SUPPLEMENTARY INFORMATION:

I. Discussion

The NRC staff has prepared a regulatory analysis for the regulatory basis to support a rulemaking that would amend the NRC's regulations for the decommissioning of nuclear power reactors. The NRC's goals in amending these regulations would be to provide for an efficient decommissioning process; reduce the need for exemptions from existing regulations; address other decommissioning issues deemed relevant by the NRC staff; and support the principles of good regulation, including openness, clarity, and reliability. The NRC is recommending rulemaking in the areas of emergency planning, physical security, cyber security, drug and alcohol testing,

training requirements for certified fuel handlers, decommissioning trust funds, applicability of backfitting provisions, and offsite and onsite financial protection requirements and indemnity agreements. These revised requirements would formalize steps to transition a power reactor from operating status to decommissioning while reducing the need for exemptions and license amendments. The NRC staff is also recommending clarifying requirements regarding topics such as spent fuel management and environmental reporting.

Accompanying this rulemaking are updates to guidance that address aging management, the appropriate role of State and local governments in the decommissioning process, the level of NRC review of a licensee's Post-Shutdown Decommissioning Activities Report, the options for decommissioning, and the timeframe associated with decommissioning.

The regulatory analysis discusses the economic impact to the nuclear power industry, government, and society that would result from the rulemaking and guidance contemplated by the regulatory basis. The regulatory analysis discusses the cost benefit analysis that was completed for the various alternatives put forth by the staff, and shows that the staff's recommendation for rulemaking and guidance development is overall cost beneficial to the nuclear power industry, government, and society.

II. Cost Benefit Analysis Summary

The following table provides the quantified and non-quantified costs and benefits for the staff-recommended alternatives discussed in the regulatory basis for each area of decommissioning under specific decommissioning topics and regulatory approaches. The complete analysis discusses at length the NRC staff's process, alternatives considered, and evaluation of costs and benefits for each area of decommissioning.
