

candidates were identified as potentially cost-beneficial based on this additional analysis. Therefore, there are no changes to the conclusions of the NRC staff's STP SAMA analysis provided at Appendix F of the STP FSEIS.

Annual Updates to the STP License Renewal Application

As required by 10 CFR 54.21(b), each year following submittal of a license renewal application, an amendment to the application must be submitted by the license renewal applicant that identifies any change to the current licensing basis that materially affects the contents of the application, including the Updated Final Safety Analysis Report (UFSAR) supplement. The NRC staff's review of STPNOC's submittals for 2014, 2015, and 2016, (ADAMS Accession Nos. ML14308A073, ML15313A175, and ML16190A135) found no new and significant information within the context of 10 CFR 51.92(a)(2) that would change STPNOC's environmental report or that would otherwise change the NRC staff's environmental impact determinations as presented in the STP FSEIS.

In addition, on April 25, 2017, STPNOC submitted an update to the environmental report portion of its license renewal application comprising a revised summary of environmental authorizations for current STP operations (ADAMS Accession No. ML17116A324). Based on its review, the NRC staff finds that STPNOC continues to maintain valid permits and related environmental authorizations governing its operations and that the submittal does not constitute new and significant information regarding STP's affected environment or operations.

MITIGATION MEASURES

The NRC has taken all practicable measures within its jurisdiction to avoid or minimize environmental harm from the proposed action (license renewal). The FSEIS concludes that the continued operation of STP would have SMALL environmental impacts in all resources areas, except for electric shock, which is SMALL to MODERATE. Pursuant to 10 CFR 51.45(c), STPNOC has separately considered mitigation measures to reduce or avoid adverse impacts of electric shock from its transmission lines at STP with a combination of options, as described in Section 4.8.4 of the STP FSEIS.

The NRC is not imposing any license conditions in connection with mitigation measures for the continued operation of STP. However, STP is subject to requirements imposed by

other Federal, State, and local agencies. For example, the TCEQ-issued Texas Pollutant Discharge Elimination System (TPDES) permits issued to STPNOC imposes effluent limitations and monitoring requirements as well as best management practices to ensure that impacts to water quality and aquatic life are minimized. The NRC is not requiring any new environmental monitoring programs outside what is required for the TPDES permits or otherwise required of the licensee under NRC's regulations, as described in the STP FSEIS.

DETERMINATION:

Based on the NRC staff's independent review, analysis, and evaluation contained in the license renewal FSEIS; careful consideration of all of the identified social, economic, and environmental factors, and input received from other agencies, organizations, and the public; and consideration of mitigation measure outlined above, the NRC has determined that the requirements of Section 102 of NEPA and 10 CFR 54.29(b) have been satisfied.

Dated at Rockville, Maryland, this 19th day of September, 2017,

For the Nuclear Regulatory Commission,
Joseph E. Donoghue, Deputy Director,
Division of License Renewal,
Office of Nuclear Reactor Regulation.
