and sablefish in both State waters and in the EEZ.

eLandings is a web-based application used by vessels and processors to report groundfish, crab, Pacific halibut, and sablefish production and landings data. Processors with limited internet access, such as the at-sea fleet, use eLandings client desktop software named seaLandings, provided by NMFS, and submit the required reports as email attachments or via direct transmit over the Internet. Once data are entered and submitted, the User must print daily through eLandings each landing report, production report, logbook report, and if an IFQ delivery, each IFQ receipt. The parties to the information must acknowledge the accuracy of the printed reports by signing them and entering the date signed. In addition, the User must make the printed copies available upon request of NMFS observers and authorized officers.

tLandings is a software application for tender vessels that records landings data on a USB flash drive and creates a printable fish ticket. The fish ticket is printed on board the tender vessel and signed by the delivering catcher vessel operator. When the tender vessel delivers to the shoreside processor, the shoreside processor uploads the landing information on the USB flash drive into eLandings.

Some of the benefits of IERS include improved data quality, automated processing of data, improved process for correcting or updating information, availability of more timely data for fishery managers, and reduction of duplicative reporting of similar information to multiple agencies.
