

or follow any new or changed items and extant sections, which are topically related. Researchers also conduct this testing to identify redundant and overlapping questions. Extant sections of the questionnaire unrelated to new items do not require testing. The demographic questions on the core

BRFSS survey are included on each field test.

CDC will submit change requests to OMB annually to gain approval to implement modifications identified in field tests. Researchers typically conduct field tests in a single state with appropriate computer-assisted telephone interview (CATI) capability.

Individuals who participate in field-testing are drawn from a different sample than individuals who participate in the BRFSS surveys. Participation is voluntary and there is no cost to participate. The average time burden per response will be 22 minutes. The total time burden across all respondents will be approximately 241,518 hours.
