Pacific Island Fisheries; Western Pacific Stock Assessment Review; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; public meeting.

SUMMARY: NMFS and the Western Pacific Fishery Management Council (Council) will convene a Western Pacific Stock Assessment Review (WPSAR) of the draft 2017 benchmark stock assessments for Guam coral reef fish.

DATES: See **SUPPLEMENTARY INFORMATION** for meeting dates, times, and daily agenda.

ADDRESSES: The meeting will be held at the Council office, 1164 Bishop St., Suite 1400, Honolulu, HI 96813.

FOR FURTHER INFORMATION CONTACT: Michael Seki, Director, NMFS Pacific Islands Fisheries Science Center (PIFSC), tel 808-725-5360.

SUPPLEMENTARY INFORMATION: PIFSC scientists are conducting stock assessments on exploited Pacific Islands coral reef fish included in the Council's fishery ecosystem plans. These stocks are generally classified as data-poor because they lack reliable, long-term, catch and fishing effort data. Historically, the Council has recommended, and NMFS has approved, setting annual catch limits (ACLs) using a percentile of median historical catch levels and, more recently, a biomass-augmented catch-MSY (maximum sustainable yield) method has been applied.

In an effort to use additional available data sources for these stocks, PIFSC scientists have conducted new coral reef fish assessments using length composition data, abundance data from diver surveys, and certain key population demographic parameters related to growth, maturity, and longevity. PIFSC scientists have been implementing an approach that uses size structure data to obtain an estimate
