet S-10 for FY 2014 with proxy data regarding a hospital's share of low-income insured days for FYs 2012 and 2013 to determine Factor 3 for FY 2018. We will continue to use data from three cost reporting periods to calculate Factor 3, which will gradually incorporate uncompensated care data from Worksheet S-10 into the calculation of Factor 3. As part of this policy, we are including a definition of uncompensated care costs consisting of the sum of charity care and bad debt and a trim methodology to address aberrant cost-to-charge ratios (CCRs) as well as potentially aberrant uncompensated care costs that exceed a threshold of 50 percent of total operating costs. We also are providing that, for Puerto Rico hospitals, Indian Health Service and Tribal hospitals, and all-inclusive rate providers, we will substitute data regarding low-income insured days for FY 2013 for the Worksheet S-10 data from FY 2014 cost reports.

We are continuing the policies that were finalized in FY 2015 to address several specific issues concerning the process and data to be employed in determining hospitals' share of uncompensated care in the case of hospital mergers. We also are continuing the policies finalized in FY 2017 concerning the methodology for calculating each hospital's relative share of uncompensated care, such as combining data from multiple cost reports beginning in the same fiscal year and averaging the sum of three individual Factor 3s by the number of cost reporting periods with data. In addition, we are annualizing hospital cost reports that do not span 12 months. We also are applying a scaling factor to each hospital's uncompensated care amount so that total uncompensated care payments will be consistent with the estimated amount available to make

uncompensated care payments for FY 2018.

g. Changes to the LTCH PPS

In this final rule, we set forth changes to the LTCH PPS Federal payment rates, factors, and other payment rate policies under the LTCH PPS for FY 2018; changes to the payment methodology under the short-stay outlier (SSO) policy; implementation of several provisions of the 21st Century Cures Act; and the adoption of a 1-year regulatory delay on the full implementation of the 25-percent threshold policy for discharges occurring in FY 2018 (that is, for the fiscal year after expiration of the current statutory moratoria under the 21st Century Cures Act, which is set to expire September 30, 2017).

h. Hospital Inpatient Quality Reporting (IQR) Program

Under section 1886(b)(3)(B)(viii) of the Act, subsection (d) hospitals are required to report data on measures selected by the Secretary for a fiscal year in order to receive the full annual percentage increase that would otherwise apply to the standardized amount applicable to discharges occurring in that fiscal year. In past years, we have established measures on which hospitals must report data and the process for submittal and validation of the data.

In this final rule, we are finalizing several changes. First, we are refining two previously adopted measures. Specifically, we are finalizing an update to the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey measure by replacing the three existing questions about Pain Management with three new questions that address Communication About Pain During the Hospital Stay, beginning with the FY 2020 payment determination with modification that public reporting would be delayed. In addition, we are finalizing an update to the stroke mortality measure to include the use of NIH Stroke Scale claims data for risk adjustment, beginning with the FY 2023 payment determination. We also are adopting the Hospital-Wide All-Cause Unplanned Readmission Hybrid Measure as a voluntary measure for the CY 2018 reporting period.

In addition, we are finalizing a modified, reduced policy for eCQM reporting as compared to our proposals. For both the CY 2017 reporting period/FY 2019 payment determination and CY 2018 reporting period/FY 2020 payment determination, we are finalizing that hospitals will be required to select and submit four of the available eCQMs

included in the Hospital IQR Program measure set and provide one self-selected, calendar year quarter of data. We are also modifying our eCQM certification requirements such that for the CY 2018 reporting period hospitals will be able to use: (1) The 2014 Edition of CERHT, (2) the 2015 Edition of CEHRT, or (3) a combination of both the 2014 and 2015 Editions of CEHRT. In addition, we are finalizing the following policies: (1) For the CY 2017 reporting period/FY 2019 payment determination and the CY 2018 reporting period/FY 2020 payment determination, a hospital using EHR technology certified to the 2014 or 2015 Edition, but for which such EHR technology is not certified to all 15 available eCQMs available to report, will be required to have its EHR technology certified to all 15 eCQMs that are available to report in the Hospital IQR Program; (2) for the CY 2017 reporting period/FY 2019 payment determination, hospitals will be required to use the most recent version of the eCQM electronic specifications (namely, the Spring 2016 version of the eCQM specifications and any applicable addenda); (3) for the CY 2018 reporting period/FY 2020 payment determination, hospitals will be required to use the most recent version of the eCQM electronic specifications (namely, the Spring 2017 version of the eCQM specifications and any applicable addenda); and (5) hospitals' EHR technology certified to all 15 eCQMs would not need to be recertified each time it is updated to a more recent version of the eCQMs. These policies are being made in alignment with the CQM electronic reporting policies for the Medicare and Medicaid EHR Incentive Programs, and will decrease the required number of eCQMs and quarters of reporting as compared with the previously finalized requirements in the FY 2017 IPPS/LTCH PPS final rule.

Furthermore, we are finalizing our policies for the eCQM data validation process, whereby we will select eight cases per quarter (the number of quarters required will vary by specific FY payment determination) to complete eCQM validation for the FY 2020 payment determination and subsequent years. In addition, for the FY 2020 payment determination and subsequent years, we are establishing policies related to the exclusion criteria for hospital and case selection, and the data submission requirements for participating hospitals. For the FY 2021 payment determination and subsequent years, we are finalizing our proposal to extend our previously finalized medical record submission policy for eCQM

validation requiring submission of at least 75 percent of sampled eCQM measure medical records in a timely and complete manner. Also, we are: (1) Formalizing our educational review process for chart-abstracted measures for the FY 2020 payment determination and subsequent years, and (2) finalizing that we will use this process to correct quarterly scores for any of the first 3 quarters of validation in order to compute the final confidence interval.

Moreover, we are establishing policies related to our Hospital IQR Program Extraordinary Circumstances Extension or Exemptions policy, including a change to the name of the policy to Extraordinary Circumstances Exceptions (ECE) policy and updates to 42 CFR 412.140(c)(2) to reflect our ECE policy. Finally, we responded to our solicitation of public comment on accounting for social risk factors in the Hospital IQR Program, the confidential and potential future public reporting of clinical quality measure data stratified by patients' dual-eligible status, and the following clinical quality measures that we are considering for future inclusion in the Hospital IQR Program: (1) Quality of Informed Consent Documents for Hospital-Performed, Elective Procedures measure; (2) four End-of-Life process and outcome measures for cancer patients; (3) two nurse staffing measures; and (4) 11 newly specified electronic clinical quality measures (eCQMs).

i. Long-Term Care Hospital Quality Reporting Program (LTCH QRP)

Section 1886(m)(5) of the Act requires LTCHs to report certain quality data to CMS in order to receive their full annual update under the LTCH PPS. In this final rule, we are adopting one new outcome measure related to pressure ulcers and two new measures (one process and one outcome) related to ventilator weaning. We also are defining the certain standardized patient assessment data that LTCHs must report to comply with section 1886(m)(5)(F)(ii) of the Act, as well as the requirements for the reporting of these data. Finally, we will publicly report data on four assessment-based measures and three claims-based measures.

j. Inpatient Psychiatric Facility Quality Reporting (IPFQR) Program

For the Inpatient Psychiatric Facility Quality Reporting (IPFQR) Program, we are making several policy changes. First, beginning with the FY 2019 payment determination (that is, for extraordinary circumstances occurring during CY 2018), we are updating the IPFQR Program's extraordinary circumstances

exceptions (ECE) policy by: (1) Allowing designated personnel to provide their contact information and sign the ECE request in lieu of the requesting IPF's Chief Executive Officer (CEO); (2) allowing up to 90 days after the extraordinary circumstance to submit the request; and (3) stating that we will strive to respond to ECE requests within 90 days of receiving them. Second, we are changing the annual data submission period from a specific date range to a 45-day period that begins at least 30 days following the end of the collection period. Third, we are aligning our deadlines for submission of a Notice of Participation (NOP) or program withdrawal with this data submission timeframe. Finally, we are establishing factors by which we will evaluate measures for removal from or retention under the IPFQR Program. These factors align with those in use in other quality reporting programs.

We are not finalizing our proposal to adopt the Medication Continuation following Inpatient Psychiatric Discharge measure for FY 2020 payment determination and subsequent years.

3. Summary of Costs and Benefits

- *Adjustment for MS–DRG Documentation and Coding Changes.* Section 414 of the MACRA replaced the single positive adjustment we intended to make in FY 2018 once the recoupment required by section 631 of the ATRA was complete with a 0.5 percent positive adjustment to the standardized amount of Medicare payments to acute care hospitals for FYs 2018 through 2023. The FY 2018 adjustment was subsequently adjusted to 0.4588 percent by section 15005 of the 21st Century Cures Act (Pub. L. 114–255). For FY 2018, we are making the 0.4588 percent positive adjustment to the standardized amount as required by these provisions.

- *Adjustment to IPPS Payment Rates as a Result of the 2-Midnight Policy.* The removal of the adjustment to IPPS rates resulting from the 2-midnight policy will decrease IPPS payment rates by (1/1.006) for FY 2018. The (1/1.006) is a one-time factor that will be applied to the standardized amount, the hospital-specific rates, and the national capital Federal rate for FY 2018 only.

- *Medicare DSH Payment Adjustment and Additional Payment for Uncompensated Care.* Under section 1886(r) of the Act (as added by section 3133 of the Affordable Care Act), DSH payments to hospitals under section 1886(d)(5)(F) of the Act are reduced and an additional payment for uncompensated care is made to eligible hospitals beginning in FY 2014.

Hospitals that receive Medicare DSH payments receive 25 percent of the amount they previously would have received under the statutory formula for Medicare DSH payments in section 1886(d)(5)(F) of the Act. The remainder, equal to an estimate of 75 percent of what otherwise would have been paid as Medicare DSH payments, is the basis for determining the additional payments for uncompensated care after the amount is reduced for changes in the percentage of individuals that are uninsured and additional statutory adjustments. Each hospital that receives Medicare DSH payments will receive an additional payment for uncompensated care based on its share of the total uncompensated care amount reported by Medicare DSHs. The reduction to Medicare DSH payments is not budget neutral.

For FY 2018, we are providing that the 75 percent of what otherwise would have been paid for Medicare DSH will be adjusted to approximately 58.01 percent of the amount to reflect changes in the percentage of individuals that are uninsured and additional statutory adjustments. In other words, approximately 43.51 percent (the product of 75 percent and 58.01 percent) of our estimate of Medicare DSH payments, prior to the application of section 3133 of the Affordable Care Act, will be available to make additional payments to hospitals for their relative share of the total amount of uncompensated care.

We project that estimated Medicare DSH payments, and additional payments for uncompensated care made for FY 2018, will increase payments overall by approximately 0.6 percent as compared to the estimate of overall payments, including Medicare DSH payments and uncompensated care payments that will be distributed in FY 2017. The additional payments have redistributive effects based on a hospital's uncompensated care amount relative to the uncompensated care amount for all hospitals that are estimated to receive Medicare DSH payments, and the calculated payment amount is not directly tied to a hospital's number of discharges.

- *Changes to the Hospital Readmissions Reduction Program.* For FY 2018 and subsequent years, the reduction is based on a hospital's risk-adjusted readmission rate during a 3-year period for acute myocardial infarction (AMI), heart failure (HF), pneumonia, chronic obstructive pulmonary disease (COPD), total hip arthroplasty/total knee arthroplasty (THA/TKA), and coronary artery bypass graft (CABG). Overall, in this final rule,

we estimate that 2,591 hospitals will have their base operating DRG payments reduced by their determined proxy FY 2018 hospital-specific readmission adjustment. As a result, we estimate that the Hospital Readmissions Reduction Program will save approximately \$564 million in FY 2018, an increase of approximately \$27 million over the estimated FY 2017 savings.

- *Value-Based Incentive Payments Under the Hospital VBP Program.* We estimate that there will be no net financial impact to the Hospital VBP Program for the FY 2018 program year in the aggregate because, by law, the amount available for value-based incentive payments under the program in a given year must be equal to the total amount of base operating MS–DRG payment amount reductions for that year, as estimated by the Secretary. The estimated amount of base operating MS–DRG payment amount reductions for the FY 2018 program year and, therefore, the estimated amount available for value-based incentive payments for FY 2018 discharges is approximately \$1.9 billion.

- *Changes to the HAC Reduction Program.* A hospital's Total HAC score and its ranking in comparison to other hospitals in any given year depends on several different factors. Any significant impact due to the HAC Reduction Program changes for FY 2018, including which hospitals will receive the adjustment, will depend on actual experience.

- *Update to the LTCH PPS Payment Rates and Other Payment Factors.* Based on the best available data for the 415 LTCHs in our database, we estimate that the changes to the payment rates and factors that we are presenting in the preamble and Addendum of this final rule, which reflects the rolling end to the transition of the statutory application of the site neutral payment rate required by section 1886(m)(6)(A) of the Act, the update to the LTCH PPS standard Federal payment rate for FY 2018, and estimated changes to the site neutral payment rate and high-cost outlier (HCO) payments will result in an estimated decrease in payments from FY 2017 of approximately \$195 million.

- *Changes to the 25-Percent Threshold Policy.* In this final rule, we estimate our adoption of a 1-year regulatory delay of the full implementation of the 25-percent threshold policy for discharges occurring in FY 2018 will increase payments to LTCHs in FY 2018 by \$70 million.

- *Changes to the Hospital Inpatient Quality Reporting (IQR) Program.* Across 3,300 IPPS hospitals, we

estimate that our finalized requirements for the Hospital IQR Program will result in the following changes to costs and benefits in this program compared to previously finalized requirements: (1) A cost reduction of \$613,864 for the FY 2019 payment determination due to the updates to the eCQM reporting requirements; (2) a total net cost reduction of \$866,277 for the FY 2020 payment determination due to the updates to the eCQM reporting requirements, the updates to the eCQM validation procedures, and the voluntary reporting of the new Hybrid Hospital-Wide Readmission measure; and (3) a total cost reduction of \$255,104 for the FY 2021 payment determination due to the updates to the eCQM validation procedures.

• *Changes Related to the LTCH QRP.* In this final rule, we are adopting one outcome measure related to pressure ulcers and two new measures (one process and one outcome) related to ventilator weaning. We also are specifying the use of certain standardized patient assessment data as required under section 1899B(b)(1)(B) of the Act and policies regarding public display of measure data. Overall, the cost associated with the changes to the LTCH QRP is estimated at a reduction of \$893.14 per LTCH annually or \$380,480 for all LTCHs.

• *Changes to the IPFQR Program.* In this final rule, we are not adopting the one claims-based measure we proposed. However, we are updating our ECE process; changing the specification of the data submission period; aligning the timeframe for submission of the NOP or program withdrawal with the data submission period; and establishing factors to evaluate measures for retention or removal. We do not believe that these policies will have any impact on the IPFQR program burden.

B. Summary

1. Acute Care Hospital Inpatient Prospective Payment System (IPPS)

Section 1886(d) of the Social Security Act (the Act) sets forth a system of payment for the operating costs of acute care hospital inpatient stays under Medicare Part A (Hospital Insurance) based on prospectively set rates. Section 1886(g) of the Act requires the Secretary to use a prospective payment system (PPS) to pay for the capital-related costs of inpatient hospital services for these “subsection (d) hospitals.” Under these PPSs, Medicare payment for hospital inpatient operating and capital-related costs is made at predetermined, specific rates for each hospital discharge.

Discharges are classified according to a list of diagnosis-related groups (DRGs).

The base payment rate is comprised of a standardized amount that is divided into a labor-related share and a nonlabor-related share. The labor-related share is adjusted by the wage index applicable to the area where the hospital is located. If the hospital is located in Alaska or Hawaii, the nonlabor-related share is adjusted by a cost-of-living adjustment factor. This base payment rate is multiplied by the DRG relative weight.

If the hospital treats a high percentage of certain low-income patients, it receives a percentage add-on payment applied to the DRG-adjusted base payment rate. This add-on payment, known as the disproportionate share hospital (DSH) adjustment, provides for a percentage increase in Medicare payments to hospitals that qualify under either of two statutory formulas designed to identify hospitals that serve a disproportionate share of low-income patients. For qualifying hospitals, the amount of this adjustment varies based on the outcome of the statutory calculations. The Affordable Care Act revised the Medicare DSH payment methodology and provides for a new additional Medicare payment that considers the amount of uncompensated care beginning on October 1, 2013.

If the hospital is training residents in an approved residency program(s), it receives a percentage add-on payment for each case paid under the IPPS, known as the indirect medical education (IME) adjustment. This percentage varies, depending on the ratio of residents to beds.

Additional payments may be made for cases that involve new technologies or medical services that have been approved for special add-on payments. To qualify, a new technology or medical service must demonstrate that it is a substantial clinical improvement over technologies or services otherwise available, and that, absent an add-on payment, it would be inadequately paid under the regular DRG payment.

The costs incurred by the hospital for a case are evaluated to determine whether the hospital is eligible for an additional payment as an outlier case. This additional payment is designed to protect the hospital from large financial losses due to unusually expensive cases. Any eligible outlier payment is added to the DRG-adjusted base payment rate, plus any DSH, IME, and new technology or medical service add-on adjustments.

Although payments to most hospitals under the IPPS are made on the basis of the standardized amounts, some categories of hospitals are paid in whole

or in part based on their hospital-specific rate, which is determined from their costs in a base year. For example, sole community hospitals (SCHs) receive the higher of a hospital-specific rate based on their costs in a base year (the highest of FY 1982, FY 1987, FY 1996, or FY 2006) or the IPPS Federal rate based on the standardized amount. SCHs are the sole source of care in their areas. Specifically, section 1886(d)(5)(D)(iii) of the Act defines an SCH as a hospital that is located more than 35 road miles from another hospital or that, by reason of factors such as isolated location, weather conditions, travel conditions, or absence of other like hospitals (as determined by the Secretary), is the sole source of hospital inpatient services reasonably available to Medicare beneficiaries. In addition, certain rural hospitals previously designated by the Secretary as essential access community hospitals are considered SCHs.

Under current law, the Medicare-dependent, small rural hospital (MDH) program is effective through FY 2017. Through and including FY 2006, an MDH received the higher of the Federal rate or the Federal rate plus 50 percent of the amount by which the Federal rate was exceeded by the higher of its FY 1982 or FY 1987 hospital-specific rate. For discharges occurring on or after October 1, 2007, but before October 1, 2017, an MDH receives the higher of the Federal rate or the Federal rate plus 75 percent of the amount by which the Federal rate is exceeded by the highest of its FY 1982, FY 1987, or FY 2002 hospital-specific rate. MDHs are a major source of care for Medicare beneficiaries in their areas. Section 1886(d)(5)(G)(iv) of the Act defines an MDH as a hospital that is located in a rural area, has not more than 100 beds, is not an SCH, and has a high percentage of Medicare discharges (not less than 60 percent of its inpatient days or discharges in its cost reporting year beginning in FY 1987 or in two of its three most recently settled Medicare cost reporting years).

Section 1886(g) of the Act requires the Secretary to pay for the capital-related costs of inpatient hospital services in accordance with a prospective payment system established by the Secretary. The basic methodology for determining capital prospective payments is set forth in our regulations at 42 CFR 412.308 and 412.312. Under the capital IPPS, payments are adjusted by the same DRG for the case as they are under the operating IPPS. Capital IPPS payments are also adjusted for IME and DSH, similar to the adjustments made under the operating IPPS. In addition, hospitals may receive outlier payments

for those cases that have unusually high costs.

The existing regulations governing payments to hospitals under the IPPS are located in 42 CFR part 412, subparts A through M.

2. Hospitals and Hospital Units Excluded From the IPPS

Under section 1886(d)(1)(B) of the Act, as amended, certain hospitals and hospital units are excluded from the IPPS. These hospitals and units are: Inpatient rehabilitation facility (IRF) hospitals and units; long-term care hospitals (LTCHs); psychiatric hospitals and units; children's hospitals; cancer hospitals; extended neoplastic disease care hospitals (referred to as "long-term care neoplastic disease hospitals" in the proposed rule and renamed for this final rule, which were formerly LTCHs classified under section 1886(d)(1)(B)(iv)(II) of the Act and redesignated by section 15008 of Pub. L. 114–255) and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa). Religious nonmedical health care institutions (RNHCIs) are also excluded from the IPPS. Various sections of the Balanced Budget Act of 1997 (BBA, Pub. L. 105–33), the Medicare, Medicaid and SCHIP [State Children's Health Insurance Program] Balanced Budget Refinement Act of 1999 (BBRA, Pub. L. 106–113), and the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA, Pub. L. 106–554) provide for the implementation of PPSs for IRF hospitals and units, LTCHs, and psychiatric hospitals and units (referred to as inpatient psychiatric facilities (IPFs)). (We note that the annual updates to the LTCH PPS are included along with the IPPS annual update in this document. Updates to the IRF PPS and IPF PPS are issued as separate documents.) Children's hospitals, cancer hospitals, hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa), and RNHCIs continue to be paid solely under a reasonable cost-based system subject to a rate-of-increase ceiling on inpatient operating costs.

The existing regulations governing payments to excluded hospitals and hospital units are located in 42 CFR parts 412 and 413.

3. Long-Term Care Hospital Prospective Payment System (LTCH PPS)

The Medicare prospective payment system (PPS) for LTCHs applies to hospitals described in section 1886(d)(1)(B)(iv) of the Act effective for cost reporting periods beginning on or after October 1, 2002. The LTCH PPS was established under the authority of sections 123 of the BBRA and section 307(b) of the BIPA (as codified under section 1886(m)(1) of the Act). During the 5-year (optional) transition period, a LTCH's payment under the PPS was based on an increasing proportion of the LTCH Federal rate with a corresponding decreasing proportion based on reasonable cost principles. Effective for cost reporting periods beginning on or after October 1, 2006, all LTCHs are paid 100 percent of the Federal rate. Section 1206(a) of the Pathway for SGR Reform Act of 2013 (Pub. L. 113–67) established the site neutral payment rate under the LTCH PPS, which made the LTCH PPS a dual rate payment system beginning in FY 2016. Under this statute, based on a rolling effective date that is linked to the date on which a given LTCH's Federal FY 2016 cost reporting period begins, LTCHs are paid for discharges at the site neutral payment rate unless the discharge meets the patient criteria for payment at the LTCH PPS standard Federal payment rate. The existing regulations governing payment under the LTCH PPS are located in 42 CFR part 412, subpart O. Beginning October 1, 2009, we issue the annual updates to the LTCH PPS in the same documents that update the IPPS (73 FR 26797 through 26798).

4. Critical Access Hospitals (CAHs)

Under sections 1814(l), 1820, and 1834(g) of the Act, payments made to critical access hospitals (CAHs) (that is, rural hospitals or facilities that meet certain statutory requirements) for inpatient and outpatient services are generally based on 101 percent of reasonable cost. Reasonable cost is determined under the provisions of section 1861(v) of the Act and existing regulations under 42 CFR part 413.

5. Payments for Graduate Medical Education (GME)

Under section 1886(a)(4) of the Act, costs of approved educational activities are excluded from the operating costs of inpatient hospital services. Hospitals with approved graduate medical education (GME) programs are paid for the direct costs of GME in accordance with section 1886(h) of the Act. The amount of payment for direct GME costs for a cost reporting period is based on

the hospital's number of residents in that period and the hospital's costs per resident in a base year. The existing regulations governing payments to the various types of hospitals are located in 42 CFR part 413.

C. Summary of Provisions of Recent Legislation Implemented in This Final Rule

1. The American Taxpayer Relief Act of 2012 (ATRA) (Pub. L. 112–240), the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10), and the 21st Century Cures Act (Pub. L. 114–255)

Section 631 of the American Taxpayer Relief Act of 2012 (ATRA) (Pub. L. 112–240) amended section 7(b)(1)(B) of Public Law 110–90 to require CMS to make a recoupment adjustment to the standardized amounts under section 1886(d) of the Act based upon the Secretary's estimates for discharges occurring from FYs 2014 through FY 2017 to fully offset \$11 billion. Once the recoupment required under section 631 of the ATRA was completed, CMS had anticipated making a single positive adjustment in FY 2018 to offset the reductions required to recoup the \$11 billion under section 631 of the ATRA. However, section 414 of the MACRA replaced the single positive adjustment CMS intended to make in FY 2018 with a 0.5 percent positive adjustment for each of FYs 2018 through 2023. Section 15005 of the 21st Century Cures Act (Pub. L. 114–255, enacted December 13, 2016) further amended Public Law 110–90 to reduce the adjustment for FY 2018 from 0.5 percent point to 0.4588 percentage point.

2. Pathway for SGR Reform Act of 2013 (Pub. L. 113–67)

The Pathway for SGR Reform Act of 2013 (Pub. L. 113–67) introduced new payment rules in the LTCH PPS. Under section 1206 of this law, discharges in cost reporting periods beginning on or after October 1, 2015 under the LTCH PPS will receive payment under a site neutral rate unless the discharge meets certain patient-specific criteria. In this final rule, we are continuing to update certain policies that implemented provisions under section 1206 of the Pathway for SGR Reform Act.

3. Improving Medicare Post-Acute Care Transformation Act of 2014 (IMPACT Act) (Pub. L. 113–185)

The Improving Medicare Post-Acute Care Transformation Act of 2014 (IMPACT Act (Pub. L. 113–185), enacted on October 6, 2014, made a number of changes that affect the Long-Term Care

Quality Reporting Program (LTCH QRP). In this final rule, we are continuing to implement portions of section 1899B of the Act, as added by section 2(a) of the IMPACT Act, which, in part, requires LTCHs, among other postacute care providers, to report standardized patient assessment data, data on quality measures, and data on resource use and other measures.

4. The Medicare Access and CHIP Reauthorization Act of 2015 (Pub. L. 114–10)

Section 411(g) of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA, Pub. L. 114–10) sets the annual update under the LTCH PPS to 1.0 percent for FY 2018. In this final rule, consistent with this requirement, we are updating the LTCH standard Federal payment rate by 1.0 percent for FY 2018.

The MACRA also extended the MDH program and temporary changes to the payment adjustment for low-volume hospitals through FY 2017. In this final rule, we discuss the expiration of the MDH program and the expiration of the temporary changes to the low-volume hospital payment adjustment under current law.

5. The 21st Century Cures Act (Pub. L. 114–255)

The 21st Century Cures Act (Pub. L. 114–255), enacted on December 13, 2016, contains a number of provisions affecting payments under the LTCH PPS, the Hospital Readmissions Reduction Program and the Medicare EHR Incentive Program, which we are implementing in this final rule:

- Section 4002(b)(1)(A) amended section 1848(a)(7)(B) of the Act to provide that the Secretary shall exempt an eligible professional from the application of the payment adjustment under section 1848(a)(7)(A) of the Act with respect to a year, subject to annual renewal, if the Secretary determines that compliance with the requirement for being a meaningful EHR user is not possible because the certified EHR technology used by such eligible professional has been decertified under the Office of the National Coordinator for Health Information Technology's (ONC) Health IT Certification Program.

- Section 4002(b)(2) amended section 1886(b)(3)(B)(ix)(II) of the Act to provide that the Secretary shall exempt a hospital from the application of the payment adjustment under section 1886(b)(3)(B)(ix)(I) with respect to a fiscal year, subject to annual renewal, if the Secretary determines that compliance with the requirement for being a meaningful EHR user is not

possible because the certified EHR technology used by the hospital is decertified under ONC's Health IT Certification Program.

- Section 15002, which amended section 1886(q)(3) of the Act by adding subparagraphs (D) and (E), which requires the Secretary to develop a methodology for the calculating the excess readmissions adjustment factor for the Hospital Readmissions Reduction Program based on cohorts defined by the percentage of dual eligible patients (that is, patients who are eligible for both Medicare and full-benefit Medicaid coverage) cared for by a hospital. In this final rule, we are implementing changes to the payment adjustment factor to assess penalties based on a hospital's performance relative to other hospitals treating a similar proportion of dual-eligible patients.

- Section 15004(a), which further amended section 114(d)(7) of the MMSEA (as amended) by striking "The moratorium under paragraph (1)(A)" and inserting "[a]ny moratorium under paragraph (1)" and specified that such amendment shall take effect as if included in the enactment of section 112 of the PAMA. We are implementing the exceptions to the current statutory moratorium, which is in effect through September 30, 2017, on increasing beds in an existing LTCH or an existing LTCH satellite as provided by Section 15004(a).

- Section 15004(b), which modifies high cost outlier payments to LTCH standard Federal rate cases beginning in FY 2018.

- Section 15006, which further amended section 114(c)(1)(A) of the MMSEA (as amended) by extending the moratorium on the full implementation of the 25-percent threshold policy through June 30, 2016, and for discharges occurring on or after October 1, 2016 and before October 1, 2017. In this final rule, we are implementing the moratorium on the full implementation of the 25-percent threshold policy for discharges occurring on or after October 1, 2016, through September 30, 2017, as provided by section 15006.

- Section 15007, which amended section 1206(a)(3) of the Pathway for SGR Reform Act by extending the exclusion for of Medicare Advantage plans' and site neutral payment rate discharges from the calculation of the average length-of-stay to all LTCHs, for discharges occurring in cost reporting periods beginning on or after October 1, 2015.

- Section 15008, which provided for a change in Medicare classification for "subclause (II)" LTCHs by redesignating

such hospitals from section 1886(d)(1)(B)(iv)(II) to section 1886(d)(1)(B)(vi) of the Act. In this final rule, we are implementing the reclassification of hospitals which had previously been classified as "subclause (II)" LTCHs as their own category of IPPS-excluded hospitals as provided by the provisions of section 15008.

- Section 15009 of Public Law 114–255, which added new subparagraph (F) to section 1886(m)(6) of the Act, providing for a temporary exception to the site neutral payment rate for certain spinal cord specialty hospitals for all discharges occurring during such LTCH's cost reporting periods that begin during FYs 2018 and 2019.

- Section 15010, which added a new subparagraph (G) to section 1886(m)(6) of the Act, to create a temporary exception to the site neutral payment rate for certain severe wound discharges from certain LTCHs during such LTCH's cost reporting period beginning during FY 2018.

- Section 16003 amended section 1848(a)(7)(D) of the Act to provide that no payment adjustment may be made under section 1848(a)(7)(A) of the Act for 2017 and 2018 in the case of an eligible professional who furnishes substantially all of his or her covered professional services in an ambulatory surgical center (ASC). Section 1848(a)(7)(D)(iii) of the Act provides that determinations of whether an eligible professional is ASC-based may be made based on the site of service as defined by the Secretary or an attestation, but shall be made without regard to any employment or billing arrangement between the eligible professional and any other supplier or provider of services. Section 1848(a)(7)(D)(iv) of the Act provides that the ASC-based exception shall no longer apply as of the first year that begins more than 3 years after the date on which the Secretary determines, through notice-and-comment rulemaking, that certified EHR technology applicable to the ASC setting is available.

D. Issuance of a Notice of Proposed Rulemaking

In the proposed rule that appeared in the **Federal Register** on April 28, 2017 (82 FR 19796), we set forth proposed payment and policy changes to the Medicare IPPS for FY 2018 operating costs and for capital-related costs of acute care hospitals and certain hospitals and hospital units that are excluded from IPPS. In addition, we set forth proposed changes to the payment rates, factors, and other payment and policy-related changes to programs

associated with payment rate policies under the LTCH PPS for FY 2018.

Below is a summary of the major changes that we proposed to make.

1. Proposed Changes to MS–DRG Classifications and Recalibrations of Relative Weights

In section II. of the preamble of the proposed rule, we included—

- Proposed changes to MS–DRG classifications based on our yearly review for FY 2018.

- Proposed adjustment to the standardized amounts under section 1886(d) of the Act for FY 2018 in accordance with the amendments made to section 7(b)(1)(B) of Public Law 110–90 by section 414 of the MACRA and section 15005 of the 21st Century Cures Act.

- Proposed recalibration of the MS–DRG relative weights.

- A discussion of the FY 2018 status of new technologies approved for add-on payments for FY 2017 and a presentation of our evaluation and analysis of the FY 2018 applicants for add-on payments for high-cost new medical services and technologies (including public input, as directed by Pub. L. 108–173, obtained in a town hall meeting).

2. Proposed Changes to the Hospital Wage Index for Acute Care Hospitals

In section III. of the preamble to the proposed rule, we proposed to make revisions to the wage index for acute care hospitals and the annual update of the wage data. Specific issues addressed include, but are not limited to, the following:

- The proposed FY 2018 wage index update using wage data from cost reporting periods beginning in FY 2014.

- Clarification of other wage-related costs in the wage index.

- Calculation of the proposed occupational mix adjustment for FY 2018 based on the 2013 Occupational Mix Survey.

- Analysis and implementation of the proposed FY 2018 occupational mix adjustment to the wage index for acute care hospitals.

- Proposed application of the rural floor and the frontier State floor and the proposed expiration of the imputed floor.

- Proposed revisions to the wage index for acute care hospitals based on hospital redesignations and reclassifications under sections 1886(d)(8)(B), (d)(8)(E), and (d)(10) of the Act.

- Proposal to require documentation of SCH and RRC classification status approvals to be submitted to the

MGCRB by the first business day after January 1.

- Clarification of special rules for SCHs and RRCs reclassifying to geographic home areas.

- Proposed changes to the 45-day notification rule.

- The proposed adjustment to the wage index for acute care hospitals for FY 2018 based on commuting patterns of hospital employees who reside in a county and work in a different area with a higher wage index.

- Determination of the labor-related share for the proposed FY 2018 wage index.

3. Proposed Rebasing and Revising of Hospital Market Basket

In section IV. of the proposed rule, we proposed to revise and rebase the hospital market baskets for acute care hospitals and update the labor-related share.

4. Other Decisions and Proposed Changes to the IPPS for Operating Costs

In section V. of the preamble of the proposed rule, we discussed proposed changes or clarifications of a number of the provisions of the regulations in 42 CFR parts 412 and 413, including the following:

- Proposed changes to MS–DRGs subject to the postacute care transfer policy.

- Proposed changes to the inpatient hospital update for FY 2018.

- Proposed changes to the volume decrease adjustment for SCHs.

- Proposed updated national and regional case-mix values and discharges for purposes of determining RRC status.

- Expiration of the temporary changes to the payment adjustment for low-volume hospitals at the end of FY 2017.

- Proposed parallel low-volume hospital payment adjustment concerning hospitals operated by the Indian Health Service (IHS) or a Tribe.

- The statutorily required IME adjustment factor for FY 2018.

- Proposed changes to the methodologies for determining Medicare DSH payments and the additional payments for uncompensated care.

- Discussion of expiration of the MDH program at the end of FY 2017 and our policy to allow MDHs to apply for SCH status in advance of the expiration of the MDH program and be paid as such under certain conditions.

- Proposed changes to the rules for payment adjustments under the Hospital Readmissions Reduction Program based on hospital readmission measures and the process for hospital review and correction of those rates for FY 2018.

- Proposed changes to the requirements and provision of value-based incentive payments under the Hospital Value-Based Purchasing Program.

- Proposed requirements for payment adjustments to hospitals under the HAC Reduction Program for FY 2018.

- Discussion of and proposals relating to the additional 5-year extension of the Rural Community Hospital Demonstration Program.

- Proposals related to the provider-based status of IHS and Tribal facilities and organizations that would remove the regulatory date limitation that restricted the grandfathering provision to IHS or Tribal facilities and organizations furnishing services on or before April 7, 2000. We also proposed to make a technical change to make the regulation text more consistent with our current rules that require these facilities to comply with all applicable Medicare conditions of participation that apply to the main provider.

5. Proposed FY 2018 Policy Governing the IPPS for Capital-Related Costs

In section VI. of the preamble to the proposed rule, we discussed the proposed payment policy requirements for capital-related costs and capital payments to hospitals for FY 2018.

6. Proposed Changes to the Payment Rates for Certain Excluded Hospitals: Rate-of-Increase Percentages

In section VII. of the preamble of the proposed rule, we discussed—

- Proposed changes to payments to certain excluded hospitals for FY 2018.

- Proposed policy changes relating to payments to hospitals-within-hospitals.

- Proposed continued implementation of the Frontier Community Health Integration Project (FCHIP) Demonstration.

7. Proposed Changes to the LTCH PPS

In section VIII. of the preamble of the proposed rule, we set forth—

- Proposed changes to the LTCH PPS Federal payment rates, factors, and other payment rate policies under the LTCH PPS for FY 2018.

- Proposed changes to the short-stay outlier (SSO) policy.

- Proposed 1-year regulatory delay of the full implementation of the 25-percent threshold policy for discharges occurring in FY 2018.

- Proposed changes to implement the temporary exception to the site neutral payment rate for certain spinal cord specialty hospitals and for certain discharges with severe wounds from certain LTCHs, as provided under sections 15009 and 15010 of Public Law 114–255, respectively.

- Proposed change to the average length of stay criterion to implement section 15007 of Public Law 114–255.

- Proposed change in Medicare classification for certain hospitals to implement section 15008 of Public Law 114–255.

8. Proposed Changes Relating to Quality Data Reporting for Specific Providers and Suppliers

In section IX. of the preamble of the proposed rule, we addressed—

- Proposed requirements for the Hospital Inpatient Quality Reporting (IQR) Program.

- Proposed changes to the requirements for the quality reporting program for PPS-exempt cancer hospitals (PCHQR Program).

- Proposed changes to the requirements under the LTCH Quality Reporting Program (LTCH QRP).

- Proposed changes to the requirements under the Inpatient Psychiatric Facility Quality Reporting (IPFQR) Program.

- Proposed changes to requirements pertaining to the clinical quality measurement of eligible hospitals and CAHs as well as EPs participating in the Medicare and Medicaid Electronic Health Record (EHR) Incentive Programs.

9. Proposed Changes Relating to Medicare Cost Reporting and Provider Requirements

In section X. of the preamble of the proposed rule, we presented our proposals to revise the regulations to allow providers to use an electronic signature to sign the Certification and Settlement Summary page of the Medicare cost report and submit this page electronically, and clarify the rules relating to the sale or scrapping of depreciable assets disposed of on or after December 1, 1997.

10. Proposed Changes Relating to Survey and Certification Requirements

In section XI. of the preamble of the proposed rule, we present our proposals for allowing transparency in accrediting organization survey reports and plans of correction and for changing the requirement for providers to publish self-termination notices in newspapers.

11. Determining Prospective Payment Operating and Capital Rates and Rate-of-Increase Limits for Acute Care Hospitals

In section V. of the Addendum to the proposed rule, we set forth proposed changes to the amounts and factors for determining the proposed FY 2018 prospective payment rates for operating costs and capital-related costs for acute

care hospitals. We proposed to establish the threshold amounts for outlier cases. In addition, we addressed the update factors for determining the rate-of-increase limits for cost reporting periods beginning in FY 2018 for certain hospitals excluded from the IPPS.

12. Determining Prospective Payment Rates for LTCHs

In the Addendum to the proposed rule, we set forth proposed changes to the amounts and factors for determining the proposed FY 2018 LTCH PPS standard Federal payment rate and other factors used to determine LTCH PPS payments under both the LTCH PPS standard Federal payment rate and the site neutral payment rate in FY 2018. We proposed to establish the adjustments for wage levels, the labor-related share, the cost-of-living adjustment, and high-cost outliers, including the applicable fixed-loss amounts and the LTCH cost-to-charge ratios (CCRs) for both payment rates.

13. Impact Analysis

In Appendix A of the proposed rule, we set forth an analysis of the impact that the proposed changes would have on affected acute care hospitals, CAHs, LTCHs, PCHs, and IPFs.

14. Recommendation of Update Factors for Operating Cost Rates of Payment for Hospital Inpatient Services

In Appendix B of the proposed rule, as required by sections 1886(e)(4) and (e)(5) of the Act, we provided our recommendations of the appropriate percentage changes for FY 2018 for the following:

- A single average standardized amount for all areas for hospital inpatient services paid under the IPPS for operating costs of acute care hospitals (and hospital-specific rates applicable to SCHs).

- Target rate-of-increase limits to the allowable operating costs of hospital inpatient services furnished by certain hospitals excluded from the IPPS.

- The LTCH PPS standard Federal payment rate and the site neutral payment rate for hospital inpatient services provided for LTCH PPS discharges.

15. Discussion of Medicare Payment Advisory Commission Recommendations

Under section 1805(b) of the Act, MedPAC is required to submit a report to Congress, no later than March 15 of each year, in which MedPAC reviews and makes recommendations on Medicare payment policies. MedPAC's March 2017 recommendations

concerning hospital inpatient payment policies address the update factor for hospital inpatient operating costs and capital-related costs for hospitals under the IPPS. We addressed these recommendations in Appendix B of the proposed rule. For further information relating specifically to the MedPAC March 2017 report or to obtain a copy of the report, contact MedPAC at (202) 220–3700 or visit MedPAC's Web site at: <http://www.medpac.gov>.

II. Changes to Medicare Severity Diagnosis-Related Group (MS–DRG) Classifications and Relative Weights

A. Background

Section 1886(d) of the Act specifies that the Secretary shall establish a classification system (referred to as diagnosis-related groups (DRGs)) for inpatient discharges and adjust payments under the IPPS based on appropriate weighting factors assigned to each DRG. Therefore, under the IPPS, Medicare pays for inpatient hospital services on a rate per discharge basis that varies according to the DRG to which a beneficiary's stay is assigned. The formula used to calculate payment for a specific case multiplies an individual hospital's payment rate per case by the weight of the DRG to which the case is assigned. Each DRG weight represents the average resources required to care for cases in that particular DRG, relative to the average resources used to treat cases in all DRGs. Section 1886(d)(4)(C) of the Act requires that the Secretary adjust the DRG classifications and relative weights at least annually to account for changes in resource consumption. These adjustments are made to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources.

B. MS–DRG Reclassifications

For general information about the MS–DRG system, including yearly reviews and changes to the MS–DRGs, we refer readers to the previous discussions in the FY 2010 IPPS/R Y 2010 LTCH PPS final rule (74 FR 43764 through 43766) and the FYs 2011 through 2017 IPPS/LTCH PPS final rules (75 FR 50053 through 50055; 76 FR 51485 through 51487; 77 FR 53273; 78 FR 50512; 79 FR 49871; 80 FR 49342; and 81 FR 56787 through 56872, respectively).

C. Adoption of the MS–DRGs in FY 2008

For information on the adoption of the MS–DRGs in FY 2008, we refer readers to the FY 2008 IPPS final rule

with comment period (72 FR 47140 through 47189).

D. FY 2018 MS-DRG Documentation and Coding Adjustment

1. Background on the Prospective MS-DRG Documentation and Coding Adjustments for FY 2008 and FY 2009 Authorized by Public Law 110-90

In the FY 2008 IPPS final rule with comment period (72 FR 47140 through 47189), we adopted the MS-DRG patient classification system for the IPPS, effective October 1, 2007, to better recognize severity of illness in Medicare payment rates for acute care hospitals. The adoption of the MS-DRG system resulted in the expansion of the number of DRGs from 538 in FY 2007 to 745 in FY 2008. By increasing the number of MS-DRGs and more fully taking into account patient severity of illness in Medicare payment rates for acute care hospitals, MS-DRGs encourage hospitals to improve their documentation and coding of patient diagnoses.

In the FY 2008 IPPS final rule with comment period (72 FR 47175 through 47186), we indicated that the adoption of the MS-DRGs had the potential to lead to increases in aggregate payments without a corresponding increase in actual patient severity of illness due to the incentives for additional documentation and coding. In that final rule with comment period, we exercised our authority under section 1886(d)(3)(A)(vi) of the Act, which authorizes us to maintain budget neutrality by adjusting the national standardized amount, to eliminate the estimated effect of changes in coding or classification that do not reflect real changes in case-mix. Our actuaries estimated that maintaining budget neutrality required an adjustment of -4.8 percentage points to the national standardized amount. We provided for phasing in this -4.8 percentage point adjustment over 3 years. Specifically, we established prospective documentation and coding adjustments of -1.2 percentage points for FY 2008, -1.8 percentage points for FY 2009, and -1.8 percentage points for FY 2010.

On September 29, 2007, Congress enacted the TMA [Transitional Medical Assistance], Abstinence Education, and QI [Qualifying Individuals] Programs Extension Act of 2007 (Public Law 110-90). Section 7(a) of Public Law 110-90 reduced the documentation and coding adjustment made as a result of the MS-DRG system that we adopted in the FY 2008 IPPS final rule with comment period to -0.6 percentage point for FY

2008 and -0.9 percentage point for FY 2009.

As discussed in prior year rulemaking, and most recently in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56780 through 56782), we implemented a series of adjustments required under sections 7(b)(1)(A) and 7(b)(1)(B) of Public Law 110-90, based on a retrospective review of FY 2008 and FY 2009 claims data. We completed these adjustments in FY 2013, but indicated in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53274 through 53275) that delaying full implementation of the adjustment required under section 7(b)(1)(A) of Public Law 110-90 until FY 2013 resulted in payments in FY 2010 through FY 2012 being overstated, and that these overpayments could not be recovered.

2. Recoupment or Repayment Adjustment Authorized by Section 631 of the American Taxpayer Relief Act of 2012 (ATRA)

Section 631 of the ATRA amended section 7(b)(1)(B) of Public Law 110-90 to require the Secretary to make a recoupment adjustment or adjustments totaling \$11 billion by FY 2017. This adjustment represented the amount of the increase in aggregate payments as a result of not completing the prospective adjustment authorized under section 7(b)(1)(A) of Public Law 110-90 until FY 2013. As discussed earlier, this delay in implementation resulted in overstated payment rates in FYs 2010, 2011, and 2012. The resulting overpayments could not have been recovered under Public Law 110-90.

Similar to the adjustments authorized under section 7(b)(1)(B) of Public Law 110-90, the adjustment required under section 631 of the ATRA was a one-time recoupment of a prior overpayment, not a permanent reduction to payment rates. Therefore, we anticipated that any adjustment made to reduce payment rates in one year would eventually be offset by a positive adjustment in 2018, once the necessary amount of overpayment was recovered. However, section 414 of the Medicare Access and CHIP Reauthorization Act (MACRA) of 2015, Public Law 114-10, enacted on April 16, 2015, replaced the single positive adjustment we intended to make in FY 2018 with a 0.5 percentage point positive adjustment for each of FYs 2018 through 2023. We stated in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49345) that we would address this MACRA provision in future rulemaking. However, section 15005 of the 21st Century Cures Act (Pub. L. 114-255), enacted on December 13, 2016, reduced the adjustment for FY 2018 from 0.5

percentage points to 0.4588 percentage points. We are addressing these provisions of MACRA and the 21st Century Cures Act in section II.D.3. of the preamble of this final rule.

As we stated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50515 through 50517), our actuaries estimated that a -9.3 percentage point adjustment to the standardized amount would be necessary if CMS were to fully recover the \$11 billion recoupment required by section 631 of the ATRA in FY 2014. It is often our practice to phase in payment rate adjustments over more than one year, in order to moderate the effect on payment rates in any one year. Therefore, consistent with the policies that we have adopted in many similar cases, and after consideration of the public comments we received, in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50515 through 50517), we implemented a -0.8 percentage point recoupment adjustment to the standardized amount in FY 2014. We estimated that if adjustments of approximately -0.8 percentage point were implemented in FYs 2014, 2015, 2016, and 2017, using standard inflation factors, the entire \$11 billion would be accounted for by the end of the statutory 4-year timeline. As estimates of any future adjustments are subject to variations in total savings, we did not provide for specific adjustments for FYs 2015, 2016, or 2017 at that time.

Consistent with the approach discussed in the FY 2014 rulemaking for recouping the \$11 billion required by section 631 of the ATRA, in the FY 2015 IPPS/LTCH PPS final rule (79 FR 49874) and the FY 2016 IPPS/LTCH PPS final rule (80 FR 49345), we implemented additional -0.8 percentage point recoupment adjustments to the standardized amount in FY 2015 and FY 2016, respectively. We estimated that these adjustments, combined with leaving the prior -0.8 percentage point adjustments in place, would recover up to \$2 billion in FY 2015 and another \$3 billion in FY 2016. When combined with the approximately \$1 billion adjustment made in FY 2014, we estimated that approximately \$5 to \$6 billion would be left to recover under section 631 of the ATRA by the end of FY 2016.

As indicated in the FY 2017 IPPS/LTCH PPS proposed rule (81 FR 24966), due to lower than previously estimated inpatient spending, we determined that an adjustment of -0.8 percentage point in FY 2017 would not recoup the \$11 billion under section 631 of the ATRA. For the FY 2017 IPPS/LTCH PPS final rule (81 FR 56785), based on the Midsession Review of the President's FY 2017 Budget, our actuaries estimated

that, to the nearest tenth of a percentage point, the FY 2017 documentation and coding adjustment factor that will recoup as closely as possible \$11 billion from FY 2014 through FY 2017 without exceeding this amount is -1.5 percentage points. Based on those updated estimates by the Office of the Actuary using the Midsession Review of the President's FY 2017 Budget, we made a -1.5 percentage point adjustment for FY 2017 as the final adjustment required under section 631 of the ATRA. The estimates by our actuaries related to this finalized adjustment were included in a memorandum that we made publicly available on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/FY2017-IPPS-Final-Rule-Home-Page-Items/FY2017-IPPS-Final-Rule-OACT.html>.

3. Adjustment for FY 2018 Required Under Section 414 of Public Law 114–10 (MACRA) and Section 15005 of Public Law 114–255

As stated in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56785), once the recoupment required under section 631 of the ATRA was complete, we had anticipated making a single positive adjustment in FY 2018 to offset the reductions required to recoup the \$11 billion under section 631 of the ATRA. However, section 414 of the MACRA (which was enacted on April 16, 2015) replaced the single positive adjustment we intended to make in FY 2018 with a 0.5 percentage point positive adjustment for each of FYs 2018 through 2023. In the FY 2017 rulemaking, we indicated that we would address the adjustments for FY 2018 and later fiscal years in future rulemaking. As noted previously, section 15005 of the 21st Century Cures Act (Pub. L. 114–255), which was enacted on December 13, 2016, amended section 7(b)(1)(B) of the TMA, as amended by section 631 of the ATRA and section 414 of the MACRA, to reduce the adjustment for FY 2018 from a 0.5 percentage point to a 0.4588 percentage point. We believe the directive under section 15005 of Public Law 114–255 is clear. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19816) for FY 2018, we proposed to implement the required +0.4588 percentage point adjustment to the standardized amount. This is a permanent adjustment to payment rates. While we did not propose future adjustments required under section 414 of the MACRA and section 15005 of Public Law 114–255 at that time, we stated in the proposed rule that we expect to propose positive 0.5

percentage point adjustments to the standardized amounts for FYs 2019 through 2023.

Comment: Several commenters reiterated their disagreement with the -1.5 percentage point adjustment that CMS made for FY 2017 under section 631 of the ATRA, which exceeded the estimated adjustment of approximately -0.8 percentage point described in the FY 2014 IPPS/LTCH PPS rulemaking. Commenters contended that, as a result, hospitals would be left with a larger permanent cut than Congress intended following the enactment of MACRA. They asserted that CMS' proposal to apply a 0.4588 percent positive adjustment for FY 2018 misinterprets the relevant statutory authority, and urged CMS to align with their view of Congress' intent by restoring an additional +0.7 percentage point adjustment to the standardized amount in FY 2018; that is, the difference between the -1.5 percentage point adjustment made in FY 2017 and the initial estimate of -0.8 percentage point discussed in the FY 2014 IPPS/LTCH PPS rulemaking. Commenters also urged CMS to use its discretion under section 1886(d)(5)(I) of the Act to increase the FY 2018 adjustment by 0.7 percentage point. Other commenters requested that, despite current law, CMS ensure that adjustments totaling the full 3.9 percentage points withheld under section 631 of the ATRA be returned.

Response: As discussed in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56783 through 56785), CMS completed the \$11 billion recoupment required under section 631 of the ATRA. We continue to disagree that section 414 of the MACRA was intended to augment or limit our separate obligation under the ATRA to fully offset \$11 billion by FY 2017, as we discussed in response to comments in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56784). Moreover, as we discussed in the FY 2018 IPPS/LTCH PPS proposed rule, we believe the directive regarding the applicable adjustment for FY 2018 is clear. While we had anticipated making a positive adjustment in FY 2018 to offset the reductions required to recoup the \$11 billion under section 631 of the ATRA, section 414 of the MACRA requires that we not make the single positive adjustment we intended to make in FY 2018 but instead make a 0.5 percentage point positive adjustment for each of FYs 2018 through 2023. As noted by the commenters, and discussed in the FY 2017 IPPS/LTCH PPS final rule, by phasing in a total positive adjustment of only 3.0 percentage points, section 414 of the MACRA would not fully restore even the 3.2 percentage point

adjustment originally estimated by CMS in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50515). Finally, Public Law 114–255, which further reduced the positive adjustment required for FY 2018 from 0.5 percentage point to 0.4588 percentage point, was enacted on December 13, 2016, after CMS proposed and finalized the -1.5 percentage point adjustment as the final adjustment required under section 631 of the ATRA in the FY 2017 rulemaking.

After consideration of the public comments we received, we are finalizing the +0.4588 percentage point adjustment to the standardized amount for FY 2018, as required under section 15005 of Public Law 114–255.

E. Refinement of the MS–DRG Relative Weight Calculation

1. Background

Beginning in FY 2007, we implemented relative weights for DRGs based on cost report data instead of charge information. We refer readers to the FY 2007 IPPS final rule (71 FR 47882) for a detailed discussion of our final policy for calculating the cost-based DRG relative weights and to the FY 2008 IPPS final rule with comment period (72 FR 47199) for information on how we blended relative weights based on the CMS DRGs and MS–DRGs. We also refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 56785 through 56787) for a detailed discussion of the history of changes to the number of cost centers used in calculating the DRG relative weights. Since FY 2014, we calculate the IPPS MS–DRG relative weights using 19 CCRs, which now include distinct CCRs for implantable devices, MRIs, CT scans, and cardiac catheterization.

2. Discussion of Policy for FY 2018

Consistent with our established policy, we calculated the final MS–DRG relative weights for FY 2018 using two data sources: The MedPAR file as the claims data source and the HCRIS as the cost report data source. We adjusted the charges from the claims to costs by applying the 19 national average CCRs developed from the cost reports. The description of the calculation of the 19 CCRs and the MS–DRG relative weights for FY 2018 is included in section II.G. of the preamble to this FY 2018 IPPS/LTCH PPS final rule. As we did with the FY 2018 IPPS/LTCH PPS proposed rule, we are providing the version of the HCRIS from which we calculated these 19 CCRs on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>. Click on the link on the

left side of the screen titled, “FY 2018 IPPS Final Rule Home Page” or “Acute Inpatient Files for Download.”

Comment: One commenter recommended that CMS work with stakeholders to update cost reporting instructions and improve the accuracy and validity of the national average CCRs. The commenter expressed concern that the differences between hospitals’ use of nonstandard cost center codes and CMS’ procedures for mapping and rolling up nonstandard codes to the standard cost centers will continue to result in invalid CCRs and inaccurate payments. The commenter stressed the need for flexibility in cost reporting, to accommodate any new or unique services that certain hospitals may provide, which may not be easily captured through the cost reporting software. Finally, the commenter again recommended, as it had done in response to prior IPPS rules, that CMS pay particular attention to data used for CT scan and MRI cost centers; the commenter believed that the hospital payment rates established by CMS from the CT scan and MRI CCRs simply do not correlate with resources used for these capital-intensive services.

Response: We received a similar public comment last year and responded to it in the FY 2017 IPPS/LTCH PPS final rule. We refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 56787) for our response to these issues. We note that we will continue to explore ways in which we can improve the accuracy of the cost report data and calculated CCRs used in the cost estimation process.

Comment: One commenter requested that CMS use a single diagnostic radiology CCR to set weights, rather than using the separate CT and MRI cost centers. The commenter requested that if CMS maintains the separate CT and MRI cost centers, CMS should not include cost reports from hospitals that use the “square foot” allocation methodology. The commenter provided an analysis to support its assertion that the CCRs for CT and MRI are incorrect and are inappropriately reducing payments under the IPPS. The commenter indicated that the charge-compression hypothesis has been shown to be false with the use of the separate CT and MRI cost centers. The commenter discussed problems with cost allocation to the CT and MRI cost centers. The commenter referenced discussions in prior IPPS/LTCH PPS rules about this issue. The commenter acknowledged that CMS did not include a specific proposal in the FY 2018 proposed rule regarding this issue.

Response: As the commenter noted, we did not make any proposals for FY 2018 relating to the number of cost centers used to calculate the relative weights. As noted previously and discussed in detail in prior rulemaking, we have calculated the IPPS MS-DRG relative weights using 19 CCRs, including distinct CCRs for MRIs and CT scans, since FY 2014. We refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 56785) for a detailed discussion of the basis for establishing these 19 CCRs. We further note that in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50518 through 50523), we presented data analyses using distinct CCRs for implantable devices, MRIs, CT scans, and cardiac catheterization. As we noted, we will continue to explore ways in which we can improve the accuracy of the cost report data and calculated CCRs used in the cost estimation process.

F. Changes to Specific MS-DRG Classifications

1. Discussion of Changes to Coding System and Basis for FY 2018 MS-DRG Updates

a. Conversion of MS-DRGs to the International Classification of Diseases, 10th Revision (ICD-10)

As of October 1, 2015, providers use the International Classification of Diseases, 10th Revision (ICD-10) coding system to report diagnoses and procedures for Medicare hospital inpatient services under the MS-DRG system instead of the ICD-9-CM coding system, which was used through September 30, 2015. The ICD-10 coding system includes the International Classification of Diseases, 10th Revision, Clinical Modification (ICD-10-CM) for diagnosis coding and the International Classification of Diseases, 10th Revision, Procedure Coding System (ICD-10-PCS) for inpatient hospital procedure coding, as well as the Official ICD-10-CM and ICD-10-PCS Guidelines for Coding and Reporting. For a detailed discussion of the conversion of the MS-DRGs to ICD-10, we refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 56787 through 56789).

b. Basis for FY 2018 MS-DRG Updates

CMS has previously encouraged input from our stakeholders concerning the annual IPPS updates when that input is made available to us by December 7 of the year prior to the next annual proposed rule update. For example, to be considered for any updates or changes in FY 2018, comments and suggestions should have been submitted

by December 7, 2016. The comments that were submitted in a timely manner for FY 2018 are discussed in this section of the preamble of this final rule. As CMS works with the public to examine the ICD-10 claims data used for updates to the ICD-10 MS-DRGs, we would like to examine areas where the MS-DRGs can be improved. This will require additional time for us to review requests from the public to make specific updates, analyze claims data, and consider any proposed updates. As discussed in the proposed rule, given the need for more time to carefully evaluate requests and propose updates, we are changing the deadline to request updates to MS-DRGs to November 1 of each year. This will provide an additional 5 weeks for the data analysis and review process. Interested parties should submit any comments and suggestions for FY 2019 by November 1, 2017, via the CMS MS-DRG Classification Change Requests Mailbox located at: MSDRGClassificationChange@cms.hhs.gov.

Following are the changes that we proposed to the MS-DRGs for FY 2018 in the FY 2018 IPPS/LTCH PPS proposed rule. We invited public comments on each of the MS-DRG classification proposed changes as well as our proposals to maintain certain existing MS-DRG classifications discussed in the proposed rule. In some cases, we proposed changes to the MS-DRG classifications based on our analysis of claims data. In other cases, we proposed to maintain the existing MS-DRG classification based on our analysis of claims data. For the FY 2018 proposed rule, our MS-DRG analysis was based on ICD-10 claims data from the December 2016 update of the FY 2016 MedPAR file, which contains hospital bills received through September 30, 2016, for discharges occurring through September 30, 2016. In our discussion of the proposed MS-DRG reclassification changes, we referred to our analysis of claims data from the “December 2016 update of the FY 2016 MedPAR file”.

In this FY 2018 IPPS/LTCH PPS final rule, we summarize the public comments we received on our proposals, present our responses, and state our final policies. For this FY 2018 final rule, we performed limited additional MS-DRG analysis of claims data. Therefore, all of the data analysis is based on claims data from the December 2016 update of the FY 2016 MedPAR file, which contains hospital bills received through September 30, 2016, for discharges occurring through September 30, 2016, except where specifically noted that it is based on the

March 2017 update of the FY 2016 MedPAR file, which contains hospital bills received through March 31, 2017, for discharges occurring through September 30, 2016.

As explained in previous rulemaking (76 FR 51487), in deciding whether to propose to make further modification to the MS-DRGs for particular circumstances brought to our attention, we consider whether the resource consumption and clinical characteristics of the patients with a given set of conditions are significantly different than the remaining patients represented in the MS-DRG. We evaluate patient care costs using average costs and lengths of stay and rely on the judgment of our clinical advisors to determine whether patients are clinically distinct or similar to other patients represented in the MS-DRG. In evaluating resource costs, we consider both the absolute and percentage differences in average costs between the cases we select for review and the remainder of cases in the MS-DRG. We also consider variation in costs within these groups; that is, whether observed average differences are consistent across patients or attributable to cases that are extreme in terms of costs or length of stay, or both. Further, we consider the number of patients who will have a given set of characteristics and generally prefer not to create a new MS-DRG unless it would include a substantial number of cases.

In our examination of the claims data, we apply the following criteria established in FY 2008 (72 FR 47169) to determine if the creation of a new complication or comorbidity (CC) or major complication or comorbidity (MCC) subgroup within a base MS-DRG is warranted:

- A reduction in variance of costs of at least 3 percent.
- At least 5 percent of the patients in the MS-DRG fall within the CC or MCC subgroup.
- At least 500 cases are in the CC or MCC subgroup.
- There is at least a 20-percent difference in average costs between subgroups.
- There is a \$2,000 difference in average costs between subgroups.

In order to warrant creation of a CC or MCC subgroup within a base MS-DRG, the subgroup must meet all five of the criteria.

Comment: Several commenters expressed concern regarding the use of ICD-10 claims data for proposed updates to the FY 2018 ICD-10 MS-DRGs Version 35 and in recalibrating the proposed FY 2018 MS-DRG relative weights. Commenters reported that the proposed relative weights for certain

MS-DRGs had large reductions when compared to the current FY 2017 ICD-10 MS-DRG Version 34 relative weights. Specifically, commenters noted that MS-DRG 215 (Other Heart Assist System Implant) appeared to have the largest decrease by approximately 35% although it was not the subject of a new proposal in the FY 2018 IPPS/LTCH PPS proposed rule. According to the commenters, the proposed reductions for certain relative weights are a direct result of the transition from ICD-9 to ICD-10 coded claims data that was utilized in setting the proposed FY 2018 MS-DRG relative weights. The commenters stated that, if finalized as proposed, these reductions could limit access to the necessary services for Medicare beneficiaries and urged CMS to consider phasing in these significant fluctuations that they asserted cause instability of the weights and hinder providers in their ability to project anticipated payment rates. Many commenters also recommended that CMS limit the percentage by which an MS-DRG's relative weight can be reduced.

Commenters also believed that the fluctuations in the proposed relative weights do not appear to be consistent with the deliberate approach CMS has taken to ensure a smooth transition from ICD-9 to ICD-10. The commenters noted that, in the past, CMS has appropriately recognized and made efforts to maintain stability within the IPPS during the transition, such as providing several versions of the ICD-10 MS-DRG Grouper for review, contracting for studies to evaluate the impact of converting the MS-DRGs to ICD-10 and assembling various public meetings. The commenters also noted that CMS has observed broader principles in prior rulemaking with regard to payment stability such as during the transition from charge-based weights to cost-based weights in FY 2007 and the conversion of the CMS DRGs to MS-DRGs in FY 2008. Consistent with those past policy refinements and the steps taken to mitigate fluctuations potentially affecting IPPS payment, commenters requested that CMS once again exercise its authority to do so. We refer readers to section II.G. of the preamble of this FY 2018 IPPS/LTCH PPS final rule for further discussion regarding recalibration of the FY 2018 MS-DRG relative weights, including our response to comments requesting a transition period for substantial reductions in relative weights in order to facilitate payment stability.

As stated above, commenters noted that MS-DRG 215 (Other Heart Assist

System Implant) appeared to have the largest decrease by approximately 35% although it was not the subject of a new proposal in the FY 2018 IPPS/LTCH PPS proposed rule. We received multiple comments stating that the American Hospital Association published Coding Clinic advice that changed coding guidance for external heart assist devices and that this will result in higher-cost patients with more ICU days and increased lengths of stay that are assigned to MS-DRG 215 in FY 2018. The commenters noted there will be a substantial difference in coding for this patient population that is not reflected in the current cost data used to set the FY 2018 payment rates and a commenter urged CMS to revise the structure of MS-DRG 215 as an alternative option to address the decrease in the FY 2018 proposed relative weight for this MS-DRG. According to the commenter, restructuring this MS-DRG would more accurately reflect the resources required for cases that will be assigned to this MS-DRG in FY 2018 and is consistent with the agency's continuing efforts to ensure accurate replication between the ICD-9 and ICD-10 based MS-DRGs.

The commenter noted that currently, patients who receive heart assist devices may be assigned to the Pre-MDC MS-DRGs 001 and 002 (Heart Transplant or Implant of Heart Assist System) or MS-DRG 215 (Other Heart Assist System Implant). The commenter asserted that the transition from using ICD-9 codes to ICD-10 codes as the basis for MS-DRG assignment has been impacted by the significant increase in the number of codes relevant to the assignment of a MS-DRG because ICD-10 is more granular. This commenter recommended that CMS revise the assignments for the ICD-10 procedure codes grouping to MS-DRG 215 to accurately replicate the logic used to assign ICD-9 procedure codes to MS-DRG 215.

An example of how the MS-DRG assignment has been impacted by the transition to ICD-10 was provided by the commenter who noted that under the ICD-9 based MS-DRGs, procedure code 37.62 (Insertion of temporary non-implantable extracorporeal circulatory assist device) was reported for both the insertion and removal of an external heart assist device and was assigned to MS-DRG 215. However, under ICD-10, two codes are required, one for the insertion and one for the removal of the device where the logic for the combination of those two codes results in assignment to Pre-MDC MS-DRGs 001 and 002 (Heart transplant or Implant of Heart Assist System).

Another example offered by the commenter included ICD-9 procedure code 37.63 (Repair of heart assist system) where, under ICD-10, these cases could be reported with a code describing revision of an external heart assist device or these cases could be reported with a combination of codes, one for the removal and one for the revision of an external heart assist device. The commenter suggested that the combinations of insertion and removal codes and the combinations of removal and revision codes be reassigned from the Pre-MDC MS-DRGs 001 and 002 to MS-DRG 215 to accurately replicate the logic that was used in the ICD-9 based MS-DRGs.

The commenter performed its own analysis of MS-DRG 215 using the FY 2016 MedPAR data and noted that its findings indicated there was a decrease in the volume of procedures involving a repair or revision of a heart assist system device and an increase in the number of insertion or implantation of heart assist system devices when compared to the FY 2015 MedPAR data. The commenter's findings also indicated that there was a decrease in the average total standardized charges, as well as a decrease in the severity of illness of the patients grouping to this MS-DRG in FY 2016 compared to FY 2015. For example, the commenter noted that its analysis showed approximately 95 percent of insertion or implant of heart assist system cases also reported a secondary diagnosis of an MCC in FY 2015; however, this number dropped to 84 percent in FY 2016. Additionally, the commenter reported that approximately 73 percent of the revision of heart assist system cases also reported a secondary diagnosis of an MCC in FY 2015; however, this number dropped to 67 percent in FY 2016. The commenter stated that the clinical and usage changes for these devices do not account for this dramatic 1-year reversal.

Response: We agree with the commenter that under the ICD-9 based MS-DRGs, procedure code 37.62 (Insertion of temporary non-implantable extracorporeal circulatory assist device) was reported for both the insertion and removal of an external heart assist device and was assigned to MS-DRG 215. We also agree with the commenter that, under ICD-10, two codes are currently required to describe this same procedure, one for the insertion and one for the removal of the device where the logic for the combination of those two codes results in assignment to Pre-MDC MS-DRGs 001 and 002 (Heart transplant or Implant of Heart Assist System). Lastly, we agree with the example

offered by the commenter that included ICD-9 procedure code 37.63 (Repair of heart assist system) where under ICD-10, these cases could be reported with a code describing revision of a heart assist device or these cases could be reported with a combination of codes, one for the removal and one for the revision of a heart assist device.

We also are aware that the American Hospital Association published Coding Clinic advice that clarified coding and reporting for certain external heart assist devices due to the technology being approved for new indications. We point out that coding advice is issued independently from payment policy. That is, in our annual IPPS rulemaking, in considering updates to the MS-DRGs, it is typically not our process to analyze changes in published coding advice. We generally do not make proposals for MS-DRG reclassification changes in the absence of data and clinical input from our clinical advisors.

In response to the commenters' request to ensure accurate replication between the ICD-9 and ICD-10 based MS-DRGs for external heart assist devices in conjunction with the public comments requesting that we maintain stability in the MS-DRG relative payment weights, we note that, for FY 2018 and beyond, we are no longer replicating the ICD-9 MS-DRGs. As stated in the FY 2018 IPPS/LTCH PPS proposed rule and this final rule, we are using ICD-10 coded claims data for the first time to propose changes to the ICD-10 MS-DRG classifications and to compute the relative weights. Therefore, our proposals and final policies for FY 2018 are based only on the ICD-10 claims data from the FY 2016 MedPAR file. However, similar to our efforts in identifying areas where improvements could be made to better account for severity of illness and resource utilization during the transition from the CMS DRGs to the MS-DRGs, we are making concerted efforts to continue refining the ICD-10 MS-DRGs after transitioning from the ICD-9 MS-DRGs.

We appreciate the commenters' acknowledgement of our efforts to maintain stability within the IPPS during the transition period to ICD-10 as noted above. We also acknowledge and appreciate the analysis that was conducted by the commenter for MS-DRG 215. We believe it is important to be able to fully evaluate the effects and the impact of restructuring any MS-DRGs for which all heart assist system procedures are currently assigned under ICD-10. As part of this evaluation, we believe it would be advantageous to consider additional ICD-10 coded claims data as well as changes in a

hospital's case-mix (for example, patient characteristics) to determine if the patients undergoing a heart assist system procedure or a combination of heart assist system procedures demonstrate a greater severity of illness and/or increased treatment difficulty as a result of the surgical approach that is used (for example, open, percutaneous, percutaneous endoscopic, among others). Finally, consultation with our clinical advisors is also important to properly analyze the appropriateness of any modifications to the MS-DRGs where a heart assist device is currently assigned.

Therefore, in response to the public comments received, we are planning to review for FY 2019 the current ICD-10 logic for Pre-MDC MS-DRGs 001 and 002 (Heart Transplant or Implant of Heart Assist System with and without MCC, respectively), MS-DRG 215 (Other Heart Assist System Implant) and MS-DRGs 268 and 269 (Aortic and Heart Assist Procedures Except Pulsation Balloon with and without MCC, respectively) where procedures involving the heart assist devices are currently assigned. We refer the reader to the ICD-10 MS-DRG Definitions Manual version 34, which is available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/FY2017-IPPS-Final-Rule-Home-Page-Items/FY2017-IPPS-Final-Rule-Data-Files.html?DLPage=1&DLEntries=10&DLSort=0&DLSortDir=ascending> for complete documentation of the GROUPER logic for Pre-MDC MS-DRGs 001 and 002, MS-DRG 215, and MS-DRGs 268 and 269. We also encourage the public to submit any comments on restructuring the MS-DRGs for heart assist system procedures to the CMS MS-DRG Classification Change Request Mailbox located at: MSDRGClassificationChange@cms.hhs.gov by November 1, 2017.

As previously stated, we are making concerted efforts to continue refining the ICD-10 MS-DRGs after transitioning from the ICD-9 MS-DRGs. We believe that it is important to include the Pre-MDC MS-DRGs and the other MS-DRGs comprised of heart assist system procedures as part of our comprehensive review of each MDC and the corresponding MS-DRGs assigned to them. After consideration of the public comments we received, we are maintaining the current structure of MS-DRG 215 for FY 2018, under the ICD-10 MS-DRGs Version 35.

We are making the FY 2018 ICD-10 MS-DRG GROUPER and Medicare Code Editor (MCE) Software Version 35 available to the public on our CMS Web

site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html> through the FY 2018 IPPS Final Rule Home Page.

2. MDC 1 (Diseases and Disorders of the Nervous System)

a. Functional Quadriplegia

We received a request to reassign cases identified by diagnosis code R53.2 (Functional quadriplegia) from MS-DRGs 052 and 053 (Spinal Disorders and Injuries with and without CC/MCC, respectively). The requestor stated that because functional quadriplegia does not involve any spinal injury or

pathology, cases identified by the diagnosis code should not be assigned to MS-DRGs 052 and 053. However, the requestor did not suggest an alternative MS-DRG assignment.

Section I.C.18.f. of the FY 2017 ICD-10-CM Official Coding Guidelines addresses the coding for the diagnosis of functional quadriplegia. Section I.C.18.f. states that functional quadriplegia (described by diagnosis code R53.2) is the lack of ability to use one's limbs or to ambulate due to extreme debility. The condition is not associated with neurologic deficit or injury, and diagnosis code R53.2 should not be used to identify cases of neurologic quadriplegia. In addition, the

Guidelines state that the diagnosis code should only be assigned if functional quadriplegia is specifically documented by a physician in the medical record, and the diagnosis of functional quadriplegia is not associated with a neurologic deficit or injury. A physician may document the diagnosis of functional quadriplegia as occurring with a variety of conditions.

As discussed in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19817 through 19818), we examined claims data from the December 2016 update of the FY 2016 MedPAR file on cases reporting diagnosis code R53.2 in MS-DRGs 052 and 053. Our findings are shown in the table below.

CASES REPORTING FUNCTIONAL QUADRIPELGIA IN MS-DRGs 052 AND 053

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 052—All cases	865	5.4	\$10,247
MS-DRG 052—Cases reporting diagnosis code R53.2	63	4.9	6,420
MS-DRG 053—All cases	239	3.3	6,326
MS-DRG 053— Cases reporting diagnosis code R53.2	16	3.3	2,318

As shown in the table above, for MS-DRG 052, there were a total of 865 cases with an average length of stay of 5.4 days and average costs of \$10,247. Of the 865 cases in MS-DRG 052, there were 63 cases that reported a principal diagnosis of functional quadriplegia, with an average length of stay of 4.9 days and average costs of \$6,420. For MS-DRG 053, there were a total of 239 cases, with an average length of stay of 3.3 days and average costs of \$6,326. Of the 239 cases in MS-DRG 053, there were 16 cases that reported a principal diagnosis of functional quadriplegia, with an average length of stay of 3.3 days and average costs of \$2,318.

To address the request to reassign cases reporting a diagnosis of functional quadriplegia to a different MS-DRG, we reviewed the data for a total of 79 cases (63 cases in MS-DRG 052 and 16 cases in MS-DRG 053) that reported a principal diagnosis of functional quadriplegia in MS-DRGs 052 and 053. As shown in the table above, our data analysis demonstrates that the average costs for these 79 cases are lower than the average costs of all cases in MS-

DRGs 052 and 053 (\$6,420 compared to \$10,247 for all cases in MS-DRG 052, and \$2,318 compared to \$6,326 for all cases in MS-DRG 053), and the average lengths of stay are shorter for cases reporting a diagnosis of functional quadriplegia in MS-DRG 052 (4.9 days compared to 5.4 days for all cases in MS-DRG 052), but equal for cases in MS-DRG 053 (3.3 days for cases reporting a diagnosis of functional quadriplegia and for all cases).

As we discussed in the proposed rule, our clinical advisors reviewed this issue and agreed that a diagnosis of functional quadriplegia does not involve a spinal disorder or injury, and may be associated with, or the result of, a variety of underlying conditions. Our clinical advisors also agreed that it is not clinically appropriate to include cases reporting a diagnosis of functional quadriplegia within MS-DRGs 052 and 053 because these cases do not involve a spinal disorder or injury. Therefore, given the fact that functional quadriplegia can be the result of a variety of other conditions, we reviewed the MS-DRGs in order to identify a

more appropriate placement for cases reporting this diagnosis. Our clinical advisors recommended assigning cases representing a diagnosis of functional quadriplegia from MS-DRGs 052 and 053 to MS-DRGs 091, 092, and 093 (Other Disorders of Nervous System with MCC, with CC, and without CC/MCC, respectively). Within each MDC, there are MS-DRGs that describe a variety of other conditions that do not have the clinical characteristics of the more specific MS-DRGs. In this case, MS-DRGs 091, 092, and 093 describe a variety of other disorders of the nervous system that are not clinically similar in characteristics to the disorders described by MS-DRGs 052 and 053. We stated in the proposed rule that our clinical advisors believe that MS-DRGs 091, 092, and 093 are more appropriate MS-DRG assignments for cases representing a diagnosis of functional quadriplegia.

We examined claims data from the December 2016 update of the FY 2016 MedPAR file on cases in MS-DRGs 091, 092, and 093. Our findings are shown in the table below.

CASES IN MS-DRGs 091, 092, AND 093

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 091—All cases	12,607	5.6	\$10,815
MS-DRG 092—All cases	19,392	3.9	6,706

CASES IN MS-DRGs 091, 092, AND 093—Continued

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 093—All cases	8,120	2.7	5,253

As shown in the table above, for MS-DRG 091, there were a total of 12,607 cases, with an average length of stay of 5.6 days and average costs of \$10,815. For MS-DRG 092, there were a total of 19,392 cases, with an average length of stay of 3.9 days and average costs of \$6,706. For MS-DRG 093, there were a total of 8,120 cases, with an average length of stay of 2.7 days and average costs of \$5,253. As stated earlier, of the 865 total cases in MS-DRG 052, there were 63 cases that reported a principal diagnosis of functional quadriplegia, with an average length of stay of 4.9 days and average costs of \$6,420. Of the 239 total cases in MS-DRG 053, there were 16 cases that reported a principal diagnosis of functional quadriplegia, with an average length of stay of 3.3 days and average costs of \$2,318. The average lengths of stay for cases reporting a diagnosis of functional quadriplegia in MS-DRGs 052 and 053 are similar to the average lengths of stay for cases found in MS-DRGs 091, 092 and 093 (4.9 days and 3.3 days for cases in MS-DRGs 052 and 053, respectively, compared to 5.6 days, 3.9 days, and 2.7 days, respectively, for cases in MS-DRGs 091, 092, and 093). The average costs for cases reporting a diagnosis of functional quadriplegia in MS-DRGs 052 and 053 are \$6,420 and \$2,318, respectively, compared to \$10,815, \$6,706, and \$5,253 for all cases in MS-DRGs 091, 092, and 093. The average costs for cases reporting a diagnosis of functional quadriplegia in MS-DRG 053 are lower than the average costs for all cases in MS-DRG 093 without a CC or MCC (\$2,318 compared to \$5,253, respectively). The average costs for cases reporting a diagnosis of functional quadriplegia in MS-DRG 052 are

\$6,420, which is lower than the average costs of \$10,815 for all cases in MS-DRG 091, but close to the average costs of \$6,706 for all cases in MS-DRG 092. We stated in the proposed rule that while we acknowledge that the average costs for cases reporting a diagnosis of functional quadriplegia are lower than those cases within MS-DRGs 091, 092, and 093, as stated earlier, the average costs of cases reporting a diagnosis of functional quadriplegia also are lower than the average costs of all cases in MS-DRGs 052 and 053 where these cases are currently assigned.

Our clinical advisors reviewed the clinical issues as well as the claims data for MS-DRGs 052, 053, 091, 092, and 093. As a result of this review, they recommended that cases reporting a diagnosis of functional quadriplegia be reassigned from MS-DRGs 052 and 053 to MS-DRGs 091, 092, and 093 because the current MS-DRG assignment is not clinically appropriate. We stated in the proposed rule that our clinical advisors stated that reassigning these cases to MS-DRGs 091, 092, and 093 is more appropriate because this set of MS-DRGs includes a variety of nervous system disorders that are not appropriately classified to more specific MS-DRGs within MDC 1. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19817 through 19818), we proposed to reassign cases identified by diagnosis code R53.2 from MS-DRGs 052 and 053 to MS-DRGs 091, 092, and 093 for FY 2018.

We invited public comments on our proposal.

Comment: Several commenters supported CMS' statement that diagnosis code R53.2 does not belong in MS-DRGs 052 and 053 because this

condition does not involve a spinal disorder or injury. The commenters supported reassigning the code from MS-DRGs 052 and 053. However, one commenter suggested that instead of assigning diagnosis code R53.2 to MS DRGs 091, 092, and 093 (Other Disorders of Nervous System with MCC, with CC, and without CC/MCC, respectively) for FY 2018, CMS instead reassign it to MS-DRGs 947 and 948 (Signs and Symptoms with MCC and without MCC, respectively). The commenter stated that the ICD-10-CM code for functional quadriplegia, R53.2, is located in Chapter 18, Symptoms, Signs and Abnormal Findings because it can be the result of a variety of underlying conditions. Therefore, the commenter believed it was not appropriate to classify this diagnosis as a nervous system disorder. The commenter pointed out that other codes in ICD-10-CM category R53 are assigned to MS-DRGs 947 and 948. Therefore, the commenter believed that it was appropriate to reassign code R53.2 from MS-DRGs 052 and 053 to MS-DRGs 947 and 948.

Response: We agree with the commenter that diagnosis code R53.2 is located in Chapter 18, Symptoms, Signs and Abnormal Findings because it can be the result of a variety of underlying conditions. We also agree that this code cannot be labeled as a nervous system disorder. Therefore, we agree that there is merit in reassigning diagnosis code R53.2 where other codes in category R53 are assigned in MS-DRGs 947 and 948. We examined claims data from the December 2016 update of the FY 2016 MedPAR file on cases in MS-DRGs 947 and 948. Our findings are shown in the table below.

CASES IN MS-DRGs 947 AND 948

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 947—All cases	10,799	4.7	\$8,225
MS-DRG 948—All cases	36,123	3.3	5,494

As stated earlier, of the 865 total cases in MS-DRG 052, there were 63 cases that reported a principal diagnosis of functional quadriplegia, with an average

length of stay of 4.9 days and average costs of \$6,420. This compares to all cases in MS-DRG 947 which had an average length of stay of 4.7 days and

average costs of \$8,225. Therefore, the average length of stay for functional quadriplegia cases in MS-DRG 052 was 0.2 days longer and the average costs

were \$1,805 lower than all cases in MS-DRG 947. Of the 239 total cases in MS-DRG 053, there were 16 cases that reported a principal diagnosis of functional quadriplegia, with an average length of stay of 3.3 days and average costs of \$2,318. This compares to all cases in MS-DRG 948 which had an average length of stay of 3.3 days and average costs of \$5,494. Therefore, the average length of stay for functional quadriplegia cases in MS-DRG 053 is the same as all cases in MS-DRG 948 and the average costs are \$3,176 lower than all cases in MS-DRG 948. The average costs of functional quadriplegia cases are lower than all cases in MS-DRGs 091, 092, and 093 as well as in MS-DRGs 947 and 948. The average length of stay of functional quadriplegia cases are similar to those in MS-DRGs 947 and 948. We agree with the commenter that the more appropriate MS-DRG assignment would be MS-DRGs 947 and 948 because these MS-DRGs capture similar symptom codes.

Our clinical advisors reviewed this clinical issue along with the claims data for MS-DRGs 947 and 948. Our clinical advisors agree that because diagnosis code R53.2 is a symptom code that could be the result of a variety of underlying conditions, it would not be appropriate to assign it to nervous system MS-DRGs such as MS DRGs 091, 092, and 093 as we proposed. Our clinical advisors agreed with the commenter that this symptom code should be assigned to MS-DRGs 947 and 948 where other symptom codes are assigned.

After consideration of the public comments that we received and the advice of our clinical advisors, we are finalizing the assignment of code R53.2 (Functional quadriplegia) to MS-DRGs 947 and 948 (Signs and Symptoms with MCC and without MCC, respectively).

b. Responsive Neurostimulator (RNS®) System

We received a request to modify the MS-DRG assignment for cases involving the use of the RNS® neurostimulator, a cranially implanted neurostimulator that is a treatment option for persons diagnosed with medically intractable epilepsy. Cases involving the use of the RNS® neurostimulator are assigned to MS-DRG 023 (Craniotomy with Major Device Implant or Acute Complex Central Nervous System (CNS) Principal Diagnosis (PDX) with MCC or Chemo Implant) and MS-DRG 024 (Craniotomy with Major Device Implant or Acute Complex Central Nervous System (CNS) Principal Diagnosis (PDX) without MCC).

Cases involving the use of the RNS® neurostimulator generator and leads are captured within the descriptions of four ICD-10-PCS codes. ICD-10-PCS code 0NH00NZ (Insertion of neurostimulator generator into skull, open approach) captures the use of the neurostimulator generator, and the other three ICD-10-PCS codes, 00H00MZ (Insertion of neurostimulator lead into brain, open approach), 00H03MZ (Insertion of neurostimulator lead into brain, percutaneous approach), and 00H04MZ (Insertion of neurostimulator lead into brain, percutaneous endoscopic approach) describe the insertions of the leads, depending on the approach used. The combination of an ICD-10-PCS code capturing the use of the generator and another ICD-10-PCS code describing the specific approach used to insert the leads would capture the performance of the entire procedure.

The requestor stated that the RNS® neurostimulator received FDA pre-market approval on November 14, 2013. The RNS® neurostimulator includes a cranially implanted programmable neurostimulator connected to one or two depth and/or subdural cortical strip leads that are surgically placed in or on the brain at the seizure focus. The neurostimulator and leads are typically implanted during a single acute inpatient hospital procedure at a Comprehensive Epilepsy Center (CEC). The implanted neurostimulator continuously monitors brain electrical activity and is programmed by a physician to detect abnormal patterns of electrical activity that the physician believes may lead to seizures (epileptiform activity). In response to the detection of epileptiform activity, the device delivers brief, mild electrical pulses (responsive stimulation) to one or two epileptic foci. Detection and stimulation parameters are adjusted noninvasively by the physician to optimize control of epileptic seizures for each patient.

As the neurostimulator monitors brain activity, electrocorticograms (ECoGs) recorded immediately before and after certain events are stored for later review by the physician. The physician reviews the stored recordings to see the detections and the effects of stimulation. The physician can reprogram the neurostimulator at an in-person office appointment to change detection and stimulation settings based on this information, as well as review the patient's seizures.

The RNS® neurostimulator was approved for new technology add-on payments for FY 2015 and FY 2016, and new technology add-on payments were discontinued for FY 2017. The new

technology add-on payment application was discussed in the FY 2015 IPPS/LTCH PPS proposed and final rules (79 FR 28051 through 28054 and 79 FR 49946 through 49950, respectively), the FY 2016 IPPS/LTCH PPS proposed and final rules (80 FR 24427 through 24448 and 80 FR 49442 through 49443, respectively), and the FY 2017 IPPS/LTCH PPS proposed and final rules (81 FR 25036 through 25037 and 81 FR 56882 through 56884, respectively).

The requestor suggested the following three options for MS-DRG assignment updates for cases involving the RNS® neurostimulator:

- Create new MS-DRGs for cases involving the use of the RNS® neurostimulator. The requestor suggested MS-DRG XXX (Cranially Implanted Neurostimulators with MCC) and MS-DRG XXX (Cranially Implanted Neurostimulators without MCC) as possible MS-DRG titles. The requestor acknowledged that the number of cases assigned to this MS-DRG would be low, but anticipated that the number of cases would increase in the future.

- Reassign cases involving the use of the RNS® neurostimulator to MS-DRGs 020 and 021 (Intracranial Vascular Procedures with Principal Diagnosis of Hemorrhage with MCC, with CC, respectively) and update the MS-DRG logic and titles. The requestor asked CMS to reassign all cases involving the use of the RNS® neurostimulator that currently map to MS-DRG 023 (Craniotomy with Major Device Implant/Acute Complex CNS Principal Diagnosis with MCC or Chemo Implant) to MS-DRG 20, and change the title of MS-DRG 20 to "Intracranial Vascular Procedures with Principal Diagnosis of Hemorrhage or Cranially Implanted Neurostimulator with MCC." In addition, the requestor asked CMS to reassign all cases involving the use of the RNS® neurostimulator that currently map to MS-DRG 024 (Craniotomy with Major Device Implant/Acute Complex CNS Principal Diagnosis without MCC) to MS-DRG 021, and change the title of MS-DRG 021 to "Intracranial Vascular Procedures with Principal Diagnosis of Hemorrhage with CC or Cranially Implanted Neurostimulator without MCC". The requestor believed that the majority of cases involving the use of the RNS® neurostimulator that map to MS-DRG 024 do not include a secondary diagnosis that is classified as a CC, and the average cost of cases involving the use of the RNS® neurostimulator without a CC is significantly higher than the average cost of all cases in MS-DRG 022 (Intracranial Vascular Procedures with Principal Diagnosis of Hemorrhage

without CC/MCC). Therefore, the requestor stated that it would not be adequate to assign cases involving the use of the RNS[®] neurostimulator without a CC to MS-DRG 022.

- Reassign cases involving the use of the RNS[®] neurostimulator to other higher paying MS-DRGs that would provide adequate payment.

The requestor stated that it had analyzed data from two sources, which demonstrated that the average cost of cases involving the use of the RNS[®]

neurostimulator was higher than the average cost of all cases in MS-DRGs 023 and 024 (the current MS-DRGs for cases involving the use of the RNS[®] neurostimulator). The requestor indicated that the data used for its analysis was obtained from hospitals performing the procedure, as well as from the FY 2015 MedPAR file.

The requestor also asked that CMS examine the cases representing cranially implanted neurostimulators and leads

that were inserted for the treatment of epilepsy. The requestor pointed out that neurostimulators also are used in the treatment of movement disorders such as Parkinson's disease, essential tremor, or dystonia. The requestor asked that CMS identify those cases with a principal diagnosis of epilepsy, and identified the following ICD-10-CM codes that it believed were representative of potential epilepsy cases.

ICD-10-CM code	ICD-10-CM code title
G40.001	Localization-related (focal) (partial) idiopathic epilepsy and epileptic syndromes with seizures of localized onset, not intractable, with status epilepticus.
G40.009	Localization-related (focal) (partial) idiopathic epilepsy and epileptic syndromes with seizures of localized onset, not intractable, without status epilepticus.
G40.011	Localization-related (focal) (partial) idiopathic epilepsy and epileptic syndromes with seizures of localized onset, intractable, with status epilepticus.
G40.019	Localization-related (focal) (partial) idiopathic epilepsy and epileptic syndromes with seizures of localized onset, intractable, without status epilepticus.
G40.101	Localization-related (focal) (partial) symptomatic epilepsy and epileptic syndromes with simple partial seizures, not intractable, with status epilepticus.
G40.119	Localization-related (focal) (partial) symptomatic epilepsy and epileptic syndromes with simple partial seizures, intractable, without status epilepticus.
G40.201	Localization-related (focal) (partial) symptomatic epilepsy and epileptic syndromes with complex partial seizures, not intractable, with status epilepticus.
G40.209	Localization-related (focal) (partial) symptomatic epilepsy and epileptic syndromes with complex partial seizures, not intractable, without status epilepticus.
G40.211	Localization-related (focal) (partial) symptomatic epilepsy and epileptic syndromes with complex partial seizures, intractable, with status epilepticus.
G40.219	Localization-related (focal) (partial) symptomatic epilepsy and epileptic syndromes with complex partial seizures, intractable, without status epilepticus.
G40.301	Generalized idiopathic epilepsy and epileptic syndromes, not intractable, with status epilepticus.
G40.309	Generalized idiopathic epilepsy and epileptic syndromes, not intractable, without status epilepticus.
G40.311	Generalized idiopathic epilepsy and epileptic syndromes, intractable, with status epilepticus.
G40.319	Generalized idiopathic epilepsy and epileptic syndromes, intractable, without status epilepticus.
G40.401	Other generalized epilepsy and epileptic syndromes, not intractable, with status epilepticus.
G40.409	Other generalized epilepsy and epileptic syndromes, not intractable, without status epilepticus.
G40.411	Other generalized epilepsy and epileptic syndromes, intractable, with status epilepticus.
G40.419	Other generalized epilepsy and epileptic syndromes, intractable, without status epilepticus.
G40.501	Epileptic seizures related to external causes, not intractable, with status epilepticus.
G40.509	Epileptic seizures related to external causes, not intractable, without status epilepticus.
G40.801	Other epilepsy, not intractable, with status epilepticus.
G40.802	Other epilepsy, not intractable, without status epilepticus.
G40.803	Other epilepsy, intractable, with status epilepticus.
G40.804	Other epilepsy, intractable, without status epilepticus.
G40.811	Lennox-Gastaut syndrome, not intractable, with status epilepticus.
G40.812	Lennox-Gastaut syndrome, not intractable, without status epilepticus.
G40.813	Lennox-Gastaut syndrome, intractable, with status epilepticus.
G40.814	Lennox-Gastaut syndrome, intractable, without status epilepticus.
G40.821	Epileptic spasms, not intractable, with status epilepticus.
G40.822	Epileptic spasms, not intractable, without status epilepticus.
G40.823	Epileptic spasms, intractable, with status epilepticus.
G40.824	Epileptic spasms, intractable, without status epilepticus.
G40.89	Other seizures.
G40.901	Epilepsy, unspecified, not intractable, with status epilepticus.
G40.909	Epilepsy, unspecified, not intractable, without status epilepticus.
G40.911	Epilepsy, unspecified, intractable, with status epilepticus.
G40.919	Epilepsy, unspecified, intractable, without status epilepticus.

MS-DRGs 023 and 024 contain a number of cases representing neurostimulator generator and lead code combinations that are captured under a list referred to as "Major Device

Implant." The neurostimulator generators on this list are inserted into the skull, as well as into the subcutaneous areas of the chest, back, or abdomen. The leads are all inserted into

the brain. The RNS[®] neurostimulator generators are inserted into the skull and the leads are inserted into the brain. The following three ICD-10-PCS code combinations capture the use of the

RNS[®] neurostimulator and leads that would determine an assignment of a case to MS-DRGs 023 and 024, as shown in the “Major Device Implant” list:

- 0NH00NZ (Insertion of neurostimulator generator into skull, open approach), in combination with 00H00MZ (Insertion of neurostimulator lead into brain, open approach);
- 0NH00NZ (Insertion of neurostimulator generator into skull, open approach), in combination with 00H03MZ (Insertion of neurostimulator

lead into brain, percutaneous approach); and

- 0NH00NZ (Insertion of neurostimulator generator into skull, open approach), in combination with 00H04MZ (Insertion of neurostimulator lead into brain, percutaneous endoscopic approach).

As discussed in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19818 through 19822), we examined claims data from the December 2016 update of the FY 2016 MedPAR file for all cases representing the use of a neurostimulator in MS-DRGs 023 and

024 listed under the “Major Device Implant” list. As requested, we also examined the cases represented by the three neurostimulator code combinations, which capture the use of the RNS[®] neurostimulator that are a subset of the cases listed on the “Major Device Implant” list using the code combinations listed above, and that had a principal diagnosis of epilepsy from the list supplied by the requestor. The following tables show our findings for those cases in MS-DRGs 023 and 024 as well as findings for cases in MS-DRGs 020 and 021.

MS-DRGs 023 AND 024

[Neurostimulator Cases]

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 023—All cases	6,723	10.9	\$39,014
MS-DRG 023—Cases with neurostimulators (Major Device Implant list cases)	21	6.7	48,821
MS-DRG 023—Cases with neurostimulator generators inserted into skull (includes cases involving the use of the RNS [®] neurostimulator) and cases with a principal diagnosis of epilepsy	7	8.0	63,365
MS-DRG 024—All cases	2,275	5.5	27,574
MS-DRG 024—Cases with neurostimulators (Major Device Implant list cases)	394	2.1	31,669
MS-DRG 024—Cases with neurostimulator generators inserted into skull (includes cases involving the use of the RNS [®] neurostimulator) and cases with a principal diagnosis of epilepsy	54	4.3	51,041

CASES IN MS-DRGs 020 AND 021

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 020—All cases	1,372	16.7	\$72,926
MS-DRG 021—All cases	336	13.5	54,385

As shown by the table above, for MS-DRG 023, we identified a total of 6,723 cases, with an average length of stay of 10.9 days and average costs of \$39,014. Of the 6,723 cases in MS-DRG 023, there were 21 cases representing the implantation of any type of neurostimulator generator with an average length of stay of 6.7 days, and average costs of \$48,821. Of the 21 neurostimulator generator cases, there were 7 cases with the neurostimulator generators inserted into skull (including cases involving the use of the RNS[®] neurostimulator) and a principal diagnosis of epilepsy with an average length of stay of 8.0 days and average costs of \$63,365. For MS-DRG 024, we identified a total of 2,275 cases, with an average length of stay of 5.5 days and average costs of \$27,574. Of the 2,275 cases in MS-DRG 024, there were 394 cases representing the implantation of any type of neurostimulator generator with an average length of stay of 2.1 days and average costs of \$31,669. Of the 394 neurostimulator generator cases,

there were 54 cases with the neurostimulator generators inserted into skull (including cases involving the use of the RNS[®] neurostimulator) and a principal diagnosis of epilepsy with an average length of stay of 4.3 days and average costs of \$51,041.

There were only 61 cases involving the use of the RNS[®] neurostimulator with a principal diagnosis of epilepsy in MS-DRGs 023 and 024 (7 and 54, respectively). As we stated in the proposed rule, our clinical advisors reviewed this issue, and agreed that this number of cases is too small on which to base a rationale for creating a new MS-DRG. Basing a new MS-DRG on such a small number of cases (61) could lead to distortion in the relative payment weights for the MS-DRG because several expensive cases could impact the overall relative payment weight. Having larger clinical cohesive groups within an MS-DRG provides greater stability for annual updates to the relative payment weights.

We also examined the possibility of reassigning cases involving the use of the RNS[®] neurostimulator to MS-DRGs 020 and 021. As the table above shows, for MS-DRG 020, there were a total of 1,372 cases with an average length of stay of 16.7 days and average costs of \$72,926. For MS-DRG 021, there were a total of 336 cases with an average length of stay of 13.5 days and average costs of \$54,385. The cases in MS-DRG 023 with neurostimulator generators inserted into skull (including cases involving the use of the RNS[®] neurostimulator) and a principal diagnosis of epilepsy have average costs that are \$9,561 lower than that for all cases in MS-DRG 020 (\$63,365 compared to \$72,926), and the average length of stay is 8.7 days shorter (8.0 days compared to 16.7 days). We stated in the proposed rule that we do not believe these data support reassigning the cases in MS-DRG 023 with neurostimulator generators inserted into the skull (including cases involving the use of the RNS[®] neurostimulator) and a principal

diagnosis of epilepsy to MS-DRG 020. While the cases in MS-DRG 024 with neurostimulator generators inserted into the skull (including cases involving the use of the RNS[®] neurostimulator) and a principal diagnosis of epilepsy have average costs that are similar to the average costs of cases in MS-DRG 021 (\$51,041 compared to \$54,385), they have an average length of stay that is 9.2 days shorter (4.3 days compared to 13.5 days). Our clinical advisors reviewed the clinical issues and the claims data and, as we discussed in the proposed rule, did not support reassigning the cases with neurostimulator generators inserted into skull (including cases involving the use of the RNS[®] neurostimulator) and a principal diagnosis of epilepsy from MS-DRGs 023 and 024 to MS-DRGs 020 and 021. Our clinical advisors pointed out that the cases in MS-DRGs 020 and 021 have a principal diagnosis of a hemorrhage. The RNS[®] neurostimulator generators are not used to treat patients with diagnosis of a hemorrhage. Therefore, our clinical advisors stated that it was inappropriate to reassign cases representing a principal diagnosis of epilepsy to an MS-DRG that contains cases that represent the treatment of intracranial hemorrhage. They also stated that the differences in average length of stay and average costs support this recommendation.

We then explored alternative MS-DRG assignments, as was requested. We noted that the 7 cases with the neurostimulator generators inserted into the skull (including cases involving the use of the RNS[®] neurostimulator) and a principal diagnosis of epilepsy had an average length of stay of 8.0 days and average costs of \$63,365, as compared to the 6,723 cases in MS-DRG 023 that had an average length of stay of 10.9 days and average costs of \$39,014. While these neurostimulator cases had average costs that were \$24,351 higher than the average costs of all cases in MS-DRG 023, there were only a total of 7 cases. There may have been other factors contributing to the higher costs. We noted that the 54 cases with the neurostimulator generators inserted into skull (including cases involving the use of the RNS[®] neurostimulator) and a principal diagnosis of epilepsy in MS-DRG 024 had average costs of \$51,041 and an average length of stay of 4.3 days, compared to average costs of

\$27,574 and average length of stay of 5.5 days for all cases in MS-DRG 024. By reassigning all cases with the neurostimulator generators inserted into the skull (including cases involving the use of the RNS[®] neurostimulator) and a principal diagnosis of epilepsy to MS-DRG 023, even if there is not a MCC present, the cases would receive higher payment. The average costs of MS-DRG 023 were \$39,014, compared to the average costs of \$51,041 for the cases with the neurostimulator generators inserted into skull (including cases involving the use of the RNS[®] neurostimulator) and a principal diagnosis of epilepsy in MS-DRG 024. Our clinical advisors reviewed the clinical issues and the claims data, and supported the recommendation to reassign the cases with the neurostimulator generators inserted into skull (including cases involving the use of the RNS[®] neurostimulator) and a principal diagnosis of epilepsy to MS-DRG 023, even if there is not a MCC reported. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19818 through 19822), we proposed to reassign all cases with a principal diagnosis of epilepsy from the epilepsy diagnosis list provided earlier, and one of the following ICD-10-PCS code combinations capturing cases with the neurostimulator generators inserted into the skull (including cases involving the use of the RNS[®] neurostimulator), to MS-DRG 023, even if there is no MCC reported:

- 0NH00NZ (Insertion of neurostimulator generator into skull, open approach), in combination with 00H00MZ (Insertion of neurostimulator lead into brain, open approach);
- 0NH00NZ (Insertion of neurostimulator generator into skull, open approach), in combination with 00H03MZ (Insertion of neurostimulator lead into brain, percutaneous approach); and
- 0NH00NZ (Insertion of neurostimulator generator into skull, open approach), in combination with 00H04MZ (Insertion of neurostimulator lead into brain, percutaneous endoscopic approach).

We also proposed to change the title of MS-DRG 023 from “Craniotomy with Major Device Implant or Acute Complex Central Nervous System (CNS) Principal Diagnosis (PDX) with MCC or Chemo Implant” to “Craniotomy with Major Device Implant or Acute Complex

Central Nervous System (CNS) Principal Diagnosis (PDX) with MCC or Chemotherapy Implant or Epilepsy with Neurostimulator” to reflect the proposed modifications to MS-DRG assignments.

We invited public comments on our proposals.

Comment: Commenters supported CMS’ proposal to reassign cases with insertion of a neurostimulator generator and a principal diagnosis of epilepsy to MS-DRG 023. The commenters also agreed with the proposed change in the title of MS-DRG 023. The commenters stated that the updates were necessary for Comprehensive Epilepsy Centers to be able to offer the RNS[®] neurostimulator. One commenter who supported this MS-DRG update recommended that codes in subcategories G40.A and G40.B be included in the list of epilepsy diagnosis codes classified to MS-DRG 023 because these subcategory codes are also epilepsy codes.

Response: We appreciate the commenters’ support for our recommendations. We identified the following list of epilepsy codes that are included under categories G40.A and G40.B.

- G40.A01 Absence epileptic syndrome, not intractable, with status epilepticus
- G40.A09 Absence epileptic syndrome, not intractable, without status epilepticus
- G40.A11 Absence epileptic syndrome, intractable, with status epilepticus
- G40.A19 Absence epileptic syndrome, intractable, without status epilepticus
- G40.B01 Juvenile myoclonic epilepsy, not intractable, with status epilepticus
- G40.B09 Juvenile myoclonic epilepsy, not intractable, without status epilepticus
- G40.B11 Juvenile myoclonic epilepsy, intractable, with status epilepticus
- G40.B19 Juvenile myoclonic epilepsy, intractable, without status epilepticus

We agree that the codes listed above are also epilepsy codes and should be added to the list of epilepsy codes assigned to MS-DRG 023 because they also capture a type of epilepsy. Our clinical advisors reviewed this issue and agree with adding the additional epilepsy codes.

For FY 2018, the complete list of epilepsy codes assigned to MS-DRG 023 under our finalized policy is as follows:

ICD-10-CM code	ICD-10-CM code title
G40.001	Localization-related (focal) (partial) idiopathic epilepsy and epileptic syndromes with seizures of localized onset, not intractable, with status epilepticus.

ICD-10-CM code	ICD-10-CM code title
G40.009	Localization-related (focal) (partial) idiopathic epilepsy and epileptic syndromes with seizures of localized onset, not intractable, without status epilepticus.
G40.011	Localization-related (focal) (partial) idiopathic epilepsy and epileptic syndromes with seizures of localized onset, intractable, with status epilepticus.
G40.019	Localization-related (focal) (partial) idiopathic epilepsy and epileptic syndromes with seizures of localized onset, intractable, without status epilepticus.
G40.101	Localization-related (focal) (partial) symptomatic epilepsy and epileptic syndromes with simple partial seizures, not intractable, with status epilepticus.
G40.119	Localization-related (focal) (partial) symptomatic epilepsy and epileptic syndromes with simple partial seizures, intractable, without status epilepticus.
G40.201	Localization-related (focal) (partial) symptomatic epilepsy and epileptic syndromes with complex partial seizures, not intractable, with status epilepticus.
G40.209	Localization-related (focal) (partial) symptomatic epilepsy and epileptic syndromes with complex partial seizures, not intractable, without status epilepticus.
G40.211	Localization-related (focal) (partial) symptomatic epilepsy and epileptic syndromes with complex partial seizures, intractable, with status epilepticus.
G40.219	Localization-related (focal) (partial) symptomatic epilepsy and epileptic syndromes with complex partial seizures, intractable, without status epilepticus.
G40.301	Generalized idiopathic epilepsy and epileptic syndromes, not intractable, with status epilepticus.
G40.309	Generalized idiopathic epilepsy and epileptic syndromes, not intractable, without status epilepticus.
G40.311	Generalized idiopathic epilepsy and epileptic syndromes, intractable, with status epilepticus.
G40.319	Generalized idiopathic epilepsy and epileptic syndromes, intractable, without status epilepticus.
G40.A01	Absence epileptic syndrome, not intractable, with status epilepticus.
G40.A09	Absence epileptic syndrome, not intractable, without status epilepticus.
G40.A11	Absence epileptic syndrome, intractable, with status epilepticus.
G40.A19	Absence epileptic syndrome, intractable, without status epilepticus.
G40.B01	Juvenile myoclonic epilepsy, not intractable, with status epilepticus.
G40.B09	Juvenile myoclonic epilepsy, not intractable, without status epilepticus.
G40.B11	Juvenile myoclonic epilepsy, intractable, with status epilepticus.
G40.B19	Juvenile myoclonic epilepsy, intractable, without status epilepticus.
G40.401	Other generalized epilepsy and epileptic syndromes, not intractable, with status epilepticus.
G40.409	Other generalized epilepsy and epileptic syndromes, not intractable, without status epilepticus.
G40.411	Other generalized epilepsy and epileptic syndromes, intractable, with status epilepticus.
G40.419	Other generalized epilepsy and epileptic syndromes, intractable, without status epilepticus.
G40.501	Epileptic seizures related to external causes, not intractable, with status epilepticus.
G40.509	Epileptic seizures related to external causes, not intractable, without status epilepticus.
G40.801	Other epilepsy, not intractable, with status epilepticus.
G40.802	Other epilepsy, not intractable, without status epilepticus.
G40.803	Other epilepsy, intractable, with status epilepticus.
G40.804	Other epilepsy, intractable, without status epilepticus.
G40.811	Lennox-Gastaut syndrome, not intractable, with status epilepticus.
G40.812	Lennox-Gastaut syndrome, not intractable, without status epilepticus.
G40.813	Lennox-Gastaut syndrome, intractable, with status epilepticus.
G40.814	Lennox-Gastaut syndrome, intractable, without status epilepticus.
G40.821	Epileptic spasms, not intractable, with status epilepticus.
G40.822	Epileptic spasms, not intractable, without status epilepticus.
G40.823	Epileptic spasms, intractable, with status epilepticus.
G40.824	Epileptic spasms, intractable, without status epilepticus.
G40.89	Other seizures.
G40.901	Epilepsy, unspecified, not intractable, with status epilepticus.
G40.909	Epilepsy, unspecified, not intractable, without status epilepticus.
G40.911	Epilepsy, unspecified, intractable, with status epilepticus.
G40.919	Epilepsy, unspecified, intractable, without status epilepticus.

After consideration of the public comments that we received, we are finalizing our proposal to reassign all cases with a principal diagnosis of epilepsy from the epilepsy diagnosis list provided above, and one of the following ICD-10-PCS code combinations capturing cases with the neurostimulator generators inserted into the skull (including cases involving the use of the RNS[®] neurostimulator), to MS-DRG 023, even if there is no MCC reported:

- 0NH00NZ (Insertion of neurostimulator generator into skull, open approach), in combination with

00H00MZ (Insertion of neurostimulator lead into brain, open approach);

- 0NH00NZ (Insertion of neurostimulator generator into skull, open approach), in combination with 00H03MZ (Insertion of neurostimulator lead into brain, percutaneous approach); and

- 0NH00NZ (Insertion of neurostimulator generator into skull, open approach), in combination with 00H04MZ (Insertion of neurostimulator lead into brain, percutaneous endoscopic approach).

We also finalizing our proposed change to the title of MS-DRG 023 from

“Craniotomy with Major Device Implant or Acute Complex Central Nervous System (CNS) Principal Diagnosis (PDX) with MCC or Chemo Implant” to “Craniotomy with Major Device Implant or Acute Complex Central Nervous System (CNS) Principal Diagnosis (PDX) with MCC or Chemotherapy Implant or Epilepsy with Neurostimulator” to reflect the modifications to MS-DRG assignments.

c. Precerebral Occlusion or Transient Ischemic Attack with Thrombolytic

We received a request to add the ICD-10-CM diagnosis codes currently

assigned to MS-DRGs 067 and 068 (Nonspecific CVA and Precerebral Occlusion without Infarction with MCC and without MCC, respectively) and the ICD-10-CM diagnosis codes currently assigned to MS-DRG 069 (Transient Ischemia) to the GROUPER logic for

MS-DRGs 061, 062, and 063 (Acute Ischemic Stroke with Use of Thrombolytic Agent with MCC, with CC, and without CC/MCC, respectively) when those conditions are sequenced as the principal diagnosis and reported with an ICD-10-PCS procedure code

describing use of a thrombolytic agent (for example, tPA).

The ICD-10-CM diagnosis codes displayed in the table below identify the conditions that are assigned to MS-DRGs 067 and 068 when reported as a principal diagnosis.

ICD-10-CM code	Code description
I65.01	Occlusion and stenosis of right vertebral artery.
I65.02	Occlusion and stenosis of left vertebral artery.
I65.03	Occlusion and stenosis of bilateral vertebral arteries.
I65.09	Occlusion and stenosis of unspecified vertebral artery.
I65.1	Occlusion and stenosis of basilar artery.
I65.21	Occlusion and stenosis of right carotid artery.
I65.22	Occlusion and stenosis of left carotid artery.
I65.23	Occlusion and stenosis of bilateral carotid arteries.
I65.29	Occlusion and stenosis of unspecified carotid artery.
I65.8	Occlusion and stenosis of other precerebral arteries.
I65.9	Occlusion and stenosis of unspecified precerebral artery.
I66.01	Occlusion and stenosis of right middle cerebral artery.
I66.02	Occlusion and stenosis of left middle cerebral artery.
I66.03	Occlusion and stenosis of bilateral middle cerebral arteries.
I66.09	Occlusion and stenosis of unspecified middle cerebral artery.
I66.11	Occlusion and stenosis of right anterior cerebral artery.
I66.12	Occlusion and stenosis of left anterior cerebral artery.
I66.13	Occlusion and stenosis of bilateral anterior cerebral arteries.
I66.19	Occlusion and stenosis of unspecified anterior cerebral artery.
I66.21	Occlusion and stenosis of right posterior cerebral artery.
I66.22	Occlusion and stenosis of left posterior cerebral artery.
I66.23	Occlusion and stenosis of bilateral posterior cerebral arteries.
I66.29	Occlusion and stenosis of unspecified posterior cerebral artery.
I66.3	Occlusion and stenosis of cerebellar arteries.
I66.8	Occlusion and stenosis of other cerebral arteries.
I66.9	Occlusion and stenosis of unspecified cerebral artery.

The ICD-10-CM diagnosis codes displayed in the table below identify the conditions that are assigned to MS-DRG

069 when reported as a principal diagnosis.

ICD-10-CM code	Code description
G45.0	Vertebro-basilar artery syndrome.
G45.1	Carotid artery syndrome (hemispheric).
G45.2	Multiple and bilateral precerebral artery syndromes.
G45.8	Other transient cerebral ischemic attacks and related syndromes.
G45.9	Transient cerebral ischemic attack, unspecified.
G46.0	Middle cerebral artery syndrome.
G46.1	Anterior cerebral artery syndrome.
G46.2	Posterior cerebral artery syndrome.
I67.81	Acute cerebrovascular insufficiency.
I67.82	Cerebral ischemia.
I67.841	Reversible cerebrovascular vasoconstriction syndrome.
I67.848	Other cerebrovascular vasospasm and vasoconstriction.
I67.89	Other cerebrovascular disease.

The ICD-10-PCS procedure codes displayed in the table below describe use of a thrombolytic agent. These

procedure codes are designated as non-O.R. procedure codes affecting the MS-

DRG assignment for MS-DRGs 061, 062, and 063.

ICD-10-PCS code	Code description
3E03017	Introduction of other thrombolytic into peripheral vein, open approach.
3E03317	Introduction of other thrombolytic into peripheral vein, percutaneous approach.
3E04017	Introduction of other thrombolytic into central vein, open approach.
3E04317	Introduction of other thrombolytic into central vein, percutaneous approach.
3E05017	Introduction of other thrombolytic into peripheral artery, open approach.
3E05317	Introduction of other thrombolytic into peripheral artery, percutaneous approach.
3E06017	Introduction of other thrombolytic into central artery, open approach.
3E06317	Introduction of other thrombolytic into central artery, percutaneous approach.

ICD-10-PCS code	Code description
3E08017	Introduction of other thrombolytic into heart, open approach.
3E08317	Introduction of other thrombolytic into heart, percutaneous approach.

At the onset of stroke symptoms, tPA must be given within 3 hours (or up to 4.5 hours for certain eligible patients) in an attempt to dissolve a clot and improve blood flow to the specific area affected in the brain. If, upon receiving the tPA, the stroke symptoms completely resolve within 24 hours and imaging studies (if performed) are negative, the patient has suffered what is clinically defined as a transient ischemic attack, not a stroke. According to the requestor, the current MS-DRG assignments do not account for this

subset of patients who were successfully treated with tPA to prevent a stroke.

In addition, the requestor expressed concerns regarding documentation and quality of the data. For example, the requestor noted that the terms “stroke-in-evolution” and “aborted stroke” may be documented as a “workaround” for a patient exhibiting symptoms of a stroke who receives tPA and, regardless of the outcome, would result in assignment to MS-DRG 061, 062, or 063. Therefore, in cases where the patient’s stroke symptoms completely

resolved upon receiving tPA and the patient clinically suffered a precerebral occlusion or transient ischemia, this documentation practice is incorrectly labeling these patients as having had a stroke and ultimately leading to inaccurate data.

As discussed in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19822 through 19824), we analyzed claims data from the December 2016 update of the FY 2016 MedPAR file for MS-DRGs 061, 062, and 063. Our findings are shown in the tables below.

MS-DRGs FOR ACUTE ISCHEMIC STROKE WITH USE OF THROMBOLYTIC AGENT

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 061—All cases	4,528	6.4	\$20,270
MS-DRG 062—All cases	8,600	4.2	14,124
MS-DRG 063—All cases	1,859	3.0	11,898

Our analysis also consisted of claims data for MS-DRGs 067 and 068 when reported with a procedure code describing the use of tPA. As shown in the table below, the total number of cases reported in MS-DRG 067 was 811, with an average length of stay of 4.8

days and average costs of \$10,248. There were 9 cases in MS-DRG 067 with a precerebral occlusion receiving tPA, with an average length of stay of 5.2 days and average costs of \$20,156. The total number of cases reported in MS-DRG 068 was 3,809, with an average

length of stay of 2.8 days and average costs of \$6,555. There were 33 cases in MS-DRG 068 with a precerebral occlusion receiving tPA, with an average length of stay of 4.3 days and average costs of \$13,814.

MS-DRGs FOR PRECEREBRAL OCCLUSION WITH USE OF THROMBOLYTIC AGENT

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 067—All cases	811	4.8	\$10,248
MS-DRG 067—Cases with tPA	9	5.2	20,156
MS-DRG 068—All cases	3,809	2.8	6,555
MS-DRG 068—Cases with tPA	33	4.3	13,814

As we stated in the proposed rule, we recognize that while the volume of cases for patients with a diagnosis of precerebral occlusion receiving tPA in MS-DRGs 067 and 068 is relatively low, the average length of stay is longer, and the average costs for this subset of

patients is approximately twice the amount of the average costs in comparison to all cases in MS-DRGs 067 and 068.

We then analyzed claims data for cases in MS-DRG 069 when reported with a procedure code describing the use of tPA. As shown in the table below,

the total number of cases reported in MS-DRG 069 was 50,633, with an average length of stay of 2.5 days and average costs of \$5,518. There were 554 cases of transient ischemia receiving tPA, with an average length of stay of 3.2 days and average costs of \$12,481.

MS-DRG FOR TRANSIENT ISCHEMIA WITH USE OF THROMBOLYTIC AGENT

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 069—All cases	50,633	2.5	\$5,518
MS-DRG 069—Cases with tPA	554	3.2	12,481

Similar to the findings for MS-DRGs 067 and 068, the number of cases for

transient ischemia receiving tPA in MS-DRG 069 was relatively low in

comparison to all the cases in the MS-DRG, with a longer average length of

stay and approximately twice the amount of average costs in comparison to all cases in MS-DRG 069.

We stated in the proposed rule that the results of analysis of the data and the advice of our clinical advisors support adding the ICD-10-CM diagnosis codes in MS-DRGs 067, 068, and 069 to the list of principal diagnoses in MS-DRGs 061, 062, and 063 to better account for this subset of patients who were successfully treated with tPA to prevent a stroke, to identify the increasing use of thrombolytics at the onset of symptoms of a stroke, to further encourage appropriate physician documentation for a precerebral occlusion or transient ischemic attack when patients are treated with tPA, and to reflect more appropriate payment for the resources involved in evaluating and treating these patients. We stated that we believe this approach will improve accuracy of the data and assist in addressing the concern that facilities may be reporting incorrect diagnoses for this subset of patients.

Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19824), for FY 2018, we proposed to add the ICD-10-CM diagnosis codes listed earlier in this section that are currently assigned to MS-DRGs 067 and 068 and the ICD-10-CM diagnosis codes currently assigned to MS-DRG 069 to the GROUPER logic for MS-DRGs 061, 062, and 063 when those conditions are sequenced as the principal diagnosis and reported with an ICD-10-PCS procedure code describing use of a thrombolytic agent (for example, tPA). We invited public comments on our proposal.

We also proposed to retitle MS-DRGs 061, 062, and 063 as “Ischemic Stroke, Precerebral Occlusion or Transient Ischemia with Thrombolytic Agent with MCC, with CC and without CC/MCC”, respectively, and to retitle MS-DRG 069 as “Transient Ischemia without Thrombolytic”.

We invited public comments on our proposals.

Comment: Several commenters supported the proposal to modify the GROUPER logic for MS-DRGs 061, 062, and 063 to better account for the subset of patients who are treated successfully with tPA at the onset of stroke symptoms. The commenters agreed that this change will encourage appropriate physician documentation for a precerebral occlusion or transient ischemic attack when patients are treated with tPA and that it will more accurately reflect proper payment for stroke care. Commenters also agreed with retitling MS-DRGs 061, 062, 063 and 069. One commenter who supported the proposals also suggested that CMS consider developing new MS-DRGs in the future to specifically distinguish acute ischemic strokes from precerebral occlusions and transient ischemia, with and without thrombolytics, with and without MCC/CC, respectively.

Response: We appreciate the commenters’ support. As additional ICD-10 claims data become available, we will continue to welcome input from the public and consider further modifications to the ICD-10 MS-DRGs if warranted.

After consideration of the public comments that we received, we are finalizing our proposal to add the ICD-10-CM diagnosis codes listed earlier in this section that are currently assigned to MS-DRGs 067 and 068 and the ICD-10-CM diagnosis codes currently assigned to MS-DRG 069 to the GROUPER logic for MS-DRGs 061, 062, and 063 when those conditions are sequenced as the principal diagnosis and reported with an ICD-10-PCS procedure code describing use of a thrombolytic agent (for example, tPA). We also are finalizing our proposal to retitle MS-DRGs 061, 062, and 063 as “Ischemic Stroke, Precerebral Occlusion or Transient Ischemia with

Thrombolytic Agent with MCC, with CC and without CC/MCC”, respectively, and to retitle MS-DRG 069 as “Transient Ischemia without Thrombolytic” effective October 1, 2017 for the ICD-10 MS-DRGs Version 35.

3. MDC 2 (Diseases and Disorders of the Eye: Swallowing Eye Drops (Tetrahydrozoline)

We received a request to reassign the following ICD-10-CM diagnosis codes that capture swallowing eye drops from MS-DRGs 124 and 125 (Other Disorders of the Eye with and without MCC, respectively) to MS-DRGs 917 and 918 (Poisoning and Toxic Effects of Drugs with and without MCC, respectively). The requestor described a case where a patient was treated following swallowing eye drops, specifically Tetrahydrozoline, which the provider considers to be a poisoning, not a disorder of the eye.

- T49.5X1A (Poisoning by ophthalmological drugs and preparations, accidental (unintentional), initial encounter);
- T49.5X2A (Poisoning by ophthalmological drugs and preparations, intentional self-harm, initial encounter);
- T49.5X3A (Poisoning by ophthalmological drugs and preparations, assault, initial encounter); and
- T49.5X4A (Poisoning by ophthalmological drugs and preparations, undetermined, initial encounter).

As stated in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19824 through 19825), we agree with the requestor that the four diagnosis codes describe a poisoning, not a disorder of the eye. We examined claims data for cases in MS-DRGs 124 and 125 from the December 2016 update of the FY 2016 MedPAR file. Our findings are shown in the table below.

MS-DRG 124 AND 125 CASES

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 124—All cases	874	4.8	\$8,826
MS-DRG 124—Cases reporting poisoning by ophthalmological drugs and preparations code	1	2.0	3,007
MS-DRG 125—All cases	3,205	3.3	5,565
MS-DRG 125—Cases reporting poisoning by ophthalmological drugs and preparations code	1	2.0	1,446

As shown in the table above, there were only 2 cases of poisoning by ophthalmological drugs and preparations—1 case in MS-DRG 124 with an average length of stay of 2 days and average costs of \$3,007 and 1 case

in MS-DRG 125 with an average length of stay of 2 days and average costs of \$1,446. The case of poisoning by ophthalmological drugs and preparations in MS-DRG 124 had a shorter average length of stay than the

average length of stay for all cases in MS-DRG 124 (2.0 days compared to 4.8 days) and lower average costs than the average costs for all cases in MS-DRG 124 (\$3,007 compared to \$8,826). The case of poisoning by ophthalmological

drugs and preparations in MS-DRG 125 also had a shorter average length of stay than the average length of stay for all cases in MS-DRG 125 (2.0 days compared to 3.3 days) and lower

average costs than the average costs for all cases in MS-DRG 125 (\$1,446 compared to \$5,565).

We also examined claims data on cases reported in MS-DRGs 917 and 918

from the December 2016 update of the FY 2016 MedPAR file. Our findings are shown in the table below.

MS-DRGs 917 AND 918 CASES

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 917— All cases	32,381	4.8	\$9,882
MS-DRG 918—All cases	24,061	3.0	5,326

As shown in the table above, the 2 cases of poisoning by ophthalmological drugs and preparations also had shorter average lengths of stay than the average length of stay for all cases in MS-DRGs 917 and 918 (2.0 days compared to 4.8 days in MS-DRG 917 and 2.0 days compared to 3.0 days in MS-DRG 918). The average costs also were lower for the 2 cases of poisoning by ophthalmological drugs and preparations than the average costs for all cases in MS-DRGs 917 and 918 (\$3,007 compared to \$9,882 for all cases in MS-DRG 917 and \$1,446 compared to \$5,326 for all cases in MS-DRG 918). Therefore, cases with this type of poisoning had lower average lengths of stay and lower average costs than all other cases assigned to MS-DRGs 124 and 125 and cases in MS-DRGs 917 and 918 where poisonings are assigned.

Because the codes clearly capture a poisoning and not an eye disorder, we stated in the proposed rule that we believe that these codes are more appropriately assigned to MS-DRGs 917 and 918 where other poisonings are assigned. Our clinical advisors also reviewed this issue and agreed that the codes should be moved from MS-DRGs 124 and 125 to MS-DRGs 917 and 918

because they clearly capture a poisoning and not a disorder of the eye. Because MS-DRGs 917 and 918 contain cases with multiple types of poisonings, it is expected that some types of poisoning cases will have longer lengths of stay and greater average costs than other types of poisoning cases. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19824 through 19825), we proposed to reassign the following ICD-10-CM diagnosis codes from MS-DRGs 124 and 125 to MS-DRGs 917 and 918 for FY 2018: T49.5X1A; T49.5X2A; T49.5X3A; and T49.5X4A.

We invited public comments on our proposal.

Comment: Several commenters supported CMS' proposal to reassign four poisoning codes from MS-DRGs 124 and 125 to MS-DRGs 917 and 918. The commenters stated that the proposal was reasonable considering the information provided.

Response: We appreciate the commenters' support for our proposal.

After consideration of the public comments that we received, we are finalizing our proposal to reassign the following ICD-10-CM diagnosis codes from MS-DRGs 124 and 125 to MS-DRGs 917 and 918 for FY 2018:

T49.5X1A; T49.5X2A; T49.5X3A; and T49.5X4A.

4. MDC 5 (Diseases and Disorders of the Circulatory System)

a. Percutaneous Cardiovascular Procedures and Insertion of a Radioactive Element

Currently, under ICD-10-PCS, the logic for MS-DRG 246 (Percutaneous Cardiovascular Procedures with Drug-Eluting Stent with MCC or 4+ Vessels or Stents), MS-DRG 247 (Percutaneous Cardiovascular Procedures with Drug-Eluting Stent without MCC), MS-DRG 248 (Percutaneous Cardiovascular Procedures with Non-Drug-Eluting Stent with MCC or 4+ Vessels or Stents), and MS-DRG 249 (Percutaneous Cardiovascular Procedures with Non-Drug-Eluting Stent without MCC) includes six procedure codes that describe the insertion of a radioactive element. When any of these six procedure codes are reported without the reporting of a percutaneous cardiovascular procedure code, they are assigned to MS-DRG 264 (Other Circulatory System O.R. Procedures). The six specific procedure codes are shown in the table below.

ICD-10-PCS code	Code description
OWHC01Z	Insertion of radioactive element into mediastinum, open approach.
OWHC31Z	Insertion of radioactive element into mediastinum, percutaneous approach.
OWHC41Z	Insertion of radioactive element into mediastinum, percutaneous endoscopic approach.
OWHD01Z	Insertion of radioactive element into pericardial cavity, open approach.
OWHD31Z	Insertion of radioactive element into pericardial cavity, percutaneous approach.
OWHD41Z	Insertion of radioactive element into pericardial cavity, percutaneous endoscopic approach.

Unlike procedures involving the insertion of stents, none of the procedures described by the procedure codes listed above are performed in conjunction with a percutaneous cardiovascular procedure, and two of the six procedures described by these procedure codes (ICD-10-PCS codes OWHC01Z and OWHD01Z) are not performed using a percutaneous approach, but rather describe an open

approach to performing the specific procedure. We stated in the proposed rule that our clinical advisors agreed that these procedures should not be used to classify cases within MS-DRGs 246 through 249 because they are not performed in conjunction with a percutaneous cardiovascular procedure. Furthermore, the indications for the insertion of a radioactive element typically involve a diagnosis of cancer,

whereas the indications for the insertion of a coronary artery stent typically involve a diagnosis of coronary artery disease.

We conducted an analysis for the six procedures described by these procedure codes by reviewing the claims data for MS-DRGs 246 through 249 from the December 2016 update of the FY 2016 MedPAR file. We did not find any cases where any one of the six

procedure codes listed above was reported. As noted earlier, when any of these six procedure codes are reported without the reporting of a percutaneous cardiovascular procedure code, the case is assigned to MS-DRG 264. Therefore, as we discussed in the proposed rule, our clinical advisors also agreed that it would be more appropriate to remove these six procedure codes from MS-DRGs 246 through 249, but maintain their current assignment in MS-DRG 264. Based on our analysis and the advice from our clinical advisors, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19825 through 19826), for FY 2018, we proposed to remove ICD-10-PCS procedure codes 0WHC01Z, 0WHC31Z, 0WHC41Z, 0WHD01Z, 0WHD31Z, and 0WHD41Z from MS-DRGs 246 through 249, but maintain their current assignment in MS-DRG 264.

We invited public comments on our proposal to remove the six procedure codes listed above from MS-DRGs 246 through 249. We also invited public comments on our proposal to maintain their current assignment in MS-DRG 264.

Comment: Commenters supported the proposal to remove the six procedure codes describing insertion of radioactive element into the mediastinum and insertion of radioactive element into the pericardial cavity from MS-DRGs 246 through 249 and to maintain their assignment in MS-DRG 264.

Response: We appreciate the commenters' support.

Comment: One commenter noted that CMS did not discuss how we identified the listed procedure codes or why CMS believes these procedure codes were assigned to MS-DRGs 246 through 249 erroneously. However, the commenter also agreed with the proposal to remove the six procedure codes describing insertion of radioactive element into the mediastinum and insertion of radioactive element into the pericardial cavity from MS-DRGs 246 through 249 and to maintain their assignment in MS-DRG 264. The commenter acknowledged that eliminating erroneous assignments that may have occurred as a result of the transition to ICD-10 is important and requires ongoing efforts.

Response: We appreciate the commenter's support. In response to the comment regarding how these procedure codes were identified, as discussed in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19825), we recognized the fact that two of the six

procedure codes describing insertion of radioactive element (0WHC01Z and 0WHD01Z) are not performed using a percutaneous approach, but rather described an open approach to performing the specific procedure and their assignment was to a group of "percutaneous" cardiovascular procedure MS-DRGs. Because the comparable translation of these procedure codes under ICD-9-CM, procedure code 92.27 (Implantation or insertion of radioactive element) did not specify an approach, all comparable ICD-10-PCS translations of the ICD-9-CM code were automatically replicated to the same ICD-10 MS-DRGs during the transition. We agree with the commenter that eliminating erroneous assignments that may have occurred as a result of the transition to ICD-10 is important and requires ongoing efforts.

After consideration of the public comments that we received, we are finalizing our proposal to remove ICD-10-PCS procedure codes 0WHC01Z, 0WHC31Z, 0WHC41Z, 0WHD01Z, 0WHD31Z, and 0WHD41Z from MS-DRGs 246 through 249, and maintain their current assignment in MS-DRG 264 effective October 1, 2017 for ICD-10 MS-DRGs Version 35.

b. Proposed Modification of the Titles for MS-DRG 246 (Percutaneous Cardiovascular Procedures With Drug-Eluting Stent With MCC or 4+ Vessels or Stents) and MS-DRG 248 (Percutaneous Cardiovascular Procedures With Non-Drug-Eluting Stent With MCC or 4+ Vessels or Stents)

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19826), we proposed to revise the titles for MS-DRGs 246 (Percutaneous Cardiovascular Procedures with Drug-Eluting Stent with MCC or 4+ Vessels or Stents) and MS-DRG 248 (Percutaneous Cardiovascular Procedures with Non-Drug-Eluting Stent with MCC or 4+ Vessels or Stents) to better reflect the ICD-10-PCS terminology of "arteries" versus "vessels" as used in the procedure code titles within the classification. Specifically, we proposed to revise the title of MS-DRG 246 to "Percutaneous Cardiovascular Procedures with Drug-Eluting Stent with MCC or 4+ Arteries or Stents". We proposed to revise the title of MS-DRG 248 to "Percutaneous Cardiovascular Procedures with Non-Drug-Eluting Stent with MCC or 4+ Arteries or Stents". We invited public comments on our proposals.

Comment: Commenters agreed with the proposal to update the titles for MS-DRG 246 and MS-DRG 248 to better reflect the ICD-10-PCS terminology of "arteries" versus "vessels" as used in the procedure code titles within the classification. One commenter noted that this change adds specificity and makes sense anatomically because percutaneous coronary intervention procedures are performed in arteries, which are a type of vessel.

Response: We appreciate the commenters' support.

After consideration of the public comments that we received, we are finalizing our proposal to revise the titles for MS-DRGs 246 and MS-DRG 248. We are finalizing the title of MS-DRG 246 to "Percutaneous Cardiovascular Procedures with Drug-Eluting Stent with MCC or 4+ Arteries or Stents" and the title of MS-DRG 248 to "Percutaneous Cardiovascular Procedures with Non-Drug-Eluting Stent with MCC or 4+ Arteries or Stents" effective October 1, 2017 for ICD-10 MS-DRGs Version 35.

c. Transcatheter Aortic Valve Replacement (TAVR) and Left Atrial Appendage Closure (LAAC)

We received a request to create new MS-DRGs for cases involving transcatheter aortic valve replacement (TAVR) and left atrial appendage closure (LAAC) procedures when performed in combination in the same operative episode. The requestor stated that there are both clinical and financial advantages for the patient when performing concomitant procedures. For example, the requestor indicated that the clinical advantages for the patient may include single exposure to anesthesia and a reduction in overall procedure time, while the financial advantages may include lower cost-sharing. The requestor further believed that a single hospitalization for these concomitant procedures could be cost-effective for various providers and payers.

TAVR is indicated and approved as a treatment option for patients diagnosed with symptomatic aortic stenosis who are not surgical candidates for traditional open surgical techniques. Cases involving TAVR procedures are assigned to MS-DRGs 266 and 267 (Endovascular Cardiac Valve Replacement with MCC and without MCC, respectively), and are identified by the following ICD-10-PCS procedure codes shown in the table below.

ICD-10-PCS code	Code description
02RF37Z	Replacement of aortic valve with autologous tissue substitute, percutaneous approach.
02RF38Z	Replacement of aortic valve with zooplastic tissue, percutaneous approach.
02RF3JZ	Replacement of aortic valve with synthetic substitute, percutaneous approach.
02RF3KZ	Replacement of aortic valve with nonautologous tissue substitute, percutaneous approach.
02RF37H	Replacement of aortic valve with autologous tissue substitute, transapical, percutaneous approach.
02RF38H	Replacement of aortic valve with zooplastic tissue, transapical, percutaneous approach.
02RF3JH	Replacement of aortic valve with synthetic substitute, transapical, percutaneous approach.
02RF3KH	Replacement of aortic valve with nonautologous tissue substitute, transapical, percutaneous approach.

LAAC is indicated and approved as a treatment option for patients diagnosed with atrial fibrillation. Cases involving LAAC procedures are assigned to MS-DRGs 273 and 274 (Percutaneous Intracardiac Procedures with MCC and without MCC, respectively), and are identified by ICD-10-PCS procedure code 02L73DK (Occlusion of left atrial appendage with intraluminal device, percutaneous approach).

The requestor suggested that the structure of the possible new MS-DRGs for TAVR procedures performed in combination with LAAC procedures could be modeled similar to the structure of MS-DRGs 266 and 267. While contemplating creation of the new MS-DRGs, the requestor asked CMS to also consider subdividing the

possible new MS-DRGs into two severity levels and title them as follows:

- Suggested MS-DRG 26x (Endovascular Cardiac Valve Replacement with LAAC with MCC); and
- Suggested MS-DRG 26x (Endovascular Cardiac Valve Replacement with LAAC without MCC).

As discussed in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19826 through 19827), we analyzed claims data from the December 2016 update of the FY 2016 MedPAR file for MS-DRGs 266 and 267 and identified the cases reporting TAVR procedures with and without an LAAC procedure. As shown in the table below, the data findings show that the total number of cases reported in MS-DRG 266 was 9,949,

with an average length of stay of 7.2 days and average costs of \$56,762. There were 9,872 cases involving a TAVR procedure, with an average length of stay of 7.2 days and average costs of \$56,628. There was only one case identified in MS-DRG 266 where both a TAVR and an LAAC procedure were reported. This case had an average length of stay of 21.0 days and average costs of \$60,226. For MS-DRG 267, the total number of cases found was 13,290, with an average length of stay of 3.5 days and average costs of \$45,297. There were 13,245 cases involving a TAVR procedure, with an average length of stay of 3.5 days and average costs of \$45,302. There were no cases identified in MS-DRG 267 where both a TAVR and an LAAC procedure were reported.

MS-DRGs FOR TAVR PROCEDURES

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 266—All cases	9,949	7.2	\$56,762
MS-DRG 266—Cases with TAVR	9,872	7.2	56,628
MS-DRG 266—Cases TAVR and LAAC	1	21.0	60,226
MS-DRG 267—All cases	13,290	3.5	45,297
MS-DRG 267—Cases with TAVR	13,245	3.5	45,302
MS-DRG 267—Cases TAVR and LAAC	0	0	0

We then analyzed claims data in MS-DRGs 273 and 274 for cases reporting an LAAC procedure. As shown in the table below, the data findings show that the total number of cases reported in MS-DRG 273 was 6,541, with an average

length of stay of 7.7 days and average costs of \$26,042. There were 179 cases involving an LAAC procedure, with an average length of stay of 3.6 days and average costs of \$30,131. For MS-DRG 274, the total number of cases found

was 14,441, with an average length of stay of 3.0 days and average costs of \$20,267. There were 2,428 cases involving an LAAC procedure, with an average length of stay of 1.2 days and average costs of \$26,213.

MS-DRGs FOR LAAC PROCEDURES

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 273—All cases	6,541	7.7	\$26,042
MS-DRG 273—Cases with LAAC	179	3.6	30,131
MS-DRG 274—All cases	14,441	3.0	20,267
MS-DRG 274—Cases with LAAC	2,428	1.2	26,213

We stated in the proposed rule that the analysis of claims data for MS-DRGs 266, 267, 273, and 274 and input from our clinical advisors do not support creating new MS-DRGs for TAVR and LAAC procedures when performed in

combination in the same operative episode. We found only one case in MS-DRG 266 where both a TAVR and an LAAC procedure were reported and the claims data for cases reporting an LAAC procedure in MS-DRGs 273 and

274 support their current assignment. Our clinical advisors agreed the current MS-DRG assignments are appropriate for each respective procedure.

Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19827), we

did not propose to create new MS-DRGs for cases involving TAVR and LAAC procedures when performed in combination in the same operative episode. We invited public comments on our proposal to maintain the current MS-DRG structure for TAVR procedures in MS-DRGs 266 and 267, as well as the current MS-DRG structure for LAAC procedures in MS-DRGs 273 and 274.

Comment: Commenters supported the proposal to maintain the current MS-DRG structure for TAVR and LAAC procedures when performed in combination in the same operative episode.

Response: We appreciate the commenters' support.

After consideration of the public comments that we received, we are finalizing our proposal to maintain the current MS-DRG structure for TAVR procedures in MS-DRGs 266 and 267, as well as the current MS-DRG structure

for LAAC procedures in MS-DRGs 273 and 274 effective October 1, 2017 for ICD-10 MS-DRGs Version 35.

d. Percutaneous Mitral Valve Replacement Procedures

We received a request to reassign four ICD-10-PCS procedure codes that describe percutaneous mitral valve replacement procedures from MS-DRGs 216 through 221 (Cardiac Valve and Other Major Cardiothoracic Procedures with and without Cardiac Catheterization with MCC, with CC and without CC/MCC, respectively) to MS-DRGs 266 and 267 (Endovascular Cardiac Valve Replacement with MCC and without MCC, respectively). The requestor indicated that there are inconsistencies in the current GROUPER logic for endovascular cardiac valve replacement procedures. Specifically, the requestor stated that

the procedure codes that describe both the percutaneous approach and the transapical, percutaneous approach for the aortic and pulmonary valves are included in MS-DRGs 266 and 267. However, for the mitral valve, the GROUPER logic only includes the procedure codes that describe the transapical, percutaneous approach.

The requestor also stated that when MS-DRGs 266 and 267 were created, the intent was to include percutaneous replacement procedures for all cardiac valves. Therefore, the requestor recommended that CMS reassign the four ICD-10-PCS procedure codes shown in the table below that describe mitral valve replacement procedures, performed with the percutaneous approach from MS-DRGs 216 through 221 to MS-DRGs 266 and 267 to more appropriately group these procedures within the MS-DRG structure.

ICD-10-PCS procedure code	Code description
02RG37Z	Replacement of mitral valve with autologous tissue substitute, percutaneous approach.
02RG38Z	Replacement of mitral valve with zooplastic tissue, percutaneous approach.
02RG3JZ	Replacement of mitral valve with synthetic substitute, percutaneous approach.
02RG3KZ	Replacement of mitral valve with nonautologous tissue substitute, percutaneous approach.

We stated in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19827 through 19828) that we agree with the requestor regarding the intent of the creation of MS-DRGs 266 and 267. As discussed in the FY 2015 IPPS/LTCH PPS final rule (79 FR 49890 through 49893), MS-DRGs 266 and 267 were created to uniquely classify the subset of high-risk cases representing patients who undergo a cardiac valve replacement procedure performed by a percutaneous (endovascular) approach. As such, we agree that all cardiac valve replacement procedures should be grouped within the same MS-DRG. In FY 2015, under the ICD-9-CM classification, there was not a specific procedure code for a percutaneous mitral valve replacement procedure. Therefore, when we converted from the

ICD-9 based MS-DRGs to the ICD-10 MS-DRGs, there was not a code available from which to replicate. We refer the reader to the FY 2015 IPPS/LTCH PPS final rule (79 FR 49890 through 49893) for a detailed discussion on the initial request to create new MS-DRGs for endovascular cardiac valve replacement procedures, as well as the FY 2016 IPPS/LTCH PPS final rule (80 FR 49354 through 49358) and the FY 2017 IPPS/LTCH PPS final rule (81 FR 56787 through 56790) for a detailed discussion of the conversion to ICD-10 MS-DRGs, including our analysis of claims data and the need to accurately replicate the ICD-9-CM based MS-DRGs.

The requestor also noted that a proposal was discussed at the September 13-14, 2016 ICD-10 Coordination and Maintenance

Committee meeting involving the creation of procedure codes that describe percutaneous tricuspid valve replacement procedures and, if finalized, these new procedure codes would also be assigned to MS-DRGs 266 and 267.

As shown in the table below and in Table 6B.—New Procedure Codes, which is associated with the proposed rule and this final rule and available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>, there are eight new procedure codes that describe tricuspid valve replacement procedures performed with percutaneous and transapical types of percutaneous approaches that will be effective October 1, 2017.

ICD-10-PCS procedure code	Code description
02RJ37H	Replacement of tricuspid valve with autologous tissue substitute, transapical, percutaneous Approach.
02RJ37Z	Replacement of tricuspid valve with autologous tissue substitute, percutaneous approach.
02RJ38H	Replacement of tricuspid valve with zooplastic tissue, transapical, percutaneous approach.
02RJ38Z	Replacement of tricuspid valve with zooplastic tissue, percutaneous approach.
02RJ3JH	Replacement of tricuspid valve with synthetic substitute, transapical, percutaneous approach.
02RJ3JZ	Replacement of tricuspid valve with synthetic substitute, percutaneous approach.
02RJ3KH	Replacement of tricuspid valve with nonautologous tissue substitute, transapical, percutaneous approach.
02RJ3KZ	Replacement of tricuspid valve with nonautologous tissue substitute, percutaneous approach.

We stated in the proposed rule that we agree with the requestor and believe that, in addition to the four procedure codes that describe the percutaneous mitral valve replacement procedures listed earlier in this section, the eight codes that describe percutaneous and transapical types of percutaneous tricuspid valve replacement procedures also should be grouped with the other endovascular cardiac valve replacement procedures. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19827 through 19828), we proposed to reassign the four percutaneous mitral valve replacement procedures described by the procedure codes listed in the table above from MS-DRGs 216 through 221 to MS-DRGs 266 and 267. In addition, we proposed to assign the eight new procedure codes (also listed in a separate table above) that describe percutaneous and transapical, percutaneous tricuspid valve replacement procedures to MS-DRGs 266 and 267.

We invited public comments on our proposals.

Comment: Many commenters supported the proposal to reassign the four percutaneous mitral valve replacement procedures from MS-DRGs 216 through 221 to MS-DRGs 266 and 267 and to assign the eight new procedure codes that describe percutaneous and transapical, percutaneous tricuspid valve replacement procedures to MS-DRGs 266 and 267. Commenters noted that these updates will appropriately reflect

the clinical characteristics and resource use for this group of endovascular cardiac valve replacement procedures.

Response: We appreciate the commenters' support.

After consideration of the public comments that we received, we are finalizing our proposal to reassign the four percutaneous mitral valve replacement procedures described by the procedure codes listed in the table above from MS-DRGs 216 through 221 to MS-DRGs 266 and 267 and assign the eight new procedure codes (also listed in a separate table above) that describe percutaneous and transapical, percutaneous tricuspid valve replacement procedures to MS-DRGs 266 and 267 effective October 1, 2017 for ICD-10 MS-DRGs Version 35.

e. Percutaneous Tricuspid Valve Repair

We received a request to reassign cases reporting ICD-10-PCS procedure code 02UJ3JZ (Supplement tricuspid valve with synthetic substitute, percutaneous approach) from MS-DRGs 216 through 221 (Cardiac Valve and Other Major Cardiothoracic Procedures with and without Cardiac Catheterization with MCC, with CC and without CC/MCC, respectively) to MS-DRGs 228 and 229 (Other Cardiothoracic Procedures with MCC and without MCC, respectively). According to the requestor, reassigning cases involving these procedures would more appropriately align the cohesiveness with other clinically similar procedures, such as percutaneous mitral valve repair (for

example, procedures involving the Mitraclip) described by procedure code 02UG3JZ (Supplement mitral valve with synthetic substitute, percutaneous approach), which are assigned to MS-DRGs 228 and 229.

The requestor noted that the FORMA Tricuspid Transcatheter Repair System (herein after referred to as the FORMA system) is currently in clinical trials in the United States, Europe, and Canada, but has not received FDA approval/clearance marketing authorization. However, the FORMA system is presently available through a compassionate use program. The FORMA system technology is indicated for use in the treatment of patients diagnosed with tricuspid regurgitation and occupies the regurgitant area of the affected valve, providing a surface for native leaflet coaptation. The requestor stated that the technology offers a viable alternative treatment using traditional tricuspid valve surgery. According to the requestor, the technology consists of a rail and a spacer, and the procedure to insert the device involves fluoroscopic imaging guidance.

As discussed in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19828 through 19829), we analyzed claims data from the December 2016 update of the FY 2016 MedPAR file for MS-DRGs 216 through 221 for cases reporting procedure code 02UJ3JZ (Supplement tricuspid valve with synthetic substitute, percutaneous approach). Our findings are shown in the following table.

MS-DRGs FOR CARDIAC VALVE AND OTHER MAJOR CARDIOTHORACIC PROCEDURES

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 216—All cases	9,139	14.4	\$68,304
MS-DRG 216—Cases with percutaneous tricuspid valve repair	1	5.0	14,954
MS-DRG 217—All cases	3,536	8.9	45,857
MS-DRG 217—Cases with percutaneous tricuspid valve repair	1	3.0	16,234
MS-DRG 218—All cases	498	5.9	41,274
MS-DRG 218—Cases with percutaneous tricuspid valve repair	0	0	0
MS-DRG 219—All cases	16,011	11.1	54,519
MS-DRG 219—Cases with percutaneous tricuspid valve repair	6	9.0	58,075
MS-DRG 220—All cases	18,476	6.8	37,506
MS-DRG 220—Cases with percutaneous tricuspid valve repair	1	5.0	90,155
MS-DRG 221—All cases	3,547	5.0	33,606
MS-DRG 221—Cases with percutaneous tricuspid valve repair	0	0	0

We also analyzed claims data for MS-DRGs 228 and 229. Our findings are shown in the following table below.

MS-DRGs FOR OTHER CARDIOTHORACIC PROCEDURES

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 228—All cases	3,466	9.8	\$47,435

MS-DRGs FOR OTHER CARDIOTHORACIC PROCEDURES—Continued

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 229—All cases	4,553	4.9	33,347

The claims data show that there were very few cases reported for performing a percutaneous tricuspid valve repair procedure in MS-DRGs 216 through 221. Of the 6 cases found in MS-DRG 219, with average costs of \$58,075, the average cost of these cases aligned with the average cost of all cases in the MS-DRG assignment (\$54,519). We stated in the proposed rule that the data analysis and our clinical advisors do not support reassigning cases reporting procedure code 02UJ3JZ to MS-DRGs 228 and 229. The current MS-DRG assignment for percutaneous tricuspid valve repair procedures to MS-DRGs 216 through 221 is clinically coherent with the other percutaneous procedures performed on the heart valves that are currently assigned to these MS-DRGs. Percutaneous repair of the aortic, pulmonary and tricuspid valves utilizing various tissue substitutes (autologous, nonautologous, zooplasic, and synthetic) are assigned to MS-DRGs 216 through 221. The exception is the percutaneous mitral valve repair, which, as the requestor pointed out, is assigned to MS-DRGs 228 and 229 as discussed in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56809 through 56813). Our clinical advisors also agreed that the limited number of cases reported in MS-DRGs 216 through 221 does not warrant reassignment.

As a result of our review and the input from our clinical advisors, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19829), we did not propose to reassign cases reporting procedure code 02UJ3JZ from MS-DRGs 216 through 221 to MS-DRGs 228 and 229.

We invited public comments on our proposal to maintain the current MS-DRG assignment for cases reporting procedure code 02UJ3JZ.

Comment: Commenters supported the proposal to maintain the current MS-DRG assignment for ICD-10-PCS procedure code 02UJ3JZ in MS-DRGs 216 through 221. One commenter also noted that, while CMS' analysis demonstrated the current assignment is appropriate, CMS should consider revisiting this procedure in the future in the event it becomes more common and warrants further consideration for reassignment. The commenter believed that there could be value in creating MS-DRGs for endovascular cardiac

repair similar to those MS-DRGs for endovascular cardiac valve replacement.

Response: We appreciate the commenters' support. As additional ICD-10 claims data become available, we will continue to welcome input from the public and consider further modifications to the ICD-10 MS-DRGs if warranted.

Comment: One commenter did not agree with the proposal to maintain the current MS-DRG assignment for ICD-10-PCS procedure code 02UJ3JZ in MS-DRGs 216 through 221. The commenter stated that transcatheter tricuspid valve repair procedures are clinically coherent with other percutaneous transcatheter cardiac valve repair procedures. This commenter asserted that the devices utilized in these procedures are currently under clinical investigation and the utilization of these technologies is expected to increase through clinical trials. Therefore, the commenter suggested that these procedures should be assigned to MS-DRGs 228 and 229.

Response: As we noted in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19829), the results of our analysis of the current MS-DRG assignment for percutaneous tricuspid valve repair procedures to MS-DRGs 216 through 221 and the advice of our clinical advisors demonstrate that this procedure is clinically coherent with the other percutaneous procedures performed on the heart valves that are currently assigned to these MS-DRGs because percutaneous repair of the aortic, pulmonary, and tricuspid valves utilizing various tissue substitutes (autologous, nonautologous, zooplasic, and synthetic) are assigned to MS-DRGs 216 through 221. We will continue to consider further modifications to the ICD-10 MS-DRGs as additional ICD-10 claims data become available that support suggested changes.

After consideration of the public comments that we received, we are finalizing our proposal to maintain the current MS-DRG assignment for cases reporting procedure code 02UJ3JZ (Supplement tricuspid valve with synthetic substitute, percutaneous approach) to MS-DRGs 216 through 221 for FY 2018.

5. MDC 8 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue)

a. Total Ankle Replacement (TAR) Procedures

For FY 2018, we again received two requests for the reassignment of total ankle replacement (TAR) procedures to a different MS-DRG. TAR procedures are currently assigned to MS-DRGs 469 and 470 (Major Joint Replacement or Reattachment of Lower Extremity with and without MCC, respectively). This topic was discussed previously in the FY 2015 IPPS/LTCH PPS proposed and final rules (79 FR 28013 through 28015 and 79 FR 49896 through 49899, respectively) and in the FY 2017 IPPS/LTCH PPS proposed and final rules (81 FR 24989 through 24990 and 81 FR 56814 through 56816, respectively). For FY 2015 and FY 2017, we did not change the MS-DRG assignment for TAR procedures. The requestors indicated that TAR procedures are currently assigned to MS-DRGs 469 and 470, to which total hip replacement and total knee replacement procedures also are assigned. The requestors stated that there are significant clinical and cost differences among these procedures, which results in underpayment for TAR procedures. The requestors asked CMS to examine claims data for the following six ICD-10-PCS codes within MS-DRGs 469 and 470:

- 0SRF0J9 (Replacement of right ankle joint with synthetic substitute, cemented, open approach);
- 0SRF0JA (Replacement of right ankle joint with synthetic substitute, uncemented, open approach);
- 0SRF0JZ (Replacement of right ankle joint with synthetic substitute, open approach);
- 0SRG0J9 (Replacement of left ankle joint with synthetic substitute, cemented, open approach);
- 0SRG0JA (Replacement of left ankle joint with synthetic substitute, uncemented, open approach); and
- 0SRG0JZ (Replacement of left ankle joint with synthetic substitute, open approach).

The requestors recommended that, if the claims data show a disparity in costs between TAR procedures and total hip and knee replacement procedures, the TAR procedures be reassigned to a more appropriate MS-DRG.

The requestors also stated that total ankle replacement is a complicated surgery that involves the replacement of the damaged parts of the three bones that comprise the ankle joint, as compared to the two bones in hip and knee replacement procedures. Furthermore, as the smallest weight-bearing large joint in the body, the requestors stated that TAR procedures demand a complexity of implant device design, engineering, and manufacture to exacting functional specifications that is

vastly different from that of total hip and knee replacement devices. One of the requestors stated that the ankle region typically has poorer circulation and thinner soft tissue coverage than the hip and knee, leading to a higher risk of wound complications and infection that may be more challenging and expensive to treat. In addition, this requestor stated that the unique anatomical characteristics and function of the ankle joint require a specialized surgical skill set, operative technique, and level of

operating room resource utilization that is vastly dissimilar from that of total hip and knee replacement procedures.

As discussed in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19829 through 19830), we examined claims data from the December 2016 update of the FY 2016 MedPAR file on reported cases of TAR procedures in MS-DRGs 469 and 470. Our findings are shown in the table below.

TOTAL ANKLE REPLACEMENTS PROCEDURES

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 469—All cases	25,778	6.7	\$22,139
MS-DRG 469—Cases reporting TAR procedure codes	31	4.6	23,828
MS-DRG 470—All cases	461,553	2.7	14,751
MS-DRG 470—Cases reporting TAR procedure codes	2,114	1.9	20,862

As shown in the table above, for MS-DRG 469, there were a total of 25,778 cases, with an average length of stay of 6.7 days and average costs of \$22,139. Of the 25,778 cases in MS-DRG 469, there were 31 cases reporting a TAR procedure, with an average length of stay of 4.6 days and average costs of \$23,828. For MS-DRG 470, there were a total of 461,553 cases, with an average length of stay of 2.7 days and average costs of \$14,751. Of the 461,553 cases in MS-DRG 470, there were 2,114 cases reporting a TAR procedure, with an average length of stay of 1.9 days and average costs of \$20,862. As mentioned earlier, there were only 31 TAR procedure cases in MS-DRG 469, and these cases had average costs of \$1,689 higher than the average costs of all cases within MS-DRG 469. The relatively small number of cases may have been impacted by other factors. Several expensive cases could impact the average costs for a very small number of patients. We also note that the average length of stay for the TAR procedure cases was 4.6 days, as compared to 6.7 days for all cases within MS-DRG 469. The 2,114 TAR procedure cases in MS-DRG 470 had average costs that were \$6,111 higher than the average costs of all cases in MS-DRG 470 (\$20,862 compared to \$14,751 for all cases). We stated in the proposed rule that the data support reassigning all of the TAR procedures to MS-DRG 469, even when there is no MCC reported. While the average costs of the TAR procedures in MS-DRG 470 are lower than the average costs for all cases in MS-DRG 469 (\$20,862 compared to \$22,139), the average costs are much closer to the

average costs of TAR procedure cases in MS-DRG 470.

We stated in the proposed rule that our clinical advisors reviewed this clinical issue and the claims data, and agreed that it is clinically appropriate to reassign all of the TAR procedure cases from MS-DRG 470 to MS-DRG 469, even when there is no MCC reported. The claims data support the fact that these cases require more resources than other cases assigned to MS-DRG 470. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19829 through 19830), we proposed to reassign the following TAR procedure codes from MS-DRG 470 to MS-DRG 469, even if there is no MCC reported: 0SRF0J9; 0SRF0JA; 0SRF0JZ; 0SRG0J9; 0SRG0JA; and 0SRG0JZ for FY 2018.

We proposed to change the titles of MS-DRGs 469 and 470 to the following to reflect these proposed MS-DRG reassignments:

- Proposed retitle of MS-DRG 469: “Major Hip and Knee Joint Replacement or Reattachment of Lower Extremity with MCC or Total Ankle Replacement”; and
- Proposed retitle of MS-DRG 470: “Major Hip and Knee Joint Replacement or Reattachment of Lower Extremity without MCC.”

We invited public comments on our proposals.

Comment: Several commenters supported CMS’ recommendation to reassign the following TAR procedure codes from MS DRG 470 to MS DRG 469, even if there is no MCC reported: 0SRF0J9; 0SRF0JA; 0SRF0JZ; 0SRG0J9; 0SRG0JA; and 0SRG0JZ for FY 2018. The commenters also supported the change in MS-DRG titles for MS-DRG

469 and 470 to reflect this MS-DRG update. One commenter stated that claims data supported this recommendation because, as CMS pointed out, the average costs of TAR cases in MS-DRG 470 are much closer to the average costs of all cases in MS-DRG 469 (\$20,862 versus \$22,139). The commenter also agreed with the CMS clinical advisors that it was clinically appropriate to reassign all TAR procedure cases from MS-DRG 470 to MS-DRG 469, even when there is no MCC reported. The commenter stated that the update will remedy a historical cost-to-payment disparity, and thus enable hospitals to continue offering Primary TAR surgery to Medicare beneficiaries as an economically sustainable, and clinically viable, alternative to ankle fusion when medically appropriate. The commenter commended CMS for its consideration of how to address this MS-DRG issue.

Response: We appreciate the commenters’ support.

After consideration of the public comments that we received, we are reassigning the following TAR procedure codes from MS DRG 470 to MS DRG 469, even if there is no MCC reported: 0SRF0J9; 0SRF0JA; 0SRF0JZ; 0SRG0J9; 0SRG0JA; and 0SRG0JZ for FY 2018. We are changing the titles of MS-DRGs 469 and 470 to the following to reflect these MS-DRG reassignments:

- MS-DRG 469: “Major Hip and Knee Joint Replacement or Reattachment of Lower Extremity with MCC or Total Ankle Replacement”; and
- MS-DRG 470: “Major Hip and Knee Joint Replacement or Reattachment of Lower Extremity without MCC.”

b. Revision of Total Ankle Replacement (TAR) Procedures

We received two requests to modify the MS-DRG assignment for revision of total ankle replacement (TAR) procedures, which the requestors indicated are assigned to MS-DRGs 515, 516, and 517 (Other Musculoskeletal System and Connective Tissue O.R. Procedures with MCC, with CC, and without CC/MCC, respectively). This topic was discussed in the FY 2015 IPPS/LTCH PPS proposed and final rules (79 FR 28013 through 28015 and 79 FR 49896 through 49899, respectively) and in the FY 2017 IPPS/LTCH PPS proposed and final rules (81 FR 24992 through 24993 and 81 FR 56819 through 56820, respectively). For FY 2015 and FY 2017, we did not change the MS-DRG assignment for revision of TAR procedures.

The requestors asked that CMS examine the following eight ICD-10-PCS codes which they indicated identify revision of TAR procedures and which are assigned to MS-DRGs 515, 516, and 517. As we discuss later in this section in response to public comments, while the requestors requested that we analyze these eight procedure codes for revisions of TAR procedures in the proposed rule, these procedures are in fact represented by a combination of other codes that capture the root operation removal and replacement of joint devices.

- 0SWF0JZ (Revision of synthetic substitute in right ankle joint, open approach);
- 0SWF3JZ (Revision of synthetic substitute in right ankle joint, percutaneous approach);
- 0SWF4JZ (Revision of synthetic substitute in right ankle joint, percutaneous endoscopic approach);
- 0SWFXJZ (Revision of synthetic substitute in right ankle joint, external approach);
- 0SWG0JZ (Revision of synthetic substitute in left ankle joint, open approach);
- 0SWG3JZ (Revision of synthetic substitute in left ankle joint, percutaneous approach);
- 0SWG4JZ (Revision of synthetic substitute in left ankle joint, percutaneous endoscopic approach); and
- 0SWGXJZ (Revision of synthetic substitute in left ankle joint, external approach).

One requestor stated that these ICD-10-PCS codes more specifically identify the revision of TAR procedures than the prior ICD-9-CM codes. Specifically, ICD-9-CM code 81.59 (Revision of joint replacement of lower extremity, not elsewhere classified) was an unspecified code, which included toe and foot joint revision procedures in addition to revision of TAR procedures. The requestor stated that claims data reporting these ICD-10-PCS codes would allow CMS to better identify revisions of TAR procedures, and

determine if the procedures are assigned to the appropriate MS-DRGs.

One requestor suggested the following three options for MS-DRG assignments:

- Assign the ICD-10-PCS ankle revision procedure codes to MS-DRGs 466, 467, and 468 (Revision of Hip or Knee Replacement with MCC, with CC, and without CC/MCC, respectively), and rename MS-DRGs 466, 467, and 468 as “Revision of Hip, Knee or Ankle with MCC, with CC, and without CC/MCC,” respectively);
- Assign the ICD-10-PCS ankle revision procedure codes to MS-DRG 469 (Major Joint Replacement or Reattachment of Lower Extremity with MCC) to more appropriately recognize higher hospital procedure costs associated with revision of TAR procedures; or
- Establish a new MS-DRG for the assignment of revision of TAR procedures.

The other requestor asked that CMS consider reassigning revision of TAR procedures to MS-DRGs that better address the cost-to-payment differential, such as MS-DRGs 466, 467, and 468.

As discussed in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19830 through 19831), we examined claims data from the December 2016 update of the FY 2016 MedPAR file on cases reporting the eight revision codes listed above as well as cases assigned to MS-DRGs 466, 467, 468, and MS-DRG 469. Our findings are shown in the tables below.

REVISIONS OF JOINT REPLACEMENTS PROCEDURES

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 515—All cases	5,038	8.0	\$20,562
MS-DRG 515—Cases reporting revision of total ankle replacement procedure codes	0	0	0
MS-DRG 516—All cases	13,276	4.8	13,524
MS-DRG 516—Cases reporting revision of total ankle replacement procedure codes	2	2.5	11,400
MS-DRG 517—All cases	13,330	2.8	10,003
MS-DRG 517—Cases reporting revision of total ankle replacement procedure codes	4	1.5	7,423

CASES IN MS-DRGs 466, 467, 468, AND 469

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 466—All cases	3,886	8.4	\$33,720
MS-DRG 467—All cases	19,145	4.2	24,609
MS-DRG 468—All cases	16,529	2.7	20,208
MS-DRG 469—All cases	25,778	6.7	22,139

As shown in the tables above, there were only 6 cases identified with the eight revision codes suggested by the requestor with no cases in MS-DRG 515, two cases in MS-DRG 516, and four cases in MS-DRG 517. We stated in

the proposed rule that the limited number of six cases does not justify the creation of a new MS-DRG for the assignment of revision of TAR procedures. Our data analysis demonstrates that the average length of

stay for these revision procedures was lower than that for all cases in MS-DRG 516 (2.5 days compared to 4.8 days), and the average costs were lower (\$11,400 compared to \$13,524). The average length of stay for these revision

procedures also was lower than that for all cases in MS-DRG 517 (1.5 days compared to 2.8 days), and the average costs were lower (\$7,423 compared to \$10,003). We stated that the data do not support reassigning the cases from MS-DRGs 515, 516, and 517.

Furthermore, we stated that the average length of stay and average costs of cases in MS-DRGs 466, 467, 468, and 469 are significantly higher than those for these revision procedures in MS-DRG 516 and 517. We stated that the average length of stay for all cases in MS-DRGs 466, 467, 468, and 469 is 8.4, 4.2, 2.7, and 6.7 days, respectively, compared to the average length of stay of 2.5 and 1.5 days for cases representing these revision procedures in MS-DRGs 516 and 517, respectively. The average costs for all cases in MS-DRGs 466, 467, 468, and 469 are \$33,720, \$24,609, \$20,208, and \$22,139, respectively, compared to the average costs of \$11,400 and \$7,423 for cases representing these revision procedures in MS-DRGs 516 and 517, respectively. Therefore, we stated that in the proposed rule that the data do not support reassigning the cases to MS-DRGs 466, 467, 468, or 469.

We stated in the proposed rule that our clinical advisors reviewed the clinical issue and the claims data and agreed that the eight revision codes are appropriately assigned to MS-DRGs 515, 516, and 517, along with other procedures that describe revisions of joint replacements of the lower extremities, including the foot and toe. Our clinical advisors did not support reassigning these cases to MS-DRGs 466, 467, 468, or 469, or creating a new MS-DRG. Therefore, based on the findings of our analysis of claims data and the advice of our clinical advisors, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19830 through 19831), we proposed to maintain the current MS-DRG assignment for these revision procedures within MS-DRGs 515, 516, and 517 for FY 2018.

Comment: Commenters supported CMS' proposal to maintain the current MS-DRG assignments for procedures within MS-DRGs 515, 516, and 517 for FY 2018.

Several commenters questioned the reliability of the revision of TAR data presented in the proposed rule. The

commenters questioned the codes used in the analysis and stated that revision of TAR procedures are not captured with the Revision of synthetic substitute codes identified in the proposed rule. The commenters stated that the procedures are captured by reporting a combination of codes that capture the removal of a prior device and the replacement of the device with a new device. The commenters stated that the correct root operations for these codes would be Removal and Replacement instead of Revision as stated in the proposed rule. The commenters provided the following codes which reported in combination would identify revision of TAR procedures. The commenters stated that revisions of TAR procedures are performed with an open approach.

Removals

- 0SPG0JZ (Removal of Synthetic Substitute from Left Ankle Joint, Open Approach); and
- 0SPF0JZ (Removal of Synthetic Substitute from Right Ankle Joint, Open Approach)

Replacements

- 0SRF0J9 (Replacement of right ankle joint with synthetic substitute, cemented, open approach);
- 0SRF0JA (Replacement of right ankle joint with synthetic substitute, uncemented, open approach);
- 0SRF0JZ (Replacement of right ankle joint with synthetic substitute, open approach);
- 0SRG0J9 (Replacement of left ankle joint with synthetic substitute, cemented, open approach);
- 0SRG0JA (Replacement of left ankle joint with synthetic substitute, uncemented, open approach); and
- 0SRG0JZ (Replacement of left ankle joint with synthetic substitute, open approach).

The commenters requested that CMS encourage the correct coding of revision of TAR cases through additional educational materials. The commenters requested that CMS review hospital claims data for revision of TAR procedures using the list of Removal and Replacement code combinations provided to identify revision of TAR cases. The commenter stated that an increasing number of claims for revision of TAR procedures will become

identifiable in the future as patients and implants naturally age into a need for revision surgery.

Response: We appreciate the commenters' support for our proposal to maintain the current MS-DRG assignment for procedures within MS-DRGs 515, 516, and 517 for FY 2018.

We conducted an analysis of the correct coding of revision of TARs and agree with the commenters that these cases are not captured with ICD-10-PCS codes with the root operation Revision as stated in the proposed rule. The commenters are correct that the revision of TAR cases are correctly coded using a combination of codes with the root operation Removal and Replacement as the commenters suggested. Updates were made to the ICD-10-PCS index on October 1, 2015 to reinforce this direction. The index entry is shown below:

Revision

Correcting a portion of existing device
see Revision of device in Removal of device without replacement
see Removal of device from Replacement of existing device
see Removal of device from device, e.g., Insertion, Replacement, Supplement

We agree that this index entry clearly indicates that the correct root operations for revision of TARs would be Removal and Replacement. The codes with the root operation Revision (included in the Revision of synthetic substitute codes used in our original analysis) would not be used to capture revision of TAR procedures. Cases reporting the combination codes are assigned to MS-DRGs 469 and 470 (Major Joint Replacement or Reattachment of Lower Extremity with and without MCC, respectively).

As requested by the commenters, we identified revision of TAR cases using the correct ICD-10-PCS codes that are captured with the root operation of Removal and Replacement. We examined our claims data for cases within MDC 8 that reported one of the Removal codes with one of the Replacement codes for ankle joint devices. These codes accurately capture revision of TAR cases. The following table shows our findings.

REVISION OF TOTAL ANKLE REPLACEMENT PROCEDURES USING CODE COMBINATIONS

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 469—All cases	25,778	6.7	\$22,139
MS-DRG 469—Cases reporting revision of TAR code combinations	0		

REVISION OF TOTAL ANKLE REPLACEMENT PROCEDURES USING CODE COMBINATIONS—Continued

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 470—All cases	461,553	2.7	14,751
MS-DRG 470—Cases reporting revision of TAR code combinations	59	1.7	19,594

Using the updated correct ICD-10-PCS codes, we found that there were 59 revision of TAR procedures in MS-DRG 470 with average costs of \$19,594 and average length of stay of 1.7 days compared to average costs of \$14,751 and average length of stay of 2.7 days for all cases in MS-DRG 470. There were no revision of TAR procedures in MS-DRG 469. As discussed in section II.5.a. of the preamble of this final rule on Total Ankle Replacements, we are finalizing updates to reassign all of the TAR procedure codes to MS-DRG 469, even if there is no MCC present, for FY 2018. This update will also impact revision of TAR cases because the same total ankle replacement codes are also used to identify revision of TAR procedures. Therefore, the MS-DRG 469 and 470 updates result in all revision of TAR procedures being assigned to MS-DRG 469 even if there is no MCC reported in FY 2018.

Revisions of TARs were assigned to MS-DRGs 515, 516, and 517 under the ICD-9-CM MS-DRGs. However, an error in replication for the ICD-10 MS-DRGs resulted in the revision of TAR procedure cases being assigned to MS-DRGs 469 and 470. This replication error was not noticed until the commenters on the FY 2018 IPPS/LTCH PPS proposed rule pointed out that accurate coding of revision of TARs would result in cases not being assigned to MS-DRGs 515, 516, and 517. Since the implementation of ICD-10 MS-DRGs, revision of TAR procedure cases have not been assigned to MS-DRGs 515, 516, and 517. Therefore, we do not need to modify MS-DRG logic to reassign revision of TAR procedures from MS-DRGs 515, 516, and 517

because correctly coded cases are not assigned there, but instead to MS-DRGs 469 and 470. As noted earlier, under our finalized policy for FY 2018, all revision of TAR procedures will be assigned to MS-DRG 469, even if there is no MCC reported.

We agree with the commenters that it is important to encourage the accurate and consistent use of ICD-10-PCS to capture procedures such as revision of TAR. Therefore, we have asked the American Hospital Association to provide additional information on how to capture revision of TARs in a future issue of Coding Clinic for ICD-10. We encourage any providers that have revision of TAR cases on which they need ICD-10 coding assistance to submit this information and their questions to the American Hospital Association's Central Office on ICD-10 at <https://www.codingclinicadvisor.com/>. We share information included in Coding Clinic for ICD-10 with our contractors.

After consideration of the public comments that we received, we are not finalizing any changes to MS-DRGs 515, 516, and 517 for FY 2018 because, as noted, the revision of TAR procedures are not assigned to these MS-DRGs. Under our finalized policy regarding TAR procedures, as discussed in section II.5.a. of the preamble of this final rule, all TAR procedure cases, as well as revision of TAR procedure cases, will be assigned to MS-DRG 469 for FY 2018, even if there is no MCC present.

c. Magnetic Controlled Growth Rods (MAGEC® System)

We received a request to add six ICD-10-PCS procedure codes that describe

the use of magnetically controlled growth rods for the treatment of early onset scoliosis (MAGEC® System) to MS-DRGs 456, 457, and 458 (Spinal Fusion Except Cervical with Spinal Curvature or Malignancy or Infection or Extensive Fusions with MCC, with CC or without CC/MCC, respectively). The MAGEC® System was discussed in the FY 2017 IPPS/LTCH PPS proposed rule (81 FR 25040 through 25042) and final rule (81 FR 56888 through 56891) as a new technology add-on payment application. The application was approved for FY 2017 new technology add-on payments, effective with discharges occurring on and after October 1, 2016. The request for new procedure codes to identify the MAGEC® System technology was discussed at the March 9–10, 2016 ICD-10 Coordination and Maintenance Committee meeting. Six new procedure codes were approved, effective October 1, 2016, and were displayed in Table 6B.—New Procedure Codes associated with the FY 2017 IPPS/LTCH PPS final rule (which is available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/FY2017-IPPS-Final-Rule-Home-Page.html>). These six procedure codes are currently assigned to MS-DRGs 518, 519, and 520 (Back and Neck Procedure Except Spinal Fusion with MCC or Disc Device/Neurostimulator, with CC, or without CC/MCC, respectively) and are shown in the table below.

ICD-10-PCS code	Code description
XNS0032	Reposition of lumbar vertebra using magnetically controlled growth rod(s), open approach, new technology group 2.
XNS0432	Reposition of lumbar vertebra using magnetically controlled growth rod(s), percutaneous endoscopic approach, new technology group 2.
XNS3032	Reposition of cervical vertebra using magnetically controlled growth rod(s), open approach, new technology group 2.
XNS3432	Reposition of cervical vertebra using magnetically controlled growth rod(s), percutaneous endoscopic approach, new technology group 2.
XNS4032	Reposition of thoracic vertebra using magnetically controlled growth rod(s), open approach, new technology group 2.
XNS4432	Reposition of thoracic vertebra using magnetically controlled growth rod(s), percutaneous endoscopic approach, new technology group 2.

According to the requestor, adding these six procedure codes will allow these cases to group to MS-DRGs that more accurately reflect the diagnosis of early onset scoliosis for which the MAGEC® System is indicated. In addition, the requestor stated that because this technology is utilized on a small subset of patients with approximately 2,500 cases per year, adding these procedure codes to MS-DRGs 456, 457, and 458 would have little impact.

We stated in the proposed rule that because these six procedure codes shown in the table above were effective as of October 1, 2016, there are no MedPAR claims data available to analyze. More importantly, we noted that cases are assigned to MS-DRGs 456, 457, and 458 when an actual spinal fusion procedure is performed. We stated that our clinical advisors agree that use of the MAGEC® System's magnetically controlled growth rods technology alone does not constitute a spinal fusion. Therefore, because there

were no claims data available at the time of development of the proposed rule and based on the advice of our clinical advisors, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19832), we did not propose to add the six procedure codes to MS-DRGs 456, 457, or 458. We stated that if a spinal fusion procedure is performed along with the procedure to insert the MAGEC® System's magnetically controlled growth rods, it would be appropriate to report that a spinal fusion was performed and the case would be assigned to one of the spinal fusion MS-DRGs.

We invited public comments on our proposal to maintain the current GROUPER logic for cases assigned to MS-DRGs 456, 457, and 458 and not add the six procedure codes describing the use of the MAGEC® System magnetically controlled growth rods. We also invited public comments on our proposal to maintain the assignment of the six procedure codes in MS-DRGs 518, 519, and 520.

Comment: Commenters agreed with CMS' proposal to maintain the assignment of the six procedure codes in MS-DRGs 518, 519, and 520 and to not reassign the six procedure codes describing the use of the MAGEC® System magnetically controlled growth rods to the spinal fusion MS-DRGs 456, 457 and 458.

Response: We appreciate the commenters' support. We also take this time to point out that the three ICD-10-PCS procedure codes describing reposition of the vertebra using magnetically controlled growth rods with a percutaneous endoscopic approach listed below have been deleted as displayed in Table 6D.—Invalid Procedure Codes associated with this FY 2018 IPPS/LTCH PPS final rule (which is available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) effective October 1, 2017 in the ICD-10 MS-DRGs Version 35.

ICD-10-PCS code	Code description
XNS0432	Reposition of lumbar vertebra using magnetically controlled growth rod(s), percutaneous endoscopic approach, new technology group 2.
XNS3432	Reposition of cervical vertebra using magnetically controlled growth rod(s), percutaneous endoscopic approach, new technology group 2.
XNS4432	Reposition of thoracic vertebra using magnetically controlled growth rod(s), percutaneous endoscopic approach, new technology group 2.

The three ICD-10-PCS procedure codes listed in the table above were discussed in a proposal at the March 7–8, 2017 ICD-10 Coordination and Maintenance Committee meeting. Decisions for proposals presented at that meeting were not finalized at the time of publication of the FY 2018 IPPS/LTCH PPS proposed rule. Additional information relating to the discussion of

these codes can be located via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/ICD-9-CM-C-and-M-Meeting-Materials.html>. Also included in that discussion was a proposal to add a new approach value to the procedures describing Reposition of the vertebra. As displayed in Table 6B.—New Procedure Codes associated

with this FY 2018 IPPS/LTCH PPS final rule (which is available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>), the following three ICD-10-PCS codes have been created effective October 1, 2017 in the ICD-10 MS-DRGs Version 35 and are assigned to MS-DRGs 518, 519 and 520.

ICD-10-PCS code	Code description
XNS0332	Reposition of lumbar vertebra using magnetically controlled growth rod(s), percutaneous approach, new technology group 2.
XNS3332	Reposition of cervical vertebra using magnetically controlled growth rod(s), percutaneous approach, new technology group 2.
XNS4332	Reposition of thoracic vertebra using magnetically controlled growth rod(s), percutaneous approach, new technology group 2.

After consideration of the public comments that we received, we are finalizing our proposal to maintain the current GROUPER logic for cases assigned to MS-DRGs 456, 457, and 458. We also are finalizing our proposal to maintain the assignment of the three existing ICD-10-PCS procedure codes

(describing an open approach) and finalizing assignment of the three new ICD-10-PCS codes (describing a percutaneous approach) for the use of magnetically controlled growth rods in the treatment of early onset scoliosis to MS-DRGs 518, 519, and 520 for FY 2018.

d. Combined Anterior/Posterior Spinal Fusion

It was brought to our attention that 7 of the 10 new ICD-10-PCS procedure codes describing fusion using a nanotextured surface interbody fusion device were not added to the appropriate GROUPER logic list for MS-

DRGs 453, 454, and 455 (Combined Anterior/Posterior Spinal Fusion with MCC, with CC and without CC/MCC, respectively), effective October 1, 2016. The logic for MS-DRGs 453, 454, and 455 is comprised of two lists: An

anterior spinal fusion list and a posterior spinal fusion list. Assignment to one of the combined spinal fusion MS-DRGs requires that a code from each list be reported.

The seven new ICD-10-PCS procedure codes currently included in the posterior spinal fusion list for MS-DRGs 453, 454, and 455 are shown in the table below.

ICD-10-PCS code	Code description
XRG6092	Fusion of thoracic vertebral joint using nanotextured surface interbody fusion device, open approach, new technology group 2.
XRG7092	Fusion of 2 to 7 thoracic vertebral joints using nanotextured surface interbody fusion device, open approach, new technology group 2.
XRG8092	Fusion of 8 or more thoracic vertebral joints using nanotextured surface interbody fusion device, open approach, new technology group 2.
XRGA092	Fusion of thoracolumbar vertebral joint using nanotextured surface interbody fusion device, open approach, new technology group 2.
XRGB092	Fusion of lumbar vertebral joint using nanotextured surface interbody fusion device, open approach, new technology group 2.
XRGC092	Fusion of 2 or more lumbar vertebral joints using nanotextured surface interbody fusion device, open approach, new technology group 2.
XRGD092	Fusion of lumbosacral joint using nanotextured surface interbody fusion device, open approach, new technology group 2.

We note that the remaining three new procedure codes are accurately reflected in the anterior spinal fusion list; that is, ICD-10-PCS code XRG1092 (Fusion of cervical vertebral joint using nanotextured surface interbody fusion device, open approach, new technology group 2); ICD-10-PCS code XRG2092 (Fusion of 2 or more cervical vertebral joints using nanotextured surface interbody fusion device, open approach, new technology group 2); and ICD-10-PCS code XRG4092 (Fusion of cervicothoracic vertebral joint using nanotextured surface interbody fusion device, open approach, new technology group 2).

The seven procedure codes currently included in the posterior spinal fusion list describe an anterior spinal fusion by use of the interbody fusion device. In an interbody fusion, the anterior column of the spine is being fused. We stated in the proposed rule that the results of our review of these procedure codes

discussed below and the advice of our clinical advisors support moving the seven procedure codes from the posterior spinal fusion list to the anterior spinal fusion list in the GROUPE logic for MS-DRGs 453, 454, and 455. We stated that this will improve clinical accuracy and allow appropriate assignment to these MS-DRGs when both an anterior and posterior spinal fusion is performed.

During our review of the spinal fusion codes using a nanotextured surface interbody fusion device in MS-DRGs 453, 454, and 455, we identified 149 additional procedure codes that should be moved from the posterior spinal fusion list to the anterior spinal fusion list. These codes describe spinal fusion of the anterior column with a posterior approach. As mentioned earlier, the logic for MS-DRGs 453, 454, and 455 is dependent upon a code from the anterior spinal fusion list and a code from the posterior spinal fusion list.

Spinal fusion codes involving the anterior column should be included on the anterior spinal fusion list only. In the FY 2018 IPPS/LTCH PPS proposed rule, we proposed to move the 149 ICD-10-PCS procedure codes listed in Table 6P.3a. associated with the proposed rule (which is available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) from the posterior spinal fusion list to the anterior spinal fusion list in MS-DRGs 453, 454, and 455.

In addition, we also identified 33 ICD-10-PCS procedure codes in the posterior spinal fusion list in MS-DRGs 453, 454, and 455 that describe an interbody fusion device in the posterior column and, therefore, are not considered clinically valid spinal fusion procedures. These procedure codes are shown in the table below.

ICD-10-PCS code	Code description
ORG00A1	Fusion of occipital-cervical joint with interbody fusion device, posterior approach, posterior column, open approach.
ORG03A1	Fusion of occipital-cervical joint with interbody fusion device, posterior approach, posterior column, percutaneous approach.
ORG04A1	Fusion of occipital-cervical joint with interbody fusion device, posterior approach, posterior column, percutaneous endoscopic approach.
ORG10A1	Fusion of cervical vertebral joint with interbody fusion device, posterior approach, posterior column, open approach.
ORG13A1	Fusion of cervical vertebral joint with interbody fusion device, posterior approach, posterior column, percutaneous approach.
ORG14A1	Fusion of cervical vertebral joint with interbody fusion device, posterior approach, posterior column, percutaneous endoscopic approach.
ORG20A1	Fusion of 2 or more cervical vertebral joints with interbody fusion device, posterior approach, posterior column, open approach.
ORG23A1	Fusion of 2 or more cervical vertebral joints with interbody fusion device, posterior approach, posterior column, percutaneous approach.
ORG24A1	Fusion of 2 or more cervical vertebral joints with interbody fusion device, posterior approach, posterior column, percutaneous endoscopic approach.
ORG40A1	Fusion of cervicothoracic vertebral joint with interbody fusion device, posterior approach, posterior column, open approach.
ORG43A1	Fusion of cervicothoracic vertebral joint with interbody fusion device, posterior approach, posterior column, percutaneous approach.

ICD-10-PCS code	Code description
ORG44A1	Fusion of cervicothoracic vertebral joint with interbody fusion device, posterior approach, posterior column, percutaneous endoscopic approach.
ORG60A1	Fusion of thoracic vertebral joint with interbody fusion device, posterior approach, posterior column, open approach.
ORG63A1	Fusion of thoracic vertebral joint with interbody fusion device, posterior approach, posterior column, percutaneous approach.
ORG64A1	Fusion of thoracic vertebral joint with interbody fusion device, posterior approach, posterior column, percutaneous endoscopic approach.
ORG70A1	Fusion of 2 to 7 thoracic vertebral joints with interbody fusion device, posterior approach, posterior column, open approach.
ORG73A1	Fusion of 2 to 7 thoracic vertebral joints with interbody fusion device, posterior approach, posterior column, percutaneous approach.
ORG74A1	Fusion of 2 to 7 thoracic vertebral joints with interbody fusion device, posterior approach, posterior column, percutaneous endoscopic approach.
ORG80A1	Fusion of 8 or more thoracic vertebral joints with interbody fusion device, posterior approach, posterior column, open approach.
ORG83A1	Fusion of 8 or more thoracic vertebral joints with interbody fusion device, posterior approach, posterior column, percutaneous approach.
ORG84A1	Fusion of 8 or more thoracic vertebral joints with interbody fusion device, posterior approach, posterior column, percutaneous endoscopic approach.
ORGA0A1	Fusion of thoracolumbar vertebral joint with interbody fusion device, posterior approach, posterior column, open approach.
ORGA3A1	Fusion of thoracolumbar vertebral joint with interbody fusion device, posterior approach, posterior column, percutaneous approach.
ORGA4A1	Fusion of thoracolumbar vertebral joint with interbody fusion device, posterior approach, posterior column, percutaneous endoscopic approach.
OSG00A1	Fusion of lumbar vertebral joint with interbody fusion device, posterior approach, posterior column, open approach.
OSG03A1	Fusion of lumbar vertebral joint with interbody fusion device, posterior approach, posterior column, percutaneous approach.
OSG04A1	Fusion of lumbar vertebral joint with interbody fusion device, posterior approach, posterior column, percutaneous endoscopic approach.
OSG10A1	Fusion of 2 or more lumbar vertebral joints with interbody fusion device, posterior approach, posterior column, open approach.
OSG13A1	Fusion of 2 or more lumbar vertebral joints with interbody fusion device, posterior approach, posterior column, percutaneous approach.
OSG14A1	Fusion of 2 or more lumbar vertebral joints with interbody fusion device, posterior approach, posterior column, percutaneous endoscopic approach.
OSG30A1	Fusion of lumbosacral joint with interbody fusion device, posterior approach, posterior column, open approach.
OSG33A1	Fusion of lumbosacral joint with interbody fusion device, posterior approach, posterior column, percutaneous approach.
OSG34A1	Fusion of lumbosacral joint with interbody fusion device, posterior approach, posterior column, percutaneous endoscopic approach.

In the proposed rule, we proposed to delete these 33 procedure codes from MS-DRGs 453, 454, and 455 for FY 2018. We also noted that some of the above listed codes also may be included in the logic for MS-DRGs 456, 457, and 458 (Spinal Fusion Except Cervical with Spinal Curvature or Malignancy or Infection or Extensive Fusions with MCC, with CC or without CC/MCC, respectively), MS-DRGs 459 and 460 (Spinal Fusion Except Cervical with MCC and without MCC, respectively), and MS-DRGs 471, 472, and 473 (Cervical Spinal Fusion with MCC, with CC and without CC/MCC, respectively). Therefore, we proposed to delete the 33 procedure codes from the logic for those spinal fusion MS-DRGs as well. In addition, we proposed to delete the 33 procedure codes from the ICD-10-PCS classification as shown in Table 6D.—Invalid Procedure Codes associated with the proposed rule (which is available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>).

In summary, we invited public comments on our proposal to move the

seven procedure codes describing spinal fusion using a nanotextured surface interbody fusion device from the posterior spinal fusion list to the anterior spinal fusion list in the GROUPER logic for MS-DRGs 453, 454, and 455. We also invited public comments on our proposal to move the 149 procedure codes describing spinal fusion of the anterior column with a posterior approach from the posterior spinal fusion list to the anterior spinal fusion list in the GROUPER logic for MS-DRGs 453, 454, and 455. In addition, we invited public comments on our proposal to delete the 33 procedure codes describing spinal fusion of the posterior column with an interbody fusion device from MS-DRGs 453, 454, 455, 456, 457, 458, 459, 460, 471, 472, and 473, as well as from the ICD-10-PCS classification.

Comment: Many commenters supported CMS' proposals related to the combined anterior/posterior spinal fusion MS-DRGs, including (1) support to move the seven procedure codes describing spinal fusion using a nanotextured surface interbody fusion device from the posterior spinal fusion

list to the anterior spinal fusion list in the GROUPER logic for MS-DRGs 453, 454, and 455; (2) support to move the 149 procedure codes describing spinal fusion of the anterior column with a posterior approach from the posterior spinal fusion list to the anterior spinal fusion list in the GROUPER logic for MS-DRGs 453, 454, and 455; and (3) to delete the 33 procedure codes describing spinal fusion of the posterior column with an interbody fusion device from MS-DRGs 453, 454, 455, 456, 457, 458, 459, 460, 471, 472, and 473, as well as from the ICD-10-PCS classification.

Response: We appreciate the commenters' support.

Comment: One commenter expressed concern with the proposal to move the 149 ICD-10-PCS procedure codes describing spinal fusion of the anterior column with a posterior approach that are currently on the posterior spinal fusion list to the anterior spinal fusion list and indicated that the proposed decrease in payment weights for this set of MS-DRGs would affect providers' ability to continue treating patients necessitating these procedures. The commenter noted that results from an

independent analysis it had conducted demonstrated that reassignment of these procedure codes and the resulting combinations for anterior/posterior spinal fusion are less costly in comparison to other procedure combinations assigned to MS-DRGs 453, 454 and 455. This commenter acknowledged that ICD-10 coded claims data enable CMS to make important clinical refinements to the ICD-10 MS-DRGs. However, the commenter stated, the resource homogeneity of the MS-DRGs may be adversely affected. The commenter also stated that it understood that the greater specificity of ICD-10 codes will naturally lead to changes in the MS-DRG weights and assignments and that these changes should generally lead to improved payment accuracy within the IPPS. However, the commenter pointed out that not all weight fluctuations occurring during the early stages of the ICD-10 transition necessarily reflect improvements in coding and payment. The commenter stated that providers should not be subject to such disruptive fluctuations in their payments in a single year. The commenter recommended applying a cap to the decline in the MS-DRG payment weights relative to the FY 2017 payment weights until the fluctuations in the number of cases and the case weights can be determined and Medicare's utilization reflects hospital adaptation to ICD-10 coding. The commenter stated that applying a cap would allow CMS to move forward with the proposal to move the 149 ICD-10-PCS spinal fusion procedure codes from the posterior spinal fusion list to the anterior spinal fusion list.

Response: We acknowledge the commenter's concerns and appreciate the analysis that was conducted. In response to the recommendation that we implement a cap to the decline in the MS-DRG payment weights relative to the FY 2017 payment weights, we refer readers to section II.G. of the preamble of this FY 2018 IPPS/LTCH PPS final rule for further discussion regarding recalibration of the FY 2018 MS-DRG relative weights, including our response to comments requesting a transition period for substantial reductions in relative weights in order to facilitate payment stability.

We also believe it is important to be able to fully evaluate the MS-DRGs for which all spinal fusion procedures are currently assigned under ICD-10 with additional claims data. Therefore, in response to the public comments received, we are planning to review the ICD-10 logic for the MS-DRGs where

procedures involving spinal fusion are currently assigned for FY 2019.

After consideration of the public comments we received, we are finalizing our proposal to: (1) Move the seven procedure codes describing spinal fusion using a nanotextured surface interbody fusion device from the posterior spinal fusion list to the anterior spinal fusion list in the Grouper logic for MS-DRGs 453, 454, and 455; (2) move the 149 procedure codes describing spinal fusion of the anterior column with a posterior approach from the posterior spinal fusion list to the anterior spinal fusion list in the Grouper logic for MS-DRGs 453, 454, and 455; and (3) delete the 33 procedure codes describing spinal fusion of the posterior column with an interbody fusion device from MS-DRGs 453, 454, 455, 456, 457, 458, 459, 460, 471, 472, and 473, as well as from the ICD-10-PCS classification for FY 2018.

6. MDC 14 (Pregnancy, Childbirth and the Puerperium)

a. Vaginal Delivery and Complicating Diagnoses

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 56854), we noted that the code list as displayed in the ICD-10 MS-DRG Version 33 Definitions Manual for MS-DRG 774 (Vaginal Delivery with Complicating Diagnoses) required further analysis to clarify what constitutes a vaginal delivery to satisfy the ICD-10 MS-DRG logic. We stated our plans to conduct further analysis of the diagnosis code lists in MS-DRG 774 for FY 2018. We stated in the proposed rule that we believe that the Version 34 Definitions Manual and Grouper logic for MS-DRG 774 continues to require additional analysis to determine how best to classify a vaginal delivery. For example, under MS-DRG 774, the Definitions Manual currently states that three conditions must be met, the first of which is a vaginal delivery. To satisfy this first condition, codes that describe conditions or circumstances from among three lists of codes must be reported. The first list is comprised of ICD-10-CM diagnosis codes that may be reported as a principal diagnosis or a secondary diagnosis. These diagnosis codes describe conditions in which it is assumed that a vaginal delivery has occurred. The second list of codes is a list of ICD-10-PCS procedure codes that also describe circumstances in which it is assumed that a vaginal delivery occurred. The third list of codes identifies diagnoses describing the outcome of the delivery. Therefore, if any code from one of those three lists is reported, the first condition (vaginal

delivery) is considered to be met for assignment to MS-DRG 774.

As discussed in the proposed rule, our continued concern with the first list of ICD-10-CM diagnosis codes as currently displayed in the Definitions Manual under the first condition is that not all of the conditions necessarily reflect that a vaginal delivery occurred. Several of the diagnosis codes listed could also reflect that a cesarean delivery occurred. For example, ICD-10-CM diagnosis code O10.02 (Pre-existing essential hypertension complicating childbirth) does not specify that a vaginal delivery took place; yet it is included in the list of conditions that may be reported as a principal diagnosis or a secondary diagnosis in the Grouper logic for a vaginal delivery. The reporting of this code also could be appropriate for a delivery that occurred by cesarean section.

As noted earlier, the second list of codes for the first condition are comprised of ICD-10-PCS procedure codes. As we stated in the proposed rule, while we agree that the current list of procedure codes in MS-DRG 774 may appropriately describe that a vaginal delivery occurred, we also believe this list could be improved and warrants closer review.

The third list of codes for the first condition in MS-DRG 774 includes conditions describing the outcome of the delivery that would be reported as secondary diagnoses. Similar to concerns with the first list of codes, we believe the conditions do not necessarily reflect that a vaginal delivery occurred because they also can be reported on claims where a cesarean delivery occurred.

For the second condition in MS-DRG 774 to be met, diagnosis codes that are identified as a complicating diagnosis from among two lists may be reported. The first list is comprised of ICD-10-CM diagnosis codes that may be reported as a principal or secondary diagnosis. The second list is comprised of ICD-10-CM diagnosis codes that may be reported as a secondary diagnosis. Currently, there is only one code listed under the secondary diagnosis list. We have concerns with these lists and what is classified as a complicating diagnosis when reviewing the code lists for this and other MS-DRGs that use that logic in MDC 14.

For the third condition in MS-DRG 774 to be met, a limited set of O.R. procedures, including both extensive and nonextensive procedures, are listed. We have concerns with this third condition as being needed to satisfy the logic for a vaginal delivery MS-DRG.

In summary, the MS-DRG logic involving a vaginal delivery under MDC 14 is technically complex as a result of the requirements that must be met to satisfy assignment to the affected MS-DRGs. As discussed in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19834), upon review and discussion, our clinical advisors recommended, and we agreed, that we should solicit public comments on further refinement to the following four MS-DRGs related to vaginal delivery: MS-DRG 767 (Vaginal Delivery with Sterilization and/or D&C); MS-DRG 768 (Vaginal Delivery with O.R. Procedure Except Sterilization and/or D&C); MS-DRG 774 (Vaginal Delivery with Complicating Diagnosis); and MS-DRG 775 (Vaginal Delivery without Complicating Diagnosis).

In addition, our clinical advisors agreed that we should solicit public comments on further refinement to the conditions defined as a complicating diagnosis in MS-DRG 774 and MS-DRG 781 (Other Antepartum Diagnoses with Medical Complications).

Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19834), we solicited public comments on which diagnosis or procedure codes, or both, should be considered in the logic to identify a vaginal delivery and which diagnosis codes should be considered in the logic to identify a complicating diagnosis. As MS-DRGs 767, 768, 774, 775, and 781 incorporate one or both aspects (vaginal delivery or complicating diagnosis), we stated that public comments that we receive from this solicitation will be helpful in determining what proposed revisions to the current logic should be made. We indicated that we will review public comments received in response to this solicitation as we continue to evaluate these areas under MDC 14 and, if warranted, we would propose refinements for FY 2019. We requested that all comments be directed to the CMS MS-DRG Classification Change Request Mailbox located at: MSDRGClassificationChange@cms.hhs.gov by November 1, 2017.

Comment: Commenters agreed that the MS-DRG logic for a vaginal delivery under MDC 14 is technically complex. One commenter stated its intention to provide separate comments related to the solicitation in accordance with the November 1, 2017 deadline.

Response: We thank the commenters for their acknowledgment of the complexity with the Grouper logic for vaginal deliveries under MDC 14 and for their support and consideration of these issues as we continue to consider possible refinement to the logic. We will review the comments received in

response to the solicitation as we continue to evaluate this area and, if warranted, we will propose refinements for the FY 2019 rulemaking.

b. MS-DRG 998 (Principal Diagnosis Invalid as Discharge Diagnosis)

The logic for MS-DRG 998 (Principal Diagnosis Invalid as Discharge Diagnosis) currently includes a list of diagnoses that are considered inappropriate for reporting as a principal diagnosis on an inpatient hospital claim. In other words, these conditions would reasonably be expected not to necessitate an inpatient admission. Examples of these diagnosis codes include what are referred to as the “Supervision of pregnancy” codes, as well as pregnancy, maternal care and fetal related codes with an “unspecified trimester”. We refer the reader to the ICD-10 Version 34 Definitions Manual which is available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/FY2017-IPPS-Final-Rule-Home-Page-Items/FY2017-IPPS-Final-Rule-Data-Files.html?DLPage=1&DLEntries=10&DLSort=0&DLSortDir=ascending> for the complete list of diagnosis codes in MS-DRG 998 under MDC 14.

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 56840 through 56841), there was discussion regarding the supervision of “high-risk” pregnancy codes, including elderly primigravida and multigravida specifically, with regard to removing them from the Unacceptable principal diagnosis edit code list in the Medicare Code Editor (MCE). After consultation with the staff at the CDC’s NCHS, we learned that the FY 2017 ICD-10-CM Official Guidelines for Coding and Reporting were updated to explain appropriate coding for this set of codes. As a result, the codes describing supervision of high-risk pregnancy (and other supervision of pregnancy codes) remained on the Unacceptable principal diagnosis edit code list in the MCE. Therefore, the MCE code edit is consistent with the logic of MS-DRG 998 (Principal Diagnosis Invalid as Discharge Diagnosis) for these supervision of pregnancy codes.

However, as a result of our review and consultation with our clinical advisors regarding the “unspecified trimester” codes in MS-DRG 998, as discussed in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19835), we determined that there are more appropriate MS-DRG assignments for this set of codes. Although it may seem unlikely that a patient would be admitted and ultimately discharged or transferred

without the caregiver or medical personnel having any further knowledge of the exact trimester, it is conceivable that a situation may present itself. For example, the pregnant patient may be from out of town or unable to communicate effectively. The fact that the specific trimester is not known or documented does not preclude the resources required to care for the patient with the particular diagnosis.

Therefore, as shown in Table 6P.3b. associated with the proposed rule (which is available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>), we proposed to remove the 314 ICD-10-CM diagnosis codes identified with “unspecified trimester” from MS-DRG 998 and reassign them to the MS-DRGs in which their counterparts (first trimester, second trimester, or third trimester) are currently assigned as specified in Column C. We stated that this would enable more appropriate MS-DRG assignments and payment for these cases. We invited public comments on our proposal.

Comment: Commenters agreed with the proposal to remove the 314 ICD-10-CM diagnosis codes identified with “unspecified trimester” from MS-DRG 998 and reassign them to the MS-DRGs in which their counterparts (first trimester, second trimester, or third trimester) are currently assigned. However, one commenter disagreed with the proposal and noted that lack of documentation that specifies the trimester on an inpatient record is representative of poor documentation and should not be acceptable for valid MS-DRG assignment. This commenter believed that the trimester could reasonably be determined or estimated, despite the patient’s circumstances, such as being from out of town or unable to communicate effectively.

Response: We appreciate the commenters’ support. In response to the commenter who did not support our proposal, we acknowledge that any diagnosis involving the term “unspecified” in a code title can appear to be the result of poor documentation. However, there are several instances across the ICD-10 MS-DRG Grouper logic where an “unspecified” principal diagnosis leads to a valid MS-DRG assignment as a result of the resources and/or complexities involved regarding the condition itself. The “unspecified trimester” diagnoses involved in the proposal included significant clinical conditions such as eclampsia, preexisting hypertensive heart disease, and cerebral venous thrombosis, to

name a few. The fact that the trimester is not specified does not preclude the significance of these conditions nor the resources involved in caring for the patients with these conditions. Therefore, while we encourage providers to continue to focus efforts on improving their respective facilities medical record documentation practices, we also believe that the MS-DRG assignment should appropriately reflect the resources involved in evaluating and caring for these patients.

After consideration of the public comments we received, we are finalizing our proposal to remove the 314 ICD-10-CM diagnosis codes identified with “unspecified trimester” from MS-DRG 998 as shown in Table 6P.3b. associated with this final rule (which is available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html> and reassign them to the MS-DRGs in which their counterparts (first trimester, second

trimester, or third trimester) are currently assigned as specified in Column C, in the ICD-10 MS-DRGs Version 35, effective October 1, 2017.

c. MS-DRG 782 (Other Antepartum Diagnoses Without Medical Complications)

The following three ICD-10-CM diagnosis codes are currently on the principal diagnosis list for the MS-DRG 782 (Other Antepartum Diagnoses without Medical Complications) logic.

ICD-10-CM code	Code description
O09.41	Supervision of pregnancy with grand multiparity, first trimester.
O09.42	Supervision of pregnancy with grand multiparity, second trimester.
O09.43	Supervision of pregnancy with grand multiparity, third trimester.

It was brought to our attention that these codes also are included in the MCE Unacceptable principal diagnosis code edit list. As discussed in section II.F.6.b. of the preamble of the FY 2018 IPPS/LTCH PPS proposed rule, the supervision of pregnancy codes are accurately reflected in the MCE code edit list for Unacceptable principal diagnosis. Therefore, we stated that it is not appropriate to include the three above listed codes in MS-DRG 782.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19835), we proposed to remove the three codes describing supervision of pregnancy from MS-DRG 782 and reassign them to MS-DRG 998 (Principal Diagnosis Invalid as Discharge Diagnosis) to reflect a more appropriate MS-DRG assignment. We invited public comments on our proposal.

Comment: Commenters supported the proposal to remove the three codes (ICD-10-CM diagnosis codes O09.41, O09.42 and O09.43) describing supervision of pregnancy and reassign them to a more appropriate MS-DRG assignment.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to remove ICD-10-CM diagnosis codes O09.41, O09.42 and O09.43, which describe supervision of pregnancy, from MS-DRG 782 and reassign them to MS-DRG 998 (Principal Diagnosis Invalid as Discharge Diagnosis) in the ICD-10 MS-DRGs Version 35, effective October 1, 2017.

d. Shock During or Following Labor and Delivery

We received a request to review ICD-10-CM diagnosis code O75.1 (Shock during or following labor and delivery), which is currently assigned to MS-DRG 774 (Vaginal Delivery with Complicating Diagnosis), MS-DRG 767 (Vaginal Delivery with Sterilization and/or D&C), and MS-DRG 768 (Vaginal Delivery with O.R. Procedure Except Sterilization and/or D&C).

The requestor provided an example of a patient that delivered at Hospital A and was transferred to Hospital B for specialized care related to the diagnosis of shock. The claim for Hospital B resulted in assignment to a delivery MS-DRG, despite the fact that a delivery did not occur during that hospitalization. The requestor noted that, by not reporting the diagnosis code for shock, the claim grouped to a postpartum MS-DRG and recommended that we evaluate the issue further.

Our analysis initially involved reviewing the Grouper logic for MS-DRGs 774, 767 and 768. As discussed in section II.F.14.a. of the preamble of the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19835 through 19836) and this final rule, the Grouper logic for classification and assignment to MS-DRG 774 requires that three conditions must be met, the first of which is a vaginal delivery. Similar Grouper logic applies for assignment to MS-DRGs 767 and 768, except that only two conditions must be met, with the first condition being a vaginal delivery. For each of these three MS-DRGs, to satisfy the first condition, one code that describes a condition or circumstance from among the three separate lists of

codes must be reported. The first list is comprised of ICD-10-CM diagnosis codes that may be reported as a principal or secondary diagnosis. These diagnosis codes describe conditions in which it is assumed that a vaginal delivery has occurred. Among this first list is ICD-10-CM diagnosis code O75.1, which is included in the Grouper logic for MS-DRGs 774, 767 and 768 (under the first condition-vaginal delivery). We refer readers to the ICD-10 MS-DRG Version 34 Definitions Manual located via the Internet on the CMS Web site at: <https://www.cms.gov/medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/FY2017-IPPS-Final-Rule-Home-Page-Items/FY2017-IPPS-Final-Rule-Data-Files.html?DLPage=1&DLEntries=10&DLSort=0&DLSortDir=ascending> for documentation of the Grouper logic associated with these MS-DRGs.

In addition, in MS-DRG 774, to satisfy the second condition, diagnosis codes that are identified as a complicating diagnosis from among two lists may be reported. The first list is comprised of ICD-10-CM diagnosis codes that may be reported as a principal or secondary diagnosis. The second list is comprised of ICD-10-CM diagnosis codes that may be reported as a secondary diagnosis. Currently, there is only one code listed under the secondary diagnosis list.

Next, our analysis involved reviewing the Grouper logic for assignment to post-partum MS-DRG 769 (Postpartum and Post Abortion Diagnoses with Major Procedure) and MS-DRG 776 (Postpartum and Post Abortion Diagnoses without O.R. Procedure). The Grouper logic for these postpartum

MS-DRGs requires that a principal diagnosis be reported from a list of several conditions, such as those following pregnancy, those complicating the puerperium, conditions that occurred during or following delivery and conditions associated with lactation disorders. For assignment to MS-DRG 769, the Grouper logic also requires that a major procedure be reported in addition to a principal diagnosis from the list of conditions.

We stated in the proposed rule that as a result of our analysis, we agree with the requestor that ICD-10-CM diagnosis code O75.1 should be added to the Grouper logic for assignment to the postpartum MS-DRGs. This diagnosis code is consistent with other diagnosis codes structured within the Grouper logic for assignment to MS-DRGs 769 and 776, and clearly represents a postpartum diagnosis with the terminology “during or following labor and delivery” in the title. We stated that we believe that adding this diagnosis code to the postpartum MS-DRGs will enable more appropriate MS-DRG assignment for cases where a delivery did not occur.

Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19835 through 19836), we proposed the following:

- Removing ICD-10-CM diagnosis code O75.1 from the list of principal or secondary diagnosis under the first condition-vaginal delivery Grouper logic in MS-DRGs 774, 767, and 768;
- Moving ICD-10-CM diagnosis code O75.1 from the list of principal or secondary diagnosis under the second condition-complicating diagnosis for MS-DRG 774 to the secondary diagnosis list only; and
- Adding ICD-10-CM diagnosis code O75.1 to the principal diagnosis list Grouper logic in MS-DRGs 769 and 776.

We invited public comments on our proposals.

Comment: Many commenters supported all of CMS’ proposals involving diagnosis code O75.1 and MS-DRGs 767, 768, 769, 774, and 776.

Response: We appreciate the commenters’ support.

After consideration of the public comments we received, we are finalizing the following in the ICD-10

MS-DRGs Version 35, effective October 1, 2017:

- Removing ICD-10-CM diagnosis code O75.1 from the list of principal or secondary diagnosis under the first condition-vaginal delivery Grouper logic in MS-DRGs 774, 767, and 768;
- Moving ICD-10-CM diagnosis code O75.1 from the list of principal or secondary diagnosis under the second condition-complicating diagnosis for MS-DRG 774 to the secondary diagnosis list only; and
- Adding ICD-10-CM diagnosis code O75.1 to the principal diagnosis list Grouper logic in MS-DRGs 769 and 776.

7. MDC 15 (Newborns and Other Neonates With Conditions Originating in Perinatal Period): Observation and Evaluation of Newborn

We received a request to add the ICD-10-CM diagnosis codes describing observation and evaluation of newborns for suspected conditions that are ruled out to MS-DRG 795 (Normal Newborn). The 14 diagnosis codes describing observation and evaluation of newborn for suspected conditions ruled out are displayed in the table below.

ICD-10-CM code	Code description
Z05.0	Observation and evaluation of newborn for suspected cardiac condition ruled out.
Z05.1	Observation and evaluation of newborn for suspected infectious condition ruled out.
Z05.2	Observation and evaluation of newborn for suspected neurological condition ruled out.
Z05.3	Observation and evaluation of newborn for suspected respiratory condition ruled out.
Z05.41	Observation and evaluation of newborn for suspected genetic condition ruled out.
Z05.42	Observation and evaluation of newborn for suspected metabolic condition ruled out.
Z05.43	Observation and evaluation of newborn for suspected immunologic condition ruled out.
Z05.5	Observation and evaluation of newborn for suspected gastrointestinal condition ruled out.
Z05.6	Observation and evaluation of newborn for suspected genitourinary condition ruled out.
Z05.71	Observation and evaluation of newborn for suspected skin and subcutaneous tissue condition ruled out.
Z05.72	Observation and evaluation of newborn for suspected musculoskeletal condition ruled out.
Z05.73	Observation and evaluation of newborn for suspected connective tissue condition ruled out.
Z05.8	Observation and evaluation of newborn for other specified suspected condition ruled out.
Z05.9	Observation and evaluation of newborn for unspecified suspected condition ruled out.

The requestor expressed concern that currently when one of these ruled out codes is added to a newborn encounter with a principal diagnosis described by ICD-10-CM code Z38.00 (Single liveborn infant, delivered vaginally), the case is assigned to MS-DRG 794 (Neonate with Other Significant Problems). The requestor stated that this assignment appears to be in error and that the assignment should instead be to MS-DRG 795 (Normal Newborn).

As discussed in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19836), we reviewed Section I.C.16.b. of the 2017 ICD-10-CM Official Guidelines for Coding and Reporting which includes

the following instructions for the diagnosis codes listed in the table above:

- Assign a code from category Z05 (Observation and evaluation of newborns and infants for suspected conditions ruled out.) to identify those instances when a healthy newborn is evaluated for a suspected condition that is determined after study not to be present. Do not use a code from category Z05 when the patient has identified signs or symptoms of a suspected problem; in such cases code the sign or symptom.
- A code from category Z05 may also be assigned as a principal or first-listed

code for readmissions or encounters when the code from category Z38 code no longer applies. Codes from category Z05 are for use only for healthy newborns and infants for which no condition after study is found to be present.

- A code from category Z05 is to be used as a secondary code after the code from category Z38, Liveborn infants according to place of birth and type of delivery.

We stated in the proposed rule that after review of the guidelines and discussion with our clinical advisors, we agree with the requestor that the assignment of these codes to MS-DRG

794 is not accurate because the assignment incorrectly labels the newborns as having a significant problem when the condition does not truly exist. We stated that we and our clinical advisors also agree that the above list of diagnosis codes should be added to MS-DRG 795. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19836), we proposed to add the 14 diagnosis codes describing observation and evaluation of newborns for suspected conditions that are ruled out listed in the table above to the GROUPER logic for MS-DRG 795. We invited public comments on our proposals.

Comment: Commenters supported the proposal to add the 14 diagnosis codes describing observation and evaluation of newborn for suspected conditions ruled out to the MS-DRG logic for normal newborn.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to add the 14 diagnosis codes describing observation and evaluation of newborns for suspected conditions that are ruled out listed in the table above to the GROUPER logic for MS-DRG 795

(Normal newborn) in the ICD-10 MS-DRGs Version 35, effective October 1, 2017.

8. MDC 21 (Injuries, Poisonings and Toxic Effects of Drugs): Complication Codes

We received a request to examine the ICD-10-CM diagnosis codes in the T85.8-series of codes that describe other specified complications of internal prosthetic devices, implants and grafts, not elsewhere classified and their respective MS-DRG assignments. According to the requestor, the 7th character values in this series of codes impact the MS-DRG assignment under MDC 21 (Injuries, Poisonings and Toxic Effects of Drugs) and MDC 23 (Factors Influencing Health Status & Other Contacts with Health Services) that have resulted in inconsistencies (that is, shifts) between the MS-DRG assignments under Version 33 and Version 34 of the ICD-10 MS-DRGs.

Under ICD-10-CM, diagnosis codes in the range of S00 through T88 require a 7th character value of "A-" initial encounter, "D-" subsequent encounter, or "S-" sequela to identify if the patient is undergoing active treatment for a condition. For complication codes, active treatment refers to treatment for

the condition described by the code, even though it may be related to an earlier precipitating problem.

The requestor suggested that the following list of diagnosis codes with the 7th character "A" (initial encounter) may have been inadvertently assigned to the GROUPER logic in the list of diagnoses (*Assignment of Diagnosis Codes*) under MDC 23 because when one of these diagnosis codes was reported with an O.R. procedure, the requestor found claims grouping to MS-DRG 939, 940, or 941 (O.R. Procedures with Diagnoses of Other Contact with Health Services with MCC, with CC and without CC/MCC, respectively) that had previously grouped to MDC 21 under Version 33 of the ICD-10 MS-DRGs. The requestor also suggested these codes may have been inadvertently assigned to the GROUPER logic list of principal diagnoses for MS-DRGs 949 and 950 (Aftercare with CC/MCC and without CC/MCC, respectively) under MDC 23 because it found claims that grouped to these MS-DRGs (949 and 950) when one of the following diagnosis codes was reported as a principal diagnosis that had previously grouped to MDC 21 under Version 33 of the ICD-10 MS-DRGs.

ICD-10-CM diagnosis code	Code description
T85.818A	Embolism due to other internal prosthetic devices, implants and grafts, initial encounter.
T85.828A	Fibrosis due to other internal prosthetic devices, implants and grafts, initial encounter.
T85.838A	Hemorrhage due to other internal prosthetic devices, implants and grafts, initial encounter.
T85.848A	Pain due to other internal prosthetic devices, implants and grafts, initial encounter.
T85.858A	Stenosis due to other internal prosthetic devices, implants and grafts, initial encounter.
T85.868A	Thrombosis due to other internal prosthetic devices, implants and grafts, initial encounter.
T85.898A	Other specified complication of other internal prosthetic devices, implants and grafts, initial encounter.

The requestor believed that the above list of diagnosis codes with the 7th character "A" (initial encounter) would be more appropriately assigned under MDC 21 to MS-DRGs 919, 920, and 921 (Complications of Treatment with MCC, with CC and without CC/MCC, respectively), according to its review of the 2017 Official Coding Guidelines for use of the 7th character and assignment of other diagnoses of associated

complications of care. The requestor also noted that these codes were new, effective October 1, 2016 (FY 2017), and the predecessor codes grouped to MS-DRGs 919, 920, and 921 in MDC 21 under Version 33 of the ICD-10 MS-DRGs in FY 2016.

In addition, the requestor suggested that the following list of diagnosis codes with the 7th character "D" (subsequent encounter) may have been inadvertently

assigned to the GROUPER logic list of principal diagnoses for MS-DRG 919, 920, or 921 in MDC 21. The requestor noted that these codes were new, effective October 1, 2016 (FY 2017), and the predecessor codes grouped to MS-DRGs 949 and 950 (Aftercare with CC/MCC and without CC/MCC, respectively) in MDC 23 under Version 33 of the ICD-10 MS-DRGs in FY 2016.

ICD-10-CM diagnosis code	Code description
T85.810D	Embolism due to nervous system prosthetic devices, implants and grafts, subsequent encounter.
T85.820D	Fibrosis due to nervous system prosthetic devices, implants and grafts, subsequent encounter.
T85.830D	Hemorrhage due to nervous system prosthetic devices, implants and grafts, subsequent encounter.
T85.840D	Pain due to nervous system prosthetic devices, implants and grafts, subsequent encounter.
T85.850D	Stenosis due to nervous system prosthetic devices, implants and grafts, subsequent encounter.
T85.860D	Thrombosis due to nervous system prosthetic devices, implants and grafts, subsequent encounter.
T85.890D	Other specified complication of nervous system prosthetic devices, implants and grafts, subsequent encounter.

The requestor also suggested that the following list of additional diagnosis codes with the 7th character “D” (subsequent encounter) may have been inadvertently assigned to the GROUPER

logic list of principal diagnoses for MS–DRGs 922 and 923 (Other Injury, Poisoning and Toxic Effect with MCC and without MCC, respectively) also under MDC 21. The requestor noted

these codes were also new, effective October 1, 2016 (FY 2017) and that the predecessor codes grouped to MS–DRGs 949 and 950 in MDC 23 under Version 33 of the ICD–10 MS–DRGs in FY 2016.

ICD–10–CM diagnosis code	Code description
T85.818D	Embolism due to other internal prosthetic devices, implants and grafts, subsequent encounter.
T85.828D	Fibrosis due to other internal prosthetic devices, implants and grafts, subsequent encounter.
T85.838D	Hemorrhage due to other internal prosthetic devices, implants and grafts, subsequent encounter.
T85.848D	Pain due to other internal prosthetic devices, implants and grafts, subsequent encounter.
T85.858D	Stenosis due to other internal prosthetic devices, implants and grafts, subsequent encounter.
T85.868D	Thrombosis due to other internal prosthetic devices, implants and grafts, subsequent encounter.
T85.898D	Other specified complication of other internal prosthetic devices, implants and grafts, subsequent encounter.

The requestor believed that the lists of diagnosis codes above with 7th character “D” (subsequent encounter) would be more appropriately assigned to MS–DRGs 949 and 950 under MDC 23, according to its review of the 2017 Official Coding Guidelines for use of the 7th character and assignment of other diagnoses of associated complications of care.

As discussed in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19837 through 19839), we ran test cases to determine if we could duplicate the requestor’s findings with regard to the shifts in MS–DRG assignment between

Version 33 and Version 34 of the ICD–10 MS–DRGs. Results of our review were consistent with the requestor’s findings. We found that the T85.8-series of diagnosis codes with the 7th character of “A” (initial encounter) and 7th character of “D” (subsequent encounter) were inadvertently assigned to the incorrect MDC for Version 34 of the ICD–10 MS–DRGs, which led to inconsistencies (MS–DRG shifts) when compared to Version 33 of the ICD–10 MS–DRGs. Our analysis also included review of all of the diagnosis codes in the T85.8-series and their current MDC and MS–DRG assignments, as well as

review of the 2017 Official Coding Guidelines for use of the 7th character and assignment of other diagnoses of associated complications of care. Based on the results of our review, we agreed with the requestor’s findings.

In addition, we identified the following list of diagnosis codes with the 7th character “S” (sequela) that appear to have been inadvertently assigned to MS–DRGs 949 and 950 in MDC 23 rather than MDC 21 in MS–DRGs 922 and 923 (Other Injury, Poisoning and Toxic Effect with MCC and without MCC, respectively).

ICD–10–CM diagnosis code	Code description
T85.810S	Embolism due to nervous system prosthetic devices, implants and grafts, sequela.
T85.820S	Fibrosis due to nervous system prosthetic devices, implants and grafts, sequela.
T85.830S	Hemorrhage due to nervous system prosthetic devices, implants and grafts, sequela.
T85.840S	Pain due to nervous system prosthetic devices, implants and grafts, sequela.
T85.850S	Stenosis due to nervous system prosthetic devices, implants and grafts, sequela.
T85.860S	Thrombosis due to nervous system prosthetic devices, implants and grafts, sequela.
T85.890S	Other specified complication of nervous system prosthetic devices, implants and grafts, sequela.

In the FY 2018 IPPS/LTCH PPS proposed rule, we invited public comment on our proposals to (1) reassign the ICD–10–CM diagnosis codes with the 7th character “A” (initial encounter) from MS–DRGs 949 and 950 in MDC 23 to MS–DRGs 919, 920 and 921 in MDC 21; (2) reassign the ICD–10–

CM diagnosis codes with the 7th character “D” (subsequent encounter) from MS–DRGs 919, 920, 921, 922, and 923 in MDC 21 to MS–DRGs 949 and 950 in MDC 23; and (3) reassign the ICD–10–CM diagnosis codes with the 7th character “S” (sequela) from MS–DRGs 949 and 950 in MDC 23 to MS–

DRGs 922 and 923 in MDC 21 for FY 2018. The table below displays the current Version 34 MDC and MS–DRG assignments and the proposed Version 35 MDC and MS–DRG assignments on which we sought public comment for the respective ICD–10–CM diagnosis codes.

ICD–10–CM code	Code description	Current V34 MDC	Current V34 MS–DRG	Proposed V35 MDC	Proposed V35 MS–DRG
T85.810D	Embolism due to nervous system prosthetic devices, implants and grafts, subsequent encounter.	21	919, 920, 921	23	949, 950
T85.810S	Embolism due to nervous system prosthetic devices, implants and grafts, sequela.	23	949, 950	21	922, 923
T85.818A	Embolism due to other internal prosthetic devices, implants and grafts, initial encounter.	23	949, 950	21	919, 920, 921
T85.818D	Embolism due to other internal prosthetic devices, implants and grafts, subsequent encounter.	21	922, 923	23	949, 950
T85.820D	Fibrosis due to nervous system prosthetic devices, implants and grafts, subsequent encounter.	21	919, 920, 921	23	949, 950
T85.820S	Fibrosis due to nervous system prosthetic devices, implants and grafts, sequela.	23	949, 950	21	922, 923

ICD-10-CM code	Code description	Current V34 MDC	Current V34 MS-DRG	Proposed V35 MDC	Proposed V35 MS-DRG
T85.828A	Fibrosis due to other internal prosthetic devices, implants and grafts, initial encounter.	23	949, 950	21	919, 920, 921
T85.828D	Fibrosis due to other internal prosthetic devices, implants and grafts, subsequent encounter.	21	922, 923	23	949, 950
T85.830D	Hemorrhage due to nervous system prosthetic devices, implants and grafts, subsequent encounter.	21	919, 920, 921	23	949, 950
T85.830S	Hemorrhage due to nervous system prosthetic devices, implants and grafts, sequela.	23	949, 950	21	922, 923
T85.838A	Hemorrhage due to other internal prosthetic devices, implants and grafts, initial encounter.	23	949, 950	21	919, 920, 921
T85.838D	Hemorrhage due to other internal prosthetic devices, implants and grafts, subsequent encounter.	21	922, 923	23	949, 950
T85.840D	Pain due to nervous system prosthetic devices, implants and grafts, subsequent encounter.	21	919, 920, 921	23	949, 950
T85.840S	Pain due to nervous system prosthetic devices, implants and grafts, sequela.	23	949, 950	21	922, 923
T85.848A	Pain due to other internal prosthetic devices, implants and grafts, initial encounter.	23	949, 950	21	919, 920, 921
T85.848D	Pain due to other internal prosthetic devices, implants and grafts, subsequent encounter.	21	922, 923	23	949, 950
T85.850D	Stenosis due to nervous system prosthetic devices, implants and grafts, subsequent encounter.	21	919, 920, 921	23	949, 950
T85.850S	Stenosis due to nervous system prosthetic devices, implants and grafts, sequela.	23	949, 950	21	922, 923
T85.858A	Stenosis due to other internal prosthetic devices, implants and grafts, initial encounter.	23	949, 950	21	919, 920, 921
T85.858D	Stenosis due to other internal prosthetic devices, implants and grafts, subsequent encounter.	21	922, 923	23	949, 950
T85.860D	Thrombosis due to nervous system prosthetic devices, implants and grafts, subsequent encounter.	21	919, 920, 921	23	949, 950
T85.860S	Thrombosis due to nervous system prosthetic devices, implants and grafts, sequela.	23	949, 950	21	922, 923
T85.868A	Thrombosis due to other internal prosthetic devices, implants and grafts, initial encounter.	23	949, 950	21	919, 920, 921
T85.868D	Thrombosis due to other internal prosthetic devices, implants and grafts, subsequent encounter.	21	922, 923	23	949, 950
T85.890D	Other specified complication of nervous system prosthetic devices, implants and grafts, subsequent encounter.	21	919, 920, 921	23	949, 950
T85.890S	Other specified complication of nervous system prosthetic devices, implants and grafts, sequela.	23	949, 950	21	922, 923
T85.898A	Other specified complication of other internal prosthetic devices, implants and grafts, initial encounter.	23	949, 950	21	919, 920, 921
T85.898D	Other specified complication of other internal prosthetic devices, implants and grafts, subsequent encounter.	21	922, 923	23	949, 950

Comment: Commenters supported the proposals to (1) reassign the ICD-10-CM diagnosis codes with the 7th character “A” (initial encounter) from MS-DRGs 949 and 950 in MDC 23 to MS-DRGs 919, 920 and 921 in MDC 21; (2) reassign the ICD-10-CM diagnosis codes with the 7th character “D” (subsequent encounter) from MS-DRGs 919, 920, 921, 922, and 923 in MDC 21 to MS-DRGs 949 and 950 in MDC 23; and (3) reassign the ICD-10-CM diagnosis codes with the 7th character “S” (sequela) from MS-DRGs 949 and 950 in MDC 23 to MS-DRGs 922 and 923 in MDC 21 for FY 2018. However, one commenter did not support the reassignment of ICD-10-CM diagnosis codes with the 7th character “S” (sequela) from MS-DRGs 949 and 950 in MDC 23 to MS-DRGs 922 and 923 in

MDC 21. This commenter agreed that the codes with the 7th character “S” should not be assigned to MS-DRGs 949 and 950. However, the commenter disagreed with the proposed reassignment to MS-DRGs 922 and 923 and referenced language from the FY 2017 ICD-10-CM Official Guidelines for Coding and Reporting under Section I.B.10. Sequela (Late Effects) which states: “A sequela is the residual effect (condition produced) after the acute phase of an illness or injury has terminated. The condition or nature of the sequela is sequenced first. The sequela code is sequenced second.” According to the commenter, sequela cases are appropriately classified to the MS-DRGs corresponding to the reported residual condition rather than MS-

DRGs 922 and 923 or MS-DRGs 949 and 950.

Response: We appreciate the support of the commenters on our proposals. In response to the commenter who did not agree with the reassignment of ICD-10-CM diagnosis codes with the 7th character “S” (sequela) from MS-DRGs 949 and 950 in MDC 23 to MS-DRGs 922 and 923 in MDC 21, we note that the proposal for the ICD-10-CM diagnosis codes with the 7th character “S” (sequela) is consistent with the assignments under Version 33 of the ICD-10 MS-DRGs from which their respective predecessor codes were derived. For example, under Version 33 of the ICD-10 MS-DRGs, ICD-10-CM diagnosis code T85.81XS (Embolism due to internal prosthetic devices, implants and grafts, not elsewhere

classified, sequela) was assigned to MDC 21 under MS-DRGs 922 and 923. Similar to the inadvertent errors in MDC and MS-DRG assignments that occurred with the ICD-10-CM diagnosis codes involving 7th characters "A" (initial encounter) and "D" (subsequent encounter) from Version 33 to Version 34 of the ICD-10 MS-DRGs, the ICD-10-CM diagnosis codes involving 7th character "S" were also inadvertently assigned to the incorrect MDC and MS-DRGs under Version 34 of the ICD-10 MS-DRGs. Therefore, the proposal is consistent for all the 7th characters. In addition, while the commenter disagreed with our proposed MDC and MS-DRG assignments, the commenter did not offer suggestions on alternative assignments.

After consideration of the public comments we received, we are finalizing our proposals as set forth in the FY 2018 IPPS/LTCH PPS proposed rule for the complication codes discussed above in the ICD-10 MS-DRGs Version 35, effective October 1, 2017.

9. MDC 23 (Factors Influencing Health Status and Other Contacts With Health Services): Updates to MS-DRGs 945 and 946 (Rehabilitation With CC/MCC and Without CC/MCC, Respectively)

In FY 2016, we received requests to modify the MS-DRG assignment for MS-DRGs 945 and 946 (Rehabilitation with CC/MCC and without CC/MCC, respectively). This issue was addressed in the FY 2017 IPPS/LTCH PPS proposed and final rules (81 FR 24998

through 25000 and 81 FR 56826 through 56831). For FY 2017, we did not change the MS-DRG assignments for MS-DRGs 945 and 946.

We did not receive a request to address this issue as part of the FY 2018 IPPS/LTCH PPS proposed rule or suggestions on how to update the MS-DRGs 945 and 946 logic. However, we did refer the FY 2016 requests for a new ICD-10-CM diagnosis code to the Centers for Disease Control and Prevention (CDC) for consideration at a future meeting of the ICD-10 Coordination and Maintenance Committee. CDC has the lead on updating and maintaining ICD-10-CM codes. CDC did not address the issue at the September 13-14, 2016 ICD-10 Coordination and Maintenance Committee meeting. When the topic was not addressed at the September 13-14, 2016 ICD-10 Coordination and Maintenance Committee meeting, we asked CDC to address the code request at the March 7-8, 2017 meeting of the ICD-10 Coordination and Maintenance Committee. The topic was on the agenda for the March 7-8, 2017 ICD-10 Coordination and Maintenance Committee meeting. The deadline for providing comments on proposals considered at this meeting was April 7, 2017. Any new codes approved after this meeting which will be implemented on October 1, 2017 were posted on the CMS Web site at: <http://www.cms.gov/Medicare/Coding/ICD10/index.html> and on the CDC Web site at: <http://www.cdc.gov/nchs/icd/icd10.html> in June 2017. New codes also are included

in Table 6A associated with this FY 2018 IPPS/LTCH PPS final rule (which is available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>).

As addressed in the FY 2017 IPPS/LTCH PPS final rule, the ICD-9-CM MS-DRGs used ICD-9-CM codes reported as the principal diagnosis that clearly identified an encounter for rehabilitation services, such as diagnosis codes V57.89 (Care involving other specified rehabilitation procedure) and V57.9 (Care involving unspecified rehabilitation procedure), and these codes were not included in ICD-10-CM. Given this lack of ICD-10-CM codes to indicate that the reason for the encounter was for rehabilitation, the ICD-10 MS-DRG logic could not reflect the logic of the ICD-9-CM MS-DRGs. Commenters on the final rule recommended that CDC create new diagnosis codes for these concepts in ICD-10-CM so that the MS-DRG logic could be updated to more closely reflect that of the ICD-9-CM MS-DRGs.

As we stated in the proposed rule, if new ICD-10-CM codes are created for encounter for rehabilitation services, we would address any updates to MS-DRGs 945 and 946 utilizing these new codes in future rulemaking. In the meantime, we welcome other specific recommendations on how to update MS-DRGs 945 and 946. We are sharing the following data on these MS-DRGs from the MedPAR file.

FY 2015 MS-DRGs with ICD-9-CM codes		Number of cases	Average length of stay	Average cost
MS-DRG 945		3,991	10.3	\$8,242
MS-DRG 946		1,184	8.0	7,322
FY 2016 MS-DRGs with ICD-10-CM codes		Number of cases	Average length of stay	Average cost
MS-DRG 945		671	10.8	\$7,814
MS-DRG 946		157	7.3	7,672

As shown by the tables above, there was a decrease of 3,320 MS-DRG 945 cases (from 3,991 to 671) from FY 2015, when claims were submitted with ICD-9-CM codes, to FY 2016 when ICD-10 codes were submitted. There was a decrease of 1,027 MS-DRG 946 cases (from 1,184 to 157) from FY 2015 to FY 2016. The average length of stay increased 0.5 days (from 10.3 to 10.8 days) for MS-DRG 945 and decreased 0.7 days (from 8.0 to 7.3 days) for MS-DRG 946. The average costs decreased by \$428 (from \$8,242 to \$7,814) for MS-

DRG 945 cases and increased by \$350 (from \$7,322 to \$7,672) for MS-DRG 946 cases. The number of cases was significantly lower in FY 2016 compared to FY 2015. However, the difference in average length of stay and average costs did not show large changes.

As discussed in the FY 2018 IPPS/LTCH PPS proposed rule, we also examined possible MS-DRGs where these cases may have been assigned in FY 2016 based on increases in the number of claims. Because there is not

a diagnosis code that could be reported as a principal diagnosis, which would indicate if the admissions were for rehabilitation services, we are unable to determine if these were cases admitted for rehabilitation that moved from MS-DRGs 945 and 946 because of the lack of a code for encounter for rehabilitation, or if there was simply a change in the number of cases. The following tables show our findings for MS-DRG 056 (Degenerative Nervous System Disorders with MCC); MS-DRG 057 (Degenerative Nervous System

Disorders without MCC); MS-DRG 079 (Hypertensive Encephalopathy without CC/MCC); MS-DRG 083 (Traumatic Stupor & Coma, Coma >1 Hour with

CC); MS-DRG 084 (Traumatic Stupor & Coma, Coma >1 Hour without CC/MCC); MS-DRG 092 (Other Disorders of Nervous System with MCC); and MS-

DRG 093 (Other Disorders of Nervous System without CC/MCC).

FY 2015 MS-DRGs with ICD-9-CM codes	Number of cases	Average length of stay	Average cost
MS-DRG 056	9,548	7.3	\$12,606
MS-DRG 057	25,652	5.1	7,918
MS-DRG 079	618	2.7	5,212
MS-DRG 083	2,516	4.3	9,446
MS-DRG 084	1,955	2.8	6,824
MS-DRG 092	12,643	5.7	11,158
MS-DRG 093	7,928	2.8	5,182

FY 2016 MS-DRGs with ICD-10-CM codes	Number of cases	Average length of stay	Average cost
MS-DRG 056	10,817	7.6	\$12,930
MS-DRG 057	28,336	5.3	7,902
MS-DRG 079	1,233	2.7	5,579
MS-DRG 083	4,058	6.2	9,134
MS-DRG 084	3,016	2.7	6,508
MS-DRG 092	19,392	3.9	6,706
MS-DRG 093	8,120	2.7	5,253

As shown by the tables above, some of the MS-DRGs that show the largest increase in number of cases do not show significant changes in the average length of stay or average costs. For instance, MS-DRG 079 cases doubled from FY 2015 to FY 2016 (from 618 to 1,233). However, the average length of stay did not change from 2.7 days and the average costs increased only \$367 (from \$5,212 to \$5,579). MS-DRG 083 cases increased by 1,542 (from 2,516 to 4,058) with a 1.9 day increase in the average length of stay (from 4.3 to 6.2 days); however, the average costs decreased only \$312 (from \$9,446 to \$9,134). There were large changes for MS-DRG 092 with cases increasing by 6,749 (from 12,643 to 19,392), the average length of stay decreasing by 1.8 days (from 5.7 to 3.9) and the average costs decreasing by \$4,452 (from \$11,158 to \$6,706). Once again, it is not possible to determine if any changes are a result of the impact of not having a code for the encounter for rehabilitation services to report as a principal diagnosis, or if other factors such as changes in types of patient admissions were involved.

Given the lack of a diagnosis code to capture the principal diagnosis of encounter for rehabilitation, we stated in the FY 2018 proposed rule that we were unable to update MS-DRG 945 or MS-DRG 946 to better identify those cases in which patients are admitted for rehabilitation services. If the CDC creates a new code, we will consider proposing updates to MS-DRGs 945 and 946 in the future.

We invited public comments on our proposal not to update MS-DRGs 945 and 946 for FY 2018.

Comment: Several commenters acknowledged that CMS' analysis indicates that there was a decrease in the number of cases reported in MS-DRG 945 and 946 from FY 2015 to FY 2016 and there was an increase in average length of stay for MS-DRG 945 and a decrease in average length of stay for MS-DRG 946 from FY 2015 to FY 2016. The commenters stated that, without an ICD-10-CM diagnosis code to capture encounters for rehabilitation therapy, it was not possible to identify any specific shifts in these cases. The commenters stated that they had written to CDC to support the creation of a new diagnosis code to capture these admissions after the topic was presented at the March 7-8, 2017 ICD-10 Coordination and Maintenance Committee meeting. The commenters stated that if CDC creates a new ICD-10-CM code for encounters for rehabilitation therapy, it recommended that CMS propose adding the new code as part of the MS-DRG logic for MS-DRGs 945 and 946 as part of the FY 2019 IPPS/LTCH PPS proposed rule. The commenters stated that if CDC decides not to create a new ICD-10-CM code for encounters for rehabilitation therapy, CMS should consider assembling a technical advisory panel made up of stakeholders, such as rehabilitation providers and other representation, to conduct an evaluation of this issue and recommend options to improve the MS-DRG logic and changes

that could be proposed as part of future rulemaking.

Response: We agree with the commenters that without a specific ICD-10-CM code for encounters for rehabilitation therapy, it is not possible to identify any specific shifts in these cases. If the CDC creates a new code effective October 1, 2018, we will evaluate potential updates to the MS-DRGs utilizing this new code as part of the FY 2019 IPPS/LTCH PPS proposed rule. If the CDC decides not to create a new code, we welcome recommendations from the public on how the MS-DRG logic could be updated to better capture patients within MS-DRGs 945 and 946.

After consideration of the public comments that we received, we are finalizing our proposal not to update MS-DRGs 945 and 946 for FY 2018.

10. Changes to the Medicare Code Editor (MCE)

The Medicare Code Editor (MCE) is a software program that detects and reports errors in the coding of Medicare claims data. Patient diagnoses, procedure(s), and demographic information are entered into the Medicare claims processing systems and are subjected to a series of automated screens. The MCE screens are designed to identify cases that require further review before classification into an MS-DRG.

As discussed in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56831 through 56844), we made available the FY 2017 ICD-10 MCE Version 34 manual file and an ICD-9-CM MCE

Version 34.0A manual file (for analysis purposes only). The links to these MCE manual files, along with the links to purchase the mainframe and computer software for the MCE Version 34 (and ICD-10 MS-DRGs) are posted on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html> through the FY 2017 IPPS Final Rule Home Page.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19840 through 19846), we addressed the MCE requests we received by the December 7, 2016 deadline. We also discussed the proposals we made based on our internal review and analysis. In addition, as a result of new and modified code updates approved after the annual spring ICD-10 Coordination and Maintenance Committee meeting, we routinely make changes to the MCE. In the past, in both the IPPS proposed and final rules, we have only provided the list of changes to the MCE that were brought to our attention after the prior year's final rule. We historically have not listed the changes we have made to the MCE as a result of the new and modified codes approved after the annual spring ICD-10 Coordination and Maintenance Committee meeting. These changes are approved too late in the rulemaking schedule for inclusion in

the proposed rule. Furthermore, although our MCE policies have been described in our proposed and final rules, we have not provided the detail of each new or modified diagnosis and procedure code edit in the final rule. However, we make available the finalized Definitions of Medicare Code Edits (MCE) file. Therefore, we have made available the FY 2018 ICD-10 MCE Version 35 manual file. The link to this MCE manual file, along with the link to the mainframe and computer software for the MCE Version 35 (and ICD-10 MS-DRGs) are posted on the CMS Web site at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html> through the FY 2018 IPPS Final Rule Home Page.

a. Age Conflict Edit

In the MCE, the Age Conflict edit exists to detect inconsistencies between a patient's age and any diagnosis on the patient's record; for example, a 5-year-old patient with benign prostatic hypertrophy or a 78-year-old patient coded with a delivery. In these cases, the diagnosis is clinically and virtually impossible for a patient of the stated age. Therefore, either the diagnosis or the age is presumed to be incorrect. Currently, in the MCE, the following four age diagnosis categories appear under the Age Conflict edit and are

listed in the manual and written in the software program:

- Perinatal/Newborn—Age of 0 years only; a subset of diagnoses which will only occur during the perinatal or newborn period of age 0 (for example, tetanus neonatorum, health examination for newborn under 8 days old).
- Pediatric—Age is 0 to 17 years inclusive (for example, Reye's syndrome, routine child health examination).
- Maternity—Age range is 12 to 55 years inclusive (for example, diabetes in pregnancy, antepartum pulmonary complication).
- Adult—Age range is 15 to 124 years inclusive (for example, senile delirium, mature cataract).

We received a request to provide clarification regarding the overlapping age ranges (0 to 17 years and 15 to 124 years) in the Pediatric and Adult categories under the Age Conflict edit. The requestor questioned which diagnosis code would be most appropriate to identify when a general or routine health examination is performed on patients who are within the age range of 15 to 17 years. The specific ICD-10-CM diagnosis codes that the requestor inquired about related to a child or to an adult encounter for a health examination are displayed in the table below.

ICD-10-CM code	Code description
Z00.00	Encounter for general adult medical examination without abnormal findings.
Z00.01	Encounter for general adult medical examination with abnormal findings.
Z00.121	Encounter for routine child health examination with abnormal findings.
Z00.129	Encounter for routine child health examination without abnormal findings.

The age ranges defined within the Age Conflict edits were established with the implementation of the IPPS. The adult age range includes the minimum age of 15 years for those patients who are declared emancipated minors. We note that, historically, we have not provided coding advice in rulemaking with respect to policy. We collaborate with the American Hospital Association (AHA) through the Coding Clinic for ICD-10-CM and ICD-10-PCS to promote proper coding. We recommend that the requestor and other interested parties submit any questions pertaining to correct coding practices for this specific issue to the AHA.

Comment: Some commenters believe that CMS is responsible for addressing questions relating to the pediatric and adult age ranges in the Age Conflict edit. Other commenters stated that, while the Coding Clinic for ICD-10-CM and ICD-10-PCS addresses proper coding, it

cannot address issues related to payer-specific edits or definitions.

Response: We believe there is some confusion with regard to the issue presented in the FY 2018 IPPS/LTCH PPS proposed rule pertaining to the Age Conflict edit. We specifically responded to a request that sought clarification regarding the overlapping age ranges (0 to 17 years and 15 to 124 years) in the Pediatric and Adult categories under the Age Conflict edit. We responded that the age ranges defined within the Age Conflict edits were established with the implementation of the IPPS and noted that the adult age range includes the minimum age of 15 years for those patients who are declared emancipated minors. Therefore, we fully responded to the request that we clarify the Age ranges in the MCE. However, in addition to the request regarding the overlapping age ranges in the Age Conflict edit, the requestor specifically

asked for coding advice. As noted earlier, "The requestor questioned which diagnosis code would be most appropriate to identify when a general or routine health examination is performed on patients who are within the age range of 15 to 17 years." We provided the specific ICD-10-CM diagnosis codes that the requestor inquired about related to a child or to an adult encounter for a health examination as displayed in the table above. The statement recommending that the requestor and other interested parties submit questions pertaining to correct coding practices for this specific issue to the AHA was with regard to reporting the most appropriate diagnosis code based on the clarification provided regarding the Age Conflict edit. As stated in the FY 2018 IPPS/LTCH PPS proposed rule, we have not provided coding advice in rulemaking with respect to policy. Accordingly, any

questions regarding which diagnosis code would be most appropriate to report when a general or routine health examination is performed on patients who are within the age range of 15 to 17 years would be best addressed by the Coding Clinic.

(1) Perinatal/Newborn Diagnosis Category

Under the ICD-10 MCE, the Perinatal/Newborn Diagnosis category under the Age Conflict edit considers the age of 0 years only; a subset of diagnoses which will only occur during the perinatal or newborn period of age 0 to be inclusive. This includes conditions that have their origin in the fetal or perinatal period (before birth through the first 28 days after birth) even if morbidity occurs later. For that reason, the diagnosis codes on this Age Conflict edit list would be expected to apply to conditions or disorders specific to that age group only.

In the ICD-10-CM classification, there are two diagnosis codes that describe conditions as occurring during infancy and the neonatal period that are currently not on the Perinatal/Newborn Diagnosis category edit code list. We consulted with staff at the Centers for Disease Control's (CDC's) National Center for Health Statistics (NCHS) because NCHS has the lead responsibility for the ICD-10-CM diagnosis codes. The NCHS' staff confirmed that, although diagnosis codes D80.7 (Transient hypogammaglobulinemia of infancy) and diagnosis code E71.511 (Neonatal adrenoleukodystrophy) do occur during infancy and the neonatal period, both conditions can last beyond the 28-day timeframe which is used to define the perinatal/newborn period. These diagnosis codes are not intended to be restricted for assignment to newborn patients. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19841), we proposed to not add these two diagnosis codes to the Perinatal/Newborn Diagnosis category under the Age Conflict edit. We invited public comments on our proposal.

Comment: Commenters agreed that ICD-10-CM diagnosis codes D80.7 and E71.511 should not be added to the Perinatal/Newborn Diagnosis category under the Age Conflict edit.

Response: We appreciate the commenters' support.

After consideration of the public comments that we received, we are finalizing our proposal to not add diagnosis code D80.7 (Transient hypogammaglobulinemia of infancy) and diagnosis code E71.511 (Neonatal adrenoleukodystrophy) to the Perinatal/

Newborn Diagnosis category under the Age Conflict edit.

(2) Pediatric Diagnosis Category

Under the ICD-10 MCE, the Pediatric diagnosis category under the Age Conflict edit considers the age range of 0 to 17 years inclusive. For that reason, the diagnosis codes on this Age Conflict edit list would be expected to apply to conditions or disorders specific to that age group only.

The ICD-10-CM diagnosis code list for the Pediatric diagnosis category under the Age Conflict edit currently includes a diagnosis code pertaining to dandruff that is not intended to apply to pediatric patients only. We consulted with staff at the Centers for Disease Control's (CDC's) National Center for Health Statistics (NCHS) because NCHS has the lead responsibility for the ICD-10-CM diagnosis codes. The NCHS' staff confirmed that, although diagnosis code L21.0 (Seborrhea capitis) has an inclusion term of "Cradle cap," the description of the diagnosis code is not intended to be restricted for assignment of pediatric patients. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19841), we proposed to remove diagnosis code L21.0 from the list of diagnosis codes for the Pediatric diagnosis category under the Age Conflict edit. We invited public comments on our proposal.

Comment: Commenters agreed that diagnosis code L21.0 should be removed from the list of diagnosis codes for the Pediatric diagnosis category under the Age Conflict edit.

Response: We appreciate the commenters' support.

After consideration of the public comments that we received, we are finalizing our proposal to remove diagnosis code L21.0 (Seborrhea capitis) from the Pediatric diagnosis category under the Age Conflict edit in the ICD-10 MCE Version 35, effective October 1, 2017.

(3) Maternity Diagnoses

Under the ICD-10 MCE, the Maternity diagnosis category under the Age Conflict edit considers the age range of 12 to 55 years inclusive. For that reason, the ICD-10-CM diagnosis codes on this Age Conflict edit list would be expected to apply to conditions or disorders specific to that age group only.

As discussed in section II.F.12. of the preamble of the proposed rule and this final rule, Table 6A.—New Diagnosis Codes lists the new ICD-10-CM diagnosis codes that have been approved to date, which will become effective with discharges occurring on and after October 1, 2017. Included on

this list are a number of diagnosis codes associated with pregnancy and maternal care that we believe are appropriate to add to the list of diagnosis codes for the Maternity diagnoses category under the Age Conflict edit. We refer readers to Table 6P.1a. associated with the FY 2018 IPPS/LTCH PPS proposed rule (which is available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) for a review of the ICD-10-CM diagnosis codes that we proposed to add to the Age Conflict edit list. We invited public comments on our proposal.

Comment: Commenters supported the proposal to add the list of diagnosis codes displayed in Table 6P.1a. associated with the FY 2018 IPPS/LTCH PPS proposed rule to the Maternity diagnoses category under the Age Conflict edit. Commenters recommended that this same list of diagnosis codes also be added to the Diagnoses for Females Only edit.

Response: We appreciate the commenters' support. We agree that the diagnosis codes proposed to be added to the Maternity diagnoses category under the Age Conflict edit are also appropriate to be added to the Diagnoses for Females Only edit code list under the Sex Conflict edit with other diagnosis codes associated with pregnancy and maternal care.

After consideration of the public comments that we received, we are finalizing our proposal to add the list of diagnosis codes displayed in Table 6P.1a. associated with the FY 2018 IPPS/LTCH PPS proposed rule and this final rule (which is available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) to the Maternity diagnoses category under the Age Conflict edit and we are adding this same list of diagnosis codes to the Diagnoses for Females Only code list under the Sex Conflict edit, effective October 1, 2017.

b. Sex Conflict Edit

In the MCE, the Sex Conflict edit detects inconsistencies between a patient's sex and any diagnosis or procedure on the patient's record; for example, a male patient with cervical cancer (diagnosis) or a female patient with a prostatectomy (procedure). In both instances, the indicated diagnosis or the procedure conflicts with the stated sex of the patient. Therefore, the patient's diagnosis, procedure, or sex is presumed to be incorrect.

(1) Diagnoses for Males Only Edit

We received a request to review the following ICD-10-CM diagnosis codes

pertaining to conditions associated with males for possible inclusion on the list

of diagnosis codes for the Diagnoses for Males Only edit.

ICD-10-CM code	Code description
B37.42	Candidal balanitis.
N35.011	Post-traumatic bulbous urethral stricture.
N35.012	Post-traumatic membranous urethral stricture.
N35.013	Post-traumatic anterior urethral stricture.
N35.112	Postinfective bulbous urethral stricture, not elsewhere classified.
N35.113	Postinfective membranous urethral stricture, not elsewhere classified.
N35.114	Postinfective anterior urethral stricture, not elsewhere classified.
N99.115	Postprocedural fossa navicularis urethral stricture.

As discussed in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19842), we agreed with the requestor that diagnosis code B37.42 describes a condition that is applicable only to males. Balanitis is the inflammation of the glans (rounded head) of the penis. We also agreed that the diagnosis codes listed above that align under subcategory N35.01 (Post-traumatic urethral stricture, male) and subcategory N35.11 (Postinfection urethral stricture, not elsewhere classified, male) are appropriate to add to the list of diagnosis codes for the Diagnoses for Males Only edit because these diagnosis codes include specific terminology that is applicable only to males. Further, we agreed that diagnosis code N99.115 is appropriate to add to the list of diagnosis codes for the Diagnoses for Males Only edit because subcategory N99.11 (Postprocedural urethral stricture, male) includes specific terminology that is applicable to males only as well. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule, we proposed to add the ICD-10-CM diagnosis codes listed in the table above to the list of diagnosis codes for the Diagnoses for Males Only edit.

We also proposed to remove ICD-10-CM diagnosis code Q64.0 (Epispadias) from the list of diagnosis codes for the Diagnoses for Males Only edit because this rare, congenital condition involving

the opening of the urethra can occur in both males and females.

In addition, as discussed in section II.F.12. of the preamble of the proposed rule, Table 6A.—New Diagnosis Codes associated with the proposed rule listed the new ICD-10-CM diagnosis codes that had been approved to date, which will become effective with discharges occurring on and after October 1, 2017. Included on this list are a number of diagnosis codes associated with male body parts that we believe are appropriate to add to the list of diagnosis codes for the Diagnoses for Males Only category under the Sex Conflict edit. We refer readers to Table 6P.1b. associated with the proposed rule (which is available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) for a review of the ICD-10-CM diagnosis codes that we proposed to add to the list of diagnosis codes for the Diagnoses for Males Only category.

We invited public comments on our proposals.

Comment: Commenters supported the proposal to add the diagnosis codes listed in the table in the proposed rule describing conditions applicable to males to the Diagnoses for Males Only edit. Commenters also supported the addition of new diagnosis codes associated with male body parts as displayed in Table 6P.1b. associated

with the proposed rule to the Diagnoses for Males Only edit. In addition, commenters supported the proposal to remove diagnosis code Q64.0 (Epispadias) from the list of diagnosis codes for the Diagnoses for Males Only edit because this condition can occur in both males and females.

Response: We appreciate the commenters' support.

After consideration of the public comments that we received, we are finalizing our proposals to add the eight diagnosis codes displayed in the table above and the new diagnosis codes associated with male body parts as displayed in Table 6P.1b. associated with the proposed rule and this final rule (which is available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) to the Diagnoses for Males Only edit, effective October 1, 2017. We are also finalizing our proposal to remove diagnosis code Q64.0 (Epispadias) from the list of diagnosis codes for the Diagnoses for Males Only edit, effective October 1, 2017.

(2) Diagnoses for Females Only

We received a request to review the following ICD-10-CM diagnosis codes for possible removal from the list of diagnosis codes for the Diagnoses for Females Only edit.

ICD-10-CM code	Code description
F52.6	Dyspareunia not due to a substance or known physiological condition.
J84.81	Lymphangioleiomyomatosis.
R97.1	Elevated cancer antigen 125 [CA 125].

The requestor noted that, in the ICD-10-CM classification, the term "Dyspareunia" (painful sexual intercourse) has specified codes for males and females located in the Alphabetic Index to Diseases for

Reporting Physiological Dyspareunia. However, the indexing for diagnosis code F52.6 (Dyspareunia not due to a substance or known physiological condition) specifies that it is not due to a physiological condition and the entry

is not gender specific. According to the requestor, while the condition is most often associated with female sexual dysfunction, there is a subset of males who also suffer from this condition.

In addition, the requestor stated that diagnosis code J84.81 (Lymphangioleiomyomatosis) describes a rare form of lung disease believed to occur more often in patients with tuberous sclerosis complex (TSC), a disorder due to genetic mutation. Although the condition is described as being exclusive to women, unique cases for men with TSC have also been reported.

Lastly, the requestor indicated that diagnosis code R97.1 (Elevated cancer antigen 125 [CA 125]) describes the tumor marker that commonly identifies ovarian cancer cells in women. However, the requestor stated that high levels have also been demonstrated in men (and women) with lung cancer as well.

As discussed in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19842 through 19843), we reviewed ICD-10-CM diagnosis codes F52.6, J84.81, and R97.1, and we agree with the requestor that Dyspareunia, not due to a physiological condition, can also occur in males. We also agree that the condition of

Lymphangioleiomyomatosis and Elevated CA 125 levels can be found in males. Therefore, we proposed to remove these three diagnosis codes from the list of diagnosis codes for the Diagnoses for Females Only edit. We invited public comments on our proposals.

In addition, we proposed to add new diagnosis code Z40.03 (Encounter for prophylactic removal of fallopian tube(s)) to the list of diagnosis codes for the Diagnoses for Females Only edit. Currently, diagnosis code Z40.02 (Encounter for prophylactic removal of

ovary) is on the edit's code list; therefore, inclusion of new diagnosis code Z40.03 would be consistent. We referred readers to Table 6A.—New Diagnosis Codes associated with the FY 2018 IPPS/LTCH PPS proposed rule (which is available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) for the list of new ICD-10-CM diagnosis codes that had been finalized to date. We invited public comments on our proposal.

Comment: Commenters supported the proposal to remove diagnosis codes F52.6, J84.81, and R97.1 from the list of diagnosis codes for the Diagnoses for Females Only edit. Commenters also supported the proposal to add new diagnosis code Z40.03 to the list of diagnosis codes for the Diagnoses for Females Only edit.

Response: We appreciate the commenters' support.

After consideration of the public comments that we received, we are finalizing our proposal to remove diagnosis codes F52.6 (Dyspareunia not due to a substance or known physiological condition), J84.81 (Lymphangioleiomyomatosis) and diagnosis code R97.1 (Elevated cancer antigen 125 [CA 125]) from the Diagnoses for Females Only edit, effective October 1, 2017. We are also finalizing our proposal to add new diagnosis code Z40.03 (Encounter for prophylactic removal of fallopian tube(s)) to the list of diagnosis codes for the Diagnoses for Females Only edit, effective October 1, 2017.

c. Non-Covered Procedure Edit: Gender Reassignment Surgery

In the MCE, the Non-Covered Procedure edit identifies procedures for which Medicare does not provide payment. Payment is not provided due to specific criteria that are established in the National Coverage Determination (NCD) process. We refer readers to the Web site at: <https://www.cms.gov/Medicare/Coverage/DeterminationProcess/howtorequestanNCD.html> for additional information on this process. In addition, there are procedures that would normally not be paid by Medicare but, due to the presence of certain diagnoses, are paid.

We issued instructions on June 27, 2014, as a one-time notification, Pub. 100-03, Transmittal 169, Change Request 8825, effective May 30, 2014, announcing to MACs the invalidation of National Coverage Determination (NCD) 140.3 for Transsexual Surgery. As a result, MACs determined coverage on a case-by-case basis. The transmittal is available via the Internet on the CMS Web site at: <https://www.cms.gov/Regulations-and-Guidance/Guidance/Transmittals/2014-Transmittals-Items/R169NCD.html?DLPage=1&DLEntries=10&DLFilter=Transsexual&DLSort=1&DLSortDir=ascending>.

It was brought to our attention that the ICD-10-PCS procedure codes shown in the table below are currently included on the list of procedure codes for the Non-Covered Procedure edit. As a result, when one of these procedure codes is reported on a claim, the edit for Non-Covered Procedure is triggered and claims are not able to process correctly.

ICD-10-PCS code	Code description
0W4M070	Creation of vagina in male perineum with autologous tissue substitute, open approach.
0W4M0J0	Creation of vagina in male perineum with synthetic substitute, open approach.
0W4M0K0	Creation of vagina in male perineum with nonautologous tissue substitute, open approach.
0W4M0Z0	Creation of vagina in male perineum, open approach.
0W4N071	Creation of penis in female perineum with autologous tissue substitute, open approach.
0W4N0J1	Creation of penis in female perineum with synthetic substitute, open approach.
0W4N0K1	Creation of penis in female perineum with nonautologous tissue substitute, open approach.
0W4N0Z1	Creation of penis in female perineum, open approach.

Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19843), we proposed to remove the ICD-10-PCS procedure codes included in the table above from the list of procedure codes for the Non-Covered Procedure edit to help resolve claims processing issues associated with the reporting of these procedure codes. We invited public comments on our proposal.

Comment: Commenters agreed with the proposal to remove the ICD-10-PCS

procedure codes included in the table in the proposed rule from the list of procedure codes under the Non-Covered Procedure edit. One commenter who supported the proposal also requested that CMS review current policies related to breast implant procedures for transgender females. This commenter noted that estrogen therapy by itself does not provide adequate growth tissue. Another commenter stated that these gender reassignment procedures

should remain noncovered as they are a form of plastic surgery and, in principle, are not unlike elective abortion procedures.

Response: We appreciate the commenters' support. In response to the commenter who requested that we review current policies related to breast implant procedures for transgender females, we recommend that the commenter contact its local MAC for additional information because there is

no national coverage determination (NCD) for this service. With regard to the commenter who stated that the procedure codes describing gender reassignment surgery listed in the table in the proposed rule should remain noncovered, we note that, as mentioned earlier in this section, NCD 140.3 for Transsexual Surgery was invalidated effective May 30, 2014, and therefore, the MACs determine coverage on a case-by-case basis.

After consideration of the public comments we received, we are finalizing our proposal to remove the ICD-10-PCS procedure codes included in the table above from the list of procedure codes for the Non-Covered Procedure edit to help resolve claims processing issues associated with the reporting of these procedure codes.

d. Unacceptable Principal Diagnosis Edit

In the MCE, there are select codes that describe a circumstance that influences an individual's health status, but does not actually describe a current illness or injury. There also are codes that are not specific manifestations but may be due to an underlying cause. These codes are considered unacceptable as a principal diagnosis. In limited situations, there are a few codes on the MCE Unacceptable Principal Diagnosis edit code list that are considered "acceptable" when a specified secondary diagnosis is also coded and reported on the claim.

(1) Bacterial and Viral Infectious Agents (B95 Through B97)

As discussed in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19843), we examined ICD-10-CM diagnosis codes in Chapter 1 (Certain Infectious and Parasitic Diseases) of the Classification Manual that fall within the range of three code categories for "Bacterial and Viral Infectious Agents" (B95 through B97). The instructional note provided at this section states that these categories are provided for use as supplementary or additional codes to identify the infectious agent(s) in diseases classified elsewhere. We identified 45 ICD-10-CM diagnosis codes within the range of these code categories for "Bacterial and Viral Infectious Agents" (B95 through B97) that, as a result of the instructional note, are not appropriate to report as a principal diagnosis. In the FY 2018 IPPS/LTCH PPS proposed rule, we proposed to add the 45 ICD-10-CM diagnosis codes shown in Table 6P.1c. associated with the proposed rule (which is available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) to the list of codes for the Unacceptable Principal Diagnosis edit. We invited public comments on our proposal.

Comment: Commenters supported the proposal to add the 45 ICD-10-CM diagnosis codes shown in Table 6P.1c. associated with the proposed rule to the list of codes for the Unacceptable Principal Diagnosis edit.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to add the 45 ICD-10-CM diagnosis codes shown in Table 6P.1c. associated with the proposed rule and this final rule (which is available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) to the list of codes for the Unacceptable Principal Diagnosis edit, effective October 1, 2017.

(2) Mental Disorders Due to Known Physiological Conditions (F01 Through F09)

We examined ICD-10-CM diagnosis codes in Chapter 5 (Mental and Behavioral Disorders) of the Classification Manual that fall within the range of nine code categories for "Mental Disorders Due to Known Physiological Conditions" (F01 through F09). The instructional note provided at this section states that this block comprises a range of mental disorders grouped together on the basis of their having in common a demonstrable etiology in cerebral disease, brain injury, or other insult leading to cerebral dysfunction. The dysfunction may be primary, as in diseases, injuries, and insults that affect the brain directly and selectively; or secondary, as in systemic diseases and disorders that attack the brain only as one of the multiple organs or systems of the body that are involved.

We identified 21 ICD-10-CM diagnosis codes that fall within the range of these code categories for "Mental Disorders Due to Known Physiological Conditions" (F01 through F09). Of these nine code categories, seven have a "Code first the underlying physiological condition" note. For example, at code category F01—Vascular dementia, the note reads, "Code first the underlying physiological condition or sequelae of cerebrovascular disease." We stated in the proposed rule that there are a total of 19 diagnosis codes that fall under these 7 code categories with a "Code first" note and, therefore, are not appropriate to report

as a principal diagnosis. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19843 through 19844), we proposed to add the 19 ICD-10-CM diagnosis codes shown in Table 6P.1d. associated with the proposed rule (which is available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) to the list of codes for the Unacceptable Principal Diagnosis edit. We invited public comments on our proposal.

Comment: Some commenters disagreed with the proposal to add the 19 ICD-10-CM diagnosis codes shown in Table 6P.1d. associated with the proposed rule to the list of codes for the Unacceptable Principal Diagnosis edit. The commenters suggested that CMS consult with the NCHS to determine if any of the codes may appropriately be sequenced as a principal diagnosis in certain circumstances. One commenter noted it had been informed through communications with the NCHS and AHA that, within the ICD-10-CM classification, there are instances where some "Code first" notes are intended to be interpreted as "Code first, if applicable" or "Code first, if known," although those terms are not explicitly stated in the instructional note. The commenter acknowledged that while some of the diagnosis codes that were proposed to be added to the Unacceptable Principal Diagnosis edit appear straightforward, such as diagnosis code F04 (Amnesic disorder due to known physiological condition), other diagnosis codes are not as clear, such as diagnosis code F01.5 (Vascular dementia) or diagnosis code F07.81 (Postconcussional syndrome).

Response: We appreciate the commenters' review and input regarding the proposal. We consulted with the staff at NCHS and they acknowledged that this group of codes was modified from the original World Health Organization (WHO) version of ICD-10. They indicated that while some code titles do include the language "due to known physiological condition," they are evaluating these "Code first" instructional notes further as they perform their annual review of the coding guidelines and consider updates for FY 2018.

After consideration of the public comments that we received and for the reasons described, we are not finalizing our proposal to add the 19 ICD-10-CM diagnosis codes shown in Table 6P.1d. associated with the proposed rule to the list of codes for the Unacceptable Principal Diagnosis edit.

(3) Other Obstetric Conditions, Not Elsewhere Classified (O94 Through O9A)

We examined ICD-10-CM diagnosis codes in Chapter 15 (Pregnancy, Childbirth and the Puerperium) of the Classification Manual that fall within the range of four code categories for “Other Obstetric Conditions, Not Elsewhere Classified” (O94 through O9A). The instructional note provided at this section under category O94 states that “this category is to be used to indicate conditions in O00 through O77, O85 through O94 and O98 through O9A as the cause of late effects. The sequelae include conditions specified as such, or as late effects, which may occur at any time after the puerperium. Code first condition resulting from (sequela) of complication of pregnancy, childbirth, and the puerperium.”

We stated in the proposed rule that we identified one ICD-10-CM diagnosis code within the range of these code categories for “Other Obstetric Conditions, Not Elsewhere Classified” (O94 through O9A) that, as a result of the instructional note, is not appropriate to report as a principal diagnosis because that code identifies the cause of the late effect. This ICD-10-CM diagnosis code is O94 (Sequelae of complication of pregnancy, childbirth, and the puerperium). In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19844), we proposed to add ICD-10-CM diagnosis code O94 to the list of codes for the Unacceptable Principal Diagnosis edit. We invited public comments on our proposal.

Comment: Commenters agreed with the proposal to add diagnosis code O94 to the list of codes for the Unacceptable Principal Diagnosis edit.

Response: We appreciate the commenters’ support.

After consideration of the public comments that we received, we are finalizing our proposal to add diagnosis code O94 (Sequelae of complication of pregnancy, childbirth, and the puerperium) to the list of codes for the Unacceptable Principal Diagnosis edit, effective October 1, 2017.

(4) Symptoms and Signs Involving Cognition, Perception, Emotional State and Behavior (R40 Through R46)

We examined ICD-10-CM diagnosis codes in Chapter 18 (Symptoms, Signs and Abnormal Findings) of the Classification Manual that fall within the range of code categories for “Symptoms and Signs Involving Cognition, Perception, Emotional State and Behavior” (R40 through R46), specifically under code category R40—Somnolence, stupor and coma. At subcategory R40.2—Coma, there is an instructional note, which states “Code first any associated: Fracture of skull (S02.-); Intracranial injury (S06.-).” We stated in the proposed rule that we identified 96 ICD-10-CM diagnosis codes under this subcategory that, as a result of the instructional note, are not appropriate to report as a principal diagnosis. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19844), we proposed to add the 96 ICD-10-CM diagnosis codes shown in Table 6P.1e. associated with the proposed rule (which is available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) to the list of codes for the Unacceptable Principal Diagnosis edit. We invited public comments on our proposal.

Comment: Commenters agreed with the proposed addition of 95 of the 96 diagnosis codes included in Table 6P.1e. associated with the proposed rule. The commenters specifically disagreed with the proposal to include diagnosis code R40.20 (Unspecified coma) to the Unacceptable Principal Diagnosis edit because the term “any” in the instructional note “Code first any associated: Fracture of skull (S02.-); Intracranial injury (S06.-)” indicates that if there is not a documented skull fracture or intracranial injury, then diagnosis code R40.20 could appropriately be reported as a Principal Diagnosis.

Response: We appreciate the commenters’ support to add 95 of the 96 diagnosis codes included in our proposal as shown in Table 6P.1e. associated with the proposed rule. We agree with the commenters that there

could be circumstances in which diagnosis code R40.20 would appropriately be reported as the principal diagnosis in the absence of a documented fracture of skull or intracranial injury.

After consideration of the public comments we received, we are finalizing the addition of 95 of the 96 diagnosis codes shown in Table 6P.1e. associated with the proposed rule (which is available via the Internet on the CMS Web site) to the list of codes for the Unacceptable Principal Diagnosis edit. For the reasons stated, we are not finalizing the proposal to add diagnosis code R40.20 (Unspecified coma) to the Unacceptable Principal Diagnosis edit. Table 6P.1e. associated with this final rule (which is available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) sets forth the 95 diagnosis codes that we are adding to the list of codes for the Unacceptable Principal Diagnosis edit, consistent with our finalized policy.

(5) General Symptoms and Signs (R50 Through R69)

We examined ICD-10-CM diagnosis codes in Chapter 18 (Symptoms, Signs and Abnormal Findings) of the Classification Manual that fall within the range of code categories for “General Symptoms and Signs” (R50 through R69), specifically, at code category R65—Symptoms and signs associated with systemic inflammation and infection. There is an instructional note at subcategory R65.1—Systemic inflammatory response syndrome (SIRS) of non-infectious origin, which states “Code first underlying condition, such as: Heatstroke (T67.0); Injury and trauma (S00–T88).” There is also an instructional note at subcategory R65.2—Severe sepsis, which states “Code first underlying infection, such as:” and provides a list of examples.

We identified four ICD-10-CM diagnosis codes in these subcategories that, as a result of the instructional notes described above, are not appropriate to report as a principal diagnosis. These four ICD-10-CM codes are shown in the table below.

ICD-10-CM code	Code description
R65.10	Systemic inflammatory response syndrome (SIRS) of non-infectious origin without acute organ dysfunction.
R65.11	Systemic inflammatory response syndrome (SIRS) of non-infectious origin with acute organ dysfunction.
R65.20	Severe sepsis without septic shock.
R65.21	Severe sepsis with septic shock.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19844), we proposed to add the four ICD-10-CM diagnosis codes shown in the table above to the list of codes for the Unacceptable Principal Diagnosis edit. We invited public comments on our proposal.

Comment: Commenters agreed with the proposal to add the four diagnosis codes listed in the table in the proposed rule to the Unacceptable Principal Diagnosis edit. However, another commenter disagreed with adding diagnosis code R65.10 (Systemic inflammatory response syndrome (SIRS) of non-infectious origin without acute organ dysfunction) and diagnosis code R65.11 (Systemic inflammatory response syndrome (SIRS) of non-infectious origin with acute organ dysfunction) to the edit. According to the commenter, if the underlying condition is not known, it would be appropriate to report either one of the two codes (R65.10 and R65.11) as the principal diagnosis.

Response: We appreciate the commenters' support. We disagree with the commenter who asserted that if the underlying condition is not known, it would be appropriate to report either diagnosis code R65.10 or R65.11 as a principal diagnosis. The current FY 2017 ICD-10-CM Official Guidelines for Coding and Reporting at Section 1.C.18.g. states, "The systemic inflammatory response syndrome (SIRS) can develop as a result of certain non-infectious disease processes, such as trauma, malignant neoplasm, or pancreatitis. When SIRS is documented with a noninfectious condition, and no subsequent infection is documented, the code for the underlying condition, such as an injury, should be assigned, followed by code R65.10, Systemic inflammatory response syndrome (SIRS) of non-infectious origin without acute organ dysfunction, or code R65.11, Systemic inflammatory response syndrome (SIRS) of non-infectious origin with acute organ dysfunction."

Therefore, the underlying condition (for example, trauma, neoplasm, pancreatitis, among others) responsible for causing the systemic inflammatory response syndrome (SIRS) should be readily available in the medical record documentation due to its clinical significance for the care and treatment of the patient.

After consideration of the public comments that we received, we are finalizing our proposal to add the four diagnosis codes shown in the table above from code category R65 (Symptoms and signs associated with systemic inflammation and infection) to the Unacceptable Principal Diagnosis edit code list, effective October 1, 2017.

(6) Poisoning by, Adverse Effects of, and Underdosing of Drugs, Medicaments and Biological Substances (T36 Through T50)

We examined ICD-10-CM diagnosis codes in Chapter 19 (Injury and Poisoning) of the Classification Manual that fall within the range of code categories for "Poisoning by, Adverse Effects of and Underdosing of Drugs, Medicaments and Biological Substances" (T36 through T50). The instructional note provided at this section states "Code first, for adverse effects, the nature of the adverse effect, such as:" and provides a list of examples. In addition, the FY 2017 ICD-10-CM Official Guidelines for Coding and Reporting at Section I.C.19.e.5.c., state that "Codes for underdosing should never be assigned as principal or first-listed codes."

We identified 996 ICD-10-CM diagnosis codes that, as a result of the instructional note for adverse effects and the guideline for reporting diagnosis codes for underdosing, are not appropriate to report as a principal diagnosis. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19844 through 19845), we proposed to add the 996 ICD-10-CM diagnosis codes shown in Table 6P.1f. associated with the proposed rule (which is available via

the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) to the list of codes for the Unacceptable Principal Diagnosis edit. We invited public comments on our proposal.

Comment: Commenters supported the proposal to add the 996 ICD-10-CM diagnosis codes shown in Table 6P.1f. associated with the proposed rule describing adverse effects and underdosing to the Unacceptable Principal Diagnosis edit.

Response: We appreciate the commenters' support.

After consideration of the public comments that we received, we are finalizing our proposal to add the 996 ICD-10-CM diagnosis codes shown in Table 6P.1f. associated with the proposed rule and this final rule (which is available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) to the list of codes for the Unacceptable Principal Diagnosis edit code list, effective October 1, 2017.

(7) Complications of Surgical and Medical Care, Not Elsewhere Classified (T80 Through T88)

We examined ICD-10-CM diagnosis codes in Chapter 19 (Injury and Poisoning) of the Classification Manual that fall within the range of code categories for "Complications of Surgical and Medical Care, Not Elsewhere Classified" (T80 through T88), specifically, at code category T81—Complications of procedures, not elsewhere classified. There is an instructional note at subcategory T81.12x—Postprocedural septic shock, which states, "Code first underlying infection."

We identified two ICD-10-CM diagnosis codes in this subcategory that, as a result of the instructional note, are not appropriate to report as a principal diagnosis. These two ICD-10-CM codes are shown in the table below.

ICD-10-CM code	Code description
T81.12XD	Postprocedural septic shock, subsequent encounter.
T81.12XS	Postprocedural septic shock, sequela.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19845), we proposed to add the two ICD-10-CM diagnosis codes shown in the table above to the list of codes for the Unacceptable Principal Diagnosis edit.

We invited public comments on our proposal.

Comment: Commenters supported the proposal to add the two diagnosis codes shown in the table in the proposed rule to the Unacceptable Principal Diagnosis edit.

Response: We appreciate the commenters' support.

After consideration of the public comments that we received, we are finalizing our proposal to add the two diagnosis codes describing postprocedural septic shock listed in the

proposed rule and above in this final rule to the list of codes for the Unacceptable Principal Diagnosis edit, effective October 1, 2017.

(8) Persons Encountering Health Services for Examinations (Z00 Through Z13)

We examined ICD-10-CM diagnosis codes in Chapter 21 (Factors Influencing Health Status) of the Classification Manual that fall within the range of code categories for “Persons Encountering Health Services for Examinations” (Z00 through Z13), specifically, at code category Z00—Encounter for general examination without complaint, suspected or reported diagnosis. The FY 2017 ICD-10-CM Official Guidelines for Coding and Reporting at Section I.C.21.c.16., state that the following ICD-10-CM Z-codes/categories may only be reported as the principal/first-listed diagnosis, except when there are multiple encounters on the same day and the medical records for the encounters are combined:

- Z00 (Encounter for general examination without complaint, suspected or reported diagnosis); except Z00.6 (Encounter for examination for normal comparison and control in clinical research program).

Therefore, we stated in the proposed rule that diagnosis code Z00.6 should not be reported as a principal/first-listed diagnosis. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19845), we proposed to add ICD-10-CM diagnosis code Z00.6 to the list of codes for the Unacceptable Principal Diagnosis edit. We invited public comments on our proposal.

Comment: Commenters did not support the proposal to add diagnosis

code Z00.6 to the list of codes for the Unacceptable Principal Diagnosis edit. The commenters stated that, although this diagnosis code is listed as an exception in the FY 2017 ICD-10-CM Official Guidelines for Coding and Reporting, the code is not prohibited from ever being reported as a principal diagnosis, rather, it is not *required* to be reported as a principal diagnosis. According to the commenters, there are circumstances when a control subject in a clinical research program may be admitted to the hospital and diagnosis code Z00.6 would be appropriate to report as the principal diagnosis. One commenter also noted that while Medicare may not be the responsible payer in these circumstances, other payers use the MCE edits, and these edits are frequently programmed in their billing software. Therefore, the commenter believed that including diagnosis code Z00.6 on the edit could cause unintended coding and reporting issues.

Response: We appreciate the commenters’ feedback on our proposal. We agree that there could be circumstances where it would be appropriate to report diagnosis code Z00.6 as the principal diagnosis. We have noted previously (72 FR 47152) that we encourage other payers to develop refinements to Medicare’s DRG system, which includes the Medicare code edits, consistent with their population’s needs. However, we also recognize that other payers use the MCE edits in their systems.

After consideration of the public comments we received and for the reasons described, we are not finalizing our proposal to add diagnosis code Z00.6 (Encounter for examination for normal comparison and control in

clinical research program) to the list of codes for the Unacceptable Principal Diagnosis edit.

To address a separate issue, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19845), we proposed to remove the diagnosis codes under category Z05 (Encounter for observation and examination of newborn for suspected diseases and conditions ruled out) from the list of codes for the Unacceptable Principal Diagnosis edit. The FY 2017 ICD-10-CM Official Guidelines for Coding and Reporting at Section I.C.16.b. state the following:

- Assign a code from category Z05, Observation and evaluation of newborns and infants for suspected conditions ruled out, to identify those instances when a healthy newborn is evaluated for a suspected condition that is determined after study not to be present. Do not use a code from category Z05 when the patient has identified signs or symptoms of a suspected problem; in such cases code the sign or symptom.

- A code from category Z05 may also be assigned as a principal or first-listed code for readmissions or encounters when the code from category Z38 no longer applies. Codes from category Z05 are for use only for healthy newborns and infants for which no condition after study is found to be present.

- A code from category Z05 is to be used as a secondary code after the code from category Z38, Liveborn infants according to place of birth and type of delivery.

Therefore, the ICD-10-CM diagnosis codes under category Z05 are allowed to be reported as a principal diagnosis. We proposed to remove the 14 ICD-10-CM diagnosis codes shown in the table below from the list of codes for the Unacceptable Principal Diagnosis edit.

ICD-10-CM code	Code description
Z05.0	Observation and evaluation of newborn for suspected cardiac condition ruled out.
Z05.1	Observation and evaluation of newborn for suspected infectious condition ruled out.
Z05.2	Observation and evaluation of newborn for suspected neurological condition ruled out.
Z05.3	Observation and evaluation of newborn for suspected respiratory condition ruled out.
Z05.41	Observation and evaluation of newborn for suspected genetic condition ruled out.
Z05.42	Observation and evaluation of newborn for suspected metabolic condition ruled out.
Z05.43	Observation and evaluation of newborn for suspected immunologic condition ruled out.
Z05.5	Observation and evaluation of newborn for suspected gastrointestinal condition ruled out.
Z05.6	Observation and evaluation of newborn for suspected genitourinary condition ruled out.
Z05.71	Observation and evaluation of newborn for suspected skin and subcutaneous tissue condition ruled out.
Z05.72	Observation and evaluation of newborn for suspected musculoskeletal condition ruled out.
Z05.73	Observation and evaluation of newborn for suspected connective tissue condition ruled out.
Z05.8	Observation and evaluation of newborn for other specified suspected condition ruled out.
Z05.9	Observation and evaluation of newborn for unspecified suspected condition ruled out.

We invited public comments on our proposal.

Comment: Commenters agreed with the proposal to remove the 14 ICD-10-CM diagnosis codes describing

observation and evaluation of newborn for various suspected conditions that have been ruled out as shown in the

table in the proposed rule from the list of codes for the Unacceptable Principal Diagnosis edit.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to remove the 14 ICD-10-CM diagnosis codes as shown in the table above from the list of codes for the Unacceptable Principal Diagnosis edit, effective October 1, 2017.

(9) Encounters for Other Specific Health Care (Z40 Through Z53)

We examined ICD-10-CM diagnosis codes in Chapter 21 (Factors Influencing Health Status) of the Classification Manual that fall within the range of code categories for "Encounters for Other Specific Health Care" (Z40 through Z53), specifically, at code category Z52—Donors of organs and tissues. The FY 2017 ICD-10-CM Official Guidelines for Coding and Reporting at Section I.C.21.c.16. state that the following Z-codes/categories may only be reported as the principal/first-listed diagnosis, except when there are multiple encounters on the same day and the medical records for the encounters are combined:

- Z52 (Donors of organs and tissues); except Z52.9 (Donor of unspecified organ or tissue).

Therefore, we stated in the proposed rule that ICD-10-CM diagnosis code Z52.9 should not be reported as a principal/first-listed diagnosis. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19846), we proposed to add ICD-10-CM diagnosis code Z52.9 to the list of codes for the Unacceptable Principal Diagnosis edit. We invited public comments on our proposal.

Comment: Commenters supported the proposal to add diagnosis code Z52.9 to the list of codes for the Unacceptable Principal Diagnosis edit. Commenters stated that this code is on the list of "non-specific Z codes" in the FY 2017 ICD-10-CM Official Guidelines for Coding and Reporting, indicating that this code is so nonspecific that there is little justification for its use in the hospital inpatient setting. However, another commenter disagreed with adding diagnosis code Z52.9 to the list of codes for the Unacceptable Principal Diagnosis edit. Similar to the circumstances with diagnosis code Z00.6 (Encounter for examination for normal comparison and control in clinical research program) discussed earlier in this section, this commenter stated that the FY 2017 ICD-10-CM Official Guidelines for Coding and Reporting does not prohibit diagnosis

code Z52.9 from ever being reported as a principal diagnosis; rather, it is not *required* to be reported as a principal diagnosis.

Response: We thank the commenters for their support and feedback. Upon further review, we agree that, consistent with the FY 2017 ICD-10-CM Official Guidelines for Coding and Reporting, the interpretation of the exception for diagnosis code Z52.9 is that it does not prohibit the code from ever being reported as a principal diagnosis; rather, the exception is indicating that the code is not *required* to be reported as a principal diagnosis.

After consideration of the public comments we received and for the reasons described, we are not finalizing our proposal to add ICD-10-CM diagnosis code Z52.9 to the list of codes for the Unacceptable Principal Diagnosis edit.

(10) Persons Encountering Health Services in Other Circumstances (Z69 Through Z76)

We examined ICD-10-CM diagnosis codes in Chapter 21 (Factors Influencing Health Status) of the Classification Manual that fall within the range of code categories for "Persons Encountering Health Services in Other Circumstances" (Z69 through Z76), specifically, at subcategory Z71.8—Other specified counseling. Consistent with ICD-10-CM diagnosis codes Z71.81 (Spiritual or religious counseling) and Z71.89 (Other specified counseling), in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19846), we proposed to add new diagnosis code Z71.82 (Exercise counseling) to the list of codes for the Unacceptable Principal Diagnosis edit. We referred readers to Table 6A.—New Diagnosis Codes associated with the proposed rule (which is available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) for the list of new ICD-10-CM diagnosis codes that had been finalized to date. We invited public comments on our proposal.

Comment: Commenters supported the proposal to add new diagnosis code Z71.82 (Exercise counseling) to the list of codes for the Unacceptable Principal Diagnosis edit.

Response: We appreciate the commenters' support.

After consideration of the public comments that we received, we are finalizing our proposal to add new ICD-10-CM diagnosis code Z71.82 (Exercise counseling) to the list of codes for the Unacceptable Principal Diagnosis edit, effective October 1, 2017.

(11) Persons With Potential Health Hazards Related to Family and Personal History and Certain Conditions Influencing Health Status (Z77 Through Z99)

We examined ICD-10-CM diagnosis codes in Chapter 21 (Factors Influencing Health Status) of the Classification Manual that fall within the range of code categories for "Persons with Potential Health Hazards Related to Family and Personal History and Certain Conditions Influencing Health Status" (Z77 through Z99), specifically, at code category Z91.8—Other specified personal risk factors, not elsewhere classified. Consistent with ICD-10-CM diagnosis codes Z91.81 (History of falling), Z91.82 (Personal history of military deployment), and Z91.89 (Other specified personal risk factors, not elsewhere classified), in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19846), we proposed to add new ICD-10-CM diagnosis codes Z91.841 (Risk for dental caries, low), Z91.842 (Risk for dental caries, moderate), Z91.843 (Risk for dental caries, high), and Z91.849 (Unspecified risk for dental caries) to the list of codes for the Unacceptable Principal Diagnosis edit. We referred readers to Table 6A.—New Diagnosis Codes associated with the proposed rule (which is available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) for the list of new ICD-10-CM diagnosis codes that had been finalized to date. We invited public comments on our proposal.

Comment: Commenters supported the proposal to add new diagnosis codes in subcategory Z91.84, Risk for dental caries, to the list of codes for the Unacceptable Principal Diagnosis edit.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to add new ICD-10-CM diagnosis codes Z91.841 (Risk for dental caries, low), Z91.842 (Risk for dental caries, moderate), Z91.843 (Risk for dental caries, high), and Z91.849 (Unspecified risk for dental caries) to the list of codes for the Unacceptable Principal Diagnosis edit, effective October 1, 2017.

e. Future Enhancement

Similar to our discussion in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56843 through 56844), with the implementation of ICD-10, it is clear that there are several new concepts in the classification. Looking ahead to the needs and uses of coded data as the data

continue to evolve from the reporting, collection, processing, coverage, payment and analysis aspects, we believe the need to ensure the accuracy of the coded data becomes increasingly significant.

The purpose of the MCE is to ensure that errors and inconsistencies in the coded data are recognized during Medicare claims processing. As we continue to evaluate the purpose and function of the MCE with respect to ICD-10, we encourage public input for future discussion. As we discussed in the FY 2017 IPPS/LTCH PPS final rule, we recognize a need to further examine the current list of edits and the definitions of those edits. We continue to encourage public comments on whether there are additional concerns with the current edits, including specific edits or language that should be removed or revised, edits that should be combined, or new edits that should be added to assist in detecting errors or inaccuracies in the coded data. Comments should be directed to the MS-DRG Classification Change Mailbox located at MSDRGClassificationChange@cms.hhs.gov by November 1, 2017 for FY 2019.

11. Changes to Surgical Hierarchies

Some inpatient stays entail multiple surgical procedures, each one of which, occurring by itself, could result in assignment of the case to a different MS-DRG within the MDC to which the principal diagnosis is assigned. Therefore, it is necessary to have a decision rule within the Grouper by which these cases are assigned to a single MS-DRG. The surgical hierarchy, an ordering of surgical classes from most resource-intensive to least resource-intensive, performs that function. Application of this hierarchy ensures that cases involving multiple surgical procedures are assigned to the MS-DRG associated with the most resource-intensive surgical class.

As discussed in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19846), because the relative resource intensity of surgical classes can shift as a function of MS-DRG reclassification and recalibrations, for FY 2018, we reviewed the surgical hierarchy of each MDC, as we have for previous reclassifications and recalibrations, to determine if the ordering of classes coincides with the intensity of resource utilization.

A surgical class can be composed of one or more MS-DRGs. For example, in MDC 11, the surgical class “kidney transplant” consists of a single MS-DRG (MS-DRG 652) and the class “major bladder procedures” consists of three MS-DRGs (MS-DRGs 653, 654, and

655). Consequently, in many cases, the surgical hierarchy has an impact on more than one MS-DRG. The methodology for determining the most resource-intensive surgical class involves weighting the average resources for each MS-DRG by frequency to determine the weighted average resources for each surgical class. For example, assume surgical class A includes MS-DRGs 001 and 002 and surgical class B includes MS-DRGs 003, 004, and 005. Assume also that the average costs of MS-DRG 001 are higher than that of MS-DRG 003, but the average costs of MS-DRGs 004 and 005 are higher than the average costs of MS-DRG 002. To determine whether surgical class A should be higher or lower than surgical class B in the surgical hierarchy, we would weigh the average costs of each MS-DRG in the class by frequency (that is, by the number of cases in the MS-DRG) to determine average resource consumption for the surgical class. The surgical classes would then be ordered from the class with the highest average resource utilization to that with the lowest, with the exception of “other O.R. procedures” as discussed in this rule.

This methodology may occasionally result in assignment of a case involving multiple procedures to the lower-weighted MS-DRG (in the highest, most resource-intensive surgical class) of the available alternatives. However, given that the logic underlying the surgical hierarchy provides that the Grouper search for the procedure in the most resource-intensive surgical class, in cases involving multiple procedures, this result is sometimes unavoidable.

We note that, notwithstanding the foregoing discussion, there are a few instances when a surgical class with a lower average cost is ordered above a surgical class with a higher average cost. For example, the “other O.R. procedures” surgical class is uniformly ordered last in the surgical hierarchy of each MDC in which it occurs, regardless of the fact that the average costs for the MS-DRG or MS-DRGs in that surgical class may be higher than those for other surgical classes in the MDC. The “other O.R. procedures” class is a group of procedures that are only infrequently related to the diagnoses in the MDC, but are still occasionally performed on patients with cases assigned to the MDC with these diagnoses. Therefore, assignment to these surgical classes should only occur if no other surgical class more closely related to the diagnoses in the MDC is appropriate.

A second example occurs when the difference between the average costs for

two surgical classes is very small. We have found that small differences generally do not warrant reordering of the hierarchy because, as a result of reassigning cases on the basis of the hierarchy change, the average costs are likely to shift such that the higher-ordered surgical class has lower average costs than the class ordered below it.

We received a request to examine a case involving the principal procedure for excision of pituitary gland (ICD-10-PCS code 0GB00ZZ (Excision of pituitary gland, open approach)) with a secondary procedure for harvesting of a fat graft (ICD-10-PCS code 0JB80ZZ (Excision of abdomen subcutaneous tissue and fascia, open approach)) to treat a condition of pituitary adenoma (ICD-10-CM diagnosis code D35.2 (Benign neoplasm of pituitary gland)) and the resulting sella turcica defect. The requestor noted that when the procedure code for harvesting of the fat graft is reported on the claim, the case currently groups to MS-DRGs 622, 623, and 624 (Skin Grafts and Wound Debridement for Endocrine, Nutritional, and Metabolic Disorders with MCC, with CC and without CC/MCC, respectively). However, when the procedure code for harvesting of the fat graft is *not* reported on the claim, the case groups to MS-DRGs 614 and 615 (Adrenal and Pituitary Procedures with CC/MCC and without CC/MCC, respectively), which appears to be a more appropriate assignment. The requester expressed concern regarding the procedure code for harvesting of the fat graft in the secondary position driving the MS-DRG assignment versus the principal procedure of the excision of pituitary gland.

As discussed in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19847), we analyzed the codes provided by the requestor in the Grouper to determine if we could duplicate the requestor's findings. The findings from our analysis were consistent with the requestor's findings. Our clinical advisors reviewed this issue and agreed that it should be the procedure code for excision of the pituitary gland that is used to determine the MS-DRG assignment in this scenario and not the harvesting of the fat graft procedure code.

Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule, we proposed to move MS-DRGs 614 and 615 above MS-DRGs 622, 623, and 624 in the surgical hierarchy to enable more appropriate MS-DRG assignment for these types of cases.

We invited public comments on our proposal.

Comment: Commenters supported the proposal to move MS-DRGs 614 and

615 above MS-DRGs 622, 623, and 624 in the surgical hierarchy. Another commenter expressed concern that the proposal to move MS-DRGs 614 and 615 above MS-DRGs 622, 623, and 624 in the surgical hierarchy was made as the result of a single scenario and recommended that a more thorough analysis be performed to determine the potential impact of such a change prior to modifying existing Grouper logic.

Response: We appreciate the commenters' support. In response to the commenter who expressed concern that the proposal to move MS-DRGs 614 and 615 above MS-DRGs 622, 623, and 624 in the surgical hierarchy was made as the result of a single scenario and that additional analysis should be performed to determine potential impacts, we are unclear as to what specific impacts the commenter is referring to and what type

of analysis the commenter is recommending. However, we did analyze claims from the December 2016 update of the FY 2016 MedPAR file for MS-DRGs 614 and 615, as well as from MS-DRGs 622, 623 and 624, to determine the volume of cases where procedure codes from both sets of MS-DRGs were reported. Our findings are shown in the tables below.

MS-DRGs FOR ADRENAL AND PITUITARY PROCEDURES

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 614—All cases	1,526	5	\$16,957
MS-DRG 615—All cases	1,007	2.4	10,680

MS-DRGs FOR SKIN GRAFTS AND WOUND DEBRIDEMENT PROCEDURES

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 622—All cases	1,289	10.7	\$23,954
MS-DRG 623—All cases	4,423	6.3	12,522
MS-DRG 624—All cases	454	3.5	9,345

As shown in the tables above, there were a total of 1,526 cases in MS-DRG 614 with an average length of stay of 5 days and average costs of \$16,957. There were a total of 1,007 cases in MS-DRG 615 with an average length of stay of 2.4 days and average costs of \$10,680. For MS-DRG 622, there were a total of 1,289 cases with an average length of stay of

10.7 days and average costs of \$23,954. For MS-DRG 623, there were a total of 4,423 cases with an average length of stay of 6.3 days and average costs of \$12,522. For MS-DRG 624, there were a total of 454 cases with an average length of stay of 3.5 days and average costs of \$9,345.

We then analyzed claims from the March 2017 update of the FY 2016 MedPAR file to determine the number of cases where a procedure code from MS-DRG 614 or MS-DRG 615 was reported with a procedure code from MS-DRGs 622, 623 or 624 on the same claim. Our findings are shown in the table below.

MS-DRGs FOR ADRENAL, PITUITARY, SKIN GRAFTS AND WOUND DEBRIDEMENT PROCEDURES

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 614 procedures with MS-DRG 622 procedures	46	10.2	\$12,977
MS-DRG 614 procedures with MS-DRG 623 procedures	240	4.4	11,540
MS-DRG 615 procedures with MS-DRG 624 procedures	125	2.9	14,494

As shown in the table above, there were a total of 46 cases reporting procedures from MS-DRG 614 and 622 on the same claim with an average length of stay of 10.15 days and average costs of \$12,977. There were a total of 240 cases reporting procedures from MS-DRG 614 and MS-DRG 623 on the same claim with an average length of stay of 4.42 days and average costs of \$11,540. Lastly, there were a total of 125 cases reporting procedures from MS-DRG 615 and MS-DRG 624 on the same claim with an average length of stay of 2.93 days and average costs of \$14,494.

We then examined the redistribution of cases that is anticipated to occur as a result of the proposal to move MS-DRGs 614 and 615 above MS-DRGs 622,

623, and 624 in the surgical hierarchy for Version 35 of the ICD-10 MS-DRGs, by processing the claims data from the March update of the FY 2016 MedPAR file through the ICD-10 MS-DRG Grouper Version 34 and then processing the same claims data through the ICD-10 MS-DRG Grouper Version 35 for comparison. The number of cases from this comparison that result in different MS-DRG assignments is the number of the cases that are anticipated to potentially shift or be redistributed. We found that the number of cases moving out of MS-DRG 622 and into MS-DRG 614 is approximately 46 cases, the number of cases moving out of MS-DRG 623 and into MS-DRG 614 is approximately 240 cases and the

number of cases moving out of MS-DRG 624 and into MS-DRG 615 is approximately 125 cases. We believe that overall, the impact of this change is limited because the subset of cases that would be reclassified is approximately 6.7 percent of the total cases currently grouping to MS-DRGs 622, 623 and 624. Additionally, as shown above, in the analysis of claims where a procedure code from MS-DRG 614 or MS-DRG 615 was reported with a procedure code from MS-DRGs 622, 623, or 624 on the same claim, the average costs for those cases are consistent with the average costs for all cases in MS DRGs 614 and 615.

For issues pertaining to the surgical hierarchy, as with other MS-DRG

related requests, we encourage commenters to submit requests to examine ICD-10 claims data via the CMS MS-DRG Classification Change Requests Mailbox located at MSDRGClassificationChange@cms.hhs.gov by November 1, 2017 for FY 2019 consideration.

After consideration of the public comments we received, we are finalizing our proposal to move MS-DRGs 614 and 615 above MS-DRGs 622, 623, and 624 in the surgical hierarchy effective October 1, 2017.

12. Changes to the MS-DRG Diagnosis Codes for FY 2018

a. Background of the CC List and the CC Exclusions List

Under the IPPS MS-DRG classification system, we have developed a standard list of diagnoses that are considered CCs. Historically, we developed this list using physician panels that classified each diagnosis code based on whether the diagnosis, when present as a secondary condition, would be considered a substantial complication or comorbidity. A substantial complication or comorbidity was defined as a condition that, because of its presence with a specific principal diagnosis, would cause an increase in the length-of-stay by at least 1 day in at least 75 percent of the patients. However, depending on the principal diagnosis of the patient, some diagnoses on the basic list of complications and comorbidities may be excluded if they are closely related to the principal diagnosis. In FY 2008, we evaluated each diagnosis code to determine its impact on resource use and to determine the most appropriate CC subclassification (non-CC, CC, or MCC) assignment. We refer readers to sections II.D.2. and 3. of the preamble of the FY 2008 IPPS final rule with comment period for a discussion of the refinement of CCs in relation to the MS-DRGs we adopted for FY 2008 (72 FR 47152 through 47171).

b. Additions and Deletions to the Diagnosis Code Severity Levels for FY 2018

We stated in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19847) that the following tabling identifying the proposed additions and deletions to the MCC severity levels list and the proposed additions and deletions to the CC severity levels list for FY 2018 are available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>.

Table 6L.1—Proposed Additions to the MCC List—FY 2018;

Table 6L.2—Proposed Deletions to the MCC List—FY 2018;

Table 6J.1—Proposed Additions to the CC List—FY 2018; and

Table 6J.2—Proposed Deletions to the CC List—FY 2018.

We invited public comments on our proposed severity level designations for the diagnosis codes listed in Table 6L.1. and Table 6J.1. We noted that, for Table 6L.2. and Table 6J.2., the proposed deletions were a result of code expansions. Therefore, the diagnosis codes on these lists are no longer valid codes, effective FY 2018. For example, diagnosis code O00.10 (Tubal pregnancy without intrauterine pregnancy) is a current CC for FY 2017 under Version 34 of the ICD-10 MS-DRGs. Effective FY 2018, under Version 35 of the ICD-10 MS-DRGs, this single code has been expanded into three diagnosis codes to include laterality (left/right) and an unspecified option with the addition of a sixth character. Therefore, diagnosis code O00.10 is included in Table 6J.2. for deletion from the CC list because it is no longer a valid code in FY 2018.

Comment: Commenters agreed with the proposed additions and deletions to the MCC and CC List severity level designations for FY 2018. One commenter suggested that CMS also consider adding existing diagnosis codes from subcategories L97.5 (Non-pressure chronic ulcer of other part of foot) and L98.4 (Non-pressure chronic ulcer of skin, not elsewhere classified) to the CC List. This commenter noted that new diagnosis codes from these subcategories were proposed to be added to the CC List. However, according to the commenter, existing codes from these same subcategories are not currently included in the CC List even though some of them represent a greater severity level than the new codes that were proposed to be added to the CC List.

Response: We appreciate the commenters' support. In response to the commenter who suggested that we consider adding existing diagnosis codes in subcategories L97.5 and L98.4 to the CC list, we were unable to fully evaluate this request for FY 2018 but will consider this recommendation as part of our comprehensive review of the CC and MCC lists. As discussed in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19848) and in the sections that follow, we have plans to conduct a comprehensive review of the CC and MCC lists for FY 2019. Therefore, we will be evaluating all of the ICD-10-CM diagnosis codes for this effort.

After consideration of the public comments we received, we are finalizing our proposed additions and deletions to the MCC severity levels list and the proposed additions and deletions to the CC severity levels list for FY 2018. We refer readers to the Tables 6L.1, 6L.2, 6J.1, and 6J.2 associated with this final rule, which are available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>.

c. Principal Diagnosis Is Its Own CC or MCC

CMS' initial goal in developing the ICD-10 MS-DRGs was to ensure that a patient case was assigned to the same MS-DRG, regardless of whether the patient record was to be coded in ICD-9-CM or ICD-10. When certain ICD-10-CM combination codes are reported as a principal diagnosis, it implies that a CC or MCC is present. This occurs as a result of evaluating the cluster of ICD-9-CM codes that would have been coded on an ICD-9-CM record. If one of the ICD-9-CM codes in the cluster was a CC or an MCC, the single ICD-10-CM combination code used as a principal diagnosis also must imply that the CC or MCC is present.

The ICD-10-CM diagnosis codes to which this logic applies are included in Appendix J of the ICD-10 MS-DRG Version 34 Definitions Manual (which is available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/FY2017-IPPS-Final-Rule-Home-Page-Items/FY2017-IPPS-Final-Rule-Data-Files.html?DLPage=1&DLEntries=10&DLSort=0&DLSortDir=ascending>). Appendix J includes two lists: Part 1 is the list of principal diagnosis codes where the ICD-10-CM code is its own MCC. Part 2 is the list of principal diagnosis codes where the ICD-10-CM code is its own CC. Part 1 of Appendix J corresponds to Table 6L.—Principal Diagnosis Is Its Own MCC List, and Part 2 of Appendix J corresponds to Table 6M.—Principal Diagnosis Is Its Own CC List.

We received a request to add the ICD-10-CM diagnosis codes for acute myocardial infarction, decompensated heart failure and specified forms of shock, which are currently designated as a CC or an MCC when reported as a secondary diagnosis, to Table 6L.—Principal Diagnosis Is Its Own MCC List. According to the requestor, the addition of these codes to the list is necessary for bundled payment initiatives and so that facilities that

accept these patients in transfer have resources to care for them.

As we stated in the proposed rule, the purpose of the Principal Diagnosis Is Its Own CC or MCC Lists was to ensure consistent MS-DRG assignment between the ICD-9-CM and ICD-10 MS-DRGs due to the clusters and combination codes. There are a number of other ICD-10-CM combination codes that, due to their prior designation as a CC or an MCC when reported as a secondary diagnosis, are not on either of these lists. Having multiple lists for CC and MCC diagnoses when reported as a principal and/or secondary diagnosis may not provide an accurate representation of resource utilization for the MS-DRGs. As discussed in further detail below, we have plans to conduct a comprehensive review of the CC and MCC lists for FY 2019. We believe the results of that review will help to inform the future of these lists.

Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19848), we did not propose to add the ICD-10-CM diagnosis codes for acute myocardial infarction, decompensated heart failure and specified forms of shock to Table 6L.—Principal Diagnosis Is Its Own MCC List. In addition, we did not propose any changes to Table 6L.—Principal Diagnosis Is Its Own MCC List and Table 6M.—Principal Diagnosis Is Its Own CC List. We invited public comments on our proposal to maintain the existing lists of principal diagnosis codes in Tables 6L. and 6M for FY 2018.

Comment: Commenters supported the proposal to not make changes to Table 6L and Table 6M. One commenter acknowledged that CMS is delaying further modifications to Tables 6L. and 6M. until the severity level (MCC and CC) analysis is performed for FY 2019. However, this commenter requested that the proposed MS-DRG assignments for the new myocardial infarction type 2 diagnosis codes be reviewed for more appropriate assignments.

Response: We appreciate the commenters' support. In response to the commenter's request that we review the proposed MS-DRG assignments for the new myocardial infarction type 2 diagnosis codes for more appropriate assignments, we point out that the codes identifying myocardial infarction type 2 diagnoses were not finalized at the time of publication of the FY 2018 IPPS/LTCH PPS proposed rule and, therefore, were not included in Table 6A.—New Diagnosis Codes that was associated with the proposed rule. As discussed in the section that follows, we have made available the final tables associated with this final rule via the Internet on the CMS Web site at: <https://www.cms.gov/>

Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html. We refer readers to the final rule Table 6A.—New Diagnosis Codes for the MS-DRG assignments for the acute myocardial infarction type 2 diagnosis codes for FY 2018, which are based on our usual process of assigning new codes to their predecessor code's MS-DRG assignment(s).

After consideration of the public comments we received, we are maintaining the current code lists for Table 6L.—Principal Diagnosis Is Its Own MCC and Table 6M.—Principal Diagnosis Is Its Own CC List for FY 2018.

d. CC Exclusions List for FY 2018

In the September 1, 1987 final notice (52 FR 33143) concerning changes to the DRG classification system, we modified the Grouper logic so that certain diagnoses included on the standard list of CCs would not be considered valid CCs in combination with a particular principal diagnosis. We created the CC Exclusions List for the following reasons: (1) To preclude coding of CCs for closely related conditions; (2) to preclude duplicative or inconsistent coding from being treated as CCs; and (3) to ensure that cases are appropriately classified between the complicated and uncomplicated DRGs in a pair. As previously indicated, we developed a list of diagnoses, using physician panels, to include those diagnoses that, when present as a secondary condition, would be considered a substantial complication or comorbidity.

In previous years, we made changes to the list of CCs, either by adding new CCs or deleting CCs already on the list.

In the May 19, 1987 proposed notice (52 FR 18877) and the September 1, 1987 final notice (52 FR 33154), we explained that the excluded secondary diagnoses were established using the following five principles:

- Chronic and acute manifestations of the same condition should not be considered CCs for one another;
- Specific and nonspecific (that is, not otherwise specified (NOS)) diagnosis codes for the same condition should not be considered CCs for one another;
- Codes for the same condition that cannot coexist, such as partial/total, unilateral/bilateral, obstructed/unobstructed, and benign/malignant, should not be considered CCs for one another;
- Codes for the same condition in anatomically proximal sites should not be considered CCs for one another; and
- Closely related conditions should not be considered CCs for one another.

The creation of the CC Exclusions List was a major project involving hundreds of codes. We have continued to review the remaining CCs to identify additional exclusions and to remove diagnoses from the master list that have been shown not to meet the definition of a CC. We refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50541 through 50544) for detailed information regarding revisions that were made to the CC and CC Exclusion Lists under the ICD-9-CM MS-DRGs.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19848), for FY 2018, we proposed changes to the ICD-10 MS-DRGs Version 35 CC Exclusion List. Therefore, we developed Table 6G.1.—Proposed Secondary Diagnosis Order Additions to the CC Exclusions List—FY 2018; Table 6G.2.—Proposed Principal Diagnosis Order Additions to the CC Exclusions List—FY 2018; Table 6H.1.—Proposed Secondary Diagnosis Order Deletions to the CC Exclusions List—FY 2018; and Table 6H.2.—Proposed Principal Diagnosis Order Deletions to the CC Exclusions List—FY 2018. Each of these principal diagnosis codes for which there is a CC exclusion is shown in Table 6G.2. with an asterisk and the conditions that will not count as a CC are provided in an indented column immediately following the affected principal diagnosis. Beginning with discharges on or after October 1 of each year, the indented diagnoses are not recognized by the Grouper as valid CCs for the asterisked principal diagnoses. Tables 6G. and 6H. associated with the proposed rule are available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>.

Comment: Commenters supported the proposed modifications to the CC Exclusion List for FY 2018 as displayed in Table 6G.1., Table 6G.2., Table 6H.1., and Table 6H.2. that were associated with the proposed rule and made available via the Internet on the CMS Web site.

Response: We appreciate the commenters' support.

We note that, for this FY 2018 IPPS/LTCH PPS final rule, we have developed Table 6K.—Complete List of CC Exclusions. Table 6K. corresponds to the Part 1 list of Appendix C in the ICD-10 MS-DRG Definitions Manual as described above.

The complete documentation of the ICD-10 MS-DRG Version 35 Grouper logic, including the CC Exclusion List, is available via the Internet on the CMS Acute Inpatient PPS Web page at: <https://www.cms.gov/Medicare/>

Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html.

To identify new, revised and deleted diagnosis and procedure codes, for FY 2018, we developed Table 6A.—New Diagnosis Codes, Table 6B.—New Procedure Codes, Table 6C.—Invalid Diagnosis Codes, Table 6D.—Invalid Procedure Codes, Table 6E.—Revised Diagnosis Code Titles, and Table 6F.—Revised Procedure Code Titles for the proposed rule and this final rule.

These tables are not published in the Addendum to the proposed rule or the final rule but are available via the Internet on the CMS Web site at: (<https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) as described in section VI. of the Addendum to this final rule. As discussed in section II.F.15. of the preamble of this final rule, the code titles are adopted as part of the ICD–10 (previously ICD–9–CM) Coordination and Maintenance Committee process. Therefore, although we publish the code titles in the IPPS proposed and final rules, they are not subject to comment in the proposed or final rules. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19849), we invited public comments on the MDC and MS–DRG assignments for the new diagnosis and procedure codes as set forth in Table 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes. In addition, we invited public comments on the proposed severity level designations for the new diagnosis codes as set forth in

Table 6A. and the proposed O.R. status for the new procedure codes as set forth in Table 6B.

Comment: One commenter disagreed with the addition of new ICD–10–CM diagnosis code R06.03 (Acute respiratory distress) as displayed in Table 6A.—New Diagnosis Codes associated with the FY 2018 IPPS/LTCH PPS proposed rule, stating that the terminology for this code title is outdated. The commenter stated that physician documentation generally supports either Acute Respiratory Distress Syndrome (ARDS) or Acute Respiratory Failure (ARF). The commenter requested that new diagnosis codes be created to avoid confusion and to support appropriate physician documentation.

Response: As noted earlier and discussed in section II.F.15. of the preamble of this final rule, the code titles are adopted as part of the ICD–10 (previously ICD–9–CM) Coordination and Maintenance Committee process. Therefore, although we publish the code titles in the IPPS proposed and final rules, they are not subject to comment in the proposed or final rules. We also note that the condition of ARDS is identified by ICD–10–CM diagnosis code J80 (Acute respiratory distress syndrome) and ARF is identified in ICD–10–CM subcategory J96.0 (Acute respiratory failure). Therefore, it is not necessary to submit a request for new diagnosis codes to the ICD–10 Coordination and Maintenance Committee.

Comment: Several commenters disagreed with the proposed Non-O.R. designations for certain procedure codes displayed in Table 6B.—New Procedure Codes associated with the FY 2018 IPPS/LTCH PPS proposed rule. The commenters recommended that CMS consider revising the designation of these procedure codes from Non-O.R. to O.R. The commenters identified approximately 200 new procedure codes describing the insertion, removal, or revision of “other device” in various body parts that they stated require an O.R. setting or are most often performed in the O.R. setting using sterile technique. The commenters further stated that patients undergoing these procedures are placed under general anesthesia and the procedures require significant time and skill.

Response: We reexamined a significant portion of the procedure codes listed in Table 6B.—New Procedure Codes that was associated with the FY 2018 IPPS/LTCH PPS proposed rule that the commenters recommended we consider revising from Non-O.R. to O.R. We note that we were unable to fully reevaluate the complete list for FY 2018, but we plan to conduct a review for FY 2019. Based upon our review, and upon further consideration of whether these procedures would be performed in an O.R. setting, we are revising the designation of the new procedure codes in the following table from non-O.R. to O.R.

ICD–10–PCS code	Code description
00H03YZ	Insertion of Other Device into Brain, Percutaneous Approach.
00H04YZ	Insertion of Other Device into Brain, Percutaneous Endoscopic Approach.
00H63YZ	Insertion of Other Device into Cerebral Ventricle, Percutaneous Approach.
00H64YZ	Insertion of Other Device into Cerebral Ventricle, Percutaneous Endoscopic Approach.
00HU0YZ	Insertion of Other Device into Spinal Canal, Open Approach.
00HV0YZ	Insertion of Other Device into Spinal Cord, Open Approach.
00HV3YZ	Insertion of Other Device into Spinal Cord, Percutaneous Approach.
00HV4YZ	Insertion of Other Device into Spinal Cord, Percutaneous Endoscopic Approach.
02H43YZ	Insertion of Other Device into Coronary Vein, Percutaneous Approach.
02H44YZ	Insertion of Other Device into Coronary Vein, Percutaneous Endoscopic Approach.
02H63YZ	Insertion of Other Device into Right Atrium, Percutaneous Approach.
02H64YZ	Insertion of Other Device into Right Atrium, Percutaneous Endoscopic Approach.
02H73YZ	Insertion of Other Device into Left Atrium, Percutaneous Approach.
02H74YZ	Insertion of Other Device into Left Atrium, Percutaneous Endoscopic Approach.
02HA3YZ	Insertion of Other Device into Heart, Percutaneous Approach.
02HA4YZ	Insertion of Other Device into Heart, Percutaneous Endoscopic Approach.
02HK3YZ	Insertion of Other Device into Right Ventricle, Percutaneous Approach.
02HK4YZ	Insertion of Other Device into Right Ventricle, Percutaneous Endoscopic Approach.
02HL3YZ	Insertion of Other Device into Left Ventricle, Percutaneous Approach.
02HL4YZ	Insertion of Other Device into Left Ventricle, Percutaneous Endoscopic Approach.
02HN3YZ	Insertion of Other Device into Pericardium, Percutaneous Approach.
02HN4YZ	Insertion of Other Device into Pericardium, Percutaneous Endoscopic Approach.
02HP0YZ	Insertion of Other Device into Pulmonary Trunk, Open Approach.
02HP3YZ	Insertion of Other Device into Pulmonary Trunk, Percutaneous Approach.
02HP4YZ	Insertion of Other Device into Pulmonary Trunk, Percutaneous Endoscopic Approach.
02HQ3YZ	Insertion of Other Device into Right Pulmonary Artery, Percutaneous Approach.
02HQ4YZ	Insertion of Other Device into Right Pulmonary Artery, Percutaneous Endoscopic Approach.

ICD-10-PCS code	Code description
02HR3YZ	Insertion of Other Device into Left Pulmonary Artery, Percutaneous Approach.
02HR4YZ	Insertion of Other Device into Left Pulmonary Artery, Percutaneous Endoscopic Approach.
02HS3YZ	Insertion of Other Device into Right Pulmonary Vein, Percutaneous Approach.

0TW98YZ	Revision of Other Device in Ureter, Via Natural or Artificial Opening Endoscopic.
0TWB8YZ	Revision of Other Device in Bladder, Via Natural or Artificial Opening Endoscopic.

After consideration of the public comments that we received, we are finalizing the designation of the procedure codes listed in the table above from non-O.R. to O.R., effective October 1, 2017.

We note that, historically, when new procedure codes were created, they were proposed to be given the same O.R. designation as their predecessor code.

However, with the transition from ICD-9 to ICD-10, the determination of when a procedure code should be designated as an O.R. procedure has become a much more complex task. This is, in part, due to the number of various approaches available in the ICD-10-PCS classification. While we have typically evaluated procedures on the basis of

whether or not they would be performed in an operating room, we believe that there may be other factors to consider, particularly with the implementation of ICD-10. Therefore, we are soliciting comments on what factors or criteria to consider in determining whether a procedure should be designated as an O.R. procedure in the ICD-10-PCS

classification system. We encourage commenters to submit comments via the CMS MS-DRG Classification Change Requests Mailbox located at *MSDRGClassificationChange@cms.hhs.gov* by November 1, 2017 for FY 2019 consideration.

We are also making available on the CMS Web site at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html* the following final tables associated with this final rule:

- Table 6A.—New Diagnosis Codes—FY 2018;
- Table 6B.—New Procedure Codes—FY 2018;
- Table 6C.—Invalid Diagnosis Codes—FY 2018;
- Table 6D.—Invalid Procedure Codes—FY 2018;
- Table 6E.—Revised Diagnosis Code Titles—FY 2018;
- Table 6F.—Revised Procedure Code Titles—FY 2018;
- Table 6G.1.—Secondary Diagnosis Order Additions to the CC Exclusions List—FY 2018;
- Table 6G.2.—Principal Diagnosis Order Additions to the CC Exclusions List—FY 2018;
- Table 6H.1.—Secondary Diagnosis Order Deletions to the CC Exclusions List—FY 2018;

- Table 6H.2.—Principal Diagnosis Order Deletions to the CC Exclusions List—FY 2018;
- Table 6I.—Complete MCC List—FY 2018;
- Table 6I.1.—Additions to the MCC List—FY 2018;
- Table 6I.2.—Deletions to the MCC List—FY 2018;
- Table 6J.—Complete CC List—FY 2018;
- Table 6J.1.—Additions to the CC List—FY 2018;
- Table 6J.2.—Deletions to the CC List—FY 2018;
- Table 6K.—Complete List of CC Exclusions—FY 2018;
- Table 6L.—Principal Diagnosis Is Its Own MCC List—FY 2018; and
- Table 6M.—Principal Diagnosis Is Its Own CC List—FY 2018.

13. Comprehensive Review of CC List for FY 2019

In the FY 2008 IPPS final rule (72 FR 47153 through 47175), we discussed our efforts to better recognize severity of illness which began with a comprehensive review of the CC list and, ultimately, the implementation of the MS-DRGs. Similar to the analysis that was performed at that time, we are providing the public with notice of our plans to conduct a comprehensive

review of the CC and MCC lists for FY 2019.

As discussed in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19849), as a result of the time that has elapsed since that review and changes to how inpatient care is currently delivered, we plan to analyze if further refinements to these lists are warranted. For example, over the past several years, there has been a steady increase in the proportion of cases grouping to the MS-DRGs with an MCC severity level than had previously occurred. Our evaluation will assist in determining if the conditions designated as an MCC continue to represent significant increases in resource utilization that support the MCC designation.

We currently utilize a statistical algorithm to determine the impact on resource use of each secondary diagnosis. Each diagnosis for which Medicare data are available is evaluated to determine its impact on resource use and to determine the most appropriate CC subclass (non-CC, CC, or MCC) assignment. In order to make this determination, the average costs for each subset of cases is compared to the expected costs for cases in that subset. The following format is used to evaluate each diagnosis:

Code	Diagnosis	Cnt1	C1	Cnt2	C2	Cnt3	C3

Count (Cnt) is the number of patients in each subset and C1, C2, and C3 are a measure of the impact on resource use of patients in each of the subsets. The C1, C2, and C3 values are a measure of the ratio of average costs for patients with these conditions to the expected average costs across all cases. The C1 value reflects a patient with no other secondary diagnosis or with all other secondary diagnoses that are non-CCs. The C2 value reflects a patient with at least one other secondary diagnosis that is a CC but none that is an MCC. The C3 value reflects a patient with at least one other secondary diagnosis that is an MCC. A value close to 1.0 in the C1 field would suggest that the code produces the same expected value as a non-CC diagnosis. That is, average costs for the case are similar to the expected average costs for that subset and the diagnosis is not expected to increase resource usage. A higher value in the C1 (or C2 and C3) field suggests more resource usage is associated with the diagnosis and an increased likelihood that it is more like a CC or major CC than a non-CC. Thus, a value close to 2.0 suggests the condition is more like a CC than a

non-CC but not as significant in resource usage as an MCC. A value close to 3.0 suggests the condition is expected to consume resources more similar to an MCC than a CC or non-CC. For example, a C1 value of 1.8 for a secondary diagnosis means that for the subset of patients who have the secondary diagnosis and have either no other secondary diagnosis present, or all the other secondary diagnoses present are non-CCs, the impact on resource use of the secondary diagnoses is greater than the expected value for a non-CC by an amount equal to 80 percent of the difference between the expected value of a CC and a non-CC (that is, the impact on resource use of the secondary diagnosis is closer to a CC than a non-CC).

We invited public comments regarding other possible ways we can incorporate meaningful indicators of clinical severity.

We did not receive any public comments offering suggestions on alternate ways to incorporate meaningful indicators of clinical severity. Therefore, we expect to continue to utilize this same statistical

algorithm to determine the impact on resource use of each secondary diagnosis to conduct our comprehensive review of the CC and MCC lists for FY 2019.

14. Review of Procedure Codes in MS DRGs 981 Through 983; 984 Through 986; and 987 Through 989

Each year, we review cases assigned to MS-DRGs 981, 982, and 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively); MS-DRGs 984, 985, and 986 (Prostatic O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively); and MS-DRGs 987, 988, and 989 (Nonextensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) to determine whether it would be appropriate to change the procedures assigned among these MS-DRGs. MS-DRGs 981 through 983, 984 through 986, and 987 through 989 are reserved for those cases in which none of the O.R. procedures performed are related to the principal diagnosis. These MS-DRGs

are intended to capture atypical cases, that is, those cases not occurring with sufficient frequency to represent a distinct, recognizable clinical group.

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19849), we stated that under the ICD-10 MS-DRGs Version 34, MS-DRGs 984 through 986 are assigned when one or more of the procedures described by ICD-10-PCS codes in Table 6P.2. that was associated with the FY 2018 proposed rule (which is available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) are performed and are unrelated to the principal diagnosis. All remaining O.R. procedures are assigned to MS-DRGs 981 through 983 and 987 through 989, with MS-DRGs 987 through 989 assigned to those discharges in which the only procedures performed are nonextensive procedures that are unrelated to the principal diagnosis.

We refer the reader to the FY 2017 IPPS/LTCH PPS final rule (81 FR 56847 through 56848) for a discussion of the movement and redesignation of procedure codes from MS-DRGs 984 through 986 related to the transition of the ICD-10 MS-DRGs.

Our review of MedPAR claims data showed that there are no cases that merited movement or should logically be reassigned from ICD-10 MS-DRGs 984 through 986 to any of the other MDCs for FY 2018. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19849 through 19850), for FY 2018, we did not propose to change the procedures assigned among these MS-DRGs. We invited public comments on our proposal to maintain the current structure of these MS-DRGs.

Comment: Commenters supported the proposal to maintain the current structure of MS-DRGs 984 through 986 and not to reassign or change the procedures assigned among these MS-DRGs to other MDCs.

Response: We appreciate the commenters' support.

After consideration of the public comments that we received, we are finalizing our proposal to maintain the current structure of MS-DRGs 984 through 986 (Prostatic O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) and not to reassign or

change the procedures assigned among these MS-DRGs to other MDCs for ICD-10 MS-DRGs Version 35, effective October 1, 2017.

a. Moving Procedure Codes From MS-DRGs 981 Through 983 or MS-DRGs 987 Through 989 Into MDCs

We annually conduct a review of procedures producing assignment to MS-DRGs 981 through 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) or MS-DRGs 987 through 989 (Nonextensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) on the basis of volume, by procedure, to see if it would be appropriate to move procedure codes out of these MS-DRGs into one of the surgical MS-DRGs for the MDC into which the principal diagnosis falls. The data are arrayed in two ways for comparison purposes. We look at a frequency count of each major operative procedure code. We also compare procedures across MDCs by volume of procedure codes within each MDC.

We identify those procedures occurring in conjunction with certain principal diagnoses with sufficient frequency to justify adding them to one of the surgical MS-DRGs for the MDC in which the diagnosis falls. As we indicated in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19850), upon review of the claims data from the December 2016 update of the FY 2016 MedPAR file, we did not find any cases that merited movement or that should logically be assigned to any of the other MDCs. Therefore, for FY 2018, we did not propose to remove any procedures from MS-DRGs 981 through 983 or MS-DRGs 987 through 989 into one of the surgical MS-DRGs for the MDC into which the principal diagnosis is assigned. We invited public comments on our proposal to maintain the current structure of these MS-DRGs.

Comment: Commenters supported the proposal to maintain the current structure of MS-DRGs 981 through 983 and MS-DRGs 987 through 989.

Response: We appreciate the commenters' support.

After consideration of the public comments that we received, we are finalizing our proposal to not remove any procedures from MS-DRGs 981

through 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) or MS-DRGs 987 through 989 (Nonextensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) into one of the surgical MS-DRGs for the MDC into which the principal diagnosis is assigned for ICD-10 MS-DRGs Version 35, effective October 1, 2017.

b. Reassignment of Procedures Among MS-DRGs 981 Through 983, 984 Through 986, and 987 Through 989

We also review the list of ICD-10-PCS procedures that, when in combination with their principal diagnosis code, result in assignment to MS-DRGs 981 through 983, 984 through 986, or 987 through 989, to ascertain whether any of those procedures should be reassigned from one of those three groups of MS-DRGs to another of the three groups of MS-DRGs based on average costs and the length of stay. We look at the data for trends such as shifts in treatment practice or reporting practice that would make the resulting MS-DRG assignment illogical. If we find these shifts, we would propose to move cases to keep the MS-DRGs clinically similar or to provide payment for the cases in a similar manner. Generally, we move only those procedures for which we have an adequate number of discharges to analyze the data.

Based on the results of our review of the December 2016 update of the FY 2016 MedPAR file, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19850), we proposed to reassign the procedure codes currently assigned to MS-DRGs 984 through 986 (Prostatic O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC and without CC/MCC, respectively) to MS-DRGs 987 through 989 (Non-extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC and without CC/MCC, respectively). As shown in the table below, we found a total of 1,001 cases in MS-DRGs 984 through 986 with an average length-of-stay of 7.5 days and average costs of \$16,539. In MS-DRGs 987 through 989, we found a total of 17,772 cases, with an average length of stay of 7.5 days and average costs of \$16,193.

O.R. PROCEDURES UNRELATED TO PRINCIPAL DIAGNOSIS

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRGs 984, 985 and 986 (Prostatic O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively)	1,001	7.5	\$16,539
MS-DRGs 987, 988 and 989 (Non-extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively)	17,772	7.5	16,193

The claims data demonstrate that it is no longer necessary to maintain a separate set of MS-DRGs specifically for the prostatic O.R. procedures. The average length of stay of 7.5 days is identical in both sets of MS-DRGs and the average costs are very similar with a difference of only \$346. As we discussed in the proposed rule, our clinical advisors reviewed the data and support movement of these 1,001 cases into the nonextensive O.R. procedures MS-DRGs. They noted that treatment practices have shifted since the inception of the prostatic O.R. procedures grouping and the average costs are in alignment.

Therefore, for FY 2018, we proposed to reassign the prostatic O.R. procedure codes from MS-DRGs 984 through 986 to MS-DRGs 987 through 989 and to delete MS-DRGs 984, 985 and 986 because they would no longer be needed as a result of this proposed movement. We invited public comments on our proposals.

Comment: Commenters supported the proposal to reassign the prostatic O.R. procedure codes from MS-DRGs 984 through 986 to MS-DRGs 987 through 989 and to delete MS-DRGs 984, 985 and 986.

Response: We appreciate the commenters' support.

After consideration of the public comments that we received, we are finalizing our proposal to reassign the prostatic O.R. procedure codes from MS-DRGs 984 through 986 to MS-DRGs 987 through 989 (Non-extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC and without CC/MCC, respectively) and to delete MS-DRGs 984, 985 and 986 (Prostatic O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC and without CC/MCC, respectively) for ICD-10 MS-DRGs Version 35, effective October 1, 2017.

15. Changes to the ICD-10-CM and ICD-10-PCS Coding Systems

In September 1985, the ICD-9-CM Coordination and Maintenance Committee was formed. This is a Federal interdepartmental committee, co-chaired by the National Center for Health Statistics (NCHS), the Centers for

Disease Control and Prevention (CDC), and CMS, charged with maintaining and updating the ICD-9-CM system. The final update to ICD-9-CM codes was made on October 1, 2013. Thereafter, the name of the Committee was changed to the ICD-10 Coordination and Maintenance Committee, effective with the March 19-20, 2014 meeting. The ICD-10 Coordination and Maintenance Committee addresses updates to the ICD-10-CM and ICD-10-PCS coding systems. The Committee is jointly responsible for approving coding changes, and developing errata, addenda, and other modifications to the coding systems to reflect newly developed procedures and technologies and newly identified diseases. The Committee is also responsible for promoting the use of Federal and non-Federal educational programs and other communication techniques with a view toward standardizing coding applications and upgrading the quality of the classification system.

The official list of ICD-9-CM diagnosis and procedure codes by fiscal year can be found on the CMS Web site at: <http://cms.hhs.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/codes.html>. The official list of ICD-10-CM and ICD-10-PCS codes can be found on the CMS Web site at: <http://www.cms.gov/Medicare/Coding/ICD10/index.html>.

The NCHS has lead responsibility for the ICD-10-CM and ICD-9-CM diagnosis codes included in the Tabular List and Alphabetic Index for Diseases, while CMS has lead responsibility for the ICD-10-PCS and ICD-9-CM procedure codes included in the Tabular List and Alphabetic Index for Procedures.

The Committee encourages participation in the previously mentioned process by health-related organizations. In this regard, the Committee holds public meetings for discussion of educational issues and proposed coding changes. These meetings provide an opportunity for representatives of recognized organizations in the coding field, such as the American Health Information Management Association (AHIMA), the American Hospital Association (AHA),

and various physician specialty groups, as well as individual physicians, health information management professionals, and other members of the public, to contribute ideas on coding matters. After considering the opinions expressed at the public meetings and in writing, the Committee formulates recommendations, which then must be approved by the agencies.

The Committee presented proposals for coding changes for implementation in FY 2018 at a public meeting held on September 13-14, 2016, and finalized the coding changes after consideration of comments received at the meetings and in writing by November 13, 2016.

The Committee held its 2017 meeting on March 7-8, 2017. The deadline for submitting comments on these code proposals was April 7, 2017. It was announced at this meeting that any new ICD-10-CM/PCS codes for which there was consensus of public support and for which complete tabular and indexing changes would be made by May 2017 would be included in the October 1, 2017 update to ICD-10-CM/ICD-10-PCS. As discussed in earlier sections of the preamble of the proposed rule and this final rule, there are new, revised, and deleted ICD-10-CM diagnosis codes and ICD-10-PCS procedure codes that are captured in Table 6A.—New Diagnosis Codes, Table 6B.—New Procedure Codes, Table 6C.—Invalid Diagnosis Codes, Table 6D.—Invalid Procedure Codes, Table 6E.—Revised Diagnosis Code Titles, and Table 6F.—Revised Procedure Code Titles for the proposed rule and this final rule, which are available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>. Because of the length of these tables, they are not published in the Addendum to this final rule. Rather, they are available via the Internet as discussed in section VI. of the Addendum to this final rule.

We note that after publication of the FY 2018 IPPS/LTCH PPS proposed rule, we were notified by the CDC of changes to the FY 2018 ICD-10-CM diagnosis codes that were listed in Table 6A.—New Diagnosis Codes and Table 6C.—Invalid Diagnosis Codes that were

associated with the proposed rule. Specifically, ICD–10–CM diagnosis code K61.3 (Ischiorectal abscess) was listed in Table 6C. as an invalid diagnosis, and diagnosis codes K61.31 (Horseshoe abscess) and K61.32 (Ischiorectal abscess, NOS) were listed in Table 6A. as new diagnosis codes. The CDC informed us that they reversed their decision with respect to these codes. Therefore, diagnosis codes K61.31 and K61.32 are not being created for FY 2018 and are not reflected in Table 6A.—New Diagnosis Codes associated with this FY 2018 IPPS/LTCH PPS final rule. In addition, diagnosis code K61.3 is no longer reflected in Table 6C. associated with this final rule as an invalid diagnosis. Diagnosis code K61.3 will continue to be a valid code for FY 2018 in the ICD–10–CM classification.

The CDC also informed us of changes to diagnosis code K61.5 (Suprlevator abscess). This diagnosis code was listed as a new diagnosis code in Table 6A.—New Diagnosis Codes that was associated with the proposed rule. However, this decision was also reversed. Therefore, diagnosis code K61.5 is not reflected in Table 6A. associated with this FY 2018 IPPS/LTCH PPS final rule and will not be reflected in the ICD–10–CM classification.

We also note that after publication of the FY 2018 IPPS/LTCH PPS proposed rule, the CDC revised the title for diagnosis code O00.212 from “Left ovarian pregnancy without intrauterine pregnancy” to “Left ovarian pregnancy with intrauterine pregnancy”. The description of the code title changed from “without” to “with” for this diagnosis code. This change will not be reflected in Table 6E.—Revised Diagnosis Code Titles because it is a new diagnosis code effective FY 2018. Rather, the corrected code title description will appear in Table 6A.—New Diagnosis Codes associated with this FY 2018 IPPS/LTCH PPS final rule. Furthermore, the CDC issued an ICD–10–CM Errata on June 27, 2017 regarding this code title change for diagnosis code O00.212. The Errata document is available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Coding/ICD10/2018-ICD-10-CM-and-GEMs.html>.

Live Webcast recordings of the discussions of procedure codes at the Committee’s September 13–14, 2016 meeting and March 7–8, 2017 meeting can be obtained from the CMS Web site at: http://cms.hhs.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/index.html?redirect/icd9ProviderDiagnosticCodes/03_meetings.asp. The minutes of the discussions of diagnosis

codes at the September 13–14, 2016 meeting and March 7–8, 2017 meeting can be found at: http://www.cdc.gov/nchs/icd/icd10cm_maintenance.html. These Web sites also provide detailed information about the Committee, including information on requesting a new code, attending a Committee meeting, and timeline requirements and meeting dates.

We encourage commenters to address suggestions on coding issues involving diagnosis codes to: Donna Pickett, Co-Chairperson, ICD–10 Coordination and Maintenance Committee, NCHS, Room 2402, 3311 Toledo Road, Hyattsville, MD 20782. Comments may be sent by Email to: nchsicd10cm@cdc.gov.

Questions and comments concerning the procedure codes should be addressed to: Patricia Brooks, Co-Chairperson, ICD–10 Coordination and Maintenance Committee, CMS, Center for Medicare Management, Hospital and Ambulatory Policy Group, Division of Acute Care, C4–08–06, 7500 Security Boulevard, Baltimore, MD 21244–1850. Comments may be sent by Email to: ICDProcedureCodeRequest@cms.hhs.gov.

In the September 7, 2001 final rule implementing the IPPS new technology add-on payments (66 FR 46906), we indicated we would attempt to include proposals for procedure codes that would describe new technology discussed and approved at the Spring meeting as part of the code revisions effective the following October.

Section 503(a) of Public Law 108–173 included a requirement for updating diagnosis and procedure codes twice a year instead of a single update on October 1 of each year. This requirement was included as part of the amendments to the Act relating to recognition of new technology under the IPPS. Section 503(a) amended section 1886(d)(5)(K) of the Act by adding a clause (vii) which states that the Secretary shall provide for the addition of new diagnosis and procedure codes on April 1 of each year, but the addition of such codes shall not require the Secretary to adjust the payment (or diagnosis-related group classification) until the fiscal year that begins after such date. This requirement improves the recognition of new technologies under the IPPS system by providing information on these new technologies at an earlier date. Data will be available 6 months earlier than would be possible with updates occurring only once a year on October 1.

While section 1886(d)(5)(K)(vii) of the Act states that the addition of new diagnosis and procedure codes on April 1 of each year shall not require the

Secretary to adjust the payment, or DRG classification, under section 1886(d) of the Act until the fiscal year that begins after such date, we have to update the DRG software and other systems in order to recognize and accept the new codes. We also publicize the code changes and the need for a mid-year systems update by providers to identify the new codes. Hospitals also have to obtain the new code books and encoder updates, and make other system changes in order to identify and report the new codes.

The ICD–10 (previously the ICD–9–CM) Coordination and Maintenance Committee holds its meetings in the spring and fall in order to update the codes and the applicable payment and reporting systems by October 1 of each year. Items are placed on the agenda for the Committee meeting if the request is received at least 2 months prior to the meeting. This requirement allows time for staff to review and research the coding issues and prepare material for discussion at the meeting. It also allows time for the topic to be publicized in meeting announcements in the **Federal Register** as well as on the CMS Web site. Final decisions on code title revisions are currently made by March 1 so that these titles can be included in the IPPS proposed rule. A complete addendum describing details of all diagnosis and procedure coding changes, both tabular and index, is published on the CMS and NCHS Web sites in June of each year. Publishers of coding books and software use this information to modify their products that are used by health care providers. This 5-month time period has proved to be necessary for hospitals and other providers to update their systems.

A discussion of this timeline and the need for changes are included in the December 4–5, 2005 ICD–9–CM Coordination and Maintenance Committee Meeting minutes. The public agreed that there was a need to hold the fall meetings earlier, in September or October, in order to meet the new implementation dates. The public provided comment that additional time would be needed to update hospital systems and obtain new code books and coding software. There was considerable concern expressed about the impact this April update would have on providers.

In the FY 2005 IPPS final rule, we implemented section 1886(d)(5)(K)(vii) of the Act, as added by section 503(a) of Public Law 108–173, by developing a mechanism for approving, in time for the April update, diagnosis and procedure code revisions needed to describe new technologies and medical services for purposes of the new technology add-on payment process. We

also established the following process for making these determinations. Topics considered during the Fall ICD-10 (previously ICD-9-CM) Coordination and Maintenance Committee meeting are considered for an April 1 update if a strong and convincing case is made by the requester at the Committee's public meeting. The request must identify the reason why a new code is needed in April for purposes of the new technology process. The participants at the meeting and those reviewing the Committee meeting summary report are provided the opportunity to comment on this expedited request. All other topics are considered for the October 1 update. Participants at the Committee meeting are encouraged to comment on all such requests. There were no requests approved for an expedited April 1, 2017 implementation of a code at the September 13-14, 2016 Committee meeting. Therefore, there were no new codes implemented on April 1, 2017.

ICD-9-CM addendum and code title information is published on the CMS Web site at: <http://www.cms.hhs.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/index.html?redirect/icd9ProviderDiagnosticCodes/01overview.asp#TopofPage>. ICD-10-CM and ICD-10-PCS addendum and code title information is published on the CMS Web site at: <http://www.cms.gov/Medicare/Coding/ICD10/index.html>. Information on ICD-10-CM diagnosis codes, along with the Official ICD-10-CM Coding Guidelines, can also be found on the CDC Web site at: <http://www.cdc.gov/nchs/icd/icd10.htm>. Information on new, revised, and deleted ICD-10-CM/ICD-10-PCS codes is also provided to the AHA for publication in the *Coding Clinic for ICD-10*. AHA also distributes information to publishers and software vendors.

CMS also sends copies of all ICD-10-CM and ICD-10-PCS coding changes to its Medicare contractors for use in updating their systems and providing education to providers.

The code titles are adopted as part of the ICD-10 (previously ICD-9-CM) Coordination and Maintenance Committee process. Therefore, although we publish the code titles in the IPPS proposed and final rules, they are not subject to comment in the proposed or final rules.

The following chart shows the number of ICD-10-CM and ICD-10-PCS codes and code changes since FY 2016 when ICD-10 was implemented.

TOTAL NUMBER OF CODES AND CHANGES IN TOTAL NUMBER OF CODES PER FISCAL YEAR ICD-10-CM AND ICD-10-PCS CODES

Fiscal year	Number	Change
FY 2016		
ICD-10-CM	69,823	
ICD-10-PCS	71,974	
FY 2017		
ICD-10-CM	71,486	+1,663
ICD-10-PCS	75,789	+3,815
FY 2018		
ICD-10-CM	71,704	+218
ICD-10-PCS	78,705	+2,916

As mentioned previously, the public is provided the opportunity to comment on any requests for new diagnosis or procedure codes discussed at the ICD-10 Coordination and Maintenance Committee meeting.

At the September 12-13, 2016 and March 7-8, 2017 Committee meetings, we discussed any requests we had received for new ICD-10-CM diagnosis codes and ICD-10-PCS procedure codes that were to be implemented on October 1, 2017. We invited public comments on any code requests discussed at the September 12-13, 2016 and March 7-8, 2017 Committee meetings for implementation as part of the October 1, 2017 update. The deadline for commenting on code proposals discussed at the September 12-13, 2016 Committee meeting was November 13, 2016. The deadline for commenting on code proposals discussed at the March 7-8, 2017 Committee meeting was April 7, 2017.

Comment: One commenter stated that coding updates interfere with consistent clinical vocabulary maintenance. The commenter pointed to ICD-10-PCS code updates for FY 2018 which involve the addition of specificity beyond what was included in the 2017 version of ICD-10-PCS. The commenter stated that a core principle of clinical vocabulary maintenance is that the meaning of a code should not change over time. The commenter acknowledged that deadline for submitting comments on code proposals for the FY 2018 ICD-10-PCS had passed. The commenter stated that clinical vocabulary maintenance should be a primary consideration of the ICD-10 Coordination and Maintenance Committee before any further coding updates are proposed. The commenter looked forward to working with the ICD-10 Coordination and Maintenance Committee meeting on future code updates.

Response: CMS and CDC welcome the participation of the public at the ICD-10 Coordination and Maintenance

Committee meetings. CMS and CDC encourage comments on any ICD-10-CM and ICD-10-PCS code updates presented at the meetings. The ICD-10-CM and ICD-10-PCS coding systems are not clinical vocabularies. The coding systems do not attempt to clarify or standardize how physicians describe clinical conditions or procedures. The ICD-10-CM and ICD-10-PCS coding systems are clinical classification systems. Classification systems arrange and organize like or related clinical conditions and procedures. The coding systems assign codes to capture diagnoses and procedures as documented by physicians. This can involve multiple diagnosis and procedure terms being captured in a single code. It is recognized that not all physicians use consistent terminology for identifying a condition or procedure. The coding systems recognize this fact and develop codes which capture this group of similar terms into a single code. The coding systems should not be viewed as a means to standardize medical terminology.

In response to public requests for updates to ICD-10-CM and ICD-10-PCS, the ICD-10 Coordination and Maintenance Committee presents the requested code updates and then solicits comments prior to making those updates. The ICD-9-CM and ICD-10 coding systems have been updated through the Coordination and Maintenance Committee since 1985, making updates to the coding systems that capture advances in medicine and changes in medical practices. The Committee will continue to meet to allow the public to provide comments on any requests to update the ICD-10-CM and ICD-10-PCS coding systems.

Comment: One commenter stated that it was a strong supporter of the conversion from ICD-9-CM to ICD-10-CM, including the creation of the new Section "X" codes to identify new medical services and technologies, because the newer, more robust coding system will allow for recognition of more technologies, procedures, and variations in patients' conditions on Medicare claims, which in turn will support greater specificity in MS-DRGs. However, the commenter asked that CMS provide additional information about how the "X" codes will be used and applied.

Response: We encourage the public to participate in the ICD-10 Coordination and Maintenance Committee meetings to offer comments on code updates. Any new codes that are finalized prior to the IPPS/LTCH PPS proposed rules, including ICD-10-PCS "X" codes, are included in the Table 6 series in the

IPPS/LTCH PPS proposed rule along with their proposed MS-DRG classifications. The public is offered the opportunity to comment on those MS-DRG classifications. Any new codes that are finalized after the IPPS/LTCH PPS proposed rule are included in the IPPS/LTCH PPS final rule along with their MS-DRG classifications. We refer the commenter to section II.H. of the preamble of this final rule for additional discussion of the section “X” codes.

16. Replaced Devices Offered Without Cost or With a Credit

a. Background

In the FY 2008 IPPS final rule with comment period (72 FR 47246 through 47251), we discussed the topic of Medicare payment for devices that are replaced without cost or where credit for a replaced device is furnished to the hospital. We implemented a policy to reduce a hospital's IPPS payment for certain MS-DRGs where the implantation of a device that has been recalled determined the base MS-DRG assignment. At that time, we specified that we will reduce a hospital's IPPS

payment for those MS-DRGs where the hospital received a credit for a replaced device equal to 50 percent or more of the cost of the device.

In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51556 through 51557), we clarified this policy to state that the policy applies if the hospital received a credit equal to 50 percent or more of the cost of the replacement device and issued instructions to hospitals accordingly.

b. Changes for FY 2018

In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19852 through 19853), for FY 2018, we did not propose to add any MS-DRGs to the policy for replaced devices offered without cost or with a credit. We proposed to continue to include the existing MS-DRGs currently subject to the policy as displayed in a table in the proposed rule.

In the proposed rule, we solicited public comments on our proposal to continue to include the existing MS-DRGs currently subject to the policy for replaced devices offered without cost or

with credit and to not add any additional MS-DRGs to the policy. We noted that, as discussed in section II.F.2.b. and in section II.F.5.a. of the preamble of the proposed rule, we proposed to revise the titles for MS-DRG 023 and MS-DRGs 469 and 470. We referred readers to those discussions of the specific proposed MS-DRG titles. We did not receive any public comments opposing our proposal to continue to include the existing MS-DRGs currently subject to the policy and to not add any additional MS-DRGs. Therefore, we are finalizing the list of MS-DRGs displayed in the table in the proposed rule and below, with conforming changes to the finalized titles for MS-DRGs 023, 469, and 470, that will be subject to the replaced devices offered without cost or with a credit policy, effective October 1, 2017. As we indicated in the proposed rule, we also will issue this final list of MS-DRGs subject to the payment policy for devices provided at no cost or with a credit for FY 2018 to providers through guidance and instructions in the form of a Change Request (CR).

MDC	MS-DRG	MS-DRG title
Pre-MDC	001	Heart Transplant or Implant of Heart Assist System with MCC.
Pre-MDC	002	Heart Transplant or Implant of Heart Assist System without MCC.
1	023	Craniotomy with Major Device Implant or Acute CNS Principal Diagnosis with MCC or Chemotherapy Implant or Epilepsy with Neurostimulator.
1	024	Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis without MCC.
1	025	Craniotomy & Endovascular Intracranial Procedures with MCC.
1	026	Craniotomy & Endovascular Intracranial Procedures with CC.
1	027	Craniotomy & Endovascular Intracranial Procedures without CC/MCC.
1	040	Peripheral, Cranial Nerve & Other Nervous System Procedures with MCC.
1	041	Peripheral, Cranial Nerve & Other Nervous System Procedures with CC or Peripheral Neurostimulator.
1	042	Peripheral, Cranial Nerve & Other Nervous System Procedures without CC/MCC.
3	129	Major Head & Neck Procedures with CC/MCC or Major Device.
3	130	Major Head & Neck Procedures without CC/MCC.
5	215	Other Heart Assist System Implant.
5	216	Cardiac Valve & Other Major Cardiothoracic Procedure with Cardiac Catheterization with MCC.
5	217	Cardiac Valve & Other Major Cardiothoracic Procedure with Cardiac Catheterization with CC.
5	218	Cardiac Valve & Other Major Cardiothoracic Procedure with Cardiac Catheterization without CC/MCC.
5	219	Cardiac Valve & Other Major Cardiothoracic Procedure without Cardiac Catheterization with MCC.
5	220	Cardiac Valve & Other Major Cardiothoracic Procedure without Cardiac Catheterization with CC.
5	221	Cardiac Valve & Other Major Cardiothoracic Procedure without Cardiac Catheterization without CC/MCC.
5	222	Cardiac Defibrillator Implant with Cardiac Catheterization with AMI/Heart Failure/Shock with MCC.
5	223	Cardiac Defibrillator Implant with Cardiac Catheterization with AMI/Heart Failure/Shock without MCC.
5	224	Cardiac Defibrillator Implant with Cardiac Catheterization without AMI/Heart Failure/Shock with MCC.
5	225	Cardiac Defibrillator Implant with Cardiac Catheterization without AMI/Heart Failure/Shock without MCC.
5	226	Cardiac Defibrillator Implant without Cardiac Catheterization with MCC.
5	227	Cardiac Defibrillator Implant without Cardiac Catheterization without MCC.
5	242	Permanent Cardiac Pacemaker Implant with MCC.
5	243	Permanent Cardiac Pacemaker Implant with CC.
5	244	Permanent Cardiac Pacemaker Implant without CC/MCC.
5	245	AICD Generator Procedures.
5	258	Cardiac Pacemaker Device Replacement with MCC.
5	259	Cardiac Pacemaker Device Replacement without MCC.
5	260	Cardiac Pacemaker Revision Except Device Replacement with MCC.
5	261	Cardiac Pacemaker Revision Except Device Replacement with CC.
5	262	Cardiac Pacemaker Revision Except Device Replacement without CC/MCC.
5	265	AICD Lead Procedures.
5	266	Endovascular Cardiac Valve Replacement with MCC.
5	267	Endovascular Cardiac Valve Replacement without MCC.

MDC	MS-DRG	MS-DRG title
5	268	Aortic and Heart Assist Procedures Except Pulsation Balloon with MCC.
5	269	Aortic and Heart Assist Procedures Except Pulsation Balloon without MCC.
5	270	Other Major Cardiovascular Procedures with MCC.
5	271	Other Major Cardiovascular Procedures with CC.
5	272	Other Major Cardiovascular Procedures without CC/MCC.
8	461	Bilateral or Multiple Major Joint Procedures Of Lower Extremity with MCC.
8	462	Bilateral or Multiple Major Joint Procedures of Lower Extremity without MCC.
8	466	Revision of Hip or Knee Replacement with MCC.
8	467	Revision of Hip or Knee Replacement with CC.
8	468	Revision of Hip or Knee Replacement without CC/MCC.
8	469	Major Hip and Knee Joint Replacement or Reattachment of Lower Extremity with MCC or Total Ankle Replacement.
8	470	Major Hip and Knee Joint Replacement or Reattachment of Lower Extremity without MCC.

17. Other Policy Changes: Other Operating Room (O.R.) and Non-O.R. Issues

a. O.R. Procedures to Non-O.R. Procedures

As discussed in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19853), we have continued our efforts to address the recommendations for consideration that we received in response to some of the proposals set forth in the FY 2017 IPPS/LTCH PPS proposed rule pertaining to changing the designation of ICD-10-PCS procedure codes from O.R. procedures to non-O.R. procedures. As we stated in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56871), we received requests and recommendations for over 800 procedure codes that we were not able to fully evaluate and finalize for FY 2017. We discuss these requests and recommendations below.

As discussed in the proposed rule, we also are addressing separate requests that we received regarding changing the designation of specific ICD-10-PCS procedure codes. For each group summarized below, the detailed lists of procedure codes are shown in Tables 6P.4a. through 6P.4p. (ICD-10-CM and ICD-10-PCS Code Designations, MCE and MS-DRG Changes—FY 2018) associated with the FY 2018 proposed rule and this final rule (which are available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>).

Comment: Some commenters expressed concern with the proposed changes from O.R. procedures to non-O.R. procedures for such a large number of procedure codes without having more detailed analysis of the impact to specific MS-DRGs. The commenters stated that many of the proposed changes for FY 2018 go beyond last year's changes when the changes from O.R. procedures to non-O.R. procedures were done for purposes of replicating the logic of the ICD-9 MS-DRGs.

Response: We acknowledge the concerns of the commenters regarding the volume of proposed changes for procedures to be redesignated from O.R. to non-O.R. As we stated in the FY 2018 IPPS/LTCH PPS proposed rule, we continued our efforts to address the recommendations that we received in response to some of the proposals set forth in the FY 2017 IPPS/LTCH PPS proposed rule pertaining to changing the designation of ICD-10-PCS procedure codes from O.R. procedures to non-O.R. procedures. We noted that those recommendations were for over 800 procedure codes that we were not able to fully evaluate and finalize for FY 2017. Therefore, we discussed the proposed changes for FY 2018.

The commenters are correct that the proposed changes for FY 2018 go beyond the FY 2017 proposed (and finalized) MS-DRG updates to change the designation of procedure codes from O.R. to non-O.R. that were done for purposes of replicating the logic of the ICD-9 MS-DRGs. We stated in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56790) that some of the issues evaluated for the FY 2017 MS-DRGs update continued to relate to the need for the ICD-10 MS-DRGs to accurately replicate the logic of the ICD-9-CM based version of the MS-DRGs. We noted that replication was important because both the logic for the MS-DRGs and the data source used to calculate and develop the relative payment weights were based on the same MedPAR claims data. We further noted that the logic for the proposed and final FY 2017 ICD-10 MS-DRGs was based upon the FY 2015 ICD-9-CM MedPAR claims data, which was also the data source used to calculate and develop the FY 2017 relative payment weights. However, for FY 2018 and future fiscal years, we are no longer replicating the ICD-9 MS-DRGs. As discussed in the FY 2018 IPPS/LTCH PPS proposed rule and this final rule, we are using ICD-10 coded claims data for the first time to

propose changes to the ICD-10 MS-DRG classifications and to compute the relative weights. Therefore, our proposals and final policies for FY 2018 are based solely on the ICD-10 claims data from the FY 2016 MedPAR file.

As such, procedures that were designated as O.R. under ICD-9 will not necessarily be appropriate to designate as O.R. under ICD-10. Conversely, procedures that were not designated as O.R. under ICD-9 may be appropriate to designate as O.R. under ICD-10. As discussed elsewhere in this final rule, with the transition from ICD-9 to ICD-10, the determination of when a procedure code should be designated as an O.R. procedure has become a much more complex task. This is, in part, due to the number of various approaches available in the ICD-10-PCS classification, as well as changes in medical practice. While we have typically evaluated procedures on the basis of whether or not they would be performed in an operating room, we believe that there may be other factors to consider with regard to resource utilization, particularly with the implementation of ICD-10. Therefore, we are soliciting comments on what factors or criteria to consider in determining whether a procedure is designated as an O.R. procedure in the ICD-10-PCS classification system for FY 2019 consideration. Commenters should submit their recommendations to the following email address: MSDRGClassificationChange@cms.hhs.gov by November 1, 2017.

(1) Percutaneous/Diagnostic Drainage

One commenter identified 135 ICD-10-PCS procedure codes describing procedures involving percutaneous diagnostic and therapeutic drainage of central nervous system, vascular and other body sites that generally would not require the resources of an operating room and can be performed at the bedside. The list includes procedure codes that describe procedures

involving drainage with or without placement of a drainage device. We stated in the proposed rule that we agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19853), we proposed that the 135 ICD-10-PCS procedure codes listed in Table 6P.4a. associated with the proposed rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of the 135 procedure codes describing percutaneous diagnostic and therapeutic drainage of central nervous system, vascular and other body sites. However, one commenter disagreed with reclassifying procedure codes 009330Z (Drainage of Epidural Space with Drainage Device, Percutaneous Approach) and 00933ZZ (Drainage of Epidural Space, Percutaneous Approach) to non-O.R. procedures. According to the commenter, these two codes are assigned for percutaneous burr hole drainage of acute traumatic and nontraumatic intracranial epidural hematomas, and for drainage of intracranial epidural abscesses. The commenter noted that, although percutaneous burr hole drainages are performed through smaller openings in the skull than open burr hole drainages, they require drilling through the skull under sterile technique and anesthesia for pain control. The commenter also noted that similar procedure codes such as 009430Z (Drainage of Subdural Space with Drainage Device, Percutaneous Approach) and 00943ZZ (Drainage of Subdural Space, Percutaneous Approach) are currently classified as O.R. procedures.

Response: We appreciate the commenters' support. In response to the commenter who disagreed with reclassifying procedure codes 009330Z and 00933ZZ to non-O.R. procedures, upon further review and consideration,

for the reasons the commenter pointed out and consistent with the current designation of procedure codes 009430Z and 00943ZZ, which are classified as O.R. procedures, we believe it is appropriate to maintain the current O.R. designation of procedure codes 009330Z and 00933ZZ.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of 133 ICD-10-PCS procedure codes listed in Table 6P.4a. associated with this final rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) from O.R. procedures to non-O.R. procedures, effective October 1, 2017. We also are finalizing the designation of procedure codes 009330Z and 00933ZZ to remain O.R. procedures for FY 2018. We note that, as shown in Table 6F.—Revised Procedure Code Titles associated with this final rule, the titles for procedure codes 009330Z, 00933ZZ, 009430Z and 00943ZZ are revised to include the term “intracranial.” Effective October 1, 2017, the title of ICD-10-PCS procedure code 009330Z is revised to read “Drainage of Intracranial Epidural Space with Drainage Device, Percutaneous Approach”; the title of ICD-10-PCS procedure code 00933ZZ is revised to read “Drainage of Intracranial Epidural Space, Percutaneous Approach”; the title of ICD-10-PCS procedure code 009430Z is revised to read “Drainage of Intracranial Subdural Space with Drainage Device, Percutaneous Approach”; and the title of ICD-10-PCS procedure code 00943ZZ is revised to read “Drainage of Intracranial Subdural Space, Percutaneous Approach”.

(2) Percutaneous Insertion of Intraluminal or Monitoring Device

One commenter identified 28 ICD-10-PCS procedure codes describing procedures involving the percutaneous insertion of intraluminal and monitoring devices into central nervous system and other cardiovascular body parts that generally would not require

the resources of an operating room and can be performed at the bedside. We stated in the proposed rule that we agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19853), we proposed that the 28 ICD-10-PCS procedure codes listed in Table 6P.4b. associated with the proposed rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of the 28 procedure codes describing percutaneous insertion of intraluminal or monitoring devices into central nervous system and other cardiovascular body parts. However, one commenter disagreed with changing the designation for 15 of the 28 listed procedure codes. The commenter disagreed with changing the designation for ICD-10-PCS procedure codes 00H032Z (Insertion of Monitoring Device into Brain, Percutaneous Approach) and 00H632Z (Insertion of Monitoring Device into Cerebral Ventricle, Percutaneous Approach). According to the commenter, these two codes are assigned for inserting a monitoring device into the brain or cerebral ventricle by a percutaneous burr hole which is most often performed in the O.R. setting under sterile technique and requires anesthesia for pain control. In addition, the commenter disagreed with changing the designation for the following 13 ICD-10-PCS procedure codes. The commenter stated that these intravascular procedures are performed in specialized vascular suites and involve insertion of a filter into the vena cava for prevention of pulmonary emboli or the insertion of vascular stents for conditions such as stenosis and other types of intraluminal devices into the great vessels and are significant procedures that warrant an O.R. designation.

ICD-10-PCS code	Code description
02H43DZ	Insertion of intraluminal device into coronary vein, percutaneous approach.
02H63DZ	Insertion of intraluminal device into right atrium, percutaneous approach.
02H73DZ	Insertion of intraluminal device into left atrium, percutaneous approach.
02HK3DZ	Insertion of intraluminal device into right ventricle, percutaneous approach.
02HL3DZ	Insertion of intraluminal device into left ventricle, percutaneous approach.
02HP3DZ	Insertion of intraluminal device into pulmonary trunk, percutaneous approach.
02HQ3DZ	Insertion of intraluminal device into right pulmonary artery, percutaneous approach.
02HR3DZ	Insertion of intraluminal device into left pulmonary artery, percutaneous approach.
02HS3DZ	Insertion of intraluminal device into right pulmonary vein, percutaneous approach.
02HT3DZ	Insertion of intraluminal device into left pulmonary vein, percutaneous approach.
02HV3DZ	Insertion of intraluminal device into superior vena cava, percutaneous approach.

ICD-10-PCS code	Code description
02HW3DZ	Insertion of intraluminal device into thoracic aorta, percutaneous approach.
06H03DZ	Insertion of intraluminal device into inferior vena cava, percutaneous approach.

Response: We appreciate the commenters' support. In response to the commenter who disagreed with changing the designation for 15 of the 28 procedure codes, upon further review and consideration, we agree that the status of the above list of procedure codes, in addition to the two procedure codes discussed earlier in this section (00H032Z and 00H632Z) should be maintained as O.R. procedures due to the indications for which these procedures may be performed and the risks involved.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of 13 ICD-10-PCS procedure codes listed in Table 6P.4b. associated with this final rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) from O.R. procedures to non-O.R. procedures, effective October 1, 2017. We also are finalizing maintaining the designation of ICD-10-PCS procedure codes 00H032Z (Insertion of Monitoring Device into Brain, Percutaneous Approach) and 00H632Z (Insertion of Monitoring Device into Cerebral Ventricle,

Percutaneous Approach) and the list of procedure codes shown in the table above as O.R. procedures, effective October 1, 2017.

(3) Percutaneous Removal of Drainage, Infusion, Intraluminal or Monitoring Device

One commenter identified 22 ICD-10-PCS procedure codes that describe procedures involving the percutaneous removal of drainage, infusion, intraluminal and monitoring devices from central nervous system and other vascular body parts that generally would not require the resources of an operating room and can be performed at the bedside. We agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19854), we proposed that the 22 ICD-10-PCS procedure codes listed in Table 6P.4c. associated with the proposed rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of 22 ICD-10-PCS procedure codes

describing the percutaneous removal of drainage, infusion, intraluminal and monitoring devices from central nervous system and other vascular body parts.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of the 22 ICD-10-PCS procedure codes listed in Table 6P.4c. associated with the proposed rule and this final rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) from O.R. procedures to non-O.R. procedures, effective October 1, 2017.

(4) External Removal of Cardiac or Neurostimulator Lead

One commenter identified four ICD-10-PCS procedure codes that describe procedures involving the external removal of cardiac leads from the heart and neurostimulator leads from central nervous system body parts that generally would not require the resources of an operating room and can be performed at the bedside. These four ICD-10-PCS codes are shown in the table below.

ICD-10-PCS code	Code description
00P6XMZ	Removal of neurostimulator lead from cerebral ventricle, external approach.
00PEXMZ	Removal of neurostimulator lead from cranial nerve, external approach.
01PYXMZ	Removal of neurostimulator lead from peripheral nerve, external approach.
02PAXMZ	Removal of cardiac lead from heart, external approach.

We agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19854), we proposed that the four ICD-10-PCS procedure codes shown in the table above be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of four ICD-10-PCS procedure codes that describe the external removal of cardiac leads from the heart and neurostimulator leads from central nervous system body parts.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the

designation of the four ICD-10-PCS procedure codes shown in the table above from O.R. procedures to non-O.R. procedures, effective October 1, 2017.

(5) Percutaneous Revision of Drainage, Infusion, Intraluminal or Monitoring Device

One commenter identified 28 ICD-10-PCS procedure codes that describe procedures involving the percutaneous revision of drainage, infusion, intraluminal and monitoring devices for vascular and heart and great vessel body parts that generally would not require the resources of an operating room and can be performed at the bedside. We agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19854), we

proposed that the 28 ICD-10-PCS procedure codes listed in Table 6P.4d. associated with the proposed rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of 28 ICD-10-PCS procedure codes that describe the percutaneous revision of drainage, infusion, intraluminal and monitoring devices for vascular and heart and great vessel body parts.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation for the 28 ICD-10-PCS procedure codes listed in Table 6P.4d. associated with the proposed rule and this final rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) from O.R. procedures to non-O.R. procedures, effective October 1, 2017.

www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html) from O.R. procedures to non-O.R. procedures, effective October 1, 2017.

(6) Percutaneous Destruction

One commenter identified two ICD-10-PCS procedure codes that describe

procedures involving the percutaneous destruction of retina body parts that generally would not require the resources of an operating room and can be performed at the bedside. These two ICD-10-PCS codes are shown in the table below.

ICD-10-PCS code	Code description
085E3ZZ	Destruction of right retina, percutaneous approach.
085F3ZZ	Destruction of left retina, percutaneous approach.

We agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19854), we proposed that the two ICD-10-PCS procedure codes shown in the table above be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of two ICD-10-PCS procedure codes that describe the percutaneous destruction of retina body parts.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of the two ICD-10-PCS procedure codes shown in the table above from O.R. procedures to non-O.R. procedures, effective October 1, 2017.

(7) External/Diagnostic Drainage

One commenter identified 20 ICD-10-PCS procedure codes that describe

procedures involving external drainage for structures of the eye that generally would not require the resources of an operating room and can be performed at the bedside. We agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19854), we proposed that the 20 ICD-10-PCS procedure codes listed in Table 6P.4e. associated with the proposed rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of 20 ICD-10-PCS procedure codes that describe external drainage for structures of the eye.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation for the 20 ICD-10-PCS procedure codes listed in Table 6P.4e. associated with the proposed rule and this final rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) from O.R. procedures to non-O.R. procedures, effective October 1, 2017.

(8) External Extirpation

One commenter identified four ICD-10-PCS procedure codes that describe procedures involving external extirpation of matter from eye structures that generally would not require the resources of an operating room and can be performed at the bedside. These four ICD-10-PCS codes are shown in the table below.

ICD-10-PCS code	Code description
08C0XZZ	Extirpation of matter from right eye, external approach.
08C1XZZ	Extirpation of matter from left eye, external approach.
08CSXZZ	Extirpation of matter from right conjunctiva, external approach.
08CTXZZ	Extirpation of matter from left conjunctiva, external approach.

We agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19854 through 19855), we proposed that the four ICD-10-PCS procedure codes shown in the table above be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of the four ICD-10-PCS procedure codes shown in the table above that describe

procedures involving external extirpation of matter from eye structures.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of the four ICD-10-PCS procedure codes shown in the table above from O.R. procedures to non-O.R. procedures, effective October 1, 2017.

(9) External Removal of Radioactive Element or Synthetic Substitute

One commenter identified three ICD-10-PCS procedure codes that describe procedures involving the external removal of radioactive or synthetic substitutes from the eye that generally would not require the resources of an operating room and can be performed at the bedside. These three ICD-10-PCS codes are shown in the table below.

ICD-10-PCS code	Code description
08P0X1Z	Removal of radioactive element from right eye, external approach.
08P0XJZ	Removal of synthetic substitute from right eye, external approach.
08P1XJZ	Removal of synthetic substitute from left eye, external approach.

We agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19855), we proposed that the three ICD-10-PCS procedure codes shown in the table above be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of the three ICD-10-PCS procedure codes shown in the table above that describe

the external removal of radioactive or synthetic substitutes from the eye.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of the three ICD-10-PCS procedure codes shown in the table above from O.R. procedures to non-O.R. procedures, effective October 1, 2017.

(10) Endoscopic/Transorifice Diagnostic Drainage

One commenter identified eight ICD-10-PCS procedure codes that describe procedures involving endoscopic/transorifice (via natural or artificial opening) drainage of ear structures that generally would not require the resources of an operating room and can be performed at the bedside. These eight ICD-10-PCS codes are shown in the table below.

ICD-10-PCS code	Code description
09977ZX	Drainage of right tympanic membrane, via natural or artificial opening, diagnostic.
09978ZX	Drainage of right tympanic membrane, via natural or artificial opening endoscopic, diagnostic.
09987ZX	Drainage of left tympanic membrane, via natural or artificial opening, diagnostic.
09988ZX	Drainage of left tympanic membrane, via natural or artificial opening endoscopic, diagnostic.
099F7ZX	Drainage of right eustachian tube, via natural or artificial opening, diagnostic.
099F8ZX	Drainage of right eustachian tube, via natural or artificial opening endoscopic, diagnostic.
099G7ZX	Drainage of left eustachian tube, via natural or artificial opening, diagnostic.
099G8ZX	Drainage of left eustachian tube, via natural or artificial opening endoscopic, diagnostic.

We stated in the proposed rule that we agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19855), we proposed that the eight ICD-10-PCS procedure codes shown in the table above be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of the eight ICD-10-PCS procedure codes

shown in the table above that describe drainage of ear structures.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of the eight ICD-10-PCS procedure codes shown in the table above from O.R. procedures to non-O.R. procedures, effective October 1, 2017.

(11) External Release

One commenter identified four ICD-10-PCS procedure codes that describe procedures involving the external release of ear structures that generally would not require the resources of an operating room and can be performed at the bedside. These four ICD-10-PCS codes are shown in the table below.

ICD-10-PCS code	Code description
09N0XZZ	Release right external ear, external approach.
09N1XZZ	Release left external ear, external approach.
09N3XZZ	Release right external auditory canal, external approach.
09N4XZZ	Release left external auditory canal, external approach.

We agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19855), we proposed that the four ICD-10-PCS procedure codes shown in the table above be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of the four ICD-10-PCS procedure codes

shown in the table above that describe external release of ear structures.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of the four ICD-10-PCS procedure codes shown in the table above from O.R. procedures to non-O.R. procedures, effective October 1, 2017.

(12) External Repair

One commenter identified three ICD-10-PCS procedure codes that describe procedures involving the external repair of body parts that generally would not require the resources of an operating room and can be performed at the bedside. These three ICD-10-PCS codes are shown in the table below.

ICD-10-PCS code	Code description
09QKXZZ	Repair nose, external approach.
0CQ4XZZ	Repair buccal mucosa, external approach.
0CQ7XZZ	Repair tongue, external approach.

We agreed with the commenter. Therefore, in the FY 2019 IPPS/LTCH PPS proposed rule (82 FR 19855), we proposed that the three ICD-10-PCS

procedure codes shown in the table above be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of the three ICD-10-PCS procedure codes shown in the table above that describe

external repair of body parts of various structures.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of the three ICD-10-PCS

procedure codes shown in the table above from O.R. procedures to non-O.R. procedures, effective October 1, 2017.

(13) Endoscopic/Transorifice Destruction

One commenter identified eight ICD-10-PCS procedure codes that describe

procedures involving the endoscopic/transorifice destruction of respiratory system body parts that generally would not require the resources of an operating room and can be performed at the bedside. These eight ICD-10-PCS codes are shown in the table below.

ICD-10-PCS code	Code description
0B538ZZ	Destruction of right main bronchus, via natural or artificial opening endoscopic.
0B548ZZ	Destruction of right upper lobe bronchus, via natural or artificial opening endoscopic.
0B558ZZ	Destruction of right middle lobe bronchus, via natural or artificial opening endoscopic.
0B568ZZ	Destruction of right lower lobe bronchus, via natural or artificial opening endoscopic.
0B578ZZ	Destruction of left main bronchus, via natural or artificial opening endoscopic.
0B588ZZ	Destruction of left upper lobe bronchus, via natural or artificial opening endoscopic.
0B598ZZ	Destruction of lingula bronchus, via natural or artificial opening endoscopic.
0B5B8ZZ	Destruction of left lower lobe bronchus, via natural or artificial opening endoscopic.

We stated in the proposed rule that we agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19855 through 19856), we proposed that the eight ICD-10-PCS procedure codes shown in the table above be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Some commenters agreed with the proposal to change the designation of the eight ICD-10-PCS procedure codes that describe procedures involving the endoscopic/transorifice destruction of respiratory system body parts from O.R. procedures to non-O.R. procedures. However, other commenters disagreed with the proposal. These commenters believed that these procedures do, in fact, require the resources of an operating room and stated that the suggestion that these procedures can be performed at the bedside is clinically inaccurate and misrepresents the nature of these procedures. According to the commenters, the only instances in which these procedures would be performed at the bedside would be if the patient was in the intensive care unit and in emergent need of care. Otherwise, the commenters indicated that providing these services at the patient's bedside would not be appropriate. Commenters also noted that the patients who undergo the above procedures typically have poor respiratory function that requires treatment within an O.R. setting for clinical and safety purposes. In addition, the commenters reported that the administration of anesthesia during these procedures is critically important. The commenters conducted an in-depth

analysis to determine the impact of the proposed change and noted that the resource utilization associated with the inpatient claims reporting these procedures more closely aligns with surgical MS-DRGs versus medical MS-DRGs.

Response: We appreciate the commenters' support. In response to the commenters who disagreed with changing the designation of the eight ICD-10-PCS procedure codes that describe the endoscopic/transorifice destruction of respiratory system body parts, we appreciate the thorough review and analysis conducted in response to our solicitation for comments on the proposal. Upon further review and consideration, we agree that these procedures warrant an O.R. setting and assignment to surgical MS-DRGs.

After consideration of the public comments we received, we are not finalizing our proposal to change the designation of the eight ICD-10-PCS procedure codes shown in the table above from O.R. procedures to non-O.R. procedures. The eight procedure codes shown in the table above will maintain their O.R. designation for FY 2018.

(14) Endoscopic/Transorifice Drainage

One commenter identified 40 ICD-10-PCS procedure codes that describe procedures involving endoscopic/transorifice (via natural or artificial opening) drainage of respiratory system body parts that generally would not require the resources of an operating room and can be performed at the bedside. We agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19856), we proposed that the 40 ICD-

10-PCS procedure codes listed in Table 6P.4f. associated with the proposed rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of the 40 ICD-10-PCS procedure codes that describe endoscopic/transorifice (via natural or artificial opening) drainage of respiratory system body parts.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of the 40 ICD-10-PCS procedure codes listed in Table 6P.4f. associated with the proposed rule and this final rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) from O.R. procedures to non-O.R. procedures, effective October 1, 2017.

(15) Endoscopic/Transorifice Extirpation

One commenter identified nine ICD-10-PCS procedure codes that describe procedures involving endoscopic/transorifice extirpation of matter from respiratory system body parts that generally would not require the resources of an operating room and can be performed at the bedside. These nine ICD-10-PCS codes are shown in the table below.

ICD-10-PCS code	Code description
0BCC8ZZ	Extirpation of matter from right upper lung lobe, via natural or artificial opening endoscopic.

ICD-10-PCS code	Code description
0BCD8ZZ	Extirpation of matter from right middle lung lobe, via natural or artificial opening endoscopic.
0BCF8ZZ	Extirpation of matter from right lower lung lobe, via natural or artificial opening endoscopic.
0BCG8ZZ	Extirpation of matter from left upper lung lobe, via natural or artificial opening endoscopic.
0BCH8ZZ	Extirpation of matter from lung lingula, via natural or artificial opening endoscopic.
0BCJ8ZZ	Extirpation of matter from left lower lung lobe, via natural or artificial opening endoscopic.
0BCK8ZZ	Extirpation of matter from right lung, via natural or artificial opening endoscopic.
0BCL8ZZ	Extirpation of matter from left lung, via natural or artificial opening endoscopic.
0BCM8ZZ	Extirpation of matter from bilateral lungs, via natural or artificial opening endoscopic.

We stated in the proposed rule that we agreed with the commenter.

Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19856), we proposed that the nine ICD-10-PCS procedure codes shown in the table above be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of the nine ICD-10-PCS procedure codes that describe endoscopic/transorifice extirpation of matter from respiratory system body parts. However, one commenter disagreed with the proposal. According to the commenter, the codes describe endoscopic procedures

performed on the lung and are more invasive in comparison to endobronchial procedures and they require specialized equipment. The commenter also noted that time, skill, and duration of sedation are increased for endoscopic lung procedures versus procedures performed on the bronchus (endobronchial).

Response: We appreciate the commenters' support. In response to the commenter who disagreed with our proposal, upon further review and consideration, we agree that these procedure codes warrant an O.R. setting.

After consideration of the public comments we received, we are not finalizing our proposal to designate the

nine ICD-10-PCS procedure codes shown in the table above as non-O.R. procedures. These procedure codes will remain designated as O.R. procedures for FY 2018.

(16) Endoscopic/Transorifice Fragmentation

One commenter identified 16 ICD-10-PCS procedure codes that describe procedures involving endoscopic/transorifice fragmentation of respiratory system body parts that generally would not require the resources of an operating room and can be performed at the bedside. These 16 ICD-10-PCS codes are shown in the table below.

ICD-10-PCS code	Code description
0BF37ZZ	Fragmentation in right main bronchus, via natural or artificial opening.
0BF38ZZ	Fragmentation in right main bronchus, via natural or artificial opening endoscopic.
0BF47ZZ	Fragmentation in right upper lobe bronchus, via natural or artificial opening.
0BF48ZZ	Fragmentation in right upper lobe bronchus, via natural or artificial opening endoscopic.
0BF57ZZ	Fragmentation in right middle lobe bronchus, via natural or artificial opening.
0BF58ZZ	Fragmentation in right middle lobe bronchus, via natural or artificial opening endoscopic.
0BF67ZZ	Fragmentation in right lower lobe bronchus, via natural or artificial opening.
0BF68ZZ	Fragmentation in right lower lobe bronchus, via natural or artificial opening endoscopic.
0BF77ZZ	Fragmentation in left main bronchus, via natural or artificial opening.
0BF78ZZ	Fragmentation in left main bronchus, via natural or artificial opening endoscopic.
0BF87ZZ	Fragmentation in left upper lobe bronchus, via natural or artificial opening.
0BF88ZZ	Fragmentation in left upper lobe bronchus, via natural or artificial opening endoscopic.
0BF97ZZ	Fragmentation in lingula bronchus, via natural or artificial opening.
0BF98ZZ	Fragmentation in lingula bronchus, via natural or artificial opening endoscopic.
0BFB7ZZ	Fragmentation in left lower lobe bronchus, via natural or artificial opening.
0BFB8ZZ	Fragmentation in left lower lobe bronchus, via natural or artificial opening endoscopic.

We agreed with the commenter.

Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19856 through 19857), we proposed that the 16 ICD-10-PCS procedure codes shown in the table above be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of the 16 ICD-10-PCS procedure codes that describe endoscopic/transorifice

fragmentation of respiratory system body parts.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of the 16 ICD-10-PCS procedure codes shown in the table above from O.R. procedures to non-O.R. procedures, effective October 1, 2017.

(17) Endoscopic/Transorifice Insertion of Intraluminal Device

One commenter identified two ICD-10-PCS procedure codes that describe procedures involving an endoscopic/transorifice (via natural or artificial opening) insertion of intraluminal devices into respiratory system body parts that generally would not require the resources of an operating room and can be performed at the bedside. These two ICD-10-PCS codes are shown in the table below.

ICD-10-PCS code	Code description
0BH17DZ	Insertion of intraluminal device into trachea, via natural or artificial opening.
0BH18DZ	Insertion of intraluminal device into trachea, via natural or artificial opening endoscopic.

We agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19857), we proposed that the two ICD–10–PCS procedure codes shown in the table above be designated non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of the two ICD–10–PCS procedure codes that describe an endoscopic/transorifice

(via natural or artificial opening) insertion of intraluminal devices into respiratory system body parts.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of the two ICD–10–PCS procedure codes shown in the table above from O.R. procedures to non-O.R. procedures, effective October 1, 2017.

(18) Endoscopic/Transorifice Removal of Radioactive Element

One commenter identified two ICD–10–PCS procedure codes that describe procedures involving the endoscopic/transorifice removal of radioactive elements from respiratory system body parts that generally would not require the resources of an operating room and can be performed at the bedside. These two ICD–10–PCS codes are shown in the table below.

ICD–10–PCS code	Code description
OBPK71Z	Removal of radioactive element from right lung, via natural or artificial opening.
OBPK81Z	Removal of radioactive element from right lung, via natural or artificial opening endoscopic.

We agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19857), we proposed that the two ICD–10–PCS procedure codes shown in the table above be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of the two ICD–10–PCS procedure codes that describe procedures involving the endoscopic/transorifice removal of radioactive elements from respiratory system body parts. However, one commenter disagreed with the proposal and asserted that endoscopic procedures performed on the lung are more invasive than endobronchial procedures.

Response: We appreciate the commenters' support. In response to the commenter who disagreed with our proposal, we recognize that endoscopic procedures performed on the lung may be considered more invasive than endobronchial procedures. However, according to the American Cancer Society, in most cases, anesthesia is not needed when the applicator and/or radioactive implant is removed, as it is usually done in the hospital room.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of ICD–10–PCS procedure codes OBPK71Z and OBPK81Z from O.R. procedures to non-O.R. procedures, effective October 1, 2017.

(19) Endoscopic/Transorifice Revision of Drainage, Infusion, Intraluminal or Monitoring Device

One commenter identified 18 ICD–10–PCS procedure codes that describe procedures involving the revision of drainage, infusion, intraluminal, or monitoring devices from respiratory system body parts that generally would not require the resources of an operating

room and can be performed at the bedside. We agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19857), we proposed that the 18 ICD–10–PCS procedure codes listed in Table 6P.4g, associated with the proposed rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of the 18 ICD–10–PCS procedure codes that describe procedures involving the revision of drainage, infusion, intraluminal, or monitoring devices from respiratory system body parts. However, one commenter disagreed with the proposal and recommended that CMS maintain an O.R. designation of 12 of the 18 proposed codes. The commenter stated that, although it is uncertain how often a device within the lung would be revised versus removed and replaced, endoscopic procedures performed on the lung are more invasive than endobronchial procedures.

Response: We appreciate the commenters' support. In response to the commenter who disagreed with 12 of the 18 procedure codes in our proposal, we still believe our proposal is appropriate, given that there are a wide range of procedures that may be performed and are described as a revision of a drainage, infusion, intraluminal, or monitoring device in the lung and generally do not require the resources of an operating room.

After consideration of the public comments we received, we are finalizing our proposal to designate the 18 ICD–10–PCS procedure codes listed in Table 6P.4g, associated with the proposed rule and this final rule (which

is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) as non-O.R. procedures, effective October 1, 2017.

(20) Endoscopic/Transorifice Excision

One commenter identified one ICD–10–PCS procedure code that describes the procedure involving endoscopic/transorifice (via natural or artificial opening) excision of the digestive system body parts that generally would not require the resources of an operating room and can be performed at the bedside. This code is ODBQ8ZZ (Excision of anus, via natural or artificial opening endoscopic). We agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19857), we proposed that ICD–10–PCS procedure code ODBQ8ZZ be designated as a non-O.R. procedure. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of ICD–10–PCS procedure code ODBQ8ZZ.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of ICD–10–PCS procedure code ODBQ8ZZ (Excision of anus, via natural or artificial opening endoscopic) from an O.R. procedure to a non-O.R. procedure, effective October 1, 2017.

(21) Endoscopic/Transorifice Insertion

One commenter identified two ICD–10–PCS procedure codes that describe procedures involving the endoscopic/transorifice (via natural or artificial opening) insertion of intraluminal device into the stomach that generally would not require the resources of an operating room and can be performed at

the bedside. These two ICD-10-PCS codes are shown in the table below.

ICD-10-PCS code	Code description
ODH67DZ	Insertion of intraluminal device into stomach, via natural or artificial opening.
ODH68DZ	Insertion of intraluminal device into stomach, via natural or artificial opening endoscopic.

We agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19857), we proposed that the two ICD-10-PCS procedure codes shown in the table above be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of the two ICD-10-PCS procedure codes that describe the endoscopic/

transorifice (via natural or artificial opening) insertion of intraluminal device into the stomach.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of the two ICD-10-PCS procedure codes shown in the table above from O.R. procedures to non-O.R. procedures, effective October 1, 2017.

(22) Endoscopic/Transorifice Removal

One commenter identified six ICD-10-PCS procedure codes that describe procedures involving endoscopic/transorifice (via natural or artificial opening) removal of feeding devices that generally would not require the resources of an operating room and can be performed at the bedside. These six ICD-10-PCS codes are shown in the table below.

ICD-10-PCS code	Code description
ODP07UZ	Removal of feeding device from upper intestinal tract, via natural or artificial opening.
ODP08UZ	Removal of feeding device from upper intestinal tract, via natural or artificial opening endoscopic.
ODP67UZ	Removal of feeding device from stomach, via natural or artificial opening.
ODP68UZ	Removal of feeding device from stomach, via natural or artificial opening endoscopic.
ODPD7UZ	Removal of feeding device from lower intestinal tract, via natural or artificial opening.
ODPD8UZ	Removal of feeding device from lower intestinal tract, via natural or artificial opening endoscopic.

We agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19857 through 19858), we proposed that the six ICD-10-PCS procedure codes shown in the table above be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of the six ICD-10-PCS procedure codes

that describe the endoscopic/transorifice (via natural or artificial opening) removal of feeding devices.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of the six ICD-10-PCS procedure codes shown in the table above from O.R. procedures to non-O.R. procedures, effective October 1, 2017.

(23) External Reposition

One commenter identified two ICD-10-PCS procedure codes that describe procedures involving external reposition of gastrointestinal body parts that generally would not require the resources of an operating room and can be performed at the bedside. These two ICD-10-PCS codes are shown in the table below.

ICD-10-PCS code	Code description
ODS5XZZ	Reposition esophagus, external approach.
ODSQXZZ	Reposition anus, external approach.

We agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19858), we proposed that the two ICD-10-PCS procedure codes shown in the table above be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of the two ICD-10-PCS procedure codes

that describe the external reposition of gastrointestinal body parts.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of the two ICD-10-PCS procedure codes shown in the table above from O.R. procedures to non-O.R. procedures, effective October 1, 2017.

(24) Endoscopic/Transorifice Drainage

One commenter identified eight ICD-10-PCS procedure codes that describe procedures involving endoscopic/transorifice (via natural or artificial opening) drainage of hepatobiliary system and pancreatic body parts that generally would not require the resources of an operating room and can be performed at the bedside. These eight ICD-10-PCS codes are shown in the table below.

ICD-10-PCS code	Code description
0F9580Z	Drainage of right hepatic duct with drainage device, via natural or artificial opening endoscopic.
0F958ZZ	Drainage of right hepatic duct, via natural or artificial opening endoscopic.
0F9680Z	Drainage of left hepatic duct with drainage device, via natural or artificial opening endoscopic.
0F968ZZ	Drainage of left hepatic duct, via natural or artificial opening endoscopic.
0F9880Z	Drainage of cystic duct with drainage device, via natural or artificial opening endoscopic.
0F988ZZ	Drainage of cystic duct, via natural or artificial opening endoscopic.
0F9D8ZZ	Drainage of pancreatic duct, via natural or artificial opening endoscopic.
0F9F8ZZ	Drainage of accessory pancreatic duct, via natural or artificial opening endoscopic.

We agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19858), we proposed that the eight ICD-10-PCS procedure codes shown in the table above be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of the eight ICD-10-PCS procedure codes that describe endoscopic/transorifice (via natural or artificial opening)

drainage of hepatobiliary system and pancreatic body parts.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of the eight ICD-10-PCS procedure codes shown in the table above from O.R. procedures to non-O.R. procedures, effective October 1, 2017.

(25) Endoscopic/Transorifice Fragmentation

One commenter identified two ICD-10-PCS procedure codes that describe procedures involving endoscopic/transorifice (via natural or artificial opening) fragmentation of hepatobiliary system and pancreatic body parts that generally would not require the resources of an operating room and can be performed at the bedside. These two ICD-10-PCS codes are shown in the table below.

ICD-10-PCS code	Code description
0FFD8ZZ	Fragmentation in pancreatic duct, via natural or artificial opening endoscopic.
0FFF8ZZ	Fragmentation in accessory pancreatic duct, via natural or artificial opening endoscopic.

We agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19858), we proposed that the two ICD-10-PCS procedure codes shown in the table above be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of the two ICD-10-PCS procedure codes that describe endoscopic/transorifice

(via natural or artificial opening) fragmentation of hepatobiliary system and pancreatic body parts.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of the two ICD-10-PCS procedure codes shown in the table above from O.R. procedures to non-O.R. procedures, effective October 1, 2017.

(26) Percutaneous Alteration

One commenter identified three ICD-10-PCS procedure codes that describe procedures involving percutaneous alteration of the breast that generally would not require the resources of an operating room and can be performed at the bedside. These three ICD-10-PCS codes are shown in the table below.

ICD-10-PCS code	Code description
0H0T3JZ	Alteration of right breast with synthetic substitute, percutaneous approach.
0H0U3JZ	Alteration of left breast with synthetic substitute, percutaneous approach.
0H0V3JZ	Alteration of bilateral breast with synthetic substitute, percutaneous approach.

We agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19858 through 19859), we proposed that the three ICD-10-PCS procedure codes shown in the table above be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of the three ICD-10-PCS procedure codes that describe percutaneous alteration of the breast.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of the three ICD-10-PCS procedure codes shown in the table above from O.R. procedures to non-O.R. procedures, effective October 1, 2017.

(27) External Division and Excision of Skin

One commenter identified 41 ICD-10-PCS procedure codes that describe

procedures involving external division and excision of the skin for body parts that generally would not require the resources of an operating room and can be performed at the bedside. We agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19859), we proposed that the 41 ICD-10-PCS procedure codes listed in Table 6P.4h. associated with the proposed rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/>

AcuteInpatientPPS/index.html) be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of the 41 ICD-10-PCS procedure codes that describe external division and excision of the skin for body parts.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of the 41 ICD-10-PCS procedure codes listed in Table 6P.4h. associated with the proposed rule and this final rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) from O.R. procedures

to non-O.R. procedures, effective October 1, 2017.

(28) External Excision of Breast

One commenter identified six ICD-10-PCS procedure codes that describe procedures involving external excision of the breast that they believed would generally not require the resources of an operating room and can be performed at the bedside. These six ICD-10-PCS codes are shown in the table below.

ICD-10-PCS code	Code description
0HBTXZZ	Excision of right breast, external approach.
0HBUXZZ	Excision of left breast, external approach.
0HBVXZZ	Excision of bilateral breast, external approach.
0HBWXZZ	Excision of right nipple, external approach.
0HBXXZZ	Excision of left nipple, external approach.
0HBYXZZ	Excision of supernumerary breast, external approach.

We disagreed with the commenter because these procedure codes describe various types of surgery performed on the breast or nipple (for example, partial mastectomy) that would typically involve the use of general anesthesia. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19859), we proposed that the six ICD-10-PCS procedure codes shown in the table above remain designated as O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to maintain the current designation of the six ICD-10-PCS procedure codes that describe external excision of the breast. However, one commenter disagreed specifically with the example of a partial mastectomy utilizing an external approach. The commenter stated that the breast itself includes glandular and ductal tissue, although it is assigned with skin to Section 0H in the Medical and Surgical

section of the ICD-10-PCS classification. Therefore, according to the commenter, by definition, a partial mastectomy, which involves excision of glandular/ductal tissue, cannot be performed by an external approach because glandular tissue cannot be removed through direct action upon the skin or mucous membrane.

Response: We appreciate the commenters' support. In response to the commenter who noted the example of a partial mastectomy that cannot be performed by an external approach, we agree that the example may not have been an appropriate illustration of an external approach according to the ICD-10-PCS definitions. A more appropriate example would be an excision of lesion of breast for the external approach. As the commenter pointed out, the breast itself includes glandular and ductal tissue, although it is assigned with skin to Chapter 0H. Because the code title description does not specifically

include the term "skin," it can lead to confusion. We believe this area in the classification may benefit from further review to determine if modifications are warranted, in which case any proposals would be presented at a future ICD-10 Coordination and Maintenance Committee meeting.

After consideration of the public comments we received, we are finalizing our proposal to maintain the six ICD-10-PCS procedure codes shown in the table above as O.R. procedures for FY 2018.

(29) Percutaneous Supplement

One commenter identified three ICD-10-PCS procedure codes that describe procedures involving percutaneous supplement of the breast with synthetic substitute that generally would not require the resources of an operating room and can be performed at the bedside. These three ICD-10-PCS codes are shown in the table below.

ICD-10-PCS code	Code description
0HUT3JZ	Supplement right breast with synthetic substitute, percutaneous approach.
0HUU3JZ	Supplement left breast with synthetic substitute, percutaneous approach.
0HUV3JZ	Supplement bilateral breast with synthetic substitute, percutaneous approach.

We agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19859), we proposed that the three ICD-10-PCS procedure codes shown in the table above be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of the three ICD-10-PCS procedure codes

that describe percutaneous supplement of the breast with synthetic substitute.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of the three ICD-10-PCS procedure codes shown in the table above from O.R. procedures to non-O.R. procedures, effective October 1, 2017.

(30) Open Drainage

One commenter identified 25 ICD-10-PCS procedure codes that describe procedures involving open drainage of subcutaneous tissue and fascia body parts that generally would not require the resources of an operating room and can be performed at the bedside. The list includes procedure codes for drainage with or without placement of a drainage device. We stated in the

proposed rule that we agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19859), we proposed that the 25 ICD-10-PCS procedure codes listed in Table 6P.4i. associated with the proposed rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of the 25 ICD-10-PCS procedure codes that describe procedures involving open drainage of subcutaneous tissue and fascia body parts. However, one commenter disagreed with changing the designation for 22 of the 25 procedure codes in the proposal from O.R. to non-O.R. This commenter agreed with the proposal to change the designation for 3 of the 25 procedure codes because these codes specifically describe the objective

of placing a drainage device. The commenter noted that the other procedures described by the 22 procedure codes are performed on deeper subcutaneous tissue and fascia, are more invasive, and are most often performed in the O.R. setting under general anesthesia. According to the commenter, these codes are assigned when the primary objective of the procedure is to incise through the skin into the subcutaneous tissue and/or fascia in order to drain and clean out an abscess or hematoma (fluid collection). The commenter also noted that CMS disagreed with the recommendation to reclassify open extraction of subcutaneous tissue and fascia to non-O.R. procedures as discussed with regard to Table 6P.4k associated with the FY 2018 IPPS/LTCH PPS proposed rule and for the same reasons, the commenter believed that open drainage of subcutaneous tissue and fascia should not be changed from an O.R. procedure to a non-O.R. procedure.

Response: We appreciate the commenters' support. In response to the commenter who noted that the procedures described by the 22 procedure codes are performed on deeper subcutaneous tissue and fascia, are more invasive, and are most often performed in the O.R. setting under general anesthesia, upon further review and consideration, we agree that it is appropriate to maintain the designation of the procedure codes as O.R. procedures.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of the following three ICD-10-PCS procedure codes that were listed in Table 6P.4i. associated with the proposed rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) from O.R. procedures to non-O.R. procedures, effective October 1, 2017.

ICD-10-PCS code	Code description
0J9100Z	Drainage of Face Subcutaneous Tissue and Fascia with Drainage Device, Open Approach.
0J9J00Z	Drainage of Right Hand Subcutaneous Tissue and Fascia with Drainage Device, Open Approach.
0J9K00Z	Drainage of Left Hand Subcutaneous Tissue and Fascia with Drainage Device, Open Approach.

We are not finalizing our proposal to change the designation for the remaining 22 ICD-10-PCS procedure codes that were listed in Table 6P.4i. associated with the proposed rule (which is available via the Internet on the CMS Web site at: [http://www.cms.gov/Medicare/Medicare-Fee-](http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html)

[for-Service-Payment/AcuteInpatientPPS/index.html](http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html)) from O.R. procedures to non-O.R. procedures. Rather, these codes will maintain their O.R. designation for FY 2018.

(31) Percutaneous Drainage

One commenter identified two ICD-10-PCS procedure codes that describe

procedures involving percutaneous drainage of subcutaneous tissue and fascia body parts that generally would not require the resources of an operating room and can be performed at the bedside. These two ICD-10-PCS codes are shown in the table below.

ICD-10-PCS code	Code description
0J9J3ZZ	Drainage of right hand subcutaneous tissue and fascia, percutaneous approach.
0J9K3ZZ	Drainage of left hand subcutaneous tissue and fascia, percutaneous approach.

We agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19859), we proposed that the two ICD-10-PCS procedure codes shown in the table above be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of the two ICD-10-PCS procedure codes that describe percutaneous drainage of subcutaneous tissue and fascia body parts.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of the two ICD-10-PCS procedure codes shown in the table above from O.R. procedures to non-O.R. procedures, effective October 1, 2017.

(32) Percutaneous Extraction

One commenter identified 22 ICD-10-PCS procedure codes that describe procedures involving percutaneous extraction of subcutaneous tissue and fascia body parts that generally would not require the resources of an operating room and can be performed at the bedside. We agreed with the

commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19859 through 19860), we proposed that the 22 ICD-10-PCS procedure codes listed in Table 6P.4j. associated with the proposed rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of the 22 ICD-10-PCS procedure codes that describe percutaneous extraction of

subcutaneous tissue and fascia body parts.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of the 22 ICD-10-PCS procedure codes listed in Table 6P.4j. associated with the proposed rule and this final rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) from O.R. procedures to non-O.R. procedures, effective October 1, 2017.

(33) Open Extraction

One commenter identified 22 ICD-10-PCS procedure codes that describe procedures involving open extraction of subcutaneous tissue and fascia body parts that the commenter believed would generally not require the resources of an operating room and can be performed at the bedside. We stated in the proposed rule that we disagreed with the commenter because these codes describe procedures that utilize an open approach and are being performed on the skin and subcutaneous tissue. Depending on the medical reason for the open extraction, the procedures may require an O.R. setting. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19860), we proposed that the 22 ICD-10-PCS procedure codes listed in Table 6P.4k. associated with the proposed rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) remain designated as O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to maintain the designation of the 22 ICD-10-PCS procedure codes that describe open extraction of subcutaneous tissue and fascia body parts.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to maintain the 22 ICD-10-PCS procedure codes listed in Table 6P.4k. associated with the proposed rule and this final rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) as O.R. procedures for FY 2018.

(34) Percutaneous and Open Repair

One commenter identified 44 ICD-10-PCS procedure codes that describe procedures involving percutaneous and open repair of subcutaneous tissue and fascia body parts that generally would not require the resources of an operating room and can be performed at the bedside. We stated in the proposed rule that we agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19860), we proposed that the 44 ICD-10-PCS procedure codes listed in Table 6P.4l. associated with the proposed rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of 44 ICD-10-PCS procedure codes that describe percutaneous and open repair of subcutaneous tissue and fascia body parts from O.R. to non-O.R. However, one commenter disagreed with changing the designation of 22 of the 44 procedure codes. The commenter stated that open repair of deeper subcutaneous tissue and fascia is much more invasive and often performed in the O.R. setting under general anesthesia. The commenter noted that patients who are admitted to the inpatient setting following trauma often have multiple traumatic injuries whereby extensive wound lacerations often require the O.R. setting for complex repair and debridement under anesthesia.

Response: We appreciate the commenters' support. In response to the commenter who disagreed with the proposal to change the designation of 22 of the 44 procedure codes, we agree that open repair of deeper subcutaneous tissue and fascia is much more invasive and may be performed in the O.R. setting under general anesthesia.

After consideration of the public comments we received, we are finalizing our proposal to change the designation for 22 procedure codes that describe percutaneous repair of subcutaneous tissue and fascia body parts listed in Table 6P.4l. associated with this final rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) from O.R. procedures to non-O.R. procedures, effective October 1, 2017. We are not finalizing our proposal to change the designation for the other 22 procedure codes that describe open repair of

subcutaneous tissue and fascia body parts from O.R. procedures to non-O.R. procedures. Rather, they will maintain their O.R. designation for FY 2018.

(35) External Release

One commenter identified 28 ICD-10-PCS procedure codes that describe procedures involving external release of bursa and ligament body parts that generally would not require the resources of an operating room and can be performed at the bedside. We agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19860), we proposed that the 28 ICD-10-PCS procedure codes listed in Table 6P.4m. associated with the proposed rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of the 28 ICD-10-PCS procedure codes that describe procedures involving external release of bursa and ligament body parts.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of the 28 ICD-10-PCS procedure codes listed in Table 6P.4m. associated with the proposed rule and this final rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) from O.R. procedures to non-O.R. procedures, effective October 1, 2017.

(36) External Repair

One commenter identified 135 ICD-10-PCS procedure codes that describe procedures involving external repair of various bones and joints. We stated in the proposed rule that we believed that these procedures generally would not be performed in the operating room. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19860), we proposed that the 135 ICD-10-PCS procedure codes listed in Table 6P.4n. associated with the proposed rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of the 135 ICD–10–PCS procedure codes that describe external repair of various bones and joints.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the

designation of the 135 ICD–10–PCS procedure codes listed in Table 6P.4n. associated with the proposed rule and this final rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) from O.R. procedures to non-O.R. procedures, effective October 1, 2017.

(37) External Reposition

One commenter identified 14 ICD–10–PCS procedure codes that describe procedures involving external reposition of various bones. These 14 ICD–10–PCS codes are shown in the table below.

ICD–10–PCS code	Code description
0NS0XZZ	Reposition skull, external approach.
0NS1XZZ	Reposition right frontal bone, external approach.
0NS2XZZ	Reposition left frontal bone, external approach.
0NS3XZZ	Reposition right parietal bone, external approach.
0NS4XZZ	Reposition left parietal bone, external approach.
0NS5XZZ	Reposition right temporal bone, external approach.
0NS6XZZ	Reposition left temporal bone, external approach.
0NS7XZZ	Reposition right occipital bone, external approach.
0NS8XZZ	Reposition left occipital bone, external approach.
0PS3XZZ	Reposition cervical vertebra, external approach.
0PS4XZZ	Reposition thoracic vertebra, external approach.
0QS0XZZ	Reposition lumbar vertebra, external approach.
0QS1XZZ	Reposition sacrum, external approach.
0QSSXZZ	Reposition coccyx, external approach.

We stated in the proposed rule that we believed that these procedures generally would not be performed in the operating room. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19860), we proposed that the 14 ICD–10–PCS procedure codes shown in the table above be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of the 14 ICD–10–PCS procedure codes that describe procedures involving external reposition of various bones.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are

finalizing our proposal to change the designation of the 14 ICD–10–PCS procedure codes shown in the table above from O.R. procedures to non-O.R. procedures, effective October 1, 2017. We note that, effective October 1, 2017, the code titles for procedure code 0NS1XZZ (Reposition right frontal bone, external approach) and procedure code 0NS7XZZ (Reposition right occipital bone, external approach) have been revised as reflected in Table 6F.—Revised Procedure Code Titles, and procedure codes 0NS2XZZ (Reposition left frontal bone, external approach) and 0NS8XZZ (Reposition left occipital bone, external approach) have been deleted as reflected in Table 6D.

—Invalid Procedure Codes associated with this final rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>).

(38) Endoscopic/Transorifice Dilation

One commenter identified eight ICD–10–PCS procedure codes that describe procedures involving endoscopic/transorifice (via natural or artificial opening) dilation of urinary system body parts that generally would not require the resources of an operating room and can be performed at the bedside. These eight ICD–10–PCS codes are shown in the table below.

ICD–10–PCS code	Code description
0T767ZZ	Dilation of right ureter, via natural or artificial opening.
0T768ZZ	Dilation of right ureter, via natural or artificial opening endoscopic.
0T777ZZ	Dilation of left ureter, via natural or artificial opening.
0T778ZZ	Dilation of left ureter, via natural or artificial opening endoscopic.
0T7B7DZ	Dilation of bladder with intraluminal device, via natural or artificial opening.
0T7B7ZZ	Dilation of bladder, via natural or artificial opening.
0T7B8DZ	Dilation of bladder with intraluminal device, via natural or artificial opening endoscopic.
0T7B8ZZ	Dilation of bladder, via natural or artificial opening endoscopic.

We stated in the proposed rule that we agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19860 through 19861), we proposed that the eight ICD–10–PCS procedure codes shown in the table above be designated

as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of the eight ICD–10–PCS procedure codes that describe procedures involving endoscopic/transorifice (via natural or

artificial opening) dilation of urinary system body parts. However, one commenter disagreed with changing the designation for four of the eight procedure codes. These four codes are shown in the table below:

ICD-10-PCS code	Code description
0T768ZZ	Dilation of right ureter, via natural or artificial opening endoscopic.
0T778ZZ	Dilation of left ureter, via natural or artificial opening endoscopic.
0T7B8DZ	Dilation of bladder with intraluminal device, via natural or artificial opening endoscopic.
0T7B8ZZ	Dilation of bladder, via natural or artificial opening endoscopic.

According to the commenter, these four endoscopic procedures typically require the use of the operating room or a dedicated suite with specialized equipment and anesthesia.

Response: We appreciate the commenters' support. In response to the commenter who disagreed with changing the designation for four of the

eight procedure codes that are displayed above, upon further review and consideration, we agree that these four procedures are appropriate to designate as O.R. procedures for the reasons provided by the commenter.

After consideration of the public comments we received, we are finalizing our proposal to change the

designation for four ICD-10-PCS procedure codes describing a transorifice (via natural or artificial opening) approach for dilation of urinary system body parts from O.R. procedures to non-O.R. procedures as shown in the table below, effective October 1, 2017.

ICD-10-PCS code	Code description
0T767ZZ	Dilation of right ureter, via natural or artificial opening.
0T777ZZ	Dilation of left ureter, via natural or artificial opening.
0T7B7DZ	Dilation of bladder with intraluminal device, via natural or artificial opening.
0T7B7ZZ	Dilation of bladder, via natural or artificial opening.

We are not finalizing our proposal to change the designation of four procedure codes (0T768ZZ, 0T778ZZ, 0T7B8DZ, and 0T7B8ZZ) that describe endoscopic dilation of urinary system body parts from O.R. procedures to non-O.R. procedures. Rather, they will

maintain their O.R designation for FY 2018.

(39) Endoscopic/Transorifice Excision

One commenter identified three ICD-10-PCS procedure codes that describe procedures involving endoscopic/transorifice (via natural or artificial

opening) excision of urinary system body parts that the commenter believed would generally not require the resources of an operating room and can be performed at the bedside. These three ICD-10-PCS codes are shown in the table below.

ICD-10-PCS code	Code description
0TBD7ZZ	Excision of urethra, via natural or artificial opening.
0TBD8ZZ	Excision of urethra, via natural or artificial opening endoscopic.
0TBDXZZ	Excision of urethra, external approach.

We disagreed with the commenter because, depending on the medical reason for the excision, the procedures may require an O.R. setting. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19861), we proposed that the three ICD-10-PCS procedure codes shown in the table above remain designated as O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to maintain the designation for

three ICD-10-PCS procedure codes that describe an endoscopic/transorifice (via natural or artificial opening) excision of urinary system body parts.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal for the three ICD-10-PCS procedure codes shown in the table above to maintain the O.R. designation for FY 2018.

(40) External/Transorifice Repair

One commenter identified three ICD-10-PCS procedure codes that describe procedures involving external and transorifice (via natural or artificial opening) repair of the vagina body part that generally would not require the resources of an operating room and can be performed at the bedside. These three ICD-10-PCS codes are shown in the table below.

ICD-10-PCS code	Code description
0UQG7ZZ	Repair vagina, via natural or artificial opening.
0UQGXXZ	Repair vagina, external approach.
0UQMXZZ	Repair vulva, external approach.

We agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19861), we

proposed that these three ICD-10-PCS procedure codes shown in the table above be designated as non-O.R.

procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation for three ICD-10-PCS procedure codes that describe external and transorifice (via natural or artificial opening) repair of the vagina body part.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal for the three ICD-10-PCS procedure codes shown in the table above to change the designation from O.R. procedures to non-O.R. procedures, effective October 1, 2017.

(41) Percutaneous Transfusion

One commenter identified 20 ICD-10-PCS procedure codes that describe procedures involving percutaneous transfusion of bone marrow and stem cells that generally would not require the resources of an operating room and can be performed at the bedside. We agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19861), we proposed that the 20 ICD-10-PCS procedure codes listed in Table 6P.4o. associated with the proposed rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Numerous commenters expressed concern with the proposal that involved 20 ICD-10-PCS procedure codes describing percutaneous transfusion of bone marrow and stem cells. The commenters agreed that, clinically, the proposal to designate these procedures as non-O.R. is appropriate. However, the commenters objected to the notion that these procedures would be reassigned to

medical MS-DRGs with lower payment rates as a result of the proposal. The commenters urged CMS to maintain the current Pre-MDC logic for patients undergoing bone marrow transplants and to maintain their respective MS-DRG assignments to MS-DRG 014 (Allogeneic Bone Marrow Transplant); MS-DRG 016 (Autologous Bone Marrow Transplant with CC/MCC and MS-DRG 017 (Autologous Bone Marrow Transplant without CC/MCC).

Response: We acknowledge the concerns of the commenters. We agree that it is important to maintain the current Pre-MDC logic for these procedures while also appropriately designating them as non-O.R. procedures.

After consideration of the public comments we received, we are finalizing our proposal to change the designation for the 20 ICD-10-PCS procedure codes listed in Table 6P.4o. associated with the proposed rule and this final rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) from O.R. procedures to non-O.R. procedures, effective October 1, 2017, and maintaining their assignment to the Pre-MDC MS-DRGs 014, 016, and 017 for FY 2018.

(42) External/Percutaneous/Transorifice Introduction

One commenter identified 51 ICD-10-PCS procedure codes that describe procedures involving external, percutaneous and transorifice (via natural or artificial opening) introduction of substances that generally would not require the resources of an operating room and can be performed at the bedside. We agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19861), we proposed that the 51

ICD-10-PCS procedure codes listed in Table 6P.4p. associated with the proposed rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of the 51 ICD-10-PCS procedure codes that describe procedures involving external, percutaneous and transorifice (via natural or artificial opening) introduction of substances.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of the 51 ICD-10-PCS procedure codes listed in Table 6P.4p. associated with the proposed rule and this final rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) from O.R. procedures to non-O.R. procedures, effective October 1, 2017.

(43) Percutaneous/Diagnostic and Endoscopic/Transorifice Irrigation, Measurement and Monitoring

One commenter identified 15 ICD-10-PCS procedure codes that describe procedures involving percutaneous/diagnostic and endoscopic/transorifice (via natural or artificial opening) irrigation, measurement and monitoring of structures, pressures and flow that generally would not require the resources of an operating room and can be performed at the bedside. These 15 ICD-10-PCS codes are shown in the table below.

ICD-10-PCS code	Code description
3E1N38X	Irrigation of male reproductive using irrigating substance, percutaneous approach, diagnostic.
3E1N38Z	Irrigation of male reproductive using irrigating substance, percutaneous approach.
3E1N78X	Irrigation of male reproductive using irrigating substance, via natural or artificial opening, diagnostic.
3E1N78Z	Irrigation of male reproductive using irrigating substance, via natural or artificial opening.
3E1N88X	Irrigation of male reproductive using irrigating substance, via natural or artificial opening endoscopic, diagnostic.
3E1N88Z	Irrigation of male reproductive using irrigating substance, via natural or artificial opening endoscopic.
4A0635Z	Measurement of lymphatic flow, percutaneous approach.
4A063BZ	Measurement of lymphatic pressure, percutaneous approach.
4A0C35Z	Measurement of biliary flow, percutaneous approach.
4A0C3BZ	Measurement of biliary pressure, percutaneous approach.
4A0C75Z	Measurement of biliary flow, via natural or artificial opening.
4A0C7BZ	Measurement of biliary pressure, via natural or artificial opening.
4A0C85Z	Measurement of biliary flow, via natural or artificial opening endoscopic.
4A1635Z	Monitoring of lymphatic flow, percutaneous approach.
4A163BZ	Monitoring of lymphatic pressure, percutaneous approach.

We agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19862) through 19862), we proposed that the 15 ICD-10-PCS procedure codes shown in the table above be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of the 15 ICD-10-PCS procedure codes that describe procedures involving percutaneous/diagnostic and

endoscopic/transorifice (via natural or artificial opening) irrigation, measurement and monitoring of structures, pressures and flow.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of the 15 ICD-10-PCS procedure codes shown in the table above from O.R. procedures to non-O.R. procedures, effective October 1, 2017.

(44) Imaging

One commenter identified six ICD-10-PCS procedure codes that describe procedures involving imaging with contrast of hepatobiliary system body parts that generally would not require the resources of an operating room and can be performed at the bedside. These six ICD-10-PCS codes are shown in the table below.

ICD-10-PCS code	Code description
BF030ZZ	Plain radiography of gallbladder and bile ducts using high osmolar contrast.
BF031ZZ	Plain radiography of gallbladder and bile ducts using low osmolar contrast.
BF03YZZ	Plain radiography of gallbladder and bile ducts using other contrast.
BF0C0ZZ	Plain radiography of hepatobiliary system, all using high osmolar contrast.
BF0C1ZZ	Plain radiography of hepatobiliary system, all using low osmolar contrast.
BF0CYZZ	Plain radiography of hepatobiliary system, all using other contrast.

We agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19862), we proposed that the six ICD-10-PCS procedure codes shown in the table above be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of the six ICD-10-PCS procedure codes

that describe imaging with contrast of hepatobiliary system body parts.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of the six ICD-10-PCS procedure codes shown in the table above from O.R. procedures to non-O.R. procedures, effective October 1, 2017.

(45) Prosthetics

One commenter identified five ICD-10-PCS procedure codes that describe procedures involving the fitting and use of prosthetics and assistive devices that would not require the resources of an operating room. These five ICD-10-PCS codes are shown in the table below.

ICD-10-PCS code	Code description
F0DZ8ZZ	Prosthesis device fitting.
F0DZ9EZ	Assistive, adaptive, supportive or protective devices device fitting using orthosis.
F0DZ9FZ	Assistive, adaptive, supportive or protective devices device fitting using assistive, adaptive, supportive or protective equipment.
F0DZ9UZ	Assistive, adaptive, supportive or protective devices device fitting using prosthesis.
F0DZ9ZZ	Assistive, adaptive, supportive or protective devices device fitting.

We agreed with the commenter. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19862), we proposed that the five ICD-10-PCS procedure codes shown in the table above be designated as non-O.R. procedures. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of the five ICD-10-PCS procedure codes that describe the fitting and use of prosthetics and assistive devices.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of the five ICD-10-PCS procedure codes shown in the table above from O.R. procedures to non-O.R. procedures, effective October 1, 2017.

b. Revision of Neurostimulator Generator

We received a request to review three ICD-10-PCS procedure codes that describe procedures for revision of a neurostimulator generator that are currently designated as O.R. procedures and assigned to MS-DRGs 252, 253 and 254 (Other Vascular Procedures with MCC, with CC and without CC/MCC, respectively). The three codes are 0JWTOZ (Revision of stimulator generator in trunk subcutaneous tissue and fascia, open approach), 0JWTOZ (Revision of stimulator generator in trunk subcutaneous tissue and fascia, percutaneous approach), and 0JWTOZ (Revision of stimulator generator in trunk subcutaneous tissue and fascia, external approach).

The requester expressed concern with the MS-DRG assignments and noted that although these codes are used to report revision of a carotid sinus stimulator pulse generator and appropriately assigned to MS-DRGs 252, 253 and 254 in MDC 5 (Diseases and Disorders of the Circulatory System), they also are very frequently used for the revision of the more common (for example, gastric, intracranial, sacral and spinal) neurostimulator generators that would generally not require the resources of an operating room.

The requestor also stated that the indication for revision of a neurostimulator generator is typically due to a complication, which would be reflected in a complication code such as ICD-10-CM diagnosis code T85.734A (Infection and inflammatory reaction

due to implanted electronic neurostimulator, generator, initial encounter) or T85.890A (Other specified complication of nervous system prosthetic devices, implants and grafts, initial encounter). Because both of these diagnosis codes are assigned to MDC 1 (Diseases and Disorders of the Nervous System), when either code is reported in combination with one of the three procedure codes that describe revision of neurostimulator generator codes (currently assigned to MDC 5 (Diseases and Disorders of the Circulatory System)), the resulting MS-DRG assignment is to MS-DRGs 981, 982 and 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC and without CC/MCC, respectively).

The requestor presented the following three options for consideration.

- Reclassify the ICD-10-PCS procedure codes from O.R. Procedures to non-O.R. procedures that affect MS-DRG assignment only in MDC 5. The requestor stated that, under this option, the procedure codes would continue to appropriately group to MDC 5 when

representing cases involving carotid sinus stimulators and the other types of neurostimulator cases would appropriately group to medical MS-DRGs.

- Add the ICD-10-PCS procedure codes to MDC 1, such as to MS-DRGs 040, 041 and 042 (Peripheral, Cranial Nerve and Other Nervous System Procedures with MCC, with CC or Peripheral Neurostimulator and without CC/MCC, respectively) under MDC 1. The requestor stated that this option would resolve the inconsistency between a revision of a carotid sinus stimulator generator being classified as an O.R. procedure, while the other comparable procedures involving a revision of a regular neurostimulator generator are not. The requestor also stated that this option would preclude cases being assigned to MS-DRGs 981 through 983.

- Stop classifying the ICD-10-PCS procedure codes as O.R. procedures entirely. The requestor stated that, under this option, all cases would then group to medical MS-DRGs, regardless of the type of neurostimulator generator.

As discussed in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19862 through 19863), we analyzed claims data for the three revision of neurostimulator generator procedure codes from the December 2016 update of the FY 2016 MedPAR file and identified cases under MDC 1 in MS-DRGs 025, 026, and 027 (Craniotomy and Endovascular Intracranial Procedures with MCC, with CC and without CC/MCC, respectively); MS-DRGs 029 and 030 (Spinal Procedures with CC or Neurostimulators and Spinal Procedures without CC/MCC, respectively); and MS-DRGs 041 and 042 (Peripheral, Cranial Nerve and Other Nervous System Procedures with CC or Peripheral Neurostimulator and without CC/MCC, respectively). We also identified cases in MS-DRGs 982 and 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with CC and without CC/MCC, respectively). Lastly, we identified cases under MDC 5 in MS-DRGs 252, 253 and 254 (Other Vascular Procedures with MCC, with CC and without CC/MCC, respectively). Our findings are shown in the table below.

MS-DRGs FOR REVISION OF NEUROSTIMULATOR GENERATOR

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 025—All cases	18,442	9.1	\$29,984
MS-DRG 025—Cases with revision of neurostimulator generator	1	12.0	73,716
MS-DRG 026—All cases	8,415	5.6	21,557
MS-DRG 026—Cases with revision of neurostimulator generator	1	6.0	4,537
MS-DRG 027—All cases	10,089	2.9	17,320
MS-DRG 027—Cases with revision of neurostimulator generator	4	1.8	13,906
MS-DRG 029—All cases	3,192	5.9	23,145
MS-DRG 029—Cases with revision of neurostimulator generator	6	3.5	32,799
MS-DRG 030—All cases	1,933	2.9	14,901
MS-DRG 030—Cases with revision of neurostimulator generator	11	2.2	18,294
MS-DRG 041—All cases	5,154	5.5	16,633
MS-DRG 041—Cases with revision of neurostimulator generator	1	1.0	14,145
MS-DRG 042—All cases	2,099	3.2	13,725
MS-DRG 042—Cases with revision of neurostimulator generator	2	2.0	28,587
MS-DRG 982—All cases	15,216	6.6	17,341
MS-DRG 982—Cases with revision of neurostimulator generator	11	3.0	15,336
MS-DRG 983—All cases	3,508	3.2	11,627
MS-DRG 983—Cases with revision of neurostimulator generator	9	4.2	19,951
MS-DRG 252—All cases	33,817	7.6	23,384
MS-DRG 252—Cases with revision of neurostimulator generator	1	7.0	18,740
MS-DRG 253—All cases	27,456	5.5	18,519
MS-DRG 253—Cases with revision of neurostimulator generator	7	2.4	19,078
MS-DRG 254—All cases	13,036	2.9	13,253
MS-DRG 254—Cases with revision of neurostimulator generator	3	3.0	11,981

As shown in the table above, the overall volume of cases reporting revision of neurostimulator generator is low, with a total of only 57 cases found across all of the MS-DRGs reviewed. The average length of stay for these cases reporting revision of neurostimulator generators is, in most cases, consistent with the average length of stay for all cases in the respective

MS-DRG, with the majority having an average length of stay below the average length of stay of all cases in the respective MS-DRG. Finally, the average costs for cases reporting revision of neurostimulator generator reflect a wide range, with a low of \$4,537 in MS-DRG 026 to a high of \$73,716 in MS-DRG 025. It is clear that, for MS-DRG 025 where the average

costs of all cases were \$29,984 and the average costs of the one case reporting revision of a neurostimulator generator was \$73,716, this is an atypical case. It is also clear from the data that there were other procedures reported on the claims where a procedure code for a revision of a neurostimulator generator was assigned due to the various MS-DRG assignments.

We stated in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19862 and 19863) that after review of the claims data and discussion with our clinical advisors, we agreed with and supported the requestor's first option—to reclassify the three ICD-10-PCS procedure codes for revision of neurostimulator generators from O.R. procedures to non-O.R. procedures that affect the assignment for MS-DRGs 252, 253 and 254 to account for the subset of patients undergoing revision of a carotid sinus neurostimulator generator specifically. In cases where one of the more common (for example, gastric, intracranial, sacral and spinal) neurostimulator generators are undergoing revision, in the absence of another O.R. procedure, these cases would group to a medical MS-DRG. We invited public comments on our proposal.

Comment: Commenters supported the proposal to reclassify the procedures described by ICD-10-PCS procedure codes 0JW0T0MZ, 0JW3T3MZ, and 0JW7X0MZ from O.R. procedures to non-O.R. procedures that affect the assignment for MS-DRGs 252, 253 and 254. One commenter agreed with reclassifying procedures described by ICD-10-PCS procedure codes 0JW3T3MZ and 0JW7X0MZ from O.R. procedures to non-O.R. procedures. However, this commenter disagreed with reclassifying the procedure described by procedure code 0JW0T0MZ and stated that the procedure utilizes an open approach and may require an O.R. setting. The commenter suggested that the procedure code should be retained as an O.R. designation to group to surgical MS-DRGs.

Response: We appreciate the commenters' support. In response to the commenter who disagreed with reclassifying the procedure described by procedure code 0JW0T0MZ from an O.R. procedure to a non-O.R. procedure, we note that, as discussed earlier, the three ICD-10-PCS procedure codes would be classified as non-O.R. procedures that affect MS-DRGs 252, 253, and 254 for revision of carotid sinus neurostimulator generators. We also noted that the volume of cases reporting revision of neurostimulator generator is low, with a total of only 57 cases found across all of the MS-DRGs reviewed. The initial requestor pointed out that these three procedure codes are very frequently used for the revision of the more common (for example, gastric, intracranial, sacral, and spinal) neurostimulator generators that would generally not require the resources of an operating room. Therefore, we believe it is appropriate to classify the three procedure codes as non-O.R. procedures

affecting MS-DRGs 252, 253, and 254 specifically.

After consideration of the public comments we received, we are finalizing our proposal to reclassify the procedures described by ICD-10-PCS procedure codes 0JW0T0MZ (Revision of stimulator generator in trunk subcutaneous tissue and fascia, open approach), 0JW3T3MZ (Revision of stimulator generator in trunk subcutaneous tissue and fascia, percutaneous approach), and 0JW7X0MZ (Revision of stimulator generator in trunk subcutaneous tissue and fascia, external approach) from O.R. procedures to non-O.R. procedures that affect the assignment for MS-DRGs 252, 253, and 254 to account for the subset of patients undergoing revision of a carotid sinus neurostimulator generator, effective October 1, 2017.

c. External Repair of Hymen

We received a request to examine ICD-10-PCS procedure code 0UQKXZZ (Repair Hymen, External Approach). This procedure code is currently designated as an O.R. procedure in MS-DRGs 746 and 747 (Vagina, Cervix and Vulva Procedures with CC/MCC and without CC/MCC, respectively) under MDC 13. The requestor provided examples and expressed concern that procedure code 0UQKXZZ was assigned to MS-DRG 987 (Non-Extensive O.R. Procedures Unrelated to Principal Diagnosis with MCC) when reported on a maternal delivery claim. The requestor noted that when a similar code was reported with an external approach (for example, procedure code 0UQMXZZ (Repair vulva, external approach)), the case was appropriately assigned to MS-DRG 774 (Vaginal Delivery with Complicating Diagnosis). The requestor stated that the physician documentation was simply more specific to the location of the repair and this should not affect assignment to one of the MS-DRGs for vaginal delivery.

As we discussed in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19863 through 19864), we reviewed claims data involving the examples provided by the requestor involving ICD-10-PCS procedure code 0UQKXZZ (Repair hymen, external approach). Our clinical advisors agreed with the requestor that reporting of this procedure code should not affect assignment to one of the MS-DRGs for vaginal delivery. We stated that, as discussed in section II.F.15.a. of the preamble of the proposed rule, we were proposing to change the designation for a number of procedure codes from O.R. procedures to non-O.R. procedures. Included in that proposal were ICD-10-PCS procedure codes

0UQGXZZ (Repair vagina, external approach) and 0UQMXZZ (Repair vulva, external approach). Consistent with the change in designation for these procedure codes, we also proposed to designate ICD-10-PCS procedure code 0UQKXZZ (Repair hymen, external approach) as a non-O.R. procedure. The procedure by itself would generally not require the resources of an operating room. If the procedure is performed following a vaginal delivery, it is the vaginal delivery procedure code 10E0XZZ (Delivery of products of conception) that determines the MS-DRG assignment because this code is designated as a non-O.R. procedure affecting the MS-DRG.

Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19864), we proposed to change the designation of ICD-10-PCS procedure code 0UQKXZZ (Repair hymen, external approach) to a non-O.R. procedure. We stated that this redesignation will enable more appropriate MS-DRG assignment for these cases by eliminating erroneous assignment to MS-DRGs 987 through 989. We invited public comments on our proposal.

Comment: Commenters supported the proposal to change the designation of ICD-10-PCS procedure code 0UQKXZZ from an O.R. procedure to a non-O.R. procedure.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of ICD-10-PCS procedure code 0UQKXZZ (Repair hymen, external approach) from an O.R. procedure to a non-O.R. procedure, effective October 1, 2017.

d. Non-O.R. Procedures in MDC 17 (Myeloproliferative Diseases and Disorders, Poorly Differentiated Neoplasms)

Under MDC 17 (Myeloproliferative Diseases and Disorders, Poorly Differentiated Neoplasms), there are 11 surgical MS-DRGs. Of these 11 surgical MS-DRGs, there are 5 MS-DRGs containing GROUPE logic that includes ICD-10-PCS procedure codes designated as O.R. procedures as well as non-O.R. procedures that affect the MS-DRG. These five MS-DRGs are MS-DRGs 823, 824, and 825 (Lymphoma and Non-Acute Leukemia with Other O.R. Procedure with MCC, with CC and without CC/MCC, respectively) and MS-DRGs 829 and 830 (Myeloproliferative Disorders or Poorly Differentiated Neoplasms with Other O.R. Procedure with CC/MCC and without CC/MCC, respectively). We

refer the reader to the ICD-10 Version 34 MS-DRG Definitions Manual which is available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/FY2017-IPPS-Final-Rule-Home-Page-Items/FY2017-IPPS-Final-Rule-Data-Files.html?DLPage=1&DLEntries=10&DLSort=0&DLSortDir=ascending> for the complete list of ICD-10-PCS procedure codes assigned to these five MS-DRGs under MDC 17.

We reviewed the list of 244 ICD-10-PCS non-O.R. procedure codes currently assigned to these 5 MS-DRGs. Of these 244 procedure codes, we determined that 55 of the procedure codes do not warrant being designated as non-O.R. procedures that affect these MS-DRGs because they describe procedures that would generally not require a greater intensity of resources for facilities to manage the cases included in the definition (logic) of these MS-DRGs. Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19864), we proposed that the 55 ICD-10-PCS procedure codes listed in Table 6P.3c. associated with the proposed rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) be removed from the logic for MS-DRGs 823, 824, 825, 829, and 830 as non-O.R. procedures affecting the MS-DRG. We also proposed to revise the titles for these five MS-DRGs by deleting the reference to "O.R." in the title. Specifically, we proposed to revise the titles for MS-DRGs 823, 824, and 825 to "Lymphoma and Non-Acute Leukemia with Other Procedure with MCC, with CC and without CC/MCC", respectively, and we proposed to revise the titles for MS-DRGs 829 and 830 to "Myeloproliferative Disorders or Poorly Differentiated Neoplasms with Other Procedure with CC/MCC and without CC/MCC", respectively. We invited public comments on our proposals.

Comment: Commenters supported the proposal to remove the 55 ICD-10-PCS procedure codes listed in Table 6P.3c. associated with the proposed rule from the logic for MS-DRGs 823, 824, 825, 829, and 830 as non-O.R. procedures affecting the MS-DRG. Commenters also supported the proposal to revise the titles for MS-DRGs 823, 824, and 825, as well as for MS-DRGs 829 and 830.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to remove the 55 ICD-10-PCS procedure codes listed in

Table 6P.3c. associated with the proposed rule and this final rule (which is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) from the logic for MS-DRGs 823, 824, 825, 829, and 830 as non-O.R. procedures affecting the MS-DRG, effective October 1, 2017. We also are finalizing our proposal to revise the titles for MS-DRGs 823, 824, and 825 to "Lymphoma and Non-Acute Leukemia with Other Procedure with MCC, with CC and without CC/MCC", respectively, and to revise the titles for MS-DRGs 829 and 830 to "Myeloproliferative Disorders or Poorly Differentiated Neoplasms with Other Procedure with CC/MCC and without CC/MCC", respectively, effective October 1, 2017.

G. Recalibration of the FY 2018 MS-DRG Relative Weights

1. Data Sources for Developing the Relative Weights

In developing the FY 2018 system of weights, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19864), we proposed to use two data sources: Claims data and cost report data. As in previous years, the claims data source is the MedPAR file. This file is based on fully coded diagnostic and procedure data for all Medicare inpatient hospital bills. The FY 2016 MedPAR data used in this final rule include discharges occurring on October 1, 2015, through September 30, 2016, based on bills received by CMS through March 31, 2017, from all hospitals subject to the IPPS and short-term, acute care hospitals in Maryland (which at that time were under a waiver from the IPPS). The FY 2016 MedPAR file used in calculating the relative weights includes data for approximately 9,647,256 Medicare discharges from IPPS providers. Discharges for Medicare beneficiaries enrolled in a Medicare Advantage managed care plan are excluded from this analysis. These discharges are excluded when the MedPAR "GHO Paid" indicator field on the claim record is equal to "1" or when the MedPAR DRG payment field, which represents the total payment for the claim, is equal to the MedPAR "Indirect Medical Education (IME)" payment field, indicating that the claim was an "IME only" claim submitted by a teaching hospital on behalf of a beneficiary enrolled in a Medicare Advantage managed care plan. In addition, the March 31, 2017 update of the FY 2016 MedPAR file complies with version 5010 of the X12 HIPAA Transaction and Code Set Standards,

and includes a variable called "claim type." Claim type "60" indicates that the claim was an inpatient claim paid as fee-for-service. Claim types "61," "62," "63," and "64" relate to encounter claims, Medicare Advantage IME claims, and HMO no-pay claims. Therefore, the calculation of the relative weights for FY 2018 also excludes claims with claim type values not equal to "60." The data exclude CAHs, including hospitals that subsequently became CAHs after the period from which the data were taken. We note that the FY 2018 relative weights are based on the ICD-10-CM diagnoses and ICD-10-PCS procedure codes from the FY 2016 MedPAR claims data, grouped through the ICD-10 version of the FY 2018 GROUPE (Version 35).

The second data source used in the cost-based relative weighting methodology is the Medicare cost report data files from the HCRIS. Normally, we use the HCRIS dataset that is 3 years prior to the IPPS fiscal year. Specifically, we are using cost report data from the March 31, 2017 update of the FY 2015 HCRIS for calculating the final FY 2018 cost-based relative weights.

2. Methodology for Calculation of the Relative Weights

As we explain in section II.E.2. of the preamble of this final rule, we are calculating the FY 2018 relative weights based on 19 CCRs, as we did for FY 2017. The methodology we used to calculate the FY 2018 MS-DRG cost-based relative weights based on claims data in the FY 2016 MedPAR file and data from the FY 2015 Medicare cost reports is as follows:

- To the extent possible, all the claims were regrouped using the FY 2018 MS-DRG classifications discussed in sections II.B. and II.F. of the preamble of this final rule.
- The transplant cases that were used to establish the relative weights for heart and heart-lung, liver and/or intestinal, and lung transplants (MS-DRGs 001, 002, 005, 006, and 007, respectively) were limited to those Medicare-approved transplant centers that have cases in the FY 2016 MedPAR file. (Medicare coverage for heart, heart-lung, liver and/or intestinal, and lung transplants is limited to those facilities that have received approval from CMS as transplant centers.)
- Organ acquisition costs for kidney, heart, heart-lung, liver, lung, pancreas, and intestinal (or multivisceral organs) transplants continue to be paid on a reasonable cost basis. Because these acquisition costs are paid separately from the prospective payment rate, it is

necessary to subtract the acquisition charges from the total charges on each transplant bill that showed acquisition charges before computing the average cost for each MS-DRG and before eliminating statistical outliers.

- Claims with total charges or total lengths of stay less than or equal to zero were deleted. Claims that had an amount in the total charge field that differed by more than \$30.00 from the sum of the routine day charges, intensive care charges, pharmacy charges, implantable devices charges, supplies and equipment charges, therapy services charges, operating room charges, cardiology charges, laboratory charges, radiology charges, other service charges, labor and delivery charges, inhalation therapy charges, emergency room charges, blood and blood products charges, anesthesia charges, cardiac catheterization charges, CT scan charges, and MRI charges were also deleted.

- At least 92.2 percent of the providers in the MedPAR file had charges for 14 of the 19 cost centers. All claims of providers that did not have charges greater than zero for at least 14 of the 19 cost centers were deleted. In other words, a provider must have no more than five blank cost centers. If a provider did not have charges greater than zero in more than five cost centers, the claims for the provider were deleted.

- Statistical outliers were eliminated by removing all cases that were beyond 3.0 standard deviations from the geometric mean of the log distribution of both the total charges per case and the total charges per day for each MS-DRG.

- Effective October 1, 2008, because hospital inpatient claims include a POA indicator field for each diagnosis present on the claim, only for purposes of relative weight-setting, the POA indicator field was reset to “Y” for “Yes” for all claims that otherwise have an “N” (No) or a “U” (documentation insufficient to determine if the condition was present at the time of inpatient admission) in the POA field.

Under current payment policy, the presence of specific HAC codes, as indicated by the POA field values, can generate a lower payment for the claim. Specifically, if the particular condition is present on admission (that is, a “Y” indicator is associated with the diagnosis on the claim), it is not a HAC, and the hospital is paid for the higher severity (and, therefore, the higher weighted MS-DRG). If the particular

condition is not present on admission (that is, an “N” indicator is associated with the diagnosis on the claim) and there are no other complicating conditions, the DRG GROUPER assigns the claim to a lower severity (and, therefore, the lower weighted MS-DRG) as a penalty for allowing a Medicare inpatient to contract a HAC. While the POA reporting meets policy goals of encouraging quality care and generates program savings, it presents an issue for the relative weight-setting process. Because cases identified as HACs are likely to be more complex than similar cases that are not identified as HACs, the charges associated with HAC cases are likely to be higher as well. Therefore, if the higher charges of these HAC claims are grouped into lower severity MS-DRGs prior to the relative weight-setting process, the relative weights of these particular MS-DRGs would become artificially inflated, potentially skewing the relative weights. In addition, we want to protect the integrity of the budget neutrality process by ensuring that, in estimating payments, no increase to the standardized amount occurs as a result of lower overall payments in a previous year that stem from using weights and case-mix that are based on lower severity MS-DRG assignments. If this would occur, the anticipated cost savings from the HAC policy would be lost.

To avoid these problems, we reset the POA indicator field to “Y” only for relative weight-setting purposes for all claims that otherwise have an “N” or a “U” in the POA field. This resetting “forced” the more costly HAC claims into the higher severity MS-DRGs as appropriate, and the relative weights calculated for each MS-DRG more closely reflect the true costs of those cases.

In addition, in the FY 2013 IPPS/LTCH PPS final rule, for FY 2013 and subsequent fiscal years, we finalized a policy to treat hospitals that participate in the Bundled Payments for Care Improvement (BPCI) initiative the same as prior fiscal years for the IPPS payment modeling and ratesetting process without regard to hospitals’ participation within these bundled payment models (that is, as if hospitals were not participating in those models under the BPCI initiative). The BPCI initiative, developed under the authority of section 3021 of the Affordable Care Act (codified at section 1115A of the Act), is comprised of four

broadly defined models of care, which link payments for multiple services beneficiaries receive during an episode of care. Under the BPCI initiative, organizations enter into payment arrangements that include financial and performance accountability for episodes of care. For FY 2018, as we proposed, we are continuing to include all applicable data from subsection (d) hospitals participating in BPCI Models 1, 2, and 4 in our IPPS payment modeling and ratesetting calculations. We refer readers to the FY 2013 IPPS/LTCH PPS final rule for a complete discussion on our final policy for the treatment of hospitals participating in the BPCI initiative in our ratesetting process. For additional information on the BPCI initiative, we refer readers to the CMS’ Center for Medicare and Medicaid Innovation’s Web site at: <http://innovation.cms.gov/initiatives/Bundled-Payments/index.html> and to section IV.H.4. of the preamble of the FY 2013 IPPS/LTCH PPS final rule (77 FR 53341 through 53343).

The charges for each of the 19 cost groups for each claim were standardized to remove the effects of differences in area wage levels, IME and DSH payments, and for hospitals located in Alaska and Hawaii, the applicable cost-of-living adjustment. Because hospital charges include charges for both operating and capital costs, we standardized total charges to remove the effects of differences in geographic adjustment factors, cost-of-living adjustments, and DSH payments under the capital IPPS as well. Charges were then summed by MS-DRG for each of the 19 cost groups so that each MS-DRG had 19 standardized charge totals. Statistical outliers were then removed. These charges were then adjusted to cost by applying the national average CCRs developed from the FY 2015 cost report data.

The 19 cost centers that we used in the relative weight calculation are shown in the following table. The table shows the lines on the cost report and the corresponding revenue codes that we used to create the 19 national cost center CCRs. In the FY 2018 IPPS/LTCH PPS proposed rule, we stated that if stakeholders have comments about the groupings in this table, we may consider those comments as we finalize our policy. However, we did not receive any comments on the groupings in this table, and therefore, we are finalizing the groupings as proposed.

3. Development of National Average CCRs

We developed the national average CCRs as follows:

Using the FY 2015 cost report data, we removed CAHs, Indian Health Service hospitals, all-inclusive rate hospitals, and cost reports that represented time periods of less than 1

year (365 days). We included hospitals located in Maryland because we include their charges in our claims database. We then created CCRs for each provider for each cost center (see prior table for line items used in the calculations) and removed any CCRs that were greater than 10 or less than 0.01. We normalized the departmental CCRs by

dividing the CCR for each department by the total CCR for the hospital for the purpose of trimming the data. We then took the logs of the normalized cost center CCRs and removed any cost center CCRs where the log of the cost center CCR was greater or less than the mean log plus/minus 3 times the standard deviation for the log of that

cost center CCR. Once the cost report data were trimmed, we calculated a Medicare-specific CCR. The Medicare-specific CCR was determined by taking the Medicare charges for each line item from Worksheet D-3 and deriving the Medicare-specific costs by applying the hospital-specific departmental CCRs to the Medicare-specific charges for each line item from Worksheet D-3. Once each hospital's Medicare-specific costs were established, we summed the total Medicare-specific costs and divided by the sum of the total Medicare-specific charges to produce national average, charge-weighted CCRs.

After we multiplied the total charges for each MS-DRG in each of the 19 cost centers by the corresponding national average CCR, we summed the 19 "costs" across each MS-DRG to produce a total standardized cost for the MS-DRG. The average standardized cost for each MS-DRG was then computed as the total standardized cost for the MS-DRG divided by the transfer-adjusted case count for the MS-DRG. The average cost for each MS-DRG was then divided by the national average standardized cost per case to determine the relative weight.

The FY 2018 cost-based relative weights were then normalized by an adjustment factor of 1.737382 so that the average case weight after recalibration was equal to the average case weight before recalibration. The normalization adjustment is intended to ensure that recalibration by itself neither increases nor decreases total payments under the IPPS, as required by section 1886(d)(4)(C)(iii) of the Act.

The 19 national average CCRs for FY 2018 are as follows:

Group	CCR
Routine Days	0.458
Intensive Days	0.373
Drugs	0.194
Supplies & Equipment	0.297
Implantable Devices	0.332
Therapy Services	0.321
Laboratory	0.120
Operating Room	0.191
Cardiology	0.112
Cardiac Catheterization	0.117
Radiology	0.153
MRIs	0.079
CT Scans	0.038
Emergency Room	0.171
Blood and Blood Products	0.322
Other Services	0.365
Labor & Delivery	0.412
Inhalation Therapy	0.169
Anesthesia	0.089

Since FY 2009, the relative weights have been based on 100 percent cost weights based on our MS-DRG grouping system.

When we recalibrated the DRG weights for previous years, we set a threshold of 10 cases as the minimum number of cases required to compute a reasonable weight. In the FY 2018 IPPS/LTCH PPS proposed rule, we proposed to use that same case threshold in recalibrating the MS-DRG relative weights for FY 2018. Using data from the March 2017 update of the FY 2016 MedPAR file, there are 7 MS-DRGs that contain fewer than 10 cases. We note that two MS-DRGs that were included as low-volume MS-DRGs in the proposed rule, MS-DRG 016 (Autologous Bone Marrow Transplant with CC/MCC) and MS-DRG 017 (Autologous Bone Marrow Transplant without CC/MCC), are no longer included in this list because, as discussed in section II.F.17.a. of the preamble of this final rule, we are maintaining the current Pre-MDC logic for the procedures assigned to those MS-DRGs in FY 2018. For FY 2018, because we do not have sufficient MedPAR data to set accurate and stable cost relative weights for these low-volume MS-DRGs, we proposed to compute relative weights for the low-volume MS-DRGs by adjusting their FY 2017 relative weights by the percentage change in the average weight of the cases in other MS-DRGs. The crosswalk table based on data from the December 2016 update of the FY 2016 MedPAR file was included in the proposed rule. We invited public comments on our proposals.

Comment: Some commenters requested a transition period for substantial reductions in relative weights in order to facilitate payment stability. Specifically, some commenters asked CMS to establish a cap of 10 percent for the degree to which a payment weight may decline in FY 2018 relative to FY 2017. Other commenters also suggested the possibility of a phase-in or multi-year transition period in cases of substantial fluctuation of payment rates. Commenters suggested that large decreases appear to result from the transition from ICD-9 coding to ICD-10 coding in the claims data used to establish the relative weights. These commenters also expressed concern that the proposed weights for MS-DRGs with significant reductions in relative weights would be too low to cover the costs of caring for patients, while other commenters expressed concern about access to such services.

Commenters also indicated that the reductions to MS-DRG relative weights resulting from the transition from ICD-9 coding to ICD-10 coding are in contrast to the goal of ICD-10 to

accurately replicate ICD-9 assignments and avoid unintended payment redistribution. One commenter asserted that because IPPS is a prospective payment system, the future claims data should result in an upward adjustment to these MS-DRGs for FY 2019. The commenter believed that hospitals should not be penalized as significantly while the FY 2018 rates are in effect.

Response: In considering these public comments, we examined the MS-DRGs with proposed relative weights that were significantly lower than the FY 2017 relative weights. While we do not believe it is normally appropriate to address relative weight fluctuations that appear to be driven by changes in the underlying data, in this particular circumstance, we share the commenters' concern that, for a limited number of MS-DRGs, this may be more extensively related to the implementation of ICD-10 coding and believe this issue requires further analysis. In the interim, in response to these comments, we are adopting a temporary one-time measure for FY 2018 for MS-DRGs where the relative weight would have declined by more than 20 percent from the FY 2017 relative weight. We believe this policy is consistent with our general authority to assign and update appropriate weighting factors under sections 1886(d)(4)(B) and (C) of the Act. Specifically, for these MS-DRGs, the relative weight will be set at 80 percent of the FY 2017 final relative weight, and we will revisit this issue in the FY 2019 rulemaking when additional ICD-10 claims data become available. We believe that 20 percent strikes an appropriate balance between addressing concerns that the relative weight changes for some MS-DRGs may be more extensively related to the implementation of ICD-10 and the fact that historically we occasionally have had appropriate relative weight changes of this magnitude. Further analysis and data will enable us to better determine the appropriateness of these changes, given the unique circumstances of the ICD-10 implementation.

After consideration of the public comments we received, we are finalizing our proposal, with the modification for recalibrating the MS-DRG relative weights for FY 2018 at 80 percent of the FY 2017 final relative weights, for those MS-DRGs where the relative weight would have declined by more than 20 percent from the FY 2017 relative weight. The crosswalk table for the low-volume MS-DRGs is shown below.

Low-volume MS-DRG	MS-DRG title	Crosswalk to MS-DRG
789	Neonates, Died or Transferred to Another Acute Care Facility.	Final FY 2017 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs).
790	Extreme Immaturity or Respiratory Distress Syndrome, Neonate.	Final FY 2017 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs).
791	Prematurity with Major Problems	Final FY 2017 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs).
792	Prematurity without Major Problems	Final FY 2017 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs).
793	Full-Term Neonate with Major Problems	Final FY 2017 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs).
794	Neonate with Other Significant Problems	Final FY 2017 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs).
795	Normal Newborn	Final FY 2017 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs).

H. Add-On Payments for New Services and Technologies for FY 2018

1. Background

Sections 1886(d)(5)(K) and (L) of the Act establish a process of identifying and ensuring adequate payment for new medical services and technologies (sometimes collectively referred to in this section as “new technologies”) under the IPPS. Section 1886(d)(5)(K)(vi) of the Act specifies that a medical service or technology will be considered new if it meets criteria established by the Secretary after notice and opportunity for public comment. Section 1886(d)(5)(K)(ii)(I) of the Act specifies that a new medical service or technology may be considered for new technology add-on payment if, based on the estimated costs incurred with respect to discharges involving such service or technology, the DRG prospective payment rate otherwise applicable to such discharges under this subsection is inadequate. We note that, beginning with discharges occurring in FY 2008, CMS transitioned from CMS-DRGs to MS-DRGs.

The regulations at 42 CFR 412.87 implement these provisions and specify three criteria for a new medical service or technology to receive the additional payment: (1) The medical service or technology must be new; (2) the medical service or technology must be costly such that the DRG rate otherwise applicable to discharges involving the medical service or technology is determined to be inadequate; and (3) the service or technology must demonstrate a substantial clinical improvement over existing services or technologies. Below we highlight some of the major statutory and regulatory provisions relevant to the new technology add-on payment criteria, as well as other information. For a complete discussion on the new technology add-on payment criteria, we refer readers to the FY 2012 IPPS/LTCH

PPS final rule (76 FR 51572 through 51574).

Under the first criterion, as reflected in § 412.87(b)(2), a specific medical service or technology will be considered “new” for purposes of new medical service or technology add-on payments until such time as Medicare data are available to fully reflect the cost of the technology in the MS-DRG weights through recalibration. We note that we do not consider a service or technology to be new if it is substantially similar to one or more existing technologies. That is, even if a technology receives a new FDA approval or clearance, it may not necessarily be considered “new” for purposes of new technology add-on payments if it is “substantially similar” to a technology that was approved or cleared by FDA and has been on the market for more than 2 to 3 years. In the FY 2010 IPPS/LTCH PPS final rule (74 FR 43813 through 43814), we established criteria for evaluating whether a new technology is substantially similar to an existing technology, specifically: (1) Whether a product uses the same or a similar mechanism of action to achieve a therapeutic outcome; (2) whether a product is assigned to the same or a different MS-DRG; and (3) whether the new use of the technology involves the treatment of the same or similar type of disease and the same or similar patient population. If a technology meets all three of these criteria, it would be considered substantially similar to an existing technology and would not be considered “new” for purposes of new technology add-on payments. For a detailed discussion of the criteria for substantial similarity, we refer readers to the FY 2006 IPPS final rule (70 FR 47351 through 47352), and the FY 2010 IPPS/LTCH PPS final rule (74 FR 43813 through 43814).

Under the second criterion, § 412.87(b)(3) further provides that, to be eligible for the add-on payment for

new medical services or technologies, the MS-DRG prospective payment rate otherwise applicable to discharges involving the new medical service or technology must be assessed for adequacy. Under the cost criterion, consistent with the formula specified in section 1886(d)(5)(K)(ii)(I) of the Act, to assess the adequacy of payment for a new technology paid under the applicable MS-DRG prospective payment rate, we evaluate whether the charges for cases involving the new technology exceed certain threshold amounts. Table 10 that was released with the FY 2017 IPPS/LTCH PPS final rule contains the final thresholds that we used to evaluate applications for new medical service and new technology add-on payments for FY 2018. We refer readers to the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/FY2017-IPPS-Final-Rule-Home-Page-Items/FY2017-IPPS-Final-Rule-Tables.html> to download and view Table 10.

In the September 7, 2001 final rule that established the new technology add-on payment regulations (66 FR 46917), we discussed the issue of whether the Health Insurance Portability and Accountability Act (HIPAA) Privacy Rule at 45 CFR parts 160 and 164 applies to claims information that providers submit with applications for new medical service and new technology add-on payments. We refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51573) for complete information on this issue.

Under the third criterion, § 412.87(b)(1) of our existing regulations provides that a new technology is an appropriate candidate for an additional payment when it represents an advance that substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries. For example, a new technology represents a substantial

clinical improvement when it reduces mortality, decreases the number of hospitalizations or physician visits, or reduces recovery time compared to the technologies previously available. (We refer readers to the September 7, 2001 final rule for a more detailed discussion of this criterion (66 FR 46902).)

The new medical service or technology add-on payment policy under the IPPS provides additional payments for cases with relatively high costs involving eligible new medical services or technologies, while preserving some of the incentives inherent under an average-based prospective payment system. The payment mechanism is based on the cost to hospitals for the new medical service or technology. Under § 412.88, if the costs of the discharge (determined by applying cost-to-charge ratios (CCRs) as described in § 412.84(h)) exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare will make an add-on payment equal to the lesser of: (1) 50 percent of the estimated costs of the new technology or medical service (if the estimated costs for the case including the new technology or medical service exceed Medicare's payment); or (2) 50 percent of the difference between the full DRG payment and the hospital's estimated cost for the case. Unless the discharge qualifies for an outlier payment, the additional Medicare payment is limited to the full MS-DRG payment plus 50 percent of the estimated costs of the new technology or new medical service.

Section 503(d)(2) of Public Law 108–173 provides that there shall be no reduction or adjustment in aggregate payments under the IPPS due to add-on payments for new medical services and technologies. Therefore, in accordance with section 503(d)(2) of Public Law 108–173, add-on payments for new medical services or technologies for FY 2005 and later years have not been subjected to budget neutrality.

In the FY 2009 IPPS final rule (73 FR 48561 through 48563), we modified our regulations at § 412.87 to codify our longstanding practice of how CMS evaluates the eligibility criteria for new medical service or technology add-on payment applications. That is, we first determine whether a medical service or technology meets the newness criterion, and only if so, do we then make a determination as to whether the technology meets the cost threshold and represents a substantial clinical improvement over existing medical services or technologies. We amended § 412.87(c) to specify that all applicants for new technology add-on payments

must have FDA approval or clearance for their new medical service or technology by July 1 of each year prior to the beginning of the fiscal year that the application is being considered.

The Council on Technology and Innovation (CTI) at CMS oversees the agency's cross-cutting priority on coordinating coverage, coding and payment processes for Medicare with respect to new technologies and procedures, including new drug therapies, as well as promoting the exchange of information on new technologies and medical services between CMS and other entities. The CTI, composed of senior CMS staff and clinicians, was established under section 942(a) of Public Law 108–173. The Council is co-chaired by the Director of the Center for Clinical Standards and Quality (CCSQ) and the Director of the Center for Medicare (CM), who is also designated as the CTI's Executive Coordinator.

The specific processes for coverage, coding, and payment are implemented by CM, CCSQ, and the local Medicare Administrative Contractors (MACs) (in the case of local coverage and payment decisions). The CTI supplements, rather than replaces, these processes by working to assure that all of these activities reflect the agency-wide priority to promote high-quality, innovative care. At the same time, the CTI also works to streamline, accelerate, and improve coordination of these processes to ensure that they remain up to date as new issues arise. To achieve its goals, the CTI works to streamline and create a more transparent coding and payment process, improve the quality of medical decisions, and speed patient access to effective new treatments. It is also dedicated to supporting better decisions by patients and doctors in using Medicare-covered services through the promotion of better evidence development, which is critical for improving the quality of care for Medicare beneficiaries.

To improve the understanding of CMS' processes for coverage, coding, and payment and how to access them, the CTI has developed an "Innovator's Guide" to these processes. The intent is to consolidate this information, much of which is already available in a variety of CMS documents and in various places on the CMS Web site, in a user-friendly format. This guide was published in 2010 and is available on the CMS Web site at: http://www.cms.gov/CouncilonTechInnov/Downloads/InnovatorsGuide5_10_10.pdf.

As we indicated in the FY 2009 IPPS final rule (73 FR 48554), we invite any

product developers or manufacturers of new medical services or technologies to contact the agency early in the process of product development if they have questions or concerns about the evidence that would be needed later in the development process for the agency's coverage decisions for Medicare.

The CTI aims to provide useful information on its activities and initiatives to stakeholders, including Medicare beneficiaries, advocates, medical product manufacturers, providers, and health policy experts. Stakeholders with further questions about Medicare's coverage, coding, and payment processes, or who want further guidance about how they can navigate these processes, can contact the CTI at CTI@cms.hhs.gov.

We note that applicants for add-on payments for new medical services or technologies for FY 2019 must submit a formal request, including a full description of the clinical applications of the medical service or technology and the results of any clinical evaluations demonstrating that the new medical service or technology represents a substantial clinical improvement, along with a significant sample of data to demonstrate that the medical service or technology meets the high-cost threshold. Complete application information, along with final deadlines for submitting a full application, will be posted as it becomes available on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/newtech.html>. To allow interested parties to identify the new medical services or technologies under review before the publication of the proposed rule for FY 2019, the CMS Web site also will post the tracking forms completed by each applicant.

2. Public Input Before Publication of a Notice of Proposed Rulemaking on Add-On Payments

Section 1886(d)(5)(K)(viii) of the Act, as amended by section 503(b)(2) of Public Law 108–173, provides for a mechanism for public input before publication of a notice of proposed rulemaking regarding whether a medical service or technology represents a substantial clinical improvement or advancement. The process for evaluating new medical service and technology applications requires the Secretary to—

- Provide, before publication of a proposed rule, for public input regarding whether a new service or technology represents an advance in medical technology that substantially

improves the diagnosis or treatment of Medicare beneficiaries;

- Make public and periodically update a list of the services and technologies for which applications for add-on payments are pending;

- Accept comments, recommendations, and data from the public regarding whether a service or technology represents a substantial clinical improvement; and

- Provide, before publication of a proposed rule, for a meeting at which organizations representing hospitals, physicians, manufacturers, and any other interested party may present comments, recommendations, and data regarding whether a new medical service or technology represents a substantial clinical improvement to the clinical staff of CMS.

In order to provide an opportunity for public input regarding add-on payments for new medical services and technologies for FY 2018 prior to publication of the FY 2018 IPPS/LTCH PPS proposed rule, we published a notice in the **Federal Register** on November 9, 2016 (81 FR 78814), and held a town hall meeting at the CMS Headquarters Office in Baltimore, MD, on February 14, 2017. In the announcement notice for the meeting, we stated that the opinions and presentations provided during the meeting would assist us in our evaluations of applications by allowing public discussion of the substantial clinical improvement criterion for each of the FY 2018 new medical service and technology add-on payment applications before the publication of the FY 2018 IPPS/LTCH PPS proposed rule.

Approximately 66 individuals registered to attend the town hall meeting in person, while additional individuals listened over an open telephone line. We also live-streamed the town hall meeting and posted the town hall on the CMS YouTube Web page at: <https://www.youtube.com/watch?v=9niqfxXe4oA&t=217s>. We considered each applicant's presentation made at the town hall meeting, as well as written comments submitted on the applications that were received by the due date of February 24, 2017, in our evaluation of the new technology add-on payment applications for FY 2018 in the FY 2018 IPPS/LTCH PPS proposed rule.

In response to the published notice and the February 14, 2017 New Technology Town Hall meeting, we received written comments regarding the applications for FY 2018 new technology add-on payments. We note that we do not summarize comments

that are unrelated to the "substantial clinical improvement" criterion. As explained above and in the **Federal Register** notice announcing the New Technology Town Hall meeting (81 FR 78814 through 78816), the purpose of the meeting was specifically to discuss the substantial clinical improvement criterion in regard to pending new technology add-on payment applications for FY 2018. Therefore, we did not summarize those written comments in the proposed rule. As we did in the proposed rule, we are summarizing below a general comment that we received prior to the issuance of the proposed rule that did not relate to a specific application for FY 2018 new technology add-on payments. In addition, as we did in section II.H.5. of the preamble of the proposed rule, we are summarizing comments regarding individual applications, or, if applicable, indicating that there were no comments received in response to the New Technology Town Hall meeting notice, at the end of each discussion of the individual applications.

Comment: One commenter recommended that CMS: (1) Prohibit local MACs from denying coverage and add-on payments for new medical services or technologies approved by the Secretary; and (2) broaden the criteria applied in making substantial clinical improvement determinations to require, in addition to existing criteria, that the Secretary consider whether the new technology or medical service meets one or more of the following criteria: (a) Results in a reduction of the length of a hospital stay; (b) improves patient quality of life; (c) creates long-term clinical efficiencies in treatment; (d) addresses patient-centered objectives as defined by the Secretary; or (e) meets such other criteria as the Secretary may specify.

Response: We appreciate the commenter's comments and will consider them in future rulemaking.

3. ICD-10-PCS Section "X" Codes for Certain New Medical Services and Technologies

As discussed in the FY 2016 IPPS/LTCH final rule (80 FR 49434), the ICD-10-PCS includes a new section containing the new Section "X" codes, which began being used with discharges occurring on or after October 1, 2015. Decisions regarding changes to ICD-10-PCS Section "X" codes will be handled in the same manner as the decisions for all of the other ICD-10-PCS code changes. That is, proposals to create, delete, or revise Section "X" codes under the ICD-10-PCS structure will be referred to the ICD-10 Coordination and

Maintenance Committee. In addition, several of the new medical services and technologies that have been, or may be, approved for new technology add-on payments may now, and in the future, be assigned a Section "X" code within the structure of the ICD-10-PCS. We posted ICD-10-PCS Guidelines on the CMS Web site at: <http://www.cms.gov/Medicare/Coding/ICD10/2016-ICD-10-PCS-and-GEMs.html>, including guidelines for ICD-10-PCS Section "X" codes. We encourage providers to view the material provided on ICD-10-PCS Section "X" codes.

4. Revision of the Reference to an ICD-9-CM Code in § 412.87(b)(2) of the Regulations

As we discussed in the FY 2018 IPS/LTCH PPS proposed rule (82 FR 19871), the existing regulations under § 412.87(b)(2) state that a medical service or technology may be considered new within 2 or 3 years after the point at which data begin to become available reflecting the ICD-9-CM code assigned to the new service or technology (depending on when a new code is assigned and data on the new service or technology become available for DRG recalibration). After CMS has recalibrated the DRGs, based on available data, to reflect the costs of an otherwise new medical service or technology, the medical service or technology will no longer be considered "new" under the criterion of this section.

As discussed in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49454), HIPAA covered entities are required, as of October 1, 2015, to use the ICD-10 coding system (ICD-10-PCS codes for procedures and ICD-10-CM codes for diagnoses), instead of the ICD-9-CM coding system, to report diagnoses and procedures for Medicare hospital inpatient services provided to Medicare beneficiaries as classified under the MS-DRG system and paid for under the IPPS. The language in § 412.87(b)(2) only references an "ICD-9-CM code." Therefore, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19871), we proposed to revise the regulations at § 412.87(b)(2) to replace the term "ICD-9-CM code" with the term "inpatient hospital code," as defined in section 1886(d)(5)(K)(iii) of the Act. Section 1886(d)(5)(K)(iii) of the Act defines an "inpatient hospital code" as any code that is used with respect to inpatient hospital services for which payment may be made under this subsection of the Act and includes an alphanumeric code issued under the International Classification of Diseases, 9th Revision, Clinical Modification ("ICD-9-CM")

and its subsequent revisions. We invited public comments on our proposal.

We did not receive any public comments on this proposal. Therefore, we are finalizing our proposal to revise the regulations at § 412.87(b)(2) to replace the term “ICD-9-CM code” with the term “inpatient hospital code”, as defined in section 1886(d)(5)(K)(iii) of the Act.

5. FY 2018 Status of Technologies Approved for FY 2017 Add-On Payments

a. CardioMEMS™ HF (Heart Failure) Monitoring System

CardioMEMS, Inc. submitted an application for new technology add-on payments for FY 2015 for the CardioMEMS™ HF (Heart Failure) Monitoring System, which is an implantable hemodynamic monitoring system comprised of an implantable sensor/monitor placed in the distal pulmonary artery. Pulmonary artery hemodynamic monitoring is used in the management of heart failure. The CardioMEMS™ HF Monitoring System measures multiple pulmonary artery pressure parameters for an ambulatory patient to measure and transmit data via a wireless sensor to a secure Web site.

The CardioMEMS™ HF Monitoring System utilizes radiofrequency (RF) energy to power the sensor and to measure pulmonary artery (PA) pressure and consists of three components: An Implantable Sensor with Delivery Catheter, an External Electronics Unit, and a Pulmonary Artery Pressure Database. The system provides the physician with the patient's PA pressure waveform (including systolic, diastolic, and mean pressures) as well as heart rate. The sensor is permanently implanted in the distal pulmonary artery using transcatheter techniques in the catheterization laboratory where it is calibrated using a Swan-Ganz catheter. PA pressures are transmitted by the patient at home in a supine position on a padded antenna, pushing one button which records an 18-second continuous waveform. The data also can be recorded from the hospital, physician's office, or clinic.

The hemodynamic data, including a detailed waveform, are transmitted to a secure Web site that serves as the Pulmonary Artery Pressure Database, so that information regarding PA pressure is available to the physician or nurse at any time via the Internet. Interpretation of trend data allows the clinician to make adjustments to therapy and can be used along with heart failure signs and symptoms to adjust medications.

The applicant received FDA approval on May 28, 2014. After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology add-on payments for the CardioMEMS™ HF Monitoring System and consideration of the public comments we received in response to the FY 2015 IPPS/LTCH PPS proposed rule, we approved the CardioMEMS™ HF Monitoring System for new technology add-on payments for FY 2015 (79 FR 49940). Cases involving the CardioMEMS™ HF Monitoring System that are eligible for new technology add-on payments are identified by either ICD-10-PCS procedure code 02HQ30Z (Insertion of pressure sensor monitoring device into right pulmonary artery, percutaneous approach) or ICD-10-PCS procedure code 02HR30Z (Insertion of pressure sensor monitoring device into left pulmonary artery, percutaneous approach). With the new technology add-on payment application, the applicant stated that the total operating cost of the CardioMEMS™ HF Monitoring System is \$17,750. Under § 412.88(a)(2), we limit new technology add-on payments to the lesser of 50 percent of the average cost of the device or 50 percent of the costs in excess of the MS-DRG payment for the case. As a result, the maximum new technology add-on payment for a case involving the CardioMEMS™ HF Monitoring System is \$8,875. We refer the reader to the FY 2015 IPPS/LTCH PPS final rule (79 FR 49937) for complete details on the CardioMEMS™ HF Monitoring System.

Our policy is that a medical service or technology may be considered new within 2 or 3 years after the point at which data begin to become available reflecting the inpatient hospital code assigned to the new service or technology. Our practice has been to begin and end new technology add-on payments on the basis of a fiscal year, and we have generally followed a guideline that uses a 6-month window before and after the start of the fiscal year to determine whether to extend the new technology add-on payment for an additional fiscal year. In general, we extend add-on payments for an additional year only if the 3-year anniversary date of the product's entry onto the U.S. market occurs in the latter half of the fiscal year (70 FR 47362).

With regard to the newness criterion for the CardioMEMS™ HF Monitoring System, we considered the beginning of the newness period to commence when the CardioMEMS™ HF Monitoring System was approved by the FDA on May 28, 2014. Because the 3-year anniversary date of the entry of the CardioMEMS™ HF Monitoring System

onto the U.S. market (May 28, 2017) would occur prior to the beginning of FY 2018, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19871–19872), we proposed to discontinue new technology add-on payments for this technology for FY 2018. We invited public comments on this proposal.

Comment: Commenters agreed with our proposal to discontinue new technology add-on payments for the CardioMEMS™ HF Monitoring System.

Response: As we proposed, we are discontinuing new technology add-on payments for the CardioMEMS™ HF Monitoring System for FY 2018. The 3-year anniversary date of the product's entry onto the U.S. market occurred prior to the beginning of FY 2018. Therefore, the technology is not eligible for new technology add-on payments for FY 2018 because the technology will no longer meet the “newness” criterion.

b. Defitelio® (Defibrotide)

Jazz Pharmaceuticals submitted an application for new technology add-on payments for FY 2017 for defibrotide (Defitelio®), a treatment for patients diagnosed with hepatic veno-occlusive disease (VOD) with evidence of multiorgan dysfunction. VOD, also known as sinusoidal obstruction syndrome (SOS), is a potentially life-threatening complication of hematopoietic stem cell transplantation (HSCT), with an incidence rate of 8 percent to 15 percent. Diagnoses of VOD range in severity from what has been classically defined as a disease limited to the liver (mild) and reversible, to a severe syndrome associated with multi-organ dysfunction or failure and death. Patients treated with HSCT who develop VOD with multi-organ failure face an immediate risk of death, with a mortality rate of more than 80 percent when only supportive care is used. The applicant asserted that Defitelio® improves the survival rate of patients diagnosed with VOD with multi-organ failure by 23 percent.

Defitelio® received Orphan Drug Designation for the treatment of VOD in 2003 and for the prevention of VOD in 2007. It has been available to patients as an investigational drug through an expanded access program since 2007. The applicant's New Drug Application (NDA) for Defitelio® received FDA approval on March 30, 2016. The applicant confirmed that Defitelio® was not available on the U.S. market as of the FDA NDA approval date of March 30, 2016. According to the applicant, commercial packaging could not be completed until the label for Defitelio® was finalized with FDA approval, and that commercial shipments of Defitelio®

to hospitals and treatment centers began on April 4, 2016. Therefore, we agreed that, based on this information, the newness period for Defitelio® begins on April 4, 2016, the date of its first commercial availability.

The applicant received unique ICD-10-PCS procedure codes to describe the use of Defitelio® that became effective October 1, 2016. The approved procedure codes are XW03392 (Introduction of defibrotide sodium anticoagulant into peripheral vein, percutaneous approach) and XW04392 (Introduction of defibrotide sodium anticoagulant into central vein, percutaneous approach).

After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology add-on payments for Defitelio® and consideration of the public comments we received in response to the FY 2017 IPPS/LTCH PPS proposed rule, we approved Defitelio® for new technology add-on payments for FY 2017 (81 FR 56906). With the new technology add-on payment application, the applicant estimated that the average Medicare beneficiary would require a dosage of 25 mg/kg/day for a minimum of 21 days of treatment. The recommended dose is 6.25 mg/kg given as a 2-hour intravenous infusion every 6 hours. Dosing should be based on a patient's baseline body weight, which is assumed to be 70 kg for an average adult patient. All vials contain 200 mg at a cost of \$825 per vial. Therefore, we determined that cases involving the use of the Defitelio® technology would incur an average cost per case of \$151,800 (70 kg adult × 25 mg/kg/day × 21 days = 36,750 mg per patient/200 mg vial = 184 vials per patient × \$825 per vial = \$151,800). Under § 412.88(a)(2), we limit new technology add-on payments to the lesser of 50 percent of the average cost of the technology or 50 percent of the costs in excess of the MS-DRG payment for the case. As a result, the maximum new technology add-on payment amount for a case involving the use of Defitelio® is \$75,900.

Because the 3-year anniversary date of the entry of Defitelio® onto the U.S. market will occur after FY 2018 (April 4, 2019), we proposed to continue new technology add-on payments for this technology for FY 2018. We proposed that the maximum payment for a case involving Defitelio® would remain at \$75,900 for FY 2018. In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19872), we invited public comments on our proposal to continue new technology add-on payments for Defitelio®.

Comment: One commenter agreed with CMS' proposal to continue new technology add-on payments for Defitelio®.

Response: We appreciate the commenter's support. We are finalizing our proposal to continue new technology add-on payments for Defitelio® for FY 2018. The maximum new technology add-on payment for a case involving Defitelio® will remain at \$75,900 for FY 2018.

c. GORE® EXCLUDER® Iliac Branch Endoprosthesis (Gore IBE Device)

W. L. Gore and Associates, Inc. submitted an application for new technology add-on payments for the GORE® EXCLUDER® Iliac Branch Endoprosthesis (GORE IBE device) for FY 2017. The device consists of two components: The Iliac Branch Component (IBC) and the Internal Iliac Component (IIC). The applicant indicated that each endoprosthesis is pre-mounted on a customized delivery and deployment system allowing for controlled endovascular delivery via bilateral femoral access. According to the applicant, the device is designed to be used in conjunction with the GORE® EXCLUDER® AAA Endoprosthesis for the treatment of patients requiring repair of common iliac or aortoiliac aneurysms. When deployed, the GORE IBE device excludes the common iliac aneurysm from systemic blood flow, while preserving blood flow in the external and internal iliac arteries.

With regard to the newness criterion, the applicant received pre-market FDA approval of the GORE IBE device on February 29, 2016. The applicant submitted a request for an unique ICD-10-PCS procedure code and was granted approval for the following procedure codes to describe the use of this technology: 04VC0EZ (Restriction of right common iliac artery with branched or fenestrated intraluminal device, one or two arteries, open approach); 04VC0FZ (Restriction of right common iliac artery with branched or fenestrated intraluminal device, three or more arteries, open approach); 04VC3EZ (Restriction of right common iliac artery with branched or fenestrated intraluminal device, one or two arteries, percutaneous approach); 04VC3FZ (Restriction of right common iliac artery with branched or fenestrated intraluminal device, three or more arteries, percutaneous approach); 04VC4EZ (Restriction of right common iliac artery with branched or fenestrated intraluminal device, one or two arteries, percutaneous approach); 04VC4FZ (Restriction of right common iliac artery with branched or fenestrated

intraluminal device, three or more arteries, percutaneous endoscopic approach); 04VD0EZ (Restriction of left common iliac artery with branched or fenestrated intraluminal device, one or two arteries, open approach); 04VD0FZ (Restriction of left common iliac artery with branched or fenestrated, intraluminal device, three or more arteries, open approach); 04VD3EZ (Restriction of left common iliac artery with branched or fenestrated intraluminal device, one or two arteries, percutaneous approach); 04VD3FZ (Restriction of left common iliac artery with branched or fenestrated intraluminal device, three or more arteries, percutaneous approach); 04VD4EZ (Restriction of left common iliac artery with branched or fenestrated intraluminal device, one or two arteries, percutaneous endoscopic approach); and 04VD4FZ (Restriction of left common iliac artery with branched or fenestrated intraluminal device, three or more arteries, percutaneous endoscopic approach). These new ICD-10-PCS procedure codes became effective on October 1, 2016. After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology add-on payments for the GORE IBE device and consideration of the public comments we received in response to the FY 2017 IPPS/LTCH PPS proposed rule, we approved the GORE IBE device for new technology add-on payments for FY 2017 (81 FR 56909). With the new technology add-on payment application, the applicant indicated that the total operating cost of the GORE IBE device is \$10,500. Under § 412.88(a)(2), we limit new technology add-on payments to the lesser of 50 percent of the average cost of the device or 50 percent of the costs in excess of the MS-DRG payment for the case. As a result, the maximum new technology add-on payment for a case involving the GORE IBE device is \$5,250.

With regard to the newness criterion for the GORE IBE device, we considered the beginning of the newness period to commence when the GORE IBE device received FDA approval on February 29, 2016. Because the 3-year anniversary date of the entry of the GORE IBE device onto the U.S. market will occur after FY 2018 (February 28, 2019), in the FY 2018 IPPS/LTCH PPS proposed rule, we proposed to continue new technology add-on payments for this technology for FY 2018. We proposed that the maximum payment for a case involving the GORE IBE device would remain at \$5,250 for FY 2018. We invited public comments on our proposal to continue

new technology add-on payments for the GORE IBE device.

Comment: Some commenters supported CMS' proposal to continue new technology add-on payments for the GORE IBE device.

Response: We appreciate the commenters' support. We are finalizing our proposal to continue new technology add-on payments for the GORE IBE device for FY 2018. The maximum new technology add-on payment for a case involving the GORE IBE device will remain at \$5,250 for FY 2018.

d. Praxbind® Idarucizumab

Boehringer Ingelheim Pharmaceuticals, Inc. submitted an application for new technology add-on payments for FY 2017 for Praxbind® Idarucizumab (Idarucizumab), a product developed as an antidote to reverse the effects of PRADAXAR (Dabigatran), which is also manufactured by Boehringer Ingelheim Pharmaceuticals, Inc.

Dabigatran is an oral direct thrombin inhibitor currently indicated: (1) To reduce the risk of stroke and systemic embolism in patients who have been diagnosed with nonvalvular atrial fibrillation (NVAF); (2) for the treatment of deep venous thrombosis (DVT) and pulmonary embolism (PE) in patients who have been administered a parenteral anticoagulant for 5 to 10 days; (3) to reduce the risk of recurrence of DVT and PE in patients who have been previously treated; and (4) for the prophylaxis of DVT and PE in patients who have undergone hip replacement surgery. Currently, unlike the anticoagulant Warfarin, there is no specific way to reverse the anticoagulant effect of Dabigatran in the event of a major bleeding episode. Idarucizumab is a humanized fragment antigen binding (Fab) molecule, which specifically binds to Dabigatran to deactivate the anticoagulant effect, thereby allowing thrombin to act in blood clot formation. The applicant stated that Idarucizumab represents a new pharmacologic approach to neutralizing the specific anticoagulant effect of Dabigatran in emergency situations.

Idarucizumab was approved by the FDA on October 16, 2015. Based on the FDA indication for Idarucizumab, the product can be used in the treatment of patients who have been diagnosed with NVAF and administered Dabigatran to reverse life-threatening bleeding events, or who require emergency surgery or medical procedures and rapid reversal of the anticoagulant effects of Dabigatran is necessary and desired.

The applicant received unique ICD-10-PCS procedure codes that became effective October 1, 2016, to describe the use of this technology. The approved procedure codes are XW03331 (Introduction of Idarucizumab, Dabigatran reversal agent into peripheral vein, percutaneous approach, New Technology Group 1) and XW04331 (Introduction of Idarucizumab, Dabigatran reversal agent into central vein, percutaneous approach, New Technology Group 1).

After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology add-on payments for Idarucizumab and consideration of the public comments we received in response to the FY 2017 IPPS/LTCH PPS proposed rule, we approved Idarucizumab for new technology add-on payments for FY 2017 (81 FR 56897). With the new technology add-on payment application, the applicant indicated that the total operating cost of Idarucizumab is \$3,500. Under § 412.88(a)(2), we limit new technology add-on payments to the lesser of 50 percent of the average cost of the technology or 50 percent of the costs in excess of the MS-DRG payment for the case. As a result, the maximum new technology add-on payment for a case involving Idarucizumab is \$1,750.

With regard to the newness criterion for Idarucizumab, we considered the beginning of the newness period to commence when Idarucizumab was approved by the FDA on October 16, 2015. Because the 3-year anniversary date of the entry of Idarucizumab onto the U.S. market will occur after FY 2018 (October 15, 2018), in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19873), we proposed to continue new technology add-on payments for this technology for FY 2018. We proposed that the maximum payment for a case involving Idarucizumab would remain at \$1,750 for FY 2018. We invited public comments on our proposal to continue new technology add-on payments for Idarucizumab.

Comment: Several commenters supported CMS' proposal to continue new technology add-on payments for Idarucizumab.

Response: We appreciate the commenters' support. We are finalizing our proposal to continue new technology add-on payments for Idarucizumab for FY 2018. The maximum new technology add-on payment for a case involving Idarucizumab will remain at \$1,750 for FY 2018.

e. Lutonix® Drug Coated Balloon PTA Catheter and In.PACT™ Admiral™ Paclitaxel Coated Percutaneous Transluminal Angioplasty (PTA) Balloon Catheter

Two manufacturers, CR Bard Inc. and Medtronic, submitted applications for new technology add-on payments for FY 2016 for LUTONIX® Drug-Coated Balloon (DCB) Percutaneous Transluminal Angioplasty (PTA) Catheter (LUTONIX®) and IN.PACT™ Admiral™ Paclitaxel Coated Percutaneous Transluminal Angioplasty (PTA) Balloon Catheter (IN.PACT™ Admiral™), respectively. Both of these technologies are drug-coated balloon angioplasty treatments for patients diagnosed with peripheral artery disease (PAD). Typical treatments for patients with PAD include angioplasty, stenting, atherectomy and vascular bypass surgery. PAD most commonly occurs in the femoropopliteal segment of the peripheral arteries, is associated with significant levels of morbidity and impairment in quality of life, and requires treatment to reduce symptoms and prevent or treat ischemic events.¹ Treatment options for symptomatic PAD include noninvasive treatment such as medication and life-style modification (for example, exercise programs, diet, and smoking cessation) and invasive options, which include endovascular treatment and surgical bypass. The 2013 American College of Cardiology and American Heart Association (ACC/AHA) guidelines for the management of PAD recommend endovascular therapy as the first-line treatment for femoropopliteal artery lesions in patients suffering from claudication (Class I, Level A recommendation).²

According to both applicants, LUTONIX® and IN.PACT™ Admiral™ are the first drug coated balloons that can be used for treatment of patients who are diagnosed with PAD. In the FY 2016 IPPS/LTCH PPS final rule, we stated that because cases eligible for the two devices would group to the same MS-DRGs and we believe that these devices are substantially similar to each

¹ Tepe G, Zeller T, Albrecht T, Heller S, Schwarzwald U, Beregi JP, Claussen CD, Oldenburg A, Scheller B, Speck U., Local delivery of paclitaxel to inhibit restenosis during angioplasty of the leg, N Engl J Med 2008, 358: 689–99.

² Anderson JL, Halperin JL, Albert NM, Bozkurt B, Brindis RG, Curtis LH, DeMets D, Guyton RA, Hochman JS, Kovacs RJ, Ohman EM, Pressler SJ, Selke FW, Shen WK., Management of patients with peripheral artery disease (compilation of 2005 and 2011 ACCF/AHA guideline recommendations): A report of the American College of Cardiology Foundation/American Heart Association Task Force on Practice Guidelines, J Am Coll Cardiol 2013, 61:1555–70. Available at: <http://dx.doi.org/10.1016/j.jacc.2013.01.004>.

other (that is, they are intended to treat the same or similar disease in the same or similar patient population and are purported to achieve the same therapeutic outcome using the same or similar mechanism of action), we evaluated both technologies as one application for new technology add-on payments under the IPPS. The applicants submitted separate cost and clinical data, and we reviewed and discussed each set of data separately. However, we made one determination regarding new technology add-on payments that applied to both devices. We believe that this is consistent with our policy statements in the past regarding substantial similarity. Specifically, we have noted that approval of new technology add-on payments would extend to all technologies that are substantially similar (66 FR 46915), and we believe that continuing our current practice of extending a new technology add-on payment without a further application from the manufacturer of the competing

product or a specific finding on cost and clinical improvement if we make a finding of substantial similarity among two products is the better policy because we avoid—

- Creating manufacturer-specific codes for substantially similar products;
- Requiring different manufacturers of substantially similar products from having to submit separate new technology add-on payment applications;
- Having to compare the merits of competing technologies on the basis of substantial clinical improvement; and
- Bestowing an advantage to the first applicant representing a particular new technology to receive approval (70 FR 47351).

CR Bard, Inc. received FDA approval for LUTONIX® on October 9, 2014. Commercial sales in the U.S. market began on October 10, 2014. Medtronic received FDA approval for IN.PACT™ Admiral™ on December 30, 2014. Commercial sales in the U.S. market began on January 29, 2015.

In accordance with our policy, we stated in the FY 2016 IPPS\LTCH PPS final rule (80 FR 49463) that we believe it is appropriate to use the earliest market availability date submitted as the beginning of the newness period. Accordingly, for both devices, we stated that the beginning of the newness period will be October 10, 2014.

After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology add-on payments for the LUTONIX® and IN.PACT™ Admiral™ technologies and consideration of the public comments we received in response to the FY 2016 IPPS/LTCH PPS proposed rule, we approved the LUTONIX® and IN.PACT™ Admiral™ technologies for new technology add-on payments for FY 2016 (80 FR 49469). Cases involving the LUTONIX® and IN.PACT™ Admiral™ technologies that are eligible for new technology add-on payments are identified using one of the ICD-10-PCS procedure codes in the following table:

ICD-10-PCS code	Code description
047K041	Dilation of right femoral artery with drug-eluting intraluminal device using drug-coated balloon, open approach.
047K0D1	Dilation of right femoral artery with intraluminal device using drug-coated balloon, open approach.
047K0Z1	Dilation of right femoral artery using drug-coated balloon, open approach.
047K341	Dilation of right femoral artery with drug-eluting intraluminal device using drug-coated balloon, percutaneous approach.
047K3D1	Dilation of right femoral artery with intraluminal device using drug-coated balloon, percutaneous approach.
047K3Z1	Dilation of right femoral artery using drug-coated balloon, percutaneous approach.
047K441	Dilation of right femoral artery with drug-eluting intraluminal device using drug-coated balloon, percutaneous endoscopic approach.
047K4D1	Dilation of right femoral artery with intraluminal device using drug-coated balloon, percutaneous endoscopic approach.
047K4Z1	Dilation of right femoral artery using drug-coated balloon, percutaneous endoscopic approach.
047L041	Dilation of left femoral artery with drug-eluting intraluminal device using drug-coated balloon, open approach.
047L0D1	Dilation of left femoral artery with intraluminal device using drug-coated balloon, open approach.
047L0Z1	Dilation of left femoral artery using drug-coated balloon, open approach.
047L341	Dilation of left femoral artery with drug-eluting intraluminal device using drug-coated balloon, percutaneous approach.
047L3D1	Dilation of left femoral artery with intraluminal device using drug-coated balloon, percutaneous approach.
047L3Z1	Dilation of left femoral artery using drug-coated balloon, percutaneous approach.
047L441	Dilation of left femoral artery with drug-eluting intraluminal device using drug-coated balloon, percutaneous endoscopic approach.
047L4D1	Dilation of left femoral artery with intraluminal device using drug-coated balloon, percutaneous endoscopic approach.
047L4Z1	Dilation of left femoral artery using drug-coated balloon, percutaneous endoscopic approach.
047M041	Dilation of right popliteal artery with drug-eluting intraluminal device using drug-coated balloon, open approach.
047M0D1	Dilation of right popliteal artery with intraluminal device using drug-coated balloon, open approach.
047M0Z1	Dilation of right popliteal artery using drug-coated balloon, open approach.
047M341	Dilation of right popliteal artery with drug-eluting intraluminal device using drug-coated balloon, percutaneous approach.
047M3D1	Dilation of right popliteal artery with intraluminal device using drug-coated balloon, percutaneous approach.
047M3Z1	Dilation of right popliteal artery using drug-coated balloon, percutaneous approach.
047M441	Dilation of right popliteal artery with drug-eluting intraluminal device using drug-coated balloon, percutaneous endoscopic approach.
047M4D1	Dilation of right popliteal artery with intraluminal device using drug-coated balloon, percutaneous endoscopic approach.
047M4Z1	Dilation of right popliteal artery using drug-coated balloon, percutaneous endoscopic approach.
047N041	Dilation of left popliteal artery with drug-eluting intraluminal device using drug-coated balloon, open approach.
047N0D1	Dilation of left popliteal artery with intraluminal device using drug-coated balloon, open approach.
047N0Z1	Dilation of left popliteal artery using drug-coated balloon, open approach.
047N341	Dilation of left popliteal artery with drug-eluting intraluminal device using drug-coated balloon, percutaneous approach.
047N3D1	Dilation of left popliteal artery with intraluminal device using drug-coated balloon, percutaneous approach.
047N3Z1	Dilation of left popliteal artery using drug-coated balloon, percutaneous approach.
047N441	Dilation of left popliteal artery with drug-eluting intraluminal device using drug-coated balloon, percutaneous endoscopic approach.
047N4D1	Dilation of left popliteal artery with intraluminal device using drug-coated balloon, percutaneous endoscopic approach.
047N4Z1	Dilation of left popliteal artery using drug-coated balloon, percutaneous endoscopic approach.

As discussed in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49469), each of the applicants submitted operating costs for its DCB. The manufacturer of the LUTONIX® stated that a mean of 1.37 drug-coated balloons was used during the LEVANT 2 clinical trial. The acquisition price for the hospital will be \$1,900 per drug-coated balloon, or \$2,603 per case ($1.37 \times \$1,900$). The applicant projected that approximately 8,875 cases will involve use of the LUTONIX® for FY 2016. The manufacturer for the IN.PACT™ Admiral™ stated that a mean of 1.4 drug-coated balloons was used during the IN.PACT™ Admiral™ DCB arm. The acquisition price for the hospital will be \$1,350 per drug-coated balloon, or \$1,890 per case ($1.4 \times \$1,350$). The applicant projected that approximately 26,000 cases will involve use of the IN.PACT™ Admiral™ for FY 2016.

For FY 2016, we based the new technology add-on payment for cases involving these technologies on the weighted average cost of the two DCBs described by the ICD-10-PCS procedure codes listed above (which are not manufacturer specific). Because ICD-10 codes are not manufacturer specific, we cannot set one new technology add-on payment amount for IN.PACT™ Admiral™ and a different new technology add-on payment amount for LUTONIX®; both technologies will be captured by using the same ICD-10-PCS procedure code. As such, we stated that we believe that the use of a weighted average of the cost of the standard DCBs based on the projected number of cases involving each technology to determine the maximum new technology add-on payment would be most appropriate. To compute the weighted cost average, we summed the total number of projected cases for each of the applicants, which equaled 34,875 cases (26,000 plus 8,875). We then divided the number of projected cases for each of the applicants by the total number of cases, which resulted in the following case-weighted percentages: 25 percent for the LUTONIX® and 75 percent for the IN.PACT™ Admiral™. We then multiplied the cost per case for the manufacturer specific DCB by the case-weighted percentage ($0.25 \times \$2,603 = \$662.41$ for LUTONIX® and $0.75 \times \$1,890 = \$1,409.03$ for the IN.PACT™ Admiral™). This resulted in a case-weighted average cost of \$2,071.45 for DCBs. Under § 412.88(a)(2), we limit new technology add-on payments to the lesser of 50 percent of the average cost of the device or 50 percent of the costs in excess of the MS-DRG payment for the case. As a result, the maximum

payment for a case involving the LUTONIX® or IN.PACT™ Admiral™ DCBs is \$1,035.72.

With regard to the newness criterion for the LUTONIX® and IN.PACT™ Admiral™ technologies, we considered the beginning of the newness period to commence when LUTONIX® gained entry onto the U.S. market on October 10, 2014. As discussed previously in this section, in general, we extend new technology add-on payments for an additional year only if the 3-year anniversary date of the product's entry onto the U.S. market occurs in the latter half of the upcoming fiscal year. Because the 3-year anniversary date of the entry of LUTONIX® onto the U.S. market (October 10, 2017) will occur in the first half of FY 2018, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19875), we proposed to discontinue new technology add-on payments for both the LUTONIX® and IN.PACT™ Admiral™ technologies for FY 2018. We invited public comments on this proposal.

Comment: Some commenters supported CMS' proposal to discontinue new technology add-on payments for both the LUTONIX® and IN.PACT™ Admiral™ technologies for FY 2018.

Response: We appreciate the commenters' support. As we proposed, we are discontinuing new technology add-on payments for both the LUTONIX® and IN.PACT™ Admiral™ technologies for FY 2018. The 3-year anniversary date of the product's entry onto the U.S. market occurs in the first half of FY 2018. Therefore, the technology is not eligible for new technology add-on payments for FY 2018 because the technology will no longer meet the "newness" criterion.

f. MAGEC® Spinal Bracing and Distraction System (MAGEC® Spine)

Ellipse Technologies, Inc. submitted an application for new technology add-on payments for FY 2017 for the MAGEC® Spine. According to the applicant, the MAGEC® Spine has been developed for use in the treatment of children diagnosed with severe spinal deformities, such as scoliosis. The system can be used in the treatment of skeletally immature patients less than 10 years of age who have been diagnosed with severe progressive spinal deformities associated with or at risk of Thoracic Insufficiency Syndrome (TIS).

The MAGEC® Spine consists of a (spinal growth) rod that can be lengthened through the use of magnets that are controlled by an external remote controller (ERC). The rod(s) can be implanted into children as young as 2

years of age. According to the applicant, use of the MAGEC® Spine has proven to be successfully used in the treatment of patients diagnosed with scoliosis who have not been responsive to other treatments.

The MAGEC® Spine initially received FDA clearance for use of the predicate device, which used a Harrington Rod on February 27, 2014. The applicant verified that, due to manufacturing delays, the MAGEC® Spine was not available for implant until April 1, 2014. Specifically, the complete MAGEC® Spine system was produced and available for shipment for the first implant on April 1, 2014. Therefore, the newness period for the MAGEC® Spine began on April 1, 2014. Subsequent FDA clearance was granted for use of the modified device, which uses a shorter 70 mm rod on September 18, 2014. After minor modification of the product, the MAGEC® Spine received FDA clearances on March 24, 2015, and May 29, 2015, respectively.

After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology add-on payments for the MAGEC® Spine and consideration of the public comments we received in response to the FY 2017 IPPS/LTCH PPS proposed rule, we approved the MAGEC® Spine for new technology add-on payments for FY 2017 (81 FR 56891). Cases involving the MAGEC® Spine that are eligible for new technology add-on payments are identified by ICD-10-PCS procedure codes XNS0032 (Reposition of lumbar vertebra using magnetically controlled growth rod(s), open approach); XNS0432 (Reposition of lumbar vertebra using magnetically controlled growth rod(s), percutaneous endoscopic approach); XNS3032 (Reposition of cervical vertebra using magnetically controlled growth rod(s), open approach); XNS3432 (Reposition of cervical vertebra using magnetically controlled growth rod(s), percutaneous endoscopic approach); XNS4032 (Reposition of thoracic vertebra using magnetically controlled growth rod(s), open approach); and XNS4432 (Reposition of thoracic vertebra using magnetically controlled growth rod(s).

With the new technology add-on payment application, the applicant stated that the total operating cost of the MAGEC® Spine was \$17,500 for a single rod and \$35,000 for a dual rod. It is historical practice for CMS to make the new technology add-on payment based on the average cost of the technology and not the maximum. For example, in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53358), we approved new technology add-on payments for

DIFICID™ based on the average dosage of 6.2 days, rather than the maximum 10-day dosage. The applicant noted that 20 percent of cases use a single rod, while 80 percent of cases use a dual rod. As a result, the weighted average cost for a single and dual MAGEC® Spine is \$31,500 $((0.2 * \$17,500) + (0.8 * \$35,000))$. Under § 412.88(a)(2), we limit new technology add-on payments to the lesser of 50 percent of the average cost of the device or 50 percent of the costs in excess of the MS-DRG payment for the case. As a result, the maximum new technology add-on payment for a case involving the MAGEC® Spine is \$15,750. We refer the reader to the FY 2017 IPPS/LTCH PPS final rule (81 FR 56888) for complete details on the MAGEC® Spine.

With regard to the newness criterion for the MAGEC® Spine, we considered the beginning of the newness period to commence when the MAGEC® Spine was produced and available for shipment for the first implant on April 1, 2014. As discussed previously in this section, in general, we extend new technology add-on payments for an additional year only if the 3-year anniversary date of the product's entry onto the U.S. market occurs in the latter half of the upcoming fiscal year. Because the 3-year anniversary date of the entry of the MAGEC® Spine onto the U.S. market (April 1, 2017) would occur prior to the beginning of FY 2018, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19876), we proposed to discontinue new technology add-on payments for this technology for FY 2018. We invited public comments on this proposal.

Comment: Some commenters supported CMS' proposal to discontinue new technology add-on payments for the MAGEC® Spine for FY 2018. Some commenters supported the continuation of the new technology add-on payments for MAGEC® Spine for FY 2018. The manufacturer also requested that CMS extend new technology add-on payments for MAGEC® Spine. The manufacturer provided the following reasons to extend the new technology add-on payment:

- Based on internal data, there have not been enough cases to provide the stimulus that the new technology add-on payments program intended.
- The patient population for which the new technology add-on payment applies is very small, estimated at less than or equal to 10 percent of the total annual cases.
- The new technology add-on payment has been available for approximately 9 months. Given the small number of patients, providers

have not had enough cases yet to utilize the new technology add-on payments in the way the program intended.

- Extension of the new technology add-on payment for FY 2018 would allow more patients to gain access to MAGEC® rods. The manufacturer stated that this has clinical benefits as noted in the literature, but also ultimately helps payers, including CMS. The manufacturer stated that payer costs of treatment are reduced over the course of care when MAGEC® rods are used vs. traditional growth rods.

- Extending the new technology add-on payment for MAGEC® Spine has minimal budgetary impact due again to the small patient population.

The manufacturer cited the importance of the new technology add-on payments to MAGEC® Spine and stated that extending the new technology add-on payment would help make the technology more accessible.

Response: We thank the commenters for their comments. With regard to the technology's newness, the timeframe that a new technology can be eligible to receive new technology add-on payments ends when data documenting the use and cost of the procedures become available. Section 412.87(b)(2) states that, a medical service or technology may be considered new within 2 or 3 years after the point at which data begin to become available reflecting the ICD-9-CM code (or, as finalized earlier in this section, the inpatient hospital code) assigned to the new service or technology (depending on when a new code is assigned and data on the new service or technology become available for DRG recalibration). Section 412.87(b)(2) also states, after CMS has recalibrated the DRGs, based on available data, to reflect the costs of an otherwise new medical service or technology, the medical service or technology will no longer be considered "new" under the applicable criteria. Therefore, as discussed in the FY 2005 IPPS final rule (69 FR 49003), if the costs of the technology are included in the charge data, and the MS-DRGs have been recalibrated using that data, the technology can no longer be considered "new" for the purposes of this provision.

In addition, similar to our discussion in the FY 2006 IPPS final rule (70 FR 47349), we do not believe that case volume is a relevant consideration for making the determination as to whether a product is "new." Consistent with the statute and our implementing regulations, a technology no longer qualifies as "new" once it is more than 2 to 3 years old, irrespective of how frequently it has been used in the

Medicare population. Therefore, if a product is more than 2 to 3 years old, we consider its costs to be included in the MS-DRG relative weights, whether its use in the Medicare population has been frequent or infrequent.

Therefore, based on all of the reasons stated above, the MAGEC® Spine is no longer considered "new" for purposes of new technology add-on payments for FY 2018. Therefore, we are finalizing our proposal to discontinue making new technology add-on payments for the MAGEC® Spine for FY 2018.

g. Vistogard™ (Uridine Triacetate)

BTG International Inc., submitted an application for new technology add-on payments for the Vistogard™ for FY 2017. Vistogard™ was developed as an emergency treatment for Fluorouracil toxicity.

Chemotherapeutic agent 5-fluorouracil (5-FU) is used to treat specific solid tumors. It acts upon deoxyribonucleic acid (DNA) and ribonucleic acid (RNA) in the body, as uracil is a naturally occurring building block for genetic material. Fluorouracil is a fluorinated pyrimidine. As a chemotherapy agent, Fluorouracil is absorbed by cells and causes the cell to metabolize into byproducts that are toxic and used to destroy cancerous cells. According to the applicant, the byproducts fluorodeoxyuridine monophosphate (F-dUMP) and floxuridine triphosphate (FUTP) are believed to do the following: (1) Reduce DNA synthesis; (2) lead to DNA fragmentation; and (3) disrupt RNA synthesis. Fluorouracil is used to treat a variety of solid tumors such as colorectal, head and neck, breast, and ovarian cancer. With different tumor treatments, different dosages, and different dosing schedules, there is a risk for toxicity in these patients. Patients may suffer from fluorouracil toxicity/death if 5-FU is delivered in slight excess or at faster infusion rates than prescribed. The cause of overdose can happen for a variety of reasons including: Pump malfunction, incorrect pump programming or miscalculated doses, and accidental or intentional ingestion.

Vistogard™ is an emergency treatment for Fluorouracil toxicity and is a prodrug of uridine. Once the drug is metabolized into uridine, it competes with the toxic byproduct FUTP in binding to RNA, thereby reducing the impact FUTP has on cell death.

The Vistogard™ received FDA approval on December 11, 2015. In the FY 2017 IPPS/LTCH PPS final rule (81 FR 56910), we stated that we agreed with the manufacturer that, due to the

delay in availability, the date the newness period begins for Vistogard™ is March 2, 2016, instead of December 11, 2015.

The applicant noted that the Vistogard™ is the first FDA-approved antidote used to reverse fluorouracil toxicity. The applicant received a unique ICD-10-PCS procedure code that became effective October 1, 2016, to describe the use of this technology. The approved procedure code is XW0DX82 (Introduction of Uridine Triacetate into Mouth and Pharynx, External Approach, New Technology Group 2).

After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology add-on payments for Vistogard™ and consideration of the public comments we received in response to the FY 2017 IPPS/LTCH PPS proposed rule, we approved Vistogard™ for new technology add-on payments for FY 2017 (81 FR 56912). With the new technology add-on payment application, the applicant stated that the total operating cost of Vistogard™ is \$75,000. Under § 412.88(a)(2), we limit new technology add-on payments to the lesser of 50 percent of the average cost of the technology or 50 percent of the costs in excess of the MS-DRG payment for the case. As a result, the maximum new technology add-on payment for a case involving Vistogard™ is \$37,500.

As noted previously, with regard to the newness criterion for the Vistogard™, we considered the beginning of the newness period to commence on March 2, 2016. Because the 3-year anniversary date of the entry of the Vistogard™ onto the U.S. market (March 2, 2019) will occur after FY 2018, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19876), we proposed to continue new technology add-on payments for this technology for FY 2018. We proposed that the maximum payment for a case involving the Vistogard™ would remain at \$37,500 for FY 2018. We invited public comments on our proposal to continue new technology add-on payments for the Vistogard™.

Comment: The manufacturer commented that, as of April 1, 2017, pricing for Vistogard™ has changed. The manufacturer noted that the wholesale acquisition cost (WAC) for Vistogard™ is now \$80,260 for a 20-dose pack (or \$4,013.00 per each 10g packet of oral granules). Given the current price for Vistogard™, the manufacturer requested that CMS revise the maximum payment per case to \$40,130, or 50 percent of the revised WAC.

Response: According to the manufacturer, as noted in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56912), the WAC of Vistogard™ was \$3,750.00 per each 10g packet of oral granules. The recommended adult dosing per the Vistogard™ label is 10g (one packet every 6 hours for a minimum of 20 doses over 5 days). The total cost was 20 packets × WAC of \$3,750.00 per packet, which equaled \$75,000 per patient.

Using the updated WAC provided by the manufacturer, we performed an additional cost analysis to determine if Vistogard™ would meet the cost criterion. We determined that the price increase would increase the amount that the inflated average standardized case-weighted charge per case exceeds the average case-weighted threshold amount. Therefore, Vistogard™ would still meet the cost criterion.

We are finalizing our proposal to continue new technology add-on payments for Vistogard™ for FY 2018. Using the revised pricing, the maximum new technology add-on payment for a case involving Vistogard™ is \$40,130 for FY 2018.

h. Blinatumomab (BLINCYTO®)

Amgen, Inc. submitted an application for new technology add-on payments for FY 2016 for Blinatumomab (BLINCYTO®), a bi-specific T-cell engager (BiTE) used for the treatment of Philadelphia chromosome-negative (Ph-) relapsed or refractory (R/R) B-cell precursor acute-lymphoblastic leukemia (ALL), which is a rare aggressive cancer of the blood and bone marrow. Approximately 6,050 individuals are diagnosed with Ph- R/R B-cell precursor ALL in the United States each year, and approximately 2,400 individuals, representing 30 percent of all new cases, are adults. Ph- R/R B-cell precursor ALL occurs when there are malignant transformations of B-cell or T-cell progenitor cells, causing an accumulation of lymphoblasts in the blood, bone marrow, and occasionally throughout the body. As a bi-specific T-cell engager, the BLINCYTO® technology attaches to a molecule on the surface of the tumorous cell, as well as to a molecule on the surface of normal T-cells, bringing the two into closer proximity and allowing the normal T-cell to destroy the tumorous cell. Specifically, the BLINCYTO® technology attaches to a cell identified as CD19, which is present on all of the cells of the malignant transformations that cause Ph- R/R B-cell precursor ALL and helps attract the cell into close proximity of the T-cell CD3 with the intent of getting close enough to allow

the T-cell to inject toxins that destroy the cancerous cell. According to the applicant, the BLINCYTO® technology is the first, and the only, bi-specific CD19-directed CD3 T-cell engager single-agent immunotherapy approved by the FDA.

BLINCYTO® is administered as a continuous IV infusion delivered at a constant flow rate using an infusion pump. A single cycle of treatment consists of 28 days of continuous infusion, and each treatment cycle is followed by 2 weeks without treatment prior to administering any further treatments. A course of treatment would consist of two phases. Phase 1 consists of initial inductions or treatments intended to achieve remission followed by additional inductions and treatments to maintain consolidation; or treatments given after remission has been achieved to prolong the duration. During Phase 1 of a single treatment course, up to two cycles of BLINCYTO® are administered, and up to three additional cycles are administered during consolidation. The recommended dosage of BLINCYTO® administered during the first cycle of treatment is 9 mcg per day for the first 7 days of treatment. The dosage is then increased to 28 mcg per day for 3 weeks until completion. During Phase 2 of the treatment course, all subsequent doses are administered as 28 mcg per day throughout the entire duration of the 28-day treatment period.

With regard to the newness criterion, the BLINCYTO® technology received FDA approval on December 3, 2014, for the treatment of patients diagnosed with Ph- R/R B-cell precursor ALL, and the product gained entry onto the U.S. market on December 17, 2014.

After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology add-on payments for BLINCYTO® and consideration of the public comments we received in response to the FY 2016 IPPS/LTCH PPS proposed rule, we approved BLINCYTO® for new technology add-on payments for FY 2016 (80 FR 49449). Cases involving BLINCYTO® that are eligible for new technology add-on payments are identified using one of the following ICD-10-PCS procedure codes: XW03351 (Introduction of Blinatumomab antineoplastic immunotherapy into peripheral vein, percutaneous approach, New Technology Group 1), or XW04351 (Introduction of Blinatumomab antineoplastic immunotherapy into central vein, percutaneous approach, New Technology Group 1).

As discussed in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49449), the

applicant recommended that CMS consider and use the cost of the full 28-day inpatient treatment cycle as the expected length of treatment when determining the maximum new technology add-on payment for cases involving the BLINCYTO®, rather than the average cost of lesser number of days used as other variables. For the reasons discussed, we disagreed with the applicant and established the maximum new technology add-on payment amount for a case involving the BLINCYTO® technology for FY 2016 using the weighted average of the cycle 1 and cycle 2 observed treatment length. Specifically, in the Phase II trial, the most recent data available, 92 patients received cycle 1 treatment for an average length of 21.2 days, and 52 patients received cycle 2 treatment for an average length of 10.2 days. The weighted average of cycle 1 and cycle 2 treatment length is 17 days. We noted that a small number of patients also received 3 to 5 treatment cycles. However, based on the data provided, these cases do not appear to be typical at this point and we excluded them from this calculation. We noted that, if we included all treatment cycles in this calculation, the weighted average number of days of treatment is much lower, 10 days. Using the clinical data provided by the applicant, we stated that we believe setting the maximum new technology add-on payment amount for a case involving the BLINCYTO® technology for FY 2016 based on a 17-day length of treatment cycle is representative of historical and current practice. We also stated that, for FY 2017, if new data on length of treatment are available, we would consider any such data in evaluating the maximum new technology add-on payment amount. However, we did not receive any new data from the applicant to evaluate for FY 2017.

In the application, the applicant estimated that the average Medicare beneficiary would require a dosage of 9mcg/day for the first 7 days under the first treatment cycle, followed by a dosage of 28mcg/day for the duration of the treatment cycle, as well as all days included in subsequent cycles. All vials contain 35mcg at a cost of \$3,178.57 per vial. The applicant noted that all vials are single-use. Therefore, we determined that cases involving the use of the BLINCYTO® technology would incur an average cost per case of \$54,035.69 (1 vial/day × 17 days × \$3,178.57/vial). Under § 412.88(a)(2), we limit new technology add-on payments to the lesser of 50 percent of the average cost of the technology or 50 percent of

the costs in excess of the MS-DRG payment for the case. As a result, the maximum new technology add-on payment amount for a case involving the use of the BLINCYTO® is \$27,017.85.

With regard to the newness criterion for BLINCYTO®, we consider the beginning of the newness period to commence when the product gained entry onto the U.S. market on December 17, 2014. As discussed previously in this section, in general, we extend new technology add-on payments for an additional year only if the 3-year anniversary date of the product's entry onto the U.S. market occurs in the latter half of the upcoming fiscal year. Because the 3-year anniversary date of the entry of the BLINCYTO® onto the U.S. market will occur in the first half of FY 2018 (December 17, 2017), in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19877), we proposed to discontinue new technology add-on payments for this technology for FY 2018. We invited public comments on this proposal.

Comment: Some commenters supported CMS' proposal to discontinue new technology add-on payments for BLINCYTO®. The applicant (the manufacturer) disagreed with the proposal to discontinue new technology add-on payments for BLINCYTO®. The manufacturer stated that CMS is discontinuing the new technology add-on payment in advance of the 3-year statutory limit. The manufacturer requested that CMS reconsider and extend the new technology add-on payments for FY 2018.

The manufacturer explained that the continuation of new technology add-on payments for BLINCYTO® in FY 2018 is well within CMS' statutory authority and would permit CMS to bolster its claims data for rate-setting to ensure that it can meaningfully recalibrate the MS-DRG weights to reflect the costs of BLINCYTO® in accordance with the policy objectives of the statute. The manufacturer stated that section 1886(d)(5)(K) of the Act gives CMS authority to grant new technology add-on payments to new technologies to "provide for the collection of data with respect to the costs of a new medical service or technology [. . .] for a period of not less than 2 years and not more than 3 years beginning on the date on which an inpatient hospital code is issued with respect to the service or technology." The manufacturer also stated that the regulation at 42 CFR 412.87(b)(2) is phrased similarly and reads that "A medical service or technology may be considered new within 2 or 3 years after the point at

which data begin to become available reflecting the ICD-9-CM code assigned to the new service or technology (depending on when a new code is assigned and data on the new service or technology become available for DRG recalibration). After CMS has recalibrated the DRGs, based on available data, to reflect the costs of an otherwise new medical service or technology, the medical service or technology will no longer be considered 'new' under the criterion of this section."

The manufacturer stated that BLINCYTO® received FDA approval on December 3, 2014, gained entry onto the U.S. market on December 17, 2014, and was issued an inpatient hospital code (ICD-10-PCS code) on October 1, 2015. Therefore, the manufacturer asserted that, as of October 1, 2017, BLINCYTO® will have received the new technology add-on payment for the minimum permitted duration of 2 years, and is eligible, by statute and regulation, for an additional year new technology add-on payments.

The manufacturer also stated that CMS explained in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56877) that "a specific medical service or technology will be considered 'new' for purposes of new technology add-on payments until such time as Medicare data are available to *fully reflect the cost of the technology* in the MS-DRG weights through recalibration" and that only once the MS-DRGs have been recalibrated to reflect the costs of a new medical technology should new technology add-on payments cease. The manufacturer believed that the above quoted regulation likewise links the termination of new technology add-on payments to having data to incorporate the item into the calibration of the inpatient payment groupings. The manufacturer also cited the FY 2011 IPPS final rule (75 FR 50138) and stated that CMS has acknowledged in previous rulemaking that, in some cases, there may be valid reasons to extend new technology add-on payment status, including, for example, when "there may be few to no Medicare data available for the new service or technology following FDA approval" to achieve the objective of appropriately recalibrating MS-DRG weights. The manufacturer believed that if insufficient data are collected on the technology to "fully reflect the cost of the technology" in the MS-DRG weights, there would be a valid reason to continue the new technology add-on payment.

The manufacturer stated that claims of BLINCYTO® in the FY 2016

MedPAR, which is used for FY 2018 MS-DRG recalibration, are insufficient in number and do not fully reflect the cost of BLINCYTO® in the MS-DRG recalibration. The applicant stated that, in the FY 2016 MedPAR claims, there were a total of 145 BLINCYTO® claims eligible for the new technology add-on payment, 111 of which were distributed across 6 MS-DRGs that the technology most frequently mapped to. The manufacturer noted that this claims volume represents less than 1 percent of the over 10,000 patient discharge claims for these 6 MS-DRGs. As a result of this low claims volume, both objectively and relative to the frequency of the relevant MS-DRGs on patient discharge claims, the manufacturer believed it is very unlikely that the fundamental objective of the new technology add-on payment to provide time to collect sufficient data to recalibrate MS-DRG weights to “*fully reflect the cost of the technology*” can be achieved by discontinuing the new technology add-on payment status for BLINCYTO®.

The manufacturer stated that it recognizes that CMS has a general practice (not set forth in its regulations) for technologies that have had new technology add-on payments for 2 fiscal years to only provide an additional year of new technology add-on payment if the 3-year anniversary of the product's FDA approval is during the second half of the fiscal year unless CMS receives evidence of a documented delay in making the product available on the market. The manufacturer believed that this general practice should not be followed here because of the paucity of data on BLINCYTO®. The manufacturer noted that CMS does not apply the general practice when there is a delay in market availability, ostensibly because that delay has an impact on the availability of data for use in inpatient hospital payment rate setting. The manufacturer asserted that when there is a paucity of data from the first of the 2 years of the new technology add-on payment, CMS should continue making new technology add-on payments for a third year to ensure that when it incorporates the item into the inpatient payment system, it has enough data to do so.

Further, the manufacturer noted that BLINCYTO® demonstrated significant improvements in overall survival, complete remission, and event-free survival in comparison to standard of care chemotherapy in adult patients with Ph-R/R B-cell precursor ALL. The manufacturer stated that extending new technology add-on payments for BLINCYTO® would continue to support access to this novel therapy.

Response: We thank the commenters for their comments. With regard to the technology's newness, as discussed in the FY 2005 IPPS final rule (69 FR 49003), the timeframe that a new technology can be eligible to receive new technology add-on payments begins when data become available. As the manufacturer noted in its comments, § 412.87(b)(2) clearly states that a medical service or technology may be considered new within 2 or 3 years after the point at which data begin to become available reflecting the ICD-9-CM code (or, as finalized earlier in this section, the inpatient hospital code) assigned to the new service or technology (depending on when a new code is assigned and data on the new service or technology become available for DRG recalibration). Section 412.87(b)(2) also specifies that after CMS has recalibrated the DRGs, based on available data, to reflect the costs of an otherwise new medical service or technology, the medical service or technology will no longer be considered “new” under the criterion of the section. The period of newness does not necessarily start with the approval date for the medical service or technology, and does not necessarily start with the issuance of a distinct code. Instead, it begins with availability of the product on the U.S. market, which is when data become available. As the manufacturer noted, we considered the newness period for BLINCYTO® to commence when the product gained entry onto the U.S. market on December 17, 2014. We have consistently applied this standard, and believe that it is most consistent with the purpose of new technology add-on payments.

While CMS may consider a documented delay in a technology's availability on the U.S. market in determining when the newness period begins, its policy for determining whether to extend new technology add-on payments for a third year generally applies regardless of the claims volume for the technology after the start of the newness period. Similar to our discussion earlier and in the FY 2006 IPPS final rule (70 FR 47349), we do not believe that case volume is a relevant consideration for making the determination as to whether a product is “new.” Consistent with the statute, a technology no longer qualifies as “new” once it is more than 2 to 3 years old, irrespective of how frequently it has been used in the Medicare population. Similarly, this same determination is applicable no matter how many MS-DRGs the technology is spread across. Therefore, if a product is more than 2

to 3 years old, we consider its costs to be included in the MS-DRG relative weights whether its use in the Medicare population has been frequent or infrequent.

Based on the reasons stated above, BLINCYTO® is no longer considered “new” for purposes of new technology add-on payments for FY 2018. We are finalizing our proposal to discontinue making new technology add-on payments for BLINCYTO® for FY 2018.

6. FY 2018 Applications for New Technology Add-On Payments

We received nine applications for new technology add-on payments for FY 2018. Three applicants withdrew their applications prior to the issuance of the FY 2018 IPPS/LTCH PPS proposed rule. Two applicants, Kite Pharma and IsoRay Medical, Inc., in conjunction with GammaTile LLC, withdrew their applications for KTE-C19 (axicabtagene ciloleucel) and GammaTile™, respectively, prior to the issuance of this FY 2018 IPPS/LTCH PPS final rule.

In addition, in accordance with the regulations under § 412.87(c), applicants for new technology add-on payments must have FDA approval or clearance by July 1 of each year prior to the beginning of the fiscal year that the application is being considered. One applicant, Celator Pharmaceuticals, Inc. for VYXEOS™, did not receive FDA approval for its technology by July 1, 2017. Therefore, VYXEOS™ is not eligible for consideration for new technology add-on payments for FY 2018. We are not including in this final rule the descriptions and discussions of this application which was included in the FY 2018 IPPS/LTCH PPS proposed rule. We note that we did receive public comments on this application. However, because VYXEOS™ is ineligible for new technology add-on payments for FY 2018 because it did not receive FDA approval by July 1, 2017, we are not summarizing nor responding to public comments regarding the new technology criteria for this application in this final rule. We note that the applicant did request that we make an exception to the July 1 deadline if it were to receive FDA approval prior to the beginning of FY 2018. However, we did not propose any changes to the regulations at § 412.87(c), and we believe the request is out of scope for this final rule.

A discussion of the three remaining applications is presented below.

a. Bezlotoxumab (ZINPLAVA™)

Merck & Co., Inc. submitted an application for new technology add-on payments for ZINPLAVA™ for FY 2018. ZINPLAVA™ is indicated to reduce

recurrence of *Clostridium difficile* infection (CDI) in adult patients who are receiving antibacterial drug treatment for a diagnosis of CDI who are at high risk for CDI recurrence. ZINPLAVA™ is not indicated for the treatment of the presenting episode of CDI and is not an antibacterial drug.

Clostridium difficile (*C-diff*) is a disease-causing anaerobic, spore forming bacteria that can affect the gastrointestinal (GI) tract. Some people carry the *C-diff* bacterium in their intestines, but never develop symptoms of an infection. The difference between asymptomatic colonization and pathogenicity is caused primarily by the production of an enterotoxin (Toxin A) and/or a cytotoxin (Toxin B). The presence of either or both toxins can lead to symptomatic CDI, which is defined as the acute onset of diarrhea with a documented infection with toxigenic *C-diff*, or the presence of either toxin A or B. The GI tract contains millions of bacteria, commonly referred to as “normal flora” or “good bacteria,” which play a role in protecting the body from infection. Antibiotics can kill these good bacteria and allow the *C-diff* bacteria to multiply and release toxins that damage the cells lining the intestinal wall, resulting in a CDI. CDI is a leading cause of hospital-associated gastrointestinal illnesses. Persons at increased risk for CDI include people who are treated with current or recent antibiotic use, people who have encountered current or recent hospitalization, people who are older than 65 years, immunocompromised patients, and people who have recently had a diagnosis of CDI. CDI symptoms include, but are not limited to, diarrhea, abdominal pain, and fever. CDI symptoms range in severity from mild (abdominal discomfort, loose stools) to severe (profuse, watery diarrhea, severe pain, and high fevers). Severe CDI can be life-threatening and, in rare cases, can cause bowel rupture, sepsis and organ failure. CDI is responsible for 14,000 deaths per year in the United States.

C-diff produces two virulent, pro-inflammatory toxins, Toxin A and Toxin B, which target host colonocytes (that is, large intestine endothelial cells) by binding to endothelial cell surface receptors via combined repetitive oligopeptide (CROP) domains. These toxins cause the release of inflammatory cytokines leading to intestinal fluid secretion and intestinal inflammation. The applicant asserted that ZINPLAVA™ targets Toxin B sites within the CROP domain rather than the *C-diff* organism itself. According to the applicant, by targeting *C-diff* Toxin B,

ZINPLAVA™ neutralizes Toxin B, prevents large intestine endothelial cell inflammation, symptoms associated with CDI, and reduces the recurrence of CDI. ZINPLAVA™ binds to sites within the CROP domain, which prevents Toxin B from binding to the host cell, thereby preventing the inflammation and symptoms associated with CDI. ZINPLAVA™ is used concomitantly with standard of care (SOC) antibiotics. Typical treatment of CDI includes antibiotic therapy using vancomycin, metronidazole, fidaxomicin, or other antibiotics. Alternative therapies include fecal microbiota transplant (FMT) and the use of probiotics.

The primary goal of CDI treatment is resolving the infection. Antibacterial drug treatment remains the cornerstone of treatment of CDI. However, this treatment option alone may not be adequate for patients diagnosed with recurrent CDI. A major concern with respect to a CDI is that even when treatment with an antibacterial drug of a primary infection is successful, generally, 25 percent to 30 percent of patients experience a recurrence of the infection within days or weeks of the presenting episode's symptom resolution. The risk of recurrence increases to 65 percent with subsequent CDI episodes. Disease recurrence results from continued disruption of the intestinal microbiota by SOC CDI antibiotics (or use of other antibiotics used to treat non-gastrointestinal conditions), combined with persistence of resistant *C-diff* spores (relapse) or acquisition of new spores from the environment (reinfection).

Antibacterial drug use may inhibit the intestinal microbiota from reestablishing itself, allowing *C-diff* spores potentially to germinate and colonize the intestines when the antibacterial drug is discontinued. If regrowth of *C-diff* overtakes the reestablishment of the intestinal microbiota, then spore germination and toxin production from vegetative *C-diff* may restart the cycle of CDI and the need for subsequent treatment. These challenges highlight the need for nonantibiotic therapies. ZINPLAVA™ targets Toxin B rather than the *C-diff* bacteria itself. According to the applicant, unlike antibacterial drugs, ZINPLAVA™ is a human monoclonal antibody and does not affect the microbiota. According to the applicant, ZINPLAVA™ neutralizes *C-diff* Toxin B and reduces recurrence of CDI. ZINPLAVA™ is given concomitantly during the course of SOC antibacterial treatment of a CDI.

With respect to the newness criterion, ZINPLAVA™ received FDA approval on October 21, 2016, for reduction of

recurrence of CDI in patients receiving antibacterial drug treatment for CDI and who are at high risk of CDI recurrence. ZINPLAVA™ became commercially available on February 10, 2017. Therefore, the newness period for ZINPLAVA™ began on February 10, 2017.

The applicant submitted a request for a unique ICD-10-PCS procedure code and was granted approval for the following procedure codes: XW033A3 (Introduction of bezlotoxumab monoclonal antibody, into peripheral vein, percutaneous approach, New Technology Group 3) and XW043A3 (Introduction of bezlotoxumab monoclonal antibody, into central vein, percutaneous approach, New Technology Group 3).

As discussed above, if a technology meets all three of the substantial similarity criteria, it would be considered substantially similar to an existing technology and would not be considered “new” for purposes of new technology add-on payments.

With regard to the first criterion, whether a product uses the same or a similar mechanism of action to achieve a therapeutic outcome, according to the applicant, ZINPLAVA™ is a human monoclonal antibody with an innovative mechanism of action. The applicant asserted that ZINPLAVA™ is a novel treatment, with a unique mechanism of action relative to SOC CDI antibiotics that target *C-diff*. The applicant explained that ZINPLAVA™ is the first human monoclonal antibody that targets and neutralizes *C. diff* Toxin B because the technology specifically binds to and neutralizes *C-diff* Toxin B (which is an exotoxin that contributes to intestinal tissue damage and immune system effects that underlie the symptoms of CDI) and inhibits binding of the toxin to mammalian cells. The applicant further asserted that the administration of ZINPLAVA™, in addition to standard of care antibacterial drug treatment, reduces CDI recurrence by providing passive immunity against Toxin B resulting from persistent or newly acquired *C-diff* spores. According to the applicant, ZINPLAVA™ is the only FDA-approved treatment indicated for reducing CDI recurrence as adjunctive therapy in adult patients who are receiving antibacterial drug treatment for CDI and who are at high risk for CDI recurrence.

With respect to the second criterion, whether a product is assigned to the same or a different MS-DRG, the applicant maintained that patients who may be eligible to receive treatment using ZINPLAVA™ could be in an acute-care hospital setting for a wide

variety of reasons and may develop a secondary CDI as a hospital-acquired infection and, therefore, cases representing patients that may be eligible for treatment using the technology can map to a wide range of MS-DRGs. ZINPLAVA™ is indicated for patients receiving SOC treatment for CDI and who are at a high risk for CDI recurrence. In order to identify the range of MS-DRGs for which cases representing patients that may be eligible for treatment using ZINPLAVA™ may map to, the applicant identified all MS-DRGs containing cases that represent patients presenting with CDI as a primary or secondary diagnosis. The applicant used FY 2015 MedPAR data to map the identified cases to 543 MS-DRGs, with 12 MS-DRGs accounting for approximately 40 percent of all cases. The applicant segmented these cases based on age because patients 65 years and older are at higher risk for CDI recurrence. Based on the FY 2015 MedPAR data, MS-DRG distribution was found to be similar, irrespective of CDI status (primary or secondary), for patients over 65 years of age and those under 65 years of age. The top 7 MS-DRGs across both age groups account for nearly 54 percent (over 65 years of age) and 49 percent (under 65 years of age). The applicant further segmented these cases to determine if status of CDI as a primary or secondary diagnosis influenced MS-DRG mapping. Regardless of age, when CDI is the primary diagnosis, approximately 98 percent of patient cases map to the same 3 MS-DRGs: MS-DRG 371 (Major Gastrointestinal Disorders and Peritoneal Infections with MCC); MS-DRG 372 (Major Gastrointestinal Disorders and Peritoneal Infections with CC); and MS-DRG 373 (Major Gastrointestinal Disorders and Peritoneal Infections without CC/MCC), respectively. Potential cases representing patients who may be eligible for treatment with ZINPLAVA™ would be assigned to the same MS-DRGs as cases representing patients who receive SOC treatment for a diagnosis of CDI.

With respect to the third criterion, whether the new use of the technology involves the treatment of the same or similar type of disease and the same or similar patient population, according to the applicant, ZINPLAVA™ is administered concomitantly or as adjunctive therapy with SOC antibacterial treatment for recurrent CDI. The applicant stated that ZINPLAVA™ is indicated to reduce recurrence of CDI in adult patients at

high risk of CDI recurrence who are receiving antibacterial drug treatment for CDI. According to the applicant, the addition of ZINPLAVA™ to SOC antibacterial drug treatment reduces CDI recurrence by providing passive immunity against Toxin B resulting from persistent or newly acquired *C-diff* spores. ZINPLAVA™ is used to reduce recurrence of the same or similar type of disease (CDI) and to treat a similar patient population receiving SOC therapy for the treatment of recurrent CDI.

We stated in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19879) that, based on the applicant's statements presented above, because ZINPLAVA™ has a unique mechanism of action, we did not believe that the technology is substantially similar to existing technologies and, therefore, meets the newness criterion. We invited public comments on whether ZINPLAVA™ meets the newness criterion.

Comment: The applicant submitted comments in agreement with CMS' belief that ZINPLAVA™ meets the newness criterion for new technology add-on payments. The applicant reiterated that ZINPLAVA™ is the only FDA approved treatment indicated for reducing CDI recurrence as adjunctive therapy in adult patients who are receiving antibacterial drug treatment for CDI and who are at risk for CDI recurrence. The applicant agreed that ZINPLAVA™ is not substantially similar to existing technologies and, therefore, meets the newness criterion.

Response: We appreciate the comments submitted by the applicant on whether ZINPLAVA™ meets the newness criterion. After review of the information provided by the applicant and consideration of its comments, we believe that ZINPLAVA™ meets the newness criterion and we consider the technology to be "new" as of February 10, 2017, when the technology became commercially available.

With regard to the cost criterion, the applicant conducted the following analysis to demonstrate that the technology meets the cost criterion. In order to identify the range of MS-DRGs that cases representing potential patients who may be eligible for treatment using ZINPLAVA™ may map to, the applicant identified all MS-DRGs for patients diagnosed with CDI as a primary or secondary diagnosis. Specifically, the applicant searched the FY 2015 MedPAR file for claims that included target patients over 65 years of age and identified cases reporting diagnoses of CDI by ICD-9-CM diagnosis code 008.45 (Intestinal infection due to *Clostridium difficile*) as

a primary or secondary diagnosis. This resulted in 139,135 cases across 543 MS-DRGs, with approximately 40 percent of all cases mapping to the following 12 MS-DRGs: MS-DRG 177 (Respiratory Infections and Inflammations with MCC); MS-DRG 193 (Simple Pneumonia and Pleurisy with MCC); MS-DRG 291 (Heart Failure and Shock with MCC); MS-DRGs 371, 372, and 373 (Major Gastrointestinal Disorders and Peritoneal Infections with MCC, with CC, and without CC/MCC, respectively); MS-DRGs 682 and 683 (Renal Failure with MCC and with CC, respectively); MS-DRG 853 (Infectious and Parasitic Diseases with O.R. Procedure with MCC); MS-DRGs 870, 871, and 872 (Septicemia or Severe Sepsis with Mechanical Ventilation >96 Hours, with MCC, and without MCC, respectively).
