amount of reimbursement is made by the OSLTF to the state. If the information is not collected, the Coast Guard and the National Pollution Funds Center will be unable to justify the resulting expenditures, and thus be unable to recover costs from the parties responsible for the spill when they can be identified.

**Forms:** None.
**Respondents:** Governor of a state or their designated representative.
**Frequency:** On occasion.
**Hour Burden Estimate:** The estimated annual burden remains 03 hours a year.

**Authority:** The Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended.

James D. Roppel,
U.S. Coast Guard, Acting Chief, Office of Information Management.

**DEPARTMENT OF HOMELAND SECURITY**

**U.S. Customs and Border Protection**

**Notice of Issuance of Final Determination Concerning Certain Ethernet Gateway Products**

**AGENCY:** U.S. Customs and Border Protection, Department of Homeland Security.

**ACTION:** Notice of final determination.

**SUMMARY:** This document provides notice that U.S. Customs and Border Protection ("CBP") has issued a final determination concerning the country of origin of certain Ethernet gateway products known as AirLink gateways. Based upon the facts presented, CBP has concluded in the final determination that the United States is the country of origin of the AirLink gateways for purposes of U.S. Government procurement.

**DATES:** The final determination was issued on February 23, 2018. A copy of the final determination is attached. Any party-at-interest, as defined in 19 CFR § 177.22(d), may seek judicial review of this final determination within April 2, 2018.

**FOR FURTHER INFORMATION CONTACT:** Ross M. Cunningham, Valuation and Special Programs Branch, Regulations and Rulings, Office of Trade (202) 325–0034.

**SUPPLEMENTARY INFORMATION:** Notice is hereby given that on February 23, 2018, pursuant to subpart B of Part 177, U.S. Customs and Border Protection Regulations (19 CFR part 177, subpart B), CBP issued a final determination concerning the country of origin of certain Ethernet gateway products known as AirLink gateways, which may be offered to the U.S. Government under an undesignated government procurement contract. This final determination, HQ H250154, was issued under procedures set forth at 19 CFR Part 177, subpart B, which implements Title III of the Trade Agreements Act of 1979, as amended (19 U.S.C. 2511–18).

In the final determination, CBP concluded that, based upon the facts presented, the programming and downloading operations performed in the United States, using U.S.-origin software, substantially transform non-TAA country AirLink gateways. Therefore, the country of origin of the AirLink gateways is the United States for purposes of U.S. Government procurement.

Section 177.29, CBP Regulations (19 CFR 177.29), provides that a notice of final determination shall be published in the Federal Register within 60 days of the date the final determination is issued. Section 177.30, CBP Regulations (19 CFR 177.30), provides that any party-at-interest, as defined in 19 CFR 177.22(d), may seek judicial review of a final determination within 30 days of publication of such determination in the Federal Register.

Alice A. Kipel,
Executive Director, Regulations and Rulings, Office of Trade.

Re: U.S. Government Procurement; Country of Origin of Gateway Products; Substantial Transformation

Dear Mr. Segrist:

This is in response to your letter dated October 25, 2013, and your supplemental submissions dated February 27, 2014 and March 21, 2014, requesting a final determination on behalf of your client, Sierra Wireless ("Sierra"). Pursuant to subpart B of Part 177 of the U.S. Customs and Border Protection ("CBP") Regulations (19 C.F.R. Part 177). A meeting was held at our office on October 3, 2014, where you and your client explained the software development process and the product. A further submission dated April 18, 2017, was provided.

This final determination concerns the country of origin of Sierra’s secure Ethernet gateway products ("gateways"). We note that as a U.S. importer, Sierra is a party-at-interest within the meaning of 19 C.F.R. § 177.22(d)(1) and is entitled to request this final determination. Per your letter dated September 22, 2014, we have reviewed your request for confidentiality pursuant to 19 C.F.R. § 177.28(b)(7) with respect to the information submitted. As that information constitutes privileged or confidential matters, it has been bracketed and will be deleted from any published versions.

**FACTS:**

Sierra produces gateways that provide secure internet connectivity for mobile stations allowing a variety of enterprises, mainly law enforcement, to monitor their infrastructure and instruments by transmitting and receiving data from a central location. The gateways are designed for entities that require 24/7 unmanned operation of remote assets and broadband connectivity. The gateways are frequently installed in police cars and provide a 24/7 internet connection and allow police officers to access information stored in the central location. The gateway also acts as a firewall server, which ensures that the connection between the mobile station and the main office is secure and that unauthorized persons cannot access information transmitted over the internet. Sierra’s submissions include details on four different gateway products, branded “AirLink,” to be covered by this final determination: Gx400, Gx440, Ls300, and Es440. The different series of gateways are designed differently to meet the needs of a variety of customers, but they have the same functions and operate with the same software, referred to as Aleos.

The hardware components consist of a case/kit that holds the module, a printed circuit assembly (“PCA”) that includes a radio module, a decorative cover placed over the case/kit, and various nuts and screws to close the case/kit and hold the cover in place. All the hardware components are designed in the United States and produced and assembled in China. Sierra imports the completed gateways into the United States, where authorized retailers install the ALEOS software. Sierra states that, at the time of importation, the fully assembled gateway is not functional because it does not contain the ALEOS software. Sierra also states that the gateway in its condition as imported has only the basic ability to communicate with a software installation tool to facilitate the download of the ALEOS software. The radio module contains firmware to control its internal function of sending and receiving data to/from the network, which cannot take place until the ALEOS software is loaded onto the gateway. Sierra states that the PCA design and the firmware in the radio module are proprietary and are designed to work only with the ALEOS software and that any

1 The GX series are designed for in-vehicle field deployments, such as connecting police cars or fire trucks to their network at headquarters. The LS series is designed for hazardous environments and for industrial deployments, such as surveillance of pipelines or meters. The ES series is designed to provide connectivity when landline connections are unavailable and can be used to maintain kiosks and retail operations online.

---
LAW AND ANALYSIS:

CBP issues country of origin advisory rulings and final determinations as to whether an article is or would be a product of a designated country or instrumentality for the purposes of granting waivers of certain “Buy American” restrictions in U.S. law or practice for products offered for sale to the U.S. Government, pursuant to subpart B of Part 177, 19 C.F.R. § 177.21 et seq., which implements Title III of the Trade Agreements Act of 1979, as amended (19 U.S.C. § 2511 et seq.).

Under the rule of origin set forth under 19 U.S.C. § 2518(4)(B): An article is a product of a country or instrumentality only if (i) it is wholly the growth, product, or manufacture of that country or instrumentality, or (ii) in the case of an article which consists in whole or in part of materials from another country or instrumentality, it has been substantially transformed into a new and different article of commerce with a name, character, or use distinct from that of the article or articles from which it was so transformed. See also 19 C.F.R. § 177.22(a).

You argue that the country of origin of the GX400, GX440, LS300, and ES440 gateway products is the United States because you believe that the last substantial transformation occurs in the United States. You state that the fully-assembled gateways are not functional when they are imported into the United States and that the gateways gain their ability to function as intended only after U.S.-origin software is installed in the United States. You support this site, among others, Data General v. United States, 4 C.I.T. 182 (1982), Headquarters Ruling (“HQ”) H052325, dated February 14, 2006, and HQ H175415, dated October 4, 2011.

In Data General, the court determined that the programming of a foreign PROM (Programmable Read-Only Memory chip) in the United States substantially transformed the PROM into a U.S. article. In the United States, the programming bestowed upon each circuit its electronic function, that is, its “memory” which it received. A distinct physical change was effected in the PROM by the opening or closing of the fuses, depending on the method of programming. The essence of the article, its interconnections or stored memory, was established by programming. The court concluded that altering the non-functioning circuitry comprising a PROM through technological expertise in order to produce a functioning read only memory device, possessing a desired distinctive circuit pattern, was not a “substantial transformation” than the manual interconnection of transistors, resistors and diodes upon a circuit board creating a similar pattern. See also Texas Instruments v. United States, 681 F.2d 776, 782 (CCPA 1982) (holding that the substantial transformation issue is a “mixed question of technology and customs law”). Accordingly, the programming of a device that confers its identity as well as defines its use generally constitutes a substantial transformation. See HQ 7330063, dated July 13, 1990 (programming blank media (EEPROM) with instructions that allow it to perform certain functions that prevent piracy of software constitutes a substantial transformation; and HQ 7330085, dated July 13, 1990.

CBP has also focused on where the programming took place. For example, in HQ H258960, dated May 19, 2016, CBP considered the country of origin of network transceivers in two different scenarios. In Scenario One, the importer purchased “blank” transceivers from Asia. The transceivers were then loaded with U.S.-developed software in the United States, which made the transceivers functional. In Scenario Two, the importer purchased the transceivers with a generic program preinstalled, which was then removed so that the U.S.-origin software could be installed. We held that, in Scenario One, because the transceivers could not function as network devices without the U.S.-developed software, the transceivers were substantially transformed as a result of the downloading of the U.S.-developed software performed in the United States. However, in Scenario Two, because the transceivers were already functional when imported, the identity of the transceivers was not changed by the downloading performed in the United States, and no substantial transformation occurred.

Similarly, in HQ H175415 dated October 4, 2011, CBP held that imported Ethernet switches underwent a substantial transformation after U.S.-origin software was downloaded onto the devices’ flash memory in the United States, which allowed the devices to function. In China, the printed circuit board assemblies, chassis, top cover, power supply, and fan were assembled. Then, in the United States, U.S.-origin software, which gave the hardware the capability of functioning as local area network devices, was loaded onto the hardware. CBP noted that the U.S.-origin software “enables the imported switches to interact with other network switches” and that “[w]ithout this software, the imported devices could not function as Ethernet switches.” Under these circumstances, CBP held that the country of origin of the local area network devices was the United States. See also HQ H052325, dated March 31, 2009 (holding that imported network devices underwent a substantial transformation in the United States after U.S.-origin software was downloaded onto the devices in the United States, which gave the devices their functionality); and HQ H034843, dated May 5, 2009 (holding that Chinese USB flash drives underwent a substantial transformation in Israel when Israeli-origin software was loaded onto the devices, which made the devices functional).

In each case, the nature of the article and the effect of the processing performed must be evaluated. Here, like the network devices and Ethernet switches at issue in HQ H175415, HQ H052325, and HQ H258960 (under Scenario One), the Sierra GX400, GX440, LS300, and ES440 gateways are imported into the United States in a non-functional state. It is only after the installation of U.S.-origin software that the devices can function as intended. Moreover, as in HQ H175415, HQ H052325, and HQ H258960, the gateway products at issue here derive their core functionality as communication devices from the installation of the U.S.-developed software. We note that this case is distinguishable from Scenario 2 in HQ H258960, as Sierra’s products do not contain pre-installed software when they are imported from China, and they are non-functional at the time of importation to the United States. Therefore, we find that the country of origin of the Sierra GX400, GX440, LS300, and ES440 gateways is the United States.

HOLDING:

Based on the facts provided, the country of origin of the gateways is the United States for purposes of U.S. Government procurement.

Notice of this final determination will be given in the Federal Register, as required by 19 C.F.R. § 177.29. Any party-at-interest other than the party which requested this final determination may request, pursuant to 19 C.F.R. § 177.31, that CBP reexamine the matter anew and issue a new final
DEPARTMENT OF HOMELAND SECURITY

U.S. Customs and Border Protection

Notice of Issuance of Final Determination Concerning Country of Origin of Aluminum Honeycomb Panels

ACTION: Notice of final determination.

SUMMARY: This document provides notice that U.S. Customs and Border Protection (“CBP”) has issued a final determination concerning the country of origin of aluminum honeycomb panels. CBP has concluded that for purposes of U.S. Government procurement, the assembly of the parts of the United States does not substantially transform the aluminum panels.

DATES: The final determination was issued on February 21, 2018. A copy of the final determination is attached. Any party-at-interest, as defined in 19 C.F.R. § 177.22(d), may seek judicial review of this final determination within April 2, 2018.

FOR FURTHER INFORMATION CONTACT: Joy Marie Virga, Valuation and Special Programs Branch, Regulations and Rulings, Office of Trade (202–325–1511).

SUPPLEMENTARY INFORMATION: Notice is hereby given that on 02/21/18, CBP issued a final determination concerning the aluminum honeycomb panels, which may be offered to the United States Government under an undesignated government procurement contract. The final determination, HQ H290528, was issued at the request of Aliva Chemica E Sistemi SRL, under procedures set forth at 19 C.F.R. Part 177, subpart B, which implements Title III of the Trade Agreements Act of 1979, as amended (19 U.S.C. § 2511–18). In the final determination, CBP was asked to consider whether the cutting, bending, and assembly of aluminum parts constitutes a substantial transformation. In the final determination, CBP concluded that these activities do not constitute a substantial transformation and the origin of the honeycomb panels remains the original country of manufacturing. Section 177.29, CBP Regulations (19 C.F.R. § 177.29), provides that notice of final determinations shall be published in the Federal Register within 60 days of the date the final determination is issued. Section 177.30, CBP Regulations (19 C.F.R. § 177.30), provides that any party-at-interest, as defined in 19 C.F.R. § 177.22(d), may seek judicial review of a final determination within 30 days of publication of such determination in the Federal Register.

Springfield Gardens, NY 11413

Doar Ms. Buro.

This is in response to your request of June 5, 2017, on behalf of Aliva Chemica E Sistemi SRL (“Aliva”) for a final determination concerning the country of origin of a product that you refer to as “aluminum honeycomb panels,” pursuant to subpart B of Part 177, U.S. Customs and Border Protection (CBP) Regulations (19 C.F.R. § 177.21, et seq.).

As a foreign producer of merchandise, Aliva is a party-at-interest within the meaning of 19 C.F.R. § 177.22(d)(1) and is entitled to request this final determination.

FACTS:

The merchandise at issue are Aliva aluminum honeycomb panels, which will be used as architectural finished coating panels for wall and tunnel areas in train stations. The panels come in two variations: straight and curved. Each installed panel will contain a casing, a core, and two mounting blades.

The casing

The casing is a flat sheet of pre-painted aluminum alloy which will be supplied in raw condition. The sheets are 1.2 mm. thick, 0.3 mm. thick, and 0.1 mm. thick, and are cut to size at the Italian factory before being secured to the core. Two different profiles are produced for the right and left blades, which hook the finished panel onto Aliva’s framing system.

Assembly

In the United States, the core will be produced from an extruded L-shaped aluminum alloy sheet of unknown origin extruded into hexagonal cells that are 80 microns thick. The skins can either be coated with five microns of primer or pre-painted black with an anti-graffiti finish. The skins are glued to the honeycomb panel to create a singular panel referred to as the core.

The Italian manufacturer will supply and transport the core sheets in bulk to a U.S. manufacturing facility. Each core sheet will produce three to 16 cores. All cores for the curved panels will be cut to-size to fit the casing in Italy but cores for the straight panels will be cut to size at the U.S. facility. Eight holes are drilled through the back of the core for attachment of the mounting blades. However, all the cores for curved panels will be cut and drilled in Italy.

The mounting blades

The mounting blades are aluminum alloy sheets of unknown origin extruded into L-shaped brackets. Two mounting blades will be attached to the back of each core on either side. The mounting blades are extruded, machined, bent, and cut-to-size in the United States before being secured to the core. Two different profiles are produced for the right and left blades, which hook the finished panel onto Aliva’s framing system.
