Case #EPS-001, EPS-002, EPS-003, EPS-004

Decision and Order

I. Background and Authority

The Energy Policy and Conservation Act of 1975, as amended (“EPCA” or “the Act”),¹ Public Law 94-163 (42 U.S.C. 6291-6317, as codified), among other things, authorizes DOE to regulate the energy efficiency of a number of consumer products and industrial equipment. Title III, Part B² of EPCA established the Energy Conservation Program for Consumer Products Other Than Automobiles, a program that includes external power supplies (“EPSs”), which are the subject of this Order. (42 U.S.C. 6291(36); 42 U.S.C. 6295(u)) Under EPCA, DOE’s energy conservation program consists essentially of four parts: (1) testing, (2) labeling, (3) Federal energy conservation standards, and (4) certification and enforcement procedures.

The Federal testing requirements consist of test procedures that manufacturers of covered products must use as the basis for: (1) certifying to DOE that their products comply with the applicable energy conservation standards adopted pursuant to EPCA (42 U.S.C. 6295(s)), and (2) making representations about the efficiency of those products (42 U.S.C. 6293(c)). Similarly, DOE must use these test procedures to determine whether a product complies with relevant standards promulgated under EPCA. (42 U.S.C. 6295(s))

Under 42 U.S.C. 6293, EPCA sets forth the criteria and procedures DOE is

¹ All references to EPCA in this document refer to the statute as amended through the Energy Efficiency Improvement Act of 2015, Public Law 114-11 (April 30, 2015).

required to follow when prescribing or amending test procedures for covered products. EPCA requires that test procedures prescribed or amended under this section must be reasonably designed to produce test results which reflect the energy efficiency, energy use or estimated annual operating cost of covered products during a representative average use cycle or period of use and requires that test procedures not be unduly burdensome to conduct. (42 U.S.C. 6293(b)(3)) The test procedure for external power supplies is contained in the Code of Federal Regulations (“CFR”) at 10 CFR part 430, subpart B, appendix Z, “Uniform Test Method for Measuring the Energy Consumption of External Power Supplies” (“Appendix Z”).

Under 10 CFR 430.27, any interested person may submit a petition for waiver from DOE’s test procedure requirements. DOE will grant a waiver from the test procedure requirements if DOE determines either that the basic model for which the waiver was requested contains a design characteristic that prevents testing of the basic model according to the prescribed test procedures, or that the prescribed test procedures evaluate the basic model in a manner so unrepresentative of its true energy or water consumption characteristics as to provide materially inaccurate comparative data. 10 CFR 430.27(f)(2). DOE may grant the waiver subject to conditions, including adherence to alternate test procedures. *Id.*

II. Petition for Waiver: Assertions and Determinations

On June 8, 2017 and June 22, 2017, the Information Technology Industry Council (“ITI”), on behalf of four petitioners—Apple, Microsoft, Poin2, and Bitland—filed individual petitions for waiver under 10 CFR 430.27 from the current DOE test procedure for EPSs for several basic models of adaptive EPSs.³ The petitioners stated that the specified basic models meet the provisions of the International Electrotechnical Commission’s “Universal serial bus interfaces for data and power—Part 1-2: Common components—USB Power Delivery” (“IEC 62680-1-2:2017”) specification.⁴ All four waiver petitions were nearly

³ The following are the basic models for which the petitioners seek a waiver: Apple—A1718, A1719, A1540; Microsoft—AC-100; Poin2—A16-045N1A; Bitland—A045R053L.
