SUPPLEMENTARY INFORMATION:

Title: Mandatory Reliability Standards: Reliability Standard CIP–014.

OMB Control No.: 1902–0274.

Type of Request: Three-year extension of the FERC–725U information collection requirements with no changes to the reporting requirements.

Abstract: Reliability Standard CIP–014–2¹ requires applicable transmission owners and transmission operators to identify and protect transmission stations and transmission substations, and their associated primary control centers that if rendered inoperable or damaged as a result of a physical attack could result in instability, uncontrolled separation, or cascading within an Interconnection.

Transmission owners and transmission operators must keep data or evidence to show compliance with the standard for three years unless directed by its Compliance Enforcement Authority. If a responsible entity is found non-compliant, it must keep information related to the non-compliance until mitigation is complete and approved, or for the three years, whichever is longer.

Type of Respondents: Transmission owners (TO) and transmission operators (TOP).

*Estimate of Annual Burden:*² The Commission estimates the annual public reporting burden for the information collection as:

¹ Reliability Standard CIP–014–2 was implemented by the letter Order in Docket No. RD15–4–000 issued on 7/14/2015. Docket No. RD15–4–000 was not submitted to OMB because it did not implicate the Paperwork Reduction Act. The revised standard became effective on 10/2/2015 and is now being included in the FERC–725U information collection.

² Burden is defined as the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. For further explanation of what is included in the information collection burden, reference 5 Code of Federal Regulations 1320.3.
