

was not split, the Council and Commission would either need to wait for revised MRIP data to become available to begin analysis of recreational-related alternatives, or begin analysis with the current data and later revise substantial portions of the document once new MRIP data became available. Because substantial progress has been made on development of alternatives for commercial issues, the Council and Commission have proposed splitting the action in order to more quickly complete the revisions to the commercial issues and FMP objectives without letting these issues become delayed by recreational data revisions.

The purpose of this revised amendment is to consider revisions to the current qualification criteria for Federal moratorium permit holders, the current allocation of commercial quota, and the current list of frameworkable items in the FMP (*i.e.*, including a provision for commercial landings flexibility). In addition, the purpose of the action is to revise the FMP goals and objectives for summer flounder only. An EIS will be prepared for this action. The Council believes that the measures have separate utility, a clearly unique purpose and need, and are not directly linked to the remaining measures from the original amendment proposed to be pursued in a future action.

The Council and Commission intend to initiate a separate action or actions once revised MRIP data become available. This future action is expected to consider revisions to the allocation between the commercial and recreational sectors for summer flounder, as well as several recreational fishery issues. General categories of recreational issues previously identified for evaluation include: Recreational process, conservation equivalency framework, and recreational allocations; recreational sector separation (for-hire and/or private mode); alternative recreational strategies (allow for alternatives to minimum size, bag limit, and season restrictions; *e.g.*, slot limits); recreational gear requirements or restrictions; and recreational data collection requirements and protocols.

SUPPLEMENTARY INFORMATION:

Terms of Reference

1. Evaluate the strengths and weaknesses of the assumptions made in applying the stock assessment model including how survey indices are scaled to the populations. Specifics might include:

a. How natural mortality estimates are estimated/applied.

b. Assumptions about survey "catchability".

c. Application of fishery and survey age-specific schedules (maturity, body mass, selectivity).

d. The application (or lack thereof) of a stock-recruitment relationship (and associated parameter estimates).

2. Evaluate the stock assessment approach used focusing specifically on how fisheries and survey data are compiled and used to assess the stock status relative to stated management objectives under the Bering Sea and Aleutian Islands Fishery Management Plan (FMP) and the Magnuson-Stevens Act requirements. Elements should consider:

a. The FMP "Tier" designation.

b. Fishing rate estimation relative to overfishing definitions.

c. Stock status determinations relative to BMSY.

3. Recommend how assessment data and/or models could be improved.

Special Accommodations

These meetings are physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Shannon Gleason at (907) 271–2809 at least 7 working days prior to the meeting date.
