SUPPLEMENTARY INFORMATION: The Atomic Energy Act (AEA) of 1954, as amended, authorizes the NRC to issue 40-year initial licenses and upon application and approval, subsequently renew licenses for nuclear power reactors. The NRC's regulations permit these licenses to be renewed beyond the initial 40-year term for an additional period of time, up to 20 years, based on the outcome of an assessment to determine if the nuclear facility can continue to operate safely during the proposed period of extended operation. There are no limitations in the AEA or the NRC's regulations restricting the number of times a license may be renewed.

The nuclear power industry has sent letters of intent to apply for subsequent

license renewals in 2018, 2019, and 2020. Subsequent License Renewal is a term referring to all license renewals allowing a plant to operate beyond the 60-year period (40-year period of an initial operating license and a 20-year period of the first license renewal). Based on a survey conducted by the nuclear power industry, the NRC staff believes that additional applications for subsequent license renewal will be submitted in future years.

The NRC has developed and published final guidance for licensees that intend to apply for subsequent license renewal. The guidance documents for subsequent license renewal (*i.e.*, for operation from 60 to 80 years), NUREG–2191, the “Generic Aging Lessons Learned for Subsequent License Renewal (GALL–SLR) Report,” and NUREG–2192, the “Standard Review Plan for Review of Subsequent License Renewal Applications for Nuclear Power Plants” (SRP–SLR), address the issues for increased operating time from 60 to 80 years. The guidance also considers recent operating experience identified since the release of GALL Report, Rev. 2. The GALL–SLR Report and SRP–SLR also include changes that have been previously issued for public comment as part of the staff’s license renewal Interim Staff Guidance (ISG) process. These ISGs can be found at <http://www.nrc.gov/reading-rm/doc-collections/isg/license-renewal.html>. These ISGs (ML12286A275, ML11297A085, ML12138A296, ML12270A436, ML12044A215, ML12352A057, ML13227A361, ML15308A018, and ML16237A383) have been incorporated into the GALL–SLR Report and the associated sections of the SRP–SLR. The NRC has previously received public comments on these ISGs, and is not requesting additional comments on the ISGs.

A notice of availability and request for comments on draft NUREG–2191 and draft NUREG–2192 was published in the **Federal Register** on December 23, 2015 (80 FR 79956). The public comment period ended on February 29, 2016. The NRC received over 500 comments on these draft guidance documents. The NRC also published a supplement to the draft guidance documents in the **Federal Register** on March 29, 2016 (81 FR 17500). The public comment period on the supplements to draft NUREG–2191 and draft NUREG–2192 ended May 31, 2016. The NRC reviewed and dispositioned all of the comments and published the disposition of the comments and the technical bases for their disposition in companion NUREG documents, which are being published

at this time, NUREG–2221, “Technical Bases for Changes in the Subsequent License Renewal Guidance Documents NUREG–2191 and NUREG–2192,” and NUREG–2222, “Disposition of Public Comments on the Draft Subsequent License Renewal Guidance Documents NUREG–2191 and NUREG–2192.” The NRC’s resolution of these comments are incorporated in the final SLR guidance documents, NUREG–2191 and NUREG–2192.

Dated at Rockville, Maryland, this 10th day of April 2018.

For the Nuclear Regulatory Commission.

Eric R. Oesterle,

*Chief, License Renewal Project Branch,
Division of Materials and License Renewal,
