FOR FURTHER INFORMATION CONTACT:

Licensing information and copies of the patent applications listed below may be obtained by emailing the indicated licensing contact at the National Heart, Lung, and Blood, Office of Technology Transfer and Development Office of Technology Transfer, 31 Center Drive Room 4A29, MSC2479, Bethesda, MD 20892-2479; telephone: 301-402-5579. A signed Confidential Disclosure Agreement may be required to receive copies of the patent applications.

SUPPLEMENTARY INFORMATION: This notice is in accordance with 35 U.S.C. 209 and 37 CFR part 404 to achieve commercialization of results of federally-funded research and development. Foreign patent applications are filed on selected inventions to extend market coverage for companies and may also be available for licensing. A description of the technology follows.

Chimeric Antibodies Against Hepatitis B e-Antigen

Description of Technology: The invention relates to recombinant chimeric rabbit/human monoclonal antibody fragments (Fabs) against hepatitis B Virus e-antigen (HBeAg), notably Fab me6. Viral hepatitis is the seventh leading cause of death worldwide. Hepatitis B core antigen (HBcAg) forms an icosahedral structure containing the viral genome. Both the HBcAg and the HBeAg of interest here are expressed by two different start codons of the viral C gene. Unlike the related HBcAg which activates type 1 T helper (Th1) cells leading to immune attack, the HBeAg activates Th2 cells which promote immune tolerance. The long-term persistence of HBeAg is associated with the development of hepatocellular carcinoma. Conversely, HBeAg seroconversion (from HBeAg carrier to anti-HBeAg carrier) is a marker for successful therapy of chronically infected patients. The presently phage display engineered antibody Fab me6 shows higher sensitivity and selectivity against HBeAg compared to three commercial diagnostics kits tested; additionally, it also inhibits capsid assembly which is essential for viral replication; furthermore, it can also be fully humanized and has potential for anti-hepatitis B virus therapeutic interventions.

Potential Commercial Applications:

- Hepatitis B therapy.
- Hepatocellular carcinoma prophylaxis.

Development Stage:

- In vitro data available.

National Institute on Aging; Amended Notice of Meeting

Notice is hereby given of a change in the meeting of the National Advisory Council on Aging, January 23, 2018, 3:00 p.m. to January 24, 2018, 2:00 p.m., National Institutes of Health, Building

31, C Wing 6th Floor Conference Room 10, 9000 Rockville Pike, Bethesda, MD, 20892 which was published in the **Federal Register** on December 11, 2017, 82 FR 58212.

Because of the strong possibility that the government would be shut down during the scheduled council date, rescheduling would have been very difficult due to the very tight timing of initiatives whose concepts were expected to be approved at January council. NIA had arranged for Notices of their availability to be published by early February for April 17 deadline (for FY 2018 award). The institute made the decision to hold an abbreviated council via teleconference on Friday January 19th, prior to the midnight deadline to keep the government open. They were counseled to post this information on their IC website. The meeting is closed to the public.
