

population is expanding following the last treatment of the selected water. Once CRCT are well established, tiger trout will no longer be stocked and will disappear from the system over 4–5 years.

Monitoring. Monitoring will occur after both the first and second treatments to ensure all fish are removed throughout the proposed project area. Once the treatment is completed and CRCT, sculpin, mountain sucker, speckled dace and tiger trout are stocked back in the drainage, populations will be monitored every 5–10 years to ensure the native populations are well established.

Possible Alternatives

At this time, there are two alternatives that are being considered: Alternative 1 (No Action) and Alternative 2 (Proposed Action). Alternative 1 would not authorize the application of piscicide in the wilderness and associated suite of activities. Alternative 2 is described above. During the course of development of the Environmental Impact Statement it is possible that the public, Forest Service staff, or both will identify additional alternatives to be evaluated.

Lead and Cooperating Agencies

The Evanston-Mountain View Ranger District of the Uinta-Wasatch-Cache National Forest will be the lead agency preparing the Environmental Impact Statement. The Utah Division of Wildlife Resources will be a cooperating agency.

Responsible Official

Unless specified otherwise, the Regional Forester is responsible for approving all measures that implement Forest Service Manual direction on the use of other resources in wilderness. Specific responsibilities include approving the use of pesticides within wilderness.

The responsible official for this project is the Regional Forester for the Intermountain Region (R4).

Nature of Decision To Be Made

The decision to be made includes whether or not to approve the proposed suite of activities, in whole or in part, specifically: (1) Application of piscicide (“treatment”) within designated wilderness on National Forest System (NFS) land and neutralization outside of designated wilderness on NFS land; (2) seasonal and multi-year timing of the action; (3) method of transport for materials, equipment, and personnel to treatment areas; (4) closing public access to the stream during the

treatment; (5) restocking with CRCT, sculpin, mountain sucker, speckled dace, and tiger trout; (6) monitoring following treatment and neutralization; and, (7) what mitigation measures will be implemented. Because the majority of streams occur within wilderness, methodologies and activities selected for implementation must conform to special land use restrictions as much as possible.

Preliminary Issues

Preliminary issues that have been identified include potential impacts to fisheries and aquatic resources, health and human safety, wilderness and other undeveloped lands, wildlife (terrestrial), soil and water resources, wilderness, and wildlife. Additional issues may arise based on comments received from the public during the scoping and comment processes.

Permits or Licenses Required

The Utah Division of Wildlife Resources would submit a Pesticide Use Proposal as well as a National Pollutant Discharge Elimination System to the Regional Forester for approval. These permits are required to allow application of the piscicide to targeted waters within wilderness.

Scoping Process

This notice of intent initiates the scoping process, which guides the development of the Environmental Impact Statement. In addition to and concurrent with publication of this notice of intent, a public scoping document was published to the project-specific information page on the Uinta-Wasatch-Cache National Forest Web site at: <https://www.fs.usda.gov/project/?project=51924>, and a postcard was sent to individuals, entities, and organizations informing them that the notice of intent and public scoping document had been published. Comments may be submitted in a variety of ways, specifically: Via regular mail, hand-delivered or express delivered, via fax, and via email. Comments sought include specific comments to the proposed action, appropriate information that could be pertinent to analysis of environmental consequences, identification of significant issues, and identification of potential alternatives.

It is important that reviewers provide their comments at such times and in such manner that they are useful to the agency’s preparation of the Environmental Impact Statement. Therefore, comments should be provided prior to the close of the scoping period and should clearly

articulate the reviewer’s concerns and contentions.

Comments received in response to this solicitation, including names and addresses of those who comment, will be part of the public record for this proposed action. Comments submitted anonymously will be accepted and considered, however.
