**SUPPLEMENTARY INFORMATION:** Animal drug sponsors are required to report annually to FDA the amount of antimicrobials sold or distributed for use in food-producing animals and provide species-specific estimates of the percentage of their drug product sales for use in any of the four major food-producing species (cattle, swine, chickens, and turkeys) identified on the approved product label (21 CFR 514.87(c)). FDA is announcing the availability of a proposed method for using a biomass denominator to adjust these sales data. The proposed method will provide estimates of annual antimicrobial drug sales adjusted for the size of the animal population (the animal biomass of each such species) potentially being treated with those drugs. The adjusted estimates will provide insight into broad shifts in the amount of antimicrobials sold for use in food-producing animals and give the Agency a more nuanced view of why sales increase or decrease over time in a manner that is specific to U.S. animal production. Such analysis will also support our ongoing efforts to encourage the judicious use of antimicrobials in food-producing animals to help ensure the continued availability of safe and effective antimicrobials for animals and humans.

Application of a biomass denominator to normalize antimicrobial sales data has been used internationally. In developing this proposal for applying a biomass denominator to antimicrobial sales data in the United States, FDA has considered methods being utilized and discussed in other countries. FDA's intent in publishing the proposed method is to initiate discussion with stakeholders on the biomass correction method FDA is considering, and to seek comment on the methodology and the utility of this type of data analysis.

### Federal Emergency Management Agency

**[Docket ID FEMA–2017–0002; Internal Agency Docket No. FEMA–B–1739]**

#### Changes in Flood Hazard Determinations

**AGENCY:** Federal Emergency Management Agency, DHS.

**ACTION:** Notice.

**SUMMARY:** This notice lists communities where the addition or modification of Base Flood Elevations (BFEs), base flood depths, Special Flood Hazard Area (SFHA) boundaries or zone designations, or the regulatory floodway (hereinafter referred to as flood hazard determinations), as shown on the Flood Insurance Rate Maps (FIRMs), and where applicable, in the supporting Flood Insurance Study (FIS) reports, prepared by the Federal Emergency Management Agency (FEMA) for each community, is appropriate because of new scientific or technical data. The FIRM, and where applicable, portions of the FIS report, have been revised to reflect these flood hazard determinations through issuance of a Letter of Map Revision (LOMR). The LOMR will be used by insurance agents and others to calculate appropriate flood insurance premium rates for new buildings and the contents of those buildings. For rating purposes, the currently effective community number is shown in the table below and must be used for all new policies and renewals.
