

PART 200—PETITIONS FOR RULEMAKING

- 34. The authority citation for part 200 is revised to read as follows:

Authority: 52 U.S.C. 30107(a)(8), 30111(a)(8); 5 U.S.C. 553(e).

§ 200.2 [Amended]

- 35. Amend § 200.2(b)(5) by removing “999 E Street NW, Washington, DC 20463” and adding in its place “at the street address identified in the definition of “Commission” in § 1.2”.

PART 9002—DEFINITIONS

- 36. The authority citation for part 9002 continues to read as follows:

Authority: 26 U.S.C. 9002 and 9009(b).

§ 9002.3 [Amended]

- 37. Amend § 9002.3 by removing “, 999 E Street NW, Washington, DC 20463”.

PART 9008—FEDERAL FINANCING OF PRESIDENTIAL NOMINATING CONVENTIONS

- 38. The authority citation for part 9008 continues to read as follows:

Authority: 52 U.S.C. 30105, 30111(a)(8), 30125; 26 U.S.C. 9008, 9009(b).

§ 9008.2 [Amended]

- 39. Amend § 9008.2(a) by removing “, 999 E Street NW, Washington, DC 20463”.

PART 9032—DEFINITIONS

- 40. The authority citation for part 9032 continues to read as follows:

Authority: 26 U.S.C. 9032 and 9039(b).

§ 9032.3 [Amended]

- 41. Amend § 9032.3 by removing “, 999 E Street NW, Washington, DC 20463”.

Dated: December 19, 2017.

On behalf of the Commission.

Steven T. Walther,

Chairman, Federal Election Commission.

[FR Doc. 2017-27683 Filed 12-22-17; 8:45 am]

BILLING CODE 6715-01-P

DEPARTMENT OF TRANSPORTATION**Federal Aviation Administration****14 CFR Part 33**

[Docket No. FAA-2017-1110; Special Conditions No. 33-021-SC]

Special Conditions: Light Helicopter Turbine Engine Company (LHTEC), CTS800-4AT; 30-Minute All Engines Operating Power Rating

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final special conditions; request for comments.

SUMMARY: These special conditions are issued for the Light Helicopter Turbine Engine Company (LHTEC), CTS800-4AT turboshaft engine model. This engine model will have a novel or unusual design feature associated with a 30-minute all engines operating (AEO) power rating. The applicable airworthiness regulations do not contain adequate or appropriate safety standards for this design feature. These special conditions contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that established by the existing airworthiness standards.

DATES: The effective date of these special conditions is January 10, 2018. We must receive your comments by January 25, 2018.

ADDRESSES: Send comments identified by docket number FAA-2017-1110 using any of the following methods:

- *Federal eRegulations Portal:* Go to <http://www.regulations.gov> and follow the online instructions for sending your comments electronically.

- *Mail:* Send comments to Docket Operations, M-30, U.S. Department of Transportation (DOT), 1200 New Jersey Avenue SE, Room W12-140, West Building Ground Floor, Washington, DC 20590-0001.

- *Hand Delivery or Courier:* Take comments to Docket Operations in Room W12-140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

- *Fax:* Fax comments to Docket Operations at 202-493-2251.

Privacy: In accordance with 5 U.S.C 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to www.regulations.gov, as described in the system of records notice (DOT/ALL-

14 FDMS), which can be reviewed at www.dot.gov/privacy.

Docket: Background documents or comments received may be read at <http://www.regulations.gov> at any time. Follow the online instructions for accessing the docket or go to the Docket Operations in Room W12-140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Christopher Richards, AIR-6A2, Engine and Propeller Standards Branch, Aircraft Certification Service, 1200 District Avenue, Burlington, Massachusetts 01803-5213; telephone (847) 361-0837; facsimile (781) 238-7199; email Christopher.J.Richards@faa.gov.

SUPPLEMENTARY INFORMATION: The FAA has determined that notice of, and opportunity for prior public comment on, these special conditions is impracticable because these procedures would significantly delay issuance of the Type Certificate approval and thus, delivery of the affected engines.

In addition, the substance of these special conditions has been subjected to the notice and comment period in prior instances, and has been derived without substantive change from those previously issued. It is unlikely that prior public comment would result in a significant change from the substance contained herein. Therefore, because a delay would significantly affect the certification of the engine, which is imminent, the FAA has determined that prior public notice and comment are unnecessary and impracticable, and good cause exists for adopting these special conditions.

Comments Invited

We invite interested people to take part in this rulemaking by sending written comments, data, or views. The most helpful comments reference a specific portion of the special conditions, explain the reason for any recommended change, and include supporting data. We will consider all comments we receive by the closing date for comments. We may change these special conditions based on the comments we receive.

Background

On April 14, 2017, LHTEC applied for an amendment to Type Certificate No. TE2CH to include the new CTS800-4AT turboshaft engine model. The CTS800-4AT turboshaft engine model is a derivative model in the CTS800 turboshaft engine series. The CTS800-

4AT is a free-turbine turboshaft engine and will incorporate a novel or unusual design feature, which is a 30-minute AEO power rating. LHTEC has requested this rating to support helicopter search and rescue missions that require hover operations at high power.

Type Certification Basis

Under the provisions of Title 14, Code of Federal Regulations (14 CFR) § 21.101, LHTEC must show that the CTS800–4AT turboshaft engine model meets the applicable provisions of the regulations incorporated by reference in Type Certificate No. TE2CH or the applicable regulations in effect on the date of application for the change, except for earlier amendments as agreed upon by the FAA. The regulations incorporated by reference in the type certificate are commonly referred to as the “original type certification basis.” The regulations incorporated by reference in TE2CH are as follows: 14 CFR part 33 dated June 3, 1964, as amended by Amendments 33–1 through 33–18 inclusive.

If the Administrator finds that the applicable airworthiness regulations do not contain adequate or appropriate safety standards for the LHTEC, CTS800–4AT turboshaft engine model because of a novel or unusual design feature, special conditions are prescribed under the provisions of § 21.16.

Special conditions are initially applicable to the engine model(s) for which they are issued. Should the type certificate for that engine model be amended later to include any other engine model(s) that incorporates the same novel or unusual design feature, or should any other engine model(s) already included on the same type certificate be modified to incorporate the same novel or unusual design feature, the special conditions would also apply to the other engine model(s) under § 21.101.

The FAA issues special conditions, as defined in 14 CFR 11.19, in accordance with § 11.38, and they become part of the type certification basis under § 21.17 or § 21.101.

Novel or Unusual Design Features

The CTS800–4AT turboshaft engine model will incorporate a novel or unusual design feature, which is a 30-minute AEO power rating. This rating will be used to support helicopter search and rescue missions that require hover operations at high power.

Discussion

Under the provisions of 14 CFR 21.17(a)(1) and 21.101(a), LHTEC must show that the CTS800–4AT turboshaft engine meets the provisions of the applicable regulations in effect on the date of application, unless otherwise specified by the FAA. The type certification basis for the derivative model CTS800–4AT turboshaft engine is 14 CFR part 33, Amendments 33–1 through 33–18 effective August 19, 1996, which does not contain adequate safety standards concerning a 30-minute AEO power rating. Therefore, these special conditions will add requirements to the rating definition, instructions for continued airworthiness (ICA), engine ratings and operating limitations, instrument connection, and endurance testing.

The 30-minute time limit applies to each instance the rating is used. In addition, there is no limit to the number of times the rating can be used during any one flight, and there is no cumulative time limitation. The ICA requirement is intended to address the unknown nature of the actual rating usage and associated engine deterioration. LHTEC will assess the expected usage and publish ICAs with airworthiness limitations section (ALS) limits in accordance with those assumptions, such that engine deterioration is not excessive. Because the CTS800–4AT engine has a continuous one engine inoperative (OEI) rating and limits equal to or higher than the 30-minute AEO power rating, the test time performed at the continuous OEI rating may be credited toward the 25-hour requirement. However, test time spent at other rating elements of the test, such as takeoff or other OEI ratings (that may be equal to or higher), may not be counted toward the 25 hours of required running. Therefore, special conditions are issued under the provisions of 14 CFR 11.19, 21.16, and 21.17(a)(2).

Applicability

As discussed above, these special conditions are applicable to the CTS800–4AT turboshaft engine model. Should LHTEC apply at a later date for a change to the type certificate to include another model on the same type certificate incorporating the same novel or unusual design feature, the special conditions would apply to that model as well.

Conclusion

This action affects only certain novel or unusual design features on the CTS800–4AT turboshaft engine. It is not a rule of general applicability and

applies only to LHTEC, who requested FAA approval of this engine feature.

List of Subjects in 14 CFR Part 33

Aircraft, Engines, Aviation safety, Reporting and recordkeeping requirements.

The authority citation for these special conditions is as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701, 44702, 44704.

The Special Conditions

Accordingly, pursuant to the authority delegated to me by the Administrator, the following special conditions are issued as part of the type certification basis for LHTEC, CTS800–4AT turboshaft engine model.

In addition to the requirements of § 1.1, the following definition applies to this special condition: “Rated 30-minute all engines operating (AEO) power means the approved brake horsepower developed under static conditions at the specified altitude and temperature, and within the operating limitations under part 33, and limited in use to periods not exceeding 30 minutes each.”

In addition to the airworthiness standards in 14 CFR part 33, the following special conditions apply:

(a) Sections 33.1, Applicability and 33.3, General. As applicable, all documentation, testing and analysis required to comply with the part 33 type certification basis must account for the 30-minute AEO power rating, limits, and usage.

(b) Section 33.4, Instructions for Continued Airworthiness. In addition to the requirements of § 33.4, the ICA must:

(1) Include instructions to ensure that in-service engine deterioration due to the rated 30-minute AEO power usage will not exceed that assumed for establishing the engine maintenance program and all other approved ratings, including OEI, are available (within associated limits and assumed usage) for every flight.

(2) Validate the adequacy of the maintenance actions required under paragraph (b)(1) of this special condition.

(3) Include in the airworthiness limitations section any mandatory inspections and serviceability limits related to the use of the 30-minute AEO power rating.

(c) Section 33.7, Engine ratings and operating limitations. In addition to the ratings provided in § 33.7(a) and (c), a rated 30-minute AEO power and operating limitations are established relating to the following:

(1) Horsepower, torque, shaft speed (r.p.m), and gas temperature.

(2) The rated 30-minute AEO power and associated limitations must not exceed the rated takeoff power and associated limitations.

(d) Section 33.29, Instrument connection. If dependence is placed on instrumentation needed to monitor the rating's use, the applicant must make provision for the installation of that instrumentation, specify the provisions for instrumentation in the engine installation instructions, and declare them mandatory in the engine approval documentation.

(e) Section 33.87, Endurance test. In addition to the requirements of § 33.87(a) and (d), the overall test run must include a minimum of 25 hours of operation at rated 30-minute AEO power and limits, divided into periods of not less than 30 minutes, but not more than 60 minutes at rated 30-minute AEO power, and alternate periods at maximum continuous power or less.

(1) Each § 33.87(d) continuous OEI rating test period of 60 minutes duration, run at power and limits equal to or higher than the 30-minute AEO power rating, may be credited toward this requirement. Note that the test time required for the takeoff or other OEI ratings may not be counted toward the 25 hours of testing required at the 30-minute AEO power rating.

Issued in Burlington, Massachusetts, on December 15, 2017.

Robert J. Ganley,

Manager, Engine and Propeller Standards Branch, Aircraft Certification Service.

BILLING CODE 4910-13-P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 97

[Docket No. 31171; Amdt. No. 3780]

Standard Instrument Approach Procedures, and Takeoff Minimums and Obstacle Departure Procedures; Miscellaneous Amendments

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This rule amends, suspends, or removes Standard Instrument Approach Procedures (SIAPs) and associated Takeoff Minimums and Obstacle Departure Procedures for operations at certain airports. These regulatory actions are needed because of the adoption of new or revised criteria, or because of changes occurring in the

National Airspace System, such as the commissioning of new navigational facilities, adding new obstacles, or changing air traffic requirements. These changes are designed to provide for the safe and efficient use of the navigable airspace and to promote safe flight operations under instrument flight rules at the affected airports.

DATES: This rule is effective December 26, 2017. The compliance date for each SIAP, associated Takeoff Minimums, and ODP is specified in the amendatory provisions.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of December 26, 2017.

ADDRESSES: Availability of matter incorporated by reference in the amendment is as follows:

For Examination

1. U.S. Department of Transportation, Docket Ops-M30, 1200 New Jersey Avenue SE, West Bldg., Ground Floor, Washington, DC 20590-0001;

2. The FAA Air Traffic Organization Service Area in which the affected airport is located;

3. The office of Aeronautical Navigation Products, 6500 South MacArthur Blvd., Oklahoma City, OK 73169 or,

4. The National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202-741-6030, or go to: http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.

Availability

All SIAPs and Takeoff Minimums and ODPs are available online free of charge. Visit the National Flight Data Center online at nfdc.faa.gov to register. Additionally, individual SIAP and Takeoff Minimums and ODP copies may be obtained from the FAA Air Traffic Organization Service Area in which the affected airport is located.

FOR FURTHER INFORMATION CONTACT:

Thomas J. Nichols, Flight Procedure Standards Branch (AFS-420) Flight Technologies and Procedures Division, Flight Standards Service, Federal Aviation Administration, Mike Monroney Aeronautical Center, 6500 South MacArthur Blvd., Oklahoma City, OK 73169 (Mail Address: P.O. Box 25082 Oklahoma City, OK 73125) telephone: (405) 954-4164.

SUPPLEMENTARY INFORMATION: This rule amends Title 14, Code of Federal Regulations, Part 97 (14 CFR part 97) by amending the referenced SIAPs. The

complete regulatory description of each SIAP is listed on the appropriate FAA Form 8260, as modified by the National Flight Data Center (NFDC)/Permanent Notice to Airmen (P-NOTAM), and is incorporated by reference under 5 U.S.C. 552(a), 1 CFR part 51, and 14 CFR 97.20. The large number of SIAPs, their complex nature, and the need for a special format make their verbatim publication in the **Federal Register** expensive and impractical. Further, airmen do not use the regulatory text of the SIAPs, but refer to their graphic depiction on charts printed by publishers of aeronautical materials. Thus, the advantages of incorporation by reference are realized and publication of the complete description of each SIAP contained on FAA form documents is unnecessary. This amendment provides the affected CFR sections, and specifies the SIAPs and Takeoff Minimums and ODPs with their applicable effective dates. This amendment also identifies the airport and its location, the procedure and the amendment number.

Availability and Summary of Material Incorporated by Reference

The material incorporated by reference is publicly available as listed in the **ADDRESSES** section.

The material incorporated by reference describes SIAPs, Takeoff Minimums and ODPs as identified in the amendatory language for part 97 of this final rule.

The Rule

This amendment to 14 CFR part 97 is effective upon publication of each separate SIAP and Takeoff Minimums and ODP as amended in the transmittal. For safety and timeliness of change considerations, this amendment incorporates only specific changes contained for each SIAP and Takeoff Minimums and ODP as modified by FDC permanent NOTAMs.

The SIAPs and Takeoff Minimums and ODPs, as modified by FDC permanent NOTAM, and contained in this amendment are based on the criteria contained in the U.S. Standard for Terminal Instrument Procedures (TERPS). In developing these changes to SIAPs and Takeoff Minimums and ODPs, the TERPS criteria were applied only to specific conditions existing at the affected airports. All SIAP amendments in this rule have been previously issued by the FAA in a FDC NOTAM as an emergency action of immediate flight safety relating directly to published aeronautical charts.

The circumstances that created the need for these SIAP and Takeoff
