Segmented Metallic Guidewires

Description of Technology: The invention pertains to segmented metallic guidewires that are suitable for MRI catheterization. Guidewires contain plurality of short conductive metallic segments that are individually short enough to not resonate during MR imaging. The conductive segments are electrically insulated from each other and mechanically coupled together end-to-end via connectors, such as stiffness matched connectors, to provide a sufficiently long, strong, and flexible guidewire for catheterization that is non-resonant during MRI.

Potential Commercial Applications: Endovascular interventions.
