

directionalize their signals during some or all of the broadcast day in order to avoid interference with other AM stations. Maintaining a directional signal pattern can be technically complex, time-consuming, and expensive. Such stations are subject to a variety of rules requiring signal strength measurements and other engineering analyses to ensure compliance with their authorizations.

In the *AMR Third R&O*, the FCC eliminated, clarified, or eased several of the rules governing AM stations using directional antenna arrays, which comprise almost 40 percent of all AM stations. First, the FCC revises 47 CFR 73.154(a) to relax the rule on submission of partial proofs of performance of directional AM antenna arrays by eliminating the requirement to take measurements on non-monitored radials adjacent to monitored radials. Next, the FCC modified several rules pertaining to AM stations that use Method of Moments (MoM) models of directional array performance. MoM modeling allows broadcasters to verify antenna system performance through computer modeling, as opposed to sending engineers in the field to take field strength measurements. Thus, a proof using a MoM model is less expensive than taking field strength measurements of an AM station's directional pattern. Specifically, the FCC: (1) Revised 47 CFR 73.151(c)(1)(ix) to eliminate the requirement of obtaining a registered surveyor's certification, provided that no new towers are being added to an existing AM array; (2) added 47 CFR 73.151(c)(1)(x) to extend the exemption (of having to file a new proof with the FCC) to any AM tower modification that does not affect the modeled values used in the previously submitted license proof; (3) revised 47 CFR 73.151(c)(3) to retain the current requirement for submission of reference field strength measurements in the initial license application, but eliminated the requirement to submit additional reference field strength measurements in subsequent license applications; and (4) revised 47 CFR 73.155 to eliminate the requirement for biennial recertification of the performance of a directional pattern licensed pursuant to a MoM proof, except when system components have been repaired or replaced.

SUPPLEMENTARY INFORMATION:**A. Purpose**

When the Government awards a cost-reimbursement construction contract, the contractor must submit to the contracting officer—and keep current a chart showing the general executive and administrative organization—the personnel to be employed in connection with the work under the contract, and their respective duties. The chart is used in the administration of the contract and as an aid in determining cost. The chart is used by contract administration personnel to assure the work is being properly accomplished at reasonable prices. The burden hours under FAR 52.236-19 were reduced based on FY 2017 FPDS data that showed the actual number of respondents for this type of requirement.
