Affected applicants and licensees are required to provide the requested information to the Commission and other third parties whenever they seek authority to provide service in the 28 GHz band. The frequency of filing is, in general, determined by the applicant or licensees. If this information is compiled less frequently or not filed in conjunction with our rules, applicants and licensees will not obtain the authorization necessary to provide telecommunications services. Furthermore, the Commission would not be able to carry out its mandate as required by statute and applicants and licensees would not be able to provide service effectively.

OMB Control Number: 3060-1139.

Title: FCC Consumer Broadband Services Testing and Measurement.

Form Number: N/A.

Type of Review: Extension of a currently approved collection.

Respondents: Businesses or other for-profit and individuals or households.

Number of Respondents and Responses: 501,020 respondents and 501,020 responses.

Estimated Time per Response: 1 hour-200 hours.

Frequency of Response: Biennial reporting requirement and third party disclosure requirement.

Obligation to Respond: Voluntary. Statutory authority for this information collection is contained in the Broadband Data Improvement Act of 2008, Public Law 110-385, Stat 4096, 103(c)(1).

Total Annual Burden: 46,667 hours.

Total Annual Costs: No Cost.

Nature and Extent of Confidentiality:

All participation in the Measuring Broadband America Program is voluntary and any participant can decline to participate at any time. No volunteers' personally identifying information (PII) such as name, phone number, or street addresses will be transmitted to the Commission from the contractor as a matter of vendor policy and agency privacy policy. SamKnows maintains a series of administrative, technical, and physical safeguards to protect against the transmission of PII. At point of registration, individuals will be given full disclosure in a "privacy statement" highlighting what information will be collected. Fixed Broadband ISP Partners receive PII about volunteers to confirm the validity of the information against their subscription records, but will be bound by a non-disclosure agreement that will maintain various administrative, technical and physical safeguards to protect the information and limit its use. Mobile Broadband ISP Partners have access to five kinds of information, including location and time of data collection, device type and operating system version, cellular performance and characteristics, and download, upload speed and other broadband performance, also restricted by a non-disclosure agreement that will maintain various administrative, technical and physical safeguards to protect the information and limit its use. ISP Partners providing support to the testing program will likewise be bound to the same series of administrative, technical and physical safeguards developed by SamKnows. In addition all third parties supporting the program directly will be bound by a "Code of Conduct" to ensure all participate and act in good faith and with other legally enforceable documents such as non-disclosure agreements.

Privacy Act Impact Assessment: This information collection effects individuals or households. However, personally identifiable information (PII) such as name, phone number, or street addresses is not being collected by, made available to or made accessible by the Commission but instead by third parties including SamKnows, a third party contractor, and Internet Service Provider (ISP) Partners.

Needs and Uses: The Commission will submit this expiring collection after

this 60-day comment period to the Office of Management and Budget (OMB) to obtain the full three-year clearance.

This study's collection of information on actual speeds and performance of fixed and mobile broadband connections delivered to consumers by ISPs has been reported to be of great value to academic researchers, manufacturers and technology providers, broadband providers, public interest groups and other diverse stakeholders. Validation of fixed broadband subscribed speeds as opposed to actual speeds by participating ISPs remains unique to this program and provides a context for measured speeds. Mobile broadband performance information is measured using the FCC Speed Test app for Android and iPhone devices to test the upload and download speed, latency and packet loss, as well as the wireless performance characteristics of the broadband connection and the kind of handsets and versions of operating systems tested. Information the FCC Speed Test App ("Application") collects is limited to information used to measure volunteers' mobile broadband service and no personally identifiable information, such as subscribers' name, phone number or unique identifiers associated with a device is collected. Software-based tools and online tools exist that can test consumer's broadband connections, including a set of consumer tools launched by the FCC in conjunction with the National Broadband Plan. However, these tools track speeds experienced by consumers, rather than speeds delivered directly to a consumer by an ISP. The distinction is important for supporting Agency broadband policy analysis, as ISPs advertise speeds and performance delivered rather than speeds experienced, which suffers from degradation outside of an ISP's control.

No other dedicated panel of direct fixed and mobile broadband performance measurement using publicly documented methodologies using free and add-free technologies exists today in the country. The program will continue to support existing software-based tools and online tools but the focus of the program will remain the direct measurement of broadband performance delivered to the consumer. The collection effort also has specific elements focused on further network performance statistics, time of day parameters, and other elements affecting consumers' broadband experience that are not tracked elsewhere. The information to be confirmed by ISP Partners about their subscribers or

technical and market data regarding the broadband services they provide is unavailable from other sources.
