

space use and value existing resources, (2) needs that can be addressed with data access, research, and analysis, and (3) opportunities to better engage stakeholders on the use and development of these resources. Over the past three years, a variety of high-quality informational resources on solar energy technology have been created by a diverse group of organizations, including universities, consultants, companies, technology developers, and the national laboratories. By cataloguing the specific information resources that the industry relies on, SETO hopes to better understand the vision driving innovation and identify gaps in knowledge creation or exchange. SETO is also interested in understanding the channels through which stakeholders access information so that future SETO-funded analysis can be disseminated as widely and effectively as possible. In addition, SETO is interested in understanding to what degree stakeholders are interested in being engaged in the development process of new tools and resources.
